Don't spare the sorts. It is a penny-wise and pound-foolish policy—which too often prevails in small as well as in large offices—to keep compositors continually on the hunt for leads, leaders, rule, metal furniture, etc., or, in fact, sorts of any kind which are in general demand, instead of providing a supply sufficient for all emergencies. Were a correct account kept of the time thus needlessly consumed, and, consequently lost in one year, it would be found to represent a sum more than sufficient to provide for all legitimate requirements. And yet, there are employers who denounce as extravagant a requisition to supply material which is absolutely necessary, who pay without a murmur, in twelve months for *lost time* more than twice the amount requisite to supply all deficits, with literally nothing to show for such expenditures. Common sense suggests that work produced under such disadvantageous circumstances must either be turned out at a nominal profit, or an overcharge allowed for extra services; and when business is conducted on business principles this needless waste of time is certain to militate against the competing establishment which is blind to its best interests.

Avoid hap-hazard estimating. The mal habit of guessing at a cost of a job instead of demonstrating it, has long been the bane of the printing trade, though the man or firm indulging in the luxury generally comes to grief. Yet, despite this fact, there are comparatively few who learn wisdom by experience. All such should take a lesson from the elephant, which runs no risks, but *tests* the bridge before he crosses. A variation of twenty-five per cent on an estimate is a matter of daily occurrence; and there have been cases brought to my attention, when the discrepancy on an estimate for the same job has

amounted to no less than eighty per cent, and this, too, in the same city, where wages, expenses, material, etc., are supposed to be, for all practical purposes, the same. Now, it certainly requires no argument to prove that either criminal carelessness or gross ignorance is to blame for such variation. While circumstances may alter cases, and the expense account in different offices vary somewhat, no excuse can be offered for accepting a job at less than actual cost, no matter what the amount of wages paid may be. It is safe to say that at least twenty per cent over cost should be allowed as the minimum business margin, a fair working margin when wear and tear of material, rent, insurance, taxes, interest on investment, bad debts, spoiled jobs, distribution, clerk hire, fuel, light and the hundred and one incidental expenses connected with the successful running of a printing office are taken into consideration. Above all it must not be forgotten the expenses connected therewith are constantly absorbing the profits. Again, some men foolishly accept a job at a loss in the expectancy of making it up on a future order, a short-sighted, unbusiness-like and dangerous policy—one which seldom, if ever, succeeds. No, no, honesty is the best policy. Let every tub stand on its own bottom. If you wish to make a present, well and good, make it outright; but don't do business on an expectancy that is not destined to be realized. And this advice applies equally to the country as the city office.

Have a price—a paying price—based on correct estimates, and stick to it. And by a paying price I mean a price which does not lead to the sheriff's office; a profit which allows for and which includes the incidental and incurred expenses referred to, and which shows a balance on the 1st of January on the right side of the ledger. Never mind what your competitor is willing to do a job for. If you cannot make the profit you desire at the rate he charges, let it go elsewhere. If he is willing to work for glory, give him his bellyful. Send him all the work you cannot profitably accept. Possess your soul in patience, pursue the even tenor of your way, and the probability, if not the certainty, is that you will one day become the owner of his office as well as of your own. Of course, legitimate competition is the life of trade, and a man who is unable to hold his own under such competition is evidently the wrong man in the wrong place; but there is a vast difference between active, honest rivalry and cut-throat competition, which means ruin to those indulging in it; and, unfortunately, this class of individuals is neither far to seek nor hard to find.

Have a place for everything, and keep everything in its place. Practically recognize the fact that order is nature's first law, and that cleanliness is next to godliness. Show me an establishment where a happy-go-lucky system prevails, where order is unknown, where each workman is a law unto himself, and where little, if any, attention is paid to so-called details, and I will show you an office where good work is the exception, and where the blacksmith is monarch of all he surveys. A tree is known by its fruits. Cause and effect go hand-in-hand. A slovenly arranged composing room and a slovenly

compositor generally keep company. Birds of a feather flock together. In fact, put a man accustomed to work in a hog pen into a well-regulated office, and he will feel as uncomfortable as a professional tramp in a bath tub. In no business does system or economy in small things count for so much, or is a verification of the proverb that "every little makes a mickle" more evident than in a printing office. It is as often the small as the large leaks which sink the ship. A stitch in time saves nine. Save a step whenever you can, and in the course of a month these steps will give a good account of themselves. Bunch as far as practicable your rules, slugs and metal furniture. I have seen offices where a compositor was compelled to box the compass to reach these companions, where the time thus needlessly lost became an important factor in the cost of composition. Properly label your cases, keeping the display, script and roman fonts together, and when supplied from one type-foundry it is preferable to have a special sort-case for quads, spaces, etc., instead of being necessitated to go to half a dozen racks to obtain them. Avoid the too common practice of placing more than one font of different type in the same case, especially scripts. The habit of tying up sorts as an old woman saves the remnant of her Christmas loaf, and forgets where she puts it, should be avoided; and when the necessary convenient receptacles for their safekeeping, where they are always accessible and can be secured, at an almost nominal cost, no excuse for such carelessness can be presented. The practice of storing cuts, etc.—and every establishment has its greater or lesser proportion—over racks or under the stone, in fact, any place where they are most likely to be battered or where they must be hunted for, is both reprehensible and expensive. Labeled and indexed, and placed in proper appliances they are free from danger and can be found, when desired, at a moment's notice. In brief, arrange your office in such a manner that you can invariably put your hand on what you want, and get what you go for; and the result will amply pay for the time expended, and justify the adoption of the so-called much despised red-tape system.

Pay due attention to distribution. There are fewer criterions by which to judge the manner in which an office is conducted, than by the system or lack of system of distribution observed. In the lesser offices where fonts are small and material limited, you cannot afford to let jobs stand from week to week. A commendable practice is to devote an hour each day to distribution, and to see that the stones and boards are cleared of dead matter every Saturday afternoon. What more provoking than to find the first job placed in a compositor's hands on Monday morning necessitates picking a letter here, and hunting for another somewhere else, which a little foresight would have avoided. I know of no more disgusting sight than an imposing stone covered with half-picked, half-pied litter—generally the result of bad management, which costs twice as much to eventually find its way to the cases and racks as it would had time been taken by the forelock. See that all forms are

properly washed and thoroughly rinsed when taken off the press, and no ink left to dry thereon. In handling body type, a good practice is to blow out both upper and lower cases before distributing, especially when seldom used. Reduced to a system, this practice will prevent accumulation of poisonous dust and matter injurious alike to the lungs and hands of the compositor and the material itself.

When the services of a foreman are required select a qualified workman who knows how to control himself as well as those under him; who is neither a sycophant nor an eyeservant; who will protect the interests of the employé as well as your own; who realizes his obligations to both, and who will fearlessly perform them; and who recognizes faithful performance of duty as the only road to preferment. Give him control of the composing room, at least make him the medium through which your desires shall be promulgated. Uphold his authority. Make him foreman in fact as well as in name, so you can consistently hold him responsible for its management. Remember, too many cooks spoil the broth. Honor his requisition for material; place confidence in his judgment and integrity, and the likelihood is that cliques and cabals—too often the bane of an office—will be unknown, and system and harmony prevail. Treat your employés courteously. Remember, they have feelings like yourself, and like to have those feelings respected. Show them you take an interest in their welfare, and appreciate honest stewardship. I have known employers who claimed that in ten years they never recognized a workman. It is needless to add, such men pursued a short-sighted, selfish policy, and that if, as they charged, their employés cared for nothing but their wages, they had themselves in a great measure to blame for such a state of affairs.

Don't dig your own grave. Don't crowd into a town or section of country already fully occupied. The farmer who places half a dozen kernels of corn where but three should be planted, cannot expect to gather a profitable crop. The publisher or printer who selects a locality already preëmpted, not only injures himself, but the community at large, as failure is the sequence of such action.

In conclusion, give your business your personal supervision, and never deputize to others what you should perform yourself. Work for a living profit. Study the tastes of your customers. Always furnish stock equal to the sample shown. Avoid sharp, dishonorable tricks, remembering a good name is better than riches. Keep your composing and press rooms clean, and free from litter. It is astonishing what effect cleanliness has on the moralé and taste of the workman. Never promise a job when you know the promise cannot be fulfilled. Study economy. Be systematic. Remember civility costs nothing. Make your imprint your trade mark, and a guarantee of good work. Keep pace with the demands of the times, and it is safe to say, the name of the printer observing these suggestions will seldom, if ever, appear among the list of bankrupts, or those who have been "foreclosed by mortgage."

MECHANICAL DEVICES IN TYPE.

NO. IV. — BY CARL SCHRAUBSTADTER, JR.

ORNAMENTS and ornamental letters are older than typefounding itself. The earlier manuscripts and some of the block books are beautiful examples of what can be done in ornamentation. In most of these the text was plain, but the initials were handsome and appropriate, being often drawn in after the work was printed. For a time initials dropped into disuse, and are not even now popular in this country. In Europe, and particularly in Germany, they are again in great favor, and the foundries are producing series after series. With the exception of the Johnson Typefoundry, whose Mortised, Mortised No. 2 and No. 43 series, shown in Figs. 10 and 12 in the last article, combine modern faces with new ideas, and the Central Typefoundry, whose series of Art Initials has been quite popular, little of merit has been produced in this country in late years, but some of the other foundries, notably the Cincinnati, have copied a number of the more meritorious European designs.

It is extremely difficult to produce faces having ornaments running throughout the background, as is often done in lithography, the difficulty being to carry out the scheme of ornamentation in the different widths of letters, so that the design shall be uninterrupted. Perhaps the first face of the kind was the Filigree, produced by the Johnson Typefoundry, a little over a decade ago, and the same foundry's Arboret, shown in Fig. 9 of a former number, and Arboret No. 2, shown in Fig. 16, are the

FIG. 16.

best examples of what has been done in this line. The Fresco Initials and the Lady Text, by the same foundry, although beautifully drawn and engraved, cannot be said to have been as successful as those last named. The Claytonian, of the Chicago Typefoundry, though very elaborate, has hardly a pleasing effect, and has never become popular. None of the other foundries have produced anything in this line worth remarking.

Ornaments furnished separately, and having no analogy to anything in the letter, but capable of being introduced between the lines, have often been designed. Particularly praiseworthy are the card ornaments, series No. 4, of the Johnson Typefoundry, and another very good idea is that exemplified in the Interline flourishes of the Cleveland Typefoundry, shown in Fig. 17. Although having no corresponding continuations in the letters themselves, when used with faces which fill the body the effect is much the same as though the lines passed through the letters.

FIG. 17.

Word ornaments, pure and simple, are very old, and the earlier books abound with crude ideas; but little attention was given to possible combinations, and with the crude appliances known to the art of typefounding it was impossible to produce

anything such as is shown in modern times. The first modern word ornaments, and for a long time the only ones, were those produced by the Cincinnati Typefoundry, and called "Card Ornaments." In late years the Johnson Typefoundry has produced many agreeable novelties. Prominent among these are the Elliptical ornaments shown in Fig. 18 and reversed in Fig. 19, cast on curved bodies, thus allowing curved

FIG. 18.

FIG. 19.

lines to be set and locked up tightly, with the ornaments close to the letters. A layman can hardly realize the amount of work and thought required for the designing, casting and finishing of such a face. The Sloping Ornaments by the same foundry, cast on triangular bodies, a few characters of one of the styles, right side and reversed, shown in Fig. 20, are also in this line. Even

FIG. 20.

young printers will recollect the time when the only ornaments at hand were the cumbersome and many characterized Minionette and Emerald borders, copied from European faces. The facts that these were cast on bastard bodies, and therefore difficult to justify with the work, and that they did not correspond in character with the type faces, were perfectly apparent, but for a long time none of the foundries produced anything worthy of remark. The Cincinnati Typefoundry was the first one to produce nonpareil and pica borders in long sections, and with corners cast on L bodies to facilitate locking up, and also the first to cast thin borders on half nonpareil, or 3 point, so as to admit the ornaments being brought in juxtaposition to the type. A specimen of one of these borders is shown in Fig. 21, the characters

FIG. 21.

on the right hand showing sections of the type. There is now scarcely a foundry which does not make numerous borders. The Japanese border of the Johnson Typefoundry, produced about ten years ago, was elaborately designed and beautifully executed, and was extremely popular. Scarcely an office in the country did not possess some of it. It was almost as many-charactered as the older series, and some of the grotesque effects produced by the compositor may still be seen in the work of the smaller offices. This foundry followed its success with a number of borders on the same idea, and some of the others, notably the Bruce, have also furnished new designs. The Cleveland Typefoundry, in its card ornaments, confined itself to a few characters, and this idea, owing to the low price at which fonts could be sold, proved very popular. Almost all of the foundries now furnish a few ornaments with their modern job faces, and sell these separately. Many faces of the Chicago, Cleveland, Central and Boston foundries are thus equipped, and it is worth remarking that the

Schwabacher, or German Old Style series, a very old face, which never had much sale in this country, when equipped with a few ornaments and dubbed Sylvan Text, enjoyed a very good sale.

While hardly coming under this heading, brass rule has of late years been prominently brought forward in job printing. Not only has the accuracy of the rule been increased, but the variety of the faces, which are now almost without limit. Within the last few years labor-saving rule has been introduced to a great extent, and tools for manipulating it are now made at such a moderate price as to make their use a necessity. Mitering machines and curvers can now be found in almost every job office, as also several ingenious devices, made especially for the job depositor. The accuracy with which very thin rules are now made has induced a number of printers to twist all kinds of curious designs from them, and the Earhart wrinkler, a little machine recently introduced, allows the compositor to do the same thing with heavier rule.

THE PRINTING PRESS.

BY NOREMAC.

"Turn to the press; its teeming sheets survey,
Big with the wonders of each passing day;
Births, deaths and weddings; forgeries, fires and wrecks;
Harangues and hailstones; brawls and broken necks."—*Sprague*.

THE printing press! How wonderful was its conception! How marvelous has been its growth! What strides it has made during the past half-century! How rapidly has it adapted itself to the increased demands made upon it! Fifty years ago we wondered at the thousands of sheets that could be printed in a year; but now we behold billions of sheets turned out in a single day! Where there were a hundred presses then there are thousands now!—their make improved, their dimensions increased and their speed multiplied a hundred-fold.

The printing press! To what noble uses has it been put! Out from its revolving cylinders have come books on every conceivable subject. The scriptures, which had previously been chained in isolated places to be perused by the few, are now circulated in millions throughout the whole earth. The writings of ancient philosophers are now to be found in all parts of the civilized world. Educational works are brought within the reach of every man, woman and child that desires to obtain them. The works of the historian, the biographer, the explorer and the scientist are no longer the exclusive property of the wealthy few, but are sold everywhere at the lowest market value. The writings of dramatists, novelists, poets and literary men of all shades of thought are being run through this vast multitude of presses with such speed that before they themselves have ceased to feel the vibrations of the thoughts to which they have just given expression, that vibration has been communicated to millions of readers.

The printing press! In what an immeasurable degree has it contributed to the spread of civilization where

barbarism prevailed! How has it helped to plant purity and holiness where licentiousness and idolatry reigned supreme! To what an extent has it brought the inhabitants of the whole world into closer relationship with each other, and given them to see that they have many interests which are common to all! Each nation has been furnished with the best productions of the ablest writers from all parts of the world, and that, too, in its own language. Nothing has done so much toward making all nations into one common family as has the printing press. Statesmanship, diplomacy, commerce and religion are dependent upon it for more than half their power. It is the force that alone can break down bigotry and superstition; that can give entrance to the light of knowledge and progress in the dark continents of the unknown world; that can substitute arbitration for war, peace for destruction, confidence for mistrust, love for hatred, freedom for slavery and right for might.

The printing press! What monuments it has built! Monuments more lasting than the pyramids of Egypt, the Tower of Pisa, Trojan's Pillar, or those of London, Washington and Bunker Hill! Monuments not built of stone, but of intellect—not of muscle, but of brain—not of dark superstition, but of light and truth! Its work stands for eternity; its heroes are immortal; its influence reaches through all time, beyond all death, right into the everlasting ages. The monuments it has erected cannot be measured by the thousands of feet, but are so vast and magnificent that their bases are immeasurable and their tops reach to the heavens!

The printing press! Who can tell what its future may be? If its achievements have been so great in the past half century, what may it accomplish in the next fifty years? Who will venture to measure its progress or define its possibilities? What Alexander will arise to say to it, "Thus far shalt thou go and no farther?" Who will dare to limit its speed, or say that where thirty thousand newspapers can now be printed, cut and folded in one hour, ten times that number shall not be possible in the near future? Who can say what part electricity may yet play in connection with the printing press? So much that appeared "impossible" has already been accomplished that the word seems out of place when thinking of the future of printing.

The printing press! What an immense number of people are employed in connection with it! What an army of skilled and unskilled helpers are attending to its requirements! What immense piles of paper it uses, what vast quantities of ink it consumes, and what an enormous amount of coal is required to keep up its momentum!

But words fail us and we are compelled to leave its praises only half sung. May future generations be blest with a wide and deeper and higher appreciation of its merits, and find among their poets and orators some who can more worthily extol and magnify its wonderful powers.

WOOD VERSUS PHOTO-ENGRAVING.

BY THOMAS W. ELLIOTT.

ON looking over THE INLAND PRINTER of January, 1889, I was pleased to read the protest of your Philadelphia correspondent on page 329. I do not know what your correspondent follows as a business, but he evidently has got the tricks of the photo-engravers down to a fine point, and he is not afraid to speak out what he thinks. With your permission I will back up what he says, and I will also as a draftsman, wood engraver and photo-engraver, give each his due. I have on the table before me about six catalogues of photo-engravings from different firms. On looking over them, what do I find? The first on the page is a portrait; how done? First of all, it is a wood engraving, over which a few *pen* lines have been put; it has then been photo-engraved. Below we find these words, "*drawn and photo-engraved from a photograph*" (excuse the lie in type).

Again, the best in all the catalogues are taken from very fine (German) wood cuts, both landscape and figure. These imitators take good care to pick good subjects, so that the uninitiated will say, "What beautiful specimens of photo-engravings; why, they are better than wood cuts!" little thinking that the productions of the wood engraver are pirated. Not only that, but the same catalogue tells you that the process used is cheaper and *better* than wood engraving. (?) It is impossible for the photo-engraver, or his artist in pen and ink, to produce the fine, wavy and free line that the wood engraver makes with his graver or elliptic tool, or to draw the graduated and flat tints produced by the ruling machine on wood. I also received a calendar today from a firm, in which a piece of poetry or verse says, "wood engraving goes to the wall." (?) Perhaps it is going, according to the idea of its editor. The same firm are very glad to get wood engravers to deepen their process plates, or were, when I lived there. This same firm, I will say, turn out some very fine specimens, both in line and half-tone; but they require in all cases to be printed on good paper, good ink, hard rollers and a good press. All photo-engravings require this. This is the reason that they will not do for the ordinary run of commercial work. I could mention firms who have been deluded into patronizing photo-engravers by their circulars, who have got bit, and don't intend to try it any more. How do they get bit? In this way: a proof is sent on very fine paper, it is then sent "C. O. D.," so, of course, the orderer has to pay for it, with the result that when he takes it to a printer for printing on common paper, it comes off the press all blurred, on account of being so shallow in the whites. Just here is where the wood cut takes the cake. I am of the same opinion as your correspondent, that there is more wood engraving done today than there ever was. In Canada, fifteen years ago, there were only about six wood engravers, now there are nearly if not quite fifty. Go to Buffalo, Detroit, and even your own city, and you will find eight now to one ten years ago. To read some of our trade journals and photo-engravers'

circulars, you would think the grave was dug for the poor wood engraver, only waiting for him to drop in; the rooster, photo-engraver, waiting to give a crow.

I remember, some sixteen years ago, when in London, England, the Graphotype Company brought out a (good, as they thought) process; even the illustrated papers gave it a trial. It was going to run every wood engraver out; but he is still there as busy as ever. Graphotype—oh where is it? Ask those who got bit as shareholders. Every little while we hear of some new (old) process going to do wonders; it starts, and, like others before it, fades out of sight. Photo-engraving by washout gelatine is very good for reproductions of other prints or pen-drawings, or drawings on grained or crayon paper. In my opinion it is the best (I have used it for the last two years in illustrating the paper with which I am connected). It is cheaper than wood cuts. I may mention here is a place photo-engraving fills which does not hurt the wood engraver. Five years ago we used to put in the newspaper about two wood cuts (small) a week, at a cost of about \$5. Now we put in the same amount of cuts, if not more (mostly portraits in a hurry). Photo-engravings we put in about one a day and about three on Saturday (no Sunday edition), at a cost of about \$12 to \$15 a week. Now, to do these on wood, the newspaper could not afford it, for the price would be about three times this amount. Half-tone work cannot be printed in a daily or weekly paper with satisfaction, unless, as I said before, upon good paper, etc. Zinc-etching is very good for open work and work wanted in a hurry, without wanting sunlight (gelatine always wants the sunlight), but it requires a great deal of experience, care and a good *man* to work it successfully, hence so few go into it to any great extent. Even after a plate is etched, it may be spoiled by the last or final etching, to take away the steps formed by the preceding etchings. I have seen a zinc-etcher of twenty years' standing spoil a plate after spending six hours on it.

Again, zinc-etching will only pay when a large plate is done at once, with five or six jobs on. Pen and ink work for zinc-etching (especially lettering and views) has to be done very carefully; in fact, a great deal more so than the same need be done for the wood engraver, so that for small work the latter would be the cheapest and best. Some very good results are made on zinc and copper by the asphaltum method, which are so fine in *detail* that it is impossible for the wood engraver to make such a finished result as regards the fineness of line, but still there is a hardness about the pen and ink work I do not like to see. Half-tone work is too much of one color. Still, beautiful, soft effects are obtained. Refer, for example, to illustrations in THE INLAND PRINTER.

Photo-engraving (washout gelatine) does not require as skilled labor as zinc-etching; it can be learned in as many months as years for the latter, but you have to lay in an electrotype plant, or send it to an electrotyper to get it finished for the press. Nearly all process cuts have to be touched up by the wood engraver (here he steps in,

even if he is abused) before it is ready for the press. I have often wondered why wood engravers have never entered any protest against process engravers, but they are a meek, mild class of men; they don't let these things trouble them; or, perhaps, they never see a trade paper. Poor devils, they can't spare the money for such, yet they will spend more in a week in waste than would pay for a year's subscription to a good trade journal. The wood engraver should study up photo-engraving, zinc-etching, etc.—persevere, as your correspondent has endeavored to do—then he can be equal to, if not better than, the photo-engraver, for he will then have a double advantage and can do both photo-engraving and wood engraving, and so make him (the photo-engraver) take the other side of the wall. Good drawings, then *a very good negative*, is required (which takes a good photographer to make, by the wet process of photography, and requires good instruments, etc.) to make a good photo-engraving. Often it has to be made two or three times, if very fine work, before it is a perfect success, hence why so many give it up after trying for a time. The writer will, in another article, give some points in favor of wood engraving (with illustrations of both) over photo-engraving and like processes, if the editor wishes. I hope to hear from some other of the craft on the subject.

Written for THE INLAND PRINTER.

SOMETHING ABOUT MAIL LISTS.

BY J. B. CALDWELL.

ONE of the most important things about a newspaper office is the subscription list. Properly kept, it becomes a source of profit and pleasure. Improperly or negligently kept, it is a source of serious loss and vexatious annoyance, which are far from being conducive to the happiness of the business management or the success of his journal from a pecuniary standpoint.

It is very well to insert a notice, stating that subscribers changing their residence must give both their former and present address, in order to secure the change desired; but such advice is neglected by a large and respectable number of patrons—many of them good pay, but rather negligent about some minor business points. So the names come in to be changed, to be credited, and sometimes to be discontinued, without address.

If the list is arranged alphabetically, and name and postoffice are correctly given, little trouble will be experienced in finding and making the necessary change. But when the name alone comes, with no address, and postmark unreadable, there is a gloomy prospect of reading over the entire list and not finding the name, or the other alternative of filing the matter or depositing it in the waste basket.

Either of the latter methods will entail loss—direct loss to the establishment. To retain influence over people, the business of the newspaper must be attended to promptly, correctly and politely. These qualifications are valuable stock in trade, and must not in

any instance be neglected. They cannot be neglected without serious loss.

But to answer all questions and keep the business in good shape will require extra help. Well, it is business, and better give it up than to play at it and neglect it.

System—a good system—adhered to strictly, will obviate much that is unpleasant relating to mail lists.

One important point is the alphabetical arrangement, which applies to states, towns and subscribers' names. This causes extra work at the time, but is not so trying or exasperating as to lose from half an hour to an hour hunting for a name.

We have three lists: First, the receipt book, with blanks for "date," "No.," "name," "address," "time paid," "from and to" and "amt." The last column shows the receipts for any day, week, month or year, though we only balance books the first of each month.

The "Nos." follow each other in consecutive order, 1, 2, 3, 4, and refer to list No. 2, which is arranged, not only alphabetically, but under each letter there are pages and spaces as necessity indicates for second letters. For instance, take the letter "M." As is well known, were there not some plan to prevent, the "M's" would soon become a task to look over. To obviate this, under "M" we have "Ma," "Mc," "Me," "Mi," "Mo," "Mu," "My." For larger lists the third initial letter can be used, and so on.

Enter the name on book or list No. 1, and then in its proper place on the index list, with its number. Suppose, then, that Mr. G. Mahoney wishes his paper changed to Chicago, but fails to give his present address. Instead of looking over his entire list and distracting his mind, or giving the matter into the hands of a clerk (and a clerk's time costs money), the manager takes his index book, opens at "M," first page, "Ma," finds "Mahoney, G., No. 1889," turns at once to No. 1889, on receipt book, and finds this entry: "Jan. 1, 1886. No. 1889, Galva, Ill., Mahoney, G., Pd. 1 yr., \$1.50," and these additional remarks, "Renewed No. 3472," etc., showing that subscription is paid and the place its receipt is recorded. If book No. 1 is used to write names from, either make the change at the first entry or state where the correct address may be found, clearly indicating that first entry is not to be used.

One man should attend to the subscription list, superintend and be responsible for its correctness. Put the most careful man in the office in charge. Instruct him to take corrections from receipt book with care, and then compare his copy with the original. Have new names set up, changes made and proof taken of all, to be carefully compared with the copy, before it is made up and arranged in galleys or form.

The galleys or forms must, to secure the best results, be arranged alphabetically and kept so. It takes time to put a dozen names in the right places, and it is so easy to put them in a vacant place in galley or form that the temptation is great, and more than the ordinary printer can resist, unless his superior gives him clearly to understand the importance of adhering to the system.

J. J. LITTLE & CO., - - - - -	New York.
BUREAU ENGRAVING AND PRINTING, - - - - -	Washington.
GOVERNMENT PRINTING OFFICE, - - - - -	Washington.

We are exporting our Inks in large quantities to England and Australia, where they are preferred to foreign inks, for the reason that our Black Inks are brilliant and enduring; they do not change their color or fade from age, and superior results are obtained from our Colored Inks.

We can exactly duplicate the quality, tack and drying properties of any ink, no matter how long a time has elapsed since it was used, as we carefully preserve our formulas, which are the result of many years of experience.

Our Inks are ground in the latest and most approved mills, and we do not hesitate to say that, *by comparison*, they will be found the *finest* and freest from grit of any inks in the market.

Are · You · in · a · Rut ?

SOME PEOPLE, loth to accept progressive ideas, keep pegging away in the same narrow rut of their predecessors. Others, more enterprising, avail themselves of every advancement, thereby securing the benefits of modern machinery. No one will claim that the printing press of today resembles very much the one in the above cut. The improvements have been rapid and beneficial. Now, why not in *Folding Machines*? It is possible that such is the case. You can readily ascertain and get full particulars by addressing the

Brown Folding Machine Co.,

ERIE, PA., U.S.A.

NEW YORK.

PATENT IMPROVED TWO-REVOLUTION PRESS

WITH patented mechanism for controlling the vertical movement of the impression cylinder. It is extremely powerful, accurately fitted, free from friction and evenly balanced. A patented automatic device is also provided which prevents lost motion, and governs the degree of impression. Its patent reversing mechanism consisting of a cross-belt and spring shifter, is operated by the foot, which places the Press under the immediate control of the feeder. These advantages, with its Sheet Delivery, Hinged Distributer, Caps, Positive Slide Motion, Noiseless Grippers, etc., complete a printing machine that in every respect is equal to the most exacting demands of the times.

TRAVELING AGENT.

A. C. CAMERON, EDITOR.

EDITORIAL OFFICE, SECOND FLOOR 183-187 MONROE ST., CHICAGO.

SUBSCRIPTION RATES.

Two dollars per annum in advance; for six months, one dollar; sample copies, twenty cents.

Great Britain and Ireland, postage paid, eleven shillings and four pence per annum.

To countries within the postal union, seventy-five cents per annum additional.

Postage stamps are not desirable, but when it is found necessary to remit them, one-cent stamps are preferred.

THE INLAND PRINTER will be issued promptly on the twentieth of each month. Subscriptions, payable in advance, may be sent to the Treasurer by postoffice order or in currency at our risk.

THE INLAND PRINTER will spare no endeavor to furnish valuable news and information to those interested professionally or incidentally in the printing profession, and printers will confer a great favor on the Editor of this Journal by sending him news pertaining to the craft in their section of the country, particularly individual theories and experiences of practical value.

 JOSEPH SHIER, 401 Tenth street, San Francisco, Cal.

CHICAGO, MARCH, 1889.

FOR some time past there have been grave charges of gross extravagance and mismanagement brought against the State Printing Commissioners of Wisconsin, and a joint committee, consisting of three members of each branch of the legislature, has been appointed to investigate the same. This committee is empowered to subpoena witnesses, take testimony, compel the production of books and accounts, and inquire into any matter in connection with the public printing. It is, however, claimed by those who profess to know, that there is nothing in the charges.

ANOTHER VIEW OF THE QUESTION.

IN our last issue, under the caption of "Time to Call a Halt," we referred, in not very complimentary terms, to the too common and pernicious practice of bolstering up bankrupt concerns at the expense of solvent firms, and protested against its continuance, claiming that such indulgence was little less than an incentive to crime and a violation of honorable business rules. We emphasize all we then said, because its injustice has been appreciated by the trade, and also because it is time to enter a protest in no uncertain voice.

But let us see how this system, if system it can be called, affects and demoralizes the trade from another standpoint. Men who are between the devil and the deep sea, are not very apt to haggle about prices. If they cannot get what they want they generally accept what they are offered, no matter if such orders are filled at a positive loss. All is fish that comes into their net. If worst anticipations are realized, they have comparatively nothing to lose. From their standpoint they can afford to do work for less prices than their solvent competitors, and why? *Simply because they are doing business on other men's capital.* If they can scrape enough together once a week to meet personal expenses, wages, rent, etc., they are satisfied; their creditors can wait. Well, they eventually run the length of their tether; the bubble bursts; the inevitable collapse occurs, and their customers are compelled to go elsewhere. *But* they have been accustomed to get their orders filled at rates which no legitimate business firm could accept, and when a proper estimate is furnished they say, "Why, this is out of all character; Messrs. So-and-so have been doing this same work at twenty-five per cent less than your prices. If they could afford to furnish it at such rates, why cannot you?" oblivious of the fact that the expression "afford" is a *misnomer*. They care nothing about the circumstances under which it was produced; the result is what they are after. If they pay the rates demanded, they growl like a bear with a scalded head, though the likelihood is they will skirmish till they find some party or parties placed in a similar situation, who are willing to accept their patronage so long as paper makers, ink manufacturers, and printers' supply houses are willing to furnish material, on their I. O. U's.

Again, we insist it is a vicious policy for any responsible party to "bid in" a bankrupt establishment with the intention of again placing it in the field as a menace to legitimate trade, because in such a case it is sure to be "disposed of at a bargain," or run as a cutthroat institution, and every printer knows the significance of the phrase. When an abandoned hulk is found in the pathway of commerce the instructions to naval officers are to destroy it at all hazards, because it is preferable that one wreck should be sent to Davy Jones' locker than that a dozen "common carriers" should be jeopardized thereby. So in the examples referred to. Better scatter their contents to the four winds of heaven than allow them to remain as wreckers in the hands of irresponsible adventurers, and this is just what a "continuance"

means under the circumstances referred to. It will certainly pay better to give the corpse decent burial, and fumigate the premises, than attempt to resuscitate it, and thereby spread the epidemic. And this practice is doubly reprehensible when the purchaser, or backer of the purchaser, of such an enterprise, is in the main dependent on the patronage of those who meet their obligations by paying one hundred cents on the dollar. We make no reference to individuals. There is a vital principle involved in this matter, and the trade at large is in no humor to be hoodwinked by shilly-shally explanations.

An ounce of prevention, however, is worth a pound of cure. We are more interested in providing a present or future remedy, than in referring to the errors of the past. This remedy depends, in a great measure, in the exercise of intelligent and consistent discrimination between solvent and insolvent creditors; between men who are able to pay and who intend to pay, and men who cannot pay and who do not intend to pay, if they can avoid doing so. So long as the latter are favored at the expense of the former, or placed on a par with them, of course the present state of affairs will continue; but if a new leaf is turned over, and a line of demarkation drawn between the bogus and the genuine, the adventurer and the solid man of business, the same policy followed, in fact, as governs our wholesale dry-goods and grocery firms in their lines of credit, the evil complained of will soon disappear. Those who dance should pay the fiddler. If paper and ink manufacturers, etc., are willing to give unlimited credit to irresponsible parties, it is eminently proper they should pay the penalty for so doing when the day of retribution comes, instead of shifting the burden on the shoulder of those who have persistently protested against their doing so.

TYPOGRAPHICAL UNIONS AND THE TYPOTHETÆ.

IT pleases us to note that the senseless estrangement which has unhappily existed for some time past between the members of local typographical unions and the local typothetæ is gradually giving way to a mutual desire to bury the hatchet, to arrive at a better understanding, to acknowledge and respect each other's rights. This is the proper spirit to manifest, and it is to the interests of both to foster it. Gentlemen, you may kick in the traces for twenty years, and you will find that the advice of THE INLAND PRINTER pays best in the end. Your interests are the same whether you acknowledge the fact or not; neither can afford to agree to disagree, to remain at dagger's point, and the longer this feeling of antagonism prevails the more difficult will the reconciliation become. The *will* and the *won't* policy is a non-paying investment. There is ample room for both in carrying out the *legitimate* objects for which they were organized, but there is no room for either as an avowed enemy of the other. Workingmen have the right to associate for mutual protection, and employers have an equal right to do likewise. Self-preservation is nature's first law. The most successful business enterprises, both in the old and new worlds, are those in which these respective rights

are recognized and respected. And when difficulties arise, as arise they will in the ordinary course of events, experience has proven that the most rational as well as the most profitable method of settling them is by conference and concession, instead of by arbitrary dictum, or a refusal to listen to the requests of the "other side." A compromise (!) effected under such circumstances will be much more likely to be honorable and lasting than one secured under the "stand and deliver" policy—only effective under pressure—which will be discarded whenever an opportunity offers. We are aware it is sometimes claimed by both parties that no ill-feeling exists; but actions speak louder than words, and an armed truce gives the answer to the denial.

While it is true, as stated, a kindlier disposition is being gradually developed, there are some who still adopt the tactics of the ostrich, put their head in the sand, in the belief that indulging in bravado, and shutting their eyes to the inevitable, will carry their point. Said one of these individuals, a few days ago, when referring to this subject, "I am now master of my own office. I have men who study my interests, who do what I wish; the outlook is favorable, and everything is running smoothly." Yet the very opposite of this is true, more work and material having been ruined in his office—and we know whereof we speak—during the past twelve months than in the previous five years. And, again, a correspondent, a journeyman, writes, "The last kick was an unfortunate one for me. Although I was opposed to the demand, which my best judgment condemned, I have been made a scapegoat ever since. Why, I cannot tell."

Let us hope that the next time a dispute arises the reckless blatherskite, the bane of labor organizations, who is here today and away tomorrow, will not have so many listeners or followers; that the conservative element will exhibit a little more decision of character at the right time and place; that employers will be willing to admit there are two sides to the question, and that workmen have rights as well as themselves.

THE ILLINOIS PRESS ASSOCIATION.

THE twenty-fourth annual session of the Illinois Press Association, which convened at Danville, February 12, was conceded to be a success in point of attendance, the spirit of good fellowship which prevailed, and the practical character of the addresses delivered and discussed, all of which we expect to publish in the present and succeeding issues of THE INLAND PRINTER. As at the preceding convention, the feature which pleased us most was the development of a healthy determination to place the country press in that position to which its importance entitles it, by making it a positive factor in molding public opinion, instead of being as heretofore a mere reëcho of the metropolitan journal, a determination which, if lived up to, will increase its power at least a hundred-fold. Its readers have a right to expect that the country editor has a personality and opinion of his own, and an ability to make them felt and respected;

but this cannot be realized so long as he is content to act as an intellectual (?) automaton. Hence these annual reunions and interchanges of opinion cannot fail to exercise a beneficial influence, both on himself and the community he represents, alike from a moral, intellectual, social and business standpoint.

The officers elected for the ensuing term are gentlemen of ability and experience, eminently qualified for the positions to which they have been chosen, and under their administration we shall look for the continual prosperity of the association.

The recognition of THE INLAND PRINTER as the technical trade journal of the craft is an honor which is duly appreciated, for which we return our sincere thanks, and, at the same time, give the assurance that we shall endeavor to merit the confidence thus kindly expressed.

To the citizens of Danville—one of the most prosperous and progressive cities in the state—and especially the committee of reception, for the courtesies extended, many thanks are due. No efforts were lacking on their part to contribute to the enjoyment of their guests, a fact which was duly appreciated by all present.

WONDERFUL USE OF PAPER.

THERE does not appear to be any limit to the use to which paper will be devoted in the future. Already it has been utilized to subserve purposes never dreamed of a generation ago, and every day reveals new and important uses for it. Houses are constructed of this material, and car wheels, boxes, tubs, plates, boats, cars and other goods are made of it. Last among the discoveries is its preparation in the form of and purpose of being used for window glass.

The process of preparation is very simple and interesting, and is as annexed: "A window-pane is made of white paper, manufactured from cotton or linen, and modified by chemical action. Afterward the paper is immersed in a preparation of camphor and alcohol, which makes it like parchment. From this point it can be molded into remarkably tough sheets, entirely transparent, and can be shaded with almost the whole of the aniline colors, the result being a transparent sheet, showing far more vivid hues than the best glass." Nothing is said about the cost, but if a sheet as transparent as glass can be made at the same cost from paper it will possess a quality which glass does not, toughness. There is on exhibition at Worcester, Mass., a portable house to be used by the Harvard College astronomical party in their South American expedition. The building is constructed of heavy paper and canvas sheets, being stretched upon a frame of pine scantling three-quarters of an inch wide and half an inch thick. It is built in small sections, so that it can be easily and cheaply transported.

The building when ready for occupancy will be 18 by 22 feet, with eight-foot posts, and covered with a third hip roof, thus elevating the center of the roof about fourteen feet above the floor. The top is surmounted by a handsome galvanized iron cupola, in the center of

which is a large pipe which can be used as a stove funnel in cold weather. The cupola is made in movable sections for the purpose of affording ventilation. The sections are worked with chains, and can be regulated as the occupant wishes. The building is divided into three rooms, and lighted by six large windows; and has two entrances, one on either side. It will be taken down, packed and shipped to New York, where it is to be transported to Peru as soon as the necessary arrangements can be perfected with the Peruvian government to pass through the custom house, in bond. This is the largest paper house ever constructed in the United States, and probably in the world. It is regarded as a revelation by all who have viewed it. Corn must look out for its laurels, or paper will tread on its corns, as the "uncrowned king."

ELECTRICITY IN THE PRESSROOM.

WE have received from time to time at least a score of letters asking for an effective remedy for electricity in the pressroom. Knowing the annoying character of the grievance complained of, we have, as far as in our power lay, given to our readers the experience of those who claimed to have discovered and designed agencies for overcoming the same, without vouching for their correctness. Candor compels the admission, however, that we know of no positive, unfailing remedy, because we have been assured, from what we deem authentic sources, that while in some cases they have for the time being proved successful, in others they have proved abortive. For example, one correspondent asserts that he has followed the advice given in a certain issue with perfect satisfaction, and another avers that it had no effect whatever. But we live and learn. The American mechanic knows no such word as failure. The problem must and will be solved, and THE INLAND PRINTER hopes to be the medium to announce it. Let us hear from the pressmen.

CORRESPONDENCE.

READERS if you are not satisfied with the quality and quantity of the correspondence in the present issue, you must be hard to please. Many valuable suggestions will be found therein well worthy of your attention. Several communications are, however, unavoidably laid over, which will appear in April issue.

THE article on the "Use of the Hyphen," now going the rounds of the press, published in the February issue of the *Phonographic World*, and credited to the *National Educator*, was expressly written for THE INLAND PRINTER by Mr. P. Root, of Medina, Ohio, and appeared therein in February, 1888. Honor to whom honor is due.

THE special attention of our typefounders is called to the communication of Mr. James E. Munson, of New York, on the subject of "Unit-made Type Bodies," published in the present issue.

Written for THE INLAND PRINTER.

OBSERVATIONS AND ADVICE.

NO. II.—BY GUSTAV BOEHM.

IN my last paper on the subject of "Observations and Advice," I have tried to warn printers from relying too much on *brisk business at any price*, without consulting their mathematical faculties as to the remunerative qualities of this, frequently imaginary, flourish. I believe I have shown where the sore spot with firms who think they do a good business while they are actually earning nothing is located, and have pointed to the fact that a steady moving of the presses does not always mean a profit to the proprietor.

Today I will endeavor to speak of a few of the hardships experienced by the second-class printer—this term, once for all, has the same significance in which I have used it before: for printers with a certain expense list and the inconvenience of the competition with the small concerns—hardships which one is apt to experience if out for *observations*, and which are well worthy of consideration and *suggestions*.

The first of all is of a *capital* nature. Business men do not care to speak of their financial matters to everybody unless they have a handsome bank account to speak about, and this class of typographers, alas, is not exactly within the range of my observations. It is well known that fluent capital is generally not very "fluent" with printers. Their wealth is represented by their plant; their machinery, their type; their tools require considerable cash, and they have sunk their money in it. The printer is not compelled to carry a large stock. His manufacture is not of an *a priori* character—that is, he is not forced to manufacture fall goods in the spring whether we will have a fall or not, for in this climate of uncertainty the seasons fail at times to set in. He manufactures to order. He need not carry any dead stock, but is only supposed to buy what he needs after he has already sold the article, or, in other words, accepted an order. It is this method which induces many to go into business if they only have enough cash to buy the machinery and type. They are under the impression that they need no capital to run the office, as the work they will do is already sold before it is done. I may here mention the fallacy of this supposition is frequently the cause of a succession of innumerable days and nights of misery, if he who is a victim of it has any feeling of decency and honor in his soul. Goethe, I believe, the greatest German poet, says, somewhere:

"Wer nie die Kumervollen Nächte
Auf seinem Bette weinend sass,
Der kennt euch nicht ihr himmlischen Mächte,"

(or similar) the translation of which would read about, that he who has not spent his nights in tearful trouble cannot judge the power of destiny. This passage of the great poet finds its realization with the unfortunate who has started in business in the false belief that the plant is all he will need to do business. Pitiably mortal! thou did'st not think of the committees of lodges, of societies and the like, and their manner of doing business. Let

me explain these methods which may become the source of incalculable trouble to your heart.

Suppose you are a printer in one of the smaller towns. Your chief trade consists in furnishing the printing for entertainments of lodges, churches, etc. Your business is based upon a cash principle, that is, you pay cash for your goods and expect to receive cash payment when your work is done. Your capital is invested in your plant; you cannot afford to give long credit. Now let us investigate the business methods you will encounter.

First, there is the committee which calls for an estimate. They intimate from the start that there are others getting estimates from other printers, and that you must figure very low if you want the job. They exonerate their own personality for their shabby demands with the excuse that it is not for themselves that they are working but for the interests of the lodge. Well, you consider the matter; you desire the work, and in calculating give them the benefit of all your cash discounts on the stock, and figure very closely on the labor. You are yet "green" in experience and take the principle "quick sales and small profits" as a basis. If you are the lowest bidder, a circumstance in itself a proof of the smallest margin, you will get the work. You hurry the same, deliver it when promised, and, handing your bill to the committee, expect to be paid at once, because the principle upon which you have based your price, as already mentioned, reads: quick sales and small profits.

You must be able to handle the money rapidly in order to live on small profits. But now comes the disappointment; the committee, "cool as a cucumber,"—to use a familiar phrase—pockets the bill and announces to you that you must wait until the meeting of the society to have it passed. In many cases you are even expected to wait until the ball, or whatever it may be, is past, before you get paid. You protest; you mention your low figure and the necessity of getting your cash back as quick as possible. You remind the committee that they received an estimate on the work; that they reported this estimate to the lodge, and that it was found satisfactory; why wait for the sanctioning of what the society has already sanctioned by awarding the work to the lowest bidder; what more is there to pass on the bill, which comes up in every respect to the stipulations of the estimate? Will it be of any use? Never. You must wait and lose weeks and months before you get a chance to handle the money again.

Now this method, although of general practice, is a nuisance; it is unbusiness-like, ungentlemanly; it almost borders upon the verge of acquiring goods under false pretenses. Remember, ye societies, that it makes the printer the *entrepreneur* of your enterprises; that he must put his money in the entertainments which you are giving; that you arrange them upon the strength of the credit which you force him to grant. There are cases in which one printer runs the entire ball season of a town with his money, and while the true arranger reaps material profit, he receives nothing but the pittance which his low figure allows him for a margin. I would

suggest that this system be abolished as quickly as possible wherever it reigns. Make your estimates conditional to the cash payment of bills. I cannot understand for the world why a printer should be expected to do the printing of ball work—tickets, for example—in January, and wait for his pay until the ball has taken place, as a rule, two to three months thereafter. Would it not be more business-like for societies who accept the estimate handed in by a committee, and consequently learn all the particulars of the transaction from the report of that committee, to empower the same to pay for the goods on receipt thereof, at the terms stated in the estimate, than to compel the printer to await a second resolution, which they are so kind as to style, “the passing of the bill.” Oppose this system. Combine and oppose it. Do not suffer the injustice to let a society withhold your money without paying interest for it. Lodges and the like will soon enough accept the modus of C. O. D. if they cannot get their work otherwise. It cannot do as much harm to them to lay out the money as it will harm you to have it withheld. Besides, they are the enterprisers; they are the sharers of the profits, if any, and they ought to run their own chances without the aid of your capital. This, I believe, is no extravagant demand; it is simply justice, common sense.

Another observation open to suggestions is the question of working for the trade. I believe, during the late meeting of the Typothetæ of New York, this question came up for discussion. I do not know what the result was, but should suggest that it be stopped, the quicker the better. The phrase, “working for the trade,” generally implies doing work for a party who takes your profits while you invest your capital. The stationer, who comes in prime consideration in this question, expects that the printer should deliver his work at a lower rate than he does to his other customers, so that he can make the profits which originally belong to the printer. Everybody in the printing business knows that trade work does hardly allow any margin. I have spoken to a prominent stationer of New York, lately, whose orders for printed stationery are quite considerable.

“Mr. S.,” I asked, “why don’t you put in your own presses and type?”

He smiled. “Presses and type?” was his reply, “My dear sir, do you know that I must invest \$10,000 before I could commence printing my orders; do you know that I could not produce the work with my own plant any cheaper than I can get it now at trade price?”

I was astonished, amazed, at the coolness with which this honorable gentleman assured me that “he knew that he actually saved the interest on \$10,000” by getting his work done outside. Don’t you think, my printer friends concerned, that it is about time to stop making investments for the benefit of the stationers? Let these gentlemen sink their own capital in plants if they desire to make the profits of the printer, or let them at least be sufficiently decent to pay a value for a value received.

“Working for the trade,” as the term is understood at present, is almost insanity.

Written for THE INLAND PRINTER.

QUADRATS.

BY PICA ANTIQUE.

THE point of a correspondent against THE INLAND PRINTER, with regard to vacations, with pay, in the government printing office was not well taken. The equity of any employé being granted such leave was not under discussion; the equity of the craft being placed upon the same footing with others working for the government is an entirely different matter, and the result should be a subject of congratulation rather than criticism.

The battle was long and hard fought, but justice triumphed in the end. *A large proportion of the brains of departments is to be found in the government printing office,* the men labor as faithfully, for more hours, as a rule for smaller remuneration, lose time by sickness and furloughs, and why they are not entitled to the same recognition, the same gratuity, if you please so to call the thirty days’ leave, passeth our comprehension.

For years clerks were thus favored to the exclusion of others; had sick leave (with pay) in addition granted to them; many more holidays and privileges. Why this was the case was a difficult theory to answer; why, when right is at last recognized, there should be fault-finding by any of the brotherhood still more so.

Right, we say, for if there is any in the matter it belongs not to one class, but to all. There is no justice in making fish of one and fowl of the other. If Mr. George W. Childs chooses to give each of his employés a valuable Christmas present, have those working for others just reason for complaint? If the government finds it to be to advantage to keep up the health and vigor of its trained corps of workmen by granting annual recreation, have the workmen in private offices just grounds for grumbling?

The discrimination against the craft was unwise, unjust; should have been done away with long since, or what is more to the purpose, never permitted. The equity of the giving does not enter into the calculation. Those who are wise by experience in department work, who best know the necessities of the case, so decided. That is sufficient. All craftsmen demanded *was to be placed upon the same footing with others*; not be ignored or trifled with, and, having succeeded, are to be congratulated.

In this, I am certain, all who know the “true inwardness” of the matter will agree and fully sustain the position taken by THE INLAND PRINTER, with its customary advocacy of strict and impartial justice. To it we give most hearty indorsement, so will the craft at large, and join in the wish that “long may she wave.”

* * *

It is somewhat singular that men possessed of at least ordinary intelligence fail to comprehend the fact that editorial rooms and printing offices are busy places and require silence. But so it is. Writers, proofreaders, copyholders and compositor are considered legitimate prey for the idle and gossiping; business is delayed,

errors cannot be avoided, patience is strained to the utmost and financial results sadly diminished.

Said a United States senator to me the other evening, after the departure of a visitor who, without the slightest excuse of business, had "buzzed" (the word is expressive if not polite) him for over an hour, "I have only one caller who appreciates how onerous are my duties, and how valuable my time. He is an old friend whom I respect, admire, and would gladly chat with. About once a month he drops in, and, without taking a seat, remarks, 'Glad to see you, senator; thought I would call and pay my respects. Busy, as usual. Hope you are quite well? Good evening,' and bows himself out. I wish there were many more like him."

Editors and printers will echo the longing, and perhaps some of the bores who infest offices may read this and take the hint that their room is very much more to be desired than their company. Hope so.

* *
*

It is pleasant to record the utterances of one, a Christian minister, who is above the bigotry of littleness and littleness of bigotry, who keeps abreast of the times, who is not blinded by superstition and intolerance and is willing to acknowledge good work done, even by those not of the same "household of faith." Therefore "let it be recorded" in the most fitting of all places, the pages of THE INLAND PRINTER, that the *Rev. Robert McIntyre*, of the Methodist Episcopal church, of Chicago, says, when speaking of Sunday papers, "The press and the pulpit are one. God has joined them together. I do not agree with ministers who denounce the daily papers and regard them as foes—workers of iniquity. The editor is a more powerful man than the preacher. He speaks to 100,000, 300,000, 400,000, we to but few hundreds. If congregations forsake the churches for the Sunday paper it is because the papers have what the preachers have not, the power to touch the people. I cannot speak against the Sunday newspaper. It is with the people; its workers are among and of them. It touches every chord of life, and is the greatest power for good on earth. It is practical, not theoretic, like the minister's expressions. It is real, not a specter like him. It is almost the only reading and education I had (at an early day); it kept me from the card table and the beer garden. I know that the Sunday paper does far more good than evil."

When ministers recognize and practice the great truths proclaimed in the above extract it will be a better and brighter day not only for the religion of humanity but that other and better one of which the Holy Exemplar was given to earth when the stars of the morning sang a jubilant anthem.

THE master printers of Berlin recently appointed a commission to regulate the question of apprenticeship. The outcome of their deliberations has been that no apprentices will in future be taken unless properly bound by indenture. After having served his time the apprentice will be subjected to an examination before the commission. Of course, the American boy, who can "pick up" a trade, will laugh at such red tapeism.

PHOTO-MECHANICAL PRINTING.

BY D. WINSTANLEY.

THE PROCESS MEISENBACH.

I HAVE before me about a couple of score of prints by the photo-mechanical process Meisenbach, one of the Meisenbach plates just as it was received from the makers of it, and several descriptions of what is said to be the "process Meisenbach." I propose now briefly to re-describe the process, and then to criticise it and its results in the new light I have thrown upon the subject of photo-mechanical printing in my former article (p. 717, *P. P.* 1888).

This is the process as described on page 29 of Mr. Burton's book on *Photographic and Photo-mechanical Printing*, and on page 514 of *Wilson's Quarter Century in Photography*.

"A transparent plate is hatched or stippled in parallel lines. A transparent positive is made of the object (which it is desired to depict—Burton). The two plates are joined, preferably face to face, and from the combined plates a definite negative is photographed in the ordinary way. In order to cross-hatch and break the lines of the shading, the hatched or stippled plate may be shifted once or more (or twice—Wilson) during the production of the (said definite—Burton) negative. This negative is transferred in the usual manner to form a typographic block."—(Burton.)

"The photographic negative thus obtained may be either applied direct to a zinc plate, or a lithographic transfer may first be made in the usual manner, and the plate subsequently bitten by acid to form a block in relief. Considerable importance is attached to the shifting of the hatched or stippled plate, this being the part of the process which is especially sought to be protected by the patent."—(Wilson.)

The process is also thus described by Herr Hermann Gunther on page 99 of the present volume of the *News*:

"In the Meisenbach process, the part which is especially sought to be protected by the patent is the production and use of the lined transparent glass screen, which has for its purpose to break up the half-tones of the photographic image. This is effected in about the following manner: A white screen of large dimensions, provided with a series of parallel lines, is photographed, and hereby as much reduced that on the resulting negative the lines are very close together. A negative is now made of the object, the lined negative being placed between the object and the negative, at first so that the parallel lines are in a vertical direction to the axis of the lens, then it is shifted once during the exposure so that the lines are now in a horizontal direction to the former ones. By this way an intersection of lines is obtained, and the photographic half-tones are broken up. The negative thus obtained is transferred in the usual manner to a zinc plate, and subsequently etched by acid to form a block in relief."

Herr Gunther, having thus described the process Meisenbach, proceeds to consider that supposed to be employed by Messrs. Angerer and Goschl, of Vienna, which does not differ materially from that of Meisenbach. In this latter description, however, he makes the following very important remark, which clearly applies as much to the one process as to the other. In alluding to the cross-lined screen, he says, "It is important that the transparent lines on it representing the black lines of the reproduced screen are narrower than the opaque lines forming the intermediate spaces." He also states that "the lined plate should have at most six black lines to a millimeter"—i. e., 150 to the inch—as "otherwise it would be difficult to transfer the image to the zinc plate, and to etch it, and also in printing the finished block many difficulties would be met with. It is, therefore, better," he continues, "to use a cross-lined negative with only four or five lines to the millimeter"—i. e., 100 to 125 to the inch—and this, he says, "may be placed before the sensitive plate at a distance of one and a half to two millimeters"—i. e., not "joined," but with an interval between of from one-seventeenth to one-twelfth of an inch.

So much for my quotations.

It will be seen that these descriptions of the process do not exactly coincide. Messrs. Burton and Wilson agree that the lines

should be "hatched or stippled," while Herr Gunther says they should be "provided." Probably they all three mean they should be ruled. "Hatched or stippled" lines would, I apprehend, be discontinuous, and present one of the appearances here sub-joined:

Herr Gunther lays stress upon it, and most properly, that the transparent lines on the negative should be narrower than the opaque lines forming the intermediate spaces. They should not only be narrower, but they should be much narrower, and here is the reason why. The size of each aperture in the grained screen—or in the network screen, as it would be more correct to call it—directly determines the size of the smallest dots seen in the ultimate print obtained, which dots are of the same magnitude as the apertures of the net, and constitute the lightest kind of shading. Were the black lines which separate the apertures or spaces of the same width of those spaces only, clearly the largest dots producible by the divergence of the rays of light would have but twice the diameter and four times the area of the smallest, as when they had reached this size coalescence would take place, and the shading would become a continuous mass.

This fact is rendered evident in Fig. 1, in which the thick horizontal lines represent the opaque parts of the network, and the lines which pass between them at various angles the diverging rays of light which produce the dots, differing in magnitude according to the different depths to which they penetrate.

FIG. 1.

It is of no consequence at what angle this divergence may take place so far as our present consideration is concerned, nor how that divergence may be effected or controlled; the fact remains that the largest dots will have only twice the diameter and four times the area of the smallest, if the lines of clearness and the lines of blackness in our network are of a common width, and the effect will be that if there are in it any areas of black at all larger than a single dot, the whole picture will be heavy and overcast as with a cloud, excepting where a few pure high-lights disport themselves sporadically amid the general gloom. This defect exists, to a greater or less extent, in many photo-mechanical prints which are now before me, and among them are some of the earlier examples of the process Meisenbach. The remedy is obvious. It is to broaden the opaque lines of the network granulator, as depicted in the final negative, or rather to increase the proportion which their breadth bears to that of the spaces which intervene between, and thus bring the intercepting screen nearer to the optical centers, from which, for theoretical purposes, the diverging rays may be supposed to spread.

As it is in the lightest shadings of a picture that the more delicate gradations are most perceptible, it will be necessary, in order to get an agreeable rendering, that the disparity in the width of the obscure and transparent spaces shall be somewhat considerable, and at a guess I should say that their proportions should be as ten to one. There must, however, be a point—and not a very indefinite one—at which this disparity of width becomes an evil and not a gain.

In Fig. 2 we have a surface in which two systems of black lines of equal width cross each other at right angles, and leave spaces between as broad as the lines themselves. The whole square which is formed by this device is eight units in length on every side, and has, accordingly, an area of sixty-four square units. The clear parts, however, number sixteen only, and each is one square unit in its area.

It follows, then, that if we photograph a transparency through a screen like this, it is not the whole of it we photograph, but only samples of its parts taken with such impartiality as is afforded by equality of distance, but amounting in the aggregate to twenty-five per cent only of the whole. If our black lines are twice as broad

as are our clear ones, this small area of twenty-five per cent becomes diminished to eleven per cent, and if our black lines are ten times as broad as are our clear ones, the actual quantity of our transparency visible through these latter will amount to only 0.826 per cent of its total area, or less than one-hundredth part. It is evident that though the laws of probability indicate that such a method of selecting samples would, in the multitude of cases, give an aggregate which was sound, yet in the instance of any individual photograph discrepancies from the literal truth must not only exist, but in some way or other must become apparent, and that the number of these discrepancies must also increase with the disparity in the width of the lines. Hence it follows that the wider our black lines, and the narrower our clear ones, the larger the number of half-tones we obtain, and the larger the number of appearances, hereafter to be considered, which are fictitious altogether, and unlike anything whatever in the negative. The process Meisenbach, however, is further complicated by the very thing which its author emphasizes in his claims—the shifting of the one-lined screen. Suppose we have a transparency, and a one-lined screen "joined face to face," and ready to be photographed, and suppose ten seconds to be the time which will give the best result, and suppose further that five of these seconds have been given, the clear parts of the transparency, even where crossed by clear lines, will have been but half exposed, and on development would yield only half-tones instead of blacks. Suppose, now, that we shift the screen, and having, without altering the position of its plane, turned its lines in a direction at right angles with that they occupied before, and "joined it face to face" with the transparency again, complete the exposure we have given. The results will be that the clear parts of the transparency will only be fully exposed where they have been twice crossed by the clear line screen, and they will be represented in the negative by areas of which one-fourth only are up to density, one-half of which are half-tone, and one-fourth of which are clear, as indicated in Fig. 3.

FIG. 2.

The half-tones will be represented by areas of which one-fourth part only is in half-tones, one-half of which is quarter-tone, and one-half of which is clear, as indicated in Fig. 4, while the dense parts of the transparency will be given in clear glass alone. This is certainly no faithful way of rendering the different shades of the original photograph employed.

FIG. 3.

FIG. 4.

I will next proceed to consider what the results of this rendering will be, and subsequently to show how the theory advanced in my former article may be more accurately applied.

P.S.—The matter of the preceding article and its immediate successor was written in May last, but for various reasons its appearance in print has been delayed. In the interval, as I gather from the *Photographic News* of August 24, "one of the Meisenbach patents (No. 2156 of 1882) has been declared in the official journal of the patent office to be void." This is the patent of the process under criticism now. The voidance of the patent I expected, but did not apprehend it would take place so soon.—*Photographic News*.

P. E. DOWE,

Secretary and treasurer of the Johnson & Dowe Manufacturing Company, Richmond, Virginia, whose portrait is presented on page 491, was born February 17, 1860. His career has been a somewhat varied one, his first business venture being an investment at the age of twelve years, in a printing press and a few fonts of type. Finding it uphill work to get a job under way he visited a newspaper office daily until a sufficient knowledge was gained to help him execute what was considered fairly good work, at least in his own estimation. At fourteen he found employment as errand boy in a store, from which position he successively rose to clerk, assistant bookkeeper and cashier in different establishments. When eighteen, finding that a few hundred dollars had been saved during his first four years' business (occasionally part of night, and sometimes nearly all night being spent at work on press), he became proprietor of a country general store, at the same time purchasing a larger jobber and several additional fonts of type. After a year's experience he sold out at an advance of a few hundred dollars.

His next move was in the nature of a larger business venture in a thriving village in northern New York, where he remained but a few months, however, as he was tendered and accepted a position as traveling salesman, in which capacity he met with remarkable success. For the past four years he has been connected with the well-known press-building firm of C. B. Cottrell & Sons as its traveling representative, being recognized as one of the most popular men on the road. As stated, he is now the secretary and treasurer of the Johnson & Dowe Manufacturing Company, electrotypers and printers' supply dealers, of Richmond, an establishment which fills a long-felt want in that section of country. He is emphatically the right man in the right place, and THE INLAND PRINTER wishes this new enterprise abundant success.

Translated for THE INLAND PRINTER.

PLANTIN'S POLYGLOT BIBLE.

BY ADOLPHE SCHOLL.

FOREMOST among the productions of the printing press of three centuries ago stands Plantin's Polyglot Bible, a monument to its compiler's and publisher's untiring energy and perseverance, and a fine demonstration of the high standard to which the printing art had attained in the sixteenth century. Christopher Plantin was born near Tours, in 1514, but removed to Antwerp, where he founded what afterward became the most famous printing establishment of the day. The Polyglot Bible is printed in four languages—Hebrew, Chaldean, Greek and Latin—and consists of eight volumes. Its publication was commenced August 2, 1568, and was completed August 10, 1573. A complete and excellently well-preserved copy of this interesting work is on exhibition in the British Museum, and the visitors look with a sort of awe at the spotless pages of this now very rare book.

The compiler of the work, Benedictus Arias Montanus, was a man noted not only for his great learning and his linguistic acquirements, but also for his simplicity in dress and abstemious mode of living. He drank no wine, was a strict vegetarian, and his only pleasure was the pursuit of the work in which he was engaged. During the publication of the book he worked eleven hours every day, including Sundays, in order to keep the compositors supplied with manuscript. Forty workmen were continuously employed during the five years on the composition, printing and binding of the work. So much interest was manifested by learned men all over Europe in the undertaking, that no visitor to Antwerp failed to visit Plantin's establishment, and to admire the systematic manner in which the successive operations were conducted from the compositor to the finisher. Many wealthy people desired to have copies of the work printed on parchment, but King Philip II, who was then ruling Holland with an iron hand, would permit none but himself to possess such a copy. He ordered for his own use thirteen copies to be printed on parchment, and it took 1,600 sheep pelts to fill this royal order. The total edition, including

the thirteen parchment copies, was 1,213, 960 of which were on great Royal paper of Troy; 200 on Lyon paper; 30 on Imperial paper, with the eagle as water mark, and 10 on Italian Imperial paper, which latter were designed as presents to distinguished personages. Plantin was of the opinion that these ten copies were superior in their elegance and general execution to the parchment edition. Philip II presented six of his parchment copies to the Escorial library in Madrid, one to Pope Pius V, and one to the Duke of Savoy. The Duke of Alva, that blood-thirsty wretch, who was then oppressing the conquered Dutch, also received a parchment copy, and in his letter of presentation Montanus shows the abject fear in which even men of his class lived by heading it, "From the best Monarch to the best Minister." This is the copy now in the British Museum. That Alva did not read it very assiduously is attested by its perfect preservation and scrupulous cleanliness.

But the publication of the work, although it made him famous, brought Plantin many disappointments. He started out with the promises of financial assistance from wealthy personages, and the patronage of the king, but the completion of the work found him a bankrupt. The enormous sums required had eaten up his own resources and exhausted the patience of his patrons. Another mortification awaited author and printer. Scarcely had the work been issued when Pope Pius V declared the two as heretics and put the bible in the *Index*, on the ground that the Talmud was mentioned in it and that a heretic named Masius had been employed in its compilation. The succeeding pope, however, was more tolerant and struck the Polyglot Bible off the list of prohibited books. Plantin died in 1589. He had as contemporaries such eminent men as Aldus and Estienne, but the learned men of Europe agreed in regarding him as the foremost printer of his time. In 1872 the Escorial Palace was struck by lightning and the valuable library partly destroyed by fire, including the parchment copies of Plantin's bible. What became of the others is not known, so that the one in the British Museum is the only complete parchment specimen extant open to the public.

A UNIVERSAL LANGUAGE.

"A universal language must," writes Professor F. A. March, in the *Forum*, "be a growth. Some national language must expand until it covers the whole world. Of late years the English language alone has been much spoken of as likely to grow so great. Hardly any philosophic linguist attempts to forecast the future without some discussion of the destiny of English; and De Candolle calculates that within a hundred years English will be spoken by 860,000,000 of men, German by 124,000,000 and French by 96,000,000. At present the populations either speaking the English language or under the domination of English-speaking peoples number more than 318,298,000, or one-fourth of the population of the globe. The English-speaking races occupy one-fourth of the dry land of the earth, and own nearly two-thirds of the tonnage of the ships. They live in all regions; they handle all articles of trade; they preach to all nations; they command one-half of the world's gold and silver, and distribute more than two-thirds of the bibles and testaments. More than one-half of the letters mailed and carried by the postal service of the world are written, read and mailed by the English-speaking populations. The expectation that English will come into universal use is not based upon anything in the nature of the language, but rather on the character and circumstances of the people. The English people have been the great colonizers of modern times. They have taken possession of America, of Australia, of South Africa, the regions which are to be the seats of new empires, and they control and assimilate the populations which flow into them and which grow up in them."

LOS ANGELES Typographical Union contains quite a number of lady members, one of them, Miss Bernice Taylor, filling the office of reading clerk for the past two years. They all take a great interest in the union and are always present at the meetings.

P. E. DOWE.

SOMETHING ABOUT PRINTING IN MISSISSIPPI.

BY DUNCAN F. YOUNG.

SO many printers in times past came to New Orleans from Mississippi that it became quite common to say of any printer who had just reached the city that he had come from Mississippi. I will add that for a time there really were too many typos coming to this city from that direction, so much so that the state, being reduced in the mind's eye to a schoolhouse, might justly have been termed a school of typography. Yet this would not have been wholly correct, for while not criticising the mechanical abilities of those printers, there have been many from that state coming under my personal supervision, who were sadly deficient in the typographic art. And, does not every printer who has worked at the business in that section speak of pica as "Mississippi agate?" We all know, then, that a building in which such books are kept is no place in which to obtain an education. Nevertheless, the State of Mississippi has furnished to the world some first-class printers in every particular—first-class even when we compare them with the old-time printers who learned their trade in job offices. These, it seems, soon leave the state and the business to itself and boys, which latter show themselves in glaring colors in the average newspaper of that state. This deplorable state of affairs is due to the unorganized condition of the craft. Unions exist there, it is true, but so puny are they in the greater number of places that the apprenticeship law seems to have been entirely ignored. This law overlooked, we may look for and always find the true cause of the cross-purposes enacted in the printing craft.

Natchez, with its commanding location and population of 8,000 or 10,000, is a striking example of the power that might be wielded with the banner of unionism and a strict apprenticeship law. In this city there are two newspapers, the *Democrat*, morning, and the *Banner*, evening, both of which have job offices attached. Boy labor is employed here generally. The *Democrat* has two compositors on cases, one of whom is also pressman, and five boys. There is not much wonder that there is a glut in the idle labor market, and schools go begging for scholars when one man is both a pressman and a printer, and five boys compose educational matter for—whom? Added to the *Democrat's* force are the foreman and a job printer. Besides the job offices mentioned, there is another in which one man and a boy are employed. The *Democrat* turns out jobwork of every description, including theatrical work. I have not seen any of its productions, but am told its job printer classes as A1. This paper is owned by James W. Lambert, uses steam power, and has a new press bought of the Campbell Company. The *Banner* is worked on a wheel-hand press, which formerly served the *Democrat*. It is almost superfluous to say that the business in Natchez is in a beggarly condition, yet anyone from that place who has the welfare of printers at heart would advise all traveling members of the craft to stay away from there.

Vicksburg presents a more pleasing aspect. In this place there are two job and three news offices. The *Commercial-Herald*, the largest and best equipped office in the city, is owned by George W. Rogers, senior partner and business manager; William Groome; Charles E. Wright, editor, and T. W. Campbell, and is a union office. The *Evening Post*, which uses plate matter, is owned by John G. Cashman, who was a charter member of No. 105, but who employs nothing but boys on his paper. The *Sunday Democrat*, which is a patent outside and is printed by the *Herald*, is owned by Clem Davis, an ex-member of No. 105. The *Commercial-Herald* does all kinds of jobwork, and has a complete bookbindery. In this office there are four Gordons—two small; two medium; two Cottrell and Babcock presses, and one Cranston newspaper press. The *Evening Post* has one small and one medium Gordon press, and one Campbell (country) newspaper press. Messrs. Rogers and Groome were charter members of No. 105, and took their withdrawal cards on going into business for themselves. Mr. Groome is at present postmaster at Vicksburg. Mr. Rogers repre-

sented Vicksburg union in the International Union in 1870. Mr. George W. Smith, who worked on the *Delta* in New Orleans in 1851, is now working on the *Commercial-Herald*, and he sets type well yet.

Vicksburg union, No. 105, numbers at the present time ten members, and Mr. Michael F. Battle, who has been secretary for thirteen years, is an old-timer, having entered the arena of stick and ruledom under Mr. Rogers in the tri-weekly *Sentinel* in June, 1857. He informs me that he has been in one office ever since the war. Thirty-one years at the case! Alas, such a case! Which case, Mr. Battle or the boxes, I am not prepared to say. It nearly equals that of Myra Clark Gaines. Mr. Battle has my sympathy.

In closing my paper, I beg to return thanks to Mr. William J. Lyle.

BRONZE PRINTING.

Many printers do not like to take orders for bronze printing, the main reason being that in many instances it does not pay. The addition of bronze to a job is equal in expense to two or more colors, and comparatively few concerns are willing to pay what it is worth. For example: Say that 1,000 copies of a catalogue cover, printed with black ink, is worth \$6.50. If the cover is to be printed in gold and black, then the printer should add the following items—of course, being governed by the amount of bronze used, the time taken to prepare the extra form and the number of boys required for the work:

Preparing form for bronze	\$ 75
Two ounces gold bronze powder	1 00
Two hours' time, making ready and feeding job, and size for same ..	1 50
Two boys, two hours' time, dusting on powder	1 00
Two boys, two hours' time, cleaning off sheets	1 00
Total	\$5 25

This would bring the job up to \$11.75. Now, how many of you who read this can say that you get a fair price for your bronze printing?—*Superior Printer.*

BINDERY ESTIMATE FORM.

The following bindery estimate form is furnished by Frederick Jones & Co., to the *American Bookmaker*. The form is bound three on a page, and contains every item that goes into a blank book.

THE LIBERTY MACHINE WORKS,

SOLE MANUFACTURERS,

54 Frankfort Street, New York.

THE UNION TYPE FOUNDRY, CHICAGO, Western Agents.

THE CHANDLER & PRICE. OLD STYLE GORDON PRESS.

Over **NINE HUNDRED** sold and **EVERYONE** given entire satisfaction.

SPECIAL FEATURES:

Steel Shaft and Steel Side Arms, Forged from Solid Bar, without Seam or Weld. The Most Positive and Practical Throw-Off yet Introduced. Best Material Used. Most Carefully Finished.

Impression Throw-Off.
Hardened Tool-Steel Cam Rollers.
Depressible Grippers.

We have recently greatly improved these Presses, enlarging and strengthening the parts, and so arranging the disk and roller carriers as to give greatly increased distribution and we believe it is unequalled in this respect by any press now made.

THE MOST DURABLE AND HENCE THE MOST ECONOMICAL PRESS FOR THE PRINTER.

WE CHALLENGE COMPARISON.

SIZES AND PRICES.

EIGHTH MEDIUM, 7 X 11, with Throw-Off and Depressible Grippers, \$150.00	HALF MEDIUM, 14 1/2 X 22, with Throw-Off and Depressible Grippers, \$450.00
" " 8 X 12, " " " " 165.00	STEAM FIXTURES, " " " " 15.00
QUARTO MEDIUM, 10 X 15, " " " " 250.00	CHANDLER & PRICE FOUNTAIN, for either size Press, " " " " 20.00
HALF MEDIUM, 14 X 20, " " " " 400.00	BUCKEYE FOUNTAIN, " " " " 10.00

The two Half Medium sizes have four Rollers. With each press there are three Chases, one Brayer, two sets of Roller Stocks, two Wrenches and one Roller Mold. No CHARGE FOR BOXING AND SHIPPING. ALL OUR GOODS GUARANTEED IN EVERY RESPECT.

N. B.—None genuine without the name of Chandler & Price, Cleveland, Ohio, cast upon the rocker.

THE BUCKEYE FOUNTAIN.

Patented June 5th, 1888.

Do not confound this Fountain with others similar in appearance.

This Fountain will be found the easiest attached, easiest worked and most practical ink fountain in the market. Its roller is so adjusted as to supply ink uniformly on either a large or small job. Its size also makes it practical to use expensive ink without waste, only a small amount being required to fully supply the fountain. The bottom is so constructed as to permit all the ink to run down to the roller, there being no pocket or dead space. By turning back the pawl from the ratchet wheel, the operation of the fountain is suspended without missing an impression. The fountain can be interchanged from one press to another without removing the attachments, so that by having two or more fountains the color can be changed without wasting the ink, which must occur if one fountain has to serve all colors. An examination of the cut will show without explanation the manner of attaching. It should be adjusted with impression on, so that the roller of the fountain will meet the upper form roller when at its highest point. The roller can be removed for cleaning by turning back the thumb screws until the caps can be removed through the slot in front, then by raising the roller it will come out through the same slot.

Do not confound this Fountain with others similar in appearance.

PRICE, \$10.00.

CHANDLER & PRICE FOUNTAIN.

To those whose special work requires greater capacity than can be obtained with the Buckeye, we offer the Chandler & Price Fountain, which is so made as to permit contact with the rollers the whole length, and will thus furnish a greater supply of ink than the Buckeye. Its construction and operation will be readily understood from the cut, which shows it attached

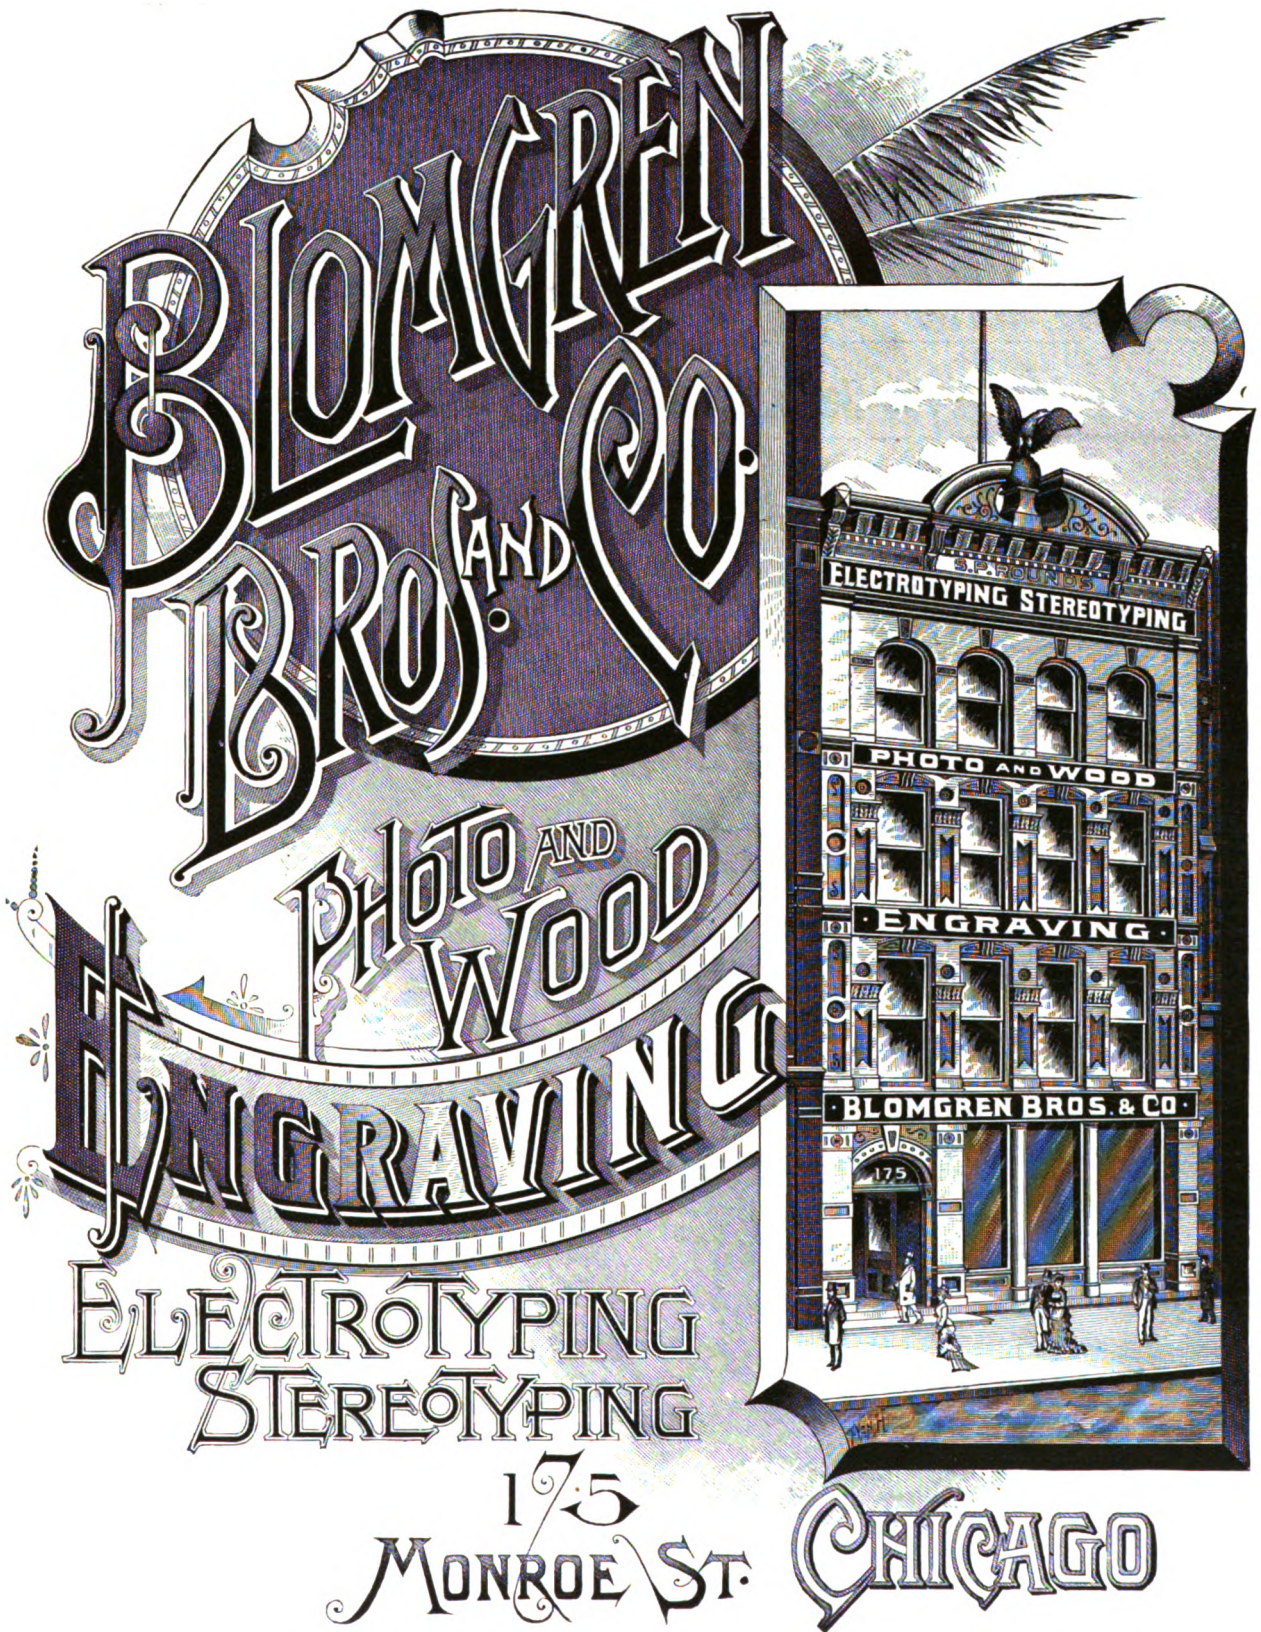

to a 14 x 20 Chandler & Price Press. It is without all extra and useless parts which complicate and add to the difficulty of using, and at the same time is complete with all the requisites of a first-class fountain.

PRICE, \$20.00.

CHANDLER & PRICE, East Prospect and C. & P. R. R. Crossing, CLEVELAND, OHIO.

— THE —
Peerless Gauge Pin
FOR PLATEN PRESSES.

PATENT APPLIED FOR.

In calling the attention of the careful printer and pressman to the PEERLESS GAUGE PIN, we do so with the firm conviction that it is in every respect the very best article for the purpose for which it is intended ever invented. It has been the aim of the inventor to overcome all the defects in the gauge pins now in the market. We claim that this aim has been successfully accomplished, and are willing to abide by the verdict of the practical pressman.

For fine color work and all work requiring a close register, the pressman will find the Peerless Pin of great assistance in the production of fine, perfect work, and a trial is all that is needed to convince him of its superiority over all others.

In size the Peerless Pin is the same as a two-em pica quad. It is neat, firm and durable, being made of steel, and is warranted to work perfectly and give satisfaction.

YOUR SAMPLE ORDER SOLICITED.

Sent, postage paid, to any part of the United States, Great Britain and Canada on receipt of price.

726 Chestnut street, Philadelphia, Pa.

CORRESPONDENCE.

While our columns are always open for the discussion of any relevant subjects, we do not necessarily indorse the opinions of contributors. Anonymous letters will not be noticed; therefore our correspondents will please give names—not for publication, if they desire to remain incog., but as a guarantee of good faith.

ELECTRICITY IN THE PRESSROOM.

To the Editor: DAYTON, Ohio, March 8, 1889.

Your illustrated device mentioned in December number regarding taking electricity from the paper by the steam method, has been thoroughly tested by us. We having made the same device as shown, and followed details. We tested with both news and book paper, and found it not as practicable as stated, besides rusting all bright work on the press wherever steam comes in contact.

We find the only thing that does any good is to oil the cylinder thoroughly about four times a day. We use common machine oil.

R. P. S.

A SUGGESTION FOR PRINTERS.

To the Editor: HAMPTON, Iowa, February 28, 1889.

Many times, especially in country offices, the presence of quads and spaces from two or three different foundries make correct justification almost an impossibility. This is especially noticeable in constructing a table of rule-work. Many printers use cardboard in such cases. I find that this way has its faults, as, if you should find it necessary to dampen your table the least bit, the cardboard swells and your rules are all out of line. My experience is that the best way to get out of the difficulty, if we must justify to avoid the variation in different foundries' material, is to take a strip of common tea lead, found in most any grocery store, lay a nonpareil slug on it, and with a common penknife cut out a piece of lead the exact size you want. This material, being thinner than any other material I know of, answers the requirements exactly. You can lay in as many pieces as is necessary to make everything snug. Water will have no effect on it, and you will not have to scrape your leads and rules to get the paper off. It can be easily smoothed down to an even surface by pressure of the thumb or the use of a knife-blade. I have found its use very practical in such emergencies. What is more trying to a printer's patience than to build and lock up a rule table, and find one-quarter of the quads are of uneven size, and are liable to pull up on the press?

W.

FROM CINCINNATI.

To the Editor: CINCINNATI, February 26, 1889.

I am glad to see THE INLAND PRINTER take up the subject of the unfair competition the trade suffers from typefounders and pressbuilders owning or running printing offices.

The Cincinnati Typothetæ has taken the matter in hand, and issued a circular note of resolutions, which has caused quite a flutter among the flock, and it is quite evident some birds have been hit; in fact, one firm upon whom no suspicion rested, candidly owned up, but said its position was an enforced one, which does not alter the case a particle.

It is hard to calculate the great benefits already derived from an association such as the Typothetæ. Its celebration of Franklin's birthday was a great success. The scheme presented by the president, A. H. Pugh, in regard to establishing a school where boys are to be taught the printing trade complete, was well received, and was endorsed by President Eugene Streck, of Typographical Union No. 3, who made one of the best speeches of the evening.

There was a general feeling of friendliness toward the union displayed by all present, and a desire that more friendly and personal intercourse might be had between the two organizations in the future.

At our last meeting there was passed a resolution to establish a typographical library at the rooms of the society, which would

be open evenings to the employés, and also the intention was expressed to have lectures on topics of the trade by members of the Typothetæ.

I think the phrase "there is always something to learn" can be applied to no trade better than to that of printing.

With best wishes for your success in ridding the trade of the many abuses now prevalent, I am yours very truly,

OBSERVER.

REWARD MERIT.

To the Editor: ST. PAUL, Minn., March 1, 1889.

While employers are sitting in their offices, chasing their fingers through their hair, and thinking of due-bills unpaid, worrying about collections and swearing over mistakes, I would ask them to switch their thoughts off for a moment or two onto the question of proper recompense to the "good printer"—the man who is engaged on high-class work, always in his place, always trustworthy and almost always satisfactory in his execution. There is no business under heaven that rewards merit less sparingly than job printing. There are too many managers who hug the belief, with an Amelia Rives passion, that economy consists in low wages, irrespective of any further consideration. There could not possibly be a greater mistake. Economy consists in picking out good printers, intelligent and respectable men, and paying them good wages. Blot out the botch and the amateur by recognizing and rewarding capable and respectable workmen. Eliminate the "cheap and nasty" printer and elevate the business above its present status. Don't degrade your calling and insult good printers by apprenticing a boy who can neither read nor write, and perhaps not talk English, by telling him you will learn him the printing business. The higher the business is elevated in respectability and intelligence, the higher the profits will be and the less competition. The printing business is mostly what the employers make it, and they are to blame for the unsatisfactory condition in which it is today. Why not commence to improve it by rewarding merit and boycotting the botch, the tought and the ignoramus.

G. H. S.

FROM ST. PAUL.

To the Editor: ST. PAUL, March 4, 1889.

The printing business in St. Paul this winter has not been as good as it had been in former years, although the legislature has been in session since the latter part of January. There was no ice palace, the weather being remarkably warm, and business of all branches suffered in consequence.

The job offices did very little, the newspapers had comparatively no advertising, and the book offices, especially West's (which is one of the largest law-book publishing houses in the world), had very little to do. The *Globe* lost its only feature to the compositors in money-making—the city printing—the *Dispatch* being awarded the prize; the printing is worth \$3,500 per month. As the *Globe* was the heaviest loser of any of the dailies, it made it worse for the compositors by setting everything, except tabular matter, in minion, including the markets. Its appearance now is anything but metropolitan.

H. P. Hall et al. have purchased the *Evening News*. Mr. Hall was formerly proprietor of the *Globe*, and during his management of the latter he distinguished himself as non-union by running a "rat sheet." He is quoted as saying that "I have had enough," and the *News* is still in the union ranks. It has discarded all small type, and, unfortunately, is set in brier, twelve ems pica in width, and "wind-bending" leads. It is published in the *Globe* building.

Having written of all the unpleasantness to the boys, now for something good. The *Pioneer-Press* and *Evening Dispatch* are two of the best papers for making good wages in the West, and, as usual with good papers, are loaded with subs. On the contrary the two other newspapers are generally short.

Everybody has heard of the *Globe* building and composing room, I think. The *Globe* is a ten-story building, and has one of

the finest composing rooms in America. The Pioneer-Press Company has in course of construction on the corner of Fourth and Robert streets a twelve-story granite building, and when completed St. Paul can proudly boast of two of the finest newspaper buildings in existence.

February 28, between the hours of 2 and 10 P.M., No. 30 held its annual election at the corner of Fourth and Wabasha streets, opposite the new city hall building. Of the 360 members entitled to vote, 308 voted. Following is the result: President, Charles H. Stevens, 272; vice-president, J. H. Wilson, 295; secretary-treasurer, Richard C. McCarthy, 187; Dominick DeLong, 118; recording secretary, C. Sherman Tousley, 305; sergeant-at-arms, John J. Burke, 106; William J. McGillicuddy, 57; Robert C. Brussock, 77; doorkeeper, Charles Fraser, 306; executive committee, Cornelius Guiney, 294; Joseph Shabel, 274; Michael J. Daly, 296; M. J. Shaw, 287; J. B. McDowell, 292; delegates to Trades Assembly, James D. Coughlin, 266; George Peterson, 248; Joseph J. Donnellon, 232; Philip Corcoran, 259; John J. Burke, 212; Thomas H. McKone, 200.

THE INLAND PRINTER is a great favorite here, almost every chapel of any size in the city having a club. THE SPIDER.

GOOD MANAGEMENT IN AN OFFICE.

To the Editor: LOWELL, Mass., February 25, 1889.

Your valuable journal brings joy with its appearance. Your efforts to instruct are and should be appreciated by all progressive craftsmen.

In the past I was connected with one of the largest houses in the country (Rand-Avery Company). Their jobroom was a practical illustration of no system. Everybody used the rule-cutter when and how they wished; to get a 35½-em lead they were just as liable to cut a 40 as to piece it. The same was true with brass rule. The effect was less work done and from 50 to 75 pounds of junk per week, nineteen-twentieths of which might have been prevented by proper care and material.

Also another cause of worry and lost time in any office are cuts and electros. I have from 700 to 750 cuts under my care, and I will guarantee to produce any one in less than five minutes. My method is this: As soon as a cut comes into the office a proof is taken, pasted in a book provided for that purpose and the proper number placed below it. The next is a record, giving the number of the cut, owner's name, how many cuts, number of receipt and remarks; then a book of receipts, giving number of cut, description, owner's name, how many and whom delivered to. There is only one person authorized to handle the cuts. No one can get a cut without signing receipt for same. Wish you success and prosperity in the coming year. J. A. K.

FROM ST. JOSEPH, MO.

To the Editor: ST. JOSEPH, Mo., February 24, 1889.

The burning of the mammoth establishment of the George W. Crane Publishing Company, at Topeka, Kansas, Friday morning, the 22d inst., recalls to mind the "why" is it necessary for modern printing houses to be swept from the face of the earth, and the "why" should cumbersome, antiquated, dirty shops be allowed, like a barnacle, to retard the advancement of business civilization. Printers throughout the West will deplore the misfortune so suddenly cast upon Mr. Crane's shoulders, but believe him possessed of that kind of ability and enterprise which will enable him to build upon the ruins of Friday's destructive blaze a better establishment and more prosperous business than ever.

St. Joseph printers, and the traveling fraternity in particular, have been wondering for years why it is that Topeka, with less population and far less business in other lines, should be so much ahead of us in modern style printing offices. The job establishments here are a disgrace to the town. One office has a stationery department, which is kept clean, but the other places are dirty almost beyond endurance. It is impossible to see anything inside from the street on account of the dirty windows, and, in consequence, the light which is so essential to the printer and pressman is

almost shut out. Entering the office, a stranger must be struck with the evidence of splendid disorder everywhere displayed, and, passing on to the composing room and pressroom, it, of course, gets worse. Cobwebs along the ceiling, black with soot and age; dust on the cases and standing racks; cigar boxes filled with sorts scattered pell mell over the room; floors impossible to see for the waste papers allowed to accumulate during the day; tables rickety, stands time-worn and hand-made, all giving silent evidence of criminal carelessness.

It is true, several new presses have been put in during the past twelve months by some of our "more enterprising" printers, and they occasionally buy a new font of type; but as for the complete point system, with a fair quantity of sorts—it takes our breath away to think of it. I know of one office in St. Joseph that, some few years ago, took an inventory of their type material, and were completely "knocked out," when some of their faces could not be found in any existing specimen book!

There is no reason why St. Joseph should not have *one* first-class printing establishment, for a great amount of work goes out of the city that could and should be done here. Take, for instance, the burned-out Topeka firm, which, at the time of the fire, had almost ready for delivery to the Wyeth Manufacturing Co., of this place, catalogues valued at \$10,000. That contract went from us because no printer here could do it.

One of our daily papers, the *Herald*, has quit using plates, increased the news service, uses big, startling heads, and seems to be showing enterprise. The scale for morning newspapers is 35 cents, and I am informed the boys make from \$3 to \$3.50 a night. The job scale still remains \$15, but I hear occasionally of a desire to have it raised a dollar or two. Both Omaha and Kansas City pay more, Leavenworth as much, and Topeka the same, with shorter hours.

We have no candidates for delegate to Denver as yet, but no telling what a day may bring forth. The young man sent last year by St. Joseph Typographical Union, No. 40, has no aspirations for the honor, I am told by friends of his. Maybe we will not make an appropriation for such purpose.

SUCCESS TO THE INLAND PRINTER.

S. W. M.

FROM MONTREAL.

To the Editor: MONTREAL, March 4, 1889.

On February 23, the Montreal *Daily Star*, now in its twenty-first year, published its own history and illustrated all the different departments. There were twenty-three cuts, representing everything from the outside of their new building to the engine room. Of all the hard times experienced in many newspaper offices, the *Star* seems to take the cake. At one time its finances were so low that all the pennies and nickels gathered from the newsboys of one day were put together and sent to the paper makers so they would be able to have paper enough to get out their edition on the next day. Coal had to be bought by the bag, one bag at a time, and the young devil was obliged to harness himself to the hand-sled and draw it from the coal-yard every morning as soon as the concern could scrape up a half dollar. The publisher, at this time, offered to sell one-half of the paper for \$2,000 to buy it back within two years for \$10,000, but the security was not considered good. The plant was a country newspaper press, capable of printing a thousand copies an hour, a dilapidated hot-air engine, and a font of well-worn type. They were richer in debts than in anything else. The hot-air engine was an extraordinary machine. It was continually burning out and stopping, often in the middle of an edition. On these occasions the publisher, the bookkeeper, the editor and the devil could be seen working at the walking-beam, pulling on the belt or handling the spokes of the balance wheel, helping it along to puff some more. The next thing done for motive power was to send out in the country for an ordinary treadmill horse power, horse and all, which was actually set up in the pressroom and set to working. After a time a turn in the tide came, a slow, halting flow at first, but growing, and has been growing ever since. New material has replaced the old many

times since till now the building and plant is estimated at \$175,000. The average of their circulation at the present time is 28,000 per day. The above office is not a union one at present but pays the union scale, and they do not object to union men being employed.

The first annual drive and dinner of the *Gazette* compositors was held on February 16. Invitations were issued to other offices to join them, but owing to the intense cold weather only thirty participated. They went in cabs to Peloquin's Hotel, Back River, about eight miles from here. The dinner was presided over by Chairman O'Callaghan. Toasts: "The *Gazette*," Foreman Finn; "The Craft," Messrs. Ford, Gorman and Pelton; "Ladies," Mr. Murphy. Songs, by Messrs. Walker and McCormack. Recitation, Mr. Gorman. They returned at 8 o'clock in the evening, and claimed to have had an excellent time. A few were feeling "how came you so."

The *Sporting Life*, a new weekly paper, has come into existence. It is a four-page (each 13 by 20) paper and devoted to sporting matters, home and abroad. The prospects for it are good, as there is sporting enough in Montreal alone to keep a paper. The management is in good hands. Mr. James Crossley is editor and proprietor, and is an old-timer in the journalistic career. It is set in brevier and long primer leaded. The composition and press-work are done at the *Canadian Workman* office, and are a credit to the establishment and Mr. Crossley.

Mr. Charles Beattie, foreman of the *Herald* newsroom, will be the delegate of Typographical Union 176 to Denver, in June. Only two candidates were in the field, Mr. Charles Beattie and Mr. Thomas Stanley. Mr. Beattie was elected by a majority of seven. Charley is an ex-delegate, having given good satisfaction before, and we are sure he will do good work for us again. He is a good speaker and is a hustler.

Work is rather dull; prospects dubious. There are any quantity of subs in town. Many home printers are walking the streets.

J. P. M.

FROM KANSAS CITY.

To the Editor: KANSAS CITY, Mo., March 6, 1889.

William Hickman, late sheriff of this county, has bought the Ramsey printing office. It is probable that he will associate with others in conducting the business, but at this writing nothing definite can be learned.

Louis Hammerslough, formerly a successful clothing merchant in this city, has bought a controlling interest in the *Morning Globe*. He also owns the *Post*, the German morning paper, and a job office connected with it.

The *Globe* prints a "cannon ball" edition for the western trains at midnight and gets out its city issue at the usual time. Its efforts to furnish the public an independent, cheap and reliable morning paper seem to be appreciated.

The *Evening News* is slowly but surely gaining a place in popular favor, so long monopolized by the *Star*. Independent, enterprising and honest journalism seems to pay in Kansas City.

The *Journal* printers are not happy. Six hours' composition on lean, solid minion, with extra frames put up for the exiled Protectives and the phat set by the favorites, does not seem to suit the fastidious tastes of the non-unionists. *Sic semper rodentibus*.

Mr. B. A. Peak, vice-president of No. 80, committed matrimony last week. Like young Lochinvar he dispensed with the consent of her parents.

Suit has been entered in several instances to set aside trustee sales, where the publication was made in the *Traveller* and in the *Penny Post*, obscure evening papers. The plaintiffs assert that these so-called dailies have no subscription lists, frequently miss issues, contain no news, are made up chiefly of plates and advertisements, and that a notice by publication in these sheets does not meet the requirements of the law.

The *Times* recently appeared in a new dress and has received many compliments from its exchanges and readers. But the compositors are not equally satisfied. The minion is nearly brevier in depth and minion in thickness; the nonpareil is of the

extra condensed variety, and reprint which made five lines in the old agate is squeezed into four lines in the new. The printer who was accustomed to make \$4 a night now has difficulty in reaching \$3.50. The space which ordinarily was filled by twenty-eight compositors, now requires thirty-five, and these seven extra men are paid in reality by the amounts cut from the strings of their fellow workmen, the total composition bill running no higher. This seems to be a case which the MacKellar system of measurement would cover. As I understand the idea, it leaves the phat fonts with their old measure by providing that "no lower-case letter m of any face of type in calculating must exceed in thickness the size of the body of the alphabet to which it belongs," and brings up the lean fonts by using the letter m, which in these instances is thinner than the em quad, in casting up, thus lessening the number of lines which shall constitute a thousand ems. The possibility of an extra thick letter m is provided against by specifying that the alphabet must always equal fifteen letter ems, otherwise the measure to be cast up according to the rule now in practice for computing type below standard. This system should receive the careful attention of the next International Convention; be thoroughly discussed, and stand or fall on its merits. The measurement by the em quad must be an innovation, or why else do we inform an outsider that we receive so much per 1,000 ems, and then hasten to explain that we do not mean 1,000 ems, but something else, 1,000 em quads? Every scale of prices I have seen says 1,000 ems, and every union should insist upon a literal and common-sense interpretation of the law as it stands.

Jobwork is running low, but the newspaper business is brisk, and almost the first time in my knowledge of the town is the supply of work equal to the demand of subs.

In the *Evening News* of March 9 I find the following: "At 3 o'clock this afternoon the papers were signed transferring the plant of Ramsey, Millett & Hudson to the Crane Publishing Company of Topeka. Mr. Crane said that he would commence work with a force of eighty men Monday morning."

George W. Crane did the largest printing and binding business in the State of Kansas, making a specialty of legal blanks, justices' dockets, etc. About three weeks ago his extensive establishment in Topeka was burned to the ground. Mr. Crane is popular with his employes, having voluntarily reduced the hours of labor from ten to nine without decrease in pay. The fair printers of Kansas City will give Mr. Crane a hearty welcome.

Mr. St. John misunderstands my kick on two-nicked type. I should take pleasure in ordering the three-nicked variety from the Central foundry, but an unkind fate compels me to set two-nicked nonpareil ordered by my employers, who unfortunately did not consult me in the selection of their dress. Hence these tears. My request to typefounders was this: To cast all type three-nicked, with the variations suggested, not leaving it to employers, who frequently are not practical printers, to specify the number of nicks. In general the men who set the type have no voice in its selection.

KICKER.

FROM ARGENTINE.

To the Editor: BUENOS AIRES, January 13, 1889.

The October number of THE INLAND PRINTER is a daisy, and was admired by everybody who saw it. Of all the communications which I have received here in the last year not one of the writers has sent postage stamps for return letters, and I hope they will know the cause why they don't get an answer if I tell them that every letter sent from here costs 12 cents, and United States postage stamps will answer the purpose, as they can be exchanged very readily. Persons writing to me about positions must remember that a good workman will always get ahead fast, and the best positions are only given to the best of men who can speak the language of the country. Snap jobs can only be filled by the good men, and a good man need not fear of starving.

There is enough work in this country for a thousand good machine men, if they want to work, and a man who can get along in the States can tackle any machine ever built. All offices have

more than they can do, and some are working three and four hours overtime all the year round.

Since my letter, which appeared in the October number, 1888, there have been two paper mills started here, and there is room for a dozen more.

Eight new presses have arrived to my knowledge, and many more have been ordered, some of which will be here in a short time. Lots of "subs" from North America have found their way here. It takes just four months from date of ordering to get anything here from the United States, which is the drawback the Yankees have to contend against.

A few steelplate printers might find work here. Something I miss in this country are those Christmas and New Year's surroundings which are found in the States and Europe. Although this is a Catholic country, the people do not observe those days, and in many places they work half time. The Christmas or New Year's Eve ball is not known here, but they make up for it in carnival time, when they dance and prance day and night for a week.

We are having very hot weather here now, and in a few weeks we shall be over it again. December is the hottest month we have. The climate here is hard on rollers, and it requires lots of work and patience to keep them in order.

Several very good presses have been ordered from Koenig & Bauer, of Oberzell, Germany.

I have heard a rumor that the United States and Brazilian Mail Steamship line will run their steamers to Buenos Aires after the first of January, 1889. This will be a blessing, as we will be able to get our mail in about four weeks, instead of from six to twelve weeks as at present. It will also be better for purchasers shipping goods to this country. People wanting to buy goods from the States can get them in one-half the time, and it will perhaps be cheaper to bring them here. The trouble is principally that the goods are not in this town, or they would sell like "hot cakes." All you would have to do would be to show these people an impression of some of the latest American faces of type, and if you could deliver them in a few days you could make a fortune here in a short time.

I have seen a stop-cylinder with table distribution, three form rollers and three chases, 25 by 36, size of form, from a Belgium manufacturer, delivered at the door of a printing office here for \$940, gold. The press is very neatly built.

The C. S. A. de B. de B. surprised all their foremen or capatasts by presenting them with an envelope on January 5, 1889, the contents of which was \$100, and the following words: "*Por orden del Señor Director General se acompaña una gratificación de \$100.*" Many other establishments did likewise. This is a great country for reward or gratitude, and a faithful servant is always cared for when in trouble or sickness.

Respectfully,
M. A. MILLER.

FROM LOUISVILLE.

To the Editor: LOUISVILLE, Ky., March 5, 1889.

Printing is a little dull here just now, although one of our large offices found it necessary to run a night and day force up to last Saturday. There is nothing special in prospect to chronicle, except that it is said that inside of the next two months we will have natural gas right at our very doors, and in our houses if we pay for it. It is being piped to Louisville from Brandenburg, about twenty-five miles down the river, and the supply will be sufficient to provide fuel for every one who cares to use it here. This is bound to aid Louisville in a manufacturing way, and its advent is being looked forward to with much pleasure.

The City Directory for 1889 has just been completed, and the introductory matter, which is composed principally of statistics, is pronounced by competent judges to be perfect in every particular. It was prepared by Mr. J. B. Lampton, one of our brightest newspaper men, and he is being congratulated upon all sides.

Main street, at the intersection of Fourth avenue, is to have a handsome ten-story building as a shining mark of Louisville's enterprising young blood, which is showing its fine Italian hand

just now in the shape of the Commercial Club. The building is an experiment of the Commercial Club, and if it proves the success that it is claimed it will, quite a number of similar structures will be erected upon its heels.

The *Progressive Age*, published by Charlton & Stoeppler, as the organ of the whisky and tobacco interests, has bidden its esteemed (?) contemporary, the *Southern Prohibition Journal*, a long and lasting farewell and turned up its toes.

Mr. George Lackland, a former member of Pressmen's Union No. 11, of Cincinnati, has taken charge of the *Apostolic Guide* pressroom. George is an old Louisville boy, and we are glad to have him back with us again.

Mr. Thomas H. Fox, of Mount Sterling, Kentucky, was in the city last week purchasing material with which to launch another newspaper upon the unsuspecting residents of that city.

Mr. Thomas McIlroy, representing the Potter Press Company and Mr. Frank Wiborg, of Ault & Wiborg, spent several days here last week.

I learn that Mr. J. H. Douglas, who has represented the Campbell Press Company in this territory for several years, has severed his connection with that company and taken the resident agency of the Huber Press Company at St. Louis, and the Nixon & Jones Company of that city have placed an order with him for one of the presses.

Mr. Q. A. Jacoby, formerly with W. D. Wilson & Co., was here last week looking up trade for J. H. Bonnell & Co., whom he now represents.

I am told that Mr. Frank J. Baumgartner is making a good race for delegate to represent St. Louis Pressmen's Union, No. 6, at Denver. No. 6 might go much farther and fare worse, as Frank is wide-awake and a union man to the core.

Mr. Frank Koken, who represented No. 6 at the Buffalo session, and who is foreman of Little & Becker's pressroom, has been forced to call upon the healing waters of Hot Springs to aid him in regaining his health. Here's hoping they will do it.

Mr. John G. Carter sold his interest in the Star Printing Company last week. The firm as it now stands is: Charles E. Loomis, John Kane and C. E. Shepard.

Mr. E. S. Tuley, who was president of the Rogers-Tuley Company until its assignment in January, has been comfortably provided for by Postmistress Thompson, who returned to him his old position, that of Assistant Postmaster, from which he was removed last June to make room for a good democrat. "Sich is life." Today we are up, tomorrow we are down.

Typographical Union No. 10 of this city has decided to send only one delegate to Denver, and Messrs. George J. Nolan, Charles Jacques and J. W. Owen have thrown themselves into the breach, with a view of being that one. At present it looks very much like Mr. Nolan will be the successful aspirant, as the job printers and quite a number of the newspaper men are of the opinion that a job printer should be honored this year, as it has been several years since one of their number has represented No. 10. Mr. Nolan is a job printer at Nunemacher's, while Messrs. Jacques and Owen are newspaper men. However, No. 10 will be well represented by either one of the gentlemen.

Being reminded of the fact in one of your editorials last month that THE INLAND PRINTER wishes to continue to cover a field distinctively its own by publishing practical hints that its readers may keep abreast of the times, I will endeavor to present an idea which, while it may not be entirely new to all, I think will prove "a balm in Gilead" to some of those who have to contend with the imperfectly made perforating rule now sold by supply houses. It has been the disagreeable experience of almost every printer to have had at some time or other a job, that was printed and perforated at the same impression, fall to pieces before it reached the customer, or have it returned to him because it would not tear. All of the perforating rule that I have ever seen was made so that the cutting surface of the teeth was much wider than the space between them, and it is there where the trouble begins. The remedy that has been tried and not found wanting is to put the rule in a vice, and with a small three-cornered file, cut the teeth as

you would a saw, making the teeth sharp and pointed, which will leave a space between each tooth about three times as wide as the face of the tooth; then when the perforator is put back into the form you will find that sufficient impression can be put upon it to cut entirely through the paper, and still have left enough paper between each perforated hole to keep it from falling to pieces. Of course the necessity for all of this trouble upon the part of the printer could be overcome by the manufacturer making the rule with a pointed tooth instead of the broad tooth, but until they see their error printers can save their reputations and money by following the above plan.

C. F. T.

THE CITY OF DENVER.

To the Editor: LOS ANGELES, Cal., February 27, 1889.

As the next session of the International Typographical Union is to be held in Denver, the Queen City of the Plains, and as quite a number of those who will be elected to represent their unions there have never visited that city, the writer will try and give a short description of it, having been a resident of Colorado at one time.

The story of the growth of Denver reads like a fairy tale. If the days of credulity had not ere this given place to a period of hard matter-of-fact, it would be easy to weave a romance out of its rise and progress that would not seem small when compared with the famous stories of the Thousand and One Nights. It is difficult to comprehend the giant strides that have been made, and which the future is yet to see. Denver has not grown into existence in a single night simply to gratify the wish of its people. It has not sprouted out of the earth as did Jonah's protecting vine. It has not been the creation of wish, the answer to a prayer. It is the result of toil, of honest, hard, persistent, potent labor. It has grown into present proportions in response to the efforts of its citizens. It is the result of their restless ambition, of their tireless energy, and of their great needs. Composed of people gathered from the four corners of the earth, many of whom have been used to the refinements and surroundings of the largest cities of the East and of Europe, who have gone to that city in search of health, wealth and novelty; who have gone as invalids, as fortune-seekers, or as men who look for a change of scene and surroundings; made up of men and women of all degrees and styles of mental development, who at first found lacking there what they most enjoyed in their old homes, there is no wonder that one should see many ideas combined in the structure of the city, and that for a place of its size Denver should be, as all pronounce it, one of the most metropolitan cities in the world. It is really more than metropolitan; it is cosmopolitan—in its theaters, its hotels, its halls, its restaurants, its schools, its places of business, its churches, its customs, its people. Ordinarily, one would probably expect such a state of affairs to exist in a city no larger than Denver, where so many elements of humanity are brought into contact. The marvel is not in this feature of the city's development, but in the rapidity with which the accumulation has gone forward. It demonstrates that its citizens have not only the ability to do, but that they do. The necessity for a city with all the modern improvements was felt, and the want was met. The writer arrived in Denver on July 3, 1879, and found a city of less than forty thousand. Today it has a population of about one hundred and fifteen thousand inhabitants, and is the finest city in the land.

The place has already reached such proportions as to make it a source of astonishment to all who see it for the first time, as it is really an oasis in the great American desert. After riding for six hundred miles across an almost barren plain, from the Missouri river to Denver, the stranger is astonished at the perfection which he discovers; at finding it a city lighted by electricity and gas, heated by steam from public works, and furnished with cable and street cars, besides the ordinary line of omnibuses and public carriages.

Denver, as it at present exists, is a city of magnificence and splendor, and will compare favorably with any city in the country.

It lies on the Platte river, at the mouth of Cherry creek, on the plains about twelve miles from the foothills of the nearest point, commanding a view of the Rocky Mountain range which is excelled in but few places on the plains. Standing on any of the elevations about the city, one can easily view the entire range, the veritable backbone of the North American continent, for an extent of two hundred miles. Long's Peak, far to the north, near the Wyoming line, stands ever visible, a genuine column of granite, covered with snow the year round, and wearing a fleecy mantle of cloud. To the southward, almost a hundred miles, Pike's Peak rears its majestic head, and a hundred miles further down, very near the line of New Mexico, can occasionally be caught the dim outlines of the Spanish peaks, the beautiful Wahatoya, as they peer out through the dimness of the distance. The view is a beautiful one. The mountains circle gracefully, and with an almost imperceptible course, in this great length of two hundred miles.

The mountains serve the purpose of affording endless delight to the residents of the city, while to the tourist and stranger they are a novelty as well. Standing on any street corner in the city one may look either to the north or to the west and catch a view of a landscape which would be creditable to any artist, if placed on canvas; the brown-gray rocks and the evergreens that skirt the hillside, reaching up to the verge of the everlasting snow, and so blending as to form a coloring all its own and of matchless beauty, which changes and which does not change with the different periods of the day, as the light falls from the overarching sky. This is a view which one may have from almost any quarter, and is one which never fails to cause delight, which, to those who are not used to it and who appreciate the beauty and grand in nature, affords a species of intellectual intoxication.

Champa and Broadway are both fashionable resident streets, and are lined with dwelling palaces. The streets of the city are generally lined by shade trees, and during the summer months the gutter flows with rippling rills of pure mountain water, moistening the roots of trees before every man's house and every man's yard.

Denver contains some magnificent buildings, the principal one being the Tabor Grand Opera House, which, in design and finish, is conceded by all who have seen it, to be the most elegant structure of the kind in America. This opera house has cost the owner, ex-Senator Tabor, over half a million dollars.

Seventy-five miles south of Denver nestles the beautiful little city of Colorado Springs, lying, as it does, at the foot of Pike's Peak. Close by are quite a number of interesting points to visit, the principal ones being Cheyenne cañon, Pike's Peak and the Garden of the Gods.

As the Denver union has wisely selected Messrs. O. L. Smith, J. D. Vaughan, W. H. Milburn, C. W. Rhodes and J. W. Hastie as committee on arrangements, the delegates to the convention need have no fear in regard to being royally entertained, and will never regret their visit to the Queen City of the Plains.

C. M. W.

LETTER FROM NEW BRUNSWICK.

To the Editor: ST. JOHNS, N. B., March 8, 1889.

Since you last heard from our section of the continent, we have had stirring times. I must go "outside of the printing trade," so that St. Johns typos who are in the United States, and who I trust all read THE INLAND PRINTER, may know what we are doing. In the first place, we are agitating to have St. Johns made the "winter port" of Canada on the completion of the Canadian Pacific Railway. Now Portland, Maine, occupies that honorable position, and nearly all the merchandise for Upper Canadian points is landed there. The people in this section believe that St. Johns should be the terminal point in winter for the mail and freight steamers, and claim that as the Dominion government grants subsidies to the C. P. R., and also to mail boats, the terminus should not be in a "foreign country." The other night a mass meeting was held, resolutions passed, and speeches made which made the walls fairly ring. If we don't succeed in

our demands, we will have "blud, Iago, blud." We are a great people to talk, but to act—alas!

We had a carnival parade here last week. It was a well gotten up show, and the "hits" were good. The "fishery question" and "fishery commission" were special features of the passing show. I guess if the "Yankees want fresh cod for supper," they will have to—well, pay for it!

The printing trade is fair to middling at present. Newspaper work is good, and all hands are employed. Some of the job offices report work a little slack. Our local legislature will soon open, and that, with the Federal government in session, will keep the newspaper offices busy for some time to come.

The event which has occupied the attention of St. Johns union for the past month, came to a head on Saturday evening, March 2—the eighth anniversary of the formation of the union—which was duly celebrated by holding a supper. The affair was grand in every respect. Fifty-two persons sat down to the table, which "fairly groaned under the weight of the good things" (the last part of the sentence is not copyrighted by me, for I *think* I have seen it before). "Praise God, from whom," etc., was sung, and then each one waded into his "take," both fat and solid. For an hour and a half colored waiters moved around as quick as they could, and then "time" was called. Of course everybody knows we are "English," and our first toast was the "Queen," and the singing of the national anthem. "Our Union and its predecessor" followed, and was responded to by President Seeley and W. H. Coates. Both spoke well. The latter dealt with unionism in old times in St. Johns, to whose printers was granted the first charter by the then National Union, outside of the United States. George Maxwell and George E. Day spoke to "Our Craft," and acquitted themselves splendidly. Richard O'Brien, one of the proprietors of the *Globe*, responded to the "Press." Mr. O'Brien's *début* in a printing office was at the case. His speech was a pleasing one. "The International Union" was responded to by Henry Buchanan in good style. "Sister labor organizations" found a ready response by the presidents of the ship laborers and stonemasons unions. The "Ladies" was replied to by Samuel Reid. As there were no ladies present, Mr. Reid let himself out. Speeches were also made by J. J. Ryan and H. E. Codner. The musical portion of the programme was fine. J. Sullivan and J. R. Hopkins excelled themselves in singing. Charles Hazel's cornet solo, and Fred Amland's clarionet solo were well executed. W. F. Wilson presided at the piano. One of the features of the evening was the reading of a telegram from W. C. Hodgson, president of Halifax Typographical Union, regretting his inability to be present, but wishing the affair every success. "For he's a jolly good fellow," was sung with a gush. The supper was a success in every respect, and would the printers of America believe it, yet the gods are witnesses—the toasts were drunk in "clear, cool, sparkling water." The banner of the union was hung at the head of the room, and the American and British flags were blended. At midnight the boys separated for their respective homes, singing "Auld Lang Syne."

WIDE AWAKE.

FROM NEW ORLEANS.

To the Editor: NEW ORLEANS, March 3, 1889.

The sunny South, where the sweet magnolia blooms, and the picaninny darkey loves to hoe, is now being viewed by our Northern visitors with a sense of deep disgust. Preparations have been in process of making for the reception of the many carnival visitors for the past three months. Extra efforts were made to make the processions of this year more pleasing, if possible, than ever before, and the enterprising ladies of our city had erected, and beautifully embellished and decorated and fitted up, a cotton and cane palace—all for the delectation and benefit of the numerous individuals expected to visit New Orleans. And, alas! what is the disappointment and chagrin of our residents to find that the heavy overhanging clouds have sprung a leak, and, as a consequence, our streets are a veritable quagmire. Unfortunately for New Orleans we had

just such weather—possibly a little worse, it being cold then—during the Exposition of 1884-5.

Owing to the day of the arrival of Rex being on Monday, March 4, the day on which the firemen parade, the latter selected Sunday, the 3d, as the day of their parade. This met the strong objections of religious people and many others, but the fire boys were inexorable and obdurate. Many say this is sacrilegious, and charge it to this fact that New Orleans has been condemned to suffer. Be that as it may, it is to be regretted that historic New Orleans, standing out as a beautiful city in a pleasant clime, is constrained to present itself to the view of its invited critics under such disagreeable and inauspicious circumstances.

Business is unusually dull, yet printers continue to arrive, ostensibly to witness the carnival displays. Several, though anxious to remain through the festivities, have been forced to give up the siege and go forth in search of richer fields. Others, however, will remain, and it is probable business will have taken a spurt, thus enabling the latter to view the flowery New Orleans in the spring in its native beauty.

The correspondent of the *THE INLAND PRINTER* called last evening on Mr. Miller, foreman of the German *Gazette* job office. That gentleman speaks of the business as being very dull, and complains in strong terms of the low-price system so much in vogue in the business in this city. In this office was seen some magnificent specimens of calendar work. One, a calendar of 1865, was the design and work of the veteran designer and job printer, Lew Graham. It was a beautiful piece of work, equaling in taste, execution and colors any of the latter-day efforts. Beside it was a calendar of 1874, a piece of work by the famous Kelly. All my readers know it is something superb.

Your correspondent saw a job of work from the office of Patterson & Ray recently, which, if I am correctly informed, and I have no reason to doubt it, exceeds anything for cheapness that ever came out of any other than an amateur job office, unless it be that of Hunter & Genslinger, who charge \$1.50 per 1,000 for billheads. This job of work was 1,100 impressions of a job on pink tint paper, note size, four pages, two pages of brevier and two pages displayed. The composition was 12,000 or 13,000 ems. For this job of work, I am reliably informed, said office received the sum of \$7.50. According to my calculation, paying union wages, the expense account of this job would have reached nearly \$10. Where is the profit?

Hon. W. J. Hammond, the veteran printer of this city and old representative of No. 17, "Me Too," as he is familiarly called by those who know him well, is announced as a candidate for delegate to the International Typographical Union.

SOMETHING PRACTICAL.

My readers who love to set phat tables, and are so unfortunate as to have an "out" sometimes, will be glad to know how to put in that out with ease and speed. The following, shown me by a compositor in the old *Democrat* office (I am sorry I have forgotten the name of the gentleman who first learned it, else I would give him the credit for it), will illustrate the rule:

110	220	330	440	550	660
880	990	100	110	120	130
140	150	160	170	180	190
200	201	202	203	204	205
206	207	208	209	300	

Now, say that the number 770 was left out of the beginning of the second line. Take out the column of figures on the right-hand side below and including the line in which the "out" is, as in diagram, the column of three lines beginning with 130. This column of figures is now placed on the extreme left-hand side, jutting against 140, 200 and 206 respectively. Place the number 770 before and against 880 and you have the correction, making the table full; in other words, 180, 204 and 300 will be at the extreme right-hand side. If, instead of one number, two numbers had been left out, two columns would have been transposed, and with three numbers left out three columns would have been transposed.

Very respectfully, D. F. Y.

FROM PHILADELPHIA.

To the Editor :

PHILADELPHIA, March 3, 1889.

At this writing the number of places that are busy is very small ; with the exception of Dornan's, which is exceedingly so, I don't know of any house that is much more than "jogging along." Some houses have a fashion of trying to appear busy ; they will insert an advertisement in the *Ledger*, perhaps, stating that they need feeders or pressmen, when, in fact, they need nothing of the kind. The object in some cases is to attract, if possible, a number of applicants, whose names and addresses are taken, and then the hands who are employed are told of the great number of men out of work, and willing to work for so much less, etc. But the men have tumbled to these tricks, and the houses who practice them may find themselves in the lurch when they really do need hands. The only harm that may come of this pernicious practice may be to attract men from a distance, who will find themselves stranded in a large city.

The Philadelphia *Inquirer*, which has been limping along for the last twenty years, appeared yesterday rejuvenated, under its new management, giving promise of being in the future a thorough-going, live newspaper, fully abreast of the times in every sense of the word. We notice that the New York afternoon papers are trying to create a demand for their editions by having them for sale in this city on day of issue. If appearances count I don't think they are making much headway ; our people seeming to be, with good cause, perfectly satisfied with the local papers.

The "want" columns of the *Ledger* have ever been a source of envy to the other papers of our city, and in order to create that feature some insert such notices for almost nothing. The only paper that seems to meet with any success in this line is the *Sunday Press*, on which day the *Ledger* does not appear.

The Franklin Printing House, for many years established at 320 Chestnut street, has removed to more commodious quarters on Minor street, between Fifth and Sixth streets. It is now a stock company.

The Keystone Publishing Company has succeeded the John E. Potter Company at Tenth and Filbert streets. They own many valuable copyrights, including fiction, biography, history, etc. They also have in hand bibles and many other standard works. Under proper management, we believe, this house will soon take a front rank and enter upon a prosperous career.

I have been asked by several of the rank and file what constitutes a "master printer ;" the question has been elicited by the term being applied to the members of the Typothetæ. Now, while we readily admit that there are in that body some who are thorough masters of the art of printing, we also claim that there are very many who are not entitled to that distinction. I refer to the employers who are in the business for revenue only. A master printer, we should think, should be one who possesses an intimate and practical knowledge of the business, and not one who simply has money invested. Who ever heard of a railroad director or president being styled a "master mechanic," such as all railroad companies have to supervise their machinery, etc.? The application, therefore, of master printer to all who are financially interested in the business is a misnomer.

The *Union*, a weekly paper published by Typographical Union No. 2, seems to be made of the right material, and has evidently come to stay. Mr. George Chance is the able editor.

On to Denver is now the cry. No. 2 will send four delegates. Pressmen's Union No. 4 will only send one, and he goes without a contest for the honor; Mr. Thos. Harrison is the name of the person so honored, and if he lives to get there he will make the "welkin ring."

Under the International Typographical Union laws the office of second vice-president is conceded to the pressmen; as this is a special concession to the pressmen, I hope the convention will indorse the delegate who shall be the choice of the particular branch to which he belongs. The position is different in its sphere from the other officers who are elected to serve *all* the affiliated branches of typography. In time past there has been more or less

agitation about the pressmen being disposed to withdraw from the International Typographical Union, but that heresy has been dispelled in this city, at least. The recent skirmish of the pressmen with the Typothetæ, and the broad-gauge action of the officers of the international organization, notably Messrs. Ed. T. Plank, President, and W. S. McClevey, Secretary-Treasurer; also District Organizer Jones, of Pittsburgh, and others, has shown that all branches are on the same footing in the I. T. U.

We understand that Wm. F. Fell & Co. have increased the rates in their composing department. We hope soon to hear that this enterprising house has come to a thorough understanding with No. 2.

OBSERVER.

FROM OMAHA.

To the Editor :

OMAHA, Neb., March 4, 1889.

Quite a number of changes in Omaha printing circles are noticeable since our last letter. The Omaha *Republican* has changed hands, being now the property of Fred Nye, and has appeared in a neat, new dress, reduced from 8 to 4 pages, and from 5 cents to 2 cents a copy. It is the only 2 cent morning paper in Omaha, and is bound to be again what it once was—the leading republican paper of Nebraska. Mr. Nye has associated with him Mr. O. H. Rothacker, one of the brainiest newspaper men of the country.

The Omaha *Daily World* published its initial Sunday morning paper last Sunday, and will hereafter be a seven-day sheet. This venture will give employment to a few more men, not many of the "regulars" being inclined to put in a "double-header" on Saturday, if "subs" can be had.

The Omaha *Bee's* new building, on Eighteenth and Farnum streets, is about finished, and they are now completing arrangements to occupy this building about the last of April. The *Bee* will have the finest printing office in the West, and one of the finest in the country.

In our meanderings with THE INLAND PRINTER, we visited the pressroom of Ackermann Bros. & Heintz, and were attracted to an ingenious apparatus attached to a cylinder press, used to straighten up the sheets as they came from the press. We have seen quite a number of appliances for this purpose, but nothing that so fully met all requirements as did this. It consists of a machine full size of fly table, adjustable stationary guides and automatic "jogging-up" guides, one each at side and ends, both operated by a single "pull" attached to center of fly. The side guide is provided with an ingeniously arranged reducing guide, which can be set instantly to any desired size paper, as can also the so-called stationary guides. The claim for this machine is that the pull is direct, thereby doing away with all friction, causing the machine to work freely, and at the same time prevent wearing. It is also provided with an extension, allowing its use on the "mammoth" papers which other machines have as yet failed to attempt. Mr. A. M. Heintz is the designer, and we understand he has applied for a patent.

Omaha Typographical Union, No. 190, at its last meeting nominated the following officers and delegates, the election to occur the last Wednesday in March. For delegates, P. M. Jones, of the *Bee*; S. K. Fisher, of the *World*; John L. Hogan, of the *Herald*; Ed Hartley and W. C. Corwin, of the *Republican*. For president, Peter Stoltenberg and Jason R. Lewis; vice-president, E. E. Ryland and J. M. Serpliss; recording secretary, R. H. Nicer and M. T. Fleming; reading clerk, T. J. Doyle and Anton Sanger; financial secretary, W. M. Kimmel and George Bradley; treasurer, W. J. Scott; sergeant-at-arms, Harvey Long; sick committee, F. B. Johnson, John W. Bruner and William Schultz; finance committee, Bert Cox, C. Turner and James Dermody; executive committee, N. S. Mahan, Arthur Pickering, F. S. Horton, A. F. Wilson, T. J. O'Brien, E. L. Sooy and J. N. Keith. The voting will be conducted on the Australian system, and the polls will be open from 12 M. to 7:30 P.M. The candidates are all "pulling out," and no one can foretell the result before "30" is in.

The Pressmen's, Stereotypers' and Electrotypers' Union, No. 32, have nominated officers as follows: President, Ben Flood and

Matt Reiner; vice-president, Ed Eagan, Art Charon and John Corton; treasurer, F. M. Young; recording secretary, J. M. Kearn; financial secretary, Ed Burch. The delegates in the field to go to Denver at the session of the International are F. M. Young, Ben Flood, Matt Reiner and Frank Devor.

The pressmen's, stereotypers' and electrotypers' annual ball at Masonic Hall on the evening of February 28 was a grand success, over two hundred and twenty-five numbers being sold. The affair was conducted in a creditable manner, and a very enjoyable time was experienced by those present.

MIKE.

UNIT-MADE TYPE BODIES.

To the Editor:

NEW YORK, February 26, 1889.

During the past two or three years, I have paid considerable attention to the subject of unit-made type bodies, and, after a long series of experiments in connection with the problem, have reached results that I think will be of interest to both typefounders and printers. At any rate, whatever may be the value of my conclusions, so far as I am concerned they are open to free adoption and use by anyone.

While my investigations in this line have been pursued with special reference to the requirements of automatic machine composition (a scheme upon which I have been long engaged, and of which several successful exhibitions were recently given to members of the press, and to other interested parties in this city), I have thought that a satisfactory unit-type would also be of utility, both in ordinary hand composition and in key-board machine work.

In order to set type automatically to the best advantage, the strip of perforated paper that is used to control the action of the machine, besides having indicated upon it the representatives of the letters, figures, punctuation marks, etc., must also have the representatives of the "reader's" corrections, and of the proper spaces for exact justification. But it is not possible to justify automatically, with anything more than an approximation to precision, while using types cast on bodies of such irregular, running-wise widths as are met with in the fonts now in common use, for the reason that, with the exception of the spaces and quads, and a few others that are not letter-types, the width of one type body bears no definite mathematical relation to the width of any other type body. The only type now being made, so far as I am informed, that is an exception to this rule of systemless body-widths is the "self-spacing" type of Benton, Waldo & Co., of Milwaukee.

But it would seem that this subject of unit-made type bodies is not so new as many of us have been led to suppose. In the year 1881 a United States patent was granted to Henry H. Thorp for "types made of runningwise widths, that are multiples of a measure of which the runningwise width of the narrowest letter-body represents the unit, said widths being also regular fractions of the height of the type bodywise." This patent is a very narrow one, and it would hardly be practicable to make type in accordance with it from which impressions could be printed that would please the eye.

Two years later, Linn Boyd Benton, of Milwaukee, secured United States letters patent for "a font of types, the bodies of the characters of which are, runningwise, all multiples of a unit, and the spaces of which are similarly equal to said unit and multiples thereof." This verbiage, reduced to plain English, means "a font of types the bodies of which are, runningwise, all multiples of the width of the thinnest, or the hair-space."

But the idea of constructing a unit-made type, with a view to greater ease in spacing and justifying, dates back much farther than the two patents to which I have referred. Nearly thirty-five years ago, one Martin Wiberg filed an application for letters patent in England for "improvements in the construction, setting up and distribution of types for printing," in which the following claim is distinctly made: "I construct each type, though of different thickness to others, yet of a thickness which will be a multiple of which all the others are also a multiple, by which I am enabled to obtain greater facility in 'spacing.'" And then, as establishing

the inventor's meaning in regard to the spacing beyond any possibility of doubt, he adds: "The 'type-collector' may have applied to it an indicator, acted upon by the type as collected, to show and thus facilitate the 'spacing' required."

This claim of Wiberg, which is set forth in his English Provisional Specification, A. D. 1854, No. 1,548, filed on July 14 of that year, is a very broad one, and seems to cover almost everything in the way of unit-made types that could be thought of. But as Wiberg's specification would naturally be classified under the head of "Improvements in mechanisms for setting and distributing types for printing," rather than under "Improvements in the construction of types for printing," it probably did not come to the notice of the United States patent office examiners who passed upon and allowed the claims of Thorp and Benton. However that may be, I am frank to admit that the suggestions as to the construction of unit-made types that I am about to present are fully covered by Wiberg's claim, and are, therefore, public property for what they are worth.

In my earlier experiments in planning a unit-type, I failed of success, as did Thorp, because I looked for the unit of the running-wise widths in some fractional part of the square em of the type; but later on I decided to discard the square em of the type altogether, and to adopt the width of the body of the lower-case m as the standard, and to take some certain fractional part of that width as my unit; and on May 17, 1887, in a letter to Messrs. Farmer, Little & Co., of this city, I stated my conclusions in this respect.

During the following month of June, only a few weeks later, at the convention of the International Typographical Union, held at Buffalo, Mr. W. B. MacKellar, of Philadelphia, presented his new plan of type measurement, in which he proposed "to abolish the em quad (or the square of the type) as the standard for measuring matter, and to adopt instead the letter m of the font." This somewhat curious, but certainly most fortunate, coincidence of suggestions to adopt m as the standard of two different kinds of type measurement, gave me at the time very great encouragement.

Now, without going into the details of my numerous experiments in this direction, I will simply state the conclusion arrived at, and say that I have found that, all things considered, decidedly the best unit from which to construct the various type bodies of a font is the eighth of the width of the lower case m. Any typefounder may apply this principle of unit-construction (the eighth of the m) to the different fonts of plain type now made by him, with the following results: The number of widths of type-bodies will be reduced to nine only, and, at the same time, the appearance of the faces of the types will not be changed. The general plan by which this reduction is brought about is, to first ascertain, by means of a micrometer-caliper, the exact width of each type, and then, unless that width be right already, which sometimes is the case, carry it to the nearest multiple of the unit. For example, let us take MacKellar's Brevier No. 16. The width of lower case m is .1065 of an inch. This divided by 8 gives .0133 as the unit; and we have: 2 units = .0266; 3 = .0399; 4 = .0532; 5 = .0665; 6 = .0798; 7 = .0931; 8 = .1064; 9 = .1197; 10 = .133. Now, the thinnest letters of the font are f (.041), i (.037), j (.0365) and l (.039), and these should be cast on a 3-unit body (.0399); the thickest lower-case letters are m (.1065), ffi (.111) and ffl (.118), and these are all best accommodated by an 8-unit body (.1064); for there is really no reason why ffl should be cast on a thicker body than that given to ffi. Capitals W (.131) and Œ (.136) are the thickest letters of the font, and they go to a 10-unit body (.133).

By referring to the accompanying "scheme" for this font of type (MacKellar's Brevier No. 16), it will be seen just exactly how each type-body is affected by the change. The column headed "REAL," gives the actual measurements of the bodies of the types, and the one headed "UNIT," gives the corresponding unit-bodies of the same types. The columns marked + and - give the amounts either added to or taken from the various bodies in order to make them conform to the unit rule.

Attention is particularly called to the excellent results in respect to the widths of the bodies of the spaces, quads and points attained by this proposed system. The 3-unit and 2-unit spaces

are not perceptibly different in width from the present 3-em and 4-em spaces of the present style of type. The hair-space contains 1½ units, which space may be used when required, provided only

JAMES E. MUNSON, Tribune Building, New York.

that two hair-spaces are always put in the same line. As two 1½-unit (hair) spaces equal a 3-unit space, the justification is not disturbed.

One decided advantage with this unit-type is the fact that the spaces and quads will be proportioned in width to the fatness or leanness of the particular font to which they belong, instead of being aliquot parts of the square of the type, and hence always of the same widths for all fonts of the same sized types.

JAMES E. MUNSON.

FROM BALTIMORE.

To the Editor:

BALTIMORE, March 2, 1889.

In a recent letter to THE INLAND PRINTER, I stated that the employing printers of Baltimore were without organization, but such is not now the fact, as a Typothetæ has been formed here since my correspondence last month. It is generally admitted among the craft in this latitude that the printing business of Baltimore is sorely afflicted with a complication of maladies, one of which may be said to act upon the trade like a blight, and may be designated by that not very elegant, yet expressive, phrase, "throat-cutting." While invitations were mailed to every printing firm in the city to attend the initial meeting, but thirty-two were present. With this contingent the Typothetæ organized and claimed a local habitation and a name. The officers elected, to serve one year, are: President, Charles H. Eavens; first vice-president, John P. Kurtz; second vice-president, F. W. Koch; secretary, John S. Bridges; treasurer, F. L. Morling; executive committee, Charles Fleet, B. H. Jones, John H. Griffin, George F. Nicholas and E. P. Read.

While a rose by any other name will smell as sweet, it makes considerable difference as to the pronunciation of a word by the manner in which you accent it. As Webster's unabridged is without the word "Typothetæ," and as Greek scholarship is not absolutely necessary to the printer, it may not be considered surprising, perhaps, when it is stated that some time was occupied at a late meeting of the Typothetæ in a discussion as to the proper pronunciation of that term. Mr. Morling stated that he had asked several college men, and they put the accent on the syllable next to the last. President Eavens, of the firm of Thomas &

Eavens, a most efficient presiding officer, and who is a good parliamentary withal, said that the question how to spell, pronounce and define the word had been a subject of much consideration all over the country, and that the authorities had decided the accent must go on the second syllable.

It would be unfair to assume that the Typothetæ of this city, which has connection with the national body of that name, is necessarily hostile or inimical to the typographical union, for such is not the fact, I am led to believe, as its object is, as set forth in the preamble to its by-laws, "to improve the trade, to cultivate a just and friendly spirit among the craft and to protect and assist one another when occasion may require." The present is an era of organization, and the master printers of Baltimore do not intend to be an exception to the general rule.

The *Telegram*, one of Baltimore's oldest weeklies, has just moved into new and handsome quarters on Baltimore street, opposite the office of the *Sun*. It formerly occupied the present site, but the old building having to give way to a more modern structure, the *Telegram* people were forced to locate, temporarily, elsewhere. It may be remembered that in a late correspondence something was said about this journal's using plate matter, contrary to a law of the local typographical union. Notwithstanding the editorial announcement made, after the withdrawal of plates a short time ago, that the paper in a few weeks would resume its ten pages—the two extra pages having been made up invariably of plates—I have it on good authority that the *Telegram* will not resume, so far as plate matter goes. This, it may be surmised, will be set down by the typos as another "union victory," while some employer or other, perhaps, may be inclined to call it another piece of "trades-union tyranny."

Mentioning the *Sun* office reminds me that I had occasion today to visit that building of corrugated iron front. In a previous letter brief mention was made of the many improvements which the interior of this establishment has lately undergone. The building has been made thoroughly fireproof. The editorial department, formerly on the second floor, where elbow room was at a premium among the pencil pushers who mold public opinion, is now located in the spacious third story, and like the newly fitted-up composing room immediately overhead, must be refreshing for some newspaper men to look in upon, such is the air of neatness, order and cleanliness which pervade its every nook and corner. One may enter here in vain to discover the conventional editor; I mean that too commonly accepted oracle of the tripod as described by the Bill Nyes, the Arizona Kickers, and some of the illustrated papers, with his feet resting upon the editorial desk, a huge pipe in his mouth, while a stray cockroach or two skirmishes in the neighborhood of the paste pot. It may be inferred that smoking is strictly forbidden in the sanctum when one sees on the white walls of the passageway leading thereto a number of placards bearing this injunction: "Don't smoke; don't spit." I found handsome city editor Deshelds enjoying his cigar, but he was doing his puffing at the street entrance.

A number of employing printers of this city make complaint about the high price charged by union compositors engaged upon bookwork. The former say 45 cents a thousand is too much (the rate here) when it is considered that for the same work New York pays but 35 to 42 cents, and Philadelphia only 38 cents. It is charged that these two last named cities draw work from Baltimore by means of this lower price for composition.

At this writing Baltimore is crowded with strangers, people attracted in this direction by the near approach of the inauguration at Washington, a locality, as is well known, not quite an hour's run by rail from this city. Speaking of the capital reminds me that some changes were made at the last election in the erewhile political complexion of Maryland's representation in congress; and, it is said, in consequence thereof, that a number of the typographical fraternity, at present holding cases in the government printing office, protégés of outgoing congressmen of democratic faith, are just now thinking of making preparations to fold their tents, and, like the Arabs, as silently steal away.

FIDELITIES.

PRINTING AND PUBLISHING INTERESTS IN THE QUAKER CITY.

To the Editor: PHILADELPHIA, Pa., March 5, 1889.

The advent of the first spring month shows a marked and pleasant improvement in all branches of printing and publishing. The job and book houses are crowded with commercial and show work, and publications connected with the observance of the Lenten period. The firms that usually execute considerable church and religious holiday work are engaged upon large orders to be delivered this month. Some of the Easter novelties are magnificent. The job printers who make a specialty of illuminated designs, are running their establishments day and night, the number of hands also being largely increased. The lithographers, engravers, bookbinders and allied interests, are enjoying a fair share of the prosperity. The demand for skilled printers and pressmen is unusually great. Within a very recent period many of the leading job-printing houses have repeatedly advertised for first-class jobbers, but have failed to secure the needed help. A high typographical union official informs THE INLAND PRINTER correspondent that not a really expert and reliable job compositor is idle in the city. Wages are good and payment is prompt, and the worthy, competent printer who captures a good "sit" generally keeps it.

The machinery people, paper manufacturers and dealers and manufacturing stationers, all report an excellent and rapidly increasing business. The demand for job presses is large, and the press makers find their facilities almost inadequate to the pressure made upon them.

The firms are quietly getting their displays of representative specimens ready for the Paris Exposition, and the goods sent for exhibition will be rare and beautiful productions of the typographical art.

The relations between the members of Philadelphia Typographical Union, No. 2, and the master printers, are harmonious and are destined to continue so for an indefinite period, notwithstanding the malicious, untruthful and unwarranted reports to the contrary. The union men have not, as yet, had any overtures from the Typothetæ suggesting a decrease of the schedule of wages that have ruled for some time past, and none are expected.

A committee of Philadelphia Typographical Union, No. 2, of which Jacob Glaser is chairman and Charles George secretary, have sent a communication to the employing printers of this city, requesting a conference "in regard to certain irregularities alleged to exist between you as employers and us as employés, to the end that a clear understanding and better feeling may prevail." It was declared that "no attempt is to be made at this conference to increase or reduce the price of composition per 1,000 ems," but that one of the good results hoped for "is the inauguration of a system of yearly meetings of employers and employés, a system which in other localities has worked to the marked advantage of all concerned."

Forty publishers and editors of Pennsylvania met at Harrisburg lately, to decide on a libel act to be submitted to the legislature. The bill introduced by Representative Foss, of this city, was taken as the basis for action. This bill provides that in actions for libel there shall be no presumption of either express, actual or legal malice from the mere fact of the publication of the libel, and that the burden of proof of express malice no exemption or punitive damages shall be awarded. These provisions were considered too radical and an almost unanimous vote was cast for their elimination from the bill. Provisions in the Foss bill were left to stand, preventing an action for libel unless a request has been made for a retraction by the defendant, and sufficient time allowed to print it and permit the proof of retraction to be offered in evidence on the question of good faith of the defendant in litigation and reduction of damages. A new section inserted prohibits the institution of an action for libel, civil or criminal, unless the plaintiff furnishes security for the payment of costs, or convinces the court that he is unable to provide the required security. Senator Cooper and the Harrisburg editors were appointed a

committee to use their influence in having the bill as modified passed by the legislature.

George Chance, who publishes the *Union* for Typographical Union No. 2, makes a handsome and interesting paper of his charge, and one that is a credit and honor to the fraternity here and in the state. The *Union* is replete with typographical labor news, and has already attained influential and deserving prominence.

Arthur C. Farley, publisher of *Farley's Booksellers', Stationers' and Printers' Reference Directory* and several other business papers, has been sold out by the sheriff.

The *Evening Journal*, the new independent newspaper recently started at Wilmington, Delaware, and conducted by F. E. Bach, has changed owners, and is now a democratic paper. The new enterprise is said to be controlled by ex-Sheriff Herbert, of New-castle.

William Ellis, a well-known and popular printer, who for several years past was proofreader and compositor on *Taggart's Times*, died February 26, after an illness of only a few days, from pneumonia. He was fifty-eight years old, and leaves a wife and several children. He was for years foreman of the old *Daily News*. His fellow members of Typographical Union No. 2 mourn an esteemed friend.

Samuel McKenzie has resigned his position on the *Times* and accepted the foremanship of the composing room of the *Inquirer*. Thomas Craig has been promoted to the assistant foremanship of the *Times*. Both McKenzie and Craig are expert printers, who are well and favorably known among the followers of Gutenberg, Faust and Caxton.

ARGUS.

THE PRINTING TRADE'S CHEERFUL SITUATION IN THE METROPOLIS.

To the Editor: NEW YORK, March 8, 1889.

The opening of spring witnesses a great and satisfactory improvement in the printing and kindred trades. The printers and publishers generally are very busy. The job and book establishments are turning out enormous quantities of work, some of the leading houses being compelled to make overtime to finish the orders filed and to be delivered during the spring season. Notwithstanding the great competition and cutting under in prices, many of the representative firms claim that profits are reasonably good and satisfactory.

The situation between the employer and employed at present is peaceable and pleasant. First-class and steady compositors are in constant demand, and competent and rapid hands can obtain a fair and remunerative compensation for their services. The traveling show season is about to be inaugurated, and this has largely increased business among the lithographers, engravers and job printers, who monopolize this class of trade. The paper makers, printers' supply houses, manufacturing stationers, bookbinders and all interests depending upon the commercial, mercantile, manufacturing, steamship and railroad operations for support, are transacting an immense amount of business. All the press manufacturers report a steady and increasing current of orders, some of them stating that their facilities are unequal to the demands made upon them.

While the typographical fraternity have not definitely or positively determined what part will be taken in the colossal industrial parade, that is to form a splendid feature of the Washington centennial next month, the Typothetæ and New York Typographical Union, No. 6, will doubtless project arrangements to be properly and handsomely represented. Various schemes have been mentioned in connection with the movement, but none of them have assumed any practical shape. It is understood, however, that an allegorical tableau, representing the invention and progress of the art of printing, will form a prominently conspicuous feature of the procession. Specimens of machinery, printing presses in operation, and other interesting and attractive things, will add to the novelty and interest of the occasion.

The appointment of the next public printer is the chief topic of discussion among members of the typographical unions here

and elsewhere in the state. They are using all their influence to induce General Harrison to select for the position some member of the International Typographical Union. While the law provides for the appointment of the government printer "from among practical printers," it has never been complied with.

The most proficient man, perhaps, who ever occupied the office was John D. Defrees, of Indiana, who was appointed by President Lincoln in 1861. He was not, however, a printer in the practical sense of the term, but was a journalist. Cornelius Wendall, who was selected for the place in 1866 by Andrew Johnson, could not, it is said, distinguish the difference between the various makes of type.

Under a change of the law which placed the appointment into the hands of the senate, John D. Defrees was again selected for the position, and served until 1869, when A. H. Clapp, of Buffalo, another newspaper man, was appointed, and occupied the office until 1877. President Hayes then appointed John D. Defrees, who for the third time assumed charge of the office. In 1881, Sterling P. Rounds was appointed and served until 1886. When Mr. Cleveland came into office he appointed Thomas E. Benedict, who is connected with the Ellenville (New York) *Press*, to the place.

The printers generally throughout the country are now determined to make strenuous efforts to have the office occupied by a member of the International Typographical Union, and many unions have already passed resolutions to that effect, while not a few have indorsed candidates.

There never was such a tremendous struggle for the office. Nearly every prominent city has a candidate, while in some of the cities there are several candidates wishing the prize. Altogether there are now one hundred and sixty-four candidates, and numerous others are looming up every day.

The failure to get the international copyright measure before the United States house of representatives last month has been a great disappointment to American authors, publishers, printers, and all others interested. It has been confidently expected that the law would be passed this year, and that we should have done with the cheap imprint business. It seems strange to find among the most ardent supporters of the bill many of the publishers who some years ago opposed it most strongly, but the reason is not far to seek. The constant duplication of editions of popular books has now driven even the "pirates" to the other extreme. There is no longer any profit in these books except for the dealers who sell them at retail. The wholesale price has been reduced until even the small newsdealers demand and receive from forty-five per cent to sixty-five per cent discount. If this rate cannot be got from one publisher, he goes to some one else, who makes an edition of the book he wants, and by pitting one against the other secures his point. There is no such thing as combining—the publishers hate each other too much for this—and as for the so-called "trade courtesy," it is a relic of days gone by which is never mentioned nowadays.

Supervisor of the *City Record* Costigan, with two practical printers, J. W. Pratt and J. Barker, are at work trying to devise a new method for the purchase of the city's stationery. By the old plan the departments made requisitions for their supplies. There was no specification of the length of time the supplies were for, and there was no way of determining how much each department would require in a year. Mayor Grant appointed the printers and instructed them in the following words: "I want the bureau to be managed on strictly business principles, and the city's interests to receive the same care as any merchant gives to those of his own firm. I fail to see why the city should pay any more for its supplies than a private concern."

Typographical Union No. 6 is boldly and commendably endeavoring to have one of its members appointed to the office of supervisor of the *City Record*. Recently a committee of union printers called on Mayor Grant to present the name of George Le Faye as a candidate for the office.

The American Newspaper Publishers' Association has held their third annual meeting here. There was a large attendance from all parts of the United States. The principal subject of

discussion was the practical and best method of conducting newspapers. The initiation fee of the organization was raised from \$20 to \$50, and annual dues from \$25 to \$50. The following officers were elected:

President, James W. Scott, *Chicago Herald*; vice-president, Colonel Charles H. Taylor, *Boston Globe*; secretary, F. K. Misch, *San Francisco Bulletin and Call*; treasurer, W. M. Laffan, *New York Sun*; executive committee, S. H. Kauffman, *Washington Star*; Major W. J. Richards, *Indianapolis News*; J. H. Farrell, *Albany Press and Knickerbocker*; W. C. Bryant, *Brooklyn Times*; Colonel L. Q. Morgan, *New Haven Register*. The meeting next year will be held in Chicago.

The members of the association witnessed exhibitions of typesetting machines, both in Brooklyn and this city. The exhibition here was at the Publishers' Printing Company, No. 157 William street, under the direction of R. W. Nelson. There are seven of these machines in operation there.

Harry Penrod, the one-armed printer, recently visited the composing room of the *New Haven Register*, and demonstrated that "he can 'stick' type with the best of the 'comps,' and can get up 1,200 or more ems in an hour without any apparent effort. It is explained that Penrod is only 24 years of age, and learned his trade in Washington, D. C. He lost his arm in a railroad disaster at Carbondale, Illinois, some years ago, but determined that this should not prevent him from following his trade. He set at work and got up a simple arrangement, which, when placed on the case, holds the stick at the proper angle. By continuous practice he learned to drop the type so gently that there was no danger of making 'pi' of any uncompleted line, and finally reached that point where he could set type as fast as he used to before he lost his arm. It is an interesting sight to watch him standing at a case and filling up a stick. He can also 'dump' a stickful of type without the least trouble, and, in a word, can get along as well as anybody."

All the plates, copyrights, publications, contracts and stock on hand of the late firms of Potter, Ainsworth & Co. and Knight, Loomis & Co. have been sold. About \$40,000 was realized by the sale.

William C. Reich, at present connected with the London edition of the *New York Herald*, is preparing to embark on James Gordon Bennett's yacht for a tour to Africa. He will return about June 1.

It was recently stated that Mrs. Frank Leslie contemplated making some extensive changes in the publication of the illustrated papers under her control. It was learned that the managers of *Judge* were negotiating for the purchase of *Frank Leslie's Illustrated Newspaper*. These negotiations were begun some time ago, but the terms and conditions of the sale were not fully decided on. Mrs. Leslie now confirms the sale of her illustrated newspaper to W. J. Arkell, proprietor of *Judge*. "The price," she says, "is no secret. Mr. Arkell pays \$300,000 for the name and good-will of the English edition of the paper, and \$100,000 more for the German edition. No plant whatever goes with it. The paper will be published after May 1 (when his ownership begins) at the new *Judge* building, at Fifth avenue and Sixteenth street. On that date I will move my eight remaining illustrated publications to the same building, where I shall occupy two floors."

The New York Press Club has held its annual dinner. The attendance was large and notable. The dining room at Delmonico's was pleasantly decorated, the menu excellent, and as for the speeches, the names embraced the best after-dinner wits of the country, among whom may be mentioned Chauncey M. Depew, Charles Emory Smith, editor of the *Philadelphia Press*; Henry George, Rev. T. DeWitt Talmage, General Felix Angus, of the *Baltimore American*; Colonel John A. Cockerill, of the *World*; W. J. Arkell, of *Judge*; T. Armoy Knox, of *Texas Siftings*; Major J. B. Pond. It was one of the most successful of the club's annual dinners.

The Board of Estimate and Apportionment for 1888 appropriated the snug sum of \$200,000 for the municipal printing and expenses of the *City Record* for 1889. PRINTER JOURNALIST.

WALTER W. BELL.

Walter W. Bell, the subject of our illustration, and the "centennial" president of the International Typographical Union, was born in London, England, February 16, 1834. After receiving an academic education in that city, at the age of fourteen, he emigrated, with his parents, to the United States, arriving in New York in April, 1848. After remaining a few days in that city, he passed on to Philadelphia, which finally became his permanent residence. He at once entered the printing business as an apprentice in the office of the *Sunbeam*, at Salem, New Jersey, where he enjoyed all the luxuries and immunities so common in those days to the country apprentice—rising early and indulging in a little manual exercise at the wood pile and doing the odd chores of the house before assuming the regular duties of the day at the case, or behind a pair of rollers at the old "Columbia" hand press, as occasion required. As the youngest apprentice, his duty also was to serve the *Sunbeam* to many of its country subscribers, which gave him many a lonely journey in an antiquated "one hoss shay," or Jersey buggy, through the pines of South Jersey, and toughened him for years of toil in the future.

In about a year the paper changed hands, being bought out in 1849 by its present owner, Mr. Robert Gwynne; and young Bell, not wishing to continue the life he had led, returned to Philadelphia and entered the office of Merriew & Thompson, then one of the leading book and job offices of Philadelphia, as an apprentice. After serving out his time, he secured employment in the office of the *Daily Register* (a paper of too advanced opinions for the time, being the organ of the radical abolitionists

of the day), where he was engaged as proofreader. The paper not succeeding financially, the Birneys, who ran and partly owned the sheet, resorted to the employment of women as compositors, but not being able to secure a sufficient number for their purpose, prepared to fill up the office with "rats." The Philadelphia union thereupon ordered a strike, and the hands quietly left the office. Although no disorderly conduct was indulged in by the old hands, Mr. Bell and two others, long since deceased, Messrs. Woolley and Breneiser, were singled out and made the defendants in a conspiracy suit, being arrested and held to bail on that charge. The suit, however, was dropped, and the paper shortly afterward died a natural death.

From the *Register* Mr. Bell went to the Philadelphia *Inquirer* office, where, after working a short time at case, he was promoted to the proofreader's desk, then to assistant foreman, and in February, 1865, assumed the foremanship, which he retained until December, 1881, when he resigned to take charge of the new illus-

trated magazine, *Our Continent*, which, after a two years' struggle for existence in Philadelphia, and spending many thousands of dollars, was removed to New York, and there died.

In 1875 Mr. Bell was elected to represent Philadelphia Typographical Union, No. 2, at the annual session of the International Union at Boston. At this session Philadelphia was chosen as the most appropriate place of meeting in 1876, it being the centennial year; and Mr. Bodwell having declined being a candidate, Mr. Bell was elected and served as president of the International Union from that time until the close of the session in Philadelphia, and until his successor was elected.

Mr. Bell was always an ardent, though conservative, member of the union, and can point with some pride to the fact that

throughout a foremanship of over sixteen years he was never made the subject of the slightest complaint or charge on the part of the men employed under him. As president of the International Union, although he had some very delicate questions to act upon and conflicting interests to arbitrate, no decision made by him was reversed or criticised by that body, many of them being codified and made part of the general laws, a fact of which both himself and many friends may feel justly proud.

On resigning from the foremanship of the *Inquirer*, he was presented with a handsome silver service, which was contributed to by everyone in the establishment, from proprietor to proof-boy. Although, on returning from New York on the decline of *Our Continent*, he retired from the printing and engaged in the real estate business, he kept up active membership in Typographical Union No. 2 until at the last meeting of that body, when, without solicitation on his part, his name

was, by a unanimous vote, placed on the honorary roll, a compliment worthily bestowed and appreciated.

A SYSTEM of forming letters, for poster work, from type metal combination blocks has lately been brought out in England. The number of blocks does not exceed twelve. Letters of any size from four picas up—condensed or extended—can be made by any ordinary workman. We judge it must be much the same as has been in use for some time in this country. The objection to them is, that after they become worn, the edges of the blocks do not fit closely, and the impression is seamy and imperfect. For coarse work, however, they answer very well. With the new process of stamping out wood type from end wood, at a cost about half former prices of wood letters, it is not likely that the combination blocks will meet with general favor. Besides the wood is much more durable. Instances are known of wood type being in use for more than fifty years and doing good work yet.

"REMINGTON STANDARD"

If you wish to keep up with the procession note what we have to say about our "REMINGTON STANDARD" typewriter type. It has been on the market but a short time and yet it is known and ordered from the Eastern and Southern States as well as from all the Western States. The orders seem to originate with those who get up circulars, and who, as live business men, take advantage of every new and good thing which tends to make their circulars still more effective.

In one instance a large Eastern manufacturer came to us saying that he had heard we had the only perfect typewriter imitation and gave us an order to get up Spanish accents for it. Another large concern in this city has found it absolutely necessary to have 150 lbs. of "REMINGTON STANDARD" though already loaded with all other leading typewriter types.

All this is naturally gratifying and indicates that the sales of our "REMINGTON STANDARD" will go on increasing very largely. It is cast in our celebrated COPPER AMALGAM METAL.

THE ONLY SUCCESSFUL BLOCKING MACHINE IN THE MARKET.

GOLDING'S TABLET PRESS.

Reduces the Cost of Blocking to a Minimum.

Indispensable to every Printer, Bookbinder and Stationer.

Fig. 1.

Fig. 2.

Fig. 3.

THE object of this machine is to make blocking or tableting easy and rapid. The press consists of a bed of two boards held at right angles in an iron frame, and a reversible hinged clamping frame, having a fixed clamp at one end and a movable screw clamp, operated by a crank, at the other. This clamping frame is thrown over the bed as shown in Fig. 1, and the paper is put in corner-wise and clamped securely, the bottom edges (resting on the bed boards) being smooth and even. The hinged frame is then lifted over as in Fig. 3, bringing the under and smooth sides of the paper uppermost, so that the whole block can be quickly and easily cemented. The No. 2 press is provided with a strong hinged bracket under the bed, by which it is secured to the bench in such a way that it may be used horizontally as in Fig. 3, or perpendicularly as in Fig. 2.

To bring the iron clamps to the center of varying sizes of paper, in order to secure central pressure, a thumb-screw is used (see Fig. 1) to raise or lower the hinged clamping frame, and blocks from 2 x 2 inches up to the full capacity of the press can be cemented with equal facility. Each press is supplied with wooden pressing boards, on which the iron clamps bear.

Blocks can be made of any thickness, the cardboard backs can be inserted anywhere, and the block as turned out by the press can be easily separated into sections by a thin, sharp knife, after the cement has set sufficiently to hold the paper.

... THE NEW ...

SCREW ADJUSTING GAUGE PIN,

WITH SPRING TONGUE.

Covered by Patents issued March 23, 1875, May 17, 1881, and two other Patents pending. Protection in Europe.

This Gauge Pin speaks for itself. It suggests at once hair-breadth adjustment. It can be applied to the tympan as readily as any pin, and when pushed home will give a firm resistance. The gauge-head is held in close contact with the tympan, so that sheets cannot feed between. The gauge can be moved at any time to correct the position of the sheet without marring the tympan as no teeth are required to hold it.

It will be noticed that two small nuts, movable by the fore-finger, are shown in the cut. One of these slides the screw-bar backward and forward and adjusts the gauge. The other, the rear nut, is used merely as a check-nut. In ninety-nine cases out of the hundred, however, this check-nut will not be needed, as the pin is so constructed as to make its use practically unnecessary.

The pin is provided with the indispensable spring tongue in an improved form, and facilities will be had for obtaining extra tongues when required at a reasonable price. The article is made in every way perfect, with finely ground points and carefully fitted parts, and is guaranteed to give satisfaction.

All parts come within the height of a pica quad.

Three in a set,—Price, 75c. per Set,—with tongues.

MR. JOHN THOMSON, New York City:

DEAR SIR:—The Executive Committee meets to-morrow afternoon and a check will be forwarded for account on Wednesday morning.

Have lived almost in a printing office for thirty-two years and never handled a finer or nicer press in that time. Does not make any more noise with a heavy form than a common sewing machine. Respectfully,

CALL PRINTING AND PUBLISHING CO., per Stugg.

THE ILLINOIS PRESS ASSOCIATION.

ADDRESS OF THE PRESIDENT—ELECTION OF OFFICERS AND DELEGATES, ETC.

The twenty-fourth annual meeting of the Illinois Press Association convened in Lincoln Hall, Danville, Tuesday evening, February 12. The welcoming address was made by Mayor James Sloan, and felicitously responded to by L. A. McLean, president of the association. A tribute to the memory of the late Mrs. C. Bostwick, of Mattoon, by Mrs. E. B. Harbert, of Evanston, was followed by the appointment of committees on new members and resolutions. The meeting then adjourned till Wednesday morning.

On re-assembling, after the transaction of executive business, among which was the raising the initiation fee to \$3, President McLean delivered the following able and interesting address :

Members of the Illinois Press Association :

LADIES AND GENTLEMEN, — I congratulate you that we are permitted to assemble on this the twenty-fourth anniversary of our association. These meetings are sources of pleasure, of profit and of power. Of pleasure, in that we meet with old and valued friends ; of profit, in that we here exchange experiences with those engaged in one pursuit, and of power, in that there is generated here an energy and high purpose that shall go with each of us throughout the coming year. I find it indeed a pleasant duty to welcome the gray-haired veterans who have long borne the heat and burden of the day, as well as the young members who for the first time meet and take part in our deliberations.

There is need for association in every department of business. The State Bar Association meets to discuss existing laws and to improve the same ; the State Teachers' Association is held to the end that the cause of education may be advanced ; the Historical Society holds its meetings so that facts and incidents pertaining to the past may be rescued from oblivion, and be preserved for future generations. Every trade has its associations to discuss improvements, and to raise higher the standard in the minds of the members. But the peculiar difficulties attending journalism give press associations special reasons for existence.

Journalism involves much perplexity from the two-fold nature of the work. On the one hand, the newspaper is as much of a business and money-making establishment as a store or foundry. The editor must live, his family must be clothed and educated, the paper must sell and afford him an income. But as "the life is more than meat," so does the catering to the mind bring graver responsibilities and duties than caring for the body. I would not be understood as holding any contempt for the business aspect of the paper, but as that subject is so broad and will be fully discussed by other members of the association, I will call your attention more particularly to that which pertains to the mind, or the

LITERARY AND MORAL SIDE OF THE WEEKLY PRESS.

It sounds like a truism to say that there is no power in this country more potent for good or evil than that exerted by the press ; yet we see the evidences on every hand that this is so. The editor of the weekly paper may not be a man of marked ability, yet by means of his paper, if his efforts are properly directed, he exerts an influence in the community in which he resides greater than all other influences combined.

"How shall I speak of thee or thy power address,
Thou God of our idolatry, the Press ?
By thee religion, liberty and laws
Exert their influence and advance their cause ;
By thee, worse plagues than Pharaoh's land befell,
Diffused, make earth the vestibule of hell ;
Thou fountain at which drink the good and wise,
Thou ever-bubbling spring of endless lies,
Like Eden's dread probationary tree,
Knowledge of good and evil is from thee."

In view of these facts it is well for us to examine into the matter and see if this power is exerted in the right direction.

Notwithstanding the large number and the widespread circulation of the great dailies of the land, it remains for the weekly press

to occupy a place not filled by any other class of literature. The daily is emphatically the business-man's paper. It chiefly circulates on the street and market, is consulted in regard to the price of bonds and stocks, general and foreign news, and, as a rule, does not reach beyond the bank, the counting house and places of business. It is not printed for the home, and hence is not adapted for the home. So it remains for the county paper to enter the sacred precincts of the family, there to be read by every member, from the gray-haired grandfather sitting in the arm-chair, patiently waiting for the final summons, down to the little one just learning its letters in the advertising columns. The good and bad in the paper is thus absorbed by the young and innocent of our homes, and the extent of the influence thus exerted will never be known until we reach the shining shore. This being true, and in view of the great responsibility resting on us, the tone of the county papers ought to be higher and purer, both from the literary and moral standpoint.

First, the *literary standpoint* : It is claimed by purists, such as Richard Grant White, Professor Hall, and others, that the newspaper lacks literary finish, and they use such terms as "penny-a-liner," "newspaper English," etc., as a reproach. Now, it should not be expected that a hastily written article—an editorial dashed off under the cry for "copy," with the devil at the elbow, shall equal in exquisite finish and purity the style of the "Reflections upon the French Revolution," which Burke re-wrote eleven times, or that of the "Confessions of an Opium Eater," which De Quincey re-wrote sixty times. But we can avoid vulgarisms, slang expressions and innuendo by growing into a greater familiarity with the best writers and thus reducing our lapses to a minimum.

Another reason for the necessity of a higher tone in literature is because we have the English language, the best in the world. It is the language which a Shakespeare, a Milton and a Webster spoke. Truly Burke's prediction, that it would be the world's speech, bids fair to come true. Professor Von Dollinger, in an address delivered recently before the Academy of Sciences, in Munich, said, "The intellectual primacy of the world is as certain one day to fall to the Anglo-Saxon race as in ancient times it fell to the Greeks and Romans. The Germans will have no small share in the intellectual world of the future, but that will be only indirectly through the medium of the English language."

The newspapers now form part of the reading of all men and all the reading of some ; hence it is an educator in style, in the use of this language, and will influence powerfully the speech of the coming generations. Ought we, therefore, to debase such a language ?

Second, the *moral tone of the paper* : Need I say to this association of gentlemen and ladies, husbands and wives, fathers and mothers, that it ought to be pure ? that its stand should be on the side of morality and virtue ? The high character of the press of Illinois answers for you that you believe this. By morality, I do not mean that the paper shall have a canting tone, or that it shall attempt to usurp the work of the pulpit. What I mean is that it shall be pure and wholesome in character ; that it shall elevate rather than drag down. Some editors devote a few paragraphs to religious matters, and all the balance of the paper to spicing up the wickedness of all the vile of earth. Every column of a family paper should pass under the eye of an honest, upright editor, who remembers that all will be read by the purest and most innocent of our homes.

No doubt someone will say the ideal is too high ; we must publish the sort of a paper the people want. Our paper must sell. There is just enough truth in this to make it dangerous. In general it is not true. I do not believe that to make a paper pay it must be filled with all the vulgar gossip of the day, or jokes which lower the standard of morality. The newspapers of today making the most money are not the vilest in tone. There are thousands of papers maintaining the high moral standard I am speaking about which are making far more money than such publications as the *Police Gazette*, *Day's Doings*, etc. Neither do I believe that the sentiment of the community will approve of a low standard. Some may laugh at a low class of wit, but they will

honestly rejoice when the tone of the paper is raised and made fit to be read by their families.

Every man has a noble side, as well as an ignoble one. I care not how low a man may sink, he will maintain a high respect for virtue, truth and morality wherever seen. Thieves, murderers and the lowest class of criminals in the low dives of London never fail to applaud a noble sentiment, and to rejoice at the triumph of virtue over the vice of the play.

In view, then, of the responsibility resting upon us as educators of the rising generations, I plead for a higher standard for our papers. The moral tone of the community depends more on the influence of the weekly paper than we are aware. It is said as a man thinketh, so is he. So, as the editor is, so is his paper. It is but the reflex of the inner life of him who controls it. In proportion as the editor practices temperance, lives a moral life, and venerates religion, to the same extent will it be exemplified in the columns and general tone of his paper.

It is hardly necessary for me to suggest a course by which this higher standard, both in literature and morality, may be attained, as the average editor, in this day of electricity, is, as a rule, conversant with the text-books pertaining to all departments of journalism, and I am pleased to say in regard to the moral tone, that, taking the papers represented in this association, the journal which is not up to a fair average is an exception. Yet, I will venture to suggest a text-book which combines the highest standard of literature with a code of morals which has never been excelled. The book is the oldest in existence, and while little referred to by some men, and some editors, nevertheless is used more than all other books combined. I need not say I mean the bible. And no man can write for English-speaking men with perfect intelligibility who is ignorant of the English in the King James version. Its teachings are the purest and best, its precepts the wisest, and its promised rewards the grandest. Whatever standard the world has attained to in its literature and morals is due to its transcendent influences.

In conclusion, I desire to make a few suggestions in regard to the business department of our association. From the great diversity of prices on a foreign advertisement by papers of similar circulation, I am led to believe that there is a radical error somewhere. In conversation with an advertising agent in regard to this matter, he said the fault was with the newspapers, who differed in their contracting prices (all things being equal) from fifty to one hundred per cent. I would therefore suggest that some action be taken by which we will maintain the price we do ask, and that a uniform per cent be added to these for preferred positions. If we agree on one point only it will be a success, and be the foundation for future improvement.

I would also call your attention to an amendment to the constitution offered at our last annual by Mr. Thomas Rees, providing for a small membership fee. Other associations have admission fees of a much larger amount, and I see no objection to a fee being charged for admission to the Illinois Press Association, as it will tend to place it on a better financial basis, so I recommend its adoption.

And now permit me to call your attention to the programme prepared for our meeting. It is one which involves work. I am glad that the day of junketing and gathering at these meetings for merely a good time has passed, and we assemble now to earnestly discuss the matters pertaining to the future good of our profession. This meeting will be a success or failure as you make it. The foundation for success is laid; let us so build that this may be reckoned the best meeting for efficient work that has been held, and that we may return to our homes feeling that we have been benefited by this interchange of ideas and plans; also cherishing in our minds kindly thoughts for the citizens of this hospitable city who are doing everything in their power to make our stay pleasant.

I desire to call your attention to the fact that the government has become a strong competitor in our business; in fact, almost monopolizing one branch of the stationery trade. I would, therefore, recommend that we remonstrate through the proper channels.

Able and interesting papers were read by Mr. Thomas Rees, of Springfield, on "Advertising," and Mr. W. H. Henrichsen, of the Quincy *Herald*, on "Schemes for Increasing Circulation and Advertising," both of which will appear *in extenso* in our next issue. Addresses were also made by Mr. Julius Schneider, of the Joliet *News*, on "Soliciting and Collecting"; C. Marquis, Bloomington *Pantagraph*, on "Bookkeeping"; H. M. Peter, Watseka *Times*, on "Purchasing"; Richard Bolter, of the Clinton *Republic*, on "Exchanges;" and C. M. Tinney, of the Virginia *Gazette*, on "Markets." A very interesting feature was the delivery of an address on the "Republic of Mexico," by Mr. Owen Scott, of the Bloomington *Bulletin*, illustrated by maps and diagrams.

The following are the officers-elect for the ensuing year: President, Owen Scott, of the Bloomington *Bulletin*; first vice-president, W. J. Lewis, of the Lena *Star*; second vice-president, G. W. Harper, of the Robinson *Argus*; third vice-president, S. T. Thornton, of the Canton *Ledger*; secretary, E. B. Fletcher, of the Morris *Herald*; treasurer, George W. Latham, of the Greenville *Advocate*.

The following delegates were elected to the National Press Association convention, to be held in Detroit, August, 1889: W. R. Jewell, Danville *News*; Frank W. Howell, Mount Carmel *Register*; George W. Cyrus, Camp Point *Journal*; Mrs. Myra Bradwell, Chicago *Legal News*; John N. Onstott, Petersburg *Democrat*; J. M. Page, Jerseyville *Democrat*; J. J. Anderson, Nashville *Democrat*; W. H. H. Henrichsen, Quincy *Herald*; Thomas Rees, Springfield *Register*; George W. Latham, Greenville *Advocate*.

The following resolution was unanimously adopted:

Resolved, That the Illinois State Press Association recognizes in THE INLAND PRINTER, of Chicago, the technical trade journal of the craft in the United States, and takes pleasure in recommending it to the patronage and support of the printers of Illinois.

The reception, banquet and ball at the armory on Wednesday evening was an occasion long to be remembered, and were attended by all the visitors, accompanied by their wives and daughters, who enjoyed themselves to their hearts' content. Taken altogether the convention was voted a magnificent success, and the attention of the reception committee, in particular, and the citizens of Danville in general, received, as they deserved, the thanks of all in attendance.

Mr. Frank W. Havill, of the Mount Carmel *Register*, delivered the following address on "Editorial Writing":

MR. PRESIDENT, LADIES AND GENTLEMEN,—I must beg your kind indulgence this morning, for I have a cold as big as Danville's hospitality, and it stays with me like Brother Henrichsen stays with a timid advertiser. I may choke up like some of you gentlemen do when you attempt to utter a great truth.

The first words of wisdom I received on editorial work, as well as my first instruction in the use of the stick and rule, was from "Old Price," a tramp printer, a walking cyclopedia of the art preservative, and whose queer old head was filled with wise saws. He said to me, "Boy, edit your ads. There's where the money comes in." The advertising department of a live paper is an excellent place for a beginner to find exercise for his powers. Suit your advertisers as to form, aid them as to matter, and encourage amplification. This, of course, as to business advertisement, editing legal advertisements, is a much lighter affair; but even here "editorial" ability can be displayed. Abbreviations are never to be tolerated, nor any disposition to curtail the law's utmost verbosity encouraged. As to this latter the lawyers can generally be trusted, but their aversion to the labor of writing out entire words, when they can satisfy their confiding clients with abbreviations, is notorious, and their copy should be carefully edited in this respect.

But something is usually expected from the editor besides editing his advertisements. Even his advertisers are likely to be somewhat exacting. They have the idea, and are probably correct, that if the paper does not exhibit enough animation and interest in general and local public affairs to induce people to expect its issue and read it, the money they pay will be bad seed sown on barren soil. They know very well, that as to newspaper diet, the public can't live on advertisements alone. And this

brings me to the writing of editorials. I know of no system in this that can be defined, nor do I believe there ought to be. If there were, blank editorials could be formulated, like blank deeds, for instance, and kept in type as standing matter. A formula might, and, in fact, does, work well enough on some papers, as to news items, as thus :

"We are reliably informed that at——, on the—— inst.," so far the form, to which can be added, as occasion may demand : "Granny Jenkins knit six pairs of socks," or "Jim Jones was at a candy whack at Bugtown," or "the slimy reptile who runs the smut mill in Rabbit Hollow got pasted on the jaw," or "our honored fellow-citizen, Judge Bugle Blast, with that characteristic go-aheaditiveness which we wish were shared by others whom we might name, has added materially to the appearance of the Third Ward by whitewashing his pig-pen."

But I apprehend that a system like this is hardly acceptable to real newspaper men, or to the public ; so that, I take it, as to writers of editorials, that each must be a law unto himself.

Editors have been known, who were themselves compositors, who "wrote" their editorials by setting them up out of the case. Others dictate them to an amanuensis. Some of you, gentlemen, who have become millionaires by editing tax lists, probably lie comfortably on a silk plush sofa at home, talk your editorials into a telephone, and have them taken down at your offices on a type-writer by a blonde beauty in bustle and bangs.

Mr. Fritz Napoleon Smith, editor of the *Chronicle*, whose establishment is graphically described by that clever romancer, Jules Verne, in the February *Forum*—but whose method of writing editorials is singularly overlooked by that descriptive gentleman—is a lightning editor who provides himself with a gross or two of Fabers, which are sharpened by a machine run by an electric motor. His paper, a ream or two for each day, cut to proper sized sheets, is piled up before him. When he squares himself to work, he fills each sheet as it is moved toward him by an ingenious application of machinery connected with the pencil-sharpener, when it is thrown over his shoulder by a frisket, worked from the main or bull wheel of the outfit. In this way he is able, during the entire *seance*, to keep in the air two or more sheets of editorial manuscript, which are distributed by an automatic devil to the lightning compositors overhead. But a majority of us are compelled to construct our editorials in a different way, and some of us somewhat laboriously.

The subjects, I suppose, are generally selected because our publics are interested in them or we believe they can be interested. For the treatment or general construction there is, as I have said, no known system—at least none known to me. The subject has probably been assigned to the wrong man. I receive and examine with considerable interest many of your papers regularly ; have watched carefully for indications of "system" in the construction of your editorials, and confess my inability to evolve anything of the kind from anything I see in any of them.

When that "admirable" vice of our school polity—uniformity of text books and methods of instruction applied to all pupils alike—classification of the dull with the bright in the same form, and all clipped or stretched to the same mental size—the local superintendent modeled upon the state superintendent, and the teachers upon the former—when this vice shall have done its perfect work, system in producing editorials will doubtless grow out of it. In that halcyon time, when all will have been compressed in the same mental mold, we may indeed be able to point with pride to a species of "signal service" which will premise with reasonable accuracy the subjects and verbal arrangement of editorials for the month or year ensuing, because there will then be "system." But for the present there is none. Yet there are methods, and again, other methods, of doing the work.

Assuming we have something to say, it is well to assume also that our public understands and takes for granted some things connected with the subject without their elaborate statement, just as it must be assumed they can read the words written. The diffusion process is said to be a good process in the making of sugar, but it is not the best for crystallizing editorials.

A knowledge of the evanescent character of these periodic lucubrations tends strongly to engender carelessness in their production. As a check to this tendency there ought to be cultivated an unvarying habit of merciless self-criticism.

The subject having been selected, or, as is likely, forced itself on attention, the natural order, I suppose, is first to collect and arrange all the facts bearing on the topic ; and, secondly, to put them together in as compact, logical and comprehensive form as possible. But it is a rare and valuable faculty, indeed, that enables a writer to produce an article at the first draft that he will be unable to improve by careful and critical pruning. Adjectives and parenthetic parasites may have intruded themselves, diluting sense and force. Cast them out. A single word may be found that will convey the meaning of a phrase. Substitute it. Entire paragraphs may be discovered that give no aid to the general conclusion. Eliminate them. Important facts, necessary to a clear understanding of the subject, have possibly been overlooked in the excitement of composition. Insert them in their logical order. Now, rewrite, making such further changes conducive to force as careful criticism in respect to consecutive arrangement will suggest. Do all this, at the risk of consigning the whole fabric to the waste-basket along with the favors of "a valued correspondent" ; for he who has not enough nerve, nor enough of the power of self-criticism to destroy his own mental bantlings before they go out into the world to disgrace, annoy or discredit him, lacks a very important element of the editorial faculty. There is a marked difference between the editorials of today and those of a few decades ago. The labored and lengthy *leaders* that were deemed indispensable by old-time editors, have, within the past few years, been superseded by the terse, incisive and brief articles and paragraphs, which are the distinguishing characteristics of the leading and popular prints of the time.

The most successful editors are those who discard these ; and summarizing current history, indulge in trenchant personal hits, perfumed scandals and local society news. The masses of the reading public of today—embracing, in the main, the whole people—active, alert and discriminating, cannot tolerate abstruse disquisitions and philosophical essays in newspapers ; but abreast with the heat and push of affairs, readers grasp at the pith and core of articles, which they weigh and digest with marvelous celerity.

The editor who would meet the popular demand must condense, must compress facts, fancies, opinions, so that, in a literal sense, he who runs may read ; and reading, may compass at a glance, the marrow and point of what he reads.

The editor who would emblazon success on his shield should combine the luminous instinct of common sense with the courage of his convictions. As the chronicler of current local history, he should "nothing extenuate, nor ought set down in malice." Imbued with Justinian's sense of justice—"the perpetual disposition to render to every man his due"—the personalities of journalism, always grateful to the public man, would not be accentuated with the rancor of partisan or personal prejudice, while they might be sufficiently incisive and pungent to satisfy the popular relish.

ELECTRICITY IN THE PRESSROOM.

A simple way of getting rid of electricity in the pressroom is introduced by Mr. Overend, of the firm of Sherman & Co., Boston. He says, "There is no difficulty before the sheet reaches the fly, as it is securely held by points, tapes and contact wheels. When, however, it reaches the fingers of the fly it acts in a most ungovernable manner, and continues to do so when it has been deposited on the heap. He prevents this nearly entirely by saturating the fingers or sticks of the fly-wheel with glycerine and water. This is put on with a sponge, while the press is at rest. The next time it is stopped it is again wet, until finally the wood is completely saturated and there is no longer need of repeating the process. There is scarcely ever any trouble in this place from electricity, although over thirty presses are in operation."

MR. OWEN SCOTT,

President of the Illinois Press Association, whose portrait is herewith presented, was born near Effingham, Illinois, July 6, 1848. His father was a county practicing physician, and one of the pioneers of Illinois, locating with his family in the state in 1825, where he still resides in the section in which he first settled. Owen, the subject of this sketch, had a relish for books from his childhood, and although the schools of the neighborhood in which he lived were not of the best, he was a constant attendant, and received much benefit therefrom. Later, he became a teacher in the country schools, and was enabled by the revenue derived therefrom, like a good many of our self-made men, to pay his way in the State Normal University, then located at Bloomington, his present home. In 1873, he became superintendent of schools of Effingham county, and served in that capacity for eight years.

During 1872-3 he pursued a course of study of the law, and was admitted to the bar by the Illinois' Supreme Court, in January, 1874, which profession he followed for a few years before becoming involved in journalistic entanglements. In 1881 he purchased a half interest in the Effingham (Illinois) *Democrat*, an influential weekly newspaper. The year following he became sole proprietor, and continued to publish the *Democrat* until September, 1884. At this time he disposed of his Effingham paper, and became the owner and publisher of the daily and weekly *Bulletin*, at Bloomington, Illinois, succeeding Mr. John H. Oberly, now Commissioner of Indian Affairs.

Mr. Scott is also editor and publisher of the *Illinois Freeman*, a monthly fraternal newspaper. As soon as possible after becoming a publisher he became a member of the Illinois Press Association, and has occupied a prominent position in that body to the present time. At the session held in Danville in February last, he was chosen president of the association for the coming year. He is happily married, and has a charming wife—a genuine helpmeet—and two interesting daughters.

It is no flattery to say that Mr. Scott enjoys the confidence and esteem of a large circle of friends. A man of positive convictions, he is a courteous and agreeable gentleman, a fluent speaker, an able writer, a firm friend, and a model husband and father.

THE employing printers of Berlin have appointed a committee out of their number to regulate their apprenticeship system. No more than a certain number, fixed according to its size, are to be taken into any office, and all apprentices, before being bound, are to pass a school examination.

INTERESTING ITEMS.

THE first edition of Robert Burns' poems was published in 1786 at 3 shillings, and consisted of 612 copies. In 1832 the market value was 1 guinea; in 1858, £3 10s.; in the following year it jumped to £8; ten years later to £14; in 1876 to £38 10s.; in 1882 to £73, and in 1888 to £111.

MONS. E. SOYMIE, manager of a newspaper at Lorient, has suggested an alteration in the ordinary method in France of printing the addresses of subscribers to newspapers and other periodicals. Instead of printing them in batches of about twenty on single sheets, which requires checking for each issue, he prints them on a strip of paper like a ribbon, and they are afterwards perforated between the addresses. This ribbon is rolled up on a bobbin and

the whole of the labels occupy but a small space, while none can be accidentally lost. Each is afterwards torn off and pasted on the wrappers. The plan seems to be something like that adopted by some of the London omnibus companies for giving out tickets.

A ROTARY machine for printing illustrated periodicals, which is claimed to combine high speed with thoroughness and efficiency of work, is described in foreign journals as made by Marioni & Co., of Paris. It is seventeen feet long and six feet wide. The reel of paper is placed near the floor at the printing end, and the sheet goes around the blanket cylinder of the inner form after passing around two steadying rollers. It then rises to the outer form blanket cylinder, after which it runs the whole length of the machine to the cutting cylinder, thus giving the ink on the sheet a chance of drying somewhat. Having been cut, a gatherer collects four sheets and passes

them on to the flyer, which lays the printed work alternately on two boards, so that both the inner and outer forms are open to the inspection of the minder. The paper passes over a horizontal box, which may be heated with steam or gas, and which it is claimed makes the paper take the ink more readily, and helps the ink to dry more rapidly than when the paper goes into the printing machine direct from the reel. The set-off sheet is passed out from a reel near the cylinders, and gathered in by another reel close to it, after it has gone around the outer form blanket cylinder, between the blanket and the sheet to be printed. This winding up is done by a belt which always drives the roller at the right speed. The winding reel is so adjusted as to allow for its increasing circumference as the sheet is wound on, and to prevent it from tearing away. The wheels of the plate and impression cylinders are adjustable for register and the inking apparatus is ample.—*Exchange*.

Written for THE INLAND PRINTER.

A LABOR-SAVING INVENTION.

BY D. L. STINCHFIELD.

DANA'S FRICTION CLUTCH.

IN the application of motive force to foot-power printing presses, however varied in detail may be the methods of that application, the primary principle of the crank has been always strictly adhered to. The crank is the first and universal link of connection between leg muscle and the gears, cams, toggles, slides or other devices used to transfer the motion given and sustained by the operator's foot. It has done this work with fair satisfaction on printing presses since their invention, but not even the respect due old age and long service shall prevent a just statement of its defects, as demanded by the purpose of this article.

In the first place, it is wasteful of the force given it for transmission, gaining speed not at all commensurate with the power applied. In it is combined the natures of servant and master—yielding fair results from a certain degree of force applied to the treadle, but rendering worse than useless the application of power beyond that degree. Recognizing, of course, the fact that modifications of the crank principle enter largely into the construction of all presses, it should be remembered that herein reference is had to the primary form as it appears in the crook of the main shaft, whereon hooks the rod connecting with the treadle.

The experience of the pressman renders necessary only the briefest statement of the peculiarities of this primary crank and the disadvantages they closely represent. He knows that in starting the press he must help the balance wheel by hand until the treadle is at the highest point and about to descend, when (on a quarto-medium or heavier) he throws the weight of his body on the treadle to get a quick revolution and prevent stoppage on the center, or a backward motion of the machine. He knows that in his effort to maintain rapid motion it is difficult—impossible, in fact—to keep the foot and treadle in unison, and that the treadle works the foot quite as much as the foot works the treadle. Thus it is that a considerable part of the force is exerted to counteract that before applied, and to actually impede instead of accelerate the motion of the press.

He knows, too, or can readily observe, that the crank yields effective results through only about one-third of its revolution, or but a part of the distance from one dead center to the other on the down-stroke. The pressman realizes, also, or can be brought to realize, that in treading a press exhaustion is caused not so much by the muscular force required as by the rapid, incessant and paralyzing kicking.

In all of this, however, there is nothing new. It aims simply to be a true and not overdrawn statement of the disadvantages of the crank application of power to the printing press—a brief review of an old lesson—in order that a new one may be better understood.

Many attempts have been made by press builders and others to reduce the amount of kicking necessary to run the machine. These long-continued efforts are in themselves strong evidence of the disadvantages of the present method as above set forth. One after another, various schemes have been devised, and proven worthless. Power has been sacrificed to gain speed, and *vice versa*, to such an extent that foot-power was inadequate, or regular speed could not be maintained. One feature has been developed at the cost of another equally important. The number of devices tested in secret by press builders, only to be abandoned in despair, if not in disgust, may never be known. Certain it is that it is large. News of such a failure occasionally gets abroad, but seemingly to discourage invention rather than to spur it on to possible success—and who shall say that success in this is not attainable? Who, on the other hand, shall have the audacity to claim, not only that a printing press can be satisfactorily driven by foot-power with one kick

to an impression, but that the fact has been practically demonstrated?

The writer is willing to go on record with such a claim, and stands ready to substantiate it by the actual working of a press, as hereinafter described.

In 1882, L. D. Dana, a machinist of Waupaca, Wisconsin, after eight or ten years of patient experimenting, obtained letters patent on "Dana's Friction Clutch," an attachment for foot-power machinery. Since that time the appliance has demonstrated its usefulness on more than a dozen different kinds of machines, working with success on them all. It had never occurred to the inventor, or those associated with him, that it was applicable to a printing press. Last December, the writer induced them to attach a clutch to a 7 by 11 Pearl. The result of the experiment has satisfied them, as well as your correspondent, that the clutch has at last entered its field of greatest usefulness, and that in it foot-power presses have found the thing they have waited for all the years since their

FIG. 1.

invention. Fig. 1 is a sectional view of the clutch as attached to the main shaft of the press, midway between the side frames. The tight pulley (called the disk in the letters patent) is fixed firmly to the shaft by the set-screw in the hub. This tight pulley, or disk, is bored out to a diameter and depth just sufficient to admit the three separate pieces marked "shoes" and "eccentric" (Fig. 2) without binding. The circumference, ccc (Fig. 2) represents the inner circumference of the disk, or cc (Fig. 1). The shoes and eccentric being within the disk, in position as shown, the loose cone pulley (Fig. 1) is brought into place and held at easy working distance from the disk (marked tight pulley) by the collar. To bring the loose

FIG. 2.

pulley to this position, the pins, firmly fixed in its face (Fig. 1), are inserted into the holes in the eccentric P P (Fig. 2). Power is transferred from the treadle by a drive strap (Fig. 1) attached to a hook on the higher step of the loose cone pulley, and wound three or more times around it. The lower end of the drive strap is stapled to the treadle, about six inches from its outer end. The reverse strap (Fig. 1) is attached to the lower step of the loose pulley, wound around it several times in the direction contrary to the winding of the drive strap, and connected at its lower end with a stout coil spring, fixed to the floor.

The parts of the mechanism being in position, and the connections made, apply force to the treadle, and observe the result. The depression of the treadle unwinds the drive strap, causing the loose pulley—and consequently the eccentric and shoes—to revolve in the direction indicated by the arrow (Fig. 2). It is

readily seen how the revolution of the eccentric in that direction crowds the shoes against the inner circumference of the disk, c c c c and c c (Figs. 1 and 2), creating enough friction at the points of bearing, v v v v (Fig. 2), to stop their independent motion and transfer it to the disk and shaft, thus running the machine. As the treadle is depressed, and the drive strap unwound, the reverse strap is, of course, wound up, creating tension in the coil spring. On lifting the foot at the end of the stroke, the coil spring instantly contracts, unwinding the reverse strap and at the same time winding up the drive strap and lifting the treadle—the whole mechanism being for a moment operating in reverse, or revolving in the direction contrary to that indicated by the arrow. A glance at Fig. 2 shows how the eccentric, moved by the pins in the loose pulley, carries the shoes in reverse without restriction by the disk. But on the instant the treadle is depressed again the forward motion succeeds the reverse, the wedge principle of the shoes operates and all the parts (during the stroke) are practically solid with the shaft, which must revolve if they do.

To understand the advantages of this attachment over the primary crank, keep these points well in mind:

With the clutch there is no dead center. It starts the press instantly from any position, without helping the wheel by hand, and always in the right direction.

It gives a constant, uninterrupted and effective application of power during the unwinding of the drive strap, or through about two complete revolutions of the shaft and wheel, instead of through one-third of a revolution, as with the crank. Here is the great saving of power that makes possible and practicable a belting for speed that, with but one kick to an impression, sustains regularity of motion on the heavier presses, with even less exertion of force than the present crank requires.

In the unwinding of the drive strap speed and power are operating together in exactly the same relation they bear each other in the spinning of a top by a quick pull of a string wound around the shaft or peg on which the top revolves. At the beginning of the stroke there is the largest roll of strap on the pulley—the longest lever—the greatest power. As the treadle descends, and the roll of strap diminishes, the leverage is shortened and speed is gained; but the consequent loss of power is more than counterbalanced by the momentum this increasing speed gives the wheel.

The most fascinating feature of the contrivance is that the clutch, treadle and their connections are perfectly independent of the machine. This feature enables the press to *run ahead of the motive force*. In other words: give the treadle a quick stroke; a wonderfully large proportion of the force exerted is effectively used on the shaft; at the suspension of the stroke hold the treadle on the floor, and the press runs on freely. Give the press great speed and remove the foot from the treadle (it will not break); the coil spring reverses the mechanism and lifts the treadle, which, with the straps, loose pulley, eccentric and shoes, remains at perfect rest, while the machine is running away, as though driven with a belt from a line shaft.

This article, already too long, perhaps, does not admit of more than a reference to the true scientific principles on which the construction of this clutch is based. Suffice it to say that so long as these principles are adhered to the clutch will remain operative with practically no chance of breakage, and with no perceptible wear, during the life of the best machine to which it can be attached. It is a new combination of old forces most economically applied. It combines such possibilities of power and speed that, so far as printing presses are concerned, either can be sacrificed to any necessary extent to gain the other.

If the press-feeder had two or three pairs of hands he could run the Pearl three or four impressions to one kick without as much leg-work as the old way requires. This being the case, the heavier machines, geared back to save power until six, seven and eight kicks and revolutions of the balance wheel are necessary to one impression, offer exactly the field the clutch needs for that wonderful speed and impetus which is superfluous on the four-kicker Pearl. The practical result of its application to the Pearl is a regularly sustained speed of 2,000 impressions per

hour with greater ease than 1,000 were accomplished in the old way.

The clutch will most distinguish itself on the larger presses, giving to them the capacity in speed the smaller ones now possess, at the same time that the labor of running them is wonderfully lessened.

Persons desiring further information relative to the clutch, are requested to correspond with D. L. Stinchfield, Waupaca, Wisconsin.

THE CLARK & LONGLEY FAILURE.

The following are the salient features of the statement of the expert appointed to make an examination of the books of the Clark & Longley Company, Chicago, at the request of the creditors:

I find that on the 30th of June, 1886, a stock company was formed, succeeding Clark & Longley, and that their assets on that date exceeded their liabilities \$30,000. (See Exhibit A A.)

The first year's business shows a loss of \$20,031.37, which amount was transferred to the printing office plant, increasing the cost of the same that amount (\$14,037.39 of this loss was caused by payments made by the company on the old creditors' claims of Clark & Longley).

The second year's business, ending June 30, shows a loss of \$27,885.12, and of this amount \$9,194.71 were paid to the creditors of Clark & Longley.

The loss of these two years' business entirely wiped out the surplus that appeared at the formation of the company, and they were undoubtedly insolvent on this date.

If their books had been closed on January 21, 1889 (the date of the failure), they would have shown a loss of \$9,122.61 from July 1, 1888 (exclusive of interest, payments on Clark & Longley's old accounts, depreciation in plant, bills receivable and accounts receivable). (See Exhibit B.)

In Exhibit C I have summarized the losses since the formation of the company, adding estimated loss on plant, bills receivable on hand, and accounts receivable (as per the appraisal after January 21, 1889), and find that the gross loss (including \$24,459.73 paid on old accounts of Clark & Longley) should be \$78,725.26. Deducting from this amount the surplus over liabilities on June 30, 1886 (\$30,000), the liabilities should exceed their assets \$48,725.26 at the date of failure.

I find, however, that the excess of liabilities over assets as per their statement is \$64,889.82, and from this must be deducted the amount of merchandise in warehouse to secure the account of Lincoln National Bank \$4,187.23, leaving net amount of excess of liabilities over assets, \$60,701.59.

Here is a difference between my statement and theirs of \$11,976.33, which I am unable at present to explain, owing to the limited time I have been allowed to examine the accounts.

I find their liabilities to be \$84,730.26, but am informed by their bookkeeper that this amount will be increased, and that he will file supplementary statement showing such increase.

On Exhibit D I have made a condensed statement from the list of assets given to the assignee.

I have not had the time to closely examine the account of A. C. Clark, but the ledger shows that on July 1, 1888, he was a creditor of the company to the amount of \$8,857.40, while at the time of the failure his account shows a debit balance of \$8,948.54. This amount, if closed to profit and loss, would account for the greater part of the discrepancy above named.

Regarding the account of John T. Dale, while the same has not been closely examined, I fail to find any record for the sale or purchase of any part of the capital stock to or from him. I find, however, that there appears to the credit of A. C. Clark, on July 27, 1887, \$4,800. This amount, I am informed by the bookkeeper of the Clark & Longley Company, was a payment made by Mr. Dale on the stock sold him by Mr. Clark. I am of the opinion that the amounts now to the credit of John T. Dale were for his note loaned the company, and were used by the company for

their benefit. This merely is an impression, and has not been verified.

Owing to the short time I have been allowed to examine these books I have been unable to verify the correctness of all the figures given, and have been compelled to take them from the ledger, assuming the correctness of the same.

THE RISLEY & LAKE COMPOSING MACHINE.

A correct illustration is given herewith of a new experimental machine, the invention of Messrs. Risley & Lake, intended for use principally in law, legislative, municipal and government printing. In it there is but one type for each letter, figure or punctuation mark, and all are cut on a cylindrical metallic shell :

{ The New York *Lithographer and Printer*, in referring to it, says : "It will be perceived that there is a key-board like that of an

ingenious device upon this machine, when a sufficient number of words to approximately fill a line have been registered, the justifying or spacing between the words is done automatically ; and when the words appear upon the paper they fill the line as accurately as do the words in this line, and the spacing between the words is as even as it could be made by the most expert compositor. In fact, the spacing is, and must of necessity be, mathematically correct.

"The reproduction of the work done on the machine now on exhibition is accomplished by lithography. The printing by the machine is done with lithographic ink on paper specially prepared. The impression is then transferred to stone in the usual manner, and the desired number of copies struck off. The first printing or composing on the machine is done in less than a fifth of the time required when movable types are used, the ordinary speed being from twenty to twenty-five words a minute. The cost of trans-

ordinary type-writer, the use of which is obvious. There is a key for each character used. These characters are all cast or cut on one cylindrical shell or sleeve, in which feature the machine resembles the well-known Crandall type-writer. This type-shell may be seen, in the illustration, at the center of the machine, immediately to the rear of the key-board, and in front of the sheet of paper upon which the printing is to be done. The ink is applied to each type by small composition rollers.

"By this means an impression is made that is as clear and sharp as an impression taken from type.

"A unique feature of the invention is that by which the lines are 'justified,' that is, lengthened or shortened to conform to the width of the column or page. To do this, when movable types are used, as in ordinary typesetting, the compositor, when the line is nearly completed, puts thicker or thinner spaces between the words. Otherwise the lines would be unequal in length, presenting a ragged appearance, similar to that of type-written work. By an

ferring to stone is said to be less than the 'making up' of forms for the press in ordinary printing, and there is no 'distribution' of type.

"This machine has also been tested with a view to making matrices for the casting of stereotype plates, but the experiments have not been carried sufficiently far, as yet, to determine what may be accomplished by it in that direction. The patents covering the machine are controlled by the Graphic Process Company, of 22 Spruce street, this city, who are now erecting extensive workshops for its manufacture."

THE SCHOOLMASTER ABROAD.

The following, given *verbatim et literatim*, is a copy of a letter recently received by an ink manufacturer of Cincinnati : "I have seane in the wagon maker Paper your avertice the ink with which this paper is Printed. Please send your Catalogue of the prices of them wat Culears youwoul have to seal at."

PERSONAL.

We acknowledge the honor of a call from the following gentlemen during the past month: Frank Gage, of William C. Gage & Son, Battle Creek Mich.; W. W. Robinson, Battle Creek, Mich.; Louis L. Lomer, with Carlon & Hallenback, Indianapolis; R. O. Boyd, Queen City Ink Works, Denver, Col.; E. B. Fletcher, secretary of the Illinois Press Association; M. L. Metsger, The W. O. Hickok Manufacturing Co., Harrisburg, Pa.; J. E. Jenkins, *The Safeguard*, Columbus Junction, Iowa; F. S. Verbeck, Minnesota Typefoundry, St. Paul, Minn.; N. R. Baker, of the Kansas Newspaper Union, and John H. Odgen, superintendent printing The George W. Crane Publishing Company, Topeka, Kan.; J. H. Ketcheson, B. Thalman's St. Louis Printing Ink Works, St. Louis; J. H. Chambers, Chambers Brothers Company, Philadelphia; H. H. Van Cliff, with Collier & Cleayland, Denver, Col.

ANSWERS TO CORRESPONDENTS.

E. S. P., Boston: Can you give me the name of the publisher of "Color Printing," by T. F. Earhart?

Answer.—Mr. Earhart informs us that the book referred to will not be placed on the market for two months from date.

N. M. L., Los Angeles, California: Will you state through your columns, whether or no there is a process of working copperplates on a common job press?

Answer.—No.

B. J. B., Sarnia, Canada: Can you tell me what bookbinders use to remove ink stains from paper? I have failed in every effort to do so, and finally appeal to you. It will help me out of a great trouble.

Answer.—Dissolve a little chloride of lime in water, and apply. If this does not entirely remove, then add a very small portion of acetic acid.

D. J. S., Marion, Kansas: Can you give me a recipe for a dryer to use in ink over which, or after the color is printed, you can use bronze without it adhering to the colors first printed, without having to wait for several days? I have used a number of formulas, but have not found them satisfactory.

Answer.—Use a good gloss varnish as an ink thinner; or calcined magnesia, dusted lightly on.

H. K. C., Vincenttown, N. J.: Will you please tell me why some of the lines in the inclosed job do not show up, particularly the one suspending the horseshoe? I used bearers and planed the form well before putting on the press (Gordon). Have had trouble of this kind before.

Answer.—Parts of the hair line rules shown are new, and some have evidently been used before, hence some portions are heavier than the others. To make them uniform in appearance "H. K. C." should draw the back of a knife blade gently over the lightest parts. This will not injure the rule in the least, while it will remove the grievance complained of.

G. P., Chicago, writes: I was one of a party the other evening when the question was asked, "Why are so many names pronounced the same and spelled differently." One of the names cited, I remember, was Daley, Daily, Daly, Dailey. Please give your opinion.

Answer.—The explanation therefor must be left a matter of conjecture. One of the most feasible which presents itself to our mind is that, in a large number of instances, parties coming to this country were unable to spell their names, or tell when they were properly spelled, and as their children became educated they signed their names as suited their caprice.

M. A. M., Buenos Aires: Can you give me the address of some firms that deal in steel and copper plate engraving machines, and also of firms that make a speciality of steel and copper plate

engraving for the trade, such as rosettes, vignettes and borders; also, of firms that deal in nets for zinc-etching?

Answer.—M. M. Kelton, New York City, probably make the best copperplate presses in the market. S. D. Childs & Co., 140 Monroe street, Chicago, furnish the devices referred to. Nets are not used for zinc-etching. The proper method is to use a ruled glass plate in the camera, the glass being covered with a black wax. These plates can be obtained from M. Wolfe, Dayton, Ohio.

SPECIMENS RECEIVED.

THE Lake View Record Printing and Publishing Company, Lake View, Illinois. Some fine specimens of society work—invitations, cards and programmes—in which both composition and presswork are above the average. The combination of colors is very harmonious, and all the specimens submitted are both neat and attractive.

A BATCH of commercial work—billheads, letterheads, business cards, etc.—from "B. McC.," Rochester, N. Y., "an apprentice of almost two years' experience." All the specimens submitted bear evidence of skill and correct judgment in display, and many compositors of twenty years' experience would have no reason to be ashamed of such work.

FREE PRESS PRINTING COMPANY, London, Ontario. A collection of commercial work, all of which bears evidence of good workmanship. Three billheads, each printed in five colors and gold, may be justly called works of art, the design and execution being very creditable. This firm is to be congratulated on its ability to turn out such fine printing.

FOSTER, ROE & CRONE, Chicago. The latest production of this house is a book under the caption of "Art Fakes," containing a variety of unique and attractive designs in colors, all of which are worthy of special commendation. The taste and originality displayed, and the effects produced by the use of brass rule, ornaments, etc., stamp them as the efforts of a first-class printer and artist.

J. HORACE McFARLAND, Harrisburg, Pennsylvania, "Floral Designs," an elegant work for florists, the handsomely engraved designs being printed in color on a tinted background on heavy-pressed paper. The letterpress portion of the work is clearly printed in old-style type, and the book, of 164 pages, is nicely bound in cloth, with gilt edges. It is a work that will bear favorable criticism from every judge of good printing.

ALFRED M. SLOCUM & Co., 409 Arch street, Philadelphia. A handsome calendar for 1889, being a combination of lithography and letterpress; each month printed on a separate card, the whole inclosed in a cover printed in two colors and gold, and tied together with a silken cord. The allegorical representations for each month are very artistic, and the quotations accompanying them exceedingly appropriate. It is the handsomest calendar we have ever seen.

BOWDEN & SONS, St. John's, N. F., circulars, cards, etc., neatly designed and printed; Los Angeles Printing Company, Los Angeles, Cal., business cards, letterheads and billheads in colors and gold, all tastefully executed, some of the designs being very original; Ashland News, Ashland, Wis., some exceedingly creditable specimens of commercial work; Bigelow Printing and Publishing Company, Pearl street, Buffalo, N. Y., monthly calendars with blotters attached; Curtis Printing Company, 158 East Third street, St. Paul, Minn., two pamphlets, neatly printed, inclosed in parchment-paper covers and tied with satin; *Colonist*, Victoria, B. C., some excellent specimens of printing, one in five colors being especially good; Moore & Overman, Marion, Ind., circular in three colors and gold; Capital City Publishing Company, Madison, Wis., business card in three colors, very neat; Pioneer Press Company, St. Paul, Minn.; Brick City Printing Company, Ocala, Fla.; Times Printing House, St. Thomas, Ont., business card and billhead, both of which are very ordinary samples of work.

A NUMBER of samples are left over for review next month.

THE "MADISON-KING."

A NEW CANDIDATE FOR PUBLIC FAVOR—A TWO-ROLLER BOOK, NEWS AND JOB PRESS.

We herewith present to the readers of THE INLAND PRINTER, and the trade in general, an illustration and a brief description of a new drum-cylinder printing machine recently placed on the market, the "Madison-King," manufactured by the well-known press builders of Madison, Wisconsin, W. G. Walker & Co., believing that its many points of excellence will commend it to those who desire a first-class machine at a reasonable price. It is built of the finest material, is substantial in every feature, elegantly finished, and constructed under the immediate personal supervision of the designer and inventor—Mr. John T. King. Its distribution—an important feature—is unsurpassed, while its many new features (secured by patents) place it in the front rank, and render it the equal, in every respect, of any press of the kind

in the market. Though, as stated, a comparatively new candidate for public favor, we feel satisfied it will become a general favorite when its merits are more fully known. It is simplicity itself, and among its many special features may be mentioned the following:

The type-bed is triple steel shod. Adjustable center rollers under center of bed. The spider has double steel ways and four center posts. Adjustable air springs. Driven from patent intermediate adjustable sleeve. No universal joint coupling. Two-faced gear rocks under the intermediate. The register rack runs full length of the impression. There are brass side gibs on corners of bed—no side lash. The cylinder shaft is special steel, and has anti-friction collars. No side-wear on cylinder boxes. The vibrating distributor over the form-rollers runs in brass sleeves, held fast by hinged boxes. The distributor is geared to type-bed with steel gears. The form-rollers are driven by contact of the vibrating distributor. The gripper motion takes up its own wear, so that register is perfect. Tapeless delivery is driven by gear. Continuous fly-cam, and the fly has sharp-edged fingers. The press can be turned backward without change or risk. All rolls, pins and rods are steel.

It has King's patent slip-nut table distribution, always in time. Double steel vibrators. The distributors and vibrators may be raised from the table and separated from each other without being taken from the press, by King's patent distributor post-heads. The fountain has under-cut knife, also hand wheel for quick movement. All gears are cut from the solid. The press is built on a very heavy iron base. These presses are made in three sizes, namely:

INSIDE BEARERS.	MATTER COVERED.	PRICE.
No. 1—29½ by 42½	27 by 40	\$2,200
No. 2—32½ by 46½	30 by 45	2,400
No. 3—35½ by 50½	32 by 48	2,600

The above price includes tapeless delivery, circular sheet-cutter, counter shaft with two swivel hangers, driving pulley, two

cone pulleys, two roller-molds, one set extra roller cores, one set cast rollers, full set wrenches, hard or soft blanket, one set chases. All boxed and delivered F. O. B.

The following are their dimensions:

LENGTH.	WIDTH.	HEIGHT.	WEIGHT.	SPEED.	HORSE POWER.
No. 1—11 ft. 6 in.	8 ft.	6 ft.	5 tons.	1,200 to 1,600	2½
No. 2—11 ft. 6 in.	8 ft. 4 in.	6 ft.	5½ "	1,000 to 1,400	3
No. 3—12 ft.	8 ft. 8 in.	6 ft. 4 in.	6½ "	800 to 1,200	4

Parties intending to purchase a press of this character can not do better than correspond with Messrs. Walker & Co., who will cheerfully furnish all necessary information.

INTERESTING FACTS.

How many miles of railway in the United States? One hundred and fifty thousand six hundred miles, about half the mileage of the world.

How much have they cost? Nine billion dollars.

How many people are employed by them? More than 1,000,000.

What is the fastest time made by a train? Ninety-two miles in ninety-three minutes, one mile being made in forty-six seconds, on the Philadelphia & Reading railroad.

What is the cost of a high-class, eight-wheel passenger locomotive? About \$8,500.

What is the longest mileage operated by a single system? Atchison, Topeka & Santa Fé system, about 8,000 miles.

What is the cost of a palace sleeping car? About \$15,000, or \$17,000 if "vestibuled."

What is the longest railroad bridge span in the United States? Cantilever span in Poughkeepsie bridge, 548 feet.

What is the highest railroad bridge in the United States? Kinzua viaduct, on the Erie road, 305 feet high.

Who built the first locomotive in the United States? Peter Cooper.

What road carries the largest number of passengers? Manhattan Elevated railroad, New York—525,000 a day, or 191,625,000 yearly.

What is the longest American railway tunnel? Hoosac Tunnel, on the Fitchburg railway, 4¾ miles.

What is the highest railroad in the United States? Denver & Rio Grande, Marshall Pass, 10,853 feet.

What are the chances of fatal accident in railway travel? One killed in 10,000,000. Statistics show more are killed by falling out of windows than in railway accidents.

What line of railway extends farthest east and west? Canadian Pacific railway, running from Quebec to the Pacific Ocean.

How long does a steel rail last with average wear? About eighteen years.

What is the fastest time made between Jersey City and San Francisco? Three days, seven hours, thirty-nine minutes and sixteen seconds. Special theatrical train, June, 1886.—Scribner.

THE working printers' unions in Austro-Hungary numbered in 1887, in all, 6,143 members, and the income of the unions in the same period amounted to 217,633 florins, of which there were spent as assistance to sick members 73,245 florins; to widows, orphans, and invalids by incapacity of working or old age, 34,983 florins; to members out of work, 15,414 florins; as traveling relief, 5,509 florins; and to purposes furthering the intellectual advancement of the members, 22,046 florins. The united property of the unions is valued at 547,082 florins, showing an advance, as compared with the preceding year, of 11,000 florins.—*Printers' Register, London.*

CHICAGO NOTES.

THE *Globe* composing room has recently been added to the list of union offices.

THE paper houses, press builders and printers' supply houses report business improving, and the outlook for the future encouraging.

MR. HARRY M. COLE, well and favorably known in this city, who represented No. 16 at the Buffalo convention, and now working on the *Globe-Democrat*, St. Louis, is a candidate for delegate to Denver.

THE branch of the business embracing Amberg's letter files and impression books, heretofore conducted by Cameron, Amberg & Co., Chicago, will in future be conducted by the Amberg File & Index Company.

DAVID McHALE, a member of No. 16, but formerly a resident of St. Louis, died on Wednesday, March 6, of consumption, at the Alexian Brothers' Hospital. His remains were interred by the union in Rosehill Cemetery.

MARK L. CRAWFORD, delivered a lecture on trades unions, under the auspices of the Economic Club, at the Madison Street Theater, on Sunday evening March 17. The attendance was large, and the lecturer did himself credit.

THE J. W. Butler Paper Company, of this city, has purchased the stock of the Standard Paper Company, of Milwaukee. The business will be continued under the same name and at the same location, under the new management.

FUCHS & LANG, dealers in lithographers' supplies, have entered up a confession of judgment for \$2,293.98 against the Phoenix Lithographing Company, in the Superior Court. The assets and liabilities, it is estimated, are about \$4,000.

THE Union Typefoundry has just brought out an artistically gotten-up sixteen-page book, containing its latest designs in faces and ornaments. It is also filling an order for a complete outfit for a printing office for a public institution in Germany.

J. J. SPAULDING, an old-time and well-known printer of Chicago, a resident of Evanston, was run over and killed by a train on the North-Western railroad, March 7. He was best known as being some years ago the junior partner in the then prominent firm of Dunlop, Sewell & Spaulding.

THE J. W. Middleton Printing and Stationery Company has failed; the immediate cause, it is alleged, being the enforcement of a judgment rendered against it, by the parents of a young man who was killed by falling through an elevator shaft in the old store of the company on State street.

MR. A. P. LUSE, of the firm of Marder, Luse & Co., sailed on Wednesday, March 6, for Europe, by the North German Lloyd steamship, *Trave*. He expects to spend six months in traveling through Germany, Switzerland, Italy, etc. The readers of THE INLAND PRINTER are promised a series of communications from his facile pen.

THE Samuel E. Barrett Manufacturing Company is the name of a new concern incorporated in this city, for the purpose of manufacturing paper and the products obtained from the distillation and manipulation of coal tar. The incorporators are S. E. Barrett, H. L. Cornell and J. G. Smith, and the capital stock is placed at \$2,000,000.

WILLIAM McCoy recently filed a bill in the Circuit Court to restrain Mayor Roche and Comptroller Burley from making a contract with the German-American Company to publish the city advertisements in the *Freie Presse*, on the ground that the ordinance passed by the city council, in 1881, authorizing the publication of city notices in both English and German, is unwarranted by the city charter.

C. B. COTTRELL & SONS having become the sole owners of the Empire Machine Company, formerly located on the corner of Van Buren and Dearborn streets, have removed its plant to their workshops at Westerly, Rhode Island, where all orders will in future

be executed. They propose, however, to keep in stock in their Chicago warehouse, a full supply of electrotypers' and stereotypers' machinery, so that all orders will receive prompt attention.

THE Globe Manufacturing Company, builders of the Peerless press, has recently put on the market an extra heavy machine for embossing, paper-box making, etc., by which cutting, scoring and printing can all be done on one press. The J. Sefton Manufacturing Company, Anderson, Indiana, has just placed two of them in its establishment, 13 by 19; and S. D. Childs & Co., of Chicago, one 14 by 22.

THE following enterprises in connection with the printing business have recently been incorporated at Chicago: The Como Printing and Publishing Company, with a capital stock of \$50,000; the Purdy Publishing Company, with a capital stock of \$60,000; the Empire Show Printing Company, with a capital stock of \$100,000; the Combined Ruling and Printing Company, capital stock, \$15,000; the Lever Publishing Company, capital stock, \$30,000; the S. Brainerd's Son & Co., capital stock, \$250,000, for publishing music; the Chicago Prestissimo Engraving and Etching Company, capital stock, \$100,000.

FROM the New York *Sun*: Long John Wentworth, who recently died in Chicago, used to tell this story of how he got the name by which he was so well known: "When I was going to school down in Connecticut I was the longest and skinniest boy you ever saw. I was fourteen years old. I used to have a habit in those days of getting my heels up on the seat, so that my knees towered above my head. I was sitting that way one day in school, when one of the examiners came around. He said to the teacher, 'What's that boy standing up on the bench doing? Why don't you make him sit down?' The teacher said I was sitting down. 'Who is he?' 'John Wentworth,' said the teacher. 'He's a pretty long John,' said the examiner; and ever since that day the name has stuck to me."

THE annual election for officers of the typographical union, which occurs Wednesday, March 27, promises to be an exciting one, and will doubtless call out a large vote. The following is the list of candidates for the various positions so far as heard from: For president, James B. Fullerton, *Tribune*; Charles E. Cobb, *Inter Ocean*; vice-president, Charles Ross, J. M. W. Jones Co.; secretary-treasurer, William McEvoy (present incumbent), George T. McNamara; recording secretary, Charles T. Gould, W. G. Crow; sergeant-at-arms, A. A. Mock, W. J. Teed, James A. Bryan. Delegates—John Canty, *Inter Ocean*; H. S. Streat, *Tribune*; W. J. Cushing, *Inter Ocean*; Will J. Creevy, *Inter Ocean*; Martin Burke, *Tribune*; Sam Rastall, *News*; Victor B. Williams, *News*; William T. Lumsden, *Herald*; William Cruikshank, *Herald*; J. B. McDonald, *Times*; W. A. Hollabaugh; James Wright, *Mail*.

PAPER TRADE ITEMS.

AN effort is being made to establish a paper mill at Newman, Georgia. The amount required is \$10,000.

THE Parsons Paper Company are building a new mill which will be, when completed, the largest in Holyoke.

IT is stated in paper-making circles that a paper mill, to cost \$50,000, is about to be erected at Lexington, Kentucky.

THE Manufacturers' Wrapping Paper Association, La Fayette, Indiana, has been incorporated, with a capital stock of \$100,000.

LEWIS county, New York, rejoices in seven wood-pulp mills, which have an average annual output of from 15,000 to 18,000 tons.

THE arrival of a large consignment of print paper from Germany, at San Francisco, has curtailed the demand for home manufacture.

THE mills of the Columbia River Paper Company, of LaCamas, Oregon, which were destroyed by fire, November 6, 1886, rebuilt during 1887, and started up in March, 1888, turned out during that year twice the output of previous years. The average amount of

straw used in former years was 700 tons. In 1888, the product was 1,300 tons, and the value \$125,000. Seventy men are employed.

FIVE new pulp-mills have been built in the State of Maine during the past year. All will be in running order early in the present year.

THE managers of the Whiting Paper Company have established a factory and salesroom in New York City. They are situated on Duane street.

THE new mill at Johnsonburg, Pennsylvania, for the manufacture of pulp and paper, will be the most modern mill in the country, as regards machinery, in both branches.

THE paper manufacturers of Holyoke report trade good, all the mills running up to their capacity, and some of them being behind with their orders. A brisk demand is reported for enameled book papers.

THERE are fifteen different styles of envelopes included in the contract to supply the American postoffice department for the year ending June 30, 1889. The total quantity is estimated at 49,998,950.

S. D. WARREN & Co., the Cumberland Mills (Me.) paper manufacturers, are experimenting with a new machine for manufacturing decorative paper. They are also experimenting with the electric bleaching process.

THE Valley Paper Company, Holyoke, Massachusetts, are making some changes in the character of their output, in the way of new lines of manufacture. What these changes and new lines are will be made known in the near future.

THE American Paper Company, of Kaukauna, Wisconsin, intends to build a paper mill in the rear of their pulp mill. It is to be of stone, 70 by 100 feet, one story high, and will cost \$100,000—\$80,000 for the building and \$20,000 for the machinery.

THE *Wood Pulp News*, of New York, a new weekly journal devoted to paper-making fiber interests, in its initial number, states that the manufacture of wood pulp has grown in a few years to over fourteen hundred tons per day, and that the importations are about one hundred tons daily.

THE American Roll Paper Company of St. Louis has entered suit in the United States Court to recover damages from the National Roll Paper Company, of Cincinnati, for infringing on a patent paper cutter. A. Q. Ross, W. St. Clair Ross and Charles H. Rust are the defendants.

THE Willamette Pulp and Paper Company, located at Oregon City, on the Willamette river, Oregon, has established an office at San Francisco. The following are its officers: President, Orestes Pierce; vice-president, C. P. Thore; general manager, W. P. Johnston; secretary, S. B. McKee.

THE Atlas Paper Company, of Appleton, Wisconsin, is now receiving from thirty to forty carloads of pulp wood per day at its yards. There are about seven cords in a car, and the total receipts this month will be about 3,000 cords. During the course of the year the Atlas pulp mills use about 10,000 cords of poplar and spruce.

THE INLAND PRINTER advertising agent recently had the pleasure of inspecting the Crane Brothers paper mills, at Westfield, Massachusetts, under the guidance of one of the Messrs. Crane. He was given an opportunity of seeing the processes by which the Crane Brothers produce their celebrated "Gold Medal" linen ledger and record papers. Besides the manufacture of these papers, the Messrs. Crane Brothers also manufacture the linen fiber ware, and their productions in this line include a general line of paper hollow-ware and also boats, burial caskets and trunks. Our representative acknowledges the receipt of several mementos of his visit.

SUBSCRIBERS are requested to examine the label upon the wrapper in which this number of THE INLAND PRINTER goes out, and promptly report to the office any error in names or date of expiration. The publishers should be notified also of failure to receive the paper regularly,

TRADE NEWS.

GAYLOR & CORLEY, printers, Carthage, Missouri, have dissolved partnership.

GOLDIE BROTHERS & MORGAN, Sioux City, Iowa, have dissolved partnership.

THE Hocking Valley Printing and Publishing Company, Athens, Ohio, has sold out.

THE *Gazette-Journal*, Hastings, Nebraska, has been ordered sold for \$36,000 by the court.

THE Queen City Printing Ink Company, Cincinnati, has increased its capital stock to \$100,000.

THE Ithaca Journal Association, job printers and publishers of the *Journal*, Ithaca, New York, has sold out.

EMORY & HUGHES, printers, Boston, have dissolved partnership. Mr. William N. Hughes continues the business.

J. B. COTTRELL & SONS have remodeled their lithographic presses, both in design and detail. They now rank with the best machines of the kind in the market.

MR. FRYTHAL, just over from England, has established the City Printing Works, at Vancouver, British Columbia. His plant was imported from Great Britain.

THE well-known printing, binding and lithographing establishment formerly owned by Ramsey, Millet & Hudson, Kansas City, Missouri, is offered for sale at a bargain.

W. & H. ERDTMANN, 252-254 Pearl street, New York, and 341-351 Dearborn street, Chicago, has discontinued the agency for Messrs. Berger & Wirth's lithographic inks.

THE Child Acme Cutter and Press Company, Boston, report trade excellent, and have more orders ahead for the various machines of their manufacture than ever before.

THE Hygienic Publishing Company has been incorporated in New Jersey, and will start an extensive printing and publishing house in Camden. The authorized capital is \$50,000.

A PRINTING establishment, under the firm name of Spiers & Anderson, has been opened at Whatcom, Washington Territory, the plant of which was furnished by Palmer & Rey, San Francisco.

