

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

THE
INLAND PRINTER

A TECHNICAL JOURNAL

DEVOTED TO THE ART OF PRINTING.

THE COMPOSING ROOM.

BY M. J. CARROLL.

SO much has been written of late years concerning the economical management of the printing office, both from the standpoint of the employer as well as that of the artisan, that it would seem as though the subject was well-nigh exhausted, and that there would be little left to say on the subject at the present time. It occurs to me, however, that there are some phases of the question that have not been under discussion, or, in so far as they have been dwelt upon, they have been treated in such a manner as to leave a wrong impression on the reader's mind, and, in a manner, work an injustice to a large and deserving branch of the craft. I do not wish to be understood as saying that the many estimable gentlemen who have discussed the internal workings of the printing office were actuated by a desire to mislead their readers, or to create an impression prejudicial to the standing or interests of any one branch of the craft, but I do maintain that the conclusions of most writers on the subject would have that effect. That it is a subject on which there is room for a wide difference of opinion there is no question, and the purpose of this article is to state the views of one who has spent a lifetime in the printing office, and whose experience has led to radically different conclusions from those usually entertained on the subject.

When discussing the subject of making necessary improvements in or additions to the composing room of a printing establishment, the matter is, as a general thing, dismissed with the remark that "there is no money in the composing room anyway." Now, one of the cardinal principles underlying all business propositions, and an accepted truth by the most eminent writers on political economy, is to the effect that whatever profit will result from the manufacture of an article is to be credited proportionately to all branches of the mechanical arts that may have been engaged in such manufacture. It would undoubtedly strike the humblest boy in a printing office as something supremely ridiculous to hear a penknife manufacturer claim that all the profit in his business was made in the manufacture of the blade, while the making of the handle was a dead loss. Yet it is no uncommon thing to

hear well-informed managers and proprietors of large printing establishments give expression to just such ideas in regard to their business. If the penknife manufacturer thinks it to his advantage, when taking a contract for the manufacture of one thousand knives, to put the handles in at a nominal figure, or for nothing for that matter, providing he can get a price for the blades that will assure him a profit on the contract, it is his own business. But it would be manifestly unjust for him to claim that he made the handles at a loss, or that the operators in that branch of his business should bear the burden of his peculiar way of making a contract. Yet this is the manner in which business is done in a great many of the printing offices in this country.

That the operating and financial results attending the running of most of our large composing rooms are anything but satisfactory, there is no question of doubt, and the object of this article is not merely to give the writer's opinion as to the cause of this unsatisfactory condition of affairs, but principally to point out some of the underlying reasons why this condition exists. Take any of our large printing offices for an example, and it will be found that the capacity of the pressroom is a well-understood matter, while the quantity and variety of material in the composing room for the accomplishment of a certain work, while it may be of the most inappropriate and meager description for the purpose desired, will be generally regarded by the men in charge as fully equal to the requirements of the case. The result is that a work is taken that is altogether beyond the capacity of the composing room, with the inevitable result that, after a useless and expensive delay, an order on the typefounder is found necessary.

But this is not the only difficulty. Many jobrooms that I know of make no pretense to keep their material properly distributed, and have things in their proper places. A certain work will be taken in and given out to the compositors. It is found that the material on hand is entirely inadequate to accomplish the work, but still it is expected that the compositors will in some way do what is expected of them. It soon becomes apparent that the work is getting behindhand, and an extra force of men is put on to make up for lost time. Still the men have nothing to work with, and the condition of affairs is not

improved. Finally it is decided to do what ought to have been done in the first place, and the necessary material is purchased, a little at a time, to do the work. All this time there has been just so much unnecessary delay and expense. The work when finished may be a standing job. Another work comes in of a somewhat similar character, and the manager, remembering that he had recently purchased just the material necessary, and conveniently forgetting that it was locked up in a job that could not be distributed, will go through with exactly the same tactics that were formerly employed, and with the same loss of time and money.

In the pressroom a different course is followed, and with more beneficial results. The pressman is not expected to run off a work with the same paper that was used on the last job of a similar character, although the compositor is expected to accomplish an impossibility of the same nature. If the pressman runs out of ink he is not expected to keep his press running, or to scrape up enough to answer the purpose; and here is where another striking contrast between he and the compositor is noticed. The compositor is expected to in some way procure the material to do his work, and I have seen men roundly abused because they could not find the desired sorts, when probably the material was never in the office, and if it was, it was no fault of theirs that it was not in its proper place.

The first thing that a manager of a printing office does, when he has secured a large contract, is to see that he has paper, ink and everything that is required to do the work in the press department, and to do it properly. I do not think it would be unreasonable or asking too much if he did the same thing in the composing room, and the more promptly it is done the more satisfactory will be the result. Nearly every jobroom is filled with material that was purchased without any idea as to the requirements of the trade in which the office would ultimately become interested. This results in having a multiplicity of fonts and cases that will have the effect of bewildering the newcomer, without rendering any beneficial results to the office. It strikes me that the proper way would be for an office to supply its composing room with the material necessary in the line of trade in which they are doing business, and then to see that every ounce of this material is properly distributed when the actual requirements of the case will permit of it. I have been in offices where it would have been considered almost a crime for the foreman to engage men enough to distribute the dead matter in the place, although a continued search and a continued demand was being made for the very material so tied up. In this respect the foreman should have the greatest latitude; in fact, he should be required to see that his office was kept in such shape as to permit of the best possible results from the material at hand.

The point I raise is simply this: That work is unhesitatingly accepted by managers of printing offices that is clearly beyond the capacity of the composing room to turn out in a satisfactory or profitable manner, and that the actual capacity of the composing room is diminished by inefficient and insufficient distribution. On this point I would like to call attention to the newspaper composing

rooms of this and other cities. There we find that the material on hand is selected for an express purpose, and though a certain number of men on a newspaper will set more type every day of publication than will be done by twice their number in a jobroom, still there is very little running to the typefoundry, and no doubt at all as to the exact time when their work will be finished.

Before closing this article I will take advantage of the opportunity to say a few words on the apprenticeship question. However widely we may differ on other points, I believe all will agree that our treatment of this question is entirely and altogether bad. I can think of no other word that would express my opinion of the matter more forcibly than that little one of three letters, although I might strengthen it by prefixing a very expressive though not very polite adjective, which the proofreader would undoubtedly strike out. A little common sense and judgment applied to this question could not fail to work great good. As far as my observations go—and they extend over a great many years now—the usual course pursued in the matter is to hire a boy when one is wanted, paying no regard to the mental or educational equipment required of the future printer, and to put him at, and keep him for an indefinite time at, whatever he can do with the least teaching. In jobrooms they are generally found distributing when not running errands or doing chores around the office. I can say without any qualification that distributing job type in a large office is the least profitable employment that a boy can be put at. With the innumerable variations now to be found in the faces of type, it requires a man to do that work, and a good man to do it with profit to the office. It is an easy matter to misplace sorts in our large jobrooms, and when they are misplaced they are of no more use than if they had never been purchased.

I have seen a number of plans suggested in *THE INLAND PRINTER* for the proper education and training of the apprentice, but if I am not greatly mistaken they will generally be found impracticable and impossible of accomplishment. I would like to see some of our prominent job offices take this method in regard to their apprentices, and see what it would result in: When a boy applies for the position of apprentice, see that he has a fair common-school education, and possesses an average amount of brightness. Meeting these requirements, and after a certain time spent in general utility work around the office, which will be found useful in making him familiar with the technicalities of the business, place him at composition on book or newspaper work for a year or a year and a half. If there is anything in him he will be a good compositor at the end of that time. Then put him at jobwork, and it will be found that long before he has completed his apprenticeship he will be very valuable to his employer. I have seen this method employed with the best possible results, both to the apprentice and the employer. How many apprentices an office should employ is a mooted question. The employer thinks that if he is allowed to employ them without limit he will be benefited. The journeyman believes that all that is necessary is enough to supply the demands of the trade

with good printers. I am inclined to favor the latter proposition.

Presumption is a natural trait of humanity, and I have no doubt but that to men who have succeeded in making themselves independent in the printing business it will seem presumptuous to them to be lectured by one who has not succeeded in rising above the ranks. But instances have been known in the past where opportunities were as clearly observed from the ranks as from the saddle of the general in command, and we cannot all occupy a seat in the saddle.

PROGRESS IN LETTERPRESS PRINTING.

BY ALFRED PYE.

IT must be patent to the most casual observer that the letterpress printing of the present day is far ahead of what was accomplished ten, or even five, years ago, and the causes of this great improvement are many, and not confined to any one branch of the printing trade. In job printing, graceful lines and ornamental faces, displayed in designs that formerly were thought only possible for the engraver or lithographer, have taken the place of the rigid lines of plain letter very recently considered entitled to the term "fine printing," while tints are often used to heighten the effect and attractiveness of the designs. In periodical and book printing equal progress is discernible, the style and make-up, together with the engravings used in their embellishment, being much superior to the old-time work.

Not to the printer alone is the credit of this improvement entirely due. During the past few years the typefounders of the United States have produced numerous types of graceful, fanciful or curious designs, the combination and contrast of which have furnished the printer opportunities for the exercise of his fancy to a remarkable degree. Combination borders and ornaments of artistic character have also been introduced, and have proved great helps to the printer in formulating designs.

The paper makers, from time to time, introduce novelties in the line of fancy stationery, such as ball programmes, wedding and visiting cards, menus, etc., which help the printer considerably; while in book papers a better grade of stock and a finer printing surface assist the pressman to turn out a high class of work.

The ink manufacturers have also contributed something to the general improvement, by placing upon the market a superior class of goods, suited to the requirements of the newer productions of the stationer and the engraver; for in this connection we must not pass by the almost magical change that has taken place in this last mentioned branch of the art. The various processes of photo-engraving, zinc-etching, etc., produce printing surfaces almost as much superior to wood engraving as the type of the present day is to that of Gutenberg or Faust. These processes, not being confined to the production of any one class of engraving, are becoming more and more useful to printers and the general public, for the printing blocks being produced direct from the photograph or original drawing, without the intervention of the draftsman and

wood engraver, can be relied upon for accuracy, while their beauty and fineness cannot be excelled. A photograph of the article or design represented cannot be more true.

But, while recounting the progress made in the various branches of the printing trade, we must not forget the pressman and his labor. Without his efforts, the improvement in the typographic, engraving, stationery and ink departments may go for naught. It is, in a great measure, his skill that presents to the public eye the perfection attained by the other branches referred to. A poor pressman can render abortive all the exertions of the typefounder, compositor, engraver and stationer combined to produce a first-class work, while a good pressman can often cover up or minimize the shortcomings of one or more of the kindred branches. Too little credit has oftentimes been given to the pressman when a veritable art production of the "art preservative" has been criticized—each and every branch receiving its meed of praise, except the press department, the existence of which did not seem to be dreamed of, but which, maybe, was in reality the main cause of the encomiums bestowed so lavishly upon the other contributors to the gem so greatly admired.

Yet other reasons than those above stated exist for the improvement that has taken place in typographic printing. Education has been rapidly spreading of late years, and the artistic perceptions quickened in the rising generations by the course of study in the public schools has extended to the every-day requirements of business. The plain card which set forth the name and business of our ancestors is no longer considered good enough for the young and aspiring tradesman of the present day. Competition is severe; and the more attractive his card, or billhead, or letterhead can be made, so much the more advantage he has over his rival. So he argues; and the printer who comes nearest to his idea of perfection gets his custom. And not only in the job department of the printing business is this preference apparent; in newspaper advertising the same principle holds good, and the paper that can give the best display stands a good show of getting the greatest share of advertising patronage.

Press manufacturers have helped along the progress in typographic art. A few years ago the presses were so constructed that they traveled at a very low speed, and needed dampened paper in single sheets to produce a passable impression for book and newspaper work. For jobwork a better class of press was provided, but not equal to those of the present day. Now our newspapers are run through the press from a roll of paper a mile or more in length, dampened, printed on both sides, cut, folded and delivered ready for sale at a rate of speed that would have been thought fabulous even five years since. Our book presses print on dry paper, with a finer finish and at a greater speed than formerly, and our job presses are having so many improvements made that it is difficult to keep track of them all.

Besides these mechanical aids to advancement, we have our trade journals, among which THE INLAND PRINTER

occupies the most conspicuous position; the *American Art Printer*, the *Paper and Printing Trades Journal*, and the *British and Colonial Printer and Stationer*, contributing their quota to the fund of information ever furnished to the practical printer. Truly our "lines are cast in pleasant places," and the printer who fails to profit by the admonitions and examples contained within and set forth by these technical educators has little excuse if he finds himself lagging behind the standard set up for the printers of the present day.

In a future paper we propose to make some comparisons between the productions of the past and the present in job printing, as well as in book printing and engraving.

(To be continued.)

THE PRACTICAL PRINTER.

BY H. G. BISHOP.

STOCK AND SHIPPING DEPARTMENT.

IN an establishment of moderate size, it is well to have the stock handled by one man (with assistance, if necessary), both before and after printing. All stock that comes in should be passed into his care, and all that goes out should go through his hands. He should also have the giving out of all stock whether to be printed, ruled or bound. By this means an easy check is kept upon the quantity received and used. It too often happens that there is great looseness with regard to stock, and it is often easy for a pressman who spoils a quantity of paper to help himself to more without its being charged up against the job. Then in the matter of delivering to customers there is great advantage in having the work, when finished, passed through the hands of the man who gave out the stock, as he will more readily detect anything that may be wrong as regards quantity or otherwise. To see that a customer gets full count is an important matter, and when it is understood that the work is being counted or measured, the chances are that the pressmen will not spoil so much.

The man who has charge of this work should know something of the printing business; should be strong and active, and also be quick at figures. These are qualifications that are not hard to find, and need not necessarily involve the paying of a large salary, but it is the poorest kind of economy to put a cheap man in so responsible a position, and a mistake to think it is only laborer's work, which can be done by anyone.

The fitting up of a stockroom is another important point to be considered. The tables and shelves should be so arranged as that each kind and weight of stock can stand by itself, instead of being piled one on the other. Nothing should stand on the floor, but platforms should be provided which would raise the paper at least twelve inches, and so prevent the damage occasioned by knocking the sweeping-broom against the edges of the paper. It is better to build the shelves so that the stock can be carried the full height of the room rather than have it spread around and occupying all the floor space.

Another point of importance is the carrying of such stock as will use up to most advantage. There are certain leading sizes and weights which should always be on hand, and never be allowed to run so low as to fall short in a day or two. The same remark applies also to certain standard qualities. But the idea of trying to keep on hand every size and weight, and every kind and quality, is unwise. Rather have less kinds and greater quantities, than more kinds and smaller quantities. In regard to flat papers for general jobbing work, two leading qualities will often suffice—one a good, substantial number one rag, and the other a cheaper grade, costing about one-third less. For instance, if the better kind cost 12 cents then the other should cost about 8 cents. Any intermediate quality is likely to lead to mistakes and loss. If an intermediate quality is carried it will often happen that when the cheaper kind is not on hand the intermediate quality will be used at a loss, and when the job is done again the customer will expect to get the same quality. Or if the better kind runs out then there is a temptation to substitute the intermediate quality, with the chance of having the whole job thrown back, or a deduction made on the bill which will cut off all the profit. And with other kinds of paper or cardboard the same rule holds good, though, of course, circumstances may alter the case in some instances.

In the matter of cutting stock for printing, it is well to have it done by a man who knows something of the printing business, as he will often cut it so as to suit the job and help the pressman in his part of the work. As, for instance, where there is little margin on a job it is well to cut it double the size, and then work and turn the sheet round, which gives an opportunity for using the grippers; and in various other ways the cutter can help the printer. While speaking of cutting it may be well to mention another point which may be of value to some who have not had much experience. It often happens that in cutting up a job which has been printed several on a sheet, there will be a set-off caused by the clamp pressing upon the printed matter. This can often be avoided by laying a strip of thick cardboard along the front of the clamp and between the printed parts so as to bear off the pressure from such printed parts. Where a small number of a job has to be done in a hurry, and cut before the ink has had time to dry, it is a good plan to take a little magnesia or plaster of paris and dust over the sheet, and then rub off with a piece of cotton batting.

Where cardboard has to be cut on an ordinary cutting machine, it should be so done as to have an inside cut edge all round, as it will be noticed that the edge which comes from the outside of the knife is always rough and broken. This can be easily accomplished by cutting the card a trifle larger and then turning it round and cutting a shaving off, which will give a nice, clean even edge.

The following tables will be found useful in this department, and the man who has charge should make himself familiar with each one, which will result in his work being done not only more accurately, but also much more easily.

Tables I to IV show the amount of paper to give out for jobs of any quantity from 50 to 100,000 copies, and will save much time in figuring.

(To be continued.)

Written for THE INLAND PRINTER.

THE FOREMAN.

BY PETER S. BOGART.

“WHAT do you call a good foreman?” This question was asked at a gathering of compositors recently, and the discussion, *pro* and *con*, showed how little these “would-be” foremen knew about a foreman’s duty. So many of our craft are ambitious to “get to the top” that they never think of what qualifications are necessary, or whether they are capable of filling the position satisfactorily to their employer or not. A foreman of a book or job printing office should be of more than ordinary capacity, able to control his temper, a thoroughly practical printer in every sense, and with an insight into character. While dealing justly with the men under him he should not forget his employers’ interests, and see that they do not suffer from the petty dishonest schemes of unscrupulous workmen, whether from overcharging, careless correcting or the hundreds of other methods known in printing offices to swell the comp’s “dupes.”

The foreman should keep thoroughly posted as to the condition and amount of materials in the office, including the capacity of the presses, and should insist on the observance of that good maxim, “A place for everything, and everything in its place,” when not actually in use. How much time has been lost hunting for a certain size of leads when, perchance, some careless workman has placed them on the top case in his rack? We have seen foremen who have been employed in a certain office a number of years who could not find or tell whether they had such-and-such a type or not, and again others who knew where to find type that had not been used for months, or could place their hands on any type needed. Which is the “good foreman”? Tyrannical conduct in a printing office is one of the things that should never be, for the workmen are quick to discern whether the power of their foreman is judiciously or arbitrarily exercised, and their actions are often influenced by the course he pursues. A gossiping foreman is one of the curses of a printing office. The habit of discussing politics, religion or the latest social scandal is a common one in many offices, and a great wrong to employers. A printer must think when he is at

work, and this he cannot do if his attention is drawn to something else. The habit of promiscuous talking is a dishonest one, and although a few moments' conversation between two compositors may seem a small matter—and generally it includes more men and moments—its result in actual loss to the employer is amazing. I do not advocate military rule, for I see no harm in an occasional joke or witty story, for it relieves the monotonous "click, click, of the type in the stick," but the privilege of these should never be abused.

Many incidents occur that tend to make the printer use "cuss" words, and so a "good" foreman should have a temper not easily ruffled. Hard words are of very common occurrence, and do not tend to good fellowship, and all workmen should be treated with courtesy and respect, for they of the "printery" are just as humane as any one else. His conduct on all occasions should be guided by justice, and a strict impartiality, and no favoritism should be shown. He will be called on to decide many a petty quarrel over "dry" distribution, "fat" takes, etc., and he will need diplomacy to straighten out and restore peace among the affected ones. He should also see that all pi is cleared away immediately, and that the stones are not unnecessarily encumbered. He should know the capacity of his men and give out the work accordingly. Some men are good for straight matter only, while others prefer stone-work, tables, etc. Put a "rule twister" on straight matter and he will be as nervous as a bridegroom. Thoroughly competent workmen—"all-round" printers if possible—should be engaged, for a poor workman is dear at any price. Let me, right here, say a word to the foreman in relation to the apprentice. Help and assist him in every way you can, for in after years when he is "full-fledged" he will always remember you gratefully, and be an honor to your teaching, or *vice versa*. I speak from experience.

Some excellent foremen have been addicted to the habit of intemperance, and lost good positions. How absurd to see a tipsy foreman reproving a man for coming to work intoxicated, when he himself can hardly see straight. Intemperance leads to irregular habits, and will lose the confidence of the employer in the foreman, and finally result in his discharge.