THE firm of R. & M. Munk, general book and job printers, 805 Mission street, San Francisco, has been changed, M. Munk retiring from the firm. The business will be continued by Mr. R. Munk.

CAMPBELL & BAKER, stationers, of Newark, New Jersey, have purchased the printing business of Bird & Son, and hereafter will run a printing and publishing department in connection with their stationery business.

LAFAYETTE YOUNG, Atlantic, Iowa, has recently added to his newspaper and job printing office a first-class bookbinding and blank-book manufactory, and is now prepared to do all kinds of bookbinding and ruling.

PALMER & REY, the well-known press manufacturers and type-founders of San Francisco, have removed their entire establishment to the large three-story building located on the corner of Alder and Front streets.

THE F. Wesel Manufacturing Company, New York, has succeeded F. Wesel & Co. The management of the business will be under the care of F. Wesel, as formerly. A full line of printers' machinery and material will be carried in stock.

THE Denver Lithographic Company has resumed business, the stock having been transferred to experienced and thoroughly practical lithographers. The quarters of the new firm are located at 1520-1522 Arapahoe street. Mr. John W. McGee, a thoroughbred, is manager of the establishment.

THE Whitlock Machine Company has just recently purchased a new building and is now moving its works into it. The new building gives more than twice the room the one the company is vacating afforded. In the new quarters the machinery will be driven by water, the motor employed being 100-horse power. The

company is also making very extensive additions to its machinery and appliances, which, together with the increased room became imperative by the increase of its business.

THE Morgans & Wilcox Manufacturing Company, of New York, has just brought out a new and convenient little rule case. It runs from 1 to 30, is conveniently and simply arranged, and will save the necessity, if there is any, for mixing fonts of labor-saving brass rule. The description of it in our advertising columns sets forth its advantages.

THERE has just been placed in the works of the Babcock Printing Press Manufacturing Company, at New London, Connecticut, a mammoth new engine of 200-horse power. This company reports its business on the increase, the increase being so great as to demand additional power, and this was met by putting in the engine above mentioned.

A NEW printing company has been chartered in East St. Louis, Illinois, with a capital of \$100,000. It is stated that the company has purchased the ground, and will soon erect thereon a four-story building, 100 by 150 feet. It is designed to place several perfecting printing machines therein, and it is claimed that it will be ready to commence operations by the first of May.

A RECENT visit of THE INLAND PRINTER representative to the Cranston Press Works, at Norwich, Connecticut, found them running up to their full capacity, and yet somewhat behind with their orders. These works turn out but two classes of machines, drum-cylinder and two-revolution. Both classes, however, are made in numerous sizes, and also two and four-roller.

THE Peerless Gauge-Pin Company, of Cleveland, Ohio, has been organized to manufacture gauge pins for platen presses. The company consists of George W. Short, of Short & Forman, printers, W. M. Williams, foreman printing department of Short & Forman, Cleveland, and A. W. Williams, attorney-at-law, Sharon, Pennsylvania.

MESSRS. EMMERICH & VONDERLEHR, manufacturers of the Emmerich improved bronzing and dusting machine, report the sale of thirteen machines during last month, and have now in hand orders for several more. Their factory has been kept running to its full capacity and also running overtime four nights of the week for some time. Three of the machines recently sold came to Chicago.

THE best bargains for buyers at the recent auction sale of the Rand, Avery & Co. printing establishment were obtained on the presses. A 42 by 60 four-roller (Potter) was sold for \$2,500 to Rev. James J. Doherty, to be used in connection with an industrial institution in New York. One of the same pattern brought \$2,340; another \$2,700. A 36 by 51 six-roller stop-cylinder (Hoe) sold for \$1,600, to Van Wert of New York. A 42 by 60 four-roller two-revolution (Hoe) brought \$1,950. A 36 by 52 four-roller combination (Potter) was bought by the Rand-Avery Supply Company for \$1,190; and another of the same pattern went to Samuel Parkhill & Co. for \$1,210. A. B. Sickler & Co. of Philadelphia paid \$790 for a 31½ by 49½ two-roller two-revolution (Cottrell). The Rand-Avery Supply Company paid \$750 for a 29 by 41 two-roller drum (Hoe). The fourteen Adams presses went at prices ranging from a little below \$100 up to \$200. The amount realized from the sale of the entire establishment amounted to \$120,000.

MR. G. HEDELER, the editor of the *Export Journal*, of Leipsic, writes to us that the Easter exhibition of the Middle German Paper Union, which we mentioned in a previous number, promises to be a great success. Among the novelties to be exhibited are Brehmers' new leather paring machine and Schoppers' new instrument for testing the quality of paper. The German Book Trades Museum and the Leipsic Typographical Society will also contribute. Each exhibitor will have a representative in attendance, and an inquiry office will be open, where visitors will be put on the track of any trade or business information they require. Mr. Hedeler, who is himself a member of the committee, adds that all manufacturers and dealers who have anything to show that is new and interesting to the paper, stationery, printing and publishing

trades will find this an excellent opportunity to place their productions among new clients. The cost of a stand is 5s. (\$1.25), and applications for space should be sent to Otto Winkler, Ufer strasse 8, Leipsic; or, Paul Hungar, Markt 8, Leipsic. The exhibition will be open from May 2 to 5, in Leipsic.

NEWSPAPER GOSSIP.

THE *Public*, Philadelphia's latest afternoon paper, has suspended.

A NEW daily newspaper is soon to be started at Peoria, Illinois, by A. A. Jones.

WINSHIP & MORLEY, publishers of the Kalamazoo *Herald*, have dissolved partnership.

GOVERNOR HOARD still continues the publication of his papers at Fort Atkinson, Wisconsin.

THE Portland (Ore.) *News* is said to have sunk \$175,000 in its six years of life. It is dead.

THE Philadelphia *Sunday Republic* has suspended publication after an existence of twenty-one years.

THE *Protectionist* is a new paper which has recently made its appearance at Birmingham, Alabama.

THE Hartford (Conn.) *Telegram* and *Record* have consolidated under the name of the *Telegram-Record*.

A NEW daily paper, the *Star*, has recently been established at Fort Gaines, Georgia. Corley & Jernigan are editors and proprietors.

ELLIOT F. LORD, of the Boston *Daily Advertiser*, has purchased the *Evening Herald* at Duluth, Minnesota, and will take possession at once.

A NEW Sunday paper was started in Newark, March 3, called the *Sunday Standard*. It is a four-page, eight-column paper, independent in politics.

THE Lima (Ohio) *Democrat* and the Lima *Times* have consolidated under one management. The *Democrat* will be published as a weekly and the *Times* as a daily.

RUSSELL B. HARRISON, son of President Harrison, has purchased the plant of the Helena (M. T.) *Record*, and will endeavor to make it the leading paper of Montana.

THE *Morning Call*, of Winnipeg, Manitoba, has suspended publication, having been consolidated in the *Free Press*. The material on which it was printed is now offered for sale *en bloc*.

ON Thursday, February 26, occurred the 67th anniversary of the birth and 54th of the induction with the printing business of the senior of the Reading (Mass.) *Chronicle*, Mr. W. H. Twombly.

THE *Daily Republican*, Omaha, Nebraska, announces that it has been sold to Fred Nye, one of its proprietors at the time it was sold to S. P. Rounds. It will appear as a four-page, 2-cent paper.

BEAUFORT, North Carolina, wants a good local newspaper, the *Record* of that place having suspended. The population of the town is 2,500, but the question is, how many of this 2,500 are willing to become subscribers?

THE *Morning Telegram*, of Cincinnati, which was transformed from an evening paper three months ago, has transferred its franchise to the *Evening Post* of that city, and has ceased to appear as a separate publication.

THE latest journalistic venture of Atlanta, Georgia, the *Echo*, has been merged into the *American*, a high-grade journal, which will hereafter be published weekly. The consolidated paper seems to have plenty of means.

THE Columbia (S. C.) *Evening Record* has been sold to a number of Columbia gentlemen, who will continue the publication under the name of the Record Publishing Company. Gibbes Gardiner is the new editor.

THE *Paper World* discloses the interesting fact that the news companies receive an average of thirty new periodical publications

every week in the year. They find not more than one out of the thirty profitable to handle, and not one in thirty is permanently successful.

AFTER July 1 the page size of the San Francisco *Examiner* will be the same size as that of the New York *World*. The daily and weekly issues will each consist of twelve pages, while the Sunday edition will contain twice that number.

THE *Weekly Wisconsin*, published at Milwaukee, has adopted a novel expedient for supplying its readers with current fiction without encroaching upon its own columns. It has started "The Newspaper Library," in which will be printed every other month a novel or work of biography or travel.

THE Oglethorpe (Ga.) *Echo* is having a circulation boom, a large number of colored people having become subscribers of late. A secret society of colored people, which requires every one joining its ranks to take the home paper, is said to be the cause of the *Echo's* sudden increase in circulation.

OF INTEREST TO THE CRAFT.

THE Childs-Drexel fund now amounts to \$20,678.93.

THE printers of Galveston, Texas, have organized a mutual aid society.

JUDGE J. W. FALLS of Paducah, Kentucky, is a candidate for public printer.

THE membership of Pittsburgh Typographical Union is now over five hundred.

THE Ohio Labor Commissioners give the average wages of printers in that state as \$2.29 per day.

TWO pressmen's unions have been organized recently, one in Helena, Montana, and the other in Atlanta, Georgia.

MR. ROBERT OGG, a well-known printer of Detroit, has been appointed deputy state oil inspector, at a salary of \$1,200 a year.

THE Commercial-Gazette Job Printing Company, of Cincinnati, has been awarded the contract for doing the city printing of that city.

THE Franklin Typographical Society of Boston, which recently celebrated the sixty-third anniversary of its organization, has \$15,000 in the treasury.

MR. MANNIS J. GEARY, ex-president of No. 6, has left for London, England. He will be placed in charge of the composing room of the London edition of the *Herald*.

MR. JOSEPH McCANN, a well-known typo, recently turned in on the *Congressional Record*, for a fortnight's work, nearly 180,000 ems, and carried about 5,000 over to the next "turn in."

PHILADELPHIA Printing Pressmen's Union, No. 4, steadily increases its membership and influence. It is destined to become a representative body in the national organization.

AMONG the more recent candidates for the position of public printer are Hon. A. M. Clapp, who held the office for eight years under President Grant, and Robert W. Lillard, of Cincinnati.

MR. O. R. LAKE, of St. Louis, is a prominent candidate for state labor commissioner of Missouri. A better selection could not be made, and his appointment would give universal satisfaction.

THE Elmira (N. Y.) Typographical Union gave its fourth annual ball on February 12, and Toronto Typographical Union its first annual concert on Saturday, February 14. Both were eminently successful.

A. H. DAVIS, who was foreman under John D. Defrees, and Charles Bus, secretary-treasurer of the Commercial Gazette Job Printing Company, are among the latest aspirants for the office of public printer.

CHARLES BRIGHAM, who died in Philadelphia, February 20, aged eighty-three years, was one of the oldest printers in that city, having been a member of the Typographical Beneficial Society since 1831. He was born in Massachusetts, but located in Philadelphia when young, and was employed for many years in Collier's printing

house, the greater part of the time as foreman or manager. In his later years he was deeply interested in schemes of municipal reform, which he formulated. He was a greatly respected member of the printing fraternity and an honored citizen.

THE union at Vancouver, British Columbia, is in a flourishing condition, numbering twenty-three members. Mr. Alexander A. Anderson, its president, has resigned his position to go into business at Whatcom, Washington Territory.

JACOB BABB, the oldest printer and publisher in Harrisburg, Pennsylvania, and possibly in Pennsylvania, died on February 20. He was nearly ninety years of age, and was a compositor with General Simon Cameron and other old-time printers. Babb came to Harrisburg from Reading about 1824, and for some time worked as a journeyman printer. He made money, but spent a couple of fortunes with a prodigal hand. He was elected printer of the German *Journal* of the house of representatives, and held the office for several years. Subsequently he was a partner with several men in the printing business, and was well known throughout Pennsylvania a generation ago. General Cameron frequently contributed to his old printer friend, and subscribed liberally to the fund for his burial expenses.

THE following statement shows the membership and operations of the Government Printing Office Mutual Relief Association during the six years of its existence:

Year.	Membership.	Amounts paid in benefits.	Number receiving benefits.	Number of weeks' benefits paid.	Pro rata dividend at close of year.
1883 (9 months).....	49	\$ 90	5	9	\$ 6 24
1884.....	113	480	20	48	7 94
1885.....	142	390	20	39	10 33
1886.....	189	530	28	53	11 30
1887.....	246	1,060	36	106	9 00
1888.....	294	950	38	95	10 00

Increase of membership from December 1, 1888, to February 14, 1889, 124.—*Craftsman*.

ITEMS OF INTEREST.

THE Kansas legislature contains ten newspaper men.

THE attention of employing printers desirous of obtaining the services of a thoroughly experienced business manager is called to an advertisement in the present issue, in the "want" column.

MR. WHITLOCK, the senior member of the Whitlock Machine Company, and the one from whom the company and the presses it builds take their name, is a son-in-law of the late Mr. Singer of sewing machine fame. He is a young man, not yet far from forty, and one whom it is a pleasure to meet and become acquainted.

"THE Cyclopædia of Music and Musicians," which is to be issued simultaneously in New York and London, will be in three volumes, quarto, at 15 guineas the set. Fifty copies only will be available in this country, which, if the specimen page accompanying the prospectus is to be taken as a fair sample of the work itself, is just as well.

THE first newspaper ever printed in North Carolina by electric power was a recent issue of *Country Homes*. It was printed in the Asheville *Citizen's* office, on a press driven by a Sprague electric motor. "Hereafter," says the *Atlanta Constitution*, "all the presses in the office will be run by this motor, an insignificant looking little affair, not the hundredth part of the size of the engine heretofore in use."

AN English invention for making watermark-like designs on the paper in continuous rolls is thus described: A machine similar to a calendering machine is constructed, containing two hard metal rolls, one of which is engraved with the design in relief. These rolls are held in suitable side frames with pressure applied on the ends. The paper to be marked is unwound, and passed between

the engraved and a plain roller, pressure being applied uniformly on both journals, and the paper is reeled up onto a hollow drum, on the other side of the machine. By this method the paper has the design imparted into its substance, and by thinning the fibers a transparent "pressure" mark is produced.

NOTES FROM ST. LOUIS.

THE Typographical Union transacts only routine business at its meetings now. Employers and employes seem to be generally harmonious.

SAMUEL F. MYERSON has removed from his old location to the spacious building at the corner of Third and Locust streets, where he has fitted up elegant and commodious quarters.

THE firms of Farris, Smith & Co. and the Bridge Printing Company have consolidated and will be run under the former name. They will publish the *Presbyterian* and also do a general job printing business, as in the past.

THE Mississippi River Commission, a government station in this city, for the purpose of overseeing the improvement and deepening of the Mississippi river channel, has recently put in a small plant of printing material for the purpose of printing some of its blanks.

THE champion of the labor element here, the *New Order*, which has been published weekly heretofore, has purchased additional material and will begin publication each evening, excepting Sundays, beginning Monday, March 11. It will be a four-page, six-column paper, and will be delivered for 6 cents per week.

THE *St. Louis Republic* will, with its issue of March 4, include a handsomely engraved and printed illustrated supplement of four pages, which will have fine steel engravings of each president from Washington to Harrison, and also a short sketch of the life of each. This paper is showing great enterprise since the new management came into power.

THE *Sunday World*, after a brief struggle for existence, was compelled, last month, to give up the ghost and ponder over the vicissitudes of this cold world while a constable quietly held possession of the office. The company styled itself the Acme Printing Company, and we understand the material will soon be sold to satisfy the claims of creditors.

OUR local Typothetae have met and appointed the different committees to look after the welfare of visiting delegates at the convention of the National Typothetae, which will be held in this city next fall. They also arranged a programme and effected arrangements to procure the necessary money to defray the expenses attaching to the entertainment.

BUSINESS has been and is quite dull, and collections are very slow and difficult among the printing fraternity. A proprietor remarked in our presence, a few days ago, that it seemed to be more and more the custom for a merchant nowadays, when he wants \$1.50 worth of printing done, to go to every printer in the city to get bids on it, and in going around getting them he wastes his own time and that of the printers, and in the end does not get more than \$1.50 worth of printing for \$1.50. THE PRINCESS.

THE MAGAZINE OF POETRY.

We acknowledge the receipt of a copy of the "Magazine of Poetry," the demand for which has been so great as to require a second edition. The number before us contains several portraits and short biographical sketches of popular authors, accompanied with selections from their writings, prominent among which we notice those of our highly esteemed correspondent, Mr. William H. Bushnell, of Washington, whose contributions to the pages of THE INLAND PRINTER have long been a source of gratification and instruction to its readers. It also contains poems by Alice Williams Brotherton, Walt Whitman, Jean Ingelow, Robert Gilfillan and other well-known writers. It is a valuable addition to any library, and is published by Charles Wells Moulton, Buffalo, N. Y.

A NEW PLATEN PRINTING PRESS.

Alton B. Carty, of Frederick, Maryland, has just been granted a patent on a new job platen printing press, for which some important claims are made. The press is very simple in construction, having a square impression, and so built that the movement of the machine in taking the impression is much less than on any other press, thus permitting of faster running than on any other platen press. From the list of new things on the press can be mentioned:

1. A new cam dwell on the crank wheel, much simpler than that on the Universal.
2. New movement of the platen, substantial, and imparting a very desirable motion.
3. New grippers—the best yet out.
4. New paper clamps—no springing possible and no bulging of paper.
5. New fountain by which ink is placed on the disk in a distributed condition without aid of form rollers.
6. New movement of form rollers—very simple and effective.
7. Adjustable roller-ways, by which pressure of rollers on form can be increased or diminished according to form to be printed.
8. New impression throw-off—can be so operated that by pulling back lever the impression can be suspended, the action of the rollers stopped, and at same time rollers thrown out of contest with ink disk.
9. An additional independent roller, which conveys ink from fountain distribution to the disk after each impression is taken.
10. Two small levers under feed-table, the operation of which will respectively stop the action of the form rollers and the fountain, by which, in conjunction with the impression throw-off lever, the form can be rolled any number of times without taking an impression, or can be printed free of all ink by not being rolled; ink distributed without rolling form, and complete suspension of action of rollers, ink-supplying apparatus and impression. By using impression throw-off alone, the form is never rolled the second time without an impression being taken, thus avoiding any accumulation of ink when necessary to use throw-off and allow press to run while a new supply of paper is being secured by press-boy. Any dirt or paper can be removed from rollers while press is in full operation. The press must be seen to be fully appreciated. A working model of iron has been built for Mr. Carty, which is a perfect jewel. Mr. Carty's desire is to either sell the patent outright, or to arrange with someone for the manufacture of the machine. The first reasonable offer accepted.

COMPARATIVE WEIGHTS OF ONE REAM OF PAPER.

THE OLD VIOLIN.

We take pleasure in calling attention to the fact that the F. Tuchfarber Company, of Cincinnati, have completed a faithful reproduction of Harnett's famous painting, "The Old Violin," which created such a furore at the thirteenth Cincinnati Industrial Exposition. Neither time nor money has been spared to produce an exact fac simile of this wonderful picture. It will prove an ornament and attraction to any art collection. See advertisement on page 551.

I ask the attention of all
who are in need of

1889.

to the fact **Printing and Binding,**

**THAT I
DO NOT
CLAIM**

To have the **Largest Concern** in the City

To turn out more **Blank Books** than any one else—having
but recently commenced manufacturing **Blank Books.**

To do **Cheaper Work** than any one else.

THIS IS IM

**BUT I
DO
CLAIM**

That I have the **best lighted and most
conveniently arranged** rooms of
any in the City.

To do more **Fine Illustrated Catalogue
and Color Work** than any one else.

To make just as good a **Blank Book** as
any one else.

To do **promptly and in the best manner** all kinds of

Illustrated Catalogues and Price Lists,
Show Cards, Plain and Colored,
Labels, Plain and Colored,
Circulars of all kinds,

Letter and Note Heads,
Bill Heads and Statements,
Agents' Order Blanks,
All Kinds Office Stationery,

In fact, anything and everything in the Printing line you may have occasion to ask for.

Certificates of Stock,
Notes and Drafts,
Checks, Receipts,
Commission Blanks,

Business Cards, Plain and Colored,
Envelopes, all kinds,
Wedding and Party Invitations,
Calendars, Special Designs,

CONRAD LUTZ

103 and 105 Valley Street,

BURLINGTON, IOWA.

I ALSO CLAIM to produce uniformly first-class "tasty" work at the lowest living rates. AND I DO CLAIM that if you will call on me and give me an opportunity to show samples and quote prices, I will verify these facts.

DENVER TYPO. UNION ARRANGEMENT COMMITTEE

— FOR —

I. T. U. CONVENTION IN JUNE.

O. L. SMITH, Chairman. J. D. VAUGHAN, Secretary.
 WM. H. MILBURN.
 C. W. RHODES. J. W. HASTIE.

Address Secretary, 1516 Arapahoe Street, Denver, Col.

BUSINESS OUTLOOK.

Aspen, Colo.—State of trade, fair; prospects, fair; composition on morning papers, 50 cents; evening, 45 cents; job printers, per week, \$24. Two morning papers, one evening, one weekly; *Morning Chronicle* and *Weekly Sun* strictly union; *Morning Times* and *Evening Democrat-Press* non-union, but open to union men; nineteen union men in town, six non-unionists. Aspen best mining camp on earth!

Auburn, N. Y.—State of trade, fair; prospects, good; composition on morning papers, 25 cents; evening, 16 cents; bookwork, 18 cents; job printers, per week, \$8 to \$12.

Baltimore, Md.—State of trade, fair; prospects, favorable; composition on morning papers, 45 cents; evening papers, 40 cents; bookwork, 45 cents; job printers, per week, \$16.20. Work is better than it has been for three months. Would advise travelers to remain away for awhile, as we have quite a surplus of printers in town.

Bangor, Maine.—State of trade, good; prospects, fair; composition on morning papers, 25 cents; evening, 16½ cents; job printers, per week, \$9.50 to \$12. Evening composition done by females.

Bismarck, Dak.—State of trade, good; prospects, encouraging; composition on morning papers, 38 cents; evening, 35 cents; bookwork, 35 to 40 cents; job printers, per week, \$18 to \$25. The legislative work has just ended here, and a number of printers have left for the West; still a good force is kept at work.

Cheyenne, Wyo.—State of trade, good; prospects, good; composition on morning papers, 45 cents; evening, 40 cents; bookwork, 45 cents; job printers, per week, \$21.

Chicago, Ill.—State of trade, improved; prospects, favorable; composition on morning papers, 46 cents; evening, 41 cents; bookwork, 35 cents; job printers, per week, \$18. Trade has materially improved during the past month, and the outlook is encouraging, though a number of printers are still out of employment.

Cincinnati.—State of trade, fair; prospects, fair; composition on morning papers, 45 cents; evening papers, 41 cents; bookwork, 40 cents; job printers, per week, \$18. Jobwork, good; bookwork, fair; newspapers with their usual complement of subs. The suspension of the *Telegram* threw about twenty comps on the market.

Columbia, S. C.—State of trade, fair; prospects, not encouraging for tourists; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, per week, nine hours, \$15; job printers, per week, \$18 and \$20.

Council Bluffs, Iowa.—State of trade, fair; prospects, good; composition on morning papers, 35 cents; evening papers, 30 cents; bookwork, per week, \$15; job printers, per week, \$15. Fully six more job printers are now employed in the city than at last report.

Dayton, Ohio.—Prospects, flattering; composition on morning papers, 35 cents; evening, 32 cents; bookwork, 33½ cents; job printers, per week, \$15 to \$18. Printing circles have never been as active as now. Printers scarce and in demand.

Duluth.—State of trade, improving; prospects, not the best; composition on morning papers, 40 cents; evening papers, 35 cents; job printers, per week, \$17. A rumor is afloat that the publishers will combine to cut composition 5 cents per thousand, but if this prove true their efforts will probably be unavailing so far as the union is concerned, as wages now are not too high, considering the cost of living.

Halifax, N. S.—State of trade, fair; prospects, fair; composition on morning papers, 30 cents; evening, 25 cents; bookwork, \$9 per week; job printers, per week, \$9.

Indianapolis, Ind.—State of trade, fair; prospects, fair; composition on morning papers, 38 cents; evening, 36 cents; bookwork, 40 cents; job printers, per week, \$16.50. No. 1 has a membership of 250, the largest since its organization.

Kalamazoo, Mich.—State of trade, very good; prospects, better; composition on morning papers, 27 cents; evening, 25 cents; bookwork, 25 cents; job printers, per week, \$10 to \$15. There are very few subs going through here now. The *Kalamazoo Daily Herald* was purchased by Mr. E. N. Dingley, proprietor of the *Telegraph*, February 11, and publication of the same stopped.

Kansas City, Mo.—State of trade, good; prospects, good; composition on morning papers, 40 cents; evening, 35 cents; bookwork, 37½ cents; job printers, per week, \$17.

Los Angeles.—State of trade, quiet; prospects, uncertain; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$20. The city is still full of idle printers, notwithstanding the fact that quite a number have left during the past month. Our

annual election of officers and delegates takes place on March 27, and promises to be a very interesting one, especially in the delegate contest. Messrs. O. T. Thomas, W. G. King, J. H. Goldsmith and several others have declared their intention to run for delegate.

Lynchburg, Va.—State of trade, good; prospects, very good; composition on morning papers, 30 cents; evening papers, per week, \$12; bookwork, 30 cents; job printers, per week, \$12.

Manchester, N. H.—State of trade, good; prospects, good; composition on morning papers, 30 cents; evening, 20 to 23 cents; bookwork, 25 cents; job printers, per week, \$10 to \$12. The *Manchester Advertiser* is the name of a new eight-page weekly, with "patent inside," published by the Kendall Newspaper Company. Local and suburban news is its specialty.

Milwaukee, Wis.—State of trade, good; prospects, gloomy; composition on morning papers, 40 cents; evening, 35 cents; bookwork, 35 cents; job printers, \$14 to \$18. As the spring opens, there is talk of pastures new and prices that are more remunerative. Many good printers will leave this city ere long to get more money.

Muskegon, Mich.—State of trade, fair; prospects, fair; composition on morning papers, 28 cents; evening papers, 25 cents; bookwork, 25 cents; job printers, per week, \$12; foremen, per week, \$15. There are plenty of "prints" here to supply the demand.

Newark, N. J.—State of trade, poor; prospects, poor; composition on morning papers, 40 cents; evening papers, 36 cents; bookwork, 36 cents; job printers, per week, \$17. The city is full of subs doing nothing; several cases in which men have had but one day's work in three weeks. The *Press-Register* has given itself a new dress, but a poor one for the comps, as it is brevier. There is talk about a new Sunday paper starting in March.

New Haven, Conn.—State of trade, fair, not very brisk; prospects, good for next three months; composition on morning papers, 40 cents; evening, 35 cents; bookwork, 35 to 40 cents; job printers, per week, \$15. The city printing has again been secured by a rat shop, notwithstanding the protests of the union; but we hope the time will soon come when politicians will listen to organized labor. A new union was organized in Bridgeport, and the charter delivered on the 21st ultimo by H. W. Forde, Deputy State Organizer. No. 47 has changed its day of meeting to the fourth Wednesday in each month. Will elect officers at the March meeting.

Omaha, Neb.—State of trade, good; prospects, good; composition on morning paper, 40 cents; evening, 37 cents; bookwork, 37 cents; job printers, per week, \$16 to \$18. Business is quiet. Considerable interest is being manifested in coming election of delegates and officers.

Portland, Ore.—State of trade, very quiet; prospects, not encouraging; composition on morning papers, 50 cents; evening, 45 cents; bookwork, 45 cents; job printers, per week, \$21. The *Pacific Farmer* has sold out to and been incorporated with the *New Northwest*. Since the state work is finished we have a large number of subs in town.

Rome, N. Y.—State of trade, good; prospects, good; composition on evening papers, 25 cents; bookwork, 25 cents; job printers, per week, \$9 to \$12. THE INLAND PRINTER is eagerly looked for by the boys every month, and we know of at least one copy that is literally worn out when it returns from the "rounds."

Sacramento, Cal.—State of trade, poor; prospects, dull; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$21.

St. Johns, N. B.—State of trade, fair; prospects, good; composition on morning papers, 30 cents; evening, 25 cents; bookwork, 28 cents; job printers, per week, \$10.

St. Louis, Mo.—State of trade, improving; prospects, better; composition on morning papers, 43 cents; evening, 38 cents; bookwork, 45 cents; job printers, per week, \$18. There has been a slight improvement in business during the past month, but nothing to sensibly affect the general trade.

St. Paul, Minn.—State of trade, fair; prospects, uncertain; composition on morning papers, 42 cents; evening papers, 37 cents; bookwork, 35 and 43 cents; job printers, per week, \$16. The month of February was very quiet among printers, the fact that there was neither a walk-out by the West boys or a call by them for a special meeting, is good evidence.

Topeka, Kan.—State of trade, poor; prospects, gloomy; composition on morning papers, 33½ cents; evening, 30 cents; bookwork, per week, \$15; job printers, per week, \$15. The close of the legislature has thrown many types out of a good sit. A large job office burned down and made matters worse, and tourists are leaving town by the trainload.

Wichita, Kan.—State of trade, good; prospects, good; composition on morning papers, 35 cents; evening, 30 cents; job printers, per week, \$15. Since the opening of Oklahoma, the prospects for spring work is very good. The fine weather has brought in a great many subs, too many for the demand.

RAPHAEL TUCK & SONS'

Easter cards and novelties for 1889, are among the handsomest which have ever been placed on the market. Each specimen is a gem. As genuine works of art they cannot be surpassed. The designs are exquisite, the execution perfect and the coloring superb. Taken altogether they amply sustain the reputation of the firm as the leading art publishing house of the world.

BUSINESS NOTICES.

WE would direct attention to the card of Mr. J. H. Atwater in the business directory of this issue. Mr. Atwater has been manufacturing newspaper files for twenty-five years. Write him for circulars and other information.

THE old, reliable gauge-pin man, Mr. E. L. Megill, of No. 60 Duane street, New York, is out with a requisite for the platen press in the new screw adjusting gauge pin, advertisement of which appears on page 529. It will no doubt prove even more useful than the many styles of pins he now manufactures.

A. OLMESDAHL, manufacturer of the new Champion press, has been succeeded by the New Champion Press Company, with Mr. Olmesdahl as manager. The press which this company manufactures has just been remodeled and improved, as the new cut in the advertisement will show. They report the sales of their machines constantly increasing.

A VERY desirable article in many printing offices is a good copyable printing ink. Francis & Loutrel, No. 45 Maiden Lane, New York, have a patent copyable printing ink they are offering to the trade (see their advertisement) which they claim to be the best in the market. It is an ink that will work perfectly, and keep in working order for almost any length of time. We would recommend a trial of it. If you cast your own rollers, also give their patent composition a trial.

MR. M. GALLY informs our advertising agent that he is considerably behind on his orders for New Universal presses, and that he has just greatly increased his facilities for turning them out by the addition of new machinery and appliances to his factory. He also states that his factory has been running overtime for some time, and by this means and his increased facilities he expects soon to catch up with his orders and be able to fill all new ones promptly on receipt. This surely speaks well for the New Universal.

A NEW machine just coming into prominence, and which is destined to soon make a place for itself, is the Huber Rotary Zincographic printing press. Messrs. Harris & Jones, Providence, Rhode Island, sole selling agents, report sales of this machine to the Courier Company, Buffalo, New York, and the Stecher Lithographic Company, Rochester, New York, the former buying a No. 2, size 34 by 48, and the latter a No. 1, size 32 by 44. A full and complete description of this machine will shortly appear in our pages.

him know him to be an honest, upright dealer, one who would rather miss a sale entirely than recommend an article above its merits. He is the manufacturer of a number of new specialties in cabinets, stands, furniture cases, lead-racks, brass label-holders, brass-rule machines and various labor-saving tools and appliances for the printing office. In addition to his specialties, Mr. Stephens handles all the popular machines in the line of presses, paper cutters, etc., and also deals in type and all things needed by the printer, except paper stock. He is a gentleman with whom no printer need fear to entrust any business, and we expect our readers will become better acquainted with him through the advertising pages of THE INLAND PRINTER.

JOHN M. JONES & CO.

With this issue THE INLAND PRINTER introduces to its readers the firm of John M. Jones & Co., of Palmyra, New York, through the medium of a full-page advertisement, and they will greet you regularly to this extent for twelve months, at least. This firm, however, is by no means a new one, nor are they unknown to the printers of the country. As indicated by their advertisement, they are manufacturers of the Jones-Gordon job printing presses, and also of the Leader paper cutters.

Mr. John M. Jones, the senior of the firm, is one of the oldest inventors and job printing press builders in the country, having been actively engaged in the business for nearly thirty years. Ruggles and Gordon, perhaps, were his only predecessors, his start being made but a short period subsequent to the latter.

As the name of their press indicates, it is a modification of the Old-Style Gordon, but it has several very important improvements possessed by no other press of this style. All the sizes are very heavy and substantially built, run easy, and the manufacturers acknowledge no superiors in the character of workmanship put upon their machines.

Among the special and important features designated by the manufacturers of the Jones-Gordon press may be mentioned the impression set, by means of which the whole impression may be instantly changed — either increased or diminished — *without stopping the press*. When the impression screws are properly set it is seldom, if ever, necessary to move them, as all adjustments can be made by means of a hand wheel within easy reach of the operator.

Another important feature is that when the impression is thrown off, by a simple device connected with and operated by the throw-off, the rollers are prevented from touching the form, thus allowing the press to be run indefinitely for the distribution of the ink.

Another feature of considerable importance in saving time is the self-locking chase hook and form-starter. When the chase is put in place on the bed, it is locked without the operator having to touch any lever or other part of the press. When the form is to be removed, it is only necessary to press forward the pad marked "patent," which causes the chase hook to raise, and the form to move forward so as to be convenient for lifting out.

These presses are also provided with depressible grippers, the advantages of which all printers know, and the roller carriages have loops to be used for putting in and removing the rollers, a convenience not on any other similar style of press.

A valuable adjunct to any press is a fountain, and in this respect the makers of the Jones-Gordon have just invented and brought out a fountain which works upon an entirely different principle from any yet made, and which they designate as the duplex fountain. The fountain, instead of being set above and over the disk, is set back of and just up to it, as can be seen by reference to the cut in their advertisement. This position allows the form rollers greater scope of motion. The form rollers do not touch the fountain roller, but the ink is supplied to the disk by an independent composition roller, which carries ink to the disk twice and passes four times over the upper part of the disk to each impression by the press, the disk making its revolution between the trips of the fountain roller. All sizes of these presses have double ink disks, the outsides and centers of which revolve in opposite directions, which with this new fountain gives unrivaled distribution. The motion of the fountain roller is given by the roller arms, therefore is positive and unfailing in its actions. The flow of ink is regulated by screws at the back, and can be governed as desired by the operator.

Messrs. John M. Jones & Co. are also manufacturers of the Leader paper cutters, and for which they claim the following points of superiority over any other lever cutters:

First. The power is applied in the direction of the cut instead of in a right angle or diagonal direction, as is the case with many cutters on the market. By experiment and test it has been

demonstrated that less than two-thirds of the power is required to cut any given amount of paper with the Leader than with any cutter of the class above referred to.

Second. The back gauge, which in all other cutters must be changed for every cut by operation of the screw, in the Leader may be instantly moved any distance up to the whole length of its travel, by a lever, just beneath the front end of the table. To illustrate: Suppose it is necessary to move the back gauge of an ordinary paper cutter twenty-four inches, it will be necessary to turn the screw forty-eight times around, an operation involving considerable labor and time, while in the Leader it is accomplished almost instantly. The wheel and long screw in the Leader are only used for slight adjustments.

Third. The octagonal stick and recessed sides, which admit of passing the stick through the side to its place, render it impossible for the stick to be drawn out by the knife, and give sixteen cutting faces on the stick.

Fourth. The lever is hung in the most convenient position, midway between the floor and the top of machine, making it unnecessary in making the cut to get down near the floor.

The Leader cutters are made in four sizes, 23, 24, 30 and 32 inch. The 23-inch has square stick and the back gauge is moved in the common way. They will admit of cutting to one-half inch on the 23 and 24 inch, and to one inch on the larger sizes. These cutters have been on the market for some years, and steadily maintain high favor in the opinions of the printing fraternity.

D. J. REILLY & CO.

We would call attention to the advertisement of the above firm on another page of this issue. This firm has just recently invented and patented an apparatus for casting printers' rollers. The main purpose of the invention is to facilitate the casting and to improve the quality of the rollers. As all printers know, rollers are made by casting the composition around cores in molds, and for the purpose of expelling the air from the molds, and, to avoid making imperfect castings, it is desirable that the composition should be injected into the molds from the bottom, and to achieve this their machine was invented.

The mold-cylinder is of ordinary construction with usual mold-tubes in the cylinder, but a bolt-rod is provided, passing centrally through the cylinder and through its bottom and into the base-plate. The bottom rests directly upon the base-plate and is held in position by this bolt-rod, about which the cylinder turns as on an axis. The bottom is provided with perforations, corresponding in diameter to the mold-tubes, and so arranged that a given number of the perforations will be coincident with the bores of a corresponding number of the mold-tubes.

The plate is constructed with a gutter, which extends from near its center to its outer edge, where it terminates in a coupling for the attachment of a charging-tube, leading from the reservoir of melted composition. This tube may have a stop-cock conveniently placed. Within the mold-tubes are placed "steady rests" or spiders, to receive and hold in position the ends of the cores within the molds.

With this construction the apparatus has the following operation: The cylinder is turned about the rod, forming its pivot, until the gutter is directly in line or coincident with a series of the perforations in the bottom. The melted composition from the reservoir passes through the tube, which may be flexible, and is forced through the gutter, thence upward through the mold-tubes, filling them and surrounding the cores, so completing the casting.

As the composition enters the mold-tubes from the bottom, the air in the tubes is expelled from the top, and it does not interfere with the soundness of the casting. One series of holes now being filled, the cylinder is turned about its pivot until the gutter is again brought coincident with a new series of empty mold-tubes, which are then charged as before stated, and so on until the entire number of molds are filled. In the operation of turning the cylinder to bring the gutter successively beneath the tubes, the face of that part of the plate in which the gutter is not lying closely against

the bores of the tubes acts as a bottom to the tubes, and prevents the composition in them from escaping and from being wasted. When the rollers so cast have solidified, they can be readily pulled out of the mold-tubes.

HANSEN PIN-HOLE PERFORATING MACHINE.

Below we print a cut of the H. C. Hansen Power Improved Perforating Machine. The cut is almost self-explanatory. The mechanism by which the desired work is accomplished consists of

two die-wheels, placed in such positions as to register perfectly, and, in passing the paper between them, the desired perforations are made. The paper, after being started in, is, of course, carried through by the rotary motion of the die-wheels. There are no gearings about the machine to wear or get out of order. It has a nicely finished table, with gauge, which can be quickly and accurately set at any desired distance from point of perforation. An especial feature claimed by the manufacturer of this machine is that it will accomplish its work in one-fourth the time required by any other machine. Its perforations are round holes, cut out clean, and the size of this line of leaders:

.....

The machine can be run by either hand or power, and Mr. Hansen has many testimonials of its excellency from those who have used it. For price see the advertisement on another page.

NEW FOLDING MACHINE.

The Stonemetz Printers' Machinery Company, on January 15, ultimo, secured letters patent on a combination point-feed and drop-roll book-folding machine with 16-page pasters, for folding books, pamphlets and magazines. This machine can be fed either to points or guides, as the work may require. With the 16-page, pasting attachment it makes a combination of three machines in one—the regular point book-folding machine, guide or marginal folding machine, and 16-page folding and pasting machine, said to be the only machine of the kind on the market. When used as a point folding machine the sheets are fed to point holes made in the paper when the signature side is printed, and an accurate register thus obtained. From ten to fifteen thousand per day is obtained on them fed to points. When used as a guide or marginal folding machine the paper is fed to a guide and drop-roll, carried by tapes into the machine and automatically straightened before the first fold is made; if the margin of the paper is uniform, accurate

folding to register can be done, and by this manner of feeding from twenty to twenty-five thousand per day can be obtained. By the addition of pasters it will fold and paste a 16-page magazine or pamphlet at this speed. This new machine is not complicated and can be quickly changed from one style to another, and is therefore adopted to do a great variety of work. The points are screw-adjusting and fitted into the table, which is of glass, giving the operator full view of the work and machine when in operation. A number of these machines are already in successful operation, and the Stonemetz Company will be pleased to give further information to parties contemplating purchasing a folder.

A RARE CHANCE—\$6,000 cash buys an incorporated Job Printing and Publishing Company in Chicago. Long lease, low rent, and best location in Chicago. Material nearly all new and in good condition. Trade established; present owners will rent office room, lend their influence, and guarantee \$500 worth of work each month from their own lines of business, to be able to give attention to which is the only reason for selling. This is exactly as represented, and best of reference can be given in this way. It is a chance of a lifetime for a practical man. Only those who have the ready cash need answer; no triflers or brokers. G. L. OLSON, 163 West Indiana street, Chicago, Ill.

EVERY PRINTER should have a copy of "DIAGRAMS OF IMPOSITION," and "THE PRINTER'S READY RECKONER." Price, 50 cents each. To be obtained of H. G. Bishop, 96 Clinton avenue, Albany, N. Y., or through Farmer, Little & Co., New York and Chicago. These are the handiest and most useful works ever published for printers. Indorsed by everyone who has seen them. Agents wanted in every town.

FOR SALE—7-horse power Otto gas engine. Good as new. \$450 at Terre Haute, Indiana. Address *The Express*.

FOR SALE—Job Printing Office. One of the best equipped medium sized job offices in a city of 100,000 inhabitants in Ohio; doing a nice business; established nine years; reason for selling, death of proprietor; liberal terms to responsible buyer. Address "C. R. J." care INLAND PRINTER.

NEWSPAPERS FOR SALE in all parts of the United States. If you desire to purchase an office please write us, stating *locality, politics, price, and terms* desired. Upon receipt of such information, we will lay before you full particulars and description of such offices as would seem to suit you, with sample copy of papers. Write for catalogue. W. J. MIZE & BROS., 149-La.Salle street, Chicago, Ill.

NEWSPAPER OUTFIT FOR SALE—A complete plant for a daily paper, consisting of a cylinder press, 32 by 48, a Forsyth folder, type cases, proof press, mailer, etc., in fact, everything necessary to run a paper. Address S. MOTT, P. O. Box 24, Guilford, Connecticut.

PRACTICAL PRINTER, who has had experience in all branches of the printing and publishing business, would like position as foreman or manager, or would go into business with man who can furnish capital, where is a good opening for newspaper and jobbing establishment. References furnished. Address "MANAGER," care of INLAND PRINTER.

TO PRINTERS—A thoroughly experienced printer, conversant with every detail of the job printing business, desires a responsible executive position with live, progressive house. Practical ideas on estimating. Good judgment on paper, stock, etc. Address P. O. Box 153, Philadelphia, Pennsylvania.

WANTED—Printer of several years' experience desires situation in good office. References given. Reasonable wages expected. Address H. HULSART, Big Rapids, Michigan.

WANTED—A thoroughly competent job foreman, one who has had experience in handling stock and making prices for good size office. Address "FOREMAN," care of INLAND PRINTER.

WANTED—The Inland Printer Co. will pay 25 cents apiece for numbers 2, 4, 5, 10 and 12 of Volume I, if in good condition, to anyone sending them to this office, or will credit the amount on subscription, if preferred.

WANTED.—Position as general manager or superintendent of large publishing house, or paper and publishing combined. Twenty-five years' experience in the business. Habits exceptional. Eastern city preferred. Address, X, care INLAND PRINTER Co.

FOUR-HORSE OTTO GAS ENGINE FOR SALE.

Having rented power from the Edison Electric Light and Power Company, we want to sell our engine.

BURDICK & TAYLOR,
481 Broadway, Albany, N. Y.

THE BATHRICK ELECTRIC DISSIPATOR

Overcomes all difficulty from Electricity while printing in any weather and with any paper.

FULLY WARRANTED.

J. H. BUNNELL & CO., Sole Agts.,
106-108 LIBERTY STREET, NEW YORK.

THE PERFECTION RULE CASE.

Four of these go into a full-sized case. Each holds a 15-lb. font of labor-saving brass rule. It is accurately graduated, and no box will take a longer length than it is marked. The rule always stands on its feet, and is easily picked out. The short pica lengths are on one side, the half picas on the other, and the longer lengths between. It runs from 1 to 30. It is simple; convenient to carry and use; saves space and the necessity of mixing fonts.

PRICE, 90 Cts.

THE LEADING ENGRAVING ESTABLISHMENT OF THE COUNTRY

PERFECTED

PROUTY P.R.E.S.S

WE WANT YOU and every other Printer TO KNOW

that the "Perfected Prouty" is the best Job Press made. Such a claim we know, and you know, is common, but we make this claim because every printer using the "Perfected Prouty" pronounces it the best, and these are

THE REASONS WHY

It is not an old-style press under a new name, but a modern press, built from original designs to meet the requirements of the printer. Old ideas of construction have been discarded, and the "Perfected Prouty" is absolutely free from grinding cams and powerful springs, rubbing or sliding motions, thump, pound, noise and rattle.

THE "PERFECTED PROUTY" PRESS

is so constructed that speed and durability combined with excellence of the work produced, and smoothness of operation are its characteristic features. In these particulars this press is Perfection, and its claims to superiority are based upon solid facts. Investigate these claims and you will be forced to admit that the "Perfected Prouty"

IS SUPERIOR TO ANY OTHER.

We sell the "Perfected Prouty" on its merits; guarantee full satisfaction, and will ship one on trial to any responsible firm. Any printer wanting a Job Press should acquaint himself with the new features and valuable merits of the "Perfected Prouty."

Descriptive Pamphlet mailed on application.

181 MONROE STREET,

CHICAGO.

INKOLEUM Warranted to be the Best INK REDUCER and Quickest DRYER in the World.

Directions for Use:

Remove all skin from ink in can, then pour in about a spoonful of Inkoleum, and mix thoroughly to consistency desired. Thin for cold room; thicken for warm room or sticky rollers. Any press can be started up without washing the rollers, upon which it can be worked clear, free and easy on any kind of paper the coldest morning in winter, regardless of fire, or the hottest day in summer, by simply putting a few drops of Inkoleum on the rollers with the fingers.

Printing or Lithographic Inks of any color or stiffness can be reduced quickly without in the least impairing the color. For fine tint work Inkoleum works miracles, as it makes the ink cover charmingly, and dries quickly. No spreading of jobs necessary, and urgent work of any kind can be delivered immediately without setting. On rollers it never dries, but preserves their suction, life and elasticity. Inkoleum is a perfect "cure-all," and saves double its cost every day in the year, and makes pressmen do better work. A trial will convince the most skeptical. Testimonials from all parts of the world to prove these assertions. Price, half-pound bottles, 50 cents. For sale by all typefounders, wholesale paper and printers' supply houses; or, it will be sent anywhere in the United States, express paid, for 75 cents.

Put up only by **ELECTRINE MANUF'G CO., St. Paul, Minn., U. S. A.**

FRANCIS & LOUTREL'S PATENT COMPOSITION

FOR PRINTERS' INKING ROLLERS,

Is superior to all others; it lasts for years, and is always ready for use; it does not "skin over" on the face, shrink nor crack, and seldom requires washing. Sold in quantities to suit, with full directions for casting. Give it a trial and be convinced.

MANUFACTURERS OF ALL KINDS OF
BOOKBINDERS' MACHINERY AND TOOLS.

THE JONES GORDON JOB PRINTING PRESS

Is not an Old Style Gordon, but has several Important Changes and Improvements which make it quite a different Machine.

A VERY IMPORTANT FEATURE in these presses is that the whole Impression may be INSTANTLY CHANGED—either increased or diminished—without stopping the press. When the impression screws are properly set, it is seldom, if ever, necessary to move them, as all adjustments are made by means of the hand wheel, marked “B” in cut.

Another important feature is, that when the impression is thrown off by means of the lever “A” a simple device causes the movement of parts that prevents the ink rollers from touching the form, and the press may be run indefinitely for the distribution of ink.

Another feature of considerable importance in saving time and patience is the self-locking Chase Hook and Form Starter. When the chase is put in place on the bed, it is locked without touching any lever, pad, screw or any part of the press. When the form is to be removed, it is only necessary to press forward the pad, marked “patent,” which causes the chase hook to raise and the form to move forward so as to be convenient for lifting out.

When the platen is in a convenient position for setting the grippers, they may be brought down on the platen for that purpose. The ink roller carriages are provided with loops to be used for putting in or removing the rollers.

The Duplex Fountain is a great advance over anything heretofore used for the distribution of ink on a disk press. A separate distributing roller moves down and back twice, or four times, over the upper part of the disk, each impression. The disk is double and is constantly changing, any part of the main disk only stopping at the same place every hundredth impression.

The press is very heavy, strongly braced and substantially built. The Impression Arms are of steel, forged from one piece without weld. Manufactured by

JOHN M. JONES & CO., PALMYRA, N. Y.

GREEN ROLLERS AND ELECTRIC SHEETS.

A PAPER READ BEFORE ST. LOUIS TYPOTHETÆ, MARCH 8, 1889.

BY C. W. CRUTSINGER.

THE discussions that have heretofore been held in this place upon economic questions pertaining to our trade, and the resulting benefits that have accrued to our membership, induce me to offer for your consideration some suggestions upon a topic that has not, so far as I know, been touched upon either here or elsewhere.

Among the many troubles which beset the pathway of the master printer, striving to do first-class work at all times, are two, which are occasioned by directly opposite atmospheric conditions. The one by warm, damp weather, and the other by a dry and usually cold atmosphere. The first producing what is commonly called *green rollers*, and the latter electricity in the paper. It is my belief that both these troubles may be almost if not entirely overcome by the very simplest means; and in the fullness of that belief, offer the following suggestions:

As is well known, printers' rollers are composed largely of glue and glycerine, both of which substances are very hygroscopic, or possess the property of readily absorbing moisture from the atmosphere. In warm, damp weather the roller absorbs an undue amount of moisture from the atmosphere, which soaks into its surface and causes it to become sticky, mushy and rotten; the composition pulls off in little pieces, which fill in the counters of the type, producing results anything but satisfactory.

Some years ago, I undertook the study of the materials generally used in the manufacture of roller composition, but found nothing that was satisfactory written upon the subject of glue making; so, after much time spent in hunting through the libraries, I obtained permission from Messrs. Max, Tamm & Co. to visit their glue factory, at Rock Springs, in the western part of the city, and there to witness and assist in the different processes of the manufacture of glue; and the care of handling, dressing, assorting and combining of the different kinds

of stock from which glue is made. As you may well imagine, the opportunity was too good to let slip, and I availed myself of it to the fullest.

The subject in hand calls only for a knowledge of the process of drying: The glue stock having been boiled out, the resulting "soup" is run off into coolers and allowed to stand over night to cool. In the morning it is found to be a mass of jelly, containing from eight to twelve parts of water to the one part of glue. If left in this condition long, it will decay; so it behooves the manufacturer to get rid of the water as rapidly as possible. To accomplish this the jelly is cut up into slices from one thirty-second to one-quarter of an inch in thickness, according to the quality of the stock used and the grade or style of glue to be produced, and laid upon the nets to be dried. Formerly glue makers depended entirely upon piling the glue-covered nets out in the open air, or in covered sheds, the sides of which were made of revolving slats, which could be opened to allow the warm, dry air to blow over the nets, or be closed upon the approach of a storm; but the go-aheadativeness of the nineteenth century could not brook such slow methods, and I am violating no confidence in stating that the greater part of the glue now made in the United States is dried by being placed in long rooms or tunnels, and a strong blast of air, heated to the proper temperature, blown over it, mechanically.

The printers' green roller, like the glue-maker's jelly, has a surplus of moisture in its surface, only; although the proportion is not nearly so great, and can readily be dried out and brought into perfect working condition by blowing a blast of warm, dry air over it. This can be done by placing the rollers in a box and blowing the air through, or by sending a blast over them while in the press and at work. It should be remembered, in this connection, that the capacity of the air to absorb moisture is increased with the increase of temperature.

My suggestion is to place an ordinary blower of suitable make and capacity for the work to be done, in the boiler room—I say in the boiler room, because there the air is, or ought to be, warm and dry—although good results may be obtained by utilizing the air of the

pressroom—conduct through ordinary tin pipes the warm, dry air to the pressroom to be used in drying out the green rollers.

For offices not using power, I would suggest a small blower so mounted as to be easily run by hand. In fact, the ordinary printing office bellows is no mean weapon with which to overcome this difficulty.

Now, as to electricity in paper :

That electricity does exist in paper is beyond a doubt, and in order to be able to devise some means of getting rid of it, it is well to understand how it got there.

Paper itself is a non-conductor of electricity.

Electricity is generated, or set free, either by friction or chemical decomposition ; and as we find it in the original package, as it comes from the mill, only in finished papers, which are so finished by passing between numbers of steel rolls, working in a train, we naturally come to the conclusion that the pressure and slip, or friction of the calendering rolls are responsible for the generation of electricity in the paper.

But you will say that not all the finished papers, as they come from the mill, are so charged.

In winter, with the thermometer around zero, the atmosphere is as near perfectly dry as it ever gets to be, as the moisture is then congealed and deposited in the shape of frost or snow. In summer the air is, during the driest weather we have in this latitude, only comparatively dry.

Air charged with moisture, especially warm air, is an excellent conductor of electricity, while dry air is a very poor conductor.

If you will look into this matter, I think you will find that nearly all paper, in the original packages, which are electrified, will be found to have been made in cold, dry weather. There may be a few days in summer sufficiently dry to cause the same effect. When the atmosphere is moist it carries the electricity off from the paper as generated ; and, when dry, the electricity generated is left in the paper.

We find in the printing office that this condition occurs chiefly in winter, when the weather outside is clear and cold, and the atmosphere dry. It is much more likely to occur in steam-heated rooms—where proper attention is not paid to ventilation, causing a hot, dry air—than in rooms heated by stoves.

In practice we find that the opening of opposite windows and doors, sprinkling the floor with water, smearing the cylinder with glycerine ; hanging wet cloths from the feed-board ; piling wet rags, sponges, paper or bricks upon the fly-table ; allowing steam to escape from the radiators, or from pipes run under, around and about the press, all for the purpose of moistening the air, in whole or in part, overcomes the difficulty.

It is a singular fact that electrified or electrical paper, which has gone through the press on the first side with but slight annoyance, will often, on running it through to print the reverse side, put the pressman to his wits' ends to keep it on the fly-table, and renders it utterly impossible for the feeder to handle the sheets at any-

where near the average speed, thus entailing great loss by diminishing the output of the press. In this case the paper is still further charged with electricity by passing through the press, rubbing on the sheet below it, and on the metal-clad edge of the feed-board, and on the fenders.

My suggestion for overcoming this well-known condition, called "electricity in the paper," is substantially the same as that for overcoming the "green roller" difficulty, with the difference that the current of warm air projected through the pipes be charged with moisture, by turning a jet of steam or spray of water into the blower, and the current of moisture-laden air be sent around about and past the press, as experiment may prove best, to carry away the electricity ; as it would be hard to find a better conductor of electricity than warm, damp air, especially if it is in motion.

The suggestion of using the blower to dry out green rollers is with me a matter of knowledge. That of using a current of warm, damp air for overcoming electricity in paper, while never having been practically tested by me, is, in my opinion, an idea which it will pay to investigate.

Written for THE INLAND PRINTER.

HOW TO BE SUCCESSFUL.

BY W. R. W., BALTIMORE.

"NOTHING succeeds like success," is an old and familiar axiom that we all appreciate and seem to thoroughly understand, for without success one would hardly succeed. So, in analyzing this sentence, we find it to contain nothing more than a self-evident fact put in concise and positive language. The more important thing for us to consider, and what we mostly desire to know, is, are there elements within the grasp of every man of business, which, if properly studied and thoroughly carried out, will lead to success, or a position within that envied circle inhabited only by those termed successful people ?

If we are close observers of things and human nature, and of good sound judgment, we have already discovered that character, intelligence, energy and progressiveness, are the elements which are at work operating in the life of every successful business man.

This is particularly true and noticeable when applied to those engaged in the varied branches of the printer's art. To illustrate : Take the publication of a daily newspaper, which, to be successful, must not only have merit intellectually, but also mechanically. Its articles and criticisms must not only be ably written, but must be shown in the best style and most attractive form.

Without the two—the intellectual and the mechanical—working in perfect unison and harmony, it will never reach that position occupied by the successful paper.

Therefore, to gain success in the field of newspaper literature, these four elements must be brought into requisition.

In the editorial department, character and intelligence must be found, while in the managing department

energy and progressiveness must be displayed. Such character that will make itself felt in a community and gain the confidence of the people; and a broad intelligence capable of quickly grasping and mastering the various and complex questions of the times, and conveying them in a condensed and appreciative style. In the managing department there must be energy and progressiveness; such energy that is at work at all times to advance the interest of the paper and make it more attractive, personally seeing to it that all things connected with its mechanical departments are in proper and satisfactory working order; such progressiveness that will always keep abreast with the times, seeing that everything has a bright and attractive look, using the latest and best productions of the typefounders, and discarding at all times that which looks or has the appearance of being time-worn or antiquated.

Another illustration is in the publication of a country paper. Who ever heard of a country paper that was poorly written and badly printed, that was ever successful? The same elements must be at work here as in the city daily.

A great many papers are ably written and are not successful, owing to being badly printed, and to poor "make-up."

These are essential matters to which the publisher of a country paper generally does not give the proper consideration and attention, seeming to lose sight of the fact that the success of a paper depends as much upon its mechanical appearance, as upon any other one thing.

Therefore, to be successful, all of the four elements mentioned must be brought into play, and the publisher must not only give his readers good matter to digest, but he must present it in a modern, pleasing and attractive style.

In looking into the jobbing branch of the printer's art and observing the successful man, we find that he embodies the same four elements.

He is a recognized man of character in the community, and has gained the confidence of his customers, and all those who have any business dealing with him. He is able to intelligently master all the details of his business, and obtain the best results. He is a man of energy, personally overseeing everything; nothing escapes his notice; he is always on the alert, seeing that everything is working in proper order, and that the work is turned out promptly as promised. He is a progressive man, giving his customers the best value for their money; ever on the lookout for anything that is new and novel and likely to improve his work and make it more attractive. He keeps well posted, consults the latest specimen sheets issued from time to time by the typefounders, subscribes to the best trade journals, takes them home with him, and at his fireside studies up the good things always to be found therein, with a practical application to his business.

Thus it will be seen that, to be successful, we must have true merit, gained by being men of character, intelligence, energy and progressiveness.

Written for THE INLAND PRINTER.

NOTES ON WOOD ENGRAVING.

NO. XLIX—BY S. W. FALLIS.

THE "Religious Emblem" of 1809 was intended by its projector (according to the preface), "to draw into one focus all the talent of the day," and it is a very conspicuous mark in the history of wood engraving in England. In 1815 Nesbit returned to the place of his nativity, where he continued to reside until 1830. While living in the country he did not abandon the art entirely, yet the cuts executed by him during this period were very few. In 1818, while living in the North, he engraved a large cut of Rinaldo and Armida for "Savage's Hints on Decorative Printing." This cut and another, the "Cave of Despair," in the same work and same size, engraved by Robert Bronston, were expressly given to display the perfection modern wood engraving had attained. Nesbit's cut was somewhat criticised by the draftsman, Mr. J. Thurston, his principal objection being that it was too dark. Nesbit accordingly went over the cut again, to the satisfaction of Thurston, but connoisseurs are free to acknowledge that the first proof of the cut is superior to those taken after it was worked over, although great care and judgment were taken in thus working it up.

In order to give a fictitious value to this book of Savage's, after a certain number of copies were made, several of the cuts were defaced, by being sawn across in several places, in such a manner as to spoil the cuts, but as these saw cuts were only surface cuts, and done for the dishonest purpose of enhancing the value of the original prints, they were easily repaired by plugging and reengraving the defaced portions, and reprinted *ad infinitum*, as the original prints before the defacing, and it requires a very practiced and educated eye, with very careful and thorough examination and comparison, to discover the difference, if any, between the cuts before and after this trick of defacing.

In 1830 Nesbit returned to London, where he continued to reside and practice his art until his death, which occurred at the age of sixty-three years, on November 11, 1838, at "Queen's Elms."

The excellence of his productions as a wood engraver made him always in demand, and his works much sought after. He was acknowledged as the best of Bewick's pupils, and a greater master of his art than his fellow-pupils, because he was never tempted beyond the limits of his craft.

Charlton Nesbit was unquestionably the best wood engraver that proceeded from that great hive of art, the workshop of Thomas Bewick, as well as the most accomplished wood engraver of his time.

Luke Clennell, another very distinguished pupil of Bewick, was a designer and painter, as well as a wood engraver; was born in the village of Ulgham, near Morpeth, in Northumberland, April 8, 1781. At an early age he was placed with a grocer (a relation), in Morpeth, as an apprentice, where he remained until he was sixteen years of age. He showed some taste for art, and some

drawings that he made while at Morpeth attracted considerable attention among his friends and acquaintances, and the result was that on April 8, 1797, he was placed with Thomas Bewick as an apprentice for a term of seven years, and in a short time he showed extraordinary taste and great proficiency in wood engraving. As he drew with great correctness and speaking power and effect, Bewick, recognizing his talents, set him to copying on the wood several of Robert Johnson's drawings, and to engrave them as tail pieces for his second volume of "British Birds."

After the expiration of his apprenticeship, Clennell continued to work for Bewick for some months, being chiefly employed in engraving cuts for a "History of England," published by Wallis & Scholey at 46 Paternoster Row. He received from Bewick two guineas each for engraving these cuts, and by some means learned that his employer received five guineas for what he paid him but two. He accordingly sent a proof of one of them, "Alfred in the Danish Camp," to the publishers, stating that the same was engraved by him.

In the course of a few days he received a letter from the publishers, inviting him to come to London, and offering him employment until the cuts intended for this work should be finished. He accepted the offer, and soon set out for London, where he arrived in the latter part of autumn, 1804.

After the expiration of his apprenticeship, and prior to his departure for London, he engraved several excellent cuts for a schoolbook, entitled, "The Hive of Ancient and Modern Literature," printed by S. Hodson, Newcastle. Clennell's fellow-pupils were Henry Hole and Edward Willis.

Most of Clennell's cuts are characterized by their free and artistic-like execution, and though generally very spirited and carefully executed, bear the appearance of coarseness, which, however, is a good fault. He was accustomed to improve on the designs by Thurston by heightening the effect of light and shadow, and often corrected the outlines of Thurston's drawings, to which Thurston at first objected, but seeing that by Clennell's corrections his illustrations were very materially improved, he submitted gracefully to Clennell's good judgment, and raised no subsequent objections to the liberties he took with his drawings for their general improvement.

An admirable example of Clennell's superior work is found in "Falconer's Shipwreck," an octavo edition, printed for Cadell & Davies, 1808.

Mr. Jackson was in possession of the first proof of this beautiful cut, inscribed "Twickenham, September 10, 1807," where Clennell was residing at the time.

The drawing was made on the block by Thurston, but the great spirit and effect was due to the judgment and careful handling of Clennell.

All the other cuts in this book are engraved by Clennell, but although well executed, they do not call for any especial notice. Two of these cuts were designed for another work, and do not bear very particularly on

the subject matter; they act the part as merely embellishments without any particular adaptation.

Clennell's largest cut is one he engraved for the diploma of the Highland Society, from a design by Benjamin West, president of the Royal Academy, and for which he received fifteen guineas. The original drawing was made on paper, and Clennell gave Thurston £15 for copying on the block for him the figures within the circle. The supports of the circle, or wreaths, a Highland soldier and a fisherman on either side, he copied himself. The block on which he originally began the engraving of this cut consisted of several pieces of boxwood veneered on beech. After he had been at work on it some two months, it suddenly split one afternoon while he was at tea. Clennell, hearing the report of the crash, immediately suspected the cause, and on finding it damaged beyond repair, he, in a fit of passion, at realizing so much labor lost, threw all the tea-things into the fire. He, however, in a few days got a new block made, consisting of solid pieces of boxwood, firmly screwed and clamped together, paid Thurston another £15 for drawing the center over again, and again drew the outside surroundings as before. He proceeded with renewed vigor and energy to the completion of the cut.

(To be continued.)

Written for THE INLAND PRINTER.

PROGRESS IN LETTERPRESS PRINTING.

NO. V.—BY ALFRED PVE.

THAT the improvement in letterpress printing is not confined to jobwork alone is evidenced by the handsome appearance of the books, magazines and periodicals of the present day. Publishers have taken advantage of every improvement in machinery or methods for the production of fine printing, with the result that today books of a high grade of artistic merit are placed in the hands of the public at prices that would have been considered ridiculously low for the same class of goods a decade back.

Various new processes of engraving have been discovered which have made it possible to illustrate descriptive articles in a vivid manner by reproducing sketches or photographs without the aid of the wood engraver and at small cost as compared with the older methods. It is an undisputed fact that many persons will read an article that is profusely illustrated who would not read the same article without the illustrations. For this reason publishers are wise in utilizing engraving processes to their fullest extent.

Improved presses and better facilities for turning out fine presswork have also contributed much to the nicer appearance of books now than in former days. Finer grades of paper with good printing surfaces are used, and printed dry, in place of the common kinds of printing paper that needed to be wet down before printing and afterward had to be dried and pressed before being bound. The old method of printing with a woolen or rubber blanket has given place to the hard packing,

which produces a sharper and clearer impression, giving better results with less wear on the type.

“Old style” types—an improved cut of the original style of letter used in English works when printing was first introduced—have been largely adopted in recent years, and their light appearance and broad face render them more easily readable than many of the “modern” faces of roman letter. No stone has been left unturned by which the character of the book of the latter end of the nineteenth century could be made superior to those of the preceding centuries—typographically considered—and it must be admitted that the efforts of both publishers and printers have been rewarded with a large measure of success.

There is another branch of the printing business which has not heretofore been referred to in these papers, but which comes more nearly home to the public, as well as the members of the typographical profession—the *daily newspaper*. For evidence of progress the daily newspaper of all the large cities of the United States does not need to go skirmishing around very far. Compare the paper of today with the one of five years back, and note the difference in every respect. Better paper, clearer printing, brighter paragraphs, illustrations, improved appearance of advertisements—all testify that newspapers at least are not lagging behind in the general improvement that is taking place in the typographical world. During the last few years efforts have been made to produce machinery that would turn out a high class of work at a rate of speed that would surprise nearly everybody—with what means of success the whole world knows. An edition of a daily newspaper that formerly needed ten or a dozen presses to run off is now accomplished with two or three presses, which not only print, but dampen the paper before printing, and cut and fold the sheets after printing. Not only in the machinery department of the newspaper office is progress apparent. What was, a few years ago, a *rara avis*—an illustrated daily newspaper—is now so common that a daily paper not illustrated would be likely to cause some unpleasant remarks as to the enterprise and ability of its proprietors. By means of a recent invention printing blocks for use with type can be produced in about forty minutes; and in giving an account of a disaster, or promotion of some political favorite, or describing some important event in the world’s history, it is rarely that the description is unaccompanied by a sketch, or portrait, or scene that will portray more forcibly than words can describe the impression intended to be created.

The appearance, and usefulness also, of the daily newspaper, has been improved by abolishing the long, solid columns of type which were formerly considered necessary to the dignity of a daily newspaper. In these busy days few men have time to read a solid dissertation upon any subject occupying all the way from a column to two columns of solid minion. Life is too short to spend the time necessary to wade through so much editorial or reportorial matter; so the journal that can express its ideas in the fewest possible words and in

such shape that “he who runs may read” is going to secure the largest amount of patronage from the general public.

Taking a general view of all classes of letterpress printing and the advancement made in every department, it must be evident to the most casual observer that the limit is not yet reached; that so long as the inventive mind of man has an existence improvement will be the order of the day, and that whether the aid of machinery or the intellect of man alone be utilized to secure its advancement, the art of printing will continue to progress. Like Tennyson’s brook, it will be able to sing,

“For men may come, and men may go,
But I go on forever.”

Written for THE INLAND PRINTER.

QUADRATS.

BY PICA ANTIQUE.

IN answering a letter received from an ambitious young gentleman, who evidently imagines he knows all about the art, I inclosed an envelope with my address printed thereon in this fashion:

JOHN SMITH,
SMITHVILLE,
WISCONSIN.

This did not please the sense of propriety of my juvenile correspondent, and back he hurls his indignation. “The *state* should be put upon the same line with the city or town, thus: ‘Smithville, Wis.,’ and no one but an old foggy or one who does not know his business would dream of having it otherwise. It is against all rules, and no good reason can be given for it.”

Softly, my incipient typo. Old, we may be, and foggy sometimes, but always endeavor to act in a “reason”-able manner; know as well as you can the fashion of the times, and that the majority of envelopes are printed according to our opinion of what is right.

Is it? The object of the address is *to secure prompt and certain delivery*. Primarily (on account of ease and correctness in reading) type is used. When letters are being sorted in postoffice or rapidly moving car, to what portion of the direction does the clerk first look? To the *state* always. The place is a secondary consideration; the county the third; the name of the individual last, until it comes to final delivery.

Some great publishing firm once reversed the “matter” thus: State, county, city, name. But the idea did not “catch-on” with the public; in fact, “died in the bornin’,” though having the element of practical common sense.

To facilitate ease and rapidity of distribution the state should make a separate line and be printed in bold type; the remainder of the address follows in natural sequence. Consequently, there is something of reason in our “old foggy” notion, and postoffice and postal clerks will fully indorse our view of the matter, whatever may be your *ipse dixit*, my budding compositor.

* *

ANOTHER correspondent, and in quite a different frame of mind, desires to know, “if there is room in

printing offices for young men?" Decidedly so, if possessing ambition to excel, brains, application and a good moral character. Printing offices are not dumping ground for mediocrity, sloth and the sowing of wild oats. The standard is high, is becoming more so with every year, and it is no boy's play to meet the requirements. It is the competition of strong, earnest, capable, educated men, and the battle for superiority is unflinchingly fought.

Yes, there is always room for one of the right metal; one who is willing and anxious to learn; who is not afraid of work; who does not insanelly imagine "the trade" can be mastered in a few months or even years, who is determined to climb to the top of the ladder—otherwise, not. There is no royal road to printing, any more than to geometry. It requires studious application, resolution, peculiar fitness, and does not, in any case, prove a national bank. Many a good plowman or laborer in some other branch of industry has made a very poor printer. Remember this before deciding. If you have the capabilities of making a first-class printer every office door will swing open and a very warm welcome awaits you; if not, you may be certain there is no room for you.

* *

WHY is it that the many become compositors and the lesser number pressmen? One position is as remunerative as the other, and the latter much more in demand than the former. Of course, we refer to those who thoroughly understand their business. For others there is never any seeking, and the necessities of work alone give them employment.

It has been the commonly accepted theory that the reason of non-discharge in the government printing office at Washington, of pressmen, was that competent men could not be found to fill their places. And it is stated as a fact that all large cities were searched in vain for them. This, if true, and there is little reason for doubting, proves that the number of *first-class pressmen* is limited, much too small, and that more should turn their attention in that direction. Of compositors there is an ample supply.

Would-be printers will do well to keep this "want" in mind when about to choose their life work, for constant employment is the great end (good wages being understood) of our business life. Far better is it to be sought by a press than to be seeking for a stand.

* *

DON'T be foolish enough to fancy favoritism will do very much for you. It is, at best, a broken reed to lean upon. Employers, whether governmental or private, are upon the lookout for men full of vigor, of creative genius, of bold and aggressive designs, of educated brains, well-balanced heads and impulsive hearts; of the power to inaugurate and command success; men fruitful in resources and with sufficient spirit and strength to force to fulfillment their plans. By such alone can great enterprises be accomplished.

Printing has long since bidden farewell to the merely mechanical, and assumed its proper place in the van of

art and thought. There is no longer wasting strength upon the old—no time for it. Constant study is required to keep pace with the new—new material, new machinery, new motor powers. To do this man must be absorbed in his business; to do it he has no hours for trifling, no moments to waste in being contented with the present.

The world is ever upon the watch for such men, such printers, especially, now, such pressmen. Therefore all who would better their condition must step beyond self, become a learned, busy, active man, forget the individual and become as the Ajax upon whose shoulders rests the entire welfare and honor of the greatest of all arts.

* *

IN view of the progress made toward a perfect type-setting machine, the large capital employed, the push with which the enterprise is being conducted, a serious question is rising in the minds of many. It is whether the result will not be fatal to the chances of employment?

It strikes us not. Even granted that composition is to be done by machinery, with lightning speed and at nominal cost, there is yet a sufficiency of labor required in this broad earth and—perchance the craft would be better for weeding. And there is an equity in labor that has never as yet been seriously disturbed by new inventions, a compensation balance that is never far out of adjustment. Thus the experience of the past gives fair assurance that nothing in the coming will ruin any particular branch of business or willing, capable workmen go begging for bread.

Remember *labor omnia vincit*, and keep your eyes open and powder dry against any change that may come.

UNSKILLED WORKMEN: THE REMEDY.

THE following quotation is an extract from a conversation between a reporter of one of the New York dailies and the Commissioner of the State Bureau of Labor Statistics of the State of New York. That what he says is true, no right thinking person will deny, and as THE INLAND PRINTER aims to aid in any wise solution of the labor question, their re-publication, may not be without interest in calling out the views of those who have our trades' interest at heart:

I am inclined to think that the average American boy looks upon a trade as a disgrace, and that he imagines that he can reach the top round of the ladder quicker by other means. The present school system is responsible for this state of affairs. The schools turn out clerks, bookkeepers and professional men at a great rate. In many of the trades men receive better pay than clerks and bookkeepers. The state should, of course, educate its children, but it should adopt some system of educating boys in mechanics. I favor manual training. The great complaint of workingmen is immigration, and if our boys learn trades there will not be that inducement for emigration that there now is in other countries. It will take years to bring this about, but it can be done. We shall prove by statistics the necessity for manual training in our schools. I believe this is the solution of the apprenticeship question. I have found that boys who have manual training make greater progress in their other studies than boys who study books only.

I am a thorough believer in manual training. Some time ago I visited Girard College, Philadelphia. Under the provisions of

the will of the founder every boy must learn a trade. It was found impossible to carry it out under rapid industrial changes, so to comply as far as possible with the provision of the will a manual training school was introduced. Today the college cannot supply the demand in Philadelphia alone for boys. The trouble is that boys are sought before they have finished the course. This is the right system, for a system of schooling that will not enable a boy to make a living is a failure. Labor is honorable and dignified, but it is a fact that it is not so recognized by a large class. There is a difference in the social standing of those who work at a trade and those who follow a profession. It is wrong, but it exists, and we cannot shut our eyes to it. Put manual labor into the schools, and let the son of the rich man and the son of the poor man labor side by side in working clothes, and it will go a great way toward removing this feeling.

ADVERTISING.

THE following able address on "Advertising" was read by Mr. Thomas Reese, of the *State Register*, Springfield, at the recent session of the Illinois Press Association:

Mr. President and Members of the Illinois Press Association:

The subject assigned me by your committee presents a broad field for thought and discussion, and while it is not replete with dramatic incident nor romance, it should be of vital interest to every publisher, and I hope those of you who feel by force of courtesy compelled to listen as I lay before you a few thoughts which I have jotted down during the rush of business, will not feel that your time has been entirely lost.

ADVERTISING.

There is no department of a newspaper business that is of more importance than this department.

You have, perhaps, heard an old saying that I believe is attributed to Horace Greeley, namely, "Take care of the circulation of a newspaper and the advertising will take care of itself." This is so wide of the mark that it is scarcely worthy of serious consideration. Advertising will not take care of itself, and if you depend upon it to do so, you will not continue long in the newspaper business.

As a homely comparison of the relations existing between circulation and advertising, I might say that while circulation is like the air we breathe, that the advertising is as vital to the existence of the paper as we find the food we eat to our own existence. So talking to a publisher who has empty columns, some wiseacre says, "Look out for the circulation and the advertising will take care of itself." It sounds about the same as though one should say to a hungry man, "Never mind the gnawings of an empty stomach, fresh air is what you need; get plenty of fresh air and your appetite will look out for itself. Besides, if you haven't got enough to fill up as you are, you can send up to Chicago and save money by getting patent insides."

SOLICIT ADVERTISING.

It is unfortunate in this day and generation that soliciting has become such an expensive part of the transaction of any business, but it is the rule of business nowadays that you have to go after it, or you will not get it. This is especially so of the advertising business of a newspaper. Therefore, I say, solicit advertising directly and indirectly every hour, every day, every year that you are in the newspaper business. You cannot solicit too much nor too often. Never let up; never become vexed, and never allow yourself to be discouraged. Be as persistent as a lightning rod peddler, as patient as a preacher and as enduring as a politician.

When you get an advertisement make a written contract for it and then take care of the business. Set up the advertisement in the best style that you can and, if the opportunity is favorable, show a proof to the advertiser—this will frequently save the loss of an insertion by the correction of errors. In any event, make it

so it will please the customer, even though it requires considerable trouble and expense.

In setting up an advertisement, do not give it a line or even a lead more or less than is covered by the contract. Hew to the line. If you give a shorter space you will perhaps offend a good patron. If you give a fraction over, you will impress him with the idea that you do not consider the space worth what you sell it for. After the advertisement is in the paper, have it well printed on good paper; it pays.

CONTRACTING FOR ADVERTISEMENTS

Is a subject that should have very serious consideration, and no contract should be made unless it is intended to be carried out as made. Examine the conditions of the contract before you sign it or accept it. Some contracts will pay at a fair price, others will not pay at any price. In contracting, a number of things should be taken into consideration, and all objectionable features should be charged for in addition to the price of the space occupied. For instance, an advertisement over two columns wide should pay extra, but especially so if it does not extend as far down the column as the full width of the advertisement. A location next reading should pay at least twenty-five per cent extra. If next to reading and at top of column, it ought to pay the twenty-five per cent, besides an extra price for location at top of column—which should be as much for an inch advertisement as for a larger advertisement, and twice as much on a double column as on a single column. If located on a special page, there should be still another charge, say twenty-five per cent. This would make three extra charges—one for next reading, one for top column and one for special page; and if the work required a number of extra changes or embraced other objectionable features, they should all pay their way.

Curves, circles, or lines at an angle, should never be found in a newspaper; and an advertisement placed in the paper upside down, to please some crank, is an abomination.

I would not contract to run locals "among pure reading" that requires the notice to be preceded and followed by pure reading. A contract requiring a local to follow pure reading is not so bad, but it is not desirable and should pay an extra price.

Display lines scattered through the local columns destroys the value of columns and the looks of the paper. I don't think it pays. Poster type should not be admitted into the columns of a paper. A fair display is not objectionable, and the style adopted several years ago by the *New York Herald* and a few other papers of allowing no display has about gone out as not being practical.

In the office with which I am connected, while all contracts differ more or less, we make three separate and distinct kinds of contracts. The regular contract, of a given amount of space for a given time, being considerably lower by the year than for a shorter time for the same number of insertions. The next is for, say one thousand lines of local, to be used within a given time, as required by the advertiser. This is the best paying contract that can be made. The third contract is similar, except that we contract for a certain number of inches to be used as required by the advertiser within the time named in the agreement. The advertiser has the privilege of using as much or as little space as he desires in any one issue; there is no charge for composition if the advertisement runs two or more issues without change. For a live advertiser this is a very satisfactory contract, and is profitable to the publisher if properly looked after.

HOW TO CHARGE FOR ADVERTISING.

This is a question that seems as far from a satisfactory answer as ever, notwithstanding the Illinois Press Association has been in successful operation several years. The "flat rate," as it is called, was discussed in one of the meetings of this association. The idea is to charge so much per inch for each advertisement for each insertion, no matter what size the advertisement should be nor how often it should run. I do not think the idea a good one. An advertisement is worth more to the patron the first day than for any subsequent day; as the first day it is laid before the entire list of readers of the paper; the next day or issue the same matter is

laid before the same people, who are supposed to have seen it in the preceding issue, and so it becomes of less value each insertion. But I think on a year order we all run down too low. I don't believe, at the price advertisements are ordinarily taken by the year, that they are desirable business to handle. I believe the most of the papers in Illinois charge less for one-half column for one year than for one full column for six months, and yet it would appear more desirable to earn the same amount of money for doing the same work when it can be done in one-half the time.

I do not believe that anybody should get a full 24-inch column in any good weekly paper for less than \$100 per year, and still this is only the asking price for most weekly papers. There appears to me to be too much attention given to long-time advertising, and not enough to short-time work. I wish we could come nearer the flat rate, and have more short-time, high-price work to do, and less long-time business, which makes big figures, hard bills to collect, and, after all, scarcely pays for the space which it occupies.

The metropolitan papers do business more on the short-time plan. Before writing this essay, I requested several of the best metropolitan papers in the country, and several of the best weekly papers, in this state, to send me their advertising schedules. All complied promptly. The weekly papers most all quoted a column by the year, and then ran down to a quarter column for three months, stopping at that point. The metropolitan dailies quoted by the line per day. They do not appear to consider long-time business desirable, but they get good short-time rates.

The *Chicago News* quotes agate, in display column, per day, 50 cents per line; nonpareil, local, \$1.75 per line.

The *Chicago Tribune*—agate, per line, 25 cents; local, \$1 per line per day.

The *St. Louis Globe*—agate, 25 cents; locals, 50 cents per line per day.

The *Detroit Evening News*—agate, 30 cents; locals, \$1 per line per day.

Most of these papers have cheaper locations, and charge extra for special positions. But these rates are not as high, circulation considered, as are charged by the country papers for single issues.

But, no matter how you charge, what you charge, or how you get at it, when you have made a price stick to it. The advertising agent, with his peculiar methods and unfathomable ways of doing business, is, after all, but a creation of the publishers, who do not know what their space is worth, and do not transact their business on business principles. Those publishers who start out by trying to get from an advertising agent more than their space is worth, and, after a long and hard-fought battle, end by accepting about one-half of what they ought to have, besides making trouble all along the line. The boy cries for the moon, but when he finds he cannot get it, he ceases to cry for it. How is it with the advertising agent? He cries for the earth, and some publishers hand it right over to him, and that is the reason he keeps right on in the same line.

I might now go on and hammer the advertising agent and receive the plaudits of the much-abused publisher; but I am not here for that purpose. If the advertising agents had asked me to write an address I would recommend many improvements in their manner of doing business; but I am now addressing myself to the publishers. I do not consider the advertising agent in any sense the agent of the newspaper. He is the attorney for the advertiser, and we must meet him, not as our agent, but as our customer; and when we—I speak collectively—meet him in a business way and do business with him on business principles, he will be, from force of necessity, compelled to meet us on the same plane. An advertising agent does not write letters for fun; it is a matter of business with him; he writes letters because he has found by experience that it pays him. He has found out that the average publisher, when he says he will not take less than a certain price for an advertisement, has not nerve enough to stick to it when he is tempted by a lower offer. I would show the agent that I had. Let me suggest that you make your last offer first, and then stick to it until the last. You cannot reform the agent nor make any

money for yourself by writing him red-hot letters. He will never be different from what he is until newspaper publishers as a rule do business in a business manner. It pays to treat the advertising agent well and answer all his communications courteously, for in locating a particular advertisement he has over ten thousand papers which he can do business with, while in reference to that particular advertisement you can deal only with him. You need the business, and you will generally get it if you deal courteously and do not deviate from a reasonable price.

IN CLOSING,

I might go into different kinds and classes of advertising and discuss railroads, churches, lodges and a hundred other things that should be reformed to the advantage of the newspaper publisher, but I would not weary you, but will say, do business on business principles. Do not depend on circulation or anything else to run your advertising. Do it yourself. A good circulation is a strong lever in working advertising, but you may have a fat circulation and a lean advertising business. Circulation is a good thing; get all of it you can, but you must add to that advantage business tact, untiring energy, perseverance, patience and close attention to the wishes of your patrons, and in the end you will reap your reward.

PRINTING FROM WOOD CUTS.

Fine illustrated work is often printed from the wood cut instead of from an electro. If the edition is small, all is well, but if the edition runs into several thousands, so that the blocks remain all night in the machine, they frequently warp, and, however beautiful the impressions may have been on the evening before, it seems on the following morning as if the entire form had slipped. The explanation of this phenomenon is easy. A block consists almost always of several pieces of boxwood glued together and afterward planed and polished. When the block is fixed in the form and put on the bed of the machine, all goes well for a time. After everything has been made ready the printing can proceed. But by imperceptible degrees the influence of the cold bed begins to make itself felt. The opening of doors, lifts, etc., produces cold or warm drafts, and the so-called "sweating" of the carriage. The moisture so produced is communicated to the block, which, especially if new, greedily sucks it up, and so gradually dissolves the glue joints. The block can be observed to work itself loose, and every time it passes under the cylinder it "lifts" and curls upward. When things have got so far, which, fortunately, only happens with big blocks, it is difficult to find a remedy. Even if the block can be brought straight again, which can be done by putting it into a cold stereotyping apparatus, covered merely with a blanket, still the glue joints will always remain visible. But to avoid all this trouble and to be able to print, after making ready, without the usual opening and warping of the wood, a simple, cheap, and excellent device may be employed. When everything has been made ready, lift the form out once more, and lay over the whole bed, or, at any rate, under the form, a piece of thin sheet *gutta-percha*, which can be got at any medical appliance or chemist's shop, as thick as paper, for eighteenpence or less. This substance is quite impervious to any liquid, and does not change in the least at ordinary temperatures. The bottom of the form always remains dry, and thus the cause of the warping of wood-blocks and of electros on wood bottoms is obviated.—*Der Stereotypen*.

It is rather an odd thing that if you paste a printed slip on a postal card the government will charge the receiver letter postage; if the same matter is printed directly on a card nothing extra is demanded. The same slip which if pasted on a postal card would be charged extra for, may be put into an unsealed envelope and it will then go at printed matter rates, or the whole paper from which the clipping is taken may be sent, containing the article marked, at a much less rate than the government would charge for the same article attached to the card. That is, the government would rather carry four ounces for a cent than the four-fifths of an ounce for the same money.—*Exchange*.

LITHOGRAPHIC AND PLATE INKS.

These Inks were awarded the First Order of Merit and Gold and Silver Medals at the Melbourne, Adelaide and Christ Church, Australian and New Zealand Expositions, over all competitors, both American and Foreign.

WHY OUR INKS ARE THE BEST IN THE WORLD:

Our Colors are **Brilliant and Permanent**. Our Blacks do not turn brown or yellow with age.
 Our Inks are made from our own recipes, based on careful experiment and are always uniform.
 They will not decompose in any climate, and can be used to the bottom of the package. This renders them economical to the consumer.

SPECIMEN BOOKS FURNISHED TO THE TRADE ON APPLICATION.

Special Inks Prepared to match any shade and for any purpose. In ordering through Commission Houses or other sources, be sure to specify **WADE'S INKS**.

OLD STYLE GORDON PRESS.

Over **NINE HUNDRED** sold and **EVERYONE** given entire satisfaction.

SPECIAL FEATURES :

Steel Shaft and Steel Side Arms, Forged from Solid Bar, without Seam or Weld. The Most Positive and Practical Throw-Off yet Introduced. Best Material Used. Most Carefully Finished.

Impression Throw-Off. Hardened Tool-Steel Cam Rollers.

Depressible Grippers.

We have recently greatly improved these Presses, enlarging and strengthening the parts, and so arranging the disk and roller carriers as to give greatly increased distribution and we believe it is unequalled in this respect by any press now made.

THE MOST DURABLE AND HENCE THE MOST ECONOMICAL PRESS FOR THE PRINTER.

WE CHALLENGE COMPARISON.

SIZES AND PRICES.

EIGHTH MEDIUM, 7 x 11, with Throw-Off and Depressible Grippers,	\$150.00	HALF MEDIUM, 14½ x 22, with Throw-Off and Depressible Grippers,	\$450.00
" 8 x 12, " " " "	165.00	STEAM FIXTURES,	15.00
QUARTO MEDIUM, 10 x 15, " " " "	250.00	CHANDLER & PRICE FOUNTAIN, for either size Press,	20.00
HALF MEDIUM, 14 x 20, " " " "	400.00	BUCKEYE FOUNTAIN,	10.00

The two Half Medium sizes have four Rollers. With each press there are three Chases, one Brayer, two sets of Roller Stocks, two Wrenches and one Roller Mold. No CHARGE FOR BOXING AND SHIPPING. ALL OUR GOODS GUARANTEED IN EVERY RESPECT. N. B.—None genuine without the name of Chandler & Price, Cleveland, Ohio, cast upon the rocker.

THE BUCKEYE FOUNTAIN.

Patented June 5th, 1888.

Do not confound this Fountain with others similar in appearance.

This Fountain will be found the easiest attached, easiest worked and most practical ink fountain in the market. Its roller is so adjusted as to supply ink uniformly on either a large or small job. Its size also makes it practical to use expensive ink without waste, only a small amount being required to fully supply the fountain. The bottom is so constructed as to permit all the ink to run down to the roller, there being no pocket or dead space.

By turning back the pawl from the ratchet wheel, the operation of the fountain is suspended without missing an impression. The fountain can be interchanged from one press to another without removing the attachments, so that by having two or more fountains the color can be changed without wasting the ink, which must occur if one fountain has to serve all colors. An examination of the cut will show without explanation the manner of attaching. It should be adjusted with *impression on*, so that the roller of the fountain will meet the upper form roller when at its highest point. The roller can be removed for cleaning by turning back the thumb screws until the caps can be removed through the slot in front, then by raising the roller it will come out through the same slot.

PRICE, \$10.00.

CHANDLER & PRICE FOUNTAIN.

To those whose special work requires greater capacity than can be obtained with the Buckeye, we offer the Chandler & Price Fountain, which is so made as to permit contact with the rollers the whole length, and will thus furnish a greater supply of ink than the Buckeye. Its construction and operation will be readily understood from the cut, which shows it attached to a 14 x 20 Chandler & Price Press. It is without all extra and useless parts which complicate and add to the difficulty of using, and at the same time is complete with all the requisites of a first-class fountain.

PRICE, \$20.00.

CHANDLER & PRICE, East Prospect and C. & P. R. R. Crossing, **CLEVELAND, OHIO.**

THE JONES GORDON JOB PRINTING PRESS

Is not an Old Style Gordon, but has several Important Changes and Improvements which make it quite a different Machine

A VERY IMPORTANT FEATURE in these presses is that the whole Impression may be INSTANTLY CHANGED—either increased or diminished—without stopping the press. When the impression screws are properly set, it is seldom, if ever, necessary to move them, as all adjustments are made by means of the hand wheel, marked “B” in cut.

Another important feature is, that when the impression is thrown off by means of the lever “A” a simple device causes the movement of parts that prevents the ink rollers from touching the form, and the press may be run indefinitely for the distribution of ink.

Another feature of considerable importance in saving time and patience is the self-locking Chase Hook and Form Starter. When the chase is put in place on the bed, it is locked without touching any lever, pad, screw or any part of the press. When the form is to be removed, it is only necessary to press forward the pad, marked “patent,” which causes the chase hook to raise and the form to move forward so as to be convenient for lifting out.

When the platen is in a convenient position for setting the grippers, they may be brought down on the platen for that purpose. The ink roller carriages are provided with loops to be used for putting in or removing the rollers.

The Duplex Fountain is a great advance over anything heretofore used for the distribution of ink on a disk press. A separate distributing roller moves down and back twice, or four times, over the upper part of the disk, each impression. The disk is double and is constantly changing, any part of the main disk only stopping at the same place every hundredth impression.

The press is very heavy, strongly braced and substantially built. The Impression Arms are of steel, forged from one piece without weld. Manufactured by

JOHN M. JONES & CO., PALMYRA, N. Y.

MORGANS & WILCOX MANUFACTURING CO., Middletown, N. Y., General Agents for the Middle, Eastern and Southern States.

CHICAGO, APRIL, 1889.

WE expect to be able to present to the readers of THE INLAND PRINTER, in a short time, a series of interesting articles (illustrated) on the newspaper and job printing offices of Japan. The work is in the hands of a gentleman thoroughly qualified for the task, who has assumed it as a labor of love.

CIVILITY IN BUSINESS.

MANY people who should know better labor under a delusive idea that brusqueness, often bordering on insolence, is a characteristic of business capacity. Never was a greater fallacy indulged in. No surer sign of weakness of character, defective training or misconception of duty; duty to self and duty to customer, can be afforded than that displayed by the ignoramus who mistakes impertinence for dignity or a disregard of the amenities of life for evidence of a thorough business education. No better test of gentlemanly character can be afforded than a studied civility to those with whom we are brought into daily or hourly contact. The most successful business representative in the Northwest, and whose reputation is world-wide, is, without exception, the most courteous in his demeanor. His yea is *yea* and his nay, *nay*; and no matter how strong the provocation, he never forgets his position as a gentleman. It is neither necessary nor polite to emphasize a decision by a use of expletives, or wound the feelings of the humblest employé by a needless and offensive display of authority.

Civility in business is a profitable as well as a commendable trait. How much more pleasant to have transactions with one who always moves in a sunshiny, cheery atmosphere and has the happy faculty of imparting his cheerfulness to those with whom he is brought in contact, than to be placed in the company of a churl who acts as if a smile would distort his countenance and is never in his element except when answering in monosyllables or snapping like a Spitz dog? A short time ago, a wealthy employer of this city, not overscrupulous as to his personal attire, called at an establishment to obtain information of value to his firm, but was curtly informed that he must go elsewhere to obtain it. A few weeks afterward, a vacancy occurring in his counting room, among the applicants for the position was the gentleman (?) who had snubbed him, whose chagrin at the discovery may be imagined. It is needless to add, his mission was a non-successful one.

Civility is infectious as well as profitable. An apropos story is told of two noblemen passing a beggar on the highway, who deferentially raised his hat, which act was promptly acknowledged in a similar manner by one of them; who, upon being chided by his companion for so doing, replied, "Why, do you think I would allow a beggar to teach me manners or outdo me in politeness?" Another illustration is furnished by the following: Once on a time, in a certain printing establishment, not a hundred miles from Chicago, in which a large number of workmen were employed, the individual who would have openly acknowledged an obligation rendered by a boy would have been made the guy of the office; and it is unnecessary to add the boys were equally chary of good manners. One day, however, a youngster, smaller than the other boys, made his appearance, who soon changed the complexion of affairs. He was modest, attentive to his duties, and by his civility and quiet demeanor soon became a general favorite. Being rewarded for some trifling service he had rendered, he acknowledged the

same with a modest "thank you." "Oh, we never thank anybody but ourselves here," was the gruff acknowledgment. "But, sir, I was told to say thank you," was the ready rejoinder. The next day, at dinner hour, the pail of coffee brought was received with "thank you," evidently prompted by a just conception of the fact that a journeyman could not afford a boy to teach him manners. The word became infectious; no favor was received without due recognition, and thus the good manners of *one* boy effected an entire change in the demeanor of every person in the establishment. If this is a childish story, there are many children of a "larger growth" who may take a lesson therefrom with advantage to themselves and others.

In the thousand and one trifles which go to make life pleasant, the kindly greeting, the pleasant word, form an important factor, and in no place should this fact be more clearly remembered than in the counting or composing room. If this should meet the eye of any party who has never tried it, the sooner he does so the better, both for himself and those with whom he is brought into association. It is certainly more creditable to be known as a gentleman than referred to as a churl, to have our company courted rather than shunned, to rule by love rather than by fear.

THE MANAGEMENT OF A COUNTRY NEWSPAPER.

A SUBSCRIBER and editor of a newspaper in one of the smaller towns in Massachusetts, under date of March 25, writes as follows:

I read THE INLAND PRINTER with increased interest each successive month, and derive a large amount of edification therefrom; but I think an article or series of articles on the "Management of a Country Newspaper" would be acceptable to a large number of your patrons who do not have a job office attached to their establishments.

While grateful to our correspondent for his kindly words, there has been so much said and written on the subject to which he refers, both in the press and in our state editorial associations, that whatever appears thereon must necessarily partake to a great extent of the character of repetition. We know of no more instructive reading to the inquirer anxious to succeed than the practical experience of those who have achieved success and surmounted the difficulties which so frequently beset the pathway of the publisher of a country newspaper. The prevalent idea that little if any training is required to occupy such a position is a mistaken one, and it is to this fact that the failures of so many journalistic enterprises may be attributed. In truth there are few callings which require in a more eminent degree the possession of special qualifications, such as the exercise of sound business judgment, tact, keen discrimination, or a thorough knowledge of the wants of the community than that of a country newspaper publisher. While the classifications in vogue in the management of a city journal are as a rule unnecessary and impracticable, the duties of its representative are of a more exacting and diversified nature—that is, if he has a higher ambition than that of

passing a mere humdrum existence. The possession of the essentials for a wide-awake business manager, printer, solicitor, collector and editor—frequently indispensable in sparsely populated districts and new enterprises—and combined in the same individual, demands talent of no mean order. The man who possesses these qualifications has a love for his chosen profession, recognizes his responsibilities and brings a stout heart to a "stae brae" may not only rationally aspire to succeed, but to make his influence felt and respected; and he who has them not had better give country journalism a wide berth.

The truth is that the term *newspaper*, as applied to a number of our country weeklies, and dailies, too, is a misnomer, many of them being a disgrace to journalism, both from a mechanical and editorial standpoint; and that some manage to eke out even a miserable existence is a matter of surprise rather than congratulation, and a left-handed compliment to the intelligence of the community in which they are circulated. There is no reason why the country press should occupy a subordinate position or play second fiddle to the so-called metropolitan journal, and laziness or incompetency is alone responsible for such a state of affairs. Plates and shears are well enough in their places—good servants but poor masters—but unless they are used with discretion, or supplemented with a modicum of home brainwork, they become like potatoes, the lazy man's crop, and are productive of more harm than good. The individual who simply reëchoes the opinions of others, and is afraid to say his soul is his own for fear of making an enemy or losing a subscriber, will never become a leader of public opinion, and is no more qualified to conduct a successful country newspaper than is a mule team to pull an express train. To the right man the field is an inviting one, and, with proper attention, pleasure and profit can be secured by working therein.

Mechanical, business and editorial qualifications are the requisites demanded, and of these we shall speak in a future issue.

A BOOM IN PRINTING MACHINERY.

THE demand for all kinds of printing machinery has been very great since the advent of 1889. The necessities of newspaper proprietors have largely augmented the order for presses. The enormous increase in the circulation of papers in all the leading cities of the country has necessitated the introduction of new machines. The demand is for the latest improved and perfect perfecting presses. The printing capacity of the great newspapers of the principal cities have been more than doubled within the last five years, and the various press manufacturing establishments in the United States are now crowded with orders which will require many months to fill.

In alluding to the encouraging outlook a prominent eastern authority appropriately remarks, "It is a most gratifying evidence of the matchless growth of American journalism, and the general publishing and printing interests to find the demand for the best presses of the world

greatly exceeding the supply. It marks the wonderful advancement of the American people under their free press, free schools and free institutions."

An inquiry among and information derived from the various printing machinery factories establishes the fact that the enormous demand for presses is not merely confined to the newspaper business; but printers generally, job and otherwise, are adding new presses and machinery to their equipment. The press manufacturers all unite in the statements that the material advance in the printing industry since the advent of 1889, is both surprising and pleasing. Every builder is loaded down with orders, while the printers' supply houses generally, throughout the country, are flooded with calls for the latest makes of small cylinder and job machines. The wonderful development of the job printing and publishing interests in every section of the country is the cause of the boom referred to.

The manufacturers in the eastern cities aver that the orders coming from printers and publishers in the South and Southwest exceed those ever known before. The prominent job printers particularly are sending in their orders for standard makes of presses. This movement is regarded as being indicative of a growing and commendable taste for what may be termed fine printing, in a section which has heretofore not been noted for it, and many of the houses filling orders for presses have forwarded samples of jobwork, engraving and lithographing, the artistic merit of which is excellent, and well deserving of praise.

Some of the southern and southwestern printers and publishers write the press makers that to be abreast of the times they are compelled to buy the best machines, type and material the market affords, the fine work produced through these agencies increasing business and swelling their bank accounts, the profits realized from good and attractive workmanship being satisfactory and justifying the outlay. Thus the present and future prosperity of the printing, newspaper and publishing interests in this as in other sections of the country, according to the best authority, are flattering in the extreme.

A STATEMENT WORTH REMEMBERING.

IN the office of the job department of the Baltimore *Sun*, the following truthful statement is prominently presented for the edification alike of customers and employés:

GOOD WORK.—All work of taste must bear a price in proportion to the skill, taste, time and risk attending their invention and manufacture. Those things called dear are, when justly estimated, the cheapest; they are attended with much less profit to the artist than those which everybody calls cheap. Beautiful forms and compositions are not made by chance, nor can they ever in any material be made at small expense. A competition for cheapness, and not for excellence of workmanship, is the most frequent and certain cause of the rapid decay and entire destruction of arts and manufactures.

Truer words were never penned, and if the patrons of establishments which turn out cheap and nasty, and dear at any price work, would give them a few moments'

reflection, they would soon be led to see the error of their ways, even from a dollar and cent standpoint. Good work is invariably the cheapest in the long run— from whatever outlook viewed. Cheap and nasty work, and the one almost invariably goes with the other, not only debauches public taste, but destroys all ambition in the workman to excel.

A GREAT WORK.

THE completion and publication of the "Encyclopædic Dictionary," by Messrs. Cassell & Co., London, consisting of fourteen volumes, and which has been in preparation for nearly seventeen years, demands more than a passing notice. It contains about 50,000 more words than any existing dictionary. We are told that while Webster's unabridged fills 1,538 pages; the Imperial 2,222, this prince of dictionaries extends to no less than 5,629 pages. Its range and comprehensiveness may be judged when we state that it contains not only modern words of a technical and scientific character, but obsolete words and phrases to be met with in the works of English writers from the thirteenth century to the present day. "The history of each word and the historical and logical development of its various meanings and uses are traced out, showing to the reader by illustrative quotations the history and evolution of each word." The references are full and exact, and to a very large extent the result of original research. The pronunciations throughout are given with great exactness and by a system which is almost instantly intelligible.

WORTHY OF EMULATION.

IT pleases us to state that Messrs. George H. Buchanan & Co., art printers, Philadelphia, have recently added a new feature to their establishment in the form of a library and reading room, for the use of their employés. Although all the reading matter is obtained through the courtesy of the members of the firm, they assume no control thereof, it being entirely in charge of a committee appointed from the employés. The object is certainly a commendable one, namely, to provide a method by which the workmen may be made acquainted with the best literature pertaining to the art of printing, and which will stimulate them to put forth greater efforts to become more efficient printers. We hope other firms will follow the example shown, as we feel confident that this and all similar enterprises will prove a profitable investment.

THE DENVER CONVENTION.

FROM present indications the delegates to the forthcoming convention of the International Typographical Union, to be held at Denver, will, in the main, be representatives of the most progressive and intelligent element in the craft; men who will bring to the discharge of their duties a catholicity of sentiment, ripe experience, an ability of no mean order, and a determination to legislate for the best interests of the organization at large. So may it be.

REFLECTIONS ON ILLUSTRATIONS.

BY GUSTAV BOEHM.

THE improvements made in recent years in the production of mechanical process illustrations lead the attention, not only of the publisher of illustrated books to that branch of the business, but also the general printer, who, if he commands somewhat of taste and ambition, has a source open in these processes, which, with little expense, permits him to introduce the quaintest designs, initials, etc., in ordinary commercial printing, which are the cause of much pleasure to the eye, and, without a doubt, open him a new and paying strata to increase his business. With the aid of photo-engraving he may, with little expense, reproduce an initial, an ornament, etc., which he has found on his rambles through foreign art works, and use it on a circular, a card, a billhead, or a pamphlet, and thus cultivate the taste of the public. He is enabled with a small outlay to furnish illustrated circulars of a descriptive character, by all means a more preferable manner of making a thing known and understood by the reader than could be done in many lines of type composition. So we see that the advantages arising from the introduction of mechanical process-engraving are without end, and, while at first only destined to furnish competition with wood engraving, today the limit of its original destination is vastly extended. We also find that this method has created a demand which before its introduction had not existed, a general application of illustration in place of the cold, stiff, untelling type composition, or, rather, accompanying this latter, and forming a pleasant and welcome associate to it.

It is true that the art of wood engraving, as Durer's time knew it, has suffered a great deal through this popularization of it. We have a small number of wood engravers rightfully commanding the epitaph "artists"; but the majority of upgrowing engravers have become frightened since the invention and rapid introduction of photo-engraving, and have exchanged their vocation for some other occupation, for fear that photo-engraving will take the bread out of their mouths if they should continue to adhere to the graver; and, in years of study and practice improve their manner. It is a sorrowful fact—if I may say so, in taking part of the individual in place of the community—that the majority of these frightened wood engravers are not in the wrong. An average wood cut cannot compete with the exact work of the camera and gelatine plate, and the general commercial purpose can by far be better accomplished with process-engraving than by handwork. But—as in everything else similar to this case—when the highest, the very best is in question, the machine cannot replace the human handwork. The peculiarities, the individualities of the artist-engraver cannot be reproduced by the machine. On the other side, again, it is this peculiarity of the engraver which often appears to the artist-draftsman of an obstructive character, and he chooses the reproduction of his work by photo-mechani-

cal engraving as preferable to the engraver's work. He claims that much of his own individuality in the drawing is lost through the meddling of another artist—the engraver at his best—with his work. He says that an engraver, who is an artist in his line, will always have the peculiarities of his own style, his own method, and, although these peculiarities may be of a highly artistic character, they, as a rule, will interfere with the individuality of the draftsman. There are cases in which the engraver is above the artist-draftsman, and will greatly improve the drawing by lending it his own artistic skill and taste; but there are very few artists in this world, no matter how inferior, who would consent to this in their special case, or, more so, who would pleasantly accept the improvement of their work and show their approval of the method. It is, therefore, in rare cases that the artist-draftsman does not willingly embrace the opportunity to have his pictures reproduced by the process-engraving. This fact, and the above-mentioned generalization of the art, have opened a wide and diligently worked field to the photographer, and the methods at present in vogue are numerous, so numerous that one is apt to be puzzled when asked which of them is the best or most preferable.

The practical printer is frequently called upon to give his advice, and he is at the present expected to know the ins and outs of the most prominent of the methods, and to decide in the selection of one or the other. Considering the partial secrecy by which many of these processes are yet protected from publicity on the one side, and the apparently picked up knowledge, usually gathered from all kinds of sources, on part of the customer, who often pretends to know all about it, it is really no easy matter to make oneself sufficiently acquainted with them so as to form a sound judgment and give valuable information.

In order to give to the reader a faint idea how extensive this art department of the printer is, I take occasion to enumerate in classified order the different manners and methods, as the page of contents of James Shirley Hodson's book brings it. Omitting the sections treating of plate engraving, wood engraving, lithography, chiaro-oscuro or chromo printing I at once introduce the second part of this valuable list of methods, namely:

(a) *Engraving by chemicals or mechanical processes*: Zincography; Dulos process; Dawson process; typographic etching; Dawson's positive etching; aquatint engraving for raised blocks; Schank's patent engraving; graphotype.

(b) *Photographic processes*: Photo-lithography; M. Baldus' process; Garnier & Salmon; Albertype; heliotype; photographic process; Woodburytype; Hannotype; Ives' process; Moss process; photogravure; direct photo-engraving process; photo-relief engraving; autotype; etching on glass; white-line etching; chromo-photolithography; stenochromy; Hoeschotype; photo-electrotype engraving; photo-electrolight engraving, and others.

These different classes derive their names either from the material which is used in their production, i. e.,

zincography, engraving on zinc; heliography, engraving on glass, etc., or from the name of the inventors, Albertype, Hannotype, etc. The type printer being mostly interested in relief plates, I will not touch upon the subjects of the other methods, such as lithography, etc.

In printing from plates the practical printer considers primarily the adaptability of the plate. It is a matter of regret and much annoyance to the pressman that all photographic engravings lack a depth of lines which makes their handling very difficult; for large editions almost useless. The Ives plate, although secured by one of the most successful processes, is so flat as to demand a large amount of skill and time to produce a satisfactory result. The Ives plate is very difficult to work, but if properly printed gives an excellent effect. The outlines are soft, perhaps at times too soft; they remind one decidedly of stonework. The shallowness of the lines is the great drawback in photo-engraved plates. As soon as they can be made deeper, this otherwise so valuable method will be as welcome as wood cuts to the practical printer and pressman. As it stands, the latter prefers the wood engraving. It requires much less work to make it ready on the press, and considerable less care to run it clean and effective. Still, I believe, under the present circumstances, in a time where a thousand photo-engraved plates are used to ten wood cuts, our printers will have to accustom themselves to the use of the photo plate. I believe that in some years from now the photo-engraved plate will have entirely replaced the former method of wood cuts. All indications point that way. The cheapness of production and the truth of effects, as well as the formerly mentioned retained individuality of the artist in the original plate, will certainly decide in favor of the photo-engraved plate, and will, through the comparatively small inconvenience of the printer and pressman, caused by the shallowness of the lines, not be blocked. The advantages of the photo-engraved plate as enumerated are so manifold in comparison to the wood engraving, if looked at from the commercial or business man's standpoint, as well as that of the artist, as to predict an assured future for the process work. At this day the very best and valuable engraving is done by skilled wood engravers. But considering the fact of constant improvement of process engraving, on one side, and the fact that, owing to this comparatively novel invention, the number of good artist wood engravers is steadily decreasing, we have every reason to prognosticate that after the present generation has done its duty on this globe there will hardly be any wood engravers worth speaking of, certainly but very few to compete with the work of the sun's rays. And we cannot blame a young man who has the ambition to become something in the world that he will not choose a profession which, apparently, will not permit him to reach the top of the hill, this being already occupied by mechanical engraving processes. The ranks of good wood engravers are thinning out—they are dying out by degrees; but the lives of the artists are the more prosperous and growing, for all who have chosen the graver in former years

now take pen and pencil and proudly thrust the phrase in the face of their endangered future, "*Anch' io sono pittore*," "I, also, am an artist," and start on this road to fame and fortune.

Closing this paper, I cannot avoid speaking on a subject which ought to be of great interest to relief-plate or type printers; that is, the lack of a process which permits the transfer of copy to a relief-plate, after the manner in which this is done in lithography, thus permitting the type-printer to duplicate the copies of his work without increasing the number of impressions or the aid of other duplicating processes, such as stereotyping, electrotyping, etc.

It appears to me that, considering the enormous, apparently much more difficult inventions which have been made on all fields of mechanical reproductions, etc., this lack of so important and certainly paying invention must be due to the lack of interest taken in it. The entire power of thought in this line seems to have been spent in recent years upon the production of photo-engraved plates. The work done in this line is unspeakably enormous in its success. Why not spend some of the brains, some time and labor upon the search of a substance which permits the transfer of a printed impression on a metal plate; for instance, permits the manifold of copies and the re-use of that plate for similar purposes, after the fashion of lithographic stones. Is there no one in the ranks of our photo-engravers who would be willing to risk time, labor and experiment upon this far-reaching, valuable process, which the printers of this decade would invariably welcome with open arms?

Now, gentlemen, one or the other; let us at least try it. Here is a way, an open road, upon which certainly but very few, if any, have trod. There are not many such roads on this mundane sphere; why ignore it when it presents itself in so forward a light as in this case? The risk is but small, the gain must be incalculably large. Think of that and try.

HOW ONE MAN MAY MOVE A JOBBER.

BY J. B. CALDWELL.

THE battle is not always to the strong, and few printers or editors are strong enough, physically, to pick up and carry a press weighing from two hundred to five hundred pounds.

In the spring and fall many find it desirable to move their jobbers, and they find it either hard or expensive business.

At the freight depots one man moves a press weighing one thousand pounds, and with comparative ease. How? By taking advantage of mechanical powers.

So the printer, on a smaller and less expensive scale, may avail himself of these same advantages.

Cut a broom-handle into convenient lengths, say five or six inches, to use for rollers. Procure and keep for use two strong pieces of timber, such as are often used to raise presses from the floor, and increase their solidity. Raise the press (by using a lever), one side at a time, and

place one piece under each side, seeing that the press rests squarely upon them. Then raise the front or back of press sufficiently to place the rollers, one under each skid, and pull gently, but firmly, on the press. If a small one it can be easily moved. If larger, use a lever or crowbar, and work gently and gradually along, inserting new rollers as needed.

When the press is in the desired position, the skids and rollers may be removed by carefully raising one side of press at a time. It will generally be safer to have two men and a boy to move a press, as the risk is much less, though one careful man can succeed.

For the larger presses the rollers should be of iron. The larger the rollers the easier the press moves.

Keep presses on a solid, unyielding foundation, if possible. When necessary to move them, the foregoing plan will be found very helpful.

In most country offices, in the winter months, presses will be found to work best when within a few feet of the office fire. The heat is conducive to ease of running, and to free and satisfactory working of the ink.

NEW DEVICES FOR PRINTERS.

After the adjournment of the convention of the Newspaper Publishers' Association, recently held in this city, the delegates started on a pleasant and instructive tour of inspection. They first visited a manufactory in Brooklyn. Here they watched Miss J. J. Camp, a stenographer and typewriter, operate successfully a typesetting machine, at a rate of speed equal to one line of forty-two ems every fifteen seconds, or 10,080 ems per hour. The visitors also saw operated a new book press, which prints, cuts and folds at once, at a rate of speed equal to from two thousand to six thousand completed signatures of thirty-two pages each per hour, or double that number of sixteen-page signatures.

The delegates came back to New York and made three other separate inspections. In William street they saw a barrel-shaped contrivance, which, with one operator, one justifier, and one feeder, composed from four thousand to five thousand ems per hour. Another curiosity was manipulated for the benefit of the visitors at a Broadway office. It is a contrivance that takes away from the printer his stick and rule, and permits him to use both hands in picking ordinary type from an ordinary case. He drops the type singly into a funnel, and they are automatically stored on a galley. This is a separate justifying appliance. The claim was made that with it the ordinary compositor can increase his work fifty per cent. The invention examined was an electrical typesetter, operated by an old typo of an office in the Equitable Building. It does away with the ordinary type, and yet can turn out a beautiful specimen of the dry matrix, column measure, suitable for newspaper plate. The visitors were apparently more impressed by the work of this improvement than anything that was brought to their attention during the round.—*New York Times*.

THE AGE OF PAPER.

The world has seen its iron age, its stone age, its golden age and its brazen age. This is the age of paper. We are making so many things of paper that it will soon be true that without paper there is nothing made that is made. We live in paper houses, wear paper clothing and sit on paper cushions in paper cars, rolling on paper wheels. We do a paper business over paper counters, buying paper goods, paying for them with paper money or charging them up in paper books, and deal in paper stocks on paper margins. We row races in paper boats for paper prizes. We go to paper theaters where paper actors play to paper audiences. We elect paper men with paper votes on a paper issue to represent a paper constituency in a paper congress and make paper laws.

As the age develops the coming man will become more deeply enmeshed in the paper net. He will awake in the morning and creep from under the paper clothing on his paper bed, and put on his paper dressing-gown and paper slippers. He will walk over paper carpets down paper stairs, and seating himself in a paper chair will read the paper news in the morning paper. A paper bell will call him to his breakfast, cooked in a paper oven, served on paper dishes, laid on a paper cloth on a paper table. He will wipe his lips with a paper napkin, and having put on his paper shoes, paper hat and paper coat and taken his paper cane, he will walk on a paper pavement or ride in a paper carriage to his paper office. He will organize paper enterprises and make paper profits. He will go to Europe on paper steamships and navigate the air in paper balloons. He will smoke paper tobacco in a paper pipe, lighted with a paper match. He will write with a paper pencil, whittle paper sticks with a paper knife, go fishing with a paper fishing-rod, a paper line and a paper hook, and put his catch in a paper basket. He will go shooting with a paper gun loaded with paper cartridges, and will defend his country in paper forts with paper cannon and paper bombs. Having lived his paper life and achieved a paper fame and paper wealth he will retire to paper leisure and die in paper peace. There will be a paper funeral, at which the mourners, dressed in paper crape, will wipe their eyes with paper handkerchiefs, and a paper preacher will preach a paper sermon in a paper pulpit from a paper text. He will lie in a paper coffin wrapped in a paper shroud, his name will be engraved on a paper plate, and a paper hearse, adorned with paper plumes, will carry him to a paper-lined grave, over which will be raised a paper monument. The papers will record his paper virtues, while paper angels with paper wings will clothe him in a paper robe and waft his paper spirit from this paper world to the paper gates of a paper paradise, where all is paper, and fireproof at that.—*The Paper World*.

RAPIDITY IN MAKING READY?

What is the secret of speed in making ready? Pressmen who have not become skillful at it wonder why others can get their forms "up" quicker than they; and, being unblessed with observant eyes or reflective minds, they jog along in their old ruts, while their fellows pass them in the race.

There are three kinds of slow pressmen: (1) Those born with thick wits; (2) those with lazy muscles, and (3) those with active hands and brains, but who have had no chance to see how things are done by the rapid workers of the craft. For the benefit of the third class, we will point out the secret of success in obtaining a rapid make-ready.

This secret lies in the study of the chief inequalities of each form, and in rectifying those by underlays before a moment's attention is given to the overlays or cutouts on the tympan sheet. This is so simple that the inquiring reader may pooh-pooh it as a paltry key to unlock so big a door; but we assure him it is the one key which, if he will use, will let him out of the dark hole he is in.

How often have we seen a pressman fussing and fuming with an overlay—pasting here and cutting there, hour after hour—sweatingly conscious that the foreman or employer judged he was consuming too much time! Had he first leveled up his form from beneath, he would have been surprised to find how little was left to be done on top. He would have discovered that he had brought up everything where it could be touched and thoroughly inked by the rollers. The neglect of this precaution is the cause of nine-tenths of the trouble from stoppages for patchwork, in addition to the original waste of time from a false system of making ready. The overlay is for finishing, precisely as the cutout is. Both should be employed only for delicate differences of impression, never for serious ones.

To the second class in our category, the lazy ones, we would say: Guard against the indolence that would prevent your lifting the form, for the fault will not only cause you a waste of time, but will infect everything you do. It is the active, willing workman who gets along. Never shirk! It does not pay.—*Art Printer*.

Mossytype—Engraved by the Moss Engraving Company, 535 Pearl street, New York.

“TALLY-HO” AT RACES.

Specially translated for THE INLAND PRINTER.

MARBLE AND FANCY PAPER-MAKING IN FRANCE.

IT is certain that under the régime of Napoleon III a great deal was done to promote manufacturing industries in his empire, by means of courses of public lectures in the manufacturing centers, and also by the publication of manuals of each branch compiled by government inspectors, and published at cheap rates to bring them within reach of the working classes. In this way more than three hundred branches of trade were treated on, and while some manufacturers denounced the revelation of trade secrets, others believed that "the more one teaches, the more he learns." One of these manuals, written by M. Fichtenberg, treated on the making of fancy papers. A condensation of this will be interesting, as showing the practice in Europe in the time of the empire, and illustrating the process of producing hand-made paper in contrast with the mechanical methods of the present day.

First, the paper selected is to be in reams of 500 sheets, flat, white, and not folded in the center. If not sufficiently sized, each sheet is taken, one by one, given a coat of size with a soft, long-haired brush, and lifted by a T-piece onto drying strings. Where a high degree of polish is desired, it is given by passing the paper between two copper cylinders. If a white ground from Mendon, white is employed the paper is called *lissé*; if talc is used it is called "satined." This talc is known as Briançon chalk, and the coating is applied by means of a rough brush mounted on a universal joint, and glossed by a second. The paper is then ready to be colored, but in some cases unsized paper is used. The workshop is furnished with a shallow oak tub rather larger than the paper to be treated, with waterproof corners, a small round stick, earthen pans with covers to hold colors, a charcoal stove, a marble slab and brayer for grinding improperly levigated colors. The gum is prepared by turning into a pan half a pailful of water, dissolving in it 91 grams of gum adraganth, and stirring from time to time during five or six days. This serves as a bed for the marbling colors. A stronger solution of gum is kept in reserve for use when it is desired to thicken that in the marbling tub. The workman prepares over night a mixture of beef suet beaten up with an equal weight of water, to which is added a little camphor dissolved in alcohol. He also melts an appropriate quantity of beeswax over a slow fire, to which he adds, stirring constantly, sufficient turpentine to make it of the consistence of honey. The colors he uses are of vegetable origin, those of mineral origin being too heavy to float on the surface of the gum. They are taken in powder and mixed upon the slab with wax prepared as above described, then preserved in their respective pots. The prepared gum is then poured into the marbling tub and alum added until the gum is of a proper consistency, which is ascertained by taking a little color prepared with the beef suet and throwing a drop on a few spoonfuls of gum sampled in a gallipot. If, on stirring it with a small stick, the color takes a spiral form without dissolving, the gum is strong enough; if the volute does not form, the gum is too strong and water must be added; if the color extends and dissolves, it is too thin, and gum must be added. When the right consistency has been hit upon, the gum is poured into the marbling tub. The consistency of the colors is similarly regulated, less suet being used when sized paper is employed. The colors are then scattered upon the surface of the gum, one after another, by means of brushes made of ozier twigs and long bristles, which sprinkle them in irregular spots, then stirred spirally. A favorite marbling is that called "partridge eye," which is made by using carmine lake, Italian yellow, light indigo, dark indigo. To the color last thrown on the gum a little turpentine is added for the purpose of the better incorporating it with those previously thrown on. The paper is then taken sheet by sheet and lightly placed upon the surface of the gum, and then withdrawn instantly marbled. A boy catches it with a "peel" or T-piece, and lifts it on the drying strings. By means of a contrivance somewhat resembling a paper-stainer's block, which the workman wears on either hand, two pieces can be printed at once. As the colors become exhausted,

new are sprinkled on, and so the figure of the marble becomes perpetually changed.

Fancy papers in imitation of chintz, cottonade, with flowers, etc., or others in imitation of branches or sea weeds, are printed from blocks in the same manner as wall paper.

Morocco paper for bookbinding is made but little in this country. The most successful of its makers is M. Fortin, of Paris. The chief trouble in producing it is with the colors. M. Fortin obtained a patent for their preparation, which gives directions as under for making *papier velin*.

RED LAKE.—5 kilog. Brazil wood, 3 hectos. cochineal, 60 quarts of river water. Boil the water to one-half and add 144 grams of alum. (2). Boil in 40 quarts of water to one-half the wood and cochineal; add 114 grams of alum and mix. (3). Repeat this operation. (4). Do it a third time, but add 92 grams of powdered cream of tartar. (5). Mix the four decoctions and allow them to settle. (6). Draw off the fluid, and add, to precipitate the color, a decoction of muriate of tin made of 4 kilos. of nitric acid, 240 grams of sal ammoniac, 8 pinches of sea salt, to which add by degrees 1 kilo. of fine tin scrap. (7). After this has been poured upon the mixture and stood for 12 hours, draw off the clear water, and replace with the same quantity of river water. Repeat this six times, and dry the color precipitated on a cloth. Another red lake is made by replacing the cochineal by 300 grams of Brazil wood. This has less of a violet tint. If three large gall-nuts are added, a browner red results. To 500 grams of this add 500 grams of amidon and a pail of water, which boil for an hour, and dip the paper, next giving it two baths in a mixture of 2 kilos. of red lake, 375 grams of vermilion, 125 of amidon and 8 quarts of gum water. This is used hot. The paper is then dipped for the last time in a bath composed of 1½ kilos. of red lake, 125 grams of amidon, and 16 quarts of gum, then sent to be polished. This is done by sponging it with a size made from 6 dozen sheep's trotters boiled to a jelly. Then the paper is sent to a cylinder press, and given its grain by pressing it on a copper plate.

SWALLOW-BLUE.—1 kilo. red lake, 5 kilos. Prussian blue, 2 quarts of gum, 6 of river water, 125 grams of sulphate of indigo. Dip sized paper twice in this, polish and grain.

BLEU-DE-ROI.—Three baths in 2½ kilos. of Prussian blue, 90 grams of sulphate of indigo.

GREEN.—1½ kilos. of "graines d'Avignon" in a pail of water boiled to half; add 125 grams of alum. Strain and add 1½ kilos. Prussian blue and 125 grams of sulphate of indigo. For light green, only one bath.

VIOLET.—500 grams of Indian wood and 60 grams of alum in six quarts of water boiled to half. Add one-third the quantity of gum water.

YELLOW.—8 quarts of boiling milk on 1 liter of *terra merita*. Boil for an hour. Give two baths.

BLACK.—500 grams Brunswick black dissolved in 2 deciliters of brandy, 1½ quarts river water and 60 grams of Marseilles soap, boiled for half an hour. When cold, powder on marble, with 125 grams of flour paste and wax melted together, 30 of sugar candy dissolved in water, 30 of gum arabic, and a piece of flower of sulphur the size of a nut, whites of two eggs and 125 grams of parchment size. The paper is dipped twice. The third bath is composed of the above with 250 grams of lampblack added. Paper thus prepared needs no varnish. Its polish is given it by beating it with a steel hammer, such as is used by gold-beaters.

OPAQUE COLORS are toned down and incorporated with 500 grams of white lead, 30 Venice talc, 30 wax melted with flour paste, 15 sugar candy dissolved. Grind on a marble slab, add whites of two eggs, and 15 grams of gum arabic dissolved in water, a deciliter of brandy or the juice of a lemon.

Gold papers are sized, given a yellow ground and next thinly coated with siccativ linseed oil. When dry enough, the gold leaf is applied to the surface, a clean sheet of paper placed above, and the palm of the hand rubbed over it. It is dried for some days, and then protected by a sheet of paper run between copper cylinders.

to give it a gloss. Silver paper receives a coat of white lead, and its mordant is a coat of white of egg. Where the papers are stamped or ornamented with gold or silver in relief, white of egg is applied through a stencil to the places where the designs are to appear, the stencil removed and small pieces of leaf laid on. The pattern is stamped from a hot plate under a press, and when dry any superfluous metal is removed with a cotton wad. Goffered paper is made in a similar manner, the enamel being first given by a coat of white lead and polished before the ornament is stamped on by the dies. Waste gold or silver is recovered from the cotton wads by saturating them with oil, drying them and next setting them on fire. The ashes are then tied in a sheet of white paper, placed in a crucible which is brought to a white heat, and when cold the metal is found at the bottom. It should be noted that in dealing with colors glass stirrers should always be used.—*From Encyclopedia of Manuel Koreg.*

Written for THE INLAND PRINTER.

THE TRAMP PRINTER.

BY M. J. CARROLL.

TAKING the assertion of some very estimable people connected with the printing business as *prima facie* evidence of the truth of the proposition, many of the ills with which the fraternity is afflicted are to be traced in a more or less direct way to that most ubiquitous specimen of the human family, the tramp printer. But is the devil in this instance really as black as he is painted? I do not believe that he is, nor can I believe for a moment that one-half that is charged up to the debtor account of the tramp printer is really deserved; while many of his shortcomings are more than offset by his good qualities, of which we so rarely hear anything.

Of all the happy-go-lucky mortals that find an existence on this mundane sphere, this thoughtless, every-day sort of a Wilkins Micawber is unquestionably the most peculiar. Is there another human being that will so unconcernedly turn his back on the place that he has come to regard as his home, and in a too often penniless condition start out to "seek his fortune," a stranger in a strange land? He often throws up as good a situation as he hopes to find elsewhere, and without any preparation whatever goes on his way—he little cares whither. At the commencement of a journey he frequently finds himself without the means to purchase a meal, or to pay for a night's lodging. His linen may not be of the most immaculate description, and his general make-up not at all suggestive of dudish propensities; but his spirits are as buoyant, and his mind burdened with as little care, as any millionaire in the land. If he should in some unaccountable way find himself possessed of sufficient of this world's goods to provide for the necessities of the hour, he is perfectly happy. He does not propose to fret or worry for the morrow, having implicit faith that in its own good time "something will turn up" to supply his wants. As a general thing he is what is termed a good "all around" printer, and is familiar with the style of every prominent newspaper from Maine to Oregon. He is certain to be pretty well up in his information touching the leading questions of the day, and is ever ready to engage in a controversy, it making no material difference whether the subject is one of theology or politics, or on matters dramatic, musical or pugilistic.

In Richardson's "Beyond the Mississippi," a somewhat profusely illustrated work, may be seen an engraving termed "Evidences of Civilization," showing a boundless prairie, in the foreground of which is a newspaper, a whisky bottle and a cigar box. The two latter articles may not be necessary to prove that the tramp printer has gone over the scene, but the presence of the newspaper is evidence that among the pioneers was to be found at least one man who was as ready to undertake the editing of a newspaper as he was capable of setting the type for the same. It would doubtless be difficult to find that there has been a single frontier settlement in any part of America that did not contain one or more printers among its numbers. How they got there no one ever knew. The chances are that they did not originally

start with the expedition formed to found a settlement or a colony. To use a popular though somewhat slangy phrase, they just "blew in" to the place, and they are just as likely to blow out of it again before anyone is aware of their intentions.

It must not be surmised, however, that the tramp printer is always a good-for-nothing or viciously inclined individual. The propensity to tramp and roam the country seems to have been a ruling passion among the disciples of Gutenberg and Faust from time immemorial. Did not that bright and shining light of the art preservative, the good Ben Franklin, indulge in this propensity when in early life he stole away from his home in Boston and went to Philadelphia; and did he not give way to the same restlessness later when he went to England in search of employment, and at a time when a visit to that country meant many weeks of toilsome and dangerous voyaging?

We must not hastily conclude that the journeyings of these "birds of passage" are wholly devoid of good. Many of the prosperous newspapers of this country—particularly of the western portion of it—owe their inception to the restlessness of this itinerant crusader to the sparsely inhabited and semi-civilized localities of the continent. A prominent feature of this class of printers is to be found in the fact that they invariably carry, a union card. But should they arrive in a town where there is no union they immediately set about organizing one. It is a well-known fact that there are more typographical unions who owe their inception to the proselyting efforts of the tramp, than to the organizing agencies of the international body, and, in fact, more than can be attributed to all other causes combined.

I must acknowledge that in many respects I have quite an admiration for the tramp printer. But I do not wish to be understood in this connection, or to have under consideration in any manner whatever, the lazy, worthless outcast, whose sole ambition is to "panhandle" an office for enough money to pander to an insatiable appetite for liquor. This excrescence on the craft is alike a nuisance, whether he tramps the country or confines his discreditable operations to a single city. Happily, this class of printers is becoming measurably less numerous year by year, and a firm resistance to their demands by all self-respecting printers will speedily make the practice a thing of the past.

But perhaps the most satisfactory results derived from this restless spirit on the part of so large a portion of the printing fraternity, is to be found in the fact that it has a tendency to equalize the supply with the demand for labor in different parts of the country. An overcrowded labor market in one city or section of the country, and a security of supply in another direction, are conditions that should not long exist among a people, so large a proportion of whom are ready to go so far for so little an inducement. I have frequently known of men who would resign a situation to take one hundred miles away, and when they knew they would not be benefiting their condition in any way by making the change. It would appear to be a part of their creed that life is made up of just about so much toil and labor, care and anxiety, and that if it can be relieved occasionally by a change of scene and associations, so much the better, and so much the easier it is to bear. And who can say after all that they are not right?

Another advantage to be derived from this practice of floating about is that it will improve the character of the work done in the country at large, and make the workman far more independent and self-reliant than would otherwise be the case. In the first instance, a superior line of work done by improved methods in a certain locality or city, would long remain an insurmountable task to printers in other places were it not from occasional visits from the roving craftsman. He picks up knowledge of the latest wrinkles in every quarter, and scatters it broadcast throughout the land, without money and without price. As to its making a workman more self-reliant and independent, there can be little question. Take a man, for instance, who has served his apprenticeship and remained for some years afterward in a certain establishment, and you will generally find him imbued with a morbid dread of leaving it. He has no confidence in his ability to give the same satisfaction elsewhere, and regards his

removal from his old position in the nature of a calamity. Certainly, if a man can remain in one position for a lifetime, well and good. But how frequently do we see the most friendly relations severed by the most trivial occurrences. Is there a man employed in the printing business who has a mortgage on his position for a single day? Is there one who on going to work in the morning can tell but what by some misunderstanding, accident or mistake, he may not be compelled before night to seek a new situation? We cannot tell what a day may bring forth, and these things are among the most likely possibilities.

In beginning this article it was my intention to deal with the tramp, pure and simple, but I have been led to digress somewhat from that intention, and will now proceed to make the only reparation I can by returning to my subject and finishing it.

That the tramp is a constituent part of the printing fraternity, is beyond a question of doubt. But to determine the cause or causes that will drive a man to follow such an existence would lead to a great deal of speculation. Notwithstanding his apparent indifference and hopefulness, his lot must frequently be far from a happy one. He does not always dwell under a glorious sky and in a perfect atmosphere. His seeming jollity may often be a mask to cover blighted ambitions and dead and buried hopes. As a bright-faced, bright-eyed boy, he undoubtedly commenced life as the rest of us did. His hopes and ambitions were the same; his frugality and industry up to the average, until fate played him some scurvy trick that made him believe that there was nothing left worth working for, and nothing to guide him through life but an ungovernable restlessness, that relentlessly carries him from point to point, until his weary body finds its last resting place, and his spirit joins the silent majority. It will cost us very little effort to have at least a kind word and a kind wish for the tramp printer.

WELL TO KNOW ABOUT.

ROLLER COMPOSITION.

Owing to the introduction in recent years of many patent and ready-mixed compositions, very little is known in most printing offices as to the ingredients of composition rollers. One of the principal desiderata in a composition is its non-liability to be affected by change of temperature; for this purpose the use of glycerine is very valuable, as it is little affected by heat, cold, or frost (it never freezes), while retaining moisture much better than the old treacle and glue compositions. The addition of glycerine, however, necessitates different treatment in regard to cleansing. Water should not be used on a roller containing glycerine or gelatine. The tendency of heat on rollers is to soften them, and cold to harden them; therefore, for cold weather the ingredient which gives softness to the rollers should be in larger proportion than in hot weather. If the ordinary recipe were treacle eight parts and glue four parts, for cold weather it would be best to give three of glue and nine parts of treacle. These proportions would depend very largely, however, on the quality of the glue, experience teaching that this varies in a large degree. Another good recipe for cold weather would be glue, ten parts; sugar, ten parts, and glycerine, twelve parts. The glycerine will offer strong resistance to frost and cold.

PRESSWORK—HARD PACKING.

Hard packing refers to the method of preparing the cylinder of a printing machine preparatory to working off a form. When machines were first invented, the packing of the cylinder consisted of a few sheets of paper and a woolen blanket. It was soon discovered, however, that packing the cylinder with paper and covering with calico or a strong sheet of paper gave a much sharper and clearer impression, and without in any way being more detrimental to the type than the woolen blanket. A further improvement was made in regard to packing the cylinder for high-class books and illustrated work, which has received the name of "hard packing." This packing consists of a few sheets of paper and a glazed or shaloon board. The paper and the board are placed round the cylinder, the board being scored about half an inch from one edge, so as to allow of its fitting neatly to the edge

of the cylinder under the grippers, and the whole is covered with a sheet of strong paper, a sheet of manila paper answering the purpose admirably. Calico is also used as a covering; it should, however, be of very fine texture if used. Hard packing, as already stated, is especially applicable for illustrated and high-class bookwork.

STEREOTYPING IN PAPIER-MACHÉ.

To make a "flog" for taking a paper mold: The materials required to make flog are tissue paper, brown paper for backing, blotting paper and composition paste, with whiting, alum and glue or gum added. There are many methods of making flog. Some operators use tissue and blotting, others only tissue, and others again use thin printing paper. The ingredients of the composition paste also vary considerably, some using only paste and whiting, others paste and glue, paste and gum, etc. A good composition for making flog may be made as follows: Take one pound of bookbinders' paste and thin with water to the consistency of thick cream, add two tablespoonfuls of powdered whiting, and two tablespoonfuls of powdered alum, mix well together, push through a fine wire gauze sieve, when it will be ready for use. First paste a sheet of brown paper and place over it a sheet of blotting, paste again, and add another sheet of blotting; then paste and add in succession three tissues, put between wet blankets under a weight until wanted, or if to be used immediately, run a roll on it, making a mark similar to that found on laid paper. The water mark, if a writing paper, will be a guide, the wrong side showing the reverse of the design or lettering.—*Practical Printing.*

PAPER MILLS AND PAPER-MAKING MACHINES OF THE WORLD.

According to statistics published in the French directory of the paper trade, the number of paper mills and paper-making machines in the world is 3,419 mills, and 3,982 machines, which are distributed as follows:

	MILLS.	MACHINES.
France	420	525
England	280	430
Scotland	68	98
Ireland	13	13
Belgium	30	41
Denmark	10	10
Germany	809	891
Spain	72	47
Portugal	16	7
Greece	1	1
Holland	61	40
Italy	228	158
Russia	133	137
Norway	8	8
Sweden	48	26

CORRESPONDENCE.

While our columns are always open for the discussion of any relevant subjects, we do not necessarily indorse the opinions of contributors. Anonymous letters will not be noticed; therefore our correspondents will please give names—not for publication, if they desire to remain incog., but as a guarantee of good faith.

FROM SAVANNAH.

To the Editor: SAVANNAH, Ga., March 31, 1889.

For the information of the craft who have an idea of coming this way, I send you the following for publication, as I have never seen a line in THE INLAND PRINTER from this city.

In order that the influx of printers to this out-of-the-way place may be abated, I give the following as the status: As to the outlook it is *very* discouraging indeed. The state of trade is *very* poor, there being more idle printers than can procure employment. There are a favored few who get all the work given out, and the tourist goes out as he comes in. There is only one morning paper, the price of composition on which is 37½ cents; one evening, 35 cents; book and job work \$15 per week, with nothing doing.

To those who desire to earn a living, I would advise them to steer clear of this place. TOURIST.

FROM OMAHA.

To the Editor: OMAHA, April 4, 1889.

Omaha Typographical Union, No. 190, at its regular annual election of officers, Wednesday, March 27, made the first practical test, in the West, of the Australian system of voting. There was great interest taken in the election, 257 votes being polled, which is nearly the full voting strength of the union, exclusive of members in arrears for dues, sick or out of town. Following is the vote received by each candidate: President—J. R. Lewis 155, Peter Stoltenberg 100; vice-president—E. E. Ryland 142, J. M. Serpless 105; recording secretary—M. T. Fleming 134, R. H. Nicol 119; reading clerk—T. F. Doyle 180, Anton Langer 67; financial and corresponding secretary—W. M. Kimmel 154, George Bradley 101; treasurer—W. J. Scott 254; sergeant-at-arms—Harvey Long 250; executive committee (five to be elected)—U. S. Mahan, chairman, 223; Arthur Pickering 186, F. S. Horton 189, A. F. Wilson 185, G. M. Whitney 175, T. J. O'Brien 100, E. L. Sooy, 84; finance committee (three to be elected)—Bert Cox 183, W. C. Turner 213, James Dermody 194, William F. Schultz 197, C. C. McMahon 154, J. W. Bruner 148, A. W. Burke 24; delegates to International Typographical Union (two to be elected)—Edward Hartley 164, K. S. Fisher 95, John J. Hogan 91, Port M. Jones 92, W. C. Corwin 26. The election seems to have left no heart burnings, and the union is well satisfied with the result. As a test of the practicability and general merits of the Australian system of voting the election was a gratifying success, and attracted much attention from the press and people generally. All essential features of the Australian plan were observed, the manner of voting being, in brief, as follows: Tickets were printed by the union, the names of all candidates being placed thereon. The election board consisted of the financial secretary and one member selected by each of the five candidates for delegate, while the sergeant-at-arms had charge of the door. The financial secretary and two election officers, in charge of the official ballots, were stationed near the door. As each member presented himself at the door his name was announced by the sergeant-at-arms to the financial secretary, who looked up the books, and ordered him admitted if in good standing. He then received from one of the ballot clerks one of the official ballots, with which he retired into one of the six booths, or stalls, built for the occasion at a slight expense, and furnished with lead pencils. There, alone, undisturbed and unobserved, the voter prepared his ticket, folded it and went to the ballot box, where it was deposited, and the voter's name recorded by the election clerks. The extra chairs in the hall were arranged in rows which conducted the voters from the door to booths, from the booths to the ballot box, and from the ballot box back to the door. As there were but six booths, six

voters and no more were allowed in the hall at one time. No conversation of any kind was allowed in the hall. The advantages of this method of voting were evident to members of the union and to all spectators, of whom there were many present at various times. The polls were open from 12 M. to 7:30 P.M. Delegates Hartley and Fisher intend to advocate the adoption of the Australian system of voting by the International Typographical Union.

The Pressmen's, Stereotypers' and Electrotypers' Union, No. 32, at their regular meeting, Sunday, March 9, elected officers to serve for the ensuing year, as follows: President, Ben Flood; vice-president, Edward Eagan; corresponding and recording secretary, J. N. Kean; financial secretary, Ed. M. Burch; treasurer, F. M. Youngs; executive committee, M. J. Buckley, Frank Devore, Ed. M. Burch, F. M. Youngs and "Doc" Clinton. On Wednesday, March 27, No. 32 held an election to decide who should represent the union at the meeting of the International at Denver in June, and voted to send Mr. Matt Rhiner, one of the able pressmen at Klopp & Bartlett's.

The Frank Orff Publishing Company have purchased from Mr. T. H. Cotter all the rights, title and interest in the Council Bluffs directory, and will make a new canvass of the field in order to deliver a directory that shall be a model in the directory line. The Orff Publishing Company are reputable publishers and ought to be able to get out a book that will be a credit to our neighbor across the river.

Jake Rhiner, the efficient pressman of the World Publishing Company, was presented, on Thursday evening, March 28, with a handsome gold-headed cane, by a number of his fellow-craftsmen. The occasion was Mr. Rhiner's birthday. M.

FROM LOUISVILLE.

To the Editor: LOUISVILLE, Ky., April 5, 1889.

Trade is extremely dull here, but everyone is looking forward to brighter times, now that the natural gas "boom" has settled down to its proper place. For about two weeks our people fairly went mad in their efforts to buy and sell natural-gas stock, but, like all such matters, when it ceased to be a novelty, and became a reality, it found its level and stopped. It will surely push Louisville to the front as a manufacturing center, as it has Pittsburgh. Every day we hear of manufacturers from other cities being here looking around for eligible sites for their factories.

Typographical Union No. 10 held its annual election last Wednesday, the following being the successful candidates: E. L. Cronk, president; W. P. Howard, vice-president; John N. Rees, recording secretary; Walter D. Binford, secretary-treasurer; Benjamin Crutchfield, sergeant-at-arms; Thomas B. Abbott, door-keeper, and E. L. Cronk, A. A. Hoffman and William M. Stinson, delegates to the trades and labor assembly. Mr. George J. Nolan carried off the delegate to Denver prize. Mr. Cronk, the new president-elect, will be pleasantly remembered by those who attended the Kansas City session last June, as one of the representatives of No. 10. He is considered one of the ablest men in the Louisville union, being a finished parliamentarian, as well as a broad-minded man, and it is predicted that No. 10 will have smooth sailing under his guidance. Mr. Nolan, the delegate-elect to the International Typographical Union, is a level-headed young man, and will be heard from during the convention.

Pressmen's Union No. 28, at its last meeting, decided that it would not send a delegate to Denver, thereby knocking Mr. John Lintner's ambition into a cocked hat.

Frank J. Baumgartner was elected to represent St. Louis Pressmen's Union, No. 6. Mr. Koken, of the same union, whom I reported on the sick list in my last letter, has returned from Hot Springs, much improved in health.

The Courier-Journal Job Printing Company has purchased the lot and building adjoining its present quarters, now occupied by the Louisville Gas Company, and at an early date will begin the erection of a six-story building especially adapted to the requirements of a modern mammoth printing house. A first-class

lithographic plant and the latest improvements in photo-engraving will be among the additions to their present very complete outfit.

The many friends of Mr. Arthur Scott, of the Queen City Printing Ink Company, will be pained to learn that he is seriously ill, and that the prospect for his early recovery is indeed doubtful. He is bed-fast at the home of his brother-in-law, Mr. E. F. Rychen, of the same company, in Cincinnati. If the good wishes of his friends will help him, he will surely be around in his accustomed haunts soon.

Mr. William J. Patterson, for a number of years assistant foreman of the *Courier-Journal* news pressroom, has taken charge of the pressroom of the *St. Louis Chronicle*. "Billy" has had that old "gag" of "Who struck Billy Patterson?" worked off on him so often that he has come to believe that he is the "Billy" that was struck.

It has been rumored for some time that the plant of the Louisville Lithographing Company was for sale, but nothing much was thought of it until last night, when the employés of the concern were notified that, beginning then, their services were to be dispensed with for an indefinite period. I could not ascertain what the company proposes to do. This is one of the oldest lithographing concerns in the city, and in its day was one of the most successful, but of late the other two companies, the "Falls City" and "Kentucky," have pushed themselves to the front, and monopolized nearly all of the lithographic trade worth having that is done here. However, there is enough of the better class of work sent from here to other cities to keep several large concerns employed the year around. C. F. T.

A GOOD WORD FOR THE AMATEUR.

To the Editor: WEVERTOWN, N. Y., March 28, 1889.

We ordered your excellent journal for 1889 from Golding & Co., Boston, and received the January and February numbers a few days ago. We have read many trade journals, and do not hesitate to pronounce this equal to the best.

"The Amateur," by W. E. Seaport, in the February number, does not appear to be written in a spirit of fairness. If it was so intended, the writer was not posted on that subject. We are inclined to believe that he does not refer to the amateur at all, but to the professional printer who does not know how to print.

Webster says the amateur is "a person attached to a particular pursuit, study, or science, as to music or painting; one who has a taste for the arts; especially one who cultivates any study or art from taste or attachment, without pursuing it professionally." Imagine such a person "strutting along the street with an order for a hundred business cards in the pocket of his well-worn coat."

The professional workman has no time and but little inclination to work out new processes or designs, while in that, the true amateur finds his chief pleasure. The finest watch-case and monogram engraver we ever knew was the son of a millionaire and never did an hour's work for wages in his short but useful life. He traveled extensively, gathered together the best ideas from everything he saw and had the ability to put those ideas in permanent form, and would have scorned the idea of a patent or copyright. His designs were extensively copied by the very men who would gladly kick him as an amateur, even while copying that which they had not the brains to produce. This gentleman was *not* "ignorant, arrogant, or parasitic."

Nearly every process or improvement in the photographic art, even to its use in the letterpress, has been the work of the hated amateur, who receives naught but insults from those who place their abuse on one page and illustrate the next with plates, the production of which would have been impossible except for the amateur. THE INLAND PRINTER would have been unnecessary, and other publications would not be far in advance of the horn-book of the seventeenth century had we depended wholly upon the productions of the professional artisan.

The amateur is, no doubt, troublesome at times, but we can not afford to exterminate him, for he often brings forth that which

we least expect to see. The caterpillar is an ugly worm, yet from the dark recess of his repulsive shell comes the gorgeous butterfly.

If our friend Seaport will turn again to page 401, opposite his John Smith sign — with its donkey-tail comma — he will see where a "Butterfly" lighted upon the fair page of THE INLAND PRINTER.

We say give the devil his due, even if he be an amateur devil. Leave him alone or treat him fairly. Do not grasp his productions with one hand while you twist his nose with the other.

The botch workman is a nuisance in every sense and should be treated as such, but the amateur (Webster's amateur) is the glittering gold buried deep beneath the worthless dross that floats upon the surface of the red-hot crucible of science and art.

M. A. M.

FROM PHILADELPHIA.

To the Editor:

PHILADELPHIA, April 7, 1889.

The state of trade at this time is what might be termed good; that is to say, as a whole, we are neither rushed nor dull. In a few offices there is an excess of work, and in others a state of slackness exists. Feisters' are running night and day on a ten million almanac order. Think of that, ye pressmen, who are hustling with miscellaneous jobwork.

Mr. George Wright, the genial Campbell press agent, says that business in his line was never so good.

After a hard struggle for several years past, the firm of A. C. Brysen & Company has been sold out by the sheriff.

The Keystone Publishing Company, of whom I wrote last month, seems to be on the road to prosperity. They recently issued a prospectus for a new book; "Sparks from the Camp Fire," and the whole edition was sold before the binding had been put on.

Speaking of books reminds me that quite a breeze was raised in one of our large offices this week by the accidental discovery that a press-feeder had been saving sheets of a new book shortly to be issued, and on which the copyright had not been secured. Detectives were called in, and the proprietor was so put to that he actually stopped the whole place for a short time. How differently people look at this question of "saving sheets." In comparison to the above, I was acquainted with a pressman who saved several volumes of a select church review. One day he noticed an advertisement, in which it was stated that copies answering to what he possessed were wanted, and would be liberally paid for by the publishers. He went and saw the parties, sold them the books, and received their thanks for being so thoughtful.

Typographical union's election, on March 27, was the most orderly ever held, and resulted in the largest vote being cast. The vote was by chapel ballot, in consequence of which wire-pulling around the polls was impossible.

The ex-delegates' association is making preparations to celebrate Mr. Childs' birthday, on April 12. A banquet will be given at Reisser's, on Fifth street, above Chestnut. Members of No. 2 and No. 4 are privileged to purchase tickets at \$3.50 each.

Pressmen's Union No. 4 is sailing along as prosperously as ever, and feels happy because so many of her members have good positions, and so few are out of work. The two scale bases of \$16 for Adams pressmen, and \$18 for cylinder pressmen, meets with the approval of all.

The employés of the National Bureau of Engraving, at Burlington, New Jersey, will give a grand ball on Easter Monday, in the opera house at that place. These are always enjoyable occasions, and a good many of our Philadelphia printers take pleasure in going to them. There has been several curious accidents to pressmen and feeders lately, resulting mostly in the loss of fingers. In one case I call to mind, a feeder had three or four fingers mashed, and after they had healed, came back to work, and immediately proceeded to ignite himself with benzine, and also came near causing a serious conflagration. These cases are not altogether due to carelessness, but indicate that such accidents are liable to occur where a spirit of "hustling" pervades the establishment on the one hand, and the contempt for danger, on the other hand, which long familiarity with machinery inspires in some people.

MELANGE.

FROM ST. PAUL.

To the Editor :

ST. PAUL, April 5, 1889.

Fred W. Stevens and Philip Corcoran are the gentlemen who represent No. 30 at the Denver meeting of the International Typographical Union. The election took place Wednesday, March 27, at the corner of Fourth and Wabasha streets, and was very hotly contested. Only seventeen members of the union did not vote, and the 349 who did vote and work for their candidates conducted themselves in an orderly manner. There were five aspirants for the honor, and the result was as follows: Fred W. Stevens, 165; Philip Corcoran, 160; Frank H. Cole, 149; J. Coughlin, 118; John P. Stratton, 47. Mr. Stevens is a job printer and Mr. Corcoran only a newspaper sub, but is possessed of oratorical ability of the higher class, and all may rest assured that St. Paul union sends to Denver next June no "wall flowers."

A good story is told on the managing editor of a brevier evening newspaper. The paper, which had, until recently, been set in minion and nonpareil with eight to pica leads, donned a new dress of brevier and twelve to pica leads on a March Monday morning. The managing editor had given orders to the foreman to send down revise proofs, which was done. "For goodness' sake lead those editorials," came with hurricane rapidity through the pipe. "They are leaded," responded the foreman. "I say they are not," etc., went on until he was shown a galley of the type, when he gently turned his head heavenward and remarked in a whispering tone, "Well, put in another lead."

The printing business during March was very brisk. The Sunday papers had about twice as much advertising as during the previous month, and, in fact, every branch of the printing business has improved.

M. J. Daly, chairman of the executive committee and ex-county commissioner, is very ill.

One year hence St. Paul will have one of the largest and finest opera houses west of New York. The past month articles of incorporation of three opera house companies were filed. Tom Lowry, the street railway king of the Northwest, is at the head of the company which promises to build an opera house that will knock Chicago, St. Louis and other large western cities silly. The Grand Opera House, which was recently destroyed by fire, will be rebuilt by the insurance companies who held risks on the building.

The legislature adjourns April 16, and State Printer Cunningham will dispense with the services of a good portion of his employés.

Lewis Baker, proprietor of the *Globe*, is sojourning in Mexico for the benefit of his health.

THE SPIDER.

FROM DETROIT.

To the Editor :

DETROIT, April 8, 1889.

Last Sunday the newly elected officers of Detroit union were installed by retiring President James P. Murtagh. The election was held to conform with the International Typographical Union law, on March 27. The day was not a very appropriate one. As far as newspaper men are concerned it was all right, but this cannot be said for weekly hands. Saturday would have been a far more convenient day. Detroit union will be represented by only one delegate this time. The choice made was George M. Knox, who is one of No. 18's oldest members and has always taken a deep interest in union affairs. The following were the officers elected: Delegate, George M. Knox; president, Charles O. Bryce; vice-president, Henry R. Boothroyd; recording secretary, Philip A. Loersch (re-elected); financial secretary, Robert Jaffray (re-elected); treasurer, William L. Bessler; sergeant-at-arms, Thomas Robinson (re-elected); executive committee, George M. Knox, John Carroll, William A. Taylor, Edwin A. Mead, Patrick O'Grady.

The Printers' Benefit Association held their annual meeting March 17, and elected the following officers for the ensuing year: President, William E. Thornton; vice-president, Mark H. Marsh;

recording secretary, Thomas Sherritt; secretary-treasurer, Philip A. Loersch; board of trustees, Louis Beckbissinger, William L. Bessler, Charles O. Bryce, Alfred A. Schroeder, Gilman B. Smith. The financial statement for the year was: Total receipts, \$432.27; relief paid during the year, \$94; miscellaneous, \$87.42; leaving a balance on hand at above date, \$250.85. The cost to each member was \$5. The association numbers seventy-seven members.

Winn & Hammond have moved into their new building, and now have one of the best offices in the city. Messrs. Raynor & Taylor will also move into new quarters next month, into a building in course of construction, where they will add new material and make their office still more complete. Their place will be occupied by the Peninsula Printing Company, which firm are also compelled to seek larger quarters. This firm is partly owned by the Richmond, Bachus Company, and is only a little over a year old, and has been doing quite well for a new firm.

The state of trade in the printing business is about fair.

The compositors on the *Sunday Sun* are all lovers of THE INLAND PRINTER, the same being read by nearly the entire force. The *Craftsman* is also kept on file.

P. A. L.

FROM NEW ORLEANS.

To the Editor :

NEW ORLEANS, April 5, 1889.

A few departures and a few arrivals of printers and a little greater dullness in the business are all that have changed the wonted quiet of our city since the election of delegates to the International Typographical Union, which resulted in the choice of a representative from the newspapers and one from the job offices, both foremen.

"Breathes there a man with soul so dead,
Who never to himself has said,
This is my own, my native land?"

Without doubt there is a great deal of poetry in the souls of most printers. Now, the question has agitated the minds of those who have the welfare of the members of the craft at heart, how we are to manage to take care of the idle labor, shorter hours, higher prices, etc., being suggested as the best solution. That, however, has been solved by the natural course of events. THE INLAND PRINTER will say to the craft far and near, rest easy, for the wave-tossed vessel is nearing the quiet shores of milk and honey. Beautiful spring is here in all its splendor and gay dress. The early sun rises and casts its shimmering rays upon the flowering plants and budding trees; the birds gayly carol, the maidens joyously chant, and the locomotive's shrill whistle echoes and re-echoes through the pure spring atmosphere, as the train, laden with human freight, speeds its way through nature's own home, and joy and happiness are in men's souls. Such, indeed, would touch the most hardened, and when brought to bear upon the susceptible nature of the poetic printer, that peculiar character determines to extricate his nose from the space box and hie himself to the green fields of nature's farmyard and plant peas and potatoes. No less than half a dozen have told your correspondent within the past week that they desire to go to the country. One proposes to purchase one hundred acres of land, upon which he will have at least eleven families working on shares, himself living on the fat of the land; others propose to raise chickens, selling off the old hens with which to purchase bread to eat with the eggs and spring chickens; and others still will have their little country homes near at hand, where they can go to rest their weary minds after making enough at the printing business to live upon for a while. Success attend them.

Mr. Robert Gilliland, a young member of the craft, now located here, has invented an improved galley and applied for a patent on it. This improvement consists of an attachment by which a galley containing a stick or ten sticks of type may be locked up and proved without quoins or sidestick. It can be used with either job or news galleys. He will have a model of it by next Monday. He claims to have a fortune "pat."

The use of the word "pat" calls to mind a laughable incident. A sub, new in town, got a take off the file which contained the

trial of some drunken policemen, and read thus: "Pat J. Bercegesy, drunk, two days' pay; Pat Johnson, sleeping on beat, dismissed the force." Mr. Compositor set it up "Pat," and the proofreader marked it "Spell out—patrolman," and wrote a note on the side of the proof, saying, "We have a few Creoles on the police force in this city." The typo was somewhat dismayed, but corrected the proof, saying, "We live to learn." D. F. Y.

FROM SOUTH AMERICA.

To the Editor:

BUENOS AIRES, Jan. 30, 1889.

Some of the hottest weather I have ever experienced is that which we are having down here now, and I tell you a person feels it when he has to work fifteen hours per day. All offices here are running overtime and some day and night.

I have taken my first crack at a power plate printing press, which inks and wipes the plates. For the benefit of those who have never seen such a machine I will give a short description. It is a four-cornered affair; has four beds, and these are pulled around the machine by an endless chain, first passing under the ink-fountain and roller, then under the wiper, and next under the impression cylinder. The paper is laid on and taken off by young boys or girls (in our case good-looking señoritas). The press is capable of producing from 250 to 1,000 impressions per hour. We have printed 4,000 sheets of 5-cent postage stamps off four plates in nine hours.

One of the neatest pieces of printing I have seen since I left the States is a calendar and specimen book of inks combined from Gebr. Jänecke & Fr. Schuesman, in Hanover. It comprises a book of 450 pages, and every page is neatly printed in four colors. I am sorry the American manufacturers do not send such effective advertising matter out this way; they certainly would find it to their interest to do so.

For the benefit of many of your worthy readers writing to me for information, I will answer a few short questions: Board here costs from \$15 to \$50 per month, and lodging or furnished rooms \$10 to \$60 per month, according to location and furnishings. It is necessary for a man working as compositor to know Spanish. There are four English offices here, *The Standard*, *The Herald*, McKern & McLean and Kidd Company, Limited. Machine hands could manage without knowing Spanish, and would pick up enough in a short time to get along, but if a man wants to enter into any other business here he must know Spanish. (I will answer no letters unless accompanied by 15 cents for return postage.)

Manufacturers sending catalogues to me always make a mistake and send one only, and when I show a person a cut of a machine or other supplies I must leave it with him, and that ends the matter. They must send more than one if they expect to be benefited therefrom. In regard to routes and rates: the Adams Express Company are the agents in the United States for the Compañia Nacional de Transportes, who will undertake to deliver any goods in this section of country. American type is admired very much down here; also brass rules, which cost big prices and seem to be very scarce.

The Standard, one of the English daily papers referred to, is putting in a Marinoni double cylinder. New lithographic and printing presses have also been placed in several places, and all come from Germany.

Mr. Charles W. Dean, an electrotyper from Rochester, New York, has found his way down here, and says the shortest route from the United States is by the United States & Brazilian Mail Steamship Line, from New York to Rio de Janeiro.

El Sud Americano, the illustrated paper of which I have mailed you many copies, is now being printed with the "Queen City" (Cincinnati) H. D. book ink, and makes an excellent appearance.

In the December (1888) number of THE INLAND PRINTER I notice several web perfecting plate bed presses, and I think they would be just the kind of a press to have down here, where it is so hard to get press feeders. The manufacturers of those machines do not want to fail to send catalogues and price lists this way. Manufacturers of engraving machinery might also find it to

their interest to send catalogues to me. There are some narrow-minded press-builders in Europe; one manufacturer does not know enough to put nippers on his take-off cylinder, but simply puts a few fenders over it, which scrape the sheet off the printing cylinder, and at the same time tear the blanket or make-ready all to pieces. Others, or most of them, do not know what a fly-cam is, so that when you run a narrow sheet it has to run all the way down the fly sticks to the board before the fly comes down. Others, and most of them, make their nippers on the printing cylinder so short that they are sure to kick back the sheet every time they are put down to the clumsy feed-guides. I am certain most of the pressmen in the States would not run such things as they send into this country from Europe, and call them printing machines. They would rather go to some farm and run a threshing machine. Proprietors of printing offices here purchase their machines because they are cheap, but never stop to think what time, waste of paper and material they would save if they would pay a few dollars more, and buy a first-class improved machine; but there are some who have got a little more sense and are casting their eyes to where the best printing presses on the face of this earth are built. There seems to be one advantage, however, the European manufacturers have over the press-builders in the United States, and that is, they pay their machinists starvation wages, whereas the American employers have to pay their machinists salaries that they can live on like Americans, and consequently do not care to, or cannot, compete with pauper labor. There are a few exceptions on the European side of this question, but very few.

M. A. MILLER,

258 San Martin, Buenos Aires.

LETTER FROM NEW BRUNSWICK.

To the Editor:

ST. JOHN, N. B., April 5, 1889.

There is quite an upheaval in printing circles here at present, and the result of all the rumors is yet uncertain.

Robert E. Armstrong, who has been on the *Globe* reportorial staff for about fourteen years, has severed his connection with that journal. He will start a weekly paper at the town of St. Andrews, to be called the *Beacon*, and, if business prospers, will merge it into a tri-weekly, and perhaps a daily. Mr. Armstrong entered the *Globe* as an apprentice and worked his way until he held the foremanship, and finally went on the staff. He is a good writer, and knows well how to put an item together in a racy style when required. He is conversant with newspaper work in all its forms and no doubt will make the St. Andrews' *Beacon* a literary as well as a newsy light. St. John will lose one of its best reporters in Mr. Armstrong. St. Andrews is to be the Mecca of New Brunswick. Its situation is splendid for a summer resort, and its waters are the finest that can possibly be found in Canada, if not on the continent. Already there is a boom in town lots. A large hotel, with all modern improvements, of course, is nearly finished. It is being built by a syndicate, and that body is bound to make things hum.

Mr. Charles Lawson, who has been foreman of J. & A. McMillan's "printing shop" for a few years, will take charge of the *Telegraph* job department on April 8. There has been a little trouble in the "shop" of late, the hands failing to pull well with Mr. Lawson. One of them put on his coat a few days ago, and is now walking around. Who will take Mr. Lawson's place is yet unknown, but rumor says an old hand of McMillan's named Atherton will "fill it." He at present works on the *Sun*. The shop is one of the best in this city, and there is money in the firm.

Rumor has it that Messrs. Day & Reid, jobbers, will dissolve partnership. They have been in business only a few years and are said to be doing a good business. Can't "pull together" is the alleged cause of the separation. However, it is said the dissolution will not lessen the offices in St. John.

The printers in the Moncton *Transcript* went on strike a few days ago. The men were required to work an hour later than other industrial establishments, without remuneration, hence the strike. One man, one girl and two boys remained in. Moncton

is New Brunswick's railway center, and is situated about eighty-four miles to the east of St. John, on the I. C. R.

A paper was recently started at Campbellton, Restigouche county. It is the pioneer sheet of the county, and the "prominent" inhabitants turned out to see the "first type set." It was a gala day for the county, and I suppose in a few years the same sheet will be trying to shape the destinies of the country. Well, such is life, and the ways of a newspaper. Restigouche is one of the northern counties.

The printing business is good in St. John at present, on the whole. The *Globe* has secured the printing of the city directory, which means extra employment for a few hands. The other offices report work fair.

WIDE AWAKE.

FROM WASHINGTON.

To the Editor :

WASHINGTON, D. C., March 28, 1889.

Looking over the January number of THE INLAND PRINTER, I find that "J. E. C.," of Cleveland, has been waiting for six months to hear from me on a subject that I thought had been settled at Kansas City. There was a question submitted there by "J. E. C.," if my memory serves me right, the substance of which was, "who shall be eligible to membership in pressmen's unions," and it was decided that anyone who could run presses and *command the scale*. In my opinion, if our members would agitate those questions they deem essential to our welfare in their respective unions, and strive to obtain the coöperation of their sister unions on those questions, our craft would be benefited by such action, and we could act more intelligently when we come together at the meetings of the International Typographical Union. In this connection a proposition has been submitted to me that I think a good one, namely, that the local unions select one or more subjects which they think will be beneficial to the pressmen at large, and if, after discussion, they find some good point, let their secretary make note of it and forward the same to the second vice-president in time to have it brought before the meeting of the International Typographical Union, if they are not going to send a delegate. This will give the unions which cannot send a delegate a hearing, and will give those who attend something to work on as soon as they arrive.

I am daily in receipt of communications from members of our organization touching on various topics that they deem important to our craft in general. I received one a few days ago, asking the question, "Why is it that pressmen delegates will travel thousands of miles, spend hundreds of dollars and accomplish so little that is beneficial to our branch of the business?" So far as my experience goes, I attribute the cause to the want of concerted action by our unions, and until we have a code of laws ingrafted in the general laws of the international body to govern us, we will continue to run in the same old rut. For instance, I find some unions have a regular scale of prices, while others have none at all. I have also discovered that some of our unions are debarred by their constitution from extending a helping hand to a sister union in the hour of their direst necessity. This is certainly wrong; such a state of affairs should not exist. I would recommend our brethren to cast aside this selfishness, and cultivate a more fraternal feeling, not only among ourselves, but with all organizations devoted to the cause of labor. With this end in view, I would recommend our unions to add to their standing committees a conference committee, whose duties it shall be to confer with sister organizations on all matters appertaining to the good and welfare of the whole craft. I know of but one city where this has been attempted, and from what I can learn it has benefited both organizations; besides it has been the means of bringing about a more friendly and fraternal feeling, a consummation devoutly to be wished for. Why should not this same feeling permeate our whole organization? Judging from my short experience, I feel satisfied that the pressmen hold the key of the position of the "art preservative" in their own hands. If they will only realize this fact it will not be long before they will be the controlling element in our profession.

A few words with "J. E. C." on his proposition to grade pressmen. I candidly admit that I am not favorable to the project,

nor do I deem it practicable. In my opinion it is entirely in the interest of the employer, and yet if those same employers that you are so anxious to protect had done their part honestly and conscientiously as they should have done toward those who had devoted the best years of their lives to their service, for the sole purpose of obtaining a practical knowledge of a business that would yield them a livelihood when they had attained man's estate, his proposition would never have been heard of. Yet in the face of this fact his object seems to be to protect the very source from whence the evils he complains of flow. Were we to inaugurate a sliding scale, owing to the fact that competition in our business is so sharp and close, the employer would take advantage of it and low-priced men would be in demand, thus aggravating instead of curing the ills he complains of. It is an undeniable fact that in this grasping age cheap labor has the call, and very few employers would employ high-priced men as long as they could pull through with cheap labor. I admit that there would be honorable exceptions to this rule, but they would be like angels' visits, "few and far between."

Again, his proposition is in direct opposition to the principles of trade unionism, whose mission is to elevate not to degrade labor. What could be more degrading than to compel a fellow craftsman to advertise himself as a drunkard or a botch? I do not believe a single man could be found in our craft so lost to self-respect, no matter what his faults or failings may be, that would subscribe to such a proposition. Why not put the mark of Cain where it properly belongs? We are compelled to take the material that composes our trade organizations just as the employers furnish it to us. We do not make botches or drunkards. If the employers will persist in the nefarious practice of grinding out paper butchers and press smashers, I see no reason under heaven why we, as trade unionists, should be called upon to protect them from their own productions. For this reason every union should have a scale of prices. While any member is at liberty to get as much more as his abilities may command, no one should be allowed to work for one cent less than the scale. If there should be, unfortunately, those among us whose abilities are of such an inferior order that they cannot command the scale, my advice to them is, "seek new fields for your labor; you have mistaken your vocation."

C. H.

FROM BOSTON.

To the Editor :

BOSTON, April 1, 1889.

In looking through THE INLAND PRINTER for March, I notice that Messrs. Cowan & Co., Melbourne, Australia, have been appointed your agents. This is a good move, because THE INLAND PRINTER has no warmer friend than Mr. Henry L. Bullen, now prominently connected with that large and enterprising house, and as I know the gentleman well, I can, with my mind's eye, see the satisfied smile that will play over his countenance as he opens out a copy to some colonist and "spreads" himself on the American printer. This also brings to my mind the question, Why does not THE INLAND PRINTER give us a letter from him. Surely, after a year's absence (or nearly so) from this country he ought, and must have, something of value to communicate to his friends here. I hope, with others from this section, to peruse such a letter soon.

Mr. M. P. McCoy, your London agent, is another good selection. He is a live and pushing American, and is building up a large business in American type, tools and presses among the printers of the United Kingdom.

Boston Typographical Union, No. 13, at its meeting, March 24, passed a resolution against the appointment of Whitelaw Reid as minister to France, and sent a telegram to President Harrison to that effect. It also appointed a committee to draft a set of resolutions which would express their sentiments as above, to be forwarded to Mr. Harrison at once. At the same meeting the Boston Herald Company asked permission to use typesetting machines in their composing room, which was granted after some discussion.

The usual "most exciting" annual election of No. 13 took place on March 27, which resulted in the election of the following

officers and delegates: President, Hugh O'Halloran; vice-president, A. McCraith; secretary, John Douglass; treasurer, George Stephens; sergeant-at-arms, George F. Hoag; trustee, J. C. Barker; executive committee, from the newspaper offices, A. W. Hovey, J. A. Grant, C. W. Randall, James E. Franklin, Fred Bogardus, H. P. Spaulding; from the book and job printing offices, George H. Sturtevant, George F. Clark, P. J. Mansfield, W. E. Mauger, C. O. Wood and O. D. Foster; delegates to the Boston Central Labor Union, E. R. Lathrop, J. R. Fultz, F. K. Foster, Ed O'Donnell, C. O. Wood and J. H. Blanchard; delegates to the International Typographical Union, C. M. Lynch of the *Herald* and William A. Holland of Mudge's office.

Another large Boston house with a world-wide reputation is in trouble. This time it is the Bufford's Sons Lithographic Company, with its office at 65 Franklin street, and works at Roxbury. A statement of the company's liabilities and assets will be made at as early a day as possible. The statement has been made that there is an improvement in the company's financial condition since the last annual statement was filed at the office of the Secretary of State, September 11, 1888. It is reported that the unsecured liabilities are about \$75,000.

Mr. R. H. Thomson, for many years connected with the *Herald* composing room, died March 19, of consumption, at Aiken, South Carolina, at the age of thirty-seven years. His death will be sincerely mourned by a host of friends and acquaintances.

One of the most important transactions here of late is the purchase of Mr. F. H. Gilson, music typographer, of the pressroom and bookbindery of Mr. William B. Weston. This place has employed somewhere about seventy hands in both departments, and was one of the first established in this city. Mr. Gilson took possession on the first of March, and has moved the whole plant to Nos. 15 and 17 Stanhope street, where he has secured a large new building, with the best of modern conveniences, and splendid light. The latter is one of the things most needed in this business, but, alas, how few offices have half enough! His new purchase occupies three floors, each 103 feet long by 43 feet wide. The street floor is devoted to the pressroom, where there are one cylinder and ten Adams presses, and a job press is about to be added. On the second floor is the counting room and bookbindery proper, while the third floor is used as the folding room. Of all the binderies in Boston I learn there are only four that can do all classes of work, and this is one of them. The basement is one large, perfectly fireproof vault, used for the storage of plates, and that it may be safe in every sense it is in no way connected with the rest of the building, and can only be reached from out of doors. The whole building is as near fireproof as possible, which is more than can be said of most printing offices. It has extra thick walls, and the asphalt floors are supported by heavy iron girders. Mr. Gilson, in connection with his other work, has made a contract with the Oliver Ditson Company, the well-known music publishers, to do their printing and binding, and the establishment is full of work, though not yet fully settled in its new quarters. The composing room still remains at the old place, at 159 High street, but it is probable that in the early fall it will be removed to a new building which is about to be erected alongside the present Stanhope street building.

Some time ago I wrote you that Mr. Fisher, for many years in charge of the salesroom of the Boston Typefoundry, had been sent by that corporation to the Bermudas in the hopes that his health might be benefited or fully restored. I am glad to say that he is reported as having improved, and is now expected back about the 18th of this month. Boston printers will be glad to see him again.

Mr. William J. Murphy, an energetic and accommodating salesman of Messrs. Golding & Co., is about to start on the road in the interests of that house. If he happens to drop in on anyone who reads this, I can only say he will be found a pleasant party to talk business with, and a man who considers his word as good as his bond. May good luck go with you, William.

About six weeks ago the firm of Emery & Hughes failed. Their affairs have not yet been settled, and are still in the hands of the

assignee. Mr. Hughes has connected himself with Messrs. C. W. Calkins & Co., 52 Purchase street, where his genial face can be seen during business hours.

After an absence of eleven years, Mr. John F. Millard, who used to be quite well known among Boston job printers, has returned east, and is full of yarns of the "Wild West." During his absence, he has visited every state in the Union west of the Mississippi, and I understand has many friends in the northwestern states. He is now foreman for A. S. Blanchard & Co., Worcester, Massachusetts.

I am glad to see you after those printers who give a price on a job without any idea of the actual cost of production. *Every* job that is undertaken should be at such a price that will give the printer a *profit*, after wear and tear, interest on money invested, rent, insurance, proofreading, and *everything* that goes under the head of expense has been deducted. There are altogether too many who do not think anything about these items when figuring the cost of production, and then do not understand how it is that at the end of the year they come out of the little end of the horn. I think that in many cases "fill-in" work is largely responsible for this state of things. Work may be dull, so a job (presswork, perhaps) is taken at a very low price to keep the presses moving, but with the intention of not allowing it to crowd out more desirable or profitable work, should such offer itself. When the better work has been secured, and the "cheap" man has to wait, then commences a howl, which so pesters the printer that finally the better work is compelled to wait until the other is off the press, and peace reigns. When this, or other work of the same class, offers itself again, the printer, knowing he must do it for almost nothing or lose it, forgets the worry, trouble and loss he had before, and "chances" it. This goes on until customers learn that work can be had of him at such price, and he finds that a large amount of his work gives him no profit. To my mind this is one of the ways that printers are brought to do work for less than a paying price. There is a remedy, however, and a sure one; it is simply "backbone." When you figure the price for work, know what you are doing; don't ask more than a fair price, but *insist* on having that. S.

FROM DENVER.

To the Editor:

DENVER, Colorado, March 24, 1889.

"The click, click,
Of the types in the stick,
Gliding together with ominous sound,
As swiftly the hand that collects them goes round
And arranges them firm in the stick."

May indicate the pulsations of aspirants who hope to represent at Denver in June, and now count the leaden hours as they pass until arrives that eventful Wednesday of March set apart for the election. With some 'tis the hazard of the die—the rally at the polls of friends and admirers—the vest-pocket ballot, and—and—the result.

"Press on! if Fortune play thee false
Today, tomorrow she'll be true;
Whom now she sinks she now exalts,
Taking old gifts and granting new.
The wisdom of the present hour
Makes up for follies past and gone:
To weakness strength succeeds, and power
From frailty springs; press on! press on!"

As there are many who, after pressing on, will fail to reach the land of Canaan, owing to distance and democratic percentage of electoral votes, a short correspondence relative to Denver union may enable them to draw comfort from imagination while disposing of grapes not yet ripe—the other fellow sampling the extra dry.

Denver was located in 1858, having as rival town-sites Colorado City and Golden, and at that time a future apparently as uncertain as that of a spotted placer mining camp. The site at the junction of Cherry creek and La Plata (the South Platte) river, had the attractions of an easy ford and an extensive cottonwood camping ground for the overland pioneers and the Clear creek miners. Long before the first log house was built, the site of

Denver had been selected by Catholic missionaries, military pathfinders and employes for fur companies, as well as the Arapahoe and Ute Indians for its many advantages. Denver (or Auraria as originally named) then consisted of three Indian tepees, a log cabin and a large number of wide-spreading cottonwoods, beneath whose umbrageous foliage Judge Lynch held court and Spanish monte rendered clearing house returns.

The placers of Clear creek, the Blue river, Gregory, California and other gulches having furnished a golden crown for Pike's Peak, the news brought hither gold-seekers from Georgia, *voyageurs* from Canada, adventurers from abroad, preachers from the States, printers from Chicago and juvenile typographical artists from Texas, or— or— Missouri. In those days everyone was—in modern political classics—in the soup. Only those who have their names enrolled among the pioneers of some far removed and isolated mining camp, can realize how thin and scarce are the lentils and beans in consomme prepared by preachers and printers' devils.

In the autumn of 1859, while General Denver's namesake was yet a cross between a stage ranch and an adobe pueblo, there assembled in a long, low, log cabin on the bank of Cherry creek a chapel meeting of the charter members of No. 49. They laid the foundation; others built, and the present third story contains three hundred and twenty-five of later growth. Of the original number, who received the national charter by ox-team in 1860, there are none actively engaged at the business in Denver. Some are referred to in that beautiful little poem, "We Are Seven"; others are millionaires. They came, like the sturdy frontiersman or the winning candidate, at the head of the procession and still remain with the drum major or within sight of the band.

In those days of \$1 a thousand, when a sub or an extra printer was required, it was customary to seek some incoming mule or bull train having the legend "Pike's Peak or Bust," and waylay the teamsters and passengers, with the chances in favor of discovering a skilled disciple of Faust lazily flecking the flies from the ears of Brandy or Bright, pointers in the lead. The journey from the Big Muddy to the mountains in those days was slightly different from the present Pullman arrangements contemplated by the committee in charge for our guests in June. The same hall accommodations used by the masonic fraternity in founding their lodge, afforded the printers luxurious union meetings—nail kegs and hard-tack boxes for the early attendants, with a joint possession of a rough pine table for the president and secretary.

In this youthful time of unionism in Colorado, an occasional error would escape the critical eye of the proofreader, while out for a liquid lunch. The *Rocky Mountain News* and *Rocky Mountain Herald* were rival hand-press dailies, one never losing an opportunity to advertise the shortcomings of the other. On one occasion one of them referred to "a whisky picnic without ice," instead of "a whisky punch without ice." Another intelligent comp read the heading of a blood-curdling local, "Wanted Satisfaction," and his type said "Warm Sausage." The indignant local marked on the proof-sheet, "see copy." The printer saw the copy, and the article appeared in the morning "Worm Sausage." Let not this deter the candidate from pressing on to secure election, as the ice crop is not a total failure and there will be a picnic, even if wienewurst is out of season. Denver has become in many respects like an eastern city. The price for five hundred half-sheet posters is no longer \$75; no more will the figure reach \$32 for one thousand cards; and the newsboys now sell daily papers from perfecting presses for 5 cents each, instead of 25 cents for one thrown by the frisket of a double-back-action Washington, with animated roller attachment.

While silk hats are not much worn in Denver as a rule, they are no novelty since November last. They serve more to indicate political sporting proclivities than the headgear of the average western citizen. Those contemplating the trip in June would do well in selecting a happy medium between the silk tile and the western cowboy hat. A spring overcoat will also prove more viceable on the mountain trip than a duster. Press on!

J. D. V.

PHILADELPHIA'S BRIGHT BUSINESS SITUATION.

To the Editor :

PHILADELPHIA, Pa., April 5, 1889.

The situation generally in the printing industry and allied interests continues easy and reasonably satisfactory. The leading establishments are quite busy, and little diminution in business is anticipated until the approach of the summer season. The demand for skilled and reliable hands is unabated. The book houses are turning out large quantities of work, and these establishments are continually seeking competent printers, bookbinders and other help.

The approaching International Typographical Convention attracts deep interest among all concerned. A characteristic letter has been received from Denver. The printer who writes says that it is the intention of the Reception Committee to make the occasion a memorable one, and that no efforts or expense will be spared in achieving this result. It is also desired that the ex-delegates be well represented, bringing with them their cousins, aunts and uncles. There will be plenty of the "needful" to entertain them all from the time of leaving the Missouri river until they are homeward bound. An interesting banquet will consume one of the evenings. Then another will be devoted to a visit to the Tabor Grand Opera House. Carriage riding about the city and the inspection of various places of interest will take up the greater part of the daytime, but the great feature of the occasion will be the visit to Leadville and Aspen, with rare opportunities of admiring the varied and magnificent scenery of the Rocky mountains. Opportunities will also be offered of witnessing practical mining. Leadville is over ten thousand feet above the level of the sea, and the distance from Denver is one hundred and fifty miles. At least one thousand persons will participate in the excursion. "Let no one," says a Denver man, "who desires to come here hesitate on the ground of expense while here, for the committee will be amply provided with funds, and desire the visitors to spend at least eight days in the state, during which time it will be 'pulled wide open for their benefit.'"

The annual election of Philadelphia Typographical Union, No. 2, which was held Wednesday, March 27, under the new methods of "chapel voting," was marked by a large vote, at least two hundred ballots more being polled than in any previous year. The total number of votes was over one thousand, coming from forty-six newspaper and job offices. The greatest interest was manifested in the election of a recording secretary and the delegates to the International Typographical Union. Eugene H. Madden, the present recording secretary, was reelected by a vote of 565 against 443 for Frederick W. Long, of the *Evening Herald*.

The other officers were elected without opposition, as annexed: President, Jacob Glasir; vice-president, John A. Dardis; financial secretary, William T. Bollman; treasurer, William A. Covington; doorkeeper, James A. Sawyer; trustees, Owen A. Duffie, Lawrence M. Meyer and Jacob J. Rupertus.

Over one-half of the total vote came from the newspaper offices, the "chapel" of the *Ledger* heading, with 96 votes. The *Press* had 89; the *Record*, 52; *Times*, 58; *Inquirer*, 55; *North American*, 32; *Bulletin*, 45; *Telegraph*, 44; *News*, 24; *Call*, 26. The largest of the book and job offices, Lippincott's, polled 45 votes.

Typographical Union No. 132, of Camden, New Jersey, has elected the following officers: President, William F. Reed, *West Jersey Press*; vice-president, James A. Cunningham, *Post*; recording secretary, Albert Schunneck, Millietle's job office; financial secretary, William B. Braker, *Post*; treasurer, Samuel Woodrow, *Courier*; sergeant-at-arms, Enoch Johnson, *Post*; delegates to the International Union, William B. Braker; Business Committee, Thomas Atkinson, *Courier*; Francis Miller, James A. Cunningham, Charles Hutchinson and William B. Braker, *Post*.

Edward M. Maeder, who died at the Odd Fellows' Home, was one of the oldest and best known printers in Philadelphia. Prior to 1834 he published a newspaper in Lowell, Massachusetts. Subsequently he came to Philadelphia, and, in 1836, established the *Spirit of the Times*, and afterward the *City Dispatch*. He then sold out his papers and turned his attention to securing patents for locking forms in

printing presses, in which he was successful. At the time of the breaking out of the war Mr. Maeder was the foreman of the *Daily News*, of which paper his son, William, was a reporter. The latter went to the seat of war as a special correspondent for the *Press*, but contracted typhoid fever, which resulted in his death. Mr. Maeder also entered the *Press* office and remained there until the paper had been sold by Colonel Forney. The deceased was for a long period a member of Typographical Union No. 2, and represented that body in the International Conventions of 1854, 1855 and 1856. He was also a member of the Last Man Brotherhood. On several occasions he was offered government positions, but invariably declined them to give his attention to printing.

Adam J. Glossbrenner, another printer and journalist, has passed to that bourne whence no traveler returneth. He learned printing business at Hagerstown, Maryland, and subsequently edited the *Age*, published here. He also held the position of sergeant-at-arms of the National House of Representatives, and in 1864 was elected to congress to represent the Fifteenth District of Pennsylvania.

The Lancaster daily and weekly *Examiner*, long owned and published by Hon. John A. Heisland, has been sold to Thomas B. Cochran, late chief clerk of the Pennsylvania State Senate, and his brother, Harry B. Cochran. The purchasers have assumed the management, and promise important changes and improvements.

The *Presbyterian Journal* has appeared in an enlarged and improved form. Rev. Robert M. Patterson, D.D., is the editor and proprietor. Rev. J. M. P. Ottes, D.D., formerly of this city, conducts in it a southern department.

Malvern and Leonard Reeves and F. R. Fithian, publishers of the Bridgeton (N. J.) *Chronicle*, have dissolved partnership, and the control of the paper now passes into hands of Mr. Fithian.

George W. Childs, publisher of the *Ledger*, is taking measures to hold a centennial celebration of the introduction of paper-making in Philadelphia county, at Roxborough, in the Twenty-third ward, on Wissahickon creek, in 1891.

ARGUS.

FROM SCOTLAND.

To the Editor: EDINBURGH, March 23, 1889.

Since writing my last note to you the state of trade in this city has been rather fluctuating. For a few weeks the demand for men was pretty good, but at the present time a goodly number are daily signing the out-of-work book.

The half-yearly general meeting of the Edinburgh Typographical Society was held on Tuesday, January 29, and was largely attended. The abstract of accounts laid before the members showed the income for association purposes to be: Protective, £303 2s. 9d.; out of work, £204 1s. 1½d.; sick and funeral fund, £294 5s. 10d.; while the expenditure was: Out of work, £135 19s., and sick and funeral fund, £287 7s. 1d. The accounts of the Scottish Typographical Circular showed a balance on hand of £4 9s. 3d., against a deficit of £2 0s. 3d. last year, this, of course, being inclusive of the grant of £12 given yearly from the association. The gain this year has been made up by a slight increase in the sales, and also in the amount obtained for advertisements. The office-bearers were all reelected. As the delegate meeting of the Scottish Typographical Association is to be held this year in the month of August, in Greenock, a committee of five was appointed to draw up resolutions, while it was agreed not to send a representative to the International Typographical Congress, which is to be held in Paris in the course of the ensuing summer, chiefly on account of the socialistic views held by continental workmen. An offer made by Miss Black of London to organize the female compositors of the city was not accepted.

An exhibition of printing, under the auspices of the class of typography conducted by Mr. G. W. Jones was opened on Thursday, January 24, and continued for two following days. The opening ceremony was performed by Archibald Constable of the University Press. The exhibition embraced specimens of chromo-xylography from the celebrated presses of Knofler & Son

of Vienna, the collection of sixteenth century miniatures by Ludwig Lott, specimens of Fasiol type, and a general collection of job printing from all parts of the world. The gems of the collection were the Knofler works, which consisted chiefly of madonnas, saints, and other ecclesiastical figures, the minute drawing and beautiful coloring producing excellent results. The Ludwig Lott fac similes of old missals were also very beautiful, while the numerous examples of Fasiol type printing was much admired. Some very fine specimens of "process" printing, the work mostly of German and American firms, also a series of Japanese fables in wood-cut pictures in various colors, attracted a good deal of attention. A very pretty print, which to all appearances appeared to be a water-color painting of a winter scene, and which was the only exhibit of the kind, excited the curiosity of everyone when it was known that it was produced by letterpress. Mr. Jones referred to this print specially at the close of the exhibition, and stated that the plates had been made by Bliss & Bartholomew of New York, and the printing done by Messrs. Haight & Dudley of Poughkeepsie. Book printing was also well represented from the imperial and royal printing offices of Germany, Russia and Austria, from various continental firms, and from Australia and America. British printers were well represented, while the well-known houses of R. & R. Clark, Blackwood and Morrison & Gibb also contributed. Altogether upwards of five thousand examples of the finest printing ever executed were on view. At the close of the exhibition Mr. Wilkie, lecturer on typography in the Heriot-Watt College, in a neat speech complimented Mr. Jones and his class upon the fine collection of specimens they had brought together, and took occasion to publicly thank Mr. Robert Hilton, printer and publisher of the *British Printer*, for the great assistance he had given in bringing the exhibition to such a successful issue, both by giving his personal attendance and also by giving the loan of his collection of specimens, which he had been collecting for the past thirty years. Mr. Jones, in reply, referred to a number of the specimens individually, and stated that he was glad if he had been able to do a little for the furtherance of the "Art preservative of arts" in the city of Edinburgh. He was also pleased to say that, although it had appeared to be a big venture they were making in engaging so large a hall, for a three-days' exhibition, which was only interesting to a section of the general public, he was glad to say that section had nobly responded, and that the exhibition had not only been a grand success as an exhibition of printing, but that it had also been so financially, and proved that the printers and allied trades in the city thoroughly appreciated their efforts.

The ordinary meetings of the Edinburgh branch of the British Typographia continue to be well attended, the papers read being much appreciated. Mr. Symington's paper, read on February 22, on "Punctuation," caused some discussion, he advocating the use of a mark of less importance than the comma. He produced several books, kindly lent by the librarian of the Edinburgh University library, to illustrate his paper. He traced the introduction of punctuation from two centuries before Christ, when dashes of various lengths were used, then passed on to the introduction of the colon and point, the comma, the semicolon, and also what he was advocating, the use of a half-comma, showing a book of fifteenth century production in which such a mark was used. A book of the fourteenth century was also shown in an excellent state of preservation, the printing being clear, the black ink in fine condition, and the red lettering looking as if newly printed, while the binding was of a high character. The books were taken to and from the place of meeting by one of the assistant librarians, so that no accident might befall them. The third public lecture was given in the Odd Fellows hall, on Friday, February 8, when John Tod, Polton paper mills (better known in the literary world by the *nom de plume* of "John Strathesk") took for his subject "Paper and Paper-making." Mr. Tod, in referring to the historical part of his subject, alluded to the use of papyrus by the ancients, and stated that in England, in the sixteenth century, a paper-maker was charged with the sin of putting up a paper-mill. He also explained the old process of paper-making by hand, and demonstrated it by a small model. Speaking of the

materials of which paper was made, he said that almost any vegetable fiber would make paper. In referring to the making of paper from rags, he said, "Perhaps the queen herself had written on something which had clothed the humblest of her subjects, and which had been tenanted, it might be, by what were known as Upper Canada squatters." Some of the finer papers nowadays were made from wood, subjected to a process of grinding. Linen made a crackly paper, cotton made a softer paper, while esparto grass nearly occupied a place between the two. A ton of rags, he remarked, costs more than a ton of bread, from £15 to £20 being paid for the former. Mr. Tod also remarked, in conclusion, that it was a very remarkable thing that the discovery of the making of paper from waste material was made just about the time the printing press was introduced, and claimed that paper-making had done as much for the world as printing, inasmuch as it enabled knowledge to be readily diffused in convenient form. Mr. Tod, who had interspersed his lecture with many touches of his characteristic humor, was, on the motion of the president of the society, cordially thanked for his lecture.

The twelfth annual reunion of the employés of Messrs. Neill & Company was held on Friday, February 1, in the Odd Fellows hall, which was comfortably filled, and was presided over by Mr. J. Wilkie, general manager. After tea the chairman made a few observations on the printing trade and its prospects, referring more particularly to the technical instruction which was being imparted all over the world. An excellent miscellaneous programme of songs was gone through, which gave entire satisfaction to the audience, the performers being all employés of the firm, after which dancing was kept up till an early hour.

The Edinburgh and District Trades Council having invited the various trades to coöperate with them so as to have better organization among the workmen of the city, a series of conferences have been held with that end in view, and a "manifesto" has been drawn up, which it is proposed to circulate. A remit has been made to the executive to consider and report as to the best basis for a scheme of federation for the trades unions of the city, and a committee of three has also been appointed to wait upon disorganized bodies of workmen, and promote as far as possible their union.

W. F.

FROM BALTIMORE.

To the Editor:

BALTIMORE, April 3, 1889.

Baltimore just now seems to be waking up in dead earnest from a sleep that has long held her in a sort of apathetic stupor. Our many natural advantages, in the way of geographical position, our terminal facilities, as to seaboard, our salubrious climate, etc., all are now understood as but meaningless stereotyped phrases, that amount to nothing in themselves, in the absence of enterprise on the part of our citizens. Talk, of itself alone, will not materialize anything, and we have had enough of that. It would seem that Baltimoreans are going to act on the principle that Providence helps those who help themselves; that is to say, they will no longer wait for outsiders to turn something up for them, but intend to go to work and turn up something for themselves. In the first place, we are to spend \$5,000,000 in securing needed facilities in opening up and widening many of our streets; \$40,000 has been appropriated for an additional public park; then \$1,000,000 will be raised by a company of progressive citizens for a permanent exposition building, the ground for which has already been secured. These undertakings will necessarily put a large sum into circulation, and add to the general prosperity of the city. It may also be mentioned that preparations are now being made for the holding of a state fair on an extensive scale.

In speaking of this new awakening, I might cite one other evidence of such a fact, that one may find in every well-regulated printing establishment in Baltimore quite a number of the best representative men of the craft here who are now subscribers to THE INLAND PRINTER. By the way, let me record a compliment paid the other day to that journal. A gentleman, well known in the paper trade in this city, in looking over a recent issue in a large

printing house, remarked suddenly, as he laid the copy down, "That is decidedly the best journal of the kind I have ever before seen, and no printer should be without it."

His remarks were concurred in.

Typographical Union No. 12 has elected Messrs. H. C. Hitchcock, of the *Sun*, and H. T. Rigg, of the *Herald*, as delegates to the forthcoming convention of the national body.

Editor John M. Dandy, of the Chicago *Saturday Evening Herald*, accompanied by his wife, visited this city last week, and was the guest of Mr. and Mrs. Cook, parents of Mrs. Dandy.

If common report be true, a new daily morning paper will be started in this city within the present month. The promised projector of this much locally discussed enterprise is said to be Mr. Edward B. Haines, of Newark, New Jersey. The paper, it is stated, will be politically out and out republican. It is understood that Mr. Haines, in conjunction with several Baltimore gentlemen, will put \$75,000 into the undertaking.

I give no opinion of my own, but the only republican paper in Baltimore, the *American*, is not considered by a number of republicans as straight out as a party organ should be.

Speaking of newspapers generally, the field cannot be said to be overcrowded in Baltimore. With the suburb just taken in, the city has a population now of 500,000, and yet we have but one afternoon paper, the *Evening News*. It may be mentioned that several attempts have been made within a few years past to permanently establish other afternoon papers in Baltimore, but without success; backbone, in the way of capital, in most cases seemed to be the one thing needful in securing a solid foothold. But one instance can be given where money was not wanting at the start, but where injudicious management caused a collapse. Baltimoreans will remember an afternoon sheet published in their midst some four years ago, that had every facility for the issuing of a first-class journal, but after an expenditure of \$100,000 the paper gave up the ghost. The journal in question was the *Evening Day*, edited by Mr. William Croasdale, now of the New York *Standard*, Henry George's paper. The *Day's* circulation soon jumped up to 15,000—unprecedented in this locality, as an evening paper, but its advertising patronage brought in no revenue to speak of, even at its best. Our merchants would not have their cards inserted in the *Day*, because they regarded it as a sort of class or factional paper, as catering alone to one portion of the community. Editor Croasdale received the plaudits of a crowd of striking laborers when he assembled them in front of the *Day* office and headed the procession with light-boxes and a band of music. But having later on refused to advocate an "eight-hour bill," then pending in the legislature, he lost caste, and a boycott having been sprung on his paper by his late admirers, the circulation of the ill-starred *Day* dwindled down in a few weeks to a mere nothing. Its make-up was excellent, and reflected credit upon the composing room; its editorial staff was regarded as the equal of any of the metropolitan papers in the country; nevertheless, it would seem, Baltimore didn't want the *Day*; but it cost its publisher a large outlay to discover the fact.

The Baltimore Typothetæ holds weekly meetings regularly, but the attendance is not, according to a statement made me by its secretary, Mr. John S. Bridges, what it ought to be. Renewed efforts are to be put forth, it is said, to rouse enthusiasm, if possible, in behalf of the association. Some of the master printers here complain daily of the need of organization in the trade, and yet, these complaining ones seem indifferent to their interest when the more enterprising would lead the way in bringing about a better condition of things in the printing business than now exists. In this regard, an incident, the common, every-day experience of master printers may be related as 'twas told to me by one of 'em. Said my informant, "Why, this morning a fellow came into my office and asked, 'What's your price for 10,000 dodgers?' He looked like a showman, and I thought he would be liberal. I gave him an estimate, but it didn't suit him. As he was about to leave, he remarked that he could get them done for 40 cents a thousand. Great Scott!" exclaimed the man of type to me, "think of it! Forty cents a thousand for one-sixteenth sheet

circulars! Four dollars for the whole job, and the paper to cost me \$2.35. The man wanted to go, and I let him go."

The foregoing sketch is but too true, and may be a mere straw, but it will go to show to some extent how the wind blows as to larger contracts. If the strikingly varied bids for work that have come under my observation in this city are a correct basis to venture an opinion upon, surely there are some printers in this latitude who should read-up on "how to make estimates," such are the ruinously low figures too often put down for jobs here by men who profess to know their business, and desire to live by their profession.

I looked into Isaac Friedenwald's well-known printing, lithographic, engraving and bookbinding establishment yesterday, and found things fairly humming with work. Mr. William Deutsch is the capable and courteous manager of this busy place, a mammoth six-story building, wherein two hundred people are employed in the various departments. Mr. Friedenwald started business ten years ago with a very humble beginning, employing but three or four hands, but since then, by close attention to business, he has built up a trade second to none, perhaps, in the country. This house has just finished a \$5,000 contract in the way of maps for the United States Land Office, and has in hand, on a second contract, 13,750 maps for the same department, in addition to 1,000,000 weather signal maps for the government, besides a contract for a large number of illustrated regulation books designed for the United States Army.

As one among the no small number of newspaper offices where THE INLAND PRINTER'S monthly visit is looked forward to with much interest, mention may be made of the *Every Saturday*, a weekly society journal of this city, which can boast of the best class of readers in Baltimore and vicinity. Editor Tom J. Wentworth is an experienced newspaper man, and knows the secret of success in making a paper of the kind sought out and read with interest. His "Town Talk" is a leading feature in *Every Saturday*.

Compositors are pretty generally employed, though there is not much difficulty experienced in "catching on" to a sub when you are short-handed or in a hole.

The paper trade has remained inactive since the beginning of the year, with considerable falling off, though prices have held their own. Just now large book offices are asking for estimates, which indicate an upward tendency, at least.

Typefounders say they are having no unusual run on orders, but are doing a medium business.

FIDELITIES.

FROM THE REPUBLICS OF BOLIVIA AND COLOMBIA.

SUCRE, December 2, 1888.

"Señor Franço Lodia, C. del C. 63, Buenos Aires (R. A.):

"You desire information about the printing offices of this state, but I regret my inability to supply you. I am too busy; indeed, know nothing about the printing trade. I send you a few papers, and below give a list of persons resident in your city, to whom you should apply for the desired particulars. Buenos Aires counts a goodly number of Bolivians among its population." * * *

Than the Republic of Bolivia, I have rarely had so much trouble in getting information of a South American state. Those indolent, lazy, effeminate, women-ridden people will never respond to an addressed reply-postcard, accompanied by some handsome periodicals, and an offer of services (which latter would be faithfully rendered at the bidding).

Weeks ago your *teniente-literario* called upon Santiago Vaca Guzman, Alsina 559 (legation of this Bolivian minister), and on P. Moscoso, secretario of legation, and S. F. Sanchez, at the consulate, Perú 106. All promised most faithfully the information sought: it would be sent me in a few days. Postal and residential addresses were left, but the Bolivia representatives never implemented their vows. Subsequently, I called on them twice. On both occasions they were out of house. I left my card as a slight reminder, but to no avail. How is this for discourteous?

By these letters, good is being done the Latin-American states, which the negligent *Bolivianos* seemingly fail to see. I claim that

the so-called "representatives" of Bolivia in Buenos Aires are unworthy of their posts, and should be turned out of office for their contemptible sluggishness and incompetency. One way to remedy this is to let the facts reach the ears of the government at the capital named in the first line, and that can be done by dispatching a copy—if the *redactor* would so favor the representative, his readers, and THE INLAND PRINTER—of the journal to the following representative Bolivian newspapers: *El Heraldo*, Cochabamba; *El Comercio* and *La Patria*, La Paz; *El Pais*, Potosi; *El Amigo del Pais*, Santa Cruz; *La Capital*, *La Industria*, *La Nación*, and *La Prensa*, Sucre; and *La Democracia*, Tarija. The journals named are an index to the principal typographic establishments in the cities of Bolivia. Also, please remit a copy to *La Biblioteca Nacional*, Sucre.

The Bolivian papers give, in italics, mostly in the cablegraphic section, names of newspapers from whom they gather information. I have copied a few of the wonderfully misspelled words. They all signify papers in the United Kingdom: "Hecho," "Chiometi," "Freermaus Jornal," "Empress," "Evenigrens." What do they stand for? Well, after some cogitation, this: *Echo*, *Chronicle*, *Freeman's Journal*, *Express*, *Evening News*.

Among the batch of papers of *La República Boliviana* given your correspondent are two others from neighboring republics. One is *La Democracia*, the representative and oldest (yet only counting eight years) daily evening newspaper of Paraguay, appearing in that state's capital, Asunción. It is a medium-sized four-pager, natively printed, and has as Frenchified a look (every letter being from Paris) as any *diario* could have. The other sheet is *La Nación*, claiming a circulation of between 4,000 and 5,000, is two years old, and has, for a Bolivian northern state paper, a most creditable appearance. Wonderful to state, it is entirely set in *American* type. How neat those *redondo* (round) types look after the ill shaped, scraggily finished French fonts! *La Nación*, administrator and director—that is, editor and manager and publisher—of which is Marco Aurelio Gomez, sails twice a week from the printing office of *La Luz*, calle 13, á número 100, Bogotá, capital of the Republic of Colombia. Bogotá being right away inland, there must be a terrific task getting printing material from the coast up to the mountainous city. The lieutenant for advertisements of the bi-weekly under review in New York is Francisco Sellén, 40 Broadway. Some printing and stationery offices in Bogotá: "Libreria Barcelonesa," conducted by Felipe N. Curriols; Joaquin Comacho, "Libreria Colombiana"; printing office of the journal *El Sol*; J. Pombo and C. Obregón, proprietors of the "Directorio General de Bogotá" (which persons desirous of knowing more of this 100,000 population city are recommended to obtain); papelería of Fidel Pombo, of Portales de la Casa Consistorial; "Libreria Americana," calle Enfardeladores; Evaristo Enciso, bookbinder and bookseller (*encuadernador y librero*); printing office of *El Correo del Pacifico*. But enough of these extracts from the political, literary and noticiary periodical under remark—*el órgano de los principios de la regeneración*.

Dr. Fernando E. Gwachalla, chargé d'affaires of Bolivia in Perú, has had dedicated to him a small but interesting literary work. I acknowledge receipt of this exceedingly neatly gotten-up volume of fifty-five pages, from the printing office of Benito Gil, of Banco de Herrador 113, Lima. It is the substance of a reading by Doctor Joaquin Lemoine on the anniversary of the installation of the "Literary Circle" (*Círculo Literario*) of Lima some months back, on Clorinda Matto de Turner, the highly distinguished and first lady journalist of Perú, of whom, from this little brochure, is gathered the following information: Born in Cuzco the 11th November, 1853, she was early left an orphan, bearing, however, her hard lot with remarkable fortitude. Coming from a good stock (her father was Ramón Matto, and mother, Grimanesa Usandivares), she possessed considerable literary tastes and talents. Studying hard, in the National College at Cuzco, philosophy, natural history, geometry, medicine, etc., an early precocity was attained, and the future renowned authoress, whose effusions (that is, at least, some of them) upon Perú during the protracted '79-'82 struggle have been translated and inserted in the *London Times*,

quickly began to make her indent in the world. Marrying an Englishman, Joseph Turner, in July, 1874 (latter figure in the composition is a wrong font one, and battered slightly, almost causing hesitation as to whether it should be printed here 1 or 4), her married life was happy but brief. Clorinda is again *soledad*. During the Pacific coast war she directed the political-commercial newspaper, *La Bolsa*, of Arequipa. (This, by the by, was not her first journalistic adventure. In Cuzco, in April, 1876, she founded *El Recreo*.) The handsome Señora de Turner still follows her literary pursuits, residing in the town of Tinta, in a beautiful villa residence, province of Tupac-Amaru. A few of above notes are also culled from *El Plata Ilustrado*, a long since defunct weekly of Montevideo, from a lengthy illustrated article which appeared in January, 1886, issue, from the clever pen of Julio F. Sandoval, a Peruvian literarian of great capabilities.

Looking over, recently, a '65-published general guide of Bolivia, issued by Ernesto O. Rück (a German, presumably) from the "Imprenta Boliviana," Sucre, I was surprised at the fearfully strange typographic appearance of this 300-flimsy-paged work. The lines of the ordinary reading matter are just straight enough, but the numerous tables were fairly squabbled before printing. The work of the early Italian printers was infinitely superior to it. But this was Herr Rück's first publication (*primer año*) of his \$2 book; succeeding numbers were, doubtless, better than the one dated Sucre, Agosto 1 de 1865.

Some Bolivian papers received are: *La Estrella de Tarija*, of Palma 25, Tarija, founder (September 14, 1876), proprietor, director and editor of which is Thomás O'Connor D'Arlach; printer, Cárlos Arismendi; and publisher, Florencio Reinoso. It is a medium-sized bi-weekly, set in French and American type, and has a hand press that is a veritable curiosity. Before the writer lies an illustration of it. No time for details. Another time.

La Estrella del Oriente, of Santa Cruz de la Sierra (director and proprietor, Gil Antonio Peña) is a wretchedly gotten-up rag, nine years old, but contains some useful matter. Also to be noticed: *El País* (of this place), a political, industrial, religious and literary weekly; *La Dinamita*, of Sucre (satirical); and *El Siglo Industrial*, of La Paz, principal editors being Ladislao Cabrera and Julio Méndez.

El Heraldo, of Cochabamba, uses some American material. It is quite neatly printed. A notable advertisement in it is that of E. Vidal y cía, of the "Librería Americana," same city.

There are public libraries in all the cities of Bolivia above commented on. Also in Cruro, for a short time once the seat of government.

From 1825 to 1874 there had appeared in Bolivia 296 journals. La Paz has had 120, and Sucre 120—first having 80,000, and second 25,000 inhabitants. Population of entire republic is 2,300,000. Today there exist in the state about one hundred publications.

The first journal published in Bolivia appeared in 1826. It was called *El Cóndor*. Antonio José de Sucre and Facundo Infantas were the editors.

For several particulars on Bolivia I acknowledge my indebtedness to the distinguished and able Peruvian writer, Julio F. Sandoval, living at this period in Buenos Aires.

Even in Buenos Aires comparatively little is known about the Republics of Colombia, Paraguay and Bolivia. With the former of these two inland American countries—veritable mediterranean states—there certainly exist means of communication by water, very close at the best; but with the latter only packhorse traveling is known. Postal facilities between Argentina and the republics above named—in fact, with all the South American republics—are faulty in the extreme. I have sent over a score of applications to parties in Paraguay and Bolivia for particulars concerning the printing trade, but all in vain. Perú and Ecuador are likewise as bad off regarding proper conveyance of mails. Efforts, however, to open up occasional correspondence with responsible people in Chile, Uruguay and Brazil were more successful. No doubt considerable rascality, in a pecuniary direction, prevails among

any amount of small postoffice employés all over the continent, with the result that stamps are meanly filched off letters and newspapers, and the epistles and journals destroyed.

I will endeavor one of these days to take a run up to Asunción, and after thoroughly exploring this capital of Paraguay, intend, if there be time, continuing journeying to Bolivia's chief city, which is either La Paz, Chuquisaca or Sucre, Potosi, Cochabamba, or Tarija; indeed, so little is really known about the country in question that it is difficult to hit upon the proper capital.

An account of the republics of Paraguay and Bolivia—literally the heart of the great South American continent—will not fail to be of deep interest to readers in the States, particularly in view of the fact that the proposed three Americas railroad (a project, as one of Argentina's most consummate engineers expressed to the writer a few days since, in every respect feasible) will run through and completely open up Bolivia, and, skirting Paraguay, likewise confer an inestimable, invaluable boon on that republic. Then will the printing-machine manufacturers, typefounders, paper makers—in fact, all those engaged in trades coming under the category of printerdom—of the northern republic receive an impulse at once magnificent, spontaneous and lasting. They will practically have the whole South American market to themselves in ten years' time; and so soon as there is direct railroad communication from Buenos Aires to New York, the European makers will be as completely ousted from the supply of printing material to these republics as the North American manufacturers are at the present moment.

F. W. N. L.

THE TRADE SITUATION IN NEW YORK CITY.

To the Editor:

NEW YORK, April 6, 1889.

The activity in all lines of trades, which began with the opening of the spring, has not diminished, and there is little prospect of any falling off in business until the advent of the summer months. The job printers, lithographers, engravers, bookbinders and the associated interests, are all well supplied with orders that will require months to finish. Some of the book printers are complaining of unprofitable business, but the whole trouble is attributed to the sharp and almost ruinous competition extending over the entire country, and it would be unreasonable to hope for any betterment of the interest at present. As a leading printer says, "Let the book printers of the United States stop the cut-throat competition, and demand good prices for good work, and then live up to the prices established, and the ruin that is staring them in the face will be averted."

In response to questions as to the general state of trade, Theodore L. De Vinne, who is an excellent authority upon all matters connected with the typographical and publishing interests, furnishes THE INLAND PRINTER correspondent with the following information:

"The present condition of the book trade interests in the printing business is unsatisfactory. The competition of out-of-town offices is severely felt by houses that work on reprints chiefly. Offices that do higher grades of work do not complain so much. There are too many compositors out of work, but most of them are inferior workmen. The employing printers, as a society, will not take any part in the industrial parade that takes place in connection with the centennial celebration of the inauguration of President George Washington, which occurs on April 29, 30 and May 1. I do not know whether the journeymen printers will do so or not. The publishers of New York will be fairly represented by good exhibits at the Paris Exposition, but the printers will not be represented, neither individually, nor as The Typothetæ."

On February 13, New York Typographical Union, No. 6, made a formal offer to the book and job printers of this city to reduce the price of piece composition 3 and 6 cents per one thousand ems if the master printers would, in future, give preference to members of the union, the union on its part agreeing not to allow its members to work in any office where the agreement is not observed.

Being interrogated about the above proposition offered by the typographical union, Mr. De Vinne made the following statement:

"The master printers of New York, with few exceptions, had reduced the price made by the union in 1887, before the union had made its proposition for a reduction. Some offices have made even greater reductions (as low as 35 cents for manuscript and reprint), while others have not changed prices at all; but all master printers, without exception, refused to sign a document giving preference to union men. There is a general belief among most printers that uniformity as to a rate per thousand ems is not only impossible, but would be injurious if carried out. The offices that pay 43 cents do not object to the action of offices that get similar work done for 35 cents. All attempts to bring offices of these two classes in line have been failures."

At a special meeting of Typographical Union No. 6 it was resolved that power be given the officers of the union to make special arrangements toward making "card" offices in the establishments of employers doing certain kinds of work, and who were in direct competition with union offices.

Russell B. Harrison, son of President Harrison, has purchased from William J. Arkell an interest in *Frank Leslie's Weekly*. Mr. Harrison said that he would return to Montana in April, and take charge of *Frank Leslie's Weekly* from Chicago to the Pacific coast. When asked what department he would manage, Mr. Harrison replied, "The work will be so arranged as to give me the progressive West, and W. J. Arkell the enterprising East. My headquarters will be at Helena, Montana."

The annual ball of New York Typographical Union, No. 6, which was a magnificent affair, splendidly managed, has been held. Tammany Hall, on Fourteenth street, was the scene of the merry-making. The blaze of the letters, "Typographical Union No. 6," shone from the stage, and decorations were hung around the balcony, presenting a very pretty picture. Five hundred couples danced to the music discoursed by Bayne's 69th Regiment Band. Every member of the typographical union who could find time was present. There were also large delegations from Philadelphia, Boston, Hartford, and other places. The big hall of the wigwam, where the Tammany chiefs are wont to hold their solemn conferences, was brilliant with the shine of silk and the sparkle of dark eyes.

The following delegates will represent New York Typographical Union, No. 6, at the Denver convention next June: Robert Costello, David Kells, William Ferguson and Charles M. Maxwell.

George B. Post, the well-known architect, has drawn the plans for the great *World* building, to be erected on the site of French's Hotel. The new *World* building will be a sight worth seeing when it is completed, which will probably be in the fall of 1890.

It is understood that the employés of the *Mail and Express* have been admitted to a share of the profits of the paper, and that the first dividend has been declared. PRINTER-JOURNALIST.

FROM PHILADELPHIA.

To the Editor:

PHILADELPHIA, April 5, 1889.

In the first place, so far as printers and publishers are concerned, business is good; one might safely say, rushing. The medical-theological-map-fiction trade, and all other publishers, have come through a busy winter and spring, up to their eyes in business. The daily-paper people have no cause to complain. Our old *Inquirer* jumped out of its knickerbockers and into a modern suit, with younger brains and management, and is now making itself talked of for its strength.

Of course, everybody is going to Europe this year. McLaughlin, of the *Times*, is booked for early June, and a dozen or two will be on his heels, and what a time they will have! Slingerly, of the *Record*, is on his feet again, after a long sick spell, and is pushing his daily up toward the 115,000 daily limit, and is not forgetting his contract to build a thousand fine houses in the upper end of town. It is rather rough on us that none of our great editors have been chosen for foreign missions; but we can wait for late plums to ripen. I hear it stated on high-up authority that Editor Joseph D. Weeks, of the Pittsburgh *American Manufacturer*, is to be the

next superintendent of the United States census. He is exceptionally well equipped for such work. Robert P. Porter, of the *New York Press*, is also influentially backed.

Typographical Union No. 2 has had quite a tempest in a teapot over who should represent it at the coming Denver convention. There were eleven candidates in the field for the positions. Four delegates were to be chosen. Seven of the eleven were from newspaper offices, and four from job offices. The vote was as follows, the four first named being elected: Alexander Dunbar, Greene's, 536; Joseph C. Gibbs, Lippincott's, 502; Walter Faries, *News*, 512; David C. Doak, *Star*, 442; A. R. Foulke, *Ledger*, 415; William Kohler, Johnson's, 321; Winfield S. Donat, *Press*, 309; J. T. Richardson, *Times*, 256; B. J. McLaughlin, *Journal of United Labor*, 173; George N. Shepherd, Ashmead's, 172, and A. Schwebke, *Inquirer*, 89.

The following officers were then elected: President, Jacob Glaser; vice-president, John A. Dardis; financial secretary, William J. Bollman; treasurer, William A. Covington; doorkeeper, James A. Sawyer; trustees, Owen A. Duffie, Lawrence M. Meyer and Jacob J. Rupertus.

The Childs-Drexel fund is slowly growing. Our friend, Grattan Donnelly, an old newspaper man, is achieving quite a reputation as a playwright. His latest is having quite a run at the Arch.

Unionism is on the increase in Philadelphia, especially among the printers, and that, too, at a time when there is no great occasion for the manifestation of its powers. The relations of employers and employés are most friendly, except in a few instances. Sherman's composing office, on Ninth and Seventh streets, has closed down for want of work, and here and there complaints are made of dullness. Catalogue work is dull, as this is the off part of the year. The smaller job offices, where from three to ten hands are employed, are getting the worst of it. The older and larger concerns are all doing well. Editor Walsh, of *Lippincott's Magazine*, is over in New York on the *Herald*. Editor Byrnes, of the *New York Lock and Bell*, is making a success of that bright trade journal.

The Johnson Typefoundry people are four weeks behind with their orders. "Why," I asked. "Don't know, only know such is the fact." Founders from St. Louis, Cleveland and New York have been here and tell us they are not at all crowded. The other day I met an old friend in New York, once a tramp printer. He is now worth \$50,000 and has a valuable invention of his own, a galley, self-locking, full of good points. This galley is bound to find its way into every printing establishment in the country.

While there is no pronounced revolution against "plate" matter, there is a greater demand for purely local matter, and the country papers are setting more type.

Organized labor in Pennsylvania is touching the eight-hour question very gingerly at present. The printers are pretty well satisfied with things as they are. The members of the building trades would accept eight hours gladly; but as matters now stand it is a question whether they would make much of a fight for the reduction.

Our school of journalism is expected to facilitate the preparation of young men for newspaper work, but at present there does not seem to be any room, certainly not at the lower end. Hard work wears off the charm.

The *Press* has been making lots of money, and wants a first-class site on Chestnut street for a grand building. The old rookery it is in is no place for it. No new papers are talked of. The *Call* needs more editorial work. The *News* plods along. The *Public* gave up the ghost. The *Telegraph* runs along in its old rut, and the *Bulletin* is the same—yesterday, today and forever. New York hurts us. We are too near for master journalism. Too many Philadelphians read the New York papers at their breakfast table. When they get through with them our home papers are tame.

Our city is growing like a young giant. This year 10,000 houses will probably be built; our debt is \$57,000,000; our taxes \$18.50 on the thousand; our gas \$1.50. M.

Six Regular Sizes—7 x 11, 9 x 13, 10 x 15, 11 x 17, 13 x 19, 14½ x 22.

Two Extra Strong Sizes for Boxmakers, Embossing, etc., 11 x 17 and 13 x 19.

The newly patented **Impression Throw-Off** is in the handiest place, right under the hand of the feeder, and being a solid eccentric, strengthens the press instead of weakening as throw-offs commonly do.

The newly patented **Gripper Movement** completely estops the battering of forms, as the grippers are at all times and under all circumstances entirely under the control of the operator, and inequality of action is simply made impossible.

The newly patented **Triple Combination Distribution** consists of rider rollers, improved fountain and improved ink disk movement, which in combination solve a problem long attempted by other press builders.

The "Liberty" ½th Medium requires only four revolutions to one impression, being thus 25 per cent faster than any other job press, as none requires less than five.

The "Liberty" Combination Brake and Shifter, stopping press and shifting belt in one operation, and applicable to the press running forward or backward, is a great convenience.

AND PRINTERS' WOOD GOODS,

AND DEALERS IN

NEW AND SECOND-HAND MACHINERY,

... TWO RIVERS, WIS. ...

We have recently greatly increased our facilities for the manufacture of **HOLLY AND END-WOOD TYPE**, and are now able to fill all orders without delay.

We handle **PRINTERS' AND BOOKBINDERS' MACHINERY** of all kinds.

We can sell Job and Cylinder Presses, Paper Cutters and other Machinery at as low figures as any house in the country.

We are the manufacturers of the **New HAMILTON-BOSS LOWER CASE**. In this case the thin spaces are brought down directly under the hand of the compositor, which arrangement enables him to set up or distribute from 10 to 25 per cent more matter in the same length of time than with the old lower case. Price, same as the old case.

Send for our Specimen Book of Wood Type and Catalogue of Wood Goods, and for prices on any machinery that you may need.

"THE WETTER"

Consecutive Numbering Machine.

PATENTED.

May 26, 1885.

October 16, 1888.

PRICE

\$25.00

The increasing demand for the WETTER NUMBERING MACHINE from the general printers throughout the United States proves the usefulness of them. It is the only Numbering Machine made that can be locked in a form and work consecutively at each impression of the press. They can be used on any style or make of printing press. All machines guaranteed. For circular and prices address

JOSEPH WETTER & CO.,

28 & 30 MORTON ST. BROOKLYN, N.Y.

SPECIAL.

We have the best equipped Numbering Machine Factory in the United States, and are prepared to furnish estimates on all manner of Numbering Machines, particularly those used on coupon presses.

Specimen of Ives Process Engraving, by the CROSSCUP & WEST ENGRAVING COMPANY, 907 Filbert street, Philadelphia, Pa.

“ BOTH PUZZLED. ”

“ But, sir, if once naught makes nothing, twice naught must make something. ”

PERSONAL.

We acknowledge visits from the following gentlemen during the past month: Samuel R. Carter, superintendent Post-Express Printing Company, Rochester, New York; Fletcher Randolph, Baker & Randolph, Indianapolis, Indiana; C. E. Loomis, Amboy, Illinois; F. Kalkhoff, Moss Engraving Company, New York; R. T. Brown and W. Downing, of the Brown Folding Machine Company, Erie, Pa.; F. L. Hurlbut, president Buffalo Printing Ink Works, Buffalo, New York; H. J. Pickering, treasurer and manager, the Omaha Typefoundry, Omaha.

NOTES FROM ST. LOUIS.

TRADE is fairly good and collections somewhat better, and the outlook, while not bright, is not discouraging.

THE Typothetæ is making fine progress toward making arrangements to right royally entertain their visitors next fall.

THE Central Typefoundry and the St. Louis Printers' Supply Company have each issued new specimen books recently.

MILLER & SPALDING have evidenced a growth of business in having increased their floor space with the occupying of an additional room.

THE city political campaign that has just closed was very sharply fought, and all the papers did yeoman service for their respective parties.

NIXON-JONES now have their presses removed to their new pressroom and everything is running finely. They have just put in one of the new Huber presses.

THERE has been a change made in the management of the Johann Palmer Printing Company lately, whereby Mr. Cole retires and Mr. Robinson succeeds him as secretary of the company.

THE building on Olive street, in which the Gottschalk Printing Company have had their offices, is being torn down to make place for a new building. The Printing Company is now located on Pine street.

IN our recent city election one of our printers, S. F. Myerson, was elected to represent his ward in the house of delegates. Hence, the printers of the city need not fear that their interests will not be looked after in the city government.

MR. C. E. MEADE, formerly editor of the Sunday Sayings, and lately connected with the Globe-Democrat and the defunct Sunday World, has been tendered and has accepted the position of private secretary to the new city mayor, E. A. Noonan. Editors are always at a premium as secretaries to public officials.

THE PRINCESS.

ANSWERS TO CORRESPONDENTS.

R. P. T., Iron Mountain, Michigan, writes: I have met with a difficulty which is new to me. After several attempts I have produced a roller for my Potter power press that in each case was smooth and free from air-holes, but with flat spots on it as big as a dollar. Composition used is Van Bibber's Rough and Ready, carefully prepared according to directions. Roller mold thoroughly warmed before the composition was run into it, and allowed to cool gradually. Can you tell what the difficulty is?