Although these are only a few qualifications necessary to make the "good" foreman, there is one that should not be overlooked—that is the reading of our trade publications, of which THE INLAND PRINTER is *par excellence*. In it we are brought in communion with such stand-bys as Brothers H. G. Bishop, A. V. Haight, Alfred Pye, Dr. P. S. M. Munro, J. F. Earhart and George Bateman. Compositors, pressmen and apprentices, as well as the "good" foreman, should be regular readers of this journal.

THE following is said to be an excellent composition for cleaning printers' rollers: 2 lbs. washing soda (bruised), 2 lbs. brown unslacked lime, and 2 ozs. common table salt, mixed in three gallons of soft water, the whole being well stirred. When settled, pour off the liquor and throw the sediments away. When washing the rollers, sponge dry, with this lye only. It is ready for use in an hour.

Written for THE INLAND PRINTER.

EVERY-DAY WORK.

BY D. P. NICHOLS, PEORIA.

THAT there are many men in the printing business, both with type and at the press, who are really artistic workmen no one will deny. Their taste and skill have been highly cultivated, and their touch appears to be almost magical. Their successes in their different lines of work have been wonderful, and the future, no doubt, has in store for them many extraordinary achievements. They have done and still are doing much to elevate printing to a high position among the industries of the present time, and they are entitled to rank with the finest workmen in any of the trades or arts, and their productions should be studied and appreciated by all progressive and ambitious printers. The class of work done by these experts is very important and useful, but it comprises only a small part of the vast amount of printing which is continually being called for. The majority of compositors and pressmen are daily employed upon various kinds of work which are produced for use, convenience or profit, the obtainable price for which will not allow any elaborate work or any extra expense, either in time or in money. Competition has been busy for a long time in the destructive policy of shaving down profits until nearly all kinds of printing must be done quickly and well in order to realize the contemplated profits and keep and gain customers. This is the kind of work upon which most printers will be employed for at least some time to come, and it is the kind of work which should be *thoroughly* understood in all of its details. In all kinds of business printing, with a few exceptions, as well as newspaper work, time-saving is the great object, and outside of improved machinery this saving must, in a great measure, depend upon the skill and knowledge of the workmen who are engaged in its execution.

Those compositors and pressmen who desire steady and remunerative employment must sooner or later realize that this is the field where most of them will find such employment, and the better they equip themselves for this work the more likely will they be to realize their desires. Printers are numerous all over the country, and the idle ones sometimes make no small number, but good, sober, industrious, general workmen are rarely out of work long at a time when they really want it. They are the ones who are most often inquired for by employers who have situations to fill, and are the ones who are often kept upon the pay roll during dull times in order that their services may be had when business is again brisk.

Few printing office proprietors outside of the larger cities can afford to hire expert men whose abilities are confined to one single line of work. Such men may make themselves valuable in offices where they can be kept constantly employed upon the kind of work which they have learned and can do well, but they are apt to be very unsatisfactory in positions where they are required to change from one variety of work to another upon short notice and are limited in time and often in facilities. In such places the every-day workman will be able to do much more and give better satisfaction. To do this, however, a thorough

knowledge of standard commercial work of all kinds must be had, and the skill must be acquired for putting this knowledge into rapid and correct execution. In composition the power to create attractiveness by the judicious use of type of various styles and sizes and a small amount of ornamentation must be so thoroughly understood that it will not be necessary to resort to the "cut and try method," and so that lines and spacing will rarely have to be changed. This knowledge and skill will require much thought, observation and practice to gain, but their possession are well worth the trouble and time expended, and make their possessor a valuable man, if he is willing to put his experience to use. In fact, it requires greater exertion to become a good general compositor than it does to become an expert in a single line of work. The same may be said of pressmen. Of course, all kinds of presswork require care, skill and judgment; but the man who is quick in turning out every-day work in a creditable manner without waste of material or damage to machinery is the man who will be sought for by the majority of employers.

Every workman should go as deeply as possible into the work he has to do, but a good foundation of practical, every-day knowledge should be laid prior to attempting expert work of any kind. It is painful to look upon an attempted piece of difficult work when every feature of it plainly shows that the workman who is responsible for it has undertaken to leap from the bottom to the top of the ladder at a single bound, and has apparently thought that patient climbing, step by step, was not in accordance with the spirit of the age. Such printers, in all likelihood, will never become thorough workmen, because they are not persevering enough to learn and practice all the necessary little details which belong to their calling. They would like to enjoy the notoriety of being experts or fine workmen, but they are unwilling to devote themselves to their business with sufficient closeness to become such.

Expert work does not always mean that which is elaborate and tedious. It may be attained in the most ordinary kinds of printing, and is within the reach of all who will strive for it. A compositor may become an expert in setting of every-day handbills, posters, cards, letterheads or any other of the various kinds of work which are in constant demand, upon which no extra amount of time will be allowed. To accomplish this, either natural or acquired quickness both of mind and hand must be possessed; also a good knowledge of the effects which may be secured by the proper display of type. And the way to gain this is to go to work with a will at anything that is offered, and not wait and sigh for a complicated job upon which to display to an astonished fraternity the ingenuity which is burning for expression, which ingenuity will forever continue to burn for expression, unless it is brought forth by patient and persevering effort.

If any workman is so situated that his time is fully occupied, day in and day out, with what may be called common work, he should not be discouraged and think that his time and talents are being thrown away. He should feel that this kind of work is just as important and necessary, very often much more so, as that which is more

complicated, and called by many "artistic." He should realize that his ability and worth are stamped upon every one of his productions, no matter how plain it may be, and that his work is generally carefully noted by those who employ him or by his foreman or superintendent. If he is not careful and correct in the execution of this kind of work, he will never be fit for anything different; and if he is careful and takes an interest in it he will find numerous opportunities for the display of artistic touches and for the expression of fine ideas. If so minded he can make for himself a reputation which will be as useful and remunerative to him as if he was an expert in curving and twisting rules or could make combination borders assume all kinds of fanciful shapes.

Nearly all apprentices, if left to select for themselves, will attempt some difficult piece of work, instead of something more suitable for their attainments. For this reason they should be carefully watched and guided by those whose duty it is to oversee them, and instructed to be careful, that their advancement may be gradual and that they learn and understand everything thoroughly as they go along. Many naturally bright boys have had their usefulness greatly lessened by being allowed to be their own judges in the matter of choosing the kind of work upon which to learn. In taking advanced work to begin with, they, of course, either succeed or fail. If they succeed, they are apt to think it is a waste of time for them to go back and learn from the beginning, and some of them never will, remaining ignorant of the first principles of their trade through life. If they fail, some of them will become discouraged and imagine that the work of a printer is too difficult for them, and they either give it up entirely or follow it without hope of ever becoming proficient in it. Beginners should learn the every-day work well first, and then if they have the time, desire and opportunity to make a special study of one or more particular lines of work, it will be well enough; but it does not seem desirable to attempt to become a specialist to the entire exclusion of everything else connected with the business.

CEYLON PAPER.

The leaves of the palmyra palm (*Borassus flabelliformis*) and of the talipot palm (*Corypha umbraculifera*) are used in Ceylon instead of paper. During the operation of writing, the leaf is supported by the left hand, and the letters scratched upon the surface with the stylus. Instead of moving toward the right hand, which performs the writing, the leaf is moved in a contrary direction by means of the thumb.

The leaves of both these palm trees lie in folds, like a fan, and the slips stand in need of no other preparation than merely to be separated, and cut smooth and even with a knife, after having been slowly dried in the shade and rubbed with oil. Their mode of writing upon them consists in carving the letters with a fine-pointed stylus, and sometimes, in order that the characters may be better seen and read, they rub them over with an ink made of lampblack, or some other substance, and a solution of gum, so that the letters have altogether the appearance of being engraved. The iron point made use of on these occasions, is set either in a brass handle, which the Moormen and others carry about with them in a wooden case, and which is sometimes six inches in length; or else it is formed entirely of iron, and, together with the blade of a knife designed for the purpose of cutting the leaves and making them even, set in a knife handle common to them both, into which handle it shuts up, so that it may be carried by the owner about with him, and be always ready at hand.—*Stationery.*

THE RECONSTRUCTED LIBERTY AND ITS IMPROVEMENTS.

THE following description and illustrations of one of the very best job presses in the market, the reconstructed "Liberty," will no doubt prove of interest to the trade in general, and to the subscribers to THE INLAND

is the only reliable method by which anything of such vital import should be accomplished.

A positive movement, as its name imports, is a movement which executes any certain purpose desired unchangeably, while the machine is in operation; and it is

PRINTER in particular. The leading color printers in the world, both in Europe and America, acknowledge the value of its latest improvements, and prove their faith by their works, in using them successfully to turn out their choicest productions. The first of these to which we shall refer is

clear that, if any such particular movement is constructed on true mechanical principles it will continue to "do its office" infallibly, and that, if it operates at all, it must

THE NEW NOISELESS GRIPPER MOTION.

(Patented 1887.)

No part of the treadle job press has heretofore given so much trouble and anxiety to the press-builder as the gripper motion, and the printer's patience for the last forty years has been tried to the utmost because of their imperfection. Springs have been twisted into every conceivable shape, by which to give full command over the motion, with more or less success; but the anxious printer has never before been furnished with a device that "fills the bill" in every particular—the grand mistake having been that springs should ever have been relied upon as the means of operation at all, and that what is known in the machine shop as the "positive" motion

Fig. 1.

continue to operate at all times. Such a movement constitutes the new patented feature and completely estops, so far as the "Liberty" press is concerned, the battering of forms. By this improvement the grippers are at all times and under all circumstances entirely under the control of the operator. Both grippers hold with equal and reliable tenacity, as the action is from the center of gripper frame, and the printed sheet cannot avoid being detached from the face of the type every impression. It also works without noise, and, undoubtedly, is the only gripper which does. Nor can it be broken by being depressed at the wrong time, because of its perfect and

Fig. 2.

simple construction. The two regular engravings at top delineate the new patent grippers in two positions on the "tympan." Outline Fig. 1 shows bed and tympan ready

hand and eye and reach of the feeder. It is in an iron box; has no knife regulated by screws and liable to bend out of shape; the flow of ink can be stopped at once by

No. 5.

for use, which, as may be seen, in no way interferes with the make-ready, and are handy to get at. Fig. 2 shows the grippers can be depressed to tympan at any time, either when the press is working or not. Fig. 3 shows that, when bed and tympan are taking the impression, the cam and arm of gripper-frame are below and out of the way.

lifting the ratchet; it has set-screws to fasten the thumb-screws on a very long run; and the fountain roller touches the disk the full length. When ink is put in, open the press and turn the crank at the end, and it will ink the entire fountain roller, so you can proceed at once with well distributed ink. It is very easily cleaned and can be washed as are rollers, with a great saving of ink when a small form or a single line of costly colored ink is in use on the press (partitioned off by the lead blocks shown in cut); can feed more ink to heavy engravings than to lighter matter in the same form—producing the desired results.

THE NEW "LIBERTY" TRIPLE COMBINATION DISTRIBUTION.

FOUNTAIN, DISK AND RIDERS. PATENT PENDING.

THE attention of the trade is particularly invited to the new "Liberty" triple combination distribution, composed of peculiar fountain, new construction of disk, and regulated rider rollers.

(2) The disk moves farther than before, and its action is such that it revolves during thirty-six impressions (or sixteen times) before the rollers come in contact with it at exactly the same place—thus all the time changing its relative position to the rollers.

(1) The new fountain is constructed with a movable

(3) One, two, or three form rollers and the fountain roller are used for ordinary work, while for extra distribution, three form and one, two, or three rider rollers may be used at option; three riders are shown by cut No. 1, which rest directly on top of form rollers when the press is open; then, as the bed

No. 6.

No. 1.

drawer, drawn back to permit the flow of the desired quantity of ink from a stationary ink-trough. This is accomplished by screws at the back, directly under the

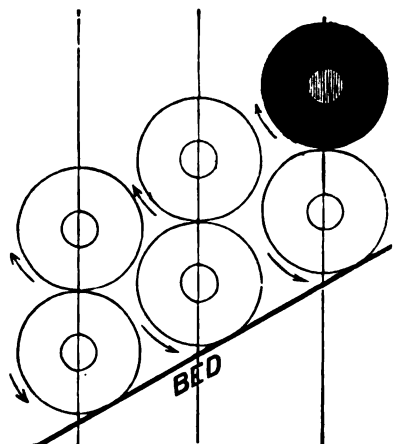

moves on, and as shown by cut No. 2, the riders 1 and 2 touch between the three form rollers, and the third rider also on the third form roller, in both cases all moving in

harmony, as also shown by cut No. 3 — which occurs when the bed changes for the “return trip” and the riders touch, each, one form roller; but No. 3 makes a half revo-

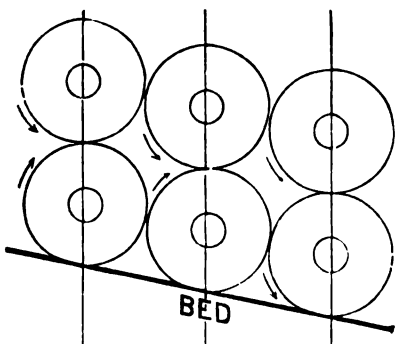

No. 2.

lution in the contrary direction, thus presenting a new surface to the form roller below, and the rider operates in the same manner as the bed returns after being inked; thus, again, both Nos. 1 and 3 riders have the benefit of

No. 3.

the reverse action every impression, and all the rollers are affected by the reverse movement, presenting, as they do, new surfaces to the form and to each other. Also, as rapidly as the form rollers part with the distributed ink to

No. 4.

the face of the form, it is being re-supplied by the riders, and the exactest uniformity of “color” is secured to the finished work.

(4) Cut No. 5 illustrates the convenience prepared for the riders on top of form rollers and the sweep of disk to each impression. Cut No. 6 gives an excellent idea of the perfectly original supply of ink from the fountain. The fountain roller never touches the form or form rollers, but takes its supply of ink from the reservoir and distributes it all over the disk in a tolerably distributed state, and in as complete a manner as if put on with a hand roller; so that, when taken by the form rollers and spread over the form, the work goes on in the most acceptable manner. This sums up in brief the wonderful efficiency of this triple combination of distributions for the “Liberty” presses, which equals, in its results, that of a stop cylinder press.

THE NEW THROW-OFF.

PATENTED 1888.

THE several “throw-offs” of the past have been the most disturbing elements of treadle job presses. From the first vouchsafed us, each successive inventor seems to have followed the beaten track of his predecessors, with

but slight variation, except that here and there something respectable did make its appearance. The mistake seems to have been that most of them hung on to the idea that a

bona fide throw-off must be located on the left-outside of whatever machine the mechanism was to be attached. Hence the weakening process for so many years; and it

was only recently that the thought of starting from a central position was conceived—in a treadle jobber from the center of the tympan shaft (sometimes called the “platen”)—and that such starting point, if operated by an eccentric movement, would not only work well, but would not

or off; neither can it be broken by the weight of heavy forms; and the handle from its position, consequently, under the hands of the feeder at the slightest indication of danger to the impression, does not in any way affect the rollers or distribution. Outline Fig. 1 illustrates the posi-

weaken the press. This happy idea was put into execution, the drawings giving evidence of correct mechanical principle and encouraging promise of success. And it was a success; for, after some slight alterations, it was built and incorporated in the machine, and is now the admira-

tion of tympan with the impression off; Fig. 2 the same, behind the press—which also shows how handy it always is; Fig. 3, while the impression is being taken; Fig. 4 illustrates the action of handle, which, as shown, only requires to be pulled back; Figs. 5 and 6 show how the

tion of every practical observer, whether machinist or printer. As intimated, an eccentric movement, working from the center of the heavy shaft, back of and under the tympan, does its work without jar or other disturbance; besides, the motion is “positive,” and must either be on

handle is kept in place, either off or on; drawing No. 7 illustrates the complete mechanism with the throw-off, tympan and grippers all ready for operation. Is it not all that is to be desired in a convenient and effectual throw-off?

PATENT IMPROVED TWO-REVOLUTION PRESS

WITH patented mechanism for controlling the vertical movement of the impression cylinder. It is extremely powerful, accurately fitted, free from friction and evenly balanced. A patented automatic device is also provided which prevents lost motion, and governs the degree of impression. Its patent reversing mechanism consisting of a cross-belt and spring shifter, is operated by the foot, which places the Press under the immediate control of the feeder. These advantages, with its Sheet Delivery, Hinged Distributer, Caps, Positive Slide Motion, Noiseless Grippers, etc., complete a printing machine that in every respect is equal to the most exacting demands of the times.

WESTERN AGENTS: H. HARTT & CO., 65 THIRD AVE., CHICAGO.

Babcock Printing Press Mfg. Co's

: : : *Drum Cylinder, Two-Revolution*

and *Lithographic Pat. Air-Spring* : : :

— P · R · E · S · S · E · S —

All our Standard Presses have the following Patented Improvements :

- 1st. Our still *Gripper Motion*, which registers perfectly.
- 2d. *Air Valve* for removing the spring when desired, and invariably restoring it when starting the press.
- 3d. The *Shield*, which effectually protects the *pistons* and *cylinders* from paper, tape, or other substances, which might otherwise fall upon them.
- 4th. The *Piston*, which can be adjusted to the size of the *cylinder*, so that *any wear* of either the *cylinder* or of the *piston* can be readily and *accurately compensated*. The adjustment is *easy, positive and perfect*, and renders the apparatus *air-tight*, a most important consideration, inasmuch as *any escape of air*, whether through a valve or around the piston, reduces the resistance, and thus impairs the efficiency of the mechanism.

- 5th. *Roller or Journal Bearings*, securing the following advantages: (a.) *Any single roller* may be removed *without disturbing* the others; (b.) *All the rollers* may be removed and replaced without altering their "set"; (c.) When desired, the *form rolls* may be released from contact with the distributor and type, *without removing the rolls from their bearings*.
- 6th. Our *reversing mechanism*, which gives the feeder *entire control* of the press, and effects a *large saving in time*, and also insures the greatest possible number of perfect sheets.
- 7th. Our *positive slider mechanism*, by which the slider is kept in the *correct relation to the bed* at all times, and thus a perfect impression secured.

From the Warren, Pa., Ledger, of Nov. 20, 1885.

There may be a better press than the "STANDARD" built by the Babcock Printing Press Mfg. Co., of New London, Conn., but we have not seen it. The No. 6 "STANDARD" recently placed in our office, by the above company, is entirely satisfactory. It runs without jar over 1,800 impressions per hour; a 1,500 motion is slow. Two thousand can be made easily without injury to the machinery.

From Fuller & Stowe Co., 49 Lyons St., Grand Rapids, Mich., March 3, 1886.

BABCOCK PRINTING PRESS MFG. CO.: *Gentlemen*,—Your favor of the 27th came to hand, and same day your new vibrating attachment. We consider it a great improvement over the old style. We are much pleased with the operation of the machine, and shall add another of your make as soon as our work will warrant it.

Yours truly,
FULLER & STOWE CO.

Office of the Times, Lima, Ohio, Dec. 1, 1886.

BABCOCK PRINTING PRESS MFG. CO.:—*Gentlemen*.—Some months ago we bought from Messrs. Barnhart Bros. & Spindler, of Chicago, one of your "STANDARD" Presses, which has been in constant use in our office ever since, and gives perfect satisfaction. We have used presses of many styles, but never operated one that embraced so many good features as your "STANDARD" series. It is a first-class machine in every respect, and yet so simple as to be easily operated and capable of doing the finest kind of work. Our press (a No. 2) is capable of running as many sheets per hour as the feeder can place properly. In fact, it is just the press we were looking for, and we would not exchange it for any other press in the market.

Very respectfully yours,

O. B. SELPRIDGE, Manager *The Times Co.*

BABCOCK PRINTING PRESS MFG. CO., MAIN OFFICE AND WORKS, New London, Conn.

BARNHART BROS. & SPINDLER, Gen'l Western Agts.,

NEW YORK OFFICE:
26 and 27 Tribune Building.

BROWN FOLDING MACHINE CO. ERIE, PA.

Newspaper and periodical folders of our make are the simplest and fastest machines in the market. —

They are made of the best material and warranted to perform more work than any other make. Our attaching fold-

ers can be attached to any drum, single or double cylinder press. We desire to call

attention to our new Book Folder as being something of special interest to bookmakers.