Answer.—The fault was certainly not with the operator as the roller was properly cast, and in the best manner; neither was it in the mold, nor in the composition, as he states that the roller was solid. What, then, caused the spots referred to? A bubble of air was inclosed between the outer surface of the composition and the surface of the mold. Perhaps the pouring was done too hurriedly. Sometimes air gets entangled in this manner, but it is generally in the form of a long flat streak, running down the length of the roller. Of course, the roller should be cast over at once. The composition should be thin enough to pour easily (if too thick it needs a little water), and should be poured very slowly on the end of the core. Before pouring, the kettle should stand quiet ten minutes or so, in a warm place, to allow all air and steam bubbles to come to the surface and form a scum. This scum should be skimmed off before pouring.

J. I. R., Sulphur Springs, Benton county, Arkansas, asks: Can you oblige a subscriber by giving a table showing the new "Font Scheme," that is, the relative proportion of letters in a, say, 4 A, 6 A, or 10 A font. Also, whether there is any difference in the proportions of fine job letters, large or small, and the common bread and butter faces, such as antiques, gothics, romans, etc.?

Answer.—1. The following is the latest scheme with which we are acquainted. 2. The proportions are the same.

INITIAL CAP SCHEMES FOR JOB LETTER.

Table with 26 columns (A-Z) and 26 rows (A-Z) showing numerical proportions for initial cap schemes. The values are arranged in a grid format.

When the Caps are used with Lower Case the quantity of Figures varies according to the proportions of the combination.

LOWER CASE SCHEMES FOR JOB LETTER.

Table with 26 columns (a-z) and 26 rows (a-z) showing numerical proportions for lower case schemes. The values are arranged in a grid format.

When A, B, C, etc. are not made, increase the C to the same number as B.

MR. JOHN ARMSTRONG.

We herewith present to our readers a portrait and biographical sketch of a printer well known to the craft throughout the United States and Canada, and who has occupied the proud position of president of the International Typographical Union, Mr. John Armstrong, of Toronto. Mr. Armstrong was born in the County Monaghan, Ireland, and immigrated with his parents to Canada in the latter part of 1852, settling in Toronto, of which city he has since been a resident. Taking advantage of the excellent school system for which the Province of Ontario has so long been noted, he secured a thorough rudimentary education, which has stood him in good need in his subsequent career. His introduction to the mysteries of the "art preservative" was in the composing room of the Toronto *Globe*, his tutor being Mr. C. W. Bunting, now proprietor of the Toronto *Mail*. Mr. E. T. Clarke, Toronto's popular mayor, being an apprentice in the same establishment, "John" and "Ed," as they were familiarly called, then formed a friendship which has remained unbroken until the present day. Side by side they fought for business, and such fighting was no child's play, as after years proved. During his apprenticeship he was noted for the intense interest he took in the welfare of his fellow-men, and before he was out of his time he was regarded by his associates as an avowed champion of the cause of labor. On completing his apprenticeship he immediately connected himself with Toronto Typographical Union, and soon became one of its most ardent workers. He was recognized as a prominent leader in the "nine-hour" movement, which was in-

augurated by a combination of trades unions in Toronto, in 1872, and ably and earnestly advocated the curtailment of the hours of labor by tongue and pen. The local typographical union took the initiative in bringing about this desired end, and what is known as the "big strike" followed. During this exciting time Messrs. Armstrong and Clarke, and twenty-five other members were arrested at the instance of the late Hon. George Brown, and the Master Printers' Association, under an almost obsolete law, known as the "Conspiracy Act." After several adjournments of the case they were finally arraigned before a police magistrate, by whom they were committed for trial to the next court of competent jurisdiction. Bail was accepted, but Armstrong and Clarke refused to avail themselves of it until all of their fellows who had been arrested with them had also secured it. The sympathy of the entire public was strongly manifested in favor of the prosecuted typos, and bail was lavishly proffered for their appearance when

called upon. Sir John A. Macdonald, leader of the Parliament of Canada, introduced a bill at that session (the bill was pushed through in three days) repealing the "Conspiracy Act," and it having been passed, the indictments against the strikers was quashed before the Assize Court met. This bitter contest lasted for more than three months, during which time several daily papers ceased to exist. Finally, the Master Printers' Association acceded to the shortening of the hours of labor, and thus ended one of the longest and most hotly conducted strikes that ever occurred in the Dominion of Canada.

In 1875 Mr. Armstrong was chosen president of Toronto Typographical Union, which position he filled with honor to himself and benefit to the organization. In 1876 he was elected delegate to the International Convention at Philadelphia, where he was chosen corresponding secretary, and thus brought to Canada the first executive office it ever had. During his incumbency he worked zealously for the cause of unionism and the extension of international principles, and succeeded in establishing a closer bond of fellowship between the typographical unions of the United States, Canada and Great Britain. At the convention held in Louisville, Kentucky, the following year he was reelected to the same position—a gratifying recognition of his past services. At the session of 1878, held in Detroit, he was elected president by acclamation, a position for which his executive ability and foresight eminently fitted him. He likewise presided over the convention in Washington, D. C., in 1879, and was chairman of the Reception Committee, at the Toronto session, in 1881, in which capacity he proved himself the prince of "good fellows," and where he

was dubbed by the late George Clarke, "the president-elect," the "genial John," an appellation which has remained with him since. During the convention, a movement was inaugurated which eventuated in the formation of the Toronto Trade and Labor Council, of which Mr. Armstrong has since been an active member. During his term of organizer for the Province of Ontario he founded typographical unions in Kingston, Brantford and St. Catharines, as well as several other labor organizations in the province.

In the autumn of 1887, the Parliament of Canada deemed it advisable to form a royal labor commission, for the purpose of investigating the relations existing between capital and labor, and Mr. Armstrong was selected by the government as one of the labor representatives. The sittings of the commission occupied six months, and held sessions in the Provinces of Ontario, Quebec, New Brunswick and Nova Scotia. From the accounts of the

proceedings which appeared in the public press at the time, and the votes of thanks which he received from the labor bodies — among which may be mentioned the Ottawa Molders' Union, Trades Council of Montreal, and the Ship Laborers' Union of Quebec — it may be accepted that his earnest efforts in behalf of labor's interests in his capacity of labor commissioner — merited their fullest approbation.

At present, Mr. Armstrong is chairman of the Municipal Committee of the Trades and Labor Council, of Toronto; financial secretary of the typographical union; master workman of a local assembly, and member of the district assembly of the Knights of Labor. Although unknown as a politician, his political leanings are toward the conservative party, and he is a firm believer in protection, or, rather, what Canadians call the "National Policy." Being unmarried his family ties are centered in supporting an aged mother, who is justly proud of her big boy. He is of a genial disposition, and enjoys the reputation of being upright in all his transactions, his strict integrity enhancing him in the opinion of his fellow craftsmen. He is one of the most popular and best known trades unionists in the Dominion, and has many warm friends and acquaintances on this side of the line.

RECENT PATENTS.

The following list of patents relating to the printing interests, granted during the past month, is specially reported by Franklin H. Hough, solicitor of American and foreign patents, 925 F street N.-W., Washington, D. C., who will furnish copies of patents for 25 cents each.

ISSUE OF MARCH 5, 1889.

399,220—Adjustable fly-table for printing presses. R. Timroth, Chicago, Ill.
398,852—Stereotype-plate holder. W. G. Slauson, Middletown, N. Y.

ISSUE OF MARCH 12, 1889.

399,368—Printers' quoin. M. W. Berryman, New York City.
399,384—Feed gauge for printing presses. L. Conant, Oak Park, Ill.
399,282—Gripper mechanism for platen printing presses. W. H. Price, Jr., Cleveland, Ohio.

ISSUE OF MARCH 19, 1889.

399,559—Printing newspapers and pamphlets. J. L. Firm, Jersey City.

ISSUE OF MARCH 26, 1889.

400,078—Printing block or type. S. Jones, Tranmere, England.
400,269—Printing machine, Rotary. C. A. Thompson, New York, N. Y.
400,221, etc. (three patents) —Printing machines, Ink-distributing apparatus for. J. T. King, Madison, Wis.

TRADE NEWS.

OBLINGER & BLAKELY, printers, Toledo, Ohio, have sold out.

L. B. STANTON & Co., printers, Grand Rapids, Michigan, have sold out.

THE Bullard Art Publishing Company, Worcester, Massachusetts, has failed.

LINCOLN & THAYER, printers, Denver, Nebraska, have dissolved partnership.

THE Braham Printing Company, Louisville, Kentucky, has made an assignment.

HORACE BINDER, printer, Philadelphia, has been succeeded by the firm of Binder & Kelley.

D. G. HOLT, printer and publisher, Medicine Hat, Northwest Territories, has sold out.

THE firm of M. N. Tomlin, printer, Des Moines, Iowa, has been changed to M. N. Tomlin & Co.

THE Wertheimer Printing Company, Cleveland, has been succeeded by Strauss & Oppenheimer.

BOTSFORD BROTHERS, proprietors of the Auburn Paper Company, at Grand Rapids, Michigan, have dissolved partnership.

THE new style noiseless "Liberty" jobber has been awarded first prize at the International Exhibition in Barcelona, Spain.

THE Morgans & Wilcox Manufacturing Company announce new faces in wood type, new sizes of the Eckerson press and several new products, among them steel rule for poster work, skeleton steel furniture for block work, ruled mahogany blocks for

fine cut and color work, steel bearers for job presses, and the Acme distributing block for loosening up metal type without injury.

EVANS & MILLIKEN, printers and publishers, Amesbury, Massachusetts, have dissolved partnership. The firm is now Evans & Richards.

F. O. SAWYER & Co., wholesale paper dealers, St. Louis, has been incorporated, and the style of the new concern is the F. O. Sawyer Paper Company.

THE Dean Printing and Publishing Company, with capital stock of \$30,000, has just been organized in Grand Rapids, Michigan. The company is organized principally to do the work of the Masonic fraternity and the G. R. & I. railroad.

THE certificate of incorporation of the Kennedy Publishing Company, of New York, has been filed. The capital stock is fixed at \$200,000, and the trustees are John Kennedy, William J. Arkell, Isaac O. Crissy, William J. Merrill and Bernard Gillam.

MESSRS. HOOPER & WILSON, manufacturers and dealers in printers' supplies, of Boston, Massachusetts, are issuing a new illustrated catalogue. In it they will describe, show and price all their many specialties. The catalogue will be a valuable one to have in any office.

AT a recent meeting of the creditors of the Bufford's Sons' Lithographic Company, Boston, the statement submitted of the firm's affairs showed the unsecured liabilities, exclusive of capital stock, are about \$70,000, and the nominal assets about \$200,000. The prevailing opinion was the creditors would be paid in full.

MESSRS. GUESSAR & FERLET, printers, have opened business under the name of "Times Printing House," at San Antonio, Texas. Both are excellent workmen. Mr. Guessar has been connected with the well-known firm of Woodward & Tiernan, St. Louis, for years, and Mr. Ferlet was formerly identified with the Great Western Printing Company of the same city. Success to you, gentlemen.

MR. LEON L. BROCKWAY, of Oswego, New York, recently purchased the entire business of C. D. Mosher & Co., of Hornersville, consisting of the manufacture of ribbon badges of every description for secret societies, etc., which they had followed for nine years, securing during that time a reputation for fine work. Mr. Brockway is prepared to execute all orders for gold leaf and lithograph work on ribbon.

IN this issue appears the advertisement of the St. Louis Typefoundry, located at Third and Vine streets, St. Louis, Missouri. This is one of the oldest typefoundries and paper warehouses in the West, having been established in 1840. It was incorporated in 1861, and again in 1886. Through the medium of their advertisement they will talk to the readers of THE INLAND PRINTER for the coming twelve months, at least.

H. P. FEISTER, proprietor of the Franklin Machine Works, Philadelphia, has removed his works to 123 and 125 North Fifth street, where he has increased room and facilities commensurate with the increased demands being made upon him. We expect soon to introduce Mr. Feister to our many thousands of readers through the medium of an advertisement in THE INLAND PRINTER. When he does come in he will interest you, for he knows what he wants to say, and knows just how to say it. Look out for his debut in these pages.

THE Manhattan Typefoundry, of 198 William street, New York, has purchased the entire plant and good will of Mr. Philip Heinrich's typefoundry, established in 1855, thus adding 45,000 matrices, a number of casting machines and other valuable appliances to its already large facilities. The typefoundry of Mr. Heinrich is especially rich in a variety of German type, of which it made a specialty for many years past, but it had also a line of beautiful romans, which, in connection with its own faces, makes the Manhattan Typefoundry second to none in the United States. Since the change in its ownership, the business enterprise and energy displayed by the new management has been fully recognized, and we feel satisfied that the new step taken is a move in the right direction.

THE CROSSCUP & WEST ENGRAVING COMPANY.

Among the many first-class photo-engraving establishments in the United States none occupy a more prominent position than that of the Crosscup & West Engraving Company, 907 Filbert street, Philadelphia, whose artistic productions have so long been familiar to the readers of *THE INLAND PRINTER*. Ever since the invention of photography a great many substitutes for hand-engraving have been tried and abandoned, but it remained for Mr. J. E. Ives—whose portrait is herewith presented—to *invent* (in 1878) the first method of direct photographic engraving which

MR. F. D. IVES, INVENTOR OF THE "IVES PROCESS."

proved capable of successful commercial operation, and which was perfected in the establishment of Crosscup & West. This method at the start adopted substantially the same pattern of block cross lines in the shadows and white cross lines in the lights which was subsequently adopted by Meisenbach, in Europe, and afterward by all successful operators. The Crosscup & West Company operated this process exclusively until 1886, when Mr. Ives succeeded in applying his principle of a graduated line in a more direct way. In the early part of 1888, still further progress was made, and the Ives process of today—now used by this firm—is said to produce directly from the copy, by a single exposure, definite negatives, with lines and dots as sharp and clean as are made from drawings, and graduated to reproduce the most delicate contrasts of light and shade. The plates are produced in hard rolled copper, making a very perfect and very durable printing surface.

This firm also does all kinds of relief plate engraving.

A SECOND ballot has just been taken by the London Society of Compositors on the eight-hour movement. The executive, at the request of the London Trades Council, considered it necessary, and instructed their secretary to take steps for testing the question a second time. Mr. C. J. Drummond, the secretary, sent out 5,075 papers asking the question, "Are you in favor of an eight-hour day?" There were 3,984 papers accounted for; 2,201 votes were given in favor of the proposition and 1,411 against it, while 372 remained neutral. There were 1,062 papers unaccounted for, and 29 were informal. To the other question, "Are you in favor of it being obtained by act of parliament?" 1,578 answered yes, 561 no, and 672 were neutral.—*Printers' Register, London.*

SPECIMENS RECEIVED.

LANE BROTHERS, Hyde Park, Massachusetts. Several specimens of neat and clean unpretentious every-day work.

KELLER PRINTING COMPANY, Evansville, Indiana. An illustrated catalogue of sixty-four pages, printed in black and green, the composition and presswork of which reflect credit on the establishment turning it out.

JOHN S. BRIDGES & Co., Baltimore. A small sixteen-page pamphlet, devoted to the interest of the firm, in purple ink, clearly printed on highly finished paper of different colors and tied with a silken ribbon. We wish Baltimore had a few more offices capable of turning out such work.

VIRGINIA STEAM PRINTING HOUSE, Lynchburg, Virginia. A number of letter, bill and note heads, programmes, circulars, etc., most of which are very creditable specimens of typography. We do not think it in good taste, however, either in a letterhead or circular to have five or six ornamental lines follow each other.

J. & A. McMILLAN, St. John, New Brunswick. Programme and bill of fare of annual dinner of the Charitable Irish Society, in green and gold. Some of the best work which we receive is the production of this establishment, and the specimen now before us is in every way worthy of it.

THE REPUBLICAN COMPANY, Rushville, Indiana. Firm letter and note heads and business cards in colors, of which we cannot speak too highly. The billhead, especially, is an artistic piece of work. It is neatly designed and executed, effective and harmonious in coloring. It is the production of a man who knows his business.

ANDREWS & BAPTIST, Richmond, Virginia. Handsome brochure and business card, both in colors and handsomely executed. The material used is of the latest and most approved character; the coloring is first-class, and the presswork leaves nothing to be desired. Richmond should be proud of a firm able to turn out such work. It does us good to look at it.

KELLOGG PRINTING COMPANY, Providence, Rhode Island. Over five hundred specimens of all kinds of printing, ranging from a poster to an address card, and, without exception, every sample received is worthy of commendation; for no matter whether we examine a dodger or a truly artistic production, "a first-class job" may appropriately be applied to both of them. We propose to distribute them to advantage.

ALSO from G. H. Powell, Peabody, Mass., several specimens of merit; H. M. Lee & Brother, Los Angeles, Cal., whose business card is an artistic production; Eaton V. Reed, Brockton, Mass.; Charles B. Longwell, Logansport, Ind., several neatly executed business cards, presswork very good; W. P. Harmon, Minneapolis, cleverly designed and unique business card, well printed; A. L. Fyfe, Chicago; The Olmstead Company, Denver, Col.; Blizzard & Co., Toronto, Ont.; Caldwell Printing Company, Birmingham, Ala.; Charles H. Possons, Glens Falls, N. Y.; Maxwell, Johnston & Co., Toronto, Ont.; Daily Chronicle Office, Marshall, Mich., a number of excellent samples of general job work; Joseph Burnett, Montreal, two samples, both of which are a disgrace to any city, and which, we should judge, were issued by a Cheap John; Will W. Sherwood, Garrettsville, Ohio; R. J. Kuhl, Mansfield, Ohio; Patterson & White, 607 Chestnut street, Philadelphia, Pa.; M. W. Fisher, 19 West Market street, York, Pa.; W. D. Page, Fort Wayne, Ind.; H. M. Lee & Bro., 8 North Spring street, Los Angeles, Cal.; Willenburg Bros., 1311 East Baltimore street, Baltimore, Md., and E. R. Botsford, Portland, Ore., a varied selection of specimens, all of which give evidence of taste and ability on the part of both compositors and pressmen; Times Job Printing House, San Antonio, Texas, several samples of work, unique in design and attractive in appearance; R. C. Harding, Napier, New Zealand, an almanac and diary, full of valuable information, gotten up in first-class style.

CHICAGO NOTES.

FIVE new frames were recently given out on the *Inter Ocean* of this city.

THE tombstone makers of the United States are represented by an organ recently established, the *Monumental News*, of Chicago.

IT is reported that the management of the *Evening Journal* office is about to place several Thorne typesetting machines in their composing room.

THE plant of the Clark & Longley Printing Company was sold on March 18 for \$10,000 to H. Hartt & Co. Other bidders were the J. W. Butler Paper Company, \$9,200; Marder, Luse & Co., \$8,600.

RUDOLPH TIMROTH, a well-known pressman of this city, has patented an adjustable fly table for printing machines. Mr. Robert Miehle, inventor of the "Miehle" press, also of Chicago, has patented a sheet-delivery apparatus.

JULIUS HEINEMANN & Co., manufacturers of brass rules, leads, slugs and metal furniture, 50 and 52 Madison street, are now turning up some of the best material in their line which can be found in the market. Give them a trial.

THE March number of the *Beacon*, a monthly journal devoted to the interests of photography in all its phases, conducted by the Beacon Publishing Company and printed by the house of H. O. Shepard & Co., is more than an ordinarily interesting issue.

AT the last Paper Trade Club dinner, given at the Palmer House, March 21, a review of the paper trade of Chicago was read. According to this statement the sales of paper here in 1888 amounted to \$33,900,000, being the fourth largest industry in this city.

J. S. GILLESPIE, a printer residing at Washington Heights, and employed in the establishment of Poole Brothers, dropped dead shortly after reaching the cars, on Wednesday evening, April 3, while on his way home. Fearing he was too late for the train, he had run for a considerable distance to catch it, and expired almost as soon as it was reached. It is supposed heart disease was the cause of death.

F. P. ELLIOTT, of F. P. Elliott & Co., 208-210 Randolph street, has just returned from a somewhat extended southern and eastern trip, during which he spent some time at Old Point Comfort, Richmond, Washington and Philadelphia. He returns invigorated in mind and body, and wishes it distinctly understood that his business interests are of too important a nature to permit him to accept the postoffice appointment his many friends were determined to thrust upon him.

THOMAS H. FAULKNER, who has been for a number of years foreman of the composing room of the J. M. W. Jones Company, has severed his connection with that house to accept the position of superintendent of Stromberg, Allen & Co's printing establishment, 347-351 Dearborn street. On Saturday afternoon, March 30, his former associates presented him with a handsome diamond pin as a slight testimonial of their regard for him as a printer and foreman.

A SHORT time ago Mr. E. P. Donnell, of this city, made a circuit which is worth referring to. He went from Chicago to St. Louis, St. Louis to New Orleans, New Orleans to Birmingham, Alabama; Birmingham to Nashville, Nashville to Louisville, Louisville to Chicago, Chicago to Pittsburgh, Pittsburgh to Philadelphia, Philadelphia to New York, New York to Boston, Boston to Chicago, Chicago to Lima, Ohio; Lima to Cleveland, Cleveland to Toledo, Toledo to Chicago, Chicago to St. Paul and Minneapolis and return, inside of four weeks. This is Chicago enterprise.

MR. JOHN BUCKIE, Jr., a well-known citizen who, for the past thirty years, has been prominently identified with the printing interests of Chicago in various capacities, died at his residence, 81 Hammond street, on Wednesday, April 10, in the fifty-first year of his age. His death, though sudden, was not unexpected, as he had long been in a delicate state of health. The funeral, which

took place on Sunday afternoon, April 14, was very largely attended. The floral tributes were exceedingly beautiful and numerous. The pall-bearers were selected from the Firemen's Benevolent Association, the pressmen's union (of which deceased was a charter member), and the Old-Time Printers' Association, with all of which he had long been identified. The pressmen's organization attended in a body, and made an exceedingly creditable appearance, and as each member viewed the remains, deposited a white rosebud on the casket. It is seldom so many old residents are met with on any occasion, and their attendance showed the high esteem in which the deceased was held. Mr. Buckie was a native of Glasgow, Scotland, but was a thorough American in every sense of the word. He was a kind husband, an indulgent parent, a firm friend, and a worthy citizen. Peace to his ashes!

THE following is the result of the election for officers of the Chicago Typographical Union for the ensuing year, held Wednesday, March 27. The friends of the various candidates worked like beavers, though the best of feeling prevailed: President—Charles E. Cobb, 381; James B. Fullerton, 402. Vice-president—O. G. Wood, 761. Board of trustees—James C. Hutchins, chairman, 764; Albert H. Brown, 755; Charles G. Stivers, 709. Secretary-treasurer—William McEvoy, 502; George T. McNamara, 276. Recording secretary—W. G. Crow, 452; Charles T. Gould, 311. Delegates to International Typographical Convention—Martin Burke, 215; John Canty, 252; William J. Creevy, 107; William Cruikshank, 251; William J. Cushing, 328; William A. Hollabaugh, 41; William T. Lumsden, 340; J. B. McDonald, 263; Samuel Rastall, 195; Harry S. Streat, 255; V. B. Williams, 258; James Wright, 385. Sergeant-at-arms—Joseph A. Bryan, 126; Albert A. Mock, 284; William J. Teed, 357.

AN INTERESTING EXHIBITION.—On Wednesday afternoon, April 3, a party of well-known citizens, including architects, painters, builders and prominent business men, assembled in the yards of the Alston Manufacturing Company's paint works (Wade, Currier and Crittenden streets), to witness a practical and decisive test as to the merits of a newly discovered formula now used by this company, which, it is claimed, enables them to produce whites, greens and yellows which are practically unchangeable. The first test was a severe but satisfactory one. The interior walls of a large wooden box, painted in one coat of ordinary white, and in one, two and three coats of the Alston Company's unchangeable white had been hung with sample strips of their unchangeable greens, yellows and whites, together with slabs painted in the best greens, yellows and whites offered in competition by leading painters and prominent dealers. In this closed box a pitcher of muriatic acid, sulphureted of iron immersed in water, was left for half an hour for the abundant generation of sulphide of hydrogen, and to demonstrate its action on the paints. When the cover was removed the Alston Company's unchangeables were found to be absolutely untarnished by the ordeal to which they had been subjected, while the others were darkened as by years of atmospheric exposure; and as all had been subjected to the same agency, the superiority of the one over the other admitted of no controversy. The second test was shown in a smaller glass box, containing dishes of dry colors, the Alston Company's unchangeable whites, greens and yellows again competing with those of other firms, the box being charged through a tube, with sulphide of hydrogen. Here the action of the gas soon became apparent, for, in a few minutes the competing whites were turned to positive black, the yellows to dark brown and the greens to a very dark shade, while *not the slightest discoloration* appeared on the Alston Company's colors. As the radical defects of modern paints is their sensibility to the sun, to wind, weather, and above all to the domestic gases; and as white lead, long the base and standard of the world, is partially soluble in water, and fails under exposure to the elements, while the brilliancy of the most positive greens and yellows, heretofore in use, is quickly lost under action of the common domestic gases, the value of the formula and the results of the experiment here given may be inferred.

NEWSPAPER GOSSIP.

THE postage, yearly, on the Detroit *Free Press* is \$10,000.

J. U. ROLAND has started a new seven-column folio at Ridgeville, Indiana.

A NEW paper, called the *Herald*, has made its appearance at Peoria, Illinois.

THE *World*, an evening daily, is the latest newspaper venture in Kansas City.

THE Arkansas Press Association convenes in Bentonville on the first Monday in May.

THE *Sunday Standard* made its first appearance March 10, at Newark, New Jersey.

THE *Evening Herald*, of Rome, Georgia, has discontinued publication, after sinking \$30,000.

LANE & THOMAS are the publishers of a new paper at Athens, Alabama, called the *Democrat*.

THE New York *World*, March 18, appeared on green paper as a passing honor to St. Patrick's Day.

THE Camden (N. J.) *Morning News*, a six-column quarto, has made its introductory bow to the public.

JOVE is a comic monthly, quarto, with colored illustrations, published at Brattleboro, Vermont, by Frank E. Housh & Co.

L. A. MARTIVET has started the *Crusader*, a republican organ for colored people, at New Orleans, Louisiana.

THE Springfield (Mass.) *Trade Journal* has been so successful as a monthly that it has been changed to a weekly.

THE Georgia Press Association will make an extended western trip next summer, probably about the first week in June.

THE *Sunday Sporting Journal*, a paper devoted exclusively to sporting matters, has been started in Newark, New Jersey.

El Sabado Secreto, the pioneer Jewish newspaper in Mexico, has been started at the capital by Elias Abarbanel y David.

THE *Baptist Reporter*, of Guyton, Georgia, and the *Baptist Sun*, of Gainesville, have been consolidated, and moved to Macon.

A NEW labor paper, the *Zamania Banner*, has been launched in New York City. It is the mouthpiece of the Russian workers.

THE *Citizen*, of Birmingham, Alabama, has suspended. It will soon be revived and printed both at Birmingham and Marion.

THE Port Huron (Mich.) Common Council has passed an ordinance making it a \$25 offense to keep the Detroit *Sunday World* for sale.

A DAILY sporting paper, to be called the *Sporting Bulletin*, will be published in Newark, New Jersey, about April 15, devoted to base ball.

THE Buffalo (N. Y.) *Express* has been made the official paper of that city, and, in consequence, has added one column to each of its eight pages.

THE *Weekly Gazette* is the name of a neatly printed seven-column, four-page paper recently established at Russell, Russell county, Kansas.

C. SWEET, publisher of the *Kalkaskian*, Kalkaskia, Michigan, has been burned out. Loss \$7,000, covered by insurance to the extent of \$2,000.

THE *Star* is the name of a paper just started at Grand Rapids by Messrs. W. A. and C. S. Emerson. The drama is one of the *Star's* specialties.

A. M. GEHR has connected himself with the *American Volunteer*, published at Carlisle, Pennsylvania. The new firm will be known as that of J. Leamer & Co.

THE *Paisley Gazette*, published at Paisley, Burlington county, New Jersey, is the name of an eight-page monthly devoted to the interests of that thriving town.

THE *Mail and Express*, of New York, announces the purchase of the lot 203 Broadway and the lots Nos. 164 to 168 Fulton street, connecting with the Broadway lots in the rear, with the buildings

thereon, for \$362,000, and states that in time the buildings named will be occupied as the headquarters of the paper, and the new quarters will be second to none in the world.

THE first daily republican paper printed in Memphis, Tennessee, since the war, the *Evening Tribune*, has appeared. General Chalmers, of Mississippi, is editor.

THE *Record* is the name of a new English-German monthly, devoted to the interests of the Knights and Ladies of Honor, in Illinois, published in Chicago, by M. H. Grundling.

T. M. ROGERS, Quincy, Illinois, owner and editor of the *Daily News*, has sold out to H. W. Wheeler, owner and editor of the *Daily Journal*, and the papers now appear as the *Journal-News*.

THE *Saturday Globe*, Utica, New York, a weekly paper having a sworn circulation of 165,000 copies, announces that after January 1, 1890, it will discontinue the publication of all advertisements.

MR. HUGH CAMPBELL KENNEDY, founder and editor of the *Courier*, of Morrisburgh, Ontario, established in 1863, departed this life on Wednesday, March 20, in the fiftieth year of his age.

THE *German-American*, a national weekly, devoted to the interests of the German residents of the United States, is to be started in Washington in May next, by Richard Guenther, L. W. Habercorn and Paul Wolff, well-known journalists.

REGINALD J. SCHRÖDER, connected for an extended period with the *Staats-Zeitung* and the Brooklyn *Freie Presse*, has been made editor of the *Frank Leslie's Illustrated Zeitung* under the new management of W. J. Arkell and Russell B. Harrison.

THE Elmira (N. Y.) *Telegram* uses dodgers to boom its Sunday circulation, printing 60,000 a day on an Eckerson web press. The New York *World* has also ordered one for the same use. This press, we hear, is to be made to print both sides of the web, and in new sizes.

FROM the edition of George P. Rowell & Co's "American Newspaper Directory," published April 1 (its twenty-first year), it appears that the newspapers and periodicals of all kinds issued in the United States and Canada now number 17,107, showing a gain of 797 during the past twelve months, and of 7,882 in ten years.

OF INTEREST TO THE CRAFT.

SEVERAL unions, at the recent election, voted according to the Australian plan.

THERE are sixteen mutes in the composing room of the *Deaf Mute Record*, at Fulton, Missouri.

THE California legislature has passed the bill making the office of state printer an elective one.

LOUIS BURK, of Bloomington, Illinois, has accepted a position as artist for the *Mark Lane Express* in London.

GEORGE LAWRENCE, a compositor on the Lawrence (Ohio) *Democrat*, it is stated, has fallen heir to \$200,000.

THERE is some talk of consolidating the various pressmen's unions of New York City. Hope the project will go through.

TWO lady members of Columbia Union, No. 101, have engaged in the job printing business, and are reported to be doing well.

A MONUMENT is proposed to the memory of the late George Clark, ex-president of the International Typographical Union.

VICE-PRESIDENT COLUMBUS HALL, of Washington, D. C., recently paid a visit to New York City in the interest of the pressmen's union.

CHARLES LEIBRICH, of the *Enquirer*, and Scott Jackson, of the *Commercial-Gazette*, will represent the interests of Cincinnati union at the Denver convention.

THE election of Indianapolis union resulted as follows: President, W. A. Musser; vice-president, John F. White; recording secretary, W. W. Davy; financial secretary, H. C. Deck; treasurer, H. S. Garner; delegates, E. T. Oburn, J. O. Shultz.

WE acknowledge the receipt of an invitation to be present at the first annual ball of the St. Paul and Minneapolis Pressmen's Union, No. 14, on Saturday, May 4. The designs of the card and

invitation are attractive, unique and original, and are worthy of commendation.

THE union printers of San Francisco have a mutual aid society. The initiation fee is \$15, payable at \$1 per week until the full amount is paid. Its benefits are \$10 per week, and it also furnishes a physician and medicines.

THE New York *Staats-Zeitung* employés have received their annual dividend of ten per cent on their total earnings for the year. There are two hundred employés, and each and every one, from the chief editor to the office boy, received the dividend.

JOHN B. PARSHALL, a compositor in the Delhi (N. Y.) *Gazette* office, recently set up the notices of three golden weddings. He set up the marriage notices of the same couples fifty years ago. A remarkable coincidence truly, but one that contains a moral.

PRINTERS who have been unable to secure bound copies of the specimens furnished by Mr. Edward H. McClure, of the "American Printers' Specimen Exchange," Buffalo, New York, on account of the price heretofore charged, will welcome the unusually liberal offer to be found in the want column of the present issue of THE INLAND PRINTER. Parties interested should take advantage of the opportunity offered, and write to Mr. McClure, or watch the May number for further information.

A VALUED correspondent, in referring to the remedies for electricity in the pressroom, recently published in THE INLAND PRINTER, says, "Glycerine is a splendid article to rub on a tympan for short runs, but for an edition of several thousand, or where the press is allowed to stand over night, the glycerine will cause the tympan to gather and pucker badly, which will necessitate a change of tympan sheet. This applies to paper tympan sheets. Personally I use machine oil, well put on, twice a day, but if the paper be very cold even this will not do away with the electricity entirely."

AT a meeting of Toronto union, No. 91, held on Saturday, April 6, the following officers were installed for the ensuing year: President, William Prescott; vice-president, J. A. Mayerhoffer; treasurer, Edward How; recording secretary, Amos Pudsey; corresponding secretary, P. J. Griffin; financial secretary, John Armstrong, and the members composing the several standing committees. Delegates to the Trade and Labor Council, John Armstrong, W. H. Parr and George H. Dower. The retiring president, Joe T. Gilmour, was the unanimous choice to International Typographical Union convention.

THE following is the result of the election in St. Louis: President, George Harry Stone, 345; vice-president, John P. Marnell, 373; secretary (one to be elected), James Friel, Sr., 244; Charles H. Wells, 132; doorkeeper, Charles L. Woodbridge, 380; chairman of finance committee, B. Frank Heirs, 366; chairman of investigating committee, J. F. Miles, 377; board of trustees (three to be elected), George W. Buck, 332; S. D. Holden, 374; C. H. Lamoreaux, 313; delegates to International Union (two to be elected), C. P. Connolly, 175; O. R. Lake, 148; Priest, 143; A. G. Wines, 116; John T. Leonard, 84; Harry C. Cole, 48; delegates to the Trades and Labor Union (five to be elected), Charles M. Wilson, 245; Frank Hill, 243; Patrick Lane, 216; John T. Bulcock, 210; Louis P. Negele, 207; George S. Bonnell, 179; A. S. Leitch, 173; O. B. Rankin, 166.

FOREIGN.

LEIPSIK is the great center of German printing. There are in the city 103 printing offices at the present time.

Two new classes in typography have been formed in Edinburgh, Scotland—one in charge of George W. Jones, the "Premier of English Printers," the other in charge of M. J. Wilkie. It may be interesting to our fellow-laborers to know that over three hundred students attend the classes at Huddersfield.

THE *Illustrated London News* was started by a Nottingham barber, and it almost failed for want of funds many times. The barber became an M. P., and, it is said that his family now reap £30,000 a year clear from it. The *Graphic* is a limited company; it pays 138 per cent, and its income is over £30,000 net.

ITEMS OF INTEREST.

To extract ink from wood scour with sand wet with water and ammonia. Then rinse with strong saleratus water.

To make a white ink mix together thirty parts nitrate of lead, fifteen parts carbonate of potassium and fifty-five parts water, and you have here an excellent white ink.

THE New York *Sun* is authority for the statement that Mrs. Harrison has agreed to pay a clipping bureau \$100 a month for all the clippings about the Harrison family.

THE latest news in regard to Mr. Pulitzer, of the New York *World*, is that his eyesight is practically restored and that he will be able to return to his post of duty this spring.

THE new governor of Wisconsin, E. C. Hoard, is an editor, and one of his first official acts was to put six newspaper men in six prominent places. He is evidently a good man to hoard with.

To prevent warping in blocks and wood letter used in large bills, they should be placed in a large zinc basin, provided with an air-tight lid, and then thoroughly saturated with paraffine oil; after being left thus for four days, they should be wiped with a clean, dry rag.

DURING the year ended June 30, 1888, 1,867,173,140 ordinary postage stamps were issued by the government, and newspaper stamps to the number of 3,464,418. The value of these stamps was \$37,881,608. The total value of all stamps, postal cards, stamped envelopes, wrappers, etc., was \$50,636,321.64.

MR. L. C. BUFFINGTON, of Buffington & Garbrock, Cincinnati, who has been confined to his home by sickness since in January last, is reported convalescent, and expects soon to be again at his desk. His siege was a long one, and at times his life was despaired of. We are sure his many friends will rejoice over his recovery.

A MAGNIFICENT field of lithographic stone has been discovered in America on the ranch of a son of a very prominent Philadelphian. The stone has been thoroughly tested by experts in New York, and has been pronounced to be equal and in some cases better than the finest stone imported into this country from Bavaria.—*Philadelphia Inquirer*.

JOSEPH C. ISRAEL, New York City, has invented a printer's brush, which has a liquid-connecting vessel or compartment arranged in its top or back with a valve designed to allow small quantities of the liquid to be delivered to the bristles through the bristle-holding apertures, being especially adapted for use in cleaning printers' forms with benzine.

THE new building now constructing for the San Francisco *Chronicle* is to be not only fireproof, but earthquake proof also. The structure will rest on twenty-seven cast-steel columns, and these will be bolted together and connected by flat steel bands, double-bolted to each floor-beam which they cross. The whole will form a sort of cage, and it is claimed that this would stand intact if every bit of the masonry were shaken from its place.

A SIMPLE recipe is given in *L'Illustration* for making luminous paper. The composition consists of forty parts ordinary paper pulp, ten parts water, ten parts phosphorescent powder, one part gelatine and one part bichromate potassa. The phosphorescent powder is composed of sulphides of calcium, barium and strontium, well ground and mixed together. The bichromate of potassa, acting on the gelatine, renders the paper, which is manufactured in the ordinary way, impermeable.

La Typographie Française announces the discovery, by a printer of Vesoul, of a method of printing several colors at once, either by letterpress or lithography. The new process, it is stated, decreases by nearly seven-eighths the number of workings usually required in a form of eight colors. It also effects considerable saving by avoiding the loss occasioned through want of precision in the workings. It considerably lessens the quantity of ink used by suppressing the numerous washings usually required. By this means color printing can be done at a great reduction on former prices. The process also applies to chromo lithography.

PAPER TRADE ITEMS.

A PAPER MILL is under construction at Noblesville, Indiana.

I. SCHULMAN & Co., dealers in paper stock, etc., Minneapolis, have dissolved partnership.

THE Standard Wrapping Paper Company has been incorporated at Cleveland, with \$500,000 capital.

A MILL for the manufacture of wood fiber is to be built on the Blanchard privilege, at Franklin Falls, New Hampshire.

A SON of L. J. Powers, of the Powers' Paper Company, is said to have invented a machine which will make 66,000 envelopes per day.

THE Arapahoe Paper Company is a new firm of paper dealers at Denver, Colorado. J. G. Smith and W. L. Ames compose the company.

THE Kearney Paper Manufacturing Company, of Vilas, Miner county, Dakota, has filed articles of incorporation. Its capital stock is \$50,000.

THE Sandusky Paper Company, of Sandusky, Ohio, manufacture a fine grade of straw paper called "Old Gold," which is meeting with a ready sale.

THE Sangamon Paper Company, recently incorporated at Springfield, Illinois, will soon commence operations looking to the building or leasing of a mill.

OMAHA is to have what she too long needed—a new jobbing paper house. B. Wilson & Co., of Utica, New York, is the name of the firm taking it in hand.

THE firm name of Z. Crane, Jr., & Bro. was, on March 1, changed to Z. & W. M. Crane, owing to Mr. Zenas Crane having dropped the Jr. from his name.

THE Florence Paper Company has been incorporated at Appleton, Wisconsin, with a capital stock of \$300,000 by H. J. Rogers, A. L. Smith and F. H. Pietsch.

AT a regular meeting of the American Chemical Fiber Association, held in Boston, on Wednesday, March 20, C. H. Delano was elected president of that body.

JAMES M. WILCOX & Co., paper dealers, Philadelphia, have been succeeded by William F. Wilcox. The new firm name is The James M. Wilcox Paper Company.

THE failure of R. A. Sentman & Sons, paper dealers, Philadelphia, is announced. It is estimated the liabilities will reach upward of \$20,000, with assets insufficient to pay in full.

THE Miami Paper Mill Company, of Miamisburg, Ohio, assigned on Saturday, April 6, to Oscar F. Davison, of Dayton. Liabilities \$65,000, assets, nominally, \$75,000, in mill-site, stock and machinery.

THE New York Pulp Company, Hadley, New York, has been placed in the hands of a receiver. The annual report, January 31, showed the liabilities were \$50,900, including mortgage on property, and assets \$63,500.

THE Hennepin Paper Company, with a capital of \$1,000,000, was incorporated at St. Paul, Minnesota, on March 8. It will manufacture and sell paper. The incorporators are Benjamin F. Nelson, Thomas B. Walker, Gilbert M. Walker and Clarence I. McNair, all of Minneapolis.

THE Cuyahoga Paper Company, of Ohio, has recently secured a grant of five acres of land on the canal south of Lima, and a supply of natural gas for five years. This company proposes to erect a mill immediately. Its present mill produces colored poster paper, and the two mills will be about two hundred miles apart.

THE A. W. Keeney Paper Company, of Rockford, Illinois, made an assignment April 8, to Levi Rhoades, of the same place. The liabilities are placed at \$60,000 and assets at \$30,000. The low price of print paper is given as the cause. Unless a reaction takes place in the price of this product it will not surprise us any to hear of more failures, as print paper can hardly be made and sold for 3½ cents a pound and yield a profit commensurate with the capital invested.—*The Paper Mill.*

MARRIED.—On the 3d of April Mr. Robert Boyd, manager of the Denver branch of the Queen City Printing Ink Company, was united in wedlock to Miss Mary Butterworth, of La Porte, Indiana. The ceremony took place at the residence of the bride's parents, and was performed by the Rev. George M. Boyd, of Valparaiso, father of the groom. The presents were elegant, numerous and costly. THE INLAND PRINTER wishes Mr. Boyd and his fair bride health, wealth and prosperity, and many years of married bliss.

DENVER TYPO. UNION ARRANGEMENT COMMITTEE

— FOR —

I. T. U. CONVENTION IN JUNE.

O. L. SMITH, Chairman.

J. D. VAUGHAN, Secretary.

WM. H. MILBURN.

C. W. RHODES. J. W. HASTIE.

Address Secretary, 1516 Arapahoe Street, Denver, Col.

BUSINESS OUTLOOK.

Austin, Texas.—State of trade, dull; prospects, not good; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$20. The legislature having adjourned, a number of compositors are thrown out, consequently work will be dull all summer.

Bay City, Mich.—State of trade, good; prospects, good; composition on morning papers, 30 cents; evening, 28 cents; bookwork, 28 cents; job printers, per week, \$12. Work has not been better in a long time than at present.

Boston, Mass.—State of trade, dull; prospects, fair; composition on morning papers, 45 cents; evening, 38 cents; bookwork, 38 cents; job printers, per week, \$15. Old board of officers reelected March 27. Delegates to International Typographical Union, Holland and Lynch. New book and job scale circulating for signatures; calls for 40 cents on bookwork per 1,000 ems, and \$15 per week.

Buffalo, N. Y.—State of trade, fair; prospects, fair; composition on morning papers, 35 cents; evening, 33 cents; bookwork, 35 cents; job printers, per week, \$15. During the past month Hunt & Kroft have started a weekly paper called "The National Odd Fellow."

Cheyenne, Wyo.—State of trade, fair; prospects, good; composition on morning papers, 45 cents; evening, 40 cents; bookwork, 45 cents; job printers, per week, \$21.

Cincinnati, Ohio.—State of trade, dull; prospects, not very encouraging; composition on morning papers, 45 cents; evening papers, 41 cents; bookwork, 40 cents; job printers, per week, \$18. Business continues dull in all branches. There has been an unusual number of idle jobbers this month. We are wishing that some enterprising party would start a daily paper. Great opportunities for a good paper.

Columbia, S. C.—State of trade, fair; prospects, not encouraging for tourists; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, per week, nine hours, \$15; job printers, per week, \$18 and \$20. We find friends here on all sides for THE INLAND PRINTER.

Detroit, Mich.—State of trade, fair; prospects, good; composition on morning papers, 38 cents; evening papers, 36 cents; bookwork, 35 cents; job printers, per week, \$14. Plenty printers here at present to supply the demand.

Duluth, Minn.—State of trade, good; prospects, fair; composition on morning papers, 40 cents; evening papers, 35 cents; job printers, per week, \$17. Ransom Metcalfe was elected delegate to represent Duluth union at the International Union. The attempt of publishers here to cut down price of composition failed.

Fort Wayne, Ind.—State of trade, fair; prospects, encouraging; composition on morning papers, 30 cents; evening papers, 28 cents; bookwork, per week, \$13.50; foremen, \$15. Mr. Ed Miller was elected delegate to the International Typographical Union, on Wednesday, March 27. The National Electrical Directory is being done here, though we have plenty to do it.

Frankfort, Ky.—State of trade, fair; prospects, fair; composition on morning papers, 37 cents; evening papers, 37 cents; bookwork, 37 cents; job printers, per week \$15. Emile F. Frey was elected as delegate to the International Typographical Union meeting at Denver, Colorado, from this place.

Halifax, N. S.—State of trade, fair; prospects, fair; composition on morning papers, 30 cents; evening, 25 cents; bookwork, \$9 per week; job printers, per week, \$9.

Indianapolis, Ind.—State of trade, fair; prospects, not very encouraging; composition on morning papers, 38 cents; evening, 36 cents; bookwork, 40 cents; job printers, per week, \$16.50.

Jackson, Mich.—State of trade, very good; prospects, good; composition on morning papers, 30 cents; evening papers, 27 cents; bookwork, per week, \$12; job printers, per week, \$12. Rumored that Mayor Loennecker will start a new morning paper soon. F. McPhillips was elected delegate to represent No. 99 at Denver, at a special meeting, March 27.

Kalamazoo, Mich.—State of trade, good; prospects, fair; composition on morning papers, 27 cents; evening, 25 cents; bookwork, 25 cents; job printers, per week, \$10 to \$15. Mr. Frank W. Butters was chosen delegate to the International Typographical Union Wednesday evening, March 27, for the third time. At the annual meeting, March 28, the following officers were elected: President, W. S. Mosher; vice-president, William H. Hamilton; secretary, Lon E. Draper; treasurer, Charles A. Black; guardian, H. W. Bush; executive committee, Thomas Quigley, chairman; William B. Hullett, Joseph L. Black.

Kansas City, Mo.—State of trade, good; prospects, good; composition on morning papers, 40 cents; evening, 35 cents; bookwork, 37½ cents; job printers, per week, \$17. At the meeting, March 10, No. 80 selected the following officers: President, Samuel S. Harrison; vice-president, C. H. Salinas; financial and corresponding secretary, D. J. Keller; recording secretary, Frank Hall; treasurer, John Coventry; sergeant-at-arms, S. H. Elbert. There was only a contest for the first and last places, the others being elected by acclamation. On March 27, the time fixed for delegate election, 198 voters registered, with the following result: James L. Conway, 121; James M. Rhodes, 82; James D. Canan, 68; John James Cassidy, 48; Mark F. Tuttle, 36; Walter S. Johnston, 34. Most of the members are well pleased with the result. The town is filled with tourists, and still the supply of work seems to hold out. The establishment of Crane's book and job office brought quite a number of printers from Topeka.

London, Ont.—State of trade, poor; prospects, doubtful; composition on morning papers, 28 cents; evening papers, 28 cents; bookwork, 28 cents; job printers, per week, \$9 to \$11. The trade is dead. Some employes on the defunct *Speaker* received half wages in settlement. Harry Whittaker was here from Toronto on a short visit. He looks well.

Los Angeles, Cal.—State of trade, dull; prospects, not encouraging; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$20. At our annual election, held March 27, C. Stamps was elected delegate to Denver, the vote being as follows: C. Stamps, 65; W. G. King, 48; O. T. Thomas, 32.

Lynchburg, Va.—State of trade, good; prospects, very good; composition on morning papers, 30 cents; evening papers, per week, \$12; bookwork, 30 cents; job printers, per week, \$12. Jno. W. Pickett, was elected delegate to represent No. 116 at International Typographical Union convention at Denver.

Manchester, N. H.—State of trade, good; prospects, good; composition on morning papers, 30 cents; evening, 20 to 23 cents; bookwork, 25 cents; job printers, per week, \$12. Work on the state printing in the *Mirror* office is lively now, and liable to continue so for three or four months, with plenty of printers here to do it.

Newark, N. J.—State of trade, fair; prospects, good; composition on morning papers, 40 cents; evening papers, 36 cents; bookwork, 36 cents; job printers, per week, \$17. From now till July the printing business will be good. George R. Derham will represent No. 103 at the convention to be held at Denver.

New Haven, Conn.—State of trade, very quiet; prospects, not bright; composition on morning papers, 40 cents; evening, 35 cents; bookwork, 35 to 40 cents; job printers, per week, \$15. No representation at Denver. The following officers elected: President, Frank J. Barnes; vice-president, F. H. Oliphant; secretary, Henry W. Forde; treasurer, Asa A. Yale.

Portland, Ore.—State of trade, dull; prospects, not encouraging; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers per week, \$21. Hamilton Platt, and Frank C. Baker, our present state printer, were elected delegates to represent No. 58 in the International Typographical Union, at Denver.

Pueblo, Col.—State of trade, fair; prospects, moderately good; composition on morning papers, 45 cents; evening, 40 cents; bookwork, 45 cents; job printers, per week, \$20. Great many tourists here and passing through. W. H. Hildreth elected as delegate to the International Typographical Union. Nice weather. Membership of 30.

Richmond, Va.—State of trade, dull; prospects, dull; composition on morning papers, 40 cents; evening, 40 cents; bookwork, 40 cents; job printers, per week, \$16.

Rome, N. Y.—State of trade, good; prospects, fair; composition on evening papers, 25 cents; bookwork, 25 cents; job printers, per week, \$10 to \$12. Mr. Cameron's address (published in the last *INLAND PRINTER*) is one of the best general articles it has ever been our pleasure to peruse. Give us another.

Sacramento, Cal.—State of trade, fair; prospects, dull; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$21.

San Francisco, Cal.—State of trade, quiet; prospects, small; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 40 cents; job printers per week, \$18. The morning papers have changed from nonpareil to minion, making an aggregate difference of twenty cases. Result, heavy phalanxes.

St. John, N. B.—State of trade, fair; prospects, good; composition on morning papers, 30 cents; evening, 25 cents; bookwork, 28 cents; job printers, per week, \$10.

St. Paul, Minn.—State of trade, good; prospects, good; composition on morning papers, 42 cents; evening papers, 37 cents; bookwork, 35 and 43 cents; job printers, per week, \$16. Business has improved considerably in the printing line, and promises to be very brisk, for a short time at least.

Wheeling, W. Va.—State of trade, fair; prospects, not extra good; composition on morning papers, 35 cents; evening, 30 cents; bookwork, 35 cents; job printers, per week, \$15. Work is tolerably good at present, with plenty of subs for all demands.

Wichita, Kan.—State of trade, very good; prospects in job printing, better; composition on morning papers, 35 cents; evening, 30 cents; job printers, per week, \$15. Since the opening of Oklahoma, prospects look much brighter. Two or three of our enterprising young printers are preparing to take an office into the new country. Hundreds of people pass through this city every day for the new land.

BUSINESS NOTICES.

GODFREY & CO.

The advertisement of the above firm appears on another page of this issue. They are manufacturers of the India Rubber brand of roller composition and makers of printers' rollers. This is their exclusive business, in which they have been engaged since 1865. Their composition they claim is the equal of any made and will readily remelt and recast. Mr. William C. Squibb is the active member and manager of the firm, and their place of business is at 325 Walnut street, Philadelphia.

PARAGON PAPER-CUTTER.

These cutters are so widely and favorably known, it is hardly possible that we can add to their popularity by anything we say. Mr. E. L. Miller is the patentee, and sole manufacturer of the Paragon cutters. He has been making them for the past ten years, and in that time has made and sold nearly two thousand five hundred of them, over one thousand three hundred of this number being the very popular 22½-inch size.

These cutters are made in five sizes, namely, 14, 22½, 25, 30 and 32 inches, the two cuts shown herewith representing the styles in which four of the sizes are built. The 14-inch is built like the

22½-INCH CUTTER.
25-INCH CUTTER.

30-INCH CUTTER.
32-INCH CUTTER.

22½ and 25 inch, except it is a bench cutter having short legs. All sizes have back and side gauges, broad clamping surfaces for general use, yet they are so arranged that when occasion requires stock can be gauged to ½ inch of the knife on the three smaller sizes, and ¾ inch on the 30 and 32 inch. All sizes of the Paragons have the patented knife motion, possessed by no other cutters, and which makes their cutting accurate and easy. They are very strong machines, as the weight of iron is disposed just where needed and left off where it would be superfluous, thus making them exceedingly strong without excessive weight.

These machines are recommended and sold by all reliable dealers in printers' goods everywhere, or can be had direct from the manufacturer by addressing him at 328 Vine street, Philadelphia, Pennsylvania. If you are intending to purchase a cutter, investigate the merits of the Paragon machines.

CASTING ROLLERS.

The following in relation to improvements in the method of casting printers' rollers, adopted by the well-known firm of Bingham, Daley & O'Hara, New York City, will no doubt prove of interest to our readers:

Till within a few years ago, the only method of casting rollers was by the use of separate iron or brass molds, and in large roller factories, where a large number are cast, the labor of handling these molds has been immense. In the process of casting and drawing a roller, each mold had to be handled from four to six times, and if only one hundred rollers a day were made, the labor was equal to the handling of from four to six hundred molds.

To simplify the work and obtain better results was the desire of Mr. L. K. Bingham, then doing business under the title of Samuel Bingham's Sons, and he had many long conversations over the matter with his brother Millard, now in business for himself in Chicago, the result being the patenting of a machine by the latter

The *claims* that were patented were in general terms these: An apparatus consisting of an oscillating and revolving cylinder provided with mold tubes and having a removable bottom or base plate, and further provided with means of filling the cylinder with steam and hot and cold water.

The patent for this apparatus was, a short time after its issue, transferred to Mr. L. K. Bingham, and the apparatus was by him, some years after, improved by the addition of a *dish-shaped* supplemental bottom (No. 342,420, May 25, 1886), in place of the *flat* one in the old patent. By means of this dish-shaped bottom, an open space was formed underneath the bottom ends of all the tubes in the cylinders, and composition was thus conveyed to the bottom of every mold by pouring it down through *any one* of the tubes (preferably the center one), or forcing it in through the gutter provided in the "supplemental bottom" or base plate, and thence up through the molds until they were full, expelling the air before it as it advanced, and forming perfect rollers.

These machines were a perfect success from the first day they

SMALL ROLLER DEPARTMENT IN THE FACTORY OF MESSRS. BINGHAM, DALEY & O'HARA.

September 26, 1876 (No. 182,547, United States patents). This apparatus consisted of a cylinder with two heads; the cylinder containing the mold tubes which were secured to holes in the two heads. This cylinder, the original of "the mold cylinder of ordinary construction," noticed on page 547 of the March number of *THE INLAND PRINTER*, was both "oscillating" and "revolving"; "oscillating" for the purpose of bringing it from a perpendicular to a horizontal position for the purpose of oiling the molds and inserting the roller stocks, and "revolving" for the purpose of bringing one mold after another under the spout of the kettle containing the melted composition. It also had a "removable bottom" or base plate that closed up the bottom ends of all the tubes or molds. It also had openings to let in hot water or steam to warm up the molds before pouring, and cold water afterward to cool the rollers quickly, and was also provided with trunnions on its sides by which it hung in slotted standards, and was slung from a perpendicular to a horizontal position, and *vice versa*. When the rollers were cooled solid the "removable bottom" was loosened and the rollers drawn out.

were used, some five or six years ago, and all work turned out by Messrs. Bingham, Daley & O'Hara for that length of time on rollers for the great variety of treadle presses, has been done in them.

During the past two or three years, they have been engaged in building apparatuses to cast all their large work for cylinder presses, and are now every day turning out rollers for such presses, unequalled in beauty and unapproached in economy of time, being able to fill and empty a cylinder containing twenty large rollers inside of an hour.

They have at the present time over thirty of the cylinders in active operation, and have more building, and have invested in them over ten thousand dollars.

The casting of rollers in these machines is simplicity itself, over twenty molds being filled in less than five minutes and emptied in fifteen more. The whole cylinder full is cast in one operation, with no more labor than the opening and closing of a valve; any tube not required to be filled is shut off with a plug. As stated, these improvements are secured by patents, and all infringements on them will be attended to in course of time.

THE HAMILTON-BOSS CASE.

We herewith present a diagram of a case, the idea of Mr. Henry R. Boss, and made by the Hamilton Manufacturing Company, Two Rivers, Wisconsin, which, it is claimed, possesses many advantages over the one now in general use.

It will be seen that the *c*, *m* and *n* boxes are reduced in size one-third—which the usual proportions of a font of body-type

fi				k		1	2	3	4	5	6	7	8
j		c		d	e			s	f	g	ff		9
l	b										fi		o
?		m									:		EM QUAD
z	l	u		n	h			y	p	w	.		
x													
q	v	t				8-EM SPACE	4-EM SPACE			3-EM SPACE	EN QUAD		2 AND 3 EM QUADS
						HAIR SPACE	6-EM SPACE						

will readily admit of—so that the three occupy only the space now given to the *c* and *m*. This allows the *l* to take the box formerly allotted to the *n*, the old *l*-box being converted into four receptacles for the thin spaces, for which only three boxes are usually allowed in the present case. The en-quad is brought to the immediate right of the thick spaces, and is replaced by the colon and semicolon. In this manner all the spaces are brought immediately under the hand—an advantage which will be highly appreciated by the careful compositor on good bookwork. It may be said that this arrangement will save from one-sixth to one-fifth of the time spent in justification where careful spacing is required, and will add at least ten per cent to the amount of the compositor's performance. As the case is now, the right hand travels an unnecessary two feet or more for every en-quad or thin space used. The gain is proportionately greater in distribution.

The three boxes left vacant above the *b* and *c* can be utilized for any sorts now in the upper case that are frequently used. Or, better still, the upper third of the *c*-box may be cut off and divided, the *ff* put in the place of the *fi* (which is rarely used), and we will then have six boxes for as many logotypes.

As stated, these cases are manufactured by the Hamilton Manufacturing Company, to whom all orders should be addressed, and who will cheerfully furnish information as to prices, etc.

AULT & WIBORG.

The full-page advertisement of the above firm appears in another part of this issue of THE INLAND PRINTER. This firm is composed of Mr. L. A. Ault and Mr. F. B. Wiborg. These gentlemen have been associated in business as printing-ink manufacturers for eleven years. Their business, which is among the largest in the United States, was built up, as the saying goes, from nothing; which, translated, means that from a very small beginning they have succeeded, by energy, honesty, and business tact and talent, in building up a business in eleven years which ranks with the best and oldest in this great country.

The manufactory of Messrs. Ault & Wiborg is, within itself, a most complete exposition of the business in which they are engaged. They are manufacturers of all grades of printing and lithographic inks, varnishes, *dry colors*, etc., and for the purposes of the business have a very extensive plant, composed of the most modern machinery and appliances throughout. They make all their own dry colors, including lampblack as well as the oils, varnishes, etc., used in their productions, and also their packages (barrels, kegs, cans, etc.) in which their goods are put up. Both members

of the firm are expert chemists, and superintend personally all the various processes in the manufacture of their products. They also see to it that no ink leaves their place until it has been thoroughly tested and proven as to color and working qualities.

Messrs. Ault & Wiborg have in their establishment at this time forty mills, with a capacity of one thousand pounds finished goods per hour. Their lithographic colors are all ground on porphyry stone rolls, and they have the capacity for a large product. All their other mills are chilled-iron rolls. Everything in the establishment is the best and most approved, yet the proprietors are constantly on the lookout for anything new. The power used to drive the mills and other machinery is one of the latest improved 200-horse power Hamilton-Corliss engines.

The productions of Messrs. Ault & Wiborg are well known throughout the length and breadth of the land. They are used more or less by nearly all the experienced and extensive consumers of printing and lithographic inks, and these they offer as

reference to any seeking information concerning their manufactures.

THE SHIPMAN ENGINE.

Herewith is presented a cut, and in this issue appears an advertisement of the Shipman Automatic Steam Engine. The Shipman has been on the market for several years, but, as now built, is very greatly improved over what it was three years ago, and is a radically different and greatly superior machine. The manufacturers claim for it eight thoroughly proven facts, namely:

“First, you can be your own engineer; second, economy in the use of fuel; third, automatic in its water and fuel supply; fourth, it consumes only the amount of fuel it requires for the power taken; fifth, puts out its own fire and relights it when more power is required; sixth, the moment the work is done the expense stops; seventh, its fuel has no dust, and its fire never has to be drawn; eighth, if you have only one hour's work to do, you can get up steam pressure of one hundred pounds, do the hour's work, put out the fire, and the consumption of fuel will not exceed one hour seven or ten minutes, at a cost not to exceed three or five cents per horse power.” Kerosene is the fuel used.

Mr. R. D. Garden, the manager, informs us that there have been over one hundred of these engines sold since December 15, three-fourths of them going into printing offices. If you are contemplating purchasing power for your office, send for catalogue, containing full description, sizes, prices, testimonials, etc., which will be sent upon application to the Pope Manufacturing Company, 291 Wabash avenue, Chicago.

We acknowledge the receipt of a complete line of samples of their fans from Cosack & Co., Buffalo, New York. As a means of advertising, fans are becoming quite popular for summer use, and a person who could not be suited from the samples of this firm would be too exacting to be pleased by anything.

THE ROSBACK POWER PERFORATOR.

The above machine is manufactured by F. P. Rosback, 338 to 342 Dearborn street, Chicago. It is a heavy, solid and thoroughly well-built machine, having all the advantages and virtually as simple as the celebrated Rosback Foot-Power Perforator, of which there are hundreds in use, and which is familiar to all binders. The machine is entirely automatic, makes any number of perforations in a sheet and lays the sheets in a pile without the attention of the operator further than feeding the machine. The same number of sheets may be perforated at a time as with the foot-power, say four or five heavy sheets. It will perforate as fast as the operator can handle the paper. The number of perforations in a sheet and the distance between each perforation is regulated by the number of dogs and the distance between each dog on the side of the large wheel on top of the cut; these dogs operate so accurately that if you run the same sheet the second time through the machine the needles will enter the same holes. When spaces between perforations are required, such as for checks, etc., they are made by simply separating the sliding plates the same as in the Rosback Foot-Power Perforators.

In addition to his foot-power and power perforators Mr. Rosback manufactures a 10-inch hand perforator and also index and corner cutters. Circulars, etc., descriptive of his machines will be sent on application. See advertisement elsewhere.

COLT'S ARMORY PRESSES.

The following letter, recently received by Mr. John Thomson, manufacturer of these celebrated presses, explains itself:

MELBOURNE, February 19, 1889.

Mr. John Thomson, 143 Nassau street, New York City:

DEAR SIR,—We have pleasure in informing you that the Colt's Armory printing presses have been awarded the *only* first award for platen printing machines, and in addition have received a "special mention," being the only platen machines so honored.

The exhibit of printing machinery from England, France, Germany and the United States was very complete, nevertheless we are convinced that the honors secured by your machines were fully earned and deserved.

Medal and certificate awarded at exhibition will be forwarded when they reach us. Delay is anticipated, as the order to print has not yet been given.

Yours very truly, (Signed) COWAN & Co.

Not satisfied with his success in Australia, Mr. Thomson is looking for new fields to conquer, and is making an exhibit at the Paris Exposition, for which he expects to leave the latter part of May. THE INLAND PRINTER predicts for the Colt's Armory press further honors at the coming Paris exhibition.

APPRENTICES who aim to become skilled workmen will be glad to learn of an opportunity to secure a copy of the "American Printers' Specimen Exchange" at the *cost of binding*. Acknowledged to be a most powerful medium for the cultivation of taste and acquirement of knowledge of good printing. ED. H. MCCLURE, Buffalo, New York.

EVERY PRINTER should have a copy of "DIAGRAMS OF IMPOSITION," and "THE PRINTER'S READY RECKONER." Price, 50 cents each. To be obtained of H. G. Bishop, 96 Clinton avenue, Albany, N. Y., or through Farmer, Little & Co., New York and Chicago. These are the handiest and most useful works ever published for printers. Indorsed by everyone who has seen them. Agents wanted in every town.

FOR SALE—A lever-cut Longley Mailer, 1 1/4-inch label, new. Will sell low for cash. Address "MAILER," care INLAND PRINTER.

FOR SALE—Newspaper outfit, first-class in every respect. One of the best for weekly newspaper in South Dakota. Write at once to GEO. B. RANSHAW, Roscoe, South Dakota.

FOR SALE—\$10,000 capital required; a general job printing office; business established on a paying basis, not local customers in every state. Good reasons for selling. Address "STICK AND RULE," care INLAND PRINTER.

WANTED—The Inland Printer Co. will pay 25 cents apiece for numbers 2, 4, 5, 10 and 12 of Volume I, if in good condition, to anyone sending them to this office, or will credit the amount on subscription, if preferred.

WANTED—A sober, reliable young man of ten years' country experience, would like a position on some good newspaper offering chances for promotion. Am a thorough compositor, and have done editorial work with success. Address "T.," care INLAND PRINTER.

FOR SALE—Job Printing Office. One of the best equipped medium sized job offices in a city of 100,000 inhabitants in Ohio; doing a nice business; established nine years; reason for selling, death of proprietor; liberal terms to responsible buyer. Address "C. R. J.," care INLAND PRINTER.

\$1,500 will buy a half interest in a newly established printing office doing a good business. \$1,500 down and \$1,500 on mortgage will buy the business, as proprietor wished to devote his time to a publication. Population of city 75,000. Address "EASTERN," care INLAND PRINTER.

WANTED.

Those in need of Counters to send for Circular and Prices to

W. N. DURANT,
Milwaukee, Wis.

INKOLEUM Warranted to be the Best INK REDUCER and Quickest DRYER in the World.

Directions for Use:

Remove all skin from ink in can, then pour in about a spoonful of Inkoleum, and mix thoroughly to consistency desired. Thin for cold room; thicken for warm room or sticky rollers. Any press can be started up without washing the rollers, upon which it can be worked clear, free and easy on any kind of paper the coldest morning in winter, regardless of fire, or the hottest day in summer, by simply putting a few drops of Inkoleum on the rollers with the fingers.

Printing or Lithographic Inks of any color or stiffness can be reduced quickly without in the least impairing the color. For fine tint work Inkoleum works miracles, as it makes the ink cover charmingly, and dries quickly. No spreading of jobs necessary, and urgent work of any kind can be delivered immediately without off-setting. On rollers it *never dries*, but preserves their suction, life and elasticity. Inkoleum is a perfect "cure-all," and saves double its cost every day in the year, and makes pressmen do better work. A trial will convince the most skeptical. Testimonials from all parts of the world to prove these assertions. Price, half-pound bottles, 50 cents. For sale by all typefounders, wholesale paper and printers' supply houses; or, it will be sent anywhere in the United States, express paid, for 75 cents.

Put up only by ELECTRINE MANUF'G CO., St. Paul, Minn., U. S. A.

THE LEADING ENGRAVING ESTABLISHMENT OF THE COUNTRY

PERFECTED

PROUTY
P.R.E.S.S

WE WANT YOU and every other Printer **TO KNOW**

that the "Perfected Prouty" is the best Job Press made. Such a claim we know, and you know, is common, but we make this claim because every printer using the "Perfected Prouty" pronounces it the best, and these are

THE REASONS WHY

It is not an old-style press under a new name, but a modern press, built from original designs to meet the requirements of the printer. Old ideas of construction have been discarded, and the "Perfected Prouty" is absolutely free from grinding cams and powerful springs, rubbing or sliding motions, thump, pound, noise and rattle.

THE "PERFECTED PROUTY" PRESS

is so constructed that speed and durability combined with excellence of the work produced, and smoothness of operation are its characteristic features. In these particulars this press is Perfection, and its claims to superiority are based upon solid facts. Investigate these claims and you will be forced to admit that the "Perfected Prouty"

IS SUPERIOR TO ANY OTHER.

We sell the "Perfected Prouty" on its merits; guarantee full satisfaction, and will ship one on trial to any responsible firm. Any printer wanting a Job Press should acquaint himself with the new features and valuable merits of the "Perfected Prouty."

Descriptive Pamphlet mailed on application.

... THE NEW ...

SCREW ADJUSTING GAUGE PIN,

WITH SPRING TONGUE.

Covered by Patents issued March 23, 1875, May 17, 1881, and two other Patents pending. Protection in Europe.

This Gauge Pin speaks for itself. It suggests at once hair-breadth adjustment. It can be applied to the tympan as readily as any pin, and when pushed home will give a firm resistance. The gauge-head is held in close contact with the tympan, so that sheets cannot feed between. The gauge can be moved at any time to correct the position of the sheet, without marring the tympan as no teeth are required to hold it.

It will be noticed that two small nuts, movable by the fore-finger, are shown in the cut. One of these slides the screw-bar backward and forward and adjusts the gauge. The other, the rear nut, is used merely as a check-nut. In ninety-nine cases out of the hundred, however, this check-nut will not be needed, as the pin is so constructed as to make its use practically unnecessary.

The pin is provided with the indispensable spring tongue in an improved form, and facilities will be had for obtaining extra tongues when required at a reasonable price. The article is made in every way perfect, with finely ground points and carefully fitted parts, and is guaranteed to give satisfaction.

All parts come within the height of a pica quad.

Three in a set,—Price, 75c. per Set,—with tongues.

DEARING "ALL-BRASS" GALLEY.

PATENTED APRIL 17, 1888.

No Wood, No Screws, No Rivets, No Plating, Nothing but
Hard-Rolled, Solid Brass, making the

STIFFEST GALLEY EVER MADE!

Prices: Single Galley, \$2.00; Double Galley, \$2.75.

HOW WE MAKE THEM.

END VIEW OF OUR "ALL-BRASS" GALLEY.

The bottom of our galley (A) is made of extra-hard rolled brass of the finest quality, of three-to-pica or four point thickness (or what is known among metal dealers as No. 18 wire gauge thickness), and the side and end braces, or reinforce (B), are formed from the same piece as the bottom.

The sides, or upright facing strips (C), are formed of nonpareil rule brass, held rigidly in its place by the brace formed from the bottom.

Our peculiar method of construction produces a strong, solid and durable galley, by a cold process of manufacture, so that the hard and elastic temper of the brass need not be lost, thus giving the necessary rigidity and strength to resist any strain that may be brought upon it.

A STRONG INDORSEMENT.

Office of H. O. SHEPARD & CO.,
Printers of "THE INLAND PRINTER."

Chicago, Jan. 17, 1889.

Gentlemen,—We have the Golding Jobber at work, and it is all you claim for it. We have six different makes of job presses, all beautiful specimens of mechanism; yours is equal to any. We are perfectly satisfied with the press, and if we wrote volumes we could not say more in its favor.

Yours truly,

H. O. SHEPARD & CO.

FURTHER COMMENDATION.

To say that I am pleased with the Jobber would be a mild way of expressing it. It is *simply immense*. I have done all kinds of work, from a single line to a half-sheet poster (two impressions), using six lines of wood type at one impression, filling a screw chase to its utmost capacity. The ease with which the press ran with this form and heavy impression was certainly astonishing. The fountain and brayer are in my estimation the acme of perfection, while the impression regulators and throw-off *can't be beat*. The ease in making ready, the rapidity of operation, and stillness in running, are points in the Golding Jobber not to be overlooked.

WOOD VERSUS PHOTO-ENGRAVING.

NO. II.—BY THOMAS W. ELLIOTT.

RELIEF plates for the type press, however produced, except wood cuts, are generally designated as photo-engravings, or etchings, although they are sometimes

FIG. A.

called photo-electro, photo-chemical, photo-stigmio, and other high-sounding names — which ever term happens to suit the caterer best. But all these must be produced by a company, even if only a man, a boy, or two boys are required to form the corporation — one to blow the dummy pipe, and the other to answer it, while the boss is talking to a customer.

Relief plates can be divided into eight classes, as follows:

1. Relief aquatint.
2. Wax process.
3. Plaster.
4. Glass process — by fluoric acid.
5. Gelatine (swelled).
6. Gelatine — washout; not using hot water, but a cold solution.
7. Zinc and copper.
8. Mezzotint.

Nos. 1 and 8 are more generally known in England than in the United States, samples of which

were published in the September (1888) number of THE INLAND PRINTER, the work of Mr. J. S. Hodson. No. 2 is used for maps and outline subjects, and for this purpose cannot be excelled. No. 3 to stereotype from after the design is drawn, or scratched in with a steel point; but it requires an artist to make the design, it being impossible to draw a fine subject on the plaster, as it chips or burrs off when the point is drawn through it, thus losing parts of the design. The stereo, in most cases, requires hand-work to deepen smaller places, and the larger places have to be routed. No. 4 is an Australian invention, though I understand it is not made use of at the present time. It is done by using greasy ink with a pen connected with a gas jet, to make it flow easily, upon plate glass. The design is put on in this way, and afterward etched by the action of fluoric acid; the plate is then put in the press, without electrotyping, and printed from, giving clean, sharp impressions. Nos. 5, 6 and 7 I will now particularly refer to and illustrate.

Half-tone work was treated of in my last article, so I will only briefly allude to the processes in connection with commercial work.

Relief plates produced by swelled gelatine have three faults: 1. The whites are too shallow, and have to be very carefully deepened by wood engravers' tools in the plaster cast and stereotype, or built up with wax in the

FIG. B.

wax mold. 2. The surface of the lines are rounded over, thus producing a gray instead of a black line.

from can be reproduced by it, either crayon, stipple or lines. Illustrations B, C, D, E, F are done in

washout gelatine. B was drawn on Ross paper, about double the size. C is reduced from a pen drawing, size 10 by 16; D, E, F are reproduced from prints, and have been used in daily and weekly editions of the London (Ontario) *Free Press*. D and F printed well, but E did not print as clearly, on account of the work being too fine in the two figures that are close together. Of course, you will not be able to show exactly its appearance in a newspaper, in comparison with the excellent presswork shown in *THE INLAND PRINTER*. The

FIG. D.

3. Too much recasting is required, which causes the losing of some of the sharpness of the details. Again, if there is a material difference in the thickness of the lines, and there is a fine line next to a heavy one, unless molded from at the right time, the heavy line will be higher than the fine one in the plate, and the fine one will be lost in the printing. Also, if too much water gets under the films, it will pucker up all over. Should the film be not properly hardened, the plaster cast will adhere to the film, and not come off clean, thus spoiling film and cast. I used this process some years ago, but discarded it for the washout process. Specimen marked A was done by this method.

Washout gelatine is known by several names, such as gelatino-type, leimtype, photo-chemitype, etc. Under my manipulations it is the least troublesome and the most reliable process, the only drawback being that the plates produced by it must be electrotyped, although small editions can

FIG. E.

be printed off the films if mounted type-high. Anything that a *good, intense, clear negative* can be made

press (not a Washington, either), and showed him what I could do, and informed him I wanted *his* proof like

FIG. C.

great difficulty in this connection is to get a pressman to understand where to put his ink, or even to take an intelligent interest in his work. Some pressmen seem to think if they make a *black* print it will pass muster. I once requested a pressman to take a proof of a cut, and he sent me one with the fine work all filled up. On refusing to receive it, he said it was the best he could do. I afterward took a proof myself on a hand

the one shown, or I did not want any. The result was he "got there," despite his assertion. So I think pressmen may conquer all difficulties. But I am digressing.

Zinc-etching generally answers all purposes for illustrations wanted in a hurry, or for newspaper use, at a

FIG. F.

comparatively small outlay, or even where a man has plenty of spare time and does not want to go to the expense of an electrotype plant; yet it requires a good deal of practice and care. The main point is to get the right zinc and materials.

The Germans, in my opinion, are the best at this work (see the work of Angerer and Goschl, also J. Husnik); Frenchmen and Americans come next (see *Paris Illustré*). By the by, have you noticed the colored plates in the last number of *Paris Illustré*? How beautiful and soft they come out; one would not think it was possible to do such work on a type press. It is going to give lithography a close race. In American work on zinc, the finest I have yet seen comes from Philadelphia; so far, I have not seen any of their work in THE INLAND PRINTER. The Germans do zinc-etching very cheaply, about four cents an inch, ready for the press. They must live on lager and pretzels, bought wholesale. Chemicals and zinc must be cheap. By this process the subject desired can either be drawn, photographed or transferred to the zinc, etched, the open places routed, mounted on wood, and placed on the press in from six to ten hours—half a dozen or more jobs on a plate—but care and judgment must be exercised.

Illustration G was photographed in ink on the zinc, and etched. This also has been through the daily and weekly edition of the *Free Press*. Your correspondent, Gustav Boehm, in the April number of THE INLAND PRINTER, wants a duplicating process. What is the matter with photographing the copy onto zinc, then making as many transfers as required onto another piece of zinc, and etching it, thus producing a number of plates? To read some of the instructions on zinc

FIG. G.

etching, a novice would naturally infer that little if any skill or experience is required; but experiments tell a different story. An operator must be something of an artist to make it a success. It can be etched in relief by acid or the dynamo. Copper is used for the same purpose as zinc, but for finer work.

Before closing, allow me to say, that very little, if any, progress has been made in the last year in photo-engraving, although, I believe, in the hands of thorough experimenters, it will continue to improve. I hope it may.

In my next contribution I will give a description of wood engraving, accompanied with illustrations and diagrams.

Written for THE INLAND PRINTER.

POINTERS FOR THE KID.

BY HERBERT L. BAKER.

HERE, Tom, you little twig of His Satanic Majesty, just stop teasing the cat long enough to gulp down a dose of instructions. Everybody else but you has instructions, advice and "pointers" till indigestion of the brain threatens; but, poor fellow, the only way you have to learn what is right is to do wrong, and welcome a kick for the information (not soon forgotten) which it conveys. Now, here is a nice little lot of "pointers" cooked *a la foreman d'shop* for your special delectation:

First pointer. Don't get down too early in the morning. If the printers should come in and find the place swept and warmed and cleaned, all ready for business, the shock would seriously disturb their nerve. They would not know what to do without their morning siesta waiting for the place to warm up, and some of them might die from the effects. You haven't made this dreadful error yet, and probably never will, but you might!

When you sweep, for heaven's sake don't pick up the type and material on the floor. Why, don't you know it will make your trousers bag at the knees to stoop so low? Then the printers despise distributing floor "pi," and since the office is run solely for their benefit, whatever they dislike they must not be asked to do. Then, too, where would the poor typefounder be if type was carefully saved and cared for—why, his business would soon be ruined! and it is your solemn duty to look after the typefounder and the printers. If the promptings of your tender little soul make it impossible to sweep out the type, by all means sweep them a long distance to a nice comfortable spot where it will be easy to pick them all up without skirmishing about under the cases. Take things easy as possible, my boy—don't break your back for a few pounds of sorts; they don't cost you anything, anyhow! This course will supply the office with a variegated assortment of hybrid letters, with small-pox faces and camel-backs, which any typefounder would gladly give as much as 8 cents a pound for; and if you are real diligent you can bring the office quite an income from this source. If the proprietor should find out how

hard you were trying to add to his income, perhaps he would give you a raise — (with the soft end of his boot-toe!).

When you go out on an errand, don't get back too soon. You are paid just as much whether you run four errands or forty a day, and it isn't dignified to hurry. Don't the books on decorum say, "Gentlemen never hurry?" Your dinner will digest better if you will remember to saunter leisurely along the boulevard, with an occasional pause to witness canine pugilism, and frequent rests whenever the chance offers to "skin" another "kid" at the fascinating game of "keeps." This will improve your skill at marbles, while saving you from the imminent dangers of overexertion. Watch the punctuation of your errands: a short pause at anything commical, a longer pause when you run across a man shoveling colon the walk, come to a full stop at any period of your jaunt, or dash up a side street when there is hy-fun ahead. If you see the proprietor coming while enjoying your heaven-given right to a life of leisure, it is a good plan to start off on a good trot, for these employers have such odd ideas about some things — besides, if you know he is out of the office, you are more likely to have a rest in it.

If you are set at putting away leads and slugs, be careful not to grab them too tight in your hand, for you might bruise them. If some fall on the floor occasionally, never mind, for you will only be aiding the "typographical artist." What! didn't you know that that is the way the artist in type gets his curves? Why, that ought to be plain even to you, after one glance at some of their productions. The easiest way (therefore the best) to sort leads, is to take a handful and jog them up on one end on the stone. It doesn't hurt the stone, and there are plenty of new leads at the foundry.

When finally put at learning the case, do not forget that you can know it in an hour as well as in a year, and your first duty certainly is to put the types in the right boxes. You will doubtless find the "p" box full of "d's," the "n" box full of "u's," etc. By all means regulate these little mistakes of the careless comps by putting together all letters that look the same, thereby earning the gratitude and good-will of the foreman. As soon as the case is learned you ought to have some cards; so when no one is about, go to the new script case and set up your name, tie a string around it and put it on the stone, then ink it, place a card on the type, put a piece of kindling wood on the card and hit it with a mallet. If it doesn't show enough on the card, hit it harder next time. This is a great scheme "never before published," except in "Hints to Amateurs," but observe one precaution: be sure to show the cards to the proprietor, for the rewards of genius are great, and his astonishment will be very funny!

Of course no bright boy in these latter days will be so foolish as to do without tobacco, so you will earn the admiration of all your elders by keeping a quid in one corner of your mouth and a cigarette in the other — as long as you can beg or steal them. Your first duty in

this connection in the office will be to find some place on the floor where the gentlemanly compositors have not spat, then spit all over the spot. The floor doesn't look well with such spots of different color, and the proprietor will appreciate your efforts to add to the appearance of the place.

Above all things, don't forget to demand higher wages every few weeks. If you follow these instructions your services will soon be so invaluable that any price will be paid rather than lose you. The more diligently you follow them the sooner you will be taken into partnership by the proprietor or — FIRED!

Written for THE INLAND PRINTER.

**THE INTERNATIONAL TYPOGRAPHICAL UNION EX
REL. THE UNITED TYPOTHETÆ.**

BY DUNCAN F. YOUNG.

AS I write this the official journal of the United Typothetæ lies before me, a stern reminder of things which should not be. Its perusal has carried my memory back to the bitter contentions of long ago — the heart-burnings, yearnings and deprivations of those times when arbitration was not understood and employer and employé had unsheathed the sword for a fight for a braggart mastery. These, I had hoped, had gone forever; but from this journal I learn that I had greatly erred, and instead of the peaceful, harmonious relations between employer and employé one would hope for, an organization of master printers has been effected to exterminate the organization of employés.

It would appear that the master printers have in view an object far more laudable, far more likely of successful execution than endeavoring to crush out of existence an organization whose principles are as deeply rooted and as indelibly printed as the Constitution of the United States, and that object is the eradication of the cut-price system in vogue throughout the country in so many printing establishments. In this they have an extensive field of fertile soil which is fully grown up with rank weeds, but which will well repay the labor of renovation and cultivation. In this task I have no doubt the International Union would lend its every effort, being greatly to the interest of the latter, since half a dozen amateur offices being forced out of existence there would be room for one legitimate office employing twelve or fifteen journeymen. The typefounders should assist in this onslaught on the amateur, for where they sell a half dozen or a dozen outfits, costing, perhaps, \$50 or \$75 each, in one city, these, in all probability, not being replenished in ten years, they would sell to one house alone a bill of material amounting to \$2,000 or \$3,000, besides filling orders from that house each year of from \$100 to \$500. The community in general should assist in such an undertaking, for a community wherein such establishments as are under consideration are located, is deemed by investors and immigrants as a place offering but little encouragement to enterprise.

It is not to be understood by what I have said that I am opposed to all classes of business founded upon small

capital, but to amateur printing offices, such as are in New Orleans in abundance—offices that are located in the front room of a man's dwelling house or in one corner of his fruit stand; offices which take work from legitimate offices because of their advantages in low rent and their superior ability in executing disgraceful work (!); offices which deprive men (employer and employé) of creating for themselves a livelihood out of their chosen avocation, while they make nothing for themselves; offices conducted by men who have never lost their valuable time in learning the trade, as printers have, and never invested money in the business, as master printers have; in fine, amateur printing offices which, during their term of existence, are absolutely receiving money under false pretenses!

Again, it appears that in several cities the United Typothetæ has taken into membership members of the Printers' Protective Fraternity, an organization (?) well known to be opposed to the International Typographical Union. It is gratifying to believe that this is not a principle of the Typothetæ, since it is in but few cities that this has been done, and there, no doubt, through a spirit of petty spite. Withal, it strikes one as being strangely inconsistent in members of one organization endeavoring to force members of another organization to yield their allegiance to that body, for in so doing they would take away from them the same right which allows them to organize themselves and trample upon that grand constitutional principle of American freedom! Some members of the Typothetæ are, without a doubt, at war with the International Typographical Union. That every man is entitled to his own opinion is a right granted by the highest authority, and if that opinion cannot be changed and is erroneous it is to his cost, and it is he, and he alone, who suffers, and then he awakens to the fact that "To err is human, to forgive divine." I yield to the members of the Typothetæ in those cities alluded to the right to their opinion, but being more or less interested I must say that their opinion is erroneous. They claim that the International Union erred. That error (if error it was, the nine-hour law) should convince the Typothetæ of its own error. The union saw the need of shorter hours, not alone for the reason that there are more men than there are places to be filled by them, but that the workmen are fast becoming a thinking class, and without the proper recreation and rest of mind they are indeed very liable to err. In fighting the union the Typothetæ plucks the bud that would make the rose; it bruises the feet of the camel that would convey it across the desert. "United we stand, divided we fall." Under this standard the United States fought, bled and won a gallant victory; under this standard the International Typographical Union has bravely withstood the combined efforts of capital for years and years, and may its banner long wave under the blue sky that hangs over these grand old United States.

Take hands, United Typothetæ, take hands with the International Typographical Union, and stand boldly up under our standard, and when our united efforts shall

have driven from the field these interloper amateurs you can afford to have your employés work eight hours a day, give them fair wages, and still make money yourself. And your workmen, having more time in which to think and study, instead of loafing about the streets or debauching himself, as held, will have more will power and will then be less liable to err, and each member will work for the combined organization as he now works for the International Typographical Union!

Written for THE INLAND PRINTER.

QUADRATS.

BY PICA ANTIQUE.

WHEN questioned as to the secret of his great success upon the stage, Edwin Forrest is said to have replied, "I owe it to the fact of doing thoroughly everything I have undertaken; to never neglecting trifles."

There is a volume of good advice and the result of experience condensed into a few words, and more than to any other business they apply to printing. That is essentially a work of trifles—from picking up the first type until the book is ready to be put upon the market—and perfection can only be secured by never neglecting minutæ. The vagaries of composition, correcting proof, the dropping out of letters from the form, the pulling out upon the press, the thousand accidents caused by the perverseness of material; obstinacy of rollers and ink; the carelessness of gatherers, stitchers and binders are painfully patent and can only be guarded against by the strictest attention to detail: the never neglecting trifles.

Even THE INLAND PRINTER, the exemplar of accuracy, taste, beauty and matchless presswork cannot entirely escape the maliciousness of error. The diabolical intermeddling imps of mischief lurking in every office pop out at most unexpected times and places to make craft-like miserable, and the poor printer the target of abuse. And if so of that paragon of the art with all its care, knowledge and as near absolute perfection as can possibly be accomplished by mind and matter, what of others laboring under many disadvantages?

Only the most untiring energy and unceasing watchfulness can accomplish good results in the manipulation of the forces of the printing office. The slightest error will be reproduced and enlarged through the entire work; the insertion of a single wrong letter makes the most egregious nonsense of sense and upset gravity at the most solemn moment; broken type will reappear through the entire edition; a change of signatures spoils every bound copy, and so little a thing as the non-insertion of a comma in the proper place once cost the government loss of revenue sufficient to have builded and sustained half a dozen homes for needy printers. Pity it could not have been thus utilized in place of going into the pockets of sharpers.

* *
*

How CAN the necessary system of care be best organized and carried out in detail? Every proprietor and foreman will have positive and individual ideas upon the

subject, but there is one general rule governing. The old Latin proverb of "*Festina lente*" appears to cover the case. To make haste slowly is the foundation stone of the absolute certainty required. The rushing will necessarily multiply errors. It could not be otherwise in printing, and when one pauses to reflect how many little things go to the making up of the whole, astonishment finds tongue at how very few errors escape unnoticed. "Haste makes waste," and does more—makes types play the buffoon; trips up the most deliberate speech and nullifies the most careful thought-reproducing pen.

Make haste slowly. Be assured beyond question that every new movement dovetails with precision into the former and will fit the one to follow. Remember that types are tricky spirits and will play sad pranks, if they can. Eternal vigilance is the price of correctness, and forced speed should only be permitted when there can be no possibility of error. The horse overleaps himself in the race; the greyhound dashes out his little of brains against a tree; the eagle breaks its wing in the swiftness of flight; the over-hasty printer makes the art a "botch" and ruins the greatest works ever produced by the genius and skillfulness of mankind—books.

* *

THIS, however, does not argue being a drone; very far from it. Speed can be increased by practice and care is the offspring of itself. Rapidity of execution is the life-blood of printing, but there are other and higher considerations that should never be sacrificed to it. Poor printing is an abomination; a disgrace to the high names that have glorified it; a shame to the standard it has reared; a non-compliance with the times in which we live. Excuses for it do not excuse; a trifle may palliate, but cannot wipe out the disgrace.

So, too, is it with drones. There is no room for them in the buzzing hive of industry filled by the craft; no time for dawdling or loitering. Earnest, active, capable, enthusiastic men are required to meet the demand (never greater than now) and the players by the way should seek—and if they will not do so, be driven to—other businesses in which to idle away their worthless lives.

* *

TYPESETTING by machinery is more and more becoming a fixed fact, a certainty; and the wise man will provide against it. The success of machines in one or more of the great offices in New York City proves the long-sought secret to have been found, and improvement will be rapid until every difficulty is removed. In this, as in all matters pertaining to the craft, the New World has outstripped the Old: the daughter taught the mother. With perfected machinery taken abroad (as is now being done) the battle against prejudice will be a short, even if a sharp one, and another diamond set in the inventive crown, another homage paid to the inventive genius of America.

* *

THE crossgrained old Snarleyow will, of course, grumble and declare that when such machines come in women

will come with them. We believe so; we hope so. Their more slender fingers will touch the keys with a rapidity and precision far beyond his own, and it is much too late for such as he to attempt to bar their progress. Has he ever read of how Telesilla saved Argos by her courage; of Volturna who screened Rome from the vengeance of her son?

Women live no longer under the baleful shadows of paganism, but in a broader world and beneath a brighter light. In many respects she is the superior of man; in all business affairs is standing co-equal; is successfully battling for the foremost places in thought, art, labor; and the man is a brute who would lay even a straw in her way.

Yes, it is probable women will learn to manipulate type machines. What matter? There is room enough on God's green earth for all. But whatever comes, every one worthy of the name will remain unsexed; will glorify man by both earthly and spiritual love; will bring peace to homes; sunshine to the hearthstones; lighten burdens; console in suffering; tend in sickness; cheer in solitude; support in penury; close the eyes in death, and forever remain that blessed flower of perennial sweetness and beauty which Adam in his despair bore away from Eden, and which alone almost compensated him for the loss of Paradise.

Written for THE INLAND PRINTER.

STYLE.

BY I. E. FOREMAN.

WE all have our ideas of "style." Every proof-reader has (or pretends to have) a system of punctuation, and a uniform style of capitalizing, quoting, italicizing, etc., but no two of these perfect (?) systems are the same.

What a blessing it would be if a uniform system could be adopted to supplant our old, crude, distressing, variable system of what is now known as "style." I know of but one parallel to it, and that will doubtless suggest itself to most printers; but happily type is now cast upon the point system.

Compositors have it in their power to put an end to this old, crude, no-system of "style." Let the International Typographical Union take the matter in hand. A committee should be appointed at its next annual meeting to consider this subject. They can begin with newspaper "style," and year by year continue the good work until we have more uniformity in the "style" of our newspapers, books, pamphlets and circulars. Then will the "comp" be happy. I think employers would welcome such a change, and would cheerfully adopt the committee's recommendations.

There will *never* be any material change for the better until some organization or representative body of writers or printers, with sufficient influence to command respect and to insure the extensive adoption of such a report, takes it in hand. Who can do this work better than the printers themselves? and the sooner they do it the better for themselves and all concerned.

“IN LOVE.”

Written for THE INLAND PRINTER.

SOME HINTS ON JOB PRINTING.

BY J. B. CALDWELL.

THERE are three main considerations in job printing, neither one of which should be ignored. First, honesty; second, art; third, success.

In this brief article the first consideration will be spoken of. Honesty alone will not insure either art or success, for a man may be very honest who is not an artist, and who has little capacity for business.

The printer who expects to succeed in the best sense of the word, must be determined to do honest work, and carefully and scrupulously fulfill his promises.

Give full count and charge for it. Give quality equal to sample, or better. It is not honest to charge for first-class work, and then furnish your patron the finger-marked, lack-luster productions of a careless printer or incompetent boy.

Use good inks, the qualities that correspond to the stock used, and see that your workmen are supplied with all that is necessary to do the work required of them. It is neither fair nor honest to expect your workmen to turn out first-class work with poor type, poor presses, poor inks, and poor rollers, in poorly lighted, poorly ventilated rooms.

Do not cheat your customer, and do not rob your workmen; and do not delude yourself with the erroneous idea that you are making money simply because you are doing a large business.

Readers of THE INLAND PRINTER who read, and heed, do not need any of these hints; but all are so liable to forget and neglect, that it is well to have attention directed to these principles occasionally. New readers, especially, should consult the late back numbers of this publication which treat so ably of the job printing business, management, system of accounts, etc. Such may find a rich treat, and valuable information.

Much more might profitably be said on the line of honesty in the printing business, but the truth that no permanent, successful business can be built upon dishonest principles, is sufficient under this head.

Written for THE INLAND PRINTER.

PUNCTUATION.

BY J. B.

PUNCTUATION is the art of introducing points into written language in such a manner that the correct meaning may be readily understood. The science of punctuation is peculiar to the modern languages of Europe. It was unknown to the Greeks and Romans, and the language of the East had no systematized mode of printing sentences for purposes similar to those of the present day. The scheme is generally acknowledged to be substantially the invention of certain Venetian printers of the sixteenth century, known in history as the Manutius family, consisting of a father and two sons, who also introduced the italic type; and there have since been but few essential changes of or additions to the rules which they established. The marks employed in written

language, while they may sometimes denote the different pauses and tones of voice which the sense and accurate enunciation require, are specially designed to show the grammatical divisions of a sentence and the dependence and relation of words and members which are separated by the intervening clauses. It not infrequently happens that the sense will allow of no pause in cases where, if the points alone were observed, it would seem that one of considerable length should be made.

The object of punctuation is frequently misunderstood, and the grammatical clearness of a sentence is sacrificed to the comparatively insignificant purpose of indicating pauses. The original design of the method was simply grammatical, and had no further reference to enunciation than to remove ambiguity in the meaning and to give precision to the sentence. An indifferent understanding in this respect leads to the notion that punctuation is nothing more nor less than the employment of marks which may be placed here or there as may seem to be adapted for the purpose of emphasis or of giving force to one's ideas. While such a theory as that referred to may not be altogether false under some circumstances, it is yet no more true of punctuation generally than it is of any other science that occasional deviations from settled usage should operate to the prejudice of fundamental principles. The dissimilarities of tastes and temperaments require that a reasonable amount of latitude be permissible in the faithfulness proper to all scientific laws. As in music the attributes of flexibility and grace blend with the taste of the performer within certain limits, so the correct pointing of clauses and sentences in English composition is an operation which involves an educated familiarity with the grammatical proprieties which constitute it a science.

Punctuation may be regarded as a branch of English grammar and composition, rather than as a portion of the work of the elocution class; but it is imperfectly comprehended in schools and scholastic institutes, and is but poorly demonstrated in grammars. Illy constructed sentences, for punctuation, are, therefore, not uncommon, even in otherwise well-written compositions. To correct such would require that the phraseology be remodeled to admit of requisite points, or else certain accommodating improprieties in pointing must be allowed on the score of intelligibility.

THE following subjects will be discussed at the International Photographic Congress, to convene in Paris during this year's Exposition. (1) "Introduction of a fixed unit of lighting in photography." (2) "Uniformity in the measures of focal lengths and of the values of diaphragms." (3) "Uniformity in the method of measuring the time of action of shutters." (4) "Uniformity in expressing formulas." (5) "Uniformity in photographic denomination." (6) "Protection of the artistic rights of photographers." (7) "Protection for photographic plates, etc., in custom houses." (8) "Uniformity in the sizes of plates." (9) "Uniform means to readily adapt different lenses to cameras."

THE INLAND PRINTER

A TECHNICAL JOURNAL, DEVOTED TO THE ART OF PRINTING.

Published Monthly by

THE INLAND PRINTER COMPANY,

183, 185, 187 MONROE STREET, CHICAGO.

H. O. SHEPARD, PRES. - - - JOS. PEAKE, SEC.-TREAS.

SAM. G. SLOANE, ADVERTISING AGENT. S. G. DUNLOP, TRAVELING AGENT.

A. C. CAMERON, EDITOR.

EDITORIAL OFFICE, SECOND FLOOR 183-187 MONROE ST., CHICAGO.

SUBSCRIPTION RATES.

Two dollars per annum in advance; for six months, one dollar; sample copies, twenty cents.

Great Britain and Ireland, postage paid, eleven shillings and four pence per annum.

To countries within the postal union, seventy-five cents per annum additional.

Postage stamps are not desirable, but when it is found necessary to remit them, one-cent stamps are preferred.

THE INLAND PRINTER will be issued promptly on the twentieth of each month. Subscriptions, payable in advance, may be sent to the Treasurer by postoffice order or in currency at our risk.

THE INLAND PRINTER will spare no endeavor to furnish valuable news and information to those interested professionally or incidentally in the printing profession, and printers will confer a great favor on the Editor of this Journal by sending him news pertaining to the craft in their section of the country, particularly individual theories and experiences of practical value.

CHICAGO, MAY, 1889.

INDORSED BY THE ILLINOIS PRESS ASSOCIATION.

RESOLVED, That the Illinois Press Association recognizes in THE INLAND PRINTER, of Chicago, a technical trade journal of the craft, eminently worthy of its indorsement, and takes pleasure in recommending it to the support of the printers of this state.

THE INTERNATIONAL TYPOGRAPHICAL UNION.

THE thirty-seventh annual session of the International Typographical Union, which convenes in the city of Denver, Monday, June 10, will be required to confront, and, if possible, definitely determine, several questions of more than ordinary importance affecting the future interests of that organization. While we believe the delegates elected thereto will be found equal to the emergency, representing and reflecting, as they do, to a great extent, the views of their several unions, and have, therefore, no intention of dictating, or even proposing, what line of policy should be followed, we desire to make a suggestion in connection with future action which we believe will be found worthy of consideration.

It is a truth which admits of no controversy that in a number of instances the subjects referred to local organizations for indorsement or disapproval have *not* received that attention to which they were entitled, and that the action taken has been based on impulse rather than on due deliberation. Such matters, generally brought up under the head of new or unfinished business, have been, as a rule, discussed when the patience of members has been overtaxed, and a desire to adjourn prevailed, hence the *matured judgment* of a majority of the members has not been obtained, despite the fact that the services of the ballot box have occasionally been brought into requisition to secure it.

This evil can be remedied to a great extent by an obligatory requirement that where a measure of vital importance is referred to the local unions it shall be discussed for at least two specified months, at a regular or special meeting, and that its consideration at such meetings shall have precedence over all other business. By the adoption of this or a similar method, the pros and cons would be intelligently presented; every member interested would have an opportunity of forming a deliberate, fortified opinion, and be placed in a position to cast a vote which meant more than an indefinite "yes" or "no." Each union would become a debating society, discussing the merits of the same question at the same time, thereby arousing a national or international interest, with the result that the delegates elected would be in a position to explain and defend their views and the views of their respective organizations, so that when the result was declared it would be accepted in good faith as the deliberate opinion of the majority of the members of the International Typographical Union. A conclusion reached under such circumstances and auspices would be of ten times more value, both from a positive and moral standpoint, than the average good lord, good devil, glad to get rid of decision. And although such decision might not partake of the character of the laws of the Medes and Persians—unalterable—it would possess an authority apt to be recognized, and impart a permanency to such expression which is now unknown.

The International Typographical Union is regarded, and justly so, as the representative trade organization in the United States, and action of the character referred to would not only redound to its own immediate interests,

but would exercise a beneficial influence on all sister associations.

THE INLAND PRINTER, which has ever been a friend of organized labor, expresses the hope that prudence, fair play, intelligence and decision may characterize the legislation of the forthcoming convention, and that the relationship between employer and employé. may be improved thereby.

THE MANAGEMENT OF A COUNTRY NEWSPAPER.

DURING the year 1888 death claimed 1,888 newspapers published in the United States and Canada—an average loss of six per day, Sundays excluded—a rate of mortality which shows there must have been something radically defective in their business, editorial or financial management, the judgment which selected the locations, or the advertising or subscription patronage extended. How many deaths each of these causes is severally responsible for, must, we suppose, remain a matter of conjecture; that each contributed its quota there is little room to question, though it is the aggregate more than the quota which now furnishes food for reflection.

In our last we stated that the success of a country newspaper, like the success of a city newspaper, depended, in a great measure, on its mechanical, business and editorial management, but in the present number we shall confine our remarks to the *mechanical* aspect of the case.

As we write we have before us two specimen country newspapers, which afford a striking contrast. Both have been recently established and in the same neighborhood; both cater to and are dependent on the patronage of the same community; and while the success of either is problematical, owing to the limited area in which they circulate, and the paucity of the population therein, *if* one succeeds, and success depends on the "survival of the fittest," from a *mechanical* standpoint, the result is already assured. One is a typographic model, an honor to any city; the other, a typographic monstrosity, a disgrace to any country. The pages of the first mentioned are neat, clean and well printed; the advertisements attractive, symmetrical and displayed to advantage; headings uniform; classification perfect; miscellaneous matter, editorial, local and business notices properly arranged; with the result as stated. On the other hand, the pages of its rival (?) remind us of the marks of a tattooed freak in a dime museum. The advertisements, if advertisements they can be called, are jumbled together like a mass of pi, poster, script, hair-line and ornamental type appearing in the same column in strange confusion, the party setting them up caring as much for proper display or punctuation as a cannibal does for condiments when picking the bones of a victim. Here is a block smeared with ink, the impression of which almost cuts through the paper, and there is an adjoining column absolutely illegible. No efforts at classification are attempted; parallel, double and single rules are mixed indiscriminately; no two headings are

alike; here is the announcement of a wedding placed next a spavin-cure puff; a stickful of brevier thrown into a column of long primer, the column rules half an inch longer than the matter, which no efforts have apparently been put forth to justify; while the list of letters remaining unclaimed appear in close embrace with a recommendation of the Acme Pulverizer; and, to cap the climax, its readers are informed in prominent headlines that this precious abortion is the *official* organ of P—s and R—h counties.

"Well," says a wiseacre, "what has all this to do with the *successful management* of a country or any other newspaper? What do its subscribers, advertisers or readers care about its mechanical execution? You cannot judge a man by his coat. A workman may be a good printer, and yet a nonentity as an editor or business manager; and, on the other hand, the contents of a journal may be of a very high order, and its composition and mechanical make-up objectionable." Not so fast, friend. If you are an ignoramus, you must not suppose all your readers are like you. Men argue from premises to conclusions. "If," say they, "you profess to publish an advertising medium, and charge your patrons for what appears therein; if you claim to furnish a newspaper and charge your subscribers so much for so many copies, the rational supposition is that its advertisements and literary matter should at least be presented in readable shape." To collect either for advertisements or subscriptions, under the circumstances referred to, is to obtain money under false pretenses, and this is just what hundreds of so-called publishers are doing every day. Suppose, for example, on receipt of a suit of clothes you had been measured for, one leg of the pants was found to be an inch shorter than the other, and that the vest or coat was out of proportion; or that a pair of gaiters made to order were found to vary in length and width, would the assurance that the former was made of the finest material, or that the calfskin used in the latter was the best the market affords, be considered an answer to your objection to pay for them? "So much the more shame that such material should be spoiled, and if you had known your business it would not have been," would doubtless be the answer; and the objection is just as valid when applied to a mechanically spoiled newspaper as to a spoiled suit of clothes.

In our next we shall have something to say about successful *business* management.

WHAT IS AN AMATEUR?

THE April issue of THE INLAND PRINTER contained a communication from "M. A. M.," Wevertown, New York, in reply to Mr. Seaford's criticism of the "Amateur" printer, his productions, his methods of doing business and his influence on the trade, which appeared in the February number of this journal. While anxious at all times to give every latitude compatible with fair play to our correspondents who differ, our Wevertown friend has evidently allowed his zeal to get the better of his discretion, and in his anxiety to say a good word for

the recognized scourge of the trade, has based his argument on a *technicality* which will hardly bear the light of direct examination. We say technicality, because we refer to the general and understood acceptance of the term rather than to a definition which has well nigh become obsolete as applied to the amateur printer of the present day.

Our correspondent says, "Webster defines the amateur as 'a person attached to a particular pursuit, study or science, as to music or painting; one who has a taste for the arts; especially one who cultivates any study or art from taste or attachment, without pursuing it professionally,'" and thereupon assumes that Mr. Seaport does not refer in his strictures to the amateur at all, but to the professional printer who does not know how to print. Now, the truth and the trouble is, that the above explanation as applied to the amateur, so-called, is a *misnomer*, because he is really—though frequently not ostensibly—a novice, working under the guise of a professional; and, while we do not claim that a botch is invariably an amateur, we do claim that an amateur—in the general acceptance of the term as applied to the printing business—is invariably a botch. The definition here given, while indorsed by Webster, is the opinion of Burke, who was born in 1723, and it is needless to add that he did not have the amateur-professional printer of 1889—a sample of whose fearfully and wonderfully made handiwork, may be found in the present issue of THE INLAND PRINTER—in his mind's eye when he penned it.

Our correspondent further says, "The professional workman has no time, and but little inclination, to work out processes or designs, while in that the true amateur finds his chief pleasure." On the contrary, we hold it is to the intelligent, skilled, progressive and experienced workman, ever on the alert to add to his stock of knowledge, and ready to avail himself of every facility placed within his reach, that we look to for the production of the beautiful, and to work out new processes and designs; and in calling to mind the list of truly artistic printers who have made a national reputation for themselves, and whose names among the craft are familiar as a household word, we fail to recognize the name of one who made such reputation as an amateur; and in this statement we believe we will be sustained by every intelligent member of the profession.

Again, "M. A. M." says, "The amateur is, no doubt, troublesome at times, but we cannot afford to exterminate him, for he often brings forth that which we least expect to see. The caterpillar is an ugly worm, yet from the dark recess of his repulsive shell comes the gorgeous butterfly." But nature recognizes a process of development, whereas the amateur proposes to improve on nature's plan, and as a natural result we find in his productions the repulsive shell instead of the gorgeous butterfly.

No, no, no! We do not intend to throw a halo of glory around, or make a persecuted hero of a man who is only worthy of contempt. The amateur of Burke is

not the amateur with which we have to deal, and we do not propose to let him steal the livery of heaven to serve the devil in, without our protest; and to this determination we believe the majority of our readers will say, "amen."

THE GOOD OLD TIMES.

THAT "wise men change their minds, but fools never," is an aphorism as true as it is trite, and there is no better illustration than can be found in some printing offices. There are printers who, despite all argument, practical proof and even disastrous failure, still obstinately cling to old-fashioned methods and material that are heavy impediments to success and progress; to the exploded theory that whatever our grandfathers did is the only wise and sensible way, and glorify the ancient at the expense of the modern.

The old was well enough—when we knew no better. When we set up, corrected, made ready and worked off by the feeble, flickering dimness of a tallow candle stuck in a bit of wood or lead, we were content because we had to be. Then, kerosene, gas and the flame of electricity were unknown, and the light *de luxe* was made by chasing, killing and robbing whales, or in an hour of almost bankrupt extravagance by stealing wax from bees. The old press, that to work almost pulled one's arm from the socket, was good enough, for cylinder, power and perfecting printing machines were not even visionary dreams. We had little knowledge of paper manufacture, of the thousand improvements that now make the art luxury and work perfection. Steam hissed contentedly from the spout of the teakettle, with never a premonition of being enslaved and forced to labor. The lightning played unchallenged through black clouds, and laughed in its midst at the efforts of the pigmies of earth to bend and make it a servant of daring enterprise. The old "thorough brace" stage rattled on, dislocating joints, and brought mails when "the Indians did not murder the driver or the wolves eat him up!" Railway tracks, locomotives and vestibule cars were peacefully slumbering in the iron of mines and timber of forests. There was no conception of the might or majesty of matter, that when manipulated by genius would revolutionize the world. We had not the slightest premonition of the possibilities of the future, or a very discontented race would have inhabited the earth.

In the "good old times," so often and ridiculously boasted of, there was neither telephone, telegraph, ocean steamer, sewing machines, reapers nor any of the grander, almost inspired results following and to follow their inception and improvement. In old times, we froze by the fireplace in winter and roasted in summer. Our houses were of logs and we had no modern improvements. We ate the coarsest food from pewter dishes and by means of leaden spoons. The beasts of the field and fowls of the air were our thermometers and barometers, our signal service and weather prophets; we forded or swam bridgeless streams, and were often hopelessly mired in the depths of sloughs. Our guns would fire but a single

shot without reloading, and our "Washington" and "Franklin" produce but a single impression without the flying and replacement of a sheet. We had the most primitive way of doing work, and the most unwieldy machinery for doing it. We were as children groping in the dark, and life was a continual battle, a hard and unrepaid struggle for its continuance.

Such and very much more of unpleasantness were the "good old times." Give them all possible credit, but in these later days of a new inspiration don't hanker after their return. They lived and died, that is enough to know; they are buried, disturb not their graves. Their dust can never again be quickened into life and usefulness. Better they should be forgotten than rise up ghosts of preposterous clumsiness and failure.

Particularly should this be the case in the modern printing office where every useful novelty is needed and every improvement stamped with availability demanded. Better throw out of the window or into the pi-box all relics of the past than cling to them, and endeavor to "make them answer." Time has become one of the most important factors in the race for wealth and the competition for patronage. It is whip and spur from the cradle to the grave, and a single moment lost often forbids the "breaking of the record." It is a wise man indeed who seizes upon every opportunity, and a fool who temporizes. By it more jobs and fortunes have been lost than can be enumerated; by clinging to the old more tempers have been soured and botched work turned out than should have been done in a century. In fact, it is a crime against labor and an imposition upon the laborer for the employer to neglect the opportunities furnished by the present. The art is worthy of it, and the craft should be worthy of the art. There should be no half way in the matter. Banish every antiquated, not up to the standard article from the office to the fire or the foundry. The new has no place for them. Show the youngest apprentice the stick, press and type used by your grandfather, the "brayer" and the shooting stick, and he would smile with supreme contempt at the stupidity incorporated in his body.

The new is ever growing to be the old. With today the things thereof pass away and others take their place. "Keep moving" is the motto of the world; "keep advancing" the order. Printing at the present day is no more like it was in the good old times than a matchlock musket is like a Gatling gun. One has to struggle to keep abreast of the tide; has to be supplied with new material and new inventions to compete with his neighbors. Good work cannot be turned out that will prove satisfactory without the means, and that does not belong to a former century or an earlier decade in this. Better burn your fingers with live coals than be digging among dead ashes. Tear off the musty, faded crape you are wearing for the good old times, keep up with and ahead of the requirements of the present. Let printing be your ambition as you hope it will be your profit, and it is only with the new can you tempt and command it.

A HINT TO INK MANUFACTURERS.

WE direct the attention of those specially interested to the letter of our Buenos Aires correspondent, contrasting the methods adopted by European and American ink manufacturers in packing their goods for a foreign market, and the superiority of those of the former to the latter. It is passing strange that, despite all warnings and requests, our home manufacturers persist in turning a deaf ear to such, and following a system which invariably redounds to their discredit and discomfort. Concurrent testimony is to the effect that while the superiority of the American product itself over those of other countries, all things being equal, is conceded, the carelessness manifested in packing, the disregard for climatic surroundings and ignorance of or indifference to local tastes and requirements, weaken if they do not entirely destroy its chances for successful competition. These and similar complaints are not confined to South America; they come from almost every quarter of the globe where manufacturers of the United States are seeking a market for their products. Are they not worth considering? We believe they are.

HO, FOR DENVER!

BY reference to a circular published in the present issue it will be seen that the craft in Denver, through their efficient Committee of Arrangements, propose to entertain in a right royal manner the delegates and visiting brethren to the ensuing convention, and with true western hospitality spare neither pains nor expense to make their trip an enjoyable one. The "Queen of the Plains" is, without doubt, one of the handsomest and most beautifully located cities on the American continent, and to those visiting it for the first time a grand surprise is in store. That the Denver of 1858, with its single log cabin, is the metropolitan Denver of 1889—vide illustration herewith given—is one of the marvels of the nineteenth century.

COLLAPSE OF THE COMBINE.

BY reference to circulars issued by a number of typefounders in the United States, we learn that the combination entered into some time ago to advance the price of roman type, leads, etc.—which action was strenuously objected to by employing printers on the ground that the rise in the price of metals, upon which such advance was justified, was the result of speculative rather than legitimate business, and must necessarily be temporary in character—has been abandoned. As matters stand, prices remain nominally the same, but the typefounders are now at liberty to make such discounts as they may deem proper, instead of being bound by an iron-clad rule.

THE new postal law makes it larceny to take a paper and refuse to pay for it; and rightly, too, for the newspaper thief is the most contemptible of all thieves. It frequently happens, however, that publishers have themselves in a great measure to blame, on account of their system, or, rather, lack of system, of doing business.

NOTES ON WOOD ENGRAVING.

NO. L.—BY S. W. FALLIS.

FOR this cut of the diploma of the Highland Society Clennell received one hundred and fifty guineas, paying Thurston out of his own pocket for the drawing. The cut is characteristic of Clennell's style of tooling. Devoting more care to line and texture where the subject seems to require, and by thus contrasting more unimportant parts of his work by coarse and careless lining, with studied care, precision and fine lines in the more critical and important portions of the cut, he enhances the value of the better tooling by thus bringing it in direct contrast with the coarser and more careless work on the portions admitting it.

The Society for the Encouragement of Arts and Manufactures presented him with their gold medal on May 30, 1809, in appreciation of the great achievement gained in the production of this cut. The cut is about 10½ inches high by 13½ wide. This original block, however, when only a very limited number of impressions had been printed from it, was destroyed by fire in the burning of Mr. Bensley's printing office. The subject was afterward reengraved on a block of the same size by John Thompson.

Rogers' poems, of 1812, with illustrations drawn in pen and ink by Thomas Stothard, R. A., and engraving executed by Clennell, may be fairly ranked among the best of Clennell's engravings. They are feelingly, artistically and carefully executed, and are admirable reproductions of the original drawings on the wood. Stothard was well pleased with the result, and expressed himself plainly that this was to him a proof that wood engravers stepped beyond the limits of their art when they attempted to introduce a variety of tints and cross-hatching, in the manner of copperplate engraving, which were not drawn by the draftsman. Hundreds of cuts, however, by such as Bewick, Nesbit, Clennell and Thompson of these early days, and the works of engravers without number of the present time, clearly show the fallacy of such arguments.

Clennell was an expert in water-colors, and he drew many of the drawings for the "Border of Antiquities," and the encouragement and praise he received in consequence as a designer and painter encouraged him to entirely abandon the practice of wood engraving. With this resolution he labored diligently to improve his talents in painting, and the result showed that in a very short time he made such progress that his pictures attracted the attention of the directors of the British Institution; and in 1814 he was employed by the Earl of Bridgewater to paint a large picture of the entertainment given to the Allied Sovereigns in the Guildhall by the city of London. He experienced some difficulty in securing sketches of the numerous distinguished personages whose portraits it was essential to produce in the picture, and this occasioned much loss of time and a great deal of anxiety on his part in procuring these preliminary items for his work. These important items and

sketches having at last been secured, he began his picture, and was making rapid progress, when, in April, 1817, he suddenly became insane, and the work was stopped. (The painting was afterwards finished by E. Bird, R. A., who also became insane.) It has been stated that Clennell's malady was the result of too close application and over-anxiety for the success of this great work of his life. This, however, is not well authenticated, as he had already surmounted his greatest difficulties, and was rapidly progressing with the work, with no great obstacles in view, when suddenly, and without any apparent cause, he was deprived of his reason.

Within a short time after Clennell was thus sadly afflicted, his wife (who was the daughter of the late C. Warren, one of the best copperplate engravers of his time), also became insane, her malady being accompanied by a fever. She expired after a brief illness, leaving three young children to mourn the death of their mother and the confirmed insanity of their father.

These distressing circumstances excited the sympathy of several noblemen and others, who appointed a committee to devise the best means of raising a fund for the support of Clennell's family. It was determined to publish by subscription an engraving from one of his pictures. The subject chosen was "The Decisive Charge of the Life Guards at Waterloo," for which Clennell had received a reward from the British Institution. The engraving was made by W. Bromley, and published in 1821. The net proceeds provided a small annuity for Clennell and his children.

After having been confined some three or four years in a lunatic asylum in London, Clennell so far recovered that his restraint was no longer considered necessary, and he was accordingly sent down to the north, where he lived several years in a state of harmless insanity, with a relative, in the neighborhood of Newcastle. He amused himself making drawings, little wood cuts, and occasionally writing poetry. Many of these drawings and wood cuts are still in existence, and are sympathetic mementos of one of the greatest artists and engravers in his palmy days.

In Clennell's insane moods he would sometimes call on Bewick. On one of his visits he requested Bewick to give him a block to engrave. Bewick, to humor him, gave him a piece of wood and left the subject to his own choice. On his next visit he brought with him the finished cut. It was like that of a boy's attempt when first beginning to engrave, but he expressed himself that it was one of his most successful productions in the art. He continued in his harmless works of drawing, engraving and writing until 1831, when he became much worse, and his friends were again compelled to place him in an asylum near Newcastle, where he remained until he died.

In 1844 a monumental tablet by R. Davies, a local sculptor, was erected to his memory in St. Andrew's Church, Newcastle. It is uncertain to what high work his talents would have led him had they not been so suddenly interrupted with this fatal malady. When attacked he was thirty-six years old, and was making rapid strides

towards excelling Nesbit, who bears the honor of being the most accomplished of Bewick's pupils. Had he been spared a few years longer, and made the same progress as in the later part of his working days, it is quite evident that the honors that now rest on Nesbit would be the possessions of Luke Clennell.

William Harvey is another of Bewick's pupils who merits a brief notice as an artist of worth. He was born at Newcastle-on-Tyne, July 13, 1796. His earlier engravings are only surpassed by his later productions. At a very early age he manifested a great taste and no mean talent for drawing, and at the age of fourteen was apprenticed to Thomas Bewick to learn the art of engraving on wood. He and his fellow-pupil, W. W. Temple, engraved most of the cuts in "Bewick's (1818) Fables." As he excelled in drawing as well as engraving, he was generally entrusted by Bewick to make the drawings on the block from Robert Johnson's designs.

In September, 1817, Harvey removed to London and studied drawing under B. R. Haydon, and anatomy under Charles Bell. While with Haydon, when Eastlake, Lance and Landseer were his fellow-pupils, he engraved the well-known cut after Haydon's "Assassination of Dentatus." That ambitious attempt to unite color, expression, light, shadow and heroic form, combined with artistic and difficult tooling, met with indescribable success. This engraving is probably the largest, and certainly the most labored, block that had, up to this time, been cut in England, and is a most marvelous and ingenious piece of engraving on wood.

Towards 1824 Harvey seems to have wholly abandoned wood engraving, and devoted his entire time and talents to designing and drawing. About 1830 he had become very popular, and seems to have been the only person to whom engravers could or would apply to for original designs. His works were very numerous and meritorious, and his reputation and talents were at their height in 1840. His talents applied to almost every imaginable subject. He made drawings for the "Tower Menagerie," 1828; "Zoölogical Gardens," 1830-31; "Blind Beggar of Bethnel Green," 1832; "Story without End," Pictorial Prayer Book, Bible, Shakespeare, and hundreds of other publications issued during this period.

(To be continued.)

Written for THE INLAND PRINTER.

THE PRICES OF PRINTING IN ENGLAND.

BY JOHN BEDFORD LENO.

I DO not propose, in my treatment of this subject, to outstep the boundaries of my own personal knowledge. My connection with the English printing trade has lasted forty-nine years. That is the full extent. As may be, however, readily imagined, the knowledge acquired during the term of my apprenticeship with regard to prices, the cost of material, labor, etc., was, indeed, small. Therefore, in order to be accurate, I propose to confine my observations to the last forty years.

The chief items in printing expenditure are rent, labor, paper, gas, ink, and plant. It may be taken for granted that the cost of nearly the whole of these have been greatly reduced. The only three items that can possibly be said to have become more costly are rent, labor and plant. If we take into consideration how

much the articles included in the last class of items have improved in the way of facilitating the capacity of production, it at once becomes doubtful whether it can be fairly said that the plant of a printer has become more costly. The outlay is greater, but this is counterbalanced by the increased output.

Forty years ago the paper could be purchased fit to print the commonest handbill at a less price than sixpence per pound. Writing papers have sold at one shilling per pound. Contrast these with present prices. I have heard of paper quite good enough for the first-named purpose being bought as low as three halfpence per pound, and the best machine-made writing papers at three-pence. Gas has fallen in the same period from five shillings to two shillings and ninepence. Ink (common black) from one shilling to sixpence.

As regard to compositors' work, it may be taken to range higher in certain departments. The scale is admittedly higher; but the work is "leaner." The cheap books of today have as much crammed into them as it is possible. There are less breakages, and the "shoving down" of the heads of chapters is greatly reduced. The use of leads is less frequent. Then, again, there are other set-offs, such as the employment of boy and female labor, to be taken into consideration. Altogether, I am inclined to the belief that the prices paid for compositors' work has not greatly varied. The proportion of boys engaged in this department of the printing business has been extended; but this extension has been accompanied by increased pay.

Machinists who have taken the place of the discarded pressmen earn, on the average, better wages; but then look at the increased output. Compare the amount of work done by a jobbing cropper to that turned out by a small hand-press, and note the immense advantage which the latter confers with regard to the cost of production.

In a former article I gave your readers a few facts regarding the rents London printers are now paying, and the heavy burden this item has become. I also noted that several large houses had started country houses in order to prevent their occupiers being swamped by the dead weight. I have, therefore, little more to say upon the matter of rent, saving that its tendency is still to go upward.

The difference in the charges for work done forty years since and now is, to say the least, marvelous, and great as has been the lowering of several items in its production—far beyond what might have been reasonably expected. This is largely to be attributed to the fierceness of competition that has prevailed during the interval. I know of no better way of putting this difference before my readers than by quoting the prices then and now:

	1849.	1889.
10,000 handbills, crown 8vo.....	£1 10 0	£0 14 6
10,000 large cards.....	1 10 0	0 15 0
100 Double crown posters.....	0 15 0	0 7 0
1,000 Crown, 8vo pamphlets, 16 pp. long primer....	3 10 0	2 10 0
	£7 5 0	£4 6 6

Great as the reductions have been in the prices of paper and ink, and the cost of presswork by the use of more rapid machinery, it will be readily seen, or I am much mistaken, that these heavy reductions in printing must have materially diminished masters' profits.

It must be understood that I am referring to work done for the general public on the ready-money principle. In cases where houses give long credit, extending occasionally over several years, little or no reductions from the old prices have been voluntarily made. The houses that set themselves out for this class of business have, indeed, been great gainers by the lowering of the cost of production.

It may be thought that the comparative prices given are too limited; but as I am writing to experts, it will readily be seen that the sixteen-page pamphlet is meant to be taken as a sample of bookwork generally. It may be added, however, that the publishing trade obtained considerable reduction on the price quoted as a sample of this description of printing.

There are several instances in which well-known printing firms have been made into companies, and I have been over and over

again struck by the prices asked by the vendors. I am inclined to doubt the genuineness of these prices. Indeed, in one instance, I know the price fixed is none other than a barefaced robbery, or attempt at robbery, and I pity those who may be caught in the spider's web.

With regard to the production of newspapers, the reduction of cost is, to say the least, marvelous in this country. Take the *Weekly Times*, one of our largest penny sheets. This immense sheet costs barely one farthing, and is worked on a machine that will turn out ten thousand per hour, or on machines each of which will produce a like quantity. Thus it will be seen that individually the printing is reduced to the merest fraction. At the time of Waterloo the then extraordinary demand for copies containing the result of the battle could only be met at the rate of 250 per hour! at a cost which it is alarming to think of.

It is almost impossible to forecast the result of this continued reduction of prices. Every now and again a firm that bore the reputation of being substantial comes down with a crash. Occasionally we hear whispers that Mr. McMurray, or some other huge dealer in stationery, has become the sole proprietor of such and such an establishment. Then we hear that Spalding & Hodge, our largest paper merchants, are bankrupt, and that the immediate cause thereof was giving almost unlimited credit to publishing and printing firms who have failed to meet the demands upon them. Typesetters and machinists dolefully complain of the failure of their customers to act up to promises, and ink merchants say there never was a time when the collection of debts presented such difficulties.

The truth is, work is being done all around at prices that cannot pay, saving in those cases where customers prefer to be overcharged rather than settle their accounts. In making their estimates, wear and tear is seldom taken into consideration. For a time matters appear to be going on swimmingly; but presently large outlays are required in this direction, and then the formidable error under which they have been laboring is revealed. A council of war is called, and all kinds of suggestive remedies are considered. A company is the remedy most often adopted, and so the general public are hooked in to pay the cost of the reckless trading that has created the difficulties. A blazing prospectus is issued. A lawyer's firm a company promotes, and the appointed manager will reap small fortunes; but the shareholders will, in the long run, lose every penny they adventure.

The printing business in England has never been celebrated for rapid fortune making. Its conditions in this respect have not improved. True, there are a few firms the members of which have grown and are growing rich; but, upon inquiry, it will be generally found that they have enjoyed, or are enjoying, unusual advantages. Practically they have had a monopoly of the very best of work. Among these may be mentioned the firms of Spottiswood, Waterlow and Hansard. But then, where would they have been was it not for the friendly help of men in high office in our government, railway boards and parliament?

There are, moreover, several firms to my knowledge that would have died out long ago had it not been for the seizing of newspapers and periodicals belonging to creditors who could not pay, that have since become excellent properties. Even the mighty *Telegraph* was obtained in this way by a firm that was in a very impecunious position when the transfer was made.

At the present moment a few city houses are doing well. There is a rage for syndicates of all kinds, and thousands are being spent in printing, and for this class of work excellent prices are, as a rule, paid. How far the expected tips, that are known to be given, lessen the amount of profit, I am not prepared to say; but I could mention one solitary case that has come within my knowledge where the reduction thus caused is very considerable.

The fall in price of lithographic printing has been equally great, as might reasonably be supposed, when we remember that before the period which marks the beginning of the interval I have selected, little or no improvement had been made in the presses used. In this department, I am informed, the customers have

profited to a far larger extent than the trade. In this branch it is the men who have suffered to the greater extent.

Printers themselves must take the blame for reducing prices to their present level. From what I have been able to glean from the perusal of your pages, the English printing business, in this respect, does not greatly differ from your own. The same fierce competition has brought about identical results on both sides of the Atlantic.

For my part, I should dislike to see competition done away with; but assuredly there is such a thing as too much of a good thing. Competition that beggars your neighbors and ends in your own ruin is condemnable; but competition that spurs men on to do their best for the consumers of printing, or aught beside, is a benefit to all concerned.

The public could and would afford to rest content with their fair share of the saving accruing from the diminished prices of the materials used and the employment of speedier machine help, and there is no necessity, save that which springs from the greediness of master printers, to give them more.

What the end of it will be I do not profess to know. Master bakers and masters in many other trades in England have, for a long time, taken counsel and regulated prices; syndicates, as already stated, are busily forming. Both are objectionable on the ground that they act unfairly to the consumer. Yet the prevailing system is, in its results, equally unfair to the producer; and this unfairness is a matter equally to be deplored.

VERMILION IN LETTERPRESS PRINTING.

Vermilion is one of the finest reds. It is in great favor with color printers on account of its bright and lively tone. Well ground, its use is easy, provided the surface on which it is printed be without influence over it. But vermilion is a sulphuret of mercury, easily decomposed if brought into prolonged contact with certain metals. When liberated, the mercury combines with the metal, with which the sulphur forms more or less colored sulphurets.

Vermilion is not generally used in a pure state, but in combination with another color, in order to insure greater brightness. This, however, is a mistake, for the brightness soon gives way to a dull and cloudy red. The printer immediately inveighs against the inkmaker, when he should, in reality, blame his own want of foresight.

The metal most easily attacked by vermilion is copper, the resulting sulphuret being black, whence the absolute necessity of refraining from using vermilion with electros, unless these be previously coated with a deposit of silvering solution or nickel.

Neither iron nor nickel have any affinity for mercury, and consequently exert no influence over vermilion. As a rule, it would be well to coat with silver or nickel all copper or zinc plates to be printed in vermilion.

Vermilion is met with in the natural state. It is the cinnabar found at Ydria, Amalden, and above all at Dialicetto, a small and little known district of Tuscany. But cinnabar needs purifying, and makers generally prefer manufacturing sulphuret of mercury.

Vermilion is often adulterated with minium, red oxide of iron and ochres. The fraud is, however, easy of detection, as pure sulphuret of mercury sublimes without leaving a deposit.

What has been said of the use of vermilion in typography applies equally to the colors of which it is the base; crimson and scarlet shades, for instance.

To avoid the drawbacks attending the use of vermilion, recourse should be had to special colors without mercurial base. These may generally be obtained of good ink makers, and advantageously substituted for vermilion, with which they are nearly identical.—*Printers' Circular*.

SINCE the first of January the Government Envelope Works, at Hartford, have made 140,000,000 of envelopes, the average monthly distribution being 40,000,000. The agency is driven with work.

REMINISCENCES.

BY JAMES BARNET.

FOREMEN, JOURS, ETC.

DEAL humanity in its harmonial aspects is as pretty as a picture and fair to look upon. To disturb the glamor of seeing it with different eyes than those who paint the one side with a glowing summer hue, seems rude; yet justifiable when discrepancies or shortcomings may give warning to others not to fall into traps of their own forming. Faultfinding seems inherent in our nature, and is ever uppermost with those who get in the way of others even in walking along the streets of a crowded city. In a printing office, as well as in a palace, the signs of unpleasantness creep in and out to the agitation of those who are affected. It has often been said that history repeats itself, but whether with individuality or nationality it is unnecessary to inquire. One of the reasons given as a preference in politics for certain named individuals why they should be chosen is that the majority of the people love to be ruled; they have not got rid of their Old Country loyalty and desire not to cast it aside as they would an old garment which has fitted them so well in former days. Custom is a powerful factor in determining opinions, and a foreman is apt to be accounted feeble who adheres strictly to the golden rule. When in the presence of a foreman, as well as in that of an employer, a jour is impressed with the inclination of looking up to them as being superior in talent as well as in responsibility. This can hardly be the case, especially if younger in years, except by their demeanor and in example of the virtues which make men great.

Self-control is one of the principal qualities that should be exhibited in the conduct of a foreman—unlike the mate in command that could not find a torch, as the lookout warned him of an approaching vessel in full sail; it had been out of place.

In Saville & Edwards' office, London (1846), two companionships, of twelve compositors each, were placed upon a 1,000-page book called "Burke's Peerage of Great Britain and Ireland," set in minion and nonpareil, double column, large octavo. They were in separate rooms. To one of these I belonged. Soon a rivalry sprang up between them, and in every contest of superiority, the one I was connected with proved to be victorious. Except in typesetting, I had no part. At last a boatace was mooted, and it was agreed among ourselves that an afternoon should be taken to decide the wager of 10s. and expenses. There was neither room nor use for three of us in the racing boats, but wishing to have a view we traveled over Vauxhall Bridge to Battersea Fields, and on a prominent point awaited the scene. Soon the opposition came scudding along, sending up their cheers when passing the onlookers. On they went out of sight near by at a bend of the river. There was no sign of our craft. Something must have happened, and it did happen; but we neither saw nor heard of it from the passing boat. Inland we went so as to reach the winning post. On arrival, no one could inform us about our companions, so we hired a boat and rowed up the Thames some distance to an island, where the racers were enjoying themselves at skittle playing. On getting ashore we were informed that our boat, notwithstanding having struck the stone abutment of Vauxhall Bridge, which detained them sometime in bailing and fixing the frail-looking craft, came in ahead. Returning, I had either to travel landward, or risk a passage in the damaged boat nearly half full of water. I chose the latter, and in I went, sink or float. It looked like a tempting of Providence, for, if a passing steamer had been near, it would have sent it to the bottom. Steady rowing and good pilotage, however, carried it safely down the stream to Westminster Bridge from Chelsea. Next morning an order was issued by the foreman that each absentee would be fined 25 cents, to be applied to the sick fund of the office (a good institution) or take his discharge. A meeting was held to discuss the subject, when it was found that the foreman had exceeded his authority in attempting to fine the compositors; but he had the privilege of discharging them for neglect of business. The men, through the cliquers, then

resigned. The foreman would not accept their resignations, and annulled the order for fining them. He made a mistake and had to acknowledge the error.

One of the London employers made an effort with non-union compositors to break the price of parliamentary work, and he had the promise of assistance from other master printers in carrying out his scheme. Having a larger order on hand than he could accomplish, a part was sent to where I was employed, when the father of the chapel was notified that it was ready to be given out by the foreman. A meeting was held, and the resolution was to reject it. The foreman knew what the result of offering the work would be from the action of the union before that took place. If his employer wished to retain union compositors in his office, he should have advised him against making the offer of doing the work of a non-union employer, as the success of the latter would result in lowering the profits of other master printers whose offices were mostly occupied with such printing.

In the same room a new hand appeared, two or three years my senior, who had been (according to his story) eighteen months in Paris, working principally in the English part of Galignani's. At every opportunity he set on to me, as I was the youngest jour, a beardless Scot, and he a full-blooded cockney. When I got tired of his talk, I shut him up by saying that he was nothing but a plaster of Paris man. This term seemingly confounded him, and he quietly resumed his work, trying to fathom the mystery of the Paris plaster. This cockney had been a newspaper rather than a book compositor, and his proofs contained more errors than those of the other compositors. This also prevented him from earning a similar amount of wages. This the foreman could notice when the bill-book came under his supervision. One morning, somewhat late, this man from Paris came in and announced that he had just been getting married. The jours immediately brought their sticks down on their cases with a rap, and "G. I." (general indulgence) came forth from a dozen of throats. Each one then named the kind of drink in which he was to toast the health of the groom and his left at home bride. Before the former had expressed his preference, the foreman came into the room unnoticed and unheard, and as the thumps of the sticks came down on the case and the words, "I'm for porter!" were uttered, a hand touched the groom's shoulder, which nearly made him jump off the stool he was sitting on, and the advice tendered him, in solemn cadence, "Young man, you had better pay attention to your work than sticking to porter!" This advice had not been improved upon, and at the end of the same week, the young married man's frame was vacant.

The youthful reader will observe where the deficiency of the groom's qualities lay—lack of reading and study of that which would enable him to become a better compositor. It would also save him from being knocked from pillar to post—a sad lookout for the struggle in the battle of life.

SOME FIGURES BY A REPORTER.

One of the problems with which a reporter has to deal is the probability of finding at home the men whom he is assigned to interview after eight o'clock in the evening. Long experience teaches him that the vocation, age and social position of the person sought will enable him to estimate the chance very accurately. Assuming 100 to represent the certainty of finding his man, the probabilities will run about as follows: Clergymen, on Monday and Saturday nights, 86; other nights, 40. Old lawyers, 75; young lawyers unmarried, 25. Capitalists and bankers, 75. Politicians, between campaigns, 30; during campaigns, 5. Clerks, living at home, 20; clerks, boarding, 10. Physicians, 50. Merchants, 60. Mechanics, 70. Young women, unmarried, 50; married women in society, 60; married women without special aspirations, 80. Old people past 70 years, 95. After ten o'clock at night the chances of finding middle aged people at home are double the eight o'clock chances, while the younger ones on the average come strolling in about twelve o'clock.—*Buffalo (N. Y.) Express.*

ODE TO AN EMPTY INK-KEG.

BY W. P. ROOT.

Fountain of darkness,
Source of light!
How widely scattered now are all thy carbon particles,
Since first, with mallet heavy, I loosed your iron hoops
And drove a nail into your head!
One little portion of your ebon blood told us of death;
And, right beside, one said a man was born,
Thus equalizing things.
Through many a day of toil I've watched the rollers,
As with ceaseless twirl
They sent thy murky contents round the world,
To teach men better things and new.
But now how far beyond recall
Of all who tread this earthly ball
Must ever be thy teachings!
The good cannot be all destroyed,
The ill we can't erase;
The merry things that thou hast said
Will cheer us in life's race.
What are we all but ink-kegs,
Filled with that which, of itself, is neither good nor bad
Until we first apply it?
Our power to talk is just as well employed
In making all men friends and neighbors,
As though we used that same unruly tongue
To make them hate and curse.
'Tis not the ink alone that puts the words on paper,
But 'tis the type.
And so our hearts, like metal cold,
Give shape to what we think;
And tongues give utterance to these thoughts,
Like paper stamped on ink.
The energy stored up in kegs of dynamite,
And other compounds deadly,
Is but a bagatelle when once compared
With all thine innate power for good or bad.
So may I scatter wisely such potential seed,
Lest the crop sown be worse than one from dragons' teeth.
Let wisdom, virtue, harmless fun,
Forever from my ink-kegs come.
Let no man ever be the worse
For having read thy contents.
Good-by, old hulk! like corse without the spirit,
Thou liest there in everybody's way,
Fit only for the sexton.
Ope the furnace-door. What heat!

Written for THE INLAND PRINTER.

THE ARTISTIC PRINTER.

BY HERBERT L. BAKER.

A lot of bent leads and some broken-down rule,
A high-smelling pipe and an old office stool,
Some crazy "art" fonts and some doctored up inks,
And wads of chewed paper to fill up the chinks.
Some "butes," a few "fakes," lot of "curliques," too,
Some "slobs" for his jobs, an old knife-blade to hew
Material too good to deserve such a fate,
But suffers destruction at a terrible rate.
The artist then goes out and fills up with "booze"—
A horrible nightmare appears in his snooze.
He wakes up next day with "ideas" in his head,
And sets up his nightmare in bits of cold lead.
No importance to him are the words in his job—
Subordinate all to the "bute" and the "slob."
But in goes the fancy as full as 'twill stick,
While all's covered over with colors most sick.

Then specimens go to the press of the trade,
And flattery thick on the "genius" is laid.
"A step in advance," and "an exquisite taste,"
"To praise this young artist with pleasure we haste."
The customer!— well, just see how he'll chill
The budding young genius, and kick on the bill.
Artistic it may be, but naught strikes his heart
When the *use* of the job has been killed by the "art."

L'ENVY.

To criticise others is easy enough—
It's easier far than to be "up to snuff."
We point in derision, of "artists" make game,
But wish we were "artists" ourselves, just the same.

Written for THE INLAND PRINTER.

THE PRINTER'S PROGRESS.

The shades of night were coming down,
When limped into a western town
A tramp, who bore, by every sign,
The banner with that well-known line,
"Dead broke."
His hat was torn, his tangled hair
Stood like a hedgehog's in despair,
And like rheumatic jewsharp rung
The accents of that thickened tongue,
"Dead broke!"
"Oh, stay!" the printer said, "and place
Your weary form at yonder case."
A flush of joy suffused his cheek,
But still he said in language meek,
"Dead broke!"
"The clerk will cash your morning's string,
Soon as the cub shall thirty bring."
This was his regular's last good-night,
And still replied this singular wight,
"Dead broke!"
And there, with a smile that was fierce and wild,
The leaved local he swiftly piled,
And anon, with a grim and ominous laugh,
He toiled through the solid telegraph—
Dead broke.
He passed his galleys at rapid pace,
And worked the hook with a careless grace,
With dashes, slugs, and pickups a few,
And he hung up his case when the night was through
Dead broke.
He tore the dupes with an anxious smile,
And pasted his string in the Frisco style,
And measured twelve-three with careful gauge
As the make-up planed down the local page—
Dead broke.
"You'll find a bunk behind the press;
That's better'n carryin' the flag, I guess."
But he counted his currency o'er and o'er
And chuckled low to himself, "No more
Dead broke!"
When the first blushes of early morn
Had roused the dispenser of morning horn,
The comp appeared and showed his trait
Of taking the national beverage straight,
Dead sure.
* * * * *
[An interval of thirteen drinks is supposed to have elapsed.]
There in the gutter making his bed,
In his pocket, as usual, nary a red,
The bright sun shone on this man of sin;
And the cop exclaimed, as he scooped him in,
"Dead drunk!" KICKER.

Mr. Printer! Do you wish to make money? If so, there is no better way than by handling our line of

Advertising Specialties

CONSISTING OF

FANS, CARDS, CALENDARS, BANNERS, FOLDERS, ETC.

Increase your profits, enlarge your business by having these goods to offer your customers. No other branch of your business will pay you as well. Inclose us your business card and we will mail you our prices on all goods we manufacture, or inclose us 4 cents in stamps and receive a set of Hudson River Views. Full line of Fans now ready. Calendars ready August 1st. Send for price list. Set of samples of Fans, \$1.50 by express. Liberal discount to the trade.

FRONT VIEW. **Double "Polhemus" Cabinet.** BACK VIEW.

The Double Cabinet has 18 full-size Italic Cases, 20 two-third Job Cases, and 2 pairs News Cases on top; Cherry finish, \$75.00.

FRONT VIEW. **Single "Polhemus" Cabinet.** BACK VIEW. **Double "Polhemus" Stand.**

The Single Cabinet has 18 full-size Italic Cases and one pair News Cases on top; Cherry finish, \$35.00.
 Double Stand with Racks for 12 full and 12 2/3-Cases, \$15.00
 Single Stand with Racks for 12 full-size Cases, - - 6.50

WE claim that the "Polhemus" Cabinets and Stands are the best and most convenient ever offered to the trade. The back of the cabinet is paneled, and compositor stands at the back when setting from top cases. The cabinet cases pull out from the front and compositor is never disturbed by others using them, a common occurrence with other cabinets. There is a galley-rest back of the case-rest, extending the whole length of the cabinet, giving same amount of room as a galley-top cabinet; and also galley shelves between the rows of cases in the Double Cabinet, with room for twenty single or double galleys.

We will cheerfully furnish estimates on any SPECIAL Cabinet or article of furniture that may be desired.
 Our new **Hamilton-Boss Lower Case** is rapidly growing in favor with compositors in book and newspaper offices; it is a great economizer of time and labor.
 Our **Brass Leader and Rule Case** is a very convenient article, and especially valuable in offices that do much blank or railroad work. In order to meet the demands of our constantly increasing business, we have recently established a Branch House at **259 Dearborn Street, Chicago**, where we carry a large stock of goods of our own manufacture. We respectfully solicit your orders for anything you may need in our line. Send for our Specimen Book and Catalogue.

THE CHANDLER & PRICE.

OLD STYLE GORDON PRESS.

Over NINE HUNDRED sold and EVERYONE given entire satisfaction.

SPECIAL FEATURES:

Steel Shaft and Steel Side Arms, Forged from Solid Bar, without Seam or Weld. The Most Positive and Practical Throw-Off yet Introduced. Best Material Used. Most Carefully Finished.

Impression Throw-Off. Hardened Tool-Steel Cam Rollers. Depressible Grippers.

We have recently greatly improved these Presses, enlarging and strengthening the parts, and so arranging the disk and roller carriers as to give greatly increased distribution and we believe it is unequalled in this respect by any press now made.

THE MOST DURABLE AND HENCE THE MOST ECONOMICAL PRESS FOR THE PRINTER.

WE CHALLENGE COMPARISON.

SIZES AND PRICES.

EIGHTH MEDIUM, 7 x 11, with Throw-Off and Depressible Grippers,	\$150.00	HALF MEDIUM, 14 1/2 x 22, with Throw-Off and Depressible Grippers,	\$450.00
" 8 x 12, " " " "	165.00	STEAM FIXTURES,	15.00
QUARTO MEDIUM, 10 x 15, " " " "	250.00	CHANDLER & PRICE FOUNTAIN, for either size Press,	20.00
HALF MEDIUM, 14 x 20, " " " "	400.00	BUCKEYE FOUNTAIN,	10.00

The two Half Medium sizes have four Rollers. With each press there are three Chases, one Brayer, two sets of Roller Stocks, two Wrenches and one Roller Mold. No CHARGE FOR BOXING AND SHIPPING. ALL OUR GOODS GUARANTEED IN EVERY RESPECT.

N. B. None genuine without the name of Chandler & Price, Cleveland, Ohio, cast upon the rocker.

THE BUCKEYE FOUNTAIN.

Patented June 5th, 1885.

Do not confound this Fountain with others similar in appearance.

This Fountain will be found the easiest attached, easiest worked and most practical ink fountain in the market. Its roller is so adjusted as to supply ink uniformly on either a large or small job. Its size also makes it practical to use expensive ink without waste, only a small amount being required to fully supply the fountain. The bottom is so constructed as to permit all the ink to run down to the roller, there being no pocket or dead space.

By turning back the pawl from the ratchet wheel, the operation of the fountain is suspended without missing an impression. The fountain can be interchanged from one press to another without removing the attachments, so that by having two or more fountains the color can be changed without wasting the ink, which must occur if one fountain has to serve all colors. An examination of the cut will show without explanation the manner of attaching. It should be adjusted with impression on, so that the roller of the fountain will meet the upper form roller when at its highest point. The roller can be removed for cleaning by turning back the thumb screws until the caps can be removed through the slot in front, then by raising the roller it will come out through the same slot.

Do not confound this Fountain with others similar in appearance.

PRICE, \$10.00.

CHANDLER & PRICE FOUNTAIN.

To those whose special work requires greater capacity than can be obtained with the Buckeye, we offer the Chandler & Price Fountain, which is so made as to permit contact with the rollers the whole length, and will thus furnish a greater supply of ink than the Buckeye. Its construction and operation will be readily understood from the cut, which shows it attached to a 14 x 20 Chandler & Price Press. It is without all extra and useless parts which complicate and add to the difficulty of using, and at the same time is complete with all the requisites of a first-class fountain.

PRICE, \$20.00.

CORRESPONDENCE.

While our columns are always open for the discussion of any relevant subjects, we do not necessarily indorse the opinions of contributors. Anonymous letters will not be noticed; therefore our correspondents will please give names — not for publication, if they desire to remain incog., but as a guarantee of good faith.

GOOD ADVICE.

To the Editor :

OMAHA, May 2, 1889.

With your permission allow me to say a few words which may be of interest. THE INLAND PRINTER is to me the same as water is to a fish, and one may sit from day to day and be pleased, instructed, and greatly benefited with its contents. A word or more to the apprentice, he who is trying to perform his work well, and become in reality one of the gems of the profession. First, do as you are told, omitting nothing. Do not think your hands are too delicate to clean a press or wash the windows. Remember that it is the small things in the print shop, as well as the larger ones, that count in all the trade, and one is of as much importance as the other. Second, do not be afraid to work, and do all you can to improve every hour. Work for your employer's interests as well as for your own, and ever strive to please him by your work, the neatness of the print-shop, and politeness. Time is flying, and you have almost served your time. Has the time spent been a good investment to you? Have you performed your duty well? We hope you have, and as the days and years roll on, and the various improvements to the craft are being made, let us look to you, who, by your life, have made the "union" what is now a shadow of the future.

E. S. D.

FROM COLUMBUS, OHIO.

To the Editor :

COLUMBUS, Ohio, May 1, 1889.

A great many times the foreman or manager of a jobroom might be heard saying, "Too busy to distribute," or something equally absurd. No time to distribute dead jobs, yet hour after hour to virtually waste hunting and pulling "sorts." The time consumed distributing dead matter is considered by many proprietors, more especially those who are not themselves practical printers, as time thrown away. How little they realize the amount of time wasted every week on account of this part of the business of the jobroom not receiving proper attention. There certainly can be no profit in a job requiring half, and sometimes even more, of the time it would take to set it up if the type was in the case, to find enough material to set it with.

Besides the time lost, there is nothing that will so demoralize a man and unfit him for doing a respectable job as to go to case after case and find them all empty, while the dead stone is running over with jobs that have long since passed in their checks and have probably been through the ordeal of several resurrections since the material was, figuratively speaking, first entombed. Yet a man is given a piece of work to be delivered at a given time, and he is expected to do it. The material is in the office; what is the trouble? The work was not done at the proper time. Keep the type in the cases, where it belongs, and you will have less trouble from that quarter.

Another bad feature of this mismanagement is one of very great importance to the proprietor — pull several letters from a line and the remainder will either fall or be knocked over, with the result of ruining the face of a great deal of type; if not at once, then "later on," just as sure as the practice is continued.

S. POKE.

OUR NEW BRUNSWICK LETTER.

To the Editor :

ST. JOHN, May 1, 1889.

The printing business remains as about last reported. Some of the offices are flush with work, while others are slack. Of course, I am speaking of job offices. Newspaper work remains about the same all the year round. Only occasionally there is any fluctuations.

Some of the rumors mentioned in my last letter have come to pass. Messrs. Day & Reid, jobbers, have dissolved, Mr. Reid

going out. Mr. Day will continue the business, and it is to be hoped he will run it successfully. George has a good deal of pluck and vim — most essential elements in trade nowadays.

While I am on the printing business, I must relate a little circumstance that came under my notice a few days ago. One of our chess admirers compiled a small book of about sixty pages, mostly diagrams. The book, when printed, could be easily carried in the breast pocket. The compiler wrote to a New York house to get figures of cost of printing, and also to a London, England, house. Both "shops" make a specialty of chess work. The English house offered to print twice the number of copies, at less than half the price of the New York firm; and, moreover, the English house sent a specimen page with the figures. Besides, the London firm offered to take a number of the books. I would like to give the figures of both places, but as the letter was only shown to me privately I must refrain from so doing. I thought over the matter, and why should there be such a wide difference in the price, but could not solve the problem. Does the secret lie in "free trade labor" (politicians say pauper labor) in England, or in "protected labor in America"?

Progress, our weekly society paper, celebrated its first anniversary last Saturday by publishing a "twelve pager." The proprietors claim they had a very successful year, and a wonderful increase in circulation. They expect to double it against their next anniversary. Success to them.

St. Andrew's new paper, the *Beacon*, it is said, will make its appearance some time this week.

John B. Jones, city editor of the *Daily Telegraph*, has tendered his resignation, and accepted the position of advertising agent of the New Brunswick and Canadian Pacific railways. Mr. Jones started his career in this printing office, and then took up reporting. He is a good fellow, and no doubt will succeed in his new occupation.

Yours,

WIDE AWAKE.

FROM NEW ORLEANS.

To the Editor :

NEW ORLEANS, May 4, 1889.

Business in this city during and since the last half of last month has been unusually active. Several offices have on several occasions worked into the wee sma' hours. Some of the morning paper subs have gone to work in the job offices. The printers are doing so well and securing so much fat in this city at this time that the *News* wag has been aroused, and he says they (the printers here now) remind him of "pigs in clover."

No. 17 has moved into new quarters. Though these are not as commodious, they are convenient, being right in Printing House Square, consequently, there is a much larger attendance than formerly.

A local typhothetæ was instituted here during the close of last month. The following are its officers: President, T. Fitzwilliam; vice-president, A. W. Hyatt; secretary, L. S. Graham; treasurer, T. H. Thomason; executive committee, George Muller, J. P. Hopkins and E. A. Brandao. Thirteen firms participated in the organization.

The Union Club, the subject of which was made mention of in the columns of THE INLAND PRINTER some months ago, is now about to be organized. It is apart from 17, but the membership will be of No. 17 men, exclusively. It will be a social club, and will have a reading room and gymnasium.

A weekly paper, the *Gossip*, will on Saturday next issue its initial number.

Mr. Brandao has formed a copartnership with Mr. Gill, and the firm name is again E. A. Brandao & Co.

A movement is now extant in this city to have all offices employing union men use an imprint, the same to be recorded or patented by No. 17, an infringement being punishable. The benefits arising therefrom, to both employer and employé, are palpable. The matter is now in the hands of a committee of No. 17, and the matter will no doubt be finally settled upon at our next meeting.

D. F. Y.

NEWSPAPER VERSUS JOB COMPOSITORS.

To the Editor :

PHILADELPHIA, May 5, 1889.

Generally the work of a newspaper compositor is of so mechanical a character and so far removed from the job printer's work, especially the artistic job printer, there being so little work done in the newspaper composing room which requires even a minimum amount of skill in his daily labor, that it is usually considered that he is removed from that branch styled "general printing." His work is so monotonous, that but for the rush to the copy hook and getting accustomed to the routine of the different offices he may be employed in, it would to a degree be a humdrum existence. Occasionally men are to be met with who are somewhat devoted to the art and in their leisure have very usefully and profitably amused themselves studying the designs of artistic printers and other good printers in such an excellent publication as *THE INLAND PRINTER*. From this arose the ambition to practice, and where opportunity offers produce very commendable workmanship. Instances are rare among newspaper compositors possessing the ability to manipulate rules into artistic formations. A few days ago a number of specimens of rule work were shown the writer in the *Record* office, gotten up by Mr. Amos Horting, a compositor, which are a credit to that gentleman. The manner in which they were set up shows that Mr. Horting's ideas of designing this peculiar grade of work have been carefully studied, and that he can now be considered an expert. As the advertiser becomes more exacting in his demands for not only best space but better display in his advertisements, so also should there be corresponding qualities in the workmanship of the compositor who prepares the advertisement for the columns of the newspaper. He should be able not only to meet this demand but be competent to suggest styles and designs that are practical that never occur to the mind of a man who is not a printer. The newspaper compositor who strives to make himself capable of doing this is indispensable in any office. It is hoped those who read this will take the matter into serious consideration, and if there is advantage to any of the readers of *THE INLAND PRINTER* it will be gratifying to the

WRITER.

FROM NEBRASKA.

To the Editor :

OMAHA, May 6, 1889.

There has been a rumor afloat for some time regarding the consolidation of the *Omaha Dispatch* and Fisher's printing establishment, and last Saturday your correspondent visited Mr. J. O. Fisher for the purpose of learning if the rumor was true, and if so, to find out the particulars. Mr. Fisher stated that the consolidation was perfected and that a stock company had been formed, to be known as The *Omaha Dispatch Publishing Company*, with a capital of \$75,000, and a provision to increase the same to \$500,000, if the venture proved successful. The officers are: J. C. Wilcox, president and treasurer; F. N. K. Orff, secretary; J. O. Fisher, general superintendent. The new office, which is being specially arranged for the purpose, will be located at 110 and 112 South Fourteenth street, and will occupy the entire building of three floors, containing about 12,000 square feet of room. The *Dispatch*, which is not yet a year old, has now quite a large circulation, and when it gets in its new quarters, increased to seven columns and remodeled generally, as it is said it will be, we predict that it will have the largest circulation of any afternoon sheet in the city, selling, as it does, for 1 cent a copy. The consolidation of these two offices will be a great benefit to all concerned, and will make at least a dozen more situations for printers in Omaha. Mr. Charles Abernethy will continue to serve as foreman of the newsroom, and the job department will be under the efficient management of Mr. E. E. Riland, formerly of Rees' job department, and vice-president of No. 190.

Messrs. F. B. Johnson and Fred Nye filed a bid with Judge Dundy, of the district court, Saturday, for the job department of the *Omaha Republican*. The price offered was \$35,000. A short time ago we chronicled the purchase of the paper by Mr. Nye,

and was surprised at the time that this property should be divided. The job department has been in the hands of a receiver for several months, and we would like to see Messrs. Johnson and Nye successful in their bid and so keep this property together and push it to the front, where it belongs. This valuable plant was formerly the property of the late S. P. Rounds, at one time public printer.

Mr. George B. Eddy, junior partner of the firm of Chase & Eddy, printers and engravers, on Wednesday, May 1, joined the noble army of benedicts, and is now in St. Paul, Minnesota, enjoying his wedding tour. Mr. Eddy is an honorary member of No. 190, and his many friends unite in wishing himself and bride future prosperity.

We are called upon to chronicle the sad death of Charles Lemarsh, which occurred April 12, after an illness of about a week's duration. Mr. Lemarsh was employed as a pressman at the Rees Printing Company, at the time of his death, and was a member in good standing of the Pressmen's, Stereotypers' and Electrotypers' Union No. 32, under whose auspices the funeral was conducted. The deceased was twenty-eight years of age, and was quite popular among his associates. None of Mr. Lemarsh's friends or relatives could be communicated with as he was delirious before his death and could not give any information. He came here from Rochester about two and a half years ago, and has been a resident of this city since. If anyone seeing this can give any information as to the whereabouts of any of his relatives they will confer a favor by sending the same to No. 32.

The installation of officers occurred at the last meeting of Omaha Typographical Union, No. 190, and the old officers stepped down and out, with the exception of two, who were re-elected. The affairs of the union have been well looked after during the past year, and thanks are due the officers who have just retired. The new officers are all capable men, and we have no doubt No. 190 will continue to prosper under their management.

Matters in printing circles are moving along very smoothly, and while no office is really rushed, they seem to have enough work in to keep all hands busy. There are quite a few printers in town, but as the weather is warm and sultry, and the base ball craze at its height, the "subs" are faring fairly well.

Since our last letter Messrs. McBride & Ryan have added a new embossing press to their already complete job office, and are now prepared to turn out work in this line.

Mr. C. I. Morris, who has so efficiently cared for the office of financial and corresponding secretary of No. 190 for the past two years, leaves Wednesday for the West, where he will endeavor to find himself a home. While we regret to lose Mr. Morris, we wish him unbounded success in whatever he may undertake. He will be greatly missed by every member of No. 190.

W. M. K.

FROM MONTREAL.

To the Editor :

MONTREAL, May 6, 1889.

The item in the April number referring to the samples sent from Montreal by Joseph Burnett has caused a good deal of controversy and comment. Your correspondent has been requested by several to investigate this matter, and let the readers of *THE INLAND PRINTER* know what kind of an office turned out such work. I went to 94 St. François Xavier street and saw a sign bearing "Joseph Burnett, stationer and job printer." On entering and making inquiries, I was told by the younger Burnett that no specimens had been sent from that place, and neither he nor his father knew who had sent them. They regarded it as a joke, though not appreciated as such. In the rear of the store is a small room about 10 by 12 feet, which contains a desk, a small cabinet of type, and a small Pearl press. The imposing stone, for want of room, is placed on top of the cabinet of type, and probably measures 10 by 13 inches. These are all that this establishment boasts of, except a good-sized kerosene lamp; whether it is used to warm up the room or light up the place I don't know. The boy is the one who does the work, and as all he knows about the business he has picked up himself, he is not too proficient in the art. One

sample he showed me, which looked miserable, as there was not half impression enough, and there was ink enough on the one sheet to have run ten. The cut in the job was all filled up and smeared, and he attributed the cause to a "poor cut and poor ink." Such are the kind who put their imprint on such a job as above mentioned, and it is a good thing for the regular up and up offices that they do, as it throws the blame on the proper parties and not on innocent ones. Montréal is badly afflicted with amateurs, and cannot blame you for censuring such.

The newspaper men of the city have formed a "Montreal Press Club," the following being elected office bearers for the ensuing year: President, Mr. R. S. White, *M. P., Gazette*; first vice-president, Mr. P. M. Sauvalle, *La Patrie*; second vice-president, M. G. H. Flint, *Witness*; treasurer, Mr. H. S. Stafford, *Gazette*; financial secretary, Mr. H. Harvey, *Trade Review*; general secretary, Mr. David Ayton, *Herald*; board of directors, Messrs. A. F. Pirie, *Star*; James Harper, *Witness*; W. A. Ritchie, *Herald*; A. C. Wurtele, *La Presse*; A. Mosher, *Empire*; Joseph Lessard, *Le Monde*; G. Desauiniers, *L'Etendard*; and Charles Marcil, *Star*. A constitution and by-laws were adopted.

Business is very poor yet. Each of the morning papers (English) has taken off three frames from their force. The *Herald* now has fourteen regulars and seventeen subs. The *Gazette* has fully as many subs. On an average the subs get about one night per week. Though navigation has been fully opened it has not yet had any effect on printing offices. The French daily offices are about the same as the English. A good share of the compositors are as good on French as on English.

The first week in May the majority of the printers of Montreal quit work at one o'clock on Saturday so that they can take in the different games held on that day during the summer. A few of the offices work nine hours; commence to labor at 7:30 in the morning and quit at six at night, and work to one o'clock on Saturday the year round. Others who work ten hours make up the difference by working from 7:00 A.M. to 12:00 then from 1:00 till 6:30 P.M., and till one on Saturday. The nine-hour scheme is a good one to both parties, as the men do just as much work in nine hours as they would in ten, and do not feel so tired after a day's work. Three or four offices are running on this system, and all are satisfied with the results.

George Debarats, proprietor of *Dominion Illustrated*, lately connected with the Canada Bank Note Company, has severed his connection with the same, and will now run an office of his own. The new location is on St. James street, where Mr. Debarats has put in new machinery and type, where he will pay strict attention to the rapidly increasing circulation of his paper, and will later turn his attention to jobwork. His many friends will be pleased to see him in his old business as he is a veteran in the business.

"Isn't that a daisy page?" all the subscribers of THE INLAND PRINTER said when they saw the insert between page 628 and 629, and they were certainly correct.

J. P. M.

FROM LOUISVILLE.

To the Editor :

LOUISVILLE, May 5, 1889.

The printing, lithographing and bookbinding establishments of this city have been much busier during the past month than for several months previous, although there has been much room for improvement. That Louisville is one of the poorest printing towns of its size in the country is acknowledged on all sides, and why it should be is indeed a mystery. Alive with natural resources, the reputed "gateway of the new South," the greatest tobacco center in the world, and the home of fine whisky and fast horses, there is every reason why printers should do a flourishing business, but alas they do not!

THE INLAND PRINTER is eagerly watched for each month by its numerous friends here, and on every possible occasion they have a good word for it. One subscriber, especially, who, in the first place, had been pretty hard to catch, declared to me the other day that he would not be without it for three times its cost. At the same time he told me of an engraver who made a regular habit of

dropping in to see him each month about the time THE INLAND PRINTER usually reaches here, and not leaving until he had devoured all of the good things in it. The last time he came in, he found that there was too much for him to digest in the one sitting, so he asked for permission to carry it home with him. The printer announced that while he had no particular objection to his coming around and reading THE INLAND PRINTER, he unqualifiedly drew the line on its going outside of his office, at the same time giving the engraver my address, with the statement that \$2 would pay all expenses for a year.

Mr. Ernest Horn, formerly connected with the Louisville Lithographing Company, has been elected secretary of the Falls City Lithographing Company vice Mr. Charles E. McBride, who, owing to his continued ill-health, was forced to resign. Mr. McBride has numerous friends throughout the country who will be pained to hear of his misfortune. Mr. McBride is now recuperating his lost strength in the delightful blue-grass country.

Mr. O. E. Comstock, formerly president of the Comstock-Branham Printing Company, has been making gallant strides toward the goal of his ambition, which is to be a minister of the gospel. It was feared for a time that he had become permanently broken in health by too constant study, but a five weeks' recreation in the delightful South Carolina climate cured him.

The Kriegshaber Brothers, than whom no more enterprising or pushing printers exist, will shortly put in an additional cylinder press, as their increasing trade is calling loudly for it.

Mr. Robert Rowell, who for years has had a monopoly (such as it is) in the printers' supply trade of this city, has sold an unusually large number of job presses within the past three months.

Mr. Thomas H. Stark, of Moore & Stark, reports business in the paper line fair to middling. This firm carry a splendid line of paper in daily use by printers, and while they are meeting with moderate encouragement from the printers of the city, there is considerable business going elsewhere that might be kept here with profit to all parties concerned. Louisville has always been noted for her lack of appreciation of home talent, especially in the paper trade, and if the printers of the city, who are ever ready to complain when they are in a pinch for some special kind of stock, because they cannot get it just when they want it, would give the local paper dealers the proper consideration, there is not the least doubt but what they (the paper dealers) would exert themselves to be prepared to supply anything within reason at short notice. The foregoing applies not only to Louisville, but to many other cities, and printers generally would profit by giving home talent its just deserts.

Mr. Louis T. Davidson has been in New York for the past two weeks, doing the centennial and at the same time looking around for ideas for his mammoth printing house, shortly to be erected by the Courier-Journal Job Printing Company. Mr. August Straus and "Uncle Jim" Davidson have been whooping things in his absence.

Messrs. J. V. Reed & Co. have taken an elegant four-story building on Main street, between Fifth and Sixth, which was found absolutely necessary as their business has been growing steadily. One of their specialties is tobacco tags, of which they have almost a monopoly here.

Morton Brothers have also moved to Fifth street, between Main and Market.

The plant of the Branham Printing Company, which made an assignment some time ago, was sold at auction last Friday and, strange to say, almost every printer in town was present or represented by proxy. There was a sale (that is, it was knocked down to a party), and still there was no sale. And all because the person who made the highest bid, when he came to paying the money, found he could not raise it. Mortgages to the extent of \$2,000 are held upon it, and the price it was knocked down at was \$2,013. There is likely to be another sale, and if it is not any better than the first one, those creditors who are not protected by mortgage will stand a poor chance to realize much on their holdings.

Our Commercial Club entertained quite a delegation of business men from Owensboro and Henderson several days this week, and

among them were the following newspaper men : Stalling Mashall, of the Henderson *Journal*; W. G. Gooch, of the Henderson *Gleaner*; Ben Harrison, of the Henderson *News*; Wilson Lamb, of the Sturgis *Enterprise*; E. E. Owsley, of the Owensboro *Inquirer*; Urey Woodson and C. W. Bransford, of the Owensboro *Messenger*; B. H. Poindexter, of the Lewisport *Post*; L. J. Early, of the Hawesville *News and World*; W. S. Sterrett, of the Hawesville *Plaindealer*; and John B. Babbige, of the Breckenridge *News*. The mighty editors were treated to a view of the city from the top of a tally-ho coach as an additional compliment, and it is needless to say that, since their return to their respective homes, nothing but kind words have been spoken of Louisville. One of our prominent dealers in paper has good grounds for declining to serve upon a reception committee in the future, as he has heard nothing else from his neighbors but expressions of surprise at his apparent straying from his sober habits, which, it is said, was caused by his almost vain endeavors to pilot one of the visiting propellers of the shears and paste-pot to a safe place as he was unable to take care of himself for the reason that "red licker" had run wild on the trip to the city.

The Rogers-Tuley Company is still in the hands of the trustees, and it is reported that the creditors have about concluded that to continue the business will, if anything, lessen their chance to realize very much upon their claims, and that a meeting will be held within a week or ten days to decide upon some means of disposing of the property.

The Louisville Lithographing Company has shut down permanently and the plant is for sale. I hear that the Courier-Journal Job Printing Company has made an offer for it, but up to this writing no trade has been made. C. F. T.

PHILADELPHIA'S PRINTING PROSPERITY.

To the Editor :

PHILADELPHIA, May 5, 1889.

The leading job and book printing houses here and in the principal cities in the state, are well supplied with work, and no particular diminution of orders is expected until the advent of summer. The Washington centennial celebration in New York has had the effect of largely increasing business among the firms that monopolize railroad work. The *Times* printing house produced some creditable centennial programmes for the Philadelphia & Reading Railroad Company, the designs showing the advance of railroading since 1789. Allen, Zane & Scott, the leading railroad printing and publishing firm in this city, also executed some original and handsome designs for the Pennsylvania Railroad Company.

The job, book and newspaper hands have for several months past been discussing what would be the probable outcome of the meeting between the representatives of the master printers and the committee from Philadelphia Typographical Union, No. 2. While there has been a great diversity of opinion as to the result of this important meeting, the following official announcement sets all doubt at rest.

The conference that was to have taken place Wednesday, April 17, between a committee of employing printers and the conference committee of Philadelphia Typographical Union, No. 2, to determine upon the compositors' wage lists, has been indefinitely postponed, owing to the fact that Jacob Glaser, president of the union, received a communication, signed by F. C. Stockbridge, that the master printers and publishers were not prepared to make any alteration in the schedule of prices that has governed the trade for some time past. The matter, which deals particularly with alleged irregularities claimed to prevail in some establishments, will be brought to the attention of Typographical Union No. 2.

The special business meeting of the Philadelphia Typothetæ, which is to be held this month, is regarded with much concern by the officers and members of Philadelphia union. It is well known that many of the master printers belonging to the Typothetæ are inimical to the union, and an impression prevails that an attempt will be made by the employers to decrease the rates of compensation that have ruled for a long time. A well-informed

representative of the union, in speaking upon the subject, said : "The increase of 'rat shops' in Philadelphia the past year has been great, while cheap, botch printing is being turned out in enormous quantities. The members of the Typothetæ, in many cases, appear to prefer 'blacksmiths' to competent men. Good hands stick up for the prices made by the union, and it appears to be the avowed purpose of the Typothetæ people to 'bar' the competent printers who support the principles laid down by the union. If the Typothetæ decide to cut down wages, the result will be a general and wide-spread strike."

A committee of well and favorably known printers, of which James Beatty is chairman, have about completed arrangements on behalf of the Philadelphia Association of ex-Delegates to the International Typographical Union for the banquet in commemoration of the birthday of George W. Childs, who, with Anthony J. Drexel, founded the Childs-Drexel Fund of the International Union. Mr. Childs' birthday (May 12) is the day on which the union printers east of the Mississippi river contribute the price of one thousand ems each to the rapidly increasing fund that is to be devoted to their benefit. Last year the event was celebrated in this city by one of the largest and most elaborate banquets ever held here, at which many eminent men who had risen from the case were present. It is not proposed to make so great a display this year, and it is intended to signalize the return of Mr. Childs' natal day by a gathering of the members of the ex-Delegates Association, principally, with a limited number of guests. The entertainment is to be held at Reiner's café, on Saturday, May 11, the twelfth being Sunday.

The monument to the memory of William H. Foster, a labor leader, who died here about three years ago, has been finished by Gibs, McMichael & Co., and placed in position in the lot of the typographical union, at Mount Moriah Cemetery, West Philadelphia. The monument is of Fox Island granite, and is nearly 12 feet high. The first base is 3 feet square and 18 inches high, and the second base is 2½ feet square and 1 foot high. The die is 1¼ feet square and 22 inches high, and the shaft 1¼ feet square at its base, and about 7 feet high. On the front panel of the die is the inscription : "Erected to the memory of William H. Foster, by Organized Labor." On one of the side panels is engraved : "Born May 3, 1848; died July 28, 1886," and on the other is stenciled : "Of him it can truly be said, the world is better for his having lived in it." On the second base "Foster" is carved in large letters. The cost of the monument was about \$300, and this was paid by the William H. Foster Memorial Association.

John E. Lonabaugh, who now occupies Council Liberty Hall, on Germantown avenue, near Berks street, where he publishes the *Centennial Advertiser*, and runs a large job and book printing house has arranged to build a five-story printing establishment, the increase of his business necessitating the undertaking.

The compositors on the *Ledger* now receive 50 cents per thousand ems, the price paid in war times, and it completely demoralizes all the other city newspaper offices.

The movement originated here by ex-State Senator Horatio Gates Jones and George W. Childs, to celebrate the bi-centennial anniversary of the establishment of the first paper mill in America, meets with much favor. Senator Jones has prepared a circular which will be forwarded to all American publishers and printers. While seeking the coöperation and assistance of those interested in the important and interesting event, the gentlemen starting the enterprise hope to receive attention generally throughout the United States through the medium of the publications devoted to printing, publishing and paper making interests. It is likely that the ruins of the old Rittenhouse paper mill, which was erected and began operations in September, 1690, will, in September, 1890, be rendered notable in the history of America by an appropriate and splendid celebration. Already a number of influential paper makers have expressed their willingness to take part in the affair, and many other favorable responses are confidently expected.

The extent to which the "plate" syndicate are carrying the botch business is simply outrageous. A concern, whose establishment

is located in the "Pennsylvania Dutch" town of York, York county, this state, makes all kinds of cheap stereotype matter, including book and news material, which is shipped broadcast over the country. The firm, which style themselves a "printing company," are constantly advertising in a local paper for compositors, but it is doubtful if many hands are obtained, as the extravagant pay of 16 cents per thousand ems is offered. Just think of it! The audacity to advertise for "first-class" compositors, and present as an inducement 16 cents per thousand! The productions of this alleged printing house are, in many instances, of the most unsightly character, being full of the most glaring and ridiculous typographical errors. The "Pennsylvania Dutch" county is notorious for bad printing, but this particular concern certainly turns out the worst work that it is possible to imagine. This amateur "blacksmithing" should be suppressed in some way, as it is actually becoming a nuisance.

Jacob Glaser, president of Philadelphia Typographical Union, No. 2, is an excellent all-round printer. Mr. Glaser has for a long time been superintendent of the mechanical department of the *Railway World*. "Jake," as he is familiarly called by his hosts of printer friends, is a genial, energetic fellow, and is regarded with great esteem by all members of the fraternity.

At the last regular meeting of Philadelphia Typographical Union, No. 2, President General W. H. Neilson surrendered the gavel to his successor, Jacob Glaser. The retiring executive head spoke of the incoming president in very complimentary terms, congratulating him upon being the unanimous choice of the union to the position to which he had been elected. Besides the seating of the new president, it was the time for installing the vice-president, corresponding secretary, financial secretary, treasurer, doorkeeper and business committee, and nearly all of these officers were on hand. The delegates-elect to the Denver convention, Alexander Dunbar, Joseph C. Gibbs, Walter Faries and David C. Doak, were also obligated. They will receive their instructions at the next meeting. Eleven new members were enrolled, and a committee of twenty-five were selected to devise means to more thoroughly organize the trade here.

The Camden (N. J.) Press Club is now pleasantly located in its new club rooms, at 205 Market street. The club has recently had a number of active and associate members added to the lists, and proposes now to handsomely furnish its new headquarters. This club is the only press club with furnished headquarters in south Jersey.

ARGUS.

FROM BOSTON.

To the Editor:

BOSTON, May 3, 1889.

As a rule the book and job offices are fairly well filled with work, and business cannot be called dull, though occasionally a growl is heard. Perhaps this growling is not entirely without cause, as money is scarce and bills hard to collect. Ever since the failure of the Rand-Avery Company the other offices have had more to do, and I have often heard the remark in this connection that it is an ill wind that blows good to no one. With an establishment second to none in this section of the country for producing all classes of letterpress printing, this company was a competitor that many feared.

April 11 witnessed a change in the well-known publishing house of Ticknor & Co. Mr. George F. Godfrey retired, Mr. Thomas B. Ticknor became associated in an important position with Houghton, Mifflin & Co., and Mr. Benjamin H. Ticknor remains at the old quarters, where he will continue the publication of the Ticknor list, including the *American Architect*, and various architectural subscription books, etc. The copyrights, electros and stock of all the miscellaneous publications were sold to Houghton, Mifflin & Co. The firm of Ticknor & Co. was established in 1832, and for thirty years were proprietors of the old corner bookstore.

Mr. Charles D. White, superintendent of the mailing department of the *Youth's Companion*, has invented a mailing machine that looks like a beauty. The Dickinson Typefoundry are the New

England agents for its sale, and there is now one on exhibition in their salesroom. The machine is operated by foot-power, prints directly on the paper from a galley, is simple and easily operated. The table is 30 by 60 inches, giving the operator plenty of room for his work.

Mr. J. G. Pierce, of the Dickinson Typefoundry, has been confined to his house for some time by sickness, but is expected to be at his desk again in the course of another week.

Mr. Henry Y. Wiggin, for the last six years entry clerk for Messrs. Golding & Co., expects to leave us next autumn, and take up his residence in Santa Fé, Argentine Republic, South America. If I may be allowed to make a prediction, success awaits him in his new field of labor, where push, good sense and a thorough knowledge of his business cannot but be appreciated.

Speaking of Golding & Co. reminds me that Mr. Murphy has started for Boston, having secured numerous orders in New York State for the Golding Jobber.

An agency has recently been established here for the sale of M. Galley's Universal press, and several machines are on exhibition at their salesroom on Arch street.

The trade in this vicinity (by "vicinity" in this case is meant anywhere between New York and Nova Scotia) is soon to have another candidate for its favors in making repairs and moving printing and bookbinding machinery. Mr. William Torbett is about to open a place of his own, and is the party referred to. He is a practical printer's machinist, having served his time at the trade, and has been in the employ of both R. Hoe & Co. and the Campbell Press Company. Mr. Torbett's father was also in the same business previous to his demise, and was most favorably known in most of the Boston offices.

The announcement is made that after a long illness Mr. Thomas S. Whiting closed this life May 1, at his residence in North Cambridge. Mr. Whiting was one of the best known of the old-time Boston printers, having served in different capacities in several newspaper offices here for upward of forty years. He was a man of marked industry, of sterling integrity, and his long connection with the *Herald* composing room had endeared him to all in that department.

Last Saturday evening, Mr. Cornelius Leary, a compositor at the University Press, Cambridge, had the great misfortune to fall from the platform of an electric car in that city, and was run over by the car in tow. He was carried to a doctor's office near by, where it was found that his right foot and hand were so badly crushed that amputation of both was necessary. He was then moved in an ambulance to the Cambridge hospital.

Mr. A. G. Daniels, job printer, has gone into insolvency, with liabilities of about \$12,360. The assets consist of his stock, presses, type, fixtures, electric motor, etc.

S.

PROPOSED CONVENTION OF PRESSMEN.

To the Editor:

LOUISVILLE, May 6, 1889.

The joint circular recently sent to the various pressmen's unions by Empire City Pressmen's Union, No. 35, and the Adams and Cylinder Press Printers' Association, of New York, having for its purpose the groundwork for a convention of pressmen to be held in New York City at an early date, has, from late advices, met with a hearty response from a large number of the unions. In some cases a desire has been expressed for a location that would be a little more central, but the majority seem to be of the opinion that if the meeting is held in New York the delegates would have an opportunity of meeting with the members of the last named association, for whom it is claimed that there is no stronger body of organized wage-workers anywhere, and their coöperation with the organized pressmen of the country would indeed be an advantage to the latter well worth the trouble in the attempt. Much interest is being manifested in certain circles looking to the raising of a fund to aid the smaller unions to meet the expenses incurred in sending a delegate, and it is probable that very little trouble will be experienced in securing

enough money to assist all of the weaker unions to a considerable extent.

At various times, in the columns of THE INLAND PRINTER, I have given my reasons for advocating a separation of the pressmen from the compositors, to which I can only add that the experience gained at and since the Kansas City session has only served to strengthen me in the belief that it is the only means by which we can ever hope to make our organization achieve the desired ends. The lack of interest in the organization throughout the country that has been so apparent since the failure at Kansas City would be immediately supplanted by interest everywhere should this movement be a success, and an impetus would be given to the unions that has never yet been experienced.

I venture the assertion that when the pressmen awaken to the fact that they are competent to govern themselves, the unions that now have almost a death struggle to keep alive will be swarmed with applications from nearly if not all the eligible pressmen within their jurisdiction. The facts are plain to be seen that interest is and has been at a very low ebb, and if something is not done shortly, before another year rolls around pressmen's unions will be known simply as a thing of the past, except in some of the larger cities. It is far from the intention of those who favor a separation to have a hostile feeling exist between the pressmen and compositors; the reverse is what they most earnestly wish for, but they do want *self-government* pure and simple, and when the time comes for the pressmen to unite with the compositors, I will guarantee that the pressmen will not be found wanting.

The feeling at Kansas City for separation was undeniably almost unanimous and would have succeeded without a doubt but for the intervention of some of the typographical delegates, who, from a desire to further their own interests, set aside the expressed will of the pressmen, for a time, at least.

I repeat a former suggestion which, in effect, was to give the pressmen a separate and distinct organization, and the compositors being willing, an amicable arrangement can be effected by which one branch will always be ready to assist the other when occasion requires it, which is all that either side asks for or could reasonably expect. There is a feeling that arises in this free country of ours when a club is held over our heads saying, we must do a certain thing that carries with it revolt; but when kindness takes the place of force, how much easier and smoother we accomplish our ends. It is either to be a large body of independent, organized pressmen or a small organization in a few cities who cannot call themselves their own masters in any sense of the word, because they must of necessity regard the wishes of their employers, and, on the other hand, their liege lords, the compositors, will occasionally pull the string and they must jump or be stigmatized as "rodents." As your Philadelphia correspondent well and truthfully said, "The pressmen want home rule," nothing more, nothing less.

When the arrangements for the convention are complete, your readers will be apprised of the fact in the columns of THE INLAND PRINTER. In the meantime, the different unions can put in time to good advantage by discussing and arranging the necessary details of the new organization.

C. F. T.

A PROSPEROUS SITUATION IN NEW JERSEY.

To the Editor:

NEWARK, N. J., May 1, 1889.

The business situation generally throughout the State of New Jersey is excellent. The industrial interests were never in a better or more prosperous condition, and the prevailing bright and satisfactory state of affairs is destined to continue right through the season. A recent extended tour through the state has revealed the fact that many extensive and important business enterprises have been started, while others will commence operations at no distant period.

The printing, publishing and kindred interests are highly prosperous, an activity existing in some places where, earlier in the year, trade affairs were in a rather languishing state. The

prominent printers, publishers, paper manufacturers and manufacturing stationers are very busy, while enough orders are filed to keep the establishments running briskly for an indefinite period.

In the cities of Elizabeth, New Brunswick, Rahway, Hoboken, Trenton and Burlington the job printers and newspaper publishers are rushed with business. The Jersey City printing houses have so much work that they are working double forces, some of the hands working until late at night.

The *True American* job office, at Trenton, is crowded with state work. Musham & Company, at Rahway, are employing about one hundred hands on bookwork. This firm, which had trouble with the printers a short time ago, has effected an amicable and satisfactory arrangement with the dissatisfied men, and peace reigns supreme now.

D. N. Messler, who publishes the *Somerset Democrat* and *New Jersey Knight*, at Somerville, in speaking of the pleasing outlook, so far as that enterprising place is particularly concerned, said to THE INLAND PRINTER correspondent: "The *Somerset Democrat* outgrew its old quarters, and 30 feet more has been added to the workroom, while the business office has also been enlarged. After we get settled, the *Democrat* will have one of the best equipped offices in the state, and will be able to handle with facility the large volume of business which it now controls. The capacity of the office has been taxed to the utmost for several months, and the quality of work turned out has been surprising to those who saw it."

The *Sunday Standard*, a neatly printed and well-edited paper, made its bow to the public here on March 10. The journal was well received, and its success was, apparently, assured. Now, after it has been running about a month, it has encountered a serious trouble. It was hinted that the management proposed, at some future time, to reduce expenses by cutting down the composition bills, and arrangements were being made with a plate-matter concern in New York City to furnish the stuff detested by typographical union men. While the story was not believed, late developments have proved that the report was too true. A few days ago the managers of the office announced that the objectionable plate-matter would be introduced, and the first installment would be used in the paper appearing Sunday, April 28. The men "holding frames" in the office are all strong union men, and when it was officially stated that the "stereotyped abomination" was to be used permanently, the compositors determined to resist. On Friday night, April 26, Newark Typographical Union, No. 103, held a special meeting, and ordered out the printers in the office of the *Standard*. At the same time, Samuel Baker, one of the owners of the paper, was expelled from the union, and another, part owner, William A. Baker, an honorary member of the union, had his card taken from him. The office was barred out of the union, and is now filled with non-union hands. The proprietors of the *Sunday Standard* asked Typographical Union No. 103 to permit the use of plate-matter, but the request was definitely and positively refused. This is the first trouble between the union and employers since the strike of German printers last fall; but as it is rumored that other newspaper proprietors contemplate the introduction of plates, other ruptures are expected to happen in the early future.

An extensive job-printing and bookbinding interest centers in this city, and both industries are experiencing a great boom. Every expert, reliable jobber and bookbinder finds regular employment at remunerative compensation, and the pleasantest relations exist between the employer and employed.

The old-established and popular firm of Campbell & Baker, stationers, who recently purchased the printing business of Bird & Son, are now operating a fine printing and publishing department in connection with the stationery interest. The increase of business has been quite large since the advent of the spring trade.

The *Sunday Sporting Journal* and the *Daily Sporting Bulletin* two new ventures, present an excellent appearance, and are well supported by the general sporting people.

CAXTON.

"THE DANCING MASTER'S PAY-DAY."

"Haftone" process, by F. D. MONTGOMERY. Removed to 359 Dearborn street, corner of Harrison, Chicago.

FROM ARGENTINE.

To the Editor :

BUENOS AIRES, March 24, 1889.

The printing, lithographing and plate-printing business in this country is being revolutionized; everybody is waking up, and new concerns are spoken of every day. Three of the most trusted employés of one of the largest concerns here have resigned and started a place of their own. Two are lithograph, phototype and zinc-etching foremen, and one is cashier of the C. S. A. de B. de B., but they will do well, I expect, as there is room for all here, and the best part is they make room for others, as their places will have to be filled, and moving up goes on in that establishment, your worthy correspondent falling into a nice berth by the operation. He is getting to the height of his ambition.

The latest in the press line is a double cylinder, a double roller, a four-roller stop illustrated and two steam copperplate presses for the C. S. A. de B. de B., all lying here waiting for the new building to be completed so they can be set up, and many more are on the way, some from the United States.

A Mr. D. W. Russell, who has worked in the government printing office at Washington, D. C., has come out for our firm with a geometrical lathe to engrave rosettes for bank notes and other valuable papers. He also will work on the transfer machine. There will be more people out here from the United States in the bank note line in a short time. There will also be more power plate presses from the United States, and altogether I think the Yankees knock them all out on steelplate work and steelplate machinery.

The following few clippings from the English papers here speak for themselves and might be read with interest. The first is a nice, good-sized order, running up in the many thousands of dollars, for bonds, with 120 coupons, and must be lithographed and numbered inside of three months. There are more than four hundred thousand impressions on the lithographing alone, not saying anything of the numbering.

"The South American Bank Note Company has secured the contract for supply of the new Provincial Cédulas Serie O of 50,000,000."

This work is all printed on Crane Bros., Dalton, Massachusetts, bond paper. The second is a new concern, of which I will write more in the near future, as it is very young yet and has nothing but its charter, and perhaps a number of subscribers to its stock:

"The statutes of the Imprenta Nacional Argentina, capital \$2,000,000, in \$100 shares (five per cent on subscription), were submitted today to the government for approval. This concern, of which Mr. B. Brelaz, ex-representative of Waterlow & Co., London, is the promoter, is being organized on a magnificent scale. The building is to be an exact imitation of Waterlow's, and we learn that the same systems and processes of this unrivaled London firm will be adopted by the new company here."

The office of McKern & McLean has adopted a shareholder system among their employés similar to that of Rand, McNally & Co., of Chicago. The C. S. A. de B. de B. have had a similar system since they have been incorporated, and it has worked very satisfactorily.

Another new firm of lithographers and printers has started here since my last letter. They are three of the oldest employés of the C. S. A. de B. de B., and two of them are practical lithographers; but there is room for all, and I guess they will get along nicely.

This company receives more paper than all the supply houses taken together. They have received as much as \$200,000 worth of paper in one month alone, from the United States and Europe. They buy their dry colors by ton and 500 kilo lots. There is one thing I have noticed since I have been here, and that is that the European ink and color manufacturers ship their goods in neater shape than the Yankees. They put their dry colors up in five or ten kilo paper or can parcels, and then pack them in zinc-lined boxes, whereas the Yankee takes and puts his dry colors in the most common barrel he can find, and generally gets it all knocked

to pieces. The Europeans have a system of names and numbers for their colors which the Americans have not, and you can order by letters if you want your inks to any desired strength or softness. They also mark all their aniline colors with a special letter. It has taken just eight months for a lot of H. D. book ink to get here, whereas inks that were ordered at the same time from Europe have been here in two months. This is where the Europeans get in their work.

If the manufacturers of the United States desire to do any business in this country they want to "shake" themselves and get up and git. They want to put on a line of steamers first; then come down here and show themselves, and let the people know what they have got to sell and what it looks like. If I tell a man I'm a Yankee, he wants to know if we have any printing machines in the United States, or if we buy them from Europe. I generally tell him to come around to my room and I will show him a few pictures of American presses; next, he wants to know what such a machine will cost to bring it here, and how long it will take. To the first I answer I don't know, and to the second, one year. Well, he generally says if he knew he could get one sure in a year, he would buy one. People down here know what a neat class of printing is done in the United States, but they get disgusted when they think of buying some supplies there.

I hope some of your many worthy advertisers will "take a tumble" to this, and remain,

Yours respectfully,

M. A. MILLER,

258 San Martin.

THE PRINTING TRADE'S EASY SITUATION IN NEW YORK CITY.

To the Editor :

NEW YORK, May 7, 1889.

The typographical industry is in an easy and reasonably satisfactory state. The leading job and book houses are about finishing a number of large contracts, and consequently quite an army of "piece" hands will soon be "furloughed" or discharged. The show business is making things very lively among the color printers, lithographers and engravers. Some of the work emanating from these establishments is really excellent, the originality of design, coloring and presswork being particularly fine and artistic. The book publishers have been quite busy making novelties bearing upon the Washington centennial celebration, and all the expert book compositors have reaped a harvest. These special productions are marvels of the "art preservative of arts," the composition and presswork surpassing all previous efforts.

The celebration of the one hundredth anniversary of the inauguration of President George Washington, which has come and gone, was productive of an extraordinary increase of business among printers, lithographers, engravers, publishers, bookbinders and manufacturing stationers. The great demand for all kinds of printed matter, souvenirs and other requisites connected with the imposing and patriotic event kept the interests previously enumerated busy day and night for several months. Not only were the orders expeditiously executed, but the character of work turned out was magnificent, the representative printing establishments producing specimens that were perfect gems of the typographical art, and which will be preserved as beautiful mementos of the memorable occasion. The leading papers produced striking and attractive souvenirs. On Tuesday, April 30, the *New York World* printed the morning edition from type of the eighteenth century and in colonial style on antique paper, while the afternoon paper appeared on sheets of red, white and blue. The papers were eagerly bought by thousands of visitors.

The printing display in the industrial parade, which occurred Wednesday, May 1, was splendid, and consisted of old and new printing presses and the very latest improved press. The float, "Public Opinion," showing the progress of the typographical art and distribution of knowledge, was very effectively done, and received an ovation. A very conspicuous and interesting feature was another float, upon which were printers' stands and cases, while compositors were at work "sticking typé," and pressmen

running presses and turning out thousands of pretty souvenirs, which were scattered among the people lining the route of the monster and remarkably brilliant procession, the like of which has never before been witnessed in America.

The New York *World* displayed the "Greatest Globe of All. The exhibit was an immense ball, which rolled along the streets, and inscribed upon a beautiful transparency, which floated over the great sphere, was the legend, which has become historical, "The *World* always moves." The ball was sixteen feet in diameter and was drawn by a tandem team of black and white horses wearing plumes and white blankets. Owing to the transparency being twenty-one feet above the ground, and too high to escape telegraph wires, it was taken down and carried in front of the globe. On each side of the immense sphere walked four guards, bearing aloft banners with the inscriptions, "The New York *World*, First in Enterprise"; "The New York *World*, First in Circulation"; "The New York *World*, First in the Hearts of the People," and "The New York *World*, Protector of the People's Rights." In passing President Harrison's stand the banners were dipped, and the chief magistrate of the United States returned the salute by taking off his hat.

Colonel Charles H. Taylor, editor of the Boston *Globe*, on Wednesday, May 1, entertained at dinner the 339 employés in all departments of the paper. The dinner was no less enjoyable than were the speeches of the heads of the departments, that of Colonel Taylor being especially bright and effective. The *Globe* quartette sang some classic music in fine style, and there was no end of good cheer and good fellowship.

The printing establishment of Horatio T. Hewitt, No. 27 Rose street, has been seized by Sheriff Grant. The plant of the business is nominally valued at \$60,000.

The palatial new building of the New York *Times* has been completed. It is not so much on account of the great size of the finished building, nor its handsome appointments and conveniences that the work is remarkable, as on account of the fact that it was erected upon the site of the old *Times* building without disturbing the old offices or interfering with the daily publication of the journal. It was a piece of brilliant engineering to thus build a new edifice, new in every particular, while not interrupting the multifarious duties of the business, editorial and mechanical staffs of one of the greatest newspapers of the day, which went on upon the very spot where the masons and carpenters were busy building the future home of the paper.

The new building is not only imposing on account of its great height, but is architecturally handsome. As already noted, it is thirteen stories high, but the architect has grouped the windows of successive stories in series of tall, round arches, which present an appearance of prettiness. By varying the size and proportion of these arches, and dividing the several sections of the building by cornices and balconies, sufficient variety is introduced to prevent monotony and give a pleasing effect to the building as a whole. The style of architecture is in keeping with the material of which the building is constructed. As the latter is granite, over-elaboration has been carefully avoided, the general effect of the finished work being that of strength and solidity. This, too, is in keeping with the character of the journal that is quartered within it. The *Times* deserves all the congratulations it may receive on having a building in every way worthy of it, and on the completion of an enterprise only less admirable than some of the journalistic work which has built it up to its present position among the great newspapers of the United States.

The printers of New York have organized a base-ball league with clubs from the *Star*, *Press*, *World*, *Sun* and *Times*.

Typographical Union No. 7 (German) announced that it has decided to get out of the Central Labor Union.

Brooklyn now has about thirty union printing offices.

The number of bids for the public or legislative printing this year is larger than ever before. Frederick Cook, secretary of state, has determined that the class of work shall come fully up to the first-class standard. As the very best printing is to be done, the typographical unions are jubilant over the fact that no "rat

shop" will get any contracts. The time for receiving bids will close at five o'clock p.m., May 15. Many of the leading printers of New York have offered proposals.

The statue of Franklin, in Printing House Square, and Washington, in Union Square, have been cleaned and painted with a brilliant bronze material.

Henry Dithman, United States consul at Breslau, Germany, who died recently, was born in Niederbrunn, Alsace, in 1824. When Henry was a child his father came to this country and settled at Easton, Pennsylvania. The latter learned the printing trade and came to this city and engaged in the newspaper business, which he followed for more than a quarter of a century, nearly all of which time he was foreman of the *Evening Post*. Mr. Dithman was appointed United States consul at Breslau in 1878, and held the position continuously until his death. His wife survives him, and a son, Edward A. Dithman, is a prominent member of the editorial staff of the New York *Times*.

John T. Everett, foreman of the *Evening World* composing room, a genial, energetic member of the craft, has passed away. Mr. Everett had been on the *World* for over a quarter of a century, although dying at the age of forty years.

James E. Sullivan has resigned his connection with the business department of Frank Leslie's publication. He has assumed the business management of the *Sporting Times*.

PRINTER-JOURNALIST.

FROM BALTIMORE.

To the Editor : BALTIMORE, May 3, 1889.

All the world has heard by this time of the noble act of Captain Hamilton Murrell, commander of the British steamship, *Missouri*, aided by his officers and crew, in rescuing from a watery grave the entire large number of people discovered in midocean on board the ill-fated steamer, *Danmark*.

The *Missouri* is now in this port, and her gallant commander, together with the officers and crew of that now famous steamer, are being handsomely entertained by our citizens. At a banquet given Captain Murrell and his ship's company in the city yesterday, the closing remarks of one of our citizens, Mr. George M. Baer, were so appropriate and eloquent withal that I reproduce them here.

The speaker, addressing Captain Murrell, who is a native of Colchester, England, said: "Your sea-girt isle, sir, has sent forth many grand naval heroes who have for centuries carried and defended the flag which has 'braved a thousand years of battle and the breeze'; but, sir, 'peace has her victories no less renowned than war'; and the deeds of the men who saved so many human beings from death as much deserves to be perpetuated in marble and bronze as those of the hero who carries his ship safely through the storm of battle, and lays the trophies of his triumph at the feet of his sovereign. It is in such a spirit and with such feelings that we greet you, sir, today. May the consciousness of duty so well and heroically discharged, and the blessings and benedictions of so many human beings saved from a wretched fate go with you until the end of your days."

In reference to our immigrant traffic, as connected with the port of Baltimore, it may be of interest to state that the largest number of emigrants ever before landed at this harbor arrived here last week. There were exactly two thousand emigrants in this ship-load, but only two concluded to remain in Baltimore, the rest, taking the late, lamented Horace Greeley's advice to young men, set their faces toward the land of the setting sun. The largest consignments to specific points were as follows: Pittsburgh, 155; Detroit, 112; Chicago, 242.

Having dwelt for a moment upon affairs in this city of general interest, a word or two as to matters appertaining to the art preservative and its kindred subjects.

The contemplated journalistic enterprise in the shape of a daily paper, mentioned in my correspondence last month, is still only talked of. But while some of our typos are anxiously awaiting the advent of the newcomer, Mr. George Colton, late editor and

proprietor of the Annapolis *Republican*, late one of the board of police commissioners, late member of the state legislature, and politician first, last and all the time, will issue, on Saturday, a brand new weekly paper. It is to be called the *Olive Branch*.

The initial number of a paper calls for a "salutatory," and the *Olive Branch* will say, in making its bow to the public, that it is extended, not with the expectation of realizing shekels galore, but to inaugurate an era of peace in the ranks of the democratic party in this city and state.

The new paper will be a four-page, twenty-eight-column sheet, set up in brevier. Mr. Benjamin H. Bealer, of Typographical Union No. 12, has charge of the composing room.

In mentioning this forthcoming newspaper venture, I am led to make a few observations upon the weekly press of Baltimore, both as to past and present time.

There are some of our citizens who can call to mind the late *Home Journal*, an illustrated, eight-page weekly, which was published here, up to within eight months past, by the Charles A. Vogeler Company. Why it is said that *some* of our citizens can call that defunct publication to mind, is based upon the fact that a goodly number of our people never saw a copy of it. Believing that the best fruit grows at the top of the tree, the *Home Journal* management aimed to secure patronage exclusively from that portion of the community which is sometimes called the "uppish" class of society. The *Home Journal* was quite pretentious at the start, having almost unlimited capital at its back; and perhaps this latter fact, a by no means to be despised consideration in the issuing of a newspaper, led the publishers to make a new departure in modern journalism. The innovation referred to was set forth in an announcement made in the first number of the paper, namely, that no solicitors would be employed, either to obtain advertisements or subscriptions, and that an exchange list would not be tolerated.

The proprietors of Baltimore's struggling weeklies, at this most remarkably daring "prospectus," stood aghast.

The failure of the proud *Home Journal*, after an expenditure of \$85,000 in the brief space of a twelvemonth, possessed, as it was, of the finest equipped office of any other weekly paper south of New York, perhaps—its plant being valued at \$25,000—furnishes another illustration of the fact that something more than a large bank account is necessary to make a newspaper go other than at a loss to the proprietors.

Like some ship wrecked off the coast, strewing the shore with what had once been part and parcel of its former self, the erewhile plant of the *Home Journal* has been scattered piece-meal among the various printing offices of Baltimore.

Not to speak disparagingly at all, but to call a spade a spade, and nothing else, it must be said that the weekly press, viewed as a whole, has anything but a walk-over in this locality in securing at the end of the year even a nominal balance over the disbursement side of the ledger. The present spring season has proved a most exceptionally dull one to our weeklies in the way of securing advertisements, and at a time, too, when the managing editors of the leading dailies are put to their wits' end in order to accommodate the advertiser and not encroach at the same time upon the reading columns.

Three of the Baltimore dailies issue mammoth Sunday sheets, and they are well patronized by both the general reader and advertiser.

The Sunday paper is gradually, yet surely, absorbing the business of the Saturday weeklies. The day was when this last named class of publications drew quite a sum from our theatrical managers, and then there was the springtime circus advance agent, with his whole double column display advertisement for the weeklies, together with tickets more than enough to go round the entire office. But that good old time would seem to have gone by to the secular once-a-week papers in this section of country. The weeklies here seem to be only tolerated now by the show people. Last week Manager P. Harris, of the Academy of Music, who is considered quite a liberal press advertiser, cut off from his advertisement list every one of that class of papers in question; his

reason for doing so, as is stated, being the lateness of the dramatic season and a desire to lop off unnecessary expenses. Forepaugh's circus is now billed here, and the weeklies are running a two-time single quarter-column advertisement in such connection; but that is only a modicum of what has been their wont to "catch on to" in former times.

Some Baltimore advertisers complain about the high rates charged by our dailies. The *Sun* charges 25 cents each for the first four lines of a nonpareil reader on first page, and 20 cents a line for all that follows therein. When compared to a large number of dailies elsewhere, with rates as high as \$1.50 per line, the wonder should be that the daily papers of this city give their space at so low a rate.

As is the custom with our state legislature and city council upon the eve of adjournment, the last named body has just donated \$150 to each representative of four of the morning papers; that is to say, this sum goes respectively to these knights of the pencil for reporting the proceedings of that body. The *Sun* will not allow its reporters to accept a dollar of money thus appropriated, contending, and justly so, many believe, that neither the legislature nor the council has the right to use the taxpayers' money in that way, pointing out at the same time the tendency which a practice of the kind must have to unduly influence the reporter.

The reply, generally, to inquiries as to the state of trade in the printing business, is, that things are quiet. And yet, about all hands seem to have something to do toward keeping the mill going, as it were.

I stepped yesterday into the printing, photo-engraving and blank-book making establishment of Messrs. Thomas & Evans, at Second and Frederick streets, and found a very busy place. The gentlemen composing this firm are thorough-going, practical printers; and, judging from the amount of work on hand, embracing the composition and presswork of eight newspaper publications, the Report of the Public Schools of Baltimore, I concluded that their force of twenty-four hands had all that could be well attended to in the way of work.

FIDELITIES.

FROM PHILADELPHIA.

To the Editor :

PHILADELPHIA, May 9, 1889.

Newspapers are bare of news, but newspaper men seem to be working as hard as ever. There have been no changes of moment, no surprises, no failures, no duels, no deaths of notable newspaper men, nothing, in fact, out of the rut. A score of our shining lights are booked for Paris. The rest will see very little of Philadelphia when that long, hot and dry summer arrives which we are told is coming. There is a lull in editorial fire and fighting. There is nothing to write about. The Centennial is worn out. We are waiting to hear from Stanley on the east coast of some other coast; we have lost interest in politics. Flabby society subjects interest nobody; business itself is dull. Manufacturers are complaining that they are making no money. The monied men are exasperated because new investments come up so slowly. The financial writers are trying to figure out possible dangers in the remote future from declining currency as compared to population; but after all there is no great thought seeking utterance, no soul is being consumed with internal fires. In short, things are flat. On May 11 the members of the Ex-Delegates Association will give a banquet at Reisser's Hotel in honor of George W. Childs, whose birthday occurs on Sunday, May 12. On that day the union printers east of the Mississippi river contribute the price of 1,000 ems to the Childs-Drexel Fund of the International Union. One of the largest banquets ever given was given last year on this occasion, but this year there will be less fuss.

Typographical Union No. 2 has had under consideration for some time certain irregularities in wages in different offices. The difference will be harmoniously adjusted.

There is a little breeze blowing because of the preferring of charges by Henry C. Dunlap before Magistrate Cobb against Joseph H. Parish charging him with having received from E. C. Markly & Son during the years from 1873 to 1880, 20 per cent of

the money paid by the city for the printing of the journals of the city councils and other documents. The *Times* started the racket and now tells Mr. Parish the only thing he can do is to sue Dunlap and bring the whole matter up in court. Parish is down in Florida at present. The charge is an old one and ought to have been made long ago, or not made at all.

On Saturday evening, May 4, the letter carriers' banquet came off at St. George's Hall at which over five hundred carriers were present. John Wanamaker, postmaster-general, and several prominent city officials were present. The occasion was the passage of the eight-hour law.

Our labor organizations are quietly considering what they may do in regard to the eight-hour movement to be inaugurated next year. Some favor it, and some do not. It will probably start and sweep over the country. Our printers are not particularly enthusiastic over it and may not cooperate. Employers are quite rigorously but covertly opposing labor domination. On our railroads they get their work in by refusing to promote any man who belongs to a labor union. The efficiency of this policy is manifested in the disbandment of two or three unions. It strikes deep and dangerously, for what man is there but who hopes for and desires promotion some day? It is not fair, but what are we to do.

Give me room to remark that the largest stationary engine in the world is at the zinc mines not far from Allentown, Pennsylvania. It is of 10,000-horse power. It raises 17,500 gallons of water per minute. Its driving wheel is 35 feet in diameter; piston rod 18 inches thick; cylinder 110 inches in diameter; stroke 10 feet. The foundations on which the engine rests are 108 feet deep. Some of the stones weigh five tons. These zinc mines are the largest in the world. The zinc is exported to several foreign countries for cartridge purposes.

Newspaper men down East are falling in favor of high buildings. The *Times* with its thirteen stories has stimulated ambition in other quarters. Here, in Philadelphia, there are numerous rumors that a grand newspaper edifice will be erected. The first and chief difficulty along Chestnut street is a site. A site on that street costs nearly as much as the structure, and it is bad form, in fact, no form at all, for a newspaper to be off that street. Yet why? The crowds that make the pavements of that street practically impassable nearly all day to a hurrying man add nothing to the cash balance of the newspaper; but still the unwritten law is, newspapers must be on Chestnut street. Why should not the "press" make a departure and gobble up, if and when it can, the Harrison Estate, corner of Market and Juniper, just across from the public buildings and across from John Wanamaker's. This corner is tied up in an estate. It is surprising how many excellent sites are out of the reach of improvement simply because a dead man owns them. Nothing would help Philadelphia so much as a thousand first-class funerals.

The printers are beginning to have it a little easier. The merchants are not rushed. The salesmen are wandering around. The shopkeepers are allowed to sit down an hour or two a day, and the paper makers are talking of restricting production a little. They had better. The publishing business is good, but at the present time rushing of production of paper it will come down with a thump, and catch some few reckless manufacturers in the crash.

The type manufacturers here are quite busy; but, as stated before, founders elsewhere complain a little—so, at least, they say here.

The paper manufacturers are crowding ahead as though a paper famine were threatening.

Office talk? Plenty of it, but there is not much in it. Old Mr. Ford, after thirty years on the *Inquirer*, instead of going to Chestnut Hill goes around into Walnut street and hangs out his real estate shingle. Ford was a good man in the cashier's office. McManus, after thirty years on the real estate advertising management of the *Record*, retires to start afresh in Tacoma or somewhere out there. John W. Gallagher would do well in his place. There is talk of more newspapers; but they had better remain

unborn. This is a bad time for blooming genius of the sort that loves to start newspapers.

We have a new furnace, or stove, here that threatens to create a revolution in heating and in steam-raising. It does not save all the coal, but it does save two-thirds of it. It burns air. It is a new discovery in nature, and this is no rash utterance. I have been studying it in my noon hours for some weeks, and I believe what I say about it. M.

STRICTURES ON THE DISSOLUTION OF THE TYPE-FOUNDERS' ASSOCIATION.

To the Editor: Moline, Illinois, May 9, 1889.

I am in receipt of circular letters announcing the disruption of the typefounders' combination, and of lists making large discounts from prices prevailing previous to May 6. While this action was in part expected, it is scarcely less surprising than if it had had no harbinger.

I do not know the causes which have led to this; but believe those printers who have endeavored to put "business" into their affairs have every reason to regret and deplore them. As evidenced by one of the circulars, the break is attributable, not because of demands on the part of printers for greater discounts and unreasonable terms, but to the failure of the founders to keep faith with themselves. Considering the magnitude of the interests involved, this failure is assigned to comparatively trivial things indeed, and suggests the need of a sand alloy in their business methods, with an amalgam of honesty in their treatment of each other.

Were the typefounders the only sufferers, and did the effects of their action lie wholly within themselves, the printers would have nothing to say. It would be none of their business. But they are most vitally concerned, for their values are swept away by a large percentage. Last week, type and the numberless things in a composing room, had a fixed value; today they have not. If entirely new, it would be difficult to fix a price; for one founder says 25, 15 and 10 off of his classifications, and another 30, 25 and 20, with others to hear from. There is not an office in the country that is not injured in proportion to its investment, the depreciation in many instances running into the tens of thousands, and in the aggregate to a sum enormously large.

What seems hardest to understand and account for is that the founders have neither considered themselves nor their customers in this matter. They have deliberately depreciated their own plants and wares, and destroyed large values for their customers. Do they suppose the printers thank them for this, or have any regard for the business acumen which has prompted the throwing away of a profitable for an unprofitable business? Do they suppose the printers who have purchased their goods to such an extent as to make many of them very rich and all well-to-do, consider the effects of their action without resentment?

No matter how ridiculously low prices may descend, it will not increase the consumption of type one pound beyond the natural and rational growth of business. This has been abundantly demonstrated in other avenues, and applies here as well. For a short time there may be a slight stimulation; but, on account of the present low state of trade, it is not to be expected. Should there be, it will have its reaction. Low prices will make business for neither founder nor printer; and the little advantage the latter now has, through heavier discounts, is counterbalanced an hundred-fold by his loss. In the long run the founders will have sold no more goods, at a much less profit, and will have encouraged and enabled the incompetent and inexperienced to put his few hundreds into material with which to hamper the growth of the already established business; whereas, had the neophyte kept out, the natural increase would have placed the same amount of material in the older office, and given the founders a reliable customer who had already paid them many profits. They would have sold the same goods under better conditions for themselves and for the printers.

If the combination was necessary two and a half years ago, it is even more essential now. There is not the volume of

business for printers there then was, and there is a corresponding indisposition to buy. A light market renders a good margin necessary to meet the fixed expenses of a concern and prevent positive loss. These gentlemen, the founders, do not think so; but at a time when there is less activity than has been known for years they hasten to cut their own financial throats, and set an example which will be followed by some of their likewise excitable customers, to the end that further obituaries, called forth by similar operations, may be recorded upon the dockets throughout the country.

In the beginning the founders claimed as an excuse for the association, that such action was absolutely needed to give them a fair return upon their investment of brains and money; they were selling without profit; type was sold at 50 off in a few instances, and prices of other materials were in sympathy; business was demoralized, and something must be done. No doubt the situation was very bad. The correction lay within themselves and they made it. The results must have been eminently satisfactory to them, and were not displeasing to the printers, their customers, not one of whom found serious fault with the movement, while most rejoiced thereat, a compliment and mark of confidence for which the founders now repay us badly.

It is possible I am doing these gentlemen a great injustice, and that the sudden collapse is due to sensitive souls burdened with the consciousness of enormous profits wrung from the poor, long-laboring and long-suffering printers; but, most emphatically, I don't believe it. Putting such an utterly absurd thought aside, I continue to believe the combination to have been a good thing for printers, a source of strength and steadiness, and did do it the honor to consider it a beneficial moral force and example. I think I was mistaken as to the morality.

J. H. P.

VALUABLE ADVICE TO DELEGATES.

To the Editor:

DENVER, Col., May 6, 1889.

At the monthly meeting of No. 49, held yesterday afternoon, the attendance numbered one hundred and eighty, despite the delightful weather, a bicycle race in which several typos participated, and a game of ball between professional teams of the Western League. In lieu of furnishing the score, with catchy plays and bleaching comments, the following of union craft moment is appended.

Interest increases as the time lessens between the present and that period beyond which no delegate, visitor or resident printer cares to glance.

The members of the committee of arrangements are cutting copy for that hook from which the conductors are to take orders before calling time for a race over mountain and valley, between the narrow-gauge pioneer scenic route and the standard track, which floats at its peak the circle and triangle.

In order that everyone preparing for the western reunion of delegates and ex-delegates on Colorado soil may have reliable information relative to the opening ceremonies, THE INLAND PRINTER is requested to publish accompanying circular:

IMPORTANT

TO DELEGATES, EX-DELEGATES AND VISITORS TO THE INTERNATIONAL TYPOGRAPHICAL CONVENTION.

DENVER, Col., May 7, 1889.

On the evening of June 7, an informal reception will be held in the rooms of the committee at the Albany Hotel, where the committee's headquarters will be located.

On June 8, the delegates, ex-delegates and visitors, accompanied by a large number of members of the Denver union, will leave the Union Depot by the Colorado Midland and Denver & Rio Grande Railroads on a grand mountain excursion, the objective point being the wonderful city of Aspen, with her marvelous mines of inexhaustible wealth. The trains will leave Union Depot at 8 o'clock Saturday morning, and will run side by side (the tracks being parallel) to Colorado Springs, seventy-five miles distant, where the Colorado Midland strikes off to the right and climbs the mountains through Ute Pass and Manitou Park over into the South Park, passing on its way the Garden of the Gods, Manitou, Cascade Cañon, Green Mountain Falls, Eleven Mile Cañon, and passing up through the South Park, along the

South Fork of the Platte River; thence up over the Divide between the Platte and the Arkansas, above Buena Vista; thence along the Arkansas to Leadville.

The Denver & Rio Grande train, after leaving Colorado Springs, runs directly south along the foot hills, fifty miles, to Pueblo, the manufacturing center of the Rocky Mountain region; the cars here turn to the right and run up the Valley of the Arkansas, passing Florence, her oil wells and refineries, and Cañon City. At this point the train enters the "Royal Gorge," or Grand Cañon of the Arkansas, one of the great wonders of the world. After leaving the Cañon we pass through the beautiful cities of Salida and Buena Vista. At this place the Colorado Midland road is 2,000 feet above the Denver & Rio Grande track, giving the excursionists on the Midland a panorama of scenery, compared with which the Highlands of the Hudson are ant hills. On leaving Buena Vista, the train follows up the Arkansas to Leadville, where it will meet the other section of the excursion. At about 3 o'clock in the afternoon of the next day, after partaking of the hospitalities of our Leadville friends, and visiting points of interest here, "all aboard!" will be called, and we run over the main range to Aspen. Those on the Midland will cross Tennessee Park, climb the mountains to Hagerman Tunnel, passing through which we come out on the Pacific slope, at the head of Frying Pan Gulch, down which we now descend, turning and twisting, and viewing the most magnificent, ever-changing scenery. Descending the mountains alongside Frying Pan Creek, that commences a tiny brook, to grow, as we descend, to a foaming river, and empties in the Roaring Fork at Aspen Junction. At this place the train will turn abruptly to the left, running up the Roaring Fork, a distance of thirty miles to Aspen.

Those leaving Leadville over the Denver & Rio Grande will cross the range over Tennessee Pass, through Red Cliff, the gloomy Cañon of the Grand River, passing by and in full view of the Mount of the Holy Cross, through Glenwood Springs, up the Roaring Fork to Aspen. The scenery on this road has no counterpart.

We will spend the night of the second day in Aspen, and will be royally entertained by the board of trade and printers. Excursions to different mines and points of interest will occupy the visitor till 3 P.M., when all aboard will be called and the return trip made, the excursionists changing trains, those going over on the Denver & Rio Grande will return by the Midland, and *vice versa*.

On Thursday evening a banquet will be given in honor of the International Typographical Union, by Denver Union, No. 49, at the Windsor Hotel. The committee has several other interesting features in contemplation for the entertainment of our guests, due notice of which will be given. It is the intention of the Denver printers that our visitors shall not miss a trick.

Arrangements have been made with the hotels for the following rates: Albany, \$3 per day; St. James, \$3 per day; Windsor, \$4 per day; Markham, \$2.50. Furnished rooms will be provided for those who desire.

It is earnestly desired by the committee of arrangements that eastern delegates will be in Kansas City NOT LATER THAN THE 5TH OF JUNE, in order that they may take the special train which will leave that place in time to be in Denver not later than 4 o'clock P.M. of June 7. Secretary-Treasurer McClevey will announce through an official circular, particulars in regard to the special train. Communications addressed to the committee at 1516 Arapahoe street, in relation to rooms at hotels, etc., will receive prompt attention.

It is the wish of the Denver printers that no delegate will allow business to interfere with his enjoying our "scenery."

J. D. VAUGHAN, *Secretary*.

O. L. SMITH, *Chairman*.

A majority of the delegates from the far East, North and South will gather at the banks of the Kaw river, Kansas City, on the evening of June 6, and journey together via the Atchison, Topeka & Santa Fé road, which has been selected by some enterprising gentlemen, who have a keen regard for comfort and sociability. The journey from Kansas City to Denver is styled "The Southern Route," and runs a little north of and parallel with the Cherokee strip, which is extensive enough to shut from view the famed Oklahoma. An iron-clad pool, ironically styled "Inter-State law," prevented Messrs. Plank and McClevey, ably assisted by gentlemen in Chicago and St. Louis, from securing concessions much better than excursion rates. All things being equal, if the greater number who have to purchase tickets select the same route and the same train, they will have ample opportunity to become known to each other, whiling away intervening hours in mooted legislation and the uncertainties of draw-poker. Magnificent opportunity, also, to shape the destiny of budding aspiration, and half-concealed ambition.

From a Denver standpoint, the southern route has the advantage of being nearly parallel for one hundred miles with one of the routes selected for the mountain trip, skirting the foothills, which, in case of unforeseen delay, would afford the arrangement committee an opportunity to meet the train at some point en route. *Verbum sap.*, don't fail to arrive in

Denver on evening of June 7, or at Colorado Springs or Pueblo next morning.

While scenery, served with and without ice, will constitute chief lines of the menu, a commissary car will be an adjunct to each train for the welfare and well-being of those neglected in Kansas or Missouri. Do not be tempted to view booming towns

lies for delegates with wives or lady relatives, at reasonable rates. If sleeping cars used on Santa Fé road can be secured for the excursion, some of the visitors can sleep aboard and rest assured of being with the party in the glinting of the rays adorning the panorama in a matutinal start without breakfast. They can thus ascend the mount in fasting and prayer for an eye-opener as the

DENVER IN 1858.

en route, or imbibe too freely of liquids flowing from water tanks coated with alkali. Fortification of the delegate is essential to a successful journey down the Frying Pan to the Devil's Turn. The Garden of the Gods should not be entered by mortal filled with the steam brewing of a tank station or the get of a windmill. Much better a void to be filled than too full for utterance. This

the train glides through tunnel after tunnel until eye-openers lose their relish and tongues looseneth in songs of praise and happiness.

USEFUL FOR THOSE GATHERING STATISTICS.

Don't fail to arrive in Denver on time. A wise delegate from the coast—the Pacific coast, 'Frisco, if you please—is on the scene, becoming acclimated, as it were.

DENVER IN 1888.

letter may also be accepted with advantage by any who intend to monopolize the attention of "Mr. President."

Good hotel accommodations are in profitable demand in Denver throughout the year. As June commences the tourist season for the peaks and trout streams, those who conduct hotels in better style than the old lady who kept tavern have figures varying from \$4 to \$2.50 per day, and you take your choice. The reception committee will have a number of rooms in private fami-

The committee of arrangements is now strengthened by a reception committee, composed of energetic members, ready and anxious to make life endurable for all.

Lady visitors will be welcomed by a committee selected for a knightly gallantry and chivalrous courtesy only equaled by our western brothers who are sailing the salt seas over with the Wild West Show of Bison William. Bill kindly consented to leave the West intact for the International Typographical Union.

Sombreros and chapparels have been discarded during the session. Unless the Washington cowboy of the Buffalo session persists in appearing in the undress of a morning call at the stock-yards, the ladies who have braved the terrors and hardships of a journey across the great American desert need have no fears. While not cultured, the western printer is disposed to be docile. The bold, bad tourist, representing Bitter Creek and Fatality Flat, will be staked out beyond the corral and drawn groom.

The authorities of the elevated and heavenly city of Leadville have issued a proclamation to enforce an ordinance calling upon all bankers having office hours after 3 P.M. to remove their counting rooms to the second stories. This is out of respect to the culture of Cape Cod and the Bay State.

The mayor of Denver has removed the frontier police force, and substituted an eight-carat imitation of the metropolitan finest.

The freedom of the cities will be accorded all who have never seen the liberties concealed by an all-night license.

The Salida brass band has mastered the music necessary for a passing senerade.

Buena Vista will be observed in passing.

The Sangre de Cristo and Lacrymæ Christi, in majesty and magnificence, rear their towering peaks.

Again, all are reminded the excursion trains for Aspen, the mining wonder of the Pacific slope, leave Denver on Saturday, June 8, returning at the pleasure of the committee of arrangements.

Colorado Springs is the diverging point where the trains part, to meet over the range. This latter is not metaphor.

Eating-stations are not specified or located. That which the eye does not see the stomach does not crave.

On arrival at Aspen, if prior to 6 o'clock P.M., direct your footsteps to the trout lake near Frying Pan creek. The fish are fed at this time. You will witness a lashing and foaming of the water that will remind you of a storm on the sea-girt shore where mackerel are caught and packed in kegs—of the shore your infancy knew. This is reliable and important, affording a fish-story for after years—credible yet true.

Current topics of conversation in the newsrooms and alley corners, after disposing of a ball game, comprise the relative merits of Prince Alberts vs. four-button cutaways.

The ex-delegate and visitor should announce his arrival in advance, and relieve the anxiety of the caterer's corps as to the probable number of plates to be provided at the banquet. The creole typo uses a word similar to banquet—ban-ka. They are not synonyms.

Denver in 1858 consisted of a substantial, low-browed log cabin, and a few low-bred Ute Indians. The Indians have retired from town-site speculation. *Vide* Denver in 1888, taken on the spot—cash—exclusively for THE INLAND PRINTER. Enterprise bears its own imprint. Colonel Barker's features mark the man, easily distinguished from the game hanging from the eave of the cabin, while the Indian is on the eve of securing the game.