In its construction we have aimed to overcome complication and em-

bodied new ideas, such as become a modern machine. All of its working parts are accessible and the operator is not required to be an expert.

We are willing to place this machine in competitive trial with any other make. Another new machine is our Double Pamphlet Folder. These are made in a variety of styles and turn out more

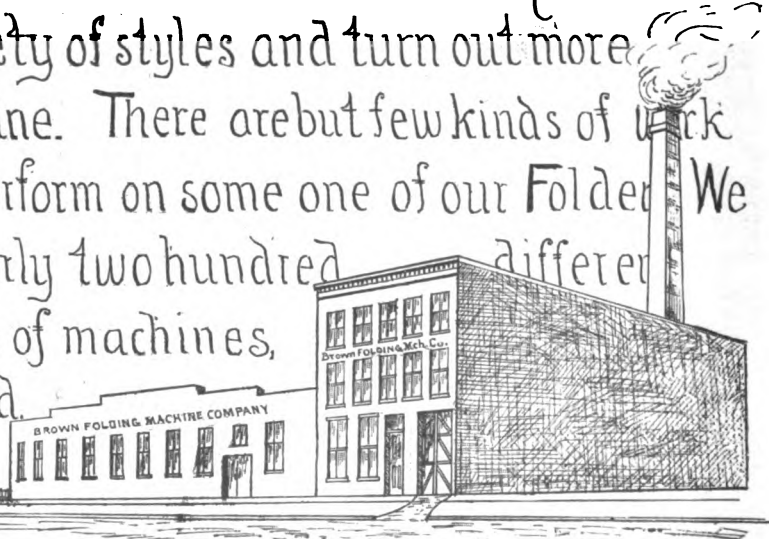

work than any similar machine. There are but few kinds of work we cannot perform on some one of our folders. We

manufacture nearly two hundred different sizes and styles of machines,

being the largest in the world.

Send for full particulars.

✦ A California Job Press ✦

Every Press complete with Patent Throwoff and Fountain.

BEING desirous of introducing our Job Presses called the **CALIFORNIA RELIABLE** into the Eastern States, we have decided to sell them at reasonable prices, Freight Paid to any Railroad Town in the United States, making them the cheapest and, as they are acknowledged to be, the best press manufactured after the pattern of the Old Style Gordon.

Medals were awarded this press at the San Francisco Mechanics Exhibitions of 1886 and 1887.

We claim that our **CALIFORNIA RELIABLE** Job Press with our *patent solid handle throwoff*, is the best press made after the Old Style Gordon pattern, and is far superior in workmanship, design, finish and strength to the presses called "Old Style Gordon," or "Challenge," made in Chicago. If you doubt our word for it, write to any machinist of note here and have him examine our machines thoroughly, examine the drill-holes, the fit and weight of the shafts and draw arms, also the patent *solid handle throwoff*; have him notice that we use **WROUGHT IRON** and **STEEL** where in the other presses *cast iron* is used. Any competent machinist will not be five minutes in deciding that our **CALIFORNIA RELIABLE** will wear twice as long as the cheaper built machines of other manufacture.

We have over *two hundred* **CALIFORNIA RELIABLE** presses in use at present time, and as our facilities for manufacture are a press a day we can fill orders promptly.

It may seem strange to many that a San Francisco firm should offer to supply Eastern printers with Job Presses, but we have demonstrated the fact that we can, with the aid of the best mechanics and most approved labor-saving appliances, build and place on the market printing presses that will successfully compete in quality and price with those of the best Eastern makers.

NOT A CHEAPLY BUILT PRESS.—Our **CALIFORNIA RELIABLES** have not been built as cheap presses, but are made of the best material and finished in a first-class manner.

FOUNTAIN.—Our fountain is a well-fountain, the full width of the platen, and is the only fountain that will feed the ink with the throwoff *on* or *off*, and is furnished with every press without extra charge.

THROWOFF.—Our patent throwoff is acknowledged to be the best in use. It is certain in its action and does not get out of order. It has a solid handle and is in easy range of the feeder.

GUARANTEE.—We guarantee every press we sell to be first-class, in every particular, and will renew any part of a press, *free of charge*, that gets broken through any defect in its manufacture.

OUR TERMS are:—Cash with order, or part cash, the balance to be paid on delivery of machines; but to parties giving us good bank or mercantile references we will ship to and draw with bill of lading. We have no agents and shall appoint none, so send your orders to us direct. Send all orders to—

THE FAIRHAVEN

Is ESPECIALLY DESIGNED for COUNTRY NEWSPAPER, BOOK AND JOB WORK.

It can be run either by Hand or Steam Power, giving from 800 to 1,200 impressions per hour.

Numerous testimonials from all parts of the country confirm our claims that the FAIRHAVEN runs with great ease, economy, and freedom from jar or noise; has an excellent ink distribution and adjustment; great convenience in changing forms, and all the adjustments are so arranged that it is easily kept in perfect running order, and fully meets the wants of those wishing to print a handsome Newspaper, or for Job, Poster and Book Work. Each Press furnished complete with Blanket, two sets Roller Cores, extra Roller Wheels, Wrenches and Gauges. One set of rollers is sent with the composition on, ready to run.

A SAMPLE TESTIMONIAL:

Ever since I graduated, nearly twenty years ago, I have looked forward to the time when I could own a Fairhaven Cylinder Press. During all these years I have owned and operated several other makes of presses, but not until February of the present year was my wish gratified. When I purchased this office I found a Fairhaven Press among the material, and without any previous knowledge of the press, I put on the forms, and with the help of a boy, got off a 35 quire edition in 55 minutes. The beauty of it is, the press is so simple in its construction that any one, with no knowledge of cylinder presses, can operate it as easily and successfully as a Washington hand press. I consider it as the best adapted for country newspaper work, and for simplicity, convenience and utility, it stands at the "top of the column."—W. E. CHURCHILL, Mohawk, N. Y., May 25, 1888.

SIZES AND PRICES

- No. 3—Bed 28 x 42 in. inside bearers, prints 25 x 39, price.....\$750
(Size, 5½x6½ feet; weight, boxed, 3,800 lbs.; partial boxing, \$10.00.)
- No. 4—Bed 31 x 46 in. inside bearers, prints 27 x 43, price.....\$900
(Size, 6x7 feet; weight, boxed, 4,500 lbs.; partial boxing, \$10.00.)

No. 3 will print an 8-col. folio, or a 5-col. quarto. No. 4 will print a 9-col. folio, or a 6-col. quarto.

The above prices include Fixtures for either Steam or Hand Power.

Published Monthly by

THE INLAND PRINTER COMPANY,

183, 185, 187 MONROE STREET, CHICAGO.

H. O. SHEPARD, PRES. - - - JOS. PEAKE, SEC.-TREAS.

A. C. CAMERON, EDITOR.

EDITORIAL OFFICE, SECOND FLOOR 183-187 MONROE ST., CHICAGO.

S. G. DUNLOP - - - - - TRAVELING AGENT.

SUBSCRIPTION RATES.

Two dollars per annum in advance; for six months, one dollar; sample copies, twenty cents.

Great Britain and Ireland, postage paid, eleven shillings and four pence per annum.

To countries within the postal union, seventy-five cents per annum additional.

Postage stamps are not desirable, but when it is found necessary to remit them, one-cent stamps are preferred.

THE INLAND PRINTER will be issued promptly on the fifteenth of each month.

Subscriptions, payable in advance, may be sent to the Treasurer by postoffice order or in currency at our risk.

THE INLAND PRINTER will spare no endeavor to furnish valuable news and information to those interested professionally or incidentally in the printing profession, and printers will confer a great favor on the Editor of this Journal by sending him news pertaining to the craft in their section of the country, particularly individual theories and experiences of practical value.

OUR COLORED INSERTS.

SINCE our last issue we have received numerous inquiries as to what extent tint-blocks will be allowed in the colored inserts about to appear in THE INLAND PRINTER. For the purpose of enlightening those desirous of knowing, we publish in the present number an advertisement of H. O. Shepard & Co., Chicago. It is not intended for competition, however, but simply, as stated, as a guide for future reference. Read the inducements offered to competitors on another page.

OUR SIXTH VOLUME.

FIVE years ago THE INLAND PRINTER made its first bow to the printers of the United States and Canada. Since that time it has grown, step by step, from little more than an unpretentious sixteen-page pamphlet, until its bound numbers for the year just passed present a portly volume of nine hundred and sixty pages. In fact, its success has been phenomenal in the records of trade journalism, both from an advertising and subscription standpoint, the number and character of the former speaking for themselves, while it may truthfully be stated that it is a welcomed monthly visitor in almost every reputable printing establishment on either side of the border.

While grateful for and justly proud of the liberal patronage, encouragement and kindly words heretofore received, it will be our continued aim to spare no effort to keep in the van; to make it still more worthy the support of the craft, and to add from time to time such special features as will inure to its value and attractiveness. Its list of contributors and correspondents, now ranking among the best practical printers in the country, and whose articles are alike instructive to the employer, the journeyman and the apprentice, will be increased from time to time as circumstances warrant; its specimens of artistic work, both in black and colors, will be retained as a permanent feature; the latest improvements in printing machinery illustrated and explained; the newest devices from the leading typesetters presented from month to month; portraits and biographical sketches of manufacturers and business men prominently identified with the interests of the craft, as well as of the ex-presidents of the International Typographical Union, continued. Each issue will also contain page illustrations produced by the most improved processes; answers to correspondents; reviews of specimens received; trade, paper and local news, and a reliable statement of the condition of the printing trade throughout the country. In short, we shall aim to make it, as heretofore promised, a helpmeet to the employer, and an indispensable to the workman.

Its management, policy and purpose, so far successful, will remain unchanged. The substitution of arbitration for needless strikes and lockouts, the adoption of a thorough apprenticeship system, and the bringing of employer and employé into more friendly and intimate relationship with each other, which have been its guide in the past, will remain its platform for the future. The slave of no organization, the tail to no kite, catering to no faction, we propose to wield a free pen, exercising our best judgment in advocating the right and condemning the wrong, irrespective of parties or position. We shall also aim to make the craft better citizens and better printers, and, whenever proper, uphold the cause of organized labor. From an editorial standpoint, we have nothing to add to what has been already stated, and whether our promises have been kept, we leave our patrons to judge for themselves.

Readers, if you are satisfied with the security, down with the dust.

MEETING OF THE TYPOTHETÆ.

WE herewith present a synopsis of the proceedings of the second convention of the United Typothetæ of America, which met in the Masonic Temple, New York City, on Tuesday, September 18. Though the attendance was not as large as expected, we recognize among the delegates present the names of many who hold high positions among the representative employing printers of the United States, a fact, taken into consideration with the circumstances under which the organization with which they are connected was called into existence, invests their deliberations with more than ordinary significance.

The address of President De Vinne is, as might have been expected, a document worthy of perusal; and, while it is delivered from a master printer's standpoint, contains statements and suggestions which it would do well for all parties interested to carefully digest, especially those who think there is only *one side* to a question, and that the side with which their interests or sympathies are identified. His advocacy of the adoption of arbitration to settle all disputes is worthy of commendation, and few will take issue with him in the following recommendations:

While we disclaim any intent to assume an arbitrary and exclusive control of the trade, either against customers, workmen, societies or members, we do desire to have a voice in the regulation of our affairs. For many years we have neglected our plainest duty. I say it to our shame. The rules and rates that have prevailed have been made almost exclusively by the compositors of our offices—in too many cases by the compositors of other offices. We have seldom been asked to confer with these compositors as to the justice or the feasibility of proposed rates and rules. We have often been asked to pay and to obey without even one day's allowance for consideration.

I do not mention this in anger—certainly not to provoke retaliation. I mention this, as I do every other attempt to get exclusive control of our trade, whether by employers or employed, as an example not to be imitated. Let us begin the work of our society with the purpose that there shall be hereafter a practical acknowledgment, on our part, at least, of the truth of the proverb that "It takes two parties to make a bargain."

Fortunately, we have evidences that our desire for peace and for coöperation in the making of rates and rules has been anticipated. Recent occurrences have taught the lesson that there are limits to exaction and compulsion. Fair-minded workmen everywhere are willing and eager to confer on a debatable policy before that policy shall be determined by either side, or to arbitrate in the event of disagreement. It will indeed be a most gratifying result if each local society can succeed in adjusting disagreements without resort to strikes or lockouts. We want peace, and something more than peace, in our offices. We want the coöperation and active good-will of all our workmen. This good result is not to be secured by vote, or resolution, or treaty of peace. There are stubborn prejudices to be uprooted—some with us, more with them—all hard to attack and slow to yield. For many years vicious schools of political economy have been sowing tares, and we are reaping the harvest. Too many workmen have been taught, and firmly believe, that capital is the enemy of labor, and that they, the workmen, do not receive a rightful share of the general earnings. The removal of these beliefs must be done more by individual effort than by the action of a society. It is a thankless and ungracious duty, but it must be done by some of us—by all of us.

It is not for me to anticipate your action concerning conferences with other societies, but I may, with propriety, make the following suggestion: Whatever agreements may be made or attempted should include *all* members of our trade. We have no privileged class. We ask for no special privileges. We can offer none. The equal rights of all men in the trade among employers and employed, whether they

do or do not belong to our society, or any other society, are the only bases for just agreement.

That we can get much good from conferences that undertake to settle debatable questions will not be denied. It is too much to expect that committees of conferences will always agree. There will be irreconcilable disagreements, and we must provide for them. What then? Shall we fight to a conclusion? I hope not. The ends of a fight leave the cause of quarrel still unadjusted. The beaten party is still unconvinced. We neither want to beat nor be beaten. There is a safe and honorable middle course—that of arbitration. It is no disgrace to accept and abide by the conclusions of impartial men.

The fact that arbitration offered by some of us a year ago was refused should not weaken our belief in its justice or its ultimate efficacy. It is the only reasonable method of settling disputes concerning policy. I do not claim it as a panacea for all disputes. It has its limitations. I do not advise it in questions of principle that cannot be compromised.

His views on the apprenticeship system are not as clear and well defined as we had a right to expect. So far as we are aware, the "adoption of the apprenticeship system of two generations ago" is advocated by no sensible man, but the doctrine that a boy who indentures himself virtually becomes a slave, is, in our opinion, one of the most *pernicious* ever inculcated. However, we propose to refer to this matter at length in a future issue.

No positive action was taken on the subjects of general interest discussed, namely, the raise in price of type, and the copyright law now before congress.

The action of the body in declining to receive the conference committee appointed by the International Typographical Union, has, as might have been expected, created a somewhat bitter feeling among the members of that organization, although we regret the latter did not formulate their propositions in their first communication. We tell the Typothetæ that it cannot afford to reject the olive branch tendered by the representative, skilled, intelligent, self-respecting printers of the United States; nor yet do we believe the protests of two or three well known sore-heads or chronic growlers, represent the feelings of the employers at large. The communications referred to read as follows, and reflect credit alike on the heads and hearts of the committee presenting them:

NEW YORK, September 17, 1888.

To the United Typothetæ of America:

GENTLEMEN,—At the last session of the International Typographical Union of North America the following resolution was adopted as the sense of that convention upon the subject it covers:

Resolved, That a committee of three, of whom the president of this body shall be chairman, be appointed for the purpose of proceeding to the place of meeting of the United Typothetæ during its next session and endeavor to confer with the representatives of that body with a view to establish a basis upon which a good understanding and honorable peace may be secured.

In accordance with its provisions, E. T. Plank, president of the International Typographical Union; Theodore C. Wildman, of New York, and Jacob Cobb, of the Russell & Morgan Printing Company, Cincinnati, Ohio, are at present in the city, and would respectfully request an opportunity to calmly and impartially review in connection with your organization, by committee or otherwise, the exact relations between the unions subordinate to the International Typographical Union and the employing printers of the country, with a special view toward a restoration of harmony in sections where disagreements may prevail, as well as the establishment of more friendly relations generally, in the belief that the utmost measure of prosperity can only accrue to employer and employed alike when such conditions exist as a basis for mutual intercourse. We desire to express ourselves in hearty sympathy with the spirit of the resolution quoted, and that personally we would feel rejoiced at its successful accomplishment.

The typographical fraternity has generally been credited with the highest order of intelligence, and in this age of enlightenment the United Typothetae of America and the International Typographical Union, representing respectively employer and employed, would but realize reasonable expectations by successfully inaugurating an era of harmony and good will that would serve as an example for others to imitate.

We would be pleased at your favorable consideration of this proposal, and await your reply.

Very respectfully,

E. T. PLANK,
JACOB COBB,
T. C. WILDMAN.

* * * * *

NEW YORK, September 20, 1888.

To the United Typothetae of America:

GENTLEMEN,—Having received no official information as to the disposition of a communication previously forwarded to your body other than that contained in a note from the chairman of your special committee to the effect that action would be taken at a later date and the result communicated to the committee of the International Typographical Union, and being of opinion that the present session of the United Typothetae is nearing an adjournment, we beg to present to your consideration certain matters of controversy which we hope will be considered by your body, or referred to your Executive Committee, in order that action may be taken looking to an early settlement of existing difficulties and the ultimate establishment upon a permanent basis of harmonious relations between employer and employed.

Believing that but few questions exist upon which a division of sentiment between the organizations is at all probable, and that when such questions are settled by mutual discussion and concession the great object sought will have been accomplished, we respectfully request that the committee from the International Typographical Union be allowed to discuss with you the following questions, which seem to present themselves as the most serious bar to an amicable adjustment. We desire to consider:

1. A proper apprentice system.
2. Separate unions for the book and job trade.
3. Withdrawal of foremen from union membership.
4. Arbitration.

And such other questions as may be deemed important.

We would respectfully urge upon you the importance of a conference before the adjournment of your present session; failing in this that you indicate to the president of the International Typographical Union when and with whom such a conference may be held.

We further request that the action of your convention upon this matter may be promptly communicated to us.

Respectfully,

E. T. PLANK,
JACOB COBB,
THEO. C. WILDMAN,

International Typographical Union Committee.

On motion, the last communication was referred to the Executive Committee, a body who we believe is composed of high-minded, honorable men. Be the result what it may, we know whereof we speak when we affirm that in certain establishments, now claiming to be entirely independent of and opposed to typographical unions, work is turned out which is a disgrace to the profession, and which their proprietors would have been ashamed to father less than a year ago. That sooner or later their customers will recognize this state of affairs, and demur to its continuance, there can be no doubt, especially in view of the propositions submitted, which, if acted on in the right spirit, will in a great measure remove the difficulties heretofore existing. A friendly interchange of opinion will at least develop the fact whether there is room for honorable compromise, or whether the antagonism unhappily existing between the two representative bodies shall continue.

THE WEST.

THE West! How few realize the significance of the term, the extent of its resources, or, in a few years at farthest, the preponderating influence it will wield in national affairs, the wealth it will possess, or the extent of its population. We are often reminded by our conservative eastern and English friends of western exaggeration—of our proneness to indulge in hyperbole; and yet its actual development has even now outstripped the predictions of the most sanguine enthusiast. As an evidence of its marvelous growth, we may mention that on what was known a few years ago as the “confines of civilization,” with a dug-out as the only evidence of settlement, may be found cities teeming with an active, pushing, intelligent population, possessing and enjoying all the comforts and conveniences of a higher modern civilization. Electric lights, high schools, churches, street cars, daily papers, hotels, etc., are special features in localities where, within the memory of a young man, the Indian was monarch of all he surveyed, and the buffalo ranged comparatively unmolested. Even the supposed sterile American desert has yielded to the demands of civilization, and grain and vegetables grown thereon are shown, which challenge comparison with the best productions from what are known as the older *agricultural* states. Peopled by a go-ahead, ambitious, difficulty-surmounting element of society, denied, by excessive competition or home-cramped surroundings, the opportunities craved for (which the limitless growing West alone affords), who bring to their new field of labor a patriotism essentially American, an enterprise whetted by temporary difficulties, and the knowledge gleaned from the experience of an older world, it requires no stretch of the imagination to presume that it affords a specially advantageous field alike for the investment of capital, and an inviting home for the efforts of those who are willing to wait for results, and are not afraid of manual labor; or that its future will be even more marvelous than its past has proved.

But what it is today is simply a foreshadow of what it is destined to become. With each succeeding year its growing importance will be recognized, its influence extended, and its well-nigh inexhaustible resources developed by the best type of American manhood. In this development the newspaper has played, and will continue to play, an important part. The school house and the printing press follow in rapid succession the heels of the settler; indeed, they are the primary agents which have brought about this wonderful result. A western village without its newspaper or printing office is like a battery without electricity, and as it increases in size and population, the hand press, no longer able to supply the demand on its resources, is superseded by the steam-driven web machine, with all its latest improvements. During the past four months we have seen a score of these in operation in localities which, thirty years ago, was the home of the coyote—a grand tribute to the vim and intelligence of American citizenship. In short, in every feature which pertains to the art of printing—in which we are most deeply interested—we understand “the latest and best” are required to fill the orders received, while specimens of artistic work daily

received bear evidence that home productions are equal in every respect to those obtained elsewhere.

This is the kind of country the West is — where there is room for everybody except the drone, whose absence is better than his company. Young man, if you are made of the right material, *come West*. If you are not, you had better stay away.

THE appointment of Mr. John H. Oberly, one of the Civil Service Commissioners, to be Commissioner of Indian affairs, is one which we have every reason to believe will be gratifying to the craft throughout the United States. THE INLAND PRINTER extends its congratulations to that gentleman, feeling satisfied that he will bring to his new and exalted position the same qualifications which have won for him the commendation of his countrymen in whatever position he has heretofore been placed. As is generally known, Mr. Oberly was president of the International Typographical Union for two terms — 1866-1867.

Written for THE INLAND PRINTER.

CALCIMINE — KALSOMINE, WHICH?

BY ELON O. HENKEL.

I REMEMBER to have read, some time ago, in your excellent periodical an article complaining of the want of consistency or uniformity in English orthography. That this is a subject embracing a great many discrepancies is not to be denied. That, owing to the nature of the subject itself, the providing of a uniform medium for expression of ideas as diverse and numerous as the minds of human beings themselves are, there will always be in every language more or less cause for complaint, must be equally apparent. Yet, by the proper observance, on the part of editors and printers, of the fixed laws of language inherent in its very nature and constitution, much could, without doubt, be done to correct this evil. I have in mind a notable instance of a word covering the phase of the subject now under consideration, which I shall take the liberty to present as illustrative of my meaning. It is the word *calcimine*, thus spelled by Webster; *kalsomine* by Worcester. There is a very decided difference presented in the spelling of this same word by these two well-known lexicographers. In the example before us, who is correct in his spelling, Webster or Worcester? Where two such high authorities differ so widely, who shall decide? Is there no standard — no principle by which to determine clearly who is right and who is wrong? I hope I may be pardoned for venturing the expression of an opinion in the presence of such learned authorities — and that, too, without incurring the odium of being egotistical. In this case, at least, I think Webster is right, and shall here give my reasons for such conclusion.

In the absence of other better reasons, the *etymon* and *law of assimilation* should, in such cases, govern orthography, and in this instance it would seem clear that no other better, if any other guide at all, exists.

I. AS TO THE ETYMON.

The word *calcimine* is derived from the Latin word *calx*, lime. The Latin noun *calx* itself, in turn, is derived from a root-word, the Latin verb *caleo*, to be hot; hence

our English derivative *calcine* means “to reduce to a powder by the action of heat”; and this process results in a product known in the commercial world as *calcimine*, that is, a friable substance created by the action of heat on a metallic body. Thus has Mr. Webster very consistently made the word *calcimine* conform with such words as *cake*, *cinder*, *candescence*, *coal*, *calender*, *caloric*, *coke*, and that group of words involving that notion — the production of heat. Can as much be said for the spelling *kalsomine*? With what etymology does it conform? Where is the authority for such a *bastard* — does it belong to the legitimate children of the family above enumerated? If not, to what lawful parentage does it owe its origin?

II. AS TO THE LAW OF ASSIMILATION.

The law of assimilation is as clearly defined in orthography as it is in physiology. Let us test the spelling of *calcimine* by this standard: *c* in antepenult assimilates with *c* in penult, *i* in penult with *i* in ultimate, and thus the law of assimilation is harmoniously preserved. Test the spelling of *kalsomine* by the same law — *k* in antepenult assimilates with *s* in penult, and *o* in penult with *i* in ultimate, and the inconsistency of the spelling is so plain that its want of correctness cannot be doubted, to say nothing of the want of conformity of *kalsomine* and *calcine*. If *kalsomine* is right, why not *kalsine*?

Yet *kalsomine* is paraded on flaming show-cards and in printed directions for its use, to breed confusion and mar the beauty of a word of comely proportions. More attention on the part of printers and proofreaders to the laws of philology would go far toward correcting the numerous discrepancies which now mar our noble language. By due observation of such rules the principle inherent in the constitution of orthography may be discovered, and when spelling is made to conform with these principles — and not on the mere *ipse dixit* or whim of individuals — it will rest on as firm a foundation as any other part of knowledge, and present as few inconsistencies, taking into consideration the multitudinous objects involved.

Written for THE INLAND PRINTER.

PRACTICAL JOURNALISM.

BY W. A. ENGARDE.

THE best school of journalism, says a prominent authority, is the newspaper and printing office. Certainly it is, just as the best school of medicine or surgery is a hospital, or the best school of the law, the courts. But if the young man who aspires to be a journalist could enter a newspaper and printing establishment equipped not only with a good, sound general education, but with a special one, affording him a general knowledge of the political, economical and social history of his own and other countries, he should become a better and more proficient journalist than his competitor, who enters the field without such an auxiliary equipment.

A very general impression prevails that if a young man who is fairly educated, and who can produce smooth sentences, can do nothing else in the way of bread-winning he can become a journalist. To be sure he can, after a certain fashion, but he will not be long in discovering that in journalism the prize is generally captured by him

that is best endowed with accurate and interesting information, prior knowledge of men and things, and the ability and competency to impart these in clear, good style to readers.

That knowledge is power is being demonstrated more definitely and positively every day in these times, when so many broadly educated young men are entering upon mechanical pursuits. The sentiment is almost universally expressed by superintendents and foremen, that when the educated boy is ambitious to succeed, his opportunities are considerably superior to those of the uneducated one. He learns everything quicker, becomes sooner acquainted with principles of mechanism, and, working with brains as well as hands, achieves early results, which the ignorant acquire only remotely or never.

School or college preparation for what is termed "journalism," however, is decidedly different in one very important particular from preparation for any of the "learned professions," or any of the college-trained occupations. After the young student has proceeded through the regular and special courses, which are at the foundation of all liberal and academic instruction, he is turned over to the classes or schools devoted to the particular studies applicable to the special profession or occupation he is to follow. If he is to be a physician he is to study medical treatises and attend medical or surgical lectures and "demonstrations." If he is to practice at the bar, he is set to reading law books and volumes on constitutional principles and history—is dispatched to hear the orations of the law professors, or is placed in the office of a practicing attorney. If he is to be a minister of the gospel, his teacher will map out for him a course of theological study and of reading in ecclesiastical literature and history. If he is to be a civil, mining or mechanical engineer, or professional electrician or chemist, he is set to the strict study of mathematics, physics, mechanics, geology, chemistry, electricity, drawing, strength of materials, etc., and so on through the catalogue of professions and vocations, which extend into special and well defined lines of employment or duty.

But after the young scholar, ambitious to enter the newspaper office and to adopt "journalism" as a pursuit, shall proceed through the regular academical schooling up to the point when he should commence special study—what literature can the college professor place in his hands? What practical books on "journalism" can be read? What lectures on newspaper work and the necessary equipment for a newspaper man can he be sent to hear? There are no such volumes, and certainly there are no qualified, practical teachers for such work in any college or university in the entire world. They do not exist anywhere, except in the fully equipped newspaper and printing office. It is our belief that they cannot be brought into artificial existence in any form with special effort in that direction.

General education at school, reading, college, or university is undoubtedly valuable to a newspaper man in a very high degree as preparatory and auxiliary—but only by way of general preparation and aid. However he may be "schooled," he can become a proficient, useful and accomplished journalist (it is not meant a mere writer

now) only by entering a good, well-equipped and managed newspaper and printing office while young—entering in the most subordinate position (that of "devil"), and gradually ascending the successive steps as he "gets to know," and the aspiring, faithful worker will always find room at the top.

QUADRATS.

BY PICA ANTIQUE.

AFTER a long life, largely devoted to printing and journalism, with our "wild oats" sown a decade since, we fancied ourselves decent members of society, and our household respectable and respected, law-abiding and Sabbath-reverencing.

It appears, however, that we have been laboring under a most terrible misapprehension. A "minister of the gospel," who chances to live opposite, says our house is "godless," referring, of course, to the inmates, not the pile of brick and mortar. Even further, he "deemed it his duty" to go about in the community and warn the good Christian people against any association, and attempted to break up a long-sanctioned matrimonial engagement of one of the juniors—a member and officer "in good standing and regular communion in an orthodox church."

And what the fearful and unpardonable sin for which we are to be condemned and ostracized in this world and consigned to everlasting perdition in the next? **WE BUY THE SUNDAY PAPERS!**

Has the reverend gentleman (both terms appear to be misnomers) ever reflected that had he been minding his own business, reading his bible and preparing for communion with the Lord, and not watching his neighbors, he would not have known of our horrible transgressions or stood before the world a self-confessed spy? Had he been kneeling in prayer, with closed eyes, he would never have seen us quietly stepping to the door to purchase a paper.

Such was not the case, and we would call to his memory the only word ever written by Christ. Has the divine precept of charity inculcated by the tracing of His holy finger in the sand ever found lodgment in his unbrotherly brain? Has he ever pondered the lesson contained in these lines:

"He said, 'She has sinned; let the sinless
Come forward and cast the first stone.'
But they—they fled, shamed and yet shameless;
And she—she stood white and alone.
"Who now shall accuse and arraign us?
What man shall condemn and disown?
Since Christ has said only the stainless
Shall cast at his brother a stone."

Intolerance, bigotry, ignorance, superstition and uncharitableness could scarcely go farther. It is the same spirit that cried "Crucify Him," and stained the cross with holy blood; the same spirit that rejoiced in the tortures of the inquisition; that would stifle thought, freedom of speech and religion; put to the sword and fire all who kneel at another altar, and murder men, women and children for opinion's sake.

Heaven be blessed, such ministers are anomalies and monstrosities in the ranks of churchmen. Despite his

senseless, ridiculous and feeble anathemas, Sunday papers will continue to be published, purchased and read; the world, by their intelligence, brightness and purity, grow nobler and better, and by their broader, more Christian and loving charity even we who "buy Sunday papers" may yet hope to be saved.

.

THE moral influence of so-called Sunday papers (the work upon them being done upon Saturday) is beyond human calculation. From each and every one of their pulpits they preach the best of sermons to the largest possible congregations. They reach eyes, ears, and hearts beyond what the religious press can ever hope to do, with pages as clean, and with thoughts as soul-uplifting and heaven-directing.

The cry against them is as paltry as it is unavailing. The age has outgrown the shackles of a blind following, and civilization and investigation have advanced man into a clearer and more perfect spiritual light. But "emancipation does not mean the casting off of true religion." On the contrary, there is no freedom or independence (of press or thought) "unless they borrow a divine principle revealed in religion for their organic form."

In this the Sunday press stands abreast with any other, is the equal of the church, and fully as powerful an instrument in the education of the world for good.

.

IT will be a matter of interest and pleasure to many readers of THE INLAND PRINTER, and especially those of the craft, to learn that B. P. Shillaber, world-wide known as "Mrs. Partington," and one of the oldest of pressmen and printers, is still living. In a recent letter—they are always more bright, sparkling with wit, and filled with the milk of human kindness than his published writings—he says: "I am in the hands of my friends, asking their toleration for silence, so unwillingly indulged in. You know me too well to doubt my friendship, and on this I rest. For five months I have been confined to my chair, as moveless as Katahdin, with half the time a lame right-hand, which is very weak now. Rough lines for seventy-four years."

Truly they are, and all will join in wishing the foremost, most original, brightest and best-hearted of humorists a speedy return to health, and many long, painless and happy years.

.

How easy it is for a man to get himself into trouble! In the goodness of our heart, and as far as in us lies to help ambitious young printers, we have answered all questions propounded. It was a dangerous undertaking. They have come thicker and faster, and now one wants to know the reason of the *y*^o, *y*ⁱ, *y*^u in old English books. To represent the *th* in *the*, *that*, *this*, a character called *thorn* was used. In form it resembled *y*, and very soon it was written so indistinctly that no distinction was to be seen between it and that letter. Consequently, *y*^o, *y*ⁱ, *y*^u, should be read as *the*, *that*, *this*, and not as many are fain to believe as *y*^o, *y*^u, *y*^u.

This, my dear "young printer," is the solution of the matter, and may your longing after knowledge be satisfied.

TYPOTHETÆ'S CONVENTION.

REPORT OF THE PROCEEDINGS OF THE NATIONAL ORGANIZATION.

THE United Typothetæ of America, an association representing the master printers of the United States, began their second annual convention at the Masonic Temple, New York City, on Tuesday, September 18, continuing in session until Thursday. Delegates were present from twenty-two local organizations. A number of new "locals" have been formed in various parts of the country, and these were represented by delegates. The national organization now comprises five hundred and ten members. A dispatch was read from the Toronto (Canada) Employing Printers' Association, requesting the favor of admission to membership in the United Typothetæ of America. The dispatch was received with applause in the convention, and the United Typothetæ promises to soon have a jurisdiction covering the continent of North America.

The officers of the convention were: Theodore L. De Vinne, of New York, president; James Davidson, of Louisville, and Samuel Slawson, of St. Louis, secretaries, and A. O. Russell, of Cincinnati, treasurer. After a speech of welcome by Joseph J. Little, President De Vinne delivered his annual address. After referring to the organization and methods of trusts and trades unions, he said: "It is but fair to admit that the actions of the unions and the brotherhoods are their retaliation on the action of the 'trusts' and 'corners,' and of other conspirators. It does not alter the fact that they are, in most cases, unwise and unjust methods. We have suffered from unjust rules and laws; we have paid unreasonable rates for materials and labor. Smarting under injustice, we may have said to ourselves, or to each other, 'What other societies have done, we may do. We can repel force by force. We, too, can strike, and boycott, and freeze out, and cajole, and intimidate.' Vagrant thoughts like these come to us, as they do to every one who has the consciousness of power to enforce the thought. But they come, I trust, only to be put aside as unworthy and unjust. We are not here to fight fire with fire. If we, as a society, cannot succeed without making use of methods unknown to law and unwarranted by accepted standards of fair dealing, then let us disband and help ourselves individually, as we have done before. I am sure that this is not my individual view. I am but declaring the views of all."

He advocated arbitration as the best means of settling disputes between employers and employes, and urged a reform in the system of apprenticeship. He recommended the adoption of wiser efforts to make skilled printers, and said they must look after the boys, and give them a greater variety of work, and not leave their instruction entirely to the foreman and time hands, and must bind them, not by legal restraint, but by kind treatment, fair wages and encouragement.

On motion of Everett Waddy, of Richmond, Virginia, a committee was appointed to consider the question of the recent advance in the prices of type under the regulation of the Typefounders' Association. A lively debate was started by the reading of a communication from the International Typographical Union, asking for a conference, by committee or otherwise, with the United Typothetæ. A motion was made to lay the communication on the table, on the ground that the Typothetæ should not have anything more to do with the union. Another delegate, however, urged a more conciliatory course. A Chicago delegate, however, said the letter was only an attempt on the part of the union to dally with the master printers. The debate disclosed the fact that the convention was about equally divided on the question of noticing the union. Finally the communication was referred to a committee to consider and report upon. The convention adjourned at half-past one o'clock, and went on an excursion to Glen Island.

The application of the International Typographical Union for a conference was the chief subject discussed at Wednesday's session. A special committee, previously appointed, consisting of Samuel Slawson, H. T. Rockwell, Andrew McNally, C. S. Moorhouse and W. Ellis Jones, reported against a conference, stating that so far as the committee knows there exists no matter of difference between the two bodies which would come properly under the jurisdiction of the United Typothetæ, and that if any misunderstandings or disputes exist they should

be settled by the local Typothetæ interested. They recommend, also, that the International Typographical Union be informed that if now, or at any future time, they have any suggestions to make for the consideration of employing printers, it can be made to the Executive Committee of the Typothetæ.

There was considerable debate over the report, the last clause especially being objectionable. Mr. R. R. Donnelly, of Chicago, strongly opposed the recommendation, and he moved that it be stricken out. Mr. P. F. Pettibone, of Chicago, said he hoped that there would be no reference to the International Union, but believed that the report of the committee was just what it should be. Mr. Joseph J. Little, of New York, supported the report. He recognized the right of the typographical unions to exist and to have an International Union. He only objected to some of their arbitrary rules. He hoped the report would be adopted as read, and that the local unions who recognized the authority of the International Union be given the courtesy of recognition through it. The report was adopted.

The Chace copyright bill was discussed, and finally referred to a committee consisting of W. J. Gilbert, St. Louis; J. W. Wallace, Philadelphia; J. Thorne Harper and Edward D. Appleton, New York; and W. P. Henneberry, Chicago. President A. H. Pugh, of the Cincinnati Typothetæ, proposed that the organization should consider the proper division of expenses, power, heat and rent, chargeable to pressroom, composing room and other departments, so that comparison of the actual cost of doing work can be made. After some discussion this was referred to a committee, comprising: C. J. Krehbiel, Cincinnati; W. L. Becker, St. Louis; David Ramaley, Minneapolis; N. L. Burdick, Milwaukee. After considering other matters of minor interest, the convention adjourned to take an excursion up the Hudson river.

At three o'clock the steamer Samuel Sloan, accompanied by the police patrol boat Patrol, started up the Hudson with about two hundred ladies and gentlemen on board, and from that time until seven o'clock, when the return landing was made, a jovial time was had. Liberty Island was first announced, and, as a halt was made, Colonel "Bob" Morris suggested that the band play the "Marseillaise" and the "Star Spangled Banner." After a short stop the steamer made a run up as far as Yonkers. When the excursionists arrived there the heavens began to weep, and the party made a home run. An ample supply of the luxuries of life were on board, and were participated in by the excursionists. Among the genialities who were present were: President De Vinne, Secretary W. C. Rogers, and Delegates Slawson, McNally, Baker, Andrews, Bailey, Martin, Martin B. Brown, J. J. Little, John C. Rankin, Jr., Knight, Donnelly, Davidson, Rockwood, Russell, Polhemus, Crump and James A. Rogers, and it was through their efforts that the trip was made the very enjoyable one it proved to be. The delegates were the guests of the *World* Wednesday night. They visited the *World* office at midnight, and, after inspecting the composing and stereotyping rooms and seeing the mammoth presses, were entertained at a collation.

The convention closed its sessions Thursday afternoon, and at night were guests of the New York Typothetæ at a banquet at the Metropolitan opera house. The day's session was long and important. The Committee on Nominations reported the following officers for the ensuing year, and they were unanimously elected:

For president, Andrew McNally, of Chicago; vice-presidents, L. L. Morgan, of New Haven; Clayton McMichael, of Philadelphia; W. Ellis Jones, of Richmond, Virginia; W. C. Swain, of Milwaukee; H. R. Lewis, of Portland, Oregon; W. A. Shepard, of Toronto; corresponding secretary, Everett Waddy, of Richmond, Virginia; recording secretary, Wm. Johnston, of Chicago; treasurer, A. O. Russell, of Cincinnati; executive committee, Howard Lockwood, of New York; H. T. Rockwell, of Boston; C. A. Mitchell, of Minneapolis; Thomas Williams, of Detroit; S. C. Toob, of Memphis, Tennessee; C. M. Skinner, of St. Louis; E. R. Andrews, of Rochester.

It was decided to hold the next convention at St. Louis, on October 3, 1889.

The Committee on Arbitration reported, "That the theory of arbitration is beautiful, but in the general application would be very dangerous, and think the whole matter should be left to the judgment of the individual or society most interested." This report was adopted.