The verdure of the lawns and shade trees of Denver in 1889 is admired by all. A closer inspection by the reader during the leafy month of June will be cheerfully assisted by

CHILE COLORADO.

ANSWERS TO CORRESPONDENTS.

J. M., Detroit, writes: Please give a recipe to make a good dry for poster work.

Answer.—Spirits of turpentine, one quart; balsam copaiba, six ounces. Add a sufficient quantity to the ink to thin it to a proper consistency for working.

A. R., Knoxville, Tennessee, writes: I am troubled with type sticking together when the job has stood, say, for two or three weeks. I have used water on jobs, but it did no good. I should be very thankful if you could tell me how to get rid of this trouble.

Answer.—We have answered this question at least half a dozen times during the past four years. To separate long-standing or sticky type, glycerine should be poured over the surface and

allowed to remain overnight. Then wash it with hot lye or soap and water, and thoroughly rinse, when it can be easily separated.

G. S., Detroit: Why do you spell Buenos Aires, the capital of the Argentine Republic, with an i instead of a y?

Answer.—Simply because it is the *correct* way to spell it. The government of the Argentine Republic is supposed to be authority in the matter, and THE INLAND PRINTER accepts it as such. Buenos Ayres is therefore *incorrect*.

W. H., Rome, N. Y., writes: We have decided to leave a much discussed typographical question to you, and request it be published in your answers to correspondents. It is: "On law work, or any matter to be folio-marked, where should the folio be placed; at top of page where the folio commences, or at the bottom or end of the folio, an inch or so down the page?" Examples given:

Is a folio mark intended to denote the head or beginning of the folio, or its ending?—that's the question.

Answer.—In *legal* work in Great Britain, seventy-two words constitute a folio. In New York, Wisconsin and several other states, one hundred words. In this state there is no absolute rule. In all cases however the folio mark should be placed opposite the *last* line of the folio.

DEATH OF MR. SAMUEL ORCHARD.

Mr. Samuel Orchard died at his home, 594 Greene avenue, Brooklyn, New York, Thursday, May 2, 1889, aged seventy-three years, four months and one day. Funeral services occurred at St. George's Episcopal Church, Brooklyn, Sunday, May 5, at 2 P.M., and were conducted by Rev. Messrs. Richey, Maxwell and others. The cortege was met at the door by the rector and a surpliced choir. The musical services were particularly impressive. The pall-bearers were, F. Sloat, Thomas Glover, Thomas Rooker, Andrew Little, Daniel S. DeVinne and R. H. Williams. Mr. Orchard was born in Bridgewater, England, January 1, 1816; came to this country when eighteen years old, and engaged in the drug business in New York. He was married January 1, 1862, and for the last twenty-five years has lived in Brooklyn. He leaves a family consisting of wife, three sons and one daughter. He had been sick for about ten months previous to his death, and was confined to his house almost the entire time, being able to go to his place of business not to exceed a half dozen times during the whole period of his sickness. The last time he was down was on September 19, last.

Mr. Orchard was the originator of the copper-facing of type, and in 1851 he founded, with Dr. Newton, the Newton Copper Type Company, becoming its manager and secretary. He was the promoter and prime mover of the business from its inception to the time of his death. The business has been in continuous operation ever since its establishment, and is the only one of the kind in this country, if not in the world. It is now and always has been prosperous, and the one principal cause for it being so was that its head and moving spirit, Samuel Orchard, was a man of honor, ability and business acumen, and one who inspired confidence in all who met him in business, social or any of the multifarious walks of life. His contact with men was not only without friction, but a positive pleasure and profit to all. He was prominently identified with a number of societies and institutions of New York and Brooklyn, and through all the many exactions of the various positions he occupied in them his demeanor was such as to command at all times the love, honor and profound respect of those with whom he thus became associated. The acts of his life are well worthy of emulation, and knowing these he will be mourned by a large circle of friends who have known him intimately through his long life of usefulness and helpfulness to his family, his friends and mankind in general.

One of the sons, Cuthbert J., who is interested in the business, has succeeded his father as secretary of the company, and the business will continue uninterruptedly.

LINE PLATES FOR PHOTO-ENGRAVING.

In answer to the requests of a number of correspondents, we herewith present a specimen print, the work of Mr. M. Wolfe, of Dayton, Ohio, produced by a process of his own, which secures the reproduction of pictures in form of typographic blocks for the printing press—the result of years of careful study and experiment, and to attain success in which many difficulties had to be surmounted. To accomplish this the first desideratum was the production of a ruled plate—perfect in all essentials. In order to secure clean-cut lines a special tool (not a diamond) that will cut from beginning to end without any perceptible change, must be used. Mr. Wolfe has lately ruled three thirteen by thirteen plates diagonally—one hundred and thirty lines to the inch. In the first plate the lines were too fine for spaces. The second had two false lines near center. The third plate was perfect, and the tool that cut it will cut another without change. By this it will be seen an *even shade* is obtained, which is necessary to secure a perfect picture.

The original ruling being perfect, copies or positives from it can only be made on plates especially prepared for the purpose, and from the one ruled plate four different kinds of screens are produced, to wit, single lines, cross lines, dots and dotted cross lines, all of which have their distinctive uses in copying different subjects, and for obtaining various effects. It should be distinctly understood that these screens are *not* copies from ruled tints, as perfect screens cannot be made therefrom, as every line must be opaque, and spaces clean and clear. From the making of the rule plate to the finished negative the utmost care is indispensable, but to one who loves the art it is a most entrancing study.

There have been comparatively few persons engaged in producing pictures by a somewhat similar process, and these have invariably kept their knowledge within their own establishments. Mr. Wolfe is the first to put it into practical shape, so that for a small outlay every photo-engraver or artist can well afford to add this process to his business and make it profitable. Typographic blocks containing accurate representations of every detail in the original subject will always command ready remuneration.

The original of the picture shown is by G. Cramer, St. Louis. The photo-engraving in half-tone is by Mr. Wolfe, made with his fine screen plate. Parties purchasing these plates will receive all necessary information.

THE PROOFREADER.

The proofreader has long shared with the "intelligent compositor" the reputation for the total depravity which has made a writer say "See the pale martyr with shirt on fire," when he wrote "in sheet of fire"; and to ask, "Is there no barn in Guilford?" when he meant "Is there no balm in Gilead?" to speak of his love of "alum water," when he wrote "Alma Mater," and to speak of "a mysterious dispensation of Providence" as a "mysterious disappearance of provisions." The silence of the proofreader has been taken either as evidence of his guilt, or that he was proof against reproofs. He has borne contumely long enough, and he rises to

"hurl back" the charges, and to "nail lies to the counter," and to "thrust the base falsehoods down the throats of his cowardly vituperators," as the contributors to the popular periodical, the *Congressional Record*, are in the habit of saying. The worm has turned at last, and a rather lively turn it is. He expresses his wonder that nothing has ever been said in praise of proofreaders. Of course, this might surprise a proofreader, but any experienced writer for the press will not be astonished at it at all. The writer will know that he has, time and time again, written the most glowing eulogies of proofreaders and their assistants—tributes that statesmen might envy and good men crave. But the proofreader has never allowed them to appear in print. Where the writer has said that the proofreader was a "benefactor to his race," it has appeared as a "benighted scapegrace"; when he has called him the "salt

of the earth," it comes to the surface as "scum of the earth"; when he has spoken of the "ease and comfort" a good proofreader gives him, he is made to say "an escaped convict," and when he has referred to the proofreader's "saintly grace," the public first learns of it as a "snake in the grass." That is why nothing has ever appeared in print in praise of the proofreader. The protesting proofreader is not willing to believe that every one of his species is "full of malice toward authors, and hates the whole world." And then the man actually goes on to speak a good word for himself and his kind. At this rate the barber will be defending his talking; the mother-in-law will clamor for a hearing; the plumber will be piping up in his own behalf; the Chinese laundryman claiming a right to live an honest and cleanly life, and turkeys speaking their minds about Thanksgiving. What is the world coming to? However, since the proofreader has been

graciously allowed to have his say, it is, perhaps, worth while, as a mild amusement, to hear how he puts the case. In the first place, he says that an author, intent on his work, is necessarily careless about his handwriting. He cannot break the flow of his thought to dot his "i's" and cross his "t's." Each author has a peculiar penmanship. The proofreader takes the manuscript and tries to catch the purport of the author's thought. He has scarcely done so, when in comes another mass of proof and manuscript of an entirely different character, and a new thread has to be picked up until another interruption. This is not for a moment, but all night, all the week, all the year. After puzzling himself until he is half blind, his brain weary, and work pushing upon him incessantly, a letter may be left out, or a comma inserted in the wrong place, when slam bang goes a volley at the proofreader! He has seen an author scold a proofreader for some trifling oversight, when that same day the proofreader had corrected an historical blunder which would have cost the author dearly had it seen the light. He has seen an author brag of his penmanship, and when his manuscript had been sent to him because it was unreadable, he was scarcely able to decipher it. It would be well to have a proofreaders' union formed, the members of which should agree to ruin authors by letting the world see their blunders and inaccuracies; for the wrongs of the long-suffering proofreader are many.—*Queries.*

GOVERNMENT ENGRAVERS.

If you own or can borrow a five-dollar bill, just look at the portrait on its face. It is a vignette of General Grant, let us say. The more you examine it the finer it seems. The note has been crumpled in twenty pockets and greased by contact with hands clean and unclean, but the portrait is still a gem of the engraver's art. It ought to be, for scarcely twenty-five men in the country can do such work, and he who did the plate from which that portrait was engraved probably received a fabulous price for his pains. It is a tiny thing, scarcely one and a half by two and a half inches, yet it may have occupied the engraver eight, ten or twelve weeks. There was, perhaps, posing of models, study of portraits, searching of history before the patient, mechanical work of the engraver began. On other notes you find Lincoln, Jackson, Hancock and a dozen other portraits.

The history of engraving in this country has its dark and romantic side. Engravers must be trusted in great matters, and sometimes they have betrayed their trust. One of the most skillful engravers in the country now works at his profession in Brooklyn under police surveillance. He counterfeited government securities while employed by the Treasury Department. He escaped imprisonment by turning state's evidence. His accomplices are still in jail, and, although he is free, he can never escape the watchful eye of the police. Once suspected, an engraver is ever after a marked man.

Another case was that of an honest engraver, now also a resident of Brooklyn, who fell under unjust suspicion. He came one morning to his studio in Wall street to find it in possession of the United States marshal. The engraver had been watched for a year. The officers knew where he had passed his evenings for months back. He was not arrested, however, for the marshal had got to the bottom of the affair, and found that Ulric, the counterfeiter, had obtained access to the innocent engraver's studio when the latter was absent and used his tools for counterfeiting. Ulric's accomplice was John Briem, the man from whom the engraver rented his apartment. Ulric went to jail, but Briem turned state's evidence, and afterward became a secret service agent. Six months after detection Briem's hair turned white, and not many years later he died.

The story of engraver John McLees is stranger still. He was a skilled artist and an honest man, but drink was his great fault. Once, when under the influence of drink, he was seized by a gang of counterfeiters, carried to Brooklyn and there detained in secret. Under threat of death he was made to counterfeit a government bond. To gain time, McLees spoiled the first plate as if by

accident, and before the second plate was finished the government's officers descended upon the place. McLees' good reputation and his frank story in court saved him from imprisonment. A friend found employment for him, and became responsible to the government for his conduct. McLees quit drink and lived the honest life he had always lived, but early one morning he was found dying, with a fractured skull, at the foot of his stairway in Dey street. He did not revive sufficiently to tell the story of his death wound.—*New York Sun.*

AN INDIAN BOY COMES OUT AHEAD.

A printer boy was working one of the steam job presses.

The lower ink-roller did not revolve on the cylinder, thus causing failure in the proper distribution of the ink.

Paying no heed to this fault the boy kept feeding papers and spoiling sheet after sheet, while apparently dreaming of pleasant paths in distant lands, or perhaps of some essay he was to have done at a certain time, or, most likely, about the next sociable and how he could get some sweetmeats for his girl friend.

However, about this time the instructor came along, and noticing the defect, spoke rather sharply to the youth, somewhat as follows:

"Why don't you fix that roller? You know well enough that you can never secure a nice print without all the rollers revolve on the ink-cylinder."

"I don't know how to fix it," said the boy, awaking slightly to the situation.

"Can't fix it? Stop the press immediately! Go to studying out the fault! Find what the matter is! Never let a thing like this pass without trying your utmost to correct it, and if you fail in the attempt always report it!"

The press was stopped forthwith, and both instructor and boy began to study the roller action.

"I think the fault is in this friction roller, which is worn," said the instructor.

The boy said not a word, but kept on looking and watching the roller arms lower and raise. Finally, he spoke out very politely but decidedly, "I think the fault is here. If the nut on this bolt were loosened, the rollers lifted and the bolt made tight again, I believe the roller will revolve all right."

There was something so refreshing in a wide-awake suggestion from an Indian boy that the instructor was delighted, but at the same time sure that the boy was wrong.

"Those arms can't be moved," said the instructor, smiling.

"I think they can," was the dignified and quiet reply.

"There is no philosophy in that, my boy. Those roller arms were made by the press manufacturer to stay in the position you find them. You cannot move them one hair's breadth if you try."

The boy still replied, very respectfully, "I think I can."

"You may try it, then."

"But it will take some time."

"Never mind about that. I want it fixed, and you may try your way; if it does not succeed, then we shall try some other way."

A wrench was brought into use. The bolt was loosened, the arms lifted about a sixteenth part of an inch, the bolt tightened, the engine strap again applied, and to the utter astonishment of the instructor the roller began to revolve, and has been on the revolve ever since, when needed. The instructor is the one who learned a lesson, and the Indian boy is not big-headed over his victory.

He is the same common-sense, quiet, gentlemanly young man he was before, and is ever ready to receive instruction and make good use of it.—*Carlisle (Pa.) Indian Helper.*

THE first printing press set up in America was in the autumn of 1638, at Cambridge, and the original printer was Stephen Daye. The earliest work issued from the press was styled "The Freeman's Oath."

Barnhart Bros. & Spindler
Superior Copper-Mixed Type
Great Western Type Foundry

115-117 Fifth Avenue

Chicago, May 9, 1889.

IMPORTANT ANNOUNCEMENT.

Well! The Type-Founders' Association rates of discounts are abolished. There is no longer a fixed standard of values for printing material or printing offices. While we have not deemed it wise to abrogate fair fixed prices, we have opposed an increase of such prices. Our representative was the only Chicago founder who, a year ago, when rates on body letter and other material were advanced, voted against it every time. At every subsequent meeting of the Association, we have taken the lead in urging a reduction to former prices.

But, with high prices or low prices we have steadily advanced in our sales and our business. When all prices were equal our strikes were even more vigorous--others fell behind; why? Because with **SUPERIOR COPPER-MIXED** selling at the same price as other grades of Type, the latter must suffer.

The war of rates has begun; we are in the van and shall stay there. We are clear of all entanglements; own no printing offices and do not compete with our customers. We make all our type at home and can therefore furnish fonts and sorts promptly. We are pestered by no meagerness in our supply of original body and job faces. We shall be now as we have been, prompt, accommodating and progressive.

We make no sham pretenses. Let our lists herewith submitted, and our actions and our past record speak for themselves.

When you want printers' material call on us; we will show you our metal and our mettle.

Until further notice our discount from list prices given in our 1889 Pony Specimen Book will be as follows subject to slight draft in 30 days unless previously remitted:

<p>25 PER CENT. IN 30 DAYS AND 5 PER CENT. EXTRA FOR CASH IN 10 DAYS. All Type, Leads, Slugs, Brass Rule and Metal Furniture of our make Bellows Borders, our make Brushes, Benzine and Lye Cabinets, Cherry and Black Walnut, Regular Cabinets, Stained Card Cutters, Elm City Cases, excepting patent Case Stands, except Patent Chases Composing and Make-up Rules Counters, Durnnt's Engravers' Tools Galleys Galley Cabinets and Galley Racks, except Patent Job Inks, Mather's Imposing and Inking Stones Lamp Holders</p>	<p>25 PER CENT. IN 30 DAYS AND 5 PER CENT. EXTRA FOR CASH IN 10 DAYS. -- CONTINUED. Lead and Slug Racks Mahogany Job Sticks Mallets, Planers, Quoins, wood Mailing Galleys, brass-lined Miter Boxes Perforating Rule Reglet and Furniture Roller Cores and Stocks Shooting Sticks Side and Foot Sticks Type Wash, Peerless Wrenches Wood Furniture</p> <p>12 1-2 PER CENT. IN 30 DAYS AND 5 PER CENT. EXTRA FOR CASH IN 10 DAYS. Bodkins and Tweezers Brass Line Shapers Brass Curves and Clamps Bronzes Composing Sticks</p>	<p>12 1-2 PER CENT. IN 30 DAYS AND 5 PER CENT. EXTRA FOR CASH 10 DAYS. -- CONTINUED. Curving Machines, Golding's Inks, News Lead Cutters Mallets, Mustang, McPatrick and Times Mitering Machines, Golding's Overhead Fixtures Pastors, Kennedy's Press Boards Quoins and Keys, Patent Roller Composition, McNamara's Casting Rollers Wood Type, Holly and End Wood</p> <p>PRICES ON THE FOLLOWING ARE NET: Blankets, Felt Cloth for Distributors Engravers' Wood Gauge Pins Roller Felt Tape Tape Fasteners and Tighteners</p>
---	---	--

Parties who have not established satisfactory credit with us should forward cash with order, or send Chicago references. This will enable us to give their orders prompt attention.

Old metal will be taken in exchange for new material of our manufacture at following net prices, delivered at our foundry: Old type, 7 cents per lb.; old leads, slugs, stereotypes, electrotypes and brass at 4 cents per lb. net.

Special discounts will be quoted on machinery on application.

Our Pony Specimen Book for 1889 is now ready. Send for a copy if you have not already received one.

We now offer at forty per cent. discount for cash a large quantity of job type on our old bodies. It is brand new and largely standard faces--all our make. We are now making everything on the Point System, and desire to move this old stock at once, therefore the above large inducement.

25% DISCOUNT.

Type equal to the very best the world affords, now offered at prices that make glad the printers' heart.

We are happy to announce to our patrons that from and after this date, we will allow a discount of Twenty-five per cent. from our list prices of metal type, manufactured on the American System of Interchangeable Type Bodies, and a discount of from ten to fifteen per cent. on other materials as per list, which will be furnished on application. This offer is made to all customers who have established with us a line of credit, with the understanding that settlements are to be made between the 1st and 15th of each month.

Do not be induced by any lower offer to purchase inferior goods, which would be dear at any price.

We beg to remind our friends that having been the originators, in 1872, of the American System of Interchangeable Type Bodies, (also known as the Point System,) which was adopted by the Type Founders' Association of the United States, on Sept. 17, 1886, we have no type to dispose of that is not cast on this system, and caution you against buying type on old bodies from founders who have but lately been compelled to adopt the point system, and have, in consequence, a large stock of type on bastard bodies, which they are willing to sell at a larger discount.

Do not be deceived, but buy good, durable type from reliable founders

Remember that copper has entered into the composition of type metal for the past thirty years, and any attempt to make you believe that type advertised as "Copper Mixed," "Copper Alloy," or "Copper Amalgam" is on this account better than the type made by founders who have used copper in its proper proportions and have said nothing about it, is misleading, and is simply an advertising dodge.

Economy is wealth. Do you wish to save money? We can show you how it is done.

The principal reduction in the market value of a new machine occurs very soon after its purchase, while it is still capable of doing as good work as ever. We can save you money in machinery, provided a good second-hand machine, thoroughly overhauled, and yet for all practical purposes virtually as good as new, will meet your requirements. Our facilities for repairs are unsurpassed, and the condition of machines which pass through our hands is guaranteed.

Write us a letter telling us what you want, and we will try to supply your wants.

Please bear in mind that we can furnish complete outfits promptly, and where time is desired on a portion of the purchase price, we believe we can effect terms which will be entirely satisfactory. We invite correspondence regarding exchange of presses, or anything else of interest to you, which this brief announcement does not fully cover, and your letters shall have our prompt attention.

We hope to make your better acquaintance.

In case we are favored with orders from parties with whom we have had no former dealings, they should be accompanied by the cash, or references, in order to avoid possible delay.

Faithfully yours,

MARDER, LUSE & CO.

139-141 Monroe St., Chicago, Ill., May, 1889.

Constitution Centennial Rejoicings

Grand Parade in Philadelphia

The Printing exhibit commenced with a tableau of Gutenberg and his employes, illustrated by German printers. Type making a century ago was shown by this foundry. An old mould was used, making daily ten pounds of unfinished type. Near this was the

Improved Casting Machine

which casts forty pounds of unfinished type in the same time. In contrast with these was the complete type-casting machine which casts and finishes fifty pounds of type per day. Following was shown the art of printing and its accessories of the present time.

THE largest assortment of News, Job, Book, Cut, Poster and Finest Colored Inks in the country. Fine Black and Colored Inks at \$1.50 per lb., and upward, are furnished in collapsible tubes, each holding one-quarter pound, in which they always keep ready for use until used up. This mode of putting up Inks has proved successful, and of the greatest advantage to printers.

SPECIMEN BOOK AND PRICE LIST MAILED ON APPLICATION.

“A girdle round about the Earth.”—*Puck*.

Printers, “A Word with You.”

The Colt's Armory Press claims the distinction of being the Best on Earth! In testimony whereof we have the word of the best and most successful printers in the land.

If there ever was an established maxim in commerce, it is this: “The Best is the Cheapest.” And the reasons therefor are sound, namely: that by the use of the *best means* you thereby increase both your trade and profit by the ability to produce the *best work in the least time*.

The business end of the argument could not be more forcibly presented than the following from one of our patrons:

“The two Colt's Armory (Quarto Medium Style One) Printing Machines I purchased of you some time ago, are in my opinion *the best presses made*. There is not a press in the market that I know of that will **MAKE AS MUCH MONEY** for a printer as yours. It is easily managed, simple in construction, strong, light running and as near perfection as possible.”

Illustrated Descriptive Pamphlet on application.

OFFICE OF
THE UNION TYPEFOUNDRY,
 SOLE MANUFACTURERS
COPPER AMALGAM TYPE,

337 DEARBORN ST.

Chicago, May, 1889.

TO THE TRADE:

We are now prepared to meet the demand from printers, and accept orders for goods of our manufacture on the basis of quick sales and small profits. In order to sell on small margins we must sell for CASH. We don't mean "Cash in 30 days," but ACTUAL CASH. Our Copper Amalgam is the best type metal in the world, and we use only the one metal. Our type is finely finished, and we guarantee that our goods are equal, if not superior, to any that can be purchased elsewhere. Further, we make a specialty of delivering "Sorts" promptly.

We, therefore, now offer the following

DISCOUNTS FOR CASH.

30 PER CENT on the regular list price of our Patented faces of Job Type, Ornaments, Borders, Brass Rule, Brass Leaders and Dashes.

25 PER CENT on the regular list price of our Plain faces, such as Gothics, Antiques, etc., Gallies, Imposing Stones and Frames, Cases, Stands, Chases, Cherry Cabinets, Leads, Inks, Furniture, Shafting and Hangers.

20 PER CENT on the regular list price of Roman and Old Style Copper Amalgam Type.

On all articles not listed above we will give as liberal discounts as possible and will meet competition.

Our new Specimen Book will be mailed free to printers who write us that they will purchase from us at least \$5.00 worth.

Please remit by Bank Draft, P. O. or Express Money Order.

Very respectfully,

THE UNION TYPEFOUNDRY.**WOOD TYPE ▲▲ NEW FACES.**

WE MAINTAIN our superior finish on our Wood Type and sell it at reduced prices. Send for specimen sheets of new faces.

OUR MANUFACTURES include regular goods and the latest improvements in cases, stands, cabinets, labor-saving reglet and furniture, imposing tables, proof presses, galleys, letter boards, standing galleys, dry racks, job sticks, roller frames, lead and slug racks, mallets, planers, miter boxes, quoins, cutting sticks, etc.

OUR NEW PRODUCTS include: Skeleton Steel Furniture for blank work, Ruled Mahogany Blocks for fine cut and color work, Steel Rule for poster work, Steel Bearers for job presses, Steel Composing Rules in sets (at 12 cents each), and the Acme Distributing Block for loosening up metal type without injuring it, made 8 by 12, iron bound, \$4, and 4 by 6, unbound, 50 cents.

WE SELL Metal Type, Inks, Press and Printers' Machinery and Tools generally.

WE IMPORT a first-class numbering machine, and the best wire stitcher made, only \$250.

General Agents for the Eckerson Web Press; new sizes in preparation. Also in Eastern, Middle and Southern States for the Jones-Gordon Press and Leader Cutter.

THE ONLY PRACTICAL

Stereotype · Outfit

IMPROVED AND MANUFACTURED BY

M. J. HUGHES,**18 SPRUCE ST. + + + NEW YORK.***One among Hundreds of Testimonials:*

TO WHOM IT MAY CONCERN: This is to certify that we have one of Hughes' Stereotype Outfits, and the same has been in our office and in constant use for five years, and is giving and has always given entire satisfaction.

Yours truly,

Feb. 16, 1888.

O. A. CARLETON & CO.,

Book, Job, Show and Commercial Work of every description,
Providence, R. I.

THE above testimonial is only one among hundreds elsewhere given. Like large numbers of others, both large and small concerns, it has used for years my quick and superior patented devices of casting and blocking, at one and the same operation, by the use of wooden cores, bars, strips and filling of a non-conducting nature. Also, with the same outfit, all other results known to stereotyping is secured by its simple and practical construction. It is an established fact that it is the only simple, practical Stereotype outfit for the printing office in general, and that if not used successfully it is certainly the fault of the operator.

It is a great mistake on the part of the purchaser to defer purchasing until the outfit is actually needed for some special purpose. "Procrastination is the thief of time."

It is undoubtedly the best thing, taking into consideration the small amount
 invested, ever put in a printing office.

Send for descriptive circulars and hundreds of indorsements.

MRS. JAMES BROWN POTTER.

Written for THE INLAND PRINTER.

STANDARD VS. GRADED SCALE FOR PRESSMEN.

BY STEPHEN MCNAMARA.

THE question of a graded scale for pressmen, according to rank or ability, is a matter which requires careful consideration. A conclusion applicable to one locality may prove quite erroneous in another. Hence, pressmen delegates to the Denver convention have the opportunity to discuss this subject and suggest such action as may be deemed necessary.

The number of platen pressmen (wrongfully designated two-thirders) who are denied admission to unions is constantly on the increase, and no subject coming before the convention should receive more careful treatment.

To examine so grave a subject let us select some similar profession for comparison; and for this purpose probably locomotive engineers will answer. As they work under the graded scale, while pressmen adopt the standard, we are enabled to perceive which produces the best results. It will be understood, of course, the application is not universal.

Switch engines pay less than road, and are supposed to require less skill in operation, and may thus be compared to platen presses, while road engines correspond to cylinders. As a distinction is thus drawn between the two classes the comparison becomes obvious that what applies to one should work equally well with the other.

It will be remembered one of the chief causes of a recent railroad strike was the displacement of old and competent men, whose seniority in the company's employ entitled them to a rate of wages far in excess of those whose enrollment in the service was of more recent date. The result of such a system was developed when it was seen the younger men were doing exactly the same work for the lesser pay. As this encouraged the company to gradually dismiss the older men, the disastrous results became evident, and the strike was precipitated.

It will thus be seen that under a standard scale, whether high or low, that strike would never have occurred.

Pressmen who are fully competent to operate any press on all kinds of work may be worth, say \$25 per week. Those less capable may be worth but \$17. If the average is \$21, and that figure is rigidly maintained, a foundation is established on which estimates can be based, and losses are *not* made up by cutting wages. The labor market is free and open, while employers have the privilege of selecting such men as suit their requirements, and no objection can be made upon the discharge of incompetent men. A union establishing a standard scale obligates itself to scrutinize the qualification of its members, and right here comes the rub.

No man can truthfully say all members of a union are worth the scale, and it is equally difficult to determine those who should be admitted. Pressmen who do newspaper work only, and who never attempt anything else, are deemed qualified, while those who execute the most beautiful specimens of printing are denied admittance.

We must remember that those who follow after us will do better work than ourselves, and every encouragement should be freely extended them. Whatever legislation may be required to do justice to the ambitious youth of the country, let us hope will be adopted by the Denver convention, with that wisdom and moderation the importance of the subject demands.

MR. SYDNEY A. GRANT, of England, has brought out an improved envelope machine. "The important point about it," says the *Paper Makers' Circular*, "is that it will gum, fold, print and emboss the envelopes in one operation, and will use several colors in the printing. It will also supply a cheap gum to the lower end flaps, while applying fine gum to the loose flap. The chain is made to run upright, and it is said that the machine costs only two-thirds as much as ordinary machines, and is easier running. It is designed to introduce it into printing offices, enabling printers to execute an order for printed or embossed envelopes without resort to the envelope factories."

PAPER TRADE ITEMS.

THE Lincoln Paper Mills Company, St. Catharines, Ontario, is building a new mill.

It is announced that steps have been taken to establish a paper mill at Houston, Texas.

It is expected that the paper mill at Portage La Prairie, Manitoba, will soon be started up.

LOCKPORT (N. Y.) capitalists will soon erect a \$65,000 pulp mill. A free site is furnished.

THE government envelope works at Hartford have made 120,000,000 envelopes since January.

SABIN ROBBINS & Co., paper dealers, Cincinnati, Ohio, have been succeeded by the Sabin Robbins Paper Company.

KERSTENS, PETERS & Co., wholesale paper dealers, Denver, Colorado, have been succeeded by E. P. Peters & Co.

A STRAWBOARD and manila mill, to employ 250 hands, is projected at Lancaster, Ohio, by a New York syndicate.

A DEPARTMENT for the manufacture of paper and tablets has been added to the business of the Holyoke Envelope Company.

OMAHA, Nebraska, is likely to lose its expected paper mill, through a difficulty between its projectors and the board of trade.

THE Hudson River Pulp and Paper Company has received overtures from an English newspaper for a contract to supply paper for its publication.

THE paper mill at Moline, Illinois, is making some very satisfactory experiments in making paper entirely from wood fiber, with no mixture of other material.

THE Manchester Paper Company, of Richmond, Virginia, has been reorganized and the following officers elected: R. Van Houten, president; A. W. Shields, treasurer; J. H. Shields, secretary and manager; John Terhune, accountant.

THE Raritan Paper Company's works, at Raritan, have been enlarged and additional machinery added to the already large plant. The mill has a daily capacity of about ten tons of news and manila papers. It is proposed to still further increase the output.

THE failure of Spalding & Hodge, English paper manufacturers, is the heaviest ever known in this line of business. The liabilities are reported to be \$2,500,000, and assets \$2,000,000. The firm has been established nearly one hundred years, and commanded unbounded confidence.

SEPTEMBER, 1890, two centuries will have passed since the first paper mill was erected in America, in Roxborough, Philadelphia county, and it is proposed that the bi-centennial anniversary of the event be fittingly celebrated. Mr. George W. Childs and ex-State Senator Horatio Gates Jones, who has written a full history of the mill, desire paper makers and printers to correspond with them as to the best plan for such a bi-centennial celebration.—*Paper Trade News*.

TO TEST printing paper, apply the tongue for sizing, and compare opposite sides together for equality of surface. Look through a sheet against strong light for spots, and note whether the paper be "regular." Printing paper ought to "rattle" well, and have good strength and surface. When there is a great "rattle," and if the paper has a glistening brilliancy of texture, then most likely straw is present in the fiber, which, when introduced in excessive quantities, causes the paper to break when folded. The paper should, therefore, be creased and then examined.

A SYNDICATE, including several Georgia capitalists, has secured the exclusive right for the southern states of a process for reducing vegetable fibers to paper stock, with the intention of establishing mills in all the cotton states, and applying the process to the reduction to paper of cotton stalks and seed hulls, now practically worthless. The promoters of the enterprise claim that they can make good new paper at 2 cents per pound, and that the establishment of their mills will be as important an event in the economical history of the South as the establishment of cotton-seed oil mills.

WILLIAM R. McLEAN,

The eighteenth president of the International Typographical Union, was born in the city of Alexandria, Virginia, December 28, 1825, and removed to Portsmouth when a youth. He died in Washington, D. C., December 1, 1879.

Mr. McLean entered the printing business at an early age, serving his apprenticeship on the *Portsmouth Times*, published by John T. Hill, afterward working a short period on the *Phoenix*, of the same city. About 1845-6 he made a trip to the national capital and secured a situation on the *Globe*, published by Blair & Rives (now the *Congressional Record*). For several years he returned to Portsmouth during the recess of congress, but in 1850 made Washington his permanent home, and subsequently worked on the *Telegram*, which became the *Star* in 1853, when he was appointed foreman of the composing room, which position he held to the time of his death, being succeeded by his only son (Richard A.), who still directs the typographical department.

After almost twenty-seven years continuous duty as foreman, with daily communication with the business and editorial departments of Washington's great dailies, in testifying to his merit as a workman the management said: "The fidelity and ability with which he performed his duties in this protracted service made him a national reputation, and quite certainly no member of the typographical fraternity was held in higher esteem throughout the country."

In October, 1850 (more than a month before the National—the immediate predecessor of the International—

Typographical Union was formed), Mr. McLean joined the pioneer trade organization of America, Columbia Typographical Society, of Washington, D. C., and from the beginning became an active worker for its advancement, for several years filling the office of president. When the society merged into the union under a charter from the International (1867), he became one of the most zealous advocates of the new order of things, and through his earnestness reconciled many to the changes which at that time appeared to them to be fraught with danger to the local craft.

At the sessions of the International Union of 1868, 1870, 1873, 1874, Mr. McLean represented No. 101, and was chosen president of that body at Montreal in 1873. When his death was announced to the International, at Chicago, Illinois, in 1880, by Mr. William H. Sweeny, an ex-president of and delegate from No. 101, by resolution it was declared, among other things, "that William R.

McLean, as president of the International Union, was capable and faithful, performing his official duties with a conscientious care and fidelity worthy of all praise." After this action, Mr. Samuel Halderman, the president of the International, paid a just and glowing tribute to his memory.

Mr. McLean's interest in the betterment of the condition of men was not restricted to his craft, but enfolded humanity in general, and he was among the originators of the plan whereby all the organized trades in the District of Columbia were brought together through delegations in a central body known as Workingmen's Assembly, wherein were formulated and pushed to a successful issue many measures of permanent benefit to those represented. He was elected the first president of the assembly and administered the oftentimes delicate and arduous tasks imposed on him with the skill, finesse, determination and success that he had hitherto brought into play in nearly everything he undertook.

At the regular meeting of the assembly, held on the day succeeding Mr. McLean's death, by resolution it was declared that "the assembly and all working men lose one of their most tried and true friends, the public a good citizen," and in the eulogies that followed, the sentiment of the assembly was voiced in the words: "He was known only to be loved and respected, and his worthy example is fit for all to follow."

When Mr. McLean's death was announced in Columbia Typographical Union at the stated meeting, December 20, 1879, an unusually large committee of old and tried members was appointed to draft the sentiment of the union. The report was presented at

the January, 1880, meeting and unanimously concurred in by a rising vote.

October 27, 1853, he united with what was then known as the people's benevolent order—the Odd Fellows—an outgrowth of trade guilds, joining Columbia Lodge, No. 10, and in the language of one of his contemporaries "from his first entrance into it he became one of the most devoted and active members, making its precepts the rule of his life, and even endeavoring to carry out the golden rule." He rose rapidly in the several branches of the order, passing through the chairs in the lower bodies, and eventually becoming Grand Master of the District of Columbia, Past Grand High Priest, and Representative to the Grand Lodge of the World.

His funeral services were supervised by the Independent Order of Odd Fellows' through committees representing the Grand

Lodge, the Grand Encampment, Columbia Lodge, Columbia Encampment, and the Uniformed Battalion of Patriarchs. His body laid in state in Odd Fellows' Hall, from 9 A. M. until 1 P. M. on the day of burial (Thursday, December 4), the Uniformed Battalion acting as a guard of honor. During these hours an immense concourse of people passed through the hall to pay the last tokens of affection and tender remembrance to one whose name, as tritely observed by the *Evening Star*, was "almost a household word in this community as the emblem of high character."

The services were extensive and the procession was one of the largest in Washington on similar occasions, many delegations from abroad attending. The active pall-bearers were: Of the Grand Lodge of Odd Fellows, A. H. Buckley, P. G. M.; of the Grand Encampment, B. A. Kidder, P. G. P.; of the Uniformed Patriarchs, R. Troland and A. Scott; of Columbia Encampment, Thomas Greer, P. S. P.; of Columbia Lodge, Benjamin C. Wright. The honorary pall-bearers were high officials in the Order from abroad, and Messrs. William R. Ramsey and — Littlefield, of Columbia union.

Of the estimate put upon Mr. McLean's character by all with whom he came in contact, and of which the foregoing record is merely a factor, the meed of praise is to be found in the composing room where so many years of his life were spent — *his record is without a blemish.*

PRESS ASSOCIATION NOTES.

THE Kentucky Press Association meets June 6, at Owensboro.

THE Alabama Press Association meets at Huntsville the latter part of June.

THE Texas Press Association, met at El Paso April 29 and brought up on a visit to the City of Mexico.

THE time for holding the Missouri Press Association annual meeting at Nevada has been changed to June 4 and 5.

HENRY WATTERSON delivers the address at the next annual meeting of the Missouri Press Association, June 4 and 5.

THE Texas Associated Press has secured a charter for fifty years, and controls the press franchise of Texas, excepting three points. It has also control of the Western Associated Press service of the state. It consists of the *Gazette*, Fort Worth; *Express*, San Antonio; *Statesman*, Austin; *Post*, Houston, and *Day*, Waco.

THE annual meeting of the Connecticut Press Association has been held. Officers were elected as follows: President, Rufus A. Lyon, Bridgeport; vice-president, John Rodemeyer, Norwalk; secretary and treasurer, W. A. Countyman, Hartford; executive committee, F. W. A. Wood, Bridgeport; Frank E. Beach, Wilimantic; Thomas A. Weaver, Hartford; Thomas L. Riley, Meridian; C. L. Case, Ansonia. Trustees of the Colonel William H. Stevenson Fund: Colonel W. H. Stevenson, Bridgeport; Colonel T. T. Morgan, New Haven; William Scheffield, New Haven. The business meeting was followed by a banquet.

THE local executive committee, to arrange for the twenty-second annual meeting of the Michigan Press Association in Grand Rapids, July 9-11, held a meeting recently. Mayor Weston presided, and Col. E. Crofton Fox was made vice-chairman of the executive committee, and Don J. Leathers, treasurer. The following programme for the meeting was suggested and referred to the general meeting: Tuesday noon, July 9—arrive at 2 P. M. Formal reception and business meeting afternoon and evening. Wednesday, July 10—forenoon, drive about the city; afternoon, Reed's Lake for banquet; evening, reception at Owashanong boathouse. Thursday, July 11—forenoon, drive; afternoon, business meeting. Depart for Grand Haven at 5 P. M. The programme calls for a grand clam-bake at the lake on the second day of the meeting. It is expected that four hundred and fifty or five hundred persons will be present, and a fund of \$1,500 will be raised to start with to entertain them.

LIST OF DELEGATES.

The following is the list of delegates-elect to the next session of the International Typographical Union, so far as ascertained, which convenes in Denver, Monday, June 10:

1. Indianapolis..... E. T. Oburn, J. O. Shultz.
2. Philadelphia..... } David C. Doak, Walter Faries, Alexander Dunbar, Joseph C. Gibbs.
3. Cincinnati..... } Charles Leibrich, Scott Jackson, Edward J. Molloy.
4. Albany..... } Francis J. McAllister.
6. New York..... } Robert Costello, William Ferguson, David Kells, Charles M. Maxwell.
7. Pittsburgh..... H. J. Kington, Frank A. Lewis.
8. St. Louis..... C. P. Connelly, O. R. Lake.
10. Louisville..... George J. Nolan.
11. Memphis..... W. H. Johnson.
12. Baltimore..... Harry C. Hitchcock, H. T. Rigg.
13. Boston..... W. A. Holland, C. M. Lynch.
14. Harrisburg..... J. Monroe Kreiter, Jr.
16. Chicago..... } James Wright, William T. Lumsden, William J. Cushing, J. B. McDonald.
17. New Orleans..... George G. Cooper, J. E. Colton.
18. Detroit..... George M. Knox.
20. Nashville..... John A. Aul, J. J. Straub.
21. San Francisco..... E. T. Plank, W. J. White, Andrew F. Smith.
23. Milwaukee..... Louis Schroeder.
28. Galveston..... G. E. John.
29. Peoria..... John Crawford.
30. St. Paul..... Fred W. Stevens, Phil Corcoran.
31. Montgomery..... T. O. Hamilton.
32. Norfolk, Va..... W. A. Winter.
33. Providence..... Andrew F. Moran.
36. Oakland..... William S. Willis.
39. Grand Rapids..... John B. Greenway.
40. St. Joseph..... G. W. Hendley.
42. Minneapolis..... J. A. Werner.
43. Charleston, S. C..... George A. Steck.
49. Denver..... J. J. Burns, J. D. Vaughan.
52. Troy..... James A. Brown.
53. Cleveland..... W. E. Dougherty.
58. Portland, Ore. (Multnomah)..... Hamilton Platt.
62. Utica..... Theo. Ray.
71. Trenton..... Thomas D. Cassidy.
72. Lansing, Mich..... T. C. Mabbott.
78. Fort Wayne..... Edward Miller.
79. Wheeling..... William C. Jones.
80. Kansas City..... James L. Conway, James M. Rhodes.
82. Colorado Springs..... A. J. McNasser.
84. San Bernardino..... John K. Shaffer.
90. Richmond..... Samuel Ragland.
91. Toronto..... J. T. Gilmour.
98. Brooklyn..... James B. Dillon.
99. Jackson, Mich..... F. X. McPhillips.
101. Washington (Columbia)..... } James H. Platt, E. W. Oyster, A. P. Marston, H. S. Sutton.
103. Newark, N. J..... Geo. E. Derham.
104. Birmingham..... Henry L. Rulander.
112. Scranton, Pa..... Norton Wagner.
117. Springfield, Ohio..... Felix L. Seward.
119. Jefferson City..... Frank Kroeger.
121. Topeka..... H. M. Ives, T. B. Brown.
122. Kalamazoo..... Frank M. Butters.
124. Bloomington..... Julius Reichel.
126. Butte City..... T. Kester.
129. Hamilton, Ont..... William McAndrew.
132. Camden..... William B. Braker.
136. Duluth, Minn..... Ransom Metcalfe.
138. Austin..... Will Lambert.
141. Williamsport, Pa..... W. J. C. Greevy.
145. Montreal..... Charles Beattie.
148. Wichita..... Henry A. Glenn.
164. Frankfort..... E. F. Frey.
173. Dallas..... A. T. Hess.
174. Los Angeles..... C. Stamps.
175. Pueblo, Col..... W. H. Hildreth.
179. Leadville..... A. C. Salisbury.
180. Sioux City..... Samuel T. Day.
184. Cheyenne (Wyoming)..... F. J. Offner.
188. Waco..... P. A. Richards.
189. Lexington (Blue Grass)..... John B. Rogers.
190. Omaha..... Edward Hartley, K. S. Fisher.
198. Fort Worth..... John L. Duff.
202. Seattle..... George E. Riggins.
210. Salem, Ore..... George Hibbert.
223. St. Catherines, Ont..... J. F. Keefer.
236. Ogden, Utah..... C. B. Anthony.
237. Phoenix, Ariz..... J. E. Bland.
246. Chester, Pa..... D. R. Feeley.

PRESMEN.

1. Washington..... P. S. Sprightley.
3. Chicago..... Martin Knowles.
4. Philadelphia..... Thomas J. Harrison.
6. St. Louis..... Frank J. Baumgartner.
17. Indianapolis..... O. McCarthy.
13. Pittsburgh..... Robert Donaldson.
35. Topeka..... Ed. Baty.

"WRITING FOR THE PRESS."

We acknowledge the receipt of the third edition of Mr. Robert Luce's manual, "Writing for the Press," one of the most instructive works of the kind we have ever read, and which has been adopted in the department of journalism at Cornell University. It is a terse and practical treatise on the subject, and will be found an invaluable manual for editors, reporters, correspondents, proof-readers and compositors. Published by the Writer Publishing Company, Boston; price 50 cents, and worth ten times the amount.

MR. EDWARD A. CURTIS,

Whose portrait is herewith presented, and who was well known to the employing printers of the United States, was born in Boston, Massachusetts, February 22, 1822, and died March 19, 1889, aged sixty-seven years. He received his education in the common schools of that city, and at an early age secured employment in the type-foundry of Mr. George Holmes, where he remained until 1847.

when he secured an interest in the business, under the name of Holmes & Curtis, which partnership lasted till 1852, when Mr. Holmes retired, Mr. Curtis purchasing his interest and continuing the business in his own name successfully for nearly twelve years. Mr. Mitchell then became a partner, the headquarters being located at 24 Congress street. The big fire of 1872, however, consumed both the buildings and contents, and a new start was made at 21 Brattle street. From thence they removed to the quarters now occupied, 15 Federal street, where they have since remained.

Mr. Curtis was in active business for over forty years, and did a large trade, having supplied some of the most prominent printing establishments in the eastern states. Mr. Mitchell died March 22, 1880, since which time Mr. Curtis has carried on the business alone. "He was a descendant of the historic Paul Revere," of which he was justly proud. He was also prominently identified with, and a leading representative of the city in which he resided (Somerville), serving its interests faithfully both in the common council and as an alderman. While somewhat close in business matters, he was honorable in all his transactions, and his word was as good as his bond. He was one of the oldest typefounders of Boston, and thoroughly understood the business. He leaves a widow, two daughters and a son. The immediate cause of his death was consumption of the blood.

THE LITHOGRAPHERS' AND PHOTOGRAPHERS' DIRECTORY.

We acknowledge the receipt of the second annual edition of the Lithographers' and Photographers' Directory, consisting of 220 pages, published by the Lithographing Publishing Company, 37 City Hall Place, New York. It contains a vast amount of valuable information, referring, as it does, to the manufacturing firms, and press, machinery and supply houses engaged in or identified with lithography, photography and the allied arts and trades. Price \$5. Address as above.

NEWSPAPER GOSSIP.

FREMONT (Neb.) has three daily papers.

TAUNTON (Mass.) has a new daily, the *Evening Mail*.

THE Greenville (S. C.) *Daily News* has been enlarged.

A NEW democratic paper is to be started at Lancaster, Ohio.

THE Aspen (Col.) *Daily Times* enlarges to an eight-page paper.

THE *Busy World* is a new weekly at Atlanta, Georgia, with ex-Senator Arnow as editor.

A NEW daily, the *Middlesex County Herald*, has made its appearance at Perth Amboy, New Jersey.

THE Valdosta (Ga.) *Times* has gone into the hands of a stock company, with a capital of \$10,000.

MRS. MARGARET E. SANGSTER has succeeded the late Mary L. Booth as editress of *Harper's Bazar*.

I. N. WALTON is at the head of the *Herald*, a new seven-column quarto, at Pittsburgh, Pennsylvania.

IT is said that there are 960 newspapers and periodicals published in foreign languages in this republic.

THE Albany (N. Y.) *Journal*, when news is crowded by advertisements simply adds a column to each page.

G. H. S. KENNEDY has assumed the full control of the Morrisburgh (Ont.) *Courier*, published at Morrisburgh.

ATHENS, Georgia, is to have a new eight-page morning daily, which will contain the associated press dispatches.

W. E. RANDALL, a former proprietor of the Griffin (Ga.) *Sun*, is about to start a daily newspaper in Milledgeville.

NORTON, a town in Brown county, Kansas, less than three years old, has one daily and five weekly newspapers.

GOVERNOR TAYLOR, of Tennessee, has appointed half a dozen journalists to state positions since his first election as governor.

A NEW temperance organ, the *News*, a six-column folio, has been issued at Williamsport, Pennsylvania, by Irvin & Houston.

EX-CONGRESSMAN R. J. VANCE, of New Britain, Connecticut, has become a member of the editorial staff of the New York *Sun*.

A NEW paper devoted largely to society news, and called the *Staten Islander*, was recently started at New Brighton, Long Island.

A NEW daily paper has been started at Centralia, Illinois, called the *Morning Gazette*, published by the Gazette Publishing Company.

THE Braddock *Sun*, Spring Mills *Times* and Shippensburg *Local Citizen*, all three Pennsylvania papers, have gone out of existence.

THE Lancaster (Pa.) *Examiner* (daily and weekly) has been sold by ex-Congressman Hiestand to Thomas B. Cochran, ex-clerk of the senate, and H. B. Cochran.

THE libel suit against the Providence (R. I.) *Journal* has ended in a nominal verdict against the paper. The plaintiff sued for \$5,000 damages, and an award of \$1 was given.

THE Bridgeton (N. J.) *Chronicle* has passed out of the ownership of F. R. Fithian, and will now be conducted by Washington Mills and Paul J. Davis, late of the Philadelphia *News*.

THE Artist Printing Company, 720 Olive street, St. Louis, is out with a tasty title page prospectus of a new trade monthly journal to be called the *Artistic Printer*. Success to it.

THE *Weekly Gazette* is the name of a new newspaper enterprise, published at Russell, Russell county, Kansas. It is a seven-column quarto, edited by S. H. Hoffa and J. C. Gault.

MESSRS. ALGAR & MASON have suspended publication of the Creston (Iowa) *News*, and propose taking the plant to some other town where the field is not so crowded. A sensible conclusion.

THE New York *Evening World* came out printed on red, white and blue paper during the days of the recent centennial celebration; and the morning edition came out on one day printed in type and on paper of the style of one hundred years ago. The

Mail and Express issued a splendid centennial souvenir number on the first day of the celebration, of which nearly everybody purchased a copy.

THE great power of a newspaper is well illustrated by the *Atlanta Constitution*, that by its impassioned appeals for the needy Confederate soldiers raised \$40,000 in a week for a Georgia soldiers' home.

THE *Monitor* is a neatly printed, eight-page monthly journal, published at Winnipeg, Manitoba, by H. H. Stovel, devoted to the interests of fire, life and accident insurance. We wish it abundant success.

THE *Livingston Post* is the name of a very neatly gotten up and printed eight-column, four-page weekly, recently established at Livingston, Park county, Montana, of which J. D. Whelpley is editor and business manager.

THE *California Home and Farm* is a new agricultural and horticultural monthly. Its articles on fruit growing and general agriculture are of real value, inasmuch as they are written by a practical man and an expert.

THE two republican papers at Greenfield, Iowa, the *Transcript* and *Reporter*, have been consolidated, and will be published by the Transcript Printing Company. The editors are James M. Gow and ex-Senator C. B. Hart.

THE *American Press*, a sixteen-page monthly journal published at Atlanta, Georgia, and devoted to the interests of printers, publishers, lithographers, paper dealers, etc., has just made its appearance. Frank J. Cohen is editor.

Mystic Breeze is the name of a neatly printed, ably conducted, eight-column, four-page paper, published at Mystic, Iowa, and edited by Frank R. Smith. It is devoted to the booming of southern Iowa in general and Mystic in particular.

Shoe and Leather Facts is the title of a new weekly journal, published by Harg & Paris, 707 Sansom street, Philadelphia. The first number has a neat typographical appearance and is brimful of news of interest to the shoe and leather trade.

THE *Illinois State Journal*, published at Springfield, has been sold to Harry Cullom and Clarence Paul. Mr. Paul received a thorough newspaper training in Chicago, and Mr. Cullom has been for the past five years secretary to his uncle, Senator Cullom.

A NEW paper for the young is to be started in Philadelphia in September next, with a capital of \$100,000. It is to be called *Santa Claus*, and is to be published simultaneously in New York, Philadelphia, Boston, Toronto, Canada, and London, England.

THE *Oberlin Farmer* is a new, neatly printed, six-column paper, published the fourth Saturday in every month, at Oberlin, Decatur county, Kansas. It is edited by G. Webb Bertram and J. C. Hopkins, and is devoted, as its name implies, to the farming interests of that section of the state.

THE *Western Horseman*, a paper devoted exclusively to the horse, is a new acquisition to Omaha newspaperdom, the first issue appearing on March 30. The editor and proprietor, Mr. M. W. Pettigrew, has had considerable experience in the handling of horses, especially trotters, and we have no doubt he will make a success of his new venture.

AT a meeting of the stockholders of the Charleston (S. C.) *News and Courier*, Major J. C. Hemphill was unanimously elected manager to fill the vacancy occasioned by the death of Captain F. W. Dawson, who was murdered on March 12. It is not probable that there will be any further changes in the staff of the paper, at least for some time to come.

THE spring edition of the *Boomerang*, Laramie, Wyoming, consists of a six-column, twelve-page edition, setting forth the advantages of Wyoming in general and Laramie in particular, accompanied with an illustrated supplement, 48 by 36, containing views of various ranches and structures in the territory. The publishers deserve great credit for their enterprise, and if one-half of what they say is true, Wyoming has been a much maligned section.

PERSONAL.

We acknowledge calls from the following visitors during the past month: Mr. Porter, of Smith & Porter, printers, Boston, Mass.; Joseph H. Donnellon, of Brown, Treacy & Co., St. Paul, Minn.; H. C. Baker, of Baker, Collins & Co., St. Paul, Minn.; Wm. W. Ferguson, representing the Ferguson Printing Company, Detroit, Mich.; A. E. Lindsly, secretary and treasurer St. Louis Printers' Supply Company, St. Louis; C. Frank Boughton, of Van Allens & Boughton, 17-23 Rose street, New York.

CHICAGO NOTES.

IT is stated that ex-Mayor Carter Harrison is going to print his travels, which were received with so much favor when published as communications, in book form, under the title "A Race with the Sun."

A NEW paper concern has located on the corner of Fifth avenue and Monroe street, under the style of Whitford & Herz. The senior partner has been known to the trade for many years, while his partner has latterly been a broker on his own account.

MR. H. H. LATHAM, manufacturer of and dealer in printers' and bookbinders' machinery, recently located at 318 Dearborn street, has removed to more commodious quarters at Nos. 304-306, a few doors north of his old location. Glad to hear of his success.

THE office of the Huber Press Company, represented by Van Allens & Boughton, has been removed to 301 Dearborn street, where their efficient western agent, Mr. A. W. Thornton, will be pleased to receive all encomiums on, and orders for, its machines.

H. O. SHEPARD & Co. have just turned out for the Queen City Printing Ink Company, Cincinnati, one of the handsomest catalogues, showing the character, shades and colors of the inks manufactured by this firm, it has ever been our good fortune to examine. It is printed on extra heavy coated paper, and the presswork is simply perfection, while the results produced amply warrant the statement contained in the preface, "the Queen City inks will do in the most satisfactory manner any kind of work that can be done on a printing press."

THE Chicago Book Concern has been incorporated by A. McLellan, H. W. McLellan and D. A. Stocking (capital stock \$1,500), to publish books and deal in novelties and general merchandise. The Publishers' Commercial Union was incorporated at Chicago, with a capital stock of \$10,000, to furnish reports of advertisers and advertising agents. Incorporators, Frank B. White, Joseph G. Orr, Howard F. Blin, and Isaac F. Dunwiddie. The Columbia Publishing Company, at Chicago, incorporated capital stock \$10,000; to do a general printing and publishing business; incorporators, Alvah F. Moore, A. B. Gehman and Louis Dansiger.

THE Hamilton Manufacturing Company, the well-known wood type concern of Two Rivers, Wisconsin, has recently established a branch house at 259 Dearborn street, Chicago. This is another step forward in the career of this enterprising firm. Though scarcely eight years have passed since they started in business, they have, by their energy and push, placed themselves at the head of the wood-type and wood-goods manufacturers of the country. The Chicago branch is in the charge of Mr. Walter C. Luse, a gentleman of many years' experience in typefounding. The convenience in ordering goods from the great distributing point of the West will be appreciated by the customers of the Hamilton Company.

THE largest real estate deal of the season in Chicago, involving \$1,000,000, has been consummated by the *Daily Inter Ocean* coming into possession of the northwest corner of Dearborn and Madison streets. This corner, 20 by 40 feet, was recently bought by H. H. Kohlsaat for \$7,500 per front foot, the highest price ever paid in Chicago. The Haskell Building, surrounding it in the form of an L, has been secured by a syndicate, of which Clarence I. Ferd and Walter Peck are members, for \$100,000, the land being leased

for ninety-nine years at \$30,000 per year. The combined properties, with a frontage of 100 feet on Madison street and 70 feet on Dearborn, together with an extension to Calhoun Place in the rear, in all 9,000 square feet, has been transferred to the *Inter Ocean*, represented by William Penn Nixon, for a new building bearing its name. It will be one of the most prominent structures in the city, as this is one of the choicest corners in Chicago.

At a recent meeting of the Old-Time Printers' Association, held in the office of THE INLAND PRINTER, it was resolved to procure a suitable design and badge for the members, to be worn on all appropriate occasions. It was also determined that the constitution be so amended that the executive officers of the association shall in future consist of a president, vice-president, secretary-treasurer, to be elected annually, and six members, three of whom shall be elected annually, such officers to constitute the board of directors. The following officers were elected for the ensuing term: President, John Anderson; vice-president, Alexander Fyfe, secretary-treasurer, A. C. Cameron; board of directors—for one year—G. W. Morris, G. W. McDonald, and F. C. Sheldon; for two years—Albert Auer, William Hornish, and James McNamara. Each member was, on motion, requested to prepare a biographical sketch, accompanied with a personal photograph, to be presented at the next meeting, the same to be entered in the record book of the association. All members of the craft are eligible for election who have been residents of Chicago for twenty-five consecutive years, and who are active or honorary members of No. 16.

FRANK W. PALMER, the newly appointed government printer, is a native of Manchester, Dearborn county, Indiana, and was born October 11, 1827. His family moved to Jamestown, Chautauqua county, New York, shortly afterwards. At the age of 14 years he was apprenticed in the printing trade and served three years in a newspaper office. At the expiration of his apprenticeship he went to New York City and worked as a compositor in the *New World* office. A year later he returned to become the editor of the *Jamestown Journal*, a weekly publication. He afterwards bought the paper, and, in conjunction with another man, was for ten years part or sole proprietor of the paper. He went to Dubuque, Iowa, in 1858, and became editor of the *Dubuque Daily Times*. In 1860 he was elected state printer, and held that office for four successive terms. Moving to Des Moines in 1861, he bought the *Iowa State Register*, and transformed it from a weekly to a daily publication at the time when the legislature was in session to provide for the raising of troops. He sold out his interest in the paper in 1866, but remained editor of it. In 1868 he was elected to congress, and reelected two years later. Upon the expiration of his second term he came to Chicago, and for nearly four years was editor-in-chief of the *Inter Ocean*. In March, 1877, he was appointed postmaster by General Grant, and reappointed by Hayes and Arthur, and removed by Cleveland for "offensive partisanship," May 30, 1885. For the last three years he has conducted the *Industrial World*, a weekly paper devoted to the iron and other manufacturing industries. He lives at Oak Park, Cook county. He is able, honest, and qualified, and will, doubtless, give satisfaction to the country and craft at large.

JUDGE TULEY recently rendered an important decision in the case of the J. W. Butler Paper Company against the John B. Jeffery Printing Company, which is a substantial and well-earned victory for the complainants. His honor held that there was a conspiracy on the part of Jeffery and others to wreck the company and build a new corporation on its ruins; that the judgments confessed to Jeffery's wife, Daniel K. Tenney, the W. O. Tyler Paper Company and Burr Robbins are null and void, and that the levies made under these judgments are unlawful. The decree provides that within thirty days Daniel K. Tenney shall pay to the receiver \$20,383.64; Emma J. Jeffery, \$64,283.13; Burr Robbins, \$6,363.79, and the Tyler Paper Company, \$18,177.60. These amounts are to be distributed, under the direction of the courts, to the creditors and stockholders. In default of payment the receiver is directed to issue executions against the defendants

Receiver George T. Pomeroy was removed and Benjamin T. Ray appointed in his stead, in bonds of \$150,000. Daniel K. Tenney is ordered to pay the receiver all the moneys had from Receiver Pomeroy, and the question of the amount thus due is referred to Master in Chancery Waite for a report. As the Butler Paper Company will share *pro rata* with the other creditors they will come in for a good portion of their claim of nearly \$12,000. John B. Jeffery is not allowed to share as a stockholder in the distribution of assets until the stockholders not party to the scheme have realized the market value of their shares. Albert Hayden and C. B. Cottrell & Sons are found to be entitled to relief as stockholders not cognizant of Jeffery's plan, but all other rights are reserved for the future to be decided when called up. The defendants have decided to take the case to the appellate court. The action of the Butler Paper Company in following this matter, not so much for the amount as the principle involved, to a successful conclusion under adverse circumstances is worthy of commendation, and will go a long way to prove that honesty is the best policy in the long run.

"THE PRACTICAL PRINTER."

This is the name of a volume of practical information to printers, consisting of 183 pages, just issued by Mr. H. G. Bishop, a writer with whom the readers of this journal are well acquainted. It is a book of instruction for beginners, of reference for the more advanced, which contains valuable suggestions and illustrations relating to the various features of the printing business, as also diagrams of imposition, and useful tables showing the size, weight and prices of paper required for various jobs. It answers a hundred questions which are asked every day. Its chapters deal at length with the composing, press and stock departments, as well as the business management of a printing office, and the knowledge to be obtained from a perusal of its pages will, we are satisfied, make it a welcome companion to all who desire to learn and excel. Its price, \$1.00, places it within the reach of every printer, apprentice, journeyman or employer, and we take pleasure in recommending it to the trade at large. For sale by H. G. Bishop, 37 North Pearl street, Albany, or any typefoundry in the United States.

RECENT PATENTS.

The following list of patents relating to the printing interests is specially reported by Franklin H. Hough, solicitor of American and foreign patents, 925 F street N.-W., Washington, D. C., who will furnish copies of patents for 25 cents each.

ISSUE OF APRIL 2, 1889.

- 400,548—Web printing and delivery mechanism. L. C. Crowell, Brooklyn, N. Y.
400,875—Sheet-delivery apparatus for printing machines. W. Scott, Plainfield, N. J.
400,599—Numbering attachment for printing machines. T. Robertson.

ISSUE OF APRIL 9, 1889.

- 401,195—Printers' press-point. J. W. Meese, Harrisburg, Pa.

ISSUE OF APRIL 16, 1889.

- 401,455—Printing machine, Hand. W. O. Nelson, Baltimore, Md.
401,437—Printing machines, Stop mechanism for cylinder. S. D. Tucker, New York City, N. Y.
401,541—Printing press. A. B. Carty, Frederick, Md.
401,542—Printing press, Ink fountain for. A. B. Carty, Frederick, Md.

ISSUE OF APRIL 23, 1889.

- 402,057—Ruling machine. H. A. Brissard, Paris, France.
401,790—Printing machine. J. W. Osborne, Washington, D. C., assignor to W. H. Forbes, Boston, Mass.
401,839—Printing press, Hand. J. Kunze, Yonkers, N. Y.
401,737—Printing presses, Paper-folding attachment for. T. C. Dexter, Des Moines, Iowa.

THE *Scientific American*, in answer to a request to give a few suggestions as to gluing wood on metal for strength and durability says: "Glue with a small percentage of glycerine added adheres well to metals. A small amount of molasses added to glue will act in the same way. Tannin added to glue makes it strong and adherent. Bichromate of potash renders glue waterproof."

CUPID'S VACATION.

Specimen illustration in half-tone by the ELECTRO-TINT ENGRAVING COMPANY,
726 Chestnut street, Philadelphia, Pa.

LAID OVER.

Our monthly review of specimens received is unavoidably laid over. Will appear as usual in June issue.

TRADE NEWS.

L. B. STANTON & Co., printers, Grand Rapids, have sold out.

ALLISON & HUFF, printers, Indianapolis, have dissolved partnership.

WILSON & COOK, printers, Indianapolis, Indiana, have dissolved partnership.

BURKHART & ROYCE, job printers, Albany, Oregon, have dissolved partnership.

RIVKIN & SCHWARTZ, printers, Syracuse, New York, have been closed by the sheriff.

ENGEL & TUTTLE is the name of a firm which has just opened a printing office at Anderson, Indiana.

O. A. CARLTON, of the firm of O. A. Carlton & Co., printers, Providence, Rhode Island, has made an assignment.

LOUIS C. HESSE, printer, St. Louis, has removed from 321 Market street to 316-318, directly opposite his old location.

THE Owosso (Mich.) Times Printing Company is erecting a two-story brick building, the lower floor to be used as an office.

THE newly organized Midland Printing Company, of Clay Center, Kansas, has \$20,000 capital stock, and will do newspaper and general printing business.

E. V. REED, printer, has removed his business from North Abington, Massachusetts, to Brockton, where he is prepared to do all kinds of commercial work.

THE J. C. Clark Printing Company and the Middlesex Newspaper Company, Framingham, Massachusetts, have been consolidated under the name of the Lake View Printing Company.

AT Columbus, Georgia, Thomas J. Gilbert, J. J. Gilbert and P. S. Harris have incorporated the Thomas Gilbert Company, for printing, publishing, lithographing, etc. Capital stock, \$25,000.

MR. M. L. METZGED, formerly connected with the W. O. Hickok Manufacturing Company, Harrisburg, Pennsylvania, has severed his connection with that firm, and is seeking other engagements.

THE Babcock Printing Press Manufacturing Company on May 1 moved their New York offices from Nos. 26 and 27 Tribune Building to Nos. 9 and 10 same building. The move brought them down a story.

THE publication of Farley's Reference Directory of the book-sellers, stationers and printers of the United States and Canada, will be continued by Mr. George M. S. Horton, Tribune Building, New York City.

THE property of the Des Moines (Iowa) Leader Company was sold on May 6 to Henry Stivers & Co., publishers of the Burlington *Gazette*, who will continue the publication as a democratic newspaper. The price paid was \$21,700.

W. H. WAGNER, of Freeport, Illinois, a printer well known to the readers of THE INLAND PRINTER, writes that he has thus far turned out more catalogues and other finer lines of work this year than ever before in the same length of time.

THE Blackhall Manufacturing Company, of Buffalo, New York, have removed from 56 Mechanic street to 170 Fulton street. They are manufacturers of the Blackhall Wire Stitching and Stapling Machines, and in their new location will be better able to meet the increasing demands for their machines.

THE South Dakota Bindery Company, has been organized at Madison, Dakota, with an authorized capital of \$15,000. The company will manufacture blank record books and blanks for county and bank purposes, do a general bindery business, deal in stationery supplies, and handle everything pertaining to the trade. A traveling agent will be sent out on the road to solicit county

orders and book and bindery work throughout the territory. Mr. H. D. Jennings, for years a practical and expert bookmaker, will have full charge of the mechanical department.

W. W. MACKAY, late foreman of the *Herald* job office and for two years with the old J. L. Regan Company of Chicago, has opened a job office at Steubenville, Ohio, making commercial printing his specialty.

THE Cultivator Publishing Company, of Boston, Massachusetts, has been incorporated, with a capital of \$200,000, to print and publish newspapers, books, periodicals and engravings. Willard White is president; George B. James, treasurer; the same, with Harvey N. Shepard and H. F. Atwood, are the directors.

MESSRS. PALMER & REY, the typefounders and press builders of San Francisco, with branches in Portland, Oregon, Los Angeles, California, and Galveston, Texas, have incorporated with a fully paid up capital of \$400,000. The president is Mr. J. J. Palmer, and vice-president and treasurer, Mr. V. A. J. Rey.

H. G. METZL & Co., book and job printers, St. Cloud, Minnesota, have recently bought an entire new outfit of the latest and most improved printing presses, and a complete assortment of the newest designs and styles of type and other material, and are now prepared to execute in the highest style of the art all kinds of commercial and book printing.

THE Century Lithographing Company has filed articles of incorporation, with an authorized capital stock of \$50,000, said to be fully paid in. The incorporators are: John Hunter, trustee for M. E. Lucas; Charles Hunter and Edward Irwin, of Philadelphia, and John T. Woodhull, of Camden. The business establishment of the company will be located at Camden.

MR. LEON L. BROCKWAY, of Owego, New York, recently purchased the entire business of C. D. Mosher & Co., of Hornellsville, consisting of the manufacture of ribbon badges of every description for secret societies, etc., which they had followed for nine years, securing during that time a reputation for fine work. Mr. Brockway is prepared to execute all orders for gold leaf and lithograph work on ribbon.

WALSH & Co. have started an extensive job printing house at 2320 North Front street, Philadelphia. The concern does a line of fine chromatic work for cotton and woolen manufacturing establishments, and is located in the very heart of the greatest textile industrial center of the country, the Nineteenth ward of Philadelphia, where there are between three and four hundred carpet-making, hosiery and other mills. Walsh & Co. will soon increase their plant, they having already ordered three job presses.

THE Buffalo Printing Ink Works, of Buffalo, New York, have been removed, and are now located at the foot of Brace street. The new quarters are much larger and better adapted to the manufacture of printing inks than were the old ones, and they have been fitted up especially for this business. The factory and offices are all on the ground floors. Several new mills and other apparatus and appliances required to meet the demands of the business have just been added. The managers of the works report business with them on the increase.

OF INTEREST TO THE CRAFT.

FOUR pressmen's unions have been organized since March 15, 1889.

THE Ohio Labor Commissioner gives the average wages of printers in that state as \$2.29 per day.

COLUMBIA UNION (Washington) will erect a fine building on the plot of land recently purchased by them.

THE office of the secretary of Typographical Union No. 6 has been removed from 53 Frankfort street to 240 William street, corner Duane.

CONCORD, New Hampshire, is the lowest price city in New England, the scale being no higher than in 1819. Tourists can rarely obtain a sit there, as the supply of female compositors

exceeds the demand for subs, and the surrounding towns are full of widows who were former compositors.

MR. FRANK BUTTERS represents the interests of Kalamazoo union for the fourth time in succession at the Denver convention.

A CORRESPONDENT, writing from New York, April 24, says: "At present trade is very slow here. Business is dull in general, and there have not been so many pressmen out of employment for years."

THERE is still about \$400 needed for the monument of Thomas A. Armstrong. J. M. Kelly, editor of the *Commoner*, Pittsburgh, Pennsylvania, will receive contributions. Printers ought to contribute to this fund.

OUT of forty-nine printing offices in Denver only twelve are non-union, and among these there are only ten journeymen who do not belong to the union, against an average number of union employés of two hundred and eighty-one.

It seems to be the general impression that the officers of the International Typographical Union have performed their duties in an able and highly satisfactory manner during the past year, and done a great deal to advance its material interests.

THE annual report of the secretary of San Francisco Union (21) show that 121 applications for membership have been received, 102 formally acted on, 3 rejected and 49 reinstated. The present standing of the union is: active members, 696; apprentices, 19; exempt, 82; total, 797.

THE last issue of the *Craftsman* announces the withdrawal of Mr. August Donath from the position of associate editor of that journal. While we have not always agreed with the position assumed by this gentleman we have given him credit for sincerity of purpose, and wish him abundant success no matter where his future lot may be cast.

THE Adams and Cylinder Press Printers' Association and the Empire City Printing Pressmen's Union of New York have issued a circular to the various pressmen's unions throughout the country asking their sanction to call a convention of delegates from pressmen's unions in New York in June or July, 1889, for the purpose of organizing an international pressmen's union.

THE printers of Kearney, Nebraska, have organized a typographical union, and a charter has been applied for. The following are the officers-elect: R. E. Brown, president; R. B. Hawkins, vice-president; Joseph D. McNabb, financial and corresponding secretary; Samuel McAltee, recording secretary; R. A. Stewart, treasurer; L. E. Oslund, sergeant-at-arms. In referring to the action taken, the *Kearney Enterprise*, which, by the way, is one of the handsomest sheets received at this office, says: "The management has, from the start, given encouragement to such a movement, as it firmly believes in a union office. In such offices, wherever located, the best work can be secured, and all hands are the better satisfied. The *Enterprise* is determined to have none but skilled workmen on the force, and 'gentlemen of the case' in this office will in the future be compelled to hold cards."

THE May issue of the *Union Printer*, of San Francisco, contains the following: "On Sunday morning, the 28th ultimo., there died in this city, from paralysis, after an illness of two weeks, Joseph Shier, aged 30, a native of South Carolina. Joseph Shier, with his young wife and her mother, arrived in San Francisco about fourteen months ago from Denver, and, up to the time of his sickness, had worked in several of the job offices of this city. While but partially acquainted with the craft here, the deceased is well known in New York, Chicago and Denver as a job printer of high artistic merit, as well as a stanch member of the Typographical Union. As a superior workman he distinguished himself by securing the second prize offered by THE INLAND PRINTER of Chicago, about two years ago, for the best and most original design in letterpress work. Those of the craft who knew Joe Shier intimately, in speaking of him, are loudest in their praise of not only his ability as a printer and his fidelity as a member of our organization, but of those qualities of mind and heart (possessed by him in so large a degree), that always bespeak the true friend

and gentleman. His wife and her mother, who watched with him in his last hours, and to whom his taking off is a terrible shock, have, thanks to the members of No. 21, been made to feel that they are not altogether without friends in this, to them, a strange land."

FOREIGN.

A CENSUS of the compositors of the United Kingdom shows that they number about sixty thousand.

THE promoters of the Professional School of Typography in Milan, Italy, hope to open it in the beginning of May.

MOSCOW contains about two hundred printing offices, employing five thousand workers and apprentices. The duration of the workday there is from ten to sixteen hours.

AN exhibition of the graphic and typographic arts will be held at Stuttgart in June next, to celebrate the twenty-fifth year of the reign of the King of Wurtemberg.

DR. ALVES FERREIRA, a banker of Rio de Janeiro, and a prominent apostle of industrial progress in Brazil, has instituted a prize of 50,000 francs for the Brazilian exhibit which shall receive highest mention at the coming exhibition.

ATTEMPTS have lately been made to introduce women into Spanish printing offices, but without any satisfactory result. The Spaniards are extremely averse to making "compositresses." Women have not yet penetrated to the Belgium printing offices either.

"SOUTH AFRICA," writes a correspondent, "is just now an El Dorado for printers, and there is room, probably, for a few hundreds of them. The new gold fields have drained the lower colonies of editors, reporters, compositors, machine hands, and the whole body corporate of a newspaper office. The compositors and machine minders are getting fabulous wages, £4 to £8 a week being the average. Steady men are certain of work and high pay. Master printers just now are not competing so much for jobs as for good hands. Most of the offices are choked with jobbing."—*London Printers' Register*.

COST OF DOING PRINTING.

The question of the cost of running printing presses is now undergoing a special investigation by a committee of the United Typothetae, in connection with the cost of doing work and the proper distribution of expenses. It is doubtful if any office knows the cost even of running its Gordon press, much less its cylinders. One office in this city has a very complete record of the expense of running its small presses for four years past, but no record of the output of each press. Allowing that the eighth mediums have averaged 8,000 per day; the quarter mediums 6,000; and the half mediums 4,000, the cost per 1,000 impressions is found to be 31½ cents for the eighth; 39⅔ cents for the quarters; and 54½ cents for half mediums. We think this is a *minimum* cost, for few offices will make the average output allowed for in the calculation. These calculations, mind you, are supposed to cover the net cost to the office. Now, what amount additional should be charged for profit? We would say not less than ten per cent.—*Exchange*.

NEWSPAPER ILLUSTRATION.

The newspaper cuts that form so conspicuous a feature of the journalism of the day are most of them process engravings on zinc. The sketch is drawn by an artist with a free hand on a comparatively large scale with as many details as he pleases. This is reduced to the required size by photography and placed upon a film of gelatine which is spread over a zinc plate. The darker portions are made in relief upon the zinc by chemical means and the plate is ready for the press one hour after the sketch is made. But for the best work six or more hours are allowed. The average cost of making these cuts, aside from what is paid to the sketcher, is 15 cents per square inch, and the whole cost is from \$3 to \$5 for a single column cut.—*Exchange*.

ITEMS OF INTEREST.

OIL stains may be removed from paper by applying clay powdered and mixed with water to the thickness of cream, and laid on for four hours.

It is reported that a revivalist at Tama, Iowa, recently asked all the congregation who paid their debts to rise. All rose but an editor, who explained that he didn't pay his debts because the entire congregation owed him on subscription.

ONION juice is said to be an unfailing glue for making paper or paper board adhere to a metal surface. The metal should be cleaned with soda and rubbed dry with a clean rag. Cheap clock dials are prepared in this way, being printed on paper which is pasted on zinc.

MR. LOUIS J. DUS, of Milwaukee, Wisconsin, has invented a printers' knife, with extensible blades arranged at opposite ends of its handle, presenting a series of sharp cutting edges, for the convenience of pressmen in cutting out "overlays" or "underlays" in making a form ready.

ALL iron ink tables on machines used for color work should be nickel-plated. Iron "kills" bright colors and renders tints dull and lifeless. The cost of nickeling is but trifling, and once done lasts a lifetime. Porcelain, litho, stone, marble, slate and glass are all good surfaces to use for color slabs.—*British Printer*.

THE paper makers in Chester and Delaware counties, Pennsylvania, and in New Jersey, Delaware and Maryland, are very busy, the mills running day and night to meet the demands for the manufacturers. The net increase of newspaper and publishing establishments throughout the country, especially in the South and Southwest, has created an enormous demand for all kinds of papers.

An improved ruling pen, by Thomas Bennet, of Philadelphia, Pennsylvania, is made with one of its blades movable when under the finger. The pen may be set to make light lines and heavy lines. If, in the progress of the work, heavy lines are needed, a pressure of the finger on the pen produces them. On releasing the finger the pen returns to light lines.—*Scientific American*.

THE printing of newspapers by means of electricity has been inaugurated in England by the *East Anglian Daily Times*, of Ipswich, so printing its evening edition, the *Star*. The electric power was supplied from accumulators at the central lighting station, and the experiment was thoroughly successful. The turning on of a switch provides power day or night, rendering the issue of frequent editions easy.—*London Herald*.

It is stated abroad that, in order to keep machinery from rusting, take one ounce of camphor, dissolving it in one pound of melted lard; take off the scum and mix in as much fine black lead as will give it an iron color. Clean the machinery and smear it with this mixture. After about twenty-four hours, rub clean with soft linen rags. It will keep clean for months under ordinary circumstances.

A PLAN for rendering paper as tough as wood or leather has been recently introduced on the continent. It consists of mixing chloride of zinc with the pulp in the course of manufacture. It has been found that the greater the degree of concentration of the zinc solution the greater will be the toughness of the paper. It can be used for making boxes, combs, for roofing and even for making boats.

A GERMAN has invented an incombustible pulp which can be made into paper or used as paste for various purposes. A Dresden paper thus describes it: "A mixture is first made of a weak solution of chloride of zinc with twenty-five per cent of amianthus fiber and from twenty-five to thirty per cent of pulverized alum. The compound is then washed with water and treated with a solution made of one part of resin soap to eight or ten parts of water and an equal volume of pure alum. Finally, there is added to it thirty-five per

cent of powdered amianthus and from five to eight per cent of barytes, the product being then converted into paper like ordinary rag pulp."

WHEN electrotypes are out of use and require to be stored, they should be kept in a dry place, and the surface of the plates should be oiled in order to prevent verdigris. When they become clogged with hard, dry ink, which the brush and benzine fail to remove, they may be cleaned and made equal to new in a few minutes by covering their surface with a little creosote, and afterward brushing the surface with benzine.

STRANGE to say, there are no postmen in Natal, although the towns are pretty large, the streets as a rule well looked after, named and numbered. Anyone who expects a letter must go to the postoffice and inquire. When the English mail comes the telegraph informs the outlying towns, and at the largest towns a gun is fired, two guns being fired when the mail is ready to be delivered. Newspapers are generally delivered next day.

THE New York Typothetæ recently elected the following officers to serve for the ensuing year: William C. Martin, president; Theodore L. De Vinne and Douglas Taylor, vice-presidents; W. C. Rogers, corresponding secretary; Francis E. Fitch, recording secretary; W. E. Hallenbeck, treasurer, and the following executive committee: R. Harmer Smith, James W. Pratt, Henry Bessey, James A. Rogers and John Polhemus.

A PAPER that resists the action of both fire and water has, it is said, recently been invented in Germany by Herr Ladowigg. The manufacture is accomplished by mixing 25 parts of asbestos fiber with from 25 to 30 parts of aluminum sulphate, and the mixture is moistened by chloride of zinc and thoroughly washed in water. It is then treated with a solution of 1 part of resin soap and in from 8 to 10 parts of a solution of pure aluminum sulphate, after which it is manufactured into paper like ordinary pulp.

THE earliest American typefounder was Christopher Sauer, whose establishment was started in Germantown in 1735. Following him were Mitchelson, Boston (1768); Buell, New Haven (1769); Baine, Philadelphia (1790); Binney & Ronaldson, Philadelphia (1796); White & Wing, Hartford (1810); Bruce, New York (1814); Lothian, New York (1822); Hager, New York (1824); James Conner, New York (1827); Johnson, Philadelphia (1833), and Dickinson, Boston (1847).

It is not always when asked for an estimate, that the printer has at hand the means of making it. He has no graduated scale, or the matter to be cast off is in awkward batches. A ready method, however, is suggested. It has been calculated that a square inch of pica contains 36 ems; small pica, 49 ems; long primer, 56 ems; bourgeois, 69 ems; brevier, 81 ems; minion, 100 ems; nonpareil, 144 ems; agate, 169 ems. Any fractions in the calculations are in favor of the printer.—*Typographic Messenger*.

NO LESS than 9,468 newspapers and periodicals may be subscribed to at all German postoffices, according to the catalogue published by the postmaster-general of Berlin. Of these papers, 6,792 are published in the German language, and 2,676 in thirty foreign ones, the largest share of which falls to the English language, namely, 897, followed by the French with 727; then, with a wide gap between, follow Danish with 191, Dutch with 172, Italian with 150, Swedish with 140, Polish with 100, Norwegian with 69, Russian with 58, and so on.

If you want to get the best results with blue ink, especially ultramarine, as well as the more brilliant greens, don't use hard rollers. Use good fresh glue and molasses rollers, and do not carry too much color. It is common to notice a mottled or speckled appearance in solid blue surfaces. In other cases a stringy appearance is seen. This indicates either too much moisture or too much oil in the rollers—a simple matter, but one to be watched with care. Attention to these remarks will remedy the mottled and streaky appearance of the various tints on the array of music titles often seen in the windows of our prominent music stores.

REPORT OF PRINTING PRESSMEN'S UNIONS.—FOURTH QUARTER.

LOCATION OF UNION.	No. of Members in Good Standing.	No. of Members in Arrears.	Total number of Members.	No. of Members Employed.	No. of Members Unemployed.	No. of Pressmen Non-Union.	Scale of Wages.	Members received since last report.	Condition of Trade.	SECRETARY'S ADDRESS.
1. Washington, D. C.	87	1	88	85	3	40c. per hour.	Fair.	Frank Fraser, 124 Tenth street, S. E.
2. Detroit, Mich.	22	4	26	26	\$15 00	1	Good.	G. A. Ray, 69 Antoine street.
3. Chicago, Ill.	92	6	98	90	8	21 00	9	Slow.	J. H. Bowman, 489 Hermitage avenue.

DENVER TYPO. UNION ARRANGEMENT COMMITTEE

I. T. U. CONVENTION IN JUNE.

O. L. SMITH, Chairman. J. D. VAUGHAN, Secretary.
 WM. H. MILBURN.
 C. W. RHODES. J. W. HASTIE.
 Address Secretary, 1516 Arapahoe Street, Denver, Col.

BUSINESS OUTLOOK.

Baltimore, Md.—State of trade, good; prospects, fair; composition on morning papers, 45 cents; evening, 40 cents; bookwork, 45 cents; job printers, per week, \$16.20. Work has been good in all the offices. We have plenty of people to do it. Union in a prosperous condition. Free of any trouble at present.

Bay City, Mich.—State of trade, good; prospects, good; composition on morning papers, 30 cents; evening, 28 cents; bookwork, 28 cents; job printers, per week, \$12. Work has not been better in this city in a long time. Two city directories are being compiled at present by different firms.

Bismarck, Dak.—State of trade, dull; prospects, fair; composition on morning papers, 38 cents; evening, 35 cents; bookwork, 35 to 43 cents; job printers, per week, \$18 to \$25. Work has been dull here for some time, but in July there will be a small boom on account of the session of the constitutional convention.

Boston, Mass.—State of trade, still dull; prospects, unsettled; composition on morning papers, 45 cents; bookwork, 38 cents; job printers, per week, \$15. As stated in my last, the new book and job scale, which calls for 40 cents on bookwork per 1,000 ems, and \$15 per week, is still circulating for signatures.

Buffalo, N. Y.—State of trade, good; prospects, good; composition on morning papers, 35 cents; evening, 33 cents; bookwork, 35 cents; job printers, per week, \$15. The *Express* (union) this year got the common council printing away from the *Courier* (non-union), and the members of No. 9 are joyful.

Cheyenne, Wyo.—State of trade, fair; prospects, good; composition on morning papers, 45 cents; evening, 40 cents; bookwork, 45 cents; job printers, per week, \$21. A great many printers in town.

Chicago, Ill.—State of trade, dull; prospects, uncertain; composition on morning papers, 46 cents; evening, 41 cents; bookwork, 35 cents; job printers, per week, \$18. Business during the past month has been unsatisfactory, work being fluctuating and uncertain.

Cincinnati, Ohio.—State of trade, slack; prospects, uncertain; composition on morning papers, 45 cents; evening, 41 cents; bookwork, 40 cents; job printers, per week, \$18. Jobwork has been good the past few weeks, but within a day or two things have fallen flat.

Columbia, S. C.—State of trade, fair; prospects, not encouraging; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, per week, nine hours, \$15; job printers, per week, \$18 and \$20.

Concord, N. H.—State of trade, dull; prospects, dull; composition on evening papers, 30 cents; no morning papers except during sessions of legislature in June, and compositors receive no extra for nightwork on these; bookwork, 25 cents, no extra for solid law; job printers, per week, \$10 to \$15. The *Monitor* (daily), ex-Senator Chandler's paper, employs only girls, except the ad. man, being unable to secure men on account of several practices of an unpopular foreman; uses plates; girls average \$6 to \$8 per week. The *Patriot* (daily) pays same price, employs men, no plates, and is run as a square office, the compositors averaging \$11 to \$14.

Dayton, Ohio.—Prospects, very good, and will be for the entire summer months; composition on morning papers, 35 cents; evening, 32 cents; bookwork, 33½ cents; job printers, per week, \$15 to \$18.

Denver, Col.—State of trade, fair to good; prospects, depends on June attractions; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$20. Union membership, 307. Increase in amount of work on newspapers supplied by tourists to convention. Outlook bright, if not overdone.

Detroit, Mich.—State of trade, good; prospects, bright; composition on morning papers, 38 cents; evening papers, 36 cents; bookwork, 35 cents; job printers, per week, \$14. Subs in good demand at present, with prospect of demand keeping up for some time.

Duluth, Minn.—State of trade, improving; prospects, good; composition on morning papers, 40 cents; evening, 35 cents; job printers, per week, \$17. It is rumored that the *Evening Herald* and *Morning Tribune* will soon consolidate. The *News* is doing a larger business than ever before.

Fort Wayne, Ind.—State of trade, good; prospects, good; composition on morning papers, 30 cents; evening papers, 28 cents; bookwork, by week; job printers, per week, \$13.50. Since first of year the printing business here has been unusually active, much to the pleasure of both proprietor and employé.

Halifax, N. S.—State of trade, fair; prospects, uncertain; composition on morning papers, 30 cents; evening, 25 cents; bookwork, \$9 per week; job printers, per week, \$9. The local house of parliament closing will throw some men off, but we hope for a good summer.

Indianapolis, Ind.—State of trade, good; prospects, fair; composition on morning papers, 38 cents; evening, 36 cents; bookwork, 40 cents; job printers, per week, \$16.50.

Jackson, Mich.—State of trade, good; prospects, fair; composition on morning papers, 30 cents; evening, 27 cents; bookwork, per week, \$12; job printers, per week, \$12. The election of officers for No. 99, held Sunday, May 5, resulted as follows: President, C. F. Messmore; vice-president, F. A. Gallagher; treasurer, Irving B. Rich; financial secretary, George A. Schretter; recording and corresponding secretary, DeWitt Wessel; sergeant-at-arms,

James McKinley; board of directors, C. F. Wasson, James McQuillen, B. J. Kingston, F. McPhillips, James Frank; membership committee, W. H. Wilson, F. A. Gallagher, James McQuillen; executive committee, F. McPhillips, T. B. Rich, James McQuillen, C. M. Peck, James Frank.

Kalamazoo, Mich.—State of trade, good; prospects, fair; composition on morning papers, 27 cents; evening papers, 25 cents; bookwork, 25 cents; job printers, per week, \$10 to \$15.

Kansas City, Mo.—State of trade, good; prospects, good; composition on morning papers, 40 cents; evening, 35 cents; bookwork, 37½ cents; job printers, per week, \$17. This union has doubled in numbers within the last two years. An assessment of two per cent a week was ordered May 5, to replenish the funds exhausted by the sick relief. John N. Edwards, editorial writer on the *Times*, died May 3 at Jefferson City. The union passed resolutions of regret.

Leadville, Col.—State of trade, fair; prospects, brighter than at last report; composition on morning papers, 50 cents; evening, 45 cents; job printers, per week, \$24. We have been threatened with serious trouble lately, but it seems now as if the storm had passed. Everybody interested in the visit of the International Typographical Union.

Los Angeles, Cal.—State of trade, dull; prospects, not encouraging; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$20. Los Angeles has been flooded all winter, and every train brings in new recruits. The summer promises to be very dull, so tourists had better keep away.

Lynchburg, Va.—State of trade, good; prospects, fair; composition on morning papers, 30 cents; evening papers, per week, \$12; bookwork, 30 cents; job printers, per week, \$12.

Manchester, N. H.—State of trade, good; prospects, good; composition on morning papers, 30 cents; evening, 20 to 23 cents; bookwork, 25 cents; job printers, per week, \$10 to \$12.

Milwaukee, Wis.—State of trade, good; prospects, dubious; composition on morning papers, 40 cents; evening, 35 cents; bookwork, 35 cents; job printers, \$14 to \$18. There are a dozen good printers here who will take jobs elsewhere if they can get them, and many will leave, job or no job.

Newark, N. J.—State of trade, fair; prospects, uncertain; composition on morning papers, 40 cents; evening papers, 36 cents; bookwork, 36 cents; job printers, per week, \$17. The *Sporting Journal*, after four issues, has suspended; cause, insufficient capital and circulation. The strike is still on in the *Sunday Standard* office. Would advise subs to keep away from Newark.

New Haven, Conn.—State of trade, very quiet; prospects, not encouraging; composition on morning papers, 40 cents; evening, 35 cents; bookwork, 35 to 40 cents; job printers, per week, \$15. Business has been very quiet since my last report, and the outlook is not encouraging. More tourists come this way than there is work for; the result, "pan-handling" to a large extent.

Omaha, Neb.—State of trade, fair; prospects, good; composition on morning paper, 40 cents; evening, 37 cents; bookwork, per week, \$16; job printers, per week, \$18. A good many printers in town, and more coming in daily. New officers installed at the last meeting, April 28.

Philadelphia, Pa.—State of trade, fair; prospects, uncertain; composition on morning papers, 40 cents; evening, 40 cents; bookwork, 40 cents; job printers, per week, \$16. The contract for city printing has been taken away from a union office and given to a rat concern.

Pittsburgh, Pa.—State of trade, good; prospects, fair; composition on morning papers, 42½ cents; evening, 37½ cents; bookwork, 37½ cents; job printers, per week, \$16. The scales of wages governing newspapers and job offices was presented to the proprietors on May 1. Delegates to International Union, Harry J. Kimpton and Frank A. Lewis.

Portland, Ore.—State of trade, dull; prospects, not encouraging; composition on morning papers, 50 cents; evening, 45 cents; bookwork, 45 cents; job printers, per week, \$21. The printing business in this town is very quiet, and would advise strangers to stay away.

Pueblo, Col.—State of trade, very good; prospects, fair; composition on morning papers, 45 cents; evening, 40 cents; bookwork, 40 cents; job printers, per week, \$20.

Rome, N. Y.—State of trade, good; prospects, good; composition on evening papers, 25 cents; bookwork, 25 cents; job printers, per week, \$10 and \$12. The *Republican* has removed into new and commodious quarters on the ground floor of the Opera House Block; added two new Campbells and a folder, and our citizens are looking for a new daily in short order. Success to it.

San Francisco, Cal.—State of trade, quiet; prospects, uncertain; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 40 cents; job printers, per week, \$18. The funeral of the late Philip A. Roach, formerly one of the proprietors of the *Examiner* office, took place May 1, and was attended by a large circle of friends and acquaintances. At a meeting of the members of the *Examiner* chapel a series of resolutions expressive of the high esteem in which deceased was held by the employes of that paper was adopted, and a copy of the same was ordered to be sent to his family.

St. John, N. B.—State of trade, fair; prospects, fair; composition on morning papers, 30 cents; evening, 25 cents; bookwork, 28 cents; job printers, per week, \$10.

St. Louis, Mo.—State of trade, good; prospects, encouraging; composition on morning papers, 43 cents; evening, 38 cents; bookwork, 45 cents; job printers, per week, \$18. Business good, cannot get job printers to supply the demand.

Topeka, Kan.—State of trade, good; prospects, flattering; composition on morning papers, 33½ cents; evening, 30 cents; bookwork, per week, \$15; job printers, per week, \$15. The opening of the spring trade exceeds the expectations of the most sanguine. The demand for printers for the past ten days has been greater than the supply, though it is not probable this will continue very long.

Toronto, Ont.—State of trade, particularly dull; prospects, poor; composition on morning papers, 30 cents; evening, 28 cents; bookwork, 33½ cents; job printers, per week, \$11.

Wichita, Kan.—State of trade, very good; prospects, not flattering; composition on morning papers, 35 cents; evening, 30 cents; job printers, per week, \$15. Oklahoma was opened with a grand rush, but we can't expect much from it for some time yet. The people are after land, not printed matter. Blank business immense.

Wheeling, W. Va.—State of trade, fair; prospects, not very good; composition on morning papers, 35 cents; evening, 30 cents; bookwork, 35 cents; job printers, per week, \$15.

BUSINESS NOTICES.

THE offer in our want columns, of a newspaper and job outfit for sale in northern Michigan, is worthy of the attention of the craft. This is an excellent opportunity for the right man. The paper is the leading one in the district, and has a circulation of two thousand, and the job office in connection is one of the best.

FARMER LITTLE & Co. show in this number the last size cut of their beautiful stationers' script, the 36-point or 3-line pica. It is certainly the nearest approach to steelplate ever produced in type. Others have *approached* this much to be desired effect, but this enterprising firm have *attained* it. When properly and carefully used "it will deceive the elect." It is evidently not intended for a "stud-horse bill," and of necessity delicate; but cast as it is of the high grade of metal for which this house is famous, it cannot fail to be a valuable addition to the outfit of every artistic printer.

THE Whitlock Machine Company, of Birmingham, Connecticut, has opened an office and salesroom at No. 8 Spruce street, New York City, where the different styles of machines manufactured by it can be seen in operation. The New York office will be under the management of Mr. G. Edward Osborn, the secretary of the company, who has been connected with it for several years in every capacity from salesman to general manager, and being a practical printer and pressman understands the wants of the trade. This new enterprise of the Whitlock company shows the prosperous condition its business is in. We bespeak for the company still further success. Notice the last page of cover of this number.

THE LIBERTY PAPER CUTTER.

On another page of this issue will be seen a full page advertisement of this machine, made by the Liberty Machine Works, 54 Frankfort street, New York, manufacturers of the celebrated Liberty press. This paper cutter is a strong, serviceable machine, made of honest materials, and is adapted for all classes of cutting. The price at which it is sold is reasonable, considering the many points of merit the machine has, and the manner in which it is built. Send for circular and further particulars of this cutter to the company at address given above.

STEVENS & MORRIS.

On another page of this issue appears the advertisement of the above firm, whose business is that of photo-engravers. They are located at 24 Cortlandt street, New York. This firm executes work both by the direct process and black and white drawings. They have just greatly increased their facilities and room by more than doubling the floor space occupied by them, and by the addition to their plant of a large number of the latest and most approved machines for use in the execution of their work. They invite correspondence, and request opportunity to estimate on work in their line.

THE HAMILTON BRASS LEADER CASE.

Since the invention of that almost indispensable article, the brass leader, there has never until now been a case devised to hold it. In offering this convenient case to the trade, the manufact-

1½	2½	3½	4½	5½	6½	7½	8½	9½
1	2	3	4	5	6	7	8	9
10	11	12	13	14	15	16	17	
25	24	23	22	21	20	19	18	

urers have supplied a long-felt want. It can be used for rule as well as leaders, and will hold about twenty-five feet. It is of a convenient size to place over the small-cap side of the upper case, and fits nicely into one side of a blank case, where it can be kept when not in use. This case is manufactured by the Hamilton Manufacturing Company, Two Rivers, Wisconsin. Branch house, 259 Dearborn street, Chicago.

THE FIETSCH PATENT ELECTROTYPE AND STEREOTYPE BASE.

This base is the invention of a pressman of many years' experience, and serves to meet the requirements of nearly every printing office, that of working any size or number of electrotype or stereotype plates from one base or block.

The base is made of solid cast-iron. In it holes are drilled and the threads cut into which the screws are inserted, by means of which the quoins are secured to the base.

The quoins are made in three pieces—the screw, eccentric and quoin. The quoin is an eccentric, and the eccentric working in same, makes a double eccentric motion, the screw simply holding quoin to base, thereby giving the pressman or printer the opportunity of changing the position of a plate from a hair's space to one and one-half picas without removing the screw from base. Should more space be required, the quoins can be moved as many

holes as desired. The above illustration represents the manner of securing an electroplate to the base by the use of the Double Eccentric Quoin.

The base requires no furniture, being locked on bed of press the same as a chase, and consequently gives from three to five

inches more printing space, as a sheet can be worked the full width of the press. Once running it requires no watching, as there are no leads, slugs or furniture to work up as in patent blocks or mounted plates. It is not affected by any change in the weather. It is impossible for color work to get out of register, because after a plate is registered it will stay in its place so long as on the press without shrinking or moving a hair's space; and should a plate need shifting it can be easily done without disturbing any other plates that may be on the base. All particulars as to prices, etc., can be obtained by addressing Ryan & Fietsch, 19-27 Coventry street, Chicago.

A NEW PAPER CUTTER.

Given herewith is the cut of a new paper-cutting machine just brought out, and to be known as "The Philadelphia." It is manufactured by Mr. L. A. Mayall, Nos. 14 and 16 South Seventh street, Philadelphia. An examination of the cut will disclose the fact that some new principles are employed in its construction.

It is exclusively a power machine, and is made in five sizes, namely, 33, 38, 44, 50 and 62 inches. The manufacturer claims for it the following points of excellence:

- First.* Simplicity of the machine; all points easily accessible; no traps of any kind.
- Second.* Compactness of machine; superior arrangements of clamp-wheel and lever, these being the only parts in front of machine.
- Third.* Superior manner of hanging knife-bar, allowing easy and accurate adjustment of knife from either end, the connections for knife-bar being fitted with a patent universal joint.
- Fourth.* The knife has, in connection with its shear motion, a slight oscillating one, which gives it more power, and prevents vibration.
- Fifth.* The driving shaft has a friction band set in the frame that operates direct on the shaft, which gives it a direct clamp.
- Sixth.* Noiseless friction clutch for starting and stopping the machine easily, and can be made to stop at any desired point.
- Seventh.* The machine will cut through six inches, and with its arrangement of traverse gauge and clamp in combination, will permit stock to be cut to the last half inch.
- Eighth.* The clamp is one solid piece, passing through frame, and has powerful screw motion, and balanced to work perfectly free.
- Ninth.* Traverse gauge, same being in sections and adjustable, permitting the cutting of two widths at one time.
- Tenth.* Adjustable side gauges front and back of clamp.
- Eleventh.* Main shaft in motion only when cutter is working.
- Twelfth.* Each machine will square stock to its size.

A NEW ERA IN ROLLER MAKING.

A NEW AND WONDERFUL MACHINE THAT IS DESTINED TO REVOLUTIONIZE THE MANUFACTURE OF PRINTERS' ROLLERS.

The cut on this page illustrates a mechanical device that will play an important part in the history of printing and its allied industries. It was invented and developed by Mr. M. F. Bingham (or "Samuel Bingham's Son," as he is well known), who is located at 296 Dearborn street, this city. It has taken years of experimenting and patient study, with a large expenditure of money, to bring the machine to the desired state of perfection, but its possibilities were so great, and the necessity for it so urgent, that its

ratus had trunnions on its side by which it hung in its supports, and by which it could be brought to either a horizontal or perpendicular position, and it had a false or movable bottom hinged to it. Means were also provided to let in steam to warm the molds, and cold water to cool them after being filled.

The method of operating this apparatus was as follows: The cylinder was brought to a horizontal position, the tube or molds oiled and roller stocks inserted, and the hinged bottom closed, thus closing the bottom ends of all the tubes. The cylinder was then turned down to a perpendicular position and steam let into it to warm the molds. The composition kettle was suspended above the apparatus and part of its contents poured into a mold; then the machine was revolved to bring another mold under the kettle and

designer persisted resolutely in his purpose, until at last he is able to present to the great printing fraternity this marvelous contrivance which is a triumph of mechanical skill and engineering.

It was a fact well known to all experienced printers and pressmen that there was no such thing as a perfect roller, and that the imperfections were frequently so numerous as to greatly impair its efficiency and render it practically useless. The imperfections with which we have to deal, and which the Bingham's have striven to overcome, are in the shape and condition of the finished roller.

Separate molds were discarded, and in 1876 an apparatus was patented by M. F. Bingham to hasten the casting and improving the quality of inking rollers. This apparatus consisted of an oscillating and revolving cylinder having a number of molds grouped inside of it, their ends being secured in the two heads. The appa-

another roller poured, which operation was repeated until all were finished. Cold water was then allowed to flow through to quickly cool the rollers, after which the hinged bottom was loosened and the rollers allowed to slide out.

In May, 1886, a patent was granted to L. K. Bingham for an improvement upon this machine, whereby the removable bottom was made dish-shaped and an open space formed by it under the bottom ends of all the molds.

The kettle containing the composition had a taper-formed cock, which was inserted into one of the tubes and the composition allowed to flow down it, and up through the others, thus pouring the whole cylinder full of rollers from the bottom upward in one operation, a cylinder containing twenty rollers being filled in five or six minutes. In the machines for large rollers, the composition

is forced into the bottom-plate direct, under hydraulic pressure through a pipe or flexible tube, and held thus until solidified by the cooling process. Thus a firm, solid, elastic roller is obtained, and the object so long sought accomplished.

The advantage of this mode of casting a roller is that the air being driven out of the mold as the composition rises in the same, the roller is free from air-holes or imperfections, which are of frequent occurrence in cases where the composition is poured into the mold from the top, the old way. In cases of this character it is often necessary to cast the roller several times before it is fit to use.

But the trouble remaining to be overcome was from the imperfections, and to improve these was the aim of the Bingham boys.

The old method of making a mold was to bore out an iron casting to the required diameter, and, if an imperfection appeared during the process, another cut was made, in order to save labor already performed. This resulted in a great variety of diameters, the variations being frequently one-sixteenth of an inch. The molds thus made were imperfect in every respect. They were neither straight, nor round, nor of uniform diameter. Not one mold in a thousand was even approximately straight, none of them round, and none were of uniform diameter throughout the entire length. All these obsolete things have been abandoned, and in their place are tubes or molds absolutely straight, round and smooth. The molds are made by special machinery, and all the various sizes are uniform in diameter. For instance, a three-inch center-piece, or star, will fit to a nicety any of the three-inch molds, and the same is true of the other sizes. These molds are absolutely uniform in diameter, absolutely straight and of mathematical roundness. Each cylinder contains from twelve to twenty molds, is 6 feet high, 2 feet in diameter, and weighs, when filled, about three thousand pounds. When the practicability of the cylinder had been fully demonstrated, it became apparent that the scheme might be greatly enlarged by multiplying the number of cylinders, and it was determined to use eight cylinders, instead of one, and to construct an apparatus for operating them.

THE "FLYING DUTCHMAN."

After the many complications which arose during the construction of the cylinder had been overcome, the next question that presented itself was, "How shall these eight cylinders, weighing together, 24,000 pounds, be mounted so as to make it possible to manipulate them without the employment of steam power?" But the genius that had produced the cylinder could not be balked by a simple problem in mechanical engineering. The illustration shows the completed mechanism, which consists of a centrally-pivoted upright shaft, with extending arms, to which the cylinders are attached. This shaft, which Mr. Bingham calls his "Flying Dutchman," can be revolved at will by the operator, and the trunnions enable the cylinders to be brought to a horizontal or vertical position. Guy rods leading from the upper end of the shaft to the trunnions centralize the immense weight of the cylinders.

THE OPERATION.

To the right is seen the first operation. The operator has swung the cylinder to a horizontal position, where, after previously oiling the molds, he is proceeding to insert the various roller stocks. Having filled these tubes or molds, he covers the bottom with the supplemental head, before described, and, securing it by the clamps, restores the cylinder to its vertical position, and swings the next cylinder to position before him, ready for the same operation. All this he does with the utmost ease, and without changing his position. Having inserted all the roller stocks and prepared the cylinders necessary for that cast, steam is turned on to all the cylinders, from a common center, to which they are all permanently attached by rubber tubes. In a few moments the molds are heated to the proper temperature for receiving the composition. This can all be done while the apparatus is revolving.

To the left is seen the operation of filling the tubes. The operation of filling the molds is quickly performed. When all are filled, the rollers are hardened by means of a stream of cold water, which is sent through the same channels and by the same process by which the steam was introduced. The cooling process takes

about thirty minutes from the time the rollers are poured, and they are then ready to be removed from the molds. This operation is illustrated by the lower section of the cut. The operators are on the floor below the cylinders. The cylinders are successively brought into position over an opening in the floor. The supplemental bottom is removed, when the rollers glide out of the molds, impelled by their own weight, and are secured by the operators beneath.

All these successive details in the operation are performed in a remarkably short space of time, and when they are completed, and the rollers are withdrawn, the

FINEST ROLLERS EVER MADE

are ready for the pressman. Not a pinhole can be found, for that is an impossibility with this machine. Every roller is mathematically straight, round, and uniform in diameter throughout its entire length. Its surface is as smooth as polished marble, and not an imperfection can be found upon it. This point has been Mr. Bingham's chief aim and study in bringing out his complicated machine. To build an expensive piece of machinery that would not do away with the annoying blemishes and imperfections that have always appeared upon rollers cast by the old processes would be a waste of time and capital. That he has succeeded in his purpose the finished rollers furnish abundant testimony.

THE ACME DISTRIBUTING BLOCK.

Inquiry was made in THE INLAND PRINTER lately for a device for loosening up type that is stuck together. The old way of breaking it on the imposing stone must go. It spreads and batters the bottoms of the letters, and many a dress of type, with a face yet good, has been thrown away because it would no longer stand on its feet by reason of this rough usage. This question has been inexpensively solved by the Morgans & Wilcox Manufacturing Company, of Middletown, New York, who have produced the Acme distributing block.

This is simply a thick end-wood block, oval in shape, iron bound for strength, and having a rounded or convex top, on which the matted type is easily broken without injury. The shape of the block throws the type instantly into a curve, loosening each type from its fellow. It does the business quicker also than it can be done on a flat surface. It will therefore save not only money for the office, but time for the compositor. It is made 8 by 12, iron bound, at \$4, and 4 by 6, unbound, for 50 cents.

MINNESOTA TYPEFOUNDRY.

These two sweet little faces adorned the first page of a handsome folder sent out by the Minnesota Typefoundry Company, St. Paul, upon the occasion of removal to new quarters a few months since. They are faithful pictures of the little daughters of Mr. F. S. Verbeck, manager of the foundry company's business, and never did a father come nearer to worshipping his children than does

Mr. Verbeck these two sweet little beings.

Since removal, the business of the Minnesota Typefoundry has constantly and rapidly increased, and they have again been compelled to enlarge their room and facilities to meet the demands of the fast growing business. Three large floors have just been added to the space now occupied, which almost doubles their room. They are putting in increased power in the shape of a new fifty-horse power boiler and engine, and are also adding to their machinery and appliances in every department. In addition to their typefoundry and printing machinery repair shops, they have a large electrotype and stereotype foundry fitted with all necessary

paraphernalia for first-class work and prompt execution of the same. The advertisement of the Minnesota Typefoundry Company appears on another page, and to it we would direct your attention. From them you can procure everything needed in a printing office on shortest possible notice.

AT A SACRIFICE—A complete newspaper and job outfit must and will be sold soon at any sacrifice. No expensive good will to purchase; just the material of a defunct paper. Address inquiries to GEO. F. COOPER, Black River Falls, Wisconsin.

EVERY PRINTER should have a copy of "DIAGRAMS OF IMPOSITION," and "THE PRINTER'S READY RECKONER." Price, 50 cents each. To be obtained of H. G. Bishop, 96 Clinton avenue, Albany, N. Y., or through Farmer, Little & Co., New York and Chicago. These are the handiest and most useful works ever published for printers. Indorsed by everyone who has seen them. Agents wanted in every town.

FOR SALE—A lever-cut Longley Mailer, 1 3/4-inch label, new. Will sell low for cash. Address "MAILER," care INLAND PRINTER.

FOR SALE—Neat job office, located in most thriving city in Indiana. Good reason for selling. Address "JOB PRINTER," care of INLAND PRINTER.

FOR SALE—Half interest in a splendid job printing establishment. Attractive and growing Southern city of 10,000. Address SHANNON & CO., Greenville, South Carolina.

FOR SALE—First-class job office; cylinder, three jobbers; power; good business, German and English; on South Side, Chicago. Address "B. B.," care INLAND PRINTER.

FOR SALE—At a bargain, job office, in best location in city of 125,000, on Missouri river. Invoices \$2,500. Business averages over \$400 per month, with no soliciting. Address "O. K.," care INLAND PRINTER.

FOR SALE—Job printing office in country town. Material almost new. Will sell with or without monthly paper in connection, \$750; easy terms; good reasons for selling. Address "G. P. H.," care of INLAND PRINTER.

FOR SALE—Complete Hughes stereotype outfit No. 1, 13 by 23 inches, with all tools, etc., for doing first-class work, and full instructions for use. Outfit is new, and will be sold at a bargain. Address "BARGAIN," care of INLAND PRINTER.

FOR SALE—An old-established and well-equipped job printing office in one of the largest and best cities in Michigan. The proprietor has other business, and will sell at a bargain. For particulars address JAS. GRAY, Box 603, Bay City, Michigan.

FOR SALE CHEAP—One paragon cutter, 22 1/2 inches, nearly new; one Peerless press, 8 by 12, with or without steam fixtures, completely overhauled recently, and is in good running order; one steam engine of 1/2 to 3/4 horse power. Address H. R. WALBACH, 300 Hurlburt street, Peoria, Illinois.

RARE CHANCE.—\$600 cash buys the business and good will of the only weekly paper in city of 50,000. Prettiest society journal in state. No outfit needed. Address "X. Y. Z.," care INLAND PRINTER.

WANTED—A No. 2 or 3 Potter lithographic press. Must be in A No. 1 condition. Give reasons for selling. Address "S. J. C.," care of INLAND PRINTER.

WANTED—A job printer. A first-class man who thoroughly understands his business, is sober and industrious, and can give good references, can obtain employment. Address *Enterprise*, Sheffield, Alabama.

WANTED—The Inland Printer Co. will pay 25 cents apiece for numbers 2, 4, 5, 10 and 12 of Volume 1, if in good condition, to anyone sending them to this office, or will credit the amount on subscription, if preferred.

YOUNG MAN, practical printer, with experience in every department of country newspaper and jobwork, desires to learn of good opening. Address C. A. GOODRIDGE, care of INLAND PRINTER.

CHANCE OF A LIFETIME!

For Sale Cheap, Newspaper and Job Outfit

In a live mining town in northern Michigan. Jobwork averages \$318 per month for past 22 months; last month jobwork amounted to \$560.75; advertising, from 16 to 30 columns per week; rate, \$100 per column yearly; six column folio mining paper; county seat; official paper of county; to an immediate purchaser will sell *at cheap* for cash. Write and get price and terms. The best of reasons given for selling.

Address "MINING," care of INLAND PRINTER.

The Original and Only Patented Ink Reducer in the World!

Warranted to instantly reduce all kinds of Printing Inks, no matter what color or how old or stiff, to any work clear, free and easy on any kind of press or stock the hottest day in summer when rollers are soft and sticky, or the coldest day in winter without fire or washing rollers. INKOLEUM makes all inks mixed with it dry quick and glossy on paper without off-setting—but never dries on rollers—and prevents paper from pulling or sticking to form. As a reducer for tint printing INKOLEUM works miracles, as the most delicate shades and tints can be produced with ink mixed to the thinness of cream, causing it to cover perfectly without clogging the finest lines, and as it is never gummy like varnish, it dries instantly, enabling one or more tints or colors to follow at once without off-set. Inks of any color or kind left on rollers over night will work or wash up readily in the morning, by simply applying a few drops of INKOLEUM with your finger. A trial will convince any pressman. **Beware of Infringements.** Accept no imitation said to be just as good as INKOLEUM. **Price only 50 Cents.** For sale everywhere. For bruises and burns apply INKOLEUM freely and relief is instantaneous. Put up only by

PERFECTED

PROUTY
·R·E·S·S

WE WANT YOU and every other Printer **TO KNOW**

that the "Perfected Prouty" is the best Job Press made. Such a claim we know, and you know, is common, but we make this claim because every printer using the "Perfected Prouty" pronounces it the best, and these are

THE REASONS WHY

It is not an old-style press under a new name, but a modern press, built from original designs to meet the requirements of the printer. Old ideas of construction have been discarded, and the "Perfected Prouty" is absolutely free from grinding cams and powerful springs, rubbing or sliding motions, thump, pound, noise and rattle.

THE "PERFECTED PROUTY" PRESS

is so constructed that speed and durability combined with excellence of the work produced, and smoothness of operation are its characteristic features. In these particulars this press is Perfection, and its claims to superiority are based upon solid facts. Investigate these claims and you will be forced to admit that the "Perfected Prouty"

IS SUPERIOR TO ANY OTHER.

We sell the "Perfected Prouty" on its merits; guarantee full satisfaction, and will ship one on trial to any responsible firm. Any printer wanting a Job Press should acquaint himself with the new features and valuable merits of the "Perfected Prouty."

Bingham's Battery of Gatling Guns!

THE MOST COMPLETE APPARATUS EMPLOYED
IN THE MANUFACTURE OF

PRINTERS' ROLLERS.

NOW IN SUCCESSFUL OPERATION, REVOLUTIONIZING THE ROLLER CASTING
BUSINESS, PRODUCING PERFECT ROLLERS AND ACCOMPLISHING
IN THIRTY MINUTES A DAY'S WORK.

Now able to cast and deliver a complete set of rollers for every press in the largest printing house in Chicago within an hour. Economizing time, accelerating speed and improving the product.

IMPOSSIBLE TO FIND A PIN-HOLE IN ANY ROLLER
CAST BY THIS PROCESS.

Impossible to find an uneven or imperfect surface. Every roller cast by pressure, forcing the composition into the tubes, and retaining the pressure until the cooling process has solidified it, making it firm, solid and elastic, with a surface like polished marble.

NOW, PRESSMEN CAN PERFECT PRINTING PERFORM.

Now can we loudly exclaim, "EUREKA, THE GATLING GUN!"
And the other fellows, "ERGO, BY GUM!"

BINGHAM'S CONQUEST.

An adaptation from Shakespeare.

KING BINGHAM, - - - - -	Commanding the World's Patronage.	} CHARACTERS {	MACBETH, - - - - -	Duke de Lager, a Man with a Troubled Spirit.
PISTOL, - - - - -	Lieutenant to King Bingham.		HAMLET, Prince of Bourbon (Ky.), given to seeing Spooks and Snakes.	
CÆSAR, - - - - -	Count de Bellows, a Prodigy of Wind and Wisdom.		SHYLOCK, - - - - -	Baron Deadbroke, a Man of Great Gall.
			Knights, Scribes, Artillerymen, Etc.	

CÆSAR—Thou art the ruin of the noblest.

"THE WORLD IS MINE OYSTER."
(Pistol—Merry Wives of Windsor.)

CÆSAR—Ye gods, it doth amaze me,
A man of such a feeble temper should
So get the start of the majestic world
And bear the palm alone.
MACBETH—Can such things be
And overcome us like a summer's cloud
Without our special wonder?

CÆSAR—What a fall was there, my countrymen.
HAMLET—Something is rotten in Denmark!
SHYLOCK—'Tis mine, and I will have it.

Enter KING BINGHAM, followed by troops of loyal patrons, Knights of the Royal Press, Scribes, and Skilled Artillerymen bearing the Battery of Gatling Roller Casting Guns.

CÆSAR—Such men are dangerous.
HAMLET—This bodes some strange eruption.

MACBETH—I 'gin to be awery of the sun,
And wish the estate o' the world were now undone.
SHYLOCK—I pray you give me leave to go from hence;
I am not well.

THE JONES GORDON JOB PRINTING PRESS

Is not an Old Style Gordon, but has several Important Changes and Improvements which make it quite a different Machine

A VERY IMPORTANT FEATURE in these presses is that the whole Impression may be INSTANTLY CHANGED—either increased or diminished—without stopping the press. When the impression screws are properly set, it is seldom, if ever, necessary to move them, as all adjustments are made by means of the hand wheel, marked “B” in cut.

Another important feature is, that when the impression is thrown off by means of the lever “A” a simple device causes the movement of parts that prevents the ink rollers from touching the form, and the press may be run indefinitely for the distribution of ink.

Another feature of considerable importance in saving time and patience is the self-locking Chase Hook and Form Starter. When the chase is put in place on the bed, it is locked without touching any lever, pad, screw or any part of the press. When the form is to be removed, it is only necessary to press forward the pad, marked “patent,” which causes the chase hook to raise and the form to move forward so as to be convenient for lifting out.

When the platen is in a convenient position for setting the grippers, they may be brought down on the platen for that purpose. The ink roller carriages are provided with loops to be used for putting in or removing the rollers.

The Duplex Fountain is a great advance over anything heretofore used for the distribution of ink on a disk press. A separate distributing roller moves down and back twice, or four times, over the upper part of the disk, each impression. The disk is double and is constantly changing, any part of the main disk only stopping at the same place every hundredth impression.

The press is very heavy, strongly braced and substantially built. The Impression Arms are of steel, forged from one piece without weld. Manufactured by

JOHN M. JONES & CO., PALMYRA, N. Y.

MORGANS & WILCOX MANUFACTURING CO., Middletown, N. Y., General Agents for the Middle, Eastern and Southern States.

These Presses are kept in stock by the CHICAGO NEWSPAPER UNION.

CORRECT SPACING.

BY ALFRED PYE.

ONE of the most important, and yet often one of the most neglected acquirements of a compositor, is the knowledge and practice of correct spacing. Too many sacrifice good spacing to speed in composition, and while they are able to claw up several hundred ems per hour, with a creditably clean proof otherwise, the spacing of their work will not bear critical inspection. Instead of dividing the space equally between words, with a due regard to whether the matter is solid or leaded, the main object would seem to be to fill out the line with the least trouble, and en quads, three, four and five em spaces are thrown in indiscriminately, with the result mentioned. Nothing offends the eye of the careful printer so much as a page or a column of improperly spaced matter.

So far as the writer's experience has gone, the average compositor does not seem to comprehend that different spacing is needed on various kinds of work. He evidently has the opinion that one style of spacing will do for every description of work, whether solid, leaded, or double leaded; and whether the type is "fat" or "lean" no variation can be made. The "three-em space between each word" is his religion, and any attempt to make him think otherwise is rank heresy, except when the words fail to fill a line, and then an extra three-em space is thrown in between a few of the words to make the measure complete.

A great deal of this carelessness in spacing is, no doubt, due to insufficient instruction at the outset of the compositor's career. The young aspirant having "learned his boxes," a stick is put into his hand, and he is shown how to pick up type. If his proof is free from literals and he leaves no "outs," he is considered to know enough to set type when needed, and is allowed to go on in his own way. If it is a newspaper office in which he is learning his business, his matter will pass the proofreader, and he thinks he has mastered the whole art and mystery of printing. In course of time he will leave the office where he has obtained the rudiments of

his education, and go into a good book printing office, where he speedily finds that his style of spacing type is not quite so correct as it should be; and in consequence his proofs have a foul appearance.

The following simple rules in regard to spacing should be graven on the mind of every compositor who aspires to do good work:

1. Space words and lines *evenly*, no matter what type is used, nor whether matter is leaded or solid.
2. Space *wider* on *leaded* matter than on solid, and *more open* on "*fat*" type than on "*lean*."
3. Space *more open* on *wide* measures than on narrow, avoiding divisions of words as much as possible.

Of course, objections will arise in opposition to these rules. The types will sometimes refuse to "come right," and lines which should be widely spaced must be condensed, or words which ought to be turned over will have to be divided; but in the majority of instances a little careful manipulation of the types will overcome all difficulties.

Thus far our remarks have had reference to book compositors. On newspapers, whether city or country, appearance is often sacrificed to speed, and good spacing is not looked for or insisted upon. And here, by way of digression, we venture to make the statement that our brothers, the book compositors, are not altogether fairly treated by the unions in regard to remuneration for their services. They are expected to do better work than the newspaper compositors, yet, in every instance, the scale for book composition is lower than for newspapers. It may be argued that the newsman receives the higher pay by reason of being compelled to work at night, while the bookman works by day; but against this argument may be cited the fact that about one-third of the time a bookman should be at work he is idle, because there is nothing for him to do, while the newsman's occupation is steady the year round, barring such times as he feels like laying off for the benefit of the poor "sub."

We will now turn our attention for a little while to the job compositor. He is a favored individual, in that he is not dependent upon the number of ems he sets for his remuneration; but oftentimes his conduct is just as

reprehensible, if not more so, in regard to spacing, than that of his brother, the book compositor. There is more reason for him to pay greater attention to spacing, for the varied character of the types he handles—skeleton, condensed, medium, round and extended—each needs different treatment from the other. The correct spacing between words set in a gothic type would not be suited to either a skeleton antique or an extended antique; in the one a four-em space of its body would be sufficient, in the other an em quad would be scarcely enough. A great deal of judgment needs to be exercised in spacing job type, more than even many job compositors think. It is not only between words that spacing needs attention, but the *letters* often need spacing also, the shape of the letter compelling it in order to obtain a uniform appearance. Take, for example, these two words: WAVY LINES. The letters in the word “lines” appear to be set closer to each other than those in the word “wavy,” yet each are set as close as the type will admit. In order to make the two words balance each other in regard to spacing, it would be necessary, in almost any kind of job type, to put a hair space or a card or lead between each letter in the second word. Similar instances occur in almost every job that is set, and constant vigilance is necessary on the part of the compositor to make his work uniformly and evenly spaced. Many of the lower case letters, even, of the later job faces, are so cut and fitted by the typefounders that it is necessary to use hair spaces or cardboard to preserve uniformity in their appearance.

Spacing between lines is a very important part of the job compositor's work. Several lines of type crowded together into a small space will look bad, if they are not altogether unreadable; yet the same lines opened out, with the proper amount of space between them, may make a first-class job. Some old printers have been heard to declare that “more depended on the spacing of the lines than on the character of the type used” for effective appearance, and in many cases they are not far wrong. Too close spacing or too wide spacing between lines are both bad, nothing being more offensive to the eye than to see a few lines of type so widely separated that a buggy could be driven between them, or so close to each other that it is hard to determine whether they are separated at all.

A thorough knowledge of what constitutes correct spacing can only come by close observation and constant practice, coupled with the ability to discern the fitness of things. There is as much connection between the use of good display type and correct spacing in composition as there is between time and tune in music; in the first instance one without the other conveys a false impression to the eye; in the second, the ear is captivated by a combination of the two, while the absence of either strikes harshly upon the sensibilities of the hearer. If compositors, both job and book, would devote a little more time to the subject of correct spacing, they would be amply rewarded by the greatly improved appearance of their work.

Written for THE INLAND PRINTER.

QUADRATS.

BY PICA ANTIQUE.

BUSINESS for THE INLAND PRINTER required my visiting the government printing office. As almost everybody knows it is in the classic portion of Washington euphoniouly denominated “Swampoodle.” The locality is undesirable and has the reputation of being unhealthy. The building—a patched-up concern—is unfitted for and inadequate to the vast amount of work required to be done; and in case of fire would, to an almost certainty, prove the funeral pyre of helpless hundreds.

The words “representing THE INLAND PRINTER,” proved talismanic. With little of delay we were received by General Palmer, and we shall be strangely mistaken if he does not prove his right to the title while commanding his force of twenty-three hundred, rank and file. We were listened to in a quiet, courteous and dignified manner and given the information desired.

The character of “the patientist man on earth,” as given to the great martyr to boils when she saw “job printing” staring her in the face at every turn, is well deserved by the new public printer. One more blessed with equanimity cannot be found in Washington. With the most unflinching politeness General Palmer listens to the impatience of political place-seekers and tales of penury and woe. Every visitor remarks this and leaves his presence to speak words of admiration and praise.

We assuredly did, and with all ambition to be the public printer of the United States forever effectually squelched; and we were more than ever convinced that the salary paid for the responsibility, the arduous duties, the mental strain and physical wear and the services of a perfect craftsman, scholar and gentleman, was paltry in the extreme.

* *
* *

“LISLE” SMITH, the man of all others in the West who deserved the title of “silver-tongued orator,” once said in a legal argument that “he had searched the revised statutes of Illinois from introduction to appendix and could find no law against a man being a fool”—only he put it stronger.

Is there any against a *printer* being a *gentleman*? Judging from recent association with many of the craft, we are forced to the conclusion that some of the number imagined there was such a law, and its provisions sternly mandatory.

What do we mean by gentleman? The old qualification of being above the “condition of yeoman,” is obsolete. It matters not now whether he “bears arms.” Being of “gentle and refined manners,” covers all that is necessary. High birth is not absolutely essential; education and association is, and very much. Dress, if but cleanly and free from rags, matters little. It is the soul, not the flesh, that is all important; the tenderness of the feelings of another; the acknowledgment and respecting of the rights of another; suavity of speech and entire freedom from low, coarse language and

profanity. Laughter is indeed a "poor exchange for Deity offended."

Dryden speaks of "God Almighty's gentleman," and such the printer, of all others, should prove himself. Before his eyes is ever the experience and wisdom of the world; its bright and shining examples. His every day is a lesson enforced of the greatness that comes from goodness; the rewards that follow kindness of heart; purity of life, temperance, and living the highest development of manhood.

There is no excuse for the printer being otherwise than a gentleman; no excuse for "tough"-ness, rowdiness, inebriety or even approximation to depravity. Following the highest employment he should never belittle it; never degrade it by speech or action; should do it honor by being honorable; should exalt it by every possible means; should teach the world the respect due it by respecting himself; should always and under all circumstances be a gentleman.

* *

BOYCOTTING, we had supposed, was opposed to the divine, as well as human law—the latter being founded upon the former. It appears, however, that we have been laboring under a strange delusion or (which?) its interpreters upon earth are not unbiassed.

In a late number of a "religious paper" we read: "Ought we not, as Christian people, give our patronage to those who decline to patronize Sunday papers. * * * We exhort people to stand by those who have no dealings with the men who are working hard to secularize the Lord's day. * * * We consider it their (Christian's) duty to abstain from advertising in the Sunday newspapers," and very much more in the same strain.

Why? The ostensible reason is because of work being done on that day. Were this true—the setting up of advertisements on the sabbath—the objection would be forcible and valid; as it is without foundation, in fact, it falls to the ground of its own weight.

Even the most ragged and inky imp of the printing office knows that the public is required to furnish "copy for ads" early on Saturday, and that composition is finished before the dawning of the sabbath. It could not be otherwise when the paper goes to press at or near midnight.

If the objection has any strength it is as against the paper published Monday morning; is without a shadow of justice against that of the previous day, as our good brothers ought to know, if pausing to think, or if ignorant, become enlightened, and not give to the world arguments drawn from such false and ridiculous premises.

But the advertisements are read on the sabbath. Does the great offense lie in that? Is that the reason why you are running a tilt with ever freshly sharpened lances against Sunday papers? Would it not be well for you to carefully remove the beam from your own eyes before magnifying the mote in others into mountains?

The paper from which the above quotations were made (and intended especially for sabbath reading) contained four pages of advertisements, and about as secular as

could be found. Were these not to be read on Sunday? Are your readers, dear religious press, educated to so high a plane that their eyes will not rest (on the sabbath) upon such offensive things? If in danger of contamination from reading them in other papers why not in yours, and, if so, why do you publish them?

The entire argument smacks strongly of boycotting. It is either the output of unpardonable ignorance or gross misrepresentation and intolerance. Wanting the essential element of truth it will be of none effect upon the minds of sensible people, no matter how much they endeavor to keep the sabbath holy and revere the lessons taught by the Great Master.

THE OFFICE TALKS IT OVER.

BY HERBERT L. BAKER.

A STRANGE quiet filled the place usually so noisy and bustling. The machines impatiently stood in their places, their frames filled with wonder over their unwonted inactivity, inquiring of one another the whereabouts of the bright but dirty little fellows who daily appeased their appetites for paper; the types whispered together in awe-stricken tones, trying to imagine the cause of the long absence of their human collaborators; the ill-humored paper-cutter inquired in his most cutting tones why his daily feed was so long withheld, and curiosity filled the whole atmosphere. The outside door finally solved the mystery by saying that there was a notice tacked on his breast which he could not read because he had not yet succeeded in getting around in front of himself, but since it was the sheriff who put it there, he could guess pretty well what it meant. Then all fell to wondering what had brought the sheriff to their busy place which had seemed so prosperous.

"I could tell you some reasons," spoke up the Desk in the counting room, "you ought to have heard some of the estimates that were given over me. So much reckless guesswork made me sick; actually, the old proprietor never could stick to a price, even when by some fool luck he got it about right; just let the customer object a little, and down came the price, sometimes to scarcely half the first bid. I don't believe he ever knew exactly what was a fair price, but sized up the customer, shut his eyes mentally, and made a guess, hit or miss—usually miss. Only let the customer say, 'Jones will do it for so and so,' and down came the figures a little below Jones, without ever stopping to figure whether Jones had not made a mistake or whether there was any money in the work at Jones' price. Why, it actually got so bad that customers would not take the first price at all, for they knew they could 'sheeny' it down by waiting."

"I could have told him some important things," interrupted the Ledger, "but he never inquired. Half an hour with me would have taught him that the expenses of running his business (aside from pay-roll) averaged nearly 20 per cent of the gross amount, hence that per cent ought to be added to the cost of work before any

profit could appear. I could have told him that one department has been costing him \$30 per week for a year—losing that much; that he is paying the same for help that he did a year ago when he was doing half again the business. A little attention to me and a careful pruning of expenses where I suggested would have helped tide him over."

"I am almost ashamed," spoke up the Collection Book, "to reveal the secrets hid away in my pages. Account after account against slow or dead-beat firms who never should have gotten a cent's worth without payment in advance. There are simple ways of learning the standing of most strangers, but in his eagerness to get business the proprietor took the chances of payment and did the work. I could have told him that it is a safe rule to ask a deposit with an order from a stranger. If the customer is honest he will understand the necessity of observing safe business rules and will not object; if he does object, especially if he gets angry about it, the chances are several to one that it will cost more to collect the bill than to do the work. This readiness to take chances is the leak that has sunk many a fine craft, and your eyes will be opened in surprise if you will turn to the profit and loss account in the ledger."

"Reckless promises to customers didn't help him any," chimed in the Counter. "I actually felt ashamed to hear him promise everything customers asked, when he and I both knew positively the promises absolutely could not be kept. What he gained by promising work on Wednesday that he could not deliver before Saturday, I could not see. The ingenuity with which he invented lying excuses was marvelous, and I often wondered how his tongue escaped becoming a mass of blisters. The result he ought to have foreseen—customers lost all faith in his promises, and took their important work elsewhere; many became disgusted and left him entirely, taking pains to spread his unsavory reputation far and wide among their friends. How much better it would have been to be frank and honest in promises, even if thereby he did occasionally lose a job!"

"When work was done," said the Packing Table, "it was usually packed and delivered in a shamefully slouchy manner. Work was never looked through for imperfect sheets; smears and finger-marks went unchallenged; any old paper was good enough for wrapping, no matter whether even clean; often packages were not even tied if the supply of stray string ran short, and by the time a careless boy had hugged them against his dirty clothes while making the delivery, the bundles were likely to be mussed up in style most beautiful to behold. Very little things influence customers—neatness in packing and delivery give them favorable impressions of the work of an establishment. Why don't printers have neat boxes made to deliver ordinary commercial work in—the right size to hold five hundred sheets of a kind? One size for letterheads, another for note, another for cards and so on. The boxes would cost less than 2 cents apiece; they would be a convenience to customers in keeping his stationery clean, and they could be nicely

and profitably used by the printer for advertising his business."

"If you want to know where lots of the money has gone," said the Stock Shelves, "just rummage through our recesses a little while. A deal of capital that was needed to use in the business is tied up here in stock that never should have been bought, even if it was a bargain. Time and again full sheets have been cut up for work when a little search would have discovered remnants which would have answered the purpose exactly. When the pile of pieces got so large as to be in the way, into the old paper sack this was thrown and carted away. Had they been carefully tied up, marked with the number of sheets and quality and laid out on a table in plain sight, many a good dollar might have been saved. Then we want to know what a man gains by carrying a large stock of paper year after year, at heavy expense for interest, insurance and waste, saying nothing of the risk, when the paper dealers will carry it for him at a small advance in price and supply any kind and quality and amount just when he wants it, at no risk or expense to the buyer?"

"I helped bring on the misfortune, I am sure," broke in the New Cylinder. "I had not been here a week before I saw I was not an absolute necessity. True, I came handy for large forms occasionally, but the office could have gotten along very well without me. It is easy enough to see that the proprietor's ambition and anxiety to get on fast, coupled with the 'accommodation' offered by dealers, led him to involve himself heavily for material he had no reasonable hope of paying for in the time agreed. In these days, when manufacturers are pushing sales so hard and offering any terms of settlement, the way into debt is a smooth and easy slide down, but the climb out is cruelly painful in many cases. Had he been content to plod along till he had money for new material, it would have been different; as it was, new machines required more room, more power, more help and more expense in every way, without corresponding increase in business. Though he struggled on through many anxious days and sleepless nights, tying himself, like a galley slave, to the oar, interest and expenses slowly and pitilessly engulfed him in the end."

Here the Lead Cutter, the Ink Cabinet, the Hell Box, the Broom, the Mallet, the Stone and others made a babel of voices as they told of the little leaks they had noticed in the office; how dirt and confusion reigned everywhere; how sorts were scattered and lost, valuable material carelessly destroyed, inks wasted and thrown away, and none of that careful supervision exercised which ought to have prevented most of the reckless waste which characterized the workrooms. A careless employer had bred carelessness in employes and brought upon his own head the results of the combined carelessness of them all.

When the sheriff entered to complete his unpleasant task, all was silent again; but sad nods of silent sympathy passed around as each took to heart the lesson of their employer's experience.

ADVERTISING.

BY SAMUEL G. SLOANE.

WITH an experience of nearly twenty years, both with advertisers and as one, I do not deem it egotism to say I have gained some knowledge of the subject. That advertising is a profitable way to spend a part of one's money in business is no longer questioned. The question now is not, "Does advertising pay?" That it does is universally conceded. But, were the question asked, "Does all advertising pay?" I should readily and positively answer in the negative. Not only does much of the advertising done not pay, but quite a percentage of it entails absolute loss to the advertisers. How can this be, may be asked, and I answer it can be for almost innumerable reasons—in the language of a threadbare phrase among advertisers, reasons "too numerous to mention." There are almost as many means and manners of advertising as there are advertisers, and it would be strange indeed did not some of them fall short of their object. A few of the many reasons for failure may here be given: (1) Advertising at inopportune times and seasons; what good results can be hoped for from running a straw hat or gauze underclothing advertisement in the winter time? (2) Using inappropriate vehicles in which to carry the advertising; what good would it do to advertise farm implements in a jeweler's journal? (3) Using methods and language not calculated to inspire confidence either in the advertiser or the articles advertised; it is a losing policy to advertise a known inferior article as the best in the world, or to advertise a good article when it is intended to supply the demand with a poor one. (4) Advertising to a wrong class of readers; it would be poor policy to advertise sporting goods in a church paper, or church goods in a sporting paper. (5) Advertising spasmodically—"by fits and starts"; it nearly always proves a losing investment to spend a large sum in one issue of an advertising medium, or in one kind of advertising, and not follow it up with more; better do less at once and make it last longer. (6) Advertising too much; like powder in a gun, only so much will burn with effect, the balance is wasted. (7) Advertising too little; by using too little powder the missile falls short of its mark or fails of the desired effect, and so it is with too little advertising. (8) Doing but one kind of advertising and depending entirely upon that for satisfactory results; the kind of advertising which will reach and attract one reader will have no effect whatever upon another. (9) Advertising in too many ways; this is not profitable, for doing so frequently prevents any of them being rightly or thoroughly done. The reader will bear in mind I use the word advertising to cover all means of making one's business known to the "dear public" whom he wishes to serve—such as announcements in regular or occasional publications, circulars, posters, dodgers, signs, etc. Extremes are hurtful in advertising as they are in almost everything else; the proper thing is the "happy medium," the "golden mean," as it

were; the right thing in the right place, at the right time. But how shall we know this happy medium, this golden mean? How tell what is the right thing in the right place at the right time? These questions are easier asked than answered. Only by thoughtful study of the subject, a careful survey of the field, a thorough knowledge of the feelings and needs of those whom it is desired to reach, as well as a perfect knowledge of the things advertised, can an advertiser hope to approach a solution of any of these questions. This is knowledge which cannot be easily and readily imparted; one must, in a degree, possess the faculties to perceive and grasp it from existing conditions at the times necessary for the work to be done.

There is one rule for advertisers to follow which I think comes nearer to telling the whole story of successful advertising than any other I know, and this rule I here give, and commend its observance by all who are, or expect to become, advertisers. It is this: *Advertise what you will do, then do just what you advertise.* This rule, lived up to strictly, will soon give to your advertisements the weight of the words of an honest and truthful advertiser, and readers will soon come to look for your advertisements to learn from them just what they can do. Advertisements are read for the information they contain; they are regarded as the words of the advertiser, and soon give to him a reputation for truthfulness or untruthfulness as his advertisements are truthful or untruthful. I admit that advertising is somewhat like acting, coloring is necessary to give the words their real import, and this the readers allow, but downright misrepresentation inevitably works hurt to the advertiser, and there is no excuse whatever for employing it under any circumstances. It is the means employed by the mountebank to catch the uninformed, and an advertiser who tries it will soon find himself looked upon and classed as such. That trite old adage, "honesty is the best policy," is as preëminently applicable and forcible in advertising as in anything else in life.

Now, regarding what to advertise in, when making announcements through regular publications, I would say the principle which is a guide in sending out circulars is also a guide to the publications in which to make announcements. When sending out circulars they are addressed to those persons whom the senders have reasons for believing will be interested in and become purchasers of the articles advertised; therefore, when seeking a publication in which to place an advertisement, look for that one which reaches the most people likely to be interested in the thing advertised. For those things which are of general need and use, the staples of life, I should say the regular newspaper is the best possible medium in which to advertise. But for those things not of general need and use, the trade journal surpasses all other vehicles for reaching just the readers wanted. A good trade journal (and what trade or profession is without one) is a guide and directory of the trade for which it is published, and, if its publisher or publishers be upright and honorable, it soon becomes a

recommendation of the articles advertised in its pages. A good trade journal is read with interest and consulted by all interested in the particular trade it represents. It is to its trade what the good, honorable newspaper is to the general public, and more, for to it one goes for information in which he is directly and immediately interested, and which he cannot obtain elsewhere. About the same information can be had from all the regular newspapers published in any given locality, but to the trade journal alone must one go for certain and reliable information concerning his particular trade. Had the regular newspaper answered all the needs of the various trades and professions, the trade journal would never have been born. Just the need for a trade journal is its excuse and reason for being, and it has not only come to stay, but to expand, improve and change with the needs and demands of the times.

As to the manner of advertising in a trade journal, all that applies to any advertising will here apply. No one can do successful advertising without giving it proper study and attention, and it should be made as much a part of the business as the buying and selling of the wares. Advertising is the keystone of success and the pillar of permanence after success has been achieved. Advertising has made many a new business and saved many an old one, but it never did either without being done properly. I would advise no man to attempt a business without advertising, neither would I advise him to attempt advertising without giving the subject careful study and due consideration. Placing the seed in the ground and then allowing the plant to care for itself is a poor way to farm; placing an advertisement in a publication and giving it no further thought and attention is equally unwise. Put honesty, sense, judgment and business ability into your advertising, and you will find the returns therefrom greater than from any equivalent investment you can make in your business.

Written for THE INLAND PRINTER.

HOW TO MAKE A SUBSTANTIAL GALLEY RACK FOR TWO DOLLARS.

BY J. B. CALDWELL.

IT is not the intention to interfere with the sale of the improvements in the way of galley racks, that this article is written, but to tell our fellow printers, who are tired of having their cases covered with galleys, how to make a substantial rack, that will hold more galleys and cost less than one-half the amount charged for the patented article.

A rack to hold ten single galleys may be made as follows: Two pieces tough pine, oak or walnut 1 by 3 by 36; three cross-pieces, 1 by 3 by 15; twenty $\frac{1}{4}$ -inch bolts, 8 inches long, with washers and nuts. Beginning 3 inches below the top, mark off both long pieces every 3 inches, to indicate where to bore holes for the bolts. Bore these the exact size of the bolts at the angle of the lower case. To secure the angle, lay a piece of reglet even with and against the end of a lower case, and saw off the end perpendicularly. Place this reglet at the side

of the galley rack pieces, the bevel flush with the broad side of the piece. You can then mark the angle, or with two small tacks fasten this indicator in place for each hole.

Put in the bolts, place the washers and put on the nuts until the ends of bolts are even with outside of nuts. The heads of the bolts hold the galleys on.

Nail the cross-pieces to the wall or fasten with screws, where they will be perfectly secure. Then fasten the upright pieces carefully with two 3-inch screws at each junction, and the galley rack is ready for use.

It might be fastened on the end of a double case rack, but a solid wall is safer. Racks may be made to hold more or less, as desired. The distance apart, 3 inches, is sufficient for filled or empty galleys. Where the rack is wanted to empty on or make up from, 6 inches should be allowed between the rests.

The bolts cost 60 cents; the bit, $\frac{1}{4}$ -inch, 25 cents; nails and screws, 5 cents. Total cash outlay, 90 cents. We keep a brace and a first-class bucksaw for office use. The lumber used we picked up in the office from type boxes, etc. Time, two hours.

A carpenter will do the work in good style for 50 cents to \$1; so the actual outlay for a substantial galley rack will not be over \$2.

IMPROVED KNIFE FOR PRINTERS' USE.

A KNIFE especially designed for the use of pressmen in cutting out "overlays" or "underlays" in making a form ready is shown in the accompanying illustration.

DUS' KNIFE FOR PRINTERS' USE.

The handle is a piece of tubing with longitudinal slots for sliding studs, by means of which the blades in either end are moved in or out. One of the blades is sharpened on its opposite edges in form much to resemble an ordinary ink eraser, while the other blade holder has pivoted therein a blade sharpened on three sides and edges, whereby the blade may be turned and adjusted to cut at any desired point and from any of its edges. This blade is retained in position when adjusted by a

spring pawl made to engage with a ratchet fast on the blade or its pivot. The rotatable blade is designed to do the general work of the pressman in making forms ready, while the other blade may be used exclusively for cutting sharp angles or corners. Movable caps are provided for covering the ends of the knife, so that it may be carried in the pocket, these caps having spring catches for engagement with the slotted portions of the handle.

For further information relative to this invention, address the patentee, Mr. Louis J. Dus, No. 819 Eighth street, Milwaukee, Wisconsin.—*Scientific American*.

FACTS AND FANCY.

SOME THOUGHTS ABOUT MEN, THINGS AND OCCURRENCES.

BY GUSTAV BOEHM.

A FIELD OF OBSERVATION—INSTIGATION "TO THINK"—NEW YORK CITY THE HARBOR OF GENIUS AND VAGRANT—THE RED, WHITE AND BLUE—SOME NEWSPAPER BUILDINGS—AN ARCHITECTURAL WONDER: THE NEW YORK "TIMES"—THE NEW YORK "WORLD"—A JOURNALISTIC WONDER—ITS FORMER AGONY—PECULIAR FEELING OF MAN OPPOSITE THE WONDERS OF MECHANISM—"FORCE" AND "MATTER"—THE "SKELETON" HAUNTING THE MECHANIC—"MAN AND MACHINE"—A SUCCESSFUL TYPESETTING MACHINE—LOOK OUT, IS ANY DANGER AHEAD?—EXCERPT FROM A DESCRIPTION—A REVOLUTION IN TYPE COMPOSITION—AN APPEAL TO SOCIAL SCIENTISTS—WHAT WILL BE THE FUTURE OF THE COMPOSITOR?—PROGRESS—FALSE VIEWS—MACHINES ARE A BLESSING—BEWARE OF UNNECESSARY FEAR—BRAINS VERSUS MUSCLE—"FACT" NOT "FANCY."

IN the busy life of the great metropolis of the East, where one has ample opportunity to meet millionaire and vagrant in a dozen specimens—I confess the latter predominating in species—within the short radius of a block or two, any person possessing but the minutest ideas of comparative science cannot help to avail himself of various thoughts about men, things and occurrences which continually pass before his eyes—actual and mental. The queer, untraceable, or, at least, unexplainable mental faculty of the intellect "to think," generally located among the lobulæ of the brain, but for all that perhaps actually located within the ganglia, further below, as far down as the stomach, has nowhere in the world more opportunity, more instigation to prove its mysterious quality and working powers than in the midst of the ever-rushing, ever-pushing, ever-growing and ever-destroying, ever-fermenting properties of a great city. And among all great cities of the world, the city of New York, situate at what may be termed the mouth of the Atlantic ocean, where the genius of the old continent, as well as the reptile therefrom too vile to live, look for first harborage under the protecting wings of our colors—by far the most beautiful of all the national colors of the world, the red, white and blue—the most beautiful flag of the universe, the star-spangled banner—is preëminently provided with all the material for thoughts that are glorious, heaven-like and

soul-elevating; as well as grave-like, deep, dark and somber.

It is the ever-renewing quality of nature to produce from dust and decay that imparts itself to every successful great enterprise, and which leads to observation. We see the immense buildings around the postoffice, built upon the ruins of their insignificant ancestors, the palaces of the modern newspapers; the *Tribune's* steeple-headed roof; the beautiful mansion of the New York *Staats Zeitung*; the imposing, though somewhat time-worn, front of the *Herald*, and, above all, the latest achievement of architectural genius, the unique palace of the New York *Times*, with its expression of stern solidity on its beautiful granite countenance, with its large, curved, stone-buried windows, like immense eyes, overlooking Printing House Square, trying to penetrate the marble walls of the city hall, ever watchful that no *indiscritions* committed within its circumference shall escape its view; a monument of human genius in every respect, from the visible granite masses piled up in heights immense before the eyes of astounded humanity, to the most secret evolutions of mental thought born within the bony walls surrounding the gray substance of the editor, that is the New York *Times* in its entirety, outward and inward, visible and invisible.

A little further below is the *World* wonder. And it is a great wonder, even in the world of newspaperdom; where wonders are less scarce than in any other strata of human life and doings. We can hardly recollect, or better, we can hardly believe the time to have existed, when the *World* was continuously gaping for wind, not "extra pure mountain air—the luxury of the better class which is above the struggle for life," and has a surplus to spend to enjoy it—but gaping for everyday, common, *conditio sine qua non*—oxygen necessary to fret a poor and painful existence. Which human being can today witness the printing of the Sunday edition of this paper without that feeling of his own smallness and inferiority toward the grandeur and sovereignty of the genius who succeeded in creating such work; without that feeling which the individual unwillingly always experiences when confronted with the enormity of nature's creations or that of human genius and learning. I am not "green" in the business of newspaper publishing and printing, but I confess that many a Saturday night I have traveled miles just to stand beside that big press of the New York *World*, with its inexplicable mechanism, in its too limited pressroom, opposite the postoffice, and to wonder at this wonder of the age. Many a time I have felt that peculiarly agreeable sensation one feels when being near a great danger and knowing that nothing can happen to him; that sensation which gives birth to a hundred thoughts concerning the inferiority and again sovereignty of the human being; who, as in this instance, could be ground to an unrecognizable mass, from which it would be hard to distinguish bone and flesh, much less to acknowledge a human being, while his intellect, in fact, has made him master over all this huge mass of steel and iron; while the thousand and thousand fold

stronger power, grumbling and cracking, obeys the pressure of his hand. "Kling, kling," a touch of the spring handle, a groan and a rattle and all that huge machinery, these thousands of wheels and screws and bolts, perform their duty with minute exactness, unconscious of the immense power which is emboved within their body. If ever and at any place, it is in such movements and here that man feels the superiority of the will power, the sovereignty of the human brain over dead force; the difference between "force" and "matter." It is here, also, that the "skeleton," known to the great class of workmen as the fear from being pushed off the path of labor by newly invented or improved machinery, must fade away. A feeling of shame invariably must overcome him who for a moment thinks that his place is where the machine now stands, and that place is unjustifiably filled by the machine, which actually does his labor so much better, more exact, quicker. Man is not made to do machine work, and wherever such is done by man it is on account of some unexplainable reason which may have kept the machine from gaining access to its rightful place.

A similar thought possessed me when I read the interesting description of a machine which (should we deny it?) humanity has expected some years—a successful typesetting machine. I have since applied for permission to see the machine while working, in order to be better capable of expressing an opinion concerning the influence this apparently wonderful piece of machinery will have upon a multitude of people who now fill its place, and gain a livelihood by doing its work. At present I must limit my observations to the description here, and I advise the readers of this article to accept it as given from an opinion which doubtless has been more or less influenced by parties directly interested in the introduction of the machine. I do not intend to diminish the value of the machine in the least by saying so, but I desire the readers of my article to know that whenever I venture a definite opinion about a matter, it is my rule to base it upon personal experience, and whenever I give a decisive view I am ready to bear all responsibility. In matters of hearsay I, therefore, recommend, as in this case, caution. Owing to the description in the *New York Tribune*, which employs, I believe, forty-three of the machines in the composing room, it is the most wonderful piece of mechanism ever turned out by human genius. Well, if it is not, it certainly ought to be, considering the time it took, comparatively, to unearth it.

The following is part of the extensive description of the machine (*New York Tribune*, May 19), and may serve to show the advantages of it to its owner :

FIGURES OF EXPENSE AND PROFIT.

The most accurate idea of the real working of the machines is to be gleaned from the actual figures, and these are also interesting as showing the costliness of the *Tribune's* experiment. In 1884 and 1885, when they were not in use, the composing room expenses were \$73,176.26 and \$75,070.16, respectively. In 1886, the year of their introduction, these had risen to \$86,009.71, and in 1887 they were still \$83,475.37, or in the neighborhood of \$10,000 above the average of former years. A report for the first week in

February, 1888, when eighteen operators were at work, showed an average composition of 101,000 ems per man, at an average cost of 21 cents, the highest amount paid any operator being \$46.45, and the lowest \$9, to a beginner whose proportion was small. For the week ending March 28, 1888, twenty-nine operators set an average of 86,200 ems, costing an average of 26 cents per thousand. During this week the two most expert operators composed a number of intricate tables, somewhat reducing the total cost of their work.

During the first week of May, thirty-one operators set 2,777,000 ems, which cost \$656.90. One operator made the especially low rate of 13 cents per thousand, two of 16 cents, one of 17 cents, and five of 19 cents. In other words, one-third of the total force averaged below 20 cents; yet the whole average was not less than 23 2-3 cents. Thirty-eight operators set, during the second week in October, an average of 104,000 ems each, at an average cost of 20.2 cents, at which figure, or a little over, it remained until the week ending November 14, when thirty-four men set an average of 102,000 ems, the cost of which was 19.5 cents per thousand. The lowest average during 1888 was that for the week ending December 12, when thirty-five operators set an average of 108,400, the average cost per thousand being 18.7 cents.

Since the beginning of 1889, the ordinary weekly record has varied from an average of 116,400 ems set by thirty-one operators and costing an average of 17.8 cents to 110,000 ems set by thirty-two operators and costing 19.8 cents. A table of corrected ems set up by the entire force of thirty-four operators for a period of four consecutive weeks in March, shows averages for different men ranging from 9½ cents to 24½ cents per thousand.

Our readers may themselves judge of the value of this important invention. If it actually performs the work which the *Tribune's* writer claims for it, then it will, without doubt, revolutionize the present system of calculating the work of composing—upsetting that of the typesetter entirely. There will not be the salt in it for the ordinary hand-compositor. It is, therefore, time for the brains or heads of unions, etc., for the social scientist to investigate the matter while there is time, that is, to show, theoretically, some means to escape the dilemma. At present, where the composing machine is simply a matter of consideration for large companies which are able and willing to invest a large capital at once in as yet—I earnestly believe so—an unapproved piece of machinery in the way of experimenting, is the time to probe and propose. We have still the time to make plans and test them, so that we may be prepared to disband the large masses of typesetters into the right strata and channel in case actual and real trouble should arise for the fraternity. This invention does not come "all of a sudden"; its introduction will not be a surprise; its probable future general adoption must not and cannot be decried as a scheme planned by monopoly. We have known of it for years; it has been the object of thought for quite a time, and, as it now stands, the problem seems too near its successful solution, and, in the Mergenthaler machine, has, perhaps, already reached it. Who is to blame if serious trouble should arise with the great masses of unemployed compositors? On whom can the workman who has to earn a living, who must work from morning to night to obtain his daily bread, and who has no time to spend in thinking over arbitrary means to equalize demand and production, rely in this matter? Who should show him the ways and means to get out

of his troubles in a legal and respectable way? Who, in short, is he whose obligation covers the field of saving the honest laborer from starvation, from becoming a beggar or a rioter, perhaps a criminal? Now is the time for the theorist to propose. Do not let us take the matter coolly. There are already forty-three machines in working order in one office, substitutes for a great number of hands; how long will it be until many more of the other large offices will have their composing rooms provided with an equal force of non-striking, non-ruling, non-troublesome means for producing type composition? Do not allow yourself to be carried away and threaten to stop its adoption by force. The machine is here and has a right to be here, while the man who simply fills the place of a machine has no right to do so. It would be ridiculous to bar the path of progress. The repetition of Fulton's well-known troubles would lead to nothing but the prison cell. This is not the age of brute force. It is the age of thought, of enlightenment, and muscle is placed at a disadvantage when brought into conflict with the gray matter of the brain. There is certainly no immediate danger. Our scientists have not yet the cries of starving families on their heels, while searching for a solution. They can take their ease. But, mind, do not delay it; show to the masses dependent upon your theories what they are worth. Open the strata through which the superfluous ranks of typos may be disbanded when the time arrives, in a right, legal order and without harm to themselves, without trouble to the ones dependent on them, without danger to the community.

To optimistic natures this call for precaution may appear untimely and superfluous. Well, I shall be glad if it is only a fancy; only a skeleton whose haunting does not amount to much. Very well, but the "Linotype," as Mr. Mergenthaler named his ingenious machine, is no fancy whatever; it is a fact, and its doing is based on figures which need no "fancy" to appear frightfully ghostlike to the father of a family who is dependent upon his so and so many thousand ems a week. Do not try to lessen the apparent danger by listening to the whispering of evil advisers who may undertake to make you believe that the capitalist has no earthly right to make use of the machine. Don't be foolish! The capitalist has every right on earth to buy for his dollar what his dollar legally can buy; his means are his power, his knowledge, his labor. He has a right to use it rightfully, and none but an overheated brain will undertake to stop him forcibly from making use of his right, as no one will have the power to stop the hand compositor to make full use of his knowledge wherever there is an opportunity, if he should be able to set up a hundred thousand ems per hour and the demand would call for it. It is in the direction of thought that I can only see a possible avoiding of dangerous consequences. Let genius meet genius. Why should human skill, human brain, after it has been capable of inventing a mechanism which deprives so many thousand of human beings of their means of existence, not be able to show some way

in which the maintenance of that number can be amply provided for? The introduction of any machine, as history proves, has always been an instigation to raise that class of men directly influenced by it one step higher upon the ladder leading to mental perfection. It was always the cause of lifting the weight from the muscles and transplanting it to man's original power—the brain. The introduction of improved machinery, in any branch, will always exercise an influence upon the elevation of the human intellect; and it is the intellect which entitles man to his superior position in the world above the mere brute creation or the dead machine. Therefore we must recognize the introduction of any machine as a blessing to humanity; and it is not this introduction which endangers the welfare of a class, but the indolence of that class to prepare in time to meet the increased mental obligations involved by the introduction of a machine and the consequent lack of willingness to give up a place which rightfully should be occupied by a piece of lifeless mechanism.

It is frequently hard to make people believe in this theory; still it has practically been approved by historical facts, and I hope it will also in this case be accepted as a "fact" and not merely as a "fancy."

Written for THE INLAND PRINTER.

NOTES ON WOOD ENGRAVING.

NO. LI.—BY S. W. FALLIS.

IN the "Arabian Nights," which is regarded as Harvey's masterpiece, he displays unusual artistic ability, and the cuts show careful study, devoid of over-elaboration. He was assisted in this, his great work, by Mr. Lane, in the minute indications of accessories and costumes. With this assistance the designs in the Nights may be safely considered the acme of Harvey's artistic work. At the time of his death, which occurred in 1866, he was the only surviving pupil of Bewick. There is little of historical or personal interest recorded of him excepting that he was a thoroughly amiable and unpretentious man, and a hard and never-tiring worker. His remains are interred in the cemetery at Richmond. His memory deserves a prominent position in the annals of the craft.

Additional pupils of Bewick may be here mentioned, but as they did not achieve much prominence a mere mention will suffice, except in the case of John Jackson, who at this time and for some years previously had figured somewhat historically. He was born at Ovingham, in 1801, and died in 1848. He is credited with first being a pupil of Armstrong and afterward of Bewick, with whom a disagreement prematurely terminated their connection before the expiration of his apprenticeship. Jackson then moved to London, and worked for a time under Harvey. He did considerable very creditable work, and by his close application gained the reputation of being the busiest and best employed wood engraver in London, between 1830 and 1840. He was a careful and painstaking engraver, without any particular indications

of genius. His name, however, has gained some prominence in the history of the art from his connection with a book to which frequent reference is made in these notes, namely, "Treatise on Wood Engraving," by Jackson & Chatto, commonly accredited in the greater part to Jackson. When the volume first appeared, in 1839, an angry dispute arose between Jackson and Chatto as to which was entitled to the honors of authorship of the book, which afterward became a recognized historical authority, with a few exceptions. Jackson seems to have had little or no literary ability, and, as far as can be learned, is not entitled to the credit of the literary part of the work. He, however, engraved and had engraved by others the illustrations in the book; even in this point he is generally credited with more than he earned, Jackson's true position in this book seeming to have been rather the projector than the author or embellisher. However, he undoubtedly did whatever he could in the project, and by his management the public are indebted for the successful publication of the treatise.

With the exception of Ebenezer Landells, the remaining pupils of Bewick are of no particular import. Landells was an excellent engraver, and did good work on the *Illustrated London News* and *Punch*, and also did some excellent work in rendering the animals of Thomas Landseer. He died in 1860.

H. F. P. W. Hole, another, was the son of a captain of the Lancashire militia. He practiced as an engraver at Liverpool, but ultimately gave up the profession on succeeding to an estate in Devonshire. He did some very good work during his time.

W. W. Temple, who assisted Harvey in Bewick's fables of 1818, became a draper at the expiration of his apprenticeship.

Henry White was a clever workman; also John Johnson, Isaac Nicholson, Anderson, Edward Willis and the balance of the lesser lights from the workshop of Bewick have nothing noteworthy recorded to their particular achievements, and may be here taken leave of with a hearty shake of the craftsmen's hand, as at least having the honor of being pupils of Thomas Bewick.

England was naturally the country where wood engraving was most flourishing and prosperous. The pupils of Bewick, particularly Nesbit and Clennell, practiced the art with great credit to themselves and the rapid growth and popularity of the art and its achievements.

The field, however, was not wholly left to the pupils of Bewick. Robert Brewster, like Bewick, was a self-taught wood engraver, but was not trammelled by traditions, like Bewick. He worked out his own methods in his own way by the light of his own genius. Brewster had served an apprenticeship and mastered the art of engraving on copper. This acquirement was both an advantage and a disadvantage to him in his new departure, and he began in the old-school imitation of copperplate engraving. He sometimes produced white line

effects, but relied principally on the black-line detail for the beauty of his productions.

Engravers on copper now began to draw on wood for the wood engravers to cut. John Thurston, the most distinguished of them, made drawings for John Thompson, who, however, did not confine himself to the severe lines of the draftsmen and the practice of engravers of the sixteenth century, but modified them and changed direction and character, occasionally introducing white-line effects, as suited his artistic taste and knowledge of pleasing effects. In the same way did Clennell take liberties with drawings thus furnished, thus founding a school in opposition to the old school of copperplate effects, which, however, continued in popular favor for some years.

Meanwhile the great illustrated papers and magazines sprang up (to which wood engraving owes much for its encouragement and patronage); then the necessity for more rapid work was self-apparent, and a more rapid manner of production was at once a case of necessity to shorten time and lessen expense.

(To be continued.)

ZINC-ETCHING BY THE ASPHALT PROCESS.

The asphalt process recommends itself by the great sharpness of the etched line. It is necessary to print by sun or electric light. The negative must be reversed by the mirror, or, better, a stripping film is used. The asphalt employed in photography is the Syrian. It can be sensitized in two ways. The first, known through Niepce since 1854, is by previous exposure to the light. In 100 grams of benzine are dissolved 5 grams of asphalt and 50 drops of oil of lavender added. This, half filling a loosely stoppered flask, is placed in a strong light for from five to eight hours.

The second is by chemical purification, and gives higher sensitiveness. Coarsely powdered asphaltum is dissolved in chloroform to a thick solution. After complete solution (in twenty-four hours) three times the quantity of ether is added; the whole is shaken and allowed to stand, with frequent shaking, for three days. The ether is then poured off, the separate resin washed once with ether, and the residue collected on a filter. Dry in the dark. The asphalt chloroform solution may be stirred with strong alcohol, which, according to Kayser, removes the last portions of the non-sensitive asphalt.

To 5 grams of the purified asphalt add 100 grams benzol and a little Peruvian balsam. To each 100 c. cm. add 50 drops (3 c. cm.) of oil of lavender. This, while not absolutely needful, gives in development clearer lines. It is well to filter the solution each time before use. The asphalt solution works better after one or two weeks than when fresh. A little aniline violet dissolved in chloroform and added to the solution makes the lines show more clearly in development.

The polished zinc plate is thinly coated with the solution (as with collodion) and dried by gentle warming. May be used the next day, or will keep for some time. The exposure in sunlight is from ten to thirty minutes. It is developed with turpentine, applied with a tuft of cotton wool or a badger brush, washed under a gentle stream of water (if desired it may be wiped with a soft rag) and etched; or the plate may be dried with the bellows and etched. The first etching lasts, with nitric acid, from one to three minutes. It is then rinsed off, varnished, dried, the lines rolled in with fatty ink, and etched in the usual way.—*Dr. J. M. Eder in Papier Zeitung.*

GEORGE W. CHILDS and James Gordon Bennett have each contributed \$1,000 for the monument to Horace Greeley. Mr. Alexander Doyle has already commenced work on the statue.

THE CHANDLER & PRICE. OLD STYLE GORDON PRESS.

Over **NINE HUNDRED**
sold and **EVERYONE**
given entire satis-
faction.

SPECIAL FEATURES:

Steel Shaft and Steel Side Arms, Forged from Solid Bar, without Seam or Weld. The Most Positive and Practical Throw-Off yet Introduced. Best Material Used. Most Carefully Finished.

Impression Throw-Off.
Hardened Tool-Steel Cam Rollers.
Depressible Grippers.

We have recently greatly improved these Presses, enlarging and strengthening the parts, and so arranging the disk and roller carriers as to give greatly increased distribution and we believe it is unequalled in this respect by any press now made.

THE MOST DURABLE AND HENCE THE MOST ECONOMICAL PRESS FOR THE PRINTER.

WE CHALLENGE COMPARISON.

SIZES AND PRICES.

EIGHTH MEDIUM, 7 x 11, with Throw-Off and Depressible Grippers,	\$150.00	HALF MEDIUM, 14 1/2 x 22, with Throw-Off and Depressible Grippers,	\$450.00
" " 8 x 12, " " " "	165.00	STREAM FIXTURES,	15.00
QUARTO MEDIUM, 10 x 15, " " " "	250.00	CHANDLER & PRICE FOUNTAIN, for either size Press,	20.00
HALF MEDIUM, 14 x 20, " " " "	400.00	BUCKEYE FOUNTAIN,	10.00

The two Half Medium sizes have four Rollers. With each press there are three Chases, one Brayer, two sets of Roller Stocks, two Wrenches and one Roller Mold. NO CHARGE FOR BOXING AND SHIPPING. ALL OUR GOODS GUARANTEED IN EVERY RESPECT.

N. B.—None genuine without the name of Chandler & Price, Cleveland, Ohio, cast upon the rocker.

THE BUCKEYE FOUNTAIN.

Patented June 5th, 1888.

Do not confound this Fountain with others similar in appearance.

This Fountain will be found the easiest attached, easiest worked and most practical ink fountain in the market. Its roller is so adjusted as to supply ink uniformly on either a large or small job. Its size also makes it practical to use expensive ink without waste, only a small amount being required to fully supply the fountain. The bottom is so constructed as to permit all the ink to run down to the roller, there being no pocket or dead space.

By turning back the pawl from the ratchet wheel, the operation of the fountain is suspended without missing an impression. The fountain can be interchanged from one press to another without removing the attachments, so that by having two or more fountains the color can be changed without wasting the ink, which must occur if one fountain has to serve all colors. An examination of the cut will show without explanation the manner of attaching. It should be adjusted with *impression on*, so that the roller of the fountain will meet the upper form roller when at its highest point. The roller can be removed for cleaning by turning back the thumb screws until the caps can be removed through the slot in front, then by raising the roller it will come out through the same slot.

Do not confound this Fountain with others similar in appearance.

PRICE, \$10.00.

CHANDLER & PRICE FOUNTAIN.

To those whose special work requires greater capacity than can be obtained with the Buckeye, we offer the Chandler & Price Fountain, which is so made as to permit contact with the rollers the whole length, and will thus furnish a greater supply of ink than the Buckeye. Its construction and operation will be readily understood from the cut, which shows it attached to a 14x20 Chandler & Price Press. It is without all extra and useless parts which complicate and add to the difficulty of using, and at the same time is complete with all the requisites of a first-class fountain.

PRICE, \$20.00.

EARL B. SMITH, Proprietor, 118 Dearborn St. (Room 47), Chicago.

Are · You · in · a · Rut ?

SOME PEOPLE, loth to accept progressive ideas, keep pegging away in the same narrow rut of their predecessors. Others, more enterprising, avail themselves of every advancement, thereby securing the benefits of modern machinery. No one will claim that the printing press of today resembles very much the one in the above cut. The improvements have been rapid and beneficial. Now, why not in *Folding Machines*? It is possible that such is the case. You can readily ascertain and get full particulars by addressing the

Brown Folding Machine Co.,

ERIE, PA., U. S. A.

The Jones Gordon Job Printing Press

IS NOT AN OLD STYLE GORDON, BUT HAS SEVERAL IMPORTANT CHANGES AND IMPROVEMENTS WHICH MAKE IT QUITE DIFFERENT FROM THAT PRESS.

IMPRESSION SET.—A very important feature in these presses is that the **WHOLE IMPRESSION MAY BE INSTANTLY CHANGED**—either increased or diminished—**WITHOUT STOPPING THE PRESS.** When the Impression Screws are properly set, it is seldom, if ever, necessary to move them, as all adjustments are made by means of hand wheel marked "B" in cut.

INK DISTRIBUTION.—Another important feature is, that when the impression is thrown off by means of the lever "A," a simple device causes the movement of parts that prevents the Ink Rollers from touching the form, and the press may be run indefinitely for the distribution of ink.

SELF-LOCKING CHASE LOCK AND FORM STARTER.—Another feature of considerable importance in saving time and patience is the Self-Locking Chase Hook and Form Starter. When the chase is put in place on the bed, it is locked without touching any lever, pad, screw, or any part of the press. When the form is to be removed, it is only necessary to press forward on the pad, marked "patent," which causes the Chase Hook to rise, and the form to move forward so as to be convenient for lifting out.

THE DUPLEX FOUNTAIN.—The Duplex Fountain is a great advance over anything heretofore used for the distribution of ink on a disk press. The distributing roller passes down and back twice, or four times over the surface of the upper part of the disk at each impression.

GRIPPER SET AND CARRIAGE PULLS.—When the Platen is in a convenient position for setting the Grippers, they may be brought down on the Platen for that purpose. The Ink Roller Carriages are provided with loops to be used for putting in or removing the rollers.

These Presses are very heavy and strongly braced, and are made of the best material that can be procured. The Impression Arms are of Steel, forged from one piece without weld.

These Presses are kept in stock by the CHICAGO NEWSPAPER UNION. Send for Circular and Price List.

The Leader Paper Cutter.

The Leader Paper Cutter has the following points of Superiority over any other lever cutter :

First.—The power is applied in the direction of the cut instead of in a right angle or diagonal direction, as is the case with many cutters on the market. By experiment and test it has been demonstrated that less than two-thirds of the power is required to cut any given amount of paper with the LEADER than with any cutter of the class above referred to.

Second.—The back gauge, which in all other cutters must be changed for every cut, may be instantly moved any distance up to the whole length of its travel, say two feet or more, by a lever, shown beneath the front end of the table. To illustrate the advantage of this arrangement, suppose it is necessary to move the back gauge of an ordinary paper cutter twenty-four inches, it will be necessary to turn the wheel shown in front forty-eight times around, an operation involving considerable labor and time. The wheel and long screw in the LEADER are only used for slight adjustments.

Third.—The octagonal stick and recessed sides, which admits of passing the stick through the side to its place, and renders it impossible for the stick to be drawn out by the knife, giving sixteen cutting faces on the stick.

Fourth.—The lever is hung in the most convenient position, midway between the floor and the top of machine, making it unnecessary in making the cut to get down near the floor.

Front table 16 inches wide instead of the usual 12 inches.

THE INLAND PRINTER

A TECHNICAL JOURNAL, DEVOTED TO THE ART OF PRINTING.

Published Monthly by

THE INLAND PRINTER COMPANY,

183, 185, 187 MONROE STREET, CHICAGO.

H. O. SHEPARD, PRES. - - - JOS. PEAKE, SEC.-TREAS.

SAM. G. SLOANE,
ADVERTISING AGENT.

S. G. DUNLOP,
TRAVELING AGENT.

A. C. CAMERON, EDITOR.

EDITORIAL OFFICE, SECOND FLOOR 183-187 MONROE ST., CHICAGO.

SUBSCRIPTION RATES.

Two dollars per annum in advance; for six months, one dollar; sample copies, twenty cents.

Great Britain and Ireland, postage paid, eleven shillings and four pence per annum.

To countries within the postal union, seventy-five cents per annum additional.

Postage stamps are not desirable, but when it is found necessary to remit them, one-cent stamps are preferred.

THE INLAND PRINTER will be issued promptly on the twentieth of each month. Subscriptions, payable in advance, may be sent to the Treasurer by postoffice order or in currency at our risk.

THE INLAND PRINTER will spare no endeavor to furnish valuable news and information to those interested professionally or incidentally in the printing profession, and printers will confer a great favor on the Editor of this Journal by sending him news pertaining to the craft in their section of the country, particularly individual theories and experiences of practical value.

ADVERTISING RATES.

CHICAGO, JUNE, 1889.

INDORSED BY THE ILLINOIS PRESS ASSOCIATION.

RESOLVED, That the Illinois Press Association recognizes in THE INLAND PRINTER, of Chicago, a technical trade journal of the craft, eminently worthy of its indorsement, and takes pleasure in recommending it to the support of the printers of this state.

COLOR.

NON-UNIFORMITY of color destroys the beauty, even if it does not seriously injure otherwise creditable work. The term "off" is applicable to it as well as diamonds and human character. Many a book, job and paper becomes an eyesore because of carelessness to supply, distribution and fountains; one page being as black as the possibilities of ink can make it, and the next pale to difficulty in reading. For this there is not even a plausible excuse. It is within the power of every pressman to produce uniform color. It is his duty to do it; it is as much a part of the labor for which he is paid as making ready forms and running off the required number of impressions.

Even in the most ordinary newspaper work, color is an important factor, and can easily be regulated. The attachments of every modern press leave nothing to be desired. They give as absolute control of ink as they do of the number of revolutions, and can be governed with as much exactness as the beat of a pendulum. All that is necessary is care and watchfulness; the attention every employer has a right to demand, and the knowledge that should imperatively be required. To the good printer, one who honors the craft and looks beyond and above than merely his daily wages, there is nothing more obnoxious than the disgraceful use of ink, the too much and too little. Errors of type, even if glaring, will escape eyes if not severely critical; the excess or lack of color, never. The most casual reader notices and comments upon it sneeringly; the "bad dog" as applied to one office, is very soon enlarged into "mad dog," and applied indiscriminately to all; the many made to suffer for the sins of the few.

"Color blind" might with propriety be applied to many who boast of the name of pressmen, even in large offices with all that is perfect in machinery. Minor concerns are not expected (why not we cannot understand) to turn out as good specimens of printing. They have many excuses behind which to shield themselves, but want of uniform color admits of none. To secure this is just as easy, in fact, more so, than justification or register. Yet papers come to every office (exchanges) spotted as Joseph's coat and looking as if the "devil" had just returned from a circus and was endeavoring to reproduce the costume of the clown. To a certain extent at least, the greater the better, every pressman should be an artist in white and black, though, strictly speaking, they are revealed by solar beams through the prism. To the printers they are so known, and black is the most essential of all, and his eyes should be so trained as to instantly recognize the proper shade, heavy or light, to produce the most tasteful and pleasing impression. In fact, common sense ought to teach every man this, and attention to the press (of pressman and feeder) will prevent the "zebra" effects now so common.

Color is a matter in which the best pressmen take great pride. Page after page, signature after signature, show no variation. From first to last the printed volume

is of one hue, a pleasure to examine and creditable to the worker. Why should it not be so with all? Want of care is the only answer that can be given, and the excuse is worse than the offense.

A TRUE HERO.

IT was a "newspaper man" who, while fighting for life amid whirling sand that stung and blinded as so many needles; amid the shrieking of winds, the roaring of water, the wrecking of stout ships and the going down to death of brave men, prepared and sent the wonderful account of the Samoan disaster. Apparently no civilian or sailor was equal to such an undertaking, and the nerve, brain and daring required challenges belief. Even more, the modesty of the man—only twenty-eight—stamps him with the signet of greatness. Not one word is to be found in type of what he personally passed through, of the danger to life and limb, the privations from even the most ordinary comfort, the mental and physical suffering that would have broken down one of less brave heart and iron resolution. Many were the heroes during that terrible elemental war, but none can claim more of honor than the special agent of the associated press. Who was he? Set in "display" type and print in gold the name of JOHN P. DUNNING.

WHICH IS CORRECT?

A CORRESPONDENT in Brockport, New York, under date of May 9, writes as follows:

In looking over THE INLAND PRINTER and the various other trade journals, I see considerable fault found with the way various foundries "put up" their fonts, and also considerable is said in the various catalogues received as to how each "put up" their type, and each one claiming theirs the best scale. Just reading this calls to mind the way my new font of — script is put up. It was bought for a 6-A 40-a font. There are 6 A's, and the rest of the font at the rate of only 3 A's. There are two kinds of A's, 3 of each kind. There are 40 lower-case a's and e's, 22 d's, 18 c's, 24 n's, and at this rate all the way through, except h's. This letter was so notoriously short that I had to send for extras, and now have 61 of them. The worst of the whole business was, there were a big lot of points sent with the cap font. Who ever heard of anyone using points with a cap font of *script*. There are 50 periods (.), 48 commas (,), 15 semi-colons (;), 13 colons (:), 16 exclamations (!), and 10 interrogation points (?), making 152 points for a 50-a font. Just think of it, printers! we who have to pay \$3 a pound for this type, receiving as many periods or commas as a's or e's; almost as many of any other point as c, d, o, n, s and g. Is this not imposing on us? But what can we do about it?

The grievance complained of is of too common occurrence, and one which has given general dissatisfaction. We think our correspondent has just cause for grumbling, and that his objections are well taken. Investigation proves that despite all which has been said to the contrary, a uniform system does not prevail among the several typefounders, even when putting up virtually the same fonts, as the following tables prove. Table A is the scheme for job fonts adopted by MacKellar, Smiths & Jordan, Marder, Luse & Co., etc.; table B is the scheme adopted by James Connors' Sons and others; and table C that adopted by Farmer, Little & Co.

“TRUSTS.”

THE tendency of capital, when governed only by unscrupulous greed of accumulation is to form combinations, and by monopoly largely increase profits. The sole end and aim is money—the how acquired being of little moment. But neither the motive, the working, nor the results are within the scope of this article. Yet there is one species of “trust” in which we are largely interested, though more for others than ourselves. We refer to the habit of doing work upon credit, of furnishing paper, ink, composition, presswork, etc., and being compelled to wait an indefinite period for payment therefor.

“Cash in advance” may not, except in extreme cases, be properly demanded; but, as a general rule, it can, and should be, on the completion and delivery of the order. In many of our larger cities it has become the rule to require all rents in advance, leaving the tenant to take the risk of fire or of the building becoming otherwise untenable. With equal justice the printer may insist upon payment for labor and material before the security therefor passes out of his hands. Equally with the landlord he suffers from loss, and generally is less able to sustain it.

Business transacted on a cash basis is always a safe one. There are no “lame ducks” to be looked after, and when the labor of the day is finished, one knows just where he stands financially. For cash everyone can afford to work cheaper than if not knowing when payment will be received; for cash stock can be purchased cheaper, there being no interest to pay. The margin upon printing, with the present intense competition, is not great at best; is altogether too small to equalize losses, and the necessity for self-protection is forced upon all engaged in it. Consequently, the rule of cash should be imperative (so far as practicable), and its inauguration will prove beneficial alike to him who buys and him who sells.

We trust, and in the near future, to see this system the absolute basis for all transactions connected with the printing business. It may work discomfort in some cases in the beginning, but the end will more than justify the means. Credit has been the ruin of many an office; cash never; credit is a seductive pit-hole; cash the firmest of rocks upon which business can be built. Union will easily accomplish the much to be desired results, and the day when the end is obtained will prove a bright one for the craft.

THE GREELEY MONUMENT.

AFTER seventeen years of neglect it is now an assured fact that Horace Greeley will have a public monument in City Hall Park, New York. A formal contract has been entered into with Alexander Doyle, the sculptor, for the production of a handsome and suitable memorial, to be finished within three years.

Soon after the decease of Horace Greeley, in 1872, energetic action was started to collect means to erect a monument to perpetuate the great printer's memory. A very influential committee was formed to carry out the movement, comprising many representative names. W. W. Niles was president, and other members were Whitelaw Reid, Samuel J. Tilden, P. T. Barnum, Clarkson N. Potter and John Bigelow. The first appeals of the committee received a lively response, and several thousand dollars were subscribed. Besides this, \$4,000 were contributed through the New York *Tribune*, which are now in the hands of Mr. Reid, subject to call. Two years ago, interest in the project was revived by the Horace Greeley Post, G. A. R. This, in combination with New York Typographical Union, No. 6, made a new committee, with George N. Moore as president and Hon. Amos J. Cummings as secretary. The two committees are now earnestly working in conjunction for the success of the project. Ten thousand dollars have already been secured, and the desired amount, \$25,000, is certain to be obtained. An earnest appeal has been dispatched to all the typographical organizations throughout the United States, and it is the desire of the committees that no printers' association in the country be omitted in the contributions. It is desired that it be a national tribute.

In referring to the project, the sculptor, Mr. Doyle, said: "The sculptor's aim will be primarily to produce a portrait statue. The figure will be represented seated in a large arm chair, one foot resting on a hassock, the left arm placed negligently upon the left leg, while the right arm holds an open newspaper. The statue will be 18 feet high. It will be in standard bronze, and the pedestal will be of granite. The location selected will be opposite the Tribune building, overlooking the scenes of his life work. The statue is to be ready for unvailing within three years' time." The treasurer of the committee reports the monument an assured success, and it is certainly gratifying to know that the printers throughout the country are playing an important part in making it a success.

LAID OVER.

THE July issue of THE INLAND PRINTER will contain a continuation of the series of illustrated articles on wood versus photo engraving, which have recently appeared in its columns, by Mr. Thomas W. Elliott. Also, a number of articles on practical subjects from the pen of practical printers, as well as an interesting synopsis of the proceedings of the thirty-seventh annual session of the International Typographical Union.

"SCHEMES."

THE following address on "Schemes" was read by Mr. H. Henrichsen, of Quincy, before the Illinois Press Association, at Danville, February 13, 1889. It will well repay perusal:

When the assignment of this article was made a discussion arose over its title. The words fakes, snaps, and schemes were suggested by different members of the committee, the last being finally accepted as being the least objectional in sound, and being broadest in its meaning. Its broadness makes it somewhat difficult to handle, for it may be understood to cover the whole field of newspaper business. Even were the ability at hand it would be impossible in a single article to cover the ground contemplated by all, and in the present instance the subject will be narrowed down to a relation of personal experiences in planning and executing schemes outside of the usual order for increasing the advertising patronage of a newspaper, and incidentally of increasing its circulation.

There may be something egotistical in this style of article, and it may be offensive on that account, but the writer feels that if his article is to be productive of any good to the members of the association he must not attempt theoretical generalization, except as based upon his personal experience, and a relation of this experience is necessary to prove the correctness of his theories.

With this explanation of the object of the article I will at once take up my subject of schemes.

Several years ago when I had just taken charge of the Quincy *Herald* my attention was attracted to newspaper schemes in the following manner: The plans for the Soldiers' Home in that city had been accepted, and through the kindness of the architect I was able to secure drawings, from which I had a cut made which I published. It attracted some attention, and gained for my paper some compliments; it may have added a few names to the subscription list, and so on, but the effect was not extraordinary. A few days after the appearance of the cut, a man called to borrow it, saying he wanted to use it in a directory. Supposing he referred to a city directory, I loaned it to him and a few days later was surprised to see the picture on a card surrounded by advertisements of merchants, most of whom had declined to patronize my paper as an advertising medium. Of course, I was provoked, but I held my temper and when the faker returned the cut I was in a good humor and drew out of him his method of doing business.

"You will notice," he said, "that my patrons do not advertise in the newspapers, so there is no competition between you and me. When I get up a card I make my plan and go around soliciting advertising, promising to put up one of them in each of the prominent places in the city and in all the neighboring villages. Say I get fifty ads, I put up a card in the business house of each advertiser and in a few prominent places in the city; then I distribute a few among the neighboring villages, and the job is done. Two hundred cards are enough if I propose to work the town again, otherwise a card for each advertiser is sufficient. I get a price they would not pay you for the same sized card in a newspaper of two thousand circulation, and they seem perfectly satisfied."

I gathered as many more details as possible, and determined to go into the fake business myself. I soon had an opportunity to make a trial of my plan. A new public building, I think it was the postoffice, was completed, and I procured a cut of it. I made a dummy the size of a page of the paper, put the cut in the center and laid off the remainder in squares for ads. My advertising solicitor taking this dummy visited such business men who had refused to advertise in the usual manner, and the result was that every square was taken at a good price. In addition to this, many of them ordered papers to send to their friends.

This was a scheme and it proved profitable, while the publication of the first cut, which was enterprise, brought no perceptible profit.

I laid plans for another scheme. A new city hall, a very fine building, to cost \$50,000, was to be built. I stood in with the

architect, and secured drawings from which I had a cut made of the proposed building. This was done quietly, so as to prevent my plans being overturned by the opposition papers. It may be mentioned that the new city hall had been a subject of municipal dispute for some time, and the people were greatly interested in it. On the day the plans of the building were accepted I had a fine proof taken of my cut and started out to work my scheme. I would enter a place of business, exhibit my picture and ask, "What do you think of our new city hall?" Of course, it was admired, for it was a good picture, and few people had any idea before how the building would appear. After it was admired I would say, "We are going to print that in the *Herald*, Sunday morning, don't you want a few of the papers to send to friends to show how our city is growing?" Certainly they did. Some only wanted three or four, and some wanted a hundred, but not one man to whom it was shown refused to take some. Following me came my advertising solicitor, suggesting that it would be a good issue in which to advertise, as a large number of extras had already been ordered, and that the paper would attract great attention. The argument was irresistible, and the result was that in two days' time advertisements to the value of nearly three hundred dollars were obtained, while the extra papers sold paid for the extra expense of the issue, including the cost of the cut. To have published the cut without saying anything about it in advance, would have been newspaper enterprise, but there would have been no profit. Publishing it as I did it was a newspaper scheme, and was extremely profitable.

I followed out these schemes, using as a groundwork different public buildings as they were erected, thus utilizing the new hotel, the public library, churches, etc. They did not follow each other rapidly, but were executed months apart. In the intervals I had other schemes at work. A balloon ascension and parachute jump was to be made in our city by the famous Baldwin. I had a page of balloons and a page of parachutes made, each balloon and parachute mortised to receive an ad. The spaces sold readily. This scheme was gotten up at a small expense. My advertiser, Mr. Hynes, is a very fair draftsman, and on a cherry board he drew the outlines of the balloons and parachutes. A wood carver for \$3 cut the surplus wood away from the lines as drawn and sawed out the mortises; the board was dressed to make it the size of a page and type-high and the job was done, except selling the ads in the mortises. I followed up this lead, utilizing every holiday with our cherry boards. We had our Christmas bells and New Year's cards; our page of hatchets for Washington's birthday, and flags for Fourth of July, turkeys for Thanksgiving, a page of eggs for Easter and hearts for St. Valentines. Men who would not advertise in the usual manner were eager to purchase places in these special pages, and paid fair prices for them.

Right here I must mention the enterprise of a contemporary in a neighboring city. He seized one of the pages I had published, had it copyrighted, and offered to sell me the right to use it the next year. I declined for I aim never to use the same scheme twice.

Besides schemes of the kind mentioned, I used others in the intervals. A description of one of these will be sufficient to show the process. I determined to publish a list of the pupils in the public schools, together with the names of the teachers, description of schoolhouses, cuts of the same, and a general review of the city school system. It was a pretty large undertaking. The city contains ten public school buildings, fifty or sixty teachers and between twenty-five hundred and three thousand pupils. The school board had cuts of the buildings which they were ready to loan, so this expense was provided for. Two trusty reporters visited the schools during school hours and obtained the necessary information, including a list of pupils from each teacher. The teachers and pupils were informed of the object and, of course, the children carried the news home, and the whole city was compelled to talk about the *Herald* and its enterprise. I called it a scheme. It was announced in the different schools that each pupil would receive a copy of the paper, and that all their names would be in it. This was during the dull season for advertising, but merchants

when approached to advertise in the school issue consented readily, for they had learned from their own children and from common report that the paper would go into nearly every house in the city and would be examined with interest. The expense of getting out this edition was considerable, but the extra advertising yielded a fair profit, besides which an increase of circulation was noted, consequent upon getting the paper in a favorable light before people who had never yet seen it.

Over a year ago I inaugurated my largest scheme and carried it to a successful completion; but the labor connected with it still makes me tired through recollection. I refer to the bird's-eye view of Quincy, which was published last May. For some time we had contemplated publishing a view of the city as a supplement to the *Herald*, simply as a feat of newspaper enterprise, but having talked the matter over it was determined to make a scheme of it. The plans were all carefully laid and the magnitude and risk of the undertaking as contemplated was appalling, but we could not give it up. As in all other schemes we had handled, I determined that the work should be good. Contracts for making the sketch and plate were entered into with a Chicago engraving house and the artist was sent down and set to work in December, 1887. He sketched the city house by house, block by block, and street by street. It took him about three months to complete his first rough sketches, and he found some difficulty in putting them together, so as to make a symmetrical picture. He wanted a general view from an elevation, and as an elevation was not at hand we determined to provide one. Baldwin, the aeronaut, was engaged to take the artist up in a balloon held captive by a rope, and although it was almost midwinter and very cold this difficult feat was successfully accomplished. Up to this time the scheme had been kept a secret, and none of the other papers had gotten onto it, but I judged that the occasion of the balloon ascension was a good opportunity to spring it on the public. Of course, the ascension in such weather attracted attention and the whole city was out to see it. After several unsuccessful attempts, the balloon carrying the artist rose to a height of five hundred feet, where it was held until he had made such notes as he wished. I am not an artist and do not know that it was absolutely necessary for him to make that ascension, but I was glad of the opportunity to advertise my scheme. The other papers of the city had to notice the event, and, of course, my own paper puffed it up in the most approved fashion. For the next week our office was thronged with people desiring to see the picture; but they were refused, as the artist could not be disturbed. They were informed that the picture would be on exhibition at the room of the Young Men's Business Association at the next monthly meeting, where all could see it, and this fact was mentioned in the paper.

At the meeting, the picture, far from complete, but still showing what it would be, was admired by all, and being called upon to explain its object, I did so, saying that it was intended as a supplement to a mammoth edition of the paper, which would consist of twenty-four pages, or 30 by 40 inches in size. The association at once passed a resolution to purchase twenty thousand copies of the bird's-eye issue for distribution in the East as an advertisement for the city. This was the first successful step, but much remained to be done. While the work on the sketch went on, solicitors scoured the city for orders for extra papers and advertisements. We promised an issue of fifty thousand copies, and the twenty thousand ordered by the Business Association proved that our promise was not wild. Nearly everyone took papers, and nearly everyone took advertising; it was the popular thing to do. The city contains about two hundred manufactories, fifty or sixty wholesale houses, and three or four hundred retail establishments of all sizes. Over five hundred of these took advertisements of some kind, and over twenty thousand more papers were sold to firms and individuals. Every possible device in advertising was used — the ordinary local, the write-up, and the display, while a handsome sum was realized from merchants and others by putting their signs on their buildings in the picture. We even put bill-boards in the picture and sold them. In short, we threw out a drag net and pulled in everything from the whale to the minnow. While this was going on,

the work of preparing the material for the paper was progressing. Special writers were employed to produce a short history of the city, a description of its industries and advantages, with numerous articles intended to convey a proper impression of its importance as a city. Extra printers were engaged, who put this matter in type as fast as written, and as fast as a page was completed it was sent to the pressroom. The picture was finally completed and turned over to the engravers, who, after several failures, produced an excellent plate, ready for the press. The work in the different departments had gone steadily forward, and were completed nearly at the same time, so that by the last of May, nearly six months from the inception of the scheme, the press was at work on the last side of the paper. The supervision of all this work, together with the labor of getting out a good paper every day, is what makes me tired up to this time. Fortunately, our supply of type was ample, having recently purchased a new dress, but our press facilities were not equal to the job. We engaged the presses of two other offices, and by keeping them and our own running constantly, when not otherwise engaged, completed the presswork. We issued, as we promised, fifty thousand copies; seven impressions to each copy made three hundred and fifty thousand impressions. We sold about all our papers, and secured all the advertising there was to spare. The total cost of the enterprise was about \$5,000, and the receipts were about \$7,500, so the profit was about \$2,500—little enough, when the labor and risk are considered.

Although it may make this article too long, I cannot forego mentioning another scheme which I have always regarded as a masterpiece. In Quincy there are five daily papers, two morning, two evening, and one German evening paper. Besides this, there are a dozen or so weeklies, monthlies, etc. Mine is the morning democratic paper, and the *Whig* is the morning republican paper, so, of course, we are in direct opposition. However, we are on excellent terms, and we made an agreement to solicit advertising in company. We drew up a paper for signature, in which the proposed signers agreed to advertise in both the *Whig* and *Herald* \$50 worth for one year, and we divided a page in each paper into two inch squares, each of which was to be sold for \$50, or \$100 in both papers. Then, arm in arm, we visited the manufacturers and jobbers who were not in the habit of advertising regularly, and showed them the advantage of advertising in a solid block in each of the principal papers. We did not pretend that it would help them individually, but we pointed out the advantage it would be to the city if a full page of such business cards from representative business houses were thrown broadcast on the world. Some signed without hesitation; others had to be talked to for hours; but we finally filled our pages, having secured forty-eight names. Our arguments may have had some effect, but I am inclined to think that our success was due mainly to the novelty of the scheme. It was a new thing to see opposition editors working so harmoniously together, and it created a good feeling toward us. It took about three weeks to secure these ads, and they brought us \$2,400 apiece, from firms not in the habit of advertising.

I could continue for hours, perhaps, with a relation of personal experiences, but enough has been told to show what I know about schemes.

Now, then, the following questions arise:

Is the scheme legitimate?

Is it profitable?

I would answer yes to both questions. I regard the scheme as perfectly legitimate, provided, always, you give the advertiser what you promise. To do otherwise is legitimate in no business. Many men have many ideas and few ideas are alike. In nothing do men differ more than in their ideas on advertising, and the shrewd newspaper man should be prepared to satisfy all tastes in that direction as he does in matters of news. The scheme furnishes certain business men an opportunity to get before the public in the way they like best, and it also teaches them the value of advertising as a regular thing.

As to the second question, my experience leads me to believe that the schemes are profitable if honestly and judiciously handled.

The scheme may be called newspaper enterprise turned to immediate profit. Not only is there an immediate return in dollars, but the paper gets the vague benefit always derived from being enterprising. Of course, they can be worked to excess, and thus be made to interfere with regular business, and I would advise everyone to have some excuse for bringing a scheme before the people, otherwise it will fall flat. I would also advise perfect candor with the advertiser. It is not wise to give your business secrets away in advance, but I have always found it advantageous to talk freely with my patrons about the scheme after it was executed. To tell them how you did it gives them an interest in the next one, and you get many a valuable suggestion from them which may be used in the future.

I have always adopted this open course, otherwise this article would not have been written. This reminds me that this article is in itself an enterprise, not a scheme, for there is no immediate profit in it. It is intended to advertise the city of Quincy, and I believe it has proved a success. I have placed upon your minds an impression you cannot get rid of. You will think of Quincy as a city containing magnificent public buildings, numerous factories and business houses, a noble school system, a liberal class of business men, and, above all, enterprising newspapers. I assure you that the impression is a correct one.

Written for THE INLAND PRINTER.

REMINISCENCES.

BY JAMES BARNET.

THERE are few compositors or pressmen who have been half a century at the printing business but can say that they have worked on Sunday, however detrimental to their conscience it might feel at the time. Extra work to a steady employé is not desirable, and the few instances in which I have observed compositors employed seven days in a week, I came to the conclusion that it did not pay the man nor his employer. These instances might, however, have been exceptional, but they were none the less real.

To help along a work on which were two companionships in Savill & Edwards' office, London, the foreman, Mr. Lennurd, who said little, but did much, ordered the hands to work on a Sunday. Each one received half a crown over what he managed to set up, as extra pay. About ten o'clock, the foreman, on his way to church, called at the office to see who was there, according to order. He made his rounds, and departed for the day. The most of the jous were not in the mood for working, and their sticks were often lying on the case, while the owners were resting on the crossbars of their frames below. At the end of the week the bills were no greater than before, excepting the extra pay, so that actually six days' work was only done in the seven. This was not repeated while I was there.

During the stock excitement in 1845, when Hudson was railway king, I heard it stated that in a certain office near the board of trade (Nichols, I think), a jour had not taken off his clothes and gone to bed for two weeks, and at the finish he received £60 sterling, or \$300, as his pay. Rumor also added that it did not take him any longer to spend this large handful of gold. Only one day, along with three others, did I have the opportunity of earning \$5 on fat railroad work. The reception of bills by the parliamentary committee ceased on a Sunday at noon, and to make a few corrections, the four of us were ordered to come on Sunday morning. In two hours the job was finished, and six copies struck off. Seven and sixpence to each was added to our bills at the end of the week, thus showing that correcting fat work paid fully more than the composition, even on Sunday. There was a necessity to have the two hours' work done on the railroad bill; but it broke the day of rest, and the beneficial result of the extra pay was unobservedly frittered away.

In Chicago I applied for work to a foreman of a job office in which the *Prairie Farmer* had been given to print. He said he could place me on the paper if I wished. "All right," I replied; "I'm not particular." He then "handed" me over to the one

in charge of the paper, who gave me cases and copy. Solid bourgeois, at 30 cents a thousand ems, was the pay at the time. For a book and job hand to set up seven thousand ems in eight hours I thought was pretty fair; at least, that was the best I could do. At the end of the week, a little over \$12 was made. The foreman of the paper then came to me on Saturday night, after being paid, and asked if I would come tomorrow, as they were behind in the day of publication. The others were to be on hand. He also stated that as soon as the proper day was reached no more Sunday work would be required. "Very well," I replied, "I shall help you out until the day is reached, but no more after that." In three or four weeks, the publication day was attained, and I looked forward to a day of rest with feelings of satisfaction. On the Saturday evening the paper foreman asked me if I was coming tomorrow, as the others had agreed to come. "Certainly not," I replied, "you know the bargain that was made about that when I commenced work on the paper. I see no necessity, nor is there any, for this stupid arrangement of passing time on Sunday in the printing office. I'm not a nigger, and I will not come for you nor for anyone else." These might not be the exact words I said, but it is the purport of them. The word stupid may have been left out. On the Monday morning on reaching the office and getting to my case, I noticed a slip of paper with a few lines written thereon, such as "your services are no longer required." To be summarily disposed of in this manner for not working on Sunday, with no extra attached, was not agreeable, so I took the paper to the foreman who hired me and asked him to clear it up for me; but he did not seem to be man enough to do it, however religious he may have felt on the subject. All the parties in authority I asked if they knew anything about the writing, and each and all denied the responsibility as well as the implication. It was an effectual stopper on my progress, for I could get no more copy. Disgusted I left, after shaking the dust from off my feet. In that office men went to work on Sunday for no other purpose than that they might spend a few hours during the week, in contravention of the Typographical Union rules. Whether the practice continued, or was dropped, I forget, but I know that the subject did not come before the union. With me, it was as one door closed another opened, and I was the gainer of a steady sit at jobwork.

The matter of Sunday meetings of the union instead of Saturday night began to be agitated and discussed. A. C. Cameron, John M. Farquhar, Sam Beach and others, besides myself, had something to say in keeping Sunday as a day of rest, and when the vote was taken we were triumphant.

THE ORIGIN OF PAPER MAKING IN AMERICA.

PREPARING TO CELEBRATE THE BI-CENTENNIAL OF THE EVENT IN 1890.

THE first paper mill in America was built in 1690 and went into operation in September of that year. Wilhelm Rittenhouse introduced paper making into the country, and he, in company with William Bradford, the printer; Samuel Carpenter, merchant; Thomas Tressa, iron manufacturer; Nicholas Pearse and others, representing various business interests, erected a paper mill and started manufacturing.

The establishment, which was constructed of stone, was located on the bank of the Wissahickon creek, near Chestnut Hill, Pennsylvania, the district now being in the twenty-second ward of Philadelphia. The dismantled and ruined old mill can still be seen, and what remains of the building has been kept intact by Henry H. Houston, the present owner of the property. The dam that furnished the water for power to propel the wheels in the mill is also standing.

Hon. Horatio Gates Jones, of Philadelphia, is said to own the only complete historical account of the industry. The paper on which it is written was made by the parent company. The volume is handsomely bound, while the title page is beautifully

embellished with the Rittenhouse mark—a three-leafed clover—and the subjoined quotation from Shakespeare's "Henry VI":

"Contrary to the King, his crown and dignity,
Thou hast built a paper mill."

Ex-Senator Jones is actively engaged in gathering the necessary data for a truthful and interesting narrative of paper making in America from its commencement to this period. The information already collected about the important industry would make a large and valuable work, but Mr. Jones will not publish the book until it is complete and authentic in every feature and detail.

A movement has been projected to celebrate the bi-centennial of the building of America's first paper mill in September, 1890. George W. Childs, the publisher of the Philadelphia *Ledger*, and Mr. Jones have had several conferences in reference to the movement, and while the arrangements for celebrating the memorable event in America's industrial history are merely outlined, it can be definitely stated that the inception of the industry will be appropriately and creditably observed. It is intended, in the first place, to form an association of paper makers, printers, publishers, newspaper men and others. On the day of the proposed celebration a historical sketch will be read and an oration will be delivered by some representative journalist, after which other interesting exercises, showing the progress of the paper manufacturing interest in America, will follow.

PRINTING ON GLAZED PAPER.

The *Papier Zeitung* has a communication with regard to printing on glazed papers which contains some useful information. Everyone who has had to do printing on highly glazed printing paper will have encountered difficulties with regard to the adhesiveness of the ink, as well as in obtaining a clear imprint that retains the glaze. Quite contrary to the general opinion that a very good black ink should be used for such papers, the writer has arrived at satisfactory results by other means. Let us first consider how to obtain a good black print on calendered orange paper. The common printing ink will not appear black to the eye on such paper, but rather green; in the next place it does not adhere to orange, but can be easily rubbed off after drying. His recipe for an ink that will suit every requirement is as follows: 500 grams Prussian blue powdered in varnish, 50 grams German black, 100 grams strong varnish, 200 grams linseed oil, 50 grams copal lac, 50 grams drying powder. To get a fine, handsome black on calendered carmine, use a mixture of 500 grams German black, 500 grams powdered Prussian blue, 200 grams copal lac, 100 grams linseed oil. It is especially hard to obtain an adhesive print on glazed chamois paper, as there is always a coating of fine dust on this kind of paper, which may arise from too fatty a coloring or too hot glazing. Jahn recommends the following: 500 grams German black, 200 grams Prussian blue, 100 linseed oil, 100 grams copal lac, 50 grams dryer. To obtain a fine red on the same paper, Jahn uses simply geranium red (iodide of mercury). To obtain a good black on glazed dark blue paper, the following mixture will be found to answer the purpose: 500 grams of Prussian blue, 250 grams German black, 100 grams copal lac, 50 grams drying powder. If common printing ink is used it will appear quite pale. A sample of glazed light yellow, with black and red printing seemed especially successful. The red color was obtained by geranium lac, while the black was composed as follows: 500 grams German black, 500 grams Prussian blue, 200 grams copal lac, 50 grams drying powder, and 100 grams linseed oil. The quantity of the latter cannot, however, be exactly determined, and in printing two colors on glazed paper particular attention must be paid to the relation of one color to another. The colors must be very weak, especially in printing tickets, where as many as possible must be printed from the same sheet. A very deep black on glazed blue paper was obtained from the following: 250 grams German black, 500 grams Prussian blue, 100 grams copal lac. A splendid bronze print on colored papers was obtained by having a first print with equal parts of mordant and terra de sienna, $\frac{1}{3}$ linseed oil, and $\frac{1}{6}$ copal lac.

Written for THE INLAND PRINTER.

JOHN HENRY—PRINTER.

BY R. P. YORKSTON.

THE announcement in the *New York World* of May 14 that John Henry had died, on the day previous, conveyed the intelligence to us that one of the greatest typographers the art of printing ever knew had quietly passed over the silent river to that bourne from whence no traveler returns. Only a few noticed the simple announcement. Only a few paid their last respects to the mortal remains of an immortal spirit that, for years, had been toiling for the elevation of his fellow craftsmen, when even the gray-beards of the present were but pupils sitting at the feet of this solon of the printer's art!

John Henry dead? Sorrowful times! John Henry dead? Great men must die, and the roll is still unrolled; but no name, however great, can ever be dearer to those who knew him than that of this humble worker who has just passed away. A noble spirit, whose every aim, whose every ambition was for the advancement of a profession and its votaries with which his lot through life had been cast. Great men have died on every branch of the tree of life, but very few have passed away so single-minded, so pure in thought, with such breadth of humanity, or with a heart so large and open for those who from frailty or weakness were seeking succor or comfort by the wayside.

John Henry was born in 1818, and was of gentle birth. His father was a gentleman of scholarly attainments—the son of a noted surgeon of the British navy—and de-

signed his son John for the ministry. At the age, however, of fifteen, John Henry disappointed his father's wishes and desires by going into a printing office. The church lost a neophyte, the art of printing acquired a disciple who was destined to play no small part in its history.

Between the ages of fifteen and twenty-five years nothing especially striking marked the career of John Henry other than that which development does for the young. In 1843 we find him as a job printer in New York, making every effort to improve the then existing methods for producing jobwork. This decade was the parting one between the clumsy work of the hand-press, the gothic display letters of the ancients and the dawn of the platen job machine and the ornate letters of the present. New York was not ready for reformers in typography. So, after a few years of

unrequited toil, the artist printer tried Philadelphia. His efforts in the latter city received little or no recognition. Disgusted, therefore, with the lack of appreciation, he went back to New York, determined to abandon job printing.

The year 1851 found John Henry launching a new journal on the sea of literature from No. 18 Spruce street, New York. It was called the *Railway and Steamboat Guide*, and was the first publication of the kind ever issued in this or any other country. It was designed and carried to completion by him, but the financial aid was supplied by Charles Parker, a gentleman interested in railway iron, etc. The success of this venture was immediate and pronounced, and Mr. Parker amassed a snug sum from its publi-

cation. He forgot, however, in his prosperity, the skillful printer who had conceived and developed the journal. Henry severed his connection with Parker in 1856. Not long after, Parker sold the *Guide* to a Mr. Dinsmore, and by him the first railway and steamboat directory was merged in what was afterward known as *Appleton's Railway Guide*.

The next and most important enterprise in which John Henry embarked was in the publication of a magazine devoted to the interests of printers and printing. It was called the *Printer*, and, so far as we can learn, was the first publication of the kind ever issued. Mr. Henry's acquaintance with the wants of the trade—the press makers and kindred industries; the great faith and confidence these manufacturers had in the projecture of the journal insured its success from the start, which began in 1858. Probably no paper ever flourished for a space as did "John Henry's *Printer*," as it was

familiarly called. The magnetism and scholarly attainments of its editor drew about him a galaxy of the brightest literary and scientific stars that ever scintillated on a venture of the kind. During its first two years, Horace Greeley always found time to contribute something of value to each issue. Dr. J. W. Francis, one of the most eminent surgeons of the time and a graduate from a printing office, wrote regularly for it. Dr. Dolby, an eminent physician, writer and old-time printer, also contributed. Bright, erratic, but enthusiastic Henry Clay Reynolds sent in his charming morsels to swell the feast, while the entrées came from such wits as Clancy, Clapp, Halpine and others. Laurenz Wallazz was associate editor, and a brilliant young man he was. Harry Earnes set type there. Thomas H. Senior was canvasser for subscriptions. R. P. Yorkston and Thomas McIlroy

ran the presses. "Bob" Menamin, of Philadelphia and *Printer's Circular* fame, learned the tricks of the trade in that office. The fight between the flat bed and platen system for producing fine work, represented by the Isaac Adams Company, of Boston, and the cylindrical system represented by R. Hoe & Co., of New York, was brought to an amicable conclusion by the purchase of the Adams patents. This important consolidation was conceived and carried out by "John Henry's *Printer*," aided by George P. Gordon. In that office, the first book press manufactured by the Ruggles Company, of Boston, was erected. In the *Printer*, Charles Potter, Jr., made his first public announcement that he was in the market with a printing press. Andrew Campbell first announced his advent as a manufacturer in the same paper. As all roads were supposed to lead to Rome, so all interested in the art of printing, whether as buyers or sellers, went toward the *Printer* office. In addition, therefore, to its value as a publication, its warerooms became a grand market place between the manufacturer of printers' tools, machinery and type, and the users of the same.

In 1860 Mr. Henry took into partnership Mr. John Greason. The fame of the *Printer* went upward and onward. The war of 1861-65 did not materially impair its remarkable prosperity, but a fatal mistake was made in 1865 when the well-remembered strike of Typographical Union No. 6 took place. From the fray the union emerged weakened, disfigured, beaten and with only its pluck left. Horace Greeley, who had been honored by the presidency of No. 6 upon its organization, was compelled to take issue against his fellow craftsmen on the ground of "presumptuous and arbitrary measures," to use his own forceful language. John Henry took up the quarrel of the printers and advocated their cause with all the warmth of his nature. Thus two almost life-long friends became estranged; one a great editor, loving the art from which his greatness sprang; the other a great printer and scholar also loving the art for itself alone. It was the old story, "bitter contests engender bitter hates."

The close of the fight between union No. 6 and the employing printers left the *Printer* in a weakened condition. A difference of opinion between its editor and his partner, Mr. John Greason, as to the policy of the paper, resulted in a dissolution of the firm, and John Henry retired. With his retirement, and the injuries it received in the battle, the *Printer* never recovered its former prestige, although it lingered for a few years.

In 1866 Mr. Henry was employed by James Conner's Sons, the well-known typefounders of New York, to conduct a magazine in which they could exhibit their new faces of letters. They gave him full authority to spare no expense in its publication. The result was the *Typographic Messenger*, which, from its beautiful and artistic appearance, was hailed with delight by the fraternity. It displayed all the matured skill and careful work of a great master, and even at this date it would not appear to disadvantage alongside of the very beautiful periodicals devoted to the "art preservative," etc., and published in this advanced age.

For two or three years before Mr. Henry became connected with the *Typographic Messenger*, he had become a convert to the cylindrical system for producing fine work. Hoe & Co., A. B. Taylor & Co., and other builders of cylinder presses had been approached by him in relation to a better or more complete distribution of ink for artistic work. They, however, turned a deaf ear to his entreaties. Determined to do what others would not, he severed his connection with the *Messenger* in 1868, and began the manufacture of printing presses, in which he embodied his ideas of distribution. Strange as it may appear, the printers were not prepared for anything out of the common, and the excellencies of the "Henry" press were virtually the most objectionable features to the printers. The roller bills were too high to suit the owners. The pressmen objected to the adjustment of so many rollers, and, worst of all, the feeder boys were opposed to the machine on account of having so many rollers to wash.

A great many presses were sold, however, and the builder and improver soon found a partner with ample means to push the enterprise. For a short time the future looked bright, but in a

moment of anger Mr. Henry and his partner quarreled over a trivial affair, and a dissolution took place, Mr. Henry retiring with the snug sum of \$25,000 for his three years' service in the cause of progress.

The "Henry" press, after its inventor's retirement, went through many vicissitudes, and at last fell into the hands of a mechanic named Whitlock, who, from the foundation left him, evolved the very popular "Whitlock" press of today.

After the connection with the "Henry" press was severed, its inventor passed some years of "innocuous desuetude" free from the cares and toils of business. From 1874 till the time of his death he appeared only at rare intervals on the marts of trade, and then only to sell some device which his fertile brain had evolved. Among the many things which John Henry devised, very few are known individually as his. His system of ink distribution now in universal use by nearly all the makers of presses, has become common property. His front delivery for taking sheets from the cylinder is now the property of C. B. Cottrell & Sons, who purchased Henry's patents in order to complete their own delivery. His proof press is the only invention that bears his name, although his handiwork is visible to those who know the facts, on many of the tools used by the printer of today.

For a short time Mr. Henry published the most beautiful of all his many artistic journals, which was called the *Chromatic Art Printer*. This periodical made its appearance in 1879 and attracted much attention, but it did not live very long, and with its death the active life of John Henry, it may be said, ceased.

Mr. Henry was not an inventor. He was a great printer and designer, and as such he could grasp possibilities and situations which an inventor would overlook. The worker in iron or the mathematician wielding the compass and square rarely, if ever, comes from the printing office. The composing room is the incubator of the ideal, the pressroom the mother of cold, stern fact. We cannot look for invention to breed in the composing room, nor would conception be fostered in the pressroom. Invention is an education. There is a germ of device in every animate thing. Humanity has this germ to a great degree, but it can only be developed by warmth. The machine shop and drawing room give development where the printing office chills and kills germination. Hoe, Potter, Campbell, Cottrell, and others do the inventing for the printers, and have nurseries for that purpose. A printer suggests. The inventor (?) completes the suggestion by producing the fact. Printers, therefore, have very little time to suggest, and be referred to the inventor of his house, as no glory awaiteth him. John Henry suggested until he grew weary and then branched for himself, and thus he became an inventor without really knowing that he was running toward such an end. The germ sprouted, much to his amazement, and he found himself one day marked up among the inventors, although he never imagined he was one. His greatest recommendation is that he never posed as a designer of printing machinery, but his wonderful knowledge of the wants of printers, both in the composing room and pressroom, served as a guide to a naturally quick mind, and thus John Henry contrived to place many useful tools in his fellow craftsmen's hands.

The natural character of John Henry was a beautiful one. His heart was a well of love for his fellow men. He had no narrow prejudices, but was open, bold and fearless. He was born a gentleman. By education he was a scholar. With these advantages, and the greatness of the profession he selected for life service, he became a marked man in his business. To his friends he was lovable; to those in his service he was monitor and parent combined. He had but one enemy, and when they closed the eyes of this noble gentleman for the last time and crossed his hands upon his breast that enemy also ceased to exist. It was himself—a too generous heart was that enemy.

MAJOR HUDSON, of the Topeka (Kan.) *Capital-Commonwealth*, has furnished a room in the Capital Block in splendid style and supplied it with magazines, books, papers, writing material, etc. The room is for the benefit and use of the Topeka printers.

LIBERTY.

From Bedford Leno's "Last Idler" and Other Poems.

O, darling, darling wife of mine,
Why art thou jealous of me ?
The love that I loved is far away,
In a land beyond the sea,
And the love that I feel for the absent one
Should make me dearer to thee.

Why art thou jealous, my bonny bride,
Of her I have loved so long,
Of her I would paint with a magic touch
And sing with a poet's song —
Of one who has followed the steps of Christ
And never did mortal wrong ?

I have worshiped her from my early youth,
When she set my heart a-glow ;
And fain would I follow the faultless one
Who tempted me long ago,
When I thought her an angel fresh from heaven,
As pure as the virgin snow.

I swore to love her, and love her still,
With a love that no tongue can tell ;
In ecstasy I would give my soul
Could I in her presence dwell,
And no earthly mandate has power to break
The force of that magic spell.

I would to heaven I could see her now
Return, like the mystic dove,
With the olive-branch of immortal Peace
And everlasting Love,
And power to drag to the light of day
The long-lost treasure-trove.

There's a track of light as she moves along,
Like the sheen on the moonlit sea —
A star she follows that leads the way
To an unfound Galilee,
With a burning glow that melts the chains
Of slaves and sets them free.

Shall I tell you the name, dear wife of mine,
Of her I loved so long ?
'Tis the name that has sharpened the keenest sword —
The name that true minstrels sung —
And filled the martyr-mouths of old
When Freedom's knell was rung.

'Twas shouted aloud at Marathon,
'Twas the cry at Thermopylae,
The name that lit the fiery cross
That passed from sea to sea,
And gathered the clans whom gallant Bruce
Led on to victory.

'Tis a name that fires the souls of men,
And teaches them to dare ;
Inspired the brave Von Winkelried
To rush on the foeman's spear,
And struck the tyrant, Gesler, down
With palsy and with fear.

'Twas breathed on the Mayflower's crowded deck
When she sailed from old England's shore ;
It cheered on the braves of Commonwealth
When they conquered at Marston Moor,
And rang when the patriot Hampden fell
At the height of the battle's roar.

It sounded on Warsaw's blood-stained walls,
On Italia's broad campaign,

On the marshy soil of the Netherlands,
'Mid the vine-clad hills of Spain ;
And rang aloud when France was swept
By a blood-red hurricane.

'Twas heard when Venice was pressed in fight,
When the Croat and Magyar met,
When the red shirts conquered in Sicily,
When the sun of Austria set —
The name of my love resounded loud
To the beat of the castanet.

'Tis a name well-known as a rallying cry,
And blessed with a magic spell ;
A name that rose from a shattered host
When Kosciusko fell —
The name of the shrine where Hofer knelt —
The beacon-light of Tell !

LEAVE IT TO THE PRINTER.

There is nothing more annoying to a printer who considers himself the possessor of at least average sense and judgment than to have a customer sit down and instruct him how every line of a certain job or jobs shall be set — just the description of type and, usually, with no regard for, or knowledge of, style or typographical custom. An instance is related where the patient printer was compelled to hunt the city over in order to find a series of letter used in country papers thirty years ago. Strange to say, he secured it ; and battered and worn as it was, it proved "the very thing." This eccentric customer was a prominent business man. The printer's imprint, however, will not be seen upon this card, nor will anyone be able to find a trace of it in his establishment. He even thanks his lucky stars that he escaped without loss of his reputation. The sensible patron, who has any faith in his printer, will leave all technical matters to professional judgment ; and in nine cases out of ten will be largely the gainer thereby, for the careful workman is ever anxious to please, and will strive, if left to himself, and where occasion offers, to present new and pleasing features in his work that one unacquainted with the art — for it may well be considered that — would never think of. It is expected that the patron will select his own stock, and decide as to size and like particulars. But, aside from these details, the judgment is unnecessary until the type is set. Then, of course, after a proof has been furnished him, he is at liberty to make whatever changes he sees fit. — *Exchange*.

THE PLEASURES OF EDITING.

Editing a paper, says a provincial editor, is a pleasant thing. If it contain too much political matter, people won't have it ; if it contain too little, they won't have it. If the type is too large, it doesn't contain enough reading matter ; if the type is too small, they can't read it. If telegraphic reports are published, some folks say they are nothing but hashes up ; if they are omitted, they say there is a want of enterprise. If we put in a few jokes, folks say we are nothing but a rattle-head ; if we omit jokes, they say we are an old fossil. If we publish original matter, they condemn us for not giving them selections ; if we publish selections, folks say we are lazy for not giving them what they have not read in some other paper. If we give a man complimentary notices we are censured for being partial ; if we do not, all hands say we are a great boor. If we insert an article which pleases the ladies, men become jealous ; if we do not cater to their wishes, the paper is not fit to be in their houses. If we attend church, they say it is only for effect ; if we do not, they denounce us as deceitful and desperately wicked. If we speak well of any act, folks say we dare not do otherwise ; if we censure, they call us a traitor. If we remain in our office and attend to business, folks say we are too proud to mingle with our fellows ; if we go about a bit, they say we had better stay at home and get on with our work. If we do not pay all bills promptly, folks say we are not to be trusted ; if we do pay promptly, they say we stole the money.

Mr. Printer! Do you wish to make money? If so, there is no better way than by handling our line of

FOR THE NEWS AND JOB PRINTING OFFICE.

THE ONLY PRACTICAL

Stereotype · Outfit

IMPROVED AND MANUFACTURED BY

M. J. HUGHES,**18 SPRUCE ST. + + + NEW YORK.***One among Hundreds of Testimonials:*

TO WHOM IT MAY CONCERN: This is to certify that we have one of Hughes' Stereotype Outfits, and the same has been in our office and in constant use for five years, and is giving and has always given entire satisfaction.

Yours truly,
Feb. 16, 1888.

O. A. CARLETON & CO.,
Book, Job, Show and Commercial Work of every description,
Providence, R. I.

THE above testimonial is only one among hundreds elsewhere given.

Like large numbers of others, both large and small concerns, it has used for years my quick and superior patented devices of casting and blocking, at one and the same operation, by the use of wooden cores, bars, strips and filling of a non-conducting nature. Also, with the same outfit, all other results known to stereotyping is secured by its simple and practical construction. It is an established fact that it is the only simple, practical Stereotype outfit for the printing office in general, and that if not used successfully it is certainly the fault of the operator.

It is a great mistake on the part of the purchaser to defer purchasing until the outfit is actually needed for some special purpose. "Procrastination is the thief of time."

It is undoubtedly the best thing, taking into consideration the small amount invested, ever put in a printing office.

Send for descriptive circulars and hundreds of indorsements.

M. J. HUGHES, INVENTOR AND MANUFACTURER, 18 Spruce St., New York.

Stereotype Outfits, Press-Stereotyper, Patent Blocks and Plate-Holders, Circular Saw and Conical-Screw Quoins.

OFFICE OF

THE UNION TYPE FOUNDRY,

SOLE MANUFACTURERS

COPPER AMALGAM TYPE,

337 DEARBORN ST.

Chicago, May, 1889.

TO THE TRADE:

We are now prepared to meet the demand from printers, and accept orders for goods of our manufacture on the basis of quick sales and small profits. In order to sell on small margins we must sell for CASH. We mean cash with order, or, where a line of credit has been previously arranged for with us, prompt payment between the 1st and 10th of the month, upon receipt of statement showing purchases of the preceding month. Our Copper Amalgam is the best type metal in the world, and we use only the one metal. Our type is finely finished, and we guarantee that our goods are equal, if not superior, to any that can be purchased elsewhere. Further, we make a specialty of delivering "Sorts" promptly.

We, therefore, now offer the following:

DISCOUNTS FOR CASH.

30 PER CENT on the regular list price of our Patented faces of Job Type, Ornaments, Borders, Brass Rule, Brass Leaders and Dashes.

25 PER CENT on the regular list price of our Plain faces, such as Gothics, Antiques, etc., Gallies, Imposing Stones and Frames, Cases, Stands, Chases, Cherry Cabinets, Leads, Inks, Furniture, Shafting and Hangers.

20 PER CENT on the regular list price of Roman and Old Style Copper Amalgam Type.

On all articles not listed above we will give as liberal discounts as possible and will meet competition.

Our new Specimen Book will be mailed free to printers who write us that they will purchase from us at least \$5.00 worth.

Please remit by Bank Draft, P. O. or Express Money Order.