The consideration of the Chace copyright bill was resumed. The committee having the subject in charge introduced Dr. Edward Eggleston, who made a long statement of the scope and purpose of the bill, which he favored, and its effects on the American printers. He said he was under the impression that in the Chace copyright bill they were protecting the printers. If cheap books were demanded they would be supplied. Mr. Samuel Slawson read a long argument against the bill, which had been prepared by Richard Ennis, of St. Louis. G. S. Duncan, of Edinburgh, said it was the opinion in the trade in Scotland that if the Chace copyright bill became a law the Scotch publishers would, from necessity, be compelled to bring their business to this country, bring their capital and plant here, and publish their books from this side. Colonel Sleicher, of the *Albany Journal*, said that the bill was not for the interest of American printers. Finally the whole matter was laid on the table.

Another communication was received from the International Typographical Union Conference Committee, repeating a request for a conference, and suggesting the following matters for consideration by the Typothetæ in conference with the typographical union, namely: Apprentices, separate union for book and job printers, the withdrawal of foremen from the unions, and arbitration. The writers also asked that if the convention had not time at this date to take up the matters suggested, they be referred to the Executive Committee of the Typothetæ. After a long discussion, the communication was referred to the Executive Committee.

The committee appointed to consider the question of usage of the trade in regard to plates and sheet stock in the hands of the printer and binder, and also as to standing matter, reported that after due inquiry among the delegates of the convention they were unable to learn of any general usage which would amount to a custom regarding any of these questions. They recommended that electrotype and other plates left in the care of the printer and remaining unused for a year should be subjected to a charge of one dollar for care and storage, and that charges be also made for the storage of sheets and for type kept standing. The committee's recommendations were adopted.

Votes of thanks to the retiring officers, and to Mr. W. W. Pasko, of the New York Typothetæ, who had charge of the entertainment of the guests, were then adopted, and the convention adjourned.

SPHINX.

ABOUT POSTAGE STAMPS.

There are about six thousand different descriptions of postage stamps in existence. The museum of the Berlin postoffice alone contains between four and five thousand specimens, of which half are from Europe, and the remainder divided between Asia, Africa, America and Australia. What country carries off the palm for absurdity and grotesqueness of artistic design and inferiority of execution, we are not told, but if the collection is faithfully representative the variety of ugliness must be considerable. Some of the stamps, it appears, bear coats of arms, and other emblems, impartially borrowed from the heavens above, the earth beneath, and the waters under the earth—stars, eagles, lions, horses, serpents, railway trains, dolphins and other "fearful wildfowl." There are, moreover, the effigies of five emperors, eighteen kings, three queens, one grand duke, several inferior titled rulers and many presidents. In so many countries and nationalities some really attractive specimens must have been elaborated, but, if so, it is a pity our authorities did not borrow a hint or two from the best; for anything more bald, monotonous and commonplace than the British series of postage stamps down to the latest issue cannot well be imagined.—*Paper Makers' Journal*.

THE Russian bank-note establishment in St. Petersburg for the production of paper money is on a most extensive scale. It consists of a paper mill with a 200-horse power engine, separate departments for copperplate engravers, etchers, compositors, and electrotypers, hundreds of steam presses, and a heliographic department, while no less than twenty-five steam engines supply the motive power to the various departments, and an approximate idea of the extent of the factory may be gathered from the fact that 900,000 notes are produced daily.

THE ART OF EMBOSSEING AND THE NEW COLT'S ARMORY EMBOSSEING PRESS.

BY JOHN THOMSON, MEM. AM. SOC. C. E., MEM. AM. SOC. M. E.

RESPONDING to the kind invitation of THE INLAND PRINTER to give its readers a description of my new embossing press, it has occurred that, in connection therewith, a few remarks on embossing as an art might be of concurrent interest. The thickness of the two being equal, it may be put down as a fundamental rule that it requires considerably more pressure to emboss paper than metal. This may appear a somewhat startling statement, to those not entirely familiar with the principles involved; but it is nevertheless a fact, and the reasons therefor may be briefly stated as follows:

In metal, it would be required simply to transmit sufficient pressure to the die to bend the metal to the desired form; but in paper it is necessary not only to bend it to the desired contour, but to also add additional force sufficient to crush and set the elastic yielding fiber; in other words, it is like attempting to crush the "life" out of an elastic rubber ball as compared with the force that would be necessary to flatten a metal sphere.

The elements necessary to a successful and durable embossing press are: great strength; great impressional power; the highest attainable degree of rigidity with an easy, convenient action for feeding and making ready. Of these, however, the most important of all is the feature of *rigidity*. A press may be strong but not rigid. The practical value of rigidity in a machine of this character is that when the job is once made ready, there are no false strains in the machine tending to break down the "force," to flatten the fine lines, or to shift the die and guides out of register. In practice there are very few dies which, if set to the center of the machine, as would usually be proper, but would be *out of balance* as to the center of area of pressure. The tendency of this is to cause the machine to "attempt" to equalize this false effect; or, in other words, to reach equilibrium. This, of course, cannot be permitted, and the resistance to this in the machine must be of such character as to properly withstand any normal strain with the least appreciable amount of spring in the acting parts.

Again, the impression members of the machine ought to be of the strongest and the most rigid construction; for it should be borne in mind that the connecting rods of an embossing press, like those of a pump or a locomotive, are to be regarded as simply enormous *springs* yielding under every strain to which they are subjected. It is the province of good engineering to come in and say what shall be the limit of such action by reason of proper design and disposal of parts.

From the foregoing generalities, we will now pass to a practical portion of the subject which may be of even greater interest to those who may have in contemplation the beginning of work of this character;

and this will refer to the practical details of making ready, or, as it is technically known, building of the "force" or "counter." To properly emboss, it is simply required to employ a single die, which should be of the female or intaglio type. It is usual to secure the die in the bed of the machine either by pasting it to a false blank, or by securing with gauges, or locking it in a chase as in ordinary type-work.

The next step in the operation is the building of the male counter-part, or, as it is termed, the force or counter. In respect of this, practice varies much as in ordinary presswork, as every practical embosser will find some particular point in the process which, with him, gives better results than that used by others; but in general terms it can be said that the most successful results are obtained by the old-fashioned but reliable method of building the force simply by the use of paper. This should be used in combination with flour paste, or gum arabic or fish glue; and it is right here where the skill of the operator will stand out with great distinctness; for we have proved it in practice

that one operator will obtain results under, say, a pressure of ten tons, which another operator might not obtain under a pressure of one hundred tons. It is the difference between manual dexterity and judgment, and the old Scotch rule of "main strength and stupidness." As the force begins to show clearly, the flat portions ought to be cut away and the high portions added to, the aim and intent being to put the pressure where it will do the most good; for it would seem to be evident that simply adding sheet upon sheet will not obtain the desired result, as in this wise the flat portions of the die *bear off* and prevent the low portions from receiving the required amount of pressure. It is probable that in dies of considerable

ECCENTRIC ACTION.
Colt's Armory Embossing and Stamping Press.

depth and large surface much trouble and annoyance comes from the air which is confined between the paper and the die as it goes to the impression, and may also partially account for the enormous energy which is consumed in the production of this character of work.

The machine which is herewith illustrated is the result of over ten years' experience in this line of manufacture, and in this general type of machine; that is, in which the platen slides to the impression and then opens out like an ordinary job printing machine to receive the sheet and to make ready the force.

This press is intended for the production of every variety of embossing, gold-leaf imprinting and book-cover stamping. It may be fitted in various ways to suit individual uses; such as being provided with steam blanks for hot work, with platen and bed blanks for inverting dies and forces, or for interchanging with printing presses. The size of the platen of the press shown in the engraving is $12\frac{1}{4}$ inches by 18 inches, the space between the connecting rods $18\frac{3}{4}$ inches. The peculiarity which establishes the designation of this press is that the platen is actuated by eccentrics instead of cranks; these eccentrics being formed upon the inside faces of the gears and projecting through the main

connecting rods; which latter are thus interposed between the finished side of the bed and the finished faces of the gear wheels, the space being just sufficient to permit free movement. In this wise the shafts and main connecting rods are brought to a perfect shearing strain; the impression stress being applied with almost theoretically perfect directness, avoiding the possibility of spring, end-thrust, or side-cramp. The gears, being outside of the rods, can thus be made of almost any desired diameter, permitting a high relation of single-pair gearing. The sides of the bed, not requiring to be recessed to receive the gears, as in regular practice heretofore, are carried out flush with the rods.

We believe that this represents the nearest approximation to what has been well termed "the anvil principle" in machine construction that has ever been reached. The practical benefit to the embosser being, as already intimated, the facility with which the "force" may be built up, and its long life when so completed, as there is no false cramping tendency to cause it to "crawl" and thus break down the lines. The platen motion is similar to that applied by me to the Colt's system of job printing presses, that is an absolutely direct slide to the impression positively controlled by interlocking lugs. The extent of the direct motion is $\frac{5}{8}$ inch. But there is here one important modification. The rocker seats being at an incline of 45° , the platen is thus virtually suspended by the connecting rods, the rockers sustaining but a portion of the weight of the platen. The rockers are developed from the center of the shaft. These conditions permit forming the bridge-cam in such manner as to swing the platen on

its shaft in unison with the travel of the eccentrics, so that the "throw" of the eccentrics is augmented to the extent that the lower edge of the platen is carried outward in a line practically parallel with the face of the bed. Two important advantages are thereby obtained: First, the entire face of the platen is, as it were, lifted out and up to the feeder; and

second, the radius (distance from center of gears) of the eccentrics is reduced to a minimum, in this machine being but $2\frac{1}{8}$ inches.

The bridge in this press is also the platen, that is, instead of being made in two parts bolted together, one single, massive, solid casting comprises the two functions. It is of the strongest and most rigid form known to the art, that is, very heavily ribbed to resist compression on front, with elliptical formation at the back to resist transverse and tensile strains. It will be observed in Fig. 3 that the bearings of both the bridge-shaft and the main-shaft are relieved at the center. These recesses are designated relief chambers, the function of which is to compel a more uniform distribution of strain upon the shaft. In the case of the main-shaft, the chamber also serves as an oil-reservoir. The platen may be carried back or forth through a range of $\frac{1}{8}$ inch, in ten distinct adjustments averaging .0125 inch each, by means of eccentric sleeves positively and separately locked to each connecting rod. Thus the center of strain, through the platen, is never altered by changing the positions of the sleeves, and the

pressure may be controlled with the greatest exactness. In this press the fly-wheel is arranged to be positively and automatically disconnected from the driving-shaft, and this may be arranged either to leave the platen open, after each impression, as shown in dotted outline of Fig. 4, or the impressions may be made successively as in an ordinary printing

FIG. 4.*

Longitudinal Section and diagram, illustrating eccentric and platen action, with detail view of steam blank.

* These views are reductions from the original drawings from which the press was built.

press. In this manner the machine is equally well adapted for "pointing," gilding, work involving difficult registration, or the more ordinary class that may be run to successive impressions. This change in the operation of the machine is accomplished by removing or replacing the disconnecting shoe, Fig. 2.

The clutch is of simple but peculiar construction, combining the positive engagement of a pair of claw clutch-members with friction for starting and stopping the machine. The fly-wheel, which is also the main driving pulley, is loose on the shaft and carries a fixed clutch. A separate, narrow, light pulley on the outside of the fly-wheel is keyed to the shaft. The sliding member of the clutch is engaged by a clutch lever, the extension of which acts in a cam attached to the end of main shaft and rotating therewith. The belt shifter is arranged to slip the belt partly across the face of fly-wheel on or off from the light pulley, which latter is termed the starting pulley. A short arm projects inwardly from the belt shifter, and is adapted to be engaged by the shoe of gear wheel. The operation is as follows: With the belt entirely upon the fly-wheel, as see dotted lines Fig. 1, it is rotated on the shaft as a loose pulley. When the belt is shifted over upon the starting pulley the press is immediately, but smoothly and quietly, put into motion, the clutch being slid into engagement by the cam when the speed of the shaft will have approximately equaled that of the fly-wheel. Consequently, the start of the platen is perfectly smooth, and there is no annoying shock or jar. After the impression has been made, the cam first acts to withdraw the sliding clutch from engagement with the fly-wheel; the shoe, impinging upon the arm of the belt shifter, slides the belt off from the starting pulley, and the platen comes quietly to a stop. The clutch lever is provided with an elastic steel tongue, so that when the teeth of the clutch members happen to be brought into contact, the tongue yields until the relative speeds change sufficiently to permit proper interlocking. To start the machine it is simply required to shift the belt, which is accomplished by the pedal in front of the press. This is locked by a hook or pawl, automatically, so that the press cannot be accidentally started up, as when making ready.

The clutches are of steel, case-hardened. The trunnions of bridge shaft are three inches diameter. The pinions are steel, cut solid in the driving shaft, which is three inches diameter, and is mounted in a solid babbitted box extending across the entire width of the frame. The main connecting-rods are of the most liberal dimensions, and are made of a special high grade of crucible steel. There is a section of machinery steel fused into each of the gear wheels, in which are formed the teeth that carry the eccentrics over the nip. These sections are formed separately, and are then melted into the iron, the union of the two metals being perfect. The advantages of this construction are that the strength of the steel teeth is at least quite as great as would be obtained were the entire wheel produced from a steel casting; while, in event of accidental breakage, the wheel can be duplicated at a much less expense. The bed is inclined at an angle of forty-five degrees from the vertical. The platen is caused to swing outward and upward to within five degrees from the horizontal. In this manner the face of the platen presents itself to the operator like a table, while the angle of the bed prevents gold leaf or sheets from dropping.

The press is entirely self-contained, every part being directly attached to the frame. The eccentrics are oiled from the outside of the gear wheels, and the bridge-shaft trunnions through a slot in the bridge; and, consequently, the connecting rods are not pierced. Oil reservoirs are formed in the gears, from which project oil holes to the bearing faces of the eccentrics, so that oil is fed at each revolution of the gears.

It is exceedingly compact, and as rigid as the Rock of Gibraltar. There is no limit to the speed, except the ability of the operator to lay the sheets. It is operated in regular practice at 1,200 impressions an hour. The workmanship, material and performance are guaranteed to be of the first order.

THERE is a French invention for printing on wood by means of hot type. A guide regulates the degree of heat. The inventor claims that the impression is as neat as if obtained by lithography. By using a special ink cold type may be employed. Only one man is required to work the machine, which will print 350 boxes or 400 flat pieces of wood an hour.

RECENT PATENTS.

The following list of patents relating to the printing interests, granted during the past month, is specially reported by Franklin H. Hough, solicitor of American and foreign patents, 925 F street, N. W., Washington, D. C., who will furnish copies of patents for 25 cents each :

ISSUE OF SEPTEMBER 4, 1888.

- 389,112—Type, Making wood. G. T. Setchell, Norwich, Conn.
- 389,135—Type-metal pot and furnace. G. Bender, Brooklyn, N. Y., assignor to Manhattan Typefoundry, New York, N. Y.
- 389,113—Type, Producing dies for making wood. G. T. Setchell, Norwich, Conn.

ISSUE OF SEPTEMBER 11, 1888.

There were no patents relating to the printing interests included in this issue.

ISSUE OF SEPTEMBER 18, 1888.

- 389,561—Printing machine, Color. W. H. Fuller, Pittsburgh, Pa.
- 389,800—Delivery mechanism for printing machines. G. P. Fenner, New London, Conn.
- 389,656—Folding machinery for printing presses. G. W. Kendall, St. Albans, Vt.
- 389,607—Galley. P. Shnidewend and J. L. Lee, Chicago, Ill.
- 389,650—Printing machine sheet-delivery mechanism. J. T. Hawkins, Taunton, Mass.

ISSUE OF SEPTEMBER 25, 1888.

- 389,995—Printing floor cloths, etc., Machinery for. J. Wright, Kilcaldy, County of Fife, Scotland.

PAPER MILLS AND MACHINES.

According to the "Annuaire de la Papeterie Universelle de 1886" (General Annals of the Paper Trade), the countries herewith named have the following number of paper mills and machines:

Possessed by	Paper Mills.	Ma- chines.	Tubs or Chst.
France	420	525	
Great Britain—			
England	280	430	
Scotland	68	98	
Ireland	13	13	
Belgium	30	48	
Denmark	10	10	
Spain	72	47	140
Portugal	16	7	
Greece	1	1	
Holland	61	40	80
Italy	228	158	300
Russia	133	137	
Sweden	48	26	
Norway	8	8	
Roumania	3	3	
India	6	4	
Japan	6	6	
Syria	1		
Island Mauritius	1		
Egypt	1		
Australia	4	6	
New Zealand	2	1	
Canada	36	44	
Mexico	11	12	
Cuba	1	2	
Argentine	3	3	
Brazil	5	4	
Venezuela	1	1	
United States of America	884	1,106	
Further, according to the Address Book of Gnutter Staib Biberach, XI Edition, 1886—			
Germany	809	891	
Austria, Hungary	220	273	
Switzerland	35	46	
Luxemburgh	2	2	
Total sum	3,419	3,952	520

TWO CLASSES OF PRINTERS.

Printers are divided into two classes. One pushes and elbows his way ahead through rain and sunshine, and all manner of business adversity, finally commanding a lucrative trade and the respect of his competitors. The other class hold back, study with great care the various signs of the times, making weak attempts to thrive when everything looks favorable, and becoming dormant and faint-hearted the moment the financial horizon has an ominous appearance. The first-class always manage to find business in some way, while the other seems satisfied to plod along in an aimless manner, executing indifferently the work left as their portion. Business of the paying sort comes only by personal endeavor and hard work, and those who go steadily forward, with ordinary prudence, are sure to lead in the end. Confidence in one's ability and the will to do business is as necessary to success as a prosperous condition of things generally. He who waits for "something to turn up," "sits and waits, and waits in vain." Go yourself and do the "turning."—*Exchange.*

CURSIVE
SCRIPT

18 POINT CURSIVE SCRIPT

40 LOWER CASE A, 10 CAP A, \$6.00
EXTRA LOWER CASE, \$3.25

Boston, Mass., October, 1888

To Printers

This Cursive Script is an imitation of a fashion of writing which was popular in France during the Sixteenth Century. Nicholas Granjon, a French engraver, cut the first punches at Lyons, during the year 1556. The King gave him exclusive privilege to manufacture the Civilitie for ten years

The Cursive was then known as Civilitie, and was so called from the title of a book of precepts, which was frequently reprinted in these types with intent to teach French children to read the fashionable handwriting of the day

Admirers of eccentric characters will find in the Cursive pleasing varieties of Mediaeval forms in both the Capitals and Lower Case, models of shapes designed by the masters of early type printing

They have been displaced by reason of changes in taste, but they are being restored to favor, and will gratify those who delight in the quaintness and strength of the old-time master printers

The Six Best Machines.

THE SMYTH BOOK-SEWING MACHINE :::::

- Sews with Thread more Books than Five or Six Girls, and gives a Handsomer, Stronger and more Flexible and Durable Book.

THE THOMPSON WIRE-STITCHING MACHINE :::::

- The Original and only Satisfactory Wire-Stitcher. Flat or Round Wire, Side or Saddle Stitch, up to an inch in thickness.

THE ELLIOTT THREAD-STITCHING MACHINE :::::

- Stitches with Cotton, Linen or Silk Thread more Pamphlets than Five Girls, and much Better. Ties an Absolutely Square, Hard Knot.

THE CHAMBERS FOLDING MACHINE :::::

- The only Folder adapted to Fine Work. Folds either from Points or Gauges, with Four Times the Speed of Hand, and with Greater Accuracy.

THE ACME PAPER CUTTING MACHINE :::::

- The original and only Simple, Automatic, Self-Clamping Cutter made. Does Twice as much and Saves all the Hard Work of Cutting Paper. Has more Improvements in Saving Labor, Time and Space than any Cutter extant.

THE GIANT SIGNATURE PRESS :::::

- Compresses Signatures for tying up. Saves cost of Smasher and does Better Work. Preserves the Life of the Paper and Stability of the Bound Book.

These machines are sold subject to trial, and guaranteed by their respective manufacturers, in addition to the guarantee of the agents. These six machines stand on their merits as being each the most successful one in its class. No first-class Bindery can afford to do without them, or to accept unsatisfactory substitutes.

MEGILL'S GAUGE PINS.

To the Editor:

NEW YORK, October 9, 1888.

In the September number of *THE INLAND PRINTER* appeared a paragraph under the head of "The Practical Printer," which would seem to reflect on the merits of my patented gauge pins.

I do not know that they were before the mind of the esteemed author when he penned those lines, but fearing that some printers who are unfamiliar with their workings might continue to live in darkness concerning their true merits, I ask that you give this publicity.

It would appear by the writer's statement that all "guide pins" must be inserted through a great many sheets of paper to insure their hold on the platen; that they must be forced through not only the top sheets, but also through the paper underneath, which is termed the packing, causing it, as he properly claims, to be unfit for subsequent use on fine work of larger form.

Whatever may be necessary with other pins (and we know of none now in use except of crude and unprofitable contrivance) it is not necessary to insert any of my gauge pins, old or new, through more than two or three sheets, which number is generally employed for making ready, and thrown aside after the job is finished. They were originally devised with a view of overcoming this objection to the use of pointed gauges, and so far have failed to meet with a successful rival, and while they may not equal carefully and strongly gummed quads on long run color work, they certainly will do a fine register, and possess advantages in the quickness with which they are applied, and the completeness of their construction, which adapts them to the great mass of work done on the job press.

EDWARD L. MEGILL.

FROM WORCESTER.

To the Editor:

WORCESTER, Mass., September 14, 1888.

On Friday afternoon, immediately after the second edition had gone to press, Mr. Philip Schofield (foreman of the *Gazette* composing room), called all hands to the middle of the room. The occasion was the twenty-fifth anniversary of the marriage of Mr. David Armitage, "ad" man on the paper. His fellow-employés wished to recognize the event, and did it in a very handsome manner. Mr. Charles H. Doe, editor of the paper, who made the presentation, spoke in substance, as follows:

He said it had been made his pleasant duty to inform Mr. Armitage that his friends in the office had become aware of the family anniversary which he was observing, and had all agreed that it ought not to pass without some expression of the good-will felt toward him. Mr. Doe said he was gratified to be selected as spokesman, not only because of his esteem for Mr. Armitage, but because he liked to be recognized in all such office gatherings which promoted good feeling among the men, and when they could all meet good-naturedly, relieved from the drive of work, so trying on an afternoon newspaper. He could bear witness from his relations to Mr. Armitage to his loyalty to the office and to his ability as an editorial writer, and could bear witness, too, that while he had been faithful to his employers, he had never toadied or flattered, or curried favor at the expense of others. To his fellow-workmen he had been as true as steel. In fact, could a man's character be put into a single phrase, he was above all things a straightforward, square man,

"True as the needle to the pole,
Or as the dial to the sun."

"We extend our compliments and good wishes," said Mr. Doe, "not only to you, but to your excellent wife, and we hope you will carry them to her. To you and to yours, we give the hand of good fellowship, and we all say, 'God bless you, David! May you live long and prosper.'"

The testimonial was then uncovered and proved to be a handsome silver water set. The pitcher, mounted on a stand, is twenty inches high, and its conspicuous ornament is fuchsias. It bears a handsomely engraved inscription: "Presented to Mr. and Mrs. David Armitage

by employés of the Worcester *Evening Gazette*," the name of the paper being cut in old English letter, the same as the *Gazette* heading. The bowl and goblet are gold lined, and the set is very beautiful in its design.

Mr. Armitage, much moved, made an impromptu speech in reply, expressing his gratitude, and his friendship for the office and the men. He had always tried to do his duty as a man, and he hoped that might be considered when it became necessary to reckon up his errors and his failures. He spoke feelingly of his wife, and of the help and strength she had given him to act his part in the world manfully.

All hands then went back to their cases, after congratulating Mr. Armitage and wishing him many happy returns. CORMACK.

FROM BRITISH HONDURAS.

To the Editor:

BELIZE, September 13, 1888.

This isolated colony, where Great Britain has set a foot, in opposition to your American ideas of propriety, never has yet been noted for its excellent printing offices and presses, nor fine specimens of jobs; nevertheless there has been this year a tendency toward better things. A small job office, on the interchangeable system, including an improved No. 7 Golding jobber, was received from Boston, and now a new newspaper plant, from the same house, has given an impetus to the printing business, and exhibits the fact that we ought to have begun years ago to purchase our printing materials in America. The new system, and a uniformity of heights and of what constitutes fonts of type, together with the beautiful presses, cutters, and other printing materials which are now manufactured only in America, will soon show this community how long they have groped about in the dark, and which is the shortest way out.

If the countries of the world which have introduced modern printing as a means of education and enlightenment among themselves, will read *THE INLAND PRINTER*, and carefully note its advertisements, as I have done for a year past, they will profit by it. Their newspapers and books may be largely improved, and their printers will be glad that the city of Chicago, for instance, has made such wonderful advance in the "art preservative" in the last decade or two.

Your correspondent joined the typographical union of St. Louis, Missouri, in 1852, and up to the time of final departure from the United States, a dozen years ago, and to this date, was never other than a strict union man, and belonged temporarily to several branches of the fraternity. If you should give place to this, no doubt there are yet alive a number of printers scattered between San Francisco and New York who will open their eyes when they learn that he still lives and puts in his eight hours every day among the cases and presses of a neat little job and news room among the palms and sea breezes of a tropical town.

Yours respectfully, C. L. GOODRICH.

FROM A COUNTRY PRINTER.

To the Editor:

IRON MOUNTAIN, Mich., September 23, 1888.

I have been an interested reader of your valuable magazine for some months, and the humor seizes upon me to unburden my soul in reference to some of the mechanical difficulties encountered by the country printer. I see in *THE INLAND PRINTER* many hints upon management and execution of work that are valuable to the proprietors of moderately large establishments, but I sometimes feel that *THE INLAND PRINTER* forgets that there are thousands of printers and publishers located in towns that run from 2,000 to 10,000 population who meet perplexing difficulties in what are doubtless considered the simplest of operations, because they are suddenly called upon to perform some piece of work outside of the usual run of business in country offices, and they thirst for knowledge that possibly many of your subscribers would think it superfluous to give. This large class of printers, Mr. Editor, must be reporters, editors, bookkeepers, proof-readers, canvassers, job printers, pressmen, roller-makers, bookbinders, engravers—in fact, must be ready to turn their hands to anything that pertains to the printing business, and as no city-bred printer, or country-bred printer for that matter, is instructed in all these things during his apprenticeship, it follows that oftentimes he must depend upon his

own ingenuity to carry him through. He is located where he cannot call in the assistance of the engraver, bookbinder, roller-maker, etc., at any time in case of emergency, so he must do these things himself, and the results of his efforts must oftentimes be unsatisfactory and embarrassing. The writer hereof recently received an order for 2,500 small pamphlets bound in cloth, the covers being made of binders' cloth, pasted onto heavy manila paper. The work was simple enough until it came to pasting the cloth onto the pamphlets, which was the last operation, except trimming the finished book. I am certain a bookbinder would know how to do this without having the covers roll up as they dried, and would not have piled up his work, and to his horror have found it was beginning to mildew. At the risk of being set down by you and your readers as being an incompetent printer, I mention this circumstance, hoping that through you I may receive valuable hints for the future. I have ways to overcome similar difficulties in binding small numbers of check books, receipt books, etc., as I often do, but this is my first experience with a job of the kind referred to, and I freely acknowledge my ignorance as to the best method to do the work. It may be said I should have competent workmen in my employ, but it must be remembered that the class of work usually coming into the country printing office does not include such jobs as the above, and it is a rare thing to find a journeyman printer who would be better posted as to the best method of doing work outside his regular routine of labor. I am convinced, Mr. Editor, that a few hints upon this subject will be interesting to many of your readers, as well as to

Yours truly,

A. B. C.

FROM SCRANTON.

To the Editor: SCRANTON, Pennsylvania, September 28, 1888.

Most of the job offices here have reduced their force to the foreman and a couple of boys. The indications are that business will pick up shortly after the November election. The new *Republican* building, which had reached the fifth story and had the roof about completed, and had to be taken down again, the result of a bad foundation, is again showing itself to be pushed forward rapidly, and by January next it is expected to be ready for occupancy.

Schoen & Keller, two former employes of the *Republican* job and press rooms, who started in business some months ago, are doing a first-class business; result, nothing but first-class work leaves their office. Business men appreciate good work, consequently they are extra busy for this season of the year. Mr. Schoen is what may be called a "star" at presswork, and Mr. Keller, speaking mildly, is an artist. We congratulate these gentlemen on their success in their new undertaking. The *Truth*, of course, is at last settled in its new office, and is now running one of R. Hoe's perfecting presses, 20,000 copies an hour. This is another successful enterprise issuing an evening paper. It is now rumored that the morning *Times* (democratic) will, after the election, receive a partner to the present publisher, and it may take a big boom, besides it will be made more of a metropolitan journal than it is at present.

The Typothetæ lately formed here seem to think they are a very important element. A few hot-heads, who were doing their work with boys, found that they could not compete against men of experience and ability, and who did work that union offices could not begin to touch with their figures, and who also about destroyed any profitable living at all, are now the biggest toads in the puddle in perfecting a regular and profitable schedule of rates, and are endeavoring to boycott a couple of the best offices in the city because they will not subscribe their names to the "never-to-be-broken schedule of rates," or their ironclad agreement. These very offices never have a union man in them only when an extra rush comes. We would like to ask what good the Typothetæ is if they still cut rates? Well, the way it is done probably is they give the schedule price on a job, and, if an old customer or friend, then a neat ten to twenty per cent discount. To illustrate it: a job was taken to one of these boycotted offices; the price given—it was too high. It was taken to an office of the Typothetæ, and it was there taken for from \$2 to \$5 less than the former office. And still they are trying to establish a schedule of rates, or probably this is what our brethren call a "trust." Eh?

B. J. B.

FROM MONTREAL, P. Q.

To the Editor:

MONTREAL, October 7, 1888.

As I have not seen anything in THE INLAND PRINTER relating to Montreal matters I have concluded to do what I could in that line. The printing fraternity in general are jubilant over the election of one of their number to parliament. At the special election held last month to fill the vacancy caused by the death of Mr. Coursol, Mr. A. T. Lepine, member of the French typographical union, and also an influential member of the Knights of Labor, was elected by a handsome majority of six hundred. The candidate from the first announced himself as being strictly a prohibitionist and trade unionist in all matters. The liberal party, who had always claimed to be the friend of the workingman, showed their genuineness by putting a candidate in the field. The conservatives, who were considered the enemy of labor, did not put forward a candidate, so there were only two candidates; and, in the face of all the obstacles placed in his way, it is considered a glorious victory for organized labor.

Work seems to be fair in most of the printing offices. The *Gazette* office has an order for a million almanacs to be printed in English, French and German. They are for an American firm, who claim they can get them done cheaper here by sending the plates, and, after they are done, ship them to other countries without paying any duty on them. This requires the above office to work nights.

The *Herald* office also has a million almanacs in two languages—French and English—which require it to put in a good deal of overtime.

The office of the *Canadian Workman*, only in existence a few months, is experiencing quite a boom. Besides the weekly paper, which has a good circulation, the proprietors have a monthly, and in a few weeks will issue a daily hotel register, besides catalogue and commercial work. The office is run on the coöperative plan. Each shareholder belongs to the Knights of Labor or the International Typographical Union. The undertaking will undoubtedly be a financial success. The readers of THE INLAND PRINTER here are sorry to see that a duty has been imposed on that publication. J. P. M.

FROM WASHINGTON.

To the Editor:

WASHINGTON, D. C., September 28, 1888.

Your Louisville correspondent, C. F. T., in his letter of July and August, to your valuable publication, makes certain statements which I think are, to say the least, very unjust to the gentlemen who represented the organized pressmen at Kansas City. As such statements are calculated to do harm, and have a tendency to retard organization in the pressmen's branch of the craft by creating a want of confidence in the minds of those whom we are striving to gather into the fold, I deem it my duty to reply to him.

C. F. T. tells us that "we have been, seen and conquered." He also tells us "There is no denying the fact that some of the unions that were the most pronounced in their demands for an international pressmen's union, sent representatives who had opinions just the opposite, and who were the most persistent opponents to the scheme." He tells us all this, but fails to tell us that the cause of this change was brought about by the new light that was thrown upon the "scheme" at Kansas City. The pressmen delegates, after coming together and talking the matter over, came to the conclusion that it was not for the best interest of the craft to separate at this time.

Stripped of all its glittering generalities the main cause of our dissatisfaction was not with the International Typographical Union, nor of any act that they had done as a body toward the pressmen of the country; on the contrary, they have treated us with kindness and consideration, and have always stood ready to extend a helping hand, but I cannot say the same for the late executive council. To their action alone must be attributed all the ill feeling and dissatisfaction which has been engendered by their unlawful action in revoking the charter of a pressmen's union without the faintest semblance of authority or warrant of law for so doing.

I cannot agree with C. F. T. that the pressmen owe a debt of gratitude to Mr. Pym or anyone else. Our remaining under the jurisdiction of the International Typographical Union depended solely on the

disposition that body would make of the case of No. 6. As we had right on our side, I do not think that the pressmen received one iota more from the Committee of Appeals than they were justly entitled to. They only received justice, pure and simple.

C. F. T., in speaking of the propositions that have been submitted to the subordinate unions relating to the increase of the per capita tax says that "The question now is whether the pressmen will submit to being forced into what they well know is opposed to their interests," and adds, "I think not, and many others are of the same opinion." In answer to this, I would most respectfully refer him, and those who hold the same views as himself on the subject, to the letter from C. W. M., of Philadelphia, published in the August number of THE INLAND PRINTER. I heartily indorse C. W. M., when he says, "I tell you union men, something of the kind must be adopted if you wish to bring unionism and beneficence to our homes and firesides."

C. F. T. goes further, and attempts to lift the veil that hides the future, and brings forth all the trials and tribulations (that in his imagination he finds therein stored) for our especial benefit. Yet in the same breath he makes the assertion that "with separate organizations, and an amicable arrangement existing between them, would put the two branches in a position to accomplish anything within reason." If this is so, what is the matter with having this amicable arrangement, and still retain the same relations to the International Typographical Union? We can have it just as well, and I think a great deal better, for in union there is strength. As a majority of our unions are small in membership, it is as much as they can do to meet the expenses of their local organizations. To burden them with the additional expense of an international organization would be the surest means we could adopt to sweep them out of existence. If C. F. T. wants to benefit his craft, let him employ his talents in getting up a code of laws that will benefit the pressmen, and help along this amicable arrangement that he speaks of. I am assured that anything emanating from the pressmen that is for their welfare will meet with the hearty coöperation of the International Typographical Union.

In conclusion, I would say that the course followed by the pressmen delegates at Kansas City was the proper one, under the circumstances. I feel satisfied that time will prove this assertion correct. There were many things demonstrated to us there that we had no idea of. I hope the pressmen in the future will profit by our experience. It is one thing to make a bargain, and another to deliver the goods. C. H.

FROM BOSTON.

To the Editor :

BOSTON, October 4, 1888.

The general business outlook here is good, and the printing trade is receiving its full share. Fall trade has fairly started, and nearly all the offices are quite busy, though some are not yet pushed to their full capacity.

Messrs. Alfred Mudge & Son are very busy in all departments, the job department especially being crowded. Besides their numerous cylinder presses, they have several Gordons and one of each size of the Golding Jobber. This house is one of the oldest and best equipped in the city, and turns out a class of work second to none.

The book department of the Rand Avery Company is full of work, and I am informed that enough is already in hand to keep this department running for the next six months. "The Franklin Press" has for many years been the imprint that has appeared on work turned out by this house, but it has recently been changed to "The Lawson Press." This firm recently advertised for forty pressmen for nightwork, by which it is evident they intend to run their plant to its fullest capacity. Mr. Thomas W. Lawson is now president, treasurer and manager of this company.

Mr. John C. Rand, formerly president of the Rand Avery Company, is now interested in the *American Queen*, a new society and fashion magazine, the first number of which is to appear this month. Many of the illustrations and all the fashion plates will come from Paris.

The office of Messrs. C. A. Pinkham & Co. has been removed to new and more commodious quarters on Congress street, and now claim to have one of the most convenient offices in the city.

Messrs. C. W. Calkins & Co. have also removed, though as yet are not fully settled. This is the second time in six years that this firm has

been forced to seek more extensive quarters. They are now located in a large new building on Purchase street and occupy two floors, the upper one being devoted to their cylinder presses. They have evidently profited by the change.

Mr. Wyman, a gentleman well and favorably known to the printers of Boston and vicinity, has recently accepted the office of treasurer of the Wright & Potter Printing Company. In making this selection the company has used excellent judgment, for Mr. Wyman has had many years experience in printing, or those branches of business connected with it which peculiarly fit him for the responsible duties now devolving upon him.

Labor Day brought out the greatest display of organized labor ever seen in Boston. Business generally was suspended and the city presented its usual holiday appearance. The principal feature of the day was the procession, after which a picnic was enjoyed at Oak Island, Revere Beach. Though Boston Typographical Union voted not to take part in the procession, there were many who wished to see our craft represented, and as a result of their efforts the printers showed up well. The procession was reviewed at the state house by the lieutenant-governor, at the city hall by the mayor, and at Fort Hill square by the chief marshal. It consumed nearly two hours in passing a given point.

Mr. Moses King, the well-known publisher of several valuable guide books, is now president of the Moses King Publishing Company. Their office is located on Boylston street.

A printer in this place has just invented a press which it is claimed will turn out 3,000,000 impressions per day. A trial was recently made of the only one yet built, and it is claimed with satisfactory results. The paper is fed from a continuous roll, and the press is designed for such classes of cheap work as have long runs. E. F. S.

THE TYPOGRAPHICAL INDUSTRY IN THE METROPOLIS.

To the Editor :

NEW YORK, October 8, 1888.

The refusal of the officers of the United Typothetæ to receive the committee of the International Typographical Union at the national convention of the former body, held here last month, has aroused considerable discussion unfavorable to the members of the Typothetæ. The general sentiment among printers, and others directly or indirectly interested, is that the action of the representatives of the master printers was arbitrary, unwarranted and unjust, and the refusal to meet the committee of union men will, eventually, revert against those members of the Typothetæ that were particularly instrumental in passing the obnoxious resolution, and conspicuous in the movement to keep the International Union's committee out of the convention.

As was intimated in a previous letter would be the case, a revival in the printing, publishing, bookmaking and kindred interests was inaugurated with the opening of October. The prominent houses that control almost exclusively the political literature are having a great boom. The rush, however, will end at the close of this month, and unless these establishments are fortunate enough to capture new and large contracts, many worthy and deserving compositors and other hands will be idle.

The publication of campaign papers gives a temporary boom to some of the small houses, but as these sheets will be suspended within a few weeks, a large number of men will either be furloughed or discharged. The outlook is certainly discouraging.

The trouble at John Polhemus' printing house is still unadjusted, and there is little probability of a satisfactory or amicable settlement of the difficulty for an indefinite period. The firm maintain the stubborn front that has always characterized them, and the locked-out compositors evince no disposition to accept anything but the union scale.

Theodore L. DeVinne, ex-president of the United Typothetæ of America, and one of the best posted men in regard to the typographical labor situation in the country, says that the condition of the printing business continues to be unsettled, uncertain and unsatisfactory. The city is crowded with unemployed printers and general help, and with the advent of the cold weather an army of men will be anxiously seeking employment that cannot be found. Mr. DeVinne further states that while there may be a spurt of work from now until after the holiday

season, the work will hardly be sufficient for the local hands, and he advises all good job printers especially to seek work elsewhere than in New York, as the chances of getting a situation are few and far between.

For some years past the officers of Typographical Union No. 6 have been endeavoring to convert the *Mail and Express* office into a union office. In November, 1883, when the newspaper scale was enforced, the paper was "ratted." At seven o'clock Friday evening, October 5, the non-union force was discharged, and Sherman Cummins, a member of No. 6, has been appointed foreman. He will have as assistants, Don. L. Swett and Thomas F. Scully. On Saturday, October 6, the office began as a union office.