Very respectfully,

THE UNION TYPE FOUNDRY.**The W. O. Hickok Manf'g Co.**

CORRESPONDENCE.

While our columns are always open for the discussion of any relevant subjects, we do not necessarily inforce the opinions of contributors. Anonymous letters will not be noticed; therefore our correspondents will please give names—not for publication, if they desire to remain incog., but as a guarantee of good faith.

NICKED TYPE FOR AUTOMATIC DISTRIBUTION, ETC.

To the Editor :

NEW YORK, May 27, 1889.

So far as I have been able to discover, the first inventor to employ specially nicked type, that is, type with nicks varying in position or arrangement for each type, for use in connection with automatic distribution, was a Frenchman named Etienne Robert Gaubert, a professor of mathematics at Paris. A description of his invention may be found in his specification for "Improvements in Machinery for Distributing Types," English patent, A. D. 1840, No. 8,427.

The very next patent issued in England after the one to Gaubert, namely, No. 8,428, for the same year (1840), was for "An Improved Mode of Setting up Printing Types," and was granted to James Hadden Young and Adrien Delcambre. The invention of Young and Delcambre seems also to have been a pioneer one, in that it appears to have been the first of the "gravity" typesetting machines. Their first and broadest claim is for "the use of an inclined plane for setting up printing types, by the inclination of which plane the types placed thereon in whatever manner are caused to slide by their own gravity to a given point, whether such point be the required position in the composing box or receptacle, answering the purpose of a composing stick, as shown in the drawing, or any other required point."

Both of the specifications I have mentioned were "enrolled" September 12, 1840.

JAMES E. MUNSON.

FROM LOUISVILLE.

To the Editor :

LOUISVILLE, June 3, 1889.

Very little, if any, change for the better has occurred in the printing trade since I last wrote you. Winter weather in May has had the effect of retarding business some. Preparations are now being made for a big time during September by the Satellites of Mercury, which organization has our annual fall celebration in charge. The prospects are that the doings this year will be of such a character as to make the mardi-gras celebration in New Orleans appear as a mere pigmy.

The assignee of the Rogers-Tuley Company has advertised an auction sale of the effects of the defunct corporation, to take place June 12. It is understood that Mr. W. B. Rogers will endeavor to buy it in, he having, it is said, the promise of sufficient backing to justify him in doing so. From what I can learn, there will not be much interest manifested by the printers here in the sale.

The sad death of Colonel W. H. Chilton, who was for twenty years commercial editor of the *Courier-Journal*, occurred last Sunday at the Anchorage Asylum for the Insane. An aged mother is the only surviving relative to mourn his loss. The funeral took place from the Walnut Street Baptist Church last Tuesday. His former editorial associates acted in the capacity of pall-bearers.

The effects of the Branham Printing Company, which made an assignment several months ago, have at last been disposed of. Moore & Stark were the purchasers, and they in turn disposed of it to the Star Printing Company, which, combined with their former outfit, has given them a pretty complete office. They have about concluded to make an afternoon daily out of their weekly *Republican Star* in the event of President Harrison making up his mind how to parcel out the "official pie" in this state. I size it up about this way: No pie, no afternoon republican daily.

Colonel R. M. Kelly has again resumed control editorially of the *Commercial*, succeeding Mr. Dan. E. O'Sullivan, who has been at the *Commercial's* helm for several years.

Mr. Clarence L. Clark, who, previous to the late lamented strike, was foreman for the Rogers Tuley Company, and who has been seriously ill for a long time, became sufficiently convalescent

to make the trip to Washington and New York during the centennial ceremonies. He has returned to the city, but the condition of his health is such that a print shop is far from agreeable to him, and his numerous friends are endeavoring to secure for him an easy berth under the government. Success to him.

I heard today that the Louisville Lithographing Company would resume business shortly, provided they succeed in securing the services of a competent lithographer to manage the business for them. They have found that to dispose of the property as they originally intended they would have to do so at a very considerable decrease from the price they paid for it less than two years ago, and the former step is taken to protect themselves.

Mr. Will R. Hickman has assumed the foremanship of Morton Brothers' office, succeeding Mr. Lee Johnson, who has served the firm faithfully and well in that capacity since they began business. Mr. Hickman has been with the Bradley & Gilbert Company for several years, where he earned the reputation of being one of the best jobbers in town.

The luckiest printer in this town is Mr. William F. Brewer. Less than two years ago he purchased the building and ground where his office is located for \$5,700. One year afterward he was offered \$10,000 for the same property, which offer he refused and to get even with him his next door neighbor took advantage of him by removing six feet of Mr. Brewer's building as it happened to encroach upon his ground that much. Nothing daunted he sailed along satisfied that his day would come. And sure enough it did come last Monday in the shape of an \$18,000 offer for his \$5,700 purchase. He accepted it and today he is kept busy straightening up his shoulders after each friend gets through patting him and saying, "great head, Billy."

The Courier-Journal Job Printing Company will not be able to begin on their new building until about the first of the year, owing to the tardiness of the present occupants in vacating the premises.

Mr. Odell Wilson representing Sigmund Ullman and Mr. S. P. du Laurans of S. P. Wright & Co. were in town this week.

Mr. W. S. Sterrett has begun the publication of the *Colonel* at Whitesburg, Daviess county, this state.

Associate Editor Chisholm, of the Franklin *Favorite*, has taken the editorship of the *Adairsville Times*.

Colonel E. C. Colgan, of the Pineville *Messenger*, has begun the publication of a newspaper at Middleborough, Kentucky.

Colonel Urey Woodson, editor of the Owensboro *Messenger*, was in the city yesterday arranging the details of the convention of the Kentucky Press Association, which is to be held in Owensboro, at an early date.

C. F. T.

NEW BRUNSWICK LETTER.

To the Editor :

ST. JOHN, N. B., June 1, 1889.

Between local government and civic politics, electrical exhibiting, and a summer carnival, we are having a stirring time in St. John. Of course, there is "nothing" in being an alderman, but just now the present incumbents are button-holing everyone, and telling them how well civic matters were managed during the year. "Do they want to go back?" Well, there is nothing in it, and it is a waste of time, and "my" business suffers—but "good government is needed," and the incumbent is willing to sacrifice everything for his country. Business may go to pot, and time is of no consequence when serving one's country. There is a wonderful number of "patriots willing to sacrifice themselves upon their country's altar"—for what? a "shave off a contract"; of course not—well, I have never been at the board; but if I ever do, why I will be a "patriot" too. At present, however, my opinion differs materially from most of the "martyrs" holding power. I pen the above for the information of the numerous St. John prints who are sojourning in Uncle Sam's domain, and who no doubt read THE INLAND PRINTER, so that they may know what is stirring the body politic in our city by the sea.

The printing trade is booming in St. John at present. In fact, I don't remember a time when work was so plentiful. The *Globe* job department is running several extra hands, and still the cry is for more. The other offices report business good, and how long

the rush will continue is a question, but the indications are that times in the printing trade will continue good for some time.

Mr. R. E. Armstrong's new paper, the *Beacon*, has made its appearance, and is a readable and lively sheet. Mr. Armstrong is bound to boom St. Andrews, and also his weekly. The paper looks well mechanically, while the selections are first class.

Yours, WIDE AWAKE.

FROM BOSTON.

To the Editor :

BOSTON, May 31, 1889.

Business is slow. At last the effects of summer weather, with its inevitable slackening of business, has been generally felt, and quietness reigns. Commencing with next month many of our book and job offices will close on Saturday afternoons, and those that are left will probably follow suit during July and August. It is fast becoming a recognized fact by employers that there is nothing to be gained by running their places of business on Saturday afternoons, and each year adds converts to their ranks. This year the custom will be more general than ever before.

Those printers who have served their time at the case, and, later on, been advanced to the position of proofreader, had better look to their laurels, and at the same time keep an eye open for other employment. This word of caution is given after due deliberation over the following advertisement, which appeared a few days since in the columns of the *Boston Herald* :

WANTED—Pupils in proofreading ; bright, educated young men taught in a few lessons, personally or by mail. Address " N. 116," *Herald* office.

If proofreaders can be made by the giving of a " few lessons," what earthly use is there in an employer paying \$18 to \$25 each week for such work ? There are hundreds of " bright, educated young men " in this city (and probably there are a few elsewhere) who would be glad to accept such a position for half the salary a good proofreader commands. The old stagers have clearly been imposing upon the ignorance of the men who employ them, and it is a shame that such a thing should be allowed by the typographical union. Of course, this organization is to blame for this state of things, for having aided and abetted them, and as a measure of self-protection should legislate upon this subject at its forthcoming meeting in Denver. It surprises me exceedingly to think of the many years the ignorant master printer has fostered the belief that a thorough knowledge of composition and the various faces of type were the *necessary* equipment of a good proofreader ; that this knowledge was necessary in enabling him to determine whether a strange looking character was a bad letter fit only for the hell-box, or a wrong font to be returned to its proper receptacle ; that this knowledge was necessary that he might know whether a piece of work had been set in " *Nonpareil*," or " *Long Prymer*," as called for on the order ; that other rules or technical instructions, equally essential, had been followed. All this is to be changed, however. By many people (presumably not natives of this section, and, therefore, lacking in perception), Boston and the " bean-eaters " are considered " small pumpkins " ; but these knowing ones forget that the West and Southwest has largely been built up through her energy, and that to accomplish this she has furnished many millions of dollars. To this and much more is now about to be added the honor (?) of giving to the trade proofreaders to order. Send in your orders early, and be careful to state concisely whether you want them to come by freight or express. As we do not believe in depreciating values, we adhere to the old terms of ten per cent for cash in thirty days, with two per cent extra if paid in ten days.

A gentleman who is prominently connected with the printing industry of Boston, and who is eminently qualified to pass his opinion upon the subject, estimates that forty per cent of the job presses in use here are some style of Gordon.

Messrs. Geo. H. Morrill & Co. have recently made an extensive shipment of inks to the *Imprensa Nacional*, which is the Brazilian government office, located at Rio de Janeiro.

Exactly as the sun reached meridian on Saturday, the 19th instant, a very pleasing event transpired in the composing room of

A. Mudge & Son. The occasion was the presentation of an elegant gold watch (one of the Waltham Watch Company's best) to their fellow worker, Mr. Charles L. Sparks, by the men of that department. Not an inkling of what was on the tapis had Friend Sparks received, and it is needless to say that his astonishment was great. Mr. M. P. Bearce presented the watch in a neat speech, which was feelingly responded to by the recipient as soon as he had recovered his breath. In the afternoon the ladies presented Mr. Sparks with a group picture of themselves, the foreman and the " make-up." Mr. Sparks, who that evening severed his connection with Mudge & Son, had been in their employ for seventeen years, and can now be found at Sparrell's, 41 Arch street. Mr. Sparrell opened his office last fall with an entirely new outfit, and has been turning out a nice class of work. It is safe to say, however, that it will be improved under the skillful hands of his new assistant.

I have always pitied the poor " comp," whose misfortune it was to get hold of some of my writing, and my sympathies are with the man who set up my last communication in this hour of his affliction and distress. The gentleman whom I meant to say was about to open a repair shop for printing machinery was Mr. William Tarbett, not Torbett. The firm name is Denner & Tarbett, and they are located at 138 Pearl street, where they have secured desirable quarters, and are now ready for business. Mr. Denner is a practical printers' machinist of many years' experience, and has been in the employ of R. Hoe & Co., the Campbell Press Co., and other well-known houses.

Golding & Co., not satisfied with their already extensive business, have commenced the manufacture of inks. S.

A REPLY TO " M. A. M. "

To the Editor :

COHOES, N. Y., May 26, 1889.

While anxiously awaiting the arrival of *THE INLAND PRINTER* it sometimes comes to hand at so busy a time that it must needs be laid aside for a more convenient season, when my whole attention can be given to a careful perusal of its brimful pages. This was the case with the April number, which has just been taken from the table, and I fear this will reach you too late for the May issue. This morning my eye fell upon a communication signed " M. A. M.," of Weavertown, New York, which I think calls for a brief reply, with your permission. I will say first of all that I have no desire to enter into a controversy with our friend, " M. A. M. "

After carefully reading the communication I have arrived at the conclusion that the amateur printer, as we know him in this section, is not an affliction at Weavertown. I infer this from the fact that among your correspondent's acquaintances there does not appear one of these creatures. I make this positive statement because the average embryonic printer must be known to be seen in his true light, and I am sure that if " M. A. M. " was " posted on that subject," he would not write anything in his (the " printer's ") defense.

Now, as regards the definition. The boy, or young man, who has " worked " in a printing office for a short time only, say six months or a year, and then opens a one-horse print-shop of his own, even though he may have a taste for the arts, etc., has for years been known to the fraternity as an amateur ; and if it be a misnomer, it is the duty of the persons who may at some future day find it necessary to revise Webster's dictionary, to add another word to the many thousands already contained therein. It should be a compound word : amateur-printer, and the definition should read something like this : " An incompetent professor of the art preservative ! " or we might define the word by using " M. A. M's " own language, thus : " A professional printer who does not know how to print. "

" M. A. M. " continues in this strain : " The professional workman has no time and but little inclination to work out new processes or designs, while in that the true amateur finds his chief pleasure. " I do not believe that this statement holds good in printing. A printer who will not attempt something new in his line of duty

now and then, is not a professional workman by any means, and if he has no inclination to reach a higher plane, we may as well class him as an amateur (not Webster's) at once. On the other hand, the office devil dare not attempt much in the line of rule twisting and other wrinkles, because he may destroy considerable material and surround himself with a mess of pi in a very short time. True it is that the imp who, in the beginning destroys something, generally advances in the lead of the drone, who will say, "I don't know how." I must say that I admire the boy who will industriously whittle a hair space with a jackknife, to fill a line, but suppose that same boy, with all his ambition, should start out with the idea that he had learned enough, because that space "got there!" Why, in the eyes of all printerdom, he would be an amateur of the first water. Our friend, "M. A. M.," might pat him on the back and say, "My dear caterpillar, you are an ugly worm, etc., today, but when you begin to learn how to reduce your ink without the use of water; or when you can empty a whole stick of matter; or when you stop using a long line of periods for leaders, then you will blossom as a gorgeous butterfly."

The amateur photographer may at rare intervals produce the gorgeous butterfly, and the millionaire's son may improve as a match-case and monogram engraver, but the young and inexperienced printer-man has never been known to come forth from his caterpillar shell.

The fellow who ordered from a typesetter "one pound of sixty pica leads (six-to-pica) and about a handful of brevier spaces to use with italic type," may not be ignorant as to general matters, but how is he to succeed without the slightest knowledge of even the rudiments of his calling. "M. A. M." will find that the above-mentioned individual does not know his case.

In conclusion, I am happy to say that at the present time there are no amateurs in Cohoes, but here is a butterfly which will bear inspection, produced, I think, in Lansingburgh, a suburb of Troy.

O. MAYNARD,

—MANUFACTURER OF—

FINE HAVANA AND DOMESTIC CIGARS

61 OLMSTEAD ST.

COHOES

NEW YORK.

I do not use tobacco, so I can say nothing anent Maynard's productions. "M. A. M." may infer from this, if he chooses, that this is one of the specimens which were "grasped."

Business is fair here; all the offices in town are moving about at a lively rate
W. E. SEAPORT.

NOTES FROM ITALY.

To the Editor:

ROME, May, 1889

Ignorance and superstition may not in these enlightened times be as prevalent now in Rome as only in a few years past, but there is yet such evidence of their existence, that one is led to exclaim almost involuntarily "can such things be possible?"

A printers' journal might be considered as hardly the place for a letter on such topics, yet from my general knowledge of printers, I am led to believe that they occasionally care to hear and read about things other than *new faces*, *typans* and *shooting sticks*, hence, this letter may seem a little *off color*.

Being in Rome, of course, one commences at once the rounds of sight-seeing, and taking in the numerous legends with which Rome is so prolific. Many of these legends are so interwoven

with much that is truth, that it is scarcely to be wondered at, that so many of these people believe in them as implicitly as they do in the Madonna and Child.

The Mamertine prison is especially interesting and historic. From this old prison, dating back 700 years before the dawn of the Christian era, there come many legends, wild and strange. That this was the place in which Peter and Paul were imprisoned, there is abundant evidence, and among the earliest of noted prisoners confined here was Jugurtha, king of the Numidians, 104 years before Christ. These prisons were excavated from the solid rock under the Capitol, and were constructed of huge blocks of tuffa without cement. Originally, there was no staircase, and the prisoners were let down or thrown down through a hole in the second floor, to the dungeon at the bottom. Here, there is believed to be the origin of the words "cast into prison." This dungeon was called the Tullianum and was 6½ feet high and 19 feet by 9 feet. Prisoners who were condemned to be strangled or starved to death were thrust down into this horrible prison. The church of *San Giuseppe dei Falegnami* is now built over the prison, and there is a flight of modern stairs leading to the Tullianum dungeon where Saints Peter and Paul were confined. On the wall near the stairs, there is shown, and carefully guarded by iron bars, an indentation resembling a human face. Roman Catholic tradition says this was caused by the jailer beating Peter's face against the rock. If so, the jailer must have used a strong *impression wrench*, or Peter was probably a hardshell Baptist.

Tradition further says that after the jailers' conversion—there were two of them—and when Peter and Paul had been in the dungeon nine months, sentence was passed on them and they were condemned to death. Paul, being a Roman citizen, was exempt from the ignominy of death by crucifixion, was to die by the sword. Peter was to die on the cross. The night before the day when the sentence was to be executed, the two prisoners were lying awake and restless. Suddenly the jailers stood before them, and, unloosening their chains, said, "Fly! the doors are open! Tomorrow it will be too late. In the name of the Lord, ye are free, even now."

Peter needed no second invitation, but, bewildered and dazed, fled. When he realized his situation, he was on a deserted street far from the prison, while a storm of rain and wind raged around him. He called for Paul, but his friend was not with him. Still on he went, for life and freedom. When Peter had passed through the city walls, the rain had stopped; he was on the Appian Way. Soon he thought he perceived a strange light moving along the road and approaching him. It formed a half-ring, like the glory around a hallowed head. As it drew nearer it lost its brightness, and the outlines of a human form appeared going toward the city. It was clad in a mantle, and strode a few steps past, but on the opposite side of the road from that on which Peter stood. Then it turned and looked at Peter with the same look that Jesus had given him on that night when Peter had denied his Lord for the third time. Again he realized the weakness of humanity, and, catching the mantle of Jesus, he cried, "*Domine, quo vadis?*" (Lord, whither goest thou?) Jesus answered, "*Venio iterum crucifigi*" (I go to be crucified again). Peter sank at the feet of Jesus, saying, "Forgive me, Lord, thou knowest my weakness. This night I have again denied thee. Lay now thy hand upon my head, and let me weep myself out at thy feet. Then shall the horror of death, that overwhelmed me, vanish, and I shall show myself worthy of the crown thou of thy grace will give me."

Peter, kneeling and penitent, was allowed to weep and feel upon his head the hand of Jesus, giving peace, blessings and strength. When he rose Jesus was no more to be seen. The storm without once more sprang up anew, but within Peter's breast all was calm. He turned back to the city—to the prison, and knocked at the iron doors, saying to the jailers, "Friends, give me my chains again. It is not for me to fly from the reward of victory."

A little distance out on the Appian Way there is a small chapel, said to have been erected on or near the spot where Peter, when

escaping from Rome, met the Savior. In this little chapel, called *Domine yuo vadis*, is preserved a marble impression of two footprints, shown as they were left by the feet of Jesus when Peter knelt before him in the Appian Way. It would seem, then, that impressions were given at that early day of the world, which still exist.

The church of *S. Pietro in Montorio* is erected on Mount Janiculum, the highest piece of ground near Rome. To this spot Peter was taken, and begged that he might be crucified with his head down, not deeming himself worthy to die in the same position as his Lord and Master had died. Peter's form therefore was locked up in the same position in which many people think printers place type in form — upside down.

While Peter was suffering the terrors of martyrdom on the cross, tradition says angels floated down and stood about him whispering consolation, and, when his spirit was freed, passed up with him to eternal joy. And there is now in the church *St. Maria in Trastevere* a marble slab (built in the wall) which shows marks similar to footprints, which the sacristan says were made by the feet of angels as they stood around Peter's cross. In the court of the monastery — *S. Pietro in Montorio* — there is a small temple said to have been erected over the spot where stood the cross on which Peter was executed. At the bottom there is a round hole in the pavement, and gathered about it I found several believers on their knees, devoutly gazing into this hole.

The grave of the apostle Paul is under the high altar of the church of *San Paolo fuori le Mura*. It is just outside the walls of Rome, and is probably the most magnificent church in the world, shining with gold, mosaics and polished marble. Past this church is the road in which Paul was taken for execution and to martyrdom. When the executioner's sword had descended, Paul's head fell to the ground and rebounded three times. On this spot three springs of water are said to have gushed forth, and the Trappist monastery *Abbadia delle tres Fontane* with its three churches now stands over this consecrated spot.

In any country or among a people where such superstition prevails, printing and kindred arts are at a low ebb. There is none of the vim, the energy or enterprise put into the journals here that we see in those of our western cities. The newspapers of Italy, with but few exceptions, are mean, dirty-looking sheets, as much like our cheap poster work as anything else with which they can be compared.

It is not an easy matter for one who does not understand the language of the country to step into an Italian printing office and ascertain the condition of trade. In such cases one must judge from general appearances, or obtain the desired information through the medium of an interpreter. And frequently it is as difficult to succeed in getting your ideas before the interpreter as with the other party. In company of an old friend, who has lived many years in Rome, I visited an office said to be one of the largest in the city. It had much the same general appearance of many printing offices in America, except that the machinery seemed to be of a past age and very dirty. There were six cylinder presses for book and job work, and two presses for printing newspapers. There are at least fifty better printing offices in Chicago than the one here referred to.

From this office I went to the establishment called "*Tipografia Poliglotta della S. C. di Propaganda Fide.*" This is the office where the Catholic literature is printed. It is a clean, well-conducted office, and sends out some good work. The presses are clumsy, awkward pieces of machinery, built somewhat after the fashion of the old Northrup and Gurnsey presses, that were long superseded in America by so much superior presses. This office has also a small typefoundry, and when I presented the superintendent with a specimen book from a Chicago typefoundry, all work ceased, so that they might admire its beauties.

Wages are quite low. I inquired how much an intelligent pressman was getting and was informed that this one received 35 lire per week — about \$7 — but that the usual price was 24 to 25 lire per week. Feeders on cylinder presses get 16 lire per

week. Compositors on manuscript receive 1 lire per thousand — reprint less. Composition by the week receive 24 to 25 lire — about \$6. Foreman receives 250 lire per month.

With such a scale of wages, we need not expect a rush of printers from Chicago to Rome. *Au revoir.* A. P. L.

THE PRINTING AND PUBLISHING INTERESTS IN THE QUAKER CITY.

To the Editor:

PHILADELPHIA, Pa., June 2, 1889.

There is but little change in the state of trade since my last letter. The printing industry continues moderately active, while all interests directly or indirectly connected with the typographical business are moving along easily and pleasantly. Notwithstanding all rumors and reports of a possible open rupture between certain employers and employés, no aggressive movement upon the part of either master printers or hands is apprehended.

The leading job and book houses usually experience a slacking up of business in all departments at this season of the year, and some piece men have been laid off, but it is understood that the "furlough" will continue but a short time. The paper makers and manufacturing stationers, as well as the bookbinders, appear to be unusually active, and it is stated by very reliable representations of these interests that the activity is destined to be maintained uninterruptedly for an indefinite period.

The pressmen of Philadelphia regard with great favor the movement to organize an international pressmen's union, and the project will have the earnest and hearty support of the union men here. A prominent member of Philadelphia Printing Pressmen's Union, No. 4, said to the correspondent of THE INLAND PRINTER, "The Adams and Cylinder Press Printers' Association and the Empire City Printing Pressmen's Union, of New York, have started an enterprise that must, if carried to a successful issue, redound to great advantage and benefit to the pressmen of the country. The establishment of an international pressmen's union is a thing that has long been wanted, so certain irregularities and abuses can be remedied, and which the local unions are almost powerless to adjust satisfactorily to all parties concerned. The New York convention, when held, will be well attended by delegates from all sections of the country, if any reliance can be placed upon the intelligence received from well-informed sources. Philadelphia pressmen are deeply interested in the important movement, and will send delegates who will work energetically for the success of the international association."

The bi-centennial celebration of the introduction of paper-making in America creates much attention throughout the United States, and the event promises to be attended with great success.

The competition among the daily newspapers at the present time is terrific. The *Press* is doing its best to divert the "want" and "for sale and to rent" advertising from the *Ledger*, and the *Ledger* has canvassers going from house to house, asking citizens to subscribe for it. The other dailies have squads of advertising solicitors on the streets rushing business, who tell men monumental yarns about the big circulation of their respective papers and the low figures of their rivals, than Baron Munchausen ever dreamed of.

Thomas B. Pennochs, of this city, has been appointed by Public Printer Palmer to be chief of the folding room of the government printing office. Mr. Pennochs has held this position for a number of years prior to the advent of Mr. Benedict, by whom he was removed for political reasons. He was a very efficient officer and was restored to his former position by Mr. Palmer entirely upon the record he made during his many years of service in the office.

The fourth annual meeting and banquet of the Reporters' Club of Philadelphia have been held. The table was magnificently decorated, and much enthusiasm prevailed. It appeared from the report of the retiring president, Peter Bolger, that the membership had increased to one hundred and fourteen. Officers for the ensuing year were elected, as follows: William C. Ruch, of the *Evening Telegraph*, president; George T. Jones, vice-president;

John T. Spurgeon, secretary; Henry F. Burns, treasurer; Peter Bolger, George W. Beatty, J. Hampton Moore, William R. Ash and Benjamin H. Gordon, managers.

The Philadelphia Typothetæ have elected the annexed officers: President, Clayton McMichael; first vice-president, J. R. McFetridge; second vice-president, William H. Hoskins; recording secretary, John W. Wallace; corresponding secretary, W. M. Potter; treasurer, William B. MacKellar.

Sheriff Shaw has seized the Tushmore Paper Mills, at Bridgeton, N. J., owned by Walter Moorehouse. The foreclosure was made by the West Jersey Railroad Company, which the mill, it is stated, owed \$300 for freight. The proprietor left Bridgeton, recently, and went to Pittsburgh, and, it is reported, will remain permanently. The liabilities of the concern are placed at about \$5,000. Over one hundred persons are thrown out of employment.

William White Harding, for many years proprietor of the Philadelphia *Inquirer*, who died here Wednesday, May 15, was, during his life, engaged in many enterprises. During his long business career Mr. Harding introduced many improvements in printing machinery and in 1863 put into successful operation in this city the first Bullock press. In 1864 he established a paper mill at Manayunk, which supplied material for his various publications, and a few years ago he entered into the manufacture of wood paper, having purchased from the inventor the sole right to manufacture. He was the first newspaper proprietor to introduce into Philadelphia the present extensively used system of stereotyping newspaper forms, by which the wear and tear of the presses upon movable types is done away with, and heavy daily editions are printed clearly and legibly. Mr. Harding had other business ventures which he conducted successfully, notably the publication of bibles, a business commenced by his father, Jasper Harding, and which developed to large proportions, over 2,000,000 copies with the Harding imprint having been sold. At the Centennial Exhibition, Mr. Harding was awarded a medal for paper-making, printing and binding, he being the only exhibitor at whose establishment the paper was made, printed and bound in book form.

"The Printers and Mr. Childs" is the title of a neat brochure that has just appeared. It gives a particular account of the banquet held in honor of the birthday of Mr. Childs, the printers' friend, May 12, 1888, at Dorner's Hotel, by the Association of Ex-Delegates to the International Typographical Union, of this city. It contains also an excellent portrait of Mr. Childs, some account of his great benefactions to the working people, and a view of the Printers' Cemetery, a gift from Mr. Childs.

Barton D. Evans, proprietor of the *Record*, West Chester, has been confirmed by the Pennsylvania Senate as superintendent of public printing.

J. Henry Edmunds, publisher of the *Wave*, Cape May, New Jersey, has secured the lease of the *Daily Star* for the season of 1889. It has been assigned to him by Upton S. Jeffeys, of the Camden *Telegram*, to whom the publication was recently let. The paper will either be run by Mr. Edmunds, or arranged for the season with the *Wave*.

H. L. Ruhlman has purchased Dr. T. W. Woodruff's interest in the *Daily Independent*, Bordentown, New Jersey.

The Philadelphia Reporters' Club is going to have its legacy from the old Press Club, the fine lot in Mount Moriah Cemetery, West Philadelphia, put in good order. There lies all that is mortal of the talented Walter Rose, the quaint "Deacon" William Jones, the virile and accomplished Ben Davis, and the railway reporter and general genius, Charley Reddy. They were all brilliant marks of the profession, and were all cut off in the heyday of their careers.

The University of Pennsylvania is about to inaugurate another marked step in advance by the publication of a special organ, the *Pennsylvania Monthly*, for which it is now completing its plans. Dr. A. T. Hummell, the successful manager of the *Medical Journal*, published under the auspices of the university, will be its business manager, and he has already secured the coöperation of a large staff of accomplished writers, representing the

various branches of the university, whose contributions will be edited by Talcott Williams, one of the ablest members of the Philadelphia newspaper staff. The new monthly will fill a place for the Pennsylvania university that is now occupied for Columbia and Princeton and other leading colleges. It is in no sense a rival of the magazine published by and for the undergraduates, but it will be from the outset a vehicle of communication between the university teachers and the public, which is always ready to give support to journals of a high character dealing with important and interesting topics.

The recollections of George W. Childs, publisher of the *Ledger*, in the June number of *Lippincott's Magazine*, are a bright example to young men starting out in life. He says he owes his success to "industry, temperance and frugality," and is not ashamed to acknowledge that he worked for \$2 a week when a boy, swept out the store, washed the pavements and made the fire in the store stove. He was a self-reliant youth, and his success in business was due more to that than to any outside assistance. His "recollections" are amusing in one respect, the pride he feels at being on intimate terms with the great men of the nation, warriors, statesmen and men of letters.

The foundation of a large building, to be used as a printing and publishing house, by R. C. Robinson, publisher of the *Sentinel*, has been laid at Ocean City, New Jersey. The structure will be completed about July 10.

H. Canfield and Rudolph Minzer have commenced the publication of the *Amateur World*, a journal devoted to outdoor sports, especially to those in which amateurs are interested.

A statement is made that the splendid machinery hall of the Paris Exposition, in which is located "Printing House Square," where the American printing machinery exhibits are displayed, is "the largest building ever constructed under a single roof." This is a mistake, unless it means that the building is the largest under a single span of roof. The main building at the centennial, held here in 1876, a single structure, was sixty per cent larger in the area it covered than machinery hall of the French Exposition. Our main building was 1,880 by 464 feet, the machinery hall at Paris 1,400 by 370 feet. These are almost exactly the dimensions of our own machinery hall, which was 1,402 by 360 feet. From this comparison can be got a good idea of the magnificent proportions of the Paris exhibition building, which no doubt gains an impressive effect by the immense arched roof, which ascends to a height of 170 feet and is almost unobstructed, save by galleries extending the length of the building.

ARGUS.

FROM DETROIT.

To the Editor:

DETROIT, June 3, 1889.

The Scripp League, which embraces the *Evening News*, of Detroit; the *Press*, of Cleveland, Ohio; the *Evening Post*, of Cincinnati; the *Evening Chronicle*, of St. Louis, Mo.; the *Echo* (weekly) and the *Sunday News*, Detroit, Mich.; in its fold, has formed the Scripp's League American Workingmen's Expedition to the Paris Exposition. This expedition has been organized for the purpose of sending forty American workingmen to the Paris Exposition.

The British government having determined to send one hundred British workingmen to the Paris Exposition, it had been hoped that the American government would do the same, but congress did not make any move in that direction. The Scripp's League of leading western newspapers have determined to do the work which congress omitted to do, and are perfecting all details involved in sending forty representative American workingmen to the industrial centers of Europe, and more particularly the World's Exposition. The league intends to pay all the expenses of the expedition of its members, both in this country and abroad, from the time the members leave their respective homes.

The details of this expedition, as being arranged, are as follows: As all trades are to be represented by actual workingmen accompanying the expedition, the various labor organizations of the country have been invited to suggest the names of candidates

to accompany the party. The trades to be represented are printers, molders, machinists, car builders, engineers, ship carpenters, shoemakers, ironworkers, etc.; the desire being to have as many trades as possible represented.

The ocean steamer City of Rome has been chartered for the purpose of taking the expedition abroad, and the start will be made from New York on July 24 next. The route of the party will include among its main features a visit to the cities of Liverpool, Birmingham, Manchester, Sheffield, London, and other great manufacturing points in England; Glasgow and the shipbuilding industries of the Clyde in Scotland; Rouen, Paris, and the great lace and silk centers of France; Essen, Dusseldorf, Antwerp, and other leading iron and industrial centers of Germany and Belgium. The central point, however, will be Paris, and the facilities which the World's Exposition will afford for observation of mechanical art in all its branches.

The main purpose of the expedition will be to accumulate information concerning the advance of industrial art from the standpoint of actual workmen. While experts, scientists and theorists have been making observations abroad, the opportunity has never been afforded the workmen themselves to investigate the advance of their various trades. Each member chosen to accompany the party will, therefore, be especially selected for the knowledge he has of the trade, his capacity for observation, and his ability to convey to others a fair idea of what he has seen abroad. So far as possible the actual notes and writings of the workmen accompanying the party will be utilized, but aside from this, the expedition will be accompanied by a staff of unusually competent and skilled correspondents, artists and photographers.

The progress of the party and the results of observation will be sent to this country by means of an extensive cable service and correspondence now being arranged. The purpose is to ultimately place the whole in substantial book form, in order that it may be of permanent value to the working masses.

The magnitude of the work involved, and the cost of working it out to a successful conclusion, will make this expedition the most expensive one that has ever been sent out from this country.

The qualifications required of those selected are: First, men who are sober, honest and industrious; actively engaged at their trade in the capacity of journeymen, foremen or superintendents; having a thorough knowledge of their trade; who are intelligent and have a good capacity for observation, and an ability to convey to workmen in plain but exact English, a fair idea of what they see; they must be American citizens, and, if naturalized, have attained their majority in this country.

Mr. Carroll D. Wright, head of the Labor Bureau, known throughout this country and Europe as a foremost economist and statistician of labor, has also personally interested himself in the expedition, and has offered some valuable suggestions as to places which the expedition might profitably visit. Mr. Wright, in a letter to the *News*, says that he will suggest the names of one or more artisans specially fitted for observing important branches of trade. These will be quasi-representatives of the government.

A circular, an outline of which is given in the foregoing, was read and discussed at the meeting of No. 18, on Sunday, and very favorably received, and three persons named for candidates, to be selected by the league, namely, Joseph A. Labadie, George W. Duncan, and Thomas McCann, any one of whom, if selected, will fill the bill.

This undertaking on the part of the Scripp League is one which cannot be too highly commended, and is one which should be favorably received by all labor organizations, who are requested to name representatives, for the benefit to be derived therefrom will be very valuable. It also shows the characteristic of enterprise of the *Evening News* and its sister papers who are engaged in this undertaking, and it is the wish of all that it will be crowned with success, and that its promoters will have the satisfaction of showing the public what newspaper

enterprise can do, and more so in asking the intelligent workmen to assist them.

Another commendable act, and one which was very gratefully received by the union from Mr. Scripp, was a tender of a bed in the Harper Hospital of this city, for members of our union who may be overtaken by illness.

Mathew Kramer, founder, editor and publisher of the Michigan *Volksblatt*, the leading German democratic daily of this city, died on the 30th ultimo. Mr. Kramer was a native of Germany, and came to Detroit forty-three years ago, starting as a newsboy on the *Free Press*, and was at one time foreman of the composing room, and later founded the above journal. His paper was very influential among the German democrats. The local press adopted resolutions of condolence. He was fifty-six years of age. The paper will be continued under the management of his sons.

A change has also taken place on the staff of the *Evening Journal*. Mr. Frank E. Robinson, managing editor, has been compelled by ill health, to relinquish his post he so acceptably filled to his credit and the paper for several years past. Mr. Robinson has also been on the staff of the *Free Press* and the late *Times*. The esteem in which Mr. Robinson is held by his associates on the *Journal* was shown last Saturday. While attending to his duties he was called to an adjoining room, where he found all the *attachés* of the paper assembled. He was presented with an address expressing regret that ill health had caused him to resign his position, and earnest and unanimous hope for his future welfare. The address was neatly bound in cover, on one side of which was a perspective view in water-colors of the Detroit river front, while on the other side was a view of Mr. Robinson's home. Inside were the autographs of all his office associates and friends. This address was presented by Mr. Brearly in a few well chosen remarks, and before Mr. Robinson had time to respond, Mr. C. F. Leidy, telegraph editor, interrupted him by presenting him with a small package containing a very handsome gold hunting-case watch, at the same time telling him the esteem in which he was held by his associates. Mr. Robinson feelingly responded. The end was not yet, however, for later in the evening he found delivered to his address, as a token of esteem, a handsome gold watch-charm from William Livingstone, Jr., ex-proprietor, and D. J. McDonald, ex-business manager, respectively, of the *Journal*. Mr. Robinson will go South.

The firm of Lozee & Morrison has been dissolved, Mr. Morrison retiring. Mr. Lozee has associated with himself R. Y. Ogg, H. E. O'Brian, T. E. Robinson and T. Richards. New quarters have been selected, and the business will be removed to Jefferson avenue.

Messrs. Raynor & Taylor have removed to the Strellinger Block on Bates street, where they have large and commodious quarters. On the second floor is the composing room, third press-room, and the fourth will be occupied by the bindery. The place vacated by Messrs. Raynor & Taylor will be occupied by the Peninsular Printing and Publishing Company, of which F. H. A. Backus is president; J. H. Gould, vice-president, and Charles F. Backus, secretary-treasurer.

W. W. Stewart, late of the *Christian Herald*, and W. H. Hess, of the Western Newspaper Union, respectively, have also branched out as a new firm of job printers, and are located at 56 Grand River avenue.

The contract for printing the council proceedings has been let to the *Tribune*; all the other city printing will be done by union offices, in accordance with a resolution passed by the common council.

The Free Press Printing Company will do the city directory.

Detroit union instructed its delegate, George M. Knox, to favor the sending of a weekly journal to every member of the International Typographical Union, holding annual sessions, officers holding office for two years; a general amnesty to all members of the protective fraternity covering a period from July 1, 1889, to December 30, 1889; against establishing the sub-list; and favoring legislation for an eight-hour work-day.

P. A. L.

THE HUNT BALL.

Specimen of Ives' Process Engraving, by the Crosscut & West Engraving Company, 907 Filbert street, Philadelphia, Pa.

THE DULL BUSINESS STATE IN NEW YORK.

To the Editor :

NEW YORK, June 1, 1889.

The advent of the first summer month finds the typographical industry in rather a depressed condition, although it seems to be generally agreed that the dullness prevailing is no more extended or general than is customary at this period of the year. Of course, it is but natural that the activity occasioned by the influx of orders caused by a great spring trade should subside now. The rush has ended, and a lull will now follow, possibly for several months at least, and probably until the opening of the fall trade. The lethargy is not confined only to the job houses, but all kindred interests are experiencing the unpleasant and almost demoralizing stagnation. The leading newspapers do not appear to show any diminution in advertising patronage; but, on the contrary, some of them exhibit a larger number of columns of advertisements than ever before. The *Herald*, *World*, *Sun*, *Times* and *Tribune*, are doing an enormous business. The *Star*, under its present management, is apparently prosperous.

It is rumored here that James Gordon Bennett, proprietor of the *Herald*, has departed to Khartoum, the capital of the Mahdi. He left Paris some time ago, went to Marseilles, from there to Alexandria, and was afterward at Cairo. Two explanations of the journey have been cabled. One to the effect that Mr. Bennett made a wager that he could enter Khartoum and leave alive, a statement doubted by an officer who had served in the Egyptian army. The other reason assigned is that a correspondent at Cairo sent a long dispatch to Mr. Bennett, in which it was stated that Chinese Gordon was still alive, but kept a close prisoner, and that the new Mahdi had agreed to ransom Gordon for one million francs in consequence of his recent reverses at Kordojan and Bahr-al-Ghazal. It is stated that Bennett made all arrangements for the payment of the sum mentioned, and started at once with an intimate friend. At the *Herald* office it is stated that dispatches from the proprietor have been received from Marseilles, Alexandria and Cairo, but nothing is known of his prospective movements.

There may be an extended strike of printing pressmen at no distant period. Before the split occurred in the Central Labor Union there were several pressmen's unions represented in it. They were Pressmen's Union No. 9, Pressmen's Union No. 34, Web Pressmen's Union No. 1, and the Franklin Association. When the trouble took place the web pressmen bolted and went with the German unions, which immediately organized the Central Labor Federation. Union No. 9 remained with the Central Labor Union. Secretary Blomacher, of Pressmen's Union No. 9, has issued a notice, saying that its members would be called out of every office in which members of the Web Pressmen's Union, No. 1, are employed, should such a movement be rendered necessary. Secretary Blomacher gives as a reason that union No. 1 is in affiliation with a socialistic organization. The web pressmen are employed in newspaper offices.

Henry E. Erdtmann and Gustave Vandmann, composing the firm of W. & H. Erdtmann, importers and manufacturers of colors, lithographing and printing inks and bronze powders, at Nos. 252 and 254 Pearl street, have made an assignment to Clement J. Kracht, giving preferences for \$8,952. The business has been established about four years, and the present firm was formed in July last. It is said they had trouble with a foreign creditor, to whom they owed \$24,000, and about two months ago made a settlement, giving notes of \$1,000 each, extending over twenty-four months. The last schedules published show the liabilities to be \$74,144; nominal assets, \$17,723; actual assets, \$2,229.

At the last regular monthly meeting of New York Typographical Union, No. 6, held at No. 116 East Thirteenth street, the delegates to the general convention of the International Typographical Union, at Denver, received their final instructions. They were ordered to insist upon the pro rata system of representation. To pay the expenses of the four delegates, Robert Costello, William Ferguson, David Kells and Charles M. Maxwell, it was agreed to use \$1,000 of the reserve fund for that purpose, and

\$1,600 for the per capita tax said to be due the International Union. There was some talk about the alleged financial discrepancies of ex-Secretary Wildman, but no definite or positive action was taken.

David Kells, of "Big Six," will be banquetted before he goes to Denver.

The wrapping-paper men from every state between the Alleghanies and the Rocky Mountains, excepting Pennsylvania, have held a meeting here for the purpose of bettering the present depressed condition of trade. It was reported that the failure of the organization to control the product was owing to the great number of new mills that are in process of erection. The meeting instructed the secretary to request the proprietors of these mills to join the association. Another special meeting will be called soon to see what response the proprietors will make.

Secretary Glackin, of Typographical Union No. 6, is opposed to the continuance of the "House of Call" at his office. It is a room set apart for unemployed members.

It seems as if the scheme to start a weekly labor paper in this city had fallen through. The last labor paper that was started, the *Leader*, sunk nearly \$75,000.

The proposed convention of pressmen's unions, which is to be held here either this month or in July, will be largely attended, estimating from the number of favorable responses received from the various representative bodies of pressmen throughout the country. Letters acknowledging the receipt of the circular issued by the Adams and Cylinder Press Printers' Association and the Empire City Printing Pressmen's Union of New York all state that the inauguration of this important movement will certainly eventuate to the great and mutual advantage of all pressmen and associated interests throughout the United States. The proposition to organize an international pressmen's union is hailed with unfeigned manifestations of approbation and satisfaction, and, in many instances, the representatives of local pressmen's unions say that every method it is possible to adopt will be pursued to accomplish the end in view—the formation of an international association of pressmen. It can safely be predicted that every American city will send a full delegation to the New York convention, while the delegates will be composed of men of intelligence and pronounced practical ability. Empire City Pressmen's Union, No. 35, and the Adams and Cylinder Press Printers' Association, the agitators of the movement, will make ample and proper arrangements for this national gathering of machine men, and, with the promised action and strong coöperation and assistance of the pressmen's unions, and the fraternity generally throughout the country, the programme of business and other details for the successful and satisfactory operation of the convention will be appropriately and promptly managed. It is certainly indicated that the pressmen of America are on the eve of a movement that is destined to become mighty and invulnerable after being once firmly organized.

The recent statement of Theodore L. De Vinne in regard to machines attracts much attention. He says: "There seems to be an uneasy feeling among compositors about typesetting machines. It is true that only three of the many recently invented are at practical work, but all of them give a promise of usefulness, if not in all fields at least in some fields of composition. It is certain that the machines have come to stay. Compositors fear that they will reduce the price of labor, and will indirectly drive them out of business. Much of this disquietude is unnecessary. That typesetting machines may or will reduce the cost of the work on reprints and cheap books and papers is probable. That it will ever drive any large body of good workmen out of business is absurd. The machines will surely make more work for workmen. So far from decreasing the standard of workmanship, they will elevate it. This conclusion is warranted by a review of the changes in the trade made by inventions in another department—that of presswork. It is really amusing to reflect on the cheerful, short-sighted stupidity of the earnest trade union men who so violently opposed all improvements in typography. Surely meaning to benefit the trade, they were actually doing their best to destroy

it. If they had carried their point, if they had suppressed all labor-saving devices, if they had kept the trade in the same narrow rut it was fifty years ago — what would be the present condition of most of the men who are now earning fair wages in pleasant situations in our trade? It is plain that, if these improvements had been prevented, they would not be in the trade at all. There would be no place for them. The limited amount of work that could be done on hand-presses would have kept them out. They would have been obliged to find employment in other fields. Most of them would have had to do hard manual labor or accept inferior situations in which they could with difficulty earn \$9 a week. In view of the enormous blunders then made by sincere men, a thinking compositor may now well question the wisdom of the policy that opposes typesetting machines."

Another prominent authority says: "I am gratified to say that the amateur printer is not so much abroad as he used to be. The writers of lying advertisements in children's story papers and in journals of large circulation are no longer so numerous. Legitimate printers have no objections to boys having type and printing presses as toys. What they object to is having these boys hunting around a neighborhood for all the printing they can find, and then doing it at rates below what it is worth. The amateurs have discovered that it does not pay. Their presses, which were just as good as those for \$250, broke down after a few weeks' wear; their type could set up only a line or two, and the entire product looked like an extremely miserable botch."

David G. Croly, an old and well-known journalist, has passed to the great unknown. He was a man of whose career in journalism much might be written. Under Manton Marble he was managing editor of the *New York World*. He founded the *Graphic* and the *Real Estate Record and Guide*, with which last publication he was connected during the latter years of his life. At the time of his death he was aged sixty years. He was a newspaper man in every sense of the word. As a writer he was strong, original and brilliant, and in the gathering and presentation of news he had few equals.

In a very interesting letter to the Associated Press, giving a description of the American exhibit at the Paris Exposition, Margaret F. Sullivan furnishes the following relative to the display of American printing machinery. "Printing House Square," in the American exhibit, will be run by electric power, supplied by Pickering for the special accommodation of the presses, which are not easily connected with the shafting. Neither Scott nor Hoe have any exhibit, but the plant, when ready, will be considerable. The Campbell and Golden companies' exhibits are the most important. Several typesetting machines are exhibited, including the MacMillan, the Thorne and the Mergenthaler linotype machine. The last named presents the most striking feature, as it does away with movable type. Instead, it uses matrices, and casts a solid bar for each line, the matrices being then returned automatically to their proper places. The machine is furnished with a phonograph, which dictates copy to the operator. The only other country exhibiting novel improvements in printing machinery is Great Britain."

Allen Thorndike Rice, who died just after being appointed Minister to Russia, was born in Boston, June 18, 1853. At the age of nine his parents visited Europe, and for five years he lived abroad. In 1867 he returned to this country, but went back to England in 1871 to study at Oxford, where he graduated in 1875. In 1876 he purchased the *North American Review*, which he has since edited with brilliant success. In 1879 he organized an expedition to examine systematically the ancient mines of Central America and Mexico. In 1884 he purchased *Le Matin*, a daily journal published in Paris. He was nominated in 1886 for congress by the republican convention in the tenth district of New York, but was defeated, as his friends allege, by the trickery of local politicians. He succeeded in having them expelled from the republican organization, and has since devoted much time and energy to the subject of ballot reform and the system known as the Australian system of voting. He has edited "Reminiscences of Abraham Lincoln," and contributed to "Ancient

Cities of the New World," besides making many minor contributions to literature.

Many of the inland newspaper proprietors have discarded "plates," and are doing all their composition at home. In several places, where wages have been low, an increase has gone into effect, and there is much rejoicing thereat among a number of industrious and worthy printers. PRINTER-JOURNALIST.

FROM BALTIMORE.

To the Editor :

BALTIMORE, June 4, 1889.

It would appear that the recent May number of *THE INLAND PRINTER* has eclipsed all its predecessors in general excellence of make-up, that is, if the opinion of the craft hereabout counts for anything in such regard. In a connection of the kind it may be that *THE INLAND PRINTER* is the only trade journal of its class that I discover in this locality preserved by the bookbinder's art, and the verdict is, that it makes not only a handsome volume but one wherein the printer, the typefounder and the publisher can find, in handy, collated form, much valuable information of a practical kind.

Messrs. A. Hoen & Co., lithographers and printers, whose imposing business structure looms up on Lexington street, opposite the city hall, were this week awarded the contract by the post-office department for furnishing post-route maps for the next fiscal year. They were the lowest bidders. These maps are for use in making postal contracts for carrying the mails. There are six editions in a year, and they are issued every two months and corrected up to date. Each edition comprises 2,500 maps. This firm is also preparing a special lithograph, showing the new exhibition building, together with the Pimlico grounds, where the state fair is to be held in September.

D. W. Glass & Co., now located on Baltimore street, west of Charles street, have been awarded the contract to furnish paper fasteners for the postoffice department for the next fiscal year at \$1.87 per thousand. This is a renewal of last year's contract. Mr. Glass, the head of this firm, about three years ago took quite a prominent part in an agitation which led to a reduction of the long hours of labor exacted at that time of the street carmen. But this gentleman and the Baltimore Typographical Union have never been in accord as to whose jurisdiction the firm's printing office should be worked under; in a word, all the efforts made to unionize the establishment of D. W. Glass & Co. have proved barren of results, all of which has led some of the members of the typographical union to intimate that Mr. Glass is not possessed of that virtue said to be a jewel, and commonly called consistency.

But, speaking of contracts, reminds me that the printing of the city registry list was not awarded this time to the highest bidder as was the case a year ago, when, in some mysterious manner, the job was given out at 15 cents per name, while responsible bidders, with good bond, who prepared to do the work for 5 cents per name, were ignored. Wells & Co. may be mentioned as among the latter class. It is estimated that the city treasury was robbed by this "job" of not less than \$8,000. On the authority of reliable job printers, there is a fair profit in printing the registry list at 5 cents per name. The contract for the present list, which embraces only five thousand names, has been awarded at 12 cents per name, when it is stated that the previous list comprised eighty thousand names, and for the printing of which 15 cents per name was paid — the highest bid — it is not at all surprising that the award was openly pronounced a "deal."

Pressmen's Union No. 38, of this city, lately reorganized under a new charter. One among other objects for doing this was to get the stereotypers and feeders out of the organizations. As organized at present none but pressmen are eligible to membership, and the candidate, moreover, must have served five years as an apprentice and have worked one year at least as a journeyman.

A movement is on foot, according to circulars sent out from New York, to get all the pressmen's unions to withdraw from the International Typographical Union, with the stated object to form an independent organization, to be free from all entangling

alliances. To the projected new departure, the pressmen's union here is said to be decidedly opposed.

Frank Daffin, late compositor on the New York *World*, who committed suicide recently in that city, was well known among the craft in Baltimore, and also as a printer who had few, if any, superiors, both as to skill and speed, in manipulating type. Daffin was employed on the Baltimore *Sun* at the time of the assassination of President Garfield. This lamentable affair occurred on the day upon which Daffin was to enter upon his two weeks' vacation. Would he defer his holiday until the rush in the composing room was over? But Daffin, though remaining in the city, as is said, steered clear of the office, nor could he be found that he might be notified of the pressing need for his services. At the expiration of the "two weeks off," Daffin "showed up," and he was then and there discharged. Immediately after this turn in affairs, he left Baltimore for New York, where he resided until he rashly determined to take a holiday without any limitation attachments, and in a country from which tourists never return.

Messrs. Hitchcock and Riggs, delegates to the Denver convention, were, on the eve of departure, instructed by Baltimore Typographical Union to vote against any measure that would give the International Typographical Union power to compel subordinate local unions to declare for the proposed eight-hour day, which some of the labor organizations will attempt to inaugurate, it is said, on May 1, 1890. The delegates were also instructed to vote against the insurance scheme. Of course, by the time the next issue of THE INLAND PRINTER appears the convention will have adjourned; but it may be stated in this correspondence what the sentiment of the majority is in the Baltimore Typographical Union as to these important questions.

Mr. Adolph Sutro, of San Francisco, paid a visit a few days ago to his brother, Mr. Otto Sutro, a public-spirited citizen of Baltimore. There is nothing remarkable, perhaps, in one's having a brother visit him, but Mr. Adolph Sutro is not a common, every-day brother. He is a man famous as the projector and successful engineer of the great Sutro tunnel. He is also a man of large fortune, accumulated by his own skill and industry. Mr. Sutro proposes to erect on his own property, at the Golden Gate, San Francisco, a great library, to accommodate one million volumes on scientific subjects. He has personally collected in his travels through Europe 200,000 volumes, and among them he has gotten together a rare library of works relating to the art of printing from its invention to the present day. The library building and its contents will be given to the city of San Francisco.

"Nacirema" is a word not to be found in any dictionary, and yet Gen. Felix Agnus, publisher and manager of the Baltimore *American*, contends that it is a good word. "Nacirema," interpreted, or spelled backward, reveals simply the term "American," and it stands as the name, given by General Agnus, of that gentleman's country seat, distant some twenty miles from Baltimore. Nacirema, on a certain day, about two weeks ago, is said to have been in its glory; the occasion, a public dinner given on the place by General Agnus to Mr. Frank Thomson, first vice-president of the Pennsylvania Railroad Company. Five hundred invitations were sent out, principally to newspaper correspondents and politicians, the great majority of whom responded promptly and in person to the epicurean summons. As the publisher and manager of the *American* is something of a statesman himself, he could not well have overlooked in making out his invitation list such shining lights in the political world as Secretary James G. Blaine, Secretary Benjamin F. Tracy and Secretary J. M. Rusk, and these distinguished gentlemen of President Harrison's cabinet were all present. General Agnus said at the feast it was the happiest day of his life. He barred, it may be presumed, the nuptial hour in which he led to the altar the daughter of the late lamented C. C. Fulton, who was editor and proprietor of the *American* at the time of his death. And yet some inquisitive people are asking why General Agnus should give a dinner to a first vice-president of a railroad company, and especially one that must necessarily include, as would seem, so large a contingent of newspaper scribes and politicians. But there are carping critics here as elsewhere, who

are tinctured with that same jealousy which prompted Brutus to stab, and then to exclaim, "Cæsar was ambitious, and I slew him."

The publishers and proprietors of the *Sun* on Saturday treated the staff, editorial and reportorial, to a regular old-fashioned outing, which consisted of a jolly run from Baltimore to Washington on the top and inside of large coach, *à la* tally-ho, with relay of horses, etc. The party traveled over the old historic Washington road, famous as being the route journeyed over between this city and the national capital by Washington, Jefferson and many more of the immortals, before an iron pathway for the steam horse was dreamed of in the philosophy of primitive days. The *Sun* of the following Monday contained over a column of interesting detail anent the trip, and as a fine bit of descriptive writing the article in question might well be set down as a masterpiece in its way.

The expressions of sympathy extended by this community to Mr. James R. Brewer, editor of the *Evening News*, in consequence of the recent untimely death of his young wife, are sincere and heartfelt. Mrs. Brewer was about twenty-two years of age, beautiful in form and feature, and possessed many amiable traits of character. She leaves a son a few weeks old.

As hinted at in a previous correspondence, as to what would soon follow the election of new congressmen from Maryland as regards the government printing office, I notice that these recently elected representatives of the republican faith are bringing a strong pressure to bear upon Public Printer Palmer in order to secure places for their typographical constituents.

Printing, both as to book and job, and in the newspaper way as well, may be quoted as fair to middling. FIDELITIES.

FROM MONTREAL.

To the Editor :

MONTREAL, June 1, 1889.

The state of trade is not much better than last month; many printers are still idle. One place in particular, Rouse's Point, New York, better known to the craft as "The Plug," does a great deal of harm in the way of manufacturing botches of all descriptions. They make printers, such as they are, in short order and set them afloat, many of them coming this way. Some endeavors are being made by Typographical Unions 176, English, and 145, French, to make that place come into the fold, and with the cooperation of our American brothers we no doubt will succeed.

A new office has been started by the Waters Brothers at 751 Craig street. All their material is new, and being good printers themselves, Montreal expects to see some fine worked turned out at the above place.

The *Journal of Commerce* have moved from their old stand at 305 St. James street to the more commodious quarters at 171 and 173 St. James street, occupying the upper three flats of the building for the pressroom, composition room and bindery. A new web press will be purchased at no distant day.

J. Theodore Robinson has moved his printing establishment from St. Francis Xavier street to 674 Craig street. The place formerly used had to be lighted up by gas all day long and every day in the year, while the place now used is the third flat, which is well provided with light and is well ventilated. The composition room, pressroom and bindery are all on this floor, while the office is on the ground floor. Several guide books are published at this office, besides many cheap editions of novels. About fifteen hands are employed the year round.

W. H. Eaton has also moved his office, though only a short distance. Considerable small work is done there. He also publishes *Eaton's Advertiser*.

Though Montreal is overprovided with girl comps and many rodents, there is no such thing as "boiler plate" or "frozen matter" used in the city, nor has there been any attempt to try type-setting machines.

The time has now come for the principal game to be played. Lacrosse is the prevailing game in Canada. The printers generally get up several base ball clubs, but none will play on the diamond this summer. Lacrosse is quite a game when one gets accustomed to it.

J. P. M.

EDWARD T. PLANK.

The present president of the International Typographical Union, Edward T. Plank, is a native of the State of New York, having first seen the light of day in the town of Catskill, over a half century ago. He received such education as could be obtained in the public schools of his state, being a constant attendant until about fifteen years of age, and a year later entered the office of the Catskill *Democrat* (soon after merged with the *Recorder*) as an apprentice. Close application and hard work soon undermined his health, and thinking he knew how it could be best restored, he went to sea in a whaleship, sailing around the world on his first voyage and passing a season in the Arctic ocean.

After a few years of sailing he reached California and again went into a printing office to learn the business. Something over thirty years ago he became a member of the union, and in 1863 was one of the charter members of Washoe (Nev.) union. The next year he went to Montana and assisted in getting out the first number of the Montana *Post*, published at Virginia City. Having a disagreement with the proprietor, who objected to paying \$1 per thousand ems for composition, Plank quit setting type and turned his attention to mining, which he followed for about two years, on Alder Gulch, which was then yielding a large amount of gold dust and gave employment to a great many miners. After nearly two years of faithful and hard work upon his own claim (which afforded a bare living), in the spring of 1866 his prospects brightened and the claim began to pay well, but before the fortune was secured and when it seemed almost within his grasp,

the melting snows on the mountain sent down a volume of water that broke over its banks, plunged into the pits, filled the drifts, and in a short time flooded the surrounding claims, and submerged in an hour his pay-streak and his hopes of wealth. Almost penniless and with impaired health, he was sought by the foreman of the *Post*, and helped them out in donning a new dress and enlarging the paper, as there were no other unemployed typos in the country. After three or four weeks on the paper, during which time the price of composition was advanced from 90 cents per thousand ems to \$1.25, and settled to \$1.15; he sold his claim for a small sum and went to Fort Benton, where a syndicate was formed, a Mackinaw boat was purchased, and the party started down the Missouri. They reached Omaha in about twenty-five or thirty days, gave the boat away and scattered in different directions, Plank visiting St. Louis and Chicago and

finally halting in Detroit, where he went to work. During the next eleven years he was in Detroit most of the time, though working in New York two or three times for short periods, and several times in Lansing, Michigan. While in Detroit he held several official positions in the union, and represented it in the Montreal session in 1873, and was reelected in 1884, but resigned before the convention met in St. Louis, that year. In 1876 he went to the Black Hills, but failed to get a mining claim, and worked for some months in the office of the *Pioneer*, at that time a weekly paper in Deadwood. Leaving the Hills in the fall, he went west to Nevada and California and returned in the spring. The following fall saw him again in Nevada, where he held cases on the *Gold Hill News* until late in 1881. While there he held office in

the union, which he had assisted in forming years before, being its presiding officer for a term or two. While its president the union became a part of the Mechanics' Union (which was composed of the different trades, the miners not being affiliated). He became a vice-president of the Mechanics' against his wish, and the duty of presiding at the meetings (which were held weekly) largely devolved upon him. In the political canvass of 1880 the printers wished members of the craft in the legislature to guard the state printing office, which had been established by law two years before, and he was one of the two nominated and elected. The printing office remained a fixture, and the following summer he again stampeded to the mining section of Wood river, in southern Idaho, where argentiferous galena had been discovered. Usual ill-luck in mining attended him and he returned West and brought up in California. In the

summer of 1882 he went to Victoria, Vancouver Island, and amused himself setting solid bourgeois on the *Colonist* for a few months. While here an invitation reached him to visit Kalakua's dominions, and he went to Honolulu, where he remained until the summer of 1883, when he returned to San Francisco. It was not a good time for a printer to reach the city, but joining the turfites he worried along, took an active part in union matters, attended its meetings regularly, and in 1886 was one of its representatives on a board of arbitration in the settlement of some matters between the union and a couple of newspaper offices. In 1887 he was elected president of the union and one of its delegates to the session of the International Typographical Union, at Buffalo. At that session he was elected vice-president. The following year he was reelected president of San Francisco union and returned as a delegate to the Kansas City session of the International

Typographical Union, and at that session was elected to the presidency of the latter organization. Headquarters were established at Indianapolis, and in that city he has resided for the past year, though he retains membership in San Francisco, and this year is again returned as one of San Francisco's delegates.

A NOVEL ENTERPRISE.

The Detroit *Evening News* and the associate papers of the Scripp's league, the Cleveland *Press*, the Cincinnati *Post* and the St. Louis *Chronicle*, have decided to send at their joint expense a delegation of forty American workmen to the Paris exposition to return the visit of the French workmen's delegation to the Centennial exposition. The men will be nominated by the leading labor organizations and from these will be chosen at least forty representative men and possibly some women, selected with regard to their respective trades, their sobriety and reliability to convey to their fellow workmen in plain but clear and exact English, a fair conception of what they have seen and studied in Paris and throughout Europe.

The delegates selected will be assembled at some point of rendezvous to receive instruction and they will depart for New York in palace cars, where they will take first-class passage for Europe. Arriving in England they will first visit the leading industrial centers of that country, including London, Birmingham and Sheffield, and then cross the channel to France. They will remain at least two weeks in Paris studying the exposition, each delegate making a special study of his own trade and the exhibits which illustrate it. They will next visit the great manufacturing establishments in the neighborhood of Paris and afterward take a flying trip to Lyons and possibly some other great industrial city of the interior. From each point of interest, and especially from Paris, each delegate will write a carefully prepared report of his observations in his own special trade. The reports will deal not only with mechanical improvements that may be observed, but also with the relations of employer and employé as they are illustrated by the observations of the delegates in Europe as compared with their knowledge of the relations of the corresponding classes in America.

STRANGE USES OF PAPER.

Paper is now made to serve for steel and iron. When strong fiber is used it can be made into a substance so hard that it can scarcely be scratched. Railroad car wheels are made of it, more durable than iron. A store in Atlanta, Georgia, has been built entirely of paper. The rafters, weather boards, roof and flooring are all made of thick compressed paper boards, impervious to water. On account of the surface of the paper being smooth and hard it cannot catch on fire as easily as a wooden building. It is found warm in cold and cool in hot weather. The Breslau fireproof chimney has demonstrated that cooking and heating stoves, bathtubs and pots, when annealed by a process that renders it fireproof, becomes more lasting than iron and will not burn out. Cracks in floors around the skirting board, or other parts of a room, may be neatly filled by thoroughly soaking newspaper in paste, made as thick as putty and forced into the cracks with a paste-knife. It will soon harden and can be painted.

Black walnut picture frames are made of paper and so colored that no one can tell them from the original wood. A paper piano has lately been exhibited in Paris. The entire case is made of compressed paper, to which is given a hard surface, a cream-white brilliant polish. The legs and sides are ornamented with arabesques and floral designs. The exterior, and as much of the interior as can be seen when the instrument is open, are covered with wreaths and medallion painted in miniature. An Italian monk has succeeded in constructing an organ where the pipes are made of paper pulp. It has 1,400 pipes of various sizes. The American Cotton Seed Oil Trust are now running a mill for making paper from the hulls remaining after all the oil has been squeezed out of the cotton seed. They are contemplating the erection of a 100-ton mill for the same purpose. These hulls have

heretofore been considered worthless. It has so far proved so successful that the trust propose erecting mills at different points in the cotton-raising country. Of course, this will somewhat revolutionize the paper trade.

A new mill for the manufacture of paper from moss has been recently established in Sweden. Paper of different thickness and pasteboard made of it have already been shown, the latter even in sheets three-quarters of an inch thick. It is as hard as wood and can be easily painted and polished. It has all the good qualities but none of the defects of wood. The pasteboard can be used for door and window frames, architectural ornaments and all kinds of furniture. The ceiling of the assembly chamber at Albany, New York, is made of papier-mache. It is a model of its kind, and appears so like marble as to deceive the most expert eye. The latest idea is to use paper instead of wood for lead pencils by using a patent preparation by which it can be cut as easily as the softest wood.—*St. Louis Stationer*.

THE COPY CUTTER'S DESK IN A BIG DAILY.

"Do you think you paid sufficient attention to my desk?" inquired J. H. Symmons, copy cutter in the *Times* composing room, of the reporter who wrote the description of that department of the paper. The reporter being one of the craft who had not risen or fallen from the case, had noticed that the desk in question was a solid and handsome bit of oak furniture, and had supposed he was doing his full duty when he said so. Five minutes' conversation with Mr. Symmons convinced the reporter that his knowledge of the copy cutter's desk was of a most superficial character. Every printer knows the ordinary copy cutter's desk, it and everything on it being perfectly open to the observant typesetter. The new desk is not one of that kind. The desk itself is just the right height, and gives the copy cutter all the room he wants. While he stands at this desk, the copy cutter cannot see the compositor, neither can the latter see him, nor can the compositor see that portion of the desk where the copy is placed. The back of the desk, from the compositor's standpoint, or the front of it, as it seems to the copy cutter, rises to a height of about 6 feet. In the middle of this barrier is an aperture, the bottom of which is about 3 inches from the top of the desk. Near this aperture, which is large enough to admit a No. 10 hand, is placed the copy. The compositor who wants a "take" puts his hand in and takes the "take" on the top of the pile. He hasn't any idea whether it will be fat or lean; he hopes it will be fat, but knows that the chance is in favor of lean. If it be lean, he hopes for better luck next time, or perhaps he may grit his teeth, but he won't, as formerly, throw the blame for his ill fortune on the copy cutter and accuse him of so placing the copy as to get into the hands of favorites. Formerly, when the desk was in full sight of the compositors, the slyest of these were fairly well able to tell at a glance when the fat was on top, and they acted accordingly, the copy cutter being more or less warmly objurgated by the rest of the room. The new desk makes it an even thing all around. It was coldly received at first because it was an innovation, and innovations are looked upon with unfriendly eyes by typesetters the world over.—*New York Times*.

A SAN FRANCISCO newspaper offered \$200 to the one who would correctly guess the number of types in a jar exhibited in the exposition there. Two men were successful, naming the correct number, 34,200. How they came to hit on that number is interesting. One of them once guessed the number of shot in a jar about the same size as the one containing the type. There were 95,000. He thought there were one-third as many type as shot, and so divided 95,000 by three, and he said, "added a little to make it even." The other man saw a crowd around the jar, and felt in his pocket for a pencil with which to write a number. He couldn't find one, and moved on; but afterward, feeling strongly impelled to make a guess, felt again for a pencil, and found an old lottery ticket, on which was the number 34,200. He borrowed a pencil, put down the number, and won \$100.

PATENT IMPROVED TWO-REVOLUTION PRESS

WITH patented mechanism for controlling the vertical movement of the impression cylinder. It is extremely powerful, accurately fitted, free from friction and evenly balanced. A patented automatic device is also provided which prevents lost motion, and governs the degree of impression. Its patent reversing mechanism consisting of a cross-belt and spring shifter, is operated by the foot, which places the Press under the immediate control of the feeder. These advantages, with its Sheet Delivery, Hinged Distributer, Caps, Positive Slide Motion, Noiseless Grippers, etc., complete a printing machine that in every respect is equal to the most exacting demands of the times.

25 AND 5% DISCOUNT.

Well! The Type-Founders' Association rates of discounts are abolished. There is no longer a fixed standard of values for printing material or printing offices. While we have not deemed it wise to abrogate fair fixed prices, we have opposed an increase of such prices. Our representative was the only Chicago founder who, a year ago, when rates on body letter and other material were advanced, voted against it every time. At every subsequent meeting of the Association, we have taken the lead in urging a reduction to former prices.

But, with high prices or low prices we have steadily advanced in our sales and our business. When all prices were equal our strides were even more vigorous--others fell behind; why? Because with **SUPERIOR COPPER-MIXED** selling at the same price as other grades of Type, the latter must suffer.

The war of rates has begun; we are in the van and shall stay there. We are clear of all entanglements; own no printing offices and do not compete with our customers. We make all our type at home and can therefore furnish fonts and sorts promptly. We are pestered by no meagerness in our supply of original body and job faces. We shall be now as we have been, prompt, accommodating and progressive.

We make no sham pretenses. Remember, that the system now known as the Point System, which was adopted by the Type-Founders' Association of the United States on Sept. 17, 1886 is simply an adaptation by the American Founders, of the French Point System, which has been in use in France more than 100 years, therefore, the attempt of any single Foundry to claim the credit of having "originated" the same "is misleading and simply an advertising dodge." All the leading American Founders are making their type on this system, and it is only through their united action that its success is possible. Every intelligent printer knows and fully recognizes this fact.

When you want printers' material call on us; we will show you our **metal** and our **mettle**.

Until further notice our discount from list prices given in our 1889 Pony Specimen Book will be as follows, subject to sight draft in 30 days unless previously remitted:

25 PER CENT. IN 30 DAYS AND 5 PER CENT. EXTRA FOR CASH IN 10 DAYS.	25 PER CENT. IN 30 DAYS AND 5 PER CENT. EXTRA FOR CASH IN 10 DAYS. -- CONTINUED.	12 1-2 PER CENT. IN 30 DAYS AND 5 PER CENT. EXTRA FOR CASH 10 DAYS. -- CONTINUED.

"THE WETTER"

Consecutive Numbering Machine.

PATENTED.

May 26, 1885.

October 16, 1888.

PRICE

\$25.00

The increasing demand for the WETTER NUMBERING MACHINE from the general printers throughout the United States proves the usefulness of them. It is the only Numbering Machine made that can be locked in a form and work consecutively at each impression of the press. They can be used on any style or make of printing press. All machines guaranteed. For circular and prices address

JOSEPH WETTER & CO.,

28 & 30 MORTON ST.

BROOKLYN, N.Y.

SPECIAL.

We have the best equipped Numbering Machine Factory in the United States, and are prepared to furnish estimates on all manner of Numbering Machines, particularly those used on coupon presses.

“SUMMER.”

“Haftone” process, by F. D. MONTGOMERY, 359 Dearborn street, Chicago, Ill.

PERSONAL.

We acknowledge calls from the following gentlemen during the ensuing month: R. L. Patterson, Toronto, representative of Miller & Richards, Edinburgh, Scotland; A. Senécal, superintendent government public printing, Ottawa, Canada; B. H. Howig, Marshall Printing Co., Marshalltown, Iowa; J. Blizzard, Blizzard & Co., commercial printers, Toronto; A. W. Croil, National Electrotypes and Stereotype Co., Toronto.

ANSWERS TO CORRESPONDENTS.

W. C. G., Bothwell, Ontario: Will you inform me where I can get a small circular saw, say 4 inches in diameter, for cutting plates.

Answer.—C. B. Cottrell & Sons, New York, or J. W. Ostrander, 77 Jackson street, Chicago, can furnish what you desire.

NEWSPAPER GOSSIP.

THE Chattanooga *Morning Tribune* has suspended publication.

D. C. DUNBAR is now business manager of the Omaha *Republican*.

MR. GEORGE McBRIDE has started the *Times* at Julesburg, Colorado.

GUS MAMER will issue a new weekly paper at Keyport, New Jersey.

THE Appleton (Wis.) *Daily Post* is to be furnished with a new dress of type.

A NEW Saturday paper, the *World*, has been established at Elmira, New York.

THE *Star* is a new daily twinkler in the journalistic firmament at Sayre, Pennsylvania.

THE Delaware *Twilight*, a colored men's organ, has appeared at Wilmington, Delaware.

KAUFFMAN BROTHERS are to establish an afternoon daily in Denver with a capital of \$100,000.

THE La Grange (Ind.) *Standard* has entered upon its thirty-fourth year in the best of health and spirits.

A UNIQUE literary celebration will soon take place in China—the thousandth anniversary of the Pekin *Gazette*.

JOHN SWINTON has returned to daily journalism, and is now engaged as editorial writer on the New York *Sun*.

ONE hundred and twenty Kansas editors have been made happy by having been appointed postmasters in that state.

THE *Medical Times, Register and Dietetic Gazette*, Philadelphia, have been consolidated and will be published hereafter as a weekly.

EX-CONGRESSMAN FLOYD S. BRICE has been chosen editor of the *North American Review*, in place of Allen Thorndike Rice, deceased.

MESSRS. L. E. MCKAY and T. W. Turnbull have bought the Spencer (Ky.) *Courier* from the widow of the late Thomas Crutcher.

MESSRS. GEORGE H. DAINS and C. W. Metcalfe have bought the Cumberland Valley (Ky.) *News*, which is published at Barbourville, this state.

THE Logan County (Ky.) *Ledger* is shortly to appear at Russellville, with Mayor Duke Bowden in editorial charge and Vascoe D. Brown, manager.

THE *Union* of Philadelphia, published weekly for Typographical Union No. 2 is one of the most interesting exchanges which reaches our table.

FRANK W. JOSLIN, who has for some time been on the editorial staff of the Utica (N. Y.) *Observer*, has resigned to become associate editor on the *Herald*.

THE sale of the Des Moines *Daily Leader* has been consummated, the assignee accepting the bid of Henry Stivers & Co., of the Burlington *Gazette*, for the sum of \$21,725. The politics of the paper will be democratic, and it is understood that Mr. Stivers

will be the editor-in-chief. The new deal gives great satisfaction to the local representatives of that party at Des Moines.

W. E. HOSKINS will start a paper at Manarquaw, New Jersey, to be known as the *Star*, and he will also publish a paper at Spring Lake, which will be called the *News*.

THE *Saturday Star* is the name of a very interesting and neatly printed six-column, eight-page weekly, printed in Milwaukee by Ernest W. and Harry E. Dankoler. Price, \$2 per annum.

Japi Oaye is the name of a very neat four-column quarto published at the Santee Agency, Nebraska. It is printed in the Sioux language, and is set up by the boys employed in the composing department of the training school.

MONTPELIER, Ohio, is to have a second paper again, called the *Republican*. Mr. Miller, of Zanesville, a gentleman of many years' experience, has moved an office there, and is making preparations to issue the first number in a few days.

Farmer's Alliance is the name of a readable, well printed, five-column, eight-page weekly, published by the Alliance Publishing Company at Ooltewah, Tennessee, and devoted, as its title implies, to the interests of the farmers of the state.

A STOCK company for the publication of a daily paper in Burlington, New Jersey, has been organized, with the following management: President, Dr. N. L. Woodruff; secretary, J. W. Gaskill; treasurer, Thomas Gifford. The name chosen is the Bordentown *Independent*. L. N. Prentiss, of Columbus, will be chief editor.

WE inadvertently failed to mention in last issue the receipt of the proceedings of the twenty-fourth annual session of the Illinois Press Association, pamphlet form, from Hayes & Fletcher, of the Morris (Ill.) *Herald*. The printing and compilation correspond—both are first-class. The secretary, Mr. E. B. Fletcher, knows his business, and the association has every reason to be proud of the services rendered by such an official. This is *not* flattery, it is the simple truth.

A PAPER MINE.

"I recently met Henry Palmer, an old California friend and one of the Argonauts, who told me he had abandoned the West and settled in St. Lawrence county," says a writer in the New York *Star*. "What are you doing up there?" I asked. He excited my curiosity by replying, "Working a paper mine." "What do you mean?" "I'll tell you. When I was a boy I worked in a paper mill at Camden and became familiar with the clays used for sizing and weighting paper. I concluded a short time ago to leave California and spend the balance of my days in the East. While on a visit to St. Lawrence county I was riding one day along a new road which had been cut for some distance through a peculiar formation of soft white rock. I examined it carefully under the microscope and found that it was fibrous, and seemed peculiarly adapted to paper making. I had tests made by manufacturers, who reported favorably, so I bought the land and began mining; we are now shipping over a hundred tons a day, and it is rapidly displacing the clays formerly used, as its fibrous nature makes it a part of the warp and weft of the paper, instead of sizing only. No other such deposit is known in the country."

A NEW composing machine is in course of completion at Berlin. It not only composes but also automatically justifies the lines, while the compositor may go on with his work. It is said to set and justify about 7,000 types an hour. Another great advantage it possesses over the old system of composing machines consists in its manner of guiding the types, which do not reach the stick through the canals on an inclined plane, but are taken up and firmly held by grippers, until they reach their intended place in the line they belong to, a system by which all the stoppages arising from the irregular progress of the types in their way down are avoided. The machine will shortly appear on the typographical mart.

THE NEW PUBLIC PRINTER.

Frank W. Palmer, the new public printer appointed by President Harrison, May 7, 1889, comes of English and Scotch stock. He was born in Manchester, Indiana, October 11, 1827, his parents having gone to that new country from eastern New York, subsequently returning to Jamestown, New York, near which city they died. His father, Rev. Z. M. Palmer, was a Baptist preacher, tall and spare, with a spiritual face, the head of a philosopher, wonderfully gifted in spiritual power, but poor in purse and broken in health. *His* treasure was not of this world. His wife, Selina Strong, on the contrary, was stout, energetic and practical. No one who met her genial welcome and sweet smile, ever forgot the good, motherly Mrs. Palmer. She came of Puritan parentage, and often modestly boasted that her father, Asahel Strong, was the leading selectman of his town, and greatly respected for his learning and many virtues.

Their boy, Frank, the youngest of seven children, was much like other boys of the town, playing truant some, helping his mother some, and attending the village school some, till at about fourteen years of age, when he bargained to learn the printing business in the office of the Jamestown *Journal*, the pioneer paper of the town, and one of the first papers in western New York. During his three years' apprenticeship, he had a stipulated amount of schooling at the village academy, still working in the office nights and mornings.

From the time Frank set the first type the whole nature of the boy seemed to change. He had no further boyhood, as boyhood is reckoned nowadays; he was a man in ambition, in purpose, and growing power. While other boys were kicking the foot ball, *à la* Yale, in the village streets of an evening, his dim light could be seen in the corner window of the old *Journal* office, where, in a little dingy room, he sat poring over some borrowed book, trying his hand slyly on an article for the *Journal*, or dreaming dreams of the future, with some congenial chum of his schoolboy days.

Completing his trade, Frank, at the age of seventeen, struck out for wider fields and a journeyman's wages. His first application, in Buffalo, for work, to a sleek, pompous employer, resulted in a cruel rebuff. Then and there the disappointed boy made a vow that if ever he became an employer, he would, at least, be kind to applicants for labor, and if he could not employ a boy he would not insult him. Possibly something of the public printer's pleasant smile and kindly greeting which make him popular now with applicants in the biggest printing office in the world, dates back to this mistaken man, who afterward obsequiously sought

the printer boy's help while he was a member of the legislature at Albany.

As illustrating the progress of the age, it may be mentioned here that on his way to New York, he was seven days going from Buffalo to Schenectady, on a line canal boat—longer than it takes travelers now to cross the Atlantic or span the continent. But that was forty-five years ago, and that time measures much of American history and American progress.

After a year or so at the case in the big city, he was sent for by his old employer, and thereafter he had the main charge of the Jamestown *Journal*, till he became part owner of it in 1848, continuing thus for some ten years. As an editor, he had the courage of his convictions, and was a success from the first. Never sensational, his style was terse, clear-cut and vigorous, dealing largely in facts, figures, and convincing argument. The party managers

of old Chautauqua soon felt his power, and sent him to the legislature two terms, where he took high rank.

But the wider field of the great Northwest attracted him, and he went to Dubuque, Iowa, taking an interest in the Dubuque *Times*, till 1861, when he removed to the capital of that state, and bought the *Weekly Register*, making it the *Daily Register* later on. Here, too, he was popular. He was elected state printer four successive terms, of two years each. Then he was chosen as congressman two terms from the capital district of Iowa, serving his people with great credit and satisfaction. In the house of representatives he was a member of the Appropriation and other leading committees, showing how highly he was appreciated by Blaine, Garfield, Kelley, Scofield, and other strong men of that day.

But his ambition was for a higher and broader journalism,

and in 1866 he sold the *Register*, afterward so ably edited by J. S. Clarkson, the present model first assistant postmaster-general, and bought a one-third interest in the Chicago *Inter Ocean*, continuing its editor in chief until 1876. In 1877 he was made postmaster of Chicago, serving more than eight years until displaced by Cleveland. He brought order out of chaos, and placed that office at a high standard by his untiring industry and executive ability. After his removal he did editorial work on the Chicago journals, latterly being editor of the *Industrial World*, a paper devoted to the metal industries, the tariff, etc. During the last presidential campaign he did good work for the republican cause for nearly two months in Wisconsin, Indiana, Michigan, New York, Connecticut and New Jersey. As a platform speaker he is among the best, holding his hearers from start to finish. He has a commanding presence, being nearly six feet tall, straight, broad shouldered,

and the picture of health and manly vigor, with a musical, far-reaching voice, a pleasant face, and a happy faculty of saying something every time he speaks. Temperate in all things, he has a good, strong body, and is able and willing to do any amount of work. Personally and socially, Mr. Palmer is one of the most agreeable of men, as gentle and considerate in the social and family circle as the wife and children of his love.

One prominent characteristic of Mr. Palmer is his abiding faith in, and fidelity to, his friends. And this, in turn, may account for the tenacity with which his friends stick to him, and why the recommendations for his appointment were so earnest, cordial, general and voluntary.

That his selection was fortunate for the public service is already apparent. As postmaster of Chicago, he handled more than \$200,000,000 of public money, without a breath of scandal, or the loss of a cent, and he has shown his honesty, ability and courage in doing what he thinks is right, in many ways. While he cannot be coerced by any man living, he will say no if he must, so kindly to the many applicants for place, that no gentleman or lady can take offense.

If the president is equally discreet and fortunate in filling other important public trusts, his party and the country will have no just cause for complaint.

ST. LOUIS JOTTINGS.

R. P. STUDLY & Co. have put in a new Huber press, recently.

BUSINESS is very quiet in this city at the present time, and the prospects are not very flattering.

THE Little & Becker Printing Company have increased their capital stock from \$5,000 to \$30,000.

THE Central Typefoundry last month added a stereotyping and electrotyping department to their foundry.

THE St. Louis Typotheta has passed a resolution to fix the rate of composition on bookwork so as to conform with the rates prevailing in Chicago for similar services.

THE F. O. Sawyer Paper Company, with a capital stock of \$60,000, has been incorporated. This firm has been in business here under the above title for a number of years, but not until now incorporated.

J. E. MANGAN & Co., finding that their present quarters are entirely inadequate for their constantly increasing business, have secured elegant, commodious quarters on Locust street, near Tenth, and will soon remove to them.

THE St. Louis Printing & Stationery Company was sold to the St. Louis Label Works about a month ago. Both firms made a specialty of druggists' labels, and the consolidation gives the St. Louis Label Works a very large plant.

ONE of our republican congressmen, Hon. Nathan Frank, recently purchased an interest in the *Daily Star-Sayings*, and he will make it one of the staunchest organs of his party. Last week this paper was awarded the city printing for another year, it having already held the contract for the past year.

SINCE starting its daily edition, the *New Order*, the local workmen's association's organ, has had it forcibly presented to them that the path of a daily paper is not strewn with sweet-scented roses. After having been attached and the office held in possession by the sheriff for some time, they succeeded in getting capital interested in their behalf, and the attachments were paid. The paper has now taken a new lease of life, but will appear only weekly as formerly.

WE are pleased to note that most of our printers here are doing a good business, taking it from one year's end to another, and most of them, I imagine, find the balance on the right side of the ledger; even if not very large, at least it is there or certainly not on the other side. This is evidenced by the many substantial improvements and increase of plants which have been made very recently by many of our printers. In spite of the prophecies and shakings of the head of the grumblers, and the printing trade has these as well as all other trades, men constantly are entering

the business, and those already in it do not evince any great desire to retire from it. No, dear grumbler, the printing trade viewed simply as a means of gaining a livelihood, is as good as any trade, and besides, when we think of it as the art preservative of arts, the *real artist* a person may make out of himself in it, the never ending changes of fine effect he may produce — but I must desist. It would take a large book to record the thoughts and musings of a true lover of the art.

ANOTHER society organ has been recently launched upon the sea of journalism. By name, it is the *Recorder*, issued weekly, in the interest of the Legion of Honor, by the Recorder Publishing Company, Howard Scott being the editor, and Gottschalk Printing Company doing the printing. It is a very bright, newsy sheet, well edited in all its departments and well printed. It should have the substantial support of all members of the order which it represents. Good luck to it. THE PRINCESS.

PRESS ASSOCIATION NEWS.

VAN BUREN county, Michigan, has formed a press association, comprising nearly every newspaper published in its limits.

THE women newspaper writers of New York are planning to organize a Women's Press Association. Mrs. Croly is talked of for president.

THE annual outing of the Pennsylvania State Editorial Association will begin on Monday, June 24. Colonel R. H. Thomas, secretary of the association, was in Philadelphia recently making arrangements for the excursion.

THE West Michigan Press Association holds its annual meeting in the city of Muskegon, June 19, 20 and 21. The programme of entertainment embraces a banquet, a visit to two of the largest sawmills, a ride upon Lakes Muskegon and Michigan and an exhibition drill by the life saving crew, etc.

THE Pennsylvania Editorial Association will make their annual excursion this year to Cape May, New Jersey. From two to three hundred editors will participate. The programme comprises an excursion from the interior of Pennsylvania to Philadelphia, arriving there June 24, and reaching the seashore the following day.

THE National Editorial Association meets at Detroit, August 27, and will remain in session four days. It is now composed of delegates from thirty-nine state and territorial associations and other associations have signified their intention to send delegates to the Detroit meeting. A trip on Lake St. Clair, one to Put-in-Bay, and one to Mackinaw will compose a part of the entertainment.

RECENT PATENTS.

The following list of patents relating to the printing interests is specially reported by Franklin H. Hough, solicitor of American and foreign patents, 925 F street, N. W., Washington, D. C., who will furnish copies of patents for twenty-five cents each.

ISSUE OF MAY 7, 1889.

- 402,561—Printing and addressing machinery, combined. S. D. Carpenter, Carthage, Mo.
 402,792—Printing in imitation of typewriting; apparatus for. C. E. Adson, Muncie, Ind.
 403,001—Printing machine, calico. J. Sutherland, Philadelphia, Pa.
 402,772—Printing machine set-off mechanism. W. Scott, Plainfield, New Jersey.

ISSUE OF MAY 14, 1889.

- 403,402—Printers quoin. S. D. Webb and S. C. Sweet, Washington, D. C.
 403,082—Printing device. S. G. Adams and C. L. Leonori, St. Louis, Mo.
 403,206—Printing machine, line. J. McAdams, Brooklyn, N. Y.
 403,181—Printing machine, plate. M. and H. E. Eberhardt, Newark, N. J.
 403,365—Printing press, platen. F. W. Museter, Fostoria, Ohio.
 403,423—Printing machines, form cylinder for. J. C. Ford, Beverly, Mo.

ISSUE OF MAY 21, 1889.

- 403,783—Compositors bracelet wrist protector. C. L. Smart, Los Angeles, Cal.
 403,882—Hand printing apparatus. T. Bartholomew, Newark, Ohio.
 403,513—Rotary printing machine. J. Brooks, Plainfield, N. J.

ISSUE OF MAY 28, 1889.

- 404,058—Printing machine. H. L. Snow, Reeseville, Wis.
 404,250—Printing machine sheet-delivery apparatus. G. P. Fenner, New London, Conn.

CHICAGO NOTES.

THE Chicago Coöperative Press Company has been licensed to incorporate with a capital stock of \$50,000.

THE *Sporting Journal* has ceased to exist, and a base ball publication has been started in its stead, the name of which, however, we do not know.

MR. O. P. BASSETT has resumed the management of the Pictorial Printing Company vice J. F. Lawrence, who has had charge for some time past.

WALTER S. MARDER is enjoying a respite from work and spending the time in the East, where he has many friends to make the time pass most agreeably.

THE monthly meeting of the Chicago Paper Trade Club was held at the Palmer House, Thursday, May 16. A very interesting paper on the subject of "Credits" was read by Thomas Cratty.

GANE BROTHERS have in press a new catalogue, which will contain, when issued, about two hundred and fifty pages. It will be a very complete guide to purchasers of bookbinders' materials and machinery.

MR. N. R. BAKER, manager of the Kansas Newspaper Union, Topeka, Kansas, recently made a tour of the Wisconsin paper mills, and also spent a number of days in Chicago. He was accompanied by Mrs. Baker.

MR. V. C. CHASE, with C. B. Cottrell & Sons, was laid up for some time with erysipelas, but is convalescent. He celebrated his first outing after recovery by selling a large two-revolution press to parties in Janesville, Wisconsin.

THE W. D. Wilson Printing Ink Company of New York have opened a branch office at Room 16, 417 Dearborn street, Chicago, where they will keep on hand a large stock of fine block, job and colored, and the various grades of cut and book inks.

THE Merchants Publishing Company have just issued a handsome catalogue of druggists' and other labels, the production of which they make a speciality. It is pronounced one of the finest and most complete catalogues of the kind ever issued in the city.

THE building at Nos. 73 and 75 Third avenue, Chicago, has been sold for \$55,000. It is a six-story and basement structure, 50 by 100 feet, and is leased to the Empire Show Printing Company for twenty-five years at \$8,000 a year. The ground is subject to a straight ninety-nine year lease at an annual rental of \$3,000.

MR. LOUIS F. BRAUNHOLD, designer and illustrator, 81 Clark street, Chicago, announces his removal to this location in a neatly executed circular and specimen sheet of his work. The book contains specimens of original designs in heliotype, wood engraving, half-tone process, etching, and pen and ink drawing, and is a credit to the artist.

THE undersigned paper houses have agreed to close their stores on Saturdays at 1 P. M. during the months of June, July and August, 1889. F. P. Elliot & Co.; Bradner Smith & Co.; Illinois Paper Company; J. W. Butler Paper Company; George H. Taylor & Co.; Calumet Paper Company; Chicago Paper Company; M. J. Fitch Paper Company; W. D. Messinger & Co.

THE condition of the printing trade in Chicago at this time is somewhat of a medley. In some branches it is extremely dull, while in others it is reported quite brisk, even to the extent of being crowded. Offices doing principally commercial printing report business quiet, while the offices doing railroad printing are fairly busy and in some instances crowded to their capacity.

OUR old friend, Mr. Albert Auer, has been appointed foreman of the pressroom in the government printing office, by Mr. Palmer, the same position he held under the administration of the late S. P. Rounds. He is a thoroughly qualified workman, and we congratulate Mr. Palmer on his selection. His many acquaintances in this city and elsewhere will be pleased to hear of his success.

MR. PAUL SHNIEDEWEND, of the Shniedewend & Lee Company, has been in poor health for some time past, and while not

confined to his house, has been able to be down to his desk but a half hour or so daily. We are pleased to state that at this time his health is improving, and all his many friends will join us in the wish that his recovery may be speedy, thorough and permanent.

AT the annual meeting of the Typothetæ Mutual Benefit Association of Chicago, held May 10, 1889, the following officers were elected for the ensuing year: President, A. McNally; vice-president, P. F. Pettibone; secretary, C. R. Hulett; treasurer, Thomas Day; librarian, C. H. Blakely; board of directors, W. P. Dunn, A. V. Willoughby, A. J. Crawford, R. R. Donnelley, D. P. Jackson, George B. Sweger, T. D. Parker, W. P. Gunthorp, C. E. Leonard, John Cross.

MR. RICHARD SULLIVAN, pressman of THE INLAND PRINTER and foreman of the pressroom of Henry O. Shepard & Co., was "under the weather," and took a trip to Mount Clements, Michigan, for rest and recuperation. Instead of regaining health, as he expected, he took cold and was prostrated by a severe attack of pneumonia, which confined him to his bed for a couple of weeks. We are pleased to note that at this time he is convalescent, and will, ere long, be at his accustomed post of duty.

THE Illinois Printing and Binding Company are well fixed in their new quarters at Nos. 65 to 71 Third Avenue. They have fitted up and furnished one of the handsomest business offices in the city. The furniture and trimmings of the office are antique oak, and the walls and ceilings are covered with latest styles of elegant gold papers and lincrusta-walton. Colonel Joe Sprague is now in charge there, and is ably seconded by a corps of assistants, of whom Jerry O'Donnell, H. C. Donohue and C. A. Rider are not the least efficient.

DIED.—It becomes our painful duty to chronicle the death of Mrs. Fanny Treloar, which sad event occurred at her home in Austin, a Chicago suburb, June 5, 1889. Mrs. Treloar was thirty-one years of age, and the cause of her death was consumption. She was the wife of Mr. Samuel H. Treloar, foreman of the job department of Henry O. Shepard & Co., and the many friends and fellow workmen of Mr. Treloar extend to him their sincerest sympathy in his loss. The remains of Mrs. Treloar were taken to Toronto, Canada, her former home, for interment.

AT a meeting of the Old-Time Printers' Association, held at the office of THE INLAND PRINTER, June 2, the following resolutions on the death of Mr. John Buckie, Jr., were unanimously adopted:

WHEREAS, Death has recently removed from our midst one of our best known and honored members, Mr. John Buckie, Jr., a man who for many years has been prominently identified with the printing interests of the West, and who was universally respected in the community as a business representative, citizen, fellow-craftsman, husband, father and friend; therefore be it

Resolved, That the Old-Time Printers' Association, while deploring his untimely death, deems it both a duty and a privilege to bear testimony to the high esteem in which deceased was deservedly held as a member of this organization, and declare that his memory will always be kept in grateful remembrance by the members thereof.

Resolved, That we hereby tender our sincere condolence to the sorrowing widow and family, and assure them of our heartfelt sympathy in their bereavement.

Resolved, That these resolutions be entered on the record book of the association, and a copy of the same forwarded to the widow and family.

THE *Daily News*, in referring to the experience of Mr. Charles Ross, Chicago's popular and handsome representative of Farmer, Little & Co., on his recent visit to New York, has this to say thereon: "Our valued friend, Charlie Ross, of Farmer, Little & Co., has just returned from New York, whither he went to see the centenary celebration. He speaks in terms of the warmest commendation of Mrs. Marshall O. Roberts, whom he pronounces the handsomest, most hospitable, and most gracious lady he ever met with. It seems that he happened to strike the big procession just in front of Mrs. Roberts' palatial residence, and he certainly would have been crushed to a jelly had not he crawled over the iron fence into the convenient grassy lawn. This happened to be Mrs. Roberts' lawn; the benevolent lady saw the handsome young Chicagoan's narrow escape and her sympathies went out to him. Ordinarily this audacious trespass would have cost the offender \$5 and costs,

but Mrs. Roberts graciously sent out a chair to sit on and an umbrella to keep the sparrows off and told Mr. Ross to make himself at home. So Mr. Ross saw the procession from first to last. The little children in the house were good and kind to Mr. Ross, too. All day long they kept throwing cake out of the windows to him, and every now and then a servant in livery would come out with a tumbler of iced drink for the stranger. Mr. Ross was not insensible to these delicate courtesies; before he went away he sent his card in to Mrs. Roberts and conveyed to her the hope that she would let him know whenever she visited Chicago, in which event he would see that she had a good time."

PAPER TRADE ITEMS.

SALISBURY, North Carolina, is to have a pulp mill.

THE paper industry of Holyoke gives employment to 3,867 persons.

NOTE paper having the grain of the cedar wood is a novelty in the English market.

F. X. T. HAMELIN, paper manufacturer, Port Neuf, Quebec, has made an assignment. Liabilities not stated.

E. B. WAITE & Co., paper manufacturers, Little Falls, New York, have been succeeded by the Little Falls Paper Company.

A PAPER and pulp mill to cost \$200,000, is to be built at Sault Ste. Marie, Michigan. Contract for the building has been let.

PULP mills have so multiplied in Maine that there is fear of an over-supply unless new mills are put up to turn the pulp into paper.

A PROJECT for building a paper mill, etc., is being agitated at Macon, Georgia. Negotiations for the McCall property are said to be pending.

THE Kearney Paper Manufacturing Company, of Vilas, Miner county, Dakota, has filed articles of incorporation. Its capital stock is \$50,000.

THE Ypsilanti Paper Company, Ypsilanti, Michigan, have recently transformed a portion of their straw plant into one for the production of sulphite fiber.

MORRIS ADLER, Isaac Liebman, O. F. Travis and others have chartered the Texas Paper Company, at Dallas, with a capital stock of \$30,000, to manufacture paper bags, printed wrapping paper, etc.

THE Illinois River Paper Co., of La Salle, with a capital stock of \$100,000, is the name of a new company recently incorporated by Messrs. John F. Clark, W. G. George and J. G. Scott. They will manufacture wrapping paper, and have an office in Chicago.

THE liabilities of the Berkshire Valley Paper Company are estimated at \$40,000; assets unknown. The Berkshire Valley Paper Company was composed of E. E. & B. B. Colton. The firm has been laboring under a heavy stock, and trying to run two large establishments.

THE Deseret Paper Mills, a few miles south of Salt Lake City, are employing forty persons, and the present product averages about 6,000 pounds of print paper per day. Manager Taylor says they are producing a better quality than ever before, and have the plant in much better condition for manufacturing.

OUT of \$3,111,876 worth of paper and paper manufactures imported into the Argentine Republic, less than \$43,000 worth came from the United States; \$28,000 of this amount consisted of printed books and sandpaper, and out of \$900,000 worth of printing and writing paper we sent the Argentine only \$2,000 worth.

THE Valley Paper Company, Holyoke, Massachusetts, are making some improvements in their mills which will increase their facilities for handling stock as well as afford considerable additional room. The improvements consist of an additional 35 feet in length to the present stock house, and raising it another story, making it when completed three and one-half stories high. An addition will be made extending 5 feet beyond the mill on the east,

which will afford a good size tower three stories high. The old elevator will be taken out and a much larger one substituted. A new 25-horse power safety engine has just been put in, to run one of the paper machines, and other new machines and appliances are to be added. When completed, these improvements will add greatly to the already excellent facilities of this mill.

THE Berkshire Valley Paper Company, New York, whose mills are at Pittsfield, Massachusetts, is financially embarrassed, and the works have been closed by the sheriff. The firm, which is composed of E. & D. B. Colton, has been laboring under a heavy stock and trying to operate two large establishments. Liabilities placed at \$40,000; assets unknown. The company has an office here.

TRADE NOTES.

ATLANTA, Georgia, is to have a typefoundry.

GUTHRIE & FRASER, job printers, Laredo, Texas, have dissolved partnership.

HINES & FORSYTHE, publishers, Carthage, Texas, have dissolved partnership.

BAKER & COLLINS, printers, St. Paul, Minnesota, have dissolved partnership.

THE St. Croix Post Printing Company, Stillwater, Minnesota, has been dissolved.

LUCAS, RICHARDSON & Co., printers, bookbinders, etc., Charleston, South Carolina, have been burned out. Loss, \$25,000.

THE firm of Glass & Bell, mercantile printers, Battle Creek, Michigan, has been dissolved; Mr. Glass purchasing Mr. Bell's interest.

NEBRASKA state printing this year goes to the Lincoln *Journal* and Henry Gibson, the latter doing work to the amount of about \$17,000, and the *Journal* about 60 per cent more.

ALFRED M. SLOCUM & Co., the well known printers of Philadelphia, have removed from 409 Arch street to 123-125 North Fourth street, above Arch street, east side of street.

MR. GEORGE S. BANHAM has severed his connection with the Belize (British Honduras) *Independent*, which will in future be under the entire management and control of C. L. Goodrich.

GEORGE H. MORRILL & Co., the well-known manufacturers of letterpress and lithographic inks and varnishes, have removed from 25-27 Rose street, to 17-19-21-23 and 25 Vandewater street, New York City.

THE Parmenter Bros. have organized the Parmenter Printing Company at Lima, Ohio, and fitted up a new job office and bookbindery. They are handsomely located and have already commenced business.

G. & C. MERRIAM & Co., Springfield, Massachusetts, the well-known publishers of Webster's dictionary, have removed from West State street, where they have been for the past thirty years, to the corner of Main and State streets.

MESSRS. Thomas Waters, L. L. Talbott and J. F. Olsen have purchased the job printing and bookbinding departments of the Des Moines *Leader* office, and will conduct a general business in the commercial printing and bookbinding line. Their material is all new, and their facilities for turning out fine work unexcelled. The members of the firm are all practical men. Success to them.

THE partnership lately subsisting between Andreas V. Haight and Edgar T. Dudley, of the city of Poughkeepsie, New York, under the firm name of Haight & Dudley, has been dissolved by mutual consent. All debts owing to the said partnership are to be received by Mr. Haight and all demands on said partnership are to be presented to him for payment. Mr. Haight will also continue the business of general job printing at 10 and 12 Liberty street, Poughkeepsie, in his own name.

Mosstype—Engraved by Moss ENGRAVING COMPANY, 525 Pearl street, New York.

SPECIMENS RECEIVED.

ALFRED M. SLOCUM & Co., Philadelphia. Firm billhead and business card in colors.

ALBERT BRANDT, JR., Trenton, New Jersey. Eight-page programme in black and red, printed on coated paper, the composition, register and presswork of which are faultless.

DAILY NEWS JOBROOM, Ashland, Wisconsin. Letterhead, unique, attractive, and on the whole creditably executed. The composition of the card is all right, but the selection of colors on the same is an unfortunate one. It lacks *character* and *harmony*.

ENNIS & COOK, Hamilton, Ontario. Letterhead and business card in colors. The design, execution and results attained on the former are commendable. We cannot say as much for the card. It lacks symmetry and tone; besides there is nothing to indicate whether it is printed in Hamilton, Ohio, or Hamilton, Ontario.

GRIFFITH & AXTELL, Holyoke, Massachusetts. A batch of invitations, reception cards, programmes, etc., many of them handsomely embossed, all of them gems of art, and evincing talent of a very high order.

J. P. MONCEL, Montreal. Letterhead for typographical union, in colors which are harmonious. The tints are worked from patent leather blocks, and are used to decided advantage. We consider it a very neat, creditable job.

FROM the *Times* office, McKeesport, Pennsylvania, comes a package of every-day work which is far above the average. The colored samples are especially deserving of notice, and the rule work is nicely finished, giving evidence that both the compositors and pressmen employed in the office are masters of their art.

EARHART & RICHARDSON, Cincinnati, Ohio, send a business card in black, tints and gold, which is as near being perfect as anything we have seen. The tints are delicate and harmonious, the register perfect, and the whole design very pleasing to the eye.

WILLIAM ROBINSON, Bolton, Lancashire, England. A package of samples, comprising billheads, letterheads, cards, programmes, etc., all of which give evidence of taste in design and excellence of execution. Such work is sure to bring credit and custom to the firm issuing the same.

WE are indebted to someone for a sixteen page pamphlet, the title page of which reads, "Suburbs of St. Paul," compiled and issued by the Star Printing Company, Minneapolis, which for composition, *imposition*, presswork, margins and stitching is hard to excel *from a botch standpoint*, and which is a positive disgrace to any establishment turning it out.

THE Turlot Typefoundry, of Paris, France, has issued a calendar for 1889, which combines, also, a specimen sheet of their type, borders, etc. It is printed in colors, each leaf being different in design and coloring, executed by Messrs. Bonaventure and Courchinoux. The calendar portion is attached to a handsomely stamped, cloth-covered board, the whole making an attractive and useful addition to any office.

PANTAGRAPH STATIONERY COMPANY, Bloomington, Illinois. Two programmes, both of which are specimens of the highest art in typography. The designs are artistic in the best sense of the term, and the coloring harmonious throughout. The Pantagraph Company are to be complimented on possessing compositors and pressmen capable of executing such fine work. We will be pleased to see more of their art productions.

WE acknowledge the receipt of Volume I of the "Michigan Printers' Specimen Exchange," of which Fred Slocum, Caro, Michigan, is the compiler. Many of the specimens are gems of art, but the collection, as a whole, is hardly up to the standard one would expect to find in such a work. While the number of samples is large, the degree of excellence is not marked, and we can fully appreciate the disappointment felt by Mr. Slocum in not receiving the support he anticipated from the printers of Michigan. Out of thirty-two contributors, nineteen are from Michigan, and the balance from outside states, and we cannot but admit that the

specimens from outside points are superior to those from Michigan points. We hope Mr. Slocum will meet with better success the next time.

ALSO from the *Safeguard* job office, Columbus Junction, Iowa, notehead and business cards; J. M. Stearns, Dalton, Massachusetts, neat embossed letterhead, design attractive and well-executed; Bass Brothers, Atlanta, Georgia, business card in colors, pretentious in design, miserable in execution; F. E. Thorp, Norwich, New York; J. H. Ropenan, Baltimore, business card; Rople & Warden, Los Angeles, California, four-page pamphlet in colors, on which presswork might be improved; Henry B. Myers, New Orleans, several specimens of creditable commercial work; Curtis Printing Company, St. Paul, Minnesota, several novelties, all of which are pleasing and attractive; Louis C. Hesse, St. Louis, business card; Harmon, Payne & Co., Minneapolis, Minnesota, four-page business circular, in blue and brown, on fancy embossed paper, neatly designed and neatly printed; South Publishing Company, 76 Park Place, New York, illustrated catalogue for the Babcock Printing Press Manufacturing Company; Gerlock & Davis, Scranton, Pennsylvania; Whittel & Shepperson, Richmond, Virginia, business cards, in colors and gold; William H. Goodland, St. John's, Newfoundland, business card, in colors, the tints being worked from patent leather blocks, very effective; *Weekly Gazette* office, Russell, Kansas, samples of commercial work, very neat in design and creditably executed; Otis J. Rogers, Girard, Kansas, some excellent samples of billheads, cards, etc.; C. J. Adams, Vinton, Iowa.

ITEMS OF INTEREST.

THE following is said to be an excellent composition with which to clean printers' rollers: Two pounds washing soda (bruised), two ounces common table salt, mixed in three gallons soft water, the whole being well stirred. When settled pour off the liquid for use. It is ready for use in an hour.

A NEW French invention, the thermographic press, is made for printing on wood by means of hot type. As neat an impression is claimed as is obtained in lithography, and by the use of a specially prepared ink, it is said that cold type may be used with equally good effect. Its speed is four hundred impressions an hour on flat wood.

LAST of all, beware of using the hyphen where (as in many cases) it gives to a compound a technical or special meaning which is foreign to the work in hand. Of this blunder a shocking example came under our notice in a concert programme printed during the present month, where one of the items was set down thus: "The Lord is a Man-of-War!"—*New Zealand Typo*.

THE turpentine brush should be used upon copper electros immediately after working; otherwise the ink which remains in the fine lines may generate acids and destroy the block. It is a good plan to clean a second time with pure oil. If the ink has been allowed to dry on the lines, it may be necessary to use creosote first, and then additionally treat the block in the manner above recommended.

THE Germans have resorted to the use of camphor oil for the purpose of cleaning rollers, type, wood cuts, machinery, etc. Essence of turpentine, petroleum, and benzene have been abandoned for various reasons. First, because camphor oil is cheaper; secondly, because it is hygienic and purifies the atmosphere of the workshop; thirdly, it is as efficacious, and as prompt as the products hitherto employed; fourthly, it is not greasy, and therefore leaves no deposit.

MESSRS. L. PRANG & Co., of Boston, art publishers, with a view to decide which shall be adopted as the national flower of the United States, have published a gem of a little work giving a charming artistic representation of both the "Mayflower" and "Golden Rod," with an appropriate description of each, in verse, and each purchaser is requested to fill out the postal card that accompanies the booklet and return it, with full address. The

result, as it appears from time to time, will be published in the daily papers and art journals in different parts of the country, and on January 1, 1890, the firm will mail to every voter a final decision.

A CONSIDERABLE industry has grown up in Australia in the manufacture of paper from corn husks. The husks are boiled with an alkali, and after passing through several processes a paper is developed that is stronger and more durable than any paper of equal weight. It can be made for newspapers, but generally is used for wrappers.

THE improved manufacture of rust-proof paper, for wrapping metallic articles liable to become tarnished, consists in incorporating with the paper or applying to its surface a fine metallic powder in such a manner that it will adhere. By this means, when silver, copper, brass, or iron articles are wrapped in the paper, they are preserved from rusting or tarnishing by reason of the greater affinity of the zinc for sulphuretted hydrogen, chloride or acid gases or vapors, and preventing them from injuring articles of such materials.

A CONTEMPORARY gives the following suggestion to pressmen who have trouble with their rollers: If a roller is affected by moisture in the atmosphere, wash it with common alcohol, which evaporates the moisture very quickly. If the roller is too dry, take 100 parts of glycerine, 10 parts of ammonia water, 40 parts of old beer which has turned sour; mix well together and wash the rollers for about five to ten minutes, and even longer. The ammonia reopens the pores of the surface for the glycerine, and the beer, by drying up, creates a compound which adheres strongly to the surface of the roller.

OF INTEREST TO THE CRAFT.

GEORGE W. SIKES, an old-time Chicago printer, is now foreman of the Leadville (Col.) *Democrat*.

ROBERT Y. OGG, of Detroit, suggests that a general amnesty be extended the Printers' Fraternity.

PITTSBURGH and Wheeling unions are almost unanimously opposed to reestablishing the sub list.

A TYPOGRAPHICAL union has been organized at Ashland, Wisconsin, starting with thirteen members.

MISS ESTELLE STAPP was initiated as the first lady member of Austin (Texas) Typographical Union recently.

BALTIMORE Typographical Union has a Franklin Relief Association that has paid \$717.95 in sick benefits last year. James W. Rogers is its president.

NEARLY all the Pittsburgh papers have signed the union scale for another year, and those that have not signed will do so in a few days, as the scale is practically the same as last year.

MR. CHARLES GAMEWELL, a gentleman wellknown to the readers of THE INLAND PRINTER, and a former vice-president of the International Typographical Union, intends to start a press-room in Philadelphia.

THE New York *Times* chapel has voted in favor of the restrictive sub rule. This measure provides that subs shall not be engaged between the hours of two and half-past five o'clock P.M. It has been generally adopted throughout New York.

WE acknowledge receipt of tickets for the first grand excursion of the Baltimore Printing Pressmen's Union, No. 38, to be given Monday, July 22, to Tolchester Beach, near Baltimore. We thank you, gentlemen, but we shall be unable to be there. May you have a grand, good time.

EDITOR COWEN, of the Warren (Pa.) *Mail*, is assisting Public Printer Palmer in his arduous labors. Cowen was a well-established printer in Jamestown, New York, when Frank Palmer, then a boy of fifteen, came to him to learn typesetting. Cowen took a liking to him and helped him all he could. They became fast friends. Palmer was a hard worker and a student, and Cowen is not surprised at his success. When he was appointed public

printer he telegraphed to Cowen, "Come: I need you." And Cowen went to him. Cowen is sixty odd years of age.—*Exchange*.

CAPTAIN J. M. JOHNSTON, city editor of the Lancaster (Pa.) *Intelligence*, who died about a month ago, was a compositor when a young man, and put in type Poe's "Raven" from the original manuscript. This manuscript he kept and held it as a sacred possession until a few years ago, when he sold it for a large sum to George W. Childs, publisher of the Philadelphia *Ledger*.

THE plans for the new New York *World* building have been filed in the Bureau of Buildings. They describe what will be one of the most striking and the tallest buildings in New York. It will be over thirteen stories high, and will be constructed of brick, stone and terra-cotta front. It will have a frontage of 115 feet, and be 136 feet deep. Its height from the curb level to the roof will be 188 feet. The structure is to cost \$1,000,000.

ON Sunday evening, May 12, the birthday of George W. Childs, Mr. Julius C. Chambers, managing editor of the *World*, entered the composing room for the purpose of setting 1,000 ems for the benefit of the Childs-Drexel Fund. To illustrate that he had been a compositor, he kicked when he got his first take because it was solid. He set 1,080 ems in fifty-five minutes, which is extraordinary, considering that Mr. Chambers had set no type before in eighteen years. There were only two typographical errors in the take, which was solid nonpareil.—*Union Printer*.

FOREIGN.

THE Berne printers wisely formed an association to avoid reckless competition, and sent in a joint estimate for the printing in connection with the Swiss census which will be taken next year. The order, amounting to about 20,000 francs, has been awarded the association, and the work will be divided among the members by lottery.

AT the close of the year 1888, 1,606 newspapers and periodicals were published in Italy. Of these, purely political were 439; political and religious, 72; purely religious, 115; literary and scientific, 139; commerce and finances, 198; and no less than 34 treat of theatrical matters. Of the 1,606 papers, 135 are published daily.

IN connection with the Technical College, Bradford, a class for the study of typography has been formed. There are about thirty members, and the average attendance is twenty-five. Mr. George Dalton, an excellent and enthusiastic printer, is the teacher of this class, which is held fortnightly. "The youths," says Mr. Dalton, "are really so much in earnest and so attentive and anxious to learn that it is quite a pleasure to work for them." Good. We want more men of Mr. Dalton's stamp.

THE Printing Exhibition at Stuttgart will take place during the month of June next. It is to comprise the whole printing trade and business, and the various machines used in the manufacture of books and papers are to be shown at work, as well as their products. As the exhibition is to contribute to the celebration of the king's reigning for twenty-five years, it will be exclusively Wurtembergian. Still, collections in the possession of, or represented by persons living in Wurtemberg will also be shown.

THE questions to be considered at the coming session of the International Typographical Congress, to be held in Paris, July 18 to 21, are as follows: An international relief fund; annual reimbursement of foreign unions for assistance rendered members in other countries; adoption of a uniform card for the different countries of Europe; the best way of securing harmonious international relations; creation of a European resistance fund; practical measures to secure a reduction of the hours of labor; how to guarantee equal privileges to all union men, irrespective of nationality.

THE men ostensibly working in the 354 printing offices of Berlin number 4,000, which number, however, includes from 300 to 400 men nearly always out of work. There are more than 1,000 apprentices, but not 200 of them are profiting from the school for apprentices. Women compositors number 45, and these only in the compositress' school of the Lette Union, as their office is

style. The wages paid in the offices are very varying. Overseers receive from 24s. to £5 a week, readers and clickers from 19s. to 50s.; the minimum wages paid to compositors on 'stab varies from 14s. to 24s.; in newspaper and larger offices compositors are paid from 30s. to 45s. Machine-minders receive from 27s. to 50s., a few head-minders rise to 60s. to 70s. a week. In 242 offices—of the other 112 no information could be got—48 rotaries, 24 double or two-color machines, 612 single ones, and 308 hand-presses or treadles were at work. Note that a shilling at Berlin goes farther than in London.

In Japan 575 dailies and weeklies are now published. It is only eighteen years since the first newspaper was allowed to make its appearance in the realm of the Tycoon. There exist also a good many monthlies. Among them is one in German, but edited by Japanese, its leading editor being the doctor of medicine Rintaro, who has made his studies in Germany. The aim of his periodical is to spread the knowledge of the German language and of German literature among his countrymen; but, according to his programme, he does not desire to discourage the study of the English language, that being "the language of commerce in Asia, Australia and Northern America."

BUSINESS OUTLOOK.

Bay City, Mich.—State of trade, good; prospects, good; composition on morning papers, 30 cents; evening, 28 cents; bookwork, 28 cents; job printers, per week, \$12. Mr. J. E. Saunders was elected vice-president of No. 81, on June 2, vice M. W. Campbell, who has left the city, and E. A. Eldredge was elected sergeant-at-arms, vice Mr. Saunders, resigned.

Bismarck, Dak.—State of trade, dull; prospects, fair; composition on morning papers, 38 cents; evening, 35 cents; bookwork, 35 to 40 cents; job printers, per week, \$18 to \$25. The coming constitutional convention in July promises to liven up the printing business some.

Buffalo, N. Y.—State of trade, good; prospects, good; composition on morning papers, 35 cents; evening, 33 cents; bookwork, 35 cents; job printers, per week, \$15. Joseph Howard was elected vice-president, and J. Dunnigan recording secretary of No. 9, at its last regular meeting.

Cheyenne, Wyo.—State of trade, fair; prospects, fair; composition on morning papers, 45 cents; evening, 40 cents; bookwork, 45 cents; job printers, per week, \$21. Never, since I have been in the town, has travel been so heavy as this spring, with the majority going east.

Columbia, S. C.—State of trade, fair; prospects, not encouraging; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, per week, nine hours, \$15; job printers, per week, \$18 and \$20.

Fort Wayne, Ind.—State of trade, fair; prospects, fair; composition on morning papers, 30 cents; evening papers, 28 cents; bookwork, by week; job printers, per week, \$13.50. Mr. Edward Clayhole, formerly of Peoria, Illinois, is lying here at the point of death.

Indianapolis, Ind.—State of trade, good; prospects, bright; composition on morning papers, 38 cents; evening, 36 cents; bookwork, 40 cents; job printers, per week, \$16.50.

Jackson, Mich.—State of trade, good; prospects, fair; composition on morning papers, 30 cents; evening, 27 cents; bookwork, per week, \$12; job printers, per week, \$12. There are plenty of printers here to supply the demand.

Kansas City, Mo.—State of trade, good; prospects, good; composition on morning papers, 40 cents; evening, 35 cents; bookwork, 37½ cents; job printers, per week, \$17. A union was formed last month across the line in Wyandotte, Kansas, with twenty members, named Sunflower Union. Isaac P. Moore is its delegate at Denver. The men at Rigby's walked out last week, as the manager wished to make it non-union. The matter is now being arbitrated.

Lynchburg, Va.—State of trade, good; prospects, encouraging; composition on morning papers, 30 cents; evening, \$12 per week; bookwork, 30 cents; job printers, per week, \$12.

Manchester, N. H.—State of trade, good; prospects, good; composition on morning papers, 30 cents; evening, 20 to 23 cents; bookwork, 25 cents; job printers, per week, \$10 to \$12. William McCann, twenty-nine years old, a compositor on the *Daily Union*, committed suicide at his boarding place, the 6th instant. Had a mother at Columbus, Ohio, and two sisters at Newport, Rhode Island. Temporary insanity the cause.

Milwaukee, Wis.—State of trade, very good; prospects for a summer vacation are very good; composition on morning papers, 40 cents; evening, 35 cents; bookwork, 35 cents; job printers, per week, \$14 to \$21. The book work now on hand will be finished on or about July 1. The directory has twenty men on, and will be completed by that time.

New Haven, Conn.—State of trade, very quiet; prospects, not encouraging; composition on morning papers, 40 cents; evening, 35 cents; bookwork, 35 to 40 cents; job printers, per week, \$15. There is only one morning paper in

the union, the other two, and one book and job office, being controlled by the Printers' Protective Fraternity. How long they will hold depends in a great measure on the present session of the International Typographical Union, for if the proper provision had been made heretofore by that body, the "Pestiferous Propagators of Famine" would now have been a thing of the past.

Omaha, Neb.—State of trade, very dull; prospects, fair; composition on morning papers, 40 cents; evening papers, 37 cents; bookwork, \$16; job printers, per week, \$18.

Pittsburgh, Pa.—State of trade, good; prospects, newspapers, good, job-work, fair; composition on morning papers, 42½ cents; evening papers, 37½ cents; bookwork, 37½ cents; job printers, per week, \$16. The newspaper proprietors have about all signed the scale. The job proprietors have not, as yet. All pay union rates. The city directory is almost finished. It has given work to at least thirty men for five weeks. Our delegates are in readiness to prospect for Colorado quartz.

Portland, Ore.—State of trade, dull; prospects, poor; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers per week, \$21. Work is very slack at present, this being the dull season with us. It usually lasts from four to six weeks.

Pueblo, Col.—State of trade, fair; prospects, not encouraging; composition on morning papers, 45 cents; evening, 40 cents; bookwork, 45 cents; job printers, per week, \$20. Work has not been so good the last month, warm weather being the cause. Our membership went down from thirty to twenty-five members in the month of May.

Rome, N. Y.—State of trade, good; prospects, cloudy; composition on evening papers, 25 cents; bookwork, 25 cents; job printers, per week, \$10 and \$12.

San Francisco, Cal.—State of trade, fair; prospects, fair; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 40 cents; job printers, per week, \$18. The total membership of active members, 696.

St. Louis, Mo.—State of trade, dull; prospects, bad; composition on morning papers, 43 cents; evening, 38 cents; bookwork, 45 cents; job printers, per week, \$18. The prospects for the next three months are not encouraging from present indications.

St. Paul, Minn.—State of trade, poor; prospects, discouraging; composition on morning papers, 42 cents; evening papers, 37 cents; bookwork, 35 cents and 43 cents; job printers, per week, \$16. The number of idle compositors in St. Paul is very large; work in book and job offices continues very dull, likewise newspapers; about two subs for every case.

Topeka, Kan.—State of trade, fair; prospects, poor; composition on morning papers, 33½ cents; evening, 30 cents; bookwork, per week, \$15; job printers, per week, \$15. The spring rush of work in book and job offices is now over, and business has settled down to its ordinary groove. Many tourists have left, but there is a surplus of idle typos here yet.

Utica, N. Y.—State of trade, fair; prospects, middling; composition on morning papers, 35 cents; evening papers, 31½ cents; bookwork, 31½ cents; job printers, per week, \$12.50.

Wheeling, W. Va.—State of trade, fair; prospects, not encouraging; composition on morning papers, 35 cents; evening, 30 cents; bookwork, 35 cents; job printers, per week, \$15. Work has been good for the past three or four weeks.

BUSINESS NOTICES.

NOTE the change in the advertisement of A. Zeese & Co. If you desire a specimen book showing "the latest," you will find it a dollar well spent to send for the book advertised.

THE Crocker Manufacturing Company, of Holyoke, Massachusetts, appears in this issue of THE INLAND PRINTER with an advertisement setting forth the merits of their products, and asking for a share of your patronage. They undoubtedly produce goods of high grade, and this fact they are willing and anxious to verify to all who desire to know or have doubts. See their advertisement, and if in need of anything of their manufacture write them for samples, prices, etc.

THE Whiting Paper Company, of Holyoke, Massachusetts, has an advertisement in this issue of THE INLAND PRINTER. This company is the largest manufacturer of writing papers in the world, having a capacity of twenty-four to twenty-six tons per day. The Whiting brands of flats and linen ledger papers are well known. They also manufacture a large line of fine stationery, fancy papers and envelopes, as well as stationers' specialties. They invite correspondence.

THE Liberty Machine Works of 54 Frankfort street, New York, have just rented another floor, 2,500 feet square, adjoining their present location, and which will be connected with the corresponding

floor in their present building. The additional room is required by their growing business, and they would have taken the whole building next door if the leases had run out. They expect, however, to get possession of two additional floors each of 2,500 feet square on or before May 1, 1890. By the way, the Liberty Machine Works were among those few American manufacturers honored by awards at the Melbourne Exhibition, just closed.

SEE on another page of this issue the advertisement of the Parsons Paper Company, of Holyoke, Massachusetts. This is one of the largest paper manufacturing concerns in the country in their special lines, which consist of several brands of linen ledger papers, bond, bank note and parchment papers, white and tinted writing papers and bristol boards. They have just completed and begun operations in one of the largest mills in Holyoke, that greatest of paper manufacturing cities in the world. The Parsons company furnish an elegant and complete line of samples of all their goods to intending purchasers, and we would advise all using goods of these classes to write for these samples.

Mr. A. E. Cox, treasurer of the Atlantic Works, East Boston, Massachusetts, informs us that the Courier Journal Job Printing Co., Louisville, has been added to the list of agents of this well-known company, and that the Boston office, in charge of Mr. E. F. Hogan, has been removed from 46½ Federal street to new and commodious quarters at 185 Congress street. The Atlantic Works manufacture the celebrated Dooley Paper Cutter, a machine so well and favorably known everywhere that mention of its merits at this time would be superfluous. With another distributing point for these machines it is safe to predict that in a very short time many printing offices and binderies will be supplied with a paper cutter that cannot fail to be satisfactory in every way—the old reliable Dooley.

A NEW THING IN AMERICA—A PHOTOGRAVURE PRESS.

We have just received from Messrs. Walker & Co., of Madison, Wisconsin, a sample of *photogravure printing*, executed on their new press. This invention must prove a great boom to American printers, as heretofore there has been no cylinder photogravure press made in this country, all the work of this character having been done on a hand-press—slow and tedious work—or on presses imported at great expense. As usual, Messrs. Walker & Co. have come to the rescue, and now American printers can boom photogravure work as never before. Notice their advertisement on page 808, in present issue of THE INLAND PRINTER.

A GOOD THING for somebody. Whole or half interest in well-established job office; for sale cheap. Good reasons for selling. Address, "S. C." care of INLAND PRINTER.

EVERY PRINTER should have a copy of "DIAGRAMS OF IMPOSITION," and "THE PRINTER'S READY RECKONER." Price, 50 cents each. To be obtained of H. G. Bishop, 37 North Pearl St., Albany, N. Y., or through Farmer, Little & Co., New York and Chicago. These are the handiest and most useful works ever published for printers. Indorsed by everyone who has seen them. Agents wanted in every town.

FOR SALE—A lever-cut Longley Mailer, 1¾-inch label, new. Will sell low for cash. Address "MAILER," care INLAND PRINTER.

FOR SALE—An \$8,000 job printing office, doing a profitable business, in a booming gas town, with large manufacturing industries. Address "GOOD BUSINESS," care INLAND PRINTER.

FOR SALE—Complete Hughes stereotype outfit No. 1, 13 by 23 inches, with all tools, etc., for doing first-class work, and full instructions for use. Outfit is new, and will be sold at a bargain. Address "BARGAIN," care of INLAND PRINTER.

FOR SALE—An old-established and well-equipped job printing office in one of the largest and best cities in Michigan. The proprietor has other business, and will sell at a bargain. For particulars address JAS. GRAY, Box 603, Bay City, Michigan.

PARTNER WANTED—In a newly equipped, well-established job printing business, in central New York. A first-class workman, with small capital to start with can find here an opportunity and a good run of work. Address, "OPPORTUNITY," care INLAND PRINTER.

WANTED—A strictly first-class compositor for fine commercial work, in western city of 50,000 inhabitants. Address, "W.," care INLAND PRINTER.

WANTED—The Inland Printer Co. will pay 25 cents apiece for numbers 2, 4, 5, 10 and 12 of Volume I, if in good condition, to anyone sending them to this office, or will credit the amount on subscription, if preferred.

WANTED—Foreman; a man who understands all branches of the printing business; must be up to the times. To a first-class man a permanent situation and good wages. Address, with all particulars, "C. P. S.," care of INLAND PRINTER.

\$15 WILL buy Vol. I (except No. 2) unbound, and Vols. II, III, IV and V of THE INLAND PRINTER, finely bound in full sheep. F. T. IRWIN, *Mirror* office, Manchester, N. H.

PERFECTED

**PROUTY
P·R·E·S·S**

WE WANT YOU and every other Printer **TO KNOW**

that the "Perfected Prouty" is the best Job Press made. Such a claim we know, and you know, is common, but we make this claim because every printer using the "Perfected Prouty" pronounces it the best, and these are

THE REASONS WHY

It is not an old-style press under a new name, but a modern press, built from original designs to meet the requirements of the printer. Old ideas of construction have been discarded, and the "Perfected Prouty" is absolutely free from grinding cams and powerful springs, rubbing or sliding motions, thump, pound, noise and rattle.

THE "PERFECTED PROUTY" PRESS

is so constructed that speed and durability combined with excellence of the work produced, and smoothness of operation are its characteristic features. In these particulars this press is Perfection, and its claims to superiority are based upon solid facts. Investigate these claims and you will be forced to admit that the "Perfected Prouty"

IS SUPERIOR TO ANY OTHER.

We sell the "Perfected Prouty" on its merits; guarantee full satisfaction, and will ship one on trial to any responsible firm. Any printer wanting a Job Press should acquaint himself with the new features and valuable merits of the "Perfected Prouty."

In use in the Government Printing Offices of the United States, Germany, Austria, Russia, France, Spain, Turkey, Portugal, Mexico, Brazil, Cuba, Etc., Etc.

THE RECONSTRUCTED LIBERTY PRESS

Has the *most perfect* distribution ever obtained on a job press. It is the only job press whose form rollers can carry full size riders. The Liberty fountain is the best used on any job press, and can be regulated by the feeder while the machine is running. These features insure better ink distribution than can be had on any other jobber.

It is the *lightest running* job press made. Its new patent *noiseless gripper* motion is worked by a cam positively, and not by springs, which are always breaking and wearing out.

The *throw-off* is simple, durable and exceedingly convenient, and does not weaken the impression, as is the case with most all the other throw-offs.

Any desired change can be made in a form without lifting it from the bed of the press. This makes the Liberty the best press for ticket, calendar and all similar job work where dates and figures have to be frequently changed.

The fly-wheel can be run in either direction, thus making it possible to locate and belt the press wherever convenience makes it most desirable.

We carry a full line of Liberty Presses and Liberty Paper Cutters in stock and can ship them from Chicago on the shortest notice.

* * TESTIMONIALS. * *

CHICAGO, April 29, 1889.
THE UNION TYPE FOUNDRY,
337-339 Dearborn St., Chicago:
Gentlemen.—We have used a "Liberty" during the past six months on our finest color and cut work, and to our entire satisfaction. We consider its distribution equal to that of a cylinder press, which cannot be said of any other jobber.
FOSTER, ROE & CRONE.

CHICAGO, March 5, 1889.
THE UNION TYPE FOUNDRY,
337-339 Dearborn St., Chicago:
Gentlemen.—The "Liberty" press recently put in our office by your company is giving entire satisfaction. We do not hesitate to say that for speed and execution it will prove in every way what its makers claim for it. HENRY O. SHEPARD & CO.

CINCINNATI, April 27, 1889.
THE UNION TYPE FOUNDRY, 337-339 Dearborn St., Chicago:
Gentlemen.—Your favor of April 24th duly received. In reply have to say that we do some of our best work on the "Liberty" job press. The inclosed supplement was printed on the "Liberty," and we think it is equal to the best work done on any other job press. We are well satisfied with the "Liberty."
EARHART & RICHARDSON.

WOOD VERSUS PHOTO-ENGRAVING.

NO. III.—BY THOMAS W. ELLIOTT.

WOOD engraving has made rapid strides the last fifteen or twenty years, and the American nation deserves the credit for pushing it forward with its capital and enterprise. The *Scientific American* stimulated wood engravers (mechanical) to do better work by its illustrations made by Ten Eyck, fifteen years ago; take up a copy of the same paper today, and you will not find any better work in it. The fine illustrations (pictorial) in *Harper's Monthly*, *Century* and other first-class American magazines, set the English engravers in London, England, thinking how the Americans could afford to pay for and

be somewhat of an artist to put artistic feeling into his work as he engraves it. Give an artistic subject to an engraver who is mostly on mechanical work, and the result will be a very stiff looking and unsatisfactory cut, to an artist in oil or water colors. Also, if you give a mechanical subject to a pictorial engraver, you will get a cut devoid of sufficient strength and which lacks decision in the details. There are some who can engrave both, and do them well, but they are mostly men of great experience,

FIG. J.

produce such work. Correspondents of trade journals often assert that process work reproduces the drawings and paintings of the artist correctly, without being *butchered* by the wood engraver. Perhaps it would open their eyes if I here say, that there are a great many artists in oil who could not draw in black and white a copy of their subject that a one term pupil in an art school would be proud of. (Look at some of the sketches by famous artists in an art exhibition catalogue.)

Before photographs on wood came into general use, wood engravers had some terrible drawings to convert into something that would look like what was intended. Certainly, a wood engraver to do pictorial work should

have a natural gift for the business, and generally over forty years of age. Mr. Huard, one of the artists of the *London News*, sixteen years ago, would draw a sketchy subject in pencil on the wood, putting in a few light touches with wash, which the wood engraver converted into a wavy tint. The drawings did not look very attractive on the block, but when printed looked well. My employer got some of this work to do, he being a mechanical engraver; not liking it, he turned it over to me; and at that time you could not have given me a better treat. Linley Sambourne, of *Punch*, made his drawings on the wood in ink, as *black as your hat*. C. Keene used to draw in reddish ink; J. Tenniel, with

a gold point (no flies on him), producing a gray line and stiff drawing. Du Maurier makes a large sketch in pen and ink; it is then photographed on wood with some chemicals that take the points off the tools and make you smile the wrong way.

I am sorry to say there are a majority of wood engravers (as well as in other callings), who do not strive to improve beyond a certain standard; work about four or five days a week and dissipate the rest; very seldom save money, go it while they are young, and when they get old, sponge or live on their friends. These are the class who say photo-engraving is ruining the business; yes, while they neglect it. Artists have the same fault. I knew one of the artists on *Frank Leslie's Illustrated* who got, at one time, \$100 a week; yet he did not save, and, at last, was buried at the expense of a prominent New Yorker. Prices in wood engraving have gone down to nearly one-third of what they were fifteen years ago. Still, wages have not gone

down at the same ratio, because photography has helped; what had to be drawn on wood is now mostly photographed, for a small sum, from the original painting, or large sketch. Illustration I was drawn in sepia, about 12 by 24, reduced by photography on to the block, and engraved. Observe how strong the blacks and how clear the snow, also details of the buildings. If this was done by half-tone process it would look flat. Take a landscape painter and ask him which he likes best—process, steel, or wood cut, and he will tell you he prefers the latter. Why? Because there are so many gradations

of tone, rich color in foliage and softness in the sky and distance where required. In fact, I have heard artists say they could tell what color the picture was painted from the wood cut print. Speaking of photography, sometimes I take a photo from the subject, put it on to the wood and engrave it without any drawing at all, ruling it on the ruling machine; illustration J was done this way. For process work this would have to be drawn in black and white (for a satisfactory job), so

it could be engraved while the artist was drawing it. Even then he would not be able to show details in taps, etc., like the wood cut. (Put down mark No. 2 for the wood-pecker.)

For work of a decided character and detail, such as silverware, stoves, bird's-eye views, etc., something like illustration K, it is best for them to be drawn on the wood, for the reason that the details get lost in the reflections, high lights and heavy shadows, and manufacturers desire that all ornamentation should be well brought out.

In this class of work the photo-engraver has to take a short run, leaving the wood engraver to put up mark No. 3. Shadows, polished edges and straight lines on K are done on the ruling machine, the rest is handwork. Speaking of the ruling machine, it was first made by an Englishman, in New York, a Mr. Bellman. The machine will do as much work in a day as would take an engraver a week by hand, and still not produce as good effects as the machine work.

Pen and ink portraits (process) generally have a hard look, and finish off abruptly from the shades into the

FIG. I.

white. Half-tone portraits are generally too gray and flat, get filled up and look smudgy. I question if a process cut can be done quicker than a wood cut in this case, for the portrait can be engraved from a photo on the wood, in the time an artist would take to draw it. Illustration I. was done this way; and has been through the London (Ont.) *Daily and Weekly Free Press*. In regard to the printing qualities of the different plates, it is well known that printers prefer the wood cut, because it is not so liable to fill up or look dirty. The following diagrams (magnified) will show the difference in the depth of the whites: Fig. 1 represents zinc-etching shown by a step for each etch; Fig. 2 shows the same, only with the steps rounded off in the final etch; if this is not well done, the first step will catch

from it; observe it is rounded at the edges. Fig. 5, a washout gelatine relief ready to electrotype from—No. 6 the wood cut showing the way the tools cut, leaving nothing for the ink to catch on to, except on the lines.

Wood engraving stands today preëminently the best method for illustrating books and catalogues. Although it may cost a little more than photo-engraving in the first place, still there is greater satisfaction in the end. As regards wood engraving going out, the writer cannot say so from experience. I have been in this continent sixteen years, and have not been out of work a week. Boxwood is cheaper now than it was a few years ago, which makes a great difference in the price, especially large cuts, this being the most expensive item with the wood engraver. In large establishments men are kept on certain classes of work only, thus becoming very rapid, and experts in their special line. One man will do nothing else but skies and

FIG. K.

the ink in the open places and look dirty. Fig. 3 represents a gelatine relief (swelled); Fig. 4, the reverse cast

water; another, trees; another, portraits, and so on. In conclusion, allow me to impress on any of your

readers who are wood engravers, to stick to their business (if they like it—no good unless they do); persevere; subscribe for and read the trade journals; keep posted;

FIG. L.

catch on to new ideas—use them in your business; don't expect something in every number—if you get one or two wrinkles in a year it will pay you more than the year's subscription; at any rate this is my experience. The more trade journals you see the more vim and enterprise you will put into your calling, for the contents will

stimulate you to go ahead, not keep behind like some old fogies who think they know everything, and have nothing to learn. Look at the May issue of *THE INLAND PRINTER* and see the record: 47 wood cuts; 10 process cuts, advertisements of process engravers; 1 wood engraver's advertisement; 5 supplements, half-tone process; 5 photo-engravings from wood cuts;

10 photo-engravings. This speaks for itself. One of your contemporaries in New York, about two weeks ago, had the following: *We notice that all first-class catalogues still use wood cuts for illustrations.* I leave the rest for your readers to judge and speak of.

Written for *THE INLAND PRINTER*.

SUCCESS IN JOB PRINTING.

BY J. B. CALDWELL.

It is evident that there are only two main reasons for engaging in the business of job printing, namely, pleasure and money making. The latter is the one to be mainly considered, as the more money one makes, honorably, of course, the better is he pleased.

To succeed, many things are essential, a few of which will be mentioned.

True success can be secured, not by simply getting patrons, but by keeping them, year in and year out.

How is this to be done? Study their likes, their tastes, and gratify them. If a customer has a fancy for a certain style of paper, of type, of ink, secure what he desires, if he will pay for the trouble, and he will if his patronage is worth having. Do first-class work, and promptly on time, and two to one you may be assured of his regular custom.

It will be found profitable, in many instances, to dispense with antiquated faces of type that have done service in newspaper and job work since the war. As a rule, such type will bring more money from the foundry than it will used in jobwork. Time, money, credit and patience will be saved by keeping a reasonable assortment of late modern faces of type.

Never use fine faces of type in newspaper and ordinary poster work.

Keep the fonts of type for advertising, for poster and for commercial printing separate, and give orders that they are not to be used except where they belong.

Have all cases labeled and numbered, and see that they are kept in their places when not in use. Having them arranged together will greatly facilitate the work, as much time is lost going from place to place to get the different faces needed.

Do not have the news-stands and regular compositors' racks filled with cases. They should contain only their own cases.

Keep a specimen book containing a line of each job face in the office, with the number of its case. This will make it possible to have any job set just as desired by marking the number of type over each line to be set.

Keep the type in the cases, clean and ready for use. Much is lost in time and money by "dead" type and "sorts" stowed away that should have been in the case or tied up, where it would be easy of access.

Collect all bills promptly, giving receipt. This is business-like, and has a favorable impression, and is necessary if you wish to pay the butcher, baker, grocer, etc., without delay.

Know to a nicety the actual cost of each job, in material, time, etc., and figure up the profit. This will enable you to know what pays, and whether your workmen are bringing in money to you, or are not earning their wages.

Some printers, who aspire to be artists, will spend a day's time, or more, setting up a letterhead or card, when no extra charge has been made for it. If the setting was done in two hours, or less, the profit would be none too much. It is well to keep an eye on such, and curtail their expensive experiments, lest they make you too much money out of pocket.

The printer who does his work honestly, carefully, and works faithfully, will bear watching, and will like to have his work frequently inspected. He will, by doing nice work, make money for his employer, and the employer, if intelligent, will find it out.

There is a certain class of characters who get a great deal of printing done, and are always changing places, hunting for cheap work, with the intimation that they

are going to make some printer rich by giving him all their work. The way to do with such is to put on a stiff price, and stick to it. Nine times out of ten they only want to get your lowest figures on a piece of work, and the next time will go to someone else, to see if they could get a lower figure.

There are well-to-do business firms who will resort to the littleness of trying to get their printing done for nearly nothing. It does not pay to try for it. Let them get it done where they can, while you study up how to do good work, keep your accounts squared, office in order and business in ship-shape.

In order to succeed don't work for nothing. If you can afford it, there are others who cannot; take a rest, let the other fellow have a chance, and you'll be the better for it.

Written for THE INLAND PRINTER.

THE PRINTER FROM A SOCIAL STANDPOINT.

BY M. J. CARROLL.

PEOPLE of an inquiring turn of mind must regard it as exceeding strange that a class of people possessing so many social traits and characteristics as do the members of the printing fraternity should be so signally and so uniformly unsuccessful in maintaining organizations of a social or beneficial character. Of the numberless efforts that have been made in this direction during the past twenty years, I cannot now recall a single instance where the results have been at all satisfactory to the projectors, or where the life of the organization was extended enough to warrant the labor expended in its formation. In fact, the organization of these societies has been followed in monotonous regularity by their collapse from one cause or another. Still, the frequency with which efforts have been made to organize and maintain societies of this kind in the past will warrant the assumption that a great many clear-thinking printers are of the opinion that their existence would prove both beneficial and enjoyable. But if we admit the truth of this proposition, then how can we satisfactorily or creditably account for the many disheartening failures that have attended our efforts in this direction.

While I do not presume to have the power or discernment to fully answer this question, still I am of the opinion that an open discussion of the matter may lead us to a partial solution of the problem, at least to an extent that will enable us to attain some measure of success in a direction in which it is generally conceded that the printer has many qualifications that, if properly directed, would undoubtedly lead to success. It is universally admitted that there is no more social individual than the printer; but collectively considered they do not appear to be able to maintain the same characteristics or propensities. Half a dozen printers, under favorable circumstances, will develop an amount of congenial sociability that, were it possible to convey the same spirit to half a hundred, it would immediately assure the success of any organization they might form.

It may be possible that in forming organizations of this kind we may have proceeded upon altogether wrong lines. This will appear the more likely when we admit the fact, as admit we must, that we have so far failed to ingraft in these organizations the features that have made it possible for the half dozen to be so genial and social, while in their stead we have steadily incorporated or adopted practices that, to the peculiar temperament of the printer, have proven wearisome, if not absolutely irksome. We know that, as a usual thing, the average printer will go as far as anyone to enjoy an evening's sociability, and we know that no one possesses the faculty of being more agreeable on such occasions. Then why is it that social organizations composed exclusively of printers have been so difficult to maintain? After reviewing the past, I am led to the conclusion that the organization possessing the necessary elements to attract and sustain the attention of printers has not yet been found; that we have heretofore omitted a link somewhere, the absence of which has rendered the whole structure defective and non-attractive.

That organizations of the character under discussion would be productive of much good among printers I am fully convinced. They would lead to a better understanding and a better acquaintance than can be reached in any other way that I know of. The trade organizations with which most printers are affiliated, while indispensable in their way, are wholly inadequate for this purpose. They are of a purely business character, and little calculated to promote sociability or good fellowship among their members, while under the most favorable circumstances they could scarcely be utilized as a channel through which the various members could bring their families into more friendly relations. Even had they the inclination they would still not have the time necessary to consider questions other than those relating to the regulation of trade matters, for which purpose they have been instituted. It would seem to follow, then, that what is needed is an organization where there will be little, if any, technical business to be considered; one, in fact, where there will be as few "rules" and "regulations" as it is possible to get along with, and where the elements of sociability and amusement will be the predominating features. It does not seem as though it would be an impossible thing to accomplish this; still we must not be unmindful of the fact that many of the societies for social promotion that have been formed in the past have had the objects just mentioned fully in view, and the failures that have attended these efforts would indicate that there has been a stumbling block somewhere, and one whose exact location or nature we have not as yet been able to place.

It cannot be truthfully charged that these failures have been caused by attempts on the part of individuals to secure the support of the organization to advance their political, financial, or other ends. I can truthfully say that I have never observed an attempt of this kind in any of these organizations that I have been a member of, nor have I heard of like attempts elsewhere.

The want of success, then, must be attributed to other causes, and I am inclined to believe, as I have above stated, that it is on account of our neglect to incorporate or properly develop features that would be considered social from a printer's standpoint. This, with a tendency in the direction of an overdose of superficial style at their meetings and entertainments, will probably account for much of the difficulty that has been encountered in the past. We will all admit that style may be a very good thing in its way, but it does not follow by any means that it is a satisfactory substitute for sociability, or that it will retain the attention of a class of people who have sense enough to know that their station and means will not allow of anything more than an awkward imitation of that doubtful commodity at best.

There is really no good reason why printers should not be able to organize and maintain societies for social intercourse in every city of any importance in the country. They would undoubtedly serve many a good purpose, not only making it possible for printers to be brought into closer and more harmonious relations, as well as serving as a means for placing the families of printers on a social footing that would not otherwise be possible. Let us make another effort in this direction, and see if we cannot provide the printer with a place where he can expect sensible and rational amusement; a place where a man's better parts will be brought to the surface, and where he can without any misgiving invite his friends and the members of his family. Past failures should be overlooked, or at least should not be held as an obstacle to future endeavor. Let us in some way break away from the humdrum sort of life that we have heretofore been contented with, and show the world that a printer is capable of something more than an automatic-like journey through life. In doing this we will not only be serving our own best interests, personally considered, but we will also be doing something that will win the regard and esteem of all well-thinking people.

Written for THE INLAND PRINTER.

ORNAMENTATION.

BY W. E. SEAPORT.

A LARGE proportion of the new productions of the typefounders, as shown in the numerous specimen sheets, issued so frequently, are supplied with word ornaments, designed for use between words and at the beginning and ending of lines. The average printing establishment is overstocked with an abundance of borders and other ornaments, which have for some time filled the places formerly occupied by the Chinese, Japanese and Egyptian combinations, which latter were so popular a few years ago. The writer has noticed a tendency among printers to overwork these word ornaments mentioned above, and the idea that some fantastical object *must* follow a word or line as necessarily as a period or a comma, seems to be prevalent. The only apparent reason for this notion is that the *extras* are furnished with the font.

It will be remembered how the Chinese and Egyptian

borders were overdone at the time of their introduction. Little jobs, such as tickets, folders, etc., scarcely large enough to contain the printed matter, were overcrowded with cornstalks, obelisks, pyramids and Chinamen. Often tiny cuts of dogs and cats would appear together as though they had fallen upon the scene. A circular announcing the opening of a fashionable millinery establishment might easily be mistaken for an advertisement heralding the coming of "thirteen united shows." Ridiculous and absurd effects, the work of the proverbial "intelligent" compositor, were brought out by placing a Chinaman in a prominent position on an American laundry price list; the serpent, a dragon and a spider's web would appear on a liquor dealer's business card; a lean, raw-boned camel, a diminutive bull pup and an exceedingly crooked cat, were made to do duty in an advertisement setting forth the merits of Chicago dressed beef and prime sausage, while the programme of a horse trot was adorned with a snail and an Egyptian ass.

Yet, notwithstanding all, when used judiciously by competent workmen, these combinations have been skillfully employed with pleasing effect, and the beautiful designs brought out by a proper and moderate arrangement of the characters have been numberless. As was anticipated, however, these novelties have almost entirely disappeared, but they may yet be found in daily use in the wayback printing office, and the editor and proprietor, who, by the way, is also the carrier boy, is still beguiled by the belief that to make an effective showing of this material it is necessary to force the whole font into one job because it all appears on one page of the specimen sheet from which he has made his selection. It is, perhaps, needless to try to convince him that he is laboring under a delusion.

I would not condemn ornamentation, but the inordinate practice of indulging in too much of it should be discouraged.

The habit of overcrowding is noticed in the use of the characters furnished with the late designs of job fonts; in many instances which have come under my observation, a space between the words would have appeared to much better advantage. A prominent line which should stand out boldly is too often put back in the case because it was found that there was not room for the end pieces, and the type substituted has been so much smaller as to have a bad effect on the whole job.

The writer, who is ready at all times to accept of a suggestion offered by any of the correspondents of THE INLAND PRINTER, would offer a few practical hints on this subject:

First of all, guard against overcrowding. The work you have in hand, which, when completed, may have a maltese cross or some nameless object between all the words, will not bear inspection. The copy furnished you may be full of embellishments, but you can certainly improve on it by omitting fully two-thirds of them. If there is a considerable amount of matter to go on the card, billhead, or whatever the work may be, there will not be much room to spare for ornaments, so leave them off.

If the work in hand contains but little matter, as compared with the size of the sheet to be printed, ornaments at the top and bottom of the page may be used with good effect, and without encroaching on blank space. Fig. 1 will illustrate:

FIG. 1.

Ornaments used in connection with a line of type should be separated from the letter by a five-em space at least. Figs. 2 and 3 will show the diverse effect of this rule when applied both ways:

FIG. 2.

SILVER+PLATED+WARE+AND+METALS.

FIG. 3.

Fig. 4 is something abominable, which a printer cannot but notice and criticise—ornaments designed for use with brass rule that will not line with the type. The line looks cramped.

EMERALD*COASTING*CLUB

FIG. 4.

Fig. 5 is also an error which cannot be laid at the door of the progressive printer. A light-faced letter hedged in by great black ornaments; it may be compared to a streak of lightning between two thunder clouds.

HARDWARE.

FIG. 5.

In the division of initials with ornaments the periods take the place of spacing on the one side, while between the character and the next letter, a space, corresponding in thickness to the period, should be given. So with the ends. See Fig. 6. If the type and ornaments were all set close together the line would present an uneven appearance.

FIG. 6.

It will be noticed by referring to your specimen books that where fonts furnished with ornaments are shown, all punctuation marks are studiously omitted. In this manner the ornaments show to better advantage.

Much could be said in favor of brass rule in ornamentation, but the expensive nature of the metal seems to be the chief objection to its lavish use in this direction. Yet every printing office should be supplied with

at least a small quantity of the various faces of fancy rule, which may be skillfully employed together with ornaments and border. However, do not commit the unpardonable sin of cutting any of the pieces contained in your labor-saving fonts.

In closing, the writer would add that the advertising columns of THE INLAND PRINTER offer a most instructive study of the principles of ornamentation. One will notice, above all other things, that no ornaments of any kind are used at a sacrifice to proportionate display.

Written for THE INLAND PRINTER.

QUADRATS.

BY PICA ANTIQUE.

THERE was a time, when, to be a printer was almost to court having one's name coupled with epithets of disapproval, if not positive disgrace. That such a conclusion was justified by facts is exceedingly doubtful. The members of the craft belong to the same human family, are formed of the same clay; their bodies are percolated by the same blood; their hearts beat to the same kindly, moral and loyal music.

Yet, to bear the name of "printer" was to be supposed (perhaps from constant association with the "devil," and the superstitious idea that the art was the invention of the father of all evil) to be an adept in and a promoter of all the mischief and cussedness in the world.

That day has passed, never to return. The title has become one of honor; respect has taken the place of sneering and calumny; the evolution is perfect. Today the printer stands not aside for anyone; is called to fill the highest and most responsible positions in the nation, and the most revered tongues speak of him only with praise.

Even in the past, bad as many believed the printer to be, no one coupled him with the betrayal of secrets, and to no class of men have more and important ones been intrusted. In the great bee hive of the government printing office at Washington, where more than all others combined, "confidential matter" is given to his keeping; where every day is crowded with department and state secrets, but a single instance can be found of the betrayal of his trust. This is a fact that cannot be disputed, and is the highest possible indorsement that the printer is imbued with the truest manhood; with honor that is proof against the greatest temptation; that he is the peer of any man, and may justly claim the most exalted praise.

Speaking of this, the Hon. James G. Blaine, a man whose testimony, from his wide and intimate association with the craft, outweighs a vast multitude of others, recently said, "Public officials usually have an unfounded fear of newspaper men, but in my experience I have never had my confidence betrayed." To that, any words would be superfluous.

* *

AND printers are as much swayed by sympathy for suffering and sorrow as any class or condition of men,

more so than the great majority ; are as tender-hearted and as open-handed, giving even to lavishness.

Is not this so ?

When the disaster of Johnstown, Pennsylvania, one beyond the power of description, so wildly, mournfully, piteously horrible, became known, printers were among the first to rush to the rescue ; to send from their often slender stores ; to even mortgage their yet unearned wages to feed the hungry, nurse the sick, clothe the naked, provide homes for the homeless and bury the dead.

"Angels could not have done more," wrote Governor Beaver to the public printer at Washington, when he received the more than liberal, the magnificent, subscription of the employés of the office. And it was sent with many a deep regret, many a sympathizing tear, many a prayer for the staying of hunger, sickness, fire, flood and pestilence ; many a blessing showered upon the heads of the noble men and women who, taking their own lives in their hands, had gone to save others.

One thousand and five hundred dollars (in round numbers) from the employés of the government printing office in Washington, contributed to the great charity, the most needed, the most deserving charity of the nineteenth century !

Do you know what that means ? Do you understand that a large percentage of the workers who thus sent aid and comfort to the hopeless, helpless and needy, are women, young and old, married and unmarried ? That many have sick or crippled husbands, fathers, mothers or children to support, and the sum taken from their small wages necessitated self-deprivation ; was the taking of bread from their own and loved ones' mouths ; the shoes from their feet ; was not the abstaining from pleasure or luxury, but the literal robbing of self and those dearer than self of the scanty means that eked out life ?

Such, however, was the fact, and thrice blessed should be the charity and thrice blessed will it be to the poor, patient, hard-working toilers and cheerful, generous givers. It was not the giving of the rich to the poor, *but the poor to the poor* ; was the taking as of one's heart's blood to bestow upon strangers ; the free, warm-hearted giving that rendered the gift holy.

Not a single iota of praise would we detract from any ; they fairly earned and are entitled to all the praise they will receive both in the here and the hereafter. But when the roll of honor of earth is recorded by angel fingers in the great book of heaven the \$1,500 given by the noble men and women of the government printing office will be found at or near the head in "bold-faced" letters of never to be tarnished gold.

* *

WHAT were newspaper men doing while others were thus winning the highest of earthly glory ? Much, very much, aye more than will ever be told. Let one of the highest among them speak for the whole. He said : "The names of the untiring, sleepless, footsore men,

with no time for self-communing, day after day built up columns of the story of a great calamity, for whose instant telling the world was alarmedly waiting—the names of these men will be forgotten before the next novel, the next story is advertised as ready for our amusement. It is a part of the unending irony of life that the brief credit which will be given them will spring more from our recognition that they fired our imagination than from our recognition of the hardships and privations of their labor. When after years in which we shall have grown no wiser, another flimsy embankment shall crumble and discharge the torrent of death upon some peaceful valley, it will not be their hard-wrung columns of bitter truth which journals will reprint, but splendid prophetic pictures of the imagination. Yet their work is the highest, and die to what degree it may with the world, which heard them only for the fact they had it to tell, it will live with them to the end of their lives in the recollection of duty done for public benefit, and for no other sake."

Aye, it is irony, bitter and often galling ; has been, ever will be so, but the work will be done bravely and well to the end. Has been, will be so, and the lines written on the death of poor Fred Burnaby by a brother journalist is a fitting epitaph for all :

"Laurels, or roses, all one to him now —
What to a dead man is glory or glow ? —
Rose wreaths for love, or a crown on his brow ?
Dead — does he know ?"

To no class of men is more honor due than to the journalists, and from the roll of honor in the present and the coming their names will not be omitted, but stand facing, full-fronted, time and eternity.

* *

HAD it not been for reporters and printers how little indeed would the world, that fairly held its breath with shuddering and awe, have ever known of the valley of death, the horror of horrors ? Remembering this let those who have heretofore spoken slightingly of the craft forever be dumb. No one exceeded them in labor, sympathy, in material aid ; no class produced more heroes. Against raging floods, falling houses, a tornado of timber, hunger, flaming fire and pestilence they fought, won tears of thankfulness, the blessings of widows and orphans, and hereafter let any scornful lips speak a word against the craft, *if they dare !*

HAVE the courage to tell a man why you will not lend him your money ; to wear your old garments till you can pay for new ones ; to pass the bottle without filling your glass ; to speak your mind when it is necessary that you should do so, and to hold your tongue when it is better that you should be silent ; to discharge a debt while you have the money in your pocket ; to provide an entertainment for your friends within your means, not beyond ; to own that you are poor, if you are so ; and to obey your Savior, at the risk of being ridiculed by man.

"OWL BRAND" PRINTING INKS.

The Jones Gordon Job Printing Press

IS NOT AN OLD STYLE GORDON, BUT HAS SEVERAL IMPORTANT CHANGES AND IMPROVEMENTS WHICH MAKE IT QUITE DIFFERENT FROM THAT PRESS.

IMPRESSION SET.—A very important feature in these presses is that the **WHOLE IMPRESSION MAY BE INSTANTLY CHANGED**—either increased or diminished—**WITHOUT STOPPING THE PRESS.** When the Impression Screws are properly set, it is seldom, if ever, necessary to move them, as all adjustments are made by means of hand wheel marked "B" in cut.

INK DISTRIBUTION.—Another important feature is, that when the impression is thrown off by means of the lever "A," a simple device causes the movement of parts that prevents the Ink Rollers from touching the form, and the press may be run indefinitely for the distribution of ink.

SELF-LOCKING CHASE LOCK AND FORM STARTER.—Another feature of considerable importance in saving time and patience is the Self-Locking Chase Hook and Form Starter. When the chase is put in place on the bed, it is locked without touching any lever, pad, screw, or any part of the press. When the form is to be removed, it is only necessary to press forward on the pad, marked "patent," which causes the Chase Hook to rise, and the form to move forward so as to be convenient for lifting out.

THE DUPLEX FOUNTAIN.—The Duplex Fountain is a great advance over anything heretofore used for the distribution of ink on a disk press. The distributing roller passes down and back twice, or four times over the surface of the upper part of the disk at each impression.

GRIPPER SET AND CARRIAGE PULLS.—When the Platen is in a convenient position for setting the Grippers, they may be brought down on the Platen for that purpose. The Ink Roller Carriages are provided with loops to be used for putting in or removing the rollers.

These Presses are very heavy and strongly braced, and are made of the best material that can be procured. The Impression Arms are of Steel, forged from one piece without weld.

These Presses are kept in stock by the CHICAGO NEWSPAPER UNION. Send for Circular and Price List.

The Leader Paper Cutter.

The Leader Paper Cutter has the following points of Superiority over any other lever cutter :

First.—The power is applied in the direction of the cut instead of in a right angle or diagonal direction, as is the case with many cutters on the market. By experiment and test it has been demonstrated that less than two-thirds of the power is required to cut any given amount of paper with the LEADER than with any cutter of the class above referred to.

Second.—The back gauge, which in all other cutters must be changed for every cut, may be instantly moved any distance up to the whole length of its travel, say two feet or more, by a lever, shown beneath the front end of the table. To illustrate the advantage of this arrangement, suppose it is necessary to move the back gauge of an ordinary paper cutter twenty-four inches, it will be necessary to turn the wheel shown in front forty-eight times around, an operation involving considerable labor and time. The wheel and long screw in the LEADER are only used for slight adjustments.

Third.—The octagonal stick and recessed sides, which admits of passing the stick through the side to its place, and renders it impossible for the stick to be drawn out by the knife, giving sixteen cutting faces on the stick.

Fourth.—The lever is hung in the most convenient position, midway between the floor and the top of machine, making it unnecessary in making the cut to get down near the floor.

Front table 16 inches wide instead of the usual 12 inches.

JOHN M. JONES & CO., PALMYRA, N. Y.

These Machines may be ordered of any Dealer in Printers' Machinery, or from the Factory.

"FLOWING CUT INK, B." We have had so many inquiries from publishers and large printers of illustrated work for a wood-cut ink that was "not short, that would flow in the fountain, follow the roller, and dry quickly with a gloss," that we have made an ink to meet these requirements, with the above name. We would respectfully solicit a trial of the same, confident that it will do all we claim for it.

PRICE \$1.00 PER POUND.—Special net figures for large quantities.

CHICAGO, JULY, 1889.

INDORSED BY INTERNATIONAL TYPOGRAPHICAL UNION, DENVER, JUNE, 1889.

RESOLVED, That the International Typographical Union recognizes in THE INLAND PRINTER the technical trade journal of the craft, and cordially recommends it to the patronage of the printers of the United States.

PROCEEDINGS OF THE INTERNATIONAL TYPOGRAPHICAL UNION.

IN another section of THE INLAND PRINTER will be found a synopsis of the proceedings of the thirty-seventh annual session of the International Typographical Union, which convened in the city of Denver, Monday, June 10, 1889, which we believe will prove of more than ordinary interest to a large proportion of our readers. While a diversity of opinion may exist as to the wisdom or propriety of all its transactions, we believe that in the main they will meet with approbation. The delegates thereto were thoroughly representative men, who were evidently guided in their decisions by what they honestly believed to be for the best interests of the craft.

But in spite of this fact we cannot help regretting that more explicit instructions were not given to the committee appointed to consider the question of the union's relations with the Typothetæ, for, while we have every faith in the ability, diplomacy and earnestness of purpose of the gentlemen composing it, we believe it would have been more satisfactory, both to themselves and the local unions, if a definite line of policy had been suggested for their guidance; and this could have been accomplished, in our judgment, without infringing on their prerogatives or hampering their action. In other words, it would have been more advisable, in view of past experience, to have formulated a line of policy in advance than to throw such onus on a committee, for while it is true a certain *discretionary* power should be vested in a consultative body, it would certainly have strengthened their hands to know that the propositions submitted had been authorized, and were in harmony with the views of the International Typographical Union. However, we feel assured the matter has been confided to good hands, and that no effort will be lacking on their part to secure peace with honor—a consummation devoutly to be wished.

The acceptance of the more than generous offer of the Board of Trade of Colorado Springs, donating eighty acres of land in the immediate vicinity of that beautiful sanitarium on condition that a printers' home be erected thereon, marks a new era in the history of the "International." Every delegate who had the pleasure of being driven over it was enraptured with the location, its surroundings, prospect, etc. It is certainly a donation of which every craftsman should feel proud; and we are perfectly satisfied that if the proper steps are taken at the proper time, and a spirit of interest manifested in its success by those most deeply interested, the employing printers of the United States will generously contribute to its endowment. There is no reason why, with a little exertion, a building cannot be erected thereon which will compare favorably with similar institutions, and which will be an asylum, not, as some croakers state, for the worthless and undeserving, but for the needy who from causes beyond their control are unable to provide for their own necessities.

Although a number of important and fundamental changes have been made in the government of the body

from those adopted at the Kansas City convention, it will be observed that before becoming operative they must be ratified by a vote of the local unions, and that the suggestion presented in the June issue of THE INLAND PRINTER has been adopted, July and August having been set apart as what may be designated the debating months, thus affording ample time for deliberate and intelligent action thereon. The reports of the officers were satisfactory on the whole; the statement of the secretary-treasurer showing a balance of \$15,619.94 on hand, and the trustees of the Childs-Drexel fund \$21,689.65. The pressmen also made a favorable showing, seven local unions having been organized during the past year. Chicago was selected as the future headquarters, and Atlanta as the city in which the next convention will be held.

The indorsement of THE INLAND PRINTER as the technical trade journal of the craft is an honor duly appreciated, for which we return our sincere thanks; and we trust that no effort will be lacking on our part to make it worthy such recognition.

The officers have proved themselves faithful and efficient, and although a little feeling was developed on the "hold over" claim, the consensus of opinion was that all were worthy of reëlection. Mr. Plank's administration was almost unanimously commended, and credit given it for the exercise of prudence and common sense. It was admitted on all hands that Secretary-Treasurer McClevey had discharged his onerous duties in an acceptable manner, and it is no exaggeration to state that the record of few officials have been more highly commended.

The princely hospitality of No. 49 will long be held in grateful remembrance. No other city than Denver *could* have afforded such a scenic treat, and certainly no body of men throughout the length and breadth of the land could have surpassed the hearty, unostentatious welcome extended by its members. The committee of arrangements spared neither trouble nor expense in catering to the enjoyment of their visitors. Their names are now household words in every city in the Union, and to prove we are not guilty of exaggeration we simply refer to their portraits on another page.

TRADE JOURNALS.

THE trade journal is here, and here to stay. It is its own reason and excuse for being, and makes and pays its own way. Its future is destined to be one of improvement and expansion. It cannot be otherwise, for the demand for it is imperative and growing. While there are now trade journals (so called) almost without number, the real trade journals are, as yet, comparatively few in number, but their influence is great and constantly and rapidly increasing.

There comes under the general head of trade journals all publications devoted wholly, or even in part, to any particular trade or profession. Journals of this general character have existed for a long time, but, as a rule, they have been published by parties interested in and

making a business of the particular trades or professions of which the journal they published was an advocate. Of course the editor of such a publication, if it rose to the dignity of having an editor, was hampered as to latitude, for the reason that all he wrote or permitted to be written for his journal must of necessity be subservient to the interests of the firm issuing it, the prime object in publishing the journal being to advance the business interests of the firm. Such journals still exist, and will continue to have existence, perhaps, if not for all time, for many years to come, but in prestige and influence they are fast losing ground. They are coming more and more to be looked upon as circulars from the firms issuing them, and not as journals in the true sense of the word. Business firms still find use for these publications; they are perfectly legitimate, and will continue to be put out so long as the conditions remain which make them useful and available. And right here let it be admitted that out of these has grown the real trade journal.

Now, what is a real trade journal? It is a publication for the dissemination of trade information exclusively, and published purely as a business matter by parties who have no business interests in the trade or profession their publication is intended to promulgate. These conditions are required to make the representative trade journal; without them it must be bereft of the most necessary prerogative of a perfect trade journal, and that prerogative is absolute freedom from alliances, either business or otherwise, that are calculated to influence the contents of the publication. While it is not pretended to intimate that a business man could not publish a journal in the interests of the trade or profession in which he was engaged in a business way, and do so in all honesty of intent and actions, it can be truly said that it is seldom, if ever, done. Human nature is so weak and the temptations are so great to color the contents so as to favor directly, or indirectly, his own individual business interests, that it can be said to almost be the rule for him to do so. And this is, to say the least, very unfair if the publication is put out claiming to be an unhampered, unbiased journal, devoted exclusively to the advancement of the best interests of the trade or profession it represents. From this practice of coloring the contents, and leaving out things which, in justice to the readers, should go in, a trade publication now emanating from a business house is looked upon as containing only such articles or information as will redound to the interests of the house, or at least such as will *not* work to the detriment of those interests. Happily there are but few publications now in the field, emanating from business houses, whose publishers claim that they are other than vehicles for advancing the business interests of the publishers. There are, however, a few still struggling to maintain the positions of real trade journals, but the very efforts they make to do so prove abortive and hurtful to them. The real trade journal, unbiased and unhampered by business alliances, will "hew to the line, let the chips fall where they may,"

and this course so frequently exposes the course pursued by the other class *calling* themselves trade journals that the latter are finding it impossible to maintain the high plane in the estimation of the public they have formerly occupied. The older business houses, with but few exceptions, fully realize these facts, and put out their publications for just what they are, vehicles for the furtherance of the business interests of the firm. Those firms not doing so are working positive hurt to themselves, and this truth they must sooner or later realize.

It may be asked if we would accuse a business firm of downright misrepresentation. By no means. Frequently the whole truth is, or may appear to be, hurtful to the business interests of a firm. To remain silent—to withhold the truth—is not lying, and this is so easily done when to “tell the whole truth, and nothing but the truth,” would jeopardize one’s business interests. The pocket is the most sensitive part of man’s organism, and he will defend it from all onslaughts, real or apparent. It is right and legitimate that he should do so, but let it be done in open, straightforward ways, which inevitably and always prove the best and surest in the long run. The real trade journals, like the real newspapers, are straightforward, honest, independent, the organs of no man, clique or sect, and are published for the profit to be derived from them as a business enterprise. Greater ability is required in the business and editorial management of a successful trade journal than in the management of a newspaper, for so little comes to the former ready-made, so to speak. The contents of the trade journal are not made up, except in very small part, of occurrences, but must be the result of energy, foresight and work. For these reasons the trade journals are fast getting into the hands of men possessing the requisite qualifications, and when once in such hands their success is assured. Long live the real trade journal.

THE LAW OF LIBEL.

AT the late session of the New York State Press Association much time was devoted to the consideration of the law of libel, as existing in that state, and a more than interesting discussion resulted therefrom. E. H. Butler, of the *Buffalo News*, read a paper declaring the present law as essentially English in form, character and intent; aimed with deadly effect at newspapers, with some concessions and improvements in recent years. The law, he said, is false in basis, which is that the press is always an offender against personal character. He suggested a wholesale amendment of the present law, and favored press opposition to candidates refusing to submit to them. Assemblyman Teft, of the *Whitehall Chronicle*, said that the press needs no exemption from the liability attaching to its special calling any more than any other profession or business. He would apply the same rule of law and treatment to each class. A sharp discussion followed between Messrs. Butler and Teft, in which the latter was called more a lawyer than a journalist, and he declared himself a defender of individual rights. Carroll E. Smith, chairman of the Committee

on Libel submitted a report recommending that the association approve and urge upon the legislature an amendment to the code, to be perfected and laid before its next session, to be applied to the general subject of libel, which shall provide an action, civil or criminal, cannot be maintained against a reporter, publisher or proprietor of a newspaper for the publishing therein of a fair and true report of any local, legislative or other public official proceedings of any public meetings or assemblies without actual malice in making the report. The report, which is quite voluminous, and which was unanimously adopted, also provides that presumption of malice should not rest in the fact of publication alone.

This proposed amendment, in our judgment, is one which will commend itself to the indorsement of all rational, unprejudiced men; for while the press has no right, either moral or legal, to use its tremendous power to blacken character or gratify personal malice, on the other hand, it must be self-evident that the principle which has heretofore been recognized, the greater the truth the greater the libel, will not stand the test of the crucible of common sense, and common sense is, or should be, common law.

HAP-HAZARD ESTIMATING.

HAP-HAZARD estimating—the bane of the trade—and the careless method, or rather lack of method, of many printers in estimating (?) on work, has been so frequently referred to in our columns that we had well-nigh intended to let the subject rest with what had been already written, and the illustrations furnished; but a case of such a flagrant character has recently been brought to our attention, with which one of the leading printing offices in Chicago is connected, that we cannot refrain from alluding to it.

A large manufacturing firm in this city desired to get out 5,000 price lists, forty-eight pages and cover, $3\frac{1}{4}$ by 6 inches, in nonpareil type (a large proportion of which was double price), printed on 28 by 42, 100 lb. extra tint paper; cover on 50 lb. 20 by 25; binding, wire stitched through cover; and sought estimates for same. The bid of the firm referred to amounted to \$168.75. A short time after the estimates had been submitted inquiry was made as to the decision arrived at, when it was ascertained that the order had been placed with a competing firm for the sum of \$75! It is needless to say that this information was received with surprise, not because the house referred to had failed to get the job—for its manager, like all sensible business men, does not work for glory—but because another printing establishment had undertaken to complete the entire job at the price he had figured the composition. That the firm which has undertaken the contract at the estimate given cannot make a profit, but must fill it at a positive loss the following statement, which can easily be verified, will demonstrate:

The composition, fifty-two pages (nonpareil) 63 by 32, 2,016 ems to a page, estimated at 70 cents per thousand, instead of sixty, in order to allow for double

price matter, and the result is \$73. The paper required—six reams, at 9 cents, a profit of 1 cent per pound, \$54; cover, one and one-quarter reams, \$6.25; presswork, inside, \$15; cover, \$5.50; binding, \$3 per thousand, \$15; total, \$168.75. What system of arithmetic was adopted by the firm that assumed to furnish five thousand such price lists for \$75 must be left to conjecture. Suffice it to say there is evidently something rotten in Denmark, as some parties will find to their cost, before the job is delivered, that is, provided the requirements are fulfilled.

Now, the pertinent question is, how long is this happy-go-lucky system of doing business to continue? How long are these wreckers to be allowed to pursue their vocation unchallenged or without exposure? How long will honest and reliable business houses be compelled to bid against people who make such prices? These are inquiries which time alone can solve. The mills of the gods grind slowly, but they grind exceeding small. Let us hope, however, that the day is not far distant when all who are demoralizing legitimate business and turning out work at the prices named will be buried in the graves they are now digging for themselves. And let us further hope that that time will come before they have inflicted an irreparable injury on the trade.

USES FOR WOOD PULP.

THE July issue of the *Paper World* contains a very interesting and instructive letter from the pen of the distinguished economist, Mr. Edward Atkinson, on the uses to which wood pulp may be applied, among which he alludes to the expediency of utilizing this material for covering roofs, and also for construction of dwelling houses. In referring to it the *Paper World* truly says:

The suggestions are practical, and are especially worthy of the attention of pulp makers, whose product is increasing at so rapid a rate that some outlet for it other than paper making seems to be a certain necessity of the not distant future. The men who are first to bring pulp into extended use as building material at a price that shall be within the reach of the builders of average dwellings, will reap a rich financial reward. The people are in just the temper to take advantage of such a material, the more so if it shall prove, as it doubtless will when it comes, to be better than lumber for the purpose. Experiment has shown the easy adaptability of wood pulp to building purposes, and it only remains to devise ways of making it economically practicable. Meanwhile the minor uses to which it is found to be suited are almost infinite, and the discovery of the means of applying it to them is going rapidly forward. Whatever may be the effect of increasing the number of mills for making wood-pulp paper, the pulp mills have a very hopeful outlook in the prospect for a wider demand for their product than the paper-making field offers.

IT is needless to say that THE INLAND PRINTER is gratified at the appointment of Capt. W. M. Meredith as chief of the Bureau of Engraving and Printing, Treasury Department. We feel satisfied he will serve the government well and faithfully, and win the record of being a good, honest and efficient officer. We congratulate President Harrison, the city of Chicago, and the craft at large, on his appointment.

THE INTERNATIONAL TYPOGRAPHICAL UNION.

SYNOPSIS OF THE PROCEEDINGS OF ITS THIRTY-SEVENTH ANNUAL SESSION.

THE thirty-seventh annual session of the International Typographical Union convened in the Chamber of Commerce, Denver, Monday evening, June 10, President Plank in the chair. After the roll call of delegates, Mark L. Crawford was appointed as reading clerk, John Mann sergeant-at arms, and Orville L. Smith messenger.

Mr. Lake (St. Louis), on behalf of the Committee on Laws, offered the following amendment to the constitution in relation to the duties of the secretary-treasurer, which was adopted:

He shall make a just, true and complete record of each and every day's proceedings, to be printed and laid on the desks of delegates each morning during the session.

The convention then adjourned till 9 A.M., Tuesday morning. Promptly at 9:30 the gavel of President Plank called the convention to order, after which the divine blessing was invoked by the Rev. Dr. Moore. Wolf Londoner, mayor of Denver, was then introduced, who welcomed the delegates in behalf of the citizens in his happiest vein, as did also Mr. William H. Milburn, president of union 49, in the name of its members. Responses to both of these addresses were made by Mr. Plank, who after the transaction of some unimportant business, announced the following standing committees:

APPEALS—Messrs. Dunbar, of Philadelphia; Jackson, of Cincinnati; Willis, of Oakland, California; John, of Galveston, Texas; Reiner, of Omaha.

RETURNS AND FINANCES—Messrs. Colton, of New Orleans; Knox, of Detroit; Burns, of Denver; Beattie, of Montreal; Harrison, of Philadelphia.

PRESIDENT'S ADDRESS—Messrs. Smith, of San Francisco; McAllister, of Albany; Walker, of Houston, Texas; Leibrich, of Cincinnati; Baumgartner, of St. Louis.

SUBORDINATE UNIONS—Messrs. Kells, of New York; Oburn, of Indianapolis; Mabbott, of Lansing; Stamps, of Los Angeles; Sprightly, of Washington.

MISCELLANEOUS BUSINESS—Messrs. Dillon, of Brooklyn; Caron, of Jacques Cartier, Montreal; Rawlings, of Council Bluffs, Iowa; Kester, of Butte, Montana; Knowles, of Chicago.

UNFINISHED BUSINESS—Messrs. Platt, of Washington; Kimpton of Pittsburgh; Magrane, of Toledo; Costello, of New York; Sommer, of Cincinnati.

COMMITTEE ON THANKS—Messrs. Gilmore, of Toronto; Derham, of Newark; Cushing, of Chicago; Faries, of Philadelphia; McCarty of Indianapolis.

The president then read his annual address, which was an interesting and instructive document. In it he referred to the action of the committee appointed at the Kansas City session to meet the United Typothetæ, which met in New York, September 17, 1888, as also the communications which passed between the two bodies, and, commenting thereon, said:

To the local Typothetæ, in my opinion, our attention should be directed, and such steps taken as shall seem best. As the theory and practice of the organization are free action of local Typothetæ and free action of individual members of the same, there is really no body with which we can treat that has authority to represent the whole. It may be said that this condition of individual action on the part of the employer existed before the Typothetæ came into existence, but then there did not exist the bond to aid each other, nor were they agreed as to any line of policy to be followed toward the Typographical Unions. Among the Typothetæ members we should aim to retain our friends, gain the friendship of those who are indifferent, and foil those who are our enemies, as apparently the underlying purpose of the majority is not to improve and protect the printing business, but to debase it so far as we are concerned by cutting down wages of employes to such a figure that it will no longer be the means of supporting a large class of people in the manner American workmen should be supported. How this latter result is to be prevented is and has been the problem of the Typographical Unions to solve, and it is for you to mark out the course to pursue. What should we submit to the Executive Committee of United Typothetæ? What should we recommend to subordinate unions, relative to their action toward local Typothetæ?

Other matters referred to were the American Federation of Labor, the contemplated inauguration of the eight-hour movement, the subject of organization, the Executive Council, report of

the proceedings and their unnecessary length, the International Typographical Congress, and proposed changes in the constitution.

Reports were also presented by the second vice-president, showing that there have been in all seven pressmen's unions organized during the past year, as follows: No. 9, Helena, Mont.; No. 36, Atlanta, Ga.; No. 37, Butte City, Mont.; No. 38, Baltimore, Md.; No. 39, Seattle, Wash.; No. 40, Denver, Col.; No. 41, Salt Lake City, Utah. Number of pressmen's unions in operation, 38; membership of pressmen's unions, 1,438; pressmen members of typographical unions, 161; total membership of pressmen under the International Typographical Union, 1,599.

The secretary-treasurer's report showed that the financial condition under the system in operation for the past two years is gradually improving. At the last session it was decided to refund an assessment which had been levied and collected, amounting to \$6,500.10, by authorizing unions which had paid said assessment to retain 50 per cent of the per capita tax until the amounts paid by them respectively had been refunded. During the year \$4,009.35 had been repaid, leaving a balance of \$2,490.75 still to be refunded. The refunding of this assessment greatly reduces the income of the general fund, as will be observed by a comparison for the past two years. The receipts to the general fund for the year 1887-8 amounted to \$13,897.92, while the receipts for 1888-9 were \$12,004.65; a decrease on account of refunding assessment of \$1,893.27. The expenditures for the year 1888-9 were \$523.29 less than that of the preceding year, and at the close of the year left a balance of \$830.13 to the credit of the fund.

Recapitulation for the year ended April 30, 1889. May 1, 1888, balance on hand, \$8,884.65; receipts as per quarterly report dated August 20, 1888, \$6,820.77; receipts as per quarterly report dated November 19, 1888, \$5,534.50; receipts as per quarterly report dated February 18, 1889, \$5,696.40; receipts as per quarterly report dated May 20, 1889, \$7,181.38; total, \$35,117.70. Expenditures as per quarterly report dated August 20, 1888, \$6,623.49; expenditures as per quarterly report dated November 19, 1878, \$6,337.23; expenditures as per quarterly report dated February 18, 1889, \$3,181.08; expenditures as per quarterly report dated May 20, 1889, \$3,355.96; total, \$19,497.76. Balance, \$15,619.94. Of this amount there is a balance of \$12,692.11 to the credit of the Executive Council.

The report of the trustees of the Childs-Drexel Fund showed a total in the treasury of \$21,689.65, which was accompanied with the recommendation that the fund remain intact, and be added to as at present till the convention of 1891, which body shall dispose of the fund as its wisdom may determine.

The reports of the organizers possessed comparatively little interest. Mr. Lake, however, presented the following recommendation:

In lieu of the present system, would suggest that state associations be formed in states and provinces where three or more unions exist, which shall hold delegate conventions annually or semi-annually; shall have exclusive jurisdiction within their own territory; shall make laws for their government not conflicting with the International. By this method unions in the various states would be drawn more closely together; would discuss trade matters from a broader standpoint than could a single subordinate union, and could oftentimes avert trouble which otherwise might overwhelm. This, too, would have a tendency to speedily enroll the country printer.

The report of the delegates to the American Federation of Labor at St. Louis, showed the attendance of fifty-one delegates, representing thirty-four organizations and 2,797 subordinate unions. It also stated that the eight-hour movement was the most important work considered by the federation and recommended its thorough discussion by the convention.

The Committee on Laws composed of O. R. Lake, A. P. Marston, H. M. Ives, James Wright and Robert Donaldson, recommended an annual meeting on the second Monday in June, to be held permanently in the city of Indianapolis; that all amendments to the constitution be referred by the International union to subordinate unions; further general laws enacted by International convention involving increased taxation shall be submitted to subordinate unions. An executive council of president, vice-president, secretary, treasurer and organizers was suggested.

This body should have general supervision of the business of the International union, of districts and of subordinate unions. It shall assemble at Indianapolis at the call of the president, or at the request of five members, for the consideration of business stated in the call. It shall decide all questions arising between subordinate unions, or between districts, and all such decisions shall be final, subject to appeal to the International union; it shall have power to direct the organizer of any district, in case of a strike or lockout, to propose a compromise or to terminate such strike or lockout. No union shall go on strike without the consent, first, of the organizer of its district, and then of the Executive Council, under such penalties for the violation thereof as the International union may prescribe, it being understood that the president and organizer shall use every endeavor to avoid trouble. Whenever a union which has complied with all laws shall have within its jurisdiction a lockout, strike or other trouble of like nature, it shall be entitled to such assistance as the Executive Council shall deem necessary, or shall be directed by the International Typographical Union by law to meet such cases. They also recommended the publication of an official organ by the secretary-treasurer. Where proofreaders are practical printers they must be members of the union. No subordinate union shall admit to membership any person who has not served an apprenticeship of at least five years and applicant submitted to rigid examination. The establishment of a life insurance feature in connection with the International union, the association to be known as "The Childs-Drexel Endowment Association of the Union Printers of North America," said association to be based upon the investment (as a reserve fund) of what is known as the Childs-Drexel Fund and the revenue derived from it.

The Cobb memorial recommending the establishment of a life insurance feature under the auspices of the International Typographical Union, to be known as the Childs-Drexel Association, the features of which are familiar to our readers, was discussed at length, and a majority and minority report on same presented.

On re-assembling, Wednesday morning, after roll call, on motion of Mr. McDonald, of Chicago, \$300 were appropriated for the use of the Johnstown sufferers.

The report of the Committee on Laws was then proceeded with, and, on motion, was considered section by section. The first recommendation provided that the International Typographical Union should meet annually on the second of June in the city of Indianapolis. After a prolonged discussion, the following amendment to the report was carried by a vote of 107 to 2:

The International Typographical Union shall meet annually on the second Monday in June in such city as the preceding convention may select.

Further amendments were adopted providing for a special meeting at the call of the president, on the request of five unions, provided thirty days' notice be given to subordinate unions; submitting amendments to the constitution to subordinate unions, and that such proposed amendments be discussed at their regular meetings in July and August, and the result thereof forwarded to the secretary-treasurer of the International Typographical Union on or before September 30; providing for an executive council, consisting of the president, vice-president and secretary-treasurer; providing for the publication of a monthly official journal, 4 pages, 14 by 10½, under the auspices of the International body, which shall publish the decisions of the president, reports of committees, receipts, disbursements and arrearages, charters granted, etc.

The following communications were then read, and referred to Committee on Laws:

THE ALBANY, DENVER, COL., June 12, 1889.

To the International Typographical Union:

GENTLEMEN,—Understanding that you are considering the advisability of founding a home for the sick and indigent members of your union, we take the liberty of presenting the following propositions for your worthy consideration:

We offer to deed to your union, in fee simple, eighty (80) acres of land lying within one mile east of the city of Colorado Springs, subject to the following conditions:

I. That your union begin the erection of a home on said land within the period of two years from the date of said deed, said home to cost not less

than the sum of twenty (20) thousand dollars, and to be completed within one year from the date of the commencement of said building.

II. That your union shall have the right to sell any portion of said tract not exceeding sixty (60) acres at any time after the date of said deed, the proceeds of said sale or sales to be placed in the hands of a trustee mutually acceptable, to be applied by him, if by you desired, toward the erection of a home on this tract, or to be paid over to the present owners of said tract in event of a failure to commence the erection of a home within two (2) years as above specified.

III. That the taxes on said land for the two years shall be borne by the union (it being guaranteed that the taxes shall not exceed one hundred (100) dollars per annum), the amount of said taxes to be reimbursed to the union in event of a failure on your part to acquire said tract of eighty acres.

IV. That the deed for said tract shall be placed in escrow with some mutually acceptable party, to be delivered to your union upon compliance with the foregoing conditions.

In behalf of the Board of Trade of Colorado Springs, by

LOUIS R. EHRLICH, *President.*

THE ALBANY, DENVER, COL., JUNE 12, 1889.

To the International Typographical Union :

GENTLEMEN.—In further explanation of the accompanying proposition, we call your attention to the following facts :

I. That the eighty acres offered for the location of your home is valued at four hundred (400) dollars per acre.

II. That the value of that part of the tract, available for purposes of sale, if the growth of the city of Colorado Springs in the next five years is at all proportionate to its growth in the past five, will in the year 1894 represent a market value of from one hundred thousand to two hundred thousand dollars.

III. That the cool bracing summer climate combined with its mild equable winter climate, in addition to its superior social character and beautiful scenic surroundings, make Colorado Springs an ideal place of residence.

IV. That the leading physicians of our country have virtually agreed in characterizing Colorado Springs as the most perfect natural sanitarium and health resort in the world for the cure of all forms of throat and lung diseases, diseases to which printers are especially liable.

V. That Colorado Springs is on the natural highway between the Atlantic and Pacific coasts, and that, geographically speaking, it is nearly in the center of the United States.

VI. That in the acceptance of our proposition the union has everything to gain and nothing to lose; that it places eighty acres of valuable land within your option of acceptance, giving you a period of two years in which to resolve to prosecute the erection of a home or to relinquish the project; that the expenditure of twenty thousand dollars will supply an institution, well built of brick or stone, containing ample accommodations for thirty persons; that the proper maintenance of such an institution will not exceed seventy-five hundred dollars per annum, a tax of about twenty-five cents per year on each member of your union; that the establishment of such a home on the highway of continental travel would naturally draw to itself the attention of many wealthy and charitably disposed citizens, and that endowments and bequests would inevitably come which would assist you in building up a home worthy of the strength and influence of your union; that we are perfectly satisfied to extend to you the privilege of a two-year consideration of our proposition because we are persuaded that a mature deliberation as to what will be for the highest and best interests of your organization, added to a careful, conservative investigation as to all the relative advantages of location, will lead you to an irresistible conviction that your union ought to maintain a home for the sick and for the indigent of your craft, and that it ought to be located in the city of Colorado Springs, Colorado.

In behalf of the Board of Trade of Colorado Springs, by

LOUIS R. EHRLICH, *President.*

Mr. Chas. S. Semper, an old union printer and a charter member of No. 49, also offered to donate eighty acres of his farm, situated nine miles north of Denver, for the purpose of building a printers' home thereon.

The result of the afternoon session was the passage of the following, providing that the secretary-treasurer shall send all receipts for money received from financial officers of subordinate unions to the disbursing officers of said unions, acknowledging the same by postal or otherwise; that no subordinate union shall admit to membership any person who has not served an apprenticeship of four years, and that the president submit to subordinate unions such measures as in his judgment may be conducive to the welfare of the craft, which he shall put in force.

Thursday morning's proceedings were mainly characterized by a somewhat excited discussion in the committee of the whole on the recommendation of the Committee on Laws, that the executive council consists of the president, vice-presidents, secretary-treasurer and organizers. The debate was participated in by a number of delegates and arguments pro and con were ably presented. As amended and adopted the section reads :

Section 6. There shall be an executive council consisting of the president, vice-presidents and the secretary-treasurer, which body shall have

general supervision of the business of the International union, of districts, and of subordinate unions. The president shall preside at all meetings and the secretary-treasurer shall act as secretary, and both shall have a vote on all questions. It shall assemble at such city as the president shall direct at the call of the president, or at the request of five members, for the consideration of business stated in the call. It shall decide all questions arising between subordinate unions, or between districts, and all such decisions shall be final, subject to appeal to the International union. Whenever a union which has complied with all laws shall have within its jurisdiction a lockout, strike or other trouble of like nature, it shall be entitled to such assistance as the Executive Council shall deem necessary, or as shall be directed by the International union by law to meet such cases. Provided, however, that in towns or cities where there is more than one union holding a charter from the International Typographical Union, they shall not call upon the Executive Council until a conference has been held by all subordinate unions having equal representation.

A motion being made to proceed to the election of officers, President Plank ruled that as there were no vacancies the regular order of election would be dispensed with. His decision being appealed from, Vice-President Hays was called to the chair, and the president defended his ruling on the ground that the official report of the proceedings of the Kansas City convention showed that biennial sessions had been determined on, the officers had been elected for two years. No provision had been made for an election at Denver. A long and exciting discussion ensued, extending into the afternoon session, when a vote was taken, with the result that the decision of the chair was sustained by a vote of ayes 59, nays 57.

The report of the Committee on the President's Address was as follows :

We congratulate the president upon the successful termination of the year just ended. Of the different subjects mentioned we would recommend that the following dispositions be made :

1. *Typotheta*.—As this is a matter of paramount importance to the International Typographical Union, we would recommend that a committee be appointed to take charge of the entire matter.
2. *American Federation of Labor*.—Indorse the action of the president.
3. *New York Stercotypers*.—Indorse the action of the president, and refer to the union for final action.
4. *Organization*.—We concur with the president in the opinion that the system of organization is insufficient. We concur with the president in the recommendation that the charters of derelict unions mentioned in his report be revoked at the end of six months if they do not comply with the law.
5. *Executive Council*.—Referred to the Committee on General Laws.
6. *David M. Pascoe*.—Referred to Committee of the Whole.
7. *Auditing Committee*.—Referred to Finance Committee.
8. *Report of Proceedings*.—We concur with the president in the recommendation that the detailed report of the secretary-treasurer be omitted from the published proceedings, but would suggest that the list of permanent members remain. Would also recommend that the price of pages in the appendix be advanced.
9. *Decisions*.—Referred to the union.
10. *International Typographical Congress*.—Referred to the union.
11. *Constitution*.—Referred to Committee on Laws.

The report of the Committee on Returns and Finances stated that an examination of the accounts of the books of the secretary-treasurer showed the cash on hand in bank, in cash drafts, etc., to be \$16,087.69.

The Committee on Miscellaneous Business presented the following report :

- No. 1. Favorably on the resolution by Mr. Vaughan, of Denver, in regard to making THE INLAND PRINTER the technical trade journal of the printing trade.
- No. 2. Unfavorably on the resolution of Mr. Metcalf, of Duluth, relative to making a uniform style for composition for newspapers.
- No. 3. Favorably on the resolution of Mr. McPhillips, of Michigan, to continue to affiliate with the American Federation of Labor.
- No. 4. Unfavorably on the resolution by Mr. Miller, of Fort Wayne, in regard to honorary membership blanks.
- No. 5. Resolution of Mr. McPhillips, of Michigan, in regard to Labor Holiday. Withheld.
- No. 6. Resolution by Mr. Vaughan relative to resolution bearing on the Childs-Drexel Fund referred back to the union for action.
- No. 7. Favorably on the resolution of Mr. Connolly, of St. Louis, relative to the publishing of the black list.
- No. 8. Favorably on the resolutions of Mr. Oyster, of Washington, relative to legislation to purify the ballot for the election of public officers.
- No. 9. Unfavorably on the resolution of Mr. Coleman, of Columbus, in regard to charters.
- No. 10. Favorably on the resolution of Mr. Kells, of New York, indorsing the Chase International Copyright Law.

The report was considered seriatim, and recommendations 1, 2, 4, 8, 9 and 10 were concurred in; recommendation No. 3 was referred to the convention in executive session; recommendations 5, 6, no action; recommendation 7, non-concurred in.

The following recommendation on the report of the second vice-president was unanimously adopted:

The report of the second vice-president is an able document and will be read by delegates with much interest. His recommendations should have the immediate attention of the Committee on Laws. We congratulate him on the fact that the pressmen's unions are in a flourishing condition.

Messrs. Holland, Lewis, Ferguson, Oyster and Riley were appointed as members of the committee to consider the question of the union's relations with the Typotheta.

The Committee on Laws recommended the acceptance of the proposition of citizens of Colorado Springs for the Printers' Home.

Mr. Lake regarded the proposition as a most munificent one. The union had only to take possession of eighty acres of land, hold it for two years and then during the third year construct a home to cost \$20,000. He said there would be sixty acres of land, rapidly appreciating in value, to be sold. This would produce a large amount of money.

The committee from Colorado Springs was invited to the platform and welcomed with applause.

Mr. Erich, president of the Chamber of Commerce of Colorado Springs, was introduced by President Plank, and said, in substance:

I can understand how any proposition from Colorado Springs would be received with distrust after the hour of rain and gust you received last Saturday. [Laughter.]

We offer you eighty acres. We place it in the hands of a third party. If you build a home before the expiration of three years the ground is yours. If you want to sell a portion of the land you can do so, and if you build the Printers' Home the money can be used for that purpose. If not, it comes back to us. It has been asked why Colorado Springs is so anxious. You underestimate your worth. You belong to a craft of intelligent men. You disseminate information. The thinking mind today recognizes that behind the editor and author stand the class of men who make the newspaper possible.

We want your organization to make Colorado Springs your home, and we know that your advertisement of our advantages will bring incalculable benefits to us. Nobler and better than all our mountain scenery is that type of American citizens who have greeted you in the far West.

When you look back on your experience here, and remember the hour in Cheyenne cañon, we hope you will also remember the warm-hearted people who were glad to welcome you and hope to know you better in the future.

Mr. Lambert, of Austin, who had come with a similar proposition from its citizens, moved that the proposition of Colorado Springs be adopted and accepted by a rising vote, which motion was put, and the convention arose en masse.

A committee of three was appointed, consisting of the president, second vice-president and secretary-treasurer, to make the proper negotiations and arrange with the donors the details of the acceptance of the proposition.

The evening session was more brief than expected. The topic that was raised, however, as soon as the convention was called to order, was the report of the Law Committee on the subject of the Childs-Drexel Fund, recommending that a system of insurance, with a benefit not exceeding \$250, be inaugurated. The discussion of the subject was quite animated and exhaustive, but at 8:30 o'clock an adjournment was had without any action being taken.

A letter was received from George W. Childs in response to an invitation to be present. Mr. Childs regretted his inability to accept the invitation, and sent the union his warmest wishes for a convention that should result in wise legislation, beneficial alike to employers and members of the craft.

On Saturday morning the union met in committee of the whole, and proceeded to act on the report of the Committee on Miscellaneous Business; all its recommendations were indorsed. Among them were that the official organ be issued forthwith, that none but practical printers be employed on typesetting machines; that the union express its sympathy with the sufferers from the Seattle conflagration; that cards be received in union offices only in the language used in those offices; that the union indorses the

blue labels of the cigarmakers union, and pledges its members to buy goods that bear those labels.

Atlanta was chosen as the next place of meeting for the next session of the International Typographical Union by a vote of 65 to 41 for St. Paul.

Messrs. Thomas J. Harrison, of Philadelphia, and J. D. Vaughan, of Denver, were elected to fill the vacancies in the delegation to the American Federation of Trades, and Messrs. Crowley, of Cincinnati, and Caron, of Montreal, as delegates to the Labor Congress in Paris.

The Plate Printing Special Committee submitted a report recommending the adoption of a resolution demanding that the government return to the process of hand work in printing government bonds and bank notes. It was adopted.

The union voted \$400 each to Messrs. Caron, of Montreal, and Crowley, of Cincinnati, as expenses to Paris as delegates to the World's Federation of Trades, provided they are not acceptable to the Scripps's syndicate.

The convention went into committee of the whole on the report of the Committee on Miscellaneous Business, and immediately rose.

A resolution, recommending Capt. W. M. Meredith to the position of chief of the National Engraving Bureau, was adopted.

The Committee on Thanks reported the following, which was unanimously adopted:

That the thanks of this convention be tendered to Rev. Dr. Moore for his eloquent invocation for the guidance of divine providence to the deliberations of this body.

To Mayor Londoner, the city council and citizens of Denver for the warm welcome received at their hands.

To the Board of Trade of Denver for the use of their beautiful chamber.

To Denver Union, No. 49, for the open-handed and warm-hearted manner in which they have provided for our entertainment.

To Committee of Arrangements, O. L. Smith, J. D. Vaughan, William H. Milburn, C. W. Rhodes, J. W. Hastie, and the members of the other committees, we are unable to express our feeling of gratitude for the almost superhuman efforts they have put forth for our comfort and pleasure.

To the Board of Trade, Typographical Union No. 82, and the citizens of Colorado Springs, for the magnificent and generous entertainment provided for us while in their beautiful city; also for the munificent gift of eighty acres of land for the use of the proposed printers' home.

To Charles L. Spencer, of Washington, D. C., for the gift of a bound volume of *The Printer*, published in New York, in the years 1859 to 1861.

To the officials of the Colorado Midland and Denver & Rio Grande railways for the many courtesies extended to us along the route of excursions to and from Aspen.

To the press of Denver generally for the fair and impartial reports of our daily proceedings.

To our officers, elected and appointed, for the efficient manner in which they have discharged their duties.

Another resolution of thanks to A. W. Middleton for his consideration on behalf of the eastern delegations, getting them through rapidly from the East.

President Plank then made a brief speech of congratulation upon the work accomplished. He assured all the delegates of his warmest feelings of personal regard, and wished them a safe return to their homes. The convention then adjourned, to meet in Atlanta, June, 1890.

COLORS AND HOW TO PRODUCE THEM.

The following is a useful list of colors and the methods for modifying them to different shades: Brown—made with red and black; bright brown—carmine, yellow and black; rose—lake and white; chestnut—white and brown; purple—carmine and blue; lead color—white and black; pearl—blue and lead color; pink—white and carmine; chocolate—black and Venetian red; French white—purple and white; green—blue and yellow; pea green—green and white; dark green—green and black; orange—red and yellow; straw color—white and yellow; flesh color—white, lake and vermilion; olive—red, blue, black and yellow; buff—yellow, white and red; vermilion—carmine and yellow; lavender—carmine, ultramarine and white; sky blue—white and ultramarine; umber—white, yellow, red and black; drab—umber, white and Venetian red. Use white to produce light tints, and black to produce dark.

A TRIP TO THE ROCKIES.

COLORADO AND HER WONDERS—SCENERY THAT BEGGARS DESCRIPTION.

WESTERN HOSPITALITY LAVISHLY BESTOWED.

A THOROUGHLY ENJOYABLE TIME, AND EVERYBODY DELIGHTED.

ON Wednesday, June 5, we left Chicago for Denver, via the Chicago, Burlington & Quincy Railroad, for a long-anticipated trip to the heart of the Rocky Mountains, under the auspices of Denver Union, No. 49, tendered to the delegates and visitors in attendance on the thirty-seventh annual session of the International Typographical Union. After a somewhat uneventful run through one of the finest farming regions in America—the garden of Illinois, Iowa (the prince of agricultural states), Nebraska and Colorado, which, owing to the recent universal rainfall, appeared in their handsomest garb—we arrived safely at our destination, and had the pleasure of being welcomed by a number of old-time friends and acquaintances. During the day "continuous arrivals" kept the efficient committee of arrangements on the *qui vive*, who, however, were equal to the emergency, and spared no pains or trouble to make the last comer feel at home. In the evening an informal reception was tendered the delegates at the Albany Hotel, and it is needless to add the occasion was a thoroughly enjoyable one, after which all preparations were perfected for the event of the season—the trip to Colorado Springs, Leadville and Aspen, the great mining camp of Colorado.

Early next morning two special trains of six cars each were found in readiness, one going by way of the Colorado Midland, the other by the Denver & Rio Grande, it having been previously arranged to divide the party, each of which should go by one route and return by the other, thereby affording an opportunity to all of witnessing the grand, weird and varied scenery on *both* roads—a treat which will never be forgotten by those who had the pleasure of participating. A number of ladies accompanied the excursionists, and thereby added materially to the enjoyment of the occasion. Those on the Midland were chaperoned by Messrs. Vaughan, Milburn and Rhodes, Mr. Hastie taking charge of the Denver & Rio Grande train. All went well with the occupants of the "Midland" until the town of Sedalia, twenty-six miles west of Denver, had been reached, at which point its track passes over that of the Denver & Rio Grande on a bridge elevated some forty feet above, where an embankment of the same height supports the track. No sooner had the bridge been cleared and the embankment reached, than the passengers realized to their horror that the train had been derailed, and that every revolution of the wheels was carrying them nearer and nearer its verge. Providentially a loss of life was averted by the engineer bringing the train to a halt within *twelve inches* of the brink of the embankment—a truly marvelous escape, for which everyone felt duly thankful. The names of the engineer and fireman who so nobly did their duty are D. B. Potter and Joseph Eaton, both residents of Colorado

Springs, and we take pleasure in presenting them, through the columns of THE INLAND PRINTER, as deserving of more than a passing recognition. They are the material of which heroes are made, and we regret that, owing to the excitement incident to the occasion, no opportunity was afforded to present them with a substantial token as an appreciation of their services. The ties were cut in twain for a number of yards, many of the cars remaining at an angle of 45°, and a broken bolt from one of the wheels of the tender will be preserved as a memento of the occasion. Through the courtesy of the Rio Grande, the excursionists were transferred to a "special," and thence forwarded to Colorado Springs, where they were tendered a right royal reception at the hands of the Board of Trade and the local typographical union. Carriages were in waiting to carry them through the broad, shaded avenues of this beautiful city, certainly one of the most attractive on the American continent, whose streets are made

beautiful with trees on either side, and charming with rippling brooks, fed from mountain streams, running along the curbstone. A visit was also paid to the plot of ground, eighty acres, situated in the heart of this national sanitarium, offered and subsequently accepted for a Printers' Home, a location unexcelled, which plead its own cause, and captured the vote of every delegate who saw it. But the treat of the day was the drive to and spread at Cheyenne cañon, situated some four miles as the crow flies from Colorado Springs, but nearly twice that distance following the winding path over rocks, between straight pines and across the rushing waters of the brook that boils down the whole rocky cut. The narrow gorge ends in a round well of granite, down one side of which leaps, foams and rushes a series of cascades—seven falls in line pouring the water from the melted snow above into this cup, into whose deep hollow only the noonday sun ever shines. The savage wildness of the scenery and the vast height of the mountain cliffs form a panorama never to be forgotten. At the extremity of the gorge—hemmed in by towering walls, gloomy and frowning—and shaded by trees, was stationed a band of music and also a well-spread table, presided over by the ladies of Colorado Springs. Unfortunately, the festivities were marred by a terrific rain and thunder storm, which compelled all present to seek refuge in their carriages, and which seemed in strange contrast to the foot of snow which welcomed the excursionists the same evening to the city of Leadville.

CASCADES IN CHEYENNE CAÑON.

(Through the courtesy of the Denver & Rio Grande R. R.)

Returning to Colorado Springs the "special" of the Midland was found waiting to convey the excursionists to Leadville. Shortly after leaving, the train dashes through the Ute Pass and some of the grandest scenery in Colorado, where views of snow-capped peaks are found on every hand. At Green Mountain Falls, a beautifully located summer resort, an elegant repast had been prepared by the model hostess, Miss Warren, formerly of Colorado Springs, and proprietress of the magnificent new hotel recently erected at this place, to which ample justice was done. The parlor and dining room were profusely decorated with mountain flowers, producing a very pleasing effect. Altogether, this reception was one of the most enjoyable treats of the trip, and the tourist will hunt far and wide before he will find a cosier and more enchanting retreat than that afforded at Green

Mountain Falls. Proceeding we pass through Buena Vista, a beautifully situated and enterprising town of two thousand inhabitants, in the valley of the Arkansas, distant 176 miles from Denver, and situated at an altitude of 7,700 feet. But on, on we speed, and tired and weary, arrive at what was formerly the greatest carbonate camp in the world—Leadville—where, as already stated, we were welcomed by a blinding snow storm, and this, too, on the 8th of June.

Although the Leadville of today is *not* the Leadville of ten years ago; although she is no longer regarded as the Mecca of the adventurer, her mineral wealth remains, and there is no doubt that for years to come the surrounding mountains will continue to pour forth their hidden treasures. But as our readers doubtless care more for information pertaining to the printing trade than in the yield of ore from this or that mine, the following facts obtained from one of her oldest and most representative citizens may prove of special interest. The first daily paper in Leadville (1879), the *Evening Chronicle*, daily and weekly, was published by Davis, Arkins & Brown (the material for which was in transit from October till the following January), and was printed in a slab shanty, 20 by 25 feet. In this compartment were huddled fourteen men, who made it their home as well as workshop—being divided into two forces. For five months an effort was made to secure bricks with which to

morning, now published. At present the population of Leadville is estimated at 18,000. Its elevation is 10,000 feet. A number of the delegates were affected by the rarity of the atmosphere, in one case amounting to entire insensibility. Early the following morning the tourists were astir, and after partaking of a good breakfast, proceeded by their respective routes to their destination.

The scenery between Leadville and Aspen by the Midland Central is simply indescribable by pen or tongue. Weird, sublime and awe-inspiring, that man must be callous indeed who fails to appreciate his own insignificance in the presence of those stupendous chasms, monstrous crags and snow-capped mountains, grim, defiant and age-scarred, following each other in rapid succession, each proclaiming the existence and puissance of that God

“Who plants his footsteps in the sea and rides upon the storm.”

After crossing the Arkansas Valley to Lake Creek a short distance, the foot of Sugar Loaf Mountain is reached. Circling around the foot of this mountain, the locomotive begins to climb the great hill to the summit of the snowy range. “Crawling up the monstrous ridge, climbing the mountain side higher and higher, gradually leaving

the valley and creek far below until they are hundreds of feet beneath the train, which keeps going up for several miles, the engine appears at the head of the gulch, making a horseshoe curve

UTE PASS.

BUENA VISTA AND MOUNT PRINCETON, COLORADO MIDLAND RAILWAY.

build a chimney, and when the much needed material arrived, calculations showed that if each brick used had not exceeded by a trifle the limits then permitted by the postal laws, the cost of their transportation by mail would not have equaled that paid for them as freight. This marvelous camp grew from a town of 1,500 to a city of 30,000 inhabitants in five months. As an evidence of the avidity with which newspapers were sought for in those days, an illustrated edition of 30,000 copies, containing fifty pages, was sold in five hours, and in 1881, a special issue of 20,000 copies was promptly disposed of at 50 cents per copy. Of the twenty-six papers, daily and weekly, established since that time, but two or three remain—the *Chronicle* being the only daily, evening and

apparently at the base of the craggy, snow-covered peaks, and yet almost to the summit of the great range.” In coming up the mountain to the curve the scenery is grand indeed. The traveler is on the side of a great mountain almost above timber line, and yet among the thickest of the tall, straight pines. In front of him are the snow-capped peaks, visible through the clouds which sometimes touch the train, while on the right, hundreds of feet below, is the emerald valley, with Lake Creek glistening in the sun. Leaving the horseshoe curve the road winds around the rugged hills above timber line, and the scene changes from grandly beautiful to grandly wild. The train winds among the rocks like a serpent, making several big curves, and marking out three or four

lines on the mountain side, one above the other, in all of which an increasing elevation is gained. Shortly after passing over a deep gulch on the great "mountain trestle," around the hill and under innumerable snow sheds, the train enters Hagerman Tunnel, through the top of the Saguache Range, 12,000 feet above sea level. This is one of the highest tunnels in the world, having an elevation of 11,530 feet. It is 2,164 feet long, 16 feet wide, and 18 feet high. As the train emerges from midnight darkness, a panorama unsurpassed is presented. Nestling at the base of the Snowy Range is Loch Ivanhoe, one of the most beautiful sheets of water in the Rockies. From the mouth of the tunnel gigantic pines, straight as an arrow, follow the track for a distance, after which it circles a hill to its south, during which trip sunshine, mist and snow alternate, a variation which commands both wonder and admiration. The train stops a few minutes, during which some of the more adventurous leave the cars in search of mountain beauties, and shortly return with choice bouquets garnered from beds of snow three to six inches deep. But why continue on a scene which has been painted a thousand times before, and yet to the tourist making his maiden trip in these regions possesses a thousand attractions that must be seen to be appreciated. Leaving Loch Ivanhoe the train follows the Fryling Pan, a somewhat insignificant stream, glimpses of which are occasionally obtained through the trees, as it winds about the mountain. Shortly after the *brink* of the great gulch is reached, where it widens and deepens into an apparently bottomless pit, bearing

LOCH IVANHOE.

the appropriate name of Hell Gate, an awful chasm which might well be imagined to be the entrance to the infernal regions. Above is an abrupt mountain of granite 1,000 feet in height, beneath the monstrous pit whose floor is strewn with rocks and boulders weighing hundreds of tons, while all the surroundings are in keeping with the rugged grandeur of the scene, and this, too, at an elevation of 10,000 feet above the level of the sea.

Leaving this awful brink the train speeds through pine woods and meadows so quickly that all seems like a dream. In a few minutes Ivanhoe Falls are reached, having come down 1,500 feet, where a good view is obtained of the shelf in the granite cliffs where the train was moving a few minutes ago. From this point to Aspen the scenery is ever changing. Castellated towers, almost as perfect as if shapen by the hands of man, valleys, hills and wooded ravines follow each other in rapid succession. Cañon Diablo is passed, then Aspen Junction, where is the confluence of the Fryling Pan and the Roaring Fork of the Grand, and next our destination, Aspen, a beautiful and enterprising mining city, situated on the Pacific slope of the great continental Divide of the Rocky Mountains, in what one of its local papers terms "the world's greatest mineral zone." Here the delegates and visitors were welcomed by the citizens *en masse*, and escorted by band, committee of reception, mounted police, cowboys, decorated stage coaches, etc., to the opera house, where they were formally welcomed by the mayor in a brief and appropriate address. The second detachment, coming by the Denver & Rio Grande, arrived

a few hours later, and were received in a similar manner. The afternoon was spent in visiting various mines, printing offices, enjoying mountain drives, etc. At five o'clock the celebrated team of the local fire department gave an exhibition for the benefit of the visitors—the same team which broke the world's record for the wet test in the tournament of 1888 in 32 2-5 seconds—and they covered themselves with glory. In the evening a public reception was tendered at the opera house, a structure of which many an older city would have reason to feel proud, which was literally crowded. Speeches were made by the president of the Board of Trade, Messrs. Hayes, Crawford, Oyster, Derham, Brown and Cameron, all of which were favorably received. A cordial invitation to spend several days in visiting the mines and other attractions was extended, but, owing to arrangements previously made, was reluctantly declined. At midnight, shortly after the moon had disappeared behind the mountain's crest, leaving the city in comparative darkness, a sight worth seeing was witnessed. Emerging from the mines (relieved by a relay) came the miners in groups, and as they wended their way down the mountain's slope the flicker from their lamps showed the tortuous pathway they were following, seeming to girdle it with a belt of fire.

The town of Aspen is a wonder and a revelation. Its elevation is 7,775 feet above sea level, and its climate is unexcelled. Nine years ago it was a comparatively unknown mining camp; today it is a thrifty city of perhaps 10,000 inhabitants, possessing all the characteristics and advantages of a metropolitan center, while the mineral lode upon which it is located is acknowledged to be the greatest ever discovered in the world. The present output is nearly 4,000 tons of ore per week, averaging \$70 per ton, exclusive of the lead. Its assessed valuations in 1881 were \$228,341; in 1889 they are estimated at \$4,000,000. It has two thriving newspapers, the *Times* and *Sun*, an examination of which showed that their establishments were kept in apple-pie order; and we were equally pleased to learn that in both of them THE INLAND PRINTER was a welcome visitor. The comparative absence of crime is a notable feature, which, however, may be explained by the fact that instead of making a hero of its first murderer, he was promptly sentenced to imprisonment for life, and he is now doing service for the state. Thus nipped in the bud, murder lost its romance, and law and order reign supreme.

Early next morning the Midland excursionists were transferred to the Denver & Rio Grande, the return trip being made by that road, the second party occupying the cars of the Midland, one leaving at three, the other at five o'clock.

Denver was again safely reached after three days of somewhat exciting travel and experience. All were delighted with the trip and lavish in their expression of the hospitality bestowed. The presence of the ladies—God bless them—contributed materially to the enjoyment of the occasion, while the attention paid to the comfort of those participating by the efficient committee of arrangements elicited deserved encomiums from every quarter. A description of the return trip, and the marvelous scenery afforded by the Denver & Rio Grande, is unavoidably laid over till the August issue.

But the hospitalities extended by No. 49 did not end here. On Wednesday afternoon delegates and visitors were treated to a carriage drive through a portion of the residence and business streets, which was highly enjoyed; and also attended the opera house—which is admitted by all who have seen it to be one of the handsomest, if not the handsomest, of its kind in the United States—to witness Mlle. Rhea and company in the play of "Adrienne Lacouvier." A large floral tribute, containing the letters I. T. U., presented to the actress, was graciously acknowledged.

On Thursday evening a grand banquet was given at the Windsor Hotel, where 262 ladies and gentlemen sat down to a sumptuous repast. The dining room was ablaze with light and odorous with huge platters of peonies and tiger lilies. By every plate lay a bouquet of delicate and fragrant blossoms, while a full orchestra discoursed most exquisite music.

After ample justice had been done the good things provided, and as the wine began to flow, Mr. O. L. Smith, chairman, called

ASPEN.

GLENWOOD SPRINGS.

Messrs Vaughan, Rhodes and Milburn around him. At that moment a committee of gentlemen from the other portion of the banquet hall, headed by Secretary McClevey, arrived, and that gentleman said:

Mr. Milburn, Mr. Vaughan and Mr. Rhodes, we have been deputized as a committee to express thanks for the many courtesies extended to the International Typographical Union by the union you represent.

He thereupon presented the gentlemen with three canes, each having a gold head, and being of finely polished wood.

Mr. Milburn responded first, saying, this was the first time he had ever been knocked out in one round.

Mr. Vaughan replied as follows:

I know that Mr. Rhodes and Mr. Milburn are too full for utterance, and I am anxious to be. We have endeavored to make it pleasant for you. All the accidents you have encountered have been only pleasant surprises. You were deprived of your Pullman sleepers that you might see some of the midnight beauties of Leadville. [Laughter.] You were run off the track to see how nicely it could be done. But I will add that if I grow to be a great grandfather I shall value this memento more and more with each succeeding year. [Applause.]

Mr. Rhodes said:

This has been a great surprise to me, and I cannot express fully my thanks. I can only say that I appreciate deeply this compliment, and on behalf of the typographical union to which I have the honor of belonging, I would add that you may, when you return to your homes, feel in some measure that every one of the Denver printers has enjoyed your coming and regrets your departure. [Applause.]

Mr. McClevey, addressing Mr. Smith, said:

Mr. Smith, one of that great family of people in this great country of ours, we desire also to express to you some of the grateful feelings we are moved by. We have known of your indefatigable industry in behalf of our entertainment, and we appreciate it. In behalf of the entire number of ladies and gentlemen who have been the recipients of Denver hospitality, I desire to express their feelings of gratitude to you as chairman of the committee on arrangements, and beg of you to accept this slight memento.

He then presented that gentleman with a very handsome gold-headed cane. Mr. Smith made a brief response, in which he modestly expressed his thanks and appreciation of the compliment paid him.

Colonel Lambert was called for and responded by saying that he wanted to say a word for the other division. A cloud was thrown over a portion of us, but we were as zealous to see our royal entertainer, Mr. John Hastie, suitably recognized. It is through a villainous mistake that the souvenir we would have given him is not here tonight, but I desire to say that we can only express again our appreciation of the warm attention that he has shown us.

Mr. Hastie said:

If my efforts have succeeded in assisting in placing the union of Denver in the rank of other unions of the United States, I shall rest content. I am sure as you leave here to go north, east, west and south, you will carry with you memories of pleasure, and will take to the respective unions you have the honor to represent good reports of faithful work. I am a great believer in the strength derived from sociability. In the relaxation from the cares of legislation such as this I have faith much good is to be done. I thank you most sincerely and gratefully.

A letter from Mr. George W. Childs was read, and was received with tumultuous applause.

The following toasts were then responded to: "The International Typographical Union," President E. T. Plank; "Colorado," Edward F. Brown, of Aspen; "The Childs-Drexel Fund," James B. Dailey, of Philadelphia; "The Western Journalist," Hon. L. B. France, of Denver; "Our Wives, Mothers and Sweethearts," W. H. Griffiths, Denver; "Denver," Corporation Counsel Marsh; "The Sunny South," Col. William Lambert, Austin, Texas; "The Glorious North," Phillip Corcoran, St. Paul; "The Atlantic Coast," Thomas J. Harrison, Philadelphia; "The Pacific Slope," George E. Riffin, San Francisco; "Denver Union," John D. Vaughan.

A. C. Cameron, of THE INLAND PRINTER, was the last speaker. He said the lavish hospitality bestowed had exceeded the utmost expectation of delegates and visitors, and next to Chicago he thought Denver the finest city in the United States.

At 1.30 the company broke up, after an evening of unalloyed enjoyment and one long to be remembered.

OMAHA.

Returning, we spent a short time in Omaha, a city whose progress has been truly phenomenal, many of its business and public structures ranking with the best in the United States. The air of go-aheaditiveness manifested is refreshing to a Chicagoan, and the lunacy of George Francis Train (so frequently referred to), based on his faith in its future, may well be called in question. The electric railroad, running between Omaha and Council Bluffs, is a grand success, making the trip between the two cities, eight miles, in twenty-five minutes. In company with the efficient representative of THE INLAND PRINTER, Mr. W. M. Kimmel, we paid a flying visit to several newspaper and job printing establishments, where we met and had a pleasant chat with a number of old acquaintances.

We also had the pleasure of inspecting the establishments of the Great Western and Omaha typefoundries and chatting with their respective representatives, Messrs. M. S. Uhl and H. J. Pickering. Both gentlemen know and appreciate the needs and requirements of the West in a preëminent degree, and make the best of all opportunities offered. Mr. Uhl reported trade fair and prospects good, while Mr. Pickering was up to his eyes in business, superintending the removal then in progress to new and commodious quarters, 1118 Howard street. This structure is five stories and basement in height, covering 18,000 square feet, all of which are devoted to the various branches of the trade, such as the machinery department, electrotyping, roller composition, specialties, Marder, Luse & Co's type, Campbell presses and second-hand machinery. Omaha is all right, and her future is assured. Her newspapers have already established a national reputation, and the enterprise manifested by her citizens makes her future secure.

Before concluding, we desire to express our heartfelt thanks for the many courtesies received on all hands. The favors extended we accept on behalf of THE INLAND PRINTER, and assure its many friends they will be reciprocated when opportunity offers.

RECENT PATENTS.

The following list of patents relating to the printing interests is specially reported by Franklin H. Hough, solicitor of American and foreign patents, 925 F street N. W., Washington, D. C., who will furnish copies of patents for 25 cents each.

ISSUE OF JUNE 11, 1889.

- 405,016—Printing and delivery mechanism. L. C. Crowell, Brooklyn, N. Y.
- 405,159—Printing machine. F. H. Grott, Jersey City, N. J.
- 405,099—Printing machine. F. Kirsch, St. Louis, Mo.
- 404,931—Printing machine sheet-delivery apparatus. A. R. Bartlett, Plainfield, N. J.
- 405,153—Printing machine sheet-delivery apparatus. G. P. Fenner, New London, Conn.
- 404,959—Printing machines. J. H. Buxton, D. Braithwaite and M. Smith, Manchester, England.

ISSUE OF JUNE 18, 1889.

- 405,479—Printers' chase. P. Huether, Allegheny, Pa.
- 405,273—Typesetting and distributing machine. G. D. Rogers, Minneapolis, Minn.

We acknowledge the receipt of a season ticket to the New Era Exposition, to be held at St. Joseph, Missouri, from September 3 to October 5. The main building, for machinery and other exhibits connected therewith, has a floor space of 80 by 1,040 feet, or 83,200 square feet, the largest building in the West. The amphitheater will seat 10,000 people. The grounds comprise forty-five acres, carpeted with blue grass and covered with beautiful elm, ash and oak trees. There will be forty acres of pavilions, pagodas, arbors, pyramids, granaries, colonnades, arcades, grottoes, canopies, etc., trimmed and decorated with and for cereal and other agricultural exhibits. There will be lakes, fountains, waterfalls turning the "old mill," rustic bridges, etc. There will be exhibited railway rolling stock and railway appliances; electric light, power and other electrical devices, and all kinds of machinery, implements, tools, etc.; inducements certainly to insure a large attendance.