The capture of the *Mail and Express* office has inspired the officers and members of "Big 6" with new courage and hope, and they will now redouble their efforts to get other non-union paper and publishing establishments within the fold of the union.

The special matinee at the Fourteenth Street Theater on Thursday afternoon, October 4, for the benefit of the newspaper men in the yellow-fever infected district in the South, was a grand success. The proceeds of the matinee, which were quite substantial, will be used in aiding newspaper men who have been stricken down at their posts, or, in case of death, in providing for their families. It was given under the auspices of the New York Press Club. The use of the theater was tendered free by Manager Rosenquest. Miss Cora Tanner and her excellent company gave her play, "Fascination," as their contribution to the worthy cause. Among the very large and appreciative audience were leading newspaper publishers and editors, while the humble ranks of reporters and printers were well represented. Many of the prominent newspaper owners and employing printers occupied private boxes.

PRINTER-JOURNALIST.

FROM ENGLAND.

[From our own Correspondent.]

To the Editor: SHEFFIELD, September 24, 1888.

Typographers and the employes connected with the various industries appertaining to the printing trade seem to be fairly well occupied throughout the country, taking into consideration the period of the year, which is usually the most slack season the printer experiences. In some parts of the provinces trade is unwontedly busy, compositors being in good demand. The heavy and complicated lists of voters, which a recent parliamentary bill necessitates, published for the first time this year, are causing a great push which will continue into November. It is said that only indifferent compositors are now found on the road. There is a great dispute in the trade at Hull. The employers of this town seem anxious to employ only non-union men, and it is anticipated that the Typographical Association will have a hard fight in this direction during the coming winter. At Burnley there is also a similar difficulty, which, however, has a prospect of an early settlement. The printers' engineering trade is reported to be flourishing, and the prospects for the immediate future are very satisfactory.

From the half-yearly report of the Typographical Association, just issued, it appears that the membership has increased from 7,498 in December last to 7,590 at the end of June. The stock account now amounts to £13,493 16s. 6d. Attention has recently been given to the financial position of the superannuation fund, and the members will realize the necessity of largely increased subscriptions if the fund is to be maintained.

The London Society of Compositors is now the largest centralized union in the United Kingdom, 7,300 members being enrolled, possessing invested capital to the amount of £23,000.

The American copyright bill, which is under consideration by the American legislature, is now looked upon with considerable misgiving by the printers of this country. They sympathized with British authors, and thought it only just that literary men should have a fair remuneration for their work wherever it was appropriated. But in supporting the agitation for international copyright the printing fraternity did not speculate upon the somewhat hard and apparently unjust conditions which it has transpired are necessary to secure the benefits of this law. Enormous quantities of printed matter are weekly imported into this country from the United States, entirely free of duty. There is consequently a desire for more equitable commercial rights. If the bill

becomes law it will necessarily divert much printing from this country to the United States, for publishing rights will thus be secured in both countries.

As an instance in which level-headed business men recognize the value of advertising, it may be stated that an eminent firm of London soap manufacturers have spent no less than £100,000 per annum for the past two or three years in advertising alone. British publishers must depend upon the probable revenue accruing from soap in all their calculations.

The number of females engaged in the printing trade in England in 1861 was only 419; twenty years afterward women employes had increased four-fold, and the returns for the next census, 1891, promise to exhibit a very large increase indeed. Few females are employed as compositors in England, though in Scotland and Ireland they are very common, particularly in the former. Wherever employed in England, they act subordinately to the men, generally taking the place of boys, and receiving extremely insignificant wages.

The *Star*, a London evening paper which circulates all over the country, just commenced a few months ago, has proved a magnificent success. The paper closely resembles the American journals in style and appearance. Several English writers have lately been at considerable pains to point out the faults of the prevailing idea of journalism in the United States, but notwithstanding these so-called defects, the Britishers highly appreciate the Americanized venture.

The phonograph is exciting considerable admiration from the press circles of this country, and a brilliant future is expected of it.

IMPRIMEUR.

AMATEUR PRINTERS.

To the Editor: CANADA, October, 5, 1888.

You sometimes allude to the amateur printer nuisance, and have illustrated some of their abortions in masterly style. Still, do you not think that the complaints on the subject are hardly justified by the results as to the depressing effects of these interlopers on the business of professionals? I have a newspaper and job office in a town of less than 3,000 inhabitants. When the population was less than half that, the first amateur "printers" made their appearance. They were watch-makers as well. But one of the partners had a small do-your-own-printing card press, and by working and turning they professed to be able to print billheads and circulars. They made their own colored inks, and so you can imagine what formidable competitors they were. Certainly, I was rather surprised at the number of my friends who patronized them for their cheap cards, at first; but after all, the amateur, grotesque efforts at billheads and circulars proved too tough for the approval of even those with whom "cheapness" was the first consideration. So that amateur concern soon failed to capture even the small, cheap card business.

Then two youngsters, one of them having graduated as a stable boy, got hold of the smallest-sized presses and a few fonts of card type, and went round offering to do better work (!) at "cheaper rates" than the professional printer could charge. However, the professional did not hide his diminished head forthwith; and after a little time nothing more was heard of these amateur geniuses, or seen of their performances.

But the professional one day managed to tread upon the toes of a tradesman who had previously done business with him; and lo and behold, the angry tradesman forthwith invested in a press and a small stock of type, and canvassed everybody else for such small work as cards and envelopes — and rather than say "no," and lest the regular printer should get rich (!) in too great a hurry, he got quite a few jobs of this description. About the same time another tradesman thought he would do his own printing, and frankly told the regular printer of his intention, and asked him which was the best style of press for what was wanted. Knowing of no reason why anyone should not do his own printing, if so inclined, as freely as his own penmanship, the desired information was given as honestly as it was asked for.

Well, what was the result? What was an entertaining novelty at first, in leisure moments, was not long in becoming irksome as a matter of business, when other business had to be attended to; and now both of them come to the regular printing office when they want something neat, or in larger number in the printing line than can be accomplished

with a limited amateur outfit; and they do not find fault with regular printing prices, either.

Experience has also been had as to the competition of "newspapers" run and edited by men who have no knowledge of the printing art beyond what they have learned from the instructions of the sellers of the cheap little card presses and amateur fonts, and without experience in journalism or reporting. They were going to break down the older concern in short order, by lowering the price for newspaper advertising and job printing. Well, the old concern never weakened on its established system and prices. Some of its advertising customers, of course, "tried it on"; they could get their "ad" of such a size, and for such a length of time, for so much less in the other paper. The reply to the proposition was that the proprietor of the other sheet knew of how much (or how little) value his sheet was as an advertising medium; that what he chose to take was no criterion for anyone who knew what business was — who could better afford to go without the advertisement altogether than to take it at less than it was worth, only to have to shut up entirely in the end. After some skirmishes on this line, as the old concern held firmly to its position, it got the advertising on its own terms, and the new one did not get it at all! Of the necessity of the other concern having finally to engage a regular printer and reporter, at a big figure at first — how the poor fellow was next cut down in his salary, bit by bit, till he could stand it no longer and left in disgust — how a substitute of some sort had to be found — your practical journalist can readily imagine; and what a lively and lovely time more than one such speculative concern had in keeping up till a purchaser could be found green enough to take hold of such "flourishing" ventures.

The "amateur" does not do the small country printer half so much injury as the grasping city "specialists," who send out travelers to grab up all the commercial printing they can — and who get it, by cutting prices, and by pestering tradesmen for orders till they are given, just to get rid of the drummers, as well as to save a few cents, and send money out of town to help the big city.

Lots of things in the world need

REVISING.

FROM BUENOS AIRES.

To the Editor:

BUENOS AIRES, August 23, 1888.

Kindly publish a few more lines from me and let your readers have the latest from the Republic of Sunrise, or the city of Buenos Aires. As usual I must say there is lots of work and more overtime than the printers like.

One of the smartest pieces of work that I have ever seen here has been done by J. H. Kidd & Co., or rather the foreman of their lithographic department, a young man from the States. I gave him one of H. D. Wade & Co's show cards, which is worked in three impressions by the A. R. N. Co., New York, tint, "Iris" or stripes and black. He photographed the whole thing, changed the principal lines and turned it out as an advertising card for the firm. It is a very neat design, and I admire his taste.

The C. S. A. de B. de B. has the contract for all the postoffice work and are now doing the postage stamps on copperplate and steelplate presses.

The new illustrated paper has made a very favorable start, and before long *El Sud Americano* will come out as a weekly instead of a semi-monthly. Have mailed you the first two numbers. The compositor who set up most of the advertisements is Mr. Sanchez, one of your subscribers, who does not read or speak English, and Mr. Tomati, also one of your subscribers, assisted me on the presswork. The paper is printed on a two-roller press of German make. Some of the type or reading matter pages are printed on an English "Wharfedale," from Dawson. All the engravings in them were made here excepting the two full-page scenes of the interior, which were produced in Europe. The ink is H. D. Wade & Co's 25 cent book black.

Lithographing holds the upper hand in this country. Commercial work, which is done by the job compositor in the United States, and printed on typographic presses, is done by the engraver or by photography here, and printed off stone. You see very little fine jobwork done here like that turned out there. You have to look a long time to see a very neat design.

I have run across another pressman from the States, who has also worked in Chicago as feeder, and later as pressman. Some of J. L. Regan's men might know him. His name is Fitzgerald, and he is now working in the office of Mackern & Maclean. He does not seem to like the English Wharfedales very much.

Have seen the last number of the *Electrotyper*, and am surprised to read about Dearborn street, south of Adams street. It must be a regular "printers' patch." They are doing some lively work down there; but its like everything in Chicago, they always hustle.

The Argentine Republic will issue sixty million dollars' worth of new "Cidulas," or bonds, and the C. S. A. de B. de B. have the contract for printing and numbering them, and there will be another good chance to beat the record on numbering machines. I will give you the record in a short time, and would like to hear from others who do that class of work.

The weather down here is very changeable, and there is one difficulty which printers have of which the lithographer does not experience anything, and that is to have roller composition to suit all changes.

Most of the paper used in this country is imported, there being but one paper mill in all the Argentine Republic, and it makes nothing but common wrapping paper. There is a gold mine in it for the man that will start a good, first-class mill here; there is any amount of material for making paper, and I dare say the government would assist any investment of that kind.

The following article, which speaks for itself, is a fair sample of the notes which appear in the papers here every now and then:

If among all those coming to this country there would come a firm of practical machinists competent to do a good job on printing machinery, they would find abundance of work at good prices and in a few years a sure competence. The very few such workmen here have many times what they can do. While clerks overwhelm us, tradesmen or skilled mechanics are scarce.

The following advertisement appeared in two English daily papers here for one week:

WANTED—A Press Feeder for German or English Printing Machines. Apply at C. S. A. de B. de B., 258 (nuevo) San Martin.

and no one came around to claim the job although it would pay from \$50 to \$60 per month. It is very hard to find a printer out of work here, no matter how poor a workman he is.

The following item speaks for itself:

PRINTING.—We understand that the firms of Mackern & Maclean and J. H. Kidd & Co. are about to be amalgamated, and the new firm will erect a large printing office at Almagro. There will be one "Guia" the less, the united firm issuing an improved one in place of the two now issued.

They are two of the largest printing and lithographing firms in Buenos Aires, but the C. S. A. de B. de B. has the start and will have the finest and largest establishment by far.

One of the most pleasing features of this country is the organ grinder. He is not like the "dago" of the States, but he has an organ on wheels, and sometimes drawn by horses. He only plays in the evening, and on your way home from work you can hear all kinds of sweet music and be cheered up by some of the most popular airs. He can be heard till 12 o'clock midnight, and you can hear him a half mile off. He plays mostly Spanish and Italian airs. Sometimes you will find three in one square, and when one stops the other will start.

One of the most discouraging things for a printing office in this country is the rainy day; most of the employes come from one-half to two hours late, and some do not come at all. Presses are waiting for feeders, forms on presses are waiting for a compositor to correct them, and everything seems to be upside down. The months of July and August are the rainy months, and when it comes down it pours until the streets are one and two feet under water. Everything is damp and wet, but paper is just damp enough to take the ink nicely, and rollers have good suction. All steel parts of machinery will rust if not wiped with oil rags; but the English Wharfedales will chew the ends of the distributors all to pieces inside of two hours. I have put them on the list as "distributor annihilators." There's nothing on the face of this earth that can come up to a table distribution press made in the United States. The only machine that beats the Yankee is the German rotary made for illustrated periodicals.

The electrotyping, stereotyping, zinc and wood engraving house of William A. Way, at 629 San Martin, Buenos Aires, is quite a place, and

they would like to have manufacturers of supplies and machinery for that line of business send catalogues and price lists.

The C. S. A. de B. de B. is now running a night gang on their lithographic machines, and will probably do so till their new building is finished.

M. A. MILLER,
Nuevo 258 San Martin, Buenos Aires.

FROM PHILADELPHIA.

To the Editor : PHILADELPHIA, Pa., October 13, 1888.

The journalists of Philadelphia are studying metropolitan journalism, but not exactly with a view to introducing the methods in vogue there. There is a vast difference in and between the two places. New York is feverish intellectually. It is surfeited with news and editorial service. Highly-seasoned journalistic viands only tempt the overwrought palate; hence new styles and methods, so to speak, are necessary there.

But *why* should we not adopt New York methods of writing and of treating subjects? James Gordon Bennett started it. What is it, does anyone ask? Well, it is simply this: Old, rigid methods of expression were cast aside. Reporters and editors were told to get down off their stilts, and to write as they would talk — colloquially — yet with hydraulic condensation and electric force in meaning. Other papers soon followed, beginning with the *World*, and in some respects the *World* now excels the *Herald*. The *World* management does not care what a man costs if he knows how to write, and no one can stay there unless he does.

What a great pity it is that Pulitzer cannot have his eyesight and health. He taught the New York journalists more in the short time he was there than they were ever taught since the days of Greeley and Raymond.

But what are we at here in Philadelphia? McClure, of the *Times*, has been down helping to unveil a monument to General Pickett at Richmond, Virginia. Pickett's, you remember, was the division which almost carried the day at Gettysburgh. McLaughlin is making the *Times* quite bulky on Sunday. Charles E. School has withdrawn from the *Evening Star*, but it will continue to shine as of old.

The *Press* made a mint last year — some \$60,000 — after losing nearly \$400,000 during five or six years past. It is owned by Mr. Wells, of Pittsburgh. It took grit to hold on all these years, and money to hold on with; but the corner has been turned. Its politics is to declare the devil a saint if he has been nominated on its ticket. The old *Ledger* is a wonder in the way of journalism for news — not always the freshest, however, but there is plenty of it, from what the 25-cent kings in Europe are doing down to the latest baseball election.

The *Record* is roaring for revenue reform, and is giving our protectionist friends all the fight they want and a little more. The tariff fight waxes hotter and hotter. The steel men alone of this town unbuttoned their pockets and sent grand chief Quay \$100,000. Pennsylvania has put up \$500,000, besides money for local expenses. The "fat-friers" are busy.

Work in all newspaper channels is quite abundant. Jobwork has picked up very much since September. Wages are unchanged. A good many country printers are dropping in. Union rates are paid in almost all offices, and the union is recognized almost universally. No strikes have taken place and everything moves along smoothly.

We have quite a rush of medical publications, and several offices confine themselves largely to this class of work. Then our bible publication houses are full of work. The pressrooms are crowded, and sometimes overtime is made; but there is objection to it on the part of the unions except when the need is urgent. Philadelphia is now turning out some excellent bible work, as well as a great deal of ordinary cheap work. The agents who are pushing business for the bible publishers and the publishers of religious and map literature say that there are growing sales. So much for the religious side of the American character.

All of our big publishers are busy. The Lippincotts, Sterns and a dozen others are on full time, and all of their presses are crowded. The publishers of magazines and periodicals are increasing their paper and

presswork bills. If the carriers of the country could be heard from they would say that the distribution of printed matter of one sort or another is greater than ever before. Much of it we owe to the politicians, who are solicitous for our enlightenment on matters of political economy that we imagined we understood pretty well ten or fifteen or twenty years ago.

Typefounders and dealers in printing material are all handling considerable stuff. Country printers are good buyers, and as fast as they can squeeze out a few spare dollars they are after sorts or a new outfit. A good many new designs in lettering are out.

There has just been perfected by Mr. W. W. Jackson, letter designer and engraver for the Johnson Typefoundry of this city, a system of interlining types that will commend itself to every printer. It will enable a printer to align, top or bottom, all the different sizes of job faces, whether with or without lower-case, and to interchange a letter without a lower-case with one having a lower-case, and vice versa. Justification can be easily made with regular sizes of leads, namely, 6 and 12 to pica. All old printers will call to mind the many profane adjectives showered on the poor, inoffensive types that would not line but by a patient application of cardboard, bits of paper, toothpicks, etc., and in many cases the use of the file in inexperienced hands. This has only been partly overcome by modern typefounding. The system referred to aims at a comprehensive, tangible line that will govern all sizes. It simplifies the compositor's work and shows the almost perfect alignment of modern American typefounding. This system will be shown and exemplified in the next *Typographic Advertiser* of the Johnson Typefoundry.

Old Edward Ruthven, who introduced the metal cutting system, is still alive, but out of active life.

It is rather difficult to interest old printers or typefounders in the discussion concerning steel or metal for matrices. Steel has certain well-known advantages, especially for book letter; it stands the constant hammering better than metal, which soon "frosts"; but for job and ornamental type, metal answers the best. Steel is out of the question, if for no other reason than the great cost. Metal matrices can be cheaply reproduced, while steel cannot.

There are six or seven steel-cutters and about five typographical engravers working in metal. When they die what will we do? Designing skill is scarce, and, like poetry, it must be born in a person. The typefounders are keeping these designers and engravers very busy. A few aspirants are seeking recognition, and in a certain way can meet some ordinary requirements; for actually original and skillful work, however, the number of capable workmen is limited to about half a dozen.

Mr. William W. Jackson, the original designer of the combination border, will soon bring out several new and attractive script designs which he has of late been making something of a specialty. He has orders in hand from all the typefounders in the country except two.

Business throughout the East is beginning to manifest signs of improvement; favorable agricultural conditions are the basis of it. Business men are impatient at artificial obstacles which impede investments and purchases. Our manufacturing establishments are fairly busy. Textile works are on about half time. Our house-builders are preparing to go into winter quarters. Trade journalism prospers; new papers are springing up. Almost every manufactured product is now represented. Our numerous technical schools have turned out a large body of intelligent, thinking, and studious engineers and mechanical experts, and these create a demand for technical journalism.

The paper makers east have had a remarkably good year. Prices have been well maintained. Competition has been restrained; supplies have been kept within bounds. Book paper has been in good request all season. Paper machinery makers have received some extensive orders this fall for the winter. Some few mills will be built in the South. The envelope combination still holds, and the various other combinations are acting in harmony.

Newspaper talent was never in greater demand, especially in our larger cities, than now. There is an oversupply of mediocre talent, and a tendency to paste and scissors. Young men complain that promotions are too slow, but the fault is with them. The managers of our great dailies are seeking for brilliancy, and it cannot long run loose. M.

ANSWERS TO CORRESPONDENTS.

W. B. T., Williamsport, Pennsylvania, asks: Please tell me, in your "Answers to Correspondents," if you bind in the advertising with the reading pages of THE INLAND PRINTER.

Answer.—Yes.

J. C. MERRILL, Ithaca, New York: May I trouble you for the address of someone in New York dealing in zinc plates suitable for photo-zinc etching?

Answer.—Fuchs & Lang, 29 Warren street, New York. We have answered this question half a dozen times.

S. G., St. Joseph, Missouri, asks: Should a period be placed after the letters O K, when they are used to convey the idea that a job or account is correct? If so, why?

Answer.—A period should be placed after each letter, thus: O. K., because every abbreviation requires a period to signify that it is an abbreviation.

"IN THE DARK," Springfield, Massachusetts, writes: Can you give any recipe in your columns for drying inks on glazed label paper? Neatness and despatch are what we are after.

Answer.—There are almost insuperable difficulties in the way sometimes, as the fault frequently lies with the paper itself having been *burnt* by passing through the rollers. The effect of a drier is to make the ink become sticky, and if too much is used, as a matter of course, the surface is pulled off the paper. In ordinary circumstances, however, heating the paper, as directed elsewhere, will secure the result desired.