J. D. VAUGHAN, *Secretary.*
C. W. RHODES.

O. L. SMITH, *Chairman.*

WM. H. MILBURN.
J. W. HASTIE.

THE OMAHA BEE'S NEW BUILDING.

THE 19th of June was a memorable day for the Omaha *Bee*. Eighteen years old on that date, it began its nineteenth volume in a new home, the largest and most complete newspaper building in the world. The occasion was fittingly celebrated by throwing open the immense edifice for the inspection of the craft, a thousand invitations having been issued to prominent newspaper men and printers throughout the country. Many of

them availed themselves of the opportunity to thoroughly study the building, which takes its place in the foremost rank of the best business structures of this age, and bids fair to stand as an example for the future.

The building, a cut of which is given herewith, occupies two full lots, with a front-

age of 132 feet on Farnam, the principal business street of Omaha, and 132 feet on Seventeenth street, and is eight stories high.

The basement, which is entirely above ground, and the first floor are built of a jasper-like brilliant red granite. This is treated in rock-faced finish for the most part with a strong buttressed effect at corners, with bee-hives carved in the granite pilasters above each corner. The eleven polished massive pillars of this material which adorn the main fronts are conceded by people who have traveled abroad to excel in beauty and variegation of colors any marble or granite used in the European capitals.

The superstructure above is of brown obsidian pressed brick, trimmed with terra-cotta to correspond in color, and brownstone, molded brick and carved terra-cotta embellishments. To break the effect of the long lines of windows, the central portion of the Farnam street front is surmounted by an eighth story, extending sixty feet, and above this two smaller turrets rise to a height of 115 feet above the sidewalk.

The main entrance is on Farnam street, by a granite arched portal of noble dimensions, flanked on either side by lesser arches, which form the windows of the landings of the marble staircase. The grand marble staircase at the main entrance leads to the first or principal story where the counting room is located. A beautiful as well as useful feature, in fact the feature of the building, is this great central court, which affords light and ventilation to all parts of the structure. All of the halls of the building are laid with the best encaustic tiles, and the bases of the hall walls are of marble. The building is finished throughout in antique oak, highly polished, and is heated by steam, lighted by electricity and provided with beautiful combination fixtures for either gas or electric light.

The power for the heating, printing and electric lighting is furnished by two magnificent Corliss engines. The smaller engine is rated at 80 horse-power and supplies the power for the presses, stereotyping apparatus, paper-wetting machine, plate elevator and day dynamo. The larger engine is rated at 150 horse-power and is used only for the operation of the electric machinery, although both or either of them can be used for any of the purposes required.

The location of the pressroom is a new departure from usage in metropolitan dailies. Instead of setting the presses underground, they occupy places on the ground floor. The presses rest

upon separate walls from the building, these walls being built up from the sub-basement. The result is that the presses are comparatively noiseless and run without the least contact with the main walls of the building. With its five windows on one side and three transoms looking directly into the court, the pressroom is as light as the composing room, and will require no artificial lighting between daybreak and sundown. Another feature of this pressroom is that there is no overhead shafting or belting. The belts that connect with the main shaft come up from the engine room in the sub-basement through the floor over the main pulleys.

The editorial, composing and stereotyping rooms are located on the seventh floor. The composing room covers an area 44 feet in width and 89 feet in length, with a height varying from 17 to 19 feet. The magnificent proportions, and superb light and ventilation impress one upon the entrance above all other things. The editorial rooms abut the east end of the composing room. The only means of communication between the two departments are two small openings. On the south side of the composing room, inclosed by an iron screen and communicating with the editorial rooms, are the advertisement department and the desks of the superintendent and foreman. From this room speaking and pneumatic tubes and electric bells lead to the counting room and other parts of the building. The editorial rooms are arranged with special reference to facilitating the work of the editors and reporters.

The stereotyping room, which connects with the composing room through a vestibule 8 by 12, is most superior in every respect for this purpose. With two fronts lighted by large plate glass windows that can be thrown open at any time, it has unequalled facilities for lighting and throwing off the great heat. The floor is covered with boiler iron riveted and screwed down upon an oak floor. In one corner it has a vault for storing material and supplies. Lighted by electricity, with an ample supply of water for all purposes, the stereotypers are surrounded by every possible convenience which would in any degree facilitate their work. All the necessary machinery in this department is furnished in duplicate, to guard against possible accidents.

Taken altogether, it is a model building, of which any city has a right to feel proud, and furnishes another and striking evidence of the marvelous growth of the great and matchless West.

We cannot conclude without referring to the able corps of mechanical managers, consisting of Mr. Harry Haskell, the efficient and gentlemanly superintendent; Mr. Sprague, day foreman; Mr. H. W. Pinney, night foreman; Mr. M. J. Buckley, foreman stereotypers' room, and Mr. F. M. Youngs, foreman of the pressroom, all of whom are an honor to their profession.

HOW NOTABLE WRITERS WORK.

The *Phonographic World* describes the manner in which notable writers do their work, and aptly precedes its articles with an extract from the Indianapolis *Journal* showing that five hundred letters come to the White House every day, outside of the President's family mail. To answer them a force of men work until nearly midnight. The more important letters Mr. Halford replies to by dictating to Miss Sanger, who typewrites what he says. But as to how great people write. John Habberton often has his manuscript copied by typewriter; so does Thomas Wentworth Higginson. J. T. Trowbridge writes with a pen. Luke Sharp writes that a noted English author once told him he could not dictate love scenes to a typewriter, because "he felt he was making a fool of himself." Sharp feels the same way, he says. Mrs. E. D. E. N. Southworth regards the pen as an old, tried friend, and stuck to it until three years ago, when she got a typewriter. Edmond C. Stedman is thinking of employing a stenographer; Noah Brooks uses a typewriter; Rossiter Johnson writes with a pen; Sarah Orne Jewett relies on quill pens, and so do Sidney Lusk and the author of "Cape Cod Folks." Arlo Bates has been forced to use a typewriter, and Thomas Nelson Page does his law work with a typewriter and his literary work with a pen.

ADVERTISING SPECIALTIES

Are · You · in · a · Rut ?

SOME PEOPLE, loth to accept progressive ideas, keep pegging away in the same narrow rut of their predecessors. Others, more enterprising, avail themselves of every advancement, thereby securing the benefits of modern machinery. No one will claim that the printing press of today resembles very much the one in the above cut. The improvements have been rapid and beneficial. Now, why not in *Folding Machines?* It is possible that such is the case. You can readily ascertain and get full particulars by addressing the

Brown Folding Machine Co.,

ERIE, PA., U. S. A.

THE "LIBERTY" GALLEY.

Indestructible, solid, all Brass. Guaranteed for three years, and every Galley that is broken within that time replaced with a new one without charge. *It is the Best and Strongest Galley made.*

No. 1.

No. 2.

No. 3.

No. 4.

The cuts show the construction, and you can see at a glance where the superiority lies. It is made of *solid brass*. The head, as shown in cut No. 1, is notched to fit in notches of the sides, thus preventing its being pushed out. The pins shown in same cut, but better in cut No. 2, are cut *on* the head and passed through the holes in the sides and riveted (see cut No. 3, also cut No. 4, where they are being put together and riveted on the outside, thus preventing the sides from being forced from the head). Both the head and the sides are fastened to the bottom by *rivets passing entirely*

through them, and being riveted *top and bottom* (as shown in cuts Nos. 1, 2 and 3), produce an indestructible joint. Cut No. 5 shows the galley complete, and a more solid and substantial piece of work cannot be imagined. In placing these galleys on the market, we do so with the utmost confidence, having put them to the severest tests, and *our guarantee will be carried out to the letter.*

No. 5.

THE LIBERTY MACHINE WORKS, 54 Frankfort St., New York, SOLE MANUFACTURERS.

Our Goods are sold by all the leading Typefounders and Dealers in Printing Materials.

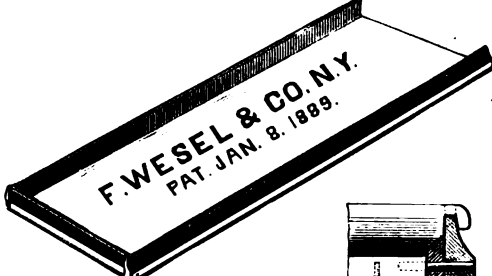

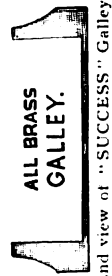

IMPORTANT NOTICE TO THE TRADE:

Notice is hereby given, that the galley above described, and heretofore sold by F. WESEL & Co., of No. 9 Spruce Street, New York, under the name of the "Success" Galley is covered by a patent adjudged to belong to us after a litigation with F. WESEL & Co. We hereby warn all persons interested that we have the *exclusive* right to make, use and sell such galleys; any person, therefore, who *USES or SELLS* such a galley infringes upon our patent and will be promptly prosecuted.

 "Success" Galleys for sale by all Type Foundries and Dealers in Printers' Materials.

THE "LIBERTY" GALLEY LOCK-UP.

This device does away with quoins, sidesticks, shooting-stick and mallet. Is complete and secure, and cannot get out of order. Is always ready for use, and neither water nor acids have any effect on it.

No more looking for quoins that will not fit. The lock-up being made of brass, neither temperature nor moisture can affect them.

The "Liberty" Galley Lock-up locks up so securely that no matter how long locked up, or how many proofs have been taken, the form is always kept tight.

Takes less than half the time any other lock-up takes to adjust, and when locked up once it cannot get loose.

Will last for years; and where time is everything, as on a daily paper, the time saved will more than pay for the lock-up in three months.

Type cannot move, and it avoids using mallet, shooting-stick or key. As all cams are of the same size, there can be no delay in picking out the right one.

Type matter can be of any length, as the footstick with cam slides up or down as required.

Footstick and cam are fastened together, therefore they cannot be put in wrong.

In using, place sidestick in, then cam, and press end of cam with the finger which will tighten it.

THE H. C. HANSEN

Power Improved Pin-Hole Perforating Machine

Price, \$60.

This is my New Pin-Hole Perforating Machine. It has many advantages over all other machines. Will perforate a sheet 36 in. wide any desired length. An excellent feature is that it does the work in less than one-fourth the time of any other machine, being run by hand or steam power.

AMERICAN STRAW BOARD COMPANY.

ANNOUNCEMENT.

THE C. L. HAWES COMPANY, operating Aqueduct Mills, Dayton, Ohio, and Branch Houses Chicago and Cincinnati, has this day been merged into and henceforth will be controlled by

AMERICAN STRAW BOARD COMPANY

All obligations of the old Company will be taken care of in due form as heretofore, and its assets collected as speedily as possible, that a complete settlement of its affairs may be had in the near future. Kindly address all communications relative to accounts to the main office here, from which point all collections and settlements will be made.

Dayton, Ohio, July 1, 1889.

AMERICAN · STRAW · BOARD · COMPANY

Having purchased the entire business of **The C. L. Hawes Company**, and retained its officers and other employés, will continue with increased facilities to supply the trade without interruption. A full line of

Book Binders' and Paper Box Makers' Materials and Machinery

will be carried in stock in both Chicago and Cincinnati, and it is hoped that the liberal patronage enjoyed by **The C. L. Hawes Company** will be transferred to the new Company, now fully equipped and prepared to handle even a larger volume of business than its predecessors.

think will bear me out in the assertion that my efforts did considerable to make it so.

This communication would have reached you earlier had I received the April number in time. It was directed, as usual, to Messrs. J. & A. McMillan's care, and only reached me a day or two before the June number, and then only after I had sent for it.

Respectfully yours, CHAS. LAWSON.

FROM LOUISIANA.

To the Editor: NEW ORLEANS, June 20, 1889.

The printing business continues to remain active in this city. Those printers located here continue to thrive, much to their regret, to a certain extent, I imagine, for recently the weather has become quite warm, and all printers would much prefer going to West End, and other points where the cooling breeze may play upon their heated brows than worrying over bad manuscript in a close printing office.

Your correspondent has had a fortnight's recreation in the piney woods of old Tangipahoa parish, and such a sojourn can be appreciated only by those who have been detained from their boyhood's home for many years, and at last allowed to return and drink in its joys and its pleasures in his own time and at his own sweet will. While there I saw a copy of the *Hammond Leader*, a weekly in its first year, conducted by Northern energy and capital. It compares with the best of country papers.

A day was spent in Baton Rouge, our capital, and being my first trip to the place, the courtesies of Mr. E. S. Conerly, of the *Truth*, in showing the main features of the town, were highly appreciated. This town, of perhaps 10,000 inhabitants, possesses three papers—the *Capital Item* and *Advocate*, daily, and the *Truth*, weekly.

Mr. B. Meyer, restaurateur of this city, subscribes for nearly all, if not all, the papers in this city. Many published in this city, of which I had never heard before, I saw on file in his restaurant. He caters to his patrons, and the latter's name is legion.

D. F. Y.

AN AMATEUR'S PLEA.

To the Editor: TOLEDO, Ohio, June 11, 1889.

I am a careful reader of your excellent paper and have watched with keen interest the articles concerning the amateur.

It seems to be a common opinion that if a printer has never spent a certain number of years under the instruction of some aged "typo" that he is an amateur and therefore a botch. I send you the inclosed samples as a specimen of what I have been able to work out for myself.

As I never "learned the trade" in the ordinary acceptance of the term, it may be of interest to you, while looking over the samples, to know something of how I did acquire my knowledge of printing.

When fourteen years of age my father loaned me \$20 with which was purchased a small self-inking lever press and a few fonts of type. It is now six years since that first very small beginning. Up to one year ago high school duties claimed most of my attention, leaving only spare hours and holidays in which to cultivate the "art preservative."

Since leaving school I have gone into business for myself. My plant contains a 10 by 15 Gordon and an eighth medium press, one of the largest size lever cutters, and a goodly complement of imposing stones, labor saving material, type, etc. An electric motor keeps things hustling. I have a good business, many of my customers being among the largest houses here. About a year ago I spent four weeks as a compositor in one of the largest offices here. That is the only time I ever spent in any office other than my own.

With the cut-rate fiend, from whose attic den emanate the disgraceful specimens of printing (?) such as have been lately displayed by THE INLAND PRINTER, I have no sympathy. He is a bad egg. In common with all other lovers of the craft I despise the

amateur who puts botch jobs in competition with the work of legitimate printers striving to do good work at fair prices in spite of an expense account of which the amateur knows nothing. But I do want to put in a plea for the "amateur," if such he may be justly called, who has, by patient effort and perseverance, conquered the difficulties which constantly beset the followers of Faust and Gutenberg. If he produces equal results; if he takes his place side by side with long established concerns, in fair competition for the public patronage, and succeeds, does he not merit equal honor with those who have always had an instructor at their elbow? Sincerely yours, F. W. T.

FROM MONTREAL.

To the Editor: MONTREAL, July 4, 1889.

A number of flags bearing the stars and stripes are floating in Montreal today. The Fourth of July for Canada is celebrated on the first—Dominion Day. There was not much of a celebration here on that day, so many went out of the city, some to Toronto, Ottawa, Hamilton and Cornwall, where championship games of lacrosse were to be played. There were many picnics to Otterburn Park, St. Rose and other surrounding places of interest. Several thousands went to Lachine by rail, then took the steamboats for a trip down the far-famed Lachine Rapids. In the evening the streets contained very few pedestrians, till train after train and boat after boat arrived with their living freight. A general good time was enjoyed by all. On the Fourth a small amount of fireworks were to be seen from different parts of the city, but during the day one could hardly look anywhere without seeing the American flag.

Our delegate to the I. T. U., Charles Beattie, made his report in writing to Montreal Union, No. 176, on their meeting night, July 6. The report was a long and concise one, such as has not been made before for years, to our union. He succeeded in doing nearly all, according to the instructions given him by a committee appointed for the purpose before he left Montreal. Of course, he is now wearing one of those large, cowboy hats.

The Canadian Workman Printing Company (limited) has gone into liquidation. It seems the paper has not had the proper support, and the stockholders were rather slow in paying up their stock, so that the necessary capital was not on hand to do things in proper shape. Things may come out all right yet, as many hope it will, as the *Workman* is the only English labor paper published in Montreal.

The *Sporting Life* is now set up and printed by the *Journal of Commerce* office. The editor and proprietor, James Crossely, is now the editor of both the above papers. The first number issued by the above office looked as if it was run with mud instead of ink. On inquiry it was found to have been printed with 7-cent news ink on toned paper.

The City Printing & Publishing Company, 751 Craig street, after having had a hard time in getting money enough to pay the hands, still owed a good sum each. A meeting was held and sufficient money raised to pay all hands up to date, and from that time *give* their hands Saturday afternoon.

W. H. Eaton published the article entitled "Trusts," contained in the June number of THE INLAND PRINTER and gave the proper credit in the *Advertiser*. Mr. Eaton knows where to look when he wants a good article, and never fails to give the proper credit.

Cameron, Currie & Co., 10 St. Nicholas street, are dealers in advertising specialties of all kinds. Their card stock comes principally from New York City. The advertisement part is done here.

Sebastin's lithographic and general printing house has moved from Beaver Hall Hill to the second flat in the Gazette Building, corner of St. François Xavier and Craig streets.

The *Gazette* office has moved its newsroom up two flats, and now the jobroom covers the whole first flat. Three new double revolution Campbell presses are being put in the pressroom. About ten extra men have been added to the jobroom, making thirty odd

hands at present employed in this room. Several pressmen have also been added to this office during the summer.

The printers will hold their second annual picnic at Otterburn Park some time in August. The matter is in the hands of a good committee, and we are sure it will be a success. A typesetting contest will be among the many attractions. This one will be under the auspices of Montreal Typographical Union, No. 176.

J. P. M.

PENNSYLVANIA'S PRINTING PROGRESS.

To the Editor : PHILADELPHIA, Pa., July 8, 1889.

The printing business generally throughout Pennsylvania and the adjacent states of Delaware and Maryland has been rather slack. In the coal and iron regions of western and northern Pennsylvania, the interest is in a very demoralized condition. This is directly due to the unsettled and uncertain state of the great industrial interests. So far as their particular localities are concerned, no change for the better is looked for until the cloud that shadows the coal and iron trades disappears. As this is not likely to occur for an indefinite period, the outlook for the typographical fraternity and publishers is exceedingly gloomy and discouraging. Wages have been reduced to the most meager notch, and, as a consequence, many of the inland cities and towns are flooded with poor and incompetent hands.

Here, in Philadelphia, the hot weather has had the effect of causing a lethargy that promises to continue until September. The houses that usually have an extra run of railroad and steamship excursion work, are executing good-sized orders, and will enjoy a continuance of such business through this month and August. The prominent master printers look forward to a heavy volume of trade when the fall transactions commence.

The lithographers, engravers and bookbinders are doing an enormous business. There is a regular and increasing demand for talented, experienced lithographers and engravers, and hardly a day elapses but what the local prints contain advertisements for first-class men. The bookbinders are busily operating day and night. Most all the leading ones are doing nightwork, and binders, folders, embossers, gilders, edgers and all-around workers are coining money by making overtime. The demand for all kinds of experienced help is so great that it is almost impossible to supply it, and the proprietors of binderies and engraving establishments have been compelled to advertise in New York and other cities to obtain people competent to perform the work required.

Philadelphia certainly presents a fine field for high-class lithographers, engravers and good bookbinders. In the two former occupations there is no limit to the compensation. Accomplished, competent, reliable and active workers can get almost any reasonable salary demanded. The representative of THE INLAND PRINTER learns that in New York and Boston there is a similar demand for such experts mentioned previously, and fabulous prices are being offered to those seeking such employment. Printers with artistic qualifications are also eagerly sought by job printing houses in New York and New England cities.

The union printers of Philadelphia and Camden, New Jersey, will have a grand picnic at Pavonia Park, Camden, New Jersey, on Monday, July 29. Athletic sports will be a feature of the occasion. Among the prizes to be distributed will be solid silver composing sticks and rules. The day's celebration will close with a balloon ascension and a fine display of fireworks.

The printers of this city covered themselves with glory by responding quickly and liberally toward the relief of the Johnstown sufferers. Philadelphia Typographical Union, No. 2, answered the call for aid promptly by donating \$250, and solicited its members to contribute, which they did in a manner which redounds greatly to their credit and the union; the amount donated, together with individual contributions, averaging nearly \$1 each, reaching \$1,200. The employing printers, newspaper and book publishers, paper and ink manufacturers and other allied interests contributed nearly \$50,000. The Times Publishing Company,

besides making a cash donation, expended \$1,000 in the purchase of useful goods to make comfortable those who had lost their household belongings. Among the special contributions, which swelled the relief fund largely, were the following: George W. Childs, publisher of the *Ledger*, \$1,000; Mackellar, Smiths & Jordan, \$1,000; Jessup & Moore Paper Company, \$1,000; Charles Eneu Johnson & Co., \$250; Charles Foster Publishing Company, \$100; International Publishing and Printing Company, \$250; Martin & William H. Nixon Paper Company, \$250.

The seaside printing and newspaper establishments are crowded with business. The daily papers at Atlantic City, Cape May, Asbury Park and Long Branch, New Jersey, are all running, and the proprietors of all of them say that their advertising patronage never was better. The job printing trade at all the summer resorts on the Atlantic coast is remarkably good. Some of the prominent concerns are so rushed with work that overtime will be necessary during July and August to keep up with the demand for all kinds of printing.

The firm of Peacock, Featherston & Co., proprietors of the *Evening Bulletin*, has been dissolved, Mr. Featherston retiring. The newspaper will hereafter be conducted by Gibson Peacock, editor; William F. McCully, business manager; Hanford C. Smith, advertising manager.

W. Hayes Grier, state superintendent of public printing, will not retire until November, in order that he may get out his annual report. Mr. Evans, of West Chester, has been appointed to succeed him. Mr. Grier will start a democratic paper in Columbia, where he formerly published the *Herald*.

The Times Publishing Company, of this city, has closed the purchase of a lot 74 by 100 feet, on Sansom street, above Eighth, south side, for the purpose of constructing a *Times* annex building, and will commence to build a six or seven story edifice as soon as plans can be projected and contracts awarded. The building will be entirely of brick, and practically fireproof. The cellar will be finished in the best style for the steam power to supply duplicate engines and printing machinery in the new building and to furnish steam power and heat in the entire new structure. Five or six floors of the new building will be rented for manufacturing or business purposes. Each floor will be supplied with steam for manufacturing and for heating purposes, and passenger and goods elevators will be accessible from each floor, and will be operated day and night as required. Work on the building will be started some time during this month, and it is expected that the structure will be completed by the close of the year.

The *Times* composing room has been considerably enlarged to obviate its crowded condition. It is understood that the number of compositors will be increased and that the *Times* will issue a six-page paper every day next fall, or as soon as business renders such a step necessary.

General Simon Cameron died at his home, "Lochiel," Donegal Farm, Lancaster county, Pennsylvania, on Wednesday evening, June 26. General Cameron was in his ninety-first year, having been born in March, 1799. The son of a poor farmer, his early education was limited, and his struggles and privations many. He learned the printing trade in the office of the Northumberland *Gazette*, at Sunbury, and afterward worked at the case in Harrisburg. He afterward edited the Doylestown *Democrat* for a couple of years, and in 1820 he went to Washington, where he worked at his trade on the *Congressional Globe*. In the spring of 1821 he returned to Harrisburg and purchased an interest in the Harrisburg *Republican*. He at once began to take an active part in politics, and wealth and honors followed. He was adjutant-general of the state in 1832. From this came his title of general. He made money by real estate investments and by contracts on the Pennsylvania canal. He was a strong democrat and a staunch friend of Jackson, Calhoun and Buchanan, and when the latter was made secretary of war under Polk, in 1845. Mr. Cameron was elected to the United States Senate to fill his place. Mr. Cameron became a republican in 1859, and his name was proposed for the presidency at the National Republican Convention, held in Chicago. It was withdrawn in favor of Hon. Abraham

Lincoln, and the nomination of the Illinois statesman was secured. Mr. Lincoln called General Cameron into his cabinet as secretary of war. Later he went as minister to Russia, but returned in time to take a prominent part in securing the second nomination and election of Mr. Lincoln. In 1867 Mr. Cameron went back to the United States Senate, where he remained until 1877, when his failing health led him to retire to his comfortable old home at Donegal Farm. Since that period he has traveled widely and read much, and up to his last sickness kept up the keenest interest in the affairs of the nation, and especially its politics. Probably no other man on the continent knew so thoroughly the ins and outs of politics and statecraft all over the Union for the past seventy years as Simon Cameron. Of his own state, Pennsylvania, he has been the dominant spirit in its politics for the past half century, and in his death the Keystone State loses one of her most remarkable and honored sons.

ARGUS.

FROM KENTUCKY.

To the Editor :

LOUISVILLE, July 7, 1889.

No improvement in the trade has been reported except in a very few instances. The paper houses report a pretty fair trade for June, while the printers' supply house has nearly as good a report to make, but when approached upon the subject most of the printers cannot make such an assertion. The effects of the Rogers-Tuley Company were disposed of at public auction several weeks since, upon which \$7,500 was realized upon the plant. It was bought by a syndicate of Louisville printers. The stock on hand, it is said, brought in the neighborhood of \$1,500, making a total of \$9,000. The indebtedness was reported to be \$33,000, which leaves quite a deficiency, added to the fact that several mortgages are held against the concern. An attempt has been made to secure the removal of the Cumberland Valley Publishing House from Nashville to this city. It is one of the largest church publishing houses in the country, and from present indications the Commercial Club, which has the matter in charge, will succeed in bringing it here.

A movement is on foot which has in view the bringing together at an early date of the master printers of the city by means of a public dinner. They do say that the best means to reach a man's better nature is by way of his stomach, so we will bide our time and see how it succeeds with our master printers. At any rate, the condition of the trade here at the present time demands that something be done, as it is in an extremely demoralized condition. While in conversation with several of our leading printers, during the past few days, I was surprised at the revelations made regarding the state of the trade. I have good reason to believe that nearly the same conditions exist in other cities, but that there is not the least excuse for it is self-evident. That every printer should strive to do a large volume of business is no excuse for them to cut prices right and left, simply to prevent their competitors from getting a share of the trade. Still, it is being done every day, and failure after failure demonstrates the folly of such a manner of doing business. Again, because Mr. Brown has to compete with Mr. Jones for trade it does not follow that he should treat Mr. Jones as his enemy and almost refuse to speak to him when they chance to meet. Good manners compel Mr. Jones to salute Mr. Brown, but if the present feeling continues to grow upon the printers of Louisville, even good manners will get to be a back number. Therefore, I say, by all means let us have a printers' banquet, and see to it that every reputable member of the trade receives a pressing invitation to be present.

Mr. Robert Rowell, of this city, has recently furnished seven new outfits for offices in this state. One of them was for Mr. W. G. Overstreet, formerly of Horse Cave, who will open a newspaper and job office in Springfield, Kentucky. The paper is to be a seven column folio and named the *Springfield News*. Another outfit was sold to Messrs. E. J. Smith & Co., of Henderson, Kentucky. Mr. Smith will make a specialty of modern artistic type work, and has already turned out several specimens that compare

very favorably with the best eastern houses. Mr. Frank P. Bush has made several trips through the state for Mr. Rowell, and his success, as shown above, has determined him upon repeating the dose quite often.

The *Medical Herald, Progress and Knight of Honor*, publications owned by the Rogers & Tuley Company, were bought by Mr. W. B. Rogers, who will continue their publication.

The *Evening Tribune* is the cognomen of a new republican afternoon daily which will shortly be launched upon this community. The promoters of the enterprise are a number of gentlemen who were fortunate enough to catch President Harrison's attention long enough to capture several lucrative government offices.

Mr. William E. Riley, formerly president of the Riley Printing Company, has been appointed deputy collector of internal revenue of this district.

Mr. Henry Pickrell, of the Fleming county *Gazette*, which is published at Flemingsburg, died of consumption June 6.

Captain A. J. May, who was for many years largely interested in paper mills in Detroit and elsewhere, has gone on the road for Moore & Stark, taking the extreme southern territory.

Mr. J. Ed. Reese, foreman of the news pressroom of the *Courier-Journal*, leaves next week for New York, where he will spend several weeks getting pointers on the mammoth press that R. Hoe & Co. are constructing for his company. He will also visit Philadelphia and Washington. The press will be ready for delivery in about four weeks.

The M. I. Sowle Manufacturing Company is the name of a new firm started here recently. It is composed of Messrs. M. I. Sowle, George H. Specht and Henry Klosse. They purchased the bindery belonging to the Louisville Lithographing Company, and have in addition several new and improved tag machines.

Mr. Mark Harding, pressman on the *Commercial and Evening Post*, visited the St. Louis newspaper pressrooms last week upon a tour of inspection. It is probable that a new fast press or two will be among the early requirements of his place.

Mr. Henry C. Gathof, foreman of the *Courier-Journal* job pressroom is taking a well-earned recreation this week.

Mr. Samuel B. Rubel, of the Calumet Paper Company, who has been here at his old home celebrating the national holiday, returned to Chicago yesterday.

Mr. Frank G. Koken, foreman of Little & Becker's pressroom, of St. Louis, of whom I made mention several months since as being ill, died Saturday, June 8, at 4 A. M., of heart disease coupled with dropsy. He was thirty-six years old, and leaves a wife and three children to mourn his loss. The funeral took place Sunday, June 9, and was attended by St. Louis Pressmen's Union, No. 6, in a body, as well as a large delegation from Standard Lodge, No. 80, A. O. U. W. The latter organization pays to his widow the sum of \$2,000. Mr. Koken was a charter member of No. 6, and was regarded as one of its staunchest members. He ably represented it at the Buffalo session of the International Typographical Union of 1887, where he was elected a delegate to the Federation of Labor, which met at Baltimore the same year. A warm friend, an honest man, he was loved and respected by all who knew him. At a meeting of St. Louis Pressmen's Union, No. 6, held Tuesday, June 11, 1889, the following resolutions were adopted :

WHEREAS, An all-wise Providence has removed from among us Frank G. Koken, a member of our union, and

WHEREAS, During the period of his sojourn in our midst, he has proved himself a worthy and honorable member, and by his genial disposition, straightforward manner and general manly attributes has endeared himself not only to the members of this union, but to all who knew him; therefore be it

Resolved, That in the death of Frank G. Koken we have suffered a loss for which we deeply grieve; and

Resolved, That we extend our sincere and heartfelt sympathy to the widow and relatives of the deceased in this the hour of their deep affliction; and further

Resolved, That a copy of this preamble and resolutions be sent to his widow and spread upon the records of this union.

C. F. T.

FROM PHILADELPHIA.

To the Editor :

PHILADELPHIA, July 4, 1889.

All who can are escaping to seashore, lakeside, mountain or across the water to see, hear and learn something different from the incessant humdrum of office and city, and club and home life. The mighty editors, who write columned nothingness about dreary things, with an air of wisdom, are preparing to leave to their lieutenants the responsibility of keeping the public intelligently informed on all leading topics. Who cares to read more than the headlines of daily papers, anyhow, and as for editorials, we Americans are getting every year to more and more do our own thinking.

There is less than ever to fire the soul with in journalistic circles. The printers are in solid phalanx, typographically speaking. They will not strike next year, when all the world of labor is expected to strike for eight hours. They will pursue their old-time conservative course and stick to their cases and be galley slaves. The printers, or, rather, our Philadelphia printers, are a conservative set. They have studied the labor question from many standpoints, and are slow to get at "outs" with employers who they feel and know in their own hearts mean to do as near right as they know how. As things stand now, employers find it necessary to do about right. There is not that constant rush of half-made printers from country offices that there used to be. One sees and meets with the same old squads of "subs," the same old faces who have been climbing the same stairs for ten, twenty, thirty years. The types almost know them, and mutely look up from their dusky boxes and say "Hello, John." The old cases seem like second cousins, and the friendly window that lets in the summer breeze, when there is any, and keeps out the winter cold, is a kindly friend that enables the toiler at the types to snatch a look at the outside world.

Here in Philadelphia we toil with a steadiness that at times becomes more than monotonous, and were it not for the friendly subs, that are always down stairs or around the corner, we would go somewhat like the venerable deacon's "one hoss shay." Sometimes work there is in abundance; wages are what we have made them; the hours and rules suit us, and we have no complaint. We have no real desire to exchange places with the boys "down stairs," for their's is, after all, no easy life.

How reporters do change, and for that matter editors, too. Some of our staffs have made the circle of all the offices. The experience is good—necessary, in fact. Just as in olden times it was good for the young artisans to journey to distant places for work, and thus become journeymen.

A dozen of our editors, big and little, are now frightening Paris cabmen with their efforts to tell them in French where they want to go. Supplee, of *Mechanics*, is with the engineers. McLaughlin, of the *Times*, is there. Davis, of the *Call*, haunts Haddon Hall at Atlantic and tells the small boy next him how he won a pig, at eleven years of age, on a wager that he was too proud to carry it home. Singerly, of the *Record*, allows President Harrison to have his yacht once in awhile. McClure, of the *Times*, has been trying to reduce the terrible swelling of our mayor's head, but it is a big contract. McKean, of the *Ledger*, sees that the Jersey mosquitoes are kept at a safe distance from President Harrison, when he comes to Cape May. The new *Inquirer* is publishing a series of slums articles which one of its reporters learned to write by practicing rag picking with some of its experts. The evening papers are publishing the next morning's news with commendable enterprise, and indulge in the usual long-winded articles that say much or nothing, according as you look at it.

The publishers of trade journals and of subscription books are keeping the paper mills going. All of our trade journals, except a half-dozen, are doing well; but they would do better if some newspaper Napoleon could gather them all under one brilliant, able management. Advertising is good, and manufacturers are liberal enough.

The pressrooms are all busy for this season. The big publishers have their hands full with "long run" work, and that

pays; catalogue work is plenty. Medical publications, theological works, technical works, mechanical treatises are coming out with a regularity and rapidity which causes one to wonder where the people are who will read them.

The typefounders here are doing a first-class business and are keeping pace with their enterprising brothers in eastern and western cities. Their immense works on Sansom street above Sixth are busy, and the managers are very hopeful of a big fall and winter trade.

The trade school idea is young. Philadelphia has two good schools already, and will have a third on a grand scale as soon as the trustees of the Williamson estate can expend judiciously the millions intrusted to their care. It is intended to educate two thousand boys at a time.

There is considerable destitution among thousands of our wage workers. Seven thousand miners on the Alleghany Mountains are now idle rather than work for 90 cents a day.

The State Editorial Association has just had their annual jaunt, and the city editors have also taken theirs. These are given at the expense of the railroad companies and are intended to keep the editors in good humor with the railroads.

The Press Company, limited, has purchased a site for a new building on Chestnut street, near Tenth. The plans for the new building have not been completed, but it is understood it will be a grand affair. The old rookery the paper is now in is a hard place, but old Colonel Forney made the *Press* what it was there. It pays well. Its owner, Calvin Wells, of Pittsburgh, would not object to being Cameron's successor in the United States Senate, and he would be a good senator. But there are a dozen after the place.

We do not hear of any more daily newspaper projects. The last fiasco cost the promoters \$20,000 in a few weeks.

Publishing companies to the number of thirteen have been organized in this state this year, and several more organizations are being arranged. This spirit of combination is natural and right. We have here a dozen or more strong companies acting under limited responsibility, but none like you have in Chicago. New York is too near us for grand printing and publishing concerns. The Lippincotts, since the death of the founder of that house, have gone on only expanding in the same lines. They have taken no great departure, have not inaugurated any new policy. The Leonard Scott Publishing House are known as the publishers of foreign magazines. The Royal Publishing Company and the National are doing excellent work. The hundreds of smaller concerns have been busy all the season, and very few expect to be idle. In fact, business is good.

The paper makers ought to know. Never before was as much paper-making machinery made and making. Our mills are crowded with orders for machinery, and they say that paper is once more on the down grade. Very little paper chemicals are arriving from abroad, but jute butts are coming in fast—over 150,000 in two weeks.

The paper-making industry is growing enormously. Mill after mill is being projected. The West is surpassing the East, but our eastern machinery makers are capturing business out of this activity.

The map publishers and the publishers of school books are having a good run of work, and the makers of schoolroom paraphernalia have about all they can do. The ink manufacturers are reporting an excellent business, but prices are out of sight under desperate competition.

Two or three alleged distinguished foreigners are here, trying to make sure that the copyright law will go through all right. Our publishers' association is in active shape and will take up the right end of the copyright cudgel when the fight opens again, if it should be a fight.

The wood engravers and process men are all working full time, and there appears to be no diminution in work. Business men are greatly pleased with the signs of the times. The last panic is well-nigh forgotten. No new one is threatening. But the distant rumbling of discontent among the great silent army of producers

is ominous. The busy dollar grabbers do not hear it. There are thousands who do. We have not yet achieved perfect development. There are revolutions and upsettings ahead of us. The magazine writers, or some of them, seem to have caught the right clue. M.

FROM BALTIMORE.

To the Editor:

BALTIMORE, July 3, 1889.

The early part of September next will be big with events in this city. Beginning on the 9th and winding up on the 14th, we are to have, in glorious succession, parades innumerable, grand choruses, concerts by massed bands, realistic battle scenes, races, banquets and, to crown the whole, the dedication of the city's new postoffice in the presence of President Harrison and his cabinet. Judging from the preparations being made, Baltimore is to have a gala week on this occasion which will surpass anything of the kind attempted heretofore in this old, conservative town of monuments.

On the morning of the fourth day, September 12, the labor organizations will parade; while a sham battle, illustrating the fight at North Point, in 1814, between the invading Britishers and the defenders of the city, will come off. The arrangements for this affair are under the direction of Brigadier-General Clinton P. Paine. He will have the assistance of Col. E. H. Wardell, who has managed many similar affairs at Chicago, Yorktown and many other places.

While this great display must necessarily give employment to a large number of mechanics and laborers, the printing press will receive no slight impetus in the way of filling orders for programmes, business cards, posters, lithographs, dodgers, etc.

Mr. Eugene Schley, for some years past a compositor on the Baltimore *Sun*, and at one time assistant foreman, died in this city last week of consumption. Mr. Schley was 53 years old, and a native of Frederick, Maryland. Some years ago the deceased was employed as assistant foreman on the *Congressional Globe*. A wife and son survive him. Baltimore Typographical Union was represented at Mr. Schley's funeral by the presence of Messrs. James W. Rodgers, E. T. Sheil, James W. McDowell and John R. Hackney.

In a previous correspondence mention was made of the fact that a "business" committee with a grievance, composed of members of Baltimore Typographical Union, had waited upon Mr. James Young, publisher and proprietor of the weekly *Telegram*. The grievance was that Mr. Young, while willing to have his establishment known as a union printing office, ignored one of the requirements of the union by the use of stereotype plate matter. He informed the committee that he desired to continue the plate inset in his paper, but did not propose to reduce his force nor run a single "ad" in the plate supplement.

The union, however, decided that Mr. Young could not use plates in his paper, in any shape or form, and continue his office in the union. The publisher of the *Telegram* thereupon discontinued the use of plates, and all was well for a time. Had he continued to refrain from using plate matter up to the present time there would be no occasion to state here that Mr. Young's printers are out on a strike, and that compositors without union credentials now occupy cases in the office of the *Telegram*.

The whole force, including apprentices and book and jobroom men, went out when it was announced that on the following week plate matter would be used in the paper. Mr. James Stites, for many years, and until recently, treasurer of Baltimore Typographical Union, and for nearly a half century in the employ of James Young, Sr. (now deceased), cast his fortune with the strikers. The union is paying \$8 weekly to the men who went out. Mr. William Server, who was foreman on the *Telegram*, and who received \$20 a week for his services, is now subbing on the *Sun*. In connection with this disagreement between Mr. Young and the union it is but fair to present that gentleman's view of the matter.

He stated to your correspondent that he could not see how the union could fairly object to his using plate matter in an *inset* to his paper when he paid, and had always paid, union rates for composition, employing only union men; and then, he said, came the fact that his compositors never so much as see the plates, the form comprising the objectionable composition being locked up in the pressroom, where the inset was worked off and pasted in the paper proper.

The truth might as well be told as to a matter, and it is simply this: With but one exception as to our daily papers, the publishers thereof, it may with safety be said, submit with rather poor grace to the interdiction of stereotype plate matter by Baltimore Typographical Union. The journals referred to issue twelve-page Sunday sheets, and use therein syndicate matter to quite a large extent. For the composition of this matter the publishers of these papers pay home compositors at the rate of 45 cents per 1,000 ems, when the same stuff might be locked up in the forms at not much more than half that sum per column, if the same matter were purchased in plates.

That is just how some newspaper publishers look at the thing. Knowing this, union printers on the dailies don't want to see a weekly paper made into a wedge, by means of which an opening for plates, might be started in the make-up of the big every day in the week journals. Thus it can be readily seen why the union would not entertain Mr. Young's seemingly fair proposition.

The newspaper press for the most part has been quite liberal in contributing to the aid of the Johnstown sufferers. The *Sun* and the *American* gave to the cause \$500 each.

The linotype, it would appear, has come to stay, while it has not been set up in Baltimore, yet it would seem to have the indorsement, as to its practicability, at least, of so conservative a journal as the *Sun*. In a recent editorial, under the caption, "The Linotype," that paper, basing its remarks upon a statement made by the New York *Tribune*, where forty-two linotypes are in use, had this to say: "The cost, however, of these machines, of the horse-power to operate them, of the gas to melt the type metal, repairs, attendance of a machinist, etc., will be likely, it appears, to restrict its use, for a time at least, to the large establishments in large cities. The typesetter's trade must be affected more or less by the introduction of composing machines that will dispense with type and typesetter, but he will doubtless find room for his activity in many fields where the use of the linotype will be impracticable."

No less than two new weekly papers have been started in this city within the past few days. One of these is called the *Prohibition Advocate*; the other, the *Avalanche*. The mission of the former is set forth in its title. The *Avalanche*, while opposing drunkenness, will champion "high license." Legitimate enterprise is commendable, and it is to be hoped that both of these ventures in the newspaper field will be sustained by the people who profess to have at heart the success of a cause which has for its object a modification in, or the suppression of, the traffic in rum. But the ephemeral existence of the temperance papers that have come and gone in this latitude within the memory of the oldest inhabitant would not seem to argue well for the permanency of the new comers. Yet the *Avalanche*, it seems, is not altogether a spring chicken, as it has been published for the last five years at Atlanta, Georgia, having only removed to this city in search of pastures new, to say nothing of a presumable quest of fields more green.

No. 12's delegates to the Denver convention and the "other fellows" of the stick and rule who accompanied the former returned home much pleased with their trip. One of the delegates, Mr. Hitchcock, of the *Sun*, debouched in the home run, journeying northward as far as Canada, visiting Niagara Falls.

Business in the book and job trade is fair. While some establishments are full of orders, others complain of slackness. Considering the season, however, it may be said that printing in Baltimore is at present doing quite well. FIDELITIES.

PLAYMATE.

Half-tone Reproduction from Photograph by A. ZEFSE & Co., Chicago, Ill.

SUMMER'S STAGNATED SITUATION.

To the Editor :

NEW YORK, July 5, 1889.

The advent of the second summer month shows the printing industry and kindred interests to be in a languishing condition, but not so greatly demoralized and crippled as has been reported. The leading job printers and book publishers have some unfinished contracts on hand, and these, together with the ordinary run of orders that are usually filled during the heated term, will keep the establishments moderately active until the opening of the fall season, when an extraordinary influx of business is expected. The houses that are fortunate enough to capture the printing of the summer resorts near by the city are running full tilt, and will continue to do so until about August 1. The manifest quietness pervading the typographical and publishing interests also affects considerably the paper and stationery trades, and no change for the better is looked for until an activity is displayed among printers and publishers.

While the movement to organize an International Pressmen's Union is still being urged forward by its promoters, nothing really definite or positive has been decided upon as to the time and date of the proposed convention. In fact, it is hinted that no conference will transpire until after the summer has ended. On the other hand, it is said that the movement has received so much encouragement that an informal meeting of the projectors will certainly be held during the present month or not later than about the middle of August.

The New York Typothetæ will send a large representation to the annual meeting of the United Typothetæ of America, which meets in St. Louis, October 3. In conjunction with the Boston and Philadelphia associations, the New York society will charter a special car, and many of the members will be accompanied by their wives and daughters. The local committee at St. Louis are perfecting arrangements to entertain the representatives, and a pleasant time is anticipated. The New York delegates are as subjoined: Theodore L. DeVinne, Douglas Taylor, William Charles Rodgers, Francis E. Fitch, Joseph J. Little, John Polhemus, R. Harmer Smith, James O. Rogers, Martin B. Brown, Frank D. Harmon, Edward Taylor, John Thorne Harper, Edward D. Appleton. Alternates: J. C. Rankin, Jr., J. W. Pratt, Henry Bessey, E. Parke Coby, Peter DeBaum, Thomas R. Hopkins, Homer Lee, M. M. Gillis, W. C. Martin, W. E. Hallenbeck, Samuel D. Styles, J. Bishop Putnam, Joseph B. Stilwell.

The stock in trade, presses, type and other fixtures of the office of the *Brooklyn Zeitung*, the German democratic paper, published in the eastern district of Brooklyn, has been sold under the hammer. The sale was the outcome of a foreclosure of a mortgage, held by J. G. Wischert, for \$17,000 on the entire plant. The paper has been in existence for nearly three years. Dr. W. E. Jacobson, its chief editor, resigned a few months ago and went west. There was very little bidding at the sale, and Mr. Wischert bought in the property.

The employés of Harper Brothers, composed of compositors, pressmen, bookbinders, engravers and machinists, had a gala time at the Harlem River Park and Casino, on Saturday, June 22. The occasion was the annual reception and games of the employés of the popular publishing house. The employés of the firm and their friends were out in full force, and the large park and Casino were filled to overflowing. The festivities began at three o'clock P.M., with a band concert. Popular selections from familiar operas were performed to the delight of those present. The athletic games were the next feature of the day's programme. Four events were contested. The track was laid in the rear of the Casino, and was ten laps to the mile. The first event, a quarter of a mile run, brought out four contestants. It resulted in a victory for J. W. Hallett, with R. Clark second. The time was 1 minute, 4 4-5 seconds. The next event, putting the sixteen-pound shot, was won by J. McCarthy, who threw the big shot 29 feet ½ inch; J. Austin was second, with 27 feet 11 inches to his credit. The 250-yard run for boys under sixteen years of age brought three of the youngsters to the scratch. Charles Carroll

won, with W. W. Watson second. Time, 49 seconds. Handsome prizes were awarded the winners of the games. William A. Harper acted as referee of the athletic games. The officers of the festival associations were as annexed: President, L. G. Donegan; vice-president, J. F. Coffee; secretary, F. Miller; treasurer, C. Michel; captain, J. Sheridan; sergeant-at-arms, R. Zimmer.

Anyone accustomed to much reading must be familiar with the paleness of the ink used in English books during the latter part of the last century and the beginning of the present, writes a contributor to *Notes and Queries*. I had always attributed the fact to want of good material; but, from a passage in Franklin's letters, it appears that the paleness was intentionally produced. Franklin (himself a working printer), writing to Noah Webster in 1789, speaks of a "fancy that gray printing is more beautiful than black; hence, the English new books are printed in so dim a character as to be read with difficulty by old eyes."

Typographia No. 7 subscribed \$10 toward the fund for the relief of the Westphalia miners.

Trouble is said to be brewing between the typographical union and the foreman of the *Daily Courier*, at Camden, New Jersey. The foreman is a boy, and the printers object to his methods, which show great inexperience and incompetency. Under these circumstances it is no wonder that men who know their business object to be under the supervision of a boy who does not.

The Bureau of Engraving and Printing, at Washington, D. C., into which Captain W. M. Meredith, of Chicago, stepped July 1, is one of the most important executive offices in the government, and is entirely outside of civil service rules. Mr. E. O. Graves, the retiring superintendent, who will enter into the banking business on his own account, is a New Yorker, and was promoted by President Cleveland to the superintendency, from that of assistant treasurer, solely because of his efficiency. Mr. Graves was not conspicuous as a politician. He was generally classed as a mugwump. His administration of the bureau has been as creditable as that of Mr. Benedict, Mr. Cleveland's other New York appointment, in the office of public printer. Business methods have governed the administration of both offices. The Chief of the Bureau of Engraving and Printing has almost as many subordinates as the public printer. His own salary is \$4,500. The pay of his superintendent of engraving has been for many years \$500 a year more than his own. Some of his workmen get \$8.50 or more a day. He has about fifteen hundred employés. All accounts concur in crediting Mr. Meredith with efficiency as a practical printer and organizer.

A comparatively new and extremely odd institution is the Fellowship Club. Its membership includes almost every sort of reputable journalist, from the young reporter, whose name is as yet unknown, to the editor-in-chief who figures on all important public occasions. Richard Watson Gilder, of the *Century*, is president, and other officers include representatives of *Puck*, *Life* and the dailies. The walls of the club house in Twenty-eighth street are adorned with works by its artist members, many of the pictures being the originals of illustrations and cartoons that have appeared in the magazines and comic weeklies. A standing rule of the club is that no report shall be published of speeches made at the monthly dinners. Under this pledge reserve thaws out, and Chauncey M. Depew, Bishop Potter, Mr. Cleveland, Daniel Dougherty, Edward Eggleston and other well-known men have said at these dinners many things that they would scarcely have uttered at any ordinary public banquet. The Fellowship is practically an all-day and all-night club. It is seldom closed earlier than four A.M., and lodgers in the house begin breakfasting only four hours later. The board of governors recently passed a rule closing the club house at one A.M. on week days, and eleven P.M. on Sundays, but protests poured in so thick that the board at its next meeting rescinded the rule.

The German Press Club has held the annual meeting, at the club room, at No. 8 Centre street. The following officers were elected: Paul Loeser, president; C. De Grimm, vice-president; Julius Auspitz, recording secretary; Theodore F. Canoy, corresponding secretary; L. F. Thomas, treasurer; Adolph Resler,

financial secretary, and Felix Fricet, Gustave Guihen and Victor Duorschack, auditors.

The members of New York Pressmen's Union No. 9 are fighting the movement to put the organization within the jurisdiction of either the Central Labor Union or Central Labor Federation. At a recent meeting, held to consider the scheme to consolidate the interests of the several bodies, Delegate McIntyre, of Pressmen's Union No. 9, spoke in opposition. He said he did not propose to bow to socialists and anarchists. If advances toward harmony were to be made, they must come from the other side. If the socialists were admitted the first thing they would do would be to expel his union. A report was sent in by the miscellaneous section exposing the alleged hypocrisy of the New York *World*, which has been masquerading as a paper friendly to organized labor. The report contained the grievance of Pressmen's Union No. 9 against the New York *Tribune*. It appears that it has been employing non-union pressmen. The report was referred to the Arbitration Committee.

PRINTER-JOURNALIST.

FROM BOSTON.

To the Editor :

BOSTON, July 8, 1889.

Base ball is now the subject most talked about and thought of, and the "cranks" are numerous among printers. Every day or so the daily papers make mention of the fact that the compositors and pressmen of such and such an office have either played a game or are about to do so. As this is the height of the season, doubtless the public will be regaled with many more "scores," though to tell the truth most of the nines have secretiveness so well developed that the scores are not published. Several games have been played among the newspaper offices, and the book and job establishments are not behind. Recently a team composed of pressmen from the Wright & Potter Printing Co. played a nine from the composing room of the same concern, defeating them handily. The latter, not satisfied with such an outcome, challenged the pressmen for another game, and they got it—that is, got the chance to get beaten again. A nine from the counting room of Golding & Co. was also warmed up recently in a five-inning contest with the Boston Typefoundry nine. But as THE INLAND PRINTER is not a sporting magazine, perhaps this is enough on this subject.

Between twelve and one o'clock on the morning of July 6, fire was discovered in the building of the Lawson Manufacturing Company, Hawley street, Roxbury, which had gained such headway as to be beyond the control of the watchman, who promptly gave the alarm. Though the fire apparatus responded promptly, the building was completely gutted, entailing a damage of about \$8,000 on it and about \$15,000 on stock and material. The building was the property of Mr. Thomas W. Lawson, late president of the defunct Rand-Avery Company, and was used by him in which to manufacture the Lawson Sale Slips.

Mr. N. J. Werner, of the specimen department of the Central Typefoundry, was in town recently on a short visit.

Mr. Charles L. Sparks, of whom I made mention in my last letter, met with a very serious accident some three weeks since. He had boarded a horse car on his way home after his day's work, when a team collided with the car. Mr. Sparks was just in the act of taking his seat as the pole of the wagon penetrated the side of the car, striking him in the groin and wedging him against the end of the car. He was liberated as quickly as possible and conveyed to his home in an ambulance. He expects to be able to resume work this week. It was a very narrow escape, and Mr. Sparks feels fortunate in getting off as well as he did, for had the pole struck him in the abdomen he would surely have "gone where the woodbine twineth."

A few months since, I wrote you that Mr. Edward P. Fisher had started for the Bermudas, in the hope that the change of climate would benefit his health, strong symptoms of a pulmonary complaint having appeared. The good results looked for did not come, and he returned only to pass away May 29. The announcement of his death causes regret to a large portion of the printing

fraternity of New England, with whom he had been connected by his service with the Boston Typefoundry, in charge of the sales-room for the past twenty years. It is pleasant to know that his last days were made easy as possible by the thoughtfulness and attention of his employers, who did all possible to this end while life lasted. The funeral services were held June 1, and among the floral tributes was a beautiful wreath (composed entirely of roses) cut in two by a sickle, the whole forming a piece three feet high, the gift of his former associates.

F. H. Gilson is about to place an electric motor in his establishment, the contract having been given to the Thomson-Houston Electric Company. The motor is now being built, and is expected to be in place in the course of two weeks.

George H. Morrell & Co., Boston, New York and Chicago (I believe that is all at present), have recently issued a small sample book of their stock inks and tints. It is a nice piece of presswork from the office of T. O. Metcalf & Co. The design is an excellent one, showing the effect on solid ground as well as several shades of ruled tint blocks. It is intended only as an advance sheet, and to fill a gap until their new and complete book is issued.

Mr. J. A. Thayer, of the Boston Typefoundry, spends considerable of his time on the road for that house, and is meeting with his usual success. He recently placed 2,000 pounds of copper alloy in an office in the western part of this state.

George H. Pratt & Co., of Fort Hill Square, have recently changed their firm name to the Fort Hill Printing & Embossing Company—a rather long name, but self-explanatory. Their specialty is fine embossed work and calendars. In connection with the change of name a new partner has been taken in, and an increased business is looked for. This concern has recently added two new job presses.

S.

FROM NEBRASKA.

To the Editor :

OMAHA, July 3, 1889.

Matters in printing circles are moving along rather slowly these hot days. While none of the book and job offices are pushed with work, there is enough to keep the regular forces employed, and in one or two places a few extra men may be found at work. With the newspapers it is different, and these are festive days for the "poor sub" who is looking for work. The only trouble is there are too many in town, about three for every "regular," and there seems to be no let up in the number coming in.

The event of the past month has been the opening of the new *Bee* building, but as it is spoken of at length in another column, we will not mention it here.

The copperplate invitations, very large and handsome, the superb souvenirs, two beveled-edge cards mounted pyramid fashion on a broad satin ribbon with fringed ends, the cards engraved with a view of the old building on one side, the new structure on the other, were the work of Chase & Eddy, of this city. The bill for the entire job must have run close on \$1,000.

THE INLAND PRINTER is fast coming to the front in Omaha, 150 copies being disposed of last month. This is the largest number ever sold here, but I hope ere long to increase this to 200. THE INLAND PRINTER is well liked among the trade in general, and now that the International Typographical Union has indorsed it as the technical trade journal of the craft, I am satisfied its subscription list will soon reach this number.

The *Western Horseman*, a weekly journal devoted to the interest of the horse, which was launched on the Omaha public a few months ago, was not a success financially and suspended publication about two weeks ago.

Cadet Taylor has commenced the publication of a monthly journal which made its first appearance last week. The *Omaha Financial Journal* is the title, and our impression is that it will be a success, as it fills a vacancy long felt in this city.

Ackermann Bros. & Heintze, bookbinders and printers, have removed to 1116 Howard street, where they occupy five floors and a basement. This firm has enjoyed extraordinary success since starting in business a year and a half ago, and can now be ranked

among the leading offices of the city. They will add two new cylinders and a folder to their pressroom, besides making many improvements in their composing room and bindery.

Mr. A. B. Dean, of New York City, has associated himself with the Western Printing Company, owners of the Herald jobrooms. While in their office, the other day, we were shown a new "Acme" self-clamping paper cutter that they had just purchased, and which worked like a charm.

The Carpentèr Paper Company have removed to 1120 Howard street, where they have pleasant quarters, near the Omaha and Great Western typefoundries. Newspaper men now coming to Omaha for material can purchase type, presses and paper without having to traverse more than half a block to secure them.

Mr. William McDiarmid, the foreman of the Omaha Daily Herald, started week before last for a trip across the ocean. He intends to be gone about three months, and will take in the Paris exposition before returning, besides many other places of interest.

Mr. Percy Pepoon, who has been employed at the Western Newspaper Union in this city for the past year or so, was notified one day last month to go to St. Louis, Missouri, and take charge of the Western Newspaper Union branch at that place. This is the way we like to see members of the craft honored, and we wish Mr. Pepoon success in his new field of labor.

We were honored, last month, by a pleasant call from the genial editor of this excellent journal, Mr. A. C. Cameron, as he was on his return home from the International convention at Denver. We were more than pleased to make his acquaintance, and during his short sojourn in the city we visited a number of the printing establishments, those honored being the Bee, World, Dispatch, Rees', Klopp & Bartlett, Chase & Eddy and the Omaha and Great Western typefoundries. The other offices were slighted only for the lack of time in making the rounds. W. M. K.

A PEN PICTURE OF INGALLS.

The friends of Senator Ingalls are greatly amused at an account of the first meeting between the great Kansas statesman and the editor of the Peabody (Kan.) Graphic, which the editor gives in a letter recently received at Washington. The letter is written in the editorial tone, not omitting the "we."

"The first time we ever saw Ingalls," says the editor, "he was doing western Kansas in a buggy in company with Lew Hanback, the congressman from the Sixth Kansas District, and they stepped into the little print-shop we were running out West at that time. He carried an umbrella over his head and wore gold-bowed spectacles that curled around and behind the back door of his ears. When we looked out through a little clean place in the window and saw him coming we told the office devil to spread an exchange paper over the ink, paste and tobacco stains on the desk, and carry out the old ashpan we were using as a spittoon, and then go out doors after his shoes, while we took down a copy of the Forum and buried ourselves in one of the senator's last articles. It is not every day that a great, high muck-a-muck United States senator, with lisle-thread socks and ten-dollar underclothes, goes calling on a little 10 by 12 western printing office. It is not every country editor who under such trying circumstances could have retained his usual equilibrium, and we would have been somewhat rattled ourselves if the senator had not adapted himself to our circumstances instead of forcing us to adapt ourselves to his. We were sure he intended to talk tariff to us, and fire great slices of wisdom and knowledge at us about the Samoan question, for instance, or the internal revenue, but he didn't. He sat himself down as comfortable as the three-legged chair would permit, put both feet upon our desk, and, producing something he had brought from the buggy, asked us if we had heard what the governor of North Carolina said to the governor of South Carolina. It is needless to say that our embarrassment disappeared immediately. Mr. Ingalls is not very pretty, his hair is very gray, and he is exceedingly thin and would make a good clothes prop or living illustration of the Dr. Tanner theory. His legs resemble a pair

of breech-loading single-barrel guns thrust into gun bags. It is a mystery to us how he manages to carry such a big head full of eighteen-karat brains around on such an emaciated set of underpinnings. However, he is one of the brightest stars that radiate in the galaxy of genius and ability, and, withal, a whole-souled, polished gentleman of the first water, and we repeat that some day he will be the president of these United States."—Exchange.

A CORRECTION.

In June issue of THE INLAND PRINTER in an article under the caption of "Which is Correct," we undertook to give the scheme adopted by various foundries in putting up job fonts. In so doing an error occurred in giving the system of James Conner's Sons. The following is a correct statement:

CAPITALS.

Table with 26 rows (A-Z) and 26 columns of numbers representing font counts for various foundries.

LOWER CASE.

Table with 26 rows (a-z) and 26 columns of numbers representing font counts for various foundries.

Marder, Luse & Co., Type Founders, Chicago.

SEMI GOTHIC.

AMERICAN SYSTEM OF INTERCHANGEABLE TYPE BODIES.

sold and **EVERYONE**
given entire satis-
faction.

SPECIAL FEATURES:

Steel Shaft and Steel Side Arms, Forged from Solid Bar, without Seam or Weld. The Most Positive and Practical Throw-Off yet Introduced. Best Material Used. Most Carefully Finished

Impression Throw-Off.
Hardened Tool-Steel Cam Rollers.
Depressible Grippers.

We have recently greatly improved these Presses, enlarging and strengthening the parts, and so arranging the disk and roller carriers as to give a greatly increased distribution and we believe it is unequalled in this respect by any press now made.

THE MOST DURABLE AND HENCE THE MOST ECONOMICAL PRESS FOR THE PRINTER.

WE CHALLENGE COMPARISON.

SIZES AND PRICES.

EIGHTH MEDIUM, 7 x 11, with Throw-Off and Depressible Grippers,	\$150.00	HALF MEDIUM, 14 1/2 x 22, with Throw-Off and Depressible Grippers,	\$450.00
" " 8 x 12, " " " "	165.00	STEAM FIXTURES,	15.00
QUARTO MEDIUM, 10 x 15, " " " "	250.00	CHANDLER & PRICE FOUNTAIN, for either size Press,	20.00
HALF MEDIUM, 14 x 20, " " " "	400.00	BUCKEYE FOUNTAIN,	10.00

The two Half Medium sizes have four Rollers. With each press there are three Chases, one Brayer, two sets of Roller Stocks, two Wrenches and one Roller Mold. No CHARGE FOR BOXING AND SHIPPING. ALL OUR GOODS GUARANTEED IN EVERY RESPECT. N. B.—None genuine without the name of Chandler & Price, Cleveland, Ohio, cast upon the rocker.

THE BUCKEYE FOUNTAIN.

Patented June 5th, 1888.

Do not confound this Fountain with others similar in appearance.

This Fountain will be found the easiest attached, easiest worked and most practical ink fountain in the market. Its roller is so adjusted as to supply ink uniformly on either a large or small job. Its size also makes it practical to use expensive ink without waste, only a small amount being required to fully supply the fountain. The bottom is so constructed as to permit all the ink to run down to the roller, there being no pocket or dead space.

By turning back the pawl from the ratchet wheel, the operation of the fountain is suspended without missing an impression. The fountain can be interchanged from one press to another without removing the attachments, so that by having two or more fountains the color can be changed without wasting the ink, which must occur if one fountain has to serve all colors. An examination of the cut will show without explanation the manner of attaching. It should be adjusted with *impression on*, so that the roller of the fountain will meet the upper form roller when at its highest point. The roller can be removed for cleaning by turning back the thumb screws until the caps can be removed through the slot in front, then by raising the roller it will come out through the same slot.

Do not confound this Fountain with others similar in appearance.

PRICE, \$10.00.

CHANDLER & PRICE FOUNTAIN.

To those whose special work requires greater capacity than can be obtained with the Buckeye, we offer the Chandler & Price Fountain, which is so made as to permit contact with the rollers the whole length, and will thus furnish a greater supply of ink than the Buckeye. Its construction and operation will be readily understood from the cut, which

shows it attached to a 14 x 20 Chandler & Price Press. It is without all extra and useless parts which complicate and add to the difficulty of using, and at the same time is complete with all the requisites of a first-class fountain.

PRICE, \$20.00.

CHANDLER & PRICE, East Prospect and C. & P. R. R. Crossing, CLEVELAND, OHIO.

In use in the Government Printing Offices of the United States, Germany, Austria, Russia, France, Spain, Turkey, Portugal, Mexico, Brazil, Cuba, Etc., Etc.

THE RECONSTRUCTED LIBERTY PRESS

Has the most perfect distribution ever obtained on a job press. It is the only job press whose form rollers can carry full size riders. The Liberty fountain is the best used on any job press, and can be regulated by the feeder while the machine is running. These features insure better ink distribution than can be had on any other jobber.

It is the *lightest running* job press made.

Its new patent *noiseless gripper* motion is worked by a cam positively, and not by springs, which are always breaking and wearing out.

The *throw-off* is simple, durable and exceedingly convenient, and does not weaken the impression, as is the case with most all the other throw-offs.

Any desired change can be made in a form without lifting it from the bed of the press. This makes the Liberty the best press for ticket, calendar and all similar job work where dates and figures have to be frequently changed.

The fly-wheel can be run in either direction, thus making it possible to locate and belt the press wherever convenience makes it most desirable.

We carry a full line of Liberty Presses and Liberty Paper Cutters in stock and can ship them from Chicago on the shortest notice.

TESTIMONIALS

JACKSONVILLE, ILL., April 26, 1889.
 THE UNION TYPE FOUNDRY, 337-339 Dearborn St., Chicago:
Gentlemen,—I have used Old Style Gordon presses for eighteen years, the Old Style "Liberty" for fifteen years, the Standard for ten years. Last month I purchased the New Noiseless "Liberty" and to say it is the *boss* of them all is putting it very mildly. It is, in my opinion, the least complicated, the easiest managed, the strongest, the fastest, and has the best distribution of any press I ever used.
 JOS. J. IRONMONGER.

MILWAUKEE, April 26, 1889.
 THE UNION TYPE FOUNDRY, 337-339 Dearborn St., Chicago:
Gentlemen,—I am well pleased with the "Liberty" job press you sold me; it is giving good satisfaction. I have no trouble now. I can print any cigar box cover, I care not how much pressure it requires. I had two so-called strong printing presses. In the month of November, 1888, I had to pay \$75.00 for repairing these so-called strong presses, but it appears to me that it would be almost impossible to break the "Liberty" cigar printing press.
 HENRY SCHWARTZBURG.

PORT HURON, April 26, 1889.
 THE UNION TYPE FOUNDRY, 337-339 Dearborn St., Chicago:
Gentlemen,—The "Liberty" press purchased of you some time since is in every way a perfect machine. It is easy running, almost noiseless, has perfect distribution, and the motion of the platen, peculiar to itself, enables one to attain a much higher rate of speed than on any other press I have ever used, and I have used nearly all the standard presses. In short, in my opinion, the "Liberty" as a money maker stands without a peer. Anyone contemplating the purchase of a platen press will certainly consult his own interest by giving it a trial.
 M. L. REDFIELD.

CHICAGO, April 25, 1889.
 THE UNION TYPE FOUNDRY, 337-339 Dearborn St., Chicago:
Gentlemen,—We have used one of your 10 x 15 "Liberty" presses for the past six months and it has given entire satisfaction. It is not only reserved for the finest cut work, but is used in preference to any other in our establishment for heavy forms and on work where a large quantity of ink, evenly distributed, is necessary to make a good job. In giving out presses some time ago, the oldest pressman, when given first choice, selected the "Liberty" in preference to any of the others, claiming that he could "make-ready" in quicker time, do better work, and get off more of it. We believe it unequalled and fully up to your recommendation.
 UNION JOB PRINTING CO.

KALAMAZOO, October 23, 1888.
 THE UNION TYPE FOUNDRY, 337-339 Dearborn St., Chicago:
Gentlemen,—We have used two of the "Liberty" presses for about seven years on all kinds of work (mostly fine), one an eighth-medium and the other a quarter-medium, and can cheerfully give them the preference over any platen press we ever used. We have used the Universal, Gordon (both old and new style), Peerless and Nonpareil, and consider the "Liberty" their *equal* in all respects, and *far superior* in many. Strongly built, simple in construction, easy running, very rapid, and with the convenience of "making-ready," correcting and planing forms on the press, it has no equal, and any printer purchasing this press will appreciate all these points. If they need a press for all classes of work, and one that will not cost half the receipts to keep it in repair, then the "Liberty" will meet the demand every time. Our presses have not cost us \$5.00 for repairs during the past seven years.
 PEASE & SON.

UNION TYPE FOUNDRY,

337 DEARBORN ST., CHICAGO.

Before the "war" is over, stock up with whatever you need. The present cutting cannot last much longer.

We intend to meet any honest competition, and therefore offer the following discounts, to take effect July 1, 1889, and continue until further notice:

- On Our Copper Amalgam Body Type, - - 25 per cent Discount.*
- On Our Copper Amalgam Job and Display, 30 per cent Discount.*
- On Brass Rule, - - - - - 30 per cent Discount.*

Our terms are CASH by the 10th of the month for all purchases of the preceding month. On goods of our own manufacture we will allow an extra 5 per cent for cash within ten days from date of invoice.

On all other type, supplies and material we will also allow the most liberal discounts possible, and on outfits and machinery we are always ready to give special terms.

For old type delivered to us we allow 7 cents a pound, and for other printers' metal 4 cents a pound. For old copper amalgam type we allow 9 cents per lb.

We believe we treat our customers as liberally as does any other founder, though we don't say so much about it. Actions speak louder than words. We have no interest in any printing office and never had. Our own work is given out to first-class printers.

Do not buy any type until you have sent for sample of our "Copper Amalgam" metal, which is the best and most durable made. If you want the most perfect and newest metal quoin, that won't slip or twist a form, write us for a descriptive circular of the "BROWER QUOIN."

THE ONLY PRACTICAL

Stereotype Outfit

IMPROVED AND MANUFACTURED BY

M. J. HUGHES,

18 SPRUCE ST. + + + NEW YORK.

One among Hundreds of Testimonials:

TO WHOM IT MAY CONCERN: This is to certify that we have one of Hughes' Stereotype Outfits, and the same has been in our office and in constant use for five years, and is giving and has always given entire satisfaction.

Yours truly,
Feb. 16, 1888. O. A. CARLETON & CO.,
Book, Job, Show and Commercial Work of every description.
Providence, R. I.

THE above testimonial is only one among hundreds elsewhere given. Like large numbers of others, both large and small concerns, it has used for years my quick and superior patented devices of casting and blocking, at one and the same operation, by the use of wooden cores, bars, strips and filling of a non-conducting nature. Also, with the same outfit, all other results known to stereotyping is secured by its simple and practical construction. It is an established fact that it is the only simple, practical Stereotype outfit for the printing office in general, and that if not used successfully it is certainly the fault of the operator.

It is a great mistake on the part of the purchaser to defer purchasing until the outfit is actually needed for some special purpose. "Procrastination is the thief of time."

It is undoubtedly the best thing, taking into consideration the small amount invested, ever put in a printing office.

Send for descriptive circulars and hundreds of indorsements.

M. J. HUGHES, INVENTOR AND MANUFACTURER, 18 Spruce St., New York.

PRINTERS' ROLLER ESTABLISHMENT**

IN AMERICA.

WE are now casting our Rollers in machines of our own invention (the original ones, patented September 26, 1876, and May 25, 1886—other patents applied for), and can guarantee results unattainable by other parties. We have over thirty such machines in daily use. Our "Star" Roller Composition is generally recognized as the standard, and once used, will not be abandoned. Samples sent anywhere on application.

Solely contributed to THE INLAND PRINTER.

THE WORLD OF TYPOGRAPHY AT THE EXPOSITION UNIVERSELLE-INTERNATIONAL, PARIS.

BY WALTER LODIA.

WHEN resident in Paris the past autumn, the writer made two round tours of inspection of the busy, well-advanced works now perfected in the universal fair of 1889, and calculated, like many others, that by the following May everything would be ready. Yet, returning to the French capital end last April, surprise was great at the backward state of affairs noticeable in almost every department: the buildings were all right, but different nations' exhibits were deplorably behind. American exhibits were like those of other countries on inauguration day—for the most part still buried in the huge cases in which sent over. Viewing the condition of affairs, an article for May issue of THE INLAND PRINTER was seen to be impracticable; but, to make up, this communication will be double the length of future letters—if, as is hoped, there will be space for all—although the matter is still compiled under one disadvantage, incompleteness of stands (some of which drag along wearily to consummation) and difficulty in getting details. What can be done with exhibits either always deserted, the "agent" never seen, or buried beneath canvas? Why the necessity for covering up goods at all, preventing correspondents wishing to note in the quiet and cool of early morning, undisturbed by the incessant tramp of ten-thousands, ocularly examining the objects placed, and reluctantly passing them over? It is the old, old story over again.

It is in the Palais des Machines, of vastness stupendous and marvels indescribable, that the printer-visitor will be always most interested, be he compositor or pressman. For the mighty edifice contains, amid its huge forest of whirling machinery, resounding till high midnight with the incessant roar of wonderful motion in a thousand or so forms, numerous printing presses, typographic outfits, the coming typesetting machines, material cognate to the trade, etc. Marinoni's grand installation will be of permanent attraction to the typo-sightseer, of which details in next epistle. For the present account, a limit will be placed at United States exhibits.

There is here an American model printing office, conducted by M. P. McCoy, of London, with assistance of O. J. Fender, Philadelphia. These firms are, by the material thus in use, fully and well represented: Golding & Co (Boston); MacKellar, Smiths & Jordan Company (Philadelphia), and, as a now important adjunct, by the use of which no more vexatious climatic difficulties with inks and rollers may be feared, the Electrine Manufacturing Company's specialty, inkoleum, a large quantity of which has arrived from St. Paul, and is piled in a stack ready for the inquisitive continental printer's gaze. It is likely to take well in Europe. The Massachusetts concern is represented by six of its widely praised jobbers and some small card presses, the improved Golding, with its automatic brayer and duplex distributor, drawing most attention. Framed specimens of the color work done on these machines will go far to show, by their exquisite fineness and beauty, the progress made by Americans in artistic letterpress printing during the ultimate decade. Then another important feature of the Messrs. Golding's good exhibit is their assortment of tools and appliances of the office, many of which have an ingenuity unknown in the Old World. Taking, for example, the Pennsylvania combination, one sees a truly elaborate display. After looking at those splendid samples of border work and ornaments, who will assert that Germans are matchless in such devices? On this, their last straw, the Vaterland founders have been squelched. America triumphs, as she generally does, over all competitors. The brand new faces of the gentlemen, MacKellar, Smiths & Jordan, so elegantly put up; their brass-rule work and corner-pieces, so nicely shown off to advantage; these are honor to craft and firm alike.

The only American cylinder presses are two exhibited by the Campbell Printing Press and Manufacturing Company, 160

William street, New York. Of these one, of course, is the hand cylinder country. But when the machines are finished and shown at work—which at present they are not—there may be opportunity for ampler notice, and no doubt they will then maintain their well-earned reputation.

Proximate is a case holding the printers' rollers of D. J. Reilly & Co., 324 and 326 Pearl street, New York. Ten, of various lengths and circumferences, are on view, made of the "Peerless" and "Acme" composition—substances excelled nowhere.

Just to the right of these notable *rouleaux de imprimeur* is the installation containing three of the Colt's Armory job printing presses, designed by John Thomson, 143 Nassau street, New York. As they were under canvas, however, at the time of my visit, I am unable to speak of the impression they will make when in operation.

No less than three typesetting machines are or will be soon at work in the absorbingly interesting palace of machines. They are the Thorne, working every day, and the British constructions, the Fraser and the Lagerman, the proprietary of which latter have not, so far, got beyond erecting a big stall, which is entirely vacant. The Macmillan was to have been on exhibition, and the Ilion firm sent a pair of machines to France for that purpose and to prove their French patents; but the distributor was so injured in transportation that they had to bring them back after proving working, and abandon their purpose to exhibit as they had arranged. It was also thought the Margenthaler people would exhibit, but nothing is seen of them. As to typewriters, one part of the United States industrial section bristles with the stands of makers showing their particular machines; but they have no place in these columns, and the mentioned department itself has no exhibit relative to printing. But to return to the subject of typesetting machines. It is the Thorne combined typesetter and distributor which attracts most attention, located, as it is, on the crowd-besieged stand of the wizard of Menlo Park, Edison. Externally the apparatus has a far better appearance than the Fraser machine; that alone is a decided recommendation in its favor. Now to see the Fraser machine, which is close to a second and unfurnished installation of the Thorne, placed there, like the other, by the London branch at 2 Cophthall Buildings, E. C. (Hugh Hamilton, managing director). Alexander Fraser, of the government printing office, in Edinburgh, of Neill & Co., claims for his machines (a setter and distributor are shown) all the good qualities advertised in others—that it will set 12,000 and more stamps (ems) per hour in a continuous line, and that "the only limit to the speed of the machines is the skill of the operator, as they will set or distribute as fast as the keys can be touched," meaning that hands as swift as the keys as a Barnes or McCann in type composing can whip into position up to 20,000 stamps an hour! Think of that, ye poor comps, and shiver! But the machine of Fraser strikes anybody as being complicated and ungainly, inventor's assertions to the contrary, notwithstanding, and that's a first prejudice against it. The illustrations of it, again, in circulars, are old and poor, and by an American would never be tolerated. If again issuing a circular, Mr. A. Fraser, put *men* in the place of women as operators. The cheap feminine dodge is worn thin. But let's now have done with typesetters and distributors. They may form the theme for comment in subsequent letters.

After writing that John A. Lowell & Co., 147 Franklin street, Boston, have a representative exhibit of printers' and engravers' specimens, among which are many marvelous and beautiful samples of high-class illustrations, the dining Palais des Machines is now left for the educational department of the United States (to which, by the way, the last-mentioned exhibit is soon to be removed). This is situated just above the section of musical instruments. Near the further corner is an old-fashioned stand constructed of pine and stained a deep chocolate color; this has been specially constructed for THE INLAND PRINTER, a number of copies of which are placed on file. A vacant space is waiting to be occupied with issues of more recent date, and a bound volume or two—better the complete series since first number. Why such, if sent, have

not turned up is a matter for conjecture; inquiry of the American commission is fruitless. When completed a photo of the exhibit will be mailed the editor. This is the leading trade journal in the printing industry in the world duly represented at the Grand Exposition Universelle-International of France, being the sole typographic journal of either the eastern or western hemisphere to have in the great show a regular and proper exhibit (one exception), which is P. S. M. Munro's *American Art Printer* (C. E. Bartholomew, printer, New York), the display of which, in loose numbers and handsomely bound volume is proximate.

Rand, McNally & Co. have remitted (via their New York house) an extremely large map of the United States, and ten big maps, showing the states in sections. The latter are suspended from a framework in curtain-fashion, and, although of such size, can be manipulated in the most facile way. This winding apparatus alone is worthy of being widely known in Europe. A good deal of board space is occupied by the Chicago combination's exhibit; the representatives are the Messieurs de Bernales, rue de la Bourse 3, Paris.

All that is exquisitely beautiful and supremely superb in fancy litho and color work is exhibited by L. Prang & Co., Boston. It is an exposition so artistic that it cannot justly be described by pen or voice, occupy what space or time one might. Only the eye can appreciate the extreme splendor of the Messrs. Prang's stand, the agent of which, Em. Terquem, has charge of the whole host of American book exhibits. Photogravure is effectively expounded by Sebbie & Husson, of Philadelphia, in a frame of processes. There is the negative, metallized mold, copper plate, ditto finished, duplicate plate, matrix, and so on unto the print. It is an entertaining study always, even to those not laymen.

Brilliantly illuminated in colors is the massive frame of bond stock and bank note specimens put forth by the New York Bank Note Company, of 1 Broadway (successors to the Kendall concern). It is doubtful if there is another such fine exhibit in the Universelle.

Now I must close for a time. Printers are active in their conversation concerning the approaching International Typographical Congress, to take place the coming July in Paris. The sessions will cover several days. Universal subjects will be the day's order.

WATER-MARKING PAPER CENTURIES AGO.

BY W. A. ENGARDE.

THE most primitive document or paper as yet unearthed with a mark is the account book of 1301, believed to be made out of linen rags by the Holbein family at Ravensburg. Except this particular specimen, all paper made by the Holbeins has the bull's head, doubtless taken from the coat-of-arms of that ancient family, whereas this account book is emblazoned with the globe and cross. The globe and jug are the most antique marks as yet found. These, together with the post-horn, which appeared about 1376, became by the close of the fourteenth century the principal delineations on paper produced in the low countries, whence they spread during the ensuing hundred years to Gonda and Delft.

Paper, as a rule, devoid of any peculiar or characteristic sign is the oldest, since the water-line exhibits a certain advance in the industry of paper making. Other conspicuous marks are a sprig with leaves and fruit or flowers; a drawn bow with an arrow; a perpendicular line with stars at each extremity between two circles; the letter R ensigned by a cross; two crescents through which a perpendicular line passes, terminating at each end; a cross, a bull's face, a demi-griffin, a pair of balances, the unicorn, an anchor, and P and Y, the initials being those of Philip of Burgundy and his wife, Isabella, whose name at the period would be usually spelled with a Y. The duke married Isabella in 1430, and previous to that date P is only found, but after that time, P and Y.

Caxton appears to have used paper mainly procured from the low countries, and, in addition to the bull's head and the P and Y, there will also be found the open hand worked on the paper on which the "Golden Legends" was printed in 1483, and also the

unicorn. Other paper employed by this famous printer came from Germany, since in his "Recueil of the History of Troy" (1468) there appears the bunch of grapes, which was a German mark. In the "Game of Chesse," the paper displays evidence of Italian origin, as there is the mark of an anchor inclosed by a circle. The dolphin and anchor was a particularly famous mark, and, after the bull's head, perhaps the best known, the reason for this being because the device was largely used by Aldo Marinzio, who has thus perpetuated to our time the primitive symbol of the city of Venice.

LAST VOLUME OF THE AMERICAN PRINTERS' SPECIMEN EXCHANGE.

Because of the inability of the conductor of the Specimen Exchange to complete the membership of the past volumes he was loth to attempt another volume, but has decided to issue as a *final volume*, "The Franklin Souvenir," not to be issued till the full number of contributions has been received, and then in extra binding and embellishments of a Franklin style. We hope our printers who have "wanted to, but dassn't," will now get ready and send the requisite number of copies of some neat job, if only to assist in the early and full completion of the work. As a matter of encouragement, the extra copies of Vol. III are offered at the binding fee to those who have not been offered a chance to examine the work, and others who desire "pointers" in the preparation of their contributions. Any desired information will be forwarded by Mr. Ed. H. McClure, Buffalo, New York.

PRINTING BY ELECTRICITY.

Those of our subscribers who read the article on "Electrical Power" which appeared in our issue of March 21, will doubtless be interested in the following account of the printing of the *Star of the East*, Ipswich, by electricity, at the offices of the *East Anglian Daily Times*, Carr street, Ipswich.

On Saturday evening the *Star of the East* was printed entirely by electricity, and, to make it the more remarkable, the electricity was generated, not from a steam engine, or by visible power of any kind, but from the silent storage cells at Messrs. Laurence, Paris & Scott's electrical works in Carr street.

At half-past three on Saturday afternoon the *Star* forms were placed on the Wharfedale machine, the engine standing idle, though the driver knowingly said he had got it ready in case the electricity did not work. It did work, however, without a hitch. It came along a cable about half an inch thick, laid from the electrical company's station in Carr street. At that station, as well as this office, all engines were stopped; all visible sign of power entirely absent. In a room fourteen feet square might be seen fifty glass boxes containing thin plates of gray and brown lead, immersed in weak sulphuric acid. The lead had been subjected to an electric current for some hours, until the brown plates had been oxidized and the gray plates deoxidized, i. e., reduced to metallic lead. This is called charging the batteries with electricity, and which had been done the previous evening. The batteries were connected by wires with the dynamo at the *East Anglian* office usually employed in lighting the building, but our dynamo on this occasion, instead of generating electricity, received it, and became a motor. The current from the batteries was turned on, and the motor at once began to revolve rapidly. A belt from it drove the printing machine just like a steam engine, but instead of an engine with a great fly-wheel, occupying a considerable space, the whole electric motor was not bigger than a barrel churn. Its driving pulley was only nine inches in diameter. There was no smoke and no noise, no need of a man to attend to it. Yet the power generated was ample, and directly the handle of the Wharfedale printing machine was turned, copies of the *Star* began to fly off with great rapidity. All the machines in the room, two printing and two folding, were for a trial run simultaneously by electricity, and went at a rattling pace. It was curious and instructive to change from this noisy scene to the small storage room at Messrs. Laurence, Paris & Scott's central station,

where the silent batteries, the real source of power, did their invisible work. Not a sign of activity was evident. It might have been a house of the dead, but all the noise and bustle a hundred yards away were due to the energy transmitted from this little room. There seemed to be a moral lesson about the experiment, that the noisiest agents are not always the most potent.

There is a curious feature about electric motors, namely, that they are naturally self-governing. When a machine is suddenly taken off, the motor does not run away, but continues at the same even, regular rate. In London, and all places where room is valuable, electrical motors would possess many advantages. The whole apparatus can be contained in a closet, dispensing with engine, boiler and shaft. Then, again, no time is lost in getting up steam, but an immediate start can be made; and directly the work is done, a knob is turned, and the current from the central station cut off. For intermittent work, electric motors should, therefore, be admirable and economical. — *British and Colonial Printer and Stationer, April 4.*

ARTISTIC TITLE PAGES.

If one take up any lately published book, that is, a medium priced book, and study the title page, it will in nine cases out of ten be printed well. The title will stand out prominently and is read easily; but upon examining the arrangement of the title it will appear that there are sprawling lines reaching from one end of the page to the other, and that there is no dainty arrangement with regard to the mass of design or color; no special design to the page itself as appropriate to the book, but merely a rearrangement of familiar types, according to the wording of the legend. Substantially there appears to be no design or thought expended upon what should be the most beautiful part of the book.

Comparing the old printed books from 1450 to 1650 with modern works, that is, those of the nineteenth century, a change may be suggested, which, if not an improvement, certainly is a novelty. Every book lover is more or less familiar with old title pages, and very many of our modern printers have said and thought that the modern books are superior, not considering that the earlier printers had to cast their own type and make all their materials, whereas modern inventiveness and ingenuity supply these in a perfected form. It is indisputable, however, that the old printers gave far more attention to the design and arrangement of the page, studying its special requirements and understanding it in all its parts; mixing the red and black sparingly, introducing black never in too great quantities, always in the right place. In a reproduction of an old book dated 1497 the title is at the middle of the top, taking up half the page, and is composed of strong and beautifully drawn letters. Immediately below is an oblong with a wood cut of a vessel, with strong decorative lines, the mast reaching up the middle of the page and dividing the lettering at the top in two. Below the device of the vessel, and very close to it, is another line of strong lettering the size of that at the top. Then follow seven lines of type about one-quarter the size of the upper part, making the whole mass as nearly a square as possible, with the date and two short lines as accents at the foot. This certainly is not like the modern title page, and, whether it may be understood from the description or not, it certainly is more beautiful.

Another one is quite simple. It consists of alternating lines of black and red, the top line being the largest size letters and in red, and each line growing smaller and shorter until it reaches to the center of the page, where there is a well drawn device of a woman standing. Below this the arrangement of the top is repeated until two very strong lines of letters in red and one smaller one in black complete the page. There is nothing of this character done now, because the old printers knew better or studied more the meaning of the distribution of color, of composition, balancing black with white, and the value of white. They made the white space as effective as a black space by blocking in at the right place a mass of color and leaving a white space to give effect to the dark. Then, above all things, they understood

the use and meaning of margins. They never had letters which when the book was trimmed necessitated a part of the title page being cut off, as occurs not infrequently in some of our cheap modern books. They never spread out the title to such an extent that it covered the entire title page, for the more white space that is shown the better is the general effect, and black letters are more prominent by contrast with liberal white margins. If a page is printed that has been very carefully designed upon the principles of these old titles, that is, if the spaces and masses of color have been tried in various ways and sizes, it will surely involve an improvement upon the methods now in use, for nearly all our modern title pages are alike and very badly arranged. — *Louis J. Rhoad, in Art Age.*

THE ART OF RULING.

In the attainment of every art there is of necessity a certain routine of teaching that must precede its accomplishment. This, therefore, is equally true in ruling as in other cases, but too often proves a thankless task to those who may undertake its tuition. This assertion is based upon experience, and originates partly from having no system of apprenticeship upon which any dependence can be placed for remunerative results to many who have labored to instill its principles to a successful issue upon the youthful mind.

Ruling of the present day is not as easily accomplished as in former years. There is more complication in it now, more variety of tints, and more style. It requires more care, more patience, and more native skill, and in teaching it to the inexperienced it is not a very to be envied undertaking. Young people become impatient when all of the major or minor points of ruling are insisted upon, and yet it is for their benefit, in view of becoming efficient workmen. They do not see far enough ahead to place any value upon skill, but prefer to rely upon their own notions, and thus lose time in its perfect accomplishment; but the main object in dilating upon this subject is to give a few points of value to those who may undertake to impart this art to others, and with the assurance that whatever dissimilarity there may be in individuals so there will be a difference in ruling and the time of its proper accomplishment — one may learn readily and perfectly, another may linger along for years and still be behind the times.

The beauty of ruling rests largely upon the uniformity of stroke, but there are some rulers who cannot distinguish the difference between the inequality of two parallel lines or a series of lines; in fact, they have to be admonished continually upon this important point. For such there would seem to be no hope.

It is evident, then, that independent of mechanical genius, the eye should be the all-important guide to correctness, and without this it is labor lost to persist in teaching anyone this important branch of the business.

There are some who seem to be troubled with Daltonism, or color blindness, and cannot distinguish the nicety with which a combination of colors should be adjusted or harmonized; an optical delusion sometimes besets them and imperfect work follows. Such cases are much to be deplored; but with indications of this character tuition is neither profitable nor pleasant, nor is the workman of much value.

There are those who possess a long or short sight, while others are afflicted with a short focus in one eye and a long range in the other. Such cases can be more or less remedied by the optician, but one great difficulty is that young people do not like to be reminded of their imperfect sight, and therefore will go along for years before submitting to artificial aid. An occasional case of ophthalmia is met with. This also is a misfortune to happen to any ruler and likely to be the forerunner of imperfect work. Ruling requires good eyesight and it should be the first consideration at all times when importuned to teach others.

Some rulers are of a nervous temperament. Learners troubled with nervousness should not be encouraged to persist in ruling as a chosen occupation, as it requires a steady nerve and skillful treatment. — *American Bookmaker.*

FREDERICK VAN WYCK.

FREDERICK VAN WYCK.

We herewith present a portrait of Mr. Frederick Van Wyck, the energetic and genial secretary of the Liberty Machine Works, the Manhattan Typefoundry and the Liberty Manufacturing Company, who has made his mark in the printing trade ever since he became connected with it.

When Mr. Bryant Godwin and Charles H. Martini purchased the Liberty Machine Works from Mr. F. M. Weiler in 1882, the office had just been moved from two small rooms at 23 Chambers street to the more commodious quarters at 49 Chambers street, where they then occupied half a loft 25 by 151 feet. Shortly after that Mr. Frederick Van Wyck was called in by his friend, Mr. Godwin, who knew his proclivities for machinery, and his qualities were utilized as a salesman. As Mr. Weiler had formerly spent eleven months out of twelve on the other side of the great pond, where, in 1881, a branch office and factory had been started, which also belong to the present proprietors of the Liberty Machine Works, he was very much needed to go personally over the ground to form the acquaintance of the printing fraternity. With untiring zeal and energy Mr. Van Wyck accomplished this task, by no means an easy one, as everybody can imagine, as the establishing of new bounds of confidence and good comradeship is only accomplished if the well directed efforts are assisted by winning ways that gain a place in the hearts and in the minds of the people. Suffice it to say that while Mr. Godwin, the president of the Liberty Machine Works, was for years away looking after the large European interests of the firm, and Mr. Martini attending quietly to the duties of the office, Mr. Van Wyck accomplished all he attempted, the business in consequence growing and spreading in every direction. New branches of the trade were taken in, and it did not take a long time for the proprietors of the Liberty Machine Works to see their advantage in making Mr. Van Wyck a copartner in their enterprise; knowing best the great chance offered him, he did not hesitate to purchase the stock offered.

Shortly thereafter, owing to a continued increase of business, a repairing department was added, which materially aided the capacity of the concern to overhaul its own second-hand machines, as well as those of other makers. The connections which had been formed by Mr. Van Wyck, as a salesman, led to the establishment of a type and printers' material department, which has proved a grand success, and given universal satisfaction to its patrons.

Mr. Van Wyck, even when a child, had a great liking for machinery, and one of the first efforts of his life showed itself in a mill he constructed according to his own original ideas, on the banks of the brook, which meandered like a silver ribbon through the country seat of his father, where he used to spend the summer months romping with Bryant Godwin, then living at the adjoining country seat of his grandfather, William Cullen Bryant, the great American poet. Notwithstanding his studying law and traveling for several years all over Europe, hunting, shooting, fishing and riding or driving, he never relaxed his interest in machinery, the understanding of which seemed to be intuitive. Naturally, nobody with an inventive and restless mind, can take an interest in a thing without thinking how the purpose of certain machinery can be carried out in a better, simpler or more efficient manner.

Mr. Degener, the original inventor of the Liberty, had already struggled with the problem how to add a throw-off to the machine without losing any of its particular points of merit, but to no avail. He tried and tried over again, but it seemed impossible to do anything which could in the least accomplish the purpose desired without interfering with such qualities of the press as the inventor was not willing to lose on account of any improvement.

However, examining the machine thoroughly, with a desire to find some way to gain his end, he struck the idea to put a throw-off where it is placed now, and in a place where it is most convenient to the hand of the feeder and at the same time adds strength, while throw-offs commonly weaken a press. Knowing

once how, it did not take long to carry the idea out successfully, and his thoughts were directed to another point that had been sometimes cause for complaint in the old style Liberty; the noise made by the grippers, especially when beating against the back of the fountain. So he contrived a cam motion by which the last spring used on the Liberty was definitely removed, and which gave a further advantage in placing the gripper movement where the grippers have the strongest pull, and hold the paper most securely.

There has ever been a desire on the part of job-press makers to improve the system of ink distribution, and various attempts have been made to accomplish this purpose. The results, however, have been meager, the best of them being obtained by the use of riders. Mr. Van Wyck saw at a glance that on the Liberty the principle of riders could be adopted just as naturally as on a cylinder, and accordingly he went to work, the result being the Liberty triple combination distribution, consisting of a combined action of fountain, ink-disk and rider rollers.

It would be going too far from our present purpose to give details of these inventions—suffice it to say that all have proved highly useful and are patented in the United States and abroad, and since their introduction the Liberty presses have added many more high awards to their already long list of honors. A first degree of merit was granted in New Orleans, a silver medal in Antwerp and Stockholm; in 1888 a gold medal at the International Exhibition in Brussels, and high honors in Barcelona and Melbourne.

While the new style noiseless Liberty was making its way, and was again sold largely in the West, where the Union Typefoundry—interested in the Liberty by Mr. Van Wyck—had become the agent, the European business and the export of printing presses and materials to Australia and South and Central America was not neglected, and in the meantime every enterprise carried on by the firm grew. On May 1, 1885, they moved into 54 Frankfort street, where it seemed they would find ample room to provide for all their needs for a long time. However, notwithstanding that the new quarters gave them three floors, besides a good deal of store room, they soon became too small, as the small repairing shop at 51 Beekman street had, in the meantime, increased to a considerable plant. The requiring of larger space led to renting a basement in the neighborhood, No. 33 Frankfort street, and as the ceiling between the ground and second floor allowed of putting in another floor conveniently, this means was selected to provide more room.

The particular demands on the strength of a press that certain classes of work make, had created in Mr. Van Wyck's mind a plan to build one of an extra strong style, and he set to work and laid out his plans for one 11 by 17, a size not built before by the Liberty Machine Works. The extra heavy 13 by 19 followed; shortly after, the regular 11 by 17, and thereafter the 14½ by 22 size. Every machine was a decided success upon the start.

At present Mr. Van Wyck is contemplating a new machine, intended entirely for embossing, and another for the special needs as to size of the paper-box makers. He is also studying over a new paper cutter which may soon put in an appearance.

The peculiar position of the Liberty Machine Works in catering to the wants of their customers by supplying type, became intolerable by the attitude of the Association of Typefounders; notwithstanding that the Liberty Machine Works had always done a conservative, legitimate business, not indulging in reckless competition, they were all of a sudden cut off by the typefounders, and had to supply type without a profit, sometimes at a loss. As a matter of course they did not propose to allow any one to put them against a wall at pleasure. The refusal of some typefounders to continue the former relations was felt the more keenly, as the relations had been mutually very pleasant, but of course the decision of the association had to be carried out. Mr. Van Wyck cast his eyes about to see how matters could be mended.

For some time in expectation of some such results from a combination of typefounders he had watched a young type-

foundry that was just making its way up, being organized on the new American system of point bodies, and bringing out new designs every now and then, the best steel print cutters in the States being stockholders in the concern and actively at work, and when they became open for another arrangement, Mr. Van Wyck jumped right in and bought all the work of the Manhattan Typefoundry in a lump, associating with himself, however, the two gentlemen who are his partners in the Liberty Machine Works. Hardly had the new Manhattan Typefoundry been moved from the old quarters at No. 15 Park place to No. 198 William street, when another opportunity offered itself and the William Quail Lead Works were purchased and added to the plant already obtained. At Nos. 4 and 6 Duane street quarters were found to carry on the newly acquired business, and the blacksmithing shops of the new concern removed to the same place. The manufactures of Mr. William Quail, especially his shaved leads and slugs, and Grover, Yankee, Screw and Albion composing sticks, are too well known to need any special enlarging on them. With patented special machinery the leads are shaved in such a way that no other leads reach the same all-over evenness and smoothness so peculiar to the Quail leads.

The foundry soon made itself felt by establishing a good line of trade right in the city, but they are not contented with that. The Manhattan is the first foundry bringing out a specimen book of type solely destined for the Spanish-American market, a desideratum so long felt by the exporter.

One of the first steps taken by Mr. Van Wyck was to establish the most friendly personal relations with all the leading typefounders and dealers in printing materials. He made it for this reason his business to attend all the meetings of the Typefounders' Association and to make friends with all its members.

The Manhattan Typefoundry, although having a rich supply of English, had no German faces, which it seemed essential to possess, in view of the fact that a very large part of its trade was carried on with our German-American brethren, and, of course, the getting of a line of German faces was a necessity. By that great stroke of good luck that seems to touch everything in the way of the subject of this sketch, the old German typefoundry, founded by Ph. Heinrich, in 1855, was, a few months ago, offered for sale; Mr. Van Wyck, of course, grasped it at once and consolidated it with the Manhattan, which now has become a formidable foundry, in its own right and able to stand on its own feet. Of course, there is a good deal of work to be done to organize everything ship-shape, but the two magnificent, exceedingly light floors which serve for the founding of type, 61 and 63 Frankfort street, are already arranged in a most business-like way to turn out work quickly and perfectly. Two new dresses are being made there now; one for the *Commercial Advertiser*, one of the leading New York evening papers, and for the *Baltimore Correspondent*, one of the leading German papers of the middle states.

Mr. Van Wyck's ambition was, however, not satisfied with all these accomplishments. He went to work and founded for the exploiting of several patents with regard to an indestructible all brass galley, a galley lock up and kindred articles, the Liberty Manufacturing Company, of Lewiston, Maine, secretary of which he acts and whose offices are the same as of the other corporations with which he is connected. One of their latest achievements, the "Liberty" galley and the "Liberty" galley and lock-up, are illustrated in the advertising columns of the present issue.

We do not know what future plans the fertile mind of Mr. Van Wyck may have in store. We predict, however, that whatever their nature, they will be carried out with the same ingenuity, pluck, quick grip of the opportunity and success which have characterized all his previous efforts. With such men to dare is to do, and we look forward with much interest to his future career. If earnest and unflagging labor deserves success, Mr. Van Wyck is certainly destined to achieve it.

As Mr. Van Wyck is today only a young man, being but thirty-five years of age, we may look forward to future achievements from him with much assurance.

THE AUGUST ISSUE

of THE INLAND PRINTER will contain a beautiful page plate of portraits of the pressmen delegates to the Denver session of the International Typographical Union. Parties desirous of securing extra copies should send in their orders at once. It will be an ornament to any pressman's home.

KANSAS PRINTERS' SPECIMEN EXCHANGE.

Mr. J. S. C. Thompson, superintendent of the printing department of the Kansas State Agricultural College, Manhattan, Kansas, contemplates the publication of a "Kansas Printers' Specimen Exchange." Full particulars as to plan and cost of contributing will be sent intending contributors upon application to the above-named gentleman.

AMERICAN PAPER IN ENGLAND.

Last week about a hundred reels of paper from America arrived in Liverpool, addressed to the office of the *Daily Post*, and that journal entertains its readers with an interesting account of the activity and sagacity of the custom house officers in connection therewith. These officers, the *Post* says, are very keen in the scent, and they appear to have at once concluded that the rolls of paper contained between the sheets countless cigars and layers of tobacco. It was in vain to reason with them, says our contemporary, or to point out that the paper was so tightly rolled that it was a physical impossibility for anything to be concealed. Two of the officers, indeed, began to see that it was rather an absurd supposition to entertain, and after endless consultation they gave us (the *Post* continues) authority to take away two cartloads of the paper to the *Daily Post* office. But in a few minutes they began to think they had been too hasty, and the authority was withdrawn with all speed. Further consultation took place at headquarters, and just when we thought we had satisfied even the scruples of a customs officer, an intimation was received that not a single roll was to be removed from the quay until it had been opened up and examined to the very center. It is necessary to explain that the paper on which the *Daily Post and Echo* is printed is wound in continuous webs—each web printing between 4,000 and 5,000 copies. The intimation, therefore, that the paper was to be unwound at the dock was rather startling, but we thought the customs authorities knew best and waited patiently to see how they would proceed, only vouchsafing the information that the paper was all in one piece. "How long is each roll?" asked the officer. "Oh, only about four or five miles." The men looked aghast, casting all eyes along the dock line, one remarking to the other: "Why, that's as far as from Bootle to Toxteth." How they were to wind or unwind the roll was evidently a puzzler, and visions of a hundred white sheets of paper being stretched the whole line of the docks began to appeal to the imagination of the officers until they actually laughed. But as they had put themselves in this position, we thought we would let them get out again as best they could. We had previously offered to unwind any number of the reels on our machinery in our office in the presence of the customs officials, and after prolonged cogitation this offer was now almost feverishly accepted as being a quick solution of the difficulty. The carts were accordingly loaded, the lynx-eyed customs officers guarding the paper all the time. The carts began to move, the officers following in the rear, never allowing the paper for a moment to go out of their sight. The arrangement was that at least ten reels should be unfolded and inspected, and we at once put one in our damping machine, and began to unwind it, the officers watching every revolution in momentary expectation of some very fine branded cigars dropping out for the manager and editor, or some Virginia tobacco for the workmen. But, alas! paper, paper everywhere, and nothing else. After seeing three rolls unrolled on the machinery—a process that occupied some time—the officers evidently thought they had enough of it, and left the office, leaving us in undisturbed possession of the whole of the paper.—*Paper Making*.

ELECTROTYPE AND STEREOTYPE PLATES.

NEW METHOD OF CURVING.

An obstacle in the way of employing electrotype or stereotype plates in printing machines having curved or cylindrical surfaces on which to support the forms has consisted in the difficulty of shaping the plates to cause them to conform accurately to the curved supporting surfaces, and without mashing the type or face, the bending of a plate (as commonly practiced by suitable machinery, i. e., between rollers), producing tangential ends, which have to be bent to curve them into continuations of the arc described by the intermediate portion.

As the bending of the tangential ends has to be performed by hand, the operation is attended with difficulty, and produces unsatisfactory results in the form of uneven curves in the plates, which thus fail to fit with the necessary accuracy the curved supporting surfaces. This difficulty is overcome, according to *Paper and Press*, by making the flat electrotype or stereotype plate as much longer or wider, according to whether the bend is longitudinal or transverse of the plate, on opposite sides of the type or face portion than the form is required to be, as is necessary to make the tangential ends equal or substantially equal in width to the excess of the width or length of the plate over that required for the form, and then, after the bending operation, cutting off the tangential ends.

As the printing surface of the plate is uneven, presenting as it does elevations and depressions in the bending, the spaces on the surface of the plate between the type are liable to "buckle," as it were—that is to say, owing to the depressions on the surface the strain of the bending operations tends to buckle the plate at the intervening spaces, and thus produce lines of type which incline toward each other, and from the respectively adjacent lines, thereby causing lack of evenness in the surface of the material upon which impression is taken from the form, besides destroying the true curve of the plates. This difficulty the inventor overcomes by filling in the spaces or thin parts between the type on the plate with a suitable substance as pliable as the material of which the plate is formed.

In manipulation, an electrotype or stereotype plate, produced in usual manner, is placed flatwise with the face or type portion up, into a shallow pan—such as the ordinary electrotypers' pan—of suitable dimensions, and molten metal (preferably a mixture of tin and lead) is poured into it until the upper surface of the plate is completely covered to a depth say to about three-sixteenths of an

inch, and allowed to cool. The coated surface is then shaved, to smooth and render it even throughout, and of uniform thickness.

When thus prepared, the end and lateral edges or portions which extend beyond and over the edges of the plate of the cap portion unite with or adhere to the metal forming the body. For an electrotype plate, the metal used for forming the cap must be such as will not, in its molten condition, injure the copper of the type-face, and if molten metal be applied to a stereotype plate to "cap" it, the type surface may be coated with a suitable substance to protect it against the injurious effect which the molten metal might otherwise have. It is not, however, necessary that the cap be formed of metal, since other substances which will afford the

desired protection to the type face against the mashing tendency of the bending operation and bend with sufficient readiness—such as pulp, rubber and the like—may be used; but metal is preferable, and particularly lead, or a suitable metal compound containing lead.

The length, in the direction of the curve to be produced, of the plate to be bent, may correspond exactly with the length thereof desired for use in printing, when the excess of length to be taken up by the tangential ends produced by the bending, and which are subsequently cut off, may be provided by the end or edge portions of the cap; or, if desired, the body of the plate may itself extend from the opposite extremities of the type sufficiently far to produce the tangential edges to be cut off, when the opposite ends of the pan or confines therein for the corresponding ends of the plate should be just about far enough apart to admit the latter between them.

In the latter case the cap would have only lateral edges, at which it would adhere to the corresponding edges of the

body or lead portion of the plate. The plate, with its cap, is then passed between the rollers of a suitable bending machine having an adjustable roller, for producing, by its proper adjustment, any desired degree of curve in the plate, and bent to concave the back of the plate and render convex the face or type surface thereof. The bending produces tangential ends or edges at opposite extremities, which are composed of the projecting end portions of the cap, if the latter be formed to compensate for the extent of the plate which would have to be cut off if the body of the plate itself were of a length to allow for the portion in the form of tangential edges to be removed.

After being curved, the sides (and if provided, the ends) of the cap which project over the corresponding edges of the plate are cut off or removed, thereby leaving the top portion of the cap, which does not unite with or adhere to the type surface, but merely

CAPT. W. M. MEREDITH,

CHIEF OF THE BUREAU OF ENGRAVING AND PRINTING, TREASURY DEPARTMENT.

fills in the spaces thereof, free to be removed. It will thus be seen that by filling in the spaces between the type on the plate a practically uniform plate is subjected to the action of the bending machine, whereby the curve between the unavoidable tangential edges is rendered even, and "buckling" is prevented between the surface spaces.

The term "type" used in the foregoing description is intended to be sufficiently generic to include any surface presenting depressions and elevations, and from which an impression may be printed.

Obviously, if the edges which become tangential by the bending are produced by the material forming the cap, as shown, there is no absolute necessity for having the lateral edges of the cap project over and beyond those of the plate, as the holding effect of the cap on the plate may be sufficiently exerted at the ends of the latter by the extension afforded by the former.—*British and Colonial Printer and Stationer.*

INVITATION OF THE PITTSBURGH PRESSMEN'S UNION.

NEW PROCESS OF REPRODUCTION.

The following process permits of easily reproducing on stone or zinc either old or recent impressions. Its chief recommendation is simplicity, for it may be put into practice in any litho establishment. The operation is as follows:

Prepare a clear solution of gelatine, pour a thin layer on a litho-stone or on zinc and allow to dry. Prepare a solution of alum; place therein the verso of the printed sheet to be reproduced, allowing the alum to penetrate the substance of the paper without traversing the printing-ink forming the drawing or the letters of the recto. Place the recto on the stone or on the zinc and pass to press. By the pressure the alum with which the paper is saturated renders the gelatine insoluble in warm water wherever it touches the unprinted parts of the paper, whilst every part of the gelatine which has only been touched by the ink of the drawing or letters is unaffected by the alum. These parts are therefore soluble in warm water.

Remove the paper, which should remain intact, and pour some warm water on the coating of gelatine. This water only dissolves those parts of the gelatine covered by the ink of the paper—that is to say, which were not rendered insoluble by the alum; at other parts, which correspond to the blank of the paper, the insoluble gelatine remains intact. Allow the surface thus prepared to dry. When it is dry, ink it, and the black will adhere only to those parts uncovered with gelatine, and which now reproduce the letters or the drawing in negative. The stone or zinc may now be prepared for working in the ordinary way.

The same operation applies to both the recto and the verso of the paper. This method avoids spoiling the original if it does not form part of a book; it permits of reproducing all the delicate parts of the drawing. It is very economical, as, except the ordinary litho material, it demands only a little alum and gelatine.

THE TYPESETTING MACHINE.

Ye printers, dear, what's this I hear, the news that's goin' round?
A grand machine, to take your place, has surely now been found;
It'll set the type quite neatly, at a most tremendous speed,
And the clever printer man, they say, we shall no longer need.
A million ems, or more, a day, they say it will turn out,
Correct its proof, revise, make-up, and whirl the forms about;
Deliver papers in the street, and do it mighty quick,
And the most admired thing of all—"the beastly thing don't kick!"

The editor will touch the keys, and deftly "set" his work;
The "special" man, his articles into the thing will jerk;
The "night man" and the "local" will quickly spread their notes;
The "funny" man will calmly smoke and click his anecdotes;
The "fashion" and the "sporting sharp" their screeds will neatly do;

The machine will edit copy, yes, and punctuate it, too.

Then the chapel will be silent, and the Father go to grass,
And the stupid typo's blunders will never come to pass.

The editors of rival sheets will revel and feel good,
While the printer man tramps o'er the land or takes to sawing wood.

But the summer time will come again and winter's winds will blow,

And many a harvest time will come again and go,
Ere the thing of cranks and gearing takes the place of pen and ink,
Or supplants the toiling typo, with his power to *work* and *think*.

—*Exchange.*

OF INTEREST TO THE CRAFT.

ON page 854, for the town of "Sedalia" read "Salida."

MR. JAMES FRIEL, Sr., has been elected secretary-treasurer of St. Louis Typographical Union. The offices have been consolidated.

PHILADELPHIA TYPOGRAPHICAL UNION contributed \$378 to the Johnstown sufferers. Aside from that, the employes of many of the printing offices made contributions in their own name.

OUR esteemed friend Mr. Isaac Moore, of Quintaro, Kansas, whose hospitality at the Kansas City convention is so well remembered, represented No. 157, the last union to receive a charter.

WE acknowledge the receipt of a kindly invitation to be present at the fourth annual picnic of Pittsburgh Pressmen's Union, No. 13, at Silver Lake Grove, Friday, July 19, 1889. We know the boys will have a good time, and wish we were able to be with them.

MRS. W. W. SLACK, of Denver, was the poetess of the excursionists. Among her other effusions was the following:

The "Midland" train ran off the track,
Good bye, my lover, good bye.
But the Rio Grande brought us safely back,
Good bye, my lover, good bye.
We thank our stars we got no whack,
Good bye, my lover, good bye.
Although we felt we were on the rack,
Good bye, my lover, good bye.

EX-DELEGATE MCABEE, of Chicago, was the funmaker of the excursionists and kept them in constant good humor by his many drolleries, one of which was appearing with a conductor's cap and lantern and deceiving the staid representative of a Denver journal. At the risk of being charged with telling tales out of school we must refer to a circumstance, which can be corroborated by Mr. James B. Dailey of the Philadelphia *Ledger*, in which the tables were turned. After the train on the "Midland" had been derailed in the vicinity of Salida and its passengers transferred to the Denver & Rio Grande en route to Colorado Springs, the commissary car and its refreshments were unavoidably left behind. As a matter of course the contents of divers and sundry little canteens were soon at a premium, and the favored few were invited into an empty baggage car to partake thereof. The stock was soon exhausted, however, and there was no means of replenishing it. A wag secured a bottle of pop which bore a strong resemblance to the "genuine" article, and filling a bourbon-marked flask Messrs.

McAbee and Knowles of Chicago were invited to partake. Their looks of disgust on finding themselves the victims of this *cruel joke*, may be imagined but cannot be described, a disgust which was not lessened by the Indian dance which followed with the unsophisticated as the "centers of attraction." However, all's well that ends well, and at Palmer's Lake their wounded feelings were assuaged by a drop of the "real crater."

FOREIGN.

THE strikes at Brünn, Vienna, and Prague are at an end, the masters having yielded to the demands of their employés.

THE printers of Lyons are about to organize a technical club on the lines of that of Geneva, says the *Intermédiaire des Imprimeurs*.

THE *Figaro* has installed on one of the platforms of the Eiffel tower a small Marinoni machine, which will print a special journal before the eyes of the visitors.

THE *Courier du Congo*, a paper for the Congo State, has recently made its first appearance. The state being under the patronage of the Belgian government, the new journal is printed in the French language.

AMONG the curiosities of statistics, these concerning St. Petersburg are noteworthy. It contains 125 printing-offices, 126 lithographic establishments, 11 typefoundries, 6 metallographic institutes, 8 zincographic and photo-zincographic, 1 xylographic, 4 phototype establishments, 14 india-rubber stamp and monogram factories, 87 photographic establishments, 51 booksellers, 66 booksellers' warehouses, 7 old bookshops, 20 music emporiums, 39 reading rooms, 2 copying implement shops, 6 newspaper kiosques, and 136 different shops for selling books, newspapers, etc.

SPECIMENS RECEIVED.

GEORGE O. SCOTT & SONS, Denver. Firm's card in colors, neat and attractive in composition, and well printed, as is all work from this establishment.

CHARLES B. LONGWELL, Logansport, Indiana. A brochure, containing a few specimens of artistic printing in colors, for which we have nothing but commendation.

THE SHERWIN-WILLIAMS COMPANY, Cleveland, Ohio. Specimen of colored press work, twenty-eight impressions to the sheet, work by J. C. Earl, the register of which is absolutely perfect.

THE KELLER PRINTING COMPANY, Evansville, Indiana. A sumptuous illustrated prospectus, of fifty pages, of the Grand Opera House in that city. It is printed on coated paper, and its composition and presswork are beyond cavil.

W. H. WAGNER, Freeport, Illinois. A large assortment of general job work, such as catalogues, circulars, certificates of stock, policies, letter and bill heads, etc., which are more meritorious than half the job work executed in the city of Chicago.

F. W. THOMAS, Toledo, Ohio. An assortment of general commercial work, which it gives us a great deal of pleasure to commend. The press work could be materially improved, but on the whole the specimens before us are above the average received.

C. B. FISK & Co., Palmer, Massachusetts. A number of specimens of artistic printing—plain and in colors, some of them handsomely embossed. That a village of 2,000 inhabitants is capable of sustaining an establishment which turns out such work proves there is no excuse for the existence of a blacksmith shop under any circumstances.

MCQUEEN & WALLACE, Washington, D. C. A number of samples of every-day commercial work, all neat, clean and attractive, containing one feature which we especially admire—an almost entire absence of the fantastic. The type used is plain and serviceable, and shows that attractiveness can be obtained without resorting to the ornately grotesque—so much in vogue.

KINGSLEY & BARNES, Los Angeles, California. A package of specimens consisting of letter heads, souvenirs, business cards and programmes, plain, embossed, and in colors, every one of which is the work of a true artist, and if we are not mistaken that artist is G. C. McKay, one of the *best* printers in this or any other

country. The firm letterhead is a beautiful piece of work, the design, execution and color-blending of which is well nigh perfection.

ENTERPRISE STEAM PRINTING HOUSE, Williamston, Michigan. A number of somewhat unique specimens, among which may be mentioned a commencement programme. At top and bottom of title page is a "selenotypic" band worked in black, crimson lake and gold, the effect of which is very attractive. Also samples, the tints of which are made with fine wire screen drawn over pine blocks.

ALSO from Messrs. Gies & Co., Buffalo, a number of exquisite specimens; W. W. Woodruff & Co., 35 North Seventh Street, Philadelphia; Conrad Lutz, Burlington, Iowa; the Curtis Printing Company, St. Paul, first-class as a matter of course; Buxton & Skinner, St. Louis, Mo.; *Journal* print, Hancock, Michigan, handsomely printed bill of fare for banquet tendered the Press Association of Upper Peninsula and Northern Wisconsin; Bowden & Sons, St. Johns, Newfoundland; S. P. Rounds, Hastings, Nebraska; *Leader* job office, Mahern, Iowa; Hale City *Times* job office, Carroll county, Missouri, catalogue and price list, which should be sent to a dime museum as a curiosity; and from F. W. Langdon, Junction City, Kansas. We would suggest to our friend that it would be a good idea to place the name of the town and state where he is located on his business card, instead of compelling those to whom it is sent to obtain that information from the postmark.

CHICAGO NOTES.

THE National Live Stock Journal Company, Chicago, Ill., has been licensed to incorporate. Capital stock, \$25,000.

THE combined Chicago paper dealers, stationers, printers and publishers contributed \$10,000 to the Johnstown flood sufferers.

MICHAEL E. AMES, C. A. Philips, and others, have incorporated the Occident Publishing Company, at Chicago, with a capital stock of \$60,000.

THE Western Catholic News Publishing Company has been incorporated, at Chicago, with a capital stock of \$25,000 by John C. Philips and others.

THE paper for the Marshall Field & Co. catalogue for 1889 will be furnished by the Chicago Paper Company. The order will amount to 65,000 pounds.

A. E. BARNHART, of Barnhart Bros. & Spindler, is off for a vacation. He is accompanied by his wife and daughter, and they will spend the time in various parts of the East.

WE acknowledge the receipt of a diagram of a new lower case for table work, the design of Mr. James E. Foreman of this city. We will try and find room for it in our next issue.

MR. DAVID KELLS, the senior member of the New York delegation to Denver, who has been visiting relatives and friends in Southern California, paid us a pleasant call a few days ago, on his return homeward.

THE Eagle Printing Company, located on Fourth Avenue and consisting of Albert P. and Charles B. Kiest, recently made a voluntary assignment to Joseph W. Brown. The liabilities are estimated at \$11,000, while the assets amount to but \$7,000.

MR. O. S. GAUCH, of the composing room of Henry O. Shepard & Co., was married June 19 to Miss Katie Kraft, at the German Methodist Episcopal Church, this city, by the Rev. Dr. Loeber. The friends of the newly married couple wish them a long and happy life.

EMIL PLETTIG and Gus. Jahn, the former of which was book-keeper and the latter foreman for Mr. A. Zeese, the well-known electrotyper at 341 Dearborn street, were drowned in the Wisconsin river, while on a fishing excursion, a few days ago. Mr. Zeese has received a letter from the guide who accompanied the young men, telling the story of the accident. They had started down the river to fish. When they came to a dam the guide told the young men to get out, and he would take the boat over. They

chose to remain in the boat, thinking it would be fun to shoot the dam. In going over they became frightened and upset the boat. The guide saved himself by swimming ashore.

MR. G. A. JOSLYN, of Omaha, treasurer of the Western Newspaper Union, paid a visit to Chicago since our last issue. Mr. Joslyn is one of the go-ahead men of prosperous, growing Omaha.

MRS. BARHYDT, wife of the genial manager of the western office of the Globe Manufacturing Company, has gone to Schenectady, New York, where she will spend the balance of the summer. *Ad interim*, Frank will put in much of his time, outside of business, being lonesome.

THE consumption of paper among the daily papers of this city is stated to be as follows: *Tribune*, 175 tons per month; *Herald*, 150 tons; *News*, 375 tons; *Times*, 150 tons; *Mail*, 50 tons; *Inter Ocean*, 100 tons; *Staats Zeitung*, 75 tons—a total of 2,150,000 pounds of paper per month.

WE understand it is the intention of the members of No. 16 to turn out in force on labor holiday, next September, and to make a showing worthy of the craft. The uniform will be: White hat, linen duster and cane. We feel satisfied they will do themselves honor and make an appearance that will be a credit to their organization.

EASTERN delegates Moran (Providence), Gibbs, Daak, Harrison, Dunbar and Faries (Philadelphia), Oyster, Sprightly and Sutton (Washington), Rigg and Hitchcock (Baltimore), Brown (Troy, New York), D. More (Brooklyn), Cassedy (Trenton), passed Wednesday and Thursday, June 19 and 20, in this city, being the recipients of a carriage-ride and other courtesies at the hands of the Chicago union.

HENRY J. WENDORFF, foreman of Knight & Leonard's press-room, adopts a very simple method of overcoming trouble from green rollers. By covering the face liberally with magnesia to absorb the moisture he is enabled to use soft winter rollers during the hot weather. To demonstrate, he recently tried a set of old rollers the surface of which was covered with moisture to such an extent as to refuse to take ink. By simply rubbing a cake of magnesia over the face and wiping off with a dry cloth he ran off a job in burnt umber of 10,000 copies. The rollers had in the meantime become almost hot enough to melt.

AT a meeting of the Chicago Typothetæ, held on June 6, 1889, the following members were elected delegates to the annual meeting of the United Typothetæ of America, to be held in St. Louis, October 8, 1889: *Delegates*—C. H. Blakely, D. R. Cameron, C. E. Leonard, W. P. Dunn, R. R. Donnelley, Amos Pettibone, George E. Cole, George Hornstein, George E. Marshall, P. F. Pettibone, J. S. McDonald, E. J. Decker. *Alternates*—Franz Gindele, Dwight Jackson, W. P. Gunthorp, Bradley Dean, D. Oliphant, R. R. McCabe, M. Donohue, T. Rubovits, James T. Hair, George Fergus, Thomas Knapp, R. B. Martin.

A NEW PRESS.—There is now on exhibition at the factory of Robert Tarant, 52-56 Illinois street, a flat bed, two-revolution, double cylinder perfecting machine, designed and built by Leonard E. Brooks. This machine is an ordinary platen cylinder, which will print from a roll of paper, and cut the same into any desired lengths from 37½ inches by ½ inch to 18 inches, if desired; or, in other words, will cut and print any sized sheet from 37½ by 58 to 18 by 24 inches. The sheets are cut off the roll by an entirely new invention, any desired length, and automatically fed to the printing cylinders; printed on *both sides* of the sheet, and delivered flat, without the use of tapes. The special features connected with the construction of this press are: 1. An entirely new bed motion for driving the form carriage, which dispenses with the universal or knuckle joint used on other machines; 2. An entirely new air spring, which renders unnecessary the pistons or cylinders formerly attached to the platen; 3. A new noiseless nipper motion; 4. Mechanism for varying the speed of the cutting cylinder, also for regulating the speed of the knife to the speed of the web. This machine is capable of running at a speed of

1,600 to 1,800 revolutions per hour—equal to 3,600 perfected impressions. The platen, 72 by 96, with racks and driving mechanism attached thereto, weighs 6,000 pounds and with form on 8,000. The press is 15 feet long by 8 wide, and 19 feet over the roll, 7 feet high, and weighs 19 tons, or a trifle over the weight of a single machine. We expect in our next issue to give an illustration and a detailed description of the same.

DIED, Saturday, June 29, 1889, at her home, 212 South Leavitt street, this city, Mrs. Emily Brine Hawkins, aged thirty-seven years. She was the wife of Mr. James Hawkins, cashier for Marder, Luse & Co. Besides her husband she leaves five children to mourn her loss, two of the children being a pair of twins (a boy and a girl) born but one day before her death. Mrs. Hawkins was a native of St. Johns, Newfoundland, but had been a resident of Chicago for some years; was a member of the Congregational church, and an active worker in some of its societies. She leaves a large circle of very warm friends, who extend their most heartfelt sympathy to the husband and children in their great loss by her death.

THE *Wide Awake* for July contains the following, respecting a gentleman well known in this city, the Hon. Melville W. Fuller. It will be read with interest by his many friends: "The Chief Justice of the United States lives on a beautiful knoll in the suburbs of Washington. His elegant home called 'Belmont,' with turrets and spires, built of rough light-colored stone, is only a few rods from the Fourteenth street car-line that leads to the White House and the capitol. As I was hurriedly passing his home yesterday, in the pouring rain, I saw three little girls all in a flutter of haste and excitement—wrapped in gossamers, with school-bags tucked away out of the wet—running to catch the car. Just behind them walked a scholarly-looking, gray-haired gentleman, with a most kindly, sunny face shining out from under the umbrella. 'O, papa! papa! do hurry; you're getting so wet,' I heard said; and the three little maids stopped and turned back to hold and pull and tug away at the quiet gentleman, hurrying him to take his place in the crowded car packed with a rainy-morning crowd. 'Papa' took hold of the strap, and the rosy little daughters kept fast hold of him to steady themselves in the swaying throng. The dripping umbrella leaned against the door, and the gentleman chatted pleasantly with the conductor, helped an old colored woman with a huge basket of clothes to a place beside him; and when the 'transfers' were given for Pennsylvania avenue and the little family 'changed cars' a murmur of inquiry and pleasure swept over the faces of those left. 'Who was that gentleman? Do you know him?' The conductor walked through very straight, and looked very proud as he said: 'That man is Chief-Justice Fuller, and he rides on my car every day. We like him. We like him, and all his family. They ain't a bit proud, nor stuck-up, and they know good manners from shoddy ones every time. Mr. Chief-Justice talks to us conductors just as kind and good as he does to the President. We hope he will stay on our line forever.'"

PAPER TRADE NOTES.

A PAPER mill has been started at Newman, Georgia.

CARROLLTON, Georgia, has subscribed \$30,000 and Whitesburg \$15,000 for a paper mill.

THE F. O. Sawyer Paper Company, St. Louis, has incorporated, with a capital stock of \$60,000.

THE contract has been signed for the erection of the \$200,000 pulp and paper mill at Sault Ste. Marie, Michigan.

THE new Fox River Paper Mill in Appleton, Wisconsin, is virtually completed, and is expected to be in operation by October.

THE Van Nortwick Paper Company, Batavia, Illinois, has shut down its mill, and will make arrangements to change from news to book grades.

IN the matter of the failure of F. G. Tilton & Co., paper manufacturers, Fort Edward, N. Y., the schedules filed show liabilities of \$64,822.20 and assets of \$43,879.91. Included in the liabilities is an item of \$22,000 borrowed from the Hotchkiss estate.

which amount, a local paper states, was loaned to the firm some time since to keep it from failure at the time of the loan.

ROBERT CHASE & Co., of Northumberland, New Hampshire, have received an order for 1,000,000 reams of manila tissue.

H. B. NASH has been appointed assignee of the Berkshire Paper Company of Pittsfield. The company has made an offer of 20 per cent.

THE Kearney Paper Manufacturing Company, Vilas, Miner county, Dakota, has filed articles of incorporation. Its capital stock is \$50,000.

WARNER MILLER of New York is credited with contemplating the erection at Mammoth Springs, Arkansas, of a \$250,000 plant for the manufacture of paper.

THE Jackson paper mills, at Bridgeton, New Jersey, which have been in the hands of the sheriff, are to resume operations under the management of a receiver.

THE annual meeting of the American Paper Manufacturers' Association will be held at Grand Union Hotel, Saratoga Springs, N. Y., Wednesday, July 31, at 10.30 a. m.

THE Rockford Paper Mill, at Rockford, Iowa, has been burned. It had been in operation only a few days. The loss is estimated at \$15,000, on which there was \$4,000 insurance.

THE new paper mill at Denver, Colorado, will be located about three miles south of the city. It will be a 10-ton plant to begin with, but provision will be made for enlargement when needed.

THE National Roll Paper and Cutter Company, capital stock \$250,000, has been chartered at Alexandria, Virginia, to manufacture paper holders and paper in rolls. E. C. Ford is president.

THE postmaster-general has advertised for bids for the postal card contract, to close July 18. He also advertises for proposals for furnishing adhesive postage stamps for four years from October 1.

THE Elkhart (Indiana) Paper Company have signed a contract for the removal of their entire plant to Muncie. They are to receive free natural gas and land, and will build a new mill 360 by 400 feet.

A \$30,000 stock company is being organized by R. Thomas, of Whitesburg, Georgia, to build a paper mill with a capacity of 6 tons daily at Carrollton, Georgia. Manila wrapping paper will comprise the product.

FOUR large mills, one of them 900 feet long, are now being built at Manchester, New Hampshire, one each by the Stark, the Amoskeag and the Manchester corporations, and one by the Leighton Manufacturing Company, at Kelley Falls on the Piscataqua River.

A MILL has been established at Ottawa, Canada, which makes paper pulp out of sawdust. The paper made wholly from sawdust is said to form an admirable sheathing that is fit for building after being tarred and dried. A better quality of paper is made by using one-fourth waste paper. The mill has a capacity for converting about 12,000 tons of sawdust into pulp annually.

THE C. L. Hawes Company, of Dayton, Ohio, manufacturer of strawboard, recently deeded all of its property and mills and transferred its business and good will to the American Strawboard Company; capital stock, \$6,000,000. O. C. Barber, of Akron, Ohio, president. The fifteen largest mills in America are in the deal; their daily production is 300 tons of strawboards. There are only five little mills left out.

THE contract for paper to be used in the state printing (Mass.), has been awarded to Rice, Kendall & Co., of Boston, at these rates: Calendered book paper, 5.45 cents per pound; machine book paper, 4.95 cents per pound; flat writings, 11, 12½, 13 and 15 cents per pound; colored flats, 8 cents per pound; ledgers less 40 and 5, 30 and 5, and 25 and 5 per cent; bond papers list price, less 25 per cent; medium covered papers 6.75 cents per pound; terms cash, 30 days, less 1 per cent, delivered at the printer's. Paper guaranteed to be free from ground wood pulp.

PERSONAL.

WE have received calls during the month from the following persons: Lucius S. Bigelow, general manager W. O. Hickok Manufacturing Co., Harrisburg, Pa.; John H. Prack and James N. Hull of the Woodward & Tiernan Printing Co., St. Louis, Mo.; Charles S. Sinclair, Chicago; J. O. Harvey and John B. Greenway of Grand Rapids, Mich.; J. Potter, printer, Davis, Ill.; Alfred L. Richman, representing L. S. Dixon & Co., Liverpool, England; R. M. Tuttle, Mandan, Dakota; W. D. Salisbury, Oakland, Cal.; J. B. Morgan, of Morgan & Hamilton Co., Nashville, Tenn.; Orville D. Orton, St. Louis, Mo.

TRADE NEWS.

HENRY BENNER, printer, Marshall, Michigan, has sold out.

J. A. DORSEY & Co., printers, Dallas, Texas, have dissolved partnership.

FORD & SALTZMAN, job printers, Binghamton, New York, have dissolved.

L. PRANG & Co, art publishers, have removed their New York office to 16 Astor place.

THE California Printing and Binding Company, San Diego, California, have dissolved partnership.

BUEL & ROBERTS, printers, Cleveland, Ohio, have dissolved partnership. F. W. Roberts continues the business.

T. D. A. WATSON, publisher of the *Herald*, Hartington, Nebraska, has been succeeded by the Herald Publishing Company.

VICKERY & HILL, of Augusta, Maine, are now putting in a Scott perfecting web press, to print their many publications on.

THE Portland *Evening Express*, of Portland, Maine, have just placed another double cylinder in their office, to be used in case of accident to their other presses.

AT the recent International Exposition, at Melbourne, Australia, Messrs. Berger & Worth, Leipsic, manufacturers of fine dry colors, and inks for all graphic branches, were awarded the first prize for their products.

MESSRS. THOMAS WATERS, L. L. Talbott and J. F. Olsen have purchased the job printing and bookbinding departments of the Des Moines *Leader* office, and will conduct a general business in the commercial printing and bookbinding line.

GEORGE H. SANBORN & SONS, 69 Beekman street, New York, have just issued a new catalogue of twenty pages containing illustrations and descriptions of the various sizes of their "Star" cutter, accompanied with testimonials vouching for the excellence of the same from the representative printers and binders of the United States.

CERTIFICATES of incorporation have been filed at Albany, New York, for the Home Seeker Printing and Publishing Company, of New York. The Home Seeker Company, formed by Charles O'Connor Hennessy, of New York, and Charles Sibley May, of Brooklyn, is organized for the purpose of printing, publishing and selling newspapers, books and pamphlets, and will include the United States in its operations.

SEVERAL months ago the Liberty Machine Works, of New York, sold one of their 9 by 13 "Liberty" jobbers to a printer at Jerusalem, who came to New York to select an outfit of American machinery and material for his printing establishment. The machine was duly shipped in small boxes, so as to allow the transporting from Jaffa to Jerusalem in the customary way, by mules, and arrived in Jerusalem in March last, all in complete order, nothing broken, where it was put at once to work. The great favor American machinery and materials have found in the Holy Land is shown in that the brother of the Jerusalem printer, who is a New York business man, called recently on the Liberty Machine Works, ordering a lot of cuts and some of Frederick H. Levey Company's inks, of which a supply had gone with the press. The

Liberty Machine Works were shown a specimen book of the types owned by the Jerusalem printing office, which presented, besides Turkish and Hebrew, a lot of faces the existence of which is due to American ingenuity. The 9 by 13 "Liberty" shipped to Jerusalem was the first job press ever brought into that section of the globe, only hand-presses being there known before, and its arrival caused quite an excitement among the printing fraternity of Jerusalem, who were invited, by the proud possessor of this new tool for the execution of his art, to witness its first performances.

OF INTEREST TO THE CRAFT.

MR. JAMES E. SCRIPPS, of Detroit, has given \$5,000 to endow a room in Harper's hospital.

The German printers' union, New York Typographia, No. 7, is nearly twenty years old.

THERE are now thirty linotype machines in use on the Louisville *Courier-Journal* and *Times*.

ST. LOUIS Union has adopted a stamp in lieu of a working card. A vignette of George Clark adorns the stamp.

THE monument in honor of Mr. Thomas Armstrong, founder and editor of the *Labor Tribune*, is to cost \$3,500. His figure will stand upon a granite pedestal.

MR. C. MOORE, of Chicago, was the "Sweet singer of Israel" on the trip, and if the songs in heaven are as sweet as the songs he rendered, we want to go there.

THOMAS F. CROWLEY, of Cincinnati, one of the International Typographical Union delegates to the World's Labor Congress at Paris, sailed from New York for Havre, Saturday, July 6.

AT a recent meeting of Detroit Typographical Union, J. A. Labadie was unanimously chosen as a delegate for choice of the Scripps League, to represent the printers at the Paris Exposition.

PUBLIC PRINTER PALMER tendered the position of chief clerk of the government printing office to Colonel A. W. Swalm, of Oskaloosa, Iowa. Colonel Swalm served an apprenticeship in Palmer's office, in Des Moines, years ago, and is now one of the proprietors of the *Oskaloosa Herald*.

ATLANTA, GEORGIA, which has been selected as the place for holding the International Typographical Convention in 1890, is situated 694 miles from Baltimore, 739 miles from Chicago, 608 miles from St. Louis, and 475 miles from Cincinnati. A pretty good location from a geographical standpoint.

FIRST VICE-PRESIDENT HAY, of Leavenworth, whose attentions last year will be remembered, especially on the visit to the fort, when jolly Gen. McCook gave the delegates a sample of what Uncle Sam's boys could do, was present at the convention, as large as life and twice as natural. He has the happy faculty of making friends, and keeping them when he makes them. Valuable characteristics.

DURING the proceedings of the International Convention a pleasing divertisement occurred. Ex-Delegate McAbee, of Chicago, on behalf of the delegates and visitors, presented Denver Union with a handsome, gold-lined water pitcher and silver goblets. Mr. Milburn expressed the union's thanks, and added: "I don't know what we're going to do with it. Very few of the boys drink water. But I will endeavor to get them to favor the pitcher in the future and let the jug stay dry."

THE lady delegates to the Denver session of the International Typographical Union, Miss Mary Knott, of Akron, Ohio, and Miss Fannie Qualtrough, from Rochester, New York, by their earnestness and lady-like conduct won the respect of every delegate present. The Philadelphia Union in referring to the latter says: "She is not only a representative member of the printing craft (being a first-class compositor), but is a representative of the best element of her sex. Miss Qualtrough is a graduate of the Rochester Free Academy, well read on all subjects of general interest, and a woman whose refinement commands the greatest respect and consideration from her brothers in the craft and all with whom she comes in contact."

NEWSPAPER GOSSIP.

C. H. VAN BUREN, Baltimore, Maryland, has commenced the publication of the *Architect and Builder*.

THE *Mercury* is the name of a new illustrated Sunday paper recently established in Washington, D. C.

THE Altoona (Pa.) *Times* entered upon its sixth volume June 20. It is an eight-column folio, democratic, and neatly printed.

THE New York *Zeitung* has been sued for libel by Mrs. Anna Scheibel, she claiming \$10,000 for defamation of character.

COL. FRED. D. MUSSEY officiates as editor of the Cincinnati *Commercial Gazette* during Murat Halstead's absence in Europe.

NELSON HERSH, who was city editor of the Davenport, Iowa, *Gazette* five years ago, is now city editor of the New York *Herald*.

THE *Tobacco Record* is the name of a handsome and interesting trade paper that has recently made its appearance in Philadelphia.

Hook and Line is a new weekly journal published by W. C. Harris. It will be devoted to the interests of New York fishermen.

W. J. MOORE has started the *Advocate*, a seven-column folio, at Edenton, North Carolina. It takes the place of the old *Enquirer*.

THE Cleveland *Plain Dealer* has recently moved into a new building on Bank street, where it now occupies one of the finest newspaper offices in Ohio.

MRS. MARY C. BRYAN, who so many papers state is the only Southern woman writer with a future, receives \$5,000 a year for editing *Monroe's Fashion Bazaar*.

THE New South Publishing Company has established the *New South*, a seven-column folio, at Beaufort, South Carolina. Its motto is suggestive: "Charity for All."

Pointers is the name of a neat four-page publication issued by Averill, Carpenter & Co., agents for Benton's self-spacing type, 191 and 193 East Fourth street, St. Paul, Minnesota.

LEE F. SPRING, for a number of years past with the *News* at Hot Springs, Arkansas, as manager of the job department, is now with the Kansas City house of the A. N. Kellogg Newspaper Company.

THE *Evening Journal*, published at Bristol, Pennsylvania, by W. C. Watson, has suspended after a hard struggle for existence. Mr. Watson will issue a weekly paper under the head of the *Bristol Weekly Journal*.

A NEW publishing company has been formed at Elizabeth, New Jersey, which will issue a daily democratic paper, to be called the *Daily Ledger*. Gen. J. Madison Drake, who owns the *Sunday Argus*, will have editorial charge of the *Ledger*.

M. BILDERBACK & SON have established a democratic paper at Griswold, Iowa. Mr. Bilderback was foreman of the *Gazette*, at Adel, Iowa, when the writer hereof entered that office as an apprentice, and the son was in swaddling clothes.

THE *Word Carrier*, a four-column, four-page monthly, printed at the Santee Agency, Nebraska, in the interest of schools and missions among the Indians, with special reference to the Santee Normal Training School, is a bright and instructive publication.

THE *Sunday Gazette-Journal*, published at Hastings, Nebraska, by the Gazette-Journal Publishing Company, is a seven-column eight-page illustrated weekly. It is one of the handsomest sheets published in the United States. We wish it abundant success.

MAJOR JOHN L. BITTINGER is again owner of the St. Joseph (Mo.) daily *Herald*. Major Bittinger was one of the proprietors of the *Herald* some twelve or fifteen years ago, the firm then being Wilkinson & Bittinger. Since that time Mr. Wilkinson has died, and Mr. Bittinger has had a somewhat varied career, but finally gets back to his old place and property. Mr. Ferd. Schlagle, the foreman of the *Herald* when Mr. Bittinger left it, is still at the helm upon his return, and, we believe, also a compositor or two, among the latter Mr. Peter Nugent, now the "ad" man. The *Herald* is the best newspaper property in St. Joseph, and it will deteriorate none under Major Bittinger's ownership and management.

MOSS ENGRAVING COMPANY, 535 Pearl street, New York.

PHOTO-ENGRAVING COMPANY, 67-71 Park Place, New York.

PRESS ASSOCIATION NEWS.

THE Dakota Press Association meets at Watertown July 23.

THE West Michigan Press Association met at Muskegon, June 19, 20, and 21.

THE Wisconsin Press Association will meet at La Crosse, July 23. There will be an excursion to Eau Claire, Superior, St. Paul, and other points. We expect to give a detailed account of the proceedings in the August issue.

AT the meeting of the Georgia Weekly Press Association, held Wednesday, July 3, at Cartersville, Mr. W. J. Campbell of the *Constitution*, public printer for Georgia, delivered a very interesting address on typesetting by machinery, for which we will try and find room in our August issue.

WE have received the proceedings of the Canadian Press Association for 1888, annual meeting and winter session of 1889, from the press of H. C. Moore, the *Free Press* office, Acton, Ontario. They are systematically compiled, and contain a great deal of useful and interesting information.

AT the annual meeting of the New England Associated Press, the following officers were elected: President, W. W. Clapp, Boston *Journal*; secretary, F. B. Whitney, Boston *Transcript*; executive committee—W. W. Clapp, T. B. Whitney, J. H. Holmes, Boston *Herald*; J. L. Shipley, Springfield *Union*; S. A. Hubbard, Hartford *Courant*.

THE Kentucky Press Association met in annual session at Owensboro, June 6, and was one of the brightest and largest editorial gatherings ever held in the state. After the transaction of a vast amount of important business the banquet took place. Prominent among those who were assigned to respond to toasts was the Hon. Henry Watterson, editor of the *Courier-Journal*, who was given a warm greeting.

THE annual excursion given by the Pennsylvania Railroad Company to the editors of Philadelphia, Baltimore and Worthington newspapers left Philadelphia on Friday morning, June 21. The excursion this year was at Cresson, Pennsylvania, which is on the top of the Alleghany Mountains, and where the Pennsylvanians have a magnificent summer resort. The newspaper men, their wives and daughters, remained at the Mountain House for several days. A trip was made through the Conemaugh Valley, where the journalists had a chance to take a look at the scene of the great and destructive flood. These annual excursions are always very pleasant for all who are fortunate enough to be numbered among the guests, and much appreciated by the editors, who are confined to close rooms so many months of the year.

THE members of the New Jersey Editorial Association, their wives and daughters, and a number of invited guests, enjoyed an excursion through northern New York, the trip lasting from Monday, June 24, until Friday. The annual hop took place at the Glen Park Hotel, at Watkins station, on Tuesday evening. The excursionists left Watkins by special train Wednesday morning and arrived at Niagara Falls at half past twelve o'clock, over the New York Central road. The run from Rochester to Buffalo, sixty-nine miles, was made in ninety minutes. The excursionists quartered at the International Hotel. The following message was wired to the Pennsylvania editors at Cape May, New Jersey: "While viewing the waters of Niagara the New Jersey Editorial Association sends greeting to the Pennsylvania editors, enjoying the waters of the Atlantic at Cape May."

ABOUT 150 members of the Pennsylvania Editorial Association and their ladies took their annual excursion to Cape May, Monday, June 24. They first assembled at the Lafayette Hotel, Philadelphia, and from thence boarded the steamboat Republic at Race street wharf, through the courtesy of the owners. From Cape May Point the association proceeded to the Stockton Hotel, Cape May, where they partook of a banquet tendered by F. Theodore Walton. The party made their headquarters at the Stockton during their three days' stay. On Thursday night the annual banquet of the association was held. The association, through the chairman of their executive committee, H. L. Taggart,

extended an invitation to President Harrison to be present at the banquet or grant them a reception, but an answer was received to the effect that the latter could not attend the banquet or grant the reception. The president of the association is Thomas M. Jones, of the Harrisburg *Telegraph*.

THE twenty-sixth annual convention of Northern Indiana Editorial Association was held in Kendallville, June 13 and 14. Able and interesting papers were read on: "The Newspaper of the Fireside," by J. B. Stoll, *South Bend Times*; "The Advertising Agent," by J. D. Page, *News*, Fort Wayne; "Official Patronage," J. W. Adams, *Post*, Columbia City; "Making Both Ends Meet," J. J. Higgins, *Butler Review*.

ITEMS OF INTEREST.

ENVELOPES gummed on the outside of the lower flap instead of the inside of the upper flap is a new American idea. In sealing envelopes of this make the tongue is not brought in contact with mucilage.

AN adhesive mucilage for labels, suitable for bottles or glass, may be prepared by soaking glue in strong vinegar; then heat to boiling and add flour. This is very adhesive and does not decompose when kept in wide-mouthed bottles.

THE fiftieth anniversary of the invention of photography will be celebrated in Berlin, from the middle of September to the middle of October next, by a jubilee photographic exhibition. Exhibits from all countries will be admitted.

THE type specimen pages in this issue of THE INLAND PRINTER include four from the MacKellar, Smiths & Jordan Co., Philadelphia, three of which are lining gothics in different faces and one lining gothic extended. It will be noticed that all these have lower case from the six point up. They will all prove useful in offices of any size.

COMPRESSED vegetable parchment is being experimented with for bearings on Prussian railways. An emulsion of water and oil, any of the mineral oils, is used as lubricant. The parchment soon becomes impregnated with oil, and is able to go a long time without a renewal of lubrication. Superiority to metal is claimed for it.

MANY thanks to Mr. William B. Root, of Aspen, of the firm of Freeman & Root, dealers in mining properties, for information given and favors extended. The specimens received will be placed under lock and key, and treasured as heirlooms. Parties intending visiting this beautiful city for the purpose of investing in its mines, cannot do better than call on him.

RUSSELL B. HARRISON has sailed for Europe, where he will visit Paris, London, Berlin, Vienna and Leipsic in the interest of his paper here. Mr. Harrison, it is stated, will be the first member of the family in direct line of descent from Major-General Thomas Harrison, who was executed for fighting under Cromwell, that has ever returned to England, even to make a visit.

A NEW YORK daily states that thirty-five convicts were at work at Sing Sing, a few days ago, sorting and boiling rags, under the contract the warden has taken with Bernard Dreyfus of New York. They have fifteen tons to work on, and if the experiment proves successful the industry will be regularly established at the prison and one hundred men will be set at work at it.

MR. THOMAS W. ELLIOTT, of London, Ontario, an esteemed contributor to THE INLAND PRINTER, received the government medal for best wood engraving at the recent art examination at Toronto. This is the second medal this gentleman has taken, having received one last year for drawings. He also received certificates for painting on china, ornamental and industrial design.

A PROCESS to render paper impervious to the action of acids, water, air, etc., has been patented by C. D. Aaria, of London. It is as follows: A bath is first prepared, composed of bisulphide of carbon and gutta percha, sufficient of the first named being employed to dissolve the gutta percha and thus form a solution into which the paper is immersed and allowed to remain for twelve hours or more. The material is then removed and allowed to dry

for two hours, when it is placed under pressure to cause the gutta percha to form a solid coat upon the material. After applying this pressure, the paper or other material is once again allowed to dry for twenty-two hours, after which the whole process is repeated and the material is ready for use.

SOME time ago the *Central Typefoundry*, of St. Louis, offered \$200 in rewards for various original designs in type, and a reward for best collection of printing done with Central Typefoundry "copper alloy" type. There were a great number of competitors for each prize. The fortunate ones were: Orange Perry, Coldwater, Mich.; C. W. Kemmer, Fergus Falls, Minn.; A. J. Munro, Knoxville, Tenn.; F. R. Horsman, London, Eng., and S. Reed Johnston, Pittsburgh, Pa.

A NEW mill for the manufacture of paper from moss has been recently established in Sweden. Paper of different thicknesses and pasteboard made of it have already been shown, the latter even in sheets three-quarters of an inch thick. It is as hard as wood and can be easily painted and polished. It has all the good qualities but none of the defects of wood. The pasteboard can be used for door and window frames, architectural ornaments and all kinds of furniture.

BUSINESS OUTLOOK.

Bay City, Mich.—State of trade, good; prospects, good; composition on morning papers, 30 cents; evening, 28 cents; bookwork, 28 cents; job printers, per week, \$12. Mr. F. Rose, late of Lansing, is now foremanizing on the *Tribune*, and Mr. G. Callahan is holding a like position on the *Evening Press*.

Bismarck, Dak.—State of trade, good; prospects, flattering; composition on morning papers, 35 cents; evening, 30 cents; bookwork, 30 to 40 cents; job printers, per week, \$18 to \$25. Work will be good in this city until after the legislature in the spring. Not enough printers here now to do the work.

Boston, Mass.—State of trade, very dull; prospects, not very good; composition on morning papers, 45 cents; evening papers, 38 cents; bookwork, 40 cents; job printers, per week, \$15. New book and job scale put into force. Business not very good and printers warned to keep away from Boston at present. Principal firms signed scale 40 cents per thousand ems, \$15 per week.

Chicago, Ill.—State of trade, dull; prospects, uncertain; composition on morning papers, 46 cents; evening, 41 cents; bookwork, 35 cents; job printers, per week, \$18. President Plank addressed the union at its last meeting, and made a favorable impression. Opinion among the craft seems to be divided about the action taken by the International body at the Denver session.

Columbia, S. C.—State of trade, only fair; prospects, not encouraging; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, per week, nine hours, \$15; job printers, per week, \$18 and \$20.

Dallas, Texas.—State of trade, fair; prospects, encouraging; composition on morning papers, 42 cents; evening and weekly, 37 cents; week scale, \$18; nine hours constitute a day's work. Some talk of a new morning paper in the near future.

Detroit, Mich.—State of trade, good; prospects, bright; composition on morning papers, 38 cents; evening papers, 36 cents; bookwork, 35 cents; job printers, per week, \$14. Subs in good demand at present, with prospect of demand keeping up for some time.

Fort Wayne, Ind.—State of trade, fair; prospects, not very encouraging; composition on morning papers, 30 cents; evening papers, 28 cents; bookwork, per week, \$13.50; job printers, per week, \$13.50. *Morning Gazette* have removed to the Michael's building, on East Berry street, and have very neat quarters. On June 7 the *Morning Journal* changed hands, W. W. Rockhill, former city clerk, and A. J. Monahan, of the *Sentinel* editorial staff, taking charge. Archer & Bro. have moved into their new building on Clinton street, built for them. It is a very fine building.

Indianapolis, Ind.—State of trade, dull; prospects, not very encouraging; composition on morning papers, 38 cents; evening, 36 cents; bookwork, 40 cents; job printers, per week, \$16.50.

Jackson, Mich.—State of trade, fair; prospects, fair; composition on morning papers, 30 cents; evening papers, 27 cents; bookwork, per week, \$12; job printers, per week, \$12. C. F. Narson has resigned his situation on the *Patriot*, and will act as agent for the *Free Press* (Detroit), here.

Kalamazoo, Mich.—State of trade, fair; prospects, good; composition on morning papers, 27 cents; evening, 25 cents; bookwork, 25 cents; job printers, per week, \$10 to \$15.

Kansas City, Mo.—State of trade, good; prospects, medium; composition on morning papers, 40 cents; evening, 35 cents; bookwork, 37½ cents; job printers, per week, \$17. Newspaper work continues fair, while book and job work is showing signs of the approach of hot weather. Crane's office is turning out considerable fine work. No. 80 pays per capita on 240 members—100 gain in last year.

Los Angeles, Cal.—State of trade, about fair; prospects, about fair; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$20. Work in the job printing line is very dull at the present time, and in book printing there is nothing doing. The supply of printers in all classes is much greater than the demand.

Lynchburg, Va.—State of trade, fair; prospects, moderately fair; composition on morning papers, 30 cents; evening, \$12 per week; bookwork, 30 cents; job printers, per week, \$12.

Manchester, N. H.—State of trade, good; prospects, good; composition on morning papers, 30 cents; evening, 20 to 23 cents; bookwork, 25 cents; job printers, per week, \$10 to \$12. Col. John B. Clarke has been reelected state printer for two years, which will make business good in his (the *Mirror*) office for that length of time, as it has been most of the time during the past four years.

Newark, N. J.—State of trade, dull; prospects, poor, until September 1; composition on morning papers, 40 cents; evening papers, 36 cents; bookwork, 36 cents; job printers, per week, \$17. The printing business is very dull, there being two unemployed printers to every one employed. The *Sunday Standard* has been changed from an eight-page to a four-page paper.

Omaha, Neb.—State of trade, fair; prospects, good; composition on morning papers, 40 cents; evening papers, 37 cents; bookwork, \$16; job printers, per week, \$18. Too many printers in town at present, and still they are pouring in.

Pittsburgh, Pa.—State of trade, good; prospects, fair; composition on morning papers, 42½ cents; evening papers, 37½ cents; bookwork, 37½ cents; job printers, per week, \$16. Sunday was suspension day in No. 7; about twenty-five members went by default, dues not paid. Joseph L. Evans, ex-president of No. 7 and an ex-delegate to the International Typographical Union, has been found guilty of boycotting, and the master decrees that he and a few more shall pay the sum of \$2,400, and costs, about \$4,000, quite a sum to pay when the boys have not the wherewithal. The printers will give their annual picnic in August. Plenty of subs in town and ditto of work.

Richmond, Va.—State of trade, very dull; prospects, not encouraging; composition on morning papers, 40 cents; evening, 40 cents; bookwork, 40 cents; job printers, per week, \$16. Business is duller than it has been for years, and the "subs" outnumber the regulars. Tourists without money had better not stop here unless they want to walk out of town.

Rome, N. Y.—State of trade, good; prospects, fair; composition on evening papers, 25 cents; bookwork, 25 cents; job printers, per week, \$10 to \$12. Job offices are having all they want to do. The employing printers are making a combined effort to stop the "pauper" printing done at the D. M. Institute. The *Republican* has added two lady compositors (the first in the city) to its composing room.

St. Louis, Mo.—State of trade, fair for the season; prospects, not so good; composition on morning papers, 43 cents; evening, 38 cents; bookwork, 45 cents; job printers, per week, \$18.

St. Paul, Minn.—State of trade, very poor; prospects, also poor; composition on morning papers, 42 cents; evening papers, 37 cents; bookwork, 35 cents and 43 cents; job printers, per week, \$16. Every branch of the printing business still continues very dull, and the city is loaded with idle printers; job hands make less than \$15 per week for the present.

Tacoma, W. T.—State of trade, very dull; prospects, fair; composition on morning papers, 50 cents; evening, 45 cents; bookwork, 45 cents; job printers, per week, \$18 for 9 hours. Due to the late conflagration at Seattle, and of consequently throwing many "comps" out of work, this will be a poor place for some time to come.

Topeka, Kan.—State of trade, fair; prospects, encouraging; composition on morning papers, 33½ cents; evening, 30 cents; bookwork, per week, \$15; job printers, per week, \$15. Contrary to all predictions and former records, July opened up with a demand for more printers than the town could supply, and a few were imported. This state of things seems destined to last through the month, and perhaps longer.

Toronto, Ont.—State of trade, very dull; prospects, not bright; composition on morning papers, 30 cents; evening and weekly, 28 cents; bookwork, 33½ cents; job printers, per week, \$11. Work on morning papers and in a few of the day offices became suddenly brisk recently, but is rapidly reacting toward dullness again. Nine hours prevails.

Wheeling, W. Va.—State of trade, fair; prospects, not encouraging; composition on morning papers, 35 cents; evening, 30 cents; bookwork, 35 cents; job printers, per week, \$15. Work has been very good for a few weeks, but has commenced to slack up a little now.

BUSINESS NOTICES.

IN this issue will be found the advertisement of a new implement for rule bending, called the Bartholomew "Twister." Cuts of it, and samples of its work, are shown in the advertisement, which explain the implement and its uses better than words. Among the recommendations offered for the Bartholomew "Twister" are its simplicity, portability, durability, and above all

its cheapness, the price being but \$4.00. At this price every rule twister can afford to have a "Twister" of his own. C. E. Bartholomew, 22 College Place, New York, is the manufacturer, to whom orders should be sent. See the advertisement.

THE Liberty Machine Works of 54 Frankfort street, New York, calls the attention of the trade in this issue to their new indestructible solid all-brass galley and their galley lock-up on pages 868 and 869. The galley is strong and substantial, is guaranteed for three years, and is certainly entitled to be called "indestructible." The galley lock-up is a useful and simple contrivance, which will save its cost in time saved in a few months.

A RARE opportunity is open for a competent job printer who can invest \$5,000 to secure a half-interest in one of the best paying plants in the West (established 1883). Business includes wood and seal engraving, making rubber stamps, etc., and will be sold only to a suitable party. Must be sold, as owner will enter theological seminary first of September. Principals only address for particulars "C. W. D.," 904 Monroe street, Topeka, Kansas.

TO THE SEA SHORE AND THE WHITE MOUNTAINS ON THE FINEST TRAIN IN THE WORLD.

The next "Sea Side and White Mountains Special," solid Pullman vestibuled train of the Chicago & Grand Trunk railway leaves Dearborn station, Chicago, Wednesday next, at 5 p. m., and each Wednesday thereafter during the tourist season. The attractions of Niagara Falls, Thousand Islands, Rapids of the St. Lawrence river, Montreal, and the glorious scenery of the White Mountains, are all enjoyed by passengers on this modern hotel on wheels. The entire train, including dining car, barber shop, ladies' and gentlemen's bath rooms, library, and observation car, with four magnificent Pullman vestibuled sleeping palaces, all lighted by electricity, runs through to the Atlantic coast without change of any car. The ladies should not overlook the special feature of a "lady attendant," who accompanies the train. Passengers for the White Mountains, Rangeley Lakes, Poland Springs, Portland, Bar Harbor, Old Orchard, York Harbor, Portsmouth, Isle of Shoals, and all the sea-side and mountain resorts of New England, should secure accommodations early on this finest train in the world by applying to E. H. Hughes, general western passenger agent Chicago & Grand Trunk railway, No. 103 Clark street, Chicago, Illinois.

Tourist tickets to all eastern summer resorts are now on sale good to October 31st.

SOMETHING NEW.

COMBINED TYPE TABLE AND GALLEY RACK.

Every proprietor of a printing office knows the trouble and annoyance the care of matter, "live" or "dead," occasions. He knows the disadvantages of the galley rack, the standing galley and the imposing stone as receptacles for standing matter. Something to take the place of these and obviate their disadvantages has been "a long-felt want." Not only has such a thing been a long-felt want to the proprietors, but foremen and compositors as well have felt the need.

Some years ago the foreman of the composing room of now one of the largest law-book publishing houses in the country discovered a scarcity of room for standing matter, and asked the proprietors to purchase a few additional stones. The proprietor replied, "Can't you find a substitute for stones? They take up too much room, and, besides, are very expensive." The foreman then set his wits to work, and, profiting by the adage that "necessity is the mother of invention," devised the Combined Type Table and Galley Rack, a condensed description and cut of which is herewith given. It is the invention of Mr. John Jehle, of St. Paul, Minnesota, and a patent on it was allowed January 29, 1889. The invention is no experiment, as it has been in use for more than three years.

The tables and covers are constructed of hardwood. Height, including covers, 3 feet 6 inches; length, 3 feet 3 inches; width,

2 feet 2 inches; with surface of about 36 square feet for type, and rack for twelve or sixteen double galleys, full length. Also, one sort case.

Covers and receptacles for type, covered with heavy rolled zinc; gutters around whole table, preventing water running onto galleys and floor. The tables and covers are designed for live or dead matter.

SIDE VIEW.—With space for sixteen double galleys lying flat, and covers projected. Also made for galleys raised on one side. *a* to *c*, portable covers for live or dead matter; *d* to *f*, stationary receptacles for live or dead matter; *d*, the letter is not shown, but it is the space for matter immediately under *c*; *g*, galley racks; *h*, sort case; *i*, water can.

The covers can be moved either forward or backward, so as to reach the matter underneath, and are provided with iron grooves to prevent tipping when moved out more than half way.

All type on tables and covers is accessible without a moment's delay. The tables and covers are provided with galley-rests for shoving type off. The covers are portable, and can be removed with type and placed near the compositors' cases, thus saving valuable time when distributing.

There is no wear on the bottom of type, as the zinc can be oiled with machine oil (which prevents corrosion), and is as smooth as stone. The oil does not get onto the type, as printers will testify. Wipe oil off before placing type on tables or covers.

By the use of these tables the imposing stones are always ready for locking up of forms.

The tables can be made any shape or size desired.

The West Publishing Company, of St. Paul, Minnesota, have in use eight tables, each being treble the size above described, with covers, and store about four thousand pages of live and dead matter on their tables — fully 30,000 pounds of type — and the average amount of matter pied does not amount to one-fourth of a galley per week! a wonderful record considering that there are from 100 to 150 employes in the composing room the year round. Three imposing stones only are used in the job and composing rooms, and no matter is kept standing in chases, thereby saving great expense in chases, furniture, etc.

THE VAN DUZEN GAS ENGINE.

Among the many modes of producing power for propelling machinery of every kind the gas engine is one of the most satisfactory, economical and efficient now used, and of the various makes of this class of engines none stand higher in the estimation of those who have used them, or have proved more serviceable and practicable, than the Van Duzen gas engine, manufactured by the Van Duzen Gas Engine Company of Cincinnati, Ohio. The Van Duzen engine is of the very highest grade both in construction and material, and being of the vertical type it occupies from 20 to 50 per cent less floor space than other engines. Besides the

advantage of compactness, an engine of this construction has less friction of the working parts, perfect alignment, and is consequently the most durable. It will be to the interest of any printer, publisher, bookbinder or electrotyper to examine this engine and look well into the merits of the same, if about to add to his plant a motor of any kind. The Van Duzen Company have issued a descriptive pamphlet fully describing all the points of excellence of their engine, which will be sent to anyone interested on request. Notice the advertisement of the company on page 862.

ANOTHER NOVELTY JUST OUT.

The old established, well-known and enterprising firm of Berger & Wirth, manufacturers of fine colors and printing inks at Leipsic, Germany, having their branch located at 190 William street, New York, have brought out an entire new roller composition, the "Victoria Bianca," called "The White," on account of its white cream color.

This new composition, to judge from the peculiar, and to the purpose, especially suitable materials, according to experience and practical tests, surpasses anything which has been made hitherto. The "Bianca" excels in its great elastic and resisting powers and durability, and can be frequently recast without losing its many excellent qualities. The composition is also quite indifferent to temperature, can be worked in cold, warm or damp rooms, and is therefore highly recommended for any kind of work, for ordinary machines as well as for the fastest running rotary machines, in every climate.

It may just as well be added that this new composition has already stood the test to the fullest extent, being pronounced by the most eminent establishments in Europe as THE BEST in the market, fully carrying out all the claims of its manufacturers. We have, therefore, much pleasure in recommending the new "Victoria Bianca" to the American trade as a first rate article in every respect.

Mr. Beisbarth, the able and courteous manager of the New York branch, will gladly give all further information.

FIVE HARVEST EXCURSIONS.

The Burlington Route, C. B. & Q. R. R., will sell from principal stations on its lines, on Tuesdays, August 6th and 20th, September 10th and 24th, and October 8th, Harvest Excursion Tickets at *Half Rates* to points in the Farming Regions of the West, Southwest and Northwest. For tickets and further information concerning these excursions call on your nearest C. B. & Q. ticket agent, or address P. S. EUSTIS, Gen'l Pass. and Ticket Agent, Chicago, Illinois.

A GOOD OPENING.—An established country paper in a growing town of over 2,000 population in New York State is offered for sale. Circulation over 2,000; job work and advertising good. Office finely located in new building. Water power and other conveniences. Don't write unless business is intended. \$2,000 or \$2,500 to make first payment. Address "X," care INLAND PRINTER.

EVERY PRINTER should have a copy of "DIAGRAMS OF IMPOSITION," and "THE PRINTER'S READY RECKONER." Price, 50 cents each. To be obtained of H. G. Bishop, 37 North Pearl St., Albany, N. Y., or through Farmer, Little & Co., New York and Chicago. These are the handiest and most useful works ever published for printers. Indorsed by everyone who has seen them. Agents wanted in every town.

FINAL VOLUME of the "American Printers' Specimen Exchange" to be issued this year, and as we have gained a good many new members by furnishing copies of Vol. III at the binding fee, shall continue to do so as long as they last. See notice in another column. ED. H. McCLURE, Buffalo, N. Y.

FOR SALE—An established business, now paying a good profit. Customers in every State. A good chance to make money. Address, STICK & RULE, care INLAND PRINTER.

FOR SALE—Newspaper in a live town in New York state. Circulation over 2,000. Office established and doing a good business. Capital opening for a young man. Address "J. P. W.," care of THE INLAND PRINTER.

FOR SALE—An old-established and well-equipped job printing office in one of the largest and best cities in Michigan. The proprietor has other business, and will sell at a bargain. For particulars address JAS. GRAY, Box 603, Bay City, Michigan.

FOR SALE—Complete Hughes stereotype outfit No. 1, 13 by 23 inches, with all tools, etc., for doing first-class work, and full instructions for use. Outfit is new, and will be sold at a bargain. Address "BARGAIN," care of INLAND PRINTER.

RARE OPENING—In leading job printing and bookbinding business. County seat of 30,000 inhabitants. Capital required, \$5,000 to \$7,000. McNEIL BROS., San Jose, California.

WANTED—Foreman; a man who understands all branches of the printing business; must be up to the times. To a first-class man a permanent situation and good wages. Address, with all particulars, "C. P. S.," care of INLAND PRINTER.

WANTED—The Inland Printer Co. desires to obtain fifteen or twenty copies of No. 4 of Vol. III of THE INLAND PRINTER to complete sets for binding, and will pay 25 cents per copy for same. Send them on if you can spare any.

\$3,000 will buy a newly established job printing office doing a paying business. Presses of the latest pattern; type on point system. Population of city 70,000, with many large surrounding towns. A capital opportunity for a stock company. Reason for selling, desire to settle estate. Address "EASTERN," care of INLAND PRINTER.

THE LEADING ENGRAVING ESTABLISHMENT OF THE COUNTRY

PERFECTED

PROUTY P.R.E.S.S.

WE WANT YOU and every other Printer TO KNOW

that the "Perfected Prouty" is the best Job Press made. Such a claim we know, and you know, is common, but we make this claim because every printer using the "Perfected Prouty" pronounces it the best, and these are

THE REASONS WHY

It is not an old-style press under a new name, but a modern press, built from original designs to meet the requirements of the printer. Old ideas of construction have been discarded, and the "Perfected Prouty" is absolutely free from grinding cams and powerful springs, rubbing or sliding motions, thump, pound, noise and rattle.

THE "PERFECTED PROUTY" PRESS

is so constructed that speed and durability combined with excellence of the work produced, and smoothness of operation are its characteristic features. In these particulars this press is Perfection, and its claims to superiority are based upon solid facts. Investigate these claims and you will be forced to admit that the "Perfected Prouty"

IS SUPERIOR TO ANY OTHER.

We sell the "Perfected Prouty" on its merits; guarantee full satisfaction, and will ship one on trial to any responsible firm. Any printer wanting a Job Press should acquaint himself with the new features and valuable merits of the "Perfected Prouty."

Descriptive Pamphlet mailed on application.

PATENT IMPROVED TWO-REVOLUTION PRESS

WITH patented mechanism for controlling the vertical movement of the impression cylinder. It is extremely powerful, accurately fitted, free from friction and evenly balanced. A patented automatic device is also provided which prevents lost motion, and governs the degree of impression. Its patent reversing mechanism consisting of a cross-belt and spring shifter, is operated by the foot, which places the Press under the immediate control of the feeder. These advantages, with its Sheet Delivery, Hinged Distributer, Caps, Positive Slide Motion, Noiseless Grippers, etc., complete a printing machine that in every respect is equal to the most exacting demands of the times.

USEFUL HINTS.

BY GUSTAV BOEHM.

IT is of small experiences and useful hints that this paper is intended to treat. They may be known to some and not to others of the extensive circle of readers of THE INLAND PRINTER, and thus, by administering advice to even a comparatively small number of people, it will fulfill its mission.

This is the time of discontentment in the pressroom. There is no ghost feared as thoroughly by any minor as the ghost of humidity by the pressman. Rollers are unfit to use. The pores of the composition seem to open and allow the property of a good roller—to take and give the ink freely—to escape. The fountain is wide open, the rollers apparently covered with ink, and still the impression is gray and insufficient. Roller-makers insist upon having cast perfect rollers, and, shrugging their shoulders, simply reply to the complaints of the printer: "It's all over so, it's the weather." Our experience this summer has been abundantly disagreeable in this direction. To await dry, if even warm, weather will in most cases not do. Time is pressing, the work must be turned out be the weather damp or not damp, and the experience and patience of the pressman are thus taxed to the utmost. It is a case where despair would be excusable; but despair will not do the work, and therefore we must keep cool, notwithstanding the 90° Fahrenheit, and be composed. The trite saying, "You must use old, winter rollers," is now heard. So far, so good, if you have them; and, although every careful pressman will provide for this emergency, it may be—I dare say it occurs every day—that there are none. In such emergency I advise the following, which, at times, has done me good service. If I have time to await the seasoning of a new set of rollers—which may be accomplished with the care of the roller-maker in two or three days, although the proper time, under ordinary circumstances, is at least a week—I order new rollers without any glycerine or fatty substance whatever. Such rollers are the best for humid weather or damp pressrooms. In places near the river or on ground floors such rollers will be found of

great service. In case there is no time for a postponement of the work, which is generally the rule, my advice is to wash the rollers; take them out of the press and roll them well on a dusty floor. Allow them to rest a short while; wash them again and put them on the press for use. This procedure will reduce the so-called life of a roller considerably, and I have frequently done very creditable work with rollers which absolutely refused to take or give ink before such treatment. It is unnecessary to say that extra, fine work, cut and plate work will hardly be satisfactorily done in such cases, and I cannot but pity that pressman who, in the dilemma of continuous damp weather with unsatisfactory rollers on hand, is compelled, or, rather, expected, to turn out creditable prints. It is a case of h—l on earth. Heaven befriend me! I have sometimes tried to dry up the atmosphere by placing a number of lighted lamps around the press, and my endeavors have several times had unlooked for success.

While dampness is often the cause of annoyance in pressrooms, it may at times become a very desirable factor. This is the case when printing on gummed paper. Dry, brisk days are unfavorable for such printing. I have been advised, and have tried, with comparative satisfaction, to place a wet sponge on the feed-board near the paper. The latter will draw the dampness sufficiently to work flat and handily. To sprinkle water on the floor about the press on which the gummed paper is to be worked has also helped me in keeping the paper from rolling.

Another case when humidity is desirable is in the much-feared case of electrical adherence. It often occurs in pressrooms, especially when extra great speed is necessary in running a job, that the immense friction produces an electric quality of no mean force, which compels the printed sheets after leaving the fly to adhere to each other and to form almost one solid mass, making it impossible to straighten the same. I have heard that the application of water will be of service in such cases. To do this properly I have sprinkled the floor around the press with water, and, placing a pail with water near the delivery table, put a sponge into it from which a

piece of heavy cord or wire leads up to the table between the delivered sheets. The electricity produced by the friction is thus received by the damp cord or wire, and, water being an excellent conductor, is, by this means, led into the pail, leaving the sheets free from the awkward property.

In this age of wood-pulp paper it is hardly necessary to speak about a method of testing the paper in regard to its possible contents of wood; still, in cases where a reliable, never-failing test is required, the following may be used: Mix three parts of nitric acid with one part of sulphuric acid; apply a drop of this mixture to the paper, and if it contains the least particle of wood it will at once color brown where it is brought in contact with the mixture.

Möser's "Technische-Rundschau" recommends the following method of printing numbers for reserved seats, etc., running in rotation. The device is simple and well worthy of the consideration of American printers, for which reason I think it not out of place to explain the manner herewith.

Suppose we have an order for 200 reserved seat numbers from 1 to 200, six copies of each, we need not set up more than the units 1 to 0. These figures are to be set up, properly spaced, one above the other, as shown in section A of the table below:

A	B	C	D	E	F	G	H	I	K	L
1	11	21	31	41	51	61	71	81	91	01
2	22	32	42	52	62	72	82	92	02	12
3	33	43	53	63	73	83	93	03	13	23
4	44	54	64	74	84	94	04	14	24	34
5	55	65	75	85	95	05	15	25	35	45
6	66	76	86	96	06	16	26	36	46	56
7	77	87	97	07	17	27	37	47	57	67
8	88	98	08	18	28	38	48	58	68	78
9	99	09	19	29	39	49	59	69	79	89
0	00	10	20	30	40	50	60	70	80	90

One hundred and twenty impressions are taken on strips of cardboard cut to the required width. This done, we have the required number of units, and change the gauge-pins in a manner to print the same form beside the printed figures to form the tens, as shown in column B of the table. We take twelve impressions of this form on twelve of the already printed strips. The next step is to change the form by taking the top figure (1) and placing it at the bottom of the column, so that the next impression on a strip of the first form will read as shown in column C of the table. We print again twelve strips of the first form. This change of the top figures, 2, 3, 4, 5, 6, 7, 8, 9 and 0, respectively, is repeated eight more times, shown in the table as sections D, E, F, G, H, I, K and L. From each change twelve impressions on the printed strips containing the first form must be made. This will finish the tens, and by changing the form to ten figure 1's, and again moving the pins to the left for the space-width of the type, and printing six strips of each of the former changes from B to L, we will obtain the hundreds, or a continuous run of numbers from 1 to 199 in an edition of six copies. To obtain number 200 we must print upon the six strips

left a figure 2 to head the 00 of column B. In assorting the numbers it will be found that each six copies of the heavy type cannot be used, but this small loss in stock is compensated many times by the advantage derived from the method.

These and similar suggestions, partly originally experienced by others, but tested by the author of this paper, could be continued to many columns of matter. But I have already trespassed too much upon the valuable space of the editor, and must abstain from saying any more today. Possibly one or the other items of information may appear new to some one of the readers of THE INLAND PRINTER, and will benefit him. In this case the writer will have attained his object.

Written for THE INLAND PRINTER.

THE DENVER CONVENTION.

BY M. J. CARROLL.

THE work of the delegates to the Denver convention of the International Typographical Union, at least that portion of it relative to matters of special interest to the craft in general, has now become sufficiently understood to at least admit of an intelligent criticism being formed on the subject.

Probably no convention of the International Union has ever been convened under more auspicious conditions and surroundings than the one just held in Denver, and it will be a little curious to note how the legislation of a body of printers will be affected when they are surrounded by such favorable circumstances as attended the delegates in their last trip to the mighty West. The scenery of that part of the country is acknowledged to be unsurpassed by any in the world, while the well-known hospitality of the western people was fairly outdone on this occasion. On no former occasion was there such a lavish expenditure of money in the entertainment of the International body, nor such unremitting zeal displayed in ministering to the comfort and enjoyment of visiting delegates.

And yet, after a careful and unprejudiced review of the work done at Denver, I am forced to the conclusion that the members of that body did not reach the high-water mark in the wisdom or effectiveness of the work done there. I am fully conscious of the fact that it may be regarded as somewhat unreasonable to expect a body of untrained legislators, such as printers necessarily must be, to avoid all the pitfalls and temptations attending a convention composed of members the majority of whom are attending the first meeting of the International that they have ever seen in session, and whose controlling influence seems to be a desire to take up all the business that may be presented, and dispose of it in some manner or shape.

One stand taken at Denver, the one in favor of submitting to local unions "laws involving an increased taxation," will probably denote, as clearly as anything else, the motive which governed the members of that body; and to a printer of a speculative turn of mind will present a somewhat curious phase of our legislative history

in the past. It is a well-known fact that there is not a single combination of workmen in the land, one that makes any pretense to maintaining a national or an international organization, whose members pay as light dues as do the members of the unions composing the International Typographical Union. We have occasionally been able to get together a convention, the majority of which was composed of men who saw the necessity of a more thorough organization of the printers of America and who had the courage of their convictions, and enacted laws looking to that end. But the next convention would invariably go back to the old order of things, or adopt measures making it necessary to submit those measures involving an "increased taxation" to the local unions, where they have been uniformly defeated.

Thus we have been playing shuttlecock with the most important measures that have ever occupied the attention of the printers of America. It may seem strange that the idea could suggest itself to anyone; that the rank and file of the unions, the men who compose it numerically and whose membership is absolutely necessary to the existence of an international body, should not be the proper people to finally pass judgment upon all questions involving an increased outlay. Still the fact remains, that every question of this class that has been so submitted has been unmercifully snowed under up to the present time. I am satisfied to leave the consideration of this question to the printers of the country without any further comment on my part.

One of the old-time questions that occupied the attention of the Denver delegates was that relating to the length of time which an apprentice should serve before he can be recognized as a full-fledged printer. It is difficult to see why this question should be so frequently brought before the convention, when we recollect that the only disposition ever made of the matter was to change the term of service from five to four years, or vice versa. Why would it not be a good idea to regulate this question in accordance with the law of supply and demand? If it should appear that we have too many printers, make the term of service longer; if there is a scarcity of labor, shorten the term. But this view of the subject seems to have no merit in it from the standpoint of the average delegate, as the only change that has ever been made in the law is the one noted above.

Below will be found a brief synopsis of the most important changes proposed at Denver to the constitution, by-laws and general laws of the International Union:

1. To make sessions of the International Typographical Union annual instead of biennial; and to change terms of officers of the International Typographical Union to one year instead of two.
2. To amend Article VI, Section 1, of the constitution, by striking out clause authorizing president and executive council of the International Typographical Union to submit measures to subordinate unions.
3. To amend Article VI, Section 6, of the constitution, by omitting organizers from executive council; striking out clause

authorizing executive council to enact temporary legislation; making meetings of executive council subject to call of president; striking out clause authorizing executive council to levy assessments; striking out clause authorizing executive council to terminate strikes, and by adding the following: "Provided, however, that in towns or cities where there are more than one union holding a charter from the International Typographical Union, they shall not call in the executive council until a conference has been had by equal representation with all subordinate unions in such city or town."

4. To strike out Section 8 of Article XIV of the constitution, which empowers the executive council, in case of a strike, to call out allied crafts; make Section 7 appear as Section 8; and to insert for Section 7 a section providing that in cities where there are more than one union holding charters from the International Typographical Union they shall create a joint standing committee, "to whom the several trades shall refer the adjustment of difficulties with employers."

5. To amend Section 3 of Article IV, so as to make an officer of the International Typographical Union eligible to reelection, "even though he has not been returned as a delegate."

6. To amend the constitution by striking out clauses which authorize organizers to hear appeals and decide thereon.

7. To amend Section 1 of Article VI of the constitution, so as to change the location of headquarters of the International Typographical Union from Indianapolis to Chicago.

8. To amend Section 116, general laws, by making the term of delegates one year instead of two.

9. To accept eighty acres of land in Colorado as a site for a home for sick and indigent printers.

In looking over the foregoing, we cannot avoid the conclusion that the members of the Denver convention were strongly impressed with the necessity of undoing, so far as possible, the work done at Kansas City. This was entirely in accord with the action of former conventions, and can be most clearly discerned in the treatment bestowed on the question of organizers by the gentlemen in the Denver convention. This was probably the most prominent measure transacted at Kansas City, and one that brought that meeting into more than usual prominence. Of course, the leading men of the Kansas City convention know that their work was far from complete, and that but little could be accomplished by the organizers with the scanty financial provision allowed them. They regarded their work as merely an entering wedge, to be taken up by succeeding conventions, and vigorously prosecuted until the printers of the country were thoroughly and systematically organized. It was supposed that each recurring convention would take the districts as they found them, and double their number by dividing each one until such time as they would have been brought to a compact and convenient size, when the results would quickly have become apparent. But the members of the Denver convention evidently looked at the matter in an altogether different light, and, in the interest of "economy," did what they could to place the International body exactly where it has been since its formation, and just where it will be of no practical value in assisting local unions out of any difficulty in which they may become involved. It is doubtful if there is any economy in this action, as the system of biennial sessions provided at Kansas City would more than save the printers of this country the amount of money

contemplated as necessary for the purposes of organization.

It will easily be agreed that one of the most vitally important questions considered at Denver was the acceptance of the gift of eighty acres of land for the building of a home for superannuated printers. This is a subject on the merits of which I cannot hope to do justice in the tail-end of an article of this kind, and will, therefore, postpone the subject to a future communication. Before closing, however, I wish to call the attention of printers to the fact that this question will require careful consideration, as the body of the printers are evidently very much divided on the advisability of accepting this donation. Many claim that it is too far removed from the large majority of the printers of America; that it is in a country where the necessities of life are high-priced, and where the health-giving qualities of the climate are of doubtful benefit to any but one class of patients. However, this is a subject I trust printers will thoroughly investigate and discuss, and will promise to return to it myself at some future time.

WRITTEN FOR THE INLAND PRINTER.

ENGLISH, AND AMERICAN CHANGES IN ITS ORTHOGRAPHY.

BY JOHN BEDFORD LENO, LONDON.

WHEN two great nations, like England and America, speak and use the same language, any difference in pronunciation or its orthography is to be regretted. It is bothering to ordinary men, but it is more so to those connected with the printing profession, more especially when the assimilation is going on, for, sooner or later, that is sure to take place.

Englishmen are inclined to the belief that no other people have a right to take liberties with a language which they deem their own, and I remember the time when the outcry against America for its orthographic changes was both loud and long, when they were looked upon as a national insult. "What right had they (the Americans) to tamper with our language and change the spelling of words?" No thought was ever taken of the fact that English spelling was full of anomalies, anomalies that can best be seen by consulting a rhyming dictionary, more especially that of Walker.

Truly, the English are a conservative people, and conservatives of a certain order never ask themselves what they wish to conserve. Many a curse have I hurled at the head of Noah Webster; but like those that came from the jackdaw of Rheims, mentioned by Ingoldsby, there is every probability that they did not disturb his last long slumber.

Withal, his style of spelling has made, and is making, headway.

I have since learned that this feeling was unwarranted, and that we should have been wiser if we had remained silent. I know of no matter upon which such exaggerated ideas have prevailed. A vast number of persons, and these not in any way confined to the uneducated order, entertained the belief that Noah Webster

had revolutionized the English language, and, moreover, that he had done this without thought or consideration. I confess that I once entertained this idea, and so the name of Noah Webster became hateful to me.

On giving time and attention to the matter, I found I had been grossly deceived; that the compiler of the dictionary for America had made comparatively few alterations, and, moreover, that he had good warranty for making them. In a word, I saw that he had been struck with glaring and admitted anomalies, and had attempted to get rid of them. There was nothing that could be called drastic in his treatment. Instead of going as far as he might have gone, he contented himself with changing—may I not say righting—a few of the most conspicuous departures from the rules laid down by our best grammarians and lexicographers. Let it be noted that I confine my remarks to Noah Webster's changes, or, at least, to those with which he is credited in this country, and the impression they created on the minds of a considerable number of Englishmen.

I have more than hinted that an English rhyming dictionary will speedily reveal the strange anomalies in English spelling. In Walker's rhyming dictionary all the words ending in "full" will be found brought together. The meaning of "full" is well understood. It has one meaning, and no more. Now, is there any earthly reason why it should be indiscriminately spelled with one or two "l's," as "ful" and "full." Take an ordinary English dictionary and search for it, either as a prefix, a terminal, or as the center of a word, and you will see that the two modes of spelling are employed without either rhyme or reason. Strange to say, we English have taken and still take but little notice of this strange inconsistency. The eye is not offended; our sense of propriety is not outraged. In all compounded words in which the word "full" occurs, I hold that one "l" would be sufficient. With this inconsistency Webster has not attempted to deal. He may have changed the spelling in certain words of this order; but he has not attempted any radical change.

In the formation of the plurals of such words as "chimney," "money," "pony," "penny," etc., he has strictly adhered to the rule laid down by Lindley Murray, and boycotted the exceptions. The English still recognize these exceptions, or, rather, a goodly number do, and pluralize without sense of congruity. Clearly, in such cases, there could have been no necessity for departing from the rule, which tells us that when the "y" terminating the singular form of the word is preceded by a vowel, the addition of the letter "s" is the legitimate mode of forming the plural, and that, when it is not so preceded, the correct way is to change the "y" into "ies." That we English are not altogether beyond conviction, is proved by the fact that the American spelling in this class of words is winning converts daily. Take the word "moneys." On looking over a host of papers, published forty years ago, I have found no instance in which the word is spelled otherwise than "monies"; but, on referring to those of today, I find in the majority

of cases where this, the plural form of the word appears, it has the added "s" only.

The deleting of the "u" in such words as "colour," "parlour," etc., is not so generally adopted or approved of. Still, there is no denying that the change is gradually and persistently making headway, and that it must win in the long run.

One of the most radical changes to which we shall stand indebted to Noah Webster, will be, when completed, the omitting of the superfluous consonant in such words as "traveller." Here, again, the great American lexicographer has taken no liberties. He has simply carried out a well-known rule and wiped away needless exceptions. When, says Murray, words ending with a consonant have the accent on the final syllable, as "allot," in forming the past participle the consonant should be doubled. In other words the rule is, when the accent is on the last syllable the consonant is doubled, but not when the accent falls elsewhere. Why was this rule not abided by? Why should "traveller" and a host of other words have been placed among the exceptions? I can find no reason, and I have never yet met a man who could.

I see that the same American authority has dropped the diphthong out of certain words in which it is still employed by the English, as, for instance, "phenix." Why is it still left in others by this usually consistent scholar, I am at a loss to divine.

There is one change introduced by this eminent American authority that appears to have made no headway with the British public. I allude to such words as "sceptre," "mitre," etc.; up to the present time no English scholar has, to my knowledge, been bold enough to attempt to change the spelling of these words to "scepter," "miter," etc. That it is a rule to change words of similar termination when incorporated into English, is well known; then, why these exceptions, and why should we remain prejudiced against the change?

There is a single word in our language, I allude to "operative," that I should like to see displaced as a noun or substantive; more especially as we could do very well without it. Fancy calling a visitor a visitive!

I am no advocate of the phonetic system, and am personally opposed to the introduction of such spelling as "hav" for "have." This opposition may result from a residue of the old prejudice. Good reason could possibly be adduced for such changes; but I hold that their introduction is likely to land us in a muddle.

It must be admitted that the effect of change to the eye, however justifiable its introduction may be, is distinctly unpleasant, so much so that I am persuaded that it was the offense given to the eye, rather than the other senses, that swelled the outcry raised at the onset. Fortunately the eye soon becomes familiarized with the changed form of the word.

We English, or rather the majority of those who come within that category, no longer speak of the unsightliness of words spelled in the American fashion, which clearly shows that the offensiveness arising from

the alteration is not lasting. The prejudice thus raised is fast dying out; indeed, it may be said to have died out. The eye no longer feels a difficulty, and the senses are being or have been convinced that the change has common sense in its favor. The eye is an important factor in all such matters; indeed, I know of no sense of equal importance. It is, as I have more than hinted, quick to take offense, and when the offense is justly taken, its influence is all-powerful.

I know of no class of men who have so much interest in this matter as compositors, both English and American. I, myself, have, before now, had to unlock a form in order to change the spelling of a word belonging to one or other of the classes of words herein alluded to, and this must have occurred to others. The loss of time thus occasioned may not be great, but it is an unnecessary waste, and might have been possibly prevented.

It is no use talking of finality; a celebrated statesman once did that in regard to political changes, and got laughed at for his pains. Reform, whether in politics or spelling, knows it not.

Our common language is admitted to be less perfect than it might be. Indeed, it sadly wants revising. Let the attempt be made. There are anomalies and anomalies. Let us at least make an attempt to deal with the worst—those that are the most offensive and the most glaring. The task might be allotted to a committee formed of the most capable men of the two great English-speaking nations. The members of such a body, if formed, should be given strictly to understand that their duties will be to reform, not to revolutionize. The time has not come for the latter, and it is somewhat doubtful if it ever will come.

Every memory, whether tenacious or otherwise, has its holding capacity. The most capacious are not necessarily the best, or, rather, the most sensibly furnished. Many are crowded with mere useless lumber. Linguistic departures from set rules are nothing more than lumber, and are, I hold, unnecessary and useless, despite the old saying that there is "no rule without an exception." They needlessly intrench upon the holding capacity of the memory. Let them be got rid of by making the rules more comprehensive, more inclusive—ay, all-inclusive, if possible.

There may be no royal road to learning, but there is no reason why the available road, or roads, should not be kept in an unincumbered state—as free as possible from hindrance, or hindrances. An instrument, intended for a given purpose, is none the worse, but infinitely better for being easily mastered. What, I ask, is language but an instrument for the expression of our thoughts or the conveyance of ideas? I hold that the knowledge of a language can never be made too easy. The longer it takes to learn, the lesser the product of a man's thoughtful labors.

There are hundreds of inconsistent persons who would laugh at the idea of reviving the uncertain spelling of Chaucer, who do not see their way clear to simplify and rid the language of unnecessary and useless anomalies.

These were excusable in the fifteenth century, when no two countries had a common dictionary, or, perhaps, none whatever; but there is no excuse for their retention.

I have purposely restrained myself from suggesting changes foreign to those that have excited public attention. I might have drawn the attention of my readers to no few anomalies of a more recent importation. Why, for instance, should we change "telegraph" into "telegram," and not "photograph" into "photogram," and "lithograph" into "lithogram," when we want to express the thing produced, and not that which gives the product?

I will, however, proceed no farther in this direction. My object in writing has been to show that both English and American compositors would benefit by the change, and that your countryman, Noah Webster (long since deceased), is entitled to the gratitude of all who speak the English language; that he has been grossly misunderstood, and to make known the fact that the film of ignorance is fast falling from the eyes of Englishmen that once prevented them from seeing this matter in its true light.

Written for THE INLAND PRINTER

QUADRATS.

BY PICA ANTIQUE.

HAVING won the two great political printatorial prizes—the government printing office and the bureau of engraving and printing, the members of the craft in Chicago may be pardoned for tossing up their caps and indulging in a large amount of enthusiasm.

Of the first and the man we have already spoken, and the fairly settling into the harness proves his right to the praise given. No one longer questions his entire fitness, or that, though surrounded by untoward circumstances and perplexing problems, his clear head, cool judgment and knowledge of details will enable him to hold the mastery.

Mr. Palmer—he denies the soft impeachment of being a "General," and claims no higher title than that of a Christian gentleman—told the writer hereof that he "intended to go slow and avoid all possible mistakes"—a consummation much to be desired, but about as probable—the escape from errors—as that printers and employes will live hereafter in the sweetest of harmony. That he is acting according to the rule laid down is certain, notwithstanding the mad rush for places, and changes have been few, very much to the disgust of many of the dominant party. But the demand is nothing now to what it will be when congress again assembles. Then heaven bless him with cast-iron nerves and not to be disturbed sanity!

Of Captain Meredith we can only speak from hearsay, biding our time to call upon him personally and see how modestly he wears his honors and how well he is blessed with the rare tact and executive ability necessary to success in the position he holds. But every one of the employes of the office speak strongly and highly in his favor, and if the present foreshadows the future his

administration will be marked by justice, firmness and the display of the peculiar talents and experience required as the head of the bureau giving all of paper money to the American world.

One thing is settled—by the ladies. Each and every one of the feminine employes declare him to be "such a handsome man," and that will cover a multitude of sins with them, if not with the administration.

It may not be widely known outside of Washington that there is no patronage, no appointing power delegated to the chief of the bureau of engraving and printing, it resting entirely with the secretary of the treasury. That fact, it is understood, was a disappointment to Captain Meredith. Could he, however, exchange places even for a single day with Mr. Palmer he would realize the situation, bless his lucky stars for having escaped a worse than the plagues of Egypt.

* *

"PICA ANTIQUE" fancied he knew something of the editor of THE INLAND PRINTER. An acquaintance of—to tell would give away both ages—inclined us to that belief. But from the manner in which the Washington delegates to the recent convention speak of him, his kindness, eloquence and craft knowledge, we had but a feeble appreciation of his numerous gifts.

If we didn't know him to be almost supernaturally modest we would rehearse a few of the praises with which our ears have been filled. That being out of the question, we advise him, should he have any curiosity in the matter, to visit Washington and learn for himself the high and honorable estimation in which he is held by his brothers of the craft. Better, however, have his life well insured before so doing, for the "boys" have a fashion in the Capital City of furnishing guests with especially "fat matter," and their hospitality and liberality is unbounded. So, though as a "stranger" he would "be taken in," he might be essentially "done for" at his departure.

* *

IN indorsement of "dry paper" and "hard packing," as mentioned by a writer in the July issue of THE INLAND PRINTER, it may be stated that such is the rule in the government printing office, except in cases of envelopes. Then "rubber blankets" are substituted on account of the often heavy and lumpy "gumming," and the time saved in not being required to "make ready" with every change of form.

"Wetting down" and "soft blankets" belong to a former age, are obsolete with *good* pressmen, and if any still are inclined to stick to the antediluvian methods they had better sojourn for a time in some large city and learn that there have been some decided improvements since the days of Adam.

* *

AS ONE of the earliest and most earnest workers for a home for printers when their days of usefulness have passed and days of necessity come, it is pleasant for us to know that the project is assuming a tangible form

and the outlook bright. That there will be opposition to the proposed locality is to be expected. Everyone fancies his own the best. It is, however, to be hoped—even more, expected—that all personal feeling will be banished; all individual, selfish interests be merged into the general good. *The home is necessary—we must have it*; and where builded is a matter of little moment, health and accommodations considered.

A typographical friend, who is smoking the pipe of laziness near me, suggests that “it would be a long way for an eastern printer to go to Colorado Springs, and that he would never be able to get there.” The answer is plain. The same liberality that builded the home would, when necessary, furnish the means of transportation, and no one be permitted to “tramp” thither or starve by the wayside.

The majority of the objections (as this one) are frivolous; the offer a good one; the locality exceptionally pleasant, prosperous and healthy; the people around blessed with genuine western hearts. For the rest, incidentals will settle themselves. Let us, therefore, hasten to do away with the stigma that we have no fitting place of rest for those who have borne the heat and labor of the day in making printing the craft of crafts, and American printing the best in the world.

* * *

WHEN Andrew Lang wrote the poem from which I cull this verse :

“O friends with time upon your hands,
 O friends with postage stamps in plenty,
 O poets out of many lands,
 O youths and maidens under twenty,
 Seek out some other wretch to bore,
 Or wreak yourselves upon your neighbors,
 And leave me to my dusty lore
 And my unprofitable labors.”

He must have been in about the same situation as your correspondent.

Almost every mail brings me letters from some ambitious “comp” who longs to come to Washington, believing it to be an El Dorado for printers—which it is not by a very large majority. Time and again has my old pen given advice to let “well enough alone” and stay at home, but there is a glamour about working for the government that appears impossible to resist.

I am neither the United States treasury nor a national bank, and Uncle Sam declines to furnish me with stamps gratis. So, to answer my numerous *postage-forgetting* correspondents in a body, permit me to use THE INLAND PRINTER, and say DON'T COME. You will be happier and, in the long run, better off financially. A position here is a fight to get in and a fight to stay in. When out one is very much like a whale stranded on a sandbank with little hope of a returning tide to float one again.

I know eight hours per day and 40 cents per hour is a golden temptation, but, my friends and inquirers, *you do not know* what the cost of obtaining a situation, of keeping it, of living means, in this city at least. Better think a hundred times the proverbial “twice” before you come to find—disappointment.

Written for THE INLAND PRINTER.

NOTES ON WOOD ENGRAVING.

NO. LII.—BY S. W. FALLIS.

THE temptation now arose with the engravers to be satisfied with producing what would satisfy the uncultivated taste of the public. Cruikshank and Seymour prepared the way for the designers, while Leech, Gilbert, Fenniel and the Dalziels introduced a careless manner of engraving, which encouraged more careless drawing, as it was very unsatisfactory to the designers to labor at their drawings and have the engravers give no heed to their ideas excepting to preserve outline and general color, but interpreting the lining to suit their own convenience and taste, which, however, was governed almost entirely by the amount of pay they were to receive for the work. Some of the drawings of the period, however, were made for fac simile engraving, as in former times, and the engravers were simply mechanics employed to cut out the interstices between the lines made on the block by the draftsman. This tedious process of fac simile engraving could not last, for the work by this method, which was produced in great quantities, as a rule, exhibited no particular value either for artistic design or unusual skill of the engraver, and the qualities of these productions had little or no claim for connection with the fine arts. No great works were produced, and only occasionally were separate prints to be found worthy of notice, except such as those by Edmund Evans in Birket Foster's edition of Cowper's “Task.” Upon the continent, however, wood engraving did not make the same progress or development as in England, but some good work was done in France by pupils of Thompson and others who went to Paris. In Germany, too, wood engraving counts some good workmen, but their works were not in comparison to those of the English or French productions.

Wood engraving, however, since the days of Nesbit, Clennel and Thompson, was practiced more as a useful art rather than making any pretentious claims to a place in fine art. However, its application for purely useful purposes has been of the greatest service, and has made it a most powerful instrument in popular education, carrying with it a visual understanding of contrivances and objects which have not been seen by the people in general, thereby disseminating a knowledge and appreciation that would be impossible to otherwise obtain. We will take wood engraving in a very crude state, and it performs a good work in the visual understanding and mental comprehension of what it illustrates, either of objects real or imaginary, allegorical subjects or caricature; its influence is incalculable; even in a low standard of art there is not the slightest doubt but that it greatly assists the exercise of popular imagination and generates in the better endowed minds an elevating sympathy with the higher products of art.

The utility of even the most inferior grades of wood engraving so far overbalance the value simply as a fine art as to give it a distinctive classification and station in art and usefulness, without debarring the practice of wood

engraving in its capabilities from taking a high rank in the fine arts. The practices of the present day compared with the past centuries show such great advancement in every particular that it seems almost impossible that a piece of wood can be transformed into such delicate lining in the hands of skillful engravers so as to represent by a printed impression such a variety of light and shade with beautiful and delicate blending of half-tones, illustrating any subject or object, fabric or texture, to a faultless accuracy. But we are getting a little ahead of our time in point of history, as these notes have touched briefly on the progress of engraving on foreign shores. We must now cross the big pond and take up our station on American shores; the land in which wood engraving has been brought to a greater perfection than in any other country. In America the capabilities of the art and the artists in wood engraving have been brought to light and to a higher sense of perfection than in any other country, and yet she is still in her youth in the art. The advancement made in the last twenty years is unprecedented in the history of the art, and should American engravers develop as much advancement in the capabilities of the art and the artists in the next twenty as in the last twenty years, the art will surely reach the acme of perfection.

As to the introduction of the art on this side of the Atlantic, the name of Dr. Alexander Anderson stands in history as the pioneer wood engraver of America. He was virtually the projector of the art in this country. During colonial times some very crude cutting on metal for printing purposes was done, and no other substance was used for engraving for letterpress printing until the discovery, by accident, that boxwood was adapted for the purpose; the fact being communicated to Dr. Anderson by a friend, in a casual way. While watching him laboring to engrave on metal, he told him that Bewick used boxwood to engrave on, and acting upon this suggestion Anderson at once procured some pieces of boxwood from a rule-making shop, and having fashioned some suitable tools, to his great delight found the wood a material much easier and more agreeable to work than his former method of type metal. *(To be continued)*

Written for the INLAND PRINTER.

ART IN JOB PRINTING.

J. B. CALDWELL.

THE artist printer of today does not shake his fine faces of type in a leather apron to round off the corners; nor does he carry them around loose in his trousers pocket; neither does he hang them up, ink-covered, in a sack until he wishes to use them again.

The artist printer of today has advanced beyond these crude methods and ideas, that have always been considered indisputable evidence that the laws of heredity decreed that the person who did such things should be either a blacksmith or a shoemaker; and experience generally demonstrates the fact that these laws were correct in their decree. A man might make a passable success mauling rails who plays sad havoc with delicate type faces. One of these apologies for a printer drove a four-line letter into a form with a mallet, striking the face of the type with the mallet.

The artist printer of today is not necessarily a designer of rule work, or a conglomeration of colors and unsightly productions, that resemble nothing in particular so much as the colored plates in the Illinois state reports representing the swine disease. Such "printers" should work under instructions until they learn not to disgrace the "art of arts" by claiming to be representatives of it.

First, honesty; second, art; third, success. By art is meant "the power of doing something not taught by nature," and in this

should be included a jealous and just regard for the profession of printing,—a regard that will make the members of the craft creditable and useful citizens, and will not, by poor work or disreputable methods, disgrace the profession and injure their own or competitor's business. This the printer of today who expects or desires to excel or succeed should bear constantly in mind.

Do good work. Pay fair wages. Keep a clean office. Keep a fair assortment of material, and an abundance of it. Pay strict attention to details, expenses, receipts. Nothing so effectually helps art as pleasant, clean surroundings and a mind not burdened by unnecessary perplexities.

DR. ALEXANDER ANDERSON.

(Engraved by himself in his eighty-ninth year.)

FANCY STATIONERY DEPARTMENT.

J. W. Butler Paper Co.

183, 185, 187 Monroe Street,

Chicago.

WE take great pleasure in calling your attention to our extensive line of

PRINTERS' FANCY STATIONERY

for the coming Fall and Winter Season, for without exception it is the largest and most complete line ever brought together in the West, and comprises many novel as well as artistic designs. A large part of the line is made to our own order, and is not to be found elsewhere. The line embraces

**BALL PROGRAMMES.
FANCY FOLDERS.
ETCHED FOLDERS.
EMBOSSSED FOLDERS.
WEDDING CABINETS.**

**WEDDING NOTES AND ENVELOPES.
SCORED CARDS.
MOURNING STATIONERY.
VISITING CARDS.
IVORINE ENGRAVED NOVELTIES.**

MENU CARDS.

NOVELTIES IN CIRCULARS, CORDS AND TASSELS, BALL PENCILS, BADGES, ETC.

But samples of above line should be seen to be appreciated and to fully realize the benefit of having such a representation of Fancy stock in your office. Samples will be ready about August 15. Write for descriptive circular.

We are also Manufacturers and Wholesale Dealers in all kinds of

Are · You · in · a · Rut ?

SOME PEOPLE, loth to accept progressive ideas, keep pegging away in the same narrow rut of their predecessors. Others, more enterprising, avail themselves of every advancement, thereby securing the benefits of modern machinery. No one will claim that the printing press of today resembles very much the one in the above cut. The improvements have been rapid and beneficial. Now, why not in *Folding Machines*? It is possible that such is the case. You can readily ascertain and get full particulars by addressing the

Brown Folding Machine Co.,

ERIE, PA., U. S. A.

... THE ...

UNION TYPE FOUNDRY,

337 DEARBORN ST., CHICAGO.

Before the "war" is over, stock up with whatever you need. The present cutting cannot last much longer.

We intend to meet any honest competition, and therefore offer the following discounts, to take effect July 1, 1889, and continue until further notice:

- On Our Copper Amalgam Body Type, - - 25 per cent Discount.*
- On Our Copper Amalgam Job and Display, 30 per cent Discount.*
- On Brass Rule, - - - - - 30 per cent Discount.*

Our terms are CASH by the 10th of the month for all purchases of the preceding month. On goods of our own manufacture we will allow an extra 5 per cent for cash within ten days from date of invoice.

On all other type, supplies and material we will also allow the most liberal discounts possible, and on outfits and machinery we are always ready to give special terms.

For old type delivered to us we allow 7 cents a pound, and for other printers' metal 4 cents a pound. For old copper amalgam type we allow 9 cents per lb.

We believe we treat our customers as liberally as does any other founder, though we don't say so much about it. Actions speak louder than words. We have no interest in any printing office and never had. Our own work is given out to first-class printers.

Do not buy any type until you have sent for sample of our "Copper Amalgam" metal, which is the best and most durable made. If you want the most perfect and newest metal quoin, that won't slip or twist a form, write us for a descriptive circular of the "BROWER QUOIN."

CHICAGO, AUGUST, 1889.

INDORSED BY INTERNATIONAL TYPOGRAPHICAL UNION, DENVER, JUNE, 1889.

RESOLVED, That the International Typographical Union recognizes in THE INLAND PRINTER the technical trade journal of the craft, and cordially recommends it to the patronage of the printers of the United States.

SOMETHING ABOUT TITLE PAGES.

THE New York *Art Age*, which has a department devoted to printers and engravers, printed in a recent number an excellent article on title pages, and presented a number of designs originated by Louis J. Rhead, who has previously furnished that journal with a series of decorative initials. The last sketches prepared by this artist illustrated methods of arranging title pages of modern books with reference to their contents, and departing, in a measure, from the conventional composition of title pages according to what is styled the long and short line method, without due regard to the value of relative masses and the profile presented by the outline of the page as a whole. The nine designs shown in the *Art Age* are for various works by Henry W. Longfellow, and their typographic qualities are given more detailed explanation further on.

The designer says that if one takes up any recently published book, that is, a medium priced work, and studies the title page, it will, in nine cases out of ten, be printed well. The title will stand out conspicuously, and is read easily; but upon examining its special features it will appear that there are sprawling lines extending from one end of the page to the other, and that there is no dainty arrangement with regard to the mass of design or color; no special significance to the page itself as appropriate to the volume, but merely a rearrangement of familiar types according to the wording of the legend, and that substantially there appears to be no design or thought expended upon what should be the most beautiful part of the book.

Mr. Rhead further observes that if one compares the old printed works, from 1450 to 1650, with modern publications, namely, those of the nineteenth century, a transition may be suggested, which, if not an improvement, is certainly a novelty. Every book lover is more or less familiar with old title pages, and very many of our everyday printers have claimed that the modern books are superior, ignoring the important fact that the earlier printers had to make their own type and produce all their materials, whereas modern inventiveness and ingenuity supply them in a perfect form. It is indisputable, however, that the old typographers gave far more attention to the design and arrangement of the page, studying its special requirements, and understanding it in all its parts, mixing the red and black sparingly, and always in the right place.

In a reproduction of an old book, which Mr. Rhead refers to, dated 1497, the title is at the middle of the top, taking up half the page, and is composed of strong and beautifully drawn letters. Immediately below is an oblong with a wood cut of a vessel with strong decorative lines, the mast reaching up the middle of the page and dividing the lettering at the top in two. Below the device of the vessel and very close to it is another line of strong lettering, the size of the lettering at the top. Then follows seven lines of type about one-quarter the size of the upper part, making the entire mass as nearly square as possible, with the date and two short lines as

accents at the foot. This certainly is not like the modern title page, and whether it may be understood from the description or not, it is doubtless more beautiful.

Mr. Rhead also describes another one which is quite simple. It consists in alternating lines of black and red, each line becoming more diminutive and shorter until it reaches to the center of the page, where there is a well drawn device of a woman standing. Below this the arrangement of the top is repeated until two very strong lines of letters in red, and one smaller, complete the page. There is nothing of this character done now, because the old printers knew better or studied more the meaning of the distribution of colors and leaving a white space to furnish effect to the dark. Then, above all things, they understood the use and meaning of margins. They never had letters which, when the book was trimmed, necessitated a part of the title page being cut off, as occurs not infrequently in some of our cheap modern books. They never spread out the title to such an extent that it covered the whole page, for the more white space that is shown the better is the general effect, and most letters become more prominent by contrast with liberal white margins. If a page is printed that has been very carefully designed and arranged upon the principles of those antique titles, it will certainly involve an improvement upon the methods now in vogue, for nearly all the titles of the period are similar, and very badly arranged. According to Mr. Rhead's statement, there are few typographers in New York that know how to arrange an artistic title page, and they can be counted on less than the fingers of one hand. In Boston there is only one, which fact, according to this authority, is attributed to a member of the firm being a man of taste, and one who accepts the work of the artist designer without alteration; whereas, in many instances, it is crippled until it becomes a painful farce on art.

Of the designs which the *Art Age* publishes there are nine different arrangements, which, of course, do not show as well as they might, being so very small, and are to be regarded more as suggestions than as worked out designs. The first thing in arranging a title is to consider the margin, and to this the general rule applies—that the smaller the type the larger the margin. As the title page, however, is a decorative arrangement, this rule, which is applicable to body type, invariably requires modification according to the immediate exigency of the title page under consideration, so that the amount of margin has much to do with this arrangement; but a square block of words is usually satisfying if contrasted with a small piece of dainty ornament, or oblong angles are desirable in contrast, as in that for Christus the square is broken by the capital, and also balanced by having the corner of the same cut off. Furthermore, the words and ornaments being placed on the side, give variety, and the lower lettering being placed at the right hand side, the square makes a plain, artistic and pleasing title. These suggestions are worthy of consideration.

ARTISTIC TYPEWRITING.

HERETOFORE we have surrendered not a little space to the description and illustration of quite a number of the various typewriting machines in the market. It is our intention to follow up the subject from time to time with criticisms of typewriter operators and their products. In this avenue of industrial art, as indeed in every other where active human enterprise obtains, the march of progress is remarkable in the advances and improvements that are taking place almost daily, not a few of which challenge attention if they do not extort admiration, so that there are not lacking those who hold that their seemingly extravagant ideas bid fair of being realized in the near future. The "amateur" was at one time the menace of the "master," yet that evil has spent its force, if, indeed, it has not been effectually stamped out. So, today, not a few of the many operators of typewriting machines in business houses and elsewhere emit discreditable productions, that cannot fail of being frowned down by the more conscientious and art-imbued directors and operators.

The active rivalry between lithographic and copperplate representatives, in their race for supremacy, has been, doubtless, often enough dilated upon by trade journals in the past, and the consequent emulation excited in letterpress circles has not failed to receive its full share of mention in the craft organs. The outputs of the first named classes have been copied to a great extent by the latter, and in turn each has successfully duplicated the typewritist's productions. Until recently, however, the latter has not dared to follow, nor attempted to rival in anywise the efforts of his brethren in the kindred arts of reproduction, nor perhaps dreamed of encroaching upon the domain of either. An exhibit of recent productions of the typewriting machine develops the fact that they are adorned with combination borders, head, corner and tail pieces, curves, circles, ovals, parallelograms, tint grounds, colors, etc.

The "fair" typewritist nowadays yearns to embellish the work passing through her hands; a system of exchange of specimens of handiwork is springing up, under wise and commendable management, of short-handers' and typewritists' journals; the art-loving and more painstaking in the twin professions cordially approve, if they do not heartily cooperate with these journals; while the press of the craft, too, occasionally reproduce by photo-engraved plates among its pages copies of such work as may be deemed noteworthy. In this connection it may be well to observe that from an artistic standpoint these specimens, up to the present time, rank in the main as do those shown on page 254, Vol. VI, No. 3, INLAND PRINTER (December 1888), but it is also manifest, it should be stated, that an improvement begins to show itself. In short, typewriting is still in its infancy; the machine of the future is probably not yet in the market; nor has the Napoleon who is to lead its army of operators yet seen the light of day.

A critical and artistic eye cannot fail to become interested in looking upon a typewritten output, wherever

found, that combines design and colors. Professor Aabacock, a practical operator of Chicago, has been the pioneer, we believe, in his line, if not the first to demonstrate by actual production that the "commercial piano" can be made capable of turning out a greater variety and wider range of design than has been dreamed of hitherto by either inventor, dealer or manufacturer. This gentleman has not been content with the range of the machine proper, but has invoked the aid of and interspersed freehand drawing, vignettes, etc., throughout many of his designs, so that his execution, reproduced by various copying processes, is calculated to attract attention and excite emulation in his particular line. His projected improvements bid fair to earn for him an enviable fame, and, we trust, a fitting pecuniary reward.

We have had recently the pleasure of looking over an extensive assortment of his productions, and find therein much that is worthy of special mention: "The Lord's Prayer," 25 by 38, made up in a variety of crosses and surrounded with varying borders; "The Typewriters' Easter Greeting," "Centennial Souvenir," "Washington's Birthday Offering," 22 by 28; rosters of church and society, 24 by 36, fancied with corner pieces, monograms, emblems, ingenious titles and tasteful borders artistically combined; directories of buildings, testimonials, resolutions, 22 by 28; a work of over 100 pages, half cap, bound, showing "cap" line display, under-scoring and figure work in abundance; pocket rosters, $2\frac{1}{8}$ by $3\frac{3}{4}$, consisting of from 24 to 48 pages, full and half titles, tinted grounds, borders and folios, together with a line of small work, such as price-lists, book-marks, meal tickets, circulars, folders, postal cards, etc., executed by him on the typewriter, showing exalted taste and novelty in design. As already stated, the possibilities of the typewriter will probably exceed the anticipations of the most sanguine, and that a resident of Chicago has taken the initiative in this matter is to us cause for congratulation.

HOW WAS IT DONE?

A VALUED correspondent, in Cincinnati, writing under date of July 26, says:

We have often been moved to express our appreciation of your articles in THE INLAND PRINTER, especially those referring to "Wild Cat Estimating," etc., and today, through a peculiar coincidence, we had just such a case as referred to in your July number (and it being so ridiculous, we cannot help airing it). The job consisted of 25,000 impressions of an 8-page circular; paper costs \$38.75 net; job given out for \$40, leaving balance of \$1.25 to pay for presswork on 25,000 impressions, cost of ink, cutting, packing, etc. This same \$1.25 pays rent, wages, wear and tear of machinery, insurance and taxes. The work was taken by a supposed to be reputable concern, and we have been figuring all day to see how it can be done. Can you enlighten us?

There is a story told of two Highland Donalds, who went bear hunting, which is somewhat apropos as an answer to the question of our correspondent. Coming to a den where cubs were known to be, they hid themselves till the mother left her young, when the more

adventurous of the two agreed to enter the cave, the entrance to which was just large enough to admit him crawling on hands and knees. Before going, however, he gave strict injunctions to his companion to notify him when the old bear came in sight. The return was made sooner than expected, and the sentinel had just opportunity to catch the unwelcome intruder by the tail, and bracing his foot against the rock was able to hold her back for some time. Finding himself in utter darkness, the imprisoned hunter shouted "Tonald, Tonald, vhat's darking the hole, Tonald?" Realizing that he must soon relinquish his grip, the answer came "*Fail, when the tail breaks you'll soon know vhat's darking the hole, Tonald!*" So, when the announcement is put up "Closed by the sheriff," the explanation of "How was it done?" will become apparent.

THE WORLD'S FAIR IN 1892.

THE proposal to hold a World's Fair in the United States in 1892, in commemoration of the discovery of America by Christopher Columbus, seems to meet with general approbation, and may be accepted as a settled fact. Which city shall obtain the coveted prize has yet to be determined. The choice, however, seems to lie between Chicago, New York and Washington; and as might be expected, the champions of the several locations are working like beavers to accomplish their purpose. It is possible a compromise may be made on the national capital, from a standpoint of national pride. Geographically considered, however, Chicago undoubtedly presents the greatest advantages, and the vim with which her representative men are pushing her claims, the promise of western and southern congressmen to recognize such claims, together with the princely financial aid assured, should at least convince her competitors that she is a dangerous rival. Her citizens, the representatives of the enterprise both of the old and new worlds, have stricken failure from their vocabulary. With them to dare is to do. They recognize that Chicago is the typical city of the American continent; the center of sixty railroads, which diverge to every section of the country, and that her ability to successfully entertain the multitude which such exposition would draw is unsurpassed. With these advantages—advantages which no city can discount—and the fact that the claims of the East were recognized in the Centennial exposition, they confidently expect shortly to announce that success has crowned their efforts. With these efforts, it is needless to add, THE INLAND PRINTER is in hearty sympathy.

THE INLAND PRINTER, though having neither politics nor party, is decidedly of the opinion that the "trade" which permits amateurism to flourish and rob men who served years of apprenticeship at printing of their just rights, is altogether too "free"; and, while boycotting has never found an indorsement in its columns, it is almost tempted to pronounce it legitimate in this instance. Probably better than a majority of its

cotemporaries it is in possession of the information necessary to judge correctly of the damage done by the youthful (not always) guerillas who by nefarious practices filch the bread from the mouths of the responsible members of the craft. Could statistics be given, great would be the astonishment and bitter the denunciation. As it is, without legislation, there appears no way open to seek or enforce justice save by moral sentiment. To that we have again and again appealed, even while alive to the fact how much self-interest swerves, and the "getting something for nothing" rules. But a blind sentinel indeed would we be were our voice not raised against such injustice alike to the honorable employer and worthy employé, practically such shocking counterfeits of the art; and we shall keep on doing it until the evil is abated, hopefully looking to the time when the public (having become convinced of its true interests) stamp amateurism with the heel of condemnation, and the fungi growth is entirely destroyed.

THE National Editorial Association meets at Detroit August 27, and will doubtless be a gathering of much importance to the newspaper fraternity, representing, as it does, every section of the country. An interchange of opinion under such circumstances will possess a special interest, and will prove of immense advantage to publishers in general. Ex-Congressman William C. Maybury, of that city, in referring to the meeting, says: "There are 300 delegates accredited from all parts of the Union, and with these we hope to have from 300 to 600 representative newspaper men as guests. The people of Detroit are earnest in their invitation to newspaper men from all parts of the country to attend as guests of the city. The occasion warrants such an invitation from us, and it also warrants a cordial acceptance of such invitation. It will be quite as easy for us to accommodate a thousand guests as 300, and the daily sessions of the convention must be of great interest to the newspaper fraternity. We are not altogether unselfish in this. We are proud of a chance to show what we are proud to look upon as one of the most metropolitan and one of the busiest and handsomest cities in the country, and we mean to show it well." All further information can be obtained by writing to the efficient secretary, E. B. Fletcher, Morris, Illinois.

PRACTICAL printers and pressmen, write for your journal. Its columns are always open for suggestions, or the narration of experience of those whose opinions or experience are of value to the craft—whether employer or employé. Tell what you know if worth telling. Do not hide your light under a bushel.

ATYPEFOUNDRY in Baltimore has adopted a sensible plan by making an extra nick on the following small cap letters: o, s, v, w, x, z, thus preventing the mixing of these letters with lower case. This or a similar system should have been adopted years ago.

Written for THE INLAND PRINTER.

WHO IS TO BLAME?

BY DUNCAN F. YOUNG.

WHO is it that has not read, probably frequently, something like the following: "Owing to an egregious blunder of the incorrigible compositor we were yesterday made to say, 'a lady was born,' instead of 'a baby was born.'" Seeing this, ninety-nine out of every one hundred of those reading the above believe that the fault lies with the compositor. Indeed, compositors themselves occasionally acknowledge that the fault very often lies with the compositor, the admission having been made in the presence of the writer hereof.

Primarily, any person reading a local item in a newspaper, it evidently reciting a recent occurrence, saying that "a lady was born," and not knowing it was an error, possesses so little intelligence that to endeavor to explain is a veritable waste of time and paper; therefore, an apology, such as quoted, is totally unnecessary.

Secondly, it is questionable if the compositor was at fault. Seeing and noticing the error, he should have corrected it, it is true, but who knows if it was noticed? There are several reasons to advance why he might have failed, though an educated and intelligent man, to notice the error. One time a famous proofreader placed in view of the public, after he had read and re-read it for errors, a proofsheets, offering a reward to the one detecting an error therein. That article was read by the most particular, the most careful, and the most learned, and all failed to single out an error; but, lo! who came along but a crank (evidently a compositor), who detected—an inverted "o." So it is with compositors. They look for errors, frequently correcting grave blunders, and failing once in some small matter are posted, as it were, as "blacksmiths." But even though it was a small matter, the compositor might have noticed and corrected the error had not the foreman, at the moment when the compositor had reached the portion of his "take" containing what transpires to be the error, asked a question of this particular individual, and the latter, setting type mechanically, while putting his mind on the matter between himself and the foreman (or any other individual with whom he might be speaking), makes the error of the writer thoughtlessly and unintentionally. That he has the right to speak, whether or not it be on business, will not be gainsaid by anyone possessing the least particle of feeling, common sense and reasoning. No one could live, confined as compositors are, with closed mouths without contracting brain and lung diseases of fatal termination.

Again, it is not advisable for compositors to correct all apparent errors, for while in a portion of an article, such as is the "take" of a compositor, an error is apparent, the entire article being read, it would be found that to have corrected the seeming error would have been to make a mistake. A "take" beginning even—that is, starting flush with the edge of the column in the middle of a sentence—reads like this: "they was there in abundance." A compositor would naturally desire to

correct the grammatical error therein, to set it up as written, to him being like pulling against the stream; yet to have corrected it, as was desired, would have been to spoil the point of the article, which, in effect, was this: A darkey was quoted as speaking, who said, "Down in my kentry ev'rybody has plenty of coons an' 'possums, an' as fur coon skins, why 'they was there in abundance.'" If the compositor had corrected that as he desired, he would have been blamed; and had it been really an error, and he had failed to correct it, which he had as much right to do as to fail to correct the apparent error in the instance cited, he would again have been blamed. In fine, the compositor is blamed, no matter what side he has taken, and the writer, the prime character, and the proofreader, the *dernier* responsible party, go forth unsullied one whit by the fault for which both are morally responsible.

There is but little doubt that this responsibility in reality is placed upon the compositor, not because he is to blame, but because there is no better excuse for the writer and proofreader than to charge it to him, as the public knows no better; and while these individuals do not scruple at this sin, this charge is placed upon the shoulders of a class that can ill afford to bear it.

If a man cannot write what he desires it would be difficult indeed for someone else to do it for him, and much more unreasonable, aggravating and unusual for someone without the least semblance of a right or authority to do that for which someone else is employed.

People generally imagine that newspaper reporters are a well-paid class of people, but such is a mistake, many of them receiving but \$10 per week. It is not often that men of learning and experience will engage at such a salary—only when sorely pressed; and then they do not fetch to their calling that interest, that ambition which should attend a man in a work which is to be a success. If this be true (and it is logic), ignorant men, who take but little interest in their calling, are employed as reporters, and as a consequence the output, or efforts, of these individuals is crude and unpolished indeed. To a certain extent this condition of affairs may be that of compositors, and the same reasons may be advanced in extenuation thereof—that the wages are not sufficient, and the conditions too confining to justify the more intelligent in remaining connected with the business when they can obtain any other position.

It would appear, then, that not infrequently compositors are actually unable to make the corrections expected of them. At the same time, the same may be said of reporters, but it is a reason which holds no place in an argument, since reporters are employed to write the articles they send to the compositors, and to write anything is to write it correctly. If they are unable to fill the position they occupy they should get down and out. While the compositors may not be able to correct the errors of the reporters, they can fulfill all the reasonable duties asked of them. Pay proper wages and employ competent men, and there will be no cause to lay the blame of errors upon innocent shoulders!

Reported for THE INLAND PRINTER.

CANADIAN PRESS ASSOCIATION—ANNUAL MEETING.

ON Thursday, July 18, the annual meeting of the Canadian Press Association was held at the Rossin House, Toronto. President Dewart in the chair, there being present the following members: W. R. Climie, *Sun*, Bowmanville; J. B. Traves, *Times*, Port Hope; J. A. Davidson, *Mercury*, Guelph; R. J. Corson, *Economist*, Markham; Roy V. Somerville, *Banner*, Dundas; George Zee, *Times*, Brampton; W. J. Watson, *Standard*, Dundas; John Motz, *Journal*, Berlin; R. L. Mortimer, *Free Press*, Shelburne; John Smith, honorary member, Guelph; Hal B. Donly, *Reformer*, Simcoe; P. A. Riky, *Free Press*, Shelburne; H. Hough, *Grip*, Toronto; Andrew Pattullo, *Sentinel-Review*, Woodstock; A. R. Fawcett, *Review*, Streetsville; W. Ireland, *North Star*, Parry Sound; W. A. King, *Times*, Orillia; L. G. Jackson, *Era*, Newmarket; George Maclean Rose, Toronto; H. P. Moore, *Free Press*, Toronto; Dr. Oronhyatekha, *International Good Templar*, Toronto; J. J. Crabbe, Toronto; C. Blackett Robinson, *The Week*, Toronto; I. N. W. Williams, *World*, Cobourg; James Innes, *Mercury*, Guelph; J. A. Rettinger, *Die Ontario Glocke*, Walkerton; Patrick Boyle, *Irish Canadian*; John Cameron, *Globe*, Toronto; Thomas Shaw, *Live Stock Journal*, Hamilton.

After calling the meeting to order, President Dewart's address was laid before the meeting in the following pithy form:

GENTLEMEN.—I have no idea that any words which I can say will add anything to the knowledge possessed by the members of this association respecting the sphere and influence of the press, and the duty of faithfully using this potent agency for the promotion of truth, freedom and social progress. Were it not that it might be thought a discourteous neglect of an established custom, I would not have inflicted any address whatever upon the association. But, though I do not feel at liberty to wholly omit the customary address, I feel fully justified in confining my remarks within such narrow limits as shall invest them with the virtue of brevity.

There is one advantage that the president of this association possesses in addressing a meeting of its members, which may help to deliver him from discomfort and embarrassment. He speaks to an association that has no avowed creed, political, social, or religious. The views he expresses on any subject cannot, therefore, be said to contravene those of the association. He simply speaks his own opinions, and involves no one else in any responsibility for his sentiments, no matter how erratic or heterodox they may be.

The experiment of holding a winter session was in a high degree successful. The papers read on the occasion were eminently practical and instructive. Mr. King's paper on the law of libel was especially able and valuable. Should it be deemed advisable to hold similar meetings in future, I think it would be well to give greater prominence to the consideration of such improved methods of conducting our public journals as shall make them more effective in the work of molding and educating public sentiment upon all great living questions.

I have long thought that it would be an improvement if our Canadian newspapers would give simply an independent support to the political parties they prefer, without that close alliance which causes them to be regarded as the "organs" of a party. I do not mean by this any condemnation of all political parties, such as has become common of late. I believe such parties are a natural outcome of our free institutions, and serve an important purpose. But if a paper has such an intimate connection with a party that it can be known beforehand what position it will take on all questions in party politics, this must greatly lessen the influence it will exert in forming the opinions of the people.

As you have already learned, the executive committee has arranged this year for an excursion to St. John, New Brunswick, and other points. It is hoped that this visit will prove pleasant and healthful, and conduce to bring the members of our association into more intelligent sympathy with our fellow-countrymen in that part of the Dominion. In my opinion, it is the duty of those who speak to the people through the press to give a loyal support to every measure which tends to bind our people of every race, creed and party into one strong, united, British-Canadian Commonwealth.

The secretary then read a number of applications for membership, which were referred to a committee to report upon, which was done forthwith and the following duly elected: W. J. Watson, *Standard*, Dundas; Roland Woolsley, *Courier*, Trenton; W. D. Brothers, *Reformer*, Milton; D. F. Burke, *Herald*, Port Arthur; M. W. Williams, *World*, Cobourg; F. H. McPherson, *World*, Beeton; William Ireland, *Star*, Parry Sound; J. A. Rittenger, *Glocke*, Walkerton; W. S. Gibson, *Gossip*, Little Current; Rev. G. R. Northgraves, *Catholic Record*, Ingersoll; W. H. Withrow, *Methodist*

Magazine, Toronto; for honorary members, W. Crabbe, George Young, Alexander Henry.

The election of officers for the coming year was then held, the choice of the meeting falling upon these gentlemen: President, Roy V. Somerville, Dundas; first vice-president, Andrew Pattullo, Woodstock; second-vice president, H. P. Moore, Acton; secretary-treasurer, W. R. Climie, Bowmanville; assistant secretary-treasurer, J. B. Traves, Port Hope; executive committee: H. Hough, Toronto; D. Creighton, Toronto; L. G. Jackson, Newmarket; J. A. Davidson, Guelph; J. S. Brierly, St. Thomas.

Mr. Roy V. Somerville moved a resolution to amend the constitution, notice of which was given at the last meeting. The proposed amendment read: "That all applications for membership be hereafter made on a blank form which shall be prepared and approved by the executive committee, the applicant to sign the same and be recommended by two members of the association, who shall also sign the application, which, with a copy of the applicant's paper, or that with which he is connected, shall be forwarded to the secretary, who will submit the same to the executive committee, upon the approval of which the secretary be empowered to issue a certificate of membership. No certificate of membership to be issued to full members until this proceeding shall have been fully carried out."

Mr. Hough seconded the resolution, and expressed the hope that it would pass without debate.

Mr. W. J. Watson, of Dundas, proposed an amendment, making it feasible for an application to be accepted by the secretary in the interim between meetings, without coming before the executive committee at all. He argued that every newspaper publisher in the province had a right to become a member.

Mr. John Cameron pointed out that the point at issue was whether it should be made easy or difficult to join the association. Membership in all bodies is considered a prize in proportion to the difficulty of attaining it, and he would be in favor of making it something of a task to gain the privileges of the association.

Mr. Climie explained the working of the present system, and maintained that he, as secretary, had admitted no applicants who were not in every sense eligible.

Mr. Hough did not understand the resolution to mean that every application must be laid before the executive committee. If so, he would withdraw his seconding of the motion.

Dr. Oronhyatekha proposed that all words of the resolution after the first appearance of the word "secretary" be struck out.

Mr. Patrick Boyle seconded this, and held that no applicant should be compelled to await the leisurely action of the executive committee.

Mr. Andrew Pattullo supported the resolution as a proposal which would keep the membership of the association most strictly confined to newspaper men.

Mr. Somerville held that the association should make the admission of new members a matter of great care, and that under his proposed amendment no delay would be experienced that was not the case in the process of joining any well-organized society or club. While every newspaper man eligible under the constitution had the right to apply for election, it was ridiculous to say that any man not appointed by the association through its executive committee had a right to election. That was a matter of choice on the part of the association. He contended for the rendering of admission to the association more difficult, and the better inspection of the claims of applicants for admission, but at the request of Mr. Hough, his seconder, added to his resolution the words, "It being understood that such consent may be secured by mail," when the resolution was adopted.

Mr. Somerville withdrew a second notice of motion, proposing to take from honorary members all railway privileges. He had looked thoroughly into the complaints as to honorary members, made at the winter session, and was satisfied that the larger proportion were valuable members and clearly entitled to the honor conferred on them by the association. He, however, called attention to the fact that the clause of the constitution fixing the time of service as an active member at ten years to entitle to an

honorary membership, had been in several instances violated, and hoped it would be more carefully observed in the future.

Mr. J. J. Crabbe introduced a resolution proposing that the regular annual meeting hereafter be held on the second Friday of February, when the officers would be elected.

Mr. Hough feared that this would destroy the summer meeting, making it a mere prelude to the annual excursion.

After some discussion, Mr. Crabbe said that there was no desire to force the proposed change, and that in the face of the opposition it had aroused he would withdraw his resolution.

A motion by Mr. H. P. Moore fixed the winter meeting for the second Friday in February in Toronto, and ordered the executive committee to prepare the programme. Messrs. C. Blackett Robinson and W. J. Watson were appointed auditors.

A communication was read from the National Editorial Association of the United States, asking that delegates be sent to their annual meeting at Detroit. Rev. Dr. Dewart and Mr. Andrew Pattullo were appointed delegates.

The business of the meeting being well out of the way, Mr. C. Blackett Robinson moved that Dr. Dewart leave the chair, and that Mr. Patrick Boyle take the same.

Then Mr. Pattullo stepped forward and moved in graceful language a warm vote of thanks to the retiring president.

Dr. Oronhyatekha seconded the motion, when Mr. Boyle put the resolution, taking occasion to say that he knew of no gentleman, whether clergyman or layman, who had better earned the good opinion of his fellow citizens by his broad, liberal views than had Dr. Dewart.

The resolution was carried, and replied to in a few words.

The business of the meeting had thus been concluded, and the members present at once fell to arranging with the secretary for their annual excursion, which, starting from Toronto the next morning, attracted a large number to enjoy the outing, which was to St. John, New Brunswick, via Canadian Pacific railway new short line, touching at Montreal on the way, and being in charge of the St. John Board of Trade while there, the association being invited to participate in St. John's celebration of the opening of the "New Short Line," and the inauguration of their great Electric Exhibition and Summer Carnival. A trip up the river to Fredericton was expected. Wednesday, July 24, the party leaves St. John via Intercolonial railroad for Moncton, and from thence a side trip to Charlottetown, Prince Edward Island. Friday, July 26, return to Moncton, leaving there at 8:45 P.M. for Quebec. The press association of the latter city have arranged for the reception and entertainment of their Ontario brethren and friends while in the ancient capital. This will include an excursion on the river and around the Island of Orleans to La Bonne Ste. Anne, returning to Quebec by special train on the new Montmorency & Charlevoix railway, a visit to the Jacques Cartier-Breboeuf monument, and a lunch at the St. Louis Hotel. Monday, July 29, leave Quebec at 8:25 P.M. for Montreal, and home at will.

A PUNCTUATION PUZZLE.

The following article forcibly illustrates the necessity of proper punctuation. It can be read in two ways, describing a very bad man, or a very good man, the result depending upon the manner in which it is punctuated. It is very well worth the study of all:

"He is an old and experienced man in vice and wickedness he is never found in opposing the works of iniquity he takes delight in the downfall of his neighbors he never rejoices in the prosperity of his fellow creatures he is always ready to assist in destroying the peace of society he takes no pleasure in serving the Lord he is uncommonly diligent in sowing discord among his friends and acquaintances he takes no pride in laboring to promote the cause of Christianity he has not been negligent in endeavoring to stigmatize all public teachers he makes no effort to subdue his evil passions he strives hard to build up Satan's kingdom he lends no aid to the support of the gospel among the heathen he contributes largely to the devil he will never go to heaven he must go where he will receive the just recompense of reward."

THE PEACEMAKER.

Specimen from Photograph by CHICAGO PHOTO-TINT COMPANY, 213 State street, Chicago.

THE YOUNG FEMALE COMPOSITOR.

Oh! but she's bonny and kind—
 A smart, cheerfu' witch o' a creature—
 A lassie just form'd to my mind,
 Wi' a face beaming ower wi' guid nature.
 And 'deed, the plain truth to declare,
 Few chaps ever turn up their nose at her,
 The charms are sae catching and rare
 O' Nell, the young female compositor.

'Maist every five lines that she sets
 For sorts thro' the hale house she dances,
 And a' that she asks for she gets,
 Returning her thanks wi' soft glances.
 And though, ance or twice every week,
 The gaffer he threatens to closet her,
 It ends wi' him patting the cheek
 O' this modest young female compositor.

But of a' the *frames* she seems to like mine ;
 And faith she's untrammelled wi' fetters,
 For twice every hour in the nine
 She comes seeking capital letters.
 Then up on a case she'llt play jump,
 And while I keep keeking richt close at her,
 She fa's on my knees wi' a thump,
 This charming young female compositor.

A wee cockie cliquer sae braw,
 Wha' thinks he's a don 'mang the lasses,
 Breaks a note or a headline or twa,
 Ilka time that the sweet lassie passes.
 But he's out o' the hunt, that's quite clear,
 For a' the sly glances he throws at her
 Are met wi' a cough and a sneer.
 By this handsome young female compositor.

A Beauregard jacket she wears,
 And a skirt neatly draped and brocaded ;
 Yet she never puts on foolish airs,
 Though oft for her pride she's upbraided.
 But though she might spit in my face,
 I'm sure I could never look cross at her,
 Sae fu' o' saft, heart-winning grace
 Is this nymph, the young female compositor.

I'm on a grand volume—bourgeois,
 Wi' lots o' big wood cuts, and leaded—
 And I'm certain, in sax weeks or so,
 I'll hae as much coin as is needed.
 Then, low on my knees, I'll discharge
 O' Cupid's saft sawder a dose at her,
 And *rove* in the conjugal barge
 Wi' this darling young female compositor.

—R. B., in the *Scottish Typographical Circular* for June.

Written for THE INLAND PRINTER.

REMINISCENCES.

BY JAMES HARNET.

"STEAM DID IT!"

DID what? There was one man who said that it cheapened job printing, while a great many others, good fellows, could not see it, for they had no boilers with which to raise the expanding force; nothing but the tireless limbs of the youth who bore the ceaseless grind of the Gordon, the Ruggles or the Liberty. This was the boast, however, of the merchant who left the shores of the Mississippi and settled in Chicago, twenty years ago, as a book and job printer. "Steam did it!"

No doubt steam has done a great deal in cheapening many things, as I remember when it knocked aside the spinning wheels of the thrifty cottar wives, whose great aim was in getting up the linen for the daughter's outfit when she got married. Steam

drove the machines for heckling flax, and did away with combinations and strikes of the hecklers by hand. When a country house was filled at one end with six looms, each one giving its click-clack, it was a busy house indeed, and if not quite musical, the sound had the advantage of the hundred pipers who all played different melodies—the looms had all one key. "Steam did it!" when the looms were all in large factories turning out one web each daily, instead of a week by hand. The country districts thereby were thinned of their inhabitants and driven into towns in search of work. "Steam did it!" when machinery turns out the finest bookwork instead of by the hand-press. Great is the power of steam; but in cards and dodgers, the "Firefly" could not compete with the treadmill of the young man who drove the eighth medium job press.

While lying on my oars, as it were, I noticed an "ad" in one of the papers, of a foreman being wanted for the merchant already mentioned, and as active work was quite agreeable, I called on him to ascertain particulars. I found that his second in command was leaving to start business on his own account, and without much ado I agreed to fill the vacant post, as the salary was a temptation in itself.

As some tradesmen make a branch of their business a specialty, this idea was carried out by my new employer in printing cards and dodgers at ten per cent over cost, all other work being taken from my estimates. If a hustler happens to have a bee in his bonnet, and is willing to work out his scheme to a legitimate conclusion, it follows that he has both faith and courage. If failure meets his efforts, many will remark, "I told you so!" If success attends his endeavor, then others follow close after him.

When three or four small presses were kept going for a week, the ten-per-cent plan paid very well, and with glee the favorite phrase was seen in print, both by card and circular, that "Steam did it!" As a continued supply of cheap work did not come in all the time, a confession was in order, and an acknowledgment made that the estimated jobwork paid far better, besides more help being needed to meet its demands. Competition made my employer reduce his figures even on cheap work, but he was bound to lead. He began to doubt his figures when a smash was made on the quarto Gordon, costing \$30 for repairs; but, then, "Steam did it!"

As the composing room had been shifted to the fourth floor, and the office on the second, a tube was in requisition when orders were sent up. With no work on hand, and a quarter of the day spent, a whistle came up the tube with the inquiry, "What are your men doing?" which was answered, "Distributing and clearing up." Then the order followed, "Lay them off; there is nothing on hand." They were laid off. They put their coats on and walked downstairs, while some one with an order was going up. As soon as known, the wigless boss ran out and followed his men as if his house was on fire. "Come back," he cried, and they came back. This was only practiced once during my stay.

Meeting a customer whose printing I had done for nearly twelve years, he desired fifty dollars' worth as soon as possible. He would give his work to my employer if I made a commission on the first order. On taking this to my boss, I gave him the cost, and told him what my customer had said. "Well, then, I will give you twenty per cent," he answered. If it had been ten per cent, it would have pleased me as well. He delivered the printing and received his pay, but failed to turn over the twenty per cent commission as promised. On my customer learning who he was dealing with, he said, "He will not get another order from me." On asking what reason he had in not complying with his own arrangement, he opened my eyes with the remark, "Why, sir, I will charge you with obtaining orders for printing without a license from the United States." This was original if not satisfactory. He cut his nose off to spite his face.

My term of office was nearing an end, as the former holder of the position concluded to return and bring his material and presses with him. This seemed beneficial for both employer and foreman, and was carried out. The fire of 1871 squared all accounts, and there was no more heard of cheap printing by steam.

Designing and Building of Special Machinery for Printers, Binders, Electrotypers, etc.

77 and 79 Jackson Street, CHICAGO, ILL.

OUR GOODS ARE SOLD BY ALL THE LEADING TYPEFOUNDERS AND DEALERS IN PRINTING MATERIALS.

.... THE NEW STYLE NOISELESS

LIBERTY * JOB * PRESS

*Has the MOST PERFECT DISTRIBUTION ever
obtained on a Job Press.*

It is the only Job Press whose form rollers can carry full size riders.

The Liberty Fountain is the best used on any job press, and can be regulated by the feeder while the machine is running. These features insure better ink distribution than can be had on any other jobber.

It is the *lightest running* job press made. Its new patent *noiseless gripper* motion is worked by a cam, positively, and not by springs which are always breaking and wearing out.

The *Throw-off* is simple, durable and exceedingly convenient, and does not weaken the impression, as is the case with most all the other throw-offs.

Any desired change can be made in a form without lifting it from the bed of the press. This makes the "Liberty" the best press for ticket, calendar and all similar jobwork where dates and figures have to be frequently changed.

The fly-wheel can be run in either direction, thus making it possible to locate and belt the press wherever convenience makes it most desirable.

Apply for descriptive pamphlets and price lists.

THE "LIBERTY" PAPER CUTTER—30 inches. The cheapest good cutter in the market.

Regular style, \$140; new style with inlaid rule and lines, back and side gauge, \$160. Boxing extra.

THE "LIBERTY" GALLEY. All brass. Guaranteed for three years. Indestructible. Prices not higher than full lined galleys.

THE "LIBERTY" GALLEY LOCK-UP. Price \$1.50 each. Can be made to fit any size of galley. No more looking for quoins that will not fit. The Lock-ups being made of brass, neither temperature nor moisture can affect them.

THE LIBERTY MACHINE WORKS,

SOLE MANUFACTURERS,

No. 54 Frankfort Street, NEW YORK.

ALL OUR GOODS ARE PROTECTED BY LETTERS
PATENT HERE AND ABROAD.

IMPORTANT NOTICE TO THE TRADE.

Notice is hereby given, that the galley above described, and heretofore sold by F. WESEL & Co., of No. 9 Spruce St., New York, under the name of the "Success" Galley is covered by a patent adjudged to belong to us after a litigation with F. WESEL & Co. We hereby warn all persons interested that we have the *exclusive* right to make, use and sell such galleys; any person therefore, who USES or SELLS such a galley infringes upon our patent and will be promptly prosecuted.

CORRESPONDENCE.

While our columns are always open for the discussion of any relevant subjects, we do not necessarily indorse the opinions of contributors. Anonymous letters will not be noticed; therefore our correspondents will please give names—not for publication, if they desire to remain incog., but as a guarantee of good faith.

FROM WASHINGTON.

To the Editor : WASHINGTON, D. C., July 30, 1889.

According to promise, I will endeavor to pen you a few lines in order to give your numerous readers at least an inkling of the business outlook at the national capital. There being so many places of interest for sight-seers, there is consequently a larger number of the "knights of the stick and rule" here than can procure employment, hence the overflow of "subs" at the various newspaper as well as book and job offices. The scale is 45 cents on morning papers, 42½ cents on evening papers, and 40 cents in job offices.

In the newspaper line there has been a great many changes during the past decade. It probably may be news to many of your readers, but this city has never as yet been able to support a penny paper. Many a venture in this line has been made, but each has followed the other in brief existence. Two weeks ago our citizens were suddenly surprised at the promulgation of the startling information that hereafter the morning *Press* would be 1 cent per copy, its former price being 2 cents. This journal is yet an infant, having been started by the Messrs. Fox a few weeks following the election of President Harrison, and is a straight-out republican paper. It now bids fair to live long and prosper. The morning *Post*, its only rival in the city, is doubtless the leading newspaper, having an efficient corps of editors and reporters, with Col. Frank Hatton as leading man. The *Star* and *Capital* are the only evening papers, the former being an old landmark and ably edited by Mr. Crosby B. Noyes. The recent change from four to eight pages, with a brand new dress, makes the *Star* an attractive and interesting paper. The evening *Capital* referred to has been lately substituted in place of the *Critic*. Previous to this transformation the *Capital* was but a Sunday edition, having no connection whatever with the *Critic*. The *Capital*, however, has a Sunday edition connected therewith, both of which are very presentable, typographically.

Among the Sunday papers worthy of special note might be mentioned the *Herald*, *Gazette* and *Chronicle*. A few weeks since the former was converted into an eight-page issue, it previously being but four pages, and with a new suit of clothes is now a bright and spicy journal, doing a thriving advertising business. By way of enterprise the management issues a supplement each week with the portrait and brief biography of the leading business men of the city. The *Gazette*, considered, until recently, one of the best "gotten up" papers here, mechanically speaking, is not in a very flourishing condition. "Hard luck" has entered its sanctum, and for some unknown cause it is said to be on its "last legs." The recent adoption of the plate matter system has robbed that paper of its once beauty. The *Sunday Chronicle*, another old landmark, having been started twenty-nine years ago, at the suggestion of the martyred Abraham Lincoln, by the late Col. John W. Forney, is now in a more thriving condition than it has been for a number of years. The removal of the office from the old "sweat-box" on F street to the large and spacious building on Eleventh street, has had a tendency to boom that paper. The building has been fitted up for the special use of publishing the *Chronicle*. With a new dress of handsome brevier and nonpareil this paper also presents an aspect of prosperity. Its editor being a "nervy" man, possessed with the "courage of his convictions," no doubt intends to make this a lively issue.

We almost forgot to mention the wirey little eight-page Sunday *Hatchet*, with its "cut and slash" vim. The office has recently been moved to a large, new building, and all the paper wants is a new dress to make it boom. Foreman Sampson, however, shows good taste in its make-up, notwithstanding his bad

material. This about completes the newspaper roll of our city of over 200,000 souls, at least that portion of it that is worthy of note.

There is the same confusion here as in other cities in reference to the patent-plate system. At present Columbia Typographical Union, No. 101, has the matter in hand, and just what termination will be arrived at is yet but conjecture. This subject has been a very knotty one for a long time, and has been argued strongly, both for and against. At present the *Hatchet*, *Gazette* and *Chronicle* are using plates, but employ union men only. The situation certainly is not an indication of prosperity.

The book and job offices of the city mostly seem to eke out an existence. Judd & Detwiler, one of our leading firms, put on an extra force of men a few days ago, and expect to be "rushed" for at least a month with the orders now on hand. This delighted a large number of idle printers.

Gray & Clark, the well-known avenue printers, seem to have their usual force busily engaged at constant employment.

The *Craftsman*, issued by No. 101 of this city, is a rare picture of mechanical beauty, and turns out first-class work in the job-room connected therewith.

EM-DASH.

FROM MONTREAL.

To the Editor : MONTREAL, August 6, 1889.

The remainder of this month and part of the next will be looked forward to by all members of the different unions and assemblies with much anxiety, as each will hold its annual picnic.

The George Bishop Printing and Engraving Company employes opened up the season by holding their picnic on August 3, at Beauharnois, where a pleasant day was enjoyed by all present.

Montreal Typographical Union, No. 176, will be the next to participate in having a grand picnic at Otterburn Park, August 10. The members will meet at the union rooms, McGill street, at 11:30 A.M., wearing a 37-em pica white plug hat and a small-pica walking stick. They will march, headed by six imps and a brass band, in great primer roman style, through the principal streets before leaving on the 12:15 train. A large number of prizes have been donated for the various contests to take place, which will include putting the shot, jumping, running by male and female comps, boys and girls and printers' wives, boat races, and last, but not least, a game of lacrosse for thirteen gold pins by the comps of the two English morning papers, the *Herald* and *Gazette*, against any picked team from the other offices in the city. This game will be, no doubt, the game of the season, as some of the best players are to be found among the printers. Everything has been well arranged, and, if the weather permits, it will be the best picnic of the season.

On the 12th instant the cigarmakers will celebrate their twenty-fifth anniversary by holding a picnic at the exhibition grounds. They will have a number of games, and will conclude by having a game of lacrosse, the winning team to receive thirteen elegant gold pins.

The next will be Jacques Cartier Typographical Union (French), which will also have an elaborate programme. They will very likely have a typesetting match between the swifts. At their last meeting they donated \$20 as a prize for No. 176, and also unanimously resolved to turn out with them on the 10th. The two unions are acting together harmoniously, and we expect good results therefrom.

Labor day is to be celebrated in Montreal in grand style this year. All the trade unions and knights of labor assemblies have been talking up the subject for the past two months, and everything is going along smoothly. A mammoth procession will be formed at 9 A.M., consisting of all the trade unions, knights of labor assemblies, benevolent societies, and several thousand excursionists are expected from Quebec, Louis, Three Rivers, Toronto, Ottawa, Cornwall, Hamilton and many other places, who will join them in the parade, after which they will proceed to the exhibition grounds where all will make merry. No political speeches are to be made on that day. The whole day's proceedings will be carried

out on temperance principles. A deputation from all the different organizations will wait on the mayor to have him proclaim it a legal holiday.

Work about the city is fair for this time of year in the job offices. The dailies are rather crowded with subs.

The programme for No. 176 was printed at the *Herald* office. It contains fourteen pages (each 4 by 6 inches) and neatly printed, containing an elegant assortment of printing house talk. The get-up is striking, and the *Herald* office may feel proud of turning out such a job.

J. P. M.

FROM UTAH.

To the Editor :

SALT LAKE CITY, July 31, 1889.

Business, which during the spring and early summer months was exceptionally good, is at present only fair, some of the offices being pretty well crowded with work while others are but moderately busy.

The nation's birthday was celebrated in grand style by the Utah Federated Trades and Labor Council. The Fourth of July, it seems, came at a rather inauspicious time—just after the subscription list for the Johnstown sufferers had been made up. The *Herald* suggested that the chamber of commerce committee, who had been soliciting aid for the above sufferers, resolve themselves into a committee to solicit funds and inaugurate a proper and fitting celebration of the nation's birth; but the gentlemen did not seem to take kindly to the proposition to go around a second time on the same sort of an errand. So, you see, it fell to the lot of the workingmen to take the steps necessary to observe this day, so dear to every true American heart.

The president of the Utah Federated Trades and Labor Council, Mr. Robert G. Sleater, was elected grand marshal of the day, and carried off the honors and discharged the arduous duties of the occasion as only a member of the art preservative can do. He was ably seconded and aided by the various committees from the different labor unions.

There was a grand procession of the various labor organizations, with appropriate banners and mottoes, including the military from Fort Douglas, the Grand Army of the Republic, the governor, members of the Utah Commission, the city council, chamber of commerce, the merchants, and a delegation from the various unions of Ogden.

The procession started at 10 o'clock, headed by the grand marshal and aides, the Fort Douglas band, the 16th United States infantry, a company of artillery, a float on which sat the Goddess of Liberty, surrounded by thirteen young ladies with the names of the thirteen original states emblazoned on their sashes. Next came another handsome float, representing the present states and territories, with Utah occupying a prominent position, and a banner on top, running the whole length of the car, on which was painted the following legend: "Utah, Old Enough to Be a State." Next came invited guests in carriages, headed by another band, and followed by the Federated Trades and Labor Council, four abreast, headed by their magnificent banner. The Salt Lake Typographical Union being the oldest union, of course came next, followed by the various trades.

The procession, which was nearly a mile long, marched to Liberty Park, where free lunch and refreshments were served. The artillery fired a salute, the bands played, the governor and others made eloquent speeches, notably among which was that of Major Bynon, who delivered an address entitled, "Eight Hours," and the gentleman showed that he was well conversant with the subject by the masterly manner in which he handled it. Five hundred copies of the *Herald*, containing this speech, were purchased by the unions and sent to the various labor organizations of the country. The Declaration of Independence was read, also an original poem. Songs by the workingmen's glee club helped to make an interesting programme, after which the people scattered in the park and gave themselves up to enjoyment and picnicking.

An 800-pound ox and six sheep were roasted whole and distributed to the public free. Four hundred gallons of beer were

donated by the local breweries, which was partaken of by all but—well, you know that printers are noted for being strictly temperate men.

The figure 8, on the Salt Lake Typographical Union's badges, seemed to be somewhat of a puzzle to the general public. The other unions, for some reason or other, forgot to place it on theirs.

Everything passed off quietly, nothing occurring to mar the day's pleasure. Labor may well feel proud of her maiden effort, and, as one of the committee remarked, "We have now served our apprenticeship, look out for next year's celebration!"

It is astonishing what a number of labor unions, through the indefatigable and untiring energy of Mr. Sleater, have lately been organized, one of which is Salt Lake Printing Pressmen's Union, No. 41, with a membership of six instead of fifteen as published in your journal, which was chartered May 1. It is to be hoped these numbers will soon be augmented, but as it is a new thing, it is a difficult matter to convince the pressmen wherein they will be benefited by joining.

The *Herald*, some three months or so ago, came out in an enlarged size, with a complete new dress, giving it quite a metropolitan appearance.

Messrs. Ackerman & Co. have added fifty fonts of new type, borders, rule, a new cutter and an Otto gas engine to their plant.

Mr. F. H. Nelden has sold out his interest in the firm of Nelden & Co., and other changes are continually occurring in the personnel of the craft at this place.

P. S.

FROM NEW ORLEANS.

To the Editor :

NEW ORLEANS, August 4, 1889.

The printing business in this city at present is quite active. At Hyatt's, upward of half a dozen men are employed; at Brandso's a couple of extra men are engaged, and at Graham's over a dozen men are regularly employed. The character of work is mostly book and special work.

Notwithstanding the job office employes are having plenty to do, the subs on morning and evening papers are not overworked, probably owing to the fact that there has been quite an influx of typographical "tourists" during the past month.

Mr. Atwater, for upward of a year foreman of Hyatt's job office, has gone traveling for his health. He has a brother in the East and one in Liverpool, England, with one of whom, I am told, he will connect himself in business after the conclusion of his journey. Mr. Hinton, the venerable job printer and corresponding secretary of our union, has succeeded Mr. Atwater as foreman of Colonel Hyatt's office.

By special legislation of No. 17, no member thereof is hereafter permitted to work in an office which is not strictly union. This is the result of the label question being discussed between master printers and No. 17, the former objecting to members of No. 17 going into small offices and rat offices and helping them out when those offices cannot do without them, thus placing a grave stumbling block in the way of legitimate union offices.

A question of much importance about to be discussed by committees representing No. 17 and the New Orleans Typothetæ is that of apprenticeship. It is thought the result which will be reached is that which is already the law of No. 17, namely, two boys to the first ten journeymen compositors or less, and one for each five or fraction thereof additional.

There is a weekly paper, the *National Exponent*, the P. O. S. A. advocate, being published here. It is a patent inside.

We have received the initial number of the International Typographical Union organ, a miniature folio.

The *Appeal*, a little journal established by woman's vim and buoyed by woman's energy, continues to claim favors from the residents of the Crescent City, and the patronage is apparently liberal, being the official organ, as it were, of the Women's Club of this city.

A compositor made his way from Chattanooga, Tennessee, in a boat, occupying, I am told by second hands, three months. The gentleman fell a victim to malaria, and is now in Bay St. Louis,

Mississippi, recuperating, so I have been unable to see him, he having remained here but a short while. I have no doubt the craft has thus lost the knowledge of some interesting anecdotes and hair-breadth 'scapes from — "fiddlers," mosquitoes and starvation.

And now, last though not least, I present your readers with what will, no doubt, prove to be the newest of the new; for having searched the annals of typography, I have failed to find anything resembling it: The *Daily News* furnishes its compositors with a water cooler, a towel-rack, mirror, comb, brush, towel, soap, blacking and brush and wash-bowl and pitcher — gratis!

D. F. Y.

FROM BALTIMORE.

To the Editor :

BALTIMORE, August 3, 1889.

If a general remark about the weather "goes," a word here may not be out of place in connection with the peculiar kind of weather that has obtained in this latitude for the past six months. Suffice it to say, that we have not had over three consecutive days of sunshine since the beginning of the year. It is to be hoped that the clerk of the weather will be considerate enough to give us a full week of old Sol's reign in September, when the great exposition comes off.

Messrs. A. Hoen & Co., lithographers and printers, have just completed for distribution in various parts of the country 10,000 lithographs (30 by 40), which give a full view of the exposition grounds, including the race track and the sham battle of North Point "as she is to be fought" by our state militia and visiting troops.

The difference which arose a few weeks ago between Mr. James Young, publisher of the weekly *Telegram*, and the Baltimore Typographical Union, has been satisfactorily settled. At the regular monthly meeting of the union on Saturday last Mr. Young was present by invitation, and in very few words stated his side of the case. He said he had no grievance, but that it was his intention to continue the plate supplement in the *Telegram*; that he would pay union rates and employ none but union compositors as heretofore. If the union saw fit to agree to that, he would reinstate his old hands and give his present force a week's notice to make a final exit. The union did agree to that, and next week, while printer Young's locked out employes resume cases at the old stand, his non-union men will step down and out.

According to some reports, Baltimore, it would seem, is not considered by the tramp printer to be the abode of a benevolent class of citizens, speaking directly with reference to those who stick type as "regulars" in the newspaper offices. Hence, it may be presumed, some of the Baltimore typos are not down on the tourist's guide-book as "good Samaritans." A day or two ago, I overheard a travel-stained, weedy-looking roadster of the genus typo, who had made the rounds of the offices for a "lift" without success, as he alleged, declare it was his unbiased opinion that the "regulars" in the Baltimore newspaper offices "slept on their cases," from a fear that some wayfarer or other might get a chance to earn a breakfast. But there are two sides to a question. As a general thing, the regular compositor on the Baltimore daily is both a competent workman and a reliable man. He is necessarily so. If he were to yield up his cases, even for the briefest space of time, to every devil-may-care, go-as-you-please applicant, who may be here today and gone tomorrow, his occupation would soon be gone. This is not, however, to say that every printer who takes the road is incompetent, or that he walks out of town from pure inclination. But everyone knows, who has printing-office experience, that there are from choice quite a number of ne'er-do-wells among the craft, who are as perverse and uncertain as the little pigs in clover. And yet many a stranded trumper has been sent on his way rejoicing by the steady-going compositor of Baltimore.

The *Morning Herald*, the only penny paper published in this section, has purchased the right to print the official programme of the exposition. The *Herald* will issue an extra edition of 23,000. The managing editor of this sprightly and outspoken journal,

A. Beckhoffer, since the management came under his entire control, has, it is generally believed, placed the *Herald* upon a good paying basis, a position, from all accounts, which it had never before attained. The *Herald* should be well supported, for it deserves success, inasmuch as it is well edited, gives about all the news and, above all, is not afraid to call things by the right name. The paper gives steady employment to about eighteen compositors.

The Constitution of the United States and the Constitution of the State of Maryland will be introduced in the grammar schools in September as supplemental reading.

The *Sun* recently published the Constitution of the United States, and it is safe to say that quite a number of its readers dropped their optics for the first time upon the nation's bulwark.

The firm of John Murphy & Co., the Catholic publishers, of Baltimore, are about completing a large order from Cardinal Gibbons, consisting of the new Roman Catholic prayer book, to be issued in several styles of binding. Proofsheets of every page were sent to every Catholic archbishop and bishop in the United States.

Baltimore Typographical Union is to have a new constitution. The relief fund has been abandoned. Delegates to the International Typographical Union convention made a full report at the last meeting, which was approved and accepted. The union is making big preparations for the parade in September, and expects to make a highly creditable showing in the turnout of the trades.

It is very well to talk about patronizing home enterprise. All things being equal, that sort of thing is commendable; but the trouble is that, to fall back on a homely phrase, they are not, in some localities, equal by a jugful. Water will not rise above its source. Nor is it fair to expect an inferior article, placed by the side of its superior, both being held at the same price, to withstand anything like competition. With the masses it seems to be of little concern where a thing was manufactured; if it is fashioned to suit their taste, they buy it; if not, they let it alone, home manufactured or otherwise.

As to some publications, down this way, that might be mentioned, scissors and paste are relied upon principally in the editorial makeup. But this is not all. The selected matter, paid for originally by enterprising publishers of the North and the West, would appear to be the *summum bonum* of the journals in question, for the scissored matter is regularly advertised as the chief attraction in the columns of these nondescript sheets.

One of the largest retail stores in this city, which does an extensive business in the bazaar way, claims to have suffered great pecuniary loss through a typographical error in a late issue of the *Sunday American*. The proprietor of the store publishes a statement in effect, that while his "ad" appeared according to copy in the *Sunday Herald* and also in the *Sunday News*, it was improperly inserted in the *American* as to the price of a certain line of goods. The result of this was, as this merchant intimates, that, not wishing to appear as trying to deceive the public, he was compelled to meet a run on patterns of "colored chambra," ten yards to the pattern, for 25 cents, the figures given by the *American*, and which should have been 62 cents, as correctly stated in the other papers. This can hardly be an advertising "dodge;" and yet it may be after all.

On Sunday afternoon last, Andrew F. Crutchfield, editor and co-proprietor of the *Baltimorean*, a popular weekly paper of this city, was laid to rest in Loudon Park cemetery. The deceased was born in Richmond, Virginia, in 1824, where he served an apprenticeship at the printing business in the office of the *Christian Advocate*. In 1865 he came to Baltimore, and at once took position on the editorial staff of the *Sun*. He was an indefatigable worker and a most genial gentleman. Peace to his ashes.

In the book and job offices business appears to be fairly brisk. Down town, canvassers are in hurried quest of storekeepers, with the laudable intent of securing "ads" for "extra editions" and divers little books, the latter to be distributed gratuitously to strangers, to guide them through the devious ways of the city during exposition week in September.

FIDELITIES.

TYPOGRAPHICAL TRADE TRANSACTIONS.

To the Editor : PHILADELPHIA, Pa., August 6, 1889.

Midsummer finds the printing industry and associated interests in a better condition than is usual at this time of the year. Many of the leading job houses are running full-handed, while in some instances a rush of summer season work has necessitated the temporary employment of extra hands.

The machinery people, particularly those engaged in the manufacture of paper-making machines, are still enjoying great prosperity. Some of the firms are so crowded with orders that they refuse to file orders for goods that are wanted within three months. The engravers, lithographers and bookbinders are still doing a tremendous business, and it appears to be generally believed that the present activity will be maintained for the balance of the season. The prominent job printers, lithographers and engravers, whose facilities enable them to turn out large quantities of handsome and attractive show work, are just now quite busy with goods to be delivered during the month of September. Some of the work will be given to the theatrical and opera people at the close of this month. A great deal of the work is produced from original designs and is strikingly beautiful, the choicest pieces coming from the establishments of well and favorably known lithographers and engravers. It is reliably stated that traveling companies will put more money into printers' ink during the fall and winter than ever previously. Already enough orders for "show business" have been filed in one city establishment to keep it running for at least two months after the close of August. The concern has purchased five carloads of paper to fill the orders.

The art publishers and makers of holiday and souvenir books, and other goods intended for festal periods, are making extensive and elaborate preparations to meet the demands they anticipate when their special trade season opens. From private information received about these artistic and brilliant productions, it is safe to say that they are rare and exquisite gems of the artists', engravers', lithographers' and printers' skill, and will far surpass anything that has ever before been undertaken in these special lines. The original designs are wonderful specimens of beauty, elegance and attractiveness, and are destined to create a *furor*, will be in great demand when once placed on the market, and will certainly please the most fastidious *connoisseur* of these graceful and pleasing emblems of love, affection, esteem and courtesy.

The Flat Rock Paper Mills, Manayunk, Pennsylvania, owned and operated by the M. & W. H. Nixon Paper Company, have started up again, after having been idle since the early part of June, in order that repairs and improvements might be made to the machinery. The entire works have undergone a thorough overhauling, and two large Humphrestone heating engines have been added. About two hundred are employed at the mills.

At the last regular monthly meeting of Philadelphia Typographical Union, No. 2, there was so much routine business to be transacted that an adjournment to finish it was ordered until the next Sunday. The report of the delegates to the International convention, at Denver, Colorado, was received, and appeared to be satisfactory.

Contracts for supplies, etc., for the state departments at Harrisburg have been awarded as follows: Deter & Blackburn, Philadelphia, stationery at 30.6 per cent below the maximum price; Hoyer & Wilner, Harrisburg, supplies, 31.5 per cent; distributing reports and documents of the house of representatives, George R. Pym, Harrisburg, 2½ per cent below.

Americans returning from Paris express general disappointment concerning the American section of the great exhibition. Mr. Michael De Young, of San Francisco, declares that the American exhibits are simply ridiculous for a country of our resources. He says that the American commissioners were late in getting on the ground, and that they allowed themselves to be hoodwinked right and left by the Frenchmen. There is very little to show for the money which our government appropriated for the purpose of making a good display of American exhibits. Mr. John B. Henderson, of St. Louis, tells about the same story.

The French, he says, have left little room for any other country. The whole thing is intended for a great glorification of France. The exhibits of all other nations are insignificant, with England among the best and the United States and Germany among the worst of a bad lot.

The original humorist, Bob Burdette, whose playful fancy has long pleased newspaper readers, is to edit the humorous department of *Lippincott's Magazine*.

The Philadelphia Typothetæ has elected the following delegates to the national convention of the United Typothetæ of America, to be held in St. Louis in October next: Col. Clayton McMichael, J. R. Jones, William B. MacKellar, William M. Patton, William H. Hoskins, John W. Wallace, George S. Ferguson, John R. McFetridge, George H. Buchanan and William F. Fell.

The Peninsular Press Association of Delaware and Maryland visited Cresson Springs, Pennsylvania, on its thirteenth annual excursion. They left Philadelphia at noon, July 20, and arrived at the famous resort in the evening. They traveled in two special cars furnished by the Pennsylvania Railroad Company. The party, which numbered seventy, remained in the Alleghany Mountains four days, looking over South Fork, Johnstown and other places of interest in the vicinity. Robert D. Hoffecker, of Smyrna, Delaware, is president of the association, and Frederick E. Bach of Wilmington, secretary and treasurer. Thirty newspapers were represented.

Secretary Windom has decided not to accept the offer of the Milligan Steam Press Company to continue the use of steam plate-presses in the Bureau of Engraving and Printing, Washington, D. C., at 1 cent a thousand. The eighteen presses will be removed, and will be replaced by twenty-eight hand presses, now in stock.

A writer in the *Examiner*, Lancaster, Pennsylvania, says: "No better or sturdier American ever lived than General Simon Cameron. At his old home in Donegal, which he loved above all other places, he met the mighty and the poor. But I always thought there was a kindlier twinkle in the old man's eye and more heartiness when he met some country acquaintance than when he greeted the senators, cabinet officials and the mighty men of the land. I remember with what satisfaction he told me about the Harrisburg centennial. Among other things that were shown on that occasion was the court dress and sword he wore while minister to Russia. 'But,' said he, 'this is a paper that should have been tacked to it.' It was his indenture to learn the printer's trade. All the commissions he ever received from legislatures and presidents were thrown aside, but the indenture of his boyhood to a trade he kept locked in his safe. He was always 'Simon Cameron, printer.'" ARGUS.

TYPOGRAPHICAL TRIBULATIONS.

To the Editor : NEW YORK, August 5, 1889.

Extreme dullness prevails in all branches of trade, and it is generally indicated that no change for the better can possibly be expected until September. This depression in business causes many printers and pressmen to be idle. The trouble between the members of New York Typographical Union, No. 6, and the newspaper publishers has added to the general demoralization that has, within a recent period, spread through Printing House Square. Many sensible men, who have been unable to obtain good employment, have migrated to the seashore and mountain resorts, where business is said to be fairly humming. The lithographing and engraving interests continue to maintain their excellent and satisfactory condition.

New York Typographical Union, No. 6, held a special meeting Sunday, July 28, at Everett Hall, East Fourth street, to take action in regard to the lockout of its members from the offices of the *World*, *Sun* and *Times*, which occurred Monday, July 22, the particulars of which event are doubtless known to most of your readers. President W. E. Boselly called the meeting to order. He faced at that time as large and intelligent a body of workmen

as ever gathered in any city under similar circumstances. At least twelve hundred men were in the hall, while outside hundreds more were congregated to discuss the situation. The windows of the houses near by were filled with men and women who occasionally added to the incidents of the day by calling out, "Success to you, printers!" and "Down with all trusts and combines." It was a serious, orderly gathering, too, for the printers recognized the importance of the occasion, and came with clear heads, prepared to take decisive steps, should they prove necessary.

After considerable discussion, the question of sustaining the recommendations of the scale committee, which made the scale in June last, was put to a vote and lost, and by this action the union voted to stand by the present scale. After this action, the meeting voted to refer the entire business to a committee of three members of each morning newspaper's force of printers, this committee to meet immediately and their action to be decisive. This committee met in the union rooms, at quarter past six o'clock Sunday evening. The twenty-seven men constituting the committee met in the secretary's office, and though the windows were open and the adjoining room filled with outside members, the discussion was conducted so quietly and harmoniously that no loud talk conveyed to outsiders any information of the proceedings.

At about half-past one, Monday morning, the committee finally adjourned. The strike of compositors in the *World*, *Times* and *Sun* offices, that seemed so imminent, has been prevented. The committee prepared a compromise plan, and this was presented to the newspaper publishers and accepted by them. At the start, the compositors' committee made three propositions. One was a modification of the new rates announced by the newspapers. The men agreed that illustrative cuts in news matter should belong to the office, but held that all advertising cuts belong to the compositors. Inset cuts, single price, the compositor to be paid for time consumed in cutting leads therefor. The men proposed that compositors required to remain in the office after three A.M. should receive 50 cents per hour in addition to type set, and continuous composition, or 75 cents per hour in lieu thereof. They agreed that reading notices should be paid according to the type they are set in, but declined to accept the rule that all tables and rule and figure work on time should be at the option of the office. The second proposition was that the men should be paid 55 cents per 1,000 ems, an advance of 5 cents; and that all "fat," such as cuts, etc., should belong to the office. The third proposition established a weekly scale of wages on the basis of \$4 a day of eight hours. The *World* and *Times* decided to accept the second proposition, and will hereafter pay 55 cents per 1,000 ems for composition and take the "fat." The *Sun* chose the first proposition. Thus peace happily reigns again in Newspaper Row.

The typographical union's committee of twenty-seven met again at the union rooms, Wednesday afternoon, July 31. There was but little work to do. The sub-committees from each chapel reported that all hands were working on the morning papers as usual with apparent satisfaction. The committee from the *Morning Journal* reported that paper had decided on the regular piece system, thereby leaving the *World* alone to work on the system of paying 55 cents per 1,000 and taking all the display advertisements. The scale for day work on evening newspapers was then considered. Inasmuch as the *Mail and Express* had taken down unconditionally the "combine's" demand made July 22, the committee decided that there was no occasion to pay that office a special visit, particularly after the very courteous and friendly message that had been received from Mr. Gray, its business manager. The other evening papers had made no demand, apparently having no grievance. However, the scale for men employed by the week on evening papers was fixed at \$21 instead of \$20 as heretofore. This price is now paid voluntarily by the journals working on this plan. After words of explanation as to the strict meaning of the new clauses of the scale, the committee adjourned to meet at the call of its chairman should occasion arise.

Misled by the printed official minutes of the proceedings of the last meeting of the United Typothetæ of America, held in New York last September, the representative of THE INLAND PRINTER

stated in the July issue that the next annual convention of the typothetæ would be held in St. Louis, beginning October 3. This is, according to official information, a mistake. The day and date should be Tuesday, October 8.

The New York Printers' Benevolent Association held their ninth annual picnic at the Empire Colosseum, Saturday, July 27. Although it rained during the early part of the day, all the floors and walks were thoroughly dried and the grounds were in as good condition as possible when the gates were opened at half-past three o'clock. As if anticipating that the elements could hardly, with any degree of consistency, go back on such a loyal set as the printers, there was a good assemblage in attendance. The majority whiled away the time in discussing the momentous question—the lockout of the *World*, *Sun* and *Times*.

The officers of the New York Printers' Benevolent Association, which is composed entirely of members of Typographical Union No. 6 in good standing, are: H. M. Blachford, president; W. A. Young, vice-president; B. J. Hankes, secretary; John Wood, treasurer; J. P. MacAuliffe, sergeant-at-arms.

Marcus Schnitzer has ceased his proprietorship of the *Oesterreich Ungarische Zeitung*, which has passed into the hands of his brother, David Schnitzer.

The *American Angler* and the *Hook and Line* have been merged, and are now published as one journal. The combination issue will cover the entire field of American angling, including both fresh and salt water fishing. It contains twenty pages the size of *Harper's Weekly*. The first issue contains several genuine fish stories.

There is every prospect of a bitter legal struggle growing out of the recent sale of the *Brooklyn Zeitung*, of Brooklyn, to Col. Henry Roehr, who also owns the *Freie Presse*. The latter is a republican organ, and, being the only daily published in the German language, was entitled to the corporation advertising. The *Zeitung* was started at the instigation of the democratic leaders, and the advertising was taken from the *Freie Presse* and given to its young rival. The *Zeitung* did not prove a success, however, and was sold at auction to John G. Wischert, who bid it in for the amount of his mortgage, \$17,000. He afterward disposed of the paper to Colonel Roehr, who announced that he would continue the paper by consolidating it with the *Freie Presse* under the double title of the *Brooklyn Freie Presse and Zeitung*. Recently Colonel Roehr notified Mayor Chapin of the change, and asked him to direct the proper officials to forward the corporation advertising to its proper destination. The Brooklyn Publishing Company, which formerly published the *Zeitung*, claim that Colonel Roehr only purchased the plant of the *Zeitung*, and not the title of the paper, which they propose to issue as usual, and have notified the mayor and common council to that effect. The conflicting notifications have been referred to the aldermanic law committee, and whatever the result the matter will no doubt be taken to the courts, as the corporation advertising is worth about \$12,000 per year.

PRINTER-JOURNALIST

FROM PHILADELPHIA.

To the Editor:

PHILADELPHIA, August 4, 1889.

Now, in regard to the printing trade in this city let me say that there are too many offices with inexperienced and non-practical men at the helm; and mark you, inside of two years many of these offices will have been drawn into the greedy maelstrom of financial failure.

July and August are always dull, and this year is no exception to the rule. The catastrophe at Johnstown brought its pencil streak of silver lining in June, when several of our offices were busy furnishing, in book form, a graphic history of that frightful casualty.

We notice the announcement in the daily papers that the National Bureau of Engraving is again in troubled financial waters. This house has for several years had its manufacturing department situated in Burlington, New Jersey, retaining the business office in this city. We hope, for the sake of all concerned,

that it may be able to so adjust its affairs that business may be continued.

One by one the ranks of the Adams pressmen are being depleted, and employers who leave their Adams presses stand for a short time realize when they wish to start them up that that class of pressmen are not easily procured. The Adams pressman naturally drifts toward the cylinder movement, and being possessed of a thorough knowledge generally of imposition, color, etc., soon becomes a valuable cylinder hand. Then again the rising generation do not apprentice themselves to the Adams press, but look to the cylinder as the one upon which to anchor. The decadence of the Adams press is also shutting off a source of employment for females, the feeders of that class of press being always of that gender.

Affairs between employers and employés are quiescent, there being no disposition to stir up strife on either side. Employés realize the benefit of being in steady positions, and employers realize that it is to their advantage to keep their men on if at all practicable. The advantages are mutual.

The work of the International Typographical Union at Denver, it strikes us, was in keeping with the spirit of the age. Some objection is made to the location of the "Home" at Colorado Springs, but if we only realize that a home is a place to stay for perhaps a long period, and that the locomotive has annihilated distance, the objection that it is not central is hardly worth considering when you look at the magnificence of the site and the liberality of the citizens of El Paso county. Pressmen's Union No. 4 feels a just pride in the wisdom manifested in sending as their delegate Mr. Thomas J. Harrison, who was recognized by the convention as worthy of the offices of first vice-president and delegate to the American Federation of Trades, at Boston, in October next.

We hope for a revival of business about October. More anon.

OCCASIONALLY.

STEREOTYPING ON PLATEN MACHINES.

In writing this article it is not my intention to give an elaborate description of stereotyping, but a simple and economical process by which printers who are not in possession of a stereotyping apparatus will be able to cast their own stereotypes, such as handbills, cards, labels, tint plates, chaostype, etc.

It is presumed that the printer has got a platen machine, which is to be used as the casting box.

The following materials will also be needed to complete the outfit: (1) a deal board a pica lower than type, to fit exactly inside the machine chase; (2) four pica brass rules for casting-gauges; (3) a strong hair brush about 5 inches long by 2½ inches wide, with a handle about 6 or 7 inches long, to be used as a beating brush; (4) a boot polishing brush for brushing the French chalk off the matrix; (5) a melting pot and a ladle.

TO TAKE A STEREO FROM AN ORDINARY TYPE FORM.

In the first place it is necessary to prepare the flong, which will eventually be the mold or matrix from which the plate will be cast.

HOW TO MAKE THE PASTE.

Mix one pound of good wheaten flour, one desertspoonful of powdered alum, and nine ounces of white starch, with a sufficient quantity of cold water, and boil in the ordinary manner. When it is required for use mix with it an almost equal quantity of powdered whiting.

TO MAKE THE FLONG.

Paste evenly a sheet of stout brown paper with the above preparation, then lay on the top of it a sheet of good blotting paper, paste as before and lay on another sheet of blotting paper, paste again and lay on a sheet of tissue paper, paste again and lay on another sheet of tissue. Then take a rolling pin or an office rule and roll the flong well to exclude all air bubbles, after which lay it on one side to dry.

CASTING.

We may now proceed with the casting. Fill the metal pot with old stereo or type metal and put it on the fire to melt.

While it is melting we will prepare the form. Unlock it and place round it a border of nonpareil reglet and then a border of three or four line metal letters face downward. Lock it up again and wipe the face of the type over with a piece of clean oily waste or rag, to prevent the matrix from sticking.

TO MAKE THE MOLD OR MATRIX.

Cut a piece of the flong and two pieces of soft but strong wrapper, a little larger than the form, and immerse two or three times in hot water, lay them each time on a piece of dry blotting paper to absorb the superfluous moisture. Leave the flong on the blotting paper while you paste the two pieces of wrapper evenly with ordinary paste, and lay them on one side. Now place the flong on to the form with the tissue paper downward, and spread over it a piece of damp linen, and with the beating brush beat the flong well into the type. Beat steadily and firmly until the required depth is obtained; then remove the linen and put on one of the pieces of wrapper and beat as before, taking great care to exclude all air bubbles. If there are any whites larger than about six ems wide it will be as well to fill them up with bits of pasted wrapper. Then lay on the second piece of wrapper and beat in in a similar manner.

DRYING THE MOLD.

The next thing to do is to dry the mold, which, as we have no heated press for the purpose, will take about four or five hours; while it is drying it will be as well to subject it to pressure to keep it flat, which can be done by putting a board and weight on top.

When it is dry remove it very carefully from the form and trim the matrix round with a pair of shears, paste a strip of brown paper the same width as the matrix on to the top edge, and long enough to protrude over the edge of the platen.

HOW TO PREPARE THE MACHINE.

Remove the rollers, take the packing off the platen, fix the board in the chase and lock it on the machine, paste one of the brass rules and rub it well on to the bottom of the platen so that it clings pretty firmly to it, then lodge the other rules on to it, at the required width apart. Close the platen up as though you were going to take an impression from a form, until the brass rules are tight. Then pour a ladleful of hot metal into it and leave it there for about two or three minutes until the platen has got thoroughly warmed. Bring the platen home again and remove the plate, and in its place put the matrix (brush the face of the matrix over well with French chalk each time before taking a cast from it, to prevent the plate from sticking to it), lay the rules on to the frame formed by the inverted letters, and a sheet of glazed brown paper over the top of them so as to be between them and the board, let it overlap in a similar manner to the pieces of paper on the matrix. Close the platen, and if the metal is of the right heat for pouring, pour it in between the two projecting pieces of paper.

TO TEST THE HEAT OF THE METAL.

Fold a piece of note paper and insert it in the metal and if the paper turns a light straw color it is ready for pouring, and if it turns black or dark brown the metal is too hot and should be allowed to cool, or it will burn the mold.

Skim the metal before pouring.

HOW TO CAST TINT PLATES.

Heat the platen and proceed as before, but in place of the matrix use bookbinder's cloth, or if a solid or flat tint is required use a piece of glazed brown paper. Rub the cloth over with French chalk before casting from it.

Be very careful about warming the platen, for if you do not have it warm enough the plate will not turn out very satisfactory.

TO CAST CHAOSTYPE.

It is only necessary to fix the board and gauges in their place and pour the hot metal on to the *old* platen. To vary the pattern of the plate, pour in the metal in an irregular stream.—*Correspondent in British Printer.*

A TRIP TO THE ROCKIES.

FROM ASPEN TO DENVER, VIA THE DENVER AND RIO GRANDE RAILWAY.

NO. II.

THE excursionists, guests of Denver Typographical Union, as previously arranged, making the trip from Denver to Aspen, via the Colorado Midland Railway, returned by the Denver and Rio Grande, thus affording all the delegates and

visitors participating the opportunity of seeing the varied scenery on both roads. In accordance with such programme the D. & R. G. "special" left Aspen at 3 o'clock, Monday morning, August 10, but, owing to the time of arrival, its occupants were unfortunately denied the pleasure of accepting the entertainment provided for them by kind friends at Glenwood Springs. The early risers, however, were rewarded by viewing scenery sublimely grand when passing through some of the cañons. Why these mountains are called the "Rockies," can be easily understood by those making such a trip. Rocks to the right, rocks to the left, rocks in front, rocks behind, rocks of all conceivable dimensions, shapes and colors—from the boulder in the valley to the mighty peak that cleaves the clouds; miles upon miles of granite, abrupt, bleak and defiant; granite crowned with trees as sentinels, and with trees in every cleft, in all imaginable positions, present themselves on every hand. Surprise follows surprise. There is a mountain torrent, foaming, leaping between the chasm; here is a valley—with the snow-covered mountains in the background—presenting a picture for a Bier-

stadt or an Elkins, and the question is asked a hundred times "Why should American tourists go to Switzerland, instead of viewing the mountain scenery of their own land."

After breakfast the first stopping place is Red Cliff, an odd-looking uninteresting mining town, perched in the mountains, where a number of the party secure some mementoes of their travel—one securing part of a petrified antler, which he evidently holds in high esteem. Friend Johnson, of Kansas City, while engaged in hunting the festive cactus, is inadvertently left behind. The race between him and the train is a very exciting one for a short distance. Finally muscle succumbs to steam, discretion becoming the better part of valor. The train is finally

brought to a halt, and the wanderer is cordially welcomed by his companions. He declares that he considers himself a number one runner at home, but protests that it is too much to expect him to successfully contend against "the altitude" and a locomotive at the same time.

When going over Tennessee Pass we have the good fortune to obtain an excellent view of the Mount of the Holy Cross, a number of miles distant. The cross is formed by two transverse cañons of immense depth down and across the summit of the mountain. In these cañons lies eternal snow. The symbol is

perfect, though some of the pictures published flavor of exaggeration. The next glimpse, from which great things are expected, proves a disappointment—a mist having fallen over the mountain top within five minutes, showing the changeable character of the atmosphere.

At Leadville an excellent repast awaits the now hungry crowd, to which ample justice is done. As on a previous visit, a snowballing match is engaged in, the snow laying from two to three inches deep. Taken altogether, Leadville is not held in high favor, the outlook being bleak and uninteresting. While in the city we did not see a tree, flower, or even a blade of grass, and we have no regrets when we find the train in motion.

We must not here omit to mention an occurrence of which we were an eyewitness, which is well worthy of record. Shortly after leaving the carbonate camp our esteemed friend, Charles M. Moore, of Chicago, a gentleman who has charmed all with his silvery notes on the tour, and who lacks only a pair of wings to make him a singing (*not* a singing) angel, undertakes, and successfully, to sing a child to sleep, who heretofore has resisted all efforts put forth in this

direction. Tenderly he takes the little one in his arms in a manner which proves him to be an adept at the business, and sings

"Hush, my babe, lie still and slumber,
Holy angels guard thy bed,"

with a pathos which brings tears to every eye, and wins for him the everlasting regard of the exhausted parents. A striking example of the versatility of genius; for, no matter whether filling an order for Omaha, Denver or the Sandwich Islands, or singing a baby's lullaby, he knows no such word as fail.

The route from Leadville to Salida is through one of the most picturesque regions in the state. Passing over the mountain

MOUNT OF THE HOLY CROSS.

plateaus snow fields are found on every hand, while here and there in the distance some giant sentinel rears his snow-crowned crest about his fellows. It is all grand — weirdly grand — and a sight never to be forgotten.

But the treat of all treats is yet to come, a treat which amply repays the tourist to visit Colorado to see—the trip through the "Royal Gorge." Shortly before entering an observation car is attached to the train, which is soon filled with expectant excursionists; and it is almost needless to add, that the sublime grandeur and impressive weirdness literally beggar description. The train rolls around a long curve close under a wall of black and banded granite a score of hundreds of dizzy feet in height; across the chasm, a few feet in width, is its counterpart, divided by the rushing, foaming Arkansas. Almost a whole circle is accomplished and the grand amphitheatrical sweep of the wall shows no breaks in its smooth zenith-cutting façade.

Oh! the crashing and the groaning,
 And the deep and awful shudder
 As that great red belt was parted and the mountains crashed in twain;
 And the Arkansas came roaring,
 Raging with its dreadful thunder,
 Sweeping through the mighty chasm, dashing madly toward the main.

* * * * *
 Oh! this myriad crested cañon
 With its walls of massive marble,
 With the granite and red sandstone piled in peaks that pierce the sky;
 Where no bird dare dip its pinion
 In the narrow veil of azure,
 Where the solemn shadows linger o'er the river rolling by.

ROYAL GORGE.

Right before us rise a succession of monster peaks, which seem to bar our progress, but as we near them the train breaks away at a tangent past their edges or round their corners. Detour after detour follows in rapid succession, skirting the base of great frowning peaks and walls, each seeming to overshadow its predecessor, whose

giddy heights it pains the eye to follow, rising, as they do, in a perpendicular mass from the water and the track. Everybody is too absorbed in wonder to indulge in conversation, and a sigh of relief is heard when the special and its living freight emerge from the "Gorge" and shortly thereafter arrive at Cañon City. Here is situated the state penitentiary of Colorado, within whose walls are confined some of the most notorious criminals and outlaws to be found throughout the length and breadth of the land; and the ugly looking muzzles of the Winchesters carried by the guards on the towers act as a notification that escape is impossible, even if a train is within a biscuit's throw. The soil surrounding this neighborhood is especially adapted to the cultivation of fruit, though the heat in summer time is said to be more than intense.

BALANCED ROCK, IN GARDEN OF THE GODS.

The ride from Cañon City to Pueblo is devoid of special interest; the passengers having been satiated with genuine Rocky Mountain scenery, are not in a humor to go into ecstasies over stunted trees or foothills. At Pueblo, the Pittsburgh of the Centennial State, whose rolling-mill furnaces are supplied with coal from its neighborhood, a bounteous supper is provided, which is duly appreciated "All aboard" is a welcome sound, as we are now on our homeward trip, and no stops of any length are expected till Denver is reached. Nearing Colorado Springs, every one is on the outlook for a glance at Pike's Peak. Fortunately, the sky is cloudless and the atmosphere clear, and, just as the sun is disappearing behind the mountains, a good view of the snow-crowned king is obtained. Shortly after, the road to Manitou, the Chamouni of America, with its health-giving springs and thousand and one attractions, as also the Garden of the Gods, with its strange peaks of sculpture and architecture, appear in sight. But these are soon left behind, and on and on we speed. Several of the party are duly initiated into the secrets of the "Order of the Pillow" to the strains of a Mason & Hamlin organ, among them being the good-natured conductor, who vows he will "never do it again." The ritual is a short and impressive one, and we sincerely regret a pledge of secrecy prevents us from divulging it. All proper information, however, can be obtained by addressing the chaplain, Mr. Thomas McNabb, Kansas City. Mirth and jollity prevail, in which the ladies join; everybody is in good spirits, everybody is delighted with the glorious mountain trip, which will long be remembered. Here is Castle Rock; here is Lyttleton, famous for its watermelons, and here is the end of our journey for the present—the union station, Denver. Thus happily ended an excursion which, it is safe to say, will never be forgotten by those who had the pleasure of participating in it.

A PROCESS of making type from paper has been patented in England. The invention, in its present state of perfection, has been found fully adequate to succeed the large wooden type now in general use. Finely divided paper pulp is mixed with paraffine oil or linseed drying oil and pressed into forms or molds. Heat under pressure consolidates the pulp. Paper type is less expensive and more durable than that cut in wood.

MANITOU SPRINGS.

MARSHALL PASS, ON DENVER & RIO GRANDE RAILWAY.

Solely contributed to the INLAND PRINTER.

THE WORLD OF TYPOGRAPHY AT THE EXPOSITION UNIVERSELLE-INTERNATIONAL, PARIS.

NO. II.—BY WALTER LODIA.

DAILY assuming a more magnificent aspect, the grand exhibition will soon be at the acme of perfection. Its splendor is indescribable, vastness unimaginable, products of every nation uncountable. It is calculated that from 16,000,000 to 18,000,000 people will have visited the exposition by the time it closes late in the fall, and on certain days during the coming tourist season a diurnal attendance of 500,000 persons is expected. This shows what a splendid financial success the International is—a triumph of the republican world in spite of the refusal of "official" assistance by nearly all monarch-ridden countries. Brave France! thrifty France! noble France!

But one half the exposition is open from 8 A.M. till 11 P.M.—grounds, palace of machines, grand dome aisles, transepts of the beautiful arts and liberal arts structures, and of course the highly-profitable Eiffel tower can be inspected up to a late hour. The closed half, being only accessible till 6 P.M., includes all the industrial sections (most edifying and attractive parts of the exposition), the edifices devoted to beaux arts and arts liberaux, the numerous buildings of various countries—notably the republics—in the grounds, the great agricultural and colonial divisions, and palace of the Trocadero.

Such is the bigness of the show that the writer, although here over two months, has not visited every part yet, being busy paying more particular attention to the American displays, which are very large and widely distributed over the exposition.

Outside the International, round and about the city, Paris is putting on her gayest charms. It is the luxurious vegetation, due to the invariably glorious weather we are having, which gives the capital its chief beauty, forming a mass of green so restful to the eye after the sultry heat and glare and uninviting aspect of huge dingy buildings in New York City, to which no American cares to return except for remunerative business. On the umbrageous boulevards of Paris the effect of the Universelle in drawing strangers from every clime of the globe is made very patent; for in their native costumes may be seen the red Indian with jaunting feather headgear; African, black as charcoal, cloaked from head to foot; Hindoo, swathed in towels and loose garments; ogle-eyed Japanese, tall and swarthy Arab, cunning Turk, pale Russian, skinny Swede, calculating Scot, jovial Irishman, and others "too numerous to mention."

To now line upon the exhibits in typography, those which will be taken up are the products of

ENGLAND.

The mother country shows very little in connection with printing, perhaps due to the tory refusal to contribute a fund or give any official aid; and, maybe, to the absurd stand taken by some Britishers fawning to the nobility, who do not participate, as it is against their principles to join in the celebration of a downfall of monarchy. May they suffer for their folly!

In type, H. W. Caslon & Co., Chiswell street, London, and rue Jacob 35, Paris, are the sole expositors, and, alone as they are, do not make a display of any consequence. Several small fonts, borders, brass rule, pots of quads and letters, brass-faced type, steel chases of divers sizes, with patent screw quoins, four catalogues, a lead cutter and a mitring machine, numerous good specimens of plain and color work done on the concern's types, centered by half a dozen prize medals—that's the exhibit complete of these *fondeurs en caractères*. Any novelty it would be useless to look for in this well-situated exhibit.

Zuccato & Wolff, 15 Charterhouse street, Holborn Viaduct, London, exhibit in the gallery of the Liberal Arts building their "typograph," which, it is asserted, will take 5,000 copies from a single writing. The apparatus is one of the now common affairs for manifolding; scribble anything on a zinc plate with a pen having at end a tiny cogged wheel; put sheet of paper between

this and leaf of thin parchment, ink with ordinary printers' color by means of narrow roller; resulting in an impression, which may be continued until the writing is worn away by friction. Zuccato's patent is represented in Paris by I. Frank, rue des Petits-Carreux 13. It has carried a number of medals at different exhibitions.

In close proximity is the "graphocycle" copying apparatus, made by somebody (agents have an object in keeping back the manufacturer's name and address) in London. It is the same appliance over again in principle as foregoing.

Whereas the United States industrial section bristles with typewriters, the caligraph, World, Hammond, Remington, and a couple of others having large stands, the United Kingdom can only claim one small exhibit in this direction, and that *the* novelty of typewriters in the Universelle. It is the production of the Miniature Pocket Typewriter Company, of Swan Arcade, Bradford. The title of the concern is embodied in their machine, if such it may be termed. This can be carried in the vest pocket, minus case. The face of the "writer" is enameled, and of the size of a large watch dial. Round the outer edge are the letters, points, figures, etc., which correspond with rubber stamps beneath. The "dial" is turned round to the desired letter and pressed on a certain point, which gives the printing. A trifling wool cylinder, damped with ink, is always being traveled over by those letters moved about but not being used, thus insuring plenty of moisture. The "Miniature" is more especially suited for foreign correspondents, who, dispatching in English copy, which for the guidance and safety of the telegraph clerk should be in roundhand, are apt, in their hurry, to become neglectful and write indistinctly.

In the vast and magnificent Palais des Machines, replete with the superbest mechanisms of the world, the Lagerman Typotheter & Justifier Company (limited), 35 Queen Victoria street, London, possess one of the more novel exhibits; their now finished installation being fitted up with stands, cases of type, two composing machines and one justifier. Those who have read up the principles of different typesetting appliances know that the Lagerman is comparatively simple and easy of working, the operator using *both* hands to pick up letters and spaces, and bringing the pieces to a funnel directly before him, dropping them in anyhow, and in the movements of the machine they are righted and brought into line, and thus words are formed. The average speed is 2,250 ems per hour, and price (absolute purchase), \$300. The justifier, which can do the work of four typotheters, is priced (selling outright), at \$550, a complete set of four typotheters and one justifier costing \$1,600. At such terms the future of this machine is doubtful, although the justifier has the better chance of surviving, and accordingly has the heavier price fixed on it. However, Secretary G. Hagborg can best speak regarding this. His Paris representatives are S. Berthier et Durey, rue des Reunes 46.

Having already been commented upon, the Fraser type composing and distributing machines (now to be seen working daily from 9½ to 11 and 15½ to 17 o'clock) and the more pleasing and neater Thorne do not need further notice; they are already well enough known.

England contributes so little to the great Universelle in the way of printing material as to scarcely figure at all under the head of typography. In bookbinding there is a solitary exhibit, very fine, however, in its specimens of the finest workmanship; R. Reviere & Son, Burlington buildings, Heddon street (Regent street), London, W. In books, a collective exhibit by the more noted London publishers creates a handsome installation. In stationery and fancy goods England comes out strongest, making several remarkably attractive displays. And in photography she is still better represented, the subject being immensely more interesting.

But the fact that Britishers have not made a great display of typographic material is nothing. All other nations, from Russia to the republics, contribute something pertaining to the art preservative, which will be all taken up in due order. These contribute a good deal to the marvels and splendors of the Universelle-International—an exposition thoroughly representative of all

that is magnificent, ingenious, wonderful and beautiful in the industries of the world. In it are gathered together the finest products of the universe. There may be seen, on a condensed scale, the more notable features of the globe itself. The person who misses the opportunity of seeing the exposition loses one of the best and most practical sights this sphere has ever offered—an affair perhaps never to be surpassed or indeed equaled.

In the Palais des Machines there is a final stand to notice. Bookbinding machinery of various makers, with latest inventions, is exhibited by W. C. Horne, 6 Dowgate-hill, London, E. C. These consist of an Elliott thread-stitcher for copy-books and pamphlets, stitching up to $\frac{1}{4}$ -inch thick, a girl stitching from 800 all the way up to 1,500 stitches per hour (according to her speed); book-sewing machine for sewing with or without tape bands, requiring no sawing, and does not cut head and tail of sections. It can sew any book, however thick, from a demy 4 to, to royal 32-mo. From 15,000 to 20,000 signatures can be sewn per day, against only 2,500 for the hand method; Martini duplex folding machine, capacity from 2,000 to 2,200 per hour without occasioning any refolds; the "Giant" signature press, popularly known as "Hart's squeezer," for pressing book signatures before being sewn, or for pressing books after being sewn, or for printers' use by pressing work and tying it up whilst under pressure; Harper's "Acme" wire-stitching machine, which forms, drives and clinches a complete stitch at the rate of 80 to 100 per minute, stitching either single sections or through the side as stabbed work; Martini gas engine, two-horse power. Not yet installed is the Lilly combination machine, so termed because it combines in one operation printing, perforating, ruling and numbering, printing from roll paper billheads at 6,000 per hour, handbills 12,000, and general work at the same rate of speed.

GOLD-LEAF: HOW TO USE IT.

Gold-leaf is a thing which it is impossible to manage unless one knows how, and yet we often have occasion to repair gilt articles of various kinds, or "touch up" a picture frame, etc. The usual practice is to apply some of the many gold paints, and the invariable result is a nasty patch, which, to a critical eye, is worse than the original flaw.

But besides patching and mending, gold-leaf is highly effective in combination with black for the ornamentation of various articles of furniture which amateurs often construct for themselves. A book of "gold leaf," which is quite good enough for such uses, may now be bought for about tenpence; indeed this German gold is quite as good for inside work as the "real thing."

Having procured a book, lay it flat upon a table, and carefully open the first leaf, when the metal foil will lie before you; with a pair of sharp scissors cut off the paper leaf you have just raised; lay it flat upon your open hand, and rub it on your hair; whether you use pomatum or not there will be quite sufficient grease to answer the end in view. Now lay the paper upon the foil in its original position and press firmly with the hand; lift carefully, and the gold will be found adhering. This paper leaf, with foil attached, will now bear to be carried about, and may be cut up with scissors to size and shape required. The same process may next be carried out for as many leaves as we need for the job in hand.

Having said so much about gold-leaf, we add a hint as to the method of laying it on, in case the reader does not know.

Paint the part you wish to gild with gold size, and be very accurate, as the leaf will stick to every spot touched; this size will dry rapidly, and when it is just not dry, or "tacky," i. e., sticky, cut a piece of your leaf a little larger every way than your design, etc., press it firmly, and then lift the paper; do not touch it again until quite dry, when you may remove the surplus foil with a large, soft camel's hair brush, or "dabber."

For illuminations, etc., gum arabic may be used instead of gold size, and may be allowed to dry, breathing upon it for a few seconds when you wish to apply the gold.—*The Printing Times, London.*

JOHN BEDFORD LENO,

A well-known contributor to the pages of THE INLAND PRINTER, whose portrait is herewith given, was born in the town of Uxbridge, England, in 1826, and his first start in life was in the

position of rural postman. Rural postmen nearly half a century ago were handsomely paid—not much in cash perhaps, not to exceed \$1 per week; but then they were allowed to draw freely upon country banks, and to feast their eyes upon country scenes! And young Leno made the most of his draw upon nature, "saved up" his impressions, and gave them to the world in after years in stanzas breathing of scents and flowers and gentle rustic life! We next hear of him as a printer's apprentice; then as foreman or overseer, organizing the while a Young Men's Improvement Society, and, with Gerald Massey, editing a manuscript

magazine. Gerald Massey and Leno subsequently edited a magazine with a pretentious title, but with limited capital; for, if report may be relied upon, "The Spirit of Freedom" was commenced with the modest capital of 15s., or less than \$4.

Mr. Leno has published several volumes of poetry, and all that he has written and all that he has done throughout his long, active and useful career has been done for the benefit of others—to bring about better education, better dwellings; in short, better lives for the people. Things have improved, are improving, and will improve in this direction. Thanks to men of Leno's stamp, the British people are beginning to realize that democracy is not such a fearful thing to contemplate after all—that the welfare, happiness and contentment of the masses means strength and stability of its institutions. "Kimberton," a story of village life, in rhyme, and "Liberty and Other Poems," both of which contain many gems worthy of reproduction, have recently been published by this chartist poet, and those who wish an intellectual treat should write for them to the "grand old man." His address is 76 Drury Lane, London.

RECENT PATENTS.

The following list of patents specially relating to the printer's trade is reported by Franklin H. Hough, solicitor of American and foreign patents, 925 F street, N. W., Washington, D. C., who will furnish copies of patents for twenty-five cents each.

ISSUE OF JULY 2, 1889.

- 406,319—Printing device for wrapping-paper rolls. E. B. Weston, Dayton, Ohio.
- 406,320—Printing machine, Bed-operating mechanism for. S. Whitlock, Birmingham, Conn.
- 406,398—Printing plates. J. G. Harris, Sedalia, Mo.
- 406,058—Printing presses. L. Oser, Galveston, Texas.
- 406,059—Printing presses. L. Oser, Galveston, Texas.

ISSUE OF JULY 9, 1889.

- 406,716—Printing machine sheet-delivery apparatus. G. P. Fenner, New London, Conn.
- 406,812—Printing signs. E. A. Bishop, Racine, Wis.

ISSUE OF JULY 16, 1889.

- 407,034—Printing machine. J. R. Rankin, Esq., Indianapolis, Ind.
- 407,172—Printing machine, stop cylinder. C. B. Cottrell, Stonington, Conn.

ISSUE OF JULY 23, 1889.

- 407,416—Station and want, printer. M. D. Porter, Brooklyn, N. Y.
- 407,630—Automatic printing device. N. D. Barradell and A. J. Bradley, Fort Worth, Texas.
- 407,393—Printing machine. J. H. Buxton, D. Braithwaite and M. Smith, Manchester, County Lancaster, England.
- 407,652—Printing machine, cylinder. G. P. Fenner, New London, Conn.
- 407,670—Type, Elastic faced. E. A. Leland, New York, N. Y.
- 407,403—Type table and galley rack, Combined. J. Jehle, St. Paul, Minn.

ISSUE OF JULY 30, 1889.

- 408,094—Printing machine. J. C. Fowler and E. A. Henkle, Washington, D. C.
- 407,840—Printing presses, Automatic feeder for. J. Schafer, Chicago, Ill.
- 408,122—Printing presses, Feed gauge for. E. L. McGill, Brooklyn, N. Y.

"FLOWING CUT INK, B." ❁

We have had so many inquiries from publishers and large printers of illustrated work for a wood-cut ink that was "not short, that would flow in the fountain, follow the roller, and dry quickly with a gloss," that we have made an ink to meet these requirements, with the above name. We would respectfully solicit a trial of the same, confident that it will do all we claim for it.

PRICE \$1.00 PER POUND.—Special net figures for large quantities.

GORDON PRESS WORKS

No. 99 Nassau Street, NEW YORK.

An Invention of Great Value to Newspaper Publishers.

THE KENDALL FOLDER.

For Hand or Press Feed. Any number of Folds desired.

THE KENDALL NEWSPAPER FOLDER consists of a light but substantial frame, a series of rollers, tapes and knives, a light shaft and a time bar, which makes the machine run in perfect unison with the press to which it is attached. The machine is light enough to be easily moved, but substantial enough to stand any amount of running. It can be attached to any press in two minutes. The capacity is equal to any press. The price is less than one-half that of the folders now in use, and so low that the amount is soon replaced in the saving of labor.

The frame is the same height as the tapes of the press, and the sheet instead of passing to the fly runs on to the row of tapes and enters the folder. The first series of tapes passes the sheet directly across the top of the machine. When it comes exactly in the center, the time bar which has been attached to the bed of the press comes back to the first latch and depresses the upper knife bar. This doubles the sheet between two rollers, which carry a second series of tapes running horizontally with the top rail of the machine. The doubled sheet passes down through these tapes just half as far as before, when the time bar hits the second latch, folding the sheet again. It then passes between another pair of rollers with the tapes at right angles with the last set, to another latch and knife, thence through another set of tapes parallel with the first, to the last knife, which makes the fourth fold, and drops the paper into the packing box.

The folder is run with a small connecting belt, and the machine requires no more power to drive it than the fly cam.

When writing, please answer the following Questions:

What make and style of press do you use? Average speed of same per hour? Is there 4 1/4 feet space in front of fly? Size of sheet? Is it quarto or folio form? Do you print both sides of your paper at once, working and turning? Do you print heading page on first or last impression?

NOTICE TO THE TRADE!

 Certain parties claim that our Patent All-Brass Galley “SUCCESS,” described and shown above, is an infringement of a patent alleged to have been obtained by them. We hereby inform all persons interested, that the Patent All-Brass Galley “SUCCESS” is covered by and manufactured by us under Letters Patent No. 395,934, dated January 8, 1889, granted to our Mr. Ferdinand Wesel, and that we will fully protect all persons using or selling the same against any claims for infringement made by said parties.

F. WESEL MANUF’G CO., MANUFACTURERS OF PRINTERS’ MATERIALS,

Patent Stereotype Blocks, Brass Rules, Wrought Iron Chases, Galley Racks, Composing Sticks and other Printers’ Materials. A large stock of Job Presses, Paper Cutters, Stands, Cases, etc., always kept on hand. Complete outfits for Job and Newspaper Offices.

No. 11 SPRUCE ST. (TWO DOORS BELOW TRIBUNE BUILDING), NEW YORK.

SUCCESS GALLEYS for sale by all Typefoundries and Dealers in Printers’ Materials.

The Jones Gordon Job Printing Press

IS NOT AN OLD STYLE GORDON, BUT HAS SEVERAL IMPORTANT CHANGES AND IMPROVEMENTS WHICH MAKE IT QUITE DIFFERENT FROM THAT PRESS.

IMPRESSION SET.—A very important feature in these presses is that the **WHOLE IMPRESSION MAY BE INSTANTLY CHANGED**—either increased or diminished—**WITHOUT STOPPING THE PRESS.** When the Impression Screws are properly set, it is seldom, if ever, necessary to move them, as all adjustments are made by means of hand wheel marked "B" in cut.

INK DISTRIBUTION.—Another important feature is, that when the impression is thrown off by means of the lever "A," a simple device causes the movement of parts that prevents the Ink Rollers from touching the form, and the press may be run indefinitely for the distribution of ink.

SELF-LOCKING CHASE LOCK AND FORM STARTER.—Another feature of considerable importance in saving time and patience is the Self-Locking Chase Hook and Form Starter. When the chase is put in place on the bed, it is locked without touching any lever, pad, screw, or any part of the press. When the form is to be removed, it is only necessary to press forward on the pad, marked "patent," which causes the Chase Hook to rise, and the form to move forward so as to be convenient for lifting out.

THE DUPLEX FOUNTAIN.—The Duplex Fountain is a great advance over anything heretofore used for the distribution of ink on a disk press. The distributing roller passes down and back twice, or four times over the surface of the upper part of the disk at each impression.

GRIPPER SET AND CARRIAGE PULLS.—When the Platen is in a convenient position for setting the Grippers, they may be brought down on the Platen for that purpose. The Ink Roller Carriages are provided with loops to be used for putting in or removing the rollers.

These Presses are very heavy and strongly braced, and are made of the best material that can be procured. The Impression Arms are of Steel, forged from one piece without weld.

These Presses are kept in stock by the CHICAGO NEWSPAPER UNION. Send for Circular and Price List.

The Leader Paper Cutter.

The Leader Paper Cutter has the following points of Superiority over any other lever cutter :

First.—The power is applied in the direction of the cut instead of in a right angle or diagonal direction, as is the case with many cutters on the market. By experiment and test it has been demonstrated that less than two-thirds of the power is required to cut any given amount of paper with the LEADER than with any cutter of the class above referred to.

Second.—The back gauge, which in all other cutters must be changed for every cut, may be instantly moved any distance up to the whole length of its travel, say two feet or more, by a lever, shown beneath the front end of the table. To illustrate the advantage of this arrangement, suppose it is necessary to move the back gauge of an ordinary paper cutter twenty-four inches, it will be necessary to turn the wheel shown in front forty-eight times around, an operation involving considerable labor and time. The wheel and long screw in the LEADER are only used for slight adjustments.

Third.—The octagonal stick and recessed sides, which admits of passing the stick through the side to its place, and renders it impossible for the stick to be drawn out by the knife, giving sixteen cutting faces on the stick.

Fourth.—The lever is hung in the most convenient position, midway between the floor and the top of machine, making it unnecessary in making the cut to get down near the floor.

Front table 16 inches wide instead of the usual 12 inches.

JOHN M. JONES & CO., PALMYRA, N. Y.

THE WISCONSIN PRESS ASSOCIATION.

SUMMER MEETING AND EXCURSION, 1889.

THE thirty-eighth meeting of the Wisconsin Press Association convened at La Crosse, Tuesday, July 23, and was largely attended, nearly one hundred editors or publishers being present, most of them accompanied by their wives or daughters, so that, including invited guests, there were over two hundred in attendance, the largest number, I think, on record.

This association is the oldest one of the kind in the United States, having been started June 23, 1853, at Madison, when the late Colonel C. D. Robinson, of the Green Bay *Advocate*, one of the pioneer editors of the state, presided. This meeting was adjourned subject to the call of a special committee, but an interval of four years elapsed before the next one, which was at Portage, July 9, 1857, and Harrison Reed (now and for many years a prominent citizen of Florida) was elected president. From that time to the present the meetings have been held annually, and it would indeed be hard to compute the amount of information spread broadcast to the world by the various journals represented, every editor making it a point to write up an account of the places visited, usually painting them in as vivid colors as they will bear — sometimes more so.

Until within a short time these annual gatherings of badger editors comprised both business and pleasure, but now they have winter meetings for business — the presentation, reading and discussion of suitable papers, election of officers, etc. — and the summer meetings are given up almost entirely to recreation. This plan has been found to give excellent satisfaction, and will probably be continued. A short preliminary business session is held to perfect arrangements for the trip, which is generally a pretty long one, and the balance of the time is spent in receptions, banquets, sight-seeing, etc.

On this occasion the members promptly assembled at Jefferson club rooms, in La Crosse, at 10 A.M., and transacted what business was in hand, namely, the collection of dues, appointment of committees, etc., and this time there was also to be elected a president, in place of John Hicks, who, since the change of administration, had received the appointment of envoy extraordinary and minister plenipotentiary (Great Cæsar, what a handle to a man's name!) to Lima, Peru.

Byron J. Price, editor of the Hudson *Star and Times*, having been acting as president *ad interim*, in virtue of his being first vice-president, was nominated and unanimously elected to take Mr. Hicks' place; and the manner in which he has discharged the duties so far make it a foregone conclusion that he will be re-elected as long as he will accept the nomination. He is small in stature, but great in all that goes to make an executive officer.

With commendable foresight he had invited Hon. Ignatius Donnelly and his wife, of Minnesota, to go the round trip, both of whom contributed largely to the pleasure and success of the excursion. Indeed, the author of the great cryptogram, which claims to demonstrate that Lord Bacon wrote the plays and poetry attributed to Shakespeare, proved to be our trump card as an after-dinner speaker and all-around orator, being always ready to respond to the frequent calls made on him, and always bringing up something new and entertaining from the storehouse of his memory.

Mr. Donnelly is a pleasant-mannered gentleman of short stature, rather thick set, and his wife is much like him in figure and facial appearance. The theory by some anthropologists that men and their wives grow to look alike after a long period of years is quite strikingly confirmed in this case, and I noted several other not so marked instances among the four-score couple on the trip. He would not be taken at first glance for an orator, nor, indeed, for the profound student and scholar that he is. There is nothing of the "crank" in his appearance either, and he is very careful not to obtrude his views or ride his hobby unless requested. He has a large head, pleasant face, with prominent chin, wears no beard, and looks somewhat, I imagine, like the typical Irish

squire, with the best characteristics of that quick-witted race. He was introduced at the morning session in La Crosse and made a few pleasant remarks, and soon afterward the convention adjourned until the evening entertainment at the opera house.

Manifestly a detailed description of our various entertainments is out of the question in the small space available in THE INLAND PRINTER, and I will merely give the main features, leaving to the imagination of the reader all minor details, which were in every instance perfect and appropriate. A long drive about the thriving city, in care of her wide-awake citizens, was given the visitors in the afternoon, which was greatly enjoyed. The newspaper fraternity of the city did their part thoroughly and handsomely.

The evening exercises at the very handsome and commodious new opera house consisted of a greeting by Mayor Dengler; response by George W. Peck, of Milwaukee (in place of Governor Hoard, who was detained at Madison by business); music by the Columbus Glee Club (who accompanied the excursionists); address by Hon. Ignatius Donnelly; violin solo by Miss Nettie Booth, of Monroe; poem by Mrs. Aubertine Woodward Moore, of Madison; vocal solo by Mrs. B. J. Price, of Hudson; harp-zither solo by Adolph Candrian, of La Crosse; all of which were well rendered, the vocal and violin solos being exceptionally fine, and receiving enthusiastic encores. An excellent collation at Norden Hall ended the day's festivities, and we boarded our special train of five sleeping cars and a baggage car about midnight.

Eau Claire was our next objective point, which was reached early Wednesday morning. After breakfasting in sections at the leading hotels our train was switched down as near as might be to the prominent manufacturing enterprises of this growing lumber city, and under the pilotage of Mayor Shaw and others these were duly visited and admired. The paper mill attracted as much attention as anything, and the various processes for converting wood into paper were watched with great interest. Poplar makes the finest paper, but other soft woods are used. This mill, I believe, uses spruce and pine mostly, which is fed into a cutting machine in pieces about the size of small stovewood, when they are quickly reduced to fine shavings or cuttings. These go into a vat, where the aid of steam is invoked to make them into pulp. The subsequent process is practically the same as that in paper mills where rags are used instead of wood, and the paper produced is of fair quality, for wood paper. I believe that but one size is made there, 30 by 44, though not certain of that. One of the "machines" that attracted the greatest attention was a good-looking young lady who counted the sheets into quires and piled them into reams. She would give a portion of the pile of sheets a slight twitch, so as to spread them out a little, then run the four fingers of her right hand through the edge of the lot six times, "quicker'n a wink," and there was your quire. It was really wonderful the rapidity with which she did this, and exemplifies the adage that "practice makes perfect."

At the conclusion of our tour of inspection carriages were in readiness to convey the party about the much spread-out city, and then came a grand banquet at Light Guards Armory, where the ladies had fairly eclipsed all previous efforts in this line (and Eau Claire is noted for this kind of thing) by furnishing an ample repast — a feast in fact, not a mere cold lunch — for over four hundred people all seated at one time; a mammoth half-and-half — half citizens and half guests. Each table (there were eleven or twelve in all) was handsomely decorated with flowers; no two tables were at all similar either in flowers or arrangement. For instance, the "pond-lily table" had white china, and the houris who beguiled the multitude into gormandizing were arrayed in white; the "blue table," was ornamented with flowers of that color, with china to match, and the young ladies who dished out the hash were all blue belles, but not "blue stockings." And so on — every table and its attendants was a symphony, a masterpiece of good taste, and the victuals tasted good, also. The "post-prandial" exercises were varied and excellent, and, as far as I could see, went off just as pleasantly and smoothly (not only here but at all other places where post-prandial exercises were had)

without the time-honored custom of wine drinking, as though there had been champagne or sherry galore, and everybody had "let the canakin clink." (Come to think of it, isn't it a pretty good indication that the temperance cause is advancing, when so many banquets on a large scale were had with nothing stronger than coffee to drink with the toasts?)

The mayor, George B. Shaw, after delivering an address of welcome, acted as toast-master, a position which he filled exceptionally well, and the other "talent" on this occasion consisted of Messrs. Price, Watrous, Teal, Peck, Ginty, Ryan, Dudley, Street and Day. Every one of the eight toasts had technical allusions, some very pat, others brought from some distance away. No. 4 was, "The City of Eau Claire; the 'Nonpareil' of the Commonwealth." Colonel Ginty, in responding, said a mistake had evidently been made, and that it should read "pica" instead of "nonpareil."

Miss Booth delighted the Eau Claireites with her skill on the violin, and they in turn enraptured us with their young prima donna (to be), Miss Myrta French, who sings with all the sweetness of a nightingale. This young lady truly possesses a wonderful voice and evidently has had the best of training.

An exhibition of the rapidity with which the fire department could be summoned to a given point ended the visit to Eau Claire, and toward evening we started for Superior via Chippewa Falls and Elroy. (By the way, I must not forget to mention, as showing the confidence of the ladies of Eau Claire in the honesty of their visitors, that the eating implements at the banquet, such as knives, forks, spoons, etc., were all solid silver, and not one of them was missing at the close.)

East or Old Superior was reached some time in the wee sma' hours Thursday morning, and at daybreak it was evident that a rainy day was before us, which was regrettable, as the Superiorites, anxious to impress us with some of their faith in the future of their double city, had made elaborate preparations for our entertainment.

Breakfast at the Euclid House, a fine, large, new hotel, much ahead, apparently, of the present requirements of this part of the city, was thoroughly enjoyed, and served for the zoo always-hungry-except-after-meals excursionists with as much precision as could have been done at a "Palmer" or a "Plankinton." Oh, those Lake Superior whitefish!

A ride on the lake and in the bay, one of the largest and best in the country, was next in order, but the boat being overcrowded, and the weather rather "nasty" outside, we went but a short distance out in the lake, and then, returning, steamed slowly up the bay to West Superior, past the mammoth coal docks and elevators, and landed for dinner in a "right smart" shower, which gave the red-clay soil thereabouts a clinging tendency, as evidenced for several days afterward on the inside of the trouser-legs of the party.

West Superior has had a very rapid growth, and the citizens talk glibly about the future "great metropolis of the Northwest," which shall comprise not only East and West Superior (they are now incorporated as "Superior"), but also take in Duluth, on the west. Chicago must look to her laurels and add a few more suburbs. They have got it down fine how that port is going to get all or nearly all the eastern shipments from nearly the entire Northwest, leaving Chicago, Milwaukee, and all other Lake Michigan ports "out in the wet," so to speak. Perhaps their day-dreams may be realized, but while this is being accomplished are "we-uns" up here going to stand still or retrograde and go to the "demnition bow-wows"? That never has been a characteristic of Chicago, nor of her handsomer little sister, Milwaukee. However, it is very probable that Superior *will* become a large and powerful city in a remarkably short time, and Duluth seems to have got a good grip also. Good luck and prosperity to both.

West Superior boasts two first-class hotels—the "Hotel Tower" and "West Superior"—and the party was divided and each one patronized, or, to speak more correctly, the doors were thrown wide, wide open for us. It was my fortune to go to the West Superior, a \$200,000 house some distance from the center of

activity, a hostelry not one whit behind the best in the land in all its appointments, but looking just now rather lonesome, there being but one other building of any magnitude near it. Directly across the street, however, the foundations are laid for what will evidently be a fine frontage of buildings occupying half a block.

The dinner here was unexceptionable and the toasts and responses appropriate and happy. Congratulations were telephoned back and forth between the two hotels, and about five o'clock we left for Duluth, with parting cheers for each other—a mutual admiration society.

Duluth, the wonderful city of 50,000 active, wide-awake people, built up under many discouraging circumstances, was reached in a short time, an hour or more later than had been expected. That fact, and the state of the weather, precluded a carriage drive which had been arranged, much to the regret of all, as a drive about that picturesque and peculiar city must be a treat indeed. To fully realize Duluth as she is, one wants to re-read Proctor Knott's celebrated speech delivered in congress only eighteen years ago—a speech which made both the witty and eloquent Kentuckian and Duluth famous—and reflect that, not only has the city been built within that time, but that for several years stagnation amounting to a decline seized her; then a reaction took place, and the resident people and newcomers tumbled over each other in their haste to build and push things.

A banquet up in the elegant seventh-story dining room of the "Spalding" was the feature, which was (please supply adjectives *ad. lib.*) "bang up" as regards *menu*, style and everything. Mr. Donnelly came out especially strong as a speaker here, being on Minnesota soil again, and the other orators spoke their pieces in a creditable manner, Peck rather taking the honors, especially with the ladies.

The stay there was all too brief. I took a long walk up the bluff over a nicely paved street as steep as this, and then up and down two of the principal streets which run the other way and are quite level, enjoying a magnificent view of the bay, tinged by occasional beams of the setting sun, and want to go there again and spend several days. It is a striking and peculiarly American city and has a great future ahead without doubt.

An all-night's ride, and we awoke at Taylor's Falls, a hamlet at the head of navigation on the St. Croix river, noted for the romantic scenery thereabout, and also as the early home of Ex-Lieut. Gov. Sam Fifield, of Ashland, who, as a fifty-years resident informed me, used to fish off the rocks with a bent pin and cotton string, afterward becoming a "printer's devil," and so on up the ladder of fame.

The forenoon was spent in viewing the scenery and in various ways requiring exertion of the body instead of the mind, and then on to White Bear Lake, near St. Paul, for dinner, passing several handsome little lakes en route. White Bear Lake, as per legend, was once the home of that frisky animal of the *Ursus* family now found only in the polar regions, and is a great resort at present for the bulls and bears of Minnesota's metropolis. The quotation from Shakespeare (beg pardon, Mr. Donnelly,—from Bacon): "Now, by St. Paul, the work goes bravely on!" is supposed to have originated at White Bear Lake when the building of summer-resort houses was at its height there.

A boat ride about the lake was the feature here, enlivened by some characteristic songs from a darkey quartette engaged for the occasion, with a few impromptu remarks by the "talent" from a pavilion on the west side, where Wisconsin's insurance commissioner, Phil Cheek, and others, lulled their listeners to sleep. Then "All aboard for St. Paul," where the wind-up was to occur that (Friday) evening, at the Hotel Ryan, the "Grand Pacific" of that bustling city.

The *menu* commenced with "Little Neck clams"—meaning, I suppose, that they would go down any neck, however small—and ended with coffee; the various courses being punctiliously observed by the well-trained sable attendants, who wouldn't bring the *Punch au Rirsch* until the proper time came, although several ordered it ahead thinking it was a beverage with a considerable "stick" in

it. Green turtle soup, Oregon salmon and other toothsome dishes made up the "feed," which was O. K. and more too.

The closing ceremonies were as follows: "Welcome," by Henry A. Castle, ex-president Minnesota Editorial Association; response, by Colonel J. A. Watrous, of Milwaukee, for the Wisconsin Association; toasts, "The Great Northwest," Ignatius Donnelly; "Journalism," Judge Sam Ryan, of Appleton; "The Old Time and the New," Major T. M. Newson, of St. Paul; "The Ladies," George W. Peck, of Milwaukee.

This was not a long programme on the face of it, but Major Newson, an old St. Paul ex-editor, proved to be loaded to the muzzle with reminiscences, and couldn't find time to stop until forty-five minutes—which seemed two hours at least—had passed, when noticing that one by one that part of the audience most distant from him were quietly going out ("now is the time for disappearing"), he made his peroration and closed, not run down, by any means, however. You will pardon us, Major, your remarks were good, but we had had a surfeit of eloquence, and it was nearly midnight.

Then another St. Paul speaker was announced, and your correspondent escaped in time, between acts.

Resolutions of thanks were passed acknowledging courtesies and favors from the various corporations, officials and individuals, and the excursion as an aggregation was ended. Many remained, however, at St. Paul and Minneapolis over Sunday, and a number of the giddy creatures took in the races Saturday afternoon, while others went out to White Bear Lake to hear Rev. T. Dewitt Talmage.

It occurs to me that several interesting and amusing incidents have been omitted in this article, and that too much reference has been made to banqueting, etc., but "let her go, Gallagher!" I may think up another dose. H. E. ROUNDS.

PRINTERS IN NORTHERN INDIA.

AN INTERVIEW WITH ONE OF THEM.

YEARS ago, there appeared in these columns an article from a correspondent on the extraordinary antics of native compositors in India when operating in the composing room. The article was incredulously received by many of our readers (who plainly told us so), laughed at by others, and ridiculed by some of our contemporaries. We readily admit that the narrative was quite odd enough, for among other acrobatic contortions said to be indulged in by the men when correcting matter, for example, was that of squatting, *à la* tailors, and lifting up the lines with their toes. This, however, was but a trifle, and whether the details printed at that time (now over twenty years ago) were all correct, we are unable to say. Certainly such strange doings are now unknown out there, albeit, from the English printer's view, the manners and customs in vogue in native Indian printing offices in some respects are sufficiently quaint. We recall this reminiscence of the past by a visit to the office of *Press News* the other day of an old trade friend and colleague, whose home is now in a flourishing town in the northwestern part of the Dependency, where he has a moderate-sized printing office in full swing. Business and a brief holiday have today brought him to England, and thinking a few particulars of how the folks print around his way would be interesting, our friend consented to answer our queries, and the conversation came out as follows:

"Since you are good enough to consent to answer a few questions relating to printing and printers in your remote quarter of the globe, I would ask first as to your office. Is the building anything like those we are accustomed to know in England?"

"No. Ours is a thatched bungalow of one story. Having been built for a dwelling house, you can imagine it to be quite unsuitable for printing. But I should say it is about the best around the country. We have three rooms, each about 18 by 12 feet, with an outer veranda, for the mechanical operations of typesetting, machinery, warehousing paper and an office, and three other rooms for the manager's quarters. For this bungalow

we pay £3 per month; no taxes. The light is at times very bad; so much so that you Londoners would no doubt think it odd to see the compositors take their cases outside, or on to the veranda, and work away in the open air. We have no gas.

"How, then, do you manage at night?"

"Our artificial light is given by paraffine and small hand-lamps."

"What of your staff?"

"It is made up entirely of black men—native Christians or Bengalees (Hindus). Of these, two are apprentices, who are not paid any salaries for the first three months. The native lads are usually very sharp and intelligent—especially if they have received a rudimentary English education—and pick up the work quickly."

"That being so, you do not have any great trouble with the compositors' proofs?"

"Yes we do, though! Some of the men are entirely unacquainted with English, and have not the remotest idea of what they are setting up, and a pretty hash they make of their 'firsters,' I can tell you. Our manager is the responsible reader, assisted by a baboo, or clerk. Of course, a good compositor, who understands English, gives comparatively little trouble; but others, who besides being unacquainted with the language are generally very ignorant, put together the most grotesque errors, and the first proofs are simply crammed with blunders and marks. You can understand this when I say that any black spot (such, for example, as a fly speck, or blotch in the paper) is taken for a punctuation mark of some kind. Then, again, words are run in to one another, misspelt, or omitted altogether, and divided at the end of a line quite regardless of syllabic divisions, and if the manuscript is anything but the plainest, heavens!—well, it would be quicker to distribute and re-compose what has been set."

"As to the machine men?"

"They, too, are natives. Men who understand anything at all of machine printing are scarce indeed up-country, where it often happens that they who have no experience and less knowledge of these appliances are put to print thereat, with the result that the work is little better than paper-staining, and the machine itself often injured through faulty handling or ignorant manipulation of the parts."

"I have heard it stated that printers in India have the greatest difficulty with their rollers?"

"Yes. We try all sorts of dodges with our rollers, and put them at night in the coolest of places. It is no use. The heat at times is such that we frequently find the composition hanging from the stocks in a semi-fluid state in the morning. It is only fair to say that we make our own rollers, and this may perhaps account for their defects. But the heat is intense."

[It was here suggested that as certain rollers of British manufacture are made to stand any and all climatic tests, it might be well to try them.]

"Of course, such inferior skill as you seem to have out there means low wages?"

"Yes. The wages we pay are what you would call rather low. Thus a foreman of the composing room receives about 40s. per month; compositors, 18s. to 25s.; minders, 12s. to 16s.; man to 'drive' a machine, 10s.; a lithographic printer, 16s. to 20s.; binder and cutter for warehouse, 12s. to 16s.

"Is there any society, or union, to regulate native labor?"

"None whatever."

"Nor apprentice system?"

"No. Not as you would understand it in England. There is merely a verbal contract that the lad will work for a time arranged—for the first few months for nothing at all, and afterward, until the completion of the time bargained for, for a mere dole."

"How do you obtain plant and machinery, and erect machines when they arrive?"

"Our appliances are chiefly ordered from England through agents in Calcutta. The only difficulty we have ever had in

ting up a machine was with a Wharfedale when first beginning business. This quite beat us, and we had to wait until an engineer turned up, and he, after a little trouble, managed to set it going."

"Under such difficulties does job printing at all flourish?"

"Only to a limited extent, and that of the commonest kind. Such aids to attractive typography as American combination borders, color work and the like, are known only in a very primitive form. We send work of a special kind to London sometimes, and a stiff price, too, we are charged. Last year we wanted 2,000 demy sheet almanacs in four colors, with four zinco portraits. For these we had to pay £80. At the same time, for the jobbing work we do the prices are much about the same as those in England."

"What have you to say as to newspaper printing in Northern India?"

"Well, the two greatest difficulties we experience in starting a newspaper are, first, to get a good editor who would work for *nothing*, and a mere trifle eventually; and second, to find subscribers; so that these publications are not abundant. All Indian papers depend for their support mainly upon the regular subscribers, who will pay up for a period. The sale of newspapers by boys in the streets, such as you know it, is quite unknown out there. The casual sale at bookstalls, too, and by agents are very uncertain and limited, even with the most popular journals among us. There are no newspaper shops as in England for the purpose of exposing publications, etc., for sale. The consequence is that if a printer starts a newspaper he must make up his mind to distribute for a time all copies free among the special class sought after. I may say, however, that we have no great difficulties in publishing our paper once it is started. The papers are all folded up in wrappers previously addressed, and then taken to the postoffice and dispatched, without stamps, under an arrangement with the postal authorities."

"How about daily newspapers?"

"There are three principal daily papers in Northern India all in a prosperous condition, and fairly well filled with advertisements, but the high price charged for them (6d.) does not help their circulation. The third paper is sold at half that price, and is rapidly coming to the front. These dailies are all turned out by the latest machinery."

"Will you please tell me something about the country in which your office is situated?"

"It is an Indian station, or town, comprising the military barracks (few or many, according to the strength of the garrison), the officers' residences (called 'lines,') the residences of the civil population and shopkeepers of the better class, the bazaar, which is simply an accumulation of small shops and houses for the native followers of the troops and domestic servants of all sorts. The houses and shops are of the poorest kind — huts, in fact — built chiefly of mud, covered with thatch or common red tiles, with here and there a regular brick building. In a large station there are sometimes two or three bazaars in different parts. The native city, the residence of the native population proper, is generally from one to two miles distant from the European station. Outside and surrounding the station comes the cultivated country. Then there is the 'mall,' or chief road in each station, which is always considered the best place for business of any kind. But, unfortunately, the military authorities (who, by the way, have chief control over all military stations) generally endeavor to keep down the number of places of business in this 'mall.'"

"*Press News* is often applied to as to the prospects for English printers abroad. Would you then recommend Northern India?"

"By no means. Native labor is so cheap. Fancy intelligent men, a master of one or two European languages, working as a reader for 10s. per week, a compositor for 8s., and machine-men for 6s. or 7s.! Large establishments have European managers, but I have never seen a European working printer."

And no wonder! — *London, Provincial, and Colonial Press News.*

MEESE'S PRINTERS' PRESS POINT.

This invention is a new and useful improvement in printers' furniture, the object being to provide a piece of furniture with a removable pin or press point for perforating the paper, to serve as a guide for printing or folding.

Heretofore it has been a common practice when it was desired to provide what is technically termed a "press point," to insert in a piece of furniture an awl, a screw, or a piece of wire, and then file it down to the proper height and shape. This in practice is inconvenient, and the point thus produced when worn renders it necessary to again employ the same unsatisfactory method. It is also difficult to secure accuracy in height. This improvement is designed to overcome these objections and to provide a point which can be readily attached, and, when worn, can be removed and a new one inserted. The points are made of steel and are inserted by the use of a key.

It is the invention of Mr. J. W. Meese, of Harrisburg, Pennsylvania.

PERIODICALS IN SPAIN.

In a statistical memorandum issued lately by the Spanish ministry of the interior it is stated that there are 1,161 periodicals (including newspapers) in Spain, appearing at all sorts of intervals. They issue a total of 1,249,131 copies, being an average of 1,075 copies each. Of these 496 are political, 237 scientific or technical, and 113 religious. The remaining 315 deal with all kinds of subjects, literary, theatrical, humorous, musical, bull fights, etc. The 496 political papers and magazines issue 783,652 copies, which would give one to every twenty-three persons of the whole population of Spain. Of these political periodicals, 370, with an issue of 513,769 copies, represent monarchical opinions; 104, with an issue of 269,883 copies, support republican views. But a more detailed classification would be all but impossible, so numerous and minute are the party divisions in Spain. Madrid publishes 327 of the whole; Barcelona has 117; Seville, 38; Cadiz and Valencia, each 32; Alicante, 30; Tarragona and Murcia, each 29; Sarra-gossa, 28, and the same number in the Balearic islands. — *London Standard.*

AUTHOR'S CORRECTIONS.

A curious fact has been mentioned by Mr. Adam W. Black, one of the publishers of the *Encyclopedia Britannica*, who has charge of the business arrangements, that the author's corrections alone had amounted to what was equivalent to the setting up of the twenty-four volumes from beginning to end twice over. The edition is also interesting from the fact that the largest portion of it was set up by the composing machine invented by Mr. Frazer, of Edinburgh, an excellently written account of which appears in the article on "Typography," by Mr. John Southward, in Volume XXIII. It is the largest work ever produced in this way.

This may be a convincing argument for printers to present to their customers who object to paying a little extra for actual time spent in making changes in matter after it has been set up.

Specimen Card from J. F. Farhart's work on "Color Printing," which will be issued about January 1, 1890. The above card shows thirty-six colors, produced by five impressions; the key form, printed with black, making thirty-seven colors and six impressions. By J. F. Farhart.

THE MINNESOTA EDITORIAL ASSOCIATION.

THE ANNUAL OUTING—VISIT TO STILLWATER, DUBUQUE AND CHICAGO.

A LARGE number of the editors of Minnesota, accompanied by their ladies, left the Union depot, St. Paul, by special train on Wednesday morning, August 14, for their annual outing, which was to embrace a trip to Stillwater, Dubuque and Chicago. The company numbered 110, and a jollier, better natured crowd it would be impossible to get together. They had met for enjoyment, and they evidently enjoyed themselves to their hearts' content. They arrived at Stillwater at 11 o'clock, and were met at the depot by a committee of citizens, headed by Mayor Durant and ex-Senator Sabin, by whom they were escorted to the Opera House, preceded by the Stillwater band. The Hon. Joel P. Heatwole, of the Northfield *News*, president of the association, opened the proceedings. Mayor Durant made a felicitous address, welcoming the delegates, and extending to them the freedom of the city, which was responded to by Major T. M. Newsom, of St. Paul, the senior editor present, in his own inimitable way.

The party was composed of the following ladies and gentlemen: President, Joel P. Heatwole, Northfield *News*; secretary, G. S. Pease, Anoka *Union*; Mrs. G. S. Pease, Miss Carrie Pease, Miss Russie Pease, L. H. Bruns and wife, Anoka *Union*; J. L. Stack, advertising agent, St. Paul; A. A. Caswell and R. M. Eastman, Anoka *Herald*; M. Turnblad, *Svenska American Posten*, Minneapolis; T. M. Newsom and wife and daughter May, *Editors on Wheels*, St. Paul; H. D. Brown and daughter Geneva, St. Paul; J. S. Pinney and wife, American Press Association, St. Paul; F. S. Verbeck and wife, Minnesota Typefoundry, St. Paul; C. H. Slocum and wife, Glencoe *Register*; C. A. Bennett, Granite Falls *Journal*; H. M. Crosby and wife, Wilmar *Republican-Gazette*; W. R. Edwards, Tracy *Republican*; J. A. Henry and D. J. Dodge, Janesville *Argus*; E. P. Peterson and wife, Litchfield *Independent*; C. F. Spencer and wife, Montevideo *Commercial*; B. B. Hebert, Red Wing *Republican and National Journalist*; C. H. Lienau and son, St. Paul, *Volkszeitung*; H. Mattson and wife, the North, Minneapolis; D. Ramaley and wife, *Employing Printer*, St. Paul; W. C. Bryant and daughter Jennie, and Miss Maud Clum, *Saturday Evening News*, St. Paul; H. A. Castle, wife and daughter Annie, St. Paul ex-editor; C. R. McKinney, North St. Paul *Sentinel*; V. C. Seward, Stillwater *Messenger*; W. S. Wingate, Northfield *Carltonia*; C. F. McDonald and wife, St. Cloud *Times*; H. E. Ives, St. Hilaire *Spectator*; W. M. Todd, St. Paul ex-editor; L. C. Herr, Slayton *Gazette*; Mrs. C. H. Davidson and sons J. W. and C. H. Jr., Austin; J. J. Dodson and wife, Northwestern Newspaper Union, St. Paul; F. C. Neumeier and wife, and Misses Glade and Draver, St. Croix *Post*, Stillwater; F. J. Meyst and T. J. Price, Kellogg Newspaper Company, St. Paul; H. G. Day, wife and daughter Pearl, Albert Lea *Standard*; W. P. Howe, Minneapolis *Trade Reporter*; Irving Todd, Jr., Hastings *Gazette*; A. C. Cameron, THE INLAND PRINTER, Chicago; M. J. Dowling, Renville *Star*; A. C. Buck, Henderson *Independent*; M. E. McKenzie, Crookston *Times*; F. W. Ives, Fosston *Thirteen Towns*; E. C. Huntington, and daughters Gale and Aurel, Windom *Reporter*; T. Le Vasseur and wife, and Miss Alma Fortin, Le Canadien, St. Paul; A. M. Smith, *Irish Standard*, Minneapolis; J. L. Putnam, Granite Falls *Tribune*; W. S. Booth and wife, law blank publisher, Minneapolis; C. L. Luce and F. W. Barlow, Albert Lea *Enterprise*; John Lawson, Northfield *Independent*; Joseph Leicht and wife, Mrs. Schladinski, *Westlicher Herold*, Winona; H. P. Hall, *Daily News*, St. Paul; B. A. Shaver, Kasson *Republican*; W. J. C. Kenyon, Burlington *Daily Rusher*.

A. C. Cameron, editor of THE INLAND PRINTER, extended a cordial invitation to those present to accept the hospitality of the representatives of the printing interests in that city, including a visit to the parks, an excursion on Lake Michigan, etc. At noon the steamer Henrietta was in waiting to convey the visitors on

a trip to Lake St. Croix as far as Hudson, a distance of eight miles, under the chaperonage of Mr. Durant, which was enjoyed immensely by all present. The scenery is superbly beautiful, and the day was all that could be desired. Several immense lumber rafts were passed. The extent and importance of this branch of trade may be imagined when we state that 300,000,000 feet of lumber are annually shipped and rafted from this city. Returning at 2 o'clock, dinner was served at the Sawyer House, after which an excursion was taken on the electric street-car line, which has been but a short time in operation and was constructed at a cost of \$125,000, to South Stillwater, a distance of four miles. The investment, we understand, has been a paying one, and lots in its immediate neighborhood are booming in consequence.

A visit was next paid to the state prison, where, under the especial guidance of Messrs. Norris and O'Brien, of the board of managers, and J. J. Randall and his efficient and courteous assistants, the cell rooms, hospital, library, solitary, women's apartments, printing office, etc., were duly inspected. Upon inquiry we ascertained the inmates numbered 442 males and 3 females, two of the latter being under life sentences for the murder of their husbands. The well-known Younger brothers, Cole, James and Robert—the latter of whom is in the last stages of consumption, and affectionately attended by his sister—were subjects of especial interest. They are all fine looking men, and the prison officials speak in highest terms of their conduct. A visit to the office of the *Prison Mirror*, a neatly printed, attractive 4-page weekly, published in the interest of the convicts in the penitentiary, amply repaid for the effort. The compositors are Lloyd Porter, George Elliott, John Ryan, Charles Morton and W. Haglin, all bright, intelligent men. The paper is circulated mainly in the prison; is ably conducted and healthy in tone. Its motto is an expressive one, "Never Too Late to Mend." The material with which it is printed was paid for by the good-time allowance of the convicts employed thereon—9 cents per day. The first year's revenue netted \$150, which amount was devoted to the purchase of books for the library. We wish all connected therewith godspeed in their meritorious efforts. After a prolonged tour those present sat down to a creditable collation, properly cooked and admirably served. We have visited many similar institutions, and cheerfully concede that for system, discipline, cleanliness and a due regard for the moral and material interests of the unfortunates incarcerated therein, the management of the penitentiary at Stillwater will compare favorably with any state's prison in the country. At 9 o'clock the return "Special" drew out of the depot, and afterwards landed all safely at St. Paul, where quarters had been provided at the Clifton.

Early next morning a train on the Chicago, Burlington & Quincy R. R. was in readiness to convey the excursionists to the city of Dubuque. Dinner was provided at the International Hotel, at La Crosse, and a hungry crowd did it ample justice. A dispatch from Winona, from Forepaugh, tendering an invitation to his show, was necessarily declined, with thanks. Dubuque was reached in the neighborhood of 5 o'clock, where a committee and carriages were in waiting to convey the visitors to various parts of the city. The sumptuous supper at the International Hotel was unanimously voted a success, and it was. On invitation the club rooms were afterward visited, where a goodly number of citizens were in waiting, and speech, song and toast enlivened the proceedings. Chicago was boomed for the World's Fair with manifest approval. At 3 o'clock the following morning the special of three sleepers was attached to the Chicago express. Passing through one of the finest farming regions in the Northwest, Aurora was duly reached, where Mr. H. O. Shepard, president of the Inland Printer Company, was found in waiting to welcome the visitors, with badges and souvenirs, to the grand metropolis of the great Northwest, where shortly after their arrival they were met by the following Committee of Reception:

COMMITTEE OF RECEPTION.

H. O. Shepard, president Inland Printer Company; A. C. Cameron, editor THE INLAND PRINTER; J. W. Butler, J. W. Butler Paper Company; A. M. Barnhart, Barnhart Bros. & Spindler;

John Marder, Marder, Luse & Co.; James Lee, Shniedewend & Lee Co.; F. P. Elliott, F. P. Elliott & Co.; C. E. Strong, Chicago Newspaper Union; F. K. Tracy, American Press Association; Charles B. Ross, Farmer, Little & Co.; Charles M. Moore, George H. Morrill & Co.; E. C. Fuller, Montague & Fuller; James White, Illinois Paper Company; Millard F. Bingham, Samuel Bingham's Son; H. B. Speed, A. N. Kellogg Newspaper Company; John H. Vivian, Campbell Printing Press and Manufacturing Company; E. M. Adams, Calumet Paper Company; George H. Taylor, George H. Taylor & Co.; F. M. Powell, Illinois Typefoundry Company; O. Blomgren, Blomgren Bros. & Co.; W. C. Gillett, Chicago Paper Company; Joseph Sprague, George Mather's Sons; Dana Slade, Jr., American Strawboard Company; A. T. H. Brower, Union Typefoundry; A. Zeese, A. Zeese & Co.; H. H. Latham; A. E. Lane, Gane Bros. & Co.; D. H. Champlin, C. B. Cottrell & Sons; Burr Robbins, president Empire Show Printing Company; William H. Armstrong, Ault & Wiborg; Bradner Smith, Bradner Smith & Co.; T. P. Rundlet, Charles Eneu Johnson & Co.

At 2 o'clock the party assembled at headquarters, where they were addressed and formally welcomed to Chicago by Congressman Mason and the Hon. T. B. Bryan, shortly after which forty carriages left the Tremont House and took the sojourners through a number of the principal resident streets on the North Side. A halt was made at the waterworks; thence they proceeded to Lincoln Park, a stop being made at Fischer's Garden, for refreshments. Returning the visitors were taken as far south as Twenty-fourth street, passing en route a number of the palatial residences of our prominent citizens on Michigan and Prairie avenues, arriving at the Tremont House in time for supper.

Saturday morning, at 10 o'clock, the steamer R. J. Gordon, Captain Corcoran, left Clark street bridge for a trip on the lake, where a three hours' pleasant excursion was indulged in. The day was made for the occasion, and all on board enjoyed themselves hugely. Dancing was indulged in, and songs and recitations were given by Messrs. Moore, Lee and McPherson. On the return the party landed at the crib, the workings of which were duly explained by Miss McKay, daughter of the keeper. A collation was then served, and at 1 o'clock all were safely landed, apparently satisfied with the trip and its accompaniments. A visit to the printing establishment of H. O. Shepard & Co. and the office of THE INLAND PRINTER followed. At 2:30 a special train, provided by P. Armour, Esq., was found in waiting at the Michigan Southern depot to convey the excursionists to his immense slaughtering and packing houses, where two hours were spent in inspecting the various branches of his own and Swift's mammoth establishments. The return was made at 6 o'clock, everybody being apparently satisfied with the day's entertainment.

At 7:30 a special meeting of the association was held in parlor A, Tremont House, at which the following resolutions were presented and unanimously adopted:

Resolved, That we return to Chicago our sincere and cordial thanks for the warm hospitality and unflinching courtesy extended to this association during our visit to this beautiful city.

Resolved, That in our judgment the West is entitled to the Columbus Fair of 1892, and that our decided preference for its location is Chicago. Our sojourn here has enabled us to realize its peculiar fitness for a world's exposition. Its grand lake, providing a limitless water supply and a bracing summer temperature, the unequalled park systems, the amplest space for all exhibits, including the agricultural from our teeming fields; all these, and many other advantages are supplemented by the centrality of the location, and by the public spirit, the indomitable will and tireless energy of the Chicagoans. The Minnesota press unite with Iowa and Dakota, and ere long with all the West and South, in pledging their heartiest efforts to secure the coming exposition in this young but metropolitan city, which best typifies the growth and prosperity of the nation.

Resolved, That we most heartily appreciate the courtesy of the Burlington Railroad Company in furnishing us transportation to Chicago, and especially do we commend the kind services of W. J. C. Kenyon, the general passenger agent of the road, who has been unremitting in his efforts to make our excursion a complete success.

Resolved, That we take pleasure in expressing our gratitude to Armour & Co., of Chicago, for providing a special train to enable us to visit and inspect the gigantic Union Stock Yards, under the chaperonage of Henry P. Darlington; and that our ideas were materially enlarged by the extent

and completeness of this grand industry and the thorough system of inspection of cattle and hogs, and the careful, cleanly manner in which the product was handled.

Resolved, That in the sense of the association the thanks of the entire party should be and are heartily extended to the press and board of trade of Dubuque, Iowa, for the courtesy shown them on the recent visit to that city.

Resolved, That the Tremont House is entitled to the thanks of the association for the admirable manner in which they have taken care of this association, and we heartily commend the house to the editorial fraternity and traveling public.

Resolved, That we recognize in THE INLAND PRINTER a journal deserving of the support of every Minnesota editor and printer, and that we fully appreciate the favors bestowed on the editorial party by President Shepard and Editor Cameron, of that publication.

The party left at 10:30 via the Wisconsin Central for their respective homes, under the care of Messrs. Ramaley and Verbeck, satisfied, we trust, with their visit to the metropolis of the great Northwest, with the best wishes of their many friends.

VISIT OF MISSISSIPPI EDITORS.

On Wednesday, July 24, seventy members of the Mississippi Press Association paid a visit to our city and took quarters at the Palmer House. In the party were forty-five gentlemen and twenty-five ladies. The excursion was undertaken on account of a general desire on the part of the Southern molders of public opinion to see the great Northwest, and especially its metropolis. They came from Jackson, Mississippi, on an elegant special train, on the Illinois Central Railroad. The following journals were represented:

Aberdeen *Examiner*—S. A. Dalton; Aberdeen *Weekly*—E. J. Hamilton and wife; Canton *American Citizen*—W. H. Dudley and wife; Amory *Hustler*—H. G. Petty; Brandon *Republican*—F. M. Runnels; Brandon *Record*—J. Avery Jones, H. J. McLaurin; Carroll County *Democrat*—Hindman Doney and wife; Centerville *Sentinel*—W. L. May, E. T. Hart; Jackson *Clarion-Ledger*—J. L. Power, R. H. Henry and wife; Columbus *Dispatch*—Miss Pearl Murry; Columbus *Index*—Miss Anna Bel Power; Copiah *Signal*—W. L. Mitchell, president, George S. Dodds; Rolling Fork *Pilot*—Sidney W. Langford, N. T. Baggett; Durant *Democrat*—J. K. Almon and wife; Durant *News*—Miss Minnie Hamilton; Edwards *Star*—W. G. Johnson; Kemper *Herald*—James H. Duke, Miss Estella Daniels; Kosciusko *Messenger*—C. M. Clark, Mrs. Fannie Coleman; Magnolia *Gazette*—D. M. Huff, Mrs. F. C. Sneed; Mayersville *Spectator*—A. M. Peyton; Meridian *Daily News*—Robert Henry, John Odeneals; Mississippi *College Magazine*—F. L. Riley; Mississippi *Teacher*—J. M. McBeath, J. L. McWilliams; Natchez *Daily Democrat*—Mrs. Ella Lamb, Miss Mabel Batte; New Albany *Watchman*—Dr. J. F. Hawkins, Miss Lottie Hillard; New *Farmer*—W. A. Hurt, Miss Bomar Hurt; Newton *Dispatch*—J. J. Armistead, Miss Ella Loper; Jackson *New Mississippian*—G. L. Sneed, R. M. Cauthen; Oxford *Eagle*—Lamar Ross, Jephtha Barbour; Oxford *Globe*—Firman Smith; Ripley *Advertiser*—J. A. Hearne, Miss Mattie L. Thurmond; Southern *Sentinel*—James C. Harris and wife; Tupelo *Ledger*—J. G. Gillespie; Pittsboro *Democratic Banner*—E. D. Futch, Miss Kate Futch; Southern *Yeoman*—R. J. Thurmond, Miss DeWitt C. Thurmond; Vicksburg *Daily Commercial Herald*—T. M. Henry, Miss Carrie Pickens; Vicksburg *Evening Post*—John G. Cashman and wife; Winona *Times*—Henry P. Hurt; Woodville *Courier*—L. C. Schloss; Yazoo City *Herald*—Miss Kate Power, Miss Ida Mitchell; Yazoo *Sentinel*—W. A. Henry, Miss Fannie Pickens.

At 2 o'clock the visitors were treated to a ride through the South Park system, the full capacity of a carry-all and two tally-ho coaches being required to accommodate the company, and it is needless to add, they were loud in their praises of our beautiful parks, drives and boulevards. In the evening they witnessed the production of "Little Lord Fauntleroy" at the Columbia, after which some of the younger journalists admired the sights of Chicago by gaslight. On Thursday morning they were shown through the foundry of Marder, Luse & Co., to whom they were indebted for the entertainments provided, and

witnessed the process of type-casting, electrotyping, etc., in which they manifested a great deal of interest. The rest of the day was devoted to a visit to the Board of Trade and general sight-seeing. A trip to Rockford, Illinois; Madison, Wisconsin (where they were welcomed by Governor Hoard), and Dubuque, Iowa, followed. Chicago was again reached Saturday, August 3, when a visit was paid to the office of THE INLAND PRINTER. The party left the same evening for home, pleased with their experience, and satisfied that Chicago is the place to hold the World's Fair in 1892.

NATIONAL EDITORIAL ASSOCIATION.

The annual meeting of this association will be held in Detroit, Michigan, commencing Tuesday, August 27, and continuing throughout the week. The Executive Committee has arranged for a division of time as follows:

TUESDAY, August 27—Two sessions for business; carriage ride and reception in the evening.

WEDNESDAY, August 28—Two sessions for business, ride on the river in the afternoon.

THURSDAY, August 29—Two sessions for business, banquet in the evening.

FRIDAY, August 30—The members of the association will be taken on board the steamer City of Cleveland and make a trip to Mackinaw City, where they will be entertained by John O. Plank at Plank's Hotel.

Topics for discussion have been assigned to states, as follows:

"Progress of Libel Law Reform." E. H. Butler, Buffalo, New York.

"Newspaper Directories—How they may be made more valuable to publishers." Kentucky.

"Needed Legislation."—1. Concerning Postal Service. Matt. Parrott, Waterloo, Iowa; 2. Public Printing. Hon. E. A. Snively, Illinois.

"Discounts to Advertising Agents: To whom should they be given and how much."—1. Francis Proctor, Gloucester, Mass.; 2. J. B. Stoll, South Bend, Ind.

"State Associations; Their Objects: How their meetings may be made more interesting and valuable." 1. C. A. Lee, Pawtucket, R. I.; 2. Hon. G. C. Matthews, Memphis, Tenn.; 3. H. E. Hoard, Hamline, Minn.

"Fraudulent Advertising; The Publisher's Responsibility Thereof."

"The Nature and Limit of the Obligation of the Newspaper to its Party." Hon. W. S. Cappellar, Mansfield, Ohio.

Colonel Elliott F. Shepherd, of the New York *Mail and Express*, will, on one evening of the session, deliver an address. Subject: "Editorial Philosophy."

Papers are limited to twenty minutes, and it is expected that delegates will go prepared to discuss each topic presented.

The officers of the association are: President—James R. Bettis, Little Rock, Ark. Vice-Presidents—John Hicks, Oshkosh, Wis.; W. C. McClintock, Lebanon, O.; J. B. Stanley, Greenville, Ala. Corresponding secretary—E. B. Fletcher, Morris, Ill. Recording secretary—William Kennedy, Pottsville, Pa. Assistant recording secretary—R. H. Tilney, Boulder, Col. Treasurer—A. H. Lowrie, Elgin, Ill.

NEW PROCESS OF PRINTING COLORS.

La Typographie Française mentions the discovery of a method of printing several colors at once, either by letterpress or lithography. The new process, it is claimed, decreases by nearly seven-eighths the number of workings usually required in a form of eight colors. It also effects considerable saving by avoiding the loss occasioned through want of precision in the workings. It considerably lessens the quantity of ink used, by suppressing the numerous washings usually required. By this means color printing can be done at a great reduction on former prices. This process also applies to chromo-lithography. M. Slater, the inventor, will exhibit his discovery at the Paris Exposition.

WASHINGTON NOTES.

The *Post* presents a creditable appearance in its new dress of minion and nonpareil.

The *Sunday Herald* has been enlarged, a salient feature being its illustrated supplements.

The *Press* is now delivered for 6 cents per week, its Sunday issue having been suspended.

MESSRS. HUDSON & JENKS, late of the *Capital*, have in contemplation the issuance of a new weekly, to be known as the *National Democrat*.

BARRING the change of name, there is nothing in the appearance of the late *Critic*, now *Capital*, to suggest the absorption of the latter by the former.

In the immediate future B. W. Gillis will give the craft an opportunity to use a meritorious device of which he is the inventor, for the purpose of measuring type. It is complete and simple, resulting in the saving of time to the compositor and the management, while its accuracy is unquestioned. To see its operations is to adopt it. The *Post* and *Star* availed themselves of its advantages on its appearance.

IN BEHALF OF THE PRINTERS' HOME.

We have received the following circular from the committee appointed by Denver Typographical Union, to push the claims of the Printer's Home, at Colorado Springs.

"Ye crags and peaks, I am with you once again!"

"If thou art worn and hard beset
With sorrows, that thou would'st forget;
If thou would'st read a lesson that will keep
Thy heart from fainting, and thy soul from sleep,
Go to the woods and hills. No tears
Dim the sweet look that nature wears."

HALL OF TYPOGRAPHICAL UNION No. 49,
DENVER, COL., July 18, 1889.

To the *Union Printers of America*:

The members of No. 49 extend a fraternal greeting.

You will soon be asked to indorse or reject by your votes that which was enacted, subject to ratification, at the thirty-seventh annual session. The State of Colorado, through enterprising citizens, desirous of establishing a permanent sanitary resort and asylum for those of our craft who may become enfeebled by disease or age, made the following offer to your representatives, in convention assembled at Denver in June.

[Here follows the offer of the donors and the conditions, also an explanation of the proposition from L. H. Ehrich, president of the Chamber of Commerce of Colorado Springs, which has already been published.]

This proposition was accepted by a rising and unanimous vote. The tract of land referred to is a portion of nature's paradise—near the mineral springs of Manitou—the sanitarium of the continent.

You are asked to receive this site and to erect a national typographical institute. You are offered a sufficient number of acres to enable you to build, by disposing of a portion of the land. You have here presented the foundation for one of the most enduring principles of fraternal organization. Generous support and endowments in the future will aid you in this enterprise. Guided by wise law, just restrictions and careful supervision, the international body can control and direct the management, to the end that the workman and veteran union brother may find a refuge, rest and restored health. Relief will thereby be afforded to constantly burdened unions and local benevolent societies, by furnishing a temporary resort for weak and worn-out members of our fraternity, until strengthened again for the battle of life. One half of the money that is now annually expended by subordinate unions, chapels and office organizations will support a home in Colorado, where the invalid may be sent to renew life in the health-laden atmosphere and climate of the mountains. The unequal burden borne by many localities will be removed. Only the more deserving and those entitled by years of affiliation may be selected for admission in the beginning until all, through a stipulated novitiate and probation, can look upon their Colorado home, as does the Grand Army veteran his refuge, or the sailor his marine hospital.

The foundations for Girard's, Mullanphy's, De Veaux's and other well-known institutes had not the encouragement and support of 30,000 men united in a worthy cause, and yet they continue to increase in volume of benefit and wealth.

A vote for indorsement of the action of your delegates, in accepting this munificent gift, signifies an International Typographical Institute valued at \$200,000 in five years, with endowment funds ample for its support.

Fraternally,

WILLIAM H. MILBURN, <i>President</i> .	J. D. VAUGHAN,	} <i>Committee</i> .
P. J. MCINTYRE, <i>Secretary</i> .	O. L. SMITH,	
	W. W. SLACK,	

Mosstype — Engraved by the Moss Engraving Company, 535 Pearl street, New York.

INDECISION.

LAI D OVER.

"Review of Specimens Received" is unavoidably laid over. Will appear in next issue.

PERSONAL.

Charles Harker, Evening *News* office, Milwaukee; Lon Hardman, St. Joseph, Mo.; Charles Holt, *Gazette*, Kankakee, Ill.; J. S. Pinney, manager American Press Association, St. Paul, Minn.; Hon. Joel P. Heatwole, Northfield, Minn.; F. S. Verbeck, manager Minnesota Typefoundry Co., St. Paul; Frederick Van Wyck, secretary of the Liberty Machine Works, 54 Frankfort street, New York, were among the callers at the office of THE INLAND PRINTER during the past month.

CALL FOR A PRESSMAN'S INTERNATIONAL CONVENTION.

A call has been issued for a convention of pressmen, for the purpose of forming a pressman's international union, under the direction of the Adams and Cylinder-Press Printers' Association and the Empire City Pressmen's Union, No. 34, of New York. The convention will meet in New York City, October 8, 1889. Parties desiring further information should address T. J. Hawkins, 437 East Seventy-ninth street, New York.

CHICAGO NOTES.

MR. H. WALLACE, San Francisco, formerly of Chicago, is on a visit to Chicago. He is looking well and doing well, and we are glad to chronicle the fact.

MR. F. P. ELLIOTT, of F. P. Elliott & Co., has gone on a visit to Woodstock, Vermont, his former home, in company with his family. He is not expected to return before October 1.

MR. EDWARD CONLEY, of the firm of Morey & Co., Boston, dealers in paper mill supplies, who has been taking a business and pleasure trip through the Northwest, left Chicago for the East a few days ago.

MR. A. R. BARNES, of A. R. Barnes & Co., printers, 68 and 70 Wabash avenue, has returned from a two months' trip to Europe, where he has left his family. Mr. C. O. Barnes, of the same firm, has gone to meet his brother's family and bring them home.

HENRY STRONG, the Chicago capitalist, has sold to Simon Stein and others the building occupied by the J. W. Butler Paper Company, with the ground upon which it stands, on the north side of Monroe street, Nos. 183, 185 and 187, for \$190,000. It is a five-story brick building, erected five or six years ago, and is but 101½ feet from Fifth avenue.

MR. THOMAS C. HAYNES, mechanical superintendent, and Mr. James McNally, manager of publications, of the firm of Rand, McNally & Co., sailed from New York, Wednesday, August 7, on the White Star line steamer *Britannic*. They expect to be gone three months, and intend making a tour of Great Britain as well as pay a visit to the Paris Exposition. THE INLAND PRINTER wishes them a pleasant journey and a safe return.

AT a meeting of the Chicago Press Club held August 18, the following memorial of George H. Jameson was reported by a committee of which John Ritchie was chairman, and was unanimously adopted:

Life is no more the inheritance of humanity than is death. Since that distant day when the first man stretched out his weary limbs and lay down to the sleep which knows no waking here, unnumbered millions have passed along the appointed course that ends in the great mystery; yet we none the less cry out in pain and surprise when one of our own falls by the way.

To a friend and fellow member the summons came but a few days ago, as we measure time, as today he lives for us in memory only. George H. Jameson was one of our little family. We knew him. In the days that are gone we have laid our hands in his, knowing they were in the faithful clasp of a friend. In the middle-day of an honorable life he has laid down the burden, and as we recall all we knew of him we may well say of him that to none had he given offense; to us his life was a profit, and in his death we lose a valuable companion and friend.

OF INTEREST TO THE CRAFT.

WHEELING printers will participate in the Labor Day parade. JOHN KLAUSER, a Wheeling typo, drew \$500 in the Louisiana lottery lately.

AUGUST DONATH has been appointed to a \$1,800 position in the pension office at Washington.

JAMES GORDON BENNETT, of the *Herald*, and William P. Sullivan, manager of the *Star*, have been elected honorary members of the Atlanta Typographical Union.

WE acknowledge the receipt of an invitation from the publishers, printers and binders of Winnipeg to attend their third annual excursion, at Fraser's Grove, Saturday, August 10.

THE West Publishing Company, the law-book concern of St. Paul, has purchased a couple of the Thorne typesetting and distributing machines, and is going to give them a good trial.

DURING the year there were 16 typographical, 7 pressmen's, 2 stereotypers', 2 press feeders', 1 stereotypers' helpers', and 1 typefounders' union chartered by the International Typographical Union.

THE Liberty press, manufactured by the Liberty Machine Works, 54 Frankfort street, New York, has been awarded the "Gold Star" with diploma of honor, at the International Exhibition at Cologne.

WE acknowledge an invitation from Typographical Union No. 7, of Pittsburgh, to attend a picnic to be given by that body at Aliquippi Grove, Wednesday, August 28. We know the boys will have a good time, and, if possible, mean to be with them.

DURING the latter part of June the printers of Rockford, Illinois, organized and made application for a charter from the International Typographical Union, which was issued July 1 and numbered 213. Their list shows a membership of fifteen, and the outlook for additional members is encouraging.

THE fourth annual picnic of the employes of the *Free Press*, London, Ontario, was given at Port Stanley, Saturday, July 28. The occasion was enlivened by excursions on the lake, fishing, baseball matches, etc. Everybody was delighted, the efforts of the committee of arrangements were highly successful, and all returned home perfectly satisfied with the day's outing.

WE acknowledge receipt of first issue of the *Typographical Journal*, the official organ of the International Typographical Union of North America. It is a handsomely printed, ably edited 4-column 8-page journal 14 by 10½. It contains a list of the subordinate unions and their officers, a synopsis of the proceedings of the recent convention, report of the Childs-Drexel fund committee, decisions, list of delinquents, etc., and much other information of value to the craft. Success to it.

THE fifteenth annual excursion of the employes of Martin B. Brown, the popular job printer, of New York, took place Sunday, July 28. The steamboat *Blackbird* and the barge *Nelson*, filled with the employes and their friends, proceeded to Grand View Park on Staten Island sound, where games and merry-makings were kept up until a late hour. Among the prominent members of New York Typographical Union, No. 6, present were David J. Strong, Richard J. White, John T. Kelly, James E. Woods, Frederick W. Clark, Michael J. Isham, P. T. Tracy and Thomas Holz.

FOREIGN.

A FIRE has destroyed the typefoundry of M. Puylinot, at Brussels, causing damage estimated at 100,000 francs.

M. LEON DELAROCHE, printer, of Lyons, and proprietor of the *Progres de Lyon*, has sent eight of the chief men of his employ to the exhibition.

THE *Australasian Typographical Journal* gives the condition of business as follows: Sydney, still dull; Adelaide, still quiet; Melbourne, still dull, with no signs of improvement; Wellington, fluctuated very much, nothing of note having occurred to disturb the peaceful monotony; Newcastle, very brisk.

ALBERT AUER,

The recently appointed foreman of the pressroom of the government printing office, whose portrait is herewith presented, is a native of Baden, Germany, and was born in 1836. In 1842, in company with his parents he came to the United States, and settled on a farm near Milwaukee, Wisconsin, where he remained for some years, passing the time as most farmers' sons are compelled to do. When twelve years of age he secured a position, whose onerous duties were to take charge of a *hand-press roller* for the *Commercial Advertiser*, a morning paper then published in that city. This institution, however, like a great many others of a similar character, was a non-paying investment, and after an eventful

struggle succumbed to the inevitable. In 1851 he came to Chicago and secured a position with the well-known printing firm of Langdon & Rounds, where he remained for some time, after which, an opening occurring in the job pressroom of the *Chicago Tribune* (which tendered), he accepted and staid there until he was seized with the prevalent Pike's Peak fever. In 1860 he started for Colorado with a quartz mill, but, like a good many others destined for Pike's Peak, failed in his ambitions and intentions, and came back to Chicago after an eventful experience, a sadder and wiser man. Shortly afterward he connected himself with the Burlington (Ia.) *Harrokeye* establishment, with which he remained for three years. In 1865 he returned to the city of his first love, and found employment with the Culver, Page & Hoyne Company, with which he was identified till appointed in 1882, by the late Sterling P. Rounds, to take charge of the government printing pressrooms, which

position he filled up to the retirement of that gentleman. His reappointment by Mr. Palmer to his old position is a befitting acknowledgment of his qualifications, and has given intense satisfaction to his many friends, who have every reason to believe that his supervision of this important branch of the public service will be characterized by ability and a faithful and efficient performance of duty.

Mr. Auer has many warm, true and tried friends in Chicago, who have known him for a long number of years. He is a member of the Old-Time Printers' Society, as well as of several other social and benevolent organizations.

THE most extensive chromo-lithographic establishment in Berlin, that of Herr W. Hagelberg, has celebrated the jubilee of its existence. As a memorial of the event, the heads of the firm made a donation of 75,000 marks to their employes.

INDIAN JOURNALISM.

"Your city delights me and the climate is positively enchanting."

The gentleman who made this remark to a *Chronicle* reporter at the Palace Hotel yesterday was Rudyard Kipling, an Englishman, and one of the editors of the *Pioneer*, a newspaper published in Allahabad, India. Mr. Kipling is touring the world on a six months' pleasure trip.

"What I have seen of American journalism and of the American daily is so utterly different from my school that I am struck with wonder," continued Mr. Kipling, ~~holding~~ ^{folddng} up a copy of the *Chronicle* and putting it in his pocket. "With us in India news-

paper work is essentially different from American or English standards. Take our paper, the Allahabad *Pioneer*, for instance. We issue each afternoon from twenty-six to thirty-two pages, in size about half as large as a sheet of the *Chronicle*. We run from six to twenty columns of telegraphic news, and from twenty to twenty-four pages of advertisements. Our telegraphic matter comes mainly from the Indian seat of government at Calcutta, or, in the hot months, from Simla, a place seven thousand feet in altitude and eleven hundred miles from Calcutta. Then, at certain seasons of the year, the viceroy and his suite make tours of inspection over the country. Our correspondents, of course, are in constant attendance, and every movement of government officials or their action is telegraphed daily to us. Our local news is comparatively limited. The ubiquitous reporter is unknown with us. It is too hot for one thing, and again he is not needed, and is

absolutely unknown. We employ probably two hundred men to get out our paper, using steam presses worked by man power. Everything is done by man power. The pressmen earn the princely sum of 8 cents a day, while the native compositors are yours body and soul at from \$5 to \$8 a month. They know the English characters and read the language, but set the type not understanding what the copy says. Our daily circulation is between 6,000 and 10,000, and the paper goes all over India, three mails being dispatched nightly. Of course, our subscribers and readers are scattered all over the country, and where the railroad does not penetrate, the papers are transferred to mail carts, and, way in the jungles and interior, are carried by naked native runners, who make marvelously rapid time over great distances. We are our own copy readers, and a superabundance of work is our happy privilege in an atmosphere where everything seems to melt away. The American journalist would last about three

months if he tried to work in India as here. He would literally thrash himself to death. You are undoubtedly struck with the great number of pages of advertising—twenty to twenty-four. All the large shops in the city advertise their wares extensively, and carry on their extensive trades that way, for their customers live hundreds of miles in the interior and jungles. A purchaser reads the advertisement, sends in his order, and the goods are shipped to him by a system called the 'Valuable Payable Parcels Post,' similar to your 'C. O. D.' system, only the post is owned by the government. An enormous trade is thus transacted."—*San Francisco Chronicle*.

NEWSPAPER GOSSIP.

D. W. CHASE, of St. Johns, is reported to have bought the Anderson (Mich.) *Herald* for \$6,000.

ATLANTA, Georgia, is to have a new paper published in the interests of the Baptist denomination.

THE *Caucasian* is a new paper at Shreveport, Louisiana. It advocates the disfranchisement of the negro.

THE *Union Printer*, of San Francisco, one of our most valued exchanges, has entered on its second volume.

THE Wooster (Ohio) *Daily Republican* has been enlarged and changed from a morning to an evening paper.

Printers' Ink, a journal for advertisers, published by George P. Rowell & Co., New York, has entered on its second volume.

THE July issue of the *Winnipeg Monitor* contains a very fair likeness of the Hon. John Norquay, ex-premier of Manitoba.

WILL A. CONNELLY, of the Springfield (Ill.) *Monitor*, has assumed the editorial management of the Danville *Daily Press*.

THE National Live Stock Journal Company and the Western Catholic News Publishing Company, Chicago, have been incorporated.

OVER four hundred of the newspaper men of New York who are members of building associations now own lots or houses in Brooklyn.

THE La Porte (Ind.) *Sunday News Item* has been merged with the *Sunday Plaindealer*, with Messrs. H. B. Darling and Frank M. Hall as editors and publishers.

WE acknowledge the receipt of the *Boyden Citizen*, published in Sioux county, Iowa. We think both the editor (?) and printer have mistaken their vocation.

THE Williamsburg (Va.) *Gazette*, established September, 1729, the first paper in which the Declaration of Independence was printed, has suspended publication.

A. J. BLETHEN, proprietor of the Minneapolis *Tribune*, has purchased the *Evening Star* of that city and will conduct it under the name of the *Evening Tribune*. The intention is to run an all-day paper.

THE *Ingersoll Chronicle and Canadian Dairyman*, published at Ingersoll, Ontario, is a neatly printed, ably edited, six-column, eight-page paper, of which the residents of that thrifty town have every reason to feel proud.

THE Nashua daily and weekly *Gazette*, the oldest democratic paper in Southern New Hampshire, is to pass into the hands of a stock company. Editor Whittemore, who has managed the paper for many years, will retire.

THE Messrs. Stivers, of the Burlington *Gazette*, have bought the Des Moines *Leader*, and will take charge at once; \$21,725 was the price paid. Henry Stivers will have the management of it and Thomas Stivers will remain at the *Gazette*.

MISS ELLA S. LEONARD and Miss Caroline G. Tingle, two Vassar college graduates, publish an excellent weekly paper, the *Independent*, at Atlantic Highlands, New Jersey. The name and title of the firm is Leonard & Tingle. Miss Leonard is her own advertising agent, and has little difficulty in persuading business men that it is their duty to sustain a newspaper. Miss Tingle is an artist in types, sets all the display advertising for the paper,

and is head and front of the job printing, which has more than a local reputation, receiving commissions from New York and even Florida.

THE *Turf, Field and Farm* has purchased *Recreation*, the well-known monthly exponent of the higher literature of manly sport, conducted by Charles Hallock, founder and late editor of *Forest and Stream*, and Fred E. Pond, who won his literary spurs as "Will Wildwood."

A. W. TYMAN, who has been chief of the New York *Sun* bureau at Washington, D. C., for the past twelve years, has severed his connection with that journal and gone to Hilsur, Montana, to assume charge of the *Independent*, in which paper he has secured a controlling interest.

A NEW weekly paper, to be called the *National Democrat*, is to be started at Washington, D. C. The type and other fixtures of a recently suspended Sunday paper have been purchased, and arrangements are said to be in progress for issuing the first number of the paper sometime in August.

G. M. HITCHCOCK, editor and proprietor of the Omaha *World*, has purchased the good-will and plant of the Omaha *Herald*, and will consolidate the two papers. The consideration is not stated. The proprietor of the *Republican* has been made an offer for his paper by Hitchcock, and the negotiations are still under way.

TRADE NEWS.

CHARLES A. BATES, printer, Indianapolis, Indiana, has sold out.

JAQUES & SAWYERS have started a printing office at Nashville, Tennessee.

THE Gurney Printing Company has been incorporated at Springfield, Illinois, with a capital stock of \$30,000.

F. F. PATTERSON, sr., publisher of the Camden *Courier*, has received the bulk of the New Jersey state printing.

T. W. JENKINS, proprietor of the *Sunday Advertiser*, Gloucester, New Jersey, is erecting a large building, to be devoted to printing and publishing purposes.

THE name of the Kellogg Printing Company, Providence, Rhode Island, has been changed to that of the Standard Printing Company, and will shortly move into more commodious quarters.

BENDERNAGLE & Co., manufacturers of printers' rollers, announce their removal from 36 Hudson street to 521 Minor street, Philadelphia, Pennsylvania, where they have larger quarters and greatly increased facilities.

MESSRS. THOMAS WATERS, L. S. Talbott and J. F. Olsen have purchased the job printing and bookbinding departments of the Des Moines *Leader* office, and will conduct a general business in the commercial printing and bookbinding line.

THE Interstate Publishing Company, of Kansas City, Missouri, has become the successor of the George W. Crane Publishing Company, of that city. Mr. Crane, however, is still president of the company, and retains the majority of the stock.

ARTICLES of incorporation have been filed with the secretary of state by the Iowa Publishing Company, with a capital stock of \$25,000. The company will publish a non-sectarian newspaper at Des Moines. J. Ellen Foster's name appears among the list of incorporators.

THE Indiana Text Book Commissioners have awarded the contract for supplying the schools of that state with readers, geographies and arithmetics to the Indiana School Book Publishing Company. These books belong to the series published by the Standard Company of St. Louis. The award amounts to \$700,000.

THE Public School Publishing Company has been organized in Elgin, Illinois, with \$50,000 capital stock, for the purpose of publishing the *Public School Journal*, an educational periodical which will represent the consolidated *Illinois School Journal*, of Bloomington, and the county school council and county and village schools of Chicago.

BYRON JOHN PRICE,

President of the Wisconsin Press Association, a correct portrait of whom is herewith presented, was born at Menasha, Wisconsin, August 10, 1850, where his parents still reside. His early education was obtained in the local schools, fall and winter terms, working in factories and on farms during the summer season. He attended Lawrence University at Appleton, and graduated

in the classical course, June, 1874. Bohemianized on the daily papers at Appleton, Oshkosh, Milwaukee and Chicago for a few years afterward. Did special editorial work on the *North-western Lumberman* at Chicago, and *Lumberman's Gazette*, Bay City, Mich., in 1876-7. In 1878 he leased a half interest in the Ripon *Commonwealth*, and the next year associated himself with Horace A. Taylor in the Hudson *Star and Times*, where he has pulled the stroke oar ever since, and is now sole proprietor of the paper, which is a large, able and influential sheet. Besides his editorial duties he manages the American Express agency at Hudson, and quite an extensive fuel and supply business.

He was married at Ripon, August 27, 1879, to Miss Emma J. Ells, then teacher of music in Ripon College, an estimable lady with rare musical attainments. They have no children. Mr. Price is a wide-awake, agreeable, well-informed gentleman, with whom it is a pleasure to be acquainted.

PAPER-TRADE ITEMS.

A COMPANY is being organized at Davenport, Iowa, to make paper from sawdust.

THE Minneapolis (Minn.) paper mills have been started up by the Nelson Spencer Paper Company.

A FIBER mill is projected at Paris, Texas, and a company for building it is in course of formation.

IT is proposed to build a paper mill at Buena Vista, Virginia, and a company is being organized for that purpose.

AT Menasha, Wisconsin, the Whiting Mill has been entirely rebuilt, and is again in operation, making eight tons of paper a day.

THE Moosehead Pulp and Paper Company has been organized at Embden, Maine, with a capital of \$400,000. The officers are: President, Stanton Day, of Boston, Massachusetts; treasurer,

Wallace C. Clement, of Rutland, Vermont; directors, Stanton Day, Wallace C. Clement and David T. Mills.

THE Buena Vista Pulp and Paper Company, Buena Vista, Virginia, has been organized with a capital of \$80,000.

THE Arapahoe Paper Company, Denver, Colorado, has been dissolved. W. L. Ames will continue the business under the same style.

THE Old Berkshire Mills Co., of Dalton, Massachusetts, has been incorporated with a capital of \$150,000. W. M. Crane is president, and John D. Carson, treasurer.

THE Lawrentide Pulp Co. (Limited) started up its new mill at Grand Mere, Province of Quebec, last month, and is now turning out twenty tons of dry pulp a day.

IT is reported that the Lincoln (Neb.) paper mills will at once add \$30,000 to their plant, increasing it 100 per cent, and that print paper will form part of the product after this addition is made.

MR. T. A. MOLE, treasurer of the L. L. Brown Paper Company, Adams, Massachusetts, returned from his trip to Europe, Saturday, August 10. He was met at New York and welcomed home by a goodly number of his friends.

THE name of the Carson & Brown Co., Dalton, Massachusetts, has been changed to Old Berkshire Mills Co. The new company will continue the manufacture of the celebrated Old Berkshire papers, so well known to the trade everywhere.

THE Schuylkill paper mill, at Manayunk, near Philadelphia, was totally destroyed by fire July 16, involving a loss of \$80,000. W. J. Elliott owns the mill and a large portion of the surrounding property. The establishment had been turning out 5,000 pounds of manila every day.

THE Keith Paper Company, Turner's Falls, Massachusetts, are making some repairs, changes and improvements at their mill, which, when completed, will put them in better shape than ever for the production of their specialties. This company have an advertisement in this issue.

THE Bowdoin Paper Company of Topsham, Maine, supplies paper for the Melbourne (Australia) *Age*, the paper being shipped in sailing vessels and occupying six months on the voyage. The company makes regular shipments to Ireland, Mexico and South America, besides supplying a large home trade.

EMIL KIPPER, president of the American Zylonite Company, of Adams, Massachusetts, sailed recently for a European tour. He will spend some time in Remsheid, Prussia, his native place. Mr. Kipper is a son-in-law of L. L. Brown, the paper maker, of Adams. Zylonite, which product Mr. Kipper's company manufactures, is a substance resembling celluloid, and is being much used for printing purposes, business cards, etc.

THE prices obtained by Rice, Kendall & Co., of Boston, for paper to be furnished the commonwealth of Massachusetts for the ensuing year are as follows: Calendered book, 5.45 cents per pound; machine finished books, 4.95 cents per pound; flat writings, 11, 12½, 13 and 15 cents per pound; colored flats, 8 cents per pound; ledger, list price, less 40 and 5, 30 and 5, and 25 and 5 per cent; bond papers, list price, less 25 per cent; medium cover, 6.75 cents per pound. Terms cash, 30 days, less 1 per cent, delivered at the printer's. Paper guaranteed to be free from ground wood pulp.

THE Richmond Paper Company, in Providence, R. I., suspended July 26. The concern experienced trouble some time ago, and has been working under an extension, \$300,000 new capital being paid in, secured by mortgages, subject, however, to a first mortgage held by the Rhode Island Hospital Trust Company for \$387,000. The company has had no rating with *Bradstreet* for some time. Their last statement showed assets of \$884,000 and liabilities of \$668,000. The plant is a magnificent one, worth \$1,000,000, and is located at East Providence. The auditors have held several meetings, and it is understood that they are in favor of an assignment. Among the men who have lost small fortunes,

bordering on \$100,000 each, are ex-United States Senator Chace, Frank Richmond Hosey, a well-known lumber merchant, and Postmaster Henry W. Gardiner, who lost about \$20,000. Similar heavy losses are on the estates of the late Colonel George W. Davidson, of the Providence *Journal*, and on the estate of the late United States Senator Anthony.

IOWA PRESS ASSOCIATION.

The Iowa Press Association has selected the following editors to represent it at the meeting of the National Editorial Association at Detroit in August: S. A. Marine, Vinton *Observer*; Byron Webster, Marshalltown *Statesman*; J. W. Brainard, Boone *Standard*; F. R. Conaway, Brooklyn *Chronicle*; Senator Parrott, Waterloo *Reporter*. A. W. Swalm, president of the state association, Oskaloosa *Herald*, and C. M. Junkin, Fairfield *Ledger*, secretary, are delegates by virtue of their office.

LONG SERVICE AT THE CASE.

There died at Pittsburgh, Pennsylvania, on Saturday, August 3, after an illness of several weeks, Benjamin Franklin Latshaw, the oldest working printer in Pennsylvania, if not in the United States. He was familiarly known as "Uncle Ben." Mr. Latshaw, who was a universal favorite with members of the typographical fraternity, was born at Stoyestown, Somerset county, Pennsylvania, February 15, 1821. In 1833 he commenced an apprenticeship at the printers' trade under the instruction of his oldest brother, William D. Latshaw, who at that time was publishing a paper at Johnstown. He went to Pittsburgh in the fall of 1835, and served an apprenticeship of four years. In 1839 he went to Springfield, Missouri. He returned to Pittsburgh in 1841, working in all of the newspaper offices in Pittsburgh until the fall of 1844, when he went to Philadelphia, where he remained until after the great conflagration of 1845, when he once more returned to the Smoky City. He remained in Pittsburgh until 1849, when he became one of the argonauts, joining the Pittsburgh and California Enterprise Company, and after proceeding as far as St. Joseph, Missouri, on the steamer Consignee, went overland with the party to Sacramento City, California, arriving there in the latter part of July. After working in the gold mines a short time he returned to his trade, and in 1851 went back to Pittsburgh, where he worked ever since until taken sick.

ITEMS OF INTEREST.

PENNSYLVANIA University will establish a course in journalism.

THE first printing ever done in New Guinea has just been put out by the mission on Murray Island.

A SWEDISH inventor has secured a patent for making a sheet of paper sized on one side and unsized on the other.

W. H. GOLDING, of Golding & Co., Boston, sailed for Europe Saturday, August 3. He will visit the Paris Exposition and other places of interest before his return.

MRS. CLEVELAND, wife of ex-President Cleveland, it is said, has promised to contribute, shortly, to one of the popular London magazines a brief article upon social life in Washington.

It is reported by New York papers that an Albany syndicate has purchased the Durant tract of land in the Adirondacks, paying \$600,000 for it. The tract embraces 389,000 acres, and contains 570,000,000 feet of spruce lumber. It is stated that the object of the syndicate is to make a corner in this lumber, which is much used in making wood-pulp.

AN ingenious machine was recently exhibited to the postmaster-general. It is an adaptation of the put-a-nickel-in-the-slot machine to the sale of postage stamps. A sheet of stamps is cut into slips the width of two stamps, and these slips are wound around a cylinder inside of the machine. A nickel is placed in the slot, which drops down, starts an electric current, which causes the stamp cylinder to revolve, the slip of stamps glides along and

passes under a row of needles, which drops down and cuts off two stamps. The owner of the nickel waits a few seconds after his money disappears and then presses a metallic button and two stamps make their appearance at an aperture in the lower part of the machine. It is proposed by the inventors to place these machines in stores and prominent places about a city.

H. DWIGHT BRADBURN, superintendent of the Nonotuck Paper Company, Holyoke, Massachusetts, was married Tuesday, August 6, 1889, to Miss Margaret Deveney, of Holyoke. The marriage occurred in Great Barrington, and was solemnized by Rev. F. R. Marvin, pastor of the Congregational church, of that place. After a three weeks' tour to Albany, Niagara Falls, the Thousand Islands and Montreal, Mr. and Mrs. Bradburn will begin life at the groom's new home, at Fairmount.

BUSINESS OUTLOOK.

Baltimore, Md.—State of trade, bad; prospects, unfavorable; composition on morning papers, 45 cents; evening, 40 cents; bookwork, 45 cents; job printers, per week, \$16.20. Work in book and job offices is in a most deplorable condition. Newspaper offices are crowded with subs. Young's office has been reclaimed and will once more employ union men.

Bay City, Mich.—State of trade, good; prospects, fair; composition on morning papers, 30 cents; evening, 28 cents; bookwork, 30 cents; job printers, per week, \$12. Polk & Co's city directory is progressing rapidly and will be out in a short time.

Bismarck, Dak.—State of trade, good; prospects, encouraging; composition on morning papers, 35 cents; evening papers, 30 cents; bookwork, 35 cents; job printers, per week, \$18. Work has been good here the past few months owing to the constitutional convention.

Boston, Mass.—State of trade, very dull; prospects, not very good; composition on morning papers, 45 cents; evening, 38 cents; bookwork, 40 cents; job printers, per week, \$15. New book and job scale signed by leading firms. Boston printers will celebrate labor day.

Cheyenne, Wyo.—State of trade, dull; prospects, fair; composition on morning papers, 45 cents; evening, 40 cents; bookwork, 45 cents; job printers, per week, \$21.

Colorado Springs, Col.—State of trade, fair; prospects, encouraging; composition on morning papers, 45 cents; job printers, per week, \$19. C. E. Tschoddi, an old case-holder on the *Gazette*, is now publishing the Manitou Daily *Journal*.

Columbia, S. C.—State of trade, fair; prospects, not too encouraging; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, per week, nine hours, \$15; job printers, per week, \$18 and \$20. The Columbia *Register* will soon be formed into a joint stock company, capital \$50,000. The *Register's* outfit now is as fine as will be found in the South.

Dallas, Tex.—State of trade, fair; prospects, encouraging; composition on morning papers, 42 cents; evening papers, 37 cents; bookwork, 42 cents; job printers, per week, \$18. The Western Newspaper Union and Dallas Lithograph Co. have increased their capital stock and enlarged their plants.

Dayton, Ohio.—State of trade, fair; prospects, fair; composition on morning papers, 35 cents; evening papers, 32 cents; bookwork, 33½ cents; job printers, per week, \$15 to \$18.

Fort Wayne, Ind.—State of trade, fair; prospects, not very encouraging; composition on morning papers, 30 cents; evening papers, 28 cents; bookwork, per week, \$13.50; job printers, per week, \$13.50. We will celebrate Labor Day here for first time, this year. The *News* has put in an electric motor for power in pressroom.

Jackson, Mich.—State of trade, good; prospects, fair; composition on morning papers, 30 cents; evening, 27 cents; bookwork, per week, \$12; job printers, per week, \$12. The *Industrial News*, published by F. J. Price, semi-monthly, is the latest in the journalistic line. It is intended to boom Jackson as a business center.

Kalamazoo, Mich.—State of trade, dull; prospects, not the best; composition on morning papers, 27 cents; evening, 25 cents; bookwork, 25 cents; job printers, per week, \$10 to \$15.

Kansas City, Mo.—State of trade, dull; prospects, fair; composition on morning papers, 40 cents; evening, 35 cents; bookwork, 37½ cents; job printers, per week, \$17. Crane is still employing a large force on bookwork, but otherwise the job offices are dull. Work is slack on the dailies, laying off cases and running larger type. Clarke & Welch, job printers, have started the *Daily Graphic*, a one cent evening paper, printed on a four-cylinder press of Mr. Clarke's invention.

Los Angeles, Cal.—State of trade, fair; prospects, not very flattering for the next two or three months; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$18 and \$20. The newspapers are all fully supplied with subs and to spare. The job-rooms are doing absolutely nothing, but look for business to pick up shortly.

Lynchburg, Va.—State of trade, fair; prospects, moderately fair; composition on morning papers, 30 cents; evening, \$12 per week; bookwork, 30

cents; job printers, per week, \$12. Messrs. Liggan & Holt, of this city, are moving their job office to larger and more convenient quarters on Ninth street.

Manchester, N. H.—State of trade, jobwork, quiet; book and news, good; prospects, good; composition on morning papers, 30 cents; evening, 20 to 23 cents; bookwork, 25 cents; job printers, per week, \$10 to \$12.

Newark, N. J.—State of trade, poor; prospects, not over bright; composition on morning papers, 40 cents; evening papers, 36 cents; bookwork, 36 cents; job printers, per week, \$17. Work on the newspapers is fair, but the book and job rooms are doing nothing. Would advise job hands to keep away from here.

New Haven, Conn.—State of trade, very dull; prospects, not good until trade opens in latter part of September; composition on morning papers, 40 cents; evening, 35 cents; bookwork, 35 to 40 cents; job printers, per week, 59 hours, \$15. Business has not been as dull in years at this season of the year as at present, and the outlook is not very encouraging until Yale University and the other sources of learning, of which the City of Elms is the grand center, resumes operations, which will be in September. Some of the offices—book and job—are now running short-handed; eight hours a day, with the proportionate reduction in pay, being the ruling passion.

Omaha, Neb.—State of trade, very dull; prospects, not what we would like; composition on morning papers, 40 cents; evening papers, 37 cents; bookwork, \$16; job printers, per week, \$18. Too many printers in town considering that there is not within 25 as many situations as there were before the consolidation of the *World-Herald*.

Pittsburgh, Pa.—State of trade, good; prospects, fair; composition on morning papers, 42½ cents; evening papers, 37½ cents; bookwork, 37½ cents; job printers, per week, \$16. Book and job work has been unusually good during the past month, and the prospects are very fair for the "brief" work, which will be under way in a week or two. Plenty of subs in the city.

Rome, N. Y.—State of trade, good; prospects, fair; composition on evening papers, 25 cents; bookwork, 25 cents; job printers, per week, \$10 to \$12. Considering that the usually "dull season" months are here, job rooms are having an extra good run of work.

San Francisco, Cal.—State of trade, poor; prospects, poor; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 40 cents; job printers, per week, \$18. Work is very slack, and the supply is greatly in excess of demand.

St. John, N. B.—State of trade, good; prospects, good; composition on morning papers, 30 cents; evening papers, 25 cents; bookwork, 28 cents; job printers, per week, \$10.

St. Louis, Mo.—State of trade, average; prospects, good; composition on morning papers, 43 cents; evening, 38 cents; bookwork, 45 cents; job printers, per week, \$18.

Toronto, Ont.—State of trade, fair; prospects, fair; composition on morning papers, 30 cents; evening and weekly papers, 28 cents; bookwork, 33½ cents; job printers, per week (fifty-four hours), \$11.

Wheeling, W. Va.—State of trade, fair; prospects, not encouraging; composition on morning papers, 35 cents; evening, 30 cents; bookwork, 35 cents; job printers, per week, \$15. There will be a Saturday evening paper started here on the 24th of this month.

BUSINESS NOTICES.

THE Child Acme Cutter and Press Company, of 64 Federal street, Boston, Massachusetts, offer big bargains in second-hand machinery for printers' or bookbinders' use, as they are desirous of clearing out the stock now on hand to make room for their rapidly increasing business in improved Acme cutters and presses. On page 953 is a list of this machinery, which it will pay anyone interested to examine.

GOODRICH, COOK & Co., of Geneva, Ohio, manufacturers of printers' wood goods of every description, have an advertisement in this issue. This firm has been in the business of making printers' wood goods for a long time and enjoy a large business, gained by liberal dealing and turning out first-class goods. Their goods are sold by nearly all dealers in printing materials everywhere. See the advertisement.

THE POPULAR CRANSTON PRESS.

That this press is everywhere meeting the approval of purchasers there is no doubt. J. H. Cranston, of Norwich, Connecticut, the manufacturer of it, says that the following are some of the expressions made by printers who have this reliable press in use: "Just what it is represented to be"; "A solid, substantial, honestly made press"; "Reliable under all circumstances"; "Does not get out of fix"; "For a quick make-ready it has no equal" "It is easy to handle; does the best work."

THORP-GORDON PRESS.

On the last page of this issue will be found the advertisement of the Thorp-Gordon Press Company, of Cleveland, Ohio. This company manufactures the Thorp-Gordon job press, which is an old style Gordon with Thorp's patent improvements. Among the improvements may be mentioned the mechanism for suspension of the rollers while taking color, self-locking throw-off, anti-friction box, improved distribution and fountain. Besides, this press has other improvements which commend it to the progressive, business-like printer. The reader will find all its merits set forth in the advertisement, to which attention is directed.

The Thorp-Gordon Press Company is now under the management of Mr. H. Bronson, formerly business manager of the Beacon Publishing Company, of Akron, Ohio. The contract which existed between this company and the H. H. Thorp Manufacturing Company, by which all machines were sold through the latter company, has been canceled, and the Thorp-Gordon Press Company is doing all business direct with its customers. They are all thoroughly practical men, and have a plant capable of turning out 300 presses a year, which is now being run up to its fullest capacity. Send to them for descriptive circulars, testimonials, price lists, etc.

BURLINGTON ROUTE.

THROUGH SLEEPER DAILY TO TEXAS POINTS.

On and after August 11, 1889, the Chicago, Burlington & Quincy railroad will run, in connection with the Missouri, Kansas & Texas railway, from Hannibal, a sleeping car from Chicago to Galveston, Texas, without change, thus making a new short daily line between Chicago and Sedalia, Fort Scott, Parsons, Denison, Fort Worth, Waco, Austin, Houston, Galveston and other points in Missouri, Kansas, Indian Territory and Texas. The sleeper will leave Chicago on the Burlington's fast train, "Eli," at 5:45 P.M. daily, connect with Chicago, Burlington & Quincy train leaving Peoria at 8:20 P.M. daily, except Sunday, and reach Texas points many hours quicker than any other route. Through tickets can be obtained of ticket agents of the Burlington Route and connecting lines. P. S. Eustis, general passenger and ticket agent, Chicago, Burlington & Quincy railroad, Chicago.

GELATINE PRINTING.

The Boston *Photographic Review*, edited by J. O. Moersch, is publishing a series of articles on gelatine printing, photogravure, and photo-engraving, embracing the whole description as they are worked. Everybody should read them. Send \$1.50 for one year's subscription, to S. Wing & Co., publishers, Charlestown, Massachusetts.

THE KENDALL NEWSPAPER FOLDER.

Newspaper publishers will find in this machine one that will meet every need in newspaper folding, at a price less than one-half that of other machines. It takes the papers from the press, or can be used to feed by hand; does not smear the sheet; can be set for any number of folds desired; is light and easily moved about, but, at the same time, thoroughly and substantially built, and will stand almost any amount of running. Make inquiries as to the merits of this folder if about to purchase one for newspaper work. E. K. Dunbar & Co., 170 Congress street, Boston, Massachusetts, are the sole selling agents, and the Opinion Manufacturing Company, Bradford, Vermont, the manufacturers. Notice the advertisement on page 976.

KEITH PAPER COMPANY.

THE INLAND PRINTER has the pleasure of introducing the above firm to its many readers through the medium of a quarter-page advertisement, appearing for the first time in this issue, and which we advise they find and give a careful reading. The products of this firm are well known, as they are handled by dealers in all the principal trade centers of the country. It has always been the policy of this company to increase the quality of their products

rather than to lower them to meet declining prices. By this method their goods have reached a perfection, as they claim, equaled by few and excelled by none. The Keith ledger papers are a well-known brand, largely used by blank-book makers, and they are given the preference over others by many users. Their Ravelstone brand of flats are strictly superfine papers, and are made inlaid and wove, both white and tints, and put up flat as well as ruled and folded. In their Westlock brand they offer an extra-superfine paper, free from imperfections and all adulterants. This brand is largely used by blank-book makers, and is also used for all kinds of commercial work, such as note, letter and bill heads, as well as being put up folded. If you do not know these papers they invite you to become acquainted with them by sending for samples.

PERFECT TYPE METAL.

"Experience and experiments have clearly shown that the most durable type, especially for stereotyping, should be composed largely of tin. In the metal used by Farmer, Little & Co. there is a due proportion of antimony and all the copper attainable, combining the good qualities claimed for copper alloy or copper-mixed type, with the added virtue of a large proportion of the more costly tin, producing a metal that is not excelled for durability. The handsome type now in use on the *Chicago Herald* is a sample of the product of this well and favorably known foundry." —*Chicago Herald, April 11, 1889.*

TO THE SEA SHORE AND THE WHITE MOUNTAINS ON THE FINEST TRAIN IN THE WORLD.

The next "Sea Side and White Mountain Special" solid Pullman vestibuled train of the Chicago & Grand Trunk railway leaves Dearborn station, Chicago, Wednesday next, at 5 P.M., and each Wednesday thereafter during the tourist season. The attractions of Niagara Falls, Thousand Islands, Rapids of the St. Lawrence river, Montreal, and the glorious scenery of the White Mountains, are all enjoyed by passengers on this modern hotel on wheels. The entire train, including dining car, barber shop, ladies' and gentlemen's bathrooms, library and observation car with four magnificent Pullman vestibuled sleeping palaces, all lighted by electricity, runs through to the Atlantic coast without change of any car. The ladies should not overlook the special feature of a "lady attendant," who accompanies the train. Passengers for the White Mountains, Rangeley Lakes, Poiland Springs, Portland, Bar Harbor, Old Orchard, York Harbor, Portsmouth, Isle of Shoals, and all the seaside and mountain resorts of New England, should secure accommodations early on this finest train in the world by applying to E. H. Hughes, general western passenger agent Chicago & Grand Trunk railway, No. 103 Clark street, Chicago, Illinois.

Tourist tickets to all eastern summer resorts are now on sale, good to October 31.

A GOOD JOB PRINTER who has had seventeen years' experience in management of book, newspaper, job and bindery business in various western cities, desires a position. Will do anything or go anywhere. Size of town no consideration. Low wages; best references. Competent to take complete charge if necessary. E. J. WAITE, Janesville, Wis.

EVERY PRINTER should have a copy of "DIAGRAMS OF IMPOSITION," and "THE PRINTER'S READY RECKONER." Price, 50 cents each. To be obtained of H. G. Bishop, 37 North Pearl St., Albany, N. Y., or through Farmer, Little & Co., New York and Chicago. These are the handiest and most useful works ever published for printers. Indorsed by everyone who has seen them. Agents wanted in every town.

FINAL VOLUME of the "American Printers' Specimen Exchange" to be issued this year, and as we have gained a good many new members by furnishing copies of Vol. III at the binding fee, shall continue to do so as long as they last. ED. H. McCLURE, Buffalo, N. Y.

FOR EMPLOYING PRINTERS—The most practical reference book for the printing house desk is "Printers' Calculations." It shows at a glance the value of stock, and also of time consumed on any job. Nothing like it has yet appeared. Price \$1.00. BURDETTE COMPANY, Burlington, Iowa.

FOR SALE—Complete Hughes stereotype outfit No. 1, 13 by 23 inches, with all tools, etc., for doing first-class work, and full instructions for use. Outfit is new, and will be sold at a bargain. Address "BARGAIN," care of INLAND PRINTER.

FOR SALE—A well-equipped newspaper office in a rapidly growing Michigan city. The leading paper in its vicinity. Splendid run of advertising and job patronage. Building and two lots will be sold with the outfit if desired. Cheap for cash. Address, PARTRIDGE, care of INLAND PRINTER, Chicago, Ill.

FOR SALE, cheap, two 12-drawer cherry cabinets containing 30 fonts of good job type, nearly new; borders, brass rule, circles, ovals, leads, etc. Send for proof. Also for sale, the finest stamp and stencil outfit in the Northwest, and best location. Established business. Address, B. J. BULLARD, Grand Rapids, Mich.

FOR SALE—Neat job office, located in most thriving city in Indiana. Established trade. Good reason for selling. Rare chance for printer with small capital. Address "JOB PRINTER," care of INLAND PRINTER.

I HAVE FOR SALE, for one of my clients whose other business demands his entire time, an incorporated job printing and publishing business in Chicago. Profits will amount to \$1,000 per month; established trade; no soliciting needed; long lease; low rent; best location; present owner will rent office room; guarantee to hold trade and give from \$700 to \$1,000 for printing matters of their business monthly to the office. Terms the most liberal. It will pay you to investigate this. K. R. SMOOT, Attorney, 84 La Salle street, Chicago.

WANTED—The Inland Printer Co. desires to obtain fifteen or twenty copies of No. 4 of Vol. III of THE INLAND PRINTER to complete sets for binding, and will pay 25 cents per copy for same. Send them on if you can spare any.

ZINC ETCHER.—A young man, first-class etcher and printer, would like a steady position, city or country. Address "F. S.," care M. ROTH, 213 East Seventh street, New York, N. Y.

\$80 buys brand new outfit, type, etc., that cost \$150. The best bargain ever offered. If you want it and have the cash, you had better write at once. Everything on point system. 100 lbs. Barnhart's brevier, old style; 40 lbs. long primer, old style; job type, cases, galleys, sticks, inks, art fakes, etc. W. F. BISHOP, Chicago, Ill.

HIGHEST AWARD.—Silver Medal awarded at the Sixteenth Annual Exhibition of the M. C. M. A., 1887.

THE H. C. HANSEN Power Improved Pin-Hole Perforating Machine

Price, \$60.

This is my New Pin-Hole Perforating Machine. It has many advantages over all other machines. Will perforate a sheet 26 in. wide any desired length. An excellent feature is that it does the work in less than one-fourth the time of any other machine, being run by hand or steam power.

MANUFACTURED AND FOR SALE BY
H. C. HANSEN, 26 HAWLEY STREET, BOSTON, MASS.

WE WANT YOU and every other Printer **TO KNOW** that the "Perfected Prouty" is the best Job Press made. Such a claim we know, and you know, is common, but we make this claim because every printer using the "Perfected Prouty" pronounces it the best, and these are

THE REASONS WHY

It is not an old-style press under a new name, but a modern press, built from original designs to meet the requirements of the printer. Old ideas of construction have been discarded, and the "Perfected Prouty" is absolutely free from grinding cams and powerful springs, rubbing or sliding motions, thump, pound, noise and rattle.

THE "PERFECTED PROUTY" PRESS

is so constructed that speed and durability combined with excellence of the work produced, and smoothness of operation are its characteristic features. In these particulars this press is Perfection, and its claims to superiority are based upon solid facts. Investigate these claims and you will be forced to admit that the "Perfected Prouty"

IS SUPERIOR TO ANY OTHER.

We sell the "Perfected Prouty" on its merits; guarantee full satisfaction, and will ship one on trial to any responsible firm. Any printer wanting a Job Press should acquaint himself with the new features and valuable merits of the "Perfected Prouty."

Descriptive Pamphlet mailed on application.

IVES PROCESS - THE PROCESS OF THE FUTURE FOR ALL KINDS OF FINE ILLUSTRATIONS
OUR SPECIALTY -

The Original and Only Patented Ink Reducer in the World!

Warranted to instantly reduce all kinds of Printing Inks, no matter what color or how old or stiff, to any consistency required, without in the least affecting their color and make them work clear, free and easy on any kind of press or stock the hottest day in summer when rollers are soft and sticky, or the coldest day in winter without fire or washing rollers. INKOLEUM makes all inks mixed with it dry quick and glossy on paper without off-setting—but never dries on rollers—and prevents paper from pulling or sticking to form. As a reducer for tint printing INKOLEUM works miracles, as the most delicate shades and tints can be produced with ink mixed to the thinness of cream, causing it to cover perfectly without clogging the finest lines, and as it is never gummy like varnish, it dries instantly, enabling one or more tints or colors to follow at once without off-set. Inks of any color or kind left on rollers over night will work or wash up readily in the morning, by simply applying a few drops of INKOLEUM with your finger. A trial will convince any pressman. **Beware of Infringements.** Accept no imitation said to be just as good as INKOLEUM. **Price only 50 Cents.** For sale everywhere. For bruises and burns apply INKOLEUM freely and relief is instantaneous. Put up only by

KEITH LEDGER PAPERS are well made, strong, hard sized, rule nicely, write easily, erase and rewrite without difficulty, and have been given the preference by good judges in competitive tests with all other leading brands of Ledger paper.

RAVELSTONE Flats are made in Laid and Wove, White and Perfection Tints, and are used by Lithographers, Stationers and Printers for first-class Commercial Stationery for Banks, Insurance Offices and Business Houses generally. These papers are also put up ruled and folded, in the usual sizes.

WESTLOCK Flats are well known and highly prized for their good color, cleanness, freedom from imperfections and all adulterants, strength, hard sizing, and are used for all kinds of commercial work, being especially preferred by makers of Blank Books, because they are thicker for the weight than other papers. These papers are put up folded, and in Note, Letter and Bill Heads, etc.

The above Papers are offered to the Trade through Agents located in the principal centers of distribution throughout the Country.

The Rawley Standing Press.

Bed Space, 21 x 29 Inches. PRICE, \$110.00.

THIS PRESS saves time and labor; does away with the use of wooden blocks for filling, and obviates injury to the press-boards, which the careless placing of unequal sizes of these blocks often causes. All who have seen or used the Rawley pronounce it a most decided improvement over the old style of Standing Presses.

The platen is not attached to the screw, but can be quickly and easily drawn up or down by taking hold of the inner chains. The books are pressed between two plane surfaces. The sections of tubing (*A*, *B* and *C*) are used instead of wooden blocks, and the screw is worked very little—merely for tightening.

Messrs. Geo. D. Barnard & Co., of St. Louis, Mo.; The Werner Printing and Lithographing Co., of Akron, Ohio, and various other houses, have these presses in use.

 No. 2, for 10x15 and 11x17 Improved Thorp-Gordon Presses, - - - - - \$20.00

• IT LEADS THEM ALL •

Among the many features of this Press, which place it in advance of the Old Style Gordon Presses of today, are the following:

SUSPENSION OF THE ROLLERS.
 (PATENTED)

This is effected at the will of the operator, by the simple device shown in the cut.
 When the link, "C," is raised to the top, or forward part of the roller frame, as in Fig. 1, it gives to the rollers a movement back and forth over the disk only, the disk revolving at each revolution of the press, the same as when the full throw of the rollers is in operation as shown in Fig. 2, when the link is in its lower or outer position. The

link is operated by the handle "B," and may be changed at any time while the press is in operation without danger. The change is made instantaneously, without change of position of the operator, and suspends the rollers from their downward movement over the form until the ink is properly distributed.

- THROW-OFF.**—Self-locking and the most perfect ever applied to the Old Style Gordon Press. Patented.
- ANTI-FRICTION BOX.**—This extends out from the side frame to a point where the entire weight of the fly-wheel, crank shaft and treadle are sustained, reducing the friction to a minimum and making this absolutely the easiest running press in the market. Used on all except the two smaller sizes, which run sufficiently easy with the LONG BEARING box used on these sizes. Patented.
- SOLID BRACE GIRT.**—We have introduced a Solid Brace Girt in the frame of these presses, which takes the place of the brace rods heretofore used, and imparts a degree of solidity to the machine not attainable by the old method of construction, and which greatly increases the durability and efficiency of the press. See cut.
- DEPRESSION OF THE GRIPPERS.**—Very simple and effective. The grippers may be brought to the platen at any time without danger of accident.
- Interchangeable parts.** Improved Distribution (patented), Improved Spring Chase Lock, Hardened Steel Cam Rollers, Steel Side Arms (forged from the solid bar), Steel Shafts, Gear (cut from the solid), Solid Disk Bracket, Solid Locking Frame, Tongue and Groove Joints.

Strong, substantial and thoroughly well built. Favor us with your orders and secure the best.

ROLLERS.

BY J. B. PASCOE.

IT is not necessary to give a list of the benefits which the roller has given the printer, also, the public. The printer who is within two hundred miles of a roller factory should never make his own rollers. Certainly, the freight is one point in favor of home-made rollers, but this is more than met by the fact that the home-made roller is not near as good and reliable. In the factory it is science; with the average of printers, casting only once or twice a year, it is mostly guesswork. It is queer that so many printers are stingy in the matter of rollers. They resort to this and that method of renewing old composition and doctoring worthless rollers, as if they expected to leave them to their heirs. Why, it is not long since that a printer gave a description of how to renew an old roller. And the main part of it was to place the roller on the imposing stone and pound it with a board. Would that the roller could return blow for blow. Another genius found that he could renew the roller with a certain compound which he made and offered for sale. What a catchpenny. Is there anything that can be worked into the face of a roller and made to remain there? Will it not work out again? If you have the sense which God gave you, you must know there is not. True, you can make a roller work by giving it a coat of molasses and letting it stand a while. But who wants to fool time away in such a manner? And what a dirty makeshift it is, after all. The pressman who makes his own rollers will tell you there are certain times when there is little to do in the pressroom; that time spent in making rollers is saved to the office. He could as well say that when work was slack he would go over and help Jones at the drug store at pounding pills. He is about as competent to do this as to make a good roller.

It is said that a roller must be free from dirt and lint and paper fiber that has gathered on it, in order to do good work. How shall it be cleaned? Is not coal oil applied with a rag least injurious to the roller? Too much washing spoils it. In changing from one color to

another, where the colors are similar, no washing is needed. By washing the disk of a job press or the ink table of the cylinder press, and rolling off the ink from the rollers onto the disk or ink table (in changing from blue to black or from black to brown), enough ink is removed so that roller washing is not needed. By this means you save time, and the washing has not injured the disk or table at all. If one washing is not enough, wash the disk twice or even three times—it is easily done.

Sometimes the printer has a dodger to work on a small press, where the ink (when the form is locked with the head to the left) is not well distributed, and fills up the smaller type at the bottom of the form. Now, if the form is locked up with the head to the right, the large type (usually found in such work at the top or head) will not clog or fill up with ink, and the surplus ink which is left after covering the large type will amply cover the smaller type in the form. This, of course, might not do on paper that is not cut exactly true and of one size, but dodgers are not usually very particular work.

It is amusing to read, in testimonials, of this and that firm using a roller for from two to four years and still doing good work with it. A roller will certainly keep its shape, unless cut or torn by accident, for a long time, but no one is simple enough to believe that a roller will do good work at the end of two or four years. Rollers over one year old should never be used except in case the new ones run down from heat and friction, or are accidentally cut or torn. Here is where your discarded roller comes in and helps you out of a "hole," but don't try to make it appear that it does good work—it is merely a makeshift. There are reasons why a publisher of a newspaper should have a set of good rollers to print his paper, as well as the job printer. If his paper is well printed, the neatness of the paper alone will commend it to that better class of people who are paying their debts and have an influence with others. And who ever heard of a subscriber, no matter how slack or slouchy he might be, that would complain of his paper being printed too neatly. It is true that rollers have nothing to do with the make-up of the paper; but take a paper with bad make-up and clean presswork and

compare it with one of the best make-up, where one part is blotched and blurred and the balance covered with gray streaks, and in places no ink at all—you will surely choose the former. Then, if you have an advertiser whom you have coaxed into the notion that “it pays,” you will have much less labor in securing his business (to say nothing about the satisfaction you may enjoy in feeling that you have really earned it), for, if he be a sensible man he will reason that whatever else may be wrong with your paper, he is sure at least that when a subscriber gets it, his advertisement *can* be read—every line of it. Besides, neatness of a paper—as compared with slovenliness—gives the patron an idea that it is prosperous, that the publisher is master of the situation in all respects, while a slouchy paper conveys the idea of slime and dirt in its management. If it could be proven, no doubt it would be safe to say that the publishers of papers of the slouchy and dirty class are the very ones who have so much trouble with accepting \$10 advertisements from the advertising agent for from \$4 to \$5. The agent, by looking at a paper, knows at once what to offer for space therein.

These lines are not written in the interest of the roller factory, but, if the printers and publishers can be induced to believe what is contained in them, they will have served their purpose.

WHY PRINTERS FAIL.

BY INVESTIGATOR, FREDERICK, MARYLAND.

LIKE many others who monthly await the arrival of THE INLAND PRINTER, I am struck with the large number of failures of printers that are reported as having occurred during the previous thirty days. I have frequently sat in deep thought trying to solve the whys and wherefores of these failures, and notwithstanding my reluctance to do so, I have nevertheless been forced to affix the blame on the printers themselves and their methods. I doubt, and it is with regret that I make the declaration, that there is any business in which men engage to reap a livelihood, that is conducted under such divergent circumstances and governed by such various conflicting rules as printing. The “art preservative,” it is called, and yet while it is presented in its true sense, many of its followers are not capable of preserving themselves against the common enemy of mankind—want. Feeling my weakness in directing the helm of such an important enterprise, and by no means attempting to do so, I write this article with the hope that some poor, unfortunate fellow-laborer may see the error of his ways, should such exist, and be benefited. It is all the reward I ask. My observations respecting the heading of this article are such that I feel satisfied I may do someone good.

We have all heard of the parent who, when asked what he intended to do with his son John, replied, “Well, John won’t work, and I see no way for him earning a living outside of the ministry or the bar.” Now that is just the idea that permeates the mind of a large

body of the employing printers of this age. Many of them, having failed in everything they undertook, consider printing the last alternative, and with the idea that anyone knows how to conduct a printing office, see in it a panacea for all their past distresses. No greater mistake was ever made by such classes, for of all occupations in which men engage, there is none that requires shrewder management or more thorough knowledge of the business than printing. The history of the trade has always tended to show that the brightest minds, the most astute financiers, the best men of the age, have been printers. A dry-goods man buys his calicoes, etc., by the yard, asks an advance of two or three per cent, and sells them, knowing exactly that he has gained something; while the average printer does not know what to ask for his printed stock, works for what he *thinks* is a handsome profit, at the same time losing year by year, and all because he does not know how to find out what it costs him to produce certain results.

In my ten years’ experience in the business I have worked for eight different sets of employers, and being of an observant nature I found in my own mind the causes of such changes. I have worked under the directorship of a youngster just ripe from college who desired to show his generation what a bright light he was, and longed to hand down to posterity his sublime thoughts in imperishable printer’s ink. As to his business capacity no one knew he had any at the time he bought the office, and they never afterward had any cause to change their minds. He failed. It was a case of gush, which never wins though backed by millions. Another case was that of a man who endeavored to run a printing office as a secondary matter, while he devoted his attention to every passing whim and caprice of the times. Had he been half as attentive to his printing business as he was to irrelevant outside matters he would have succeeded. It was one of those cases in which a man has ability but fails to direct it. Still another individual failed because he tried to conduct a \$10,000 business on less than half that amount. The individual had merit but he ran ahead of his means. His mistake caused his failure in business. Better do a little well than to do much indifferently. While it is always commendable to be desirous of pushing ahead, never let your ambition get ahead of your bank account. It will surely result in failure. Then there was the man who was extravagant. He was enjoying a good run of custom, with but little competition, and good prices, but he spent his money faster than he made it, in “cutting a dash,” so to speak, among the people. He failed suddenly and left the city. The other was the case of a politician, a whole-souled, well-meaning fellow, a thorough gentleman, but who unfortunately left his affairs in the hands of an incompetent person while he (the politician) was serving his country in office in a distant city. The printing office gained him prestige, but he paid dearly for it. It cost him \$15,000 during the few years he owned it, and was recently sold for \$3,000. But, perhaps, the principal cause of failure is the lack of knowledge in estimating

the cost of printing. By all means ascertain the *cost* before you set the price for your labor, and if you then find that you cannot afford to do work at the prices some of your competitors are offering, why, sell out and try to earn a living in some other department of trade. There is always something for honest hands to do. If you continue in business at such a dying rate you will ultimately fail, and you had better sell out your stock yourself than to allow the sheriff to do so. The only salvation you have if you insist in continuing in the business is to try to freeze out the blockhead who lowered the prices, and, in my opinion, there is nothing that can possibly be done that should be set aside to accomplish this end. Now, in conclusion, permit me to admonish you "not to kick against the pricks," or to think you can conduct your business on any of the principles of those who are stated in this article as having failed, else the result with you will be the same as with them—failure. It cannot be otherwise.

CONDITION OF THE TYPEFOUNDING AND PRINTING TRADES.

BY THE GROWLER.

"I TOLD you so!" In conversation with a type-founder, not long since, he informed me that his concern had sold more small printing-office outfits since the break in prices of type than had been sold by them in the two years preceding. He added that, while this was true, the large offices were purchasing only such things as they were compelled to have. This is a verification of the statements put forth by the founders and dealers themselves, that low prices worked to the detriment of the regular printers by inducing the establishment of small concerns, by persons lacking business experience, judgment and capital necessary to conduct an establishment on good and regular business principles. That the break has had this effect those knowing the facts do not doubt, but if further proof be demanded it can be had in the increased sales of second-hand printing machinery which followed immediately upon the heels of the break in the prices of type, as well as an increased sale of bed and platen job presses.

In all my wanderings I have yet to find the printer, typefounder or dealer who is satisfied with the present demoralized state of affairs. There is no stability manifested, nor confidence shown, by anyone, either printer, typefounder or dealer. While the founders themselves are not satisfied with the present state of affairs, each one with whom I have talked seemed to see no way out of the predicament, at least for some time to come. The conditions are worse in the West than they are in the East, and prices are more uncertain and demoralized. Some of the Eastern founders and dealers still adhere to the discounts prevailing before the break, except when coming in direct competition with those whom they hold responsible for the disruption of the association. One instance came to my knowledge where the Eastern founder wired his representative, "take the order," in

reply to a telegram stating what had been offered and by whom, and his instructions were obeyed. He said, had the offer been by some other founder or dealer than the one making it he should have instructed his man to let it go, but that in this case he would have taken the order no matter what the conditions. It was a Western order.

To my knowledge, efforts have been made to patch up a truce, but they met with a signal failure; not because a settlement of the differences was not desired, but because of a lack of confidence all around. Those discussing it said plainly that a settlement was greatly desired, but at the same time they were sure it could not be reached, at least for some time yet, or until certain ones, to use the expressive language employed, "had got their bellies full." There is little doubt but the war will be continued indefinitely, and that the typefounding and printing industries will suffer in consequence.

That an industry composed of so few firms as that of typemaking cannot get along in harmony and "dwell together in unity" is a matter of no little surprise and chagrin to many, and also greatly to be deplored. One thing, I think, can be truly said in their favor, and that is, that under their combinations and agreements they have never been extortionate, unreasonable or oppressive. That this is true is attested by the fact that their patrons were so well satisfied with the conditions established by the founders and dealers themselves, and are so dissatisfied with the present state of affairs wherein it is "every fellow for himself, and the devil take the hindmost."

I do not think I am mistaken when I say it would be highly gratifying to the members of the printing trade for the founders and dealers to come together and inaugurate the conditions which existed before the break, as to price and terms, with, perhaps, the change back to the lists which prevailed before the advance made on the claim of advance in price of metals. But, as stated above, I do not think any agreement can be reached by the founders and dealers for some time to come, and that instead of getting better affairs will continue to grow worse and worse, until they will become disastrous to some and unendurable to others, when, for self-preservation, matters will be arranged. Then the new arrangements will prove more annoying and hurtful to the printing industry than to make the arrangements now; then things will have become somewhat adjusted to the present order, and a re-adjustment will be necessary, while now, the change back would not be felt so much.

In one particular the old established printers are manifesting great wisdom, and that is in not jumping in and making heavy purchases simply because prices are low. A thing not needed is dear at any price. This action on the part of the printers is a great surprise and disappointment to some of the founders and dealers, as they calculated on a great increase in orders as soon as a break in prices was announced. Instead they find themselves with few more orders and greatly decreased profits on those they do get. Those who increased their

stock in anticipation of increased orders have the pleasure (?) of watching the peaceful repose of most of this increased stock upon their shelves.

I confidently predict a continuance of the present unsettled state of affairs until some of the founders and dealers are driven almost, if not quite, to the wall, but cannot say I have any sympathy to extend.

STYLE.

BY DUNCAN F. YOUNG.

IN the selection of the above caption no reference whatever is made to the scourge of human existence, fashion—style of dress, style of carriage, and style of living in general. Rather, it is applied to that fashion which, among that class which it affects, is disagreeable and unrelenting to the last degree. It is the style, or, rather, the styles, of printing offices. To printers the style in an office causes more annoyance, more aggravation, more loss of time, perhaps, than any other contingent of the business. This matter of style is nothing more nor less than rules prepared by the foreman or proofreader governing the capitalization upon a newspaper or journal.

Strange to say, in all the multifarious references or directions no mention is made of punctuation as regards commas other than a few stereotyped rules, such as using commas instead of commas and semicolons in setting off nouns in apposition appearing in roll-calls. The excuse made for this absence of a very important feature of these directions in composition is that there is no rule governing punctuation. No greater error exists in newspaper or book composition, and in my experience everyone who fortifies himself by this plea is ignorant, for anyone who understands grammar can punctuate, and everyone who understands grammar and has studied the rules of punctuation as given us by Quackenbos will invariably punctuate alike. There is but one way to punctuate and that is the correct way, and anyone knowing how to punctuate will punctuate correctly; that is to say, for instance, that the latter will place a comma before the conjunction "and" only in sentences where it is the beginning of a change of subject, and not place it there in every instance because it is essential at times. I knew a printer, regarded as first-class, who would never once think of setting up the word "which" unless it followed a comma. It is superfluous to express that he was as ignorant as a heathen, but as a matter of fact he has acknowledged in the presence of the writer hereof that he knew not the different parts of speech. Unfortunately for the craft this individual was elevated (both above *himself* and his collaborators) to that place where he was in a position to issue his typographical "ukase." And would, or did he do it? Does it not take such as he to take advantage of his position? Alas! and such as he to sit in judgment upon the capitalization and punctuation of the long-suffering compositor. Others who, through merit or otherwise (most usually *otherwise*), attain the position of

foremen, where ignorant, nearly always give life to the idiosyncrasies imbued in them in printing offices during the days which should have been spent at school. When remonstrated with for marking some trivial matter one of these individuals said that such had been marked on him when he was learning his trade. All these things, it is perceived, are learned by the latter-day compositor through bitter experience, they thereby frequently receiving galleys, entailing on them, being piece-workers, more or less pecuniary loss.

In analyzing the style upon newspapers these days we can sum up nothing more than a stumbling-block to compositors. In one office it is style to capitalize the single word "state" when referring to one of the United States, but in speaking of one of the territories, name not given, it is in lower case. The same incongruity in style is it where they follow Webster in the spelling and dividing of words, while in others it is Worcester. But among the most glaring inconsistencies in American printing offices is the capitalization of the word "president" when meaning the President of the United States, while the president of the richest bank in the country or the most important organization extant, used in like manner, must be converged to obscurity by the infinitesimal smallness of its beginning or frontal letter. History has taught and continues to teach us that to be American is to be independent. One of the principles of that grand and glorious document, that beloved mother of all our sound and world-famed institutions, the Declaration of Independence, declares against the slavish system of toadyism, and yet the educators, these organs of the brain of the country, are made to toady to the President of the United States and belie history and that beautiful, well-penned, well-timed document of which I spoke by giving him a preference over others, like was done in the time of His Majesty King George. And this has probably been done by a foreman who has never read the Declaration of Independence, or having read it heeded it not, being a monarchist.

These errors may be of very little importance in the hurry and bustle of these days, but they are such, nevertheless, and should and will receive attention at probably no distant day. In addition to the errors, the compositors who work by the piece, whose compensation depends upon their strict attention to work, are grievously annoyed and pecuniary loss entailed upon them. In fine, it is a work purely gratuitous, since it is not actually their duty, for all writers of eminence and ability have always objected to compositors meddling with their copy, as witness Byron's letter to his publishers, and other like authorities.

This matter of style, to an educated man, is worrying to the eye-sight, for inasmuch as in one journal there are inconsistencies, there are those in others which are directly contrary. For the sake of convenience to readers and compositors, and a uniformity in style if nothing else, there should be some steps taken toward a change. A change could be wrought with the greatest of ease. A convention of local editors and proprietors

and printers to adopt a uniform style, the reporters to learn that style, and most especially the editor and city editor, each of the latter or one of them to correct the capitalization and punctuation in revising copy. This could even be extended, making a permanent organization of these local bodies, delegates being sent therefrom to an international congress, this body to form a style governing the typographic finish of literature for the United States. This would relieve a much-persecuted class, and would justify the expense that might be entailed.

The first step has been taken; who will take the next?

Written for THE INLAND PRINTER.

A PRACTICAL PRINTER (?)

BY A. B. CARTY.

"PRACTICAL," according to the lexicographer, signifies pertaining to use. When applied to an individual, and especially a printer, as he is at present nearest to our thoughts, I would say that the term practical printer referred to a printer who thoroughly understands his business. That there are some misnomers working at the trade none will doubt; and there are lessons for the thoughtful individual to be gleaned by contact with the non-practical printer that will prove very useful to him in that it will not be probable that he will "go and do likewise," but will profit by the example.

There is a printer in this city who delights to affix the term "practical" to his business in all his advertisements. Now, let us see how practical he is. I stepped into his office the other day while he was at work on his Gordon press endeavoring to print a programme for a Sunday-school entertainment. I don't know how long he had been at work in making ready, but his attempt was a total failure. He handed me a proof and asked me what was the matter with it. I replied that the impression on the press was not even. He said he knew it, but as the d—d press was made without impression screws he would have to let her go. The fact is he had been used to working a Universal, on which the impression screws are located under the platen, and because there were no impression screws under the platen on his Gordon he concluded the press had no such screws. I fixed the impression and started him off all right. I noticed a break on the platen, which I was informed was caused by the oil can falling into the press during a process of oiling while the press was in motion.

I stepped over to the job stone, where he was setting a job, and found him spacing out with nonpareil quad lines. He had a fine stereotyping outfit in one corner of the room, and, with his permission, and with the use of several strips of new nonpareil reglet, two sheets of cardboard and about twenty-five pounds of old type from the refuse box, I cast a nice lot of slugs. He was highly pleased, and said he never thought of using the outfit for such purposes.

In addition to other machinery he has two cylinder presses, one of which is used for the daily and weekly

papers he publishes, the other being used for jobwork. Last week the driving belt on the newspaper press broke, and in order to repair it, it was necessary to set in a small piece of new belting. There was no form on the job cylinder at the time, so he cut the necessary piece out of the belt on that press. The other day he had the ink-plate on the newspaper press washed, and instead of distributing the fresh ink on the plate before putting on the forms, he put on the forms and distributed the ink while several old papers were being run through. In order to hasten the distribution of the ink he held a brayer on the distributing rollers while the press was in motion. Suddenly the brayer flew out of his hand, lifted out a form roller, the result being a smash. No time was to be wasted, so he lifted the forms over on the job cylinder. Having cut a piece out of the driving belt for the use of the newspaper press several days before, there was now no belt to run the job cylinder, so he sent out and secured two big negroes who turned the paper off while the accumulating steam in the boiler was blowing off at seventy pounds.

I could write many other similar instances did space permit. Now, the above printer claims to be "practical," and has six or eight boys he is educating in the way he is treading. What a disgrace to the high calling of the trade, and yet there seems to be no remedy.

THE ELECTRIC MOTOR IN THE PRESSROOM.

BY S. C. DE FOLLETT.

THE employment of the electric motor for various purposes is exciting general interest, and in nearly every case where an application has been made the experiment has proved successful. The most flattering efforts, however, seem to have been in connection with the printing press. It has become an everyday matter to have some such announcement brought to our notice as "John Smith, electric mercantile printer."

But while we see these evidences of enterprise slowly increasing, we cannot fail to find printers who know nothing of the matter, and, what is greatly to be regretted, those who care less; these last, let us hope, are the exceptions.

Electric power is now attainable in nearly every town of importance throughout the United States. Of course, where there is no power station the scheme becomes impracticable, except in a very large establishment. Power being procurable, it is only necessary to have wires run into the office and the motor belted to the same shafting as that used with the deposed engine.

Let me assume that this has been done, and glance for a moment at the result.

To the person looking at a motor (electric) for the first time, and comparing it with a steam or gas engine of equivalent horse-power, it becomes a lilliputian affair; in fact, he says he don't believe it will run the same machinery, but it will, and not only with far less noise and jar, but with equal facility, whether on the floor or bottom upwards on the ceiling; the electric machine

being securely fastened, is totally indifferent as to its position while at work.

An electric motor is a clean piece of machinery and requires scarcely any attendance.

The writer had occasion, not long since, to go through a printing office in one of our larger cities. The establishment was all on one floor, and in the center of the press space was a hot, dirty boiler and a noisy and scarcely less dirty engine; it was the strongest argument against steam power that one would care to see.

The only labor necessary in starting an electric motor is the moving of a switch; this done, and the motor is running. In the instance I have just cited, it was necessary that someone should tend to the engine early in the morning, at intervals of about five minutes through the day and after closing at night, to say nothing of the knowledge requisite to its proper care.

In some printing offices it would be a great convenience to have machines run by independent power, and this is possible with the use of electric motors, which can be secured as small as $\frac{1}{8}$ -horse power. This is being taken advantage of by manufacturers in various lines and is giving good satisfaction, while with steam or gas it would be highly impracticable.

The element of cost is generally the subject of greatest consideration; Americans are, as a usual thing, slaves to low prices, and the contract goes to the lowest bidder, irrespective of other points of far greater consequence. That article which is the cheapest in the beginning is almost invariably the most expensive in the end.

Such persons as have adopted electric power are somewhat divided in their opinions as to cost; some say it is more expensive, others that it is less so than steam, while the majority seem to find it about the same. They all, however, unite in declaring that nothing could induce them to return to the old rut.

There is a popular propensity with the public to shake their heads at the mention of electricity, and say it is "too dangerous." They read in the newspapers accounts of people being killed by electric shocks, and others who are more or less injured (frightened would be a better term) thereby. Now, these accidents, as a reference to the matter will show, are the results of carelessness—occasionally on the part of the electric companies, but more frequently of the injured themselves. If proper care be taken in our relations with the current, and we avoid showing undue familiarity with the positive and negative wires, the danger of an untimely end will be greatly reduced, in fact less probable than with boiler and engine.

One word in regard to the machine to be selected. There are several makes of electric motors on the market, nearly all of which are admirably adapted for the purpose of running printing machinery. For small powers ($\frac{1}{8}$ to 1 horse power) the "C. & C." motor seems to be unrivaled; for greater powers, the "Baxter," "Daft," "Thomson-Houston," "Sprague," together with many others, perhaps not so prominent, may be selected with full confidence in the result to be obtained.

Written for THE INLAND PRINTER.

ORDER IN THE PRINTING OFFICE.

BY J. B. CALDWELL.

THERE is a wise saying that "order is heaven's first law." It would be the part of wisdom to make it one of the laws of the printing office. In no place is order more essential than where so much depends upon the speedy and correct execution of important work. As one of the useful arts printing ranks among the first in importance. That printers and proprietors are more generally seeing the need of orderly, well-kept offices is a hopeful indication, and as a movement is calculated to produce comfort to employes and satisfaction to proprietors as well as place money in the pockets of both. Order and cleanliness will give respectability and independence to the disciples of Faust and Gutenberg, and help to place the art where it justly belongs—at the head of the mechanical professions.

A printing office should cease to be a synonym for dirt and confusion. There is no reason why the floor should be covered with dirty papers and the corners filled with greasy, inflammable rags, that increase the liability of fire and the rates of insurance.

The floors should be kept clean and free from the pollutions of tobacco spittle. The windows ought to be clean and polished, so that the bright sunlight may enter and render the apartments cheerful. The walls should be free from dirty finger marks and unsightly scribbling.

The surroundings, inside and out, should be clean, orderly and tasteful, and kept so. More and better work can thus be done, with greater ease and pleasure.

That type should be in its place seems such a self-evident fact that it need not be stated. Yet in how many offices is the type in its proper place? Many hours are lost hunting for sorts that are in jobs stowed away, or in pi that has accumulated. New sorts must be ordered, or a long hunt instituted, either of which is expensive. Judicious and wise (which is only honest) management would place type and sorts in cases and easily attainable places.

Pi ought to be distributed or paid for by the person who makes it. Much pi might be prevented by ordering that no sorts are to be "pulled" from standing matter without the direction of the foreman.

The slovens who have their quad boxes half filled with pi ought to be reformed or made to emigrate, for they are a nuisance in any establishment.

In justice to his employes no proprietor should purchase the old and the point system of type with the same face. It is bound to get mixed (as the difference is hard to discern), and cause confusion and trouble, hindering the order that should exist in all well-regulated offices.

The groom who does not curry his horse, soon gets his walking papers. Is the pressman who keeps his press dirty with oil and surrounded by litter entitled to any better treatment than the careless, incompetent groom?

Written for THE INLAND PRINTER.

QUADRATS.

BY PICA ANTIQUE.

THE question of whether work (under ordinary circumstances) should continue longer than eight hours per day scarcely admits of an argument. Humanity, in the race for supremacy of power and gold, has been driven as by superheated steam. More and more have the hours for rest been encroached upon; more and more has man and womankind been deprived of recreation; more and more has human life been robbed of everything tending to make it enjoyable, and more and more have we become machines and beasts of burden. These being not to be controverted facts it was full time to call a halt and look for relief from the sordid requirements of gain.

The battle is not a new one; has been long fought, but the end appears to be drawing near and will fully repay the exertion and trouble necessary for its accomplishment.

Given the "three score and ten" yet life is brief, and if all but absolutely forced hours of rest are to be given to toil what better are wage-workers than slaves, and how can they prepare themselves mentally or physically for the here, or spiritually for the hereafter? This, we take it, is a point not to be lost sight of. The longest earthly life is but as a drop when numbered against the not to be enumerated waves that will ceaselessly swell and break against the shores of the ocean of eternity.

Long ago Shakespeare recognized "how full of briars" was the work-day world, and Charles Lamb earnestly discoursed of those "who first invented work and bound the free and holiday-rejoicing spirit down." Yet they knew very little of the to-day, or how bread-winners are cribbed, confined, fettered with the gyves of necessity and (in some instances) worked until the muscles refuse to obey the numbed will, and accident follows.

That eight hours will become the standard for a day's labor no longer admits of questioning. The volcano of dissatisfaction that has long grumbled and groaned is showing fire and strength that cannot safely be disregarded. Driven to extremity the convulsion would be terrible and the consequences of disaster world-wide.

The demand for eight hours only will not be ignored unless the seekers for relief forget all of reason, of caution, of justice, and by their own actions defeat their most cherished desires. It has frequently been the case, will be again. There are men who never are satisfied, seek for the earth, and would clamor for the moon if given to them.

We refer to those who are foolishly urging that if eight hours are to be fixed for toil, why not seven? With that conceded, why should it not be six, and is there any reason why not five, or four, or three? The fact is, malcontents do not desire to labor at all—are sluggards and loafers in the fields of industry; tramps seeking to live upon the toil of others; anarchists, who, having sold their birthright, endeavor to steal that of others.

The arguments such men urge remind one forcibly of the two sons of the "Emerald Isle" who, when working at night, bemoaned their sad lot. "Bad luck till the man who first invented working by the dhirty loight ov a lamp"; and Mike feelingly replied: "Ye may well say that; and bad luck till the man who first invented working at all at all."

Do those who are talking of less than eight hours for a day of labor see the point? If so, will they not take warning?

* *

Is a publisher bound to reveal the authorship of articles appearing in the columns of his paper? Decidedly not, morally or legally, unless there is entire willingness on the part of the author to have his name given to the public.

There is an unwritten law against his so doing, and we know of no *lex scripta* relieving him of the sacred obligation to keep inviolate the secrets intrusted to him. The *esprit de corps* among writers and literary men, the highest interests of the guild of letters are against throwing open the doors of the sanctum and permitting free entry and free observation. The reasons for this are too obvious to require enumeration—are patent to every thinking man—and any other course would be suicidal to newspaper policy and continuance of publication.

To say that any committee (senatorial or other) is possessed of the power to compel revelation of editorial secrets; that any grand jury can force the opening of lips, or punish for contempt, would be to incorrectly state the scope of their jurisdiction. Otherwise free press would be a misnomer, and a censorship established at once arbitrary and fatal to the best interests of the public and a death blow to the very objects for which newspapers are established.

Are not editorial secrets as sacred as those of lawyer, physician, even of the confessional? If not, why not? No one will contend that one of the medical or legal profession can be forced to reveal words whispered in his ears by patient or client; no one, that the story told by a soul seeking to throw off its burden of sin shall be told to others. Against such betrayal of confidence the entire world would rise in indignation and condemnation. Why, then, should men of letters be excepted?

There is no just, no even plausible reason for such breaking of the seal of silence; of giving curiosity seekers and scandal mongers the entree to the inner chamber of newspaper life, and the blazoning of names never intended to be revealed.

An editor is responsible both to the law and that greater power, public opinion, for all that appears in the columns of his paper. That should be, *must be* enough if the press is to remain unshackled. Any inquiry as to the particular pen that wrote or tongue that dictated the lines is going beyond right, justice, equity or national polity. The limit over which an editor cannot step with impunity is sharply defined; reputation is protected and right fenced by law; the sense of propriety and fairplay dwells within the breast of every man. To dare the

beyond is to invite punishment in money damages and personal incarceration, and none but an irresponsible mental crank or fool will overstep the mark.

This being the case, the press is placed upon the same high platform with law, medicine and religion. Any attempt to coerce revelation is unwise, unjust, oppressive, and, we are happy to state, is so being looked upon by bench and bar. The wise men of every land look upon it in this light, and as a blow aimed directly at the freedom of the press and an attack upon the stability of the corner-stone of our boasted liberty, prosperity and national greatness.

* * *

WHAT about the grand exhibition to perpetuate the memory of the discoverer of America, and to be held (probably) in Washington? Are printers giving it any thought? Are craftsmen taking the interest they should in the matter? Are they taking the long look forward toward the securing of their rights; the securing of the room and place to which they are justly entitled? It is too early to talk much of this; not too soon for a concerted movement that will culminate in a display worthy of printing and printers—the historians and custodians of all the knowledge ever given to the world; of all ever to be given.

Written for THE INLAND PRINTER.

PROMPTNESS.

BY W. H. BUSHNELL.

THE *Manufacturers' Gazette* hit the nail of often failure squarely on the head when it said, "there is nothing more damaging to a business than to be found wanting in the matter of promptness in filling orders."

As a rule it should never be permitted. What may be temporary gain will certainly prove future loss. To take work that cannot be finished at the time promised, is clearly obtaining it under false pretenses; is impolitic and smacks strongly of dishonesty. The need of the moment in the patron may be great, and not being able to meet it, cause annoyance and disaster. The age is not one that admits of delay; is a constant struggle to be ahead, to climb to the top, and it is more important than another can calculate to be ready to grapple with emergencies.

The credit of a printing office hinges equally with its bank account upon keeping faith with employers; upon delivering jobs at the hour specified. With a reputation established for so doing, frugality in outside expenditure, strict attention, good work, push and enterprise, there is little danger of being driven to the wall of assignment. The standing of an office is as well known as ability and promptness to pay notes when due—not after suit and at the tail end of an execution.

To secure work by promises that cannot be kept is not only lowering manhood, but proves that the peculiar trait in the character of Ananias did not die with him. It is but a slightly concealed fraud, and its effect will be reactionary. Men prompt in business themselves will

not, unless forced by necessity, patronize others who have once deceived them. They cannot afford the time and trouble even for the sake of friendship. The stopping of a single wheel in the vast machinery of trade is detrimental to the progress of the whole, and the annoyance spreads as a circle in still water.

Every printer knows *or should know* just how much work he can do within a specified time, and keep it in mind when promising. The capacity of an office should never be overlooked; the limit of truth never strained. Judge by your own experience of the disappointment and perplexity of being put off day after day.

"He was ever precise in promise-keeping," is the best of reputations as much now as in Shakespeare's time, and the printer of whom it can be truthfully said has an anchor of prosperity to windward that will keep him—other business requirements not being neglected—safe from wreck.

Written for THE INLAND PRINTER.

COUNTRY OFFICES.

BY M. NOVOTNY.

THE management of country offices is not a small matter for consideration by anyone interested in the success and improvement of the country offices throughout the whole continent. To run a country office successfully cannot be done by a man who has worked in a one-horse shop three or six months and then tries to pass himself off as a "first-class printer." It is an absolute necessity for anyone to, at least, spend five or six years in different offices before calling himself a printer; and then, with the full determination to rise by running a country printing office, can one hope to succeed, providing he applies every pronounced method to be the best in conducting an office by our many technical journals. The best factor to obtain money for a young man starting out for himself in a country town is his knowledge gathered from experience and through reading technical journals, of which THE INLAND PRINTER is one of the very best. I found by my own experience that in reading only one article in a first-class journal, I learned something more valuable than I have learned by working in a small country office for years. Now I liken a printer without some technical journal to a boat without a rudder. If it could be possible to place a first-class journal in the hands of every printer, pressman and editor in the thousands of country offices scattered all over our broad land, it would be a great blessing, and turn many of the dirty and tobacco-littered offices into places of convenience and neatness. The editor needs these journals as much, if not more, than his printer. If he fails to be methodical and practical, his printer will also fail. The editor or proprietor should remember that example is a great teacher. In many instances the printer is too poor to subscribe for a journal, therefore his employer should subscribe for it himself, and after perusing its pages hand it over to the printer with the request to do the same. Try this experiment and it will pay you a hundred-fold.

**FANCY
STATIONERY
DEPARTMENT.**

J. W. Butler Paper Co.

183, 185, 187 Monroe Street,
Chicago.

WE take great pleasure in calling your attention to our extensive line of

PRINTERS' FANCY STATIONERY

for the coming Fall and Winter Season, for without exception it is the largest and most complete line ever brought together in the West, and comprises many novel as well as artistic designs. A large part of the line is made to our own order, and is not to be found elsewhere. The line embraces

**BALL PROGRAMMES.
FANCY FOLDERS.
ETCHED FOLDERS.
EMBOSSSED FOLDERS.
WEDDING CABINETS.**

**WEDDING NOTES AND ENVELOPES.
SCORED CARDS.
MOURNING STATIONERY.
VISITING CARDS.
IVORINE ENGRAVED NOVELTIES.**

MENU CARDS.

NOVELTIES IN CIRCULARS, CORDS AND TASSELS, BALL PENCILS, BADGES, ETC.

But samples of above line should be seen to be appreciated and to fully realize the benefit of having such a representation of Fancy stock in your office. Samples will be ready about August 15. Write for descriptive circular.

We are also Manufacturers and Wholesale Dealers in all kinds of

An Invention of Great Value to Newspaper Publishers.

THE KENDALL FOLDER.

For Hand or Press Feed. Any number of Folds desired.

THE KENDALL NEWSPAPER FOLDER consists of a light but substantial frame, a series of rollers, tapes and knives, a light shaft and a time bar, which makes the machine run in perfect unison with the press to which it is attached. The machine is light enough to be easily moved, but substantial enough to stand any amount of running. It can be attached to any press in two minutes. The capacity is equal to any press. The price is less than one-half that of the folders now in use, and so low that the amount is soon replaced in the saving of labor.

The frame is the same height as the tapes of the press, and the sheet instead of passing on to the fly runs on to the row of tapes and enters the folder. The first series of tapes passes the sheet directly across the top of the machine. When it comes exactly in the center, the time bar which has been attached to the bed of the press comes back to the first latch and depresses the upper knife bar. This doubles the sheet between two rollers, which carry a second series of tapes running horizontally with the top rail of the machine. The doubled sheet passes down through these tapes just half as far as before, when the time bar hits the second latch, folding the sheet again. It then passes between another pair of rollers with the tapes at right angles with the last set, to another latch and knife, thence through another set of tapes parallel with the first, to the last knife, which makes the fourth fold, and drops the paper into the packing box.

The folder is run with a small connecting belt, and the machine requires no more power to drive it than the fly cam.

When writing, please answer the following Questions:

What make and style of press do you use? Average speed of same per hour? Is there 4 1/2 feet space in front of fly? Size of sheet? Is it quarto or folio form? Do you print both sides of your paper at once, working and turning? Do you print heading page on first or last impression?

The Jones Gordon Job Printing Press

IS NOT AN OLD STYLE GORDON, BUT HAS SEVERAL IMPORTANT CHANGES AND IMPROVEMENTS WHICH MAKE IT QUITE DIFFERENT FROM THAT PRESS.

IMPRESSION SET.—A very important feature in these presses is that the **WHOLE IMPRESSION MAY BE INSTANTLY CHANGED**—either increased or diminished—**WITHOUT STOPPING THE PRESS.** When the Impression Screws are properly set, it is seldom, if ever, necessary to move them, as all adjustments are made by means of hand wheel marked "B" in cut.

INK DISTRIBUTION.—Another important feature is, that when the impression is thrown off by means of the lever "A," a simple device causes the movement of parts that prevents the Ink Rollers from touching the form, and the press may be run indefinitely for the distribution of ink.

SELF-LOCKING CHASE LOCK AND FORM STARTER.—Another feature of considerable importance in saving time and patience is the Self-Locking Chase Hook and Form Starter. When the chase is put in place on the bed, it is locked without touching any lever, pad, screw, or any part of the press. When the form is to be removed, it is only necessary to press forward on the pad, marked "patent," which causes the Chase Hook to rise, and the form to move forward so as to be convenient for lifting out.

THE DUPLEX FOUNTAIN.—The Duplex Fountain is a great advance over anything heretofore used for the distribution of ink on a disk press. The distributing roller passes down and back twice, or four times over the surface of the upper part of the disk at each impression.

GRIPPER SET AND CARRIAGE PULLS.—When the Platen is in a convenient position for setting the Grippers, they may be brought down on the Platen for that purpose. The Ink Roller Carriages are provided with loops to be used for putting in or removing the rollers.

These Presses are very heavy and strongly braced, and are made of the best material that can be procured. The Impression Arms are of Steel, forged from one piece without weld.

These Presses are kept in stock by the CHICAGO NEWSPAPER UNION. Send for Circular and Price List.

The Leader Paper Cutter.

The Leader Paper Cutter has the following points of Superiority over any other lever cutter :

First.—The power is applied in the direction of the cut instead of in a right angle or diagonal direction, as is the case with many cutters on the market. By experiment and test it has been demonstrated that less than two-thirds of the power is required to cut any given amount of paper with the LEADER than with any cutter of the class above referred to.

Second.—The back gauge, which in all other cutters must be changed for every cut, may be instantly moved any distance up to the whole length of its travel, say two feet or more, by a lever, shown beneath the front end of the table. To illustrate the advantage of this arrangement, suppose it is necessary to move the back gauge of an ordinary paper cutter twenty-four inches, it will be necessary to turn the wheel shown in front forty-eight times around, an operation involving considerable labor and time. The wheel and long screw in the LEADER are only used for slight adjustments.

Third.—The octagonal stick and recessed sides, which admits of passing the stick through the side to its place, and renders it impossible for the stick to be drawn out by the knife, giving sixteen cutting faces on the stick.

Fourth.—The lever is hung in the most convenient position, midway between the floor and the top of machine, making it unnecessary in making the cut to get down near the floor.

Front table 16 inches wide instead of the usual 12 inches.

JOHN M. JONES & CO., PALMYRA, N. Y.

These Machines may be ordered of any Dealer in Printers' Machinery, or from the Factory.

FACSIMILE
OF
WATERMARKS.

SEND
FOR
SAMPLES.

KEITH LEDGER PAPERS are well made, strong, hard sized, rule nicely, write easily, erase and rewrite without difficulty, and have been given the preference by good judges in competitive tests with all other leading brands of Ledger paper.

RAVELSTONE Flats are made in Laid and Wove, White and Perfection Tints, and are used by Lithographers, Stationers and Printers for first-class Commercial Stationery for Banks, Insurance Offices and Business Houses generally. These papers are also put up ruled and folded, in the usual sizes.

WESTLOCK Flats are well known and highly prized for their good color, cleanness, freedom from imperfections and all adulterants, strength, hard sizing, and are used for all kinds of commercial work, being especially preferred by makers of Blank Books, because they are thicker for the weight than other papers. These papers are put up folded, and in Note, Letter and Bill Heads, etc.

The above Papers are offered to the Trade through Agents located in the principal centers of distribution throughout the Country.

"FLOWING CUT INK, B."

We have had so many inquiries from publishers and large printers of illustrated work for a wood-cut ink that was "not short, that would flow in the fountain, follow the roller, and dry quickly with a gloss," that we have made an ink to meet these requirements, with the above name. We would respectfully solicit a trial of the same, confident that it will do all we claim for it.

PUBLISHERS INLAND PRINTER,
Chicago, Ill.

GENTLEMEN:--The incalculable and well-nigh infinite increase in modern circularizing and the tremendous affinity which that product has for the waste basket have inspired artisans, printers and business men of late years to efforts at producing circulars which will bear the impress of a PERSONAL and CONFIDENTIAL "dictated" letter.

Methods are numerous and their enumeration is unnecessary; but the inestimable value of a good one is conceded by all live business men.

With the introduction of the type-writer into general use, a new problem arose, the result of which was the common type-writer imitation type. This did well for a time; but the charm is gone and the product is at once recognized. Into the waste basket it goes.

The letter you are now reading was printed from type on a common printing press, at the usual speed; and is the only perfect type-writer imitation yet invented. The process is perfectly simple.

It has now been in use but a short time and to only a limited extent; but there the highest testimonials are awarded it on account of the immediate attention it demands; and the printers who hold rights of territory, have no difficulty in controlling ALL the "circular" work of their locality.

Its actual cost is no more than ordinary work, while the price it demands--on account of its saving to the customer (only a fifth as many circulars being required)--is from \$1.00 to \$2.00 additional per 1000.

Further information as to process and territorial rights may be obtained from the inventor and patentee,

GEO. W. WEAVER,
Rochester, N. Y.

Dict.--P.

P. S.--Different type faces are herein used to show the imitation of different writing machines.

Are · You · in · a · Rut ?

SOME PEOPLE, loth to accept progressive ideas, keep pegging away in the same narrow rut of their predecessors. Others, more enterprising, avail themselves of every advancement, thereby securing the benefits of modern machinery. No one will claim that the printing press of today resembles very much the one in the above cut. The improvements have been rapid and beneficial. Now, why not in *Folding Machines*? It is possible that such is the case. You can readily ascertain and get full particulars by addressing the

Postage stamps are not desirable, but when it is found necessary to remit them, one-cent stamps are preferred.

THE INLAND PRINTER will be issued promptly on the twentieth of each month. Subscriptions, payable in advance, may be sent to the Treasurer by postoffice order or in currency at our risk.

THE INLAND PRINTER will spare no endeavor to furnish valuable news and information to those interested professionally or incidentally in the printing profession, and printers will confer a great favor on the Editor of this Journal by sending him news pertaining to the craft in their section of the country, particularly individual theories and experiences of practical value.

CHICAGO, SEPTEMBER, 1889.

INDORSED BY INTERNATIONAL TYPOGRAPHICAL UNION, DENVER, JUNE, 1889.

RESOLVED, That the International Typographical Union recognizes in THE INLAND PRINTER the technical trade journal of the craft, and cordially recommends it to the patronage of the printers of the United States.

COMPETITION.

A SHORT time ago, while visiting a printing establishment, upon inquiring about the state of trade we were gravely informed that *competition had killed it*. Without investigating individual cases (though firm in the faith that the rule governing one applies equally to all), let us see how much truth, if any, there is in the statements of a similar character.

At the outset, however, we assert our unbelief in the statement that legitimate competition—and to use it in any other sense is a misnomer—ever injured, much less “killed,” any business. Upon every principle of trade ethics it is the propelling power, the blood and marrow of life; the incentive to mental and physical energy; the promoter of demand and the rewarder of effort; the agency that develops true manhood; the pushing, restless, nervous excitement that longs for success and forces the recognition necessary to command it. Without competition business life would be a dawdling existence, hopeless of anything higher; the taking of what was within our reach whatever came unsought, and never striving for the better or the beyond. What has given business its present magnitude? What would have been the state of things today had there been absolute satisfaction? What has caused, nay, forced the evolution from ignorance and want of facilities to the highest type?

The history of one branch is the history of all, and taking *printing* as one example what do we find? How came something better than the old shackling, unsatisfactory press? than ink balls? than the hundred bungling contrivances the printers of the present look upon with a feeling akin to incredulity? Had the world been content with the speed of the tortoise we should never have had that of the hare; with the old “Washington” or “Columbian” we should never have had the cylinder. These—and all new and valuable inventions, have been the result of progress. And what stimulated progress except the desire to excel; the necessity of better, simpler, more labor-saving machines; the abridgment of time, and a superior class of work.

There can be but one answer to these questions. Competition was the whip and spur and the laggard got left in the race. Competition is as natural as breath in all things; in all beings lower than the Godhead. Are we not told that one star seeketh to exceed another in glory? Does not the following wave seem to endeavor to swell more grandly than the one preceding? each lion fight to be king? each horse to be first under the wire, and each man to outdo his fellows? Competition is in harmony with both the material and the spiritual. It is the rightful and honest endeavor to better our condition, first for ourselves, and second for those with whom we are thrown into association, and to benefit whom is to secure personal benefits. There may be a selfish motive underlying its exercise, but it is not guilty aspiration, but rather worthy of emulation.

Competition is the legitimate use of brains, muscle and money to rise above “low birth and iron fortune”; to increase business, secure patronage and provide against

the contingencies of the future. Without it trade would remain a sluggish stream, feeling nothing of spring tides or fall freshets. It is the desire innate with every man not content with the simple right to breathe and eat, to do something more worthy of his high birthright. It is to make life worth the living and himself more qualified for usefulness and enjoyment. In no sense can it justly be deemed conspiring, for the principle that whatever elevates one must elevate all is too well established to need proof or defense. Competition is to business as steam to iron arms and whirling wheels; as the controlled wind to drive the vessel forward. To it we are indebted in a great measure for all the wonderful improvements and inventions of the age; to the constant stepping in advance, the never resting until something better is done.

To competition as much if not more than anything can be traced the magnificent successes of today. The old lever galled the hand and tried the muscles. A "token an hour" fell behind, far behind the rushing demands of trade. The roller boy could not ink the form with sufficient speed and accuracy. Human sinews could not endure the continued strain. One form was not enough; several were required, and so on through the entire list; and power presses, inking attachments, stereotyping and electrotyping sprang wonderfully equipped into birth. Why? Because competition demanded them; because the few hundreds of impressions were increased by large multiples; because time became an important factor, and accuracy and color no longer permitted slighting.

The improvement in method in machinery, in the saving of hours by one man, caused his neighbor to awaken from slumber and hustle round to keep even with, to excel him. He was compelled to do so to keep his customers; to execute as good work; to retain that which he already had; to secure more. To this may safely be attributed very much of the excellence we see in every branch of industry; the almost necromantic skill of fingers; the almost intellectual movements of machinery.

"So far, well," says the malcontent, the man who has been satisfied to sit upon a log on the bank and permit the tide to ebb away without catching any of the golden fish swimming around; whereas, had he been up and doing or secured the right kind of bait his hook would not have remained untouched on the water. He did neither, and having turned a deaf ear to growing requirements, and with blood too sluggish to be stirred by the twin spirits of improvement and progress, he starves, with plenty around, and attempts to console himself with the falsehood that "competition killed trade." Competition never did anything of the kind; never laid a straw in the way of success in business. On the contrary, it has done and is doing everything for it. It has swept away the useless incumbrances of the olden times and banished to obscurity things that have outlived usefulness. The need, aye necessity, to keep abreast with the demands of the

times, to keep step with the march of the country, has lifted many a man out of self and selfishness, brushed away the cobwebs of ignorance and benefited the world at large.

Competition, as here referred to, has never injured any man, trade or profession. It never *kills* business; on the contrary, it creates and enlarges it. Never does it clog the wheels, but drives faster by the increased volume of water. Trace back the *killing*, and not to competition but the lack of it will be found the true state of affairs, and the more pronounced and brisker it is the greater will good results be found.

THE PROPOSED PRINTERS' HOME.

THE proposed establishment of a home at Colorado Springs, under the auspices of the International Typographical Union, for the benefit of invalid or superannuated printers unable to provide for themselves, and the likelihood of its acceptance by the local bodies of the more than generous offer of the Board of Trade of that city, donating eighty acres of land in the choicest location of that beautiful sanitarium, for the erection of suitable buildings thereon, for that purpose, and the partial endowment of the same, has aroused a spirit of opposition in many quarters from which better things should have been expected. In the main the objections offered are both puerile and untenable, unworthy of recognition, and betray an animus evidently begotten by ignorance, prejudice or sectionalism. Instead of urging the benefits of an offer as princely as unexpected, and its acceptance by the craft, quibble after quibble has been raised, and difficulties, in which the wish is father to the thought, created with the evident design of throwing cold water on the scheme, questioning its feasibility or the ultimate benefits the establishment of such an institution would confer. Despite this fact, however, we confidently anticipate its acceptance by the duly authorized bodies (although at the time of writing we are unacquainted with the result of their decision), having an abiding faith in the common sense and intelligence of the craft at large.

It would be an endless and thankless task to reply or attempt to reply to the many frivolous objections presented by carping critics; by men who make a mountain out of a molehill; who like to place the cart before the horse; who talk for the sake of hearing themselves talk. Instead of recognizing the fact that in less than five years from date this property will be worth \$200,000; and further, provided the more than liberal terms of the bequest are complied with, will become the property of the International Typographical Union, and the revenues derived therefrom disbursed under its jurisdiction, and trusting to the good sense, business judgment and tact of its members to provide all necessary safeguards for its financial management and the admission of inmates, these men are industriously sowing the seeds of discord.

Why is it located in Colorado? How will it be conducted? Who will be admitted, and under what circumstances will they be admitted? What will be the expense

of conducting the same? What will be considered the basis of admission? How many officials will it have, and who will appoint them? How are we to know in advance it will be economically or honestly conducted? How are the successful applicants to obtain transportation, and a score of similar far-fetched interrogatories have formed the stock in trade of carpists who in all probability will never contribute a dollar to its support; whose grumbling propensities are their only characteristics, and who, if finding themselves in heaven, instead of hades, would try to find a flaw in the through bill of lading.

Without attempting to answer these questions in detail, we may state: (1) That the location, all advantages considered, is one of the *most* healthful and desirable in the United States, unsurpassed for salubrity, and specially beneficial to those afflicted with pulmonary ailments, the too common scourge of those following the printing profession. This fact disposes in our judgment of the inquiry, why should it not be situated in Wisconsin, Illinois, Michigan, Ohio, West Virginia, or some other central location? (2) The supposition is it will be conducted on business principles, and that all necessary safeguards, based on the experience of similar institutions, will be observed and enforced in its management, and as an account of stewardship rendered will be submitted from time to time to those authorized to investigate, the rational conclusion is that dishonesty or misconduct, should it unfortunately develop itself, will promptly receive its quietus. (3) It will relieve the local unions and chapels in a great measure of the responsibility and expense now entailed upon them, in contributing to many of the demands made. (4) All applicants will be subjected to a course of examination or vouched for by responsible authorities before admission. (5) Ways and means for maintaining the same will no doubt be devised by the International Typographical Union, while if proper steps are taken to secure the same—and they certainly will be—the employing printers of the United States will provide a fund which will secure its success beyond a peradventure.

In face of these facts, is it the part of wisdom to accept the offer presented? In our opinion no special pleading is required to furnish an affirmative answer.

COME, YOU WON'T BE HURT!

THE last issue of the *American Press*, published at Atlanta, Georgia, contains the following:

Atlanta, Ga., which has been selected as the place for holding the International Convention in 1890, is situated 694 miles from Baltimore, 739 miles from Chicago, 608 from St. Louis, and 475 from Cincinnati. A pretty good location from a geographical standpoint.—*Inland Printer*.

Is it possible that THE INLAND PRINTER can find no words of commendation for the action of the International Typographical Union in selecting Atlanta as the point of their next annual convention? What is there in Atlanta that arouses the animosity of Mr. Cameron? At a recent meeting of the local Typothetæ and of the Printers' Union a resolution was introduced and unanimously carried requesting everybody in Atlanta to leave their pistols, bowie knives and other weapons at home during the

session of the International Typographical Union. Even the negroes will be allowed the freedom of the streets, and visitors will be allowed the opportunity of entertaining a pickaninny for a penny. We hope THE INLAND PRINTER man will attend, and the *American Press* hereby binds itself to treat to a glass of soda water, and give the representative of this world-famed journal a fine, fat and slick coon to take back to Chicago for ornamental purposes. In other words, we expect to make all Northern visitors feel that they are not in a land exclusively owned and inhabited by barbarians, and while we have not as much stale beer and tall houses as Chicago, we can certainly boast of more negroes, mules and pigs. There will be no latch-string on the outside of any door because of the fact that the doors will be taken off the hinges and carefully stored away in some secure spot, together with other movable valuables.

We extend a hearty invitation to all to come, promising them that an extra police force and a brass band will be in attendance.

We think it would puzzle a Philadelphia lawyer to understand what the editor of the *American Press* is driving at in the foregoing remarks. Mr. Cameron probably has as large an acquaintance with and as high an appreciation of the characteristics of the Southern people as his instructor. Instead of showing animosity to the city of Atlanta, the statement to which exception is taken was penned in its favor. If spared to visit that goodly city he expects to find a whole-souled, patriotic, generous class of people, who have as little use for pistols, bowie knives and other weapons as the average American citizen located farther north. He hopes, however, for the honor of Atlanta, it has greater inducements to offer its guests than coons, negroes, mules and pigs, as there are enough of them nearer home. By the by, the soda water is all right, friend Cohen, but he expects you to furnish something on the inside.

MEETING OF THE NATIONAL EDITORIAL ASSOCIATION.

THE recent meeting of the National Editorial Association in the city of Detroit, was an event of more than ordinary interest. Many valuable and practical papers were read, the more worthy of which will be presented from time to time to our readers. The weather was propitious, and the princely hospitality shown by the various committees having the entertainment of the guests in hand, will never be forgotten. The reports published in the daily press were exhaustive, and no pains were lacking on the part of the citizens in general to make the occasion a thoroughly enjoyable one. In the next issue of THE INLAND PRINTER we expect to present portraits of the officers elected.

IN answer to a number of correspondents who take exception to our exposure of and strictures on the work of the so-called amateurs, we desire to assure them once and for all, that their remonstrances are love's labor lost. While we are much obliged to them for the interest manifested, we propose to pursue the even tenor of our way, and do all in our power to help drive these botches, amateurs, blacksmiths, or by whatever name they may be called, from a profession which they continue to disgrace.

A GOOD TIME TO BEGIN.

THE present number closes the sixth volume of THE INLAND PRINTER. Those desirous of subscribing for the same should avail themselves of the opportunity presented of doing so at the commencement of a new year. Two dollars cannot be used to better advantage by any party connected with the printing interests than by sending them to the office of publication either for a renewal or commencement of subscription for this journal.

PROOFREADERS.

BY ONE OF THEM.

SO much has been written lately of the hardships of the compositor and how he is imposed upon by the rulings of the proofreader that it would be well to call attention to the fact that he is not altogether blameless. If different styles are called for in different works, the compositor in many instances gives the proofreader the credit of it being due to his crankiness, and makes reflections on his mental condition, his personal beauty, or his ancestry, if he finds the punctuation marked closer in bookwork today than it was on his proof of a law brief yesterday. The compositor should remember that if his proofs are poor it is his misfortune, not the fault of the proofreader, in the greatest number of cases—being proven by the fact that there are those of his companions who seldom have a galley passed to them, for the reason that they have taken pains to make themselves acquainted with the style that usage called for in each piece of composition, so that whatever is marked on their proofs is of a minor nature only. Many times, too, it happens where a compositor leaves an "out" in a take of bookwork that he will ask the proofreader to change the reading so that he will not have to overrun, and is very indignant that the "brainery" should not make itself financially responsible for his negligence, when his request is declined.

In the larger offices the selection and employment of the proofreaders is frequently handed over to the foreman, and they are at his mercy should he be inclined to be overbearing, for there is no law restraining the exercise of tyranny over the proofreader. He has no union to appeal to. What can be more irritating to a proofreader than to have his marks disregarded by order of the foreman on the plea of hurried work, without any consultation on the matter, and as a consequence see two or three different styles on the same piece of composition; and then to be restrained from correcting these inconsistencies on any extra issues that may be ordered, because it was "worked that way before." As a consequence of the foreman's sway, the compositor impatiently waits in the room while his "few lines" are being read, and if nervous about the time he has taken to set them up, will assist the proofreader by holding one corner of the proof and giving it spasmodic jerks, while he swears softly to himself as he beholds it gradually assume a map-like appearance. He is more

impressed than ever with the disagreeable qualities of the proofreader if he is reminded when he stands in the light that he is not transparent and that his presence does not hasten the work in the least. "The foreman sent him in" and he must stay till the proof is ready, making remarks with the voice of a Boanerges on any subject that may strike his fancy, rattling on the floor with his boots in his light-heartedness or to let it be known that he is getting impatient. Should a page of the proof be missing, he is vexed at the implied question of his veracity if the proofreader desires to see it when he said it was all right, and in many cases flares out in open abuse.

The proofreader may battle long and earnestly against these malign influences on his enjoyment of life, but the constant friction soon subdues him to composing his soul to a grim patience—the foreman has control of him and there is no appeal.

The compositors make the mistake of antagonizing the proofreader in many instances—abusing him in and out of season—so that the "incompetents" among them, by virtue of unvarying bad proofs, aver that the "cage" is "against" them, is trying to run them out of the office, etc. The proofreader does not exult over the inconsistencies of English as affording him an opportunity to mark up the proofs of his fellow-workmen; bad proofs entail additional work upon himself—and yet it is popularly supposed that he derives a diabolical pleasure marking proofs unnecessarily, and delaying the work of the office as far as in his power lies. Instances have frequently occurred where the proofreader having been at pains to make a note of the peculiarities of style in a certain work, and passed copies around among the compositors, that his efforts have been treated with contempt and the remark made that they would "fix it all right in the proof."

Under such treatment as is thus given him, combined with the vexing duties of his position, is it to be expected that the proofreader will comply with any degree of suavity to the demands of the compositor as to "what in —— he means by putting 'old country' down and 'Old World' up?" and inquiries of a like nature.

Benjamin Drew in his book, "Pens and Types," says: "The experienced proofreader speaks *ex cathedra*, and submits to no council his claim to infallibility; he lays down rules, but never descends to give reasons. In all other callings and professions, humility is a virtue; in proofreading it is little less than a sin." If this advice, which certainly smacks of the heroic, is carried out, it will save the proofreader much waste of time and useless discussion, but it certainly will not render him less objectionable to his friend, the compositor.

It is certainly true that the compositor has many seeming injustices done him in not having copy prepared; but how few compositors there are who will devote any of their spare time to the study of their trade. It is not denied that there are plenty of excuses,

possibly, but the fact remains that the man who does not *study* his trade is not a success at it, and as a consequence of his mistakes from ill-prepared copy, invokes the vengeance of the gods on the head of the devoted proofreader.

NOTES ON WOOD ENGRAVING.

NO. LIII.—BY S. W. FALLIS.

ALEXANDER ANDERSON was born near Beekman Slip, New York City, on April 21, 1775, two days after the first bloodshed in the war for independence had occurred at the battle of Lexington.

Anderson was of Scotch descent, his father being a native of Scotland, a printer by profession, and at the time of Alexander's birth was the publisher of a republican newspaper in the city of New York called the *Constitutional Gazette*. He differed in politics from most of his countrymen, who were generally distinguished for their loyalty to the king. He continued to publish the *Gazette* until the autumn of 1776, when the British took possession of New York City. Then the "rebel printer," as he was called, was compelled to fly with his books and printing materials, nearly all of which were lost before he reached a place of safety, in Connecticut, where he remained with his family until the close of the war; then returned to New York City.

At the age of twelve years, young Anderson began the use of the graver for his own amusement. He was a very timid and backward lad, but with keen perception and acute understanding and comprehension. He shrunk from asking questions, and gained information by silent and modest observation. Looking in the silversmiths' windows he saw the shape and method of using the graver in lettering spoons. He thereupon rolled out copper cents, and improvised a graver with the back spring of a pocket knife, with which he made his first attempts at the engraver's art. Meeting with such satisfactory success, he progressed still further by his characteristic perseverance, and soon cut small ships and other objects on type metal and sold them to newspaper publishers of New York.

The wonders of general science also early engaged his attention, especially that branch which pertains to the economy of physical life, and some of his early efforts in the engraver's art were in making copies of anatomical figures from medical books. His father perceived this proclivity with the greatest pleasure, as he depreciated the lad's manifest love of art, and at the age of fourteen he was apprenticed to Dr. Young, a physician of some eminence, who had been a surgeon in the Continental army. He remained with him as a student for five years, during which time he employed all his spare moments at engraving, and became so proficient while yet a medical student that the principal printers and publishers of New York availed themselves of his talents and abilities, and engaged him to make such illustrations as they required from time to time. During his apprenticeship as medical student, at the age of about seventeen,

his proficiency in the art of engraving had gained such a high standard, notwithstanding the many difficulties that lay in his way, that he was employed by William Durell, a bookseller, to copy the illustrations of a popular little English work entitled "The Looking Glass of the Mind." The engravings that embellished this book were made on wood by Thomas Bewick. Up to this time Anderson's engravings had been made on type metal, and he had no idea that any other substance or material was used for the purpose. When he had completed about one-half these illustrations, he was informed by a friend that Bewick's cuts were engraved on box-wood. He immediately procured some blocks of this material from a rule-maker's shop, invented proper tools and made the experiment, and engraved

THE BEGGAR AT THE DOOR.

(Anderson's first engraving on wood, for "Looking Glass of the Mind.")

To his great joy he found the material much easier managed and more agreeable to work on than his former method of using type metal, and to this accidental discovery comes to us the first American wood engraving and the first American wood engraver, Dr. Alexander Anderson, the father of wood engraving in America, which had its beginning in 1793.

Anderson followed this first engraving on wood up by others in quick succession, his second attempt being

WILLIAM AND AMELIA IN THE ORCHARD.

(Anderson's second wood engraving, for "Looking Glass of the Mind.")

The first of these wood cuts heads the chapter in "The Looking Glass," entitled "The Destructive Consequences of Dissipation and Luxury." The second illustrates the story of "William and Amelia."

In May, 1796, at the age of twenty-one, Anderson received the degree of Medical Doctor from the faculty

of Columbia College. The subject of his address on that occasion was "Chronic Mania," and the theories which he then advanced concerning its cause and cure have now been long established facts in medical science.

In the first year of Dr. Anderson's practice of medicine, he drew and engraved on wood in a most admirable manner a full length human skeleton from "Albinn's Anatomy," which he enlarged to a length of three feet. Up to this time this was believed to be the largest fine and carefully elaborated engraving on wood ever attempted, and has never been excelled in accuracy of drawing and characteristic execution.

(To be continued.)

THE NOMENCLATURE OF TYPE FACES.

BY CARL SCHRAUBSTADTER, JR.

THE nomenclature of type faces apparently follows no law. The most common of faces, and the standard from which most of the others are drawn, is appropriately called roman, and, in contradistinction to the long serifed and stiffer faces which became popular during the early part of this century, old style is perhaps well named, and italic having originated in Italy, the name answers very well. If we confine ourselves to the old faces, the blacks are well named. These occupied so much of the paper as to produce a very black effect as compared with the roman, but some of the modern blacks are far lighter than the average face. Condensed, extended, expanded, light-face, etc., are usually properly used to qualify the name of the face. The titles (heavy romans, which were formerly used for the purpose indicated by the name), do not belie their name. One or two foundries call such styles Full-Face, and this is also appropriate; but when we leave the plain letter apparently all laws cease. While some job faces possess good names, by far the greatest number seem to have been selected hap-hazard. This is, perhaps, not to be wondered at. The method adopted by one prominent foundry of numbering its faces consecutively has always proven unpopular. Numbers are difficult to remember, but the printer can readily keep in mind a name, even if it is not descriptive. For that reason short, euphonious words are preferred. With the host of modern job faces which have been poured on the market a supply of good names has become scarce, and it is almost as difficult to name as to originate a new and useful face. While perhaps the heavy serifs of the old faces may have suggested the name of Antique, the idea of such faces is essentially modern, and the name Block, as applied by sign painters, seems far more appropriate. Gothic could hardly have been suggested by the Gothic architecture, but it is barely possible that the name was suggested by the simplicity and rudeness of the Goths. They are called Egyptian by sign painters, and the European name of Sans-Serif, though not

particularly euphonious, is certainly the most correct. Nevertheless, by popular consent these names have been adopted, as has also the name of Latin for faces which possess the main characteristics of the Antique, but have three-cornered serifs. But why a condensed face of this character should be called Latin Condensed, and the extended one Latin Antique, is difficult to say. The faces having these same characteristics, but much lighter lines, are generally called Celtic. Surely nothing in the history of that nation could warrant the selection of this name, and Romanesque, adopted by one or two, seems more appropriate. The confusion which this hap-hazard nomenclature sometimes occasions is well exemplified by such names as Old Style Antique, descriptive of an old style having very heavy serifs, and Modern Old Style, having its letters modified to suit modern tastes. Yet such a name as Modern Antique seems a palpable self-contradiction, although, perhaps there is as much reason for this name as for many of the others. Ionic, Doric, Clarendon and Caledonian, as applied to several Antiques, have become standard names, but why they were chosen would probably tax the reason of the man who first applied them. French Clarendon, applied to letters which have upper and lower serifs heavy, and perpendicular lines light, hardly seems as appropriate as Egyptian, used by one or two foundries, faces of this character having something suggestive of the heavy architecture of that nation. Another face, variously known as Law Italic and Caledonian Italic, is certainly better known by the former name, the face being very often used in printing legal documents, whereas there is nothing in the character of the face to suggest either the nation or the Caledonian face—a heavy Antique which preceded it by a number of years. There is nothing to suggest a monk in the Monastic, nor a seal in a Signet. Venetian, Chameleon, Alpine, Moslem, Altona, Teniers, Stencil, Esthetic, Ruskin, may be mentioned as examples of a great many which give the reader no idea of the face. Some foundries have taken the names of cities or states, others, of printers, artists and other well-known men, while the majority select them hap-hazard, the main thought being to get some euphonious two or three syllabled word which the compositor can easily remember.

Occasionally some strong departure is made, as in Mother Hubbard, Santa Claus or Morning Glory, but usually the titles are short and characteristic. Occasionally a modern face is appropriately named, as Typewriter, Filagree, Mortised, or Pen Text, but in general nothing of the kind has been done. The writer is far from believing that this system is in any way pernicious. The only alternative would be to number the faces consecutively by mutual agreement between the different producing typefounders, or to give a long descriptive title, either of which is certain to give dissatisfaction; but there are certain anomalies which could and should be avoided, and it is principally to call attention to this fact that this article is penned.

PHOTO-ENGRAVING COMPANY, 67-71 Park Place, New York.

"A SON OF THE DESERT."

SPEED OF PULLEYS.

Pressmen frequently wonder why their belts slip on the pulleys at certain speeds and not at others. This is because they are ignorant of the law of centrifugal force. Experienced hands have found that belts can be run safely at from 500 to 700 feet per minute, but on six-inch pulleys they lose about two-fifths of their cohesion by centrifugal force and become uncertain in their driving power. A four-foot pulley should not be run over 400 revolutions per minute. The *Mechanic and Builder* says that pulleys and belts are more liable to be affected by high velocities than are shafts, the belting losing pulley contact, and the pulleys losing cohesion from the cause we have stated above—the centrifugal force developed by high speeds. It is a common habit of pressmen to daub the inner sides of belting, especially the main driving belt, with common ink to increase cohesion. Of course, such make-shifts prove but temporary aids, by reason of the speedy glazing of the ink from friction, and the belt is liable to slip worse than before, from the high polish it acquires. In our fast age the tendency is to push things to utmost limits, to work both men and machines to their full capacity of production. Where this is done with a knowledge of what those limits are, and of the law of action and reaction, there is little danger; but too often it is carried to extremes with a reckless determination to simply "get there," such as used to actuate the navigators of the Mississippi when they "chucked in resin and pine and had a nigger squat on the safety valve." Good practice, it is said, is to run shafts for machine shops at 120 revolutions per minute; for wood-working machinery, at 150, and for cotton and woolen mills at from 300 to 400 revolutions. As will be seen, the machine-shop shafting, which meets with greater resistance in the more ponderous machinery, is run at much slower speed, by reason of higher friction, than that, for example, of a cotton-spinner. This is a safe guide for pressmen. — *Pacific Printer.*

COLOR-BLINDNESS.

An ingenious device for testing color-blindness has recently appeared. It consists in a combination of two adjustably attached cards or surfaces, one made up of different color sections and the other containing an opening or aperture upon a white surface, the card containing the color sections being so arranged that the several sections can be brought to pass beneath the opening of the card. The subject of color-blindness has been receiving much attention, and many of the government employes are now obliged to submit to a color examination before they can secure an appointment. It is found that forty men out of every thousand are color-blind. A color-blind would be useless were the science of colors to enter into his life work. It appears strange that color-blinds make the best etchers, steel engravers or wood engravers, but such is the case. By the law of compensation, they possess what is known to their profession as the "recognition of tone." But two women in a thousand are color-blind. The savage races possess the perception of color to a greater degree than do the civilized races. — *New York American Stationer.*

GLUE STAMPS TO PRINT FROM.

Mr. Anton Gerhard, printer, of Emden, writes as follows to the *Nuremberg Stereotypist*: "I do not use india-rubber stamps any more in my business, but glue stamps, with which I use printers' ink. I make these stamps as follows: On the composed type I place some leaves of tin-foil, then a piece of felt, and press down tightly. The pressure is at once removed, and the complete tin-foil matrix taken off. It is then slightly oiled over; oiled furniture is laid around it, and liquid glue, mixed with a little roller composition, is poured over it. When cold, the coating of glue easily comes away from the matrix, is sufficiently hard, and yet remains elastic. For the glue I use pure joiners' glue. I am very well pleased with the stamps; they print very clearly on all kinds of paper; are a little soft for the first few days, but then become hard, and at the same time are sufficiently elastic."

TO PREVENT OFFSET OF COLORS.

Many pressmen, when they meet obstacles in the working of inks, are apt to blame the manufacturer when they should accuse their own ignorance. It is the old story of the workman growling at his tools.

The real trouble lies in the prevailing lack of primary technical knowledge of processes of manufacture and relative proportions of ingredients, a knowledge which our present system of training gives no opportunity of acquiring. Had we at each trade center an efficient school for the teaching of all the secrets of our great art, every apprentice, aye, and every journeyman (most of the latter need such schooling) would have a chance of gaining that theoretical knowledge which should underlie and even precede all practical experience in the shop.

Our present purpose is to answer queries as to a remedy for the offsetting of final colors where several are worked on top of each other. Had our correspondents been cognizant of the composition of inks, of their ingredients and methods of manufacture, as well as of the absorptive or resistive character of the various kinds of paper stock they use, remedies would have almost suggested themselves. As to the paper, experience soon drums into even a dullhead the simple fact that ink dries *into* a porous surface rapidly, while it has to dry *onto* a hard-finished one; hence that a stiffer ink is needed for the latter than for the former, which ink has more "dryer" in it.

The thoughtful, inquiring pressman will, *in time*, find a remedy for the trouble we are specially considering; but in both cases this will only be sought, in all likelihood, after serious losses from spoilage have occurred. Had he been properly instructed at an early stage, such losses would have been averted.

The pressman must know that, while the manufacture of inks has made great progress, and while our inkmakers are incessant in their efforts to produce goods to meet all demands, and, where special needs are known, *do* meet them, yet it is absurd to expect that inks sold from regular stock can serve, as sold, in all emergencies. The knowledge and experience of the pressman must come into frequent play, so as to control each special case. Where these exist there is little or no complaint against the material used.

The case under consideration is a special one. Before stating the remedy, let us clearly set down the cause. The trouble rarely occurs on soft-finished paper, but is frequent enough where inks are printed on top of each other on hard-faced stock, for, as we have said, each color is simply dried on, not dried in. *The tendency of the fresh color on top is to soften the color or colors beneath, and will almost invariably do so, unless there is a very quick dryer used in the last color.* This is the pressman's place to mix in as he prepares his ink for the fountain or slab.

Nearly all tints are mixed by the pressman for the special job in hand. Where very large quantities are used, they are ordered, per sample, of the inkmaker, but even then they often require some manipulation from the pressman, to meet conditions that arise. *If, previous to putting the final color into the fountain, the pressman will work in a little "copal flock,"* he will have no trouble from offset, and indeed this advice may apply to all inks that show this tendency. In the case of two or more colors, the oil in the top one will be prevented from loosening or amalgamating with the oil in the color below, and the drying process will be accelerated.

The remedy here given could have been stated in a paragraph, but we have deemed it our duty, while doing this service, to do a greater one by trying to turn our readers' thoughts into broader channels; by dropping a stone into over-quiet and sluggish waters, whose resultant agitation shall go circling outward for the benefit of the craft at large. Both compositors and pressmen know too little of the possibilities of the materials at their command, and if we succeed in waking them up to think, investigate and experiment for themselves, we shall think our space well devoted. — *Art Printer.*

A STRONG INDORSEMENT.

OFFICE OF H. O. SHEPARD & CO.,

Printers of "The Inland Printer."

CHICAGO, Jan. 17, 1889.

GENTLEMEN,—We have the Golding Jobber at work, and it is all you claim for it. We have six different makes of job presses, all beautiful specimens of mechanism; yours is equal to any. We are perfectly satisfied with the press, and if we wrote volumes we could not say more in its favor.

Yours truly,

H. O. SHEPARD & Co.

FURTHER COMMENDATION.

To say that I am pleased with the Jobber would be a mild way of expressing it. It is simply immense. I have done all kinds of work, from a single line to a half-sheet poster (two impressions), using six lines of wood type at one impression, filling a screw chase to its utmost capacity. The ease with which the press ran with this form and heavy impression was certainly astonishing. The fountain and brayer are in my estimation the acme of perfection, while the impression regulators and throw-off can't be beat. The ease in making ready, the rapidity of operation, and stillness in running, are points in the Golding Jobber not to be overlooked.

C. C. JUDD,

CHICAGO, September 1, 1889.

Gentlemen :

We have for several years past felt the necessity growing upon us of having a depot for our goods in Chicago. Our business has increased so rapidly and our patronage has been so widely extended that the demand for a central distributing point, from which we could reach our customers with as little delay as possible, has seemed imperative.

We have now accomplished the object we have had in view so long, and have established our **Chicago Branch House at 259 Dearborn Street.** Our location is a choice one, situated between the two great printing districts of the city, it is equally as convenient to one as to the other.

We shall endeavor to carry at all times a complete stock of Wood Type, both End Wood and Holly, Printers' Wood Goods and Furniture, all of our own manufacture; and also handle Metal Type, Machinery and Printers' Supplies of all kinds.

We would *especially* direct your attention to our **End Wood Type**, upon which we pride ourselves. We have recently doubled our capacity for the manufacture of End Wood Type, by the addition of the latest improved machinery, and are now able to fill orders promptly. This type in material and finish has never been equaled in this country, nor in any other country. We say this without fear of contradiction. The material used is thoroughly seasoned *Rock Maple*.

We make the **Hamilton-Boss Lower Case.** In this case the spaces and en quads are all brought down directly under the hand of the compositor, an advantage that is readily recognized by the progressive printer. Hamilton's Brass Leader Case is another new feature that we are introducing, and is a great convenience, especially in offices that do much blank work.

Our plant for the manufacture of Printers' Wood Goods and Furniture is probably the most extensive in the country. We would be pleased to give you figures on any *special* Cabinet or article of Furniture that you may need.

Come and see us at our new Chicago House, or write to us for figures on anything in the Printers' Supply line. As to prices, we simply say that we can do as well by you as any house in the business.

Respectfully yours,

THE HAMILTON MFG. CO.

CORRESPONDENCE.

While our columns are always open for the discussion of any relevant subjects, we do not necessarily indorse the opinions of contributors. Anonymous letters will not be noticed; therefore our correspondents will please give names—not for publication, if they desire to remain incog., but as a guarantee of good faith.

FROM LOUISIANA.

To the Editor: NEW ORLEANS, September 1, 1889.

But little has transpired in this city in our circle since my last worthy of reporting. A number of printers have deposited their cards, several going to work in job offices. Mr. Colton, formerly foreman of the book department at Graham's, has taken charge of Hyatt's job office, and Mr. Connors has succeeded the latter.

No. 17 has again been called upon to mourn the death of an old member, Mr. Charles Brewerton, who died after a lingering illness, at the age of forty-one years.

Mr. Wickliffe, editor of the *News*, who was formerly a printer, and who is rather facetious, is familiarly called "Wick." He has been printing a number of jokes in his paper, but of late there is a noticeable absence of anything facetious, and the other day a friend came to me and said, "The 'wick' in Wickliffe's lamp seems to be burning low." Alas! poor Wickliffe's "wick," as regards his editorial connection with the *News*, has been extinguished. He was and is, in my opinion, an able writer. He has been succeeded by the former city editor of that paper, who, I have been reliably informed, now fills both positions. He is a fresh importation, being in this city, I think, about two months. He is an Irishman, possessing an American name, born in England, and the initials of his name, I believe, are R. A. T.

On Wednesday, last, Mr. F. J. Hogan, the Crescent City compositor, was joined in wedlock to Widow Hille.

Business continues active, though there is none too much work for the printers at present in town. D. F. Y.

FROM ATLANTA.

To the Editor: ATLANTA, Ga., August 27, 1889.

The question, how shall we creditably entertain the International Typographical Union next year, has been more thoroughly discussed since June 15 than any other subject among the members of No. 48. An almost unanimous verdict is that harmony shall prevail among us this year, and all that can be done to make the stay of the delegates pleasant shall be our object. We ought and we expect to make the week pleasant to everyone who attends that session. There will be no attempt to rival the entertainment given by the grand and beautiful Queen of the Plains. We hope to make everybody feel that we would do as much as she did if the means were as available.

Our union has put on new life and much good will result soon. Never since reorganization were we as strong as now, and much good should soon be the outcome of long conservatism among the leaders.

On August 28 the pressmen and pressfeeders, electrotypers and stereotypers, bookbinders and the honorary members of No. 48 will meet to take action relative to better organization and to cooperate with the printers in devising ways and means to entertain the International convention. The pressmen and feeders of Atlanta are reliable men and their organizations will be permanent.

Several copies of THE INLAND PRINTER have been distributed among the printers here, and they all like it. The International did right in acknowledging it the technical printers' journal. It is just the kind of a paper to read and enlighten the printers of the country as to their own capabilities and possibilities.

At a recent meeting of No. 48 a resolution was adopted appointing a committee to memorialize the legislature asking the passage of a law requiring that all state work be done by union printers and that the scale of the union be paid therefor. Whether it passes or not it will do some good in causing discussion and agitation. If it should pass, this city would very soon become one of

the most solid in the country. A resolution was also passed fining a member \$5 for allowing his string or wages to be discounted.

There are more printers than enough in the city to do the work that is given out. Our delegate to Denver, Mr. W. L. Skelton, has resigned—such resignation to take effect March 27, 1890, it has been announced.

The Knights of Labor are reorganizing again. A flourishing assembly is headed by Hon. James G. Woodward, who represented this union at Cincinnati in 1884, and Kansas City in 1886. Politicians and men willing to sell out have hurt the Knights of Labor in this city and state. The new orders hope to be free of these tricksters. EEL.

FROM ESSEX CENTRE, ONTARIO.

To the Editor: ESSEX CENTRE, September 3, 1889.

Some time in March last, the employing printers and publishers of this county (Essex) formed themselves into an association for mutual benefit and protection. For some years the country printing has been let by tender, and this has led to cutting prices so fine that the man who got the work might be considered unfortunate, for in many cases the figures would scarcely cover the cost of production. Not only was this the state of affairs in reference to county work, but township printing and work for fall fairs was done in the same way. The result of this wholesale cutting of prices was badly executed work and dissatisfaction all round. It was to do away with this evil and to establish uniformity in prices that the association was formed. There is a penalty in case of non-conformance with the rules and regulations of the association making it doubly binding on its members. I believe it will not be long before other counties in the province will adopt a similar order of things, and am certain that all would find it to their advantage in more ways than one.

Under the new scale prices in some instances are higher, and in others lower than the old rates, but for all classes of work they are based on a fair calculation of the cost of production. Of course, there are some old soreheads who are pleased to say that the association is a skin game, etc., but these individuals are generally grangers from way-back, who have been placed on a board of churches for some fall fair and imagine that printers should be classed with the proverbial lightning-rod man. Business men, however, who are used to patronizing printing offices, can see that our prices are fair and consistent with good work.

W. H. H.

FROM BOSTON.

To the Editor: BOSTON, September 5, 1889.

A few years ago our principal printing offices were located on or near Washington street, within hailing distance of that section still occupied by the *Herald*, *Journal*, *Globe*, *Advertiser* and *Record*, and known among the craft as Newspaper Row. Ever since the great fire, however, one office after another has gradually moved toward or into the burned district, until that section lying between Washington and Oliver streets on one side, and Milk and Summer streets on the other, contains the majority. This movement has, doubtless, been occasioned by the rebuilding of this section, and its occupancy by those business houses representing the heavy business interests of the city—the printers naturally following in the wake of their customers in their desire to be within easy reach. By this movement Fort Hill Square (often termed Printing House Square) has become a well-known place to the craft, for in it, or clustering immediately around, are numerous offices, among them those of T. O. Metcalf & Co., Robinson & Stevenson, The Printing and Embossing Company, F. H. Gilson, J. N. Allen & Berry, McIndoe Bros., C. J. Peters & Son, P. H. Foster & Co., Allen Print, Addison C. Getchell, C. W. Calkins & Co., S. G. Robinson and Thomas J. M. Smith & Co. Besides these, in a massive brick building facing the square is also located the spare office of the Boston *Herald*. Here can be found a complete office ready for immediate occupancy, the cases all full and everything in apple-pie order, including even the presses. This place is

maintained so that in case of fire in its regular quarters the *Herald* may appear promptly on time as if nothing had happened and without the loss of an edition. I am not sure that such is the case, but I understand that there is but one other paper in this country with such an outfit, and in any case it is, to my mind, a crowning feature of modern journalism. Fort Hill Square is also the home of two printers' warehouses, those of Samuel Stevens and Golding & Co., and several printers' machinists are near by. This square is a sightly place and affords a beautiful outlook for the weary printer (when the foreman is not looking). It is considerably the largest in the business section, with a well-kept grass plot, circular in shape, and during the present season a number of trees have been set out which will in a few years add greatly to its attractiveness.

By reference to the Boston City Directory for 1889, which has recently been issued, I find that eight streets contain the majority of printing offices, divided as follows: Washington, 42; Federal, 12; Devonshire, 11; Oliver, 10; Franklin, 9; Congress, 8; Purchase, 6; Pearl, 5; while the total for the city is 260. Quite a showing for a city of 500,000 inhabitants.

Mr. Albert Cottle has recently been appointed foreman of the third district of the government printing office at Washington, at a salary of \$1,800. Mr. Cottle was formerly employed in the *Globe* office here, and secured the position through the influence of Henry Cabot Lodge. He was also backed by Senator Dawes and others.

Number 73 Federal street has been overhauled and changed considerably since the Rand-Avery Supply Company left it for the old quarters of the Rand-Avery Company, and is now occupied by T. R. Marvin & Son, J. L. McIntosh, Goodwin & Drisco, Blair Printing Company and L. P. Coffin. S.

FROM DETROIT.

To the Editor:

DETROIT, September 3, 1889.

During the past week Detroit was honored by a large number of ye editors of ye newspapers from the North, South, East and West, occasioned by the meeting of the National Editorial Association, and a very neat-looking lot of ladies and gentlemen they were. The City Hall was handsomely decorated and the following very appropriate mottoes were displayed on the Woodward avenue side: Over the grand portal was a cottonade with the welcome, "Greeting from the City of the Straits." Above were the sentiments, "Gray matter and shears mold public opinion"; "Do not neglect pleasure for business"; "Graphite and ink lead people to think"; "A double-leaded welcome"; "Guests at the head of the column next to reading matter." The crowning effort of the witty mottoist was the laudable sentiment, "Cash subscribers are the best type of American citizenship." The balance of the City Hall was a fluttering pyramid of flags of all nations with the stars and stripes surmounting them all.

The business sessions of the association were opened Tuesday morning, which was called to order by Mr. William E. Quinby, editor of the *Free Press*, who introduced Acting Mayor J. C. Jacob, who welcomed the knights of the quill to the city. A carriage ride was indulged in in the afternoon through the city and to the log cabin of Minister Palmer, where the guests were shown what early pioneer life was in ye olden time.

Wednesday morning was devoted to business and the reading of various papers. In the afternoon an excursion was had on the Detroit river. The route was to the Exposition Building, where Detroit's International Fair opens September 17. Your correspondent had the pleasure to enjoy this trip in company with the editor of THE INLAND PRINTER.

Many a pleasant word was heard by the various newspaper men about Detroit's beautiful river, fine steamers, etc. A Southern gentleman was heard to remark that he was somewhat puzzled in a geographical sense. He came directly north and then found when he came here that Canada was south of Michigan. After looking over the buildings and grounds of the exposition the steamer returned to the city and took the Fourth

Regiment, Michigan State Troops, on board for a dress parade at Belle Isle Park, under command of Lieutenant-Colonel Sheehan. The music on the boat and for the dress parade was by the Fourth Regiment Band.

Thursday and Friday morning were devoted to business sessions, and a fitting finale was the excursion up to the Flats and Star Island House, where the editors were banqueted. A large number of the newspaper fraternity also availed themselves of a special excursion to Niagara Falls.

On Monday was another gala day for the workingmen — Labor Day. The same decorations on the City Hall remained, and the mottoes that were placed in conspicuous places were the following:

"He that does not work, neither shall he eat."

"By the sweat of thy brow shalt thou eat bread."

"Ill fares the land, to hastening ills a prey,
Where wealth accumulates and men decay."

"Equalities of rights, of opportunities and taxation."

"When wealth combines, labor must unite."

"Eight hours for work; eight hours for rest; eight hours for mental and physical improvement."

Along the route of march many of the business places were profusely decorated.

There were two demonstrations in this city. In the morning the Knights of Labor had their parade, and in the afternoon the trades unions paraded, the latter having by far the greatest number in line. Typographical Union, No. 18, headed by the Fourth Regiment Band, headed the third division. The Pressmen's and Stereotypers' unions were also well represented and, all told, there were over three hundred men in line. They made a handsome appearance and marched like veterans, and were the recipients of applause all along the line. The union was commanded by P. N. Bland.

The day was a fine one but the heat was almost too much. At the Driving Park numerous games had been arranged, and every one who attended had a good time.

The *Sun* lockout still continues, the office being filled by "all sorts." The union has the support of all fair-minded citizens, which has been shown by the leading business firms, who absolutely refuse to advertise in the sheet. Its advertising columns look very meager.

The state of trade is nothing to boast of and the summer dullness still prevails.

P. A. L.

FROM THE ARGENTINE REPUBLIC.

To the Editor:

BUENOS AIRES, June 23, 1889.

The advertisement of the *Compania Sud Americana de Billetes de Banco*, which appeared on page 522 of the March number of THE INLAND PRINTER, goes to prove that the people of this country are willing to come more than half way to do business with the Yankee manufacturers. This is not the only establishment in this country which would like to have some dealings with the North Americans, but there are many others; and if the Yankee manufacturers cannot place their agencies in the hands of the printers' furnishing houses here at reasonable terms, why don't some of the best and most leading firms club together and appoint a good practical man in this country, put him in charge of their business, pay him a good salary or a commission which will make it worth while for him to go in with heart and soul, and repay them in the end. Of course, they would have to send their goods on consignment and furnish a place for their representative, so he could sell "at sight." Some folks might think I'm off my base, but this is what they will have to get down to if they want to sell their goods down here, and I know they would sell lots of them.

The Cottrell & Sons, press builders, have gotten out a very neat Spanish catalogue, and have mailed them to most of the printing concerns here; but I notice they fail to mention their best presses. They only mention such presses that will stand some show against European manufacturers. Many others have sent catalogues and price lists this way, but most have failed to

give prices and special rates, and also seem to be afraid to send more than one catalogue or illustration. Others don't know how to answer a business letter.

I discovered an R. Hoe & Co. three-revolution newspaper press in a one-horse tumble-down machine shop here. The fellow bought it at the custom house auction sales, and has been three months trying to set it up, but could not get it through his head, and I don't know how many years it has lain in the custom warehouses. I suppose it got here through a case of misplaced confidence.

Two new printing concerns have started here since my last letter, and each with over \$50,000 capital.

A new stereotype office has been opened here by Mr. D. W. Dean, who came out here for William Way, but found this person was on his last pins, and could not pay his help.

In the "Quadrats" of the April, 1889, number of THE INLAND PRINTER I notice an item on good pressmen being scarce, and I would like to say that not alone in the United States are they scarce, but in all parts of the world. Why, in Buenos Aires there are not five men whom you could call pressmen, and they are not what I would call the best kind, and to look at some of the work turned out here, you would say it was done by a shoemaker.

I expect in a short time there will be lots of more printers and engravers down here from the United States, from what I have heard.

The *Tribune Nacional*, the organ of the government, has been stopped being published after fourteen years of existence, and a new paper, *El Globo*, has appeared. Respectfully,

M. A. MILLER.

FROM MONTREAL.

To the Editor :

MONTREAL, September 7, 1889.

Labor Day no doubt is an established institution in Montreal, as it is observed better and better as each year rolls by. This year it was called by everyone, toiler or capitalist, a great credit to the workingmen in general. The procession was about three miles long and consisted of all the trade unions and assemblies of the Knights of Labor. Each member made it a point to be on hand at the proper time and fall in line. Jacques Cartier Typographical Union and the Pressmen's Union, and Montreal Typographical Union, No. 176, turned out *en masse*, the latter wearing white plugs and carrying canes, and were headed by one of their members, dressed in full Highland costume — Fred Riddle, who is an expert bagpipe player. When the band that led the printers did not play, Fred would get in his work in fine style. The printers seemed to be favorites, as they were almost continually cheered by the spectators. The River Front Assembly, Knights of Labor, turned out the largest number of men, six hundred and fifty, wearing checked jackets and white straw hats. They had an elegant white silk banner, embroidered with maroon velvet and gold lace, and bearing on one side a representation of a ship at sea, and inscription, "Labor is noble and holy," and on the obverse side a well-executed portrait of T. V. Powderly. The most elaborate badge was carried by the Watchmakers' Union, having a blue badge surmounted with a gold watchcase; these were on horseback leading the procession. The line of march was about six miles in length, and that with the sun scorching everyone exposed to its rays. After the procession all went to the exhibition grounds to take in the sports. Men with their wheel of fortune were there bright and early, also the usual cane and ring men, but about the most comical thing was a man and a nigger and half-ripe tomatoes. The nigger would sit on a chair, about forty feet away, with an old black plug hat on. The other man sold the tomatoes, three for 5 cents, to throw at the coon's hat. If the hat was knocked off the throw would get a fair-ground Havana cigar free. If the tomato hit the coon he had to grin and bear it. Somehow people did not seem to have very good success at hitting the hat, but had better luck hitting the coon. From early in the morning till late at night the weather was as fine and clear as could be wished for. About twenty

thousand persons were on the grounds in the afternoon, and many hundreds were on the side of Mount Royal, overlooking the grounds, where they had a good view of all the sports and the game of lacrosse. Most of the factories, large and small, were closed on that day. About all the printing offices were deserted. The mayor proclaimed the day a civic holiday during the last week of August, giving all an opportunity to be prepared for the *fête*. The laboring men are now looked up to more than ever before, as there were enough men out that day, if all stood together, to control any election.

A dispatch came from Ottawa on August 10, calling for twenty printers for the government printing office at that place. A special meeting of the union was held to see what action would be taken in the matter. It was resolved, seeing Montreal was overcrowded, to pay the required number of men's fares there, provided they would not return here inside of three months. Out of about fifty idle printers only sixteen applied for the positions. The men were guaranteed work for three months or more at \$11 per week, \$1 more than is paid here.

Montreal Typographical Union's picnic held on August 10 was a grand success. Over two hundred members, wearing white hats and carrying canes, formed in line in front of the union rooms. The best band in the city was engaged for the occasion. Three young imps, also wearing white plugs, were in front of the band. They marched through several of the principal streets, then took the Grand Trunk for Otterburn Park, St. Hilaire, having to go through the celebrated Victoria Bridge, two miles long, taking five minutes to go through. The excursionists, after arriving at their destination, scattered in many directions, some going out on the Richelieu river, some to the Beloit mountains, where they could go to the elegantly furnished Iroquois House, or take a trip on the lake which is on the mountains, the circumference of which is about two and a half miles. It is a grand place to go. Everything was carried out to the letter and everyone was perfectly satisfied. The last train reached Montreal at 9 P. M.

Business is fair in job offices, plenty of subs on the dailies. The outlook for the future is rather uncertain. J. P. M.

A PRESSMAN'S EXPLANATION.

To the Editor :

NEW YORK, September 1, 1889.

As the proposition emanating from the Adams and Cylinder Press Printers' Association and Empire City Pressmen's Union, No. 34, to form an International Pressmen's Union, is provoking discussion in almost every city in the country where a pressmen's union is organized, it may not be amiss that an authoritative statement of the reasons which impel this step, at this time, should be given.

The association above mentioned was organized in this city December 2, 1865, and has to this day maintained an unbroken front. It has been during all those years the only *bona fide* pressmen's union in New York City, if we except the time elapsed since the organization of No. 34, the membership of which union is embraced in the association. The association has and does maintain a minimum scale of \$20 per week, and is fast strengthening its organization both in New York, Brooklyn and Jersey City. It has, at present writing, a membership of over three hundred pressmen, not one of whom is receiving a less wage than the \$20 scale, and a good many something over.

This much to show that in addressing ourselves to the organized pressmen of the country we are not stepping outside of our proper sphere, but are actuated rather by a desire to advance the interest of all pressmen.

It has been assumed, so far back as my memory serves, that our brothers of the stick and rule were the best fitted to legislate for the whole trade, and it scarce ever entered the mind of one of them to question their ability in that direction. For years the International Typographical Union claimed, and does still, that all jurisdiction in the printing trade lay in its grasp, and not until the pressure became too strong for it to resist did it permit the

organization of pressmen's unions. I personally wrestled with the delegates to the convention of 1873, at Montreal, to pass some provision for that purpose, but in vain. At that time, if the spirit of unionism had any place in a pressman's organism it had to be developed in a typographical union, where a pressman, unless of very strong personality, was a nonentity indeed. The consequence was that union pressmen at that time were like hen's teeth, few and far between. The Adams and Cylinder Association sent a delegate to the convention at Baltimore in 1871, to seek a charter from the International Typographical Union, but returned charterless. In spite of their proven desire to affiliate with this body, when at last it seemed right to the International Typographical Union to grant a charter to New York City, of all the people in the world who should get it but a number of feeders, who forthwith proclaimed themselves a pressmen's union.

The same story, with variations, has marked the interference of the typesetting fraternity with the affairs of pressmen wherever it has occurred. As, for instance, in 1882, when the International Typographical convention was held in St. Louis. Prior to its assembling the local typographical union, knowing that a pressmen's union was in existence in that city, concluded, so far as making preparations for the convention, that the typographical union was *the* union and that a pressmen's union was not entitled to notice at all. In the same city a few years later it was held by President Aimison, acting in conjunction with, and, presumably by the advice of the late Mr. George Clark, that the provisions of the general laws of the International Typographical Union appertaining to strikes, while they might be operative in the case of a typographical, were not so in the case of a pressmen's union, with the result that the St. Louis Pressmen's Union was suspended. In New York City a strike was entered into by No. 6, without complying with the provisions of a resolution printed on page 131 of the Buffalo proceedings, and which provided for the giving of a notice to the sister union, of any demand or request made on employers. Inasmuch as No. 34 afterward complied with the request of No. 6 to strike work, it may not be fair to allude to it, but the fact remains that the further organization under the International Typographical Union charter of the Pressmen's Union in New York was set back indefinitely through an ill-advised strike of hot-headed typos, who supposed that all they had to do was to demand and it would be acceded to.

These instances show that there is no middle course for pressmen to adopt; that if they desire sound legislation in their own interests, they themselves must legislate; if they desire to make themselves a power for good for the pressmen of America, they must assert themselves and not consent to play second fiddle to any body of men, no matter whether they are really desirous of advancing the interests of labor, or whether, on the other hand, they are merely puffed up with their own arrogance; they must, in fact, be men, not mice.

Animated by those views the Adams and Cylinder Association some time ago appointed a committee, of which I have the honor of being chairman, to discover by correspondence and otherwise how far the spirit of disaffection toward the International Typographical Union and its methods permeated the pressmen's unions of the country. The result would surprise the officials of that body could they but see it, and while a number of pressmen's unions will not go into the convention *at this time*, it is because they fear coercion on the part of the typographical unions.

A sufficient number of unions have signified their willingness to cooperate in this movement, to encourage the Adams and Cylinder Association to issue the call for a convention of pressmen in New York City, on Tuesday, October 8, 1889, and the formation of an International Pressmen's Union is now a foregone conclusion. It remains to be seen whether the pressmen's unions which still hold aloof will not consider their interests best served in an organization where pressmen, and they alone, make the laws to guide the body.

With a sincere hope that pressmen will give their present position careful consideration and shape their actions accordingly,

I remain yours truly, T. J. HAWKINS.

FROM WASHINGTON.

To the Editor :

WASHINGTON, September 4, 1889.

Since my last budget quite a number of changes have taken place here in the newspaper line. At present the number of idle printers in this city exceeds any previous season in a long time, the cause being due to the present discharges at the government printing office. Last Wednesday the "mighty ax" fell upon the heads of about twenty compositors, and that number, coupled with those of the previous week, account for this condition of affairs. Next month, however, there will doubtless be a number of appointments made at this great workhouse, and many a heart will be made glad, after having waited so patiently for his or her turn to come.

Some of these unfortunate compositors lie around the city with the expectation of securing a position by subbing on the various papers. The writer is among that class who does not believe in positions given out in this manner. We are a member of Columbia Union, No. 101, of this city, and would be the last to harm a member unlawfully, if the opportunity afforded itself. Every office has its favorites in the sub-list, and a "regular" cannot certainly help but realize the importance of the subs that regularly "show up" for work, and also cannot refrain from appreciating him when he (the "regular") desires to "lay off" a day or more, as the case may be. A foreman cannot pursue his daily vocation without also observing this fact, and fully realizing the real importance of their presence. Then we think it is a "dead insult" to a competent, sober "sub" when the foreman goes outside of the office to fill a vacancy by a stranger. There are two cases in this city where foremen have sent to Baltimore for compositors, when the streets are filled with idle printers. In our mild opinion, this should be a rule in every "square" office, namely, that a position when vacant should be tendered the oldest sub, then life would be worth living.

The last number of THE INLAND PRINTER was a picture of beauty in every regard, and greatly admired by a number of people here.

The new weekly paper you refer to will introduce itself upon our streets on Wednesday next. It will be a four-page issue, briefer and agate type, and bears the appropriate caption, *National Democrat*. Instead of using the material of the recently suspended *Sunday Capital*, the management have purchased new material throughout, including the type above mentioned, and a brand new press. The paper is said to be backed by a number of monied democrats, and will result in giving employment to about a dozen compositors at least three days a week.

The recent action of the union here in relation to the plate matter has caused quite a ripple of excitement among the craftsmen. It was in the shape of a resolution, and strictly forbids the use of plates unless paid for at the usual rate of composition per one thousand. The *Hatchet* wiggled out of the order by procuring a patent inside from Baltimore. The *Republic* succeeded in changing hands, Mr. Rufus Darby having taken his name from its title page as proprietor. The *Gazette* is now gotten out by two apprentices, and, as we remarked in our last, its once beauty is robbed by the use of a large quantity of plates. Before adopting the plate system, this paper employed six journeymen each Saturday, none of whom are permitted to work there now.

In our last letter we mentioned the *Sunday Chronicle* as being in a flourishing condition. We are now prepared to give more accurate facts regarding its financial standing. This paper came under the same category as the *Gazette*, and likewise used plates to a pretty great extent. Mr. Branson, the late foreman, was also compelled to "walk out," the proprietor positively refusing to pay compositors for the plates. Foreman Riley, of the *Gazette*, and Branson, of the *Chronicle*, are yet out of positions, caused by the action referred to by Typographical Union No. 101. At the last monthly meeting a motion was carried granting Messrs. Branson and Riley financial support until they had secured permanent employment. This was no more than right, and we cannot help from congratulating these gentlemen for the principle

manifested. At present the *Chronicle* is gotten out by two apprentices, and does not indicate many characteristics of prosperity.

The morning *Post* and *Press* give out a good deal of work now, and Manager Hatton, of the former, says the *Post* hands have the best position of any paper in the city. Subbing on the *Evening Star* is said to be more liberal at present than it has been for a long time. We should think that any office running forty-two slugs, as does the *Star*, ought to give out a good deal of work, but formerly the *Star* has always been slow in this regard.

Mr. Frank Padgett, the very obliging secretary of No. 101, is kept very busy now, owing principally to the changes taking place at the government printing office. Mr. Padgett was reëlected at the last regular election of officers, and fills his arduous duties with accuracy and promptness.

Work is picking up at the book and job offices of Judd & Detwiler, Clarkson (formerly Gray & Clarkson), Darby, Polkinhorn, and other larger offices here, and it looks as though the coming fall would be prolific with lots of work.

The *Inventive Age*, a monthly issue, recently published in the interests of inventors, is a bright and sparkling pamphlet-shaped paper, and a rare picture of mechanical beauty. EM-DASH.

FROM LOUISVILLE.

To the Editor :

LOUISVILLE, September 5, 1889.

At the present time there is little or no complaining heard because of dull times, the majority of the offices having sufficient work to do to keep all hands busy. The book trade has been on a boom, caused by the opening of the schools, and business in general is in a very satisfactory condition. Natural gas, of which I wrote some months since, has at last been put into use, and its advantages are to be seen upon all sides. The supply is equal to all demands likely to be made upon it, and ere long, "to be in the swim," you must be a consumer of natural gas.

In the death of Mr. John P. Morton, founder and principal owner of the well-known publishing house of John P. Morton & Co., which occurred July 19, Louisville loses one of her most substantial citizens and the charitable institutions of the city one of their truest friends. The business will be continued under the same name and management, the latter being in charge of the Messrs. Griswold, nephews of the deceased, who have had the active management of the business for quite a long time. I am told that Mr. William J. Adams, who has been superintendent of the bindery for the past thirty years, was the recipient of quite a handsome bequest in Mr. Morton's will.

Mr. Theodore W. Powell, for the past twenty-five years foreman of the Bradley & Gilbert Co's bindery, has at last "come out from under the log," as the saying goes, and is offering to the bookbinders of the country a very simple but ingeniously contrived index tag (or tab, as some of the eastern binders are wont to term it) for blank books, as the result of his many years' experience. The swell produced by these tags is said to be less than one-half that of other tags, while the space grip is nearly doubled, which also prevents the leaves from tearing at the niches. All who have used them have pronounced them the tag par-excellence, and Mr. Powell has already selected his brownstone front which is to be purchased with the profits from the tag business.

As predicted in one of my previous letters, Mr. Clarence L. Clark has been given a comfortable government position, which all of his friends hope will be more conducive to health than the confining influences of a printing office, which were rapidly carrying him into a decline.

The Falls City Lithographing Company, one of the most conservative concerns of the country (I suppose because a bank president is in control of it), has found it necessary to add a large Scott lithograph press, so as to be able to keep abreast of their largely increased trade. The press will be put in position next week.

Mr. August Straus, of the Courier-Journal Job Company, tells me that they will be given possession of the property recently

purchased by them from the Gas Company, by the first of October, when they will begin at once the erection of the largest and most complete printing office in the South. All of the adjuncts which go to make up a complete establishment, such as lithographing and steel engraving, will be among the additions. President Davidson has been east for the past six weeks, and it is safe to say that he has kept his eyes wide open for all of the latest improvements. Quite a number of new machines will be likely to take the place of those that have been doing duty in the old quarters.

Mr. William Harrison, secretary and manager of the Bradley & Gilbert Co., spent last week very pleasantly in Chicago, and came back as spry as a four-time winner.

Mr. H. W. Thornton, western manager for the Huber Press Company, was here about two weeks ago talking Huber presses to all prospective buyers whose ears were within reaching distance.

Without doubt the handsomest piece of color printing ever executed in the Falls City is that of a 48-page libretto of the "Last Days of Pompeii," upon which Messrs. Ben Humphrey and Dave Barfield in the composing room, and Messrs. H. C. Gathof, George Bohn and John G. Metzger in the pressroom of the *Courier-Journal*, did themselves proud. It must be seen to be appreciated.

The Louisville Typothetæ has not as yet elected delegates to attend the St. Louis convention of the United Typothetæ which meets next month, but a meeting will be held within the next ten days, when Mr. James Davidson, editor of the *National Publisher and Printer*, will be named as one of the delegates, so I am informed.

Mr. Albert Merki, of the Campbell Press Company, is without exception the most unfortunate being now on the road. A few weeks ago the German Society of Turners held their annual festival in Cincinnati, and it so happened that Albert's business called him to that city at the same time. Meeting a number of his Chicago acquaintances, among them several ladies, a happy thought struck him—he would assume the rôle of gallant and have them dine with him. Unfortunately for him, however, he forgot that in the large restaurant where he had taken them, there was a separate room provided for ladies, so he took them directly into the restaurant proper, where he and his friends were the recipients of an "uneearthly guying" for the overabundance of hayseed carried with them. That Albert escaped with his hide is more to the credit of his ability as a pedestrian than to his pugilistic acquirements.

Mr. Edward N. Morrison, who ranks second to none among our first-class job compositors, has purchased an interest in the business of the Eugene Bell Letter Press, and will assume the active management of the concern shortly. Mr. Eugene Bell will relinquish his active interest in the business for a time, at least, that he may be able to assist President Harrison in running the government by accepting quite a snug position that has been tendered him.

The *Sunday Critic* made its first appearance last Sunday, and to the credit of its owner and editor, Mr. Dan E. O'Sullivan, be it said that it was fully up to the high standard set for it by those who have eagerly watched the career of this shining star of the younger generation of journalists.

Mr. Harry Anderson, manager of the Cincinnati *Enquirer* jobrooms, and a warm friend of THE INLAND PRINTER, paid Louisville a flying business visit last Saturday. Harry looks ten years younger than he did five years ago, is well on the high road to success, and none more than his Louisville friends rejoice at it.

Mr. William W. Watson, who for a number of years was foreman of the *Post* composing room, is aiding to boom that lively city, Owensboro, in the capacity of secretary of the Board of Trade.

Mr. Emmet G. Logan, who has been the leading editorial writer on the *Times* since its début five years ago, has announced that he will forsake active journalism about the first of November

for the purpose of acquiring a well-earned rest, and at the same time follow a plow while cultivating a fine farm belonging to him, which is located near Bowling Green.

Mr. Bruce Champ, editor of the *Bourbon Arcos*, Paris, Kentucky, was united in marriage with Miss Lizzie Cozzens at the Gibson House, Cincinnati, last night.

The Satellites of Mercury, an organization composed of some of our leading business men, have shown their appreciation of the value of printers' ink by expending \$3,000 for a descriptive programme in pamphlet form of our Fall Celebration, which continues at intervals for a period of one month. Mr. William F. Brewer, the Fifth avenue printer, has the contract, and a first-class piece of work will be the natural consequence.

The George G. Fetter Co. are overrun with work, and if signs have any significance, it will not be very long until a larger building and more machinery will be a crying need of this go-ahead firm.

A great deal of interest is being manifested by members of the craft in Mr. J. F. Earhart's work on "Color Printing," which I learn is nearly at its completion. Mr. Earhart's ability is so well known that the edition, which is a limited one, will likely fall short of the demand, if we are to judge from the way advance orders are coming in for them from all parts of the country.

C. F. T.

FAVORABLE FALL AND WINTER OUTLOOK IN PENNSYLVANIA.

To the Editor :

PHILADELPHIA, September 5, 1889.

The advent of the first fall month finds the typographical and kindred interests in very fair condition. The depression that prevailed almost generally among job printers and book publishers, is rapidly disappearing, and the universal sentiment is that the fall and winter trade will be an enormous one. As a certain and assuring evidence of an improvement in the job printing and book publishing interests, it may be mentioned that the demand for compositors—book, job and "straight" hands, is great, hardly a day passing but what competent men are advertised for in the local papers. There is also a demand for good pressmen, engravers, lithographers and bookbinders. The type makers are busy, and proficient foundrymen are wanted.

The act of the last legislature, designating a "Labor Day," and making it a legal holiday throughout Pennsylvania, went into effect for the first time on Monday, September 2. The chief celebration was held under the auspices of the United Labor League, at Rising Sun Park. Here there was a gathering of probably more than five thousand people, including many of the old-time leaders. The exercises consisted of music and dancing, speeches on the labor question, and sports, and all of these were appreciated by crowds. Some of the unions made a display of the banners of their organizations, the members of Philadelphia Typographical Union, No. 2, displaying two silken banners. The principal speakers were George Chance, publisher of the *Union*, the organ of Typographical Union No. 2; Charles F. Keyser, a member of the Philadelphia bar; President Thomas Phillips, of the International Boot and Shoe Makers' Union, and James A. Wright, one of the general lecturers of the Knights of Labor. These orators all congratulated their hearers upon the fact that, by reason of the recent act of legislature, enacting Labor Day, the workingmen were now assembled together "under the sanction of the law." They regarded this as the precursor to the eight-hour movement.

As the time for the holding of the convention for the purpose of organizing an international pressmen's union approaches, the interest in the movement visibly increases, and it can be safely predicted that the attendance of pressmen from all parts of the country will be large at the national convention, which takes place in New York, Tuesday, October 8. The members of the Cylinder Press Printers' Association and the Empire City Pressmen's Union, No. 34, headed by President T. J. Hawkins, are arranging to take care of the delegates while in New York, and

the representatives may expect a hearty welcome from their New York brethren. The projectors of the movement to establish the new trade organization have received many favorable responses, and delegations of able and experienced pressmen will be present, and it may be regarded as a foregone conclusion that an international pressmen's union will be a thing of real and active life after October 8.

That enterprising class of art publishers, the makers of holiday *souvenirs* and novelties for the Christmas and New Year season, are certainly outstripping all their previous efforts this year. A tour among these producers of everything that is original, unique, beautiful and attractive, has elicited the fact that the lovers of these artistic and graceful *morceaux* can depend upon receiving many magnificent prizes when the season for the sale of these goods is inaugurated. The representative of THE INLAND PRINTER has had a private view of these ornate wonders, and the beauties witnessed surpasses anything previously inspected.

The Philadelphia printers, members of Typographical Union No. 2, have disposed of the thirteen proposed amendments to the International Typographical Union constitution, and the renewed scheme of insurance, and are now waiting to hear the returns from other parts of the country, so that they can tell whether they voted for the successful or unsuccessful propositions. The first twelve amendments, excepting one which proposed to change the permanent headquarters of the union from Indianapolis to Chicago, were voted down by the Philadelphians. The vote in favor of Chicago was 259 against 186. Nearly all the interest, however, centered on the vote of the thirteenth amendment, which proposed to accept the offer of a large piece of ground at Colorado Springs, Colorado, on which to build a printers' home. This amendment was opposed on the ground that a home at Colorado Springs might be very good for printers in the vicinity of Colorado Springs, but would be unavailable for printers in the extreme East or West. The vote, however, stood 230 in favor, and 207 against accepting the ground. On the question of insurance the vote was as follows: For the Cobb scheme, 34; for the cigarmakers' plan, 58; for no insurance, 338.

Pittsburgh Typographical Union, No. 7, held its annual picnic at Aliquippa Grove, a beautiful, picturesque and romantic spot, near Pittsburgh, on Wednesday, August 28. The printers, with their wives and sweethearts, turned out in large numbers, and spent a delightful day, and though the crowd was large, the picnic was one of the most orderly held at Aliquippa this year. The committee of arrangements consisted of the following members of No. 7: John R. Horner, C. M. Leighley, R. Hunter, John T. McCoy, J. J. Jones, O. A. Williams, Frank A. Lewis, C. F. Ward, T. J. Dicus and Wiman G. Nellis. About 10 o'clock P.M., a special train conveyed the participants home. The attendance was estimated at fifteen hundred, all the merry-makers expressing themselves as being highly pleased with the enjoyable occasion.

The newspaper men connected with the Chester News Association had a very pleasant outing on Monday, August 26, they being the guests of Commodore Craig, who transported them on one of his steamers to Augustine Pier, on the Delaware coast. Those who went were Mayor Coates, John A. Wallace and C. K. Melville, of the *Daily Times*; Joseph A. N. Thomson, William H. Bowen and Charles B. Ross, of the *Evening News*; Hon. Ward R. Bliss and H. V. Smith, of the *Republican*; John Spencer, of the *Advocate*; E. J. Frysinger, of the *Democrat*; Henry Frysinger, of the *Business Mirror*, and Joshua Taylor, of the *Weekly Local*. The host is superintendent of the Chester and Philadelphia freight line and was formerly on the *Advocate*. He has earned the title of "Commodore of the Chester Navee."

The newspaper correspondents and editors of the Bedford, Pennsylvania, papers, have organized an association, and the Bedford journalists gave them a fine and excellently served banquet. N. E. Legg responded to the toast, "The advantages of antiquating;" Mr. Clouse, "The purpose of our gathering;" J. S. Walker, "The Bedford papers." Mr. Haderman, chairman of the Republican County Committee, made the welcoming address. The association will meet annually.

ARGUS.

FROM BALTIMORE.

To the Editor :

BALTIMORE, September 4, 1889.

One stifling hot day this week your correspondent found a breeze where least expected—in a composing room—that of John S. Bridges, on South Charles street. Over every frame a revolving fan was whirling round and round like the paddles on the screw of a steamship. This struck me as an evidence of kind consideration on the part of employer for the comfort of employes. A contrivance of the kind is simple enough, and the expense, where there is power in the building, not worth mentioning. In close composing rooms, wherever practicable, these fans should be introduced.

In the August number of THE INLAND PRINTER appears the subjoined editorial paragraph :

"A typefoundry in Baltimore has adopted a sensible plan, by making an extra nick on the following small cap letters: o, s, v, w, x, z, thus preventing the mixing of these letters with lower case. This or a similar plan should have been adopted years ago."

The above caused me to hunt up that typefoundry. I found it, and learned that, while it was the first to introduce in this country a feature of the kind, the "extra nick" was adopted originally some years ago in England. For the information of those who may be puzzled to know why only *six* letters in small cap are thus nicked, it may be stated that those enumerated so closely resemble their duplicates in lower case that the printer is often "put to it" to tell "tother from which." The typefoundry in question has also introduced a very neat "ditto mark," to take the place of the "awkward and ugly turned comma."

At this writing, the sound of the saw and the hammer resounds on many of our principal thoroughfares. Stands are going up everywhere along the prescribed route of parades of the incoming week. A number of printing firms will have floats in the industrial turnout.

Baltimore Typographical Union expects to have two hundred men in line. The union has a membership of three hundred and eighty; but it would seem that some must work while others play, for the dailies must come out on time; and come out, too, brim full of descriptive matter relative to the big event.

And what of the ubiquitous reporter? He will have my sympathies during exposition week at least. While the typos may be rushed, think of six consecutive days' and nights' newsgathering amid the clash of arms on the tented field, the roar of great guns on the water, massed bands, bombs, rockets, civic parades, fairs, horse racing, beer drinking, speech making, balls, tournaments! He will be there; and so will the crowd, here, there, everywhere.

A visit to the spacious rooms of A. Hoen & Company, lithographers and printers, at North and Lexington streets, will delight one who takes an interest in the great progress made in improvements to the printing press since Franklin worked the lever of that laborious affair of his own invention.

Having occasion to visit the Hoen Building yesterday, your correspondent, upon the invitation of General Manager Elhers, took a look at the new Hoe stop-cylinder press, which the firm has just added to their large number of other excellent presses. They have two stop-cylinders of English make, but the new Hoe is to be used exclusively on extra fine color work. It has a capacity of one thousand and eight hundred, and a movement as graceful and easy as if instinct with life. It self oils at the most important parts; by touching an adjustment bar, the cylinder is thrown off in a twinkling, the form working free of contact. There is but one other of its kind in this city, I am informed, and that is in the possession of John Murphy & Company.

It was not altogether plain sailing to restore the *Telegram* office to the union, even after its publisher had consented to restate the strikers. He was rather loath to part with his newly acquired non-union printers, for they were retained two weeks after the time agreed upon for their removal. It appears that he wanted to put them into the union, but there was objection to this, as it was claimed that the would-be unionists, for the most

part, were either expelled or suspended members. The trouble, however, was finally settled this week by a clean sweep out of the ins and a reinstating of the outs.

He is glad, is the erewhile unhappy editor of the defunct *Argus*, a weekly paper once hereabout, whose collapse was noted, at the time of its demise, in this correspondence, some six months ago. He was sad enough when his paper was compelled to surrender to the inexorable demand of divers creditors. But just at the point of his extreme sadness, he became a wiser man; for while canvassing among the typefounders, with a view of obtaining the largest possible sum for his second-hand material, he discovered what he had been totally ignorant of before—that among the typefounders of Baltimore there existed a "combine." It was not until after this ex-editor had about made the rounds, that he found this out. It mattered little then to whom among the combination he should sell, for they all had the same figures. That these figures did not represent fancy prices, may go without saying. But that ex-editor is glad now, and just because there is one "combine" less, for the typefounders of Baltimore lately withdrew from that sort of thing.

While in Washington a day or two ago, I visited the government printing office. If there are any "soft places" there, it would appear to the average visitor, I should say, that neither the typos, nor the binders, nor the folders, nor the pressmen, nor the stereotypers, nor the feeders, are filling them. All these were as "hard at it" as if the "shop" was run by one of those contractors we hear of, who, as he says, is always losing money on the job.

No reflection is intended to be cast here on anyone. What is wished to be conveyed is, that no idling or loafing was noticed among the thousand of employes that came within the scope of my vision, something not observable in all of Uncle Sam's workshops at all times. In the estimation of some, perhaps, the "soft sits" may be the positions occupied by the gentlemen who hold down arm-chairs at the outer doorways. The duties of these sentinels would appear to be to do nothing. And yet it must be a hard job, after all, to sit there day after day and stare at vacancy.

Once within the main entrance of the building, you ascend a broad stairway that lands at a wide corridor. On your right, you get a glimpse of the great composing room, whence come sounds like the tick of the telegraph. It is the click, click of the type, as an army of compositors marshal them in the stick. On your left, toward the south, you observe a number of offices, and the largest of these is occupied by Public Printer Palmer.

I gave my card to an usher, and told him I had called to pay my respects to his chief. The usher appeared to be a very intelligent man, who had served in the war, as he told me, with the fighting Fifth Michigan; and the one arm in his sleeve! He had left the other at Gettysburg. I forget his name, and I am sorry for it.

After waiting ten minutes, an audience was had with Printer Palmer, in whom your correspondent found a very courteous gentleman of fine presence. He may be recognized at a glance by anyone who has seen his picture as presented in the June number of THE INLAND PRINTER. By the way, Mr. Palmer thinks it an excellent likeness of himself, as he took occasion to inform me.

Accompanied by a guide, I visited the several departments of the government printing office, and was well repaid for the long tramp by what I saw, a description of which, however, must be deferred at present.

Among other calls, I looked in at the office of the *Craftsman*, where I was cordially received by the proprietors, who informed me that they were full of jobwork, and, indeed, appearances gave every indication of the fact of such a statement.

While some of the job offices in Baltimore are quite busy, others are without anything to do to speak of. There is a good deal of complaint about the low prices prevailing, the result of a number of printers doing work for anything they can get, rather than to see the job go from them. It is a ruinous policy, and the sooner corrected the better it will be for all parties concerned.

unless it be, perhaps, the man who thus profits by getting his printing done for next to nothing.

Although quite a number of idle compositors may be seen on any day of the week about the *Sun* office corner, some of the "swifts" on the dailies are making strings of twelve thousand ems; \$5.40 for a day's work is not bad wages, and a number of the fast ones on the dailies are making that amount.

FIDELITIES.

FROM PHILADELPHIA.

To the Editor: PHILADELPHIA, September 10, 1889.

Our editors, publishers, reporters and printers are nearly all back from a prolonged absence. Summering is now indulged in by the thousands, where a few years ago only tens slipped away. Our editors have been to Europe, Asia and Africa. Some of our publishers have been up the Nile and through the Suez Canal on one side of the world, and through our great lakes, the Yellowstone Park and the Pacific coast on this side.

In the fewest possible words, the situation is about this: Business of all kinds is improving. A political convention held in this state last week spoke of depressed business, hard times and so on, but we have not experienced anything of the kind in the printing and allied trades, nor in journalistic circles. Old editors are busy and the new crop is sprouting into activity. A rather large contingent of college-reared youths are seeking glory and wealth in journalism here and in other eastern cities, and for the present, at least, are content to start at the bottom along with the average \$10 to \$15 a week reporter, or they are even willing to work on space. I make mention of this fact in order to point out the growing regard in which journalism is held. The ministry, law and medicine no longer capture the flower of our youth. Newspaper work is attractive to thousands, but tens only of those thousands will ever get behind the scenes. How few of them will ever get before the footlights!

Our daily papers are all crowded with news, such as it is, and with business; one can readily catch the drift of things by watching the advertising columns. Skilled labor is wanted, even printers possessing exceptional skill in certain departments are advertised for. There is a constant drifting away of old timers westward and southward to new fields.

Kendrick of the *Carpet Trade*, and Clifford of the *Upholsterer*, have been engaged to do special work on the census in their respective fields. One or two of our dailies look as though their exit from this troublesome world would do no harm.

The Miller & Magee Company are getting out some heavy publications of the encyclopedia variety. The Historical Publishing Company is forging ahead and is keeping about as many persons at work as any other concern. The Avil Printing Company is about to add a seven-story building, or, rather, to add five stories to its present structure. Mr. John D. Avil has been a phenomenal success in the printing business. He was only second on the list of bidders for the government postal card contract.

Trades unionism is quietly flourishing in Philadelphia. There are very few printers here who do not owe allegiance to the union, and even the fresh arrivals from rural sections generally present a card. The same officers are continued year after year; the meetings are well attended and very little ever arises to call for the appointment of special committees. Employers do not relish the position always taken by printers, but the uniformity of wages is an advantage which they can always count on.

The large publishing houses are not exactly overrun with business, but several are working overtime. The Lippincotts are bringing out several new works, historical, technical and otherwise. Mr. M. C. Lea is pushing out medical publications. The school-book publishers are busy. The publishers of bibles have their presses pretty well crowded. We have three very large houses here in this branch. The publication of subscription books is on the increase.

The company that is handling a new typesetting machine here, along with its phonograph, is making progress slowly. People

look at \$1,500 or \$2,000 a long time before letting it go for a machine for that purpose. The phonograph has not made such a stir as one would suppose from the accounts given of it in its infantile stages. I had one in my office for some three months, but finally concluded to let it go and dictate in the old way. Yet, it is, no doubt, a good thing.

The paper mills are full of fall orders. A new mill is to be built at Manayunk. The eastern Pennsylvania mills have large contracts on hand, but buyers are not as willing to pay outside prices as two months ago. Bottom prices for very common news is $3\frac{1}{4}$ cents to 4 cents. The makers of paper-making machinery here report an unusual activity, and overtime is made in several establishments. The Johnston Typefoundry is very busy, and the designers of new styles of type have just been loaded up with new orders, many of them from the West.

Here in the East we hear more or less quiet talk among men of means as to the great probability of a rapid expansion of business next winter and spring. They are preparing for it. Some predict a boom in prices. There is no surplus of stocks. Production is under control. Trade and manufacturing interests are pretty compactly organized. Thousands of opportunities are presented for energy, money and enterprise. In many industries wages have advanced a little, but with such an inroad of foreign workmen much of an advance is impossible.

Employers are somewhat anxious as to the probable outcome of next spring's eight-hour strike. So far as Philadelphia is concerned, the building trades will be the chief participants in it, and it is doubtful today if there will be a general coöperation even among them. The builders have had an excellent year. During August they started work on seven hundred and sixty-four two and three story houses. M.

FALL TRADE FAIRLY GOOD IN NEW YORK.

To the Editor:

NEW YORK, September 7, 1889.

The opening of the fall season shows an easy situation in all branches of trade. The prominent printers and publishers, as well as lithographers, manufacturing stationers and engravers, appear to regard the worst period of the year as past, and confidently look forward to the early advent of more cheerful and encouraging times. The press and general printing machinery men are, as has been the case for an extended period, enjoying great prosperity. They expect a continuance of the good times for an indefinite season.

Theodore L. De Vinne, of the well and favorably known firm of Theodore L. De Vinne & Co., supplies the following information about trade matters: "The book and job printing offices are still as they have been, working with very few orders. The prospects of a fall business are fairly good. There is no disturbance in the wages question. Some offices are paying but 30 cents for composition, and others 43 cents for the same work. I do not hear of any dissatisfaction with this inequality on the part of the employers. The composition done at 30 cents, is, of course, of poor quality, which is done largely by inexperts. Weekly wages keep fully up to the standard. The Typothetæ have had no meeting for many weeks, and will not meet before the middle of September. R. H. Smith is testing the McMillan typesetting and type-distributing machines, and is well pleased with their performance."

The R. Hoe Press Company, of this city, are about finishing the fitting up of two newspaper offices in Scotland, the *Journal* and *News* of Dundee, with the most rapid and latest improved American printing machinery. The *Journal* machine is warranted to "print, fold and cut 48,000 copies per hour of a four or six page paper."

The call for the convention of pressmen, for the purpose of forming a pressmen's international union, under the direction of the Adams and the Cylinder Press Printers' Association and the Empire City Pressmen's Union, No. 34, of New York, has aroused much attention throughout the country. The convention will meet in New York City, Tuesday, October 8. T. J. Hawkins,

president of the Adams and Cylinder Press Printers' Association and the Empire City Printing Pressmen's Union, No. 34, who is prominently connected with the movement to organize the new association, has issued a circular explaining the objects sought to be accomplished.

The coöperation of the pressmen's unions in Boston, Albany, Troy, Toronto, Louisville, Topeka, Denver, St. Paul, Minneapolis, Buffalo and Detroit, have been promised, and the local unions of New York expect to receive the adhesion of a number of others before the date of the convention, October 8. It is the aim of those arranging the preliminaries that junketing shall be eliminated from the proceedings of the convention, and by this means facilitate the transaction of such business as may come before the body. Having the experience of so many national bodies to guide them in their formation, it will go hard, indeed, if the international pressmen's union does not take a decided step in advance, and, so to speak, place labor's standard on a still higher eminence than any it has yet occupied.

The *Star* has donned a handsome new suit of minion, nonpareil and agate, and changed its form to a neater and more attractive style. This old paper, which, under its present management, has become an aggressive and successful defender of typographical and pressmen's unions, as well as other labor organizations, is enjoying great prosperity.

Labor Day, September 2, was observed grandly. Business was almost entirely suspended. Extraordinary efforts had been made by the various labor organizations in the city to fittingly celebrate the day. At an early hour in the morning the labor and trade organizations of all branches assembled at their headquarters and marched to the starting point of the great parade. The signal was given shortly after ten o'clock, and some 20,000 wage earners moved along Washington avenue into Fifth avenue, and thence on an extended route to the Cooper Union, where the parade was dismissed.

The fourth division of the great procession was composed almost entirely of printers belonging to New York Typographical Union, No. 6. There were about twenty-five hundred knights of the stick and rule in line. The grand marshal was George H. Moore. His aids were Thomas J. Condon, Anthony Walsh, William Anderson, William Besthoof, H. M. Stauffers, Harry Burbridge, William Bishop.

The right of line was accorded to the *Star* chapel, which had in line one hundred men, and it is but just to them to concede that they presented as fine an appearance as any of those in the line which followed, although all made an excellent showing. Following the division marshal and his aids came Boyne's Sixty-ninth Regiment Band. Then came the four standard bearers and four tassel-holders, carrying the cradle on which was hung the banner of "Big Six," which was the handsomest seen during the day. It bore the inscription, "Typographical Union No. 6. Established 1850."

Then came the Adam Goss Post Drum and Fife Corps, followed by the *Star* chapel, in their natty wine-colored felt hats and carrying their dainty bamboo sticks at "carry arms." They looked every inch the intelligent printer, and were as fine a looking body of men as could be brought together anywhere. In the line were noticed several reporters, members of No. 6, who had graduated from the "case." Marshal Robert H. Duy took charge of the *Star* chapel, and was ably seconded by Joseph Farquhar and J. Harvey Fichtel. The *Star* chapel banner was a beauty. It was made of blue silk, emblazoned in letters of gold.

The *Mail and Express* chapel followed with forty-five men, marshaled by Robert McKechnie. They wore manila hats and presented an excellent appearance. They were followed by the *Herald* chapel, the *Times* chapel, and chapels of the *Press*, *Morning Journal*, *World* and *Sun* and *Evening News*. This made up the representation of the daily papers, and the weekly papers were represented by delegations from the *Standard*, *New York Weekly* and *Police Gazette*.

The job printing trade was represented by eighty men from Martin B. Brown's, under the marshalship of Patrick J. Tracey.

They were preceded by the Brooklyn City Drum and Fife Corps, and in the center of the body was floated a large banner bearing the inscription, "Eight hours for work; eight hours for rest; eight hours for play."

Then came the Bookbinders' Union, Marshal Hugh Gilroy and aids, Thomas Brady, Peter Kehoe and Charles Mitchell. There were about one hundred and fifty men in line, preceded by a band of twenty pieces.

In the evening there was an eight-hour meeting held in the Cooper Union Building. The audience was a representative one of intelligent workingmen and women. There were a number of ladies in the audience, all of whom joined heartily in the applause of the arguments in advocacy of shorter hours of labor. Henry Emrich, Professor Guntir, Sergius Shevitch, Hugh McGregor and others, delivered powerful and convincing speeches favoring the eight-hour law, and supporting all interests beneficial to the working people of the country.

Typographical Union No. 150, of Elizabeth, New Jersey, has declared war against General J. Madison Drake's *Daily Leader*, the new 1-cent paper. Its opposition arises from the alleged employment of more boys in the office than the union allows. The employes struck, but General Drake has managed to get out his paper every day, with the aid of four boys. The union claims that only one boy is allowed to seven men, while the *Leader* office has four boys to seven men. Delegates were sent to the general from a special meeting of the union recently, and it was reported that the proceeding became very heated and terminated in the delegates making a very hurried exit with the general in hot pursuit. Thereupon the meeting adopted resolutions denouncing the general and calling for a boycott.

Among the letters received from prominent citizens in regard to the World's Fair, Mayor Hugh Grant has been the recipient, from Walter S. Church, of the following: "Wherever the World's Fair may be held, public attention is hereby called to the magnificent display that might be made at it of the book output of the United States, more especially of its industrial literature. Nothing of the kind worth mentioning has ever been attempted in the expositions in this or any other country, nor does there exist anywhere in the United States anything approaching to a creditable collection of this sort, including, as it should, the general and state and municipal reports on agriculture, mines, railroads, canals, river and harbor improvements, water works, reports of government, state and city engineers, boards of trade, produce exchanges, manufactures, geological and trigonometrical surveys, professional and technical journals, valuable trade circulars, statistics of all sorts, etc."

There are five pressmen's unions in this city, as follows: Web Pressmen's Union, Pressmen's Union No. 9, Empire Union No. 34, Adams and Cylinder Pressmen's and the Franklin Association.

The striking pressmen of the *World* have not evinced any signs of weakness. Notwithstanding all reports to the contrary, they are as determined in the stand assumed as on the night they decided to leave the *World* pressroom in a body. Recently, President Plank, of the International Typographical Union, arrived in the city, and in a short time he was in consultation with officers of Typographical Union No. 6, of the pressmen, the stereotypers and the newsdealers. All the points of difference between the *World* and the strikers were freely talked over and carefully considered, the benefits to be derived from a union of interest being of course the leading subject. President Plank called attention to the amendments to the constitution of the International Union that will be voted on in the printing offices of New York, and especially to one that bears expressly on the subject of the present claim of the pressmen for fraternal aid. The amendments undoubtedly will be carried, and within a short time all unions connected with the printing trade will be under the charter of the International Typographical Union and the immediate control of an executive committee composed of members from each district organization. Mr. Plank stated that he was not here distinctly as an official, but, learning of the strike, he came here

to personally investigate the matter. All present at the conference were favorably impressed by his counsel. It is understood that the stereotypers have decided to give the pressmen substantial aid. This conclusion was arrived at after a conference between the executive board of Pressmen's Union No. 34 and the executive committee of New York Typographical Union, No. 6. President Keenan, of the Stereotypers' International Union, has also called upon the executive committee of the Newspaper Printers' Union No. 1. A long consultation ensued. It is stated that the compositors have signified their willingness to go out with the stereotypers in case such action is determined upon. President T. J. Hawkins, of the Empire City Pressmen's Union, No. 34, has initiated all the pressmen of the Newspaper Printers' Union No. 1, into the Empire City Pressmen's Union. This is regarded as a very significant movement.

The annual afternoon picnic of the Nonpareil Benevolent and Protective Union, composed of pressmen, bookbinders, compositors, stereotypers, typefounders, etc., was held at Washington Park, Brooklyn, on Monday, September 2. There were athletic contests between Typographical Union No. 98, of Brooklyn, and No. 6 of New York. There were other games and amusements. About three thousand persons took part in the festivities, the occasion being a very pleasurable and felicitous one.

PRINTER-JOURNALIST.

EARLY WESTERN JOURNALISM.

When Mr. William N. Byers, the Colorado pioneer of journalism, first started in to print the *Rocky Mountain News* he had a pretty tough time of it and experiences lively enough to suit a Ute Indian agent.

News was plentiful enough, and it was not generally supposed that the press would make any editorial attacks upon the citizens of Auraria, as Denver was then called; so one day when Byers found fault editorially with the killing of a Mexican by Charles Harrison, a gambler, the latter's friends, fully armed, gathered about and made an attack upon the log-house occupied by the *News*. The editor and his reporters and typesetters were so surprised at the suddenness of the attack that they did not have time to make any resistance.

Editor Byers was taken captive to Harrison's saloon, called the "Criterion." The crowd wanted to kill him on the spot, and knives and pistols were flourished in his face. Harrison had once been a Mason, and knew that Byers was a member of the fraternity, so under the pretense of taking him into a side room to talk he got him out of the place altogether.

Byers was plucky enough, for he ran for his office, and arming all hands, laid low for the enemy, who came fast enough, and a lively combat took place and one man was killed.

It was just about this time that the Hon. Joseph Wolff, of Boulder, Colorado, who was a good printer and a handy man about an office, arrived in town from Omaha via a freight train.

He was dead broke, and he made at once for the *News* office and asked for the boss. Byers, seated on a barrel, was pointed out to him.

"Want any hands?" asked Joe, leaning against the door.

"That depends," said Byers, without looking up.

"Depends on what?"

"Can you shoot?"

"You bet."

"Will you?"

"Of course."

"Well, then," said the editor, getting off the barrel, "here's a rifle and there's a case, go to work."

"What'll I do first," asked Wolff, "kill somebody or throw in a case?"

Byers went to the window, leaned well out, looked up and down carefully, and then turning back, said:

"I guess you'll have time to throw in a handful."

Just about this time the office was in a state of siege, and to write and print what Byers wrote and printed at that time

required an amount of moral courage, or what is more commonly called nerve, than is possessed by journalists of the present day.

Many threats were made and more than one combat took place, but the editor came out ahead, and always stuck to the paragraph in his salutatory which read: "Our course is marked out. We will adhere to it with steadfast determination to speak, write and publish the truth, and nothing but the truth, let it work us weal or woe."

A WRINKLE IN IMPOSITION.

From a recent number of the *Superior Printer*: The following wrinkle, sent to us by one of our friends, may prove of value to those who may have a large edition of a small sixteen-page form to print, and where binding, in addition to presswork, forms a large item of expenses. We present a diagram of the make-up of the form, for a more lucid explanation.

The four forms can be folded together without cutting, and the covers (also printed four on a sheet) can be either pasted or wire stitched, as the case may be, the outer edges trimmed at once and cut into single books. The same scheme could be worked with larger pages if desired.

THE LATE WILBUR F. STOREY.

Mr. Storey did not exercise supervision over the daily make-up and matter in his paper. Each department was supposed to be competent for its task and sufficient unto itself. Every man about the office knew that failure was dismissal instart and without comment. This knowledge was a constant spur to effort. He wrote but little himself. He never dictated to his staff. Its members wrote as they pleased upon what subjects they pleased. The wastebasket was not only the receptacle of rejected manuscript, but the narrator of the feelings of Storey when reading the article. If it were torn but once in two, it expressed a mild dissent, twice a decided disapprobation, and every succeeding mutilation a corresponding intensity of repugnance. Sometimes the pieces were not larger than a dime, and this was considered as evidence that the "old man," as he was termed in the office, was profane inwardly at the time of the tearing, and would have been so audibly had there been an auditor present.—*Detroit Free Press*.

Buffalo Printing

Ink Works,

Buffalo, N. Y.

THE ENTIRE PRESS WORK OF THIS SHEET WAS EXECUTED UPON A
QUARTO MEDIUM COLT'S ARMORY PRESS,
DESIGNED AND FOR SALE EXCLUSIVELY BY
JOHN THOMSON,
TEMPLE COURT,
MARSAU AND BERMAN STREETS,
NEW YORK.

MEDULL'S SCREW ADJUSTING GAUGE PINS
USED FOR PERFECT REGISTER.

WILLIAM ROAF CLIMIE,

Secretary-treasurer of the Canadian Press Association, is a native Canadian, being born in the county of Simcoe, Upper Canada, in 1839. His father, the Rev. John Climie, a Congregational minister, moved to Bowmanville in 1844, and there Mr. Climie has resided since that date. In 1854 his father and elder brother—the latter a journeyman printer—purchased the *Messenger* office, which was the first printing office in Bowmanville, and commenced the publication of the *Canadian Statesman*, W. R. Climie entering the office as an apprentice to the trade. In 1860 he became sole proprietor of the business, which he carried on successfully until 1878, when, desiring a cessation from labor and a straightening up of outlying accounts, sold out, but continued to reside in Bowmanville. He then remained out of business for nearly six years. In 1883 he purchased a new plant, and commenced publication of *The Sun*, which still continues to "shine for all," a journal which wields a powerful influence. Mr. Climie joined the Canadian Press Association in 1867, and for the past thirteen years has filled the office of secretary-treasurer with universal satisfaction. He has always been a conscientious liberal, and for twenty-seven years has been secretary of the West Durham (Ontario) Reform Association. Mr. Climie deservedly enjoys the personal friendship and esteem of all the prominent newspaper men in the province, whom he generally conducts on their annual excursion. He is a warm advocate of total abstinence, exemplifying his principles in his daily walk and conversation, and has many friends among his co-workers. Such men are an honor to their profession, and cannot fail to exercise a healthful influence among the community with which they associate.

At the government printing office, for some months past, the major portion of the force has been engaged upon a number of contested election cases, to be heard at incoming session of congress. Public Printer Palmer is pushing forward the additions to the building to such an extent that when "time" is called on the *Congressional Record* the proofreaders thereon will have new and commodious quarters. In addition, effort has been made to add to the security of the old building by a series of posts and props. The local press is replete with suggestions, for each of which might be substituted, "Build a new building." It is intimated that the forthcoming effort of the public printer will urge such a course.

PAPER AS A NON-CONDUCTOR.

The advantages arising from the use of non-conducting walls for dwellings, cellars, cold storage warehouses, silos, etc., are not nearly as well understood as they should be. Of all the materials used in building, wood is the best and brick the next best non-conductor, while thick paper is useful in combination with other materials, from its air-tight qualities and great pliability. Wooden boxes of flowers and plants lined with thick paper are shipped thousands of miles in the dead of winter, and sometimes carried in a wagon for an hour in a zero temperature without injuring the contents. I once shipped a lot of apples in dry goods boxes to Columbus, a distance of 140 miles. The railroad agent promised

that the fruit should reach its destination the following day, but it was near the holidays, and I took the precaution to line the boxes with newspaper. The weather suddenly turned cold; the freight, through some carelessness, was carried 300 miles out of the way, and reached its destination fourteen days after shipment, with the thermometer four degrees below zero. Yet the apples were not frozen, except a few around a knot-hole, where the paper was broken. Having occasion last winter to deliver a few bushels of apples on a cold day, I put them in paper flour sacks and allowed them to stand several hours in a warm room. They were then carried two hours in an open sleigh, with the temperature at fourteen degrees above zero, without freezing, and could doubtless have been carried two hours longer without injury. Being at a temperature of seventy degrees when taken out, it took a long time to reduce this to twenty-seven degrees (the temperature at which apples

freeze), protected as they were by the impenetrable walls of the paper sacks.

Where cellars are under an unwarmed part of the house it is often difficult to keep them warm, even when banked. The cold comes through the floor overhead. Sealing the under side of the joists with matched lumber will often remedy the difficulty. Many dollars could be annually saved in stables if they were lined with building paper, kept in position and protected with a lining of boards. The boards need not be more than half an inch thick, but should be well seasoned and the edges matched. Two half-inch boards with paper between make an excellent partition between a stable and a carriage house, keeping the stable warm and the carriage room free of ammonia, so destructive to paint and varnish.—*American Agriculturist*,

PUBLIC PRINTING.

THE following address was delivered by Hon. E. A. Snively, of Springfield, Illinois, before the National Editorial Association, on Wednesday, August 28, 1889:

MR. PRESIDENT AND MEMBERS OF THE CONVENTION.—At the last meeting of the Illinois Press Association, the then president, Mr. L. A. McLean, associate editor of the *Urbana Herald*, in the course of his annual address, among other things, said:

"I desire to call your attention to the fact that the government has become a strong competitor in our business, and, in fact, almost monopolizes one branch of the stationery trade."

The passage of the address which I have quoted, after being discussed, was referred to myself, as the legislative committee of the association, with instructions to take such action as I deemed for the interest of the association. The discussion demonstrated a preponderance of sentiment in favor of having the matter brought before the National Association, and in this view I fully concurred, because this is one question upon which the National Association should act, and which belongs to its domain more properly than that of any state organization.

Subsequently, your executive committee honored me with a place upon your programme, and assigned me the prolific subject of "Public Printing."

The very words "public printing" call to mind the thousands of volumes of all sorts of reports from all sorts of officials upon all sorts of subjects, which are sent out to a patient and long-suffering public from Washington, and which are of no earthly use except to add to the stock of the junk dealer. They call to mind, too, that prosaic serial, the *Congressional Record*, which comes to you only as a reminder that days before you have read in the daily papers all that it contains.

To give the subject a full and comprehensive discussion would necessitate an array of figures and statistics which would require much more time than I have had at my disposal, and would take up so much of the time of the convention as to be wearisome, even if the executive committee had not limited the time in which one may afflict the convention to only twenty minutes. I presume the committee expected only a reference to one or more subjects in order to lead to present and future discussion.

Under the circumstances, therefore, I will avail myself of the courtesy of your committee, and as a representative of the Illinois Association, and in its behalf, discuss only the matter referred to by Mr. McLean in his address.

Under the laws of congress the public printing office is today a direct competition with every other printing office in the land. Why the government should seek to place itself in competition with the printing offices of the country in preference to any other business, I leave to be answered to those distinguished gentlemen in congress for whom the press of the country does more stalwart lying than all other classes combined, not excepting obituaries, patent medicine men, circus agents and the "distinguished fellow townsman" who has returned from a fishing excursion.

At the very threshold of the discussion one is met by the principle which seems imbedded in the public mind and action, to make the newspaper subservient to all else. And this idea has been crystallized into congressional enactment and become the settled policy of one department of the government. It is unnecessary to enter upon a disquisition of the powers and duties of the general government, or to advance any argument to prove to a reflecting mind that the system of printing as referred to by Mr. McLean is wrong. If there was any justice in the usurpation by the government of the business of private individuals, then there should be a general store kept by paid agents of the government. The man who has been appointed postmaster should no more become an agent for the sale of envelopes, than for the sale of calico, hardware and groceries.

In dealing with this matter the postoffice department is unfair, to use a very mild term. I say this more in sorrow than in anger, and I do not wish my patriotism questioned for making the statement, because I am heartily in favor of the war which began in 1861 and

ended long ago in some newspapers, while in others, both south and north, it is still in progress. The government offers to do printing for one business man, but will not for his neighbor. Suppose Mr. John Smith owns a wholesale grocery establishment. The government will not print on his envelope, "return to John Smith, wholesale grocer"; but, if he will make a very slight change in the style of the firm, he can have his envelope printed, "return to the John Smith Wholesale Grocery Company." The man who invented that fine distinction must have been god-father to the marksman who invariably hit if it was a deer and missed if it was a calf. The distinction is made because several years ago there was a general protest from the press of the country against placing business cards upon stamped envelopes. The protest became so universal that it was decided that the practice of the government printing business cards on envelopes should be discontinued. And it has been decided that it is advertising to say on an envelope to return to "John Jones, Banker," while it is not advertising to say "return to John Jones' Bank."

That venerable trio of political grandmothers who constitute that colossal humbug, the civil service commission, must have a serious time in securing clerks with discriminating powers adequate to draw the line and distinguish what is and what is not advertising. The gentlemen who do this work would be invaluable around a newspaper office during the season when oysters are ripe and church fairs are flourishing to guide the business department so as to distinguish between what is news and what is advertising.

In talking to a gentleman who is postmaster, or who was yesterday, he claimed that the printing of the address on the envelope was an essential part of the present efficiency of the postal service, and that it was indispensable to the business of the country. I grant this to be true, but does it render the service any more efficient, or is it any better for the interests of the country to have this work done by the government than by the home printing office?

There is no regulation of the postal department that I am aware of that requires more expedition to be used in carrying a letter with a return address printed by the government than one printed at the poorest cross-roads printing office in the country. Of course, I may be mistaken in this view, and the letter which never came may have been side-tracked somewhere because the postal clerk discovered that the sender had neglected to add to the surplus in the national treasury by having his printing done at home.

No one will deny the efficiency of having a return address printed on an envelope. And if the department would require every envelope to have a return address printed or written upon it, it would be a most proper regulation.

Another reason urged in behalf of the present system is that the business of the postoffice is thereby increased. In other words, it is proper to rob the publisher in order to aid the postmaster, and that, too, when thousands of people are climbing over each other and making life a burden to their friends to secure the position of postmaster. But why draw the line at the printing office? If the postmaster also sold cheese, crackers, bologna sausage, yams and potatoes he would realize still more, even though the green-grocer retired to the poor farm. And why not increase the revenues by making the postmaster a government agent for the selling of clothing, agricultural implements and ladies' dress goods? It might require a little more study for a man to pass a civil service examination in order to enable him to tell the difference between a thrashing machine and a patent churn, or to properly grapple with a piece of calico, in the bolt, but would not the increased revenue compensate for the midnight oil burned in acquiring the information?

In the same connection it is urged that the profits of this business aid the postal department and assist in making it self-sustaining. As I understand it, the theory of city, county, state and national government is that they are to be supported in all their departments by all the people. If the printing offices of the country are to be deprived of patronage in order to make the postal department self-sustaining, why not deprive some other

industry of patronage to sustain other departments, and why not levy a special tax upon wind-mills to keep congress running?

It is urged that the government can furnish envelopes cheaper than can private parties. There is no doubt of this. And if the government would establish a paper mill, there would not only be more offices to fill, but the envelopes could be furnished at a still lower rate. The rankest confederate who ever traded tobacco, whisky and lies, with a sentinel on a northern outpost, must be inspired with respect for the government when he sees it go into the market and purchase its envelopes by the million, and says to the country publisher, who buys his by the thousand, we can sell cheaper than you can.

It is claimed, I am aware, that the envelope is a part and parcel of the postal arrangements. If so, why is not the inclosure, for without it the envelope would be useless. Why should not the government, then, furnish all manner of writing paper, from the ponderous legal cap used by the lawyer, to the most delicately scented sheet used by the pestiferous dude?

The amount of this work differs in localities. There are towns and considerable cities in Illinois, and I presume in other states, where the printing of envelopes has become almost a lost art, where the postmaster (after having cheated the newspaper publisher out of the postoffice) has become a canvassing agent for the government printing office. The amount lost to each individual printing office may be very small, but the excuse that a wrong was insignificant has never yet availed as a proper defense for its commission.

To the wise men of the nation, or those who think themselves wise, who are worrying and puzzling their brains over the surplus, it may seem ridiculous for an association to be discussing such a question as this. If it amounts to little, then the less will the postoffice department be injured by a change. If, in the aggregate, it amounts to enough to seriously affect the postoffice department, then the time has most surely come for a change, in that one private business should no longer be deprived of its income in order to benefit all other classes.

Experience with the legislature in my own state has taught me that the way to secure legislation is, to first determine upon one or two measures, and then work for their adoption. In this view I have discussed but one measure. There are many others, no doubt, which will suggest themselves to the members of the convention, and they may be of much more importance than the one I have referred to. The nation's capital is a long distance from the majority of the people who contribute to the support of the government. The actual results of the labors of congress—the conduct of officials—are little known only as they are discussed in the heat of political campaigns. Millions of the people's money are expended in sending out volumes of useless reports which no one is so idiotic as to read, while other millions are used in sending out garden seeds which never grow. And congress fosters this waste of public money, on the theory that the distribution of these things popularizes its members with the masses.

Why should the laws of congress be furnished only to the law libraries of the land?—why should there not be at least an authoritative annual financial statement of the status of the government published in the leading papers?—but these and other matters will, no doubt, suggest themselves to members of the association. And when once you fully embark upon this question, you will find many instances where laws can be changed, and while benefiting the publishers, will also educate and benefit the people.

Having once settled on what legislation you want, if you want any at all, the next question is how to obtain it. This ought to be easy enough with a congress composed of men who depend upon the press to make their calling and election sure. It has been my good, or ill, fortune, to mingle to some extent with such grave and dignified deliberative bodies as boards of school directors, city councils, boards of supervisors and state legislators, and I have discovered that as the office increases in importance the officer becomes more and more dependent upon the press. Experience teaches in unmistakable terms that men want

office, either for the money or the glory connected therewith, and the average newspaper is published in the same humanitarian spirit. It will not take long for each member of the various state press associations to let the able and distinguished gentleman who represents his district in congress know that they expect a little reciprocity in this life; that while you are ready, willing and anxious to drape your paper in mourning because Washington and Lincoln were his inferiors in ability and statesmanship, you don't want the fact sent broadcast in ready printed stationery furnished by the government. I have no doubt if the matter is properly presented to the members of the two houses that there will be no difficulty in securing such legislation as may be called for; and if the publishers will look after their own interests there certainly will not be. If the present members of congress will not aid you, I violate no confidence in saying that in every district in the nation there are numerous patriots ready and anxious to serve the dear people at the national capital. The most persistent opponents of any legislation that will be of advantage to the newspapers are what an old Illinois legislator once appropriately denominated the "Smart Aleck statesman"—the happy victim of some political accident which gave him position. Many of these men of premature growth imagine they are pandering to the public by fighting the press. But the number of such creatures in congress is always small. Governor Reynolds, on his first visit to Washington, while congress was in session, is said to have remarked that the houses were much larger and the men much smaller than he had expected to find them. This is no doubt true, and it is a fact which newspaper men should keep in mind.

If any action is to be taken by the association, I would recommend the appointment of a committee on legislation, to whom shall be intrusted the whole matter of bringing to the attention of congress such reforms as they may deem best, or such as may be decided on by the association to be the most important. It ought to be an easy matter to remedy existing evils, if there is only reasonable unity among the publishers. The gentlemen representing the various congressional districts will readily understand that they need you more than you need them. While I do not presume for a moment that any editor would resort to the tactics of a bulldozer or the braggart, neither would I recommend the course of the sycophant. A firm, courteous demand for such legislation as may be desired will no doubt secure it.

In Illinois we have found many rocks and pitfalls in the way of arriving at definite and final action in dealing with the advertising agent, because the business environments of one office and in one community are entirely different from another. Equally unfortunate have we been in adopting rigid and inflexible rules in regard to local advertising, for the same reason. Advance payment of subscription is being enforced in many instances, while the custom has become almost universal to see that the newspaper is paid for its campaign printing with as much promptness as is the brass band. They have learned that the acme of editorial philosophy is to have twelve of their own men on the jury, if possible, when there is a libel suit on hand.

But in so far as securing the passage of laws requiring publications to be made, there has been practical unanimity. As a result, the last few years have witnessed the enactment of statutes that have been of incalculable benefit to the people, while the revenue which the publishers have derived has brightened many a Saturday night.

What has been done in this line in any state through the instrumentality of the Press Association can be done to a still greater extent in the nation through the instrumentality of the National Association. Every essay that has been read, or address that has been delivered, at the past meetings of this body, or that may hereafter be presented, will tend to enlighten and educate the press and weld more closely the ties of brotherhood in the profession. But, after all, logic, sentiment and theory avail but little when the condition of an empty treasury faces one on Saturday night. During the years I had the honor to be editor and publisher of a newspaper I smilingly bowed to everyone who complimented my

editorials, but I reached out with both arms to embrace the man who brought in a large advertisement.

This, if I mistake not, is the first time the question of "Public Printing" has been brought to the attention of the association. While regretting that I have not been more comprehensive, I trust that, once the question is introduced, such action will be taken as will eventually end in national legislation that will open many a sealed book, and will aid the people to a better understanding of the official acts of their servants, while it incidentally swells the pocketbooks of every newspaper in the land. This can be done easily enough if there is only a little stiffening of the editorial backbone, and the maintenance toward members of congress of the same determination you would use toward a circus agent, who wanted a double column at half price, when you knew he had already paid for his city license and had the bulletin boards erected.

Many of those before me have traveled hundreds, and others have traveled thousands, of miles to reach this beautiful city and meet the representatives from the various states. As the train, with lightning speed, cut through space, leaving farm and hamlet and city behind, we were all more than ever impressed with the greatness and grandeur of our country. From the Atlantic to the Pacific, from the lakes to the gulf, peace and happiness reigns. Politicians may wrangle and demagogues quarrel, but in the hearts of the people is indelibly stamped the grand and beautiful sentiment of Garfield, "God reigns, and the government at Washington lives."

But recently we celebrated the last important epoch in connection with the centennial of our republic; and no man was found with pen or tongue so eloquent as to properly portray the great strides our country has made during the last ten decades. Surely, a country with such a glorious past and such a brilliant future, a country with traditions challenging the attention of civilization everywhere, and which has been the beacon-light of liberty throughout the world, ought to find in the patriotism of the people enough of love to furnish ample means to conduct every department of the government without resorting to competition with any private business in the land.

THE WORLD'S EXPOSITION OF 1892.

The following address has been issued by the Press Committee in Chicago to the editors of the United States, showing forth the advantages and claims possessed by this city, for holding the World's Exposition of 1892:

DEAR SIR,—In soliciting you to exercise your influence in behalf of Chicago as the site of the World's Exposition of 1892, we do not desire to detract from the claims of other leading cities. In friendly rivalry it is not necessary that we should do so, but at the same time we take this opportunity to offer to the journalistic fraternity a few reasons why the great fair should be held here.

We have all the essentials of an eligible location—an abundance of fresh air and pure water, space for all exhibits, and unsurpassed facilities for transportation.

Our refrigerator—Lake Michigan—renders our climate, in the summer season, more comfortable than that of any other available city, as can be proven by the reports of the weather bureau. This immense lake also furnishes us with an inexhaustible supply of water far superior in quality to that of any other city in the world.

Combined with these are our exceptional railroad facilities, which would make the exposition accessible alike to exhibitors and visitors from every quarter of the globe. In this connection, the recent report of the Interstate Commerce Commission shows that thirty per cent of the railway mileage of the United States, exclusive of the eastern trunk lines beyond Pittsburgh and Buffalo, directly enter Chicago.

Our hotel accommodations, which are being rapidly enlarged, are amply sufficient to insure the comfort and convenience of visitors, having now the capacity to easily entertain 150,000 guests, to say nothing of the 5,000 boarding houses.

The leading officials of the several telegraph companies acknowledge that our telegraph facilities are unequaled, as has been

evidenced by the numerous tests which have resulted in this being proudly designated the "Convention City."

There can be an agricultural and live stock exhibit here, such as the world has never seen. Secretary of Agriculture Rusk says, "Chicago is the center of the greatest agricultural and stock raising region in the world."

The people of all nations can rendezvous here more cheaply, and from this point the United States can make a deeper and more lasting impression upon the world of its achievements and capabilities.

Chicago wants the exposition, because her citizens will see to it that the thousands of foreigners coming are impressed with the beauties, realize the wonderful resources, and comprehend the amazing growth of the West, the Northwest, the Southwest, the South and the Pacific coast states. We would not be content to have them go away without visiting all our sister cities. We would have them observe the possibilities of the South, inhale the ozone of the empire state of Texas, and gaze on the picturesque grandeur of California and the Yellowstone. We would not have their range of vision confined to Long Island, the Brooklyn bridge and Central Park, but would have them inspect our mines, take them through our factories, over our farms, show them the stock, our fields, our implements, our granaries and our forests.

Finally, then, we ask you to aid us by arousing public sentiment in our favor, because the exposition, if held in the heart of America, will enable foreigners to more fully appreciate our country after witnessing the evidences of its past and present rapid development, and the promises of coming greatness. The West and its tributaries, therefore, seek the support of the journalists of the country in behalf of Chicago, whose citizens have the magnanimity and public spirit to advance the millions of dollars necessary to make the exposition a success.

Yours fraternally,

TINT PLATES.

A very pretty and attractive tint-plate is made in the following simple manner: Saturate thoroughly a piece of blotting-paper with water, after which put it in a stereotype casting-box, and pour in melted typemetal as though making a stereotype plate. The hot metal coming in contact with the wet paper will cause a peculiar formation, which will give the "weird effect" when printed so much admired and sought by those ambitious to become artists in the "art preservative." Great care should be exercised to prevent the hot metal from splashing on the operator. Use a very long-handled ladle to pour from and stand well back from the casting-box.

Some six years ago this process was first discovered, but has been carefully guarded as a great secret from the public. The most attractive and unique borders, tint plates, and designs for color printing can be produced in this way. In the East this process is extensively used and always with satisfactory results. We do not think, however, that any letters patent on the *modus operandi* have ever been issued.—*American Press*.

BEFORE COMPOSING-STICKS.—Previous to 1640, when the composing-stick was introduced, the method of setting up type was by taking the letters direct from the boxes and placing them side by side in a kind of small coffin, made of hardwood, and held tight when filled by means of two screws at foot.

By ceaseless action all that is subsists.
 Constant rotation of the unwearied wheel
 That Nature rides upon, maintains her health,
 Her beauty, her fertility. She dreads
 An instant's pause, and lives but while she moves.
 Its own revolency upholds the world.
 Winds from all quarters agitate the air,
 And fit the limpid element for use,
 Else noxious. Oceans, rivers, lakes, and streams,
 All feel the fresh'ning impulse, and are cleansed
 By restless undulation: ev'n the oak
 Thrives by the rude concussions of the storm:
 He seems indeed indignant, and to feel

*Th' impression of the blast with proud disdain;
 Frowning, as if in his unconscious arm
 He held the thunder: but the monarch owes
 His firm stability to what he scorns.*

The sun's last rays are on the hill,
 And sparkle in the fountain rill,
 Whose welcome waters, cool and clear,
 Draw blessings from the mountaineer:
 Here may the loitering merchant Greek
 Find that repose 't were vain to seek
 In cities lodged too near his lord,
 And trembling for his secret hoard:
 Here may he rest where none can see,—

*In crowds a slave, in deserts free,—
 And with forbidden wine may stain
 The bowl a Moslem must not drain.*

EXCHANGES MADE ON FAVORABLE TERMS.

... THE ...

UNION TYPE FOUNDRY,

337 DEARBORN ST., CHICAGO.

Before the "war" is over, stock up with whatever you need. The present cutting cannot last much longer.

We intend to meet any honest competition, and therefore offer the following discounts, to take effect July 1, 1889, and continue until further notice:

- On Our Copper Amalgam Body Type, - - 25 per cent Discount.
- On Our Copper Amalgam Job and Display, 30 per cent Discount.
- On Brass Rule, - - - - - 30 per cent Discount.

Our terms are CASH by the 10th of the month for all purchases of the preceding month. On goods of our own manufacture we will allow an extra 5 per cent for cash within ten days from date of invoice.

On all other type, supplies and material we will also allow the most liberal discounts possible, and on outfits and machinery we are always ready to give special terms.

For old type delivered to us we allow 7 cents a pound, and for other printers' metal 4 cents a pound. For old copper amalgam type we allow 9 cents per lb.

We believe we treat our customers as liberally as does any other founder, though we don't say so much about it. Actions speak louder than words. We have no interest in any printing office and never had. Our own work is given out to first-class printers.

Do not buy any type until you have sent for sample of our "Copper Amalgam" metal, which is the best and most durable made. If you want the most perfect and newest metal quoin, that won't slip or twist a form, write us for a descriptive circular of the "BROWER QUOIN."

WOOD
ENGRAVING

ELECTROTYPING
STEREOTYPING

175
MONROE ST. CHICAGO

The advertisement features a large, ornate logo for Blomgren Bros. & Co. on the left, with the company name in a highly decorative, gothic-style font. Below the main name, the services offered are listed: 'PHOTO AND WOOD ENGRAVING', 'ELECTROTYPING', and 'STEREOTYPING'. On the right, a photograph shows the exterior of the company's building at 175 Monroe St. in Chicago. The building is a multi-story structure with several windows and a sign that reads 'BLOMGREN BROS. & CO.' at the entrance. Above the entrance, there is a sign for 'ENGRAVING' and another for 'PHOTO AND WOOD'. The top of the building has a sign for 'ELECTROTYPING STEREOTYPING'. A decorative eagle sculpture is visible on the roof. The overall design is highly detailed and characteristic of early 20th-century commercial printing.

“THE DAIRY MAID.”

Half-tone reproduction, direct from photograph, by A. ZEESE & Co., Chicago.

FIFTH ANNUAL SESSION OF THE NATIONAL EDITORIAL ASSOCIATION.

THE Fifth Annual Session of the National Editorial Association of the United States convened in the Light Infantry Armory, Detroit, on Tuesday morning, August 27, a hundred and fifty delegates being in attendance. The parlors, reception rooms, etc., were tastefully decorated, and the stage in the big drill hall was fringed with potted tropical plants, topped with rich floral designs. The assemblage was called to order by T. E. Quinby, Esq., of the Arrangements Committee, after which the Rev. Dr. Potts invoked the divine blessing. The formal welcome was then extended by Acting-Mayor Jacobs in an eloquent and felicitous address, which was responded to by the president, Mr. James L. Bettis, of Little Rock, Arkansas.

Mayor Pridgeon, one of the most incessant workers in making preparations for the convention, sent a letter of regret from Cottage Hill, Massachusetts, stating his inability to be present owing to his absence from the city, and bidding all the delegates a hearty welcome.

George H. Barbour, Esq., then came to the front with a handsome gavel made of wood from the old Pontiac tree. He told the editors what the tree had seen in its day, and then presented the gavel to the association, with the wish that it might be a conservator of order and harmony.

C. A. Lee, of Rhode Island, Gen. Leon Jastrinski, of Louisiana, Gen. Reuben Williams, of Indiana, J. O. Hayden, of Massachusetts, and J. O. Amos, of Ohio, were named as the committee on credentials. The convention then adjourned to 7:30 P. M.

In the evening President Bettis delivered the annual address, after which Col. Elliott F. Shepard, of the *New York Mail and Express*, read an address on "Editorial Philosophy," which, on the whole, was favorably received, although some of his remarks were deemed in bad taste and uncalled for by a number of delegates from the southern states.

At its conclusion Colonel Farnsworth announced that Mr. and Mrs. Dickinson extended a cordial invitation to the delegates and invited guests to attend a reception to be given at their residence that evening. Adjourned till 9:30 Wednesday morning.

Shortly after ten o'clock on Wednesday morning the convention was called to order by President Bettis. After the transaction of routine business, an interesting paper on the "Progress of Libel Law Reform," was read by E. H. Butler, of the *Buffalo (N. Y.) News*, which showed careful preparation and extensive research. He was followed by the Hon. E. A. Snively, of Springfield, Illinois, who, under the caption of "Public Printing," presented his views on the injustice of the government entering into competition with the printing offices of the country. (This paper will be found in our present issue). The "Postal Service" was ably discussed by Mr. M. Panott, of Waterloo, Iowa, who pointed out in a forcible manner the much needed reforms that the service would have to adopt before it would deserve the commendation of the public.

The Committee on Resolutions was instructed to cable Minister Palmer the thanks of the association for the magnificent entertainment at the log cabin on Tuesday afternoon.

Several committees were then appointed after which the convention adjourned until 9:30 Thursday morning.

On reassembling Thursday morning, a communication was read from the Massachusetts Press Association cordially inviting the National Association to hold its convention of 1890 in the city of Boston.

The regular programme was then taken up, and W. S. Capellar, editor of the *Daily News*, Mansfield, Ohio, read one of the ablest addresses delivered during the session, on the "Nature and Limit of the Newspaper to its Party." It did honor alike to his head and his heart, and was well received by the convention.

An interesting paper entitled "Discounts to Advertising Agents; to whom should they be given and how much?" was then read by Mr. Francis Proctor, of the *Cape Ann Advertiser* and Gloucester (Mass.) *Daily Times*. He was followed by Mr. J. B. Stoll, of the

South Bend (Ind.) *Times*, on the same subject. It was as follows: "Discounts to Advertising Agents; to whom should they be given and how much? Answer: If they work for you, pay them what their services are worth. If they work for the advertiser, let the agent look to the latter for his compensation for your space. When you get that, it matters little by whom the commission is paid." The production, brief as it was, was received with hearty applause.

"State Associations; how they may be made more interesting and valuable," was the subject of the last two papers read during the morning session, their authors being G. C. Matthews, of Tennessee, and W. E. Hoard, of Minnesota.

Robert Mann Woods of the *Republic and Sun*, Joliet, introduced a resolution proposing the formation of an international editorial congress, which was referred to the proper committee. The convention then took a recess until 2 P. M.

On reassembling, Mr. Charles A. Lee, editor of the *Gazette and Chronicle*, Pawtucket, Rhode Island, read an interesting and humorous paper on "State Associations; their objects and how their meetings may be made more interesting and valuable."

Mr. W. H. Brearley, of the *Detroit Evening Journal*, opened the debate on the "Progress of Libel Law Reform." His remarks were listened to with attention. Among other things he stated that the draft of the law submitted for passage had taken three years of hard labor to perfect, and when submitted to the lawyers of the Michigan legislature it had been met with ridicule and contempt. It was reported adversely from the Committee of the House, and the line of argument against it was to the effect that the press was organized for the purpose of blackening the character of citizens. The discussion was continued by Messrs. Capellar, of Ohio; Maccabe, of Boston; Schleicher, of New York, and Jewell and Single, of Missouri, with more or less warmth.

The Rev. Dr. Hewitt, representative of the Canadian Press Association, was introduced by the chairman, and made a few appropriate remarks.

The Committee on Resolutions reported a resolution opposing the action of the government in entering into the domain of job printing, and asked that the government cease printing return requests on envelopes. Adopted and referred to the Committee on Legislation.

The resolution submitted by W. C. McClintock, regretting the ruinous competition of typefounders, was laid on the table.

Maj. Robert M. Woods said he didn't think the time had arrived for an international editorial association, but gave notice that he would exploit such a proposition next year.

A committee to prepare an editorial directory was appointed, of which D. N. Richardson, of Davenport, Iowa, was chairman.

Col. T. H. Elliott, of Florida, who waved a large American flag from the Eiffel tower, Paris, on July 4 last, related his experience, and said that it was the only foreign flag that had ever been allowed to float from that lofty height. In conclusion, Col. Elliott presented the flag to the association. It was received with thanks, and a resolution was adopted to have it displayed at each subsequent convention.

The following committee on legislation was appointed:

Tennessee, Louis J. Brooks; Mississippi, J. G. McGuire; Colorado, A. E. Pierce; Georgia, Walter S. Coleman; Indiana, William D. H. Hunter; Illinois, E. A. Snively; Kansas, D. A. Valentine; Michigan, Thomas S. Applegate; Missouri, W. O. L. Jewett; Nebraska, J. D. Kluetsch; Ohio, John T. Mack; Texas, E. F. Yeager; West Virginia, W. S. Wiley; Wisconsin, Edward Decker, L. E. Bentley. The committee met after adjournment of association, and appointed W. O. L. Jewett chairman and William D. H. Hunter secretary.

In the evening Major W. J. Richards, of the Indianapolis *News*, delivered an address on the "Philosophy of the Business Management." The essayist took the ground that every paper, to be successful, must have one supreme head, combining both editorial and business judgment, and that no publication can long be successful where the business and editorial departments are separate and alone. Lincoln said: "One poor general is better

than two good ones at cross-purposes." Only fifty papers out of the sixteen thousand in the United States and Canada strictly enforce the rule of allowing no advertisements in the reading columns without some distinguishing mark. Major Richards closed with an earnest appeal to all publishers, in towns where even but two papers were conducted, to organize, make fair rates and stick to them.

The thanks of the association were tendered to Major Richards for his able and valuable paper, and the essay was ordered printed in the proceedings of the convention.

The balance of the evening was taken up with a discussion of prices of white paper, ink, and the operations of advertising agents, participated in by J. W. Scott, of the Chicago *Herald*, L. L. Morgan, of New Haven, Connecticut, Kellogg, of the New York *World*, and John F. Mack, of Sandusky, Ohio.

The convention began its last day's session Friday morning at 9 o'clock. Boston was selected as the city in which the association should hold its next annual session, after an eloquent speech in its favor had been made by Mr. B. Maccabe of that city. The Executive Committee was empowered to fix the time for holding the convention either in June or July.

Section 3 of Article III was amended to give in effect a representation of one vote in the convention to every twenty newspapers or fractional overplus in the state. The Executive Committee was authorized to fill *ad interim* any vacancy which might occur during the year in the office of president or corresponding secretary.

W. O. L. Jewett, chairman of the Committee on Legislation, reported recommending that the association demand of congress and the postoffice department, as a matter of justice, that the practice of the government of printing a return request on envelopes be abolished, and that the rates of postage on newspapers be modified in the interest of public intelligence. The report was adopted.

The committee appointed to take into consideration the donation to the association of a tract of land in Florida for summer cottages for editors, reported recommending that the matter be referred to the Executive Committee. It was so referred.

J. J. Anderson, of Illinois, submitted a resolution calling on congress to enact that notices of sales of property, issuing from federal courts, shall be published in papers in the county where the property to be sold is located, instead of in a central state paper as at present. The resolution was adopted.

The Committee on Editorial Directory reported asking further time, and the matter was referred to the next convention.

The convention then proceeded to the election of officers. W. H. Graenhalgh, of Colorado, nominated Charles A. Lee, of Pawtucket, Rhode Island; J. B. Stoll, of Indiana, named A. H. Lowrie, of Elgin, Illinois; Perry F. Powers, of Michigan, nominated W. H. Brearley, of the Detroit *Journal*, and Byron J. Price, of Hudson, Wisconsin, and W. C. McClintock, of Lebanon, Ohio, were also entered for the race. The first ballot stood: Lee, 94; Brearley, 65; McClintock, 48; Lowrie, 48; Price, 31. On the second ballot the convention broke in favor of Mr. Lee, and his nomination was made unanimous.

General J. B. Stanley, of Alabama, was then elected first vice-president, and E. B. Fletcher, of Illinois, second vice-president. A spirited contest ensued over the selection of a third vice-president, New York declaring for H. A. Dudley, the veteran of the Warsaw *New Yorker*, and Missouri contending for E. W. Stephens, president of the state association. Mr. Stephens was finally victorious, and the official bid was soon completed as follows: John W. Doane, Ohio, corresponding secretary; William Kennedy, Pennsylvania, recording secretary; with R. H. Tilney as his assistant, and A. H. Lowrie, of Illinois, treasurer.

The committee appointed to memorialize in a suitable manner the generous hospitality extended the association reported the following resolutions, which were unanimously adopted:

WHEREAS, The National Editorial Association at this its fifth annual convention, has been most royally entertained in the city of Detroit. Such a profusion of favors has been showered upon us from the moment of our

arrival, to particularize those to whom we are under obligations is impossible, yet we desire, besides expressing our appreciation of all the kindly attention shown the delegates and their ladies, to acknowledge special courtesies from the following:

The city officials, including the board of aldermen, the board of trade, the citizens and daily newspapers of Detroit for the invitation to meet in this city this year, and the munificent hospitality shown us by them, every promise made by them having been fulfilled, and more, an hundred-fold.

The Detroit daily newspapers for their able and impartial reports of all meetings, free papers furnished and other favors.

The Detroit City Railway Company, the Grand River and Fort street lines, for free transportation over their lines.

Minister T. W. Palmer, whose log cabin will ever be to memory dear, and ex-Postmaster-General and Mrs. Don M. Dickinson, whose pleasant residence was thrown open to us.

The citizens of Detroit who placed their private carriages at our disposal, as well as rendering other favors too numerous to mention, and the owners of the yachts *Pastime*, belonging to Commodore Frank H. Walker, the *Idler* to W. C. McMillan, *Lillie* to Alfred E. Brush, *Truant* to Truman H. Newberry, and *May Lily* to George B. Hill, for the use of their handsome yachts.

Mr. C. J. Whitney, proprietor of the Detroit Opera House, and Harry Boel Parker, manager of "The Royal Pass" Company.

The Detroit International Fair and Exposition, the Detroit Museum of Art, the Michigan Phonograph Company, the Detroit Cyclorama Company, the Fourth Michigan State troops, Col. J. A. Bayliss, division superintendent of the Wagner Palace Car Company; William Robinson, northwestern passenger agent of the Grand Trunk railway; J. B. Mulliken, general manager of the Detroit, Lansing & Northern Railway Company, and the Western Union Telegraph Company.

The following railway and car companies: The Chicago & Grand Trunk railway, the Grand Trunk railway, the Wabash railway, the Cincinnati, Hamilton & Dayton railway, the Baltimore & Ohio railway, the Milwaukee & St. Paul railway, the Santa Fé system, the Pullman Car Company, the Wagner Car Company.

Attentions from the citizens of Detroit have been so numerous, preparations so ample and elaborate, the many members of the local committees so industrious and thoughtful, every detail so accurate and satisfactorily arranged that individuals, perhaps, should not be singled out; but we cannot refrain from expressing especial gratitude to Col. Fred E. Farnsworth, Col. F. J. Hecker and Capt. Joseph Nicholson for untiring, unremitting and successful labor and effort to contribute to our comfort; therefore, be it

Resolved, That Detroit, the beautiful City of the Straits, magnificent in natural advantages and resources, to the fore front in growth, development, improvements and enterprise and in all that goes to make up a model American city, and its public-spirited, cordial, generous and progressive citizens will ever have our kindest remembrances and most grateful recollections; and be it

Resolved, That while no words can adequately express our appreciation of the magnificent manner in which this association has been cared for and entertained, the memory thereof is eternally graven in our hearts in letters of gold. We leave with regret, for we have come to feel at home in Detroit and will ever feel a fraternal regard for her citizens. May prosperity ever attend all their efforts and happiness be always at their sides.

Signed by the committee: R. M. White, Wisconsin; Emily A. Kellogg, Illinois; A. P. Riddle, Kansas; John Bushnell, Dakota; John M. Doane, Ohio; J. O. Henderson, Indiana; M. E. Milford, Indian Territory.

An executive committee of one from each state was then announced, to take up their duties when the newly elected officers shall come into power sixty days from the day of election.

The convention then adjourned.

GRAINED NEGATIVES FOR ZINC-ETCHING MADE WITHOUT A SCREEN.

Grained negatives for zinc-etching can be made without a screen, by coating the plates with an emulsion containing sulphate of baryta in very fine powder and well shaken up before coating. Pictures are taken upon these plates and developed and fixed in the usual way, but the image, instead of being smooth and nice, will be covered with myriads of small pinholes. These negatives are used for printing on the zinc in bitumen, then etched in relief for type blocks.

Instead of sulphate of baryta, carbonate of soda, etc., may be used in the emulsion; and, after fixing, immersion in weak acid will develop the pinholes. The bromo-chloride emulsion may be used upon collotype plates, followed by drying them in the oven at a high temperature, exposing under a reversed negative. Develop and ink up as for the paper; pull the transfers upon ordinary lithograph transfer paper. To obtain a coarser grain, soaking in warm water will develop the reticulation.—*W. T. Wilkinson in London Photographic News.*

THE CITY OF DETROIT.

THE MANY HOSPITALITIES EXTENDED TO MEMBERS OF THE NATIONAL EDITORIAL ASSOCIATION.

DETROIT—the City of the Straits—is, without doubt, one of the most beautifully located cities on the American continent. That it is one of the most hospitable can be vouched for by the many visitors whom it has magnificently entertained during the past thirty days, by none more so, however, than the members of the National Editorial Association, who from the hour of their arrival to the hour of departure, were the recipients of all that lavish hospitality could devise to make their stay thoroughly enjoyable. Delicate attentions and kindness were manifested on all hands, and it is safe to claim that nothing but good words will be heard for many a long day from those who had the pleasure of enjoying them. The various committees having the entertainment of their guests in charge, were composed of substantial business representatives, and it is needless to add that they performed their duty in a manner that left nothing to be desired. To prove that this statement is correct, we have only to refer to the many enjoyable treats afforded.

Between two and three o'clock on Tuesday afternoon, August 27, one hundred and fifty well-filled carriages left the Light Infantry Armory, on West Congress street, for the log cabin and stock farm of the Hon. T. W. Palmer, United States Minister to Spain, situated about eight miles from the city. The drive was a somewhat dusty and tedious one, and all were pleased when at five o'clock the last carriage had entered the adjacent grove. The interior of the "cabin" and its relics were carefully inspected. In it are Mr. Palmer's grandfather's clock, his grandmother's old spinning wheel, and the bed in which the old couple slept. By its side is the cradle in which the senator was rocked when a baby. The building cost \$16,000. The stock farm is composed of six hundred and forty acres, where a number of the finest Percheron horses and Jersey cattle in the United States can be seen. After the guests had finished inspecting the cabin and admiring the artificial lake and waterfall, they adjourned to the grove, where they found a band of music, and an array of chicken salad, ice cream, watermelon, etc., awaiting them. After thorough justice had been done the dainties provided, Mr. Cottrell made a neat little speech, welcoming the guests to the cabin. He said he regretted that Mr. Palmer was not present in the capacity of farmer to extend a hearty welcome in person, and then read the following cablegram from that gentleman, dated August 27, San Sebastian, Spain :

Gentlemen of the National Editorial Association :

Welcome to the log house, brethren ; present but not visible.
PALMER.

Shortly after the guests took their departure for the city, where all arrived safely after an afternoon's enjoyment.

On Tuesday, at 2:30, the good steamer *Fortune* left the dock, foot of Woodward avenue, crowded with editorial excursionists and their wives and daughters, for a trip to the exposition buildings and Belle Isle Park. Music was furnished by the Fourth Regiment Band. The buildings loomed up splendidly from the river, with their gaily decorated flags flying in the breeze. The main structure and annexes were carefully inspected and their admirable proportions duly admired. They are about four miles below the city, and can be reached by boat and street car, and will be open from September 17 to 27. The main building has a frontage of nearly five hundred feet. The central tower is 200 feet high and presents an imposing appearance. A toothsome lunch was served in the spacious art gallery, and the guests were bountifully supplied. After several congratulatory speeches "all aboard" was sounded, and in a few minutes thereafter the *Fortune* proceeded to Woodward avenue, where the Fourth Regiment was in waiting, after which she proceeded to Belle Isle, where a dress parade was given under the command of Lieutenant-Colonel Sheehan. This beautiful park is about three miles from the center of the city, and is reached by ferry and bridge. It is half a mile

in width by a mile and a half long, and is a playground and breathing spot for Detroit's inhabitants. It is traversed by canals, on which are pleasure boats, rustic bridges for foot passengers and carriages, including drives and walks, well-kept lawns, flower beds, etc. Groves afford grateful shades, and cooling breezes from the surrounding river—the grandest in America—contrive to make this island park a home of comfort and loveliness. At the casino we had the pleasure of meeting one of the park commissioners, Mr. John Erhard, an affable, intelligent gentleman. On the return we formed the acquaintance of Captain Joseph Nicholson, superintendent of the Detroit House of Correction, ex-Congressman William C. Maybury and George H. Barbour, Esq., three of the best-looking gentlemen on the boat, whose hearts and looks correspond. Of course, the ubiquitous, courteous and courtly secretary, Colonel Fred E. Farnsworth, must not be overlooked, whose name has become a household word in the home of every editor present. All were safely landed on time at the foot of Woodward avenue, after a delightful excursion. "Are you satisfied?" inquired a friend. "Yes, more than satisfied," we replied. But the inquiry, "Can't we make arrangements to borrow the Detroit river during the world's fair in Chicago in 1892?" received a "Well, we will think about the matter in the meantime."

In the evening a reception was held at the mansion of ex-Postmaster General and Mrs. Don M. Dickinson, 1040 Woodward avenue. The spacious grounds were illuminated by long lines of parti-colored Chinese lanterns, skillfully arranged, while the decorations of the mansion, with its flowers, foliage and mellow light, were simply superb. The guests were welcomed by the host and hostess, assisted by a bevy of Detroit's charming daughters. Refreshments were served in the dining room. Geniality took the place of the usual formality, and all present seemed delighted with the welcome tendered.

On Thursday afternoon, shortly after 2 o'clock, five gaily decorated steam yachts, the *Pastime*, *Truant*, *Idler*, *Lilly* and *May Lilly*, the pride of Detroit, started from the foot of Broad street, for a spin down to the Grosse Point Club House. They were freighted for the most part with the better halves, daughters and sweethearts of the visiting editors. When going down the river they presented a beautiful sight. "Magnificent!" "Exquisite!" "Lovely!" "Perfectly enchanting!" "What a lovely river!" were heard on every hand. Refreshments were served in the handsomely furnished cabins, and mirth and the utmost good feeling prevailed. Every attention was paid to the comfort of the guests, and regrets were expressed when the Michigan Central docks were reached shortly after 6 o'clock.

Not content with what had already been provided, however, the treat of all treats was yet to come, the river ride to and banquet at the Star Island House, St. Clair Flats. Shortly after 2 o'clock, on Friday afternoon, the excursion steamer *Greyhound* left the foot of Griswold street, having six hundred ladies and gentlemen on board, for a thirty-mile run. The weather was made for the occasion, the trip was a glorious one, and was hugely enjoyed. An orchestra furnished the sweetest of music, and several famous (!) singers in the party gave a sample of their vocal powers. At 4:30 o'clock our destination was reached, and in a few minutes thereafter the guests were seated in the spacious dining room of the Star Island House. The banquet was a generous one, and the delicacies provided partaken of with zest. At 6 o'clock Colonel Hecker introduced Major L. T. Griffin as the toastmaster of the occasion, a position which he admirably filled. Speeches were made by Mr. James R. Bettis, of Little Rock; Governor Luce, of Michigan, who made *the* speech of the occasion; Colonel E. F. Shepard, of New York; General L. S. Trowbridge, of Detroit; James W. Scott, of Chicago; A. H. Lowrie, of Elgin, Illinois, and Hon. W. C. Maybury. Messrs. Scott's and Maybury's remarks were received with the heartiest applause, both gentlemen making several "bull's-eye" shots that were evidently appreciated by those present.

The *Greyhound* left Star Island at 7:40 P.M., and safely landed her living freight at the Griswold street dock two hours later. Thus happily ended a round of entertainments which will be gratefully

remembered by all who had the pleasure of participating therein, and which secured for the various members of the arrangement committee the thanks and gratitude of every delegate to the National Editorial Association.

We cannot conclude without referring to the active and efficient work done by the representatives of the Chicago Press Club in the interests of the world's fair in Chicago in 1892. They were bright, energetic young gentlemen, who reflected honor on their profession, the city from which they hailed, and the cause which they represented. Their friends—and their name is legion—will concede that this tribute is well deserved.

WRITING FAMOUS POEMS.

Gray's immortal "Elegy" occupied him for seven years.

Cowper wrote one of the drollest and quaintest English ballads, "John Gilpin's Ride," when he was under one of those terrible fits of depression so common to him.

The noted poem, "The Falls of Niagara," was written by J. G. C. Brainard, the editor of a small paper in Connecticut, in fifteen minutes. He wrote it under pressure in response to a call for "more copy."

General Lyle wrote his beautiful composition, "Antony and Cleopatra," which begins, "I am dying, Egypt, dying," on the night before his death. He had a premonition that he was going to die next day.

Thomas Moore, while writing "Lallah Rookh," spent so many months in reading Greek and Persian works that he became an accomplished Oriental scholar, and people find it difficult to believe that its scenes were not penned on the spot, instead of in a retired dwelling in Derbyshire.

Poe first thought of "The Bells" when walking the streets of Baltimore on a winter's night. He rang the bell of a lawyer's house (a stranger to him), walked into the gentleman's library, shut himself up, and the next morning presented the lawyer with a copy of his celebrated poem.

"Old Grimes," that familiar "little felicity in verse" which caught the popular fancy as far back as 1823, was an inspiration of the late Judge Albert G. Green, of Providence, R. I., who found the first verse in a collection of old English ballads, and, enjoying its humor, built up the remainder of the poem in the same conceit.

MAKING UP A NEWSPAPER.

Of the toil which a daily newspaper demands, of the unceasing attention it exacts, of the judicious care it requires, the great public of readers take no account. Those who come to the breakfast table, more or less bilious, expect to find in the morning sheet something like perfection, and I do not mean to say, observes a correspondent, that they are not right in expecting it. But when they glance hastily over the columns, and then judicially declare there is nothing in them, they forget there is everything in them of importance that has happened during the preceding twenty-four hours; and that two hundred or more men toiled all night, while the snap critics were sleeping, to make this great compendium, this map, the picture of a day, "its fluctuations and its vast concerns." It might lead a dissatisfied purchaser to revise his judgment if he could stand between two and three o'clock in the morning in the composing room of a great journal and witness the intense excitement, all kept well under in properly regulated offices, which characterizes the "making up" of the sheet he sometimes dismisses so contemptuously. The printer, if then in a state to speak calmly, might tell him the great point was not so much what should go in, as what should be left out. For there never was yet a morning paper big enough prepared for it, and there never can be. The larger the sheet the more news will come to it—for every additional column three columns of matter of some sort will demand admission. Again, the rule is that there shall be no mistakes. It is inexorable, yet thrice happy is the journal in which it is never violated. There are more mistakes than the sagacious public ever finds out.—*Printer's Register*.

MR. ROY V. SOMERVILLE,

The newly elected president of the Canadian Press Association, whose likeness is herewith presented, is the youngest member who has ever been elected to that post of honor, having just passed his

thirtieth birthday. He has, however, had a thorough training in the printing and newspaper business, having entered the office of the *True Banner*, Dundas, Ontario, when fifteen years of age, and having been successfully, and sometimes concurrently, apprentice, journeyman, foreman, bookkeeper, collector, canvasser, local editor, partner, and now proprietor and editor. Mr. Somerville is a hustling young Canadian whose energy and thorough knowledge of his business have pushed to the front rank in Canadian journalism, and to the same attributes, and the keen interest he has taken in its affairs, he owes the honor the Canadian Press Association has conferred on him. In 1887 he was elected a member of the executive committee; in 1888, vice-president, and this year president; rapid promotion indeed, but unanimously accorded in each instance. His paper, the *True Banner*, is popularly conceded to be one of the handsomest and best of Ontario's many good local weekly journals.

A REPRESENTATIVE OF THE INLAND PRINTER recently had the pleasure of visiting, while in Princeton, Illinois, the office of the *Bureau County Tribune*, a wide-awake weekly published by Mercer & Dean. Mr. E. K. Mercer, the editor, is a genial gentleman, at home either when writing an editorial or attending to business matters. Mr. Daniel Dean has charge of the job department of the business, and is assisted by Edward Mercer and Mr. Page. Taken altogether the office is ably run and is a credit to its proprietors. The *Bureau County Republican*, published by Bailey & Bascom, is also a thrifty weekly, with a job department under the direction of T. P. Streeter, who always finds time to make it pleasant to visitors, although up to his ears in work. The *News*, published at the north end of the town, near the depot, is the other weekly paper. This office also has a job department and does creditable work.

ANSWERS TO CORRESPONDENTS.

E. J. R., Mobile, Alabama, asks: Please inform me through the columns of THE INLAND PRINTER, the probable number of job printing offices in the United States.

Answer.—As there has never been a directory of job printing offices independent of those in connection with newspapers and publications, our correspondent asks a question difficult to answer. We have been told that one of the directory publishers said there were, in round numbers, thirteen thousand job offices in the United States. We give this for what it is worth only.

F. D. W., Norwalk, Ohio, writes: Can you tell me of any book or books of general information on cylinder and platen presses, and where they can be obtained?

Answer.—We know of no book published giving general information on printing presses. The printing press has been written upon, from time to time, in various printers' publications, but we know of nothing of the kind being issued in book form. One way of obtaining information concerning printing presses, is to procure the descriptive catalogues of the various manufacturers, or back numbers of THE INLAND PRINTER containing the same.

W. M. B., Kenton, Ohio. 1. Is the pica of all the foundries adopting the point system exactly the same, or is there not still a slight variation? 2. Can you give the fraction of an inch of six picas of all the foundries? 3. What is meant by the term, "strong varnish"?

Answer.—1. The picas of all foundries that have adopted the point system are supposed to be the same, and we believe they are, the slight variations of some at the start having been corrected. 2. A standard pica is 1/16 of an inch, consequently six picas would be 3/8 of an inch. 3. The term, "strong varnish," means simply a thick varnish.

E. G. S., Medina, Ohio, asks: Will you please explain the process by which the illustrations such as are found in the Chicago Inter Ocean, are engraved, whether by hand or otherwise.

Answer.—There are several processes in use for making illustrations for daily papers, the most popular, we believe, being the one in which the subject is engraved on a prepared plate with a hard, sharp tool, and from this a cast is taken. These plates are specially prepared by those making it a business. The plate proper is of metal, perfectly smooth, on which is put a plaster surface, in which the subject desired is engraved. Instructions in their use are furnished by the manufacturers of the plates to their patrons.

C. J. A., Iowa, writes: I have trouble with my "rubber glue"—it dries too slow and sticky in hot weather. Can you give me a remedy or good recipe?

Answer.—There should be no trouble for anyone to get a good tablet composition nowadays, for there are quite a number on the market. If that used by our correspondent is of his own making, he evidently does not make it properly. Its refusing to dry is evidence of too much of the oily substance used, and, of course, failing to dry, it would be sticky if it contained glue. As a rule the better plan for smaller establishments is to purchase the ready prepared articles sold for this purpose and use strictly according to direction. THE INLAND PRINTER has heretofore published at least half a dozen recipes, such as desired by our inquirer.

L. W. W., Roanoke, Virginia. Can you inform me what mitering machine will cut a V-shaped groove in brass rule, of any desired depth and angle, so that when the rule is bent toward the groove it will close and present an unbroken surface, thus making a corner in one piece?

Answer.—There are several machines that will do this, it only being necessary to use the tool cutting the angle desired, and to so set the tool that it will not cut quite through the brass—say within the thickness of a twelve-to-pica lead. This, however, is not very successful for angles less than the right angle. The different makes of machines can be found in almost any catalogue of

dealers in printing materials, tools, etc. The four angles made by the tools are the triangle, right angle, octagon and sexagon. These will cut to any desired depth, not greater than great primer.

THE S. Co., Winnipeg, Manitoba, writes: Would you kindly furnish us with information as follows: Are electric motors a success for printing offices? Are they cheaper than steam? Same regard water motors? Both to run, say, a pony Campbell and three or four jobbers.

Answer.—Replying to this correspondent in a general way, we can say that both electric and water motors are used successfully in many printing offices throughout the country, but in all places something depends upon other things than the motors themselves. Where they are successful they are invariably pronounced cheaper than steam. The success of even a good electric motor depends upon the strength and quality of the current furnished; while the success of a water motor is dependent upon the pressure supplied by those furnishing the water. We should say a three or four horse-power motor of either make would be required to run the machines named by our correspondent.

REDUCED FAC-SIMILE OF "PRISON MIRROR."

The Prison Mirror. A weekly publication from the State's Prison, Stillwater, Minnesota. The page contains a grid of small text columns, likely a directory or list of names and information. The text is too small to read accurately but appears to be organized in rows and columns.

Published at the State's Prison, Stillwater, Minnesota.

BRACKELSBERG'S multiplying paper consists of sheets of paper, each one supplied with a coloring layer, whose principal element is a violet aniline methyl. An oiled leaf serves as a hard, smooth under-layer. Place a sheet of the copy paper on this, then a sheet of writing paper, and write with a hard lead pencil. The back of the writing paper will give a negative of the writing in high color. Wet the copy sheet thoroughly, and from it twenty or more copies can be made, which will not roll nor show a gelatinous coating. Embroidery and compass sawing patterns are finely rendered in this way.

MANUFACTURERS OF

DOORS, SASH, BLINDS, SNOW SHOVELS, BOXES.

GENERAL BUILDING AND CARPENTRY.

Fort Ann, N. Y.,

18.

SPECIMENS RECEIVED.

"SPECIMENS OF PRINTING," by E. N. Alling, 818 Chapel street, New Haven, Connecticut, is a collection of designs printed in two or more colors, showing the resources of his office and the executive ability of his workmen from an artistic point of view. It is a creditable production.

THE business card of Charles A. Perley, of the *Chronicle* printing house, Franklinville, New York, is a striking piece of work in four colors and gold. The design gives evidence of the expenditure of considerable patience, and the execution is neat and finished. The selection of colors is also in good taste.

FROM A. J. Lilly, Dixon, Illinois, a catalogue of the Normal School and Business College; cover printed in gold on jet black, inside in black and brown. The typography on this work is excellent, but the presswork might be improved. Also several samples of programmes, etc., which exhibit artistic taste and are well executed.

H. E. TUTTLE (with Sawyer & Woodard), Osage, Iowa, forwards a few specimens of commercial work, cards and programmes, which, for one who has "just commenced his fourth year," are excellent. He has evidently made the best use of his opportunities. One card, in gold, red and blue, is a good combination of color with a pleasing effect.

JAMES S. COMRIE, an apprentice, of Gloversville, New York, sends two specimens of rulework, asking for an opinion thereon. The design in each is faulty and execution bad, though the second specimen is an improvement on the first. The plea that the office is poorly furnished with material will not account for the want of care in joining rules at the corners. Try again, sonny.

W. M. CASTLE, Algona Building, Oshkosh, Wisconsin, furnishes samples of plain and fancy work, which, for excellence of display in composition and good quality of presswork, compare favorably with the productions of the best printers in our large cities. Oshkosh, while so ably represented by printers of the W. M. Castle stamp, is not going to be left behind in the procession.

THE *Index* office, Northwood, Iowa, sends a 32-page pamphlet, entitled "A List of Premiums at the Worth County Fair," with cover printed in gold and black on a blue enameled ground. The list is interspersed with advertisements, which are a collection of antiquated type and borders, poorly displayed, and not improved by the low quality of the presswork. There is certainly room for improvement in the job department of the *Index* office.

FROM H. E. Johns, Oil City, Pennsylvania, come several samples of work which show him to be an adept in the use of "chaos-type," "slobs," etc., in the production of surprising effects in typography. He is also an artist in rulework, and, though employed in the *Blizzard* office, it will evidently be a "cold day" when Mr. Johns "gets left" on anything pertaining to art printing in the typographic branch. All the samples submitted show that great care and skill have been exercised in their execution.

FROM the artistic department of the *Oil City Derrick*, Oil City, Pennsylvania, we receive a "souvenir" in the shape of a programme of the Centenary Exercises at Georgetown University, which is an example of what a combination of paper, type, ink, bronze and brains can produce in the line of art printing. It has been our pleasure to see many specimens of high art in typography, but we can truly say that none have excelled this gem. The *Oil City Derrick* is to be complimented for the excellent manner in which this souvenir is turned out.

INTERSTATE PUBLISHING COMPANY, successors to the George W. Crane Publishing Company, Kansas City, Missouri. A superbly illustrated catalogue of 248 pages, 12½ by 9½, printed on coated paper. As a specimen of western enterprise we may state that the contract for this work was taken up February 21, when the Crane Publishing Company was located at Topeka. Upon the morning of the 22d its entire establishment was destroyed by fire, and the parties interested talked of canceling their contract as they did not believe the firm could possibly get it out by

the time stipulated. The first copy, however, was received April 20, and the entire completed edition delivered June 30. The composition and presswork are perfect, and the binding is equal to that turned out by any binding establishment in the United States.

S. B. NEWMAN & CO., 66 Union street, Knoxville, Tennessee, submit a card, which, for neatness of design and execution, would be hard to excel. The main feature of the card is a horn of plenty made of brass rule, from which, in lieu of the traditional fruit and flowers, there descends a number of cards on which are inscribed the legends, "billheads," "cards," "pamphlets," "blanks," "posters," etc., showing that the firm is prepared to take hold of every description of printing; while their card, taken as a criterion of their work, is a guarantee that whatever is entrusted to them will be well executed. The tints used in the card are quiet but harmonious, and the work, as a whole, reflects great credit upon its designer.

ALSO, from the Porter Printing Company, Moline, Illinois, an 8-page circular, illustrated, neatly printed in black and red, showing their facilities for executing neat work; Alfred M. Slocum & Co., 123 and 125 North Fourth street, Philadelphia, Pennsylvania, circular in colors, which is a sample of the excellent work this firm is noted for turning out; Thomas & Hubbard, 114 and 116 New High street, Los Angeles, California, card and circular in black and gold, which give evidence of taste and ability; W. C. Wolfe, 119 Requena street, Los Angeles, California, business cards in colors, on which the presswork might be improved with advantage; George O. Scott & Son, 1516 Lawrence street, Denver, Colorado, card in black, red and two tints, in which the design is good but not fully carried out; Raynor & Taylor, 96 to 100 Bates street, Detroit, Michigan, card in two colors, printed on ivory; John W. Michael, Columbia, Pennsylvania, several specimens of ordinary merit, in which the presswork is good, but the selection of colors not appropriate, there being a too free use of green.

PRESS ASSOCIATION NOTES.

FREDERICK W. HYDE, of the Jamestown (New York) *Journal*, has been reelected president of the Associated Press of Western New York and Northwestern Pennsylvania.

THE Young Men's Editorial Association of Kentucky will hold its annual meeting at Bowling Green, October 25 and 26. Robert E. Morningstar, of the Bowling Green *Democrat*, is president. The young men say they have a pleasing surprise for the older editors at the October session, but for the present they prefer to keep it a secret.

AT the recent annual meeting at Catskill, the New York State Press Association elected the following officers, to serve the ensuing year: President, William H. Clark, of the Cortland *Standard*; vice-presidents, G. D. A. Bridgman, of the Canandaigua *Journal*; J. B. Guilford, of the Elmira *Advertiser*; Charles Welling, of the Jamaica *Farmer*; W. C. Stone, of the Camden *Advance*; and William McKinstry, of the Fredonia *Censor*; secretary and treasurer, A. O. Burnett, of the Dansville *Advertiser*; executive committee, H. J. Knapp, of the Auburn *Advertiser*; J. G. P. Holden, of the Yonkers *Gazette*; E. N. Butler, of the Buffalo *News*; W. J. Arkell, of the *Judge*; J. A. Sleicher, of Frank Leslie's.

THE publishers of the various newspapers in New Jersey have formed the State Publishers' Union for the purpose of mutually protecting each other in the matter of rates for advertising and legal notices. The organization was brought about by the controversy over the publication of the laws of New Jersey, which have been delayed this year for several reasons. The following officers have been selected: President, T. W. Morrison, Plainfield *Evening News*; secretary, J. H. Mathison, Somerville *Messenger*; treasurer, E. Gardiner, Bayonne *Times*; executive committee, O. Kanderhover, Sussex *Leader*; Joseph Atkinson, Newark *Standard*; A. V. D. Honeyman, *Unionist-Gazette*, Somerville; J. Carpenter, Jr., Clinton *Democrat*; J. S. Yard, Freehold *Democrat*; J. C. Nichols, Bridgeton *Pioneer*, and John Brient, Trenton *Emporium*.

CHICAGO NOTES.

HERBERT E. CROUCH, Augustine Davis and William Snell have incorporated the Mercantile Book Company, of Chicago, with a capital stock of \$100,000.

THE Seymour-Brewer Printing Press Company has been incorporated at Chicago, with a capital stock of \$50,000, for the purpose of manufacturing printing presses.

J. P. TRENTER, the enterprising proprietor of the Chicago Brass Rule Works, was united in marriage to Miss Emma Christman on August 22 in New York City. THE INLAND PRINTER congratulates the happy pair.

THE American Paper Company, of Chicago, has been incorporated with a capital stock of \$15,000, and the incorporators are Charles E. Follansbee, Frederick C. Tyler, Merrill C. Follansbee, Warren O. Tyler and Frank P. Tyler.

THERE are four weekly newspapers printed in Chicago in the Polish language. The *Gazette Polska* (Polish Gazette) has been published seventeen years. The others are the *Gazette Katolicka*, the *Tzoda* and the *Wiasa I Ojczyzna*.

THE Interstate Exposition, now in full blast, is without doubt the most interesting and instructive which has yet been held, and a visit to the same will equally repay the resident or non-resident visitor. The displays in the various departments are well worthy of examination, while the art gallery is alone worth twice the price of admission.

GEORGE E. COLE & Co., printers and stationers, located at 84 Dearborn street, were burned out on August 21. The fire started in their pressroom, but was subdued before their entire large stock of paper was destroyed. As it is, their loss will foot up \$30,000, on which there was \$25,000 insurance. Mr. Cole has the sympathy of the entire trade, as he is regarded as an honorable and upright man.

HARRY GEORGE, a member of the chapel of H. O. Shepard & Co., purposes withdrawing from the printing business for a season, to seek the retirement of the wigwam of the Kickapoo, in Kansas City, where he purposes to tickle the cords of the Ethiopian guitar, while the noble red-man expatiates on the merits of the wonderful cure-all that he has on tap for the ills of the flesh. Harry's numerous friends wish him success in his new vocation.

FRANKLIN S. BLAIN, the well-known assistant city editor of the *Inter Ocean*, died at his residence, 5202 Washington avenue, Hyde Park, at 8 o'clock Friday morning, August 9. Though he had been an invalid for several weeks, his sudden demise was a shock to his many friends, as he was considered convalescent. He was but thirty-three years of age, and had had experience as a writer on the *Chicago Tribune* and *Inter Ocean* and *St. Paul Pioneer-Press*. At a meeting of the Press Club the following resolutions were unanimously adopted:

WHEREAS, In the interposition of divine providence our friend and co-worker, Frank S. Blain, first vice-president of the Press Club of Chicago, has been removed from our midst; therefore, be it

Resolved, That we have heard of the sad calamity with poignant feelings of regret. In the death of Mr. Blain the Press Club loses an active, vigilant, efficient and loyal member, and the profession an able, untiring and devoted follower. He was a big-hearted, manly man, a true friend, an ardent champion of the principles he espoused and one whose loss we shall ever deplore.

Resolved, That we extend to his sorrowing mother, who watched over his sick-bed with such love and solicitude, and upon whom he bestowed his whole affection, our heartfelt sympathy and trust and strength.

Resolved, That a copy of these resolutions be spread upon the records of this club and an engrossed copy be forwarded to Mrs. Blain.

The remains were taken to Buffalo, New York, and buried beside those of his father.

THE *United States Mail*, a monthly publication published in Chicago, devoted to postal affairs, is urging another national convention of third and fourth class postmasters, the object of which is to work congress for increased compensation for offices of those grades. The fiftieth congress granted third-class postmasters \$400,000 for rent, light and fuel, but practically did nothing for those of the fourth, but this great journal has renewed the fight

with a determination to succeed. The issue for September is a beautiful number, finely illustrated and printed in the highest style of the art, while its contents are not only instructive in the matter of properly conducting the business of a postoffice, but are also interesting and amusing. It is printed in magazine form.

LABOR Holiday was suitably observed in this city by a procession of the various trades, under the auspices of the Trades and Labor Assembly. The printers had the head of the line, and presented a most creditable appearance, turning out nearly nine hundred men. Each member was provided with a duster, hat, cane and badge. The order of procession was as follows:

Mounted Marshals.
Band.
Officers of the Union in carriage, with Banner of the Union.
Trades' Assembly Prize Flag.
Old-Time Printers' Association.
The Globe Chapel. Times and Mail Chapel. Inter Ocean Chapel.
Morning and Evening News Chapel.
Journal Chapel.
Early & Halla Chapel. H. O. Shepard & Co. Chapel.
Horace O'Donoghue Chapel. Poole Brothers Chapel.
Band.
Stars and Stripes.
Herald Chapel. Tribune Chapel.
J. M. W. Jones Chapel. Stromberg & Allen Chapel.
Newspaper Union Chapel. Kellogg's Chapel.
Miscellaneous Chapeles.

NEWSPAPER GOSSIP.

THE Waterbury (Conn.) *Republican* has been sold for \$5,000.

THE *Free Press* and the *Herald* of Quitman, Georgia, have consolidated.

A MR. BIBB has commenced the publication of the *Gazette* at Roanoke, Virginia.

A STOCK company has been organized to publish the *Express* at Cartersville, Georgia.

J. M. MILLER has commenced the publication of the *Democrat* at Ashland, Kentucky.

BAVOL & LINK have commenced the publication of the *Daily Guide* at Selma, Alabama.

A NEW German paper, the *Arbeiter Zeitung*, has made its appearance in Pittsburgh.

CHARLES WITMORE, telegraph editor of the *Post*, Pittsburgh, has resigned to accept a similar position upon the *Times*, of the same city.

THE *Baptist*, published at Memphis, and *Baptist Reflector*, published at Chattanooga, have consolidated and will in the future be published at Nashville, Tennessee.

COLLIER & LOFTUS have started a bright and well-edited daily paper, called the *Times*, at Pittston, Pennsylvania, a central and lively business spot in the Wyoming coal fields of the Keystone State.

THE St. Clairsville (W. Va.) *Gazette* has been sold to a company headed by David H. Milligan, deputy clerk of the Belmont Circuit Court, and William A. Mechlin. The purchase money is \$9,000, outside of book accounts.

ROBERT SIMPSON, who has been connected with the Pittsburgh (Pa.) *Dispatch* for some time, has severed his connection with that paper to accept the managing editorship of the *Oil City Derrick*, upon which journal he was formerly employed.

A COMPANY known as the National Democratic Publishing Company, in which a number of leading democrats are stockholders, has been incorporated under the laws of West Virginia for the publication at Washington, D. C., of a weekly democratic paper for national circulation. The paper will appear early in September, and will be under the charge of Edmund Hudson, with Fred Perry Powers as principal editorial assistant. Letters indorsing the enterprise will be published in the initial number from ex-President Cleveland, Senator McPherson, Speaker Carlisle, Senator Morgan, ex-Secretary Fairchild, Representatives

John E. Russell, Patrick A. Collins and John F. Andrews, and other prominent democrats. The name of this new paper will be the *National Democrat*.

AN interesting departure in journalism has been inaugurated by Messrs. Root & Tinker, the well-known publishers. They have commenced the publication of the initial number of the *Daily Dry Goods Reporter*, the first and only daily trade newspaper in the world.

JOHN REID, for many years managing editor of the *New York Times*, and lately connected with the London edition of the *Herald*, has become managing editor of the *New York Herald*. Arthur Brisbane, London correspondent of the *Sun*, it is understood, is to become editor of the *Evening Sun*.

Wide Awake for August is a genuine summer number, full of things to be done out of doors—geologizing, boating, making wildflower books, and other recreations which afford needed change and amusement to girls and boys who have escaped the turmoil and heat of the great city, and are reveling in the unwonted delights of the free, glad hillsides, meadows and forest shades. The illustrations are, as usual, among the chief attractions of the number; the story element is of fine quality, and the poetry is sweet and true. *Wide Awake* is an eagerly welcomed guest in every home into which it has made an entrance, and its refined, instructive literature carries a beneficent influence wherever it goes. D. Lothrop Company, Boston.

OF INTEREST TO THE CRAFT.

DENVER Union has now 336 members on its rolls.

A VISIT to the *Free Press* office, in Detroit, convinced us that it is one of the best conducted newspaper establishments in the United States.

THE Bloomington (Ill.) *Pentagraph* job office has been merged into a stock company, and John Condon, for many years its foreman, is secretary.

JOHN D. VAUGHAN, who accepted the position of manager of the *Aspen Chronicle* last May, has sent in his resignation and returned to Denver.

CONGRESSMAN JOHN M. FARQUHAR, of Buffalo, New York, ex-president of the International Typographical Union, still retains a card of membership.

THE striking printers of the Little Rock (Ark.) *Gazette* have established a paper, the *Evening Call*, and will hereafter employ themselves at the union rate per thousand.

ATLANTA printers are building up a fund for the entertainment of those who will attend the sessions of the International Typographical Union, which convenes in that city next June.

HARRY M. OGDEN, of Cincinnati, representing the printers in the Scripps League, replied to the address of welcome of President Chautemps, of the Paris Council, to the visiting delegates.

THE report that Mr. George W. Childs sent pressmen to New York to help out the *World* in its trouble is emphatically denied by that gentleman. The report was based simply on a rumor current in New York.

AT Roanoke, Virginia, a new union has been organized, with the following officers: President, J. P. Ackerly; vice-president, George Martin; financial and corresponding secretary, H. G. Peace; recording secretary, J. R. Thomas; treasurer, Flem Hurt.

AT a meeting held by Scranton Typographical Union, No. 112, the following officers were elected: President, Norton Wagner; vice-president, Frank Anertz; financial secretary, L. N. Connors; recording secretary, M. Andrews; corresponding secretary, James Conley; treasurer, George F. Weeks; sergeant-at-arms, Cyrus Evans.

A FIRE that recently broke out in the third story of the building, No. 208 Broadway, occupied by Raphael Tuck & Sons, art publishers, resulted in much damage. The flames were confined to the rear part of this floor and the one above, occupied by the

same firm, but all the floors and the basement were flooded with water. The origin of the fire is unknown. Raphael Tuck & Sons claim they had \$56,000 worth of stock, most of which was either destroyed or so seriously damaged as to be worthless. They carried an insurance of \$17,500, but say that their loss will foot up at least \$25,000.

WILKESBARRE Typographical Union, No. 187, recently had their annual excursion to Glen Onoko, Mauch Chunk and the Switchback. The day selected for the outing was nearly a perfect one, and about eighty persons availed themselves of the opportunity to enjoy the beautiful scenery in and around the region of the far-famed Lehigh Valley, appropriately styled the "Switzerland of America." Besides the Wilkesbarre party at Glen Onoko there were quite a number of printers, pressmen and others from Mauch Chunk present, making in all quite a large crowd.

FOREIGN.

THE newspaper of the smallest circulation in the world is that published for the exclusive use of the emperor of Austria, his minister of foreign affairs and his secretary of state. A fourth copy is never printed. Its contents consist of the criticisms of the journals of the world upon his administration of government. Its annual cost is \$80,000.

THE Indian editor is evidently a person of independent action, free from the trouble of trying to meet the regular habits and customs of his patrons. The last number of the *Decca Gazette* contains the cheerful announcement that "we are all so fatigued by the incessant labor of bringing out this paper for the last year, that the next publication will be postponed for a month, as the staff wants a holiday." American journalists will smile enviously at the prospect opened up by the last sentence.

A NEW composing machine that is in the course of completion at Berlin, Germany, promises great results, as it is claimed it not only composes, but automatically justifies the lines while the compositor goes on with his work. It has already reached a speed of setting and justifying about seven thousand ems an hour. In guiding the types they do not reach the stick through the canals on an inclined plane, but are taken up and firmly held by grippers until they reach their intended place, a system avoiding all stoppages from irregular progress of the types.

RECENT PATENTS.

The following list of patents relating to the printers' interests is specially reported by Franklin H. Hough, solicitor of American and foreign patents, 925 F street N.-W., Washington, D. C., who will furnish copies of patents for 25 cents each:

ISSUE OF AUGUST 6, 1889.

- 408,597—Printer and cutter combined. L. Ehrlich, St. Louis, Mo.
- 408,394—Printing and delivery mechanism, web. S. D. Tucker, New York.
- 408,393—Printing cylinders, imposing forms upon. S. D. Tucker, New York.
- 408,398—Printing machine, web delivery apparatus. S. D. Tucker, New York.
- 408,390—Printing machine, delivery mechanism. S. D. Tucker, New York.
- 408,391—Printing machine, sheet-counting mechanism. S. D. Tucker, New York.
- 408,603—Printing machine, gripping motion for. G. P. Fenner, New London, Conn.

ISSUE OF AUGUST 13, 1889.

- 408,747—Printers' stand. S. W. Rathbun, Marion, Iowa.
- 408,913—Printing or embossing fabrics, machine for. J. Farmer, Salford, England.

ISSUE OF AUGUST 20, 1889.

- 409,518—Composing stick. V. Sperle, Pittsburgh, Pa.

ISSUE OF AUGUST 27, 1889.

- 409,821—Printing aniline black. J. Bracewell, North Adams, Mass.
- 409,906—Printing dark blue colors. J. Bracewell, North Adams, Mass.
- 409,885—Printing machine. M. Umbdenstock, Chicago, Ill.

WE desire to return our thanks to Mr. P. A. Loersch, the efficient and gentlemanly representative of THE INLAND PRINTER for the many courtesies received at his hands during our recent visit to Detroit. We were pleased to learn that he was not only held in esteem by his associates, but by all who have the pleasure of his acquaintance.

MEASUREMENT TABLE ON THE "POINT" SYSTEM.

BY H. MORTIMER, CHICAGO.

SOME months since, for the use of the compositors in an extensive book office, a table similar to the one below was worked out; the basis being the fonts actually in use in that office. A comparison with type from some other foundries reveals

such wide discrepancies in some of the fonts, that I have been induced to work out a table on the "point" system, and to offer it for the "benefit of those concerned." That it will prove of value, to compositors especially, is evident, as it can be made the basis of measurement of composition, which will do away with what is now an acknowledged grievance, namely, the uniform price paid for composition of "lean" and "fat" fonts.

A TABLE

SHOWING THE NUMBER OF LINES, 12 TO 30 EMS MEASURE, IN 1,000 EMS OF TYPE, FROM AGATE TO PICA BODY.

NOTE.—The LEFT hand superiors in each column denote the ems in a single line; the RIGHT hand superiors show the number of ems over on each 1,000. Thus, in the 12-em pica column, there are 26 agate ems in a line, 39 lines to 1,000 ems, and 14 ems over.

Pica Em	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30

TRADE NEWS.

FORD & CLARK, printers, Dallas, Texas, have dissolved partnership.

WARD & VORPHAL, printers, Wichita, Kansas, have dissolved partnership.

THE Halifax Printing Company, Halifax, Nova Scotia, has been dissolved.

C. L. JENKINS & Co., printers, Los Angeles, California, have dissolved partnership.

D. J. SEARCY & Co., stationers and printers, New Orleans, have made an assignment.

DAVIS & MCKILLIP, publishers of the Muncie *Herald*, Muncie, Indiana, have dissolved partnership.

THOMASSON & TAYLOR, job printers, Atlanta, Georgia, have been succeeded by J. J. Thomasson.

THE Virginia Printing and Lithographing Company, Richmond, Virginia, have sold their business.

THE Polytechnical News Company has been incorporated at Albany, New York, for the purpose of doing a publishing and printing business. Capital stock, \$20,000.

THE Quannah Publishing Company, of Quannah, Texas, has been incorporated with a capital stock of \$22,000. J. W. Nelson, D. Q. Smith and others are the incorporators.

LIGGIN & HOLT, book and job printers of Lynchburg, Virginia, are preparing to move into new quarters on Ninth street, where they will have more room and conveniences.

THE name of the Kellogg Printing Company, Providence, Rhode Island, has been changed to that of the Standard Printing Company, and will shortly move into more commodious quarters.

THE Missionary Publishing Company has been organized at Richmond, Virginia, with John S. Ellett as president. The capital stock is to be not less than \$12,000 nor more than \$48,000.

THE *Republic*, of St. Louis, has placed an order with R. Hoe & Co. for two of their immense presses, to cost \$40,000 apiece. These two machines will have an aggregate running speed per hour of ninety-six thousand four and six page sheets, seventy-two

thousand eight-page, forty-eight thousand ten and twelve, and twenty-four thousand sixteen, twenty, and twenty-four sheets.

W. W. WATTS and J. F. Anthony, of Pratt Mines, have incorporated the Pratt Mines and Ensley Publishing Company, capital stock \$4,000, to publish a newspaper and do job printing at Ensley, Alabama.

MR. F. WESEL, of F. Wesel Manufacturing Company, New York City, has returned from a trip to Europe, during which he visited many places of interest, including the Paris Exposition. Mr. Wesel is ready again for business and intends to make things lively in Spruce street.

MR. R. P. YORKSTON, a gentleman whose name is familiar as a household word wherever a pressman is found, formerly manager for the Duplex Printing Machine, has connected himself with the Whitlock Machine Company, 8 Spruce street, New York. In connection therewith it gives us pleasure to state that a good man represents a good press.

THE right, title and interest of the Union Square Printing Company, at No. 36 East Fourteenth street, New York, in printing presses, type, etc., were recently sold out by the sheriff, on execution in favor of G. B. Hurd for \$5,581, realizing only \$500. The company was incorporated in March, had a capital stock of \$50,000, and was controlled by Dempsey & Carroll.

WE are glad to note that Messrs. Reed & Goodman, of 513 Sacramento street, San Francisco, California, who located there about the first of last March, are building up a nice trade in the printing ink line. The firm consists of Charles S. Goodman and George Russell Reed. They are the sole western agents for the celebrated inks made by Frederick H. Levey & Co., New York.

METAL is being substituted by some English binders for cardboard in bookbinding. The metal is specially prepared, and the cover may be bent and straightened again without perceptible damage. It may, in fact, be safely subjected to such treatment as would destroy board covers. The metal is covered, and the finished book presents no difference in appearance, except in the greater thinness of the cover.

PAPER TRADE ITEMS.

A HEAVY flood, August 17, swept away the new paper mill at Beatrice, Nebraska.

The Lynchburg Pulp and Paper Company will begin at once to build its paper mill at Big Island, Virginia.

JACOB STERN is about to build a straw-paper mill at Austin, Texas. The mill is to have a capacity of two tons.

IT is reported that Mammoth Springs, Arkansas, is to have a \$250,000 plant for the manufacture of paper, to be built by Warner Miller.

THE Whiting Paper Mill at Menasha, Wisconsin, has been entirely rebuilt and is again in operation, making eight tons of paper a day.

THE paper manufacturers of Holyoke, Massachusetts, and those closely allied, will contribute to the tax fund this year the aggregate amount of \$97,332.

THE capital stock of the company lately reported as formed to build a seven-ton mill at Cumberland, Maryland, will be \$80,000, and \$30,000 of bonds will be issued.

THE Whiting Paper Company, Holyoke, Massachusetts, claims to be the largest manufacturers of writing papers in the world. Its output is twenty-six tons per day.

THE Minn Paper Company (not incorporated), wholesale paper dealers, Milwaukee, Wisconsin, has been damaged by water. Loss estimated at \$6,000 to \$7,000; insured for \$6,000.

THE Central Fiber & Paper Company of Cleveland, contractors, are building a paper mill for parties in St. Mary's, near Lima, Ohio, which will cost when completed \$15,000.

THE Cliff Paper Company, with a capital stock of \$100,000, has been formed at Niagara Falls, New York. The incorporators are C. H. Gilchrist, J. F. Quigley and Arthur C. Hastings.

PHILADELPHIA capitalists are negotiating for the purchase of the paper mills between Potomac and Washington, D. C., lying in Montgomery county, Maryland. They will be put in operation.

THE Winchester (Va.) Paper Mills have been sold to the American Strawboard Company, with headquarters in Chicago. The present management, Wissler & Co., will continue to operate the mills.

THE Wilkinson Paper Company, of Carrollton, Georgia, has been incorporated with a capital of \$35,000. It will build a six-ton paper mill. L. A. Thomas, M. R. Wilkinson and E. P. McBurney are the incorporators.

AT Sault Ste. Marie, Michigan, a pulp mill is assured, the projectors having been granted a handsome bonus, also four hundred-horse power free for ten years and exemption from taxation for five years.

THE Crown Paper Company has been incorporated at San Francisco, California, for the manufacture of paper and pasteboard. The capital stock is \$150,000, and the directors are Sigmund D. Rosenbaum, Mendel Esberg, Sigmund Schwabacher, Ludwig Schwabacher, S. J. Rose, Max Levy and Edward Lande.

PAPER mills are still on the increase in the West, and the most noticeable feature in this industry is the great changes in equipment that are taking place in many of the mills in order to increase the production and at the same time economize in manufacture. No less than thirty new mills are reported as under construction throughout the North and West.—*Paper Mill.*

A GREAT feat was recently accomplished at the Glens Falls Paper Company's mill. In twenty-four hours 40 tons 1,432 pounds of print paper was made by four machines. In that time, by detention to the machines, about five hours of time were lost. The machines made 940 feet of paper per minute, and "traveled" 256 miles 1,420 feet in the time they were at work. This entire record, the people at the mill say, is probably unequalled throughout the world, taking into consideration the number of machines used.—*Glens Falls Star.*

WASHINGTON NOTES.

THE new paper, the *National Democrat*, has not as yet materialized.

AMONG the participants in the excursion given by Columbia Union to replenish her building fund was Captain William Meredith, the new chief of the Bureau of Printing and Engraving. Nearly \$300 was received thereby.

THE vote of Columbia Union on the several amendments from the international body was decidedly in favor of "no insurance," the acceptance of the donation from the citizens of Colorado Springs, and the retention of the headquarters at Indianapolis.

ITEMS OF INTEREST.

A COAT of varnish can be printed over a sheet in the same manner as ink. Use gloss varnish and a block instead of ink and type.

A NATIVE newspaper, which has lately commenced publication at one of the Greenland settlements, bears the euphonious title (presumably of Esquimaux origin) of *Arrangaglotio Nalinginnar-nik Sysaraminas Sinik.*

A WRITER in the *American Machinist* recommends the use of castor oil in boilers where alkaline water is used. He says that from two ounces to a pint of oil will prevent foaming all day. The oil is put in after the engine has started, if foaming begins.

MOSCOW has two hundred printing offices, with about five thousand workers and apprentices; the number of the latter is very great. The workday has from ten to sixteen hours. The monthly earnings of the employes are said to fluctuate between eighteen and thirty roubles.

ONE paper mill in England, in Settingbourne, manufactures enough paper every year to put a belt around the world some 100 inches in width, says the *New York Tribune*. One of the constituents of this paper is esparto grass, which is brought in great bales from Algeria.

To make a good, cheap and serviceable fountain division for working two colors at once: Take a piece of "Ivory" soap and cut as near the shape and size of the fountain and roller as possible. Push down to the fountain roller and friction will soon fashion the soap to hug the roller so nicely that all danger of the mixing of colors will be overcome.

IN 1816 it took just one bushel of corn to buy one pound of nails. Then it required sixty-four bushels of barley to buy one yard of broadcloth, now the same amount of barley will pay for twenty yards of broadcloth. It then required the price of one bushel of wheat to pay for one yard of calico, now one bushel of wheat will buy twenty yards of calico.

To prevent gold leaf or bronze adhering to the surface beyond the outline of the sizing, pounce the whole of the surface after sizing with whiting, or lay on with a soft brush whiting mixed with water, brushing off the superfluous powder when the water has evaporated. The varnish or gold size may be distinctly seen over this whitish ground as the striping progresses.

THE latest evolution of paper is a paper oil can, so prepared with a patent composition lining that it is impervious to even kerosene oil, and is handsomer and more durable than any can in the market. It is very difficult to solder tin cans so that some are not defective, besides which kerosene oil seems to soon corrode them so that the oil works through, while those which are glass-lined are easily broken; hence, the paper oil can fills a want.

SIGNIFICANT of the inventive disposition of the American people is the number of patents which is granted by the government every year. Since 1836, 395,305 first patents were issued up to 1889. Patents for designs commenced to be issued in 1843, and up to the present year 18,830 of these have been granted. Inventors, or those holding patents, paid the government, during 1888, \$1,119,000 for privileges, etc. Government receipts in this way have been large since 1881.

A STORY ON CAPTAIN MEREDITH.

Captain Meredith, the new chief of the bureau of engraving and printing, is a plain, blunt man who does not mince words with anybody. His straightforward manner is particularly attractive in contrast with the dissimulation which is so prevalent among men in the public service. Recently the representative of a Grand Army paper published in the Northwest dropped into Captain Meredith's bureau while on a visit to the city and sent in his card to the chief. He was shown in and greeted Captain Meredith with some familiarity.

"I suppose you know, captain, that I opposed your candidacy for public printer with all my might," he said, with the air of a man who dared to express his honest sentiments to the world without fear or favor. "I was in favor of another candidate, and, as you know, I did all I could against you."

Captain Meredith took up the visitor's card again and scrutinized it carefully. Then he looked his man over calmly and replied: "This is the first time I have ever heard of it; in fact, this is the first time I ever heard of your existence, sir."

"Well, that beats me," said the editor as he drew a long breath. When he departed, his look of bewilderment had not vanished, nor was it unaccompanied by an expression which seemed to denote pity for Meredith on account of the latter's ignorance.—*New York Tribune.*

INSTANTANEOUS STEREOTYPING.

What appears to be an important improvement in stereotyping is the recent invention of Printer Friedrich Schreiner and Dr. Arnold Schott, of Philadelphia.

The invention consists of a special matrix, made from cotton and asbestos, with a face of stereotypers' ordinary cream tissue, and a backing of wood pulp.

With this matrix no heating of the type is necessary, as it can be dried, from cold type, in from half a minute to a minute and a half.

Large open spaces need not be filled in or backed.

A large number of casts can be made from one matrix.

The matrix can be used a year or more after being made.

From the foregoing claims of the patentees, which appear to be confirmed by an examination of several of the matrices made by this "cold-type process," it will be seen that some important advantages have been gained. The most important is that of time—doing away almost entirely with the twelve to fifteen minutes required to dry the matrix under the system now in vogue.

The type, not being heated, will not become soft on the bottom, nor "bottle-arsed"; hence a less frequent renewal of body fonts will be required. This may not inure to the benefit of the typesetter, but the heart of the newspaper publisher will rejoice thereat. The absence of heat will also allow wood cuts to be used the same as in stereotyping from plaster.

Mr. Schreiner, one of the patentees, is a compositor on the Philadelphia *German Demokrat*, and Dr. Schott, the other patentee, is his brother-in-law. Conjointly they have worked until success has been achieved, and well deserve the substantial reward that awaits the introduction of their invention.—*Printers' Circular.*

HOW SPONTANEOUS COMBUSTION COMES ABOUT.

From all the principles of chemistry spontaneous combustion is a possible, and, in fact, a frequent phenomenon. Professor William P. Tonry, the chemist, says the flame in such cases invariably arises from a combination of oxygen with some material favorable to producing heat.

Wherever there is turpentine there is danger of spontaneous combustion. If the substance be poured on rags, especially when they are soaked with grease, fire is likely to result. Furniture establishments and all places where oils and turpentine are kept are especially liable to visitation from fires of inexplicable origin.

Hay, when moist and packed tightly, ferments by a natural

process and absorbs oxygen so freely as to produce flame in many instances. Sulphuric acid, if allowed to come in contact with bagging at fertilizing factories, is also a source of great danger. The same acid, if mixed with water, produces intense heat.

A common source of unexpected combustion is the gas which escapes from a jet which has been carelessly left open. Gas and common air produces an explosive compound which can be touched off like gunpowder by a tiny flame.

Professor Tonry says it is difficult to prevent combustion which arises from natural combinations, although thorough ventilation and cleanliness in private houses and business establishments will go a long way toward reducing the danger. The phenomenon is common to all seasons, although a temperature of 70 to 80 degrees, which is high enough for fermentation, is most favorable to it.

An accumulation of inflammable materials is always to be avoided. It was once believed that human bodies, especially those of inebriates, were liable to take fire and be consumed spontaneously, but the theory finds but little acceptance in these days.

BUSINESS OUTLOOK.

Auburn, N. Y.—State of trade, fair; prospects, fair; composition on morning papers, 25 cents; evening (female), 16 cents; bookwork (female), 18 cents; job printers, per week, \$8 to \$12. Between "boiler plates" and female labor, this city does not "pan out" very well for "sailors."

Bay City, Mich.—State of trade, good; prospects, fair; composition on morning papers, 30 cents; evening, 28 cents; bookwork, 28 cents; job printers, per week, \$12. The prospects are not any too bright in the printing line at present. Polk's directory is being placed in the hands of subscribers now.

Buffalo, N. Y.—State of trade, dull; prospects, fair; composition on morning papers, 35 cents; evening, 33 cents; bookwork, 35 cents; job printers, per week, \$15. Work in book offices has not started yet, but prospects are good when it does.

Columbia, S. C.—State of trade, fair; prospects, not encouraging yet; composition on morning papers, 40 cents; evening papers, 40 cents; book work, per week, nine hours, \$15; job printers, per week, \$18 and \$20. The state work will start about October 15. C. A. Caloo, Jr., and James Woodrow will do the work.

Port Wayne, Ind.—State of trade, fair; prospects, fair; composition on morning papers, 30 cents; evening papers, 28 cents; bookwork, per week, \$13.50; job printers, per week, \$13.50. Labor Day here was a grand success, both financially and otherwise. We raised some \$51 on that day for the Clay county miners.

Kalamazoo, Mich.—State of trade, picking up; prospects, better; composition on morning papers, 27 cents; evening, 25 cents; bookwork, 25 cents; job printers, per week, \$10 to \$15.

Kansas City, Mo.—State of trade, dull; prospects, fair; composition on morning papers, 40 cents; evening, 35 cents; bookwork, 37½ cents; job printers, per week, \$17. The newspapers and job offices have been doing very little the past month, and there are many idle printers in town. It is expected that the revival of fall trade will help matters. The *Evening Star* is moving into its new building, putting on a dress of minion, brevier and nonpareil, and intends to run thirty-two cases.

Lincoln, Neb.—State of trade, fair; composition on morning papers, 35 cents; evening, 30 cents; bookwork, 33½ cents. Plenty of subs, but all are well supplied with work. At the last session of the Nebraska Legislature a law was passed making the first day in September a legal holiday in honor of labor, to be known as Labor Day. There was an attempt to celebrate made by some of the various labor organizations in the city. There was a parade, participated in by about two hundred and fifty union men. After the parade there were several good speeches on the eight-hour law and various other questions of interest to the laborer.

Lynchburg, Va.—State of trade, fair; prospects, moderately fair; composition on morning papers, 30 cents; evening, \$12 per week; bookwork, 30 cents; job printers, per week, \$12.

Manchester, N. H.—State of trade, good; prospects, good; composition on morning papers, 30 cents; evening, 20 to 23 cents; bookwork, 25 cents; job printers, per week, \$10 to \$12. F. H. Challis, of the *Daily Press*, has purchased the job office of O. D. Kimball.

Newark, N. J.—State of trade, good; prospects, fair; composition on morning papers, 40 cents; evening papers, 36 cents; bookwork, 36 cents; job printers, per week, \$17. Fall trade has begun to pick up, and the prospects are that there will be plenty of business for the coming six months.

New Haven, Conn.—State of trade, very dull; prospects, not encouraging; composition on morning papers, 40 cents; evening, 35 cents; bookwork, 35 to 40 cents; job printers, per week, \$15. Business has not been as dull in years as during July and August. There will be no stir until a few weeks

after the colleges open, when it is to be hoped we may have a chance for full time; now eight hours, with corresponding reduction in pay. Tourists should steer clear of New Haven.

Omaha, Neb.—State of trade, good; prospects, good; composition on morning papers, 40 cents; evening, 37 cents; bookwork, 37 cents; job printers, per week, \$18. Work picking up in the job shops, and subs in good demand in the newspaper offices.

Pittsburgh, Pa.—State of trade, good; prospects, good; composition on morning papers, 42½ cents; evening papers, 37½ cents; bookwork, 37½ cents; job printers, per week, \$16. Job and book work is very good at present, and a number of job printers are in town. Labor Day was not generally observed. The exposition opened its doors on the 4th instant.

Rome, N. Y.—State of trade, rather dull; prospects, good; composition on evening papers, 25 cents; bookwork, 25 cents; job printers, per week, \$10 to \$12.

San Francisco, Cal.—State of trade, dull; prospects, not encouraging; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 40 cents; job printers, per week, \$18 and \$21. The total active membership of the union is 730.

St. Louis, Mo.—State of trade, average; prospects, fair; composition on morning papers, 43 cents; evening, 38 cents; bookwork, 45 cents; job printers, per week, \$18. In job offices the prospects are fair, but there are an immense number of subs on daily papers in the city, with constant arrivals.

Wheeling, W. Va.—State of trade, fair; prospects, fair; composition on morning papers, 35 cents; evening, 30 cents; bookwork, 35 cents; job printers, per week, \$15. Plenty of men for all demands. The *Weekly Graphic* made its appearance in this city on August 24. August 24 was Labor Day in this city. The printers made the poorest turnout they have ever made. About one-fifth of the home printers were in line.

BUSINESS NOTICES.

We acknowledge receipt of a copy of "Printers' Calculations," a reference book for printing houses, published by the Burdette Company, Burlington, Iowa, which is a useful work and a great time-saver. It is sold at \$1.00.

We show in the present issue two specimen pages from the Dickinson Typefoundry, Boston, Massachusetts, which will meet the approval of printers who desire to obtain new and handsome faces of type. The *Typhotæ* is original in design and really artistic, is made in nine sizes, with figures and ornaments for each size, and will be useful in any job office. The French *Elzevir*, although imitating somewhat the French Old Style, will still be wanted by many offices who secure everything that is new. We predict for the *Typhotæ* as large a sale as accorded the popular *Quaint* and *Quaint Open*.

THE columns of THE INLAND PRINTER have always been open for the illustration of whatever improvements in the printing art have come to our notice, and we have given everything its due. Among the many whose achievements have been chronicled have been those of Mr. M. F. Bingham and his brother Leander, of New York, in the manufacture of printers' inking rollers. What improvements have been made in this line have been mainly by themselves. But the later improvement, a cut of which appears on page 1089, is that greater thing connected with the printing art. It is only second to the latest printing machine. It is the *ne plus ultra* of improvement in the printing line. This machine is the result of years of patient effort, experiment and large outlay of capital, triumphing over obstacles and difficulties. Not the apparatus alone was to be made, but the machine for the construction of the apparatus had to be built and invented also. The object in view was the superseding of the old, long, tedious method of casting rollers by the cumbersome, heavy, crooked and defective roller mold, and the substitution of something round, straight, smooth and as far from shrinking as possible and do it quick. The inventors have done it; the object has been attained.

EWING BROS. & CO.,

Of Chelsea, Massachusetts, appear before the readers of THE INLAND PRINTER for the first time, through the medium of an advertisement in this issue. By the advertisement it will be learned they are dealers in second-hand printing machinery of all

kinds, folding machines, etc., their especial business being to trade for or buy, and after thoroughly overhauling, to sell all such machinery they can get hold of. They have large shops of their own, fitted up with all modern appliances, in which all repair work is done, and which is under the direct supervision of the members of the firm. It is a strict rule of this firm, and one which they never violate, that no machine is permitted to leave their shops until it is thoroughly overhauled, put in perfect repair and tested. By adherence to this rule they have, in a comparatively short time, built up a large trade, which is constantly growing. They are in almost daily receipt of flattering testimonials as to their excellent workmanship and honorable methods of doing business. If you are in the market for any kind of second-hand printing machinery, or have any to trade or sell, correspond with them; your inquiries will receive prompt attention. The address of Ewing Bros. & Co. is corner Eastern and Woodlawn avenues, Chelsea, Massachusetts. They are twenty-five or thirty minutes by horse car from Boston, where they have recently opened an office at No. 50 Oliver street.

THE HAMILTON MANUFACTURING COMPANY.

We take pleasure in calling attention to the advertisement of this company, on page 1040 of this issue, which tells its own story. The establishment of a branch house in Chicago is one of the progressive moves constantly being made by this enterprising firm, and will prove of great convenience to country customers when in the city. The manufactory, located at Two Rivers, Wisconsin, is capable of producing a supply of the goods handled by the company sufficient to meet almost any demand, and at the Chicago house will be found a large and well-assorted stock from which outfits can be shipped at once. Do not fail to visit this firm when in Chicago.

THE "ECONOMIC" PAPER CUTTER.

The "Economic" is the name of a lever paper cutter manufactured at Westerly, Rhode Island, by Messrs. T. V. & V. C. Stillman. It is called "Economic" from the fact that it is a low-priced machine, and, in the words of the makers, "is designed to meet the demands of printers who want a good paper cutter at a low price." They further say, "It is very simple in construction, yet it is powerful, strong, and as well built as any high-priced cutter." The Messrs. Stillman are honorable, responsible business men of Westerly, and they warrant every machine. The "Economic" is made in three sizes, 24, 30 and 32 inches, and priced at \$115, \$150 and \$175, respectively. These prices include boxing and putting on board cars at the factory in Westerly. They have received many flattering testimonials for the "Economic," which they will send to any printer requesting them. See their advertisement in another part of this issue.

VALLEY PAPER COMPANY, HOLYOKE, MASS.

The advertisement of the above company appears in this issue of THE INLAND PRINTER. This company makes a number of well-known brands of papers, designated as "*Commercial Bond*," "*Valley Linen Ledger*," "*Our Ledger*," "*French*," "*Old English*" and "*Congress Linens*"; also fine wedding Bristols. All these productions are claimed to be equal to the very best, and are superior to many. The company has a capital stock of \$200,000, was organized in 1866, employs 250 hands and turns out from six and one-half to seven tons of loft-dried paper daily. The mill has recently changed management throughout, has been thoroughly overhauled, new machinery put in and an extensive addition made to the original plant, which gives increased facilities to meet the growing demand for the bond, ledger and linen papers and flat and folded writings manufactured.

Mr. Henry E. McElwain, the treasurer and manager, is a gentleman thoroughly up with the times in paper making, and one whom it is a pleasure to meet and transact business with. Give the Valley Company's advertisement a perusal.

COMBINATION MACHINE.

The accompanying cut represents a new machine for doing three kinds of work, which makes it a very desirable tool in a job bindery or printing office. It punches paper, books and other material for eyeletting purposes, from one sheet to 1/2 inch thick

at a time, with one or more punches any distance apart up to 12 inches. It does stab-binding books any distance to 12 inches apart with one or more needles at a time. It does round corner book cutting up to 2 inches thick, any size of corner. Can make changes of cutters, punches or needles in two minutes. Side, back gauges and strippers with machine. Can be worked with steam or hand power, preferably steam. The cutter spindle of this machine has a period of rest equal to one-half the revolution of shaft, which gives the operator time to adjust his work to the gauges,

thereby preventing any spoiled work. This machine occupies a space of only 14 by 18 inches, and can be placed on any convenient stiff bench where power can be applied. This valuable machine can be seen at the showroom of J. M. Ives & Co., dealers in bookbinders' machinery, 293 Dearborn street, Chicago, who are sole agents for this and many other improved machines.

THE WETTER NUMBERING MACHINE.

This useful invention for consecutive numbering is meeting with as great success in Europe as in America. Latest advices from Berlin, Germany, state that the machine pleases everyone, and wherever introduced it meets with hearty approval and gives unqualified satisfaction. The government printing offices, especially, unite with the smaller offices in commending the Wetter as the most useful device yet brought to their attention. The machines have been exhibited at the Paris Exposition, with the result of giving them wide-spread popularity, and it is safe to assert that before long there will be as many in use in different parts of Europe as there are now in the United States and Canada. We take pleasure in again presenting the advertisement of Messrs. Wetter & Co. on page 1064 of this issue. The printing craft on both sides of the ocean will in a short time more fully appreciate the advantages and usefulness of the Wetter machine as it becomes better known. Write to the home office, 28 and 30 Morton street, Brooklyn, New York, for full information.

PHOTOGRAVURE WORK.

The Boston *Photographic Review*, edited by J. O. Moersch, is publishing a series of articles on gelatine printing, photogravure, and photo-engraving, embracing the whole description as they are worked. Everybody should read them. Send \$1.50 for one year's subscription, to S. Wing & Co., publishers, Charlestown, Massachusetts.

A RARE BARGAIN—\$1,600 buys a \$3,200 job office at Sycamore, Illinois; 51 miles west of Chicago; 3,800 people; only 2 papers, both Republican. Outfit embraces Potter drum cylinder, 32 by 48, rubber packing; half medium Gordon; one-eighth medium Universal; 32-inch power paper cutter; 1/2 horse-power engine; 200 fonts job type, 43 new; 10 fonts standard wood type; also everything required to print a newspaper. Apply to C. D. ROGERS, Sycamore, Illinois.

ADVERTISER, a competent printer, with many years' experience in all branches of the business as foreman and manager, desires a position in either capacity. Address "H. M.," INLAND PRINTER.

EDWARD HARRIS, printer, of Hamilton, Canada, was in Chicago last December; if this should meet his eye he is earnestly requested to write. Any information respecting him will be thankfully received by his anxious parents. Address W. J. HARRIS, Drill Hall, Hamilton, Canada.

FOR EMPLOYING PRINTERS—The most practical reference book for the printing house desk is "Printers' Calculations." It shows at a glance the value of stock, and also of time consumed on any job. Nothing like it has yet appeared. Price \$1.00. BURDETTE COMPANY, Burlington, Iowa.

FOR SALE—Complete Hughes stereotype outfit No. 1, 13 by 23 inches, with all tools, etc., for doing first-class work, and full instructions for use. Outfit is new, and will be sold at a bargain. Address "BARGAIN," care of INLAND PRINTER.

FOR SALE—Half interest in a well-established and finely equipped book and job printing office in a manufacturing town of nearly 20,000 population. \$4,000 to \$5,000 required. Might take part in satisfactory trade. Address HALF INTEREST, care INLAND PRINTER, Chicago.

NOTICE—Printers please take notice that one F. C. Taylor, who advertises himself as the inventor of a Chromatic Printing Process, announces on his business cards that his permanent address is at our New York office. This statement is entirely unauthorized, as we have no arrangement of the kind nor any business relations with said F. C. Taylor. CAMPBELL PTG. PRESS & MFG. CO.

PERMANENT position and good wages for one or two good type cutters. KEYSTONE TYPEFOUNDRY, Nos. 734-740 Sansom street, Philadelphia, inventors of Nickel Alloy Type Metal.

PRESSMAN—A young man, first-class cylinder pressman, would like steady situation, city or country. Address "A. B.," care of Shea, 114 S. Sangamon street, Chicago.

SITUATION WANTED—A sober young man of seven years' experience in general printing, wishes (after October 1) to secure situation in first-class job office in Chicago. Address "C. W.," care of INLAND PRINTER.

SPECIMENS—A few copies of "Fassett's Specimen Book of Every-day Printing" for sale. \$1 postpaid. First come, first served. Address CHAS. W. FASSETT, St. Joseph, Mo.

THE largest job printing office in a large, thriving western city for sale; doing best business in the place. Terms easy. Good reasons given for selling. Railroad, show and catalogue printing a specialty. Address "X," care of INLAND PRINTER.

TO designers and designing printers.—We will pay liberally for new and original designs, that we can use for new faces of type. Originality the main requisite. KEYSTONE TYPEFOUNDRY, 734-740 Sansom street, Philadelphia, inventors of the celebrated Nickel Alloy Type Metal.

WANTED—The Inland Printer Co. desires to obtain fifteen or twenty copies of No. 4 of Vol. III of THE INLAND PRINTER to complete sets for binding, and will pay 25 cents per copy for same. Send them on if you can spare any.

PHILADELPHIA

A SUCCESS!

No cams or powerful springs are used or needed to govern its motion. Its parts are evenly balanced, and its smooth and noiseless operation, without pound or vibration when driven at the highest speed, is one of its important features. *Four* form rolls, in connection with a fountain both simple and perfect in its operation, give an unsurpassed ink distribution.

BOSTON, August 29, 1889.

MESSRS. GEO. W. PROUTY & Co.:

Regarding the "Perfected Prouty" Press purchased of you we would say that we have found it satisfactory, and for the following reasons: *First.* It is strong and capable of doing heavy work easily. *Second.* It runs smoothly, and all the attachments, gripper-motion, throw-off, etc., are well arranged. *Third.* The distribution is first-class, with superior fountain. *Fourth.* It is very rapid, the speed being limited only by the ability of feeder.

ROCKWELL & CHURCHILL,
City Printers, 39 Arch Street.

BOSTON, August 27, 1889.

GEO. W. PROUTY & Co.:

The "Perfected Prouty" Press we have now had in use about a year is, we find, a machine of great strength, is easy to operate and can be driven at a high speed on any class of work, in fact its speed is limited only by the ability of the operator; it turns off more work in a day than any other job press in our office. This alone, in these days of close competition, is one reason why printers in want of a money-making machine should give it the preference. The ink fountain is the most perfect in its operation, and can be cleansed and adjusted more readily than any other we have ever seen.

McINDOE BROS., 40 Oliver Street.

BINGHAM'S BATTERY OF GATLING GUNS

FOR THE MANUFACTURE OF
PRINTERS' INKING ROLLERS.

THIS cut illustrates our latest improvement in the apparatus for the rapid and perfect manufacture of Printers' Inking Rollers. It is the application of hydraulic pressure by which twenty rollers are made in *one minute* by forcing the composition in the molds from the bottom, and retaining the pressure until the hardening process has solidified them, thus producing firm, solid, elastic and lasting rollers, absolutely straight, round and smooth, whereby perfect distribution, evenness and purity of color and improved output is obtained. A realization of what has long been sought for. *No pinholes. No crooked rollers. No delay*, and least possible shrinkage. Printers engaged in the business for the money there is in it can not afford to be without them. They are the cheapest, because they are the BEST.

Samuel Bingham's Son,

22-24 Fourth Avenue, CHICAGO.

OUR GOODS ARE SOLD BY ALL THE LEADING TYPEFOUNDERS AND DEALERS IN PRINTING MATERIALS.

.... THE NEW STYLE NOISELESS

LIBERTY * JOB * PRESS

*Has the MOST PERFECT DISTRIBUTION ever
obtained on a Job Press.*

It is the only Job Press whose form rollers can carry full size riders.

The Liberty Fountain is the best used on any job press, and can be regulated by the feeder while the machine is running. These features insure better ink distribution than can be had on any other jobber.

It is the *lightest running* job press made. Its new patent *noiseless gripper* motion is worked by a cam, positively, and not by springs which are always breaking and wearing out.

The *Throw-off* is simple, durable and exceedingly convenient, and does not weaken the impression, as is the case with most all the other throw-offs.

Any desired change can be made in a form without lifting it from the bed of the press. This makes the "Liberty" the best press for ticket, calendar and all similar jobwork where dates and figures have to be frequently changed.

The fly-wheel can be run in either direction, thus making it possible to locate and belt the press wherever convenience makes it most desirable.

Apply for descriptive pamphlets and price lists.

THE "LIBERTY" PAPER CUTTER— 30 inches. The cheapest good cutter in the market.

Regular style, \$140; new style with inlaid rule and lines, back and side gauge, \$160. Boxing extra.

THE "LIBERTY" GALLEY. All brass. Guaranteed for three years. Indestructible. Prices not higher than full lined galleys.

THE "LIBERTY" GALLEY LOCK-UP. Price \$1.50 each. Can be made to fit any size of galley. No more looking for quoins that will not fit. The Lock-ups being made of brass, neither temperature nor moisture can affect them.

THE LIBERTY MACHINE WORKS,

The "CALIFORNIA RELIABLE."

WHAT ITS PATRONS SAY OF IT.

From the Office of
THE BANCROFT COMPANY,
Printers and Stationers,
San Francisco, June 26, 1888.

Messrs. PALMER & REY,
San Francisco, Cal.

Gentlemen:—Our machinery expert, Mr. Burton, has examined your "California Reliable" Jobbers at our request, and we are pleased to say that his report is that your "California Reliabilities" are much better built than the Chicago Old Style Gordons or "Challenge" Gordons. This being the case, we shall arrange to put in a line of your presses at once.

THE BANCROFT COMPANY,
Per PARISER, Sup't Printing Dep't.

Office of THE THEATRICAL PUBLISHING Co., Printers.
San Francisco, June 18, 1888.
Messrs. PALMER & REY,
San Francisco, Cal.

Gentlemen: Please quote us best price for two more quarto-medium "California Reliable" Jobbers. The last quarto-medium you supplied us with some few months since, gives the best of satisfaction. The Fountain also is a fine piece of mechanism.

Yours truly,
THEATRICAL PUBLISHING Co.

Ashland (Or.) Tidings, October 28, 1887.

The "California Reliable" job presses manufactured by Palmer & Rey at San Francisco are preferred by many of the best printers to any other first-class press made. The quarter-medium purchased by the Tidings office about a year ago has been run on all kinds of work, often at a high rate of speed by our water-power, and has given entire satisfaction.

Yours truly,
W. H. LEEDS.

From UPTON BROTHERS, Printers,
San Francisco, June 15, 1888.

Messrs. PALMER & REY,

The throwoff you attached to our "Challenge" Gordon is a beauty, and is a great contrast to the useless thing that was on the press before.

Yours truly,
UPTON BROTHERS.

Medals were awarded this press at the San Francisco Mechanics Exhibitions of 1886 and 1887.

Cut of 8x12 size.

BRANCH HOUSES—112 and 114 FRONT ST., PORTLAND, OR. and 115 and 117 N. LOS ANGELES ST., LOS ANGELES, CAL.

✦ A California Job Press ✦

Every Press complete with Patent Throwoff and Fountain.

BEING desirous of introducing our Job Presses called the **CALIFORNIA RELIABLE** into the Eastern States, we have decided to sell them at reasonable prices, **Freight Paid to any Railroad Town in the United States**, making them the **cheapest** and, as they are acknowledged to be, the **best** press manufactured after the pattern of the Old Style Gordon.

Medals were awarded this press at the San Francisco Mechanics Exhibitions of 1886 and 1887.

We claim that our **CALIFORNIA RELIABLE** Job Press with our *patent solid handle throwoff*, is the best press made after the Old Style Gordon pattern, and is far superior in workmanship, design, finish and strength to the presses called "Old Style Gordon," or "Challenge," made in Chicago. If you doubt our word for it, write to any machinist of note here and have him examine our machines thoroughly, examine the drill-holes, the fit and weight of the shafts and draw arms, also the patent *solid handle throwoff*; have him notice that we use **WROUGHT IRON** and **STEEL** where in the other presses *cast iron* is used. Any competent machinist will not be five minutes in deciding that our **CALIFORNIA RELIABLE** will wear twice as long as the cheaper built machines of other manufacture.

We have over *two hundred* **CALIFORNIA RELIABLE** presses in use at present time, and as our facilities for manufacture are a press a day we can fill orders promptly.

It may seem strange to many that a San Francisco firm should offer to supply Eastern printers with Job Presses, but we have demonstrated the fact that we can, with the aid of the best mechanics and most approved labor-saving appliances, build and place on the market printing presses that will successfully compete in quality and price with those of the best Eastern makers.

NOT A CHEAPLY BUILT PRESS.—Our **CALIFORNIA RELIABLES** have not been built as cheap presses, but are made of the best material and finished in a first-class manner.

FOUNTAIN.—Our fountain is a well-fountain, the full width of the platen, and is the only fountain that will feed the ink with the throwoff *on or off*, and is furnished with every press without extra charge.

THROWOFF.—Our patent throwoff is acknowledged to be the best in use. It is certain in its action and does not get out of order. It has a solid handle and is in easy range of the feeder.

GUARANTEE.—We guarantee every press we sell to be first-class, in every particular, and will renew any part of a press, *free of charge*, that gets broken through any defect in its manufacture.

OUR TERMS are:—Cash with order, or part cash, the balance to be paid on delivery of machines; but to parties giving us good bank or mercantile references we will ship to and draw with bill of lading. We have no agents and shall appoint none, so send your orders to us direct. Send all orders to—

OFFICE OF PEORIA COMMERCIAL REPORT,
H. S. HILL PRINTING CO.

PEORIA, ILL., February 1, 1889.

Campbell Printing Press and Mfg. Co., New York :

GENTLEMEN.—In compliance with my personal promise to your Vice-President, Mr. Brower, when last in the city, I give you my experience with power presses.

About twenty years ago I experienced the necessity of a faster press than the Gordon Oscillator, which I was then using, and put in a Potter 24 x 36 cylinder, new, which I used about three years, during which time I had the ink vibrator renewed three times, and the springs once, when, finding it would no longer register nor do good work, being badly track-worn, and requiring a still faster press for my Daily Reports, I put in a No. 1 Hoe; but this press, at a speed never above 2000 an hour, I so completely used up in one year as to be unfit for my work, which was steadily increasing, when, about fifteen years ago I was induced, with many misgivings, to put in a "Campbell Pony No. 7." This press, though much larger, I easily run up to 2000 an hour, and often 2500, without damage, and for about ten years this press did one-third, increasing to fully one-half more work than either the Potter or the Hoe had done. My work had by this time so increased as to require another and still faster press. I went to Chicago and visited all the press agencies before going to the Campbell rooms, and was struck with the unanimity with which all the agents said comparatively little about their own presses, but expanded on the short life and comparative worthlessness of that "common cast-iron Campbell press." I went to the Campbell rooms, and they told me what their No. 8 Pony would do and warranted it. I did not need their warrant for the durability of their "cast-iron press," for I had tested them. I bought one, and it has run more than satisfactorily ever since at a speed varying from 2500 to 3500 impressions an hour, as occasion required—the latter speed it run today for over two hours without a stop! My No. 7 Pony, up to the time I took it down to exchange with you for a new larger one, did as fine work as I ever saw done on a two-roller cylinder, and during the fifteen years that I have run the No. 7 and the five years the No. 8, I have not paid one cent for repairs except to twice replace the wooden bearings on No. 7, and three or four grippers and "shoo-fly" fingers carelessly broken by feed-boys.

I have given you the facts, and you may make such use of them as you please.

Respectfully,

[SIGNED.]

H. S. HILL.

We make the following Special Claims for our Pony Press.

IN THIS PRESS Railroad, Insurance, Blank Book, Fine Circular, Envelope and similar classes of work can be printed much better and more cheaply than upon half, quarto and eighth medium job presses or pony drums. It is convenient to make ready and easy to manage. Its cylinder and bed are especially accessible. There is not a tape or a string anywhere about this press. It will last longer than any pony press in the market. It delivers the clean side of the sheet to the fly; cannot smut or streak the job; has both table and screw vibrating distribution; gives a perfect impression, and is faultless as to register.

It will fly a sheet with as small a margin as *one-sixteenth of an inch*. The color can be set in the shortest possible time, because the fountain and delivery table are both on same end of press. The fountain and ink table are protected from dust and trash by being under the delivery table.

This press has table distribution in addition to the rack and screw distributor used on other ponies. A very high grade of color and cut work can be done on it. Our combination distributor adjustment is used on this machine, as upon all our two-revolution presses.

As this press has a small cylinder, it is not top-heavy, as are all drum ponies. It is a well-balanced, shapely piece of mechanism, made of best materials by most expert workmen.

Our Pony is the only two-revolution Pony built. It will make more money in any good-sized job office than any other press.

Read the accompanying testimonial, and write us for terms, etc.

PUBLISHED MONTHLY.

THE LEADING TRADE JOURNAL OF THE WORLD IN THE PRINTING INDUSTRY.

THE INLAND PRINTER.

A. C. CAMERON, EDITOR.

WITH the October, 1889, number THE INLAND PRINTER begins its seventh year. It is the intention of the publishers to make Vol. VII of this journal surpass any of its predecessors in the tone of its editorials and original articles, character of its contributions, extent and value of its correspondence, beauty of its illustrations, and general excellence of its typography. No effort will be spared to make it of more value to the employer and employed, more beneficial to its advertisers, than in the past, and prove a welcome visitant in offices and homes of all engaged or interested in the printing and kindred trades.

<p>TO THE EMPLOYER It affords information to be obtained in no other publication; suggestions as to managing offices successfully, hints in regard to estimating on work, ideas about supervision of the various departments, reports of late inventions in printing, and other matters of interest.</p>	<p>VOLUME VII</p>	<p>TO THE PRESSMAN Its every page is a delight and a study, the press-work being pronounced by the trade superior to anything heretofore produced. Articles on care of rollers, electricity in the pressroom, making ready, mixing colors, etc., will appear from month to month.</p>
<p>TO THE COMPOSITOR It offers items of news from correspondents everywhere, business outlook in different cities, giving state of trade and other interesting notes, biographical sketches, with portraits of prominent printers connected with organized labor, specimens of printing in black and colors, diagrams of imposition, etc.</p>	<p>CLUB RATES. A SPECIAL RATE OF \$1.50 PER YEAR Will be made to clubs of six or more subscribers. Proprietors of offices should take the paper themselves and induce their men to do so. It will be money well spent, as the ideas derived from a perusal of its pages will make them more efficient workmen, and enable them to produce more perfect and artistic work, giving the office a higher standard of production, and consequently better prices. Foremen of offices, large or small, can by little effort secure a club of six subscribers. It will pay to do it.</p>	<p>TO THE APPRENTICE Desirous of coming to the front and taking his place with thorough workmen, in addition to its practical articles on printing, it shows from time to time reproductions of amateur and poorly executed jobs with same matter displayed as it should be upon opposite pages—an object lesson that cannot fail to be beneficial.</p>
<p>BIGGER</p>		<p>BRIGHTER</p>
<p>TO THE ELECTROTYPYER A visit each month from such a periodical can not be otherwise than welcome. What interests printers and pressmen will interest as well the electrotypy and stereotypy. Machinery pertaining to his trade will be illustrated and described.</p>	<p>BETTER</p> 	<p>TO THE ENGRAVER The illustrations in wood engraving and zinc etching, half-tone and modern processes, and articles descriptive of them will prove of unusual benefit. New processes will be mentioned as fast as they become known.</p>
<p>TO THE ADVERTISER Desirous of reaching trade in all parts of the world, it affords the best medium extant. THE INLAND PRINTER circulates among the best classes of trade, and its large circulation insures a wide scope to advertisements appearing in its columns.</p>		<p>TO THE DESIGNER It gives ideas in regard to lettering, sketching and other branches of his work. Each number will contain something of interest and profit. Color blending in connection with designing will be touched upon, and useful hints given for producing best results.</p>

• Subscription Price, \$2.00 per Year. Sample Copies, 20 Cents each.

Foreign Subscriptions, Postage added.

To old subscribers we say: Continue your subscription. You will like Volume VII better than you did previous ones. To all who are not subscribers we say: Try THE INLAND PRINTER six months or one year. Once tried, we are sure you will continue.

Send Twenty Cents for Sample Copy.