A. T. C., Albany, N. Y., asks: Can you give any cause or remedy for the following? The distributing rollers on several cylinder presses, with table distribution, have been constantly tearing for several months past. Do not tear on the ends only, but in spots along the whole roller. Average speed, 1,500. Use an A I manufactured composition, and season well.

Answer.—We have already explained *why* rollers tear on the ends. No explanation can be given why they *tear along the whole roller*, except that the composition used in their manufacture is NOT an A I manufactured composition, and seasoned well.

J. H. F., Auckland, New Zealand, asks: 1. How can red ink be worked upon an iron table without impairing the color of the ink? 2. What is the best and cheapest machine for cutting, curving and mitering brass rule?

Answer.—1. Ink is only affected by an iron table when the table becomes heated. Keep it *cool* and there will be no trouble. 2. We know of no thoroughly successful combined cutting and curving machine. The best cutting and mitering machine, as also the cheapest, is manufactured by R. Hoe & Co., New York. The curving machine made by F. A. Ringler & Co., 21-23 Barclay street, New York, is equal to any in the market. These are machines we can recommend.

A. M. S., Philadelphia, under date of September 15, writes: Will you advise writer through the columns of your valuable monthly, or otherwise, how to print successfully on glazed paper, highly finished—the same paper as used by boxmakers in making confectionery and similar boxes—samples herewith inclosed. Our first trouble is to get a jet black ink that will *not* (after several days drying) *rub off of the paper*. Putting the labels on these boxes required considerable handling, and we find the printed surface rubs off. Having now met with some success in this matter, we find it is utterly impossible to print same on cylinder press, even though we run on lowest speed, say 600 per hour; and when printed on smaller sheets, on job press (the only way we can meet success), *each sheet* has to be pulled off the form by hand. This is awfully slow work when order calls for 50,000 box fronts, sides and tops. Can you advise us on this? The question has been referred to three different ink manufacturers, and samples from each house fail to perform the desired purpose—the ink will rub off. Can anything be done to the ink, which, while it makes it hold firmly to the paper and prevents its rubbing off, will also keep its jet black color, and print without requiring it to be pulled off the form by hand? Can it be successfully printed on cylinder press? We do not want any impossibilities, but if this *can* be done, your writer would like to know "*how*."

To anyone interested I will gladly forward our minor details, as I am very anxious to further this important topic to its successful end.

Answer.—The foregoing contains a number of questions which have been frequently asked, and perhaps never satisfactorily answered. The only successful plan with which we are acquainted is to use a soft, quick drying ink of the best quality, and place the paper as near the stove as possible in order to *heat it while working*. All *mixtures* which are put with the ink will deaden its color, and rub off when worked.

PAPER-MAKING PROSPERITY IN PENNSYLVANIA.

The paper-making interest in the manufacturing centers of Pennsylvania is enjoying a fair degree of prosperity. Many of the old establishments located in the Chester and Schuylkill valleys have been enlarged and otherwise improved, to meet the increased business that has come in this fall.

F. P. Miller, of Downington, Chester county, is building an extension to his mill at Chester Valley. The building is 43 by 70 feet, two stories high, and includes the space now occupied by the boilers. It more than compensates for the loss of the north wing, recently removed to accommodate the Pennsylvania Railroad Company. Mr. Miller reports business very brisk at his mill.

Mr. Edward Bicking, of Coatesville, Pennsylvania, has received the appointment to a fine position at Charleston, West Virginia. He has contracted with the Kanawha Paper Company to fill the office of superintendent of their mill at Charleston. The mill has a capacity of four tons per day, and Mr. Bicking's position will be both pleasant and remunerative. He has already started for his new field of business. The Kanawha Paper Company has received a large trade in the Ohio valley and surrounding country.

The York Haven (Ind.) Paper Company has started the steam engine and line shaft of the first of their 104-inch machines, and limbered up the big machine last Wednesday, ready to put the paper over it. Everything started off beautifully. This machine is considered the finest one in America, and when it is running to its full capacity, on a 94½-inch roll (exclusively for the Philadelphia *Ledger*), it is expected to turn out 1,000 pounds of finished paper per hour.

THE VO'S AND THE MO'S.

Every reader of a newspaper which notices new books frequently meets the term quarto, octavo, duodecimo, etc., or their abbreviations, 4to, 8vo, 12mo, etc. This is the mode by which the size of a book is designated in print. These mo's and vo's indicate the number of leaves in a sheet, and correspond to the leaves, not to the pages, which a sheet contains. Take a sheet of a given size, say a medium, and give it one fold, like a common newspaper, and you have a folio, with two leaves; give it another, and you have a quarto (4to), with four leaves; give it another fold, and you have an octavo (8vo), or eight leaves, and so on. By another mode of folding you obtain a 12mo, 16mo, and by another again 18mo, etc. These figures and letters, though abbreviations of Latin words, are ordinarily, in these days, turned into rather barbarous English by printers and publishers for the sake of brevity. Thus they say a 12mo, a 24mo, a 48mo, instead of a duodecimo, etc.—*Journalist*.

TO TRANSFER PRINTS TO GLASS.

The following recipe, says the *National Druggist*, is sold by itinerants at from \$3 to \$5: First coat the glass with damar varnish or Canada balsam dissolved in an equal volume of turpentine, and let it dry till it is very sticky, which takes half a day or more. The printed paper to be transferred should be well soaked in soft water and carefully laid upon the prepared glass, after removing the surplus water with blotting paper, and pressed upon so that no air-bubbles or drops of water are seen underneath. This should dry a whole day before it is touched; then with wetted fingers begin to rub off the paper at the back. If this is skillfully done almost the whole of the paper can be removed, leaving simply the ink upon the varnish. When the paper has been removed another coat of varnish will serve to make the whole more transparent.

MR. ROBERT McKECHNIE.

ROBERT McKECHNIE was born in the city of Armagh, Ireland, on October 20, 1834. His father was a native of Dundee, Scotland, and a soldier in the Seventy-ninth Highlanders, and had served under Wellington at Waterloo, and in the occupation of Paris by the allies, 1815-18. His mother was the daughter of an Englishman named Brierly, a native of Rochdale, also a soldier, in the British cavalry service, who was killed in the Peninsular war.

Robert was educated at the Academical Institute, Belfast, and served his apprenticeship to the printing trade in the office of the Belfast *Northern Whig*. In a strike to regulate the number of apprentices to each office, in December, 1853, Mr. McKechnie left Belfast for the purpose of going to London, but changing his mind in Liverpool, took passage for New York, where he arrived in January, 1854.

In February, 1855, he, with several other New York printers, was engaged to go to Nashville, Tennessee, to work in the Methodist Book Concern, South, just then established. Nashville union had applied for but had not yet received its charter from the National Union. It came shortly after their arrival. The scale of prices was advanced twice during the six months Mr. McKechnie remained in the Nashville union. He returned to New York in July of the same year. In 1858 he went to Belfast, Ireland, with the intention of going to Australia, but after an absence of nine months came back to New York and resumed his old position on the *Herald*, where he remained until the breaking out of the war.

On April 19, 1861, Mr. McKechnie enlisted in the Ninth New York Volunteers (Hawkin's Zouaves). In June his regiment was ordered to Newport News, and was present, though not engaged in the Big Bethel fight. Here he was promoted to be first sergeant. With a detachment of his regiment he participated in the capture of Hatteras Inlet, September, 1861, to which place the regiment was subsequently ordered, and where they remained until the advent of the Burnside expedition, March, 1862. In December, 1861, Mr. McKechnie received his commission as second lieutenant. His regiment bore a conspicuous part in the capture of Roanoke Island, and participated in most of the other engagements of the Burnside expedition in North Carolina.

Mr. McKechnie relates an incident that occurred after the battle of Roanoke Island, that we deem worthy of mention, as showing the indomitable spirit that possessed the small body of O. Jennings Wise, son of Governor Henry Wise, of Virginia. Captain Wise commanded a company in a Richmond regiment, and was severely, if not mortally, wounded in defense of a battery that commanded the principal road on the island. When the battery was carried by the Union forces the Confederates fled toward the northern portion of the island with the purpose of escaping across the sound to Nagg's Head. Wise, with a party of five or six, tried to escape in a boat from Shallowback Bay, and refusing to return when ordered, was fired into and again wounded in several places.

The boat then returned, and Wise was carried dying into the house of a farmer named Jarvis, where there were a number of other Confederate wounded. It was about eight o'clock P.M. before a Union surgeon arrived at the Jarvis House, who, approaching Wise's pallet, inquired: "Where were you wounded, sir?" The fast glazing eyes of the dying man brightened as he turned them toward the speaker and answered proudly, "At the head of my company, sir!" The surgeon stated who he was, and explained that he wished to know where his (Wise's) wounds were located, to which Wise replied, "I beg your pardon, doctor, I really don't know." He received all the attention and care the circumstances would permit, but died at three the next morning.

Mr. McKechnie was commissioned as first lieutenant March 15, 1862, and shortly afterward the Burnside command was organized into the Ninth Army Corps and joined the Army of the Potomac. He commanded his company at the battles of South Mountain and Antietam, September 14 and 17, 1862. In August he was appointed acting

assistant adjutant-general of brigade and served in that capacity until after the disastrous first battle of Fredericksburg, December 13, 1862, when he was appointed aide-de-camp on the staff of General George W. Getty, commanding the third division, Ninth Army Corps. The last few months of his service were passed at Suffolk, Virginia, then invested by General Longstreet's command, where he participated in a gallant dash across the Nansemond river and capture, on Hill's Point, western branch of the Nansemond, of an entire battery of six 12-pounders, with its full complement of men and officers, thereby opening the Nansemond for the gunboats clear up to Suffolk.

On the expiration of his regiment's term of service he returned to New York and resumed work on the *Herald*. In 1864 occurred the strike in New York, the loss of which resulted so disastrously to No. 6.

When Mr. McKechnie was elected president of New York union in 1866, the scale had been suspended, and the membership had dwindled away to

204 in good standing, according to the printed list of March of that year. He had oftentimes to wait for over half an hour after the time for the meeting before he could get a quorum for the transaction of business. A year's effort only resulted in a little more than doubling the membership, as the list for March, 1867, shows a total membership of 452. In 1867, being reelected president, the city was districted, and a large committee appointed, sub-committees from which were assigned to the several districts, whose duty it was made to thoroughly canvass the different offices in their respective districts, to urge the necessity of unity, and in offices where members of the union were found to appoint one as chairman. The efforts of this committee soon began to make themselves felt, and in December, 1867, there were 918 members in good standing, with a total membership of 1,079. During the year 1867 a new scale, on a basis of 50 cents per thousand, was adopted, and put into successful operation in the great majority of the offices in the city, the New York *World* being a notable exception. There were not enough union printers in that office to enforce the

scale. In October of the same year the printers of Brooklyn struck for an increase, and the *Eagle* of that city was so crippled that its proprietors applied to the *World* for assistance. The *World* furnished them with matter, which was carried across the river on galleys. This coming to the knowledge of McKechnie, he instructed the members of the union in the *World* office to protest, but they were informed that the *World* would give the *Eagle* all the assistance it required. He immediately ordered a strike, and the whole office, with the exception of nine men, responded. This stopped the carrying of type to Brooklyn, but the *World* succeeded, with the assistance of non-union men and women, in postponing the time of its becoming a union office. The *World* was a democratic partisan sheet, and at that time, or shortly before, it was owned by August Belmont, chairman of the National Democratic Committee, Samuel J. Tilden, chairman of the Democratic State Committee, and other high-up democratic politicians. McKechnie conceived the idea of bringing the political power of organized labor to bear against the candidates for office of these gentlemen, and with that purpose in view wrote an address to the workingmen of the state, detailing the grievances of the printers against the chief democratic organ. But two copies were printed. Armed with one McKechnie visited the State Committee, then in session in the St. Nicholas Hotel, and laid the case of the union and the address before them. He subsequently had an interview with Mr. Tilden in his office in Wall street, but without effect. He was informed, however, that Mr. Manton Marble was then the sole proprietor of the *World*, and that they had no power in the matter. At one of the largest, up to that time, meetings of the union, the action of the president was submitted to the union and unanimously indorsed. The union, however, by a small majority, refused to issue the address.

In 1868 Mr. McKechnie was elected delegate from New York to the Washington session of the National Union, and succeeded Mr. John H. Oberly as president of that body. The most notable feature of Mr. McKechnie's administration was the issuing, by authority of the national body, of the "Amnesty Proclamation," whereby all subordinate unions were ordered to receive into membership, within a given period and without regard to former action, all suspended or expelled members on application and payment of the usual initiation fee. This met with a great deal of opposition from some of the local unions where the feeling against backsliders was bitter, and, while its effect did not come up to what McKechnie expected, still, on the whole, the result was salutary as, through its provisions, men were returned to the fold who otherwise would not have been.

In 1872 Mr. McKechnie was for the third time elected president of No. 6, and in 1880 served as vice-president under Charles B. Smith.

In 1877 Whitelaw Reid began his fight against organized labor in general and Typographical Union No. 6 in particular, which he has continued to the present time. In 1883 Reid was driven to the wall, and through his foreman, Thompson, signed a written contract making the *Tribune* a union office, which contract was deliberately broken within one month of its going into operation.

Then began the political phase of the struggle with Whitelaw Reid, the result of which is known to the readers of THE INLAND PRINTER. Mr. McKechnie, in conjunction with Mr. Charles B. Smith, was chosen, on account of his well known republicanism, to visit Mr. Blaine at his home in Augusta, Maine, immediately after his nomination, with a view to have him use his influence to make the *Tribune* again a union office. Notwithstanding the fact, however, that he did use his influence with Mr. Reid, he failed to move him, which led to the establishment by No. 6 of the *Boycotter*, whose work in the campaign is well remembered. Mr. McKechnie was one of the 3,000 editors of that unique journal, now known as the *Union Printer*, which is still keeping up a vigorous fight, in which action it is sustained by its members.

ON Thursday evening, September 20, the delegates to the session of the United Typothetae of America were entertained by the New York Typothetae at a banquet given at the Assembly Rooms of the Metropolitan Opera House. President Martin presided, and appropriate speeches were made by P. F. Pettibone, of Chicago; H. J. Rockwell, of Boston; Clayton McMichael, of Philadelphia; J. A. Sleicher, of Albany; A. Miner Griswold, of *Texas Siftings*; H. O. Houghton, of Boston, and others.

Written for THE INLAND PRINTER.

PRINTING AT SEA.

BY JAMES BARNET.

THIRTY-SIX years ago, printing on board of a sailing vessel was very seldom mentioned. Even then, it was an afterthought with Kenneth McKenzie and myself, as we journeyed in the staunch bark *Tay* across the Atlantic. Not until my diary became interesting and lengthened out with incidents occurring among three hundred passengers, through storm, mutiny and smallpox, during the seven weeks of the voyage, did we agree to put it into print. Mac had a small Ruthven press, which seemed like a toy and could be carried about with your two hands. The impression plate, with frame, ran upon rails by pushing it in the center backward and forward. When drawn toward you with the right hand, after the tympan, frisket and paper had been closed above the type on the platen, a lever at the side, operated with the left hand, drew the plate down as it was held in a clutch or grip. One page at a time was the utmost that could be printed. Mac also had some long primer type and a small variety for a title page, with a two-line pica cut of a ship, a galley, whether brass or wood I cannot remember, a composing stick and rule, and last but not least, a few ounces of black ink. So far, good. There was no roller, however, and we could not get one without a mold and its belongings. We were compelled to adopt a more primitive plan of inking the form and operate with a ball almost the size of one's head. On making known to Captain Adams what we were about doing, the resources of the ship were freely placed at our service. A piece of canvas was secured, with sufficient oakum, and fastened strongly with cord to keep the ball in a round shape. Then glue and molasses were cooked and spread over its face about one-eighth of an inch in thickness. A smooth board to distribute the ink was also accepted from one of the passengers. A ream of plain note paper I had beside me completed the outfit all ready for use. The press was placed upon the top of a chest and held by willing hands whenever Mac and I operated with the jimcrack.

Typesetting could not be done below, and only above in fine, fair weather. The carpenter fitted a place for a pair of cases on the bulwarks, in a passage next to the cabin or quarter deck, so as to be free from interruption. Not being sheltered from the blazing sun, I worked away until the skin of my exposed neck was peeled off. It was so gradually and gently effected that I would not have known of the circumstance were it not for the sharp pains pricking their way outward from the sensitive nerves within. Working at the case was a slow job, but then there was plenty of time, and it could not be finished until the river St. Lawrence was entered and our sailing near to an end. Sometimes a few lines would be got up, then a shower of rain would compel a stoppage. For shelter the cases were taken into the cabin until another time. The first occasion of the type being thus housed, both the captain and the doctor were anxious to see the operation of composition; so the cases were placed upon the cabin table and I set up a few lines, at the same time explaining the *modus operandi*. Afterward the steward was ordered to bring in *something*, which was soon brought, while the cases had to be moved off the table to give room for the refreshment. It was astonishing how the doctor had grown stout and hearty from being a lean, scraggy consumptive as at first he set foot on board. The steward's *something* must have had a hand in his improvement. To be gentlemanly, I had to taste something, there being no cigars offered as a choice; and then it was only once, and no oath was violated in looking at the *cratur*.

It was generally understood that a slim individual named Elliott, a tailor, had been amusing himself in noting down events, and from his manuscript I had drawn a few lines about the beginning of the voyage, and the scenery on the coast of Ireland while the sun was bathing the serried rocks in golden sheen. As I had exercised a little freedom in describing the doings of a big railroad man while he was engaged in the hold among some fifty of the five hundred tons of rails that had worked loose, and were fast making a hole in the side of the ship under the water line, the tailor's name came into play on the appearance of the printed account. The railroader took offense when he was singled out and found his efforts put down in print, and he went for the tailor in

his wrath. There was such a disparity between the two in size and strength that the railroader was somewhat mollified, on being told by the tailor to find fault with the printer, who did the deed. As I noticed him making tracks toward me, I kept a staid and sober face, and innocently told him that the tailor was only fooling him, and that he should go back and tell him so. He was ashamed to lift a hand on the slim tailor, and he knew better than shove out one to me. Thus the railroader got cooled down, and everyone knew that his reported doings were correctly printed.

On account of the dreaded smallpox, everything movable was put on shore when we reached Grosse Isle, the quarantine ground. Washing clothes in spaces between the rocks, supplied with pots of boiling water for the purpose, made that day a busy one for the women, and the men who assisted them. Sheds, fitted up with sparred shelves, were in place for resting or sleeping. In spite of fatigue, it was somewhat amusing, in the course of the night, to hear some one in the lower shelf yelling out to his companion, "Od man, Jock, is it raining? Whur's yer umbrella?" The spars, seemingly, had been too far apart. The sick ones were taken to the hospital, and the ship fumigated with sulphur. Next day we got on board for the last trip, when the strains of the violin were heard giving time to the poetry of motion on deck, while I was alone below, squirming with a colic. The misery of the immigrant seemed heavy for me, and it is little wonder why Gilfillan gave out his sorrowful lay, "O! why left I my hame?"

Eighty copies of five pages of print were published, of which Captain Adams took fifty on his return to the Clyde. The only copy I could recover a few years afterward was brought from the old country, which I placed in the Chicago Historical Society's keeping, and it was consumed in the great fire of 1871.

With the exception of Mac, and two or three of my own party, none of the three hundred passengers, captain or crew of the *Tay* have I seen since coming ashore at the Citadel City. In the language of the hopeful, "We shall meet beyond the river by and by."

THE ABUSE OF BRASS RULE.

BY G. H. POWELL.

NO one thing in a printing office is more useful and more generally abused than brass rule. It is the target for incompetent compositors, as well as for the better class who are forever trying to outrival the true artist or the engraver. The outlay is always heavy, and any proprietor of considerable experience will testify that nothing perplexes him more than "where the rules all go to." Now and then will be found a proprietor who once worked himself at the case. He knows, in a measure, the abuse to which they are subjected, but a remedy he is not always sure of. In the majority of large city offices you will find all sizes and kinds huddled together, making blank work one of drudgery to the compositor and taking twice the time it should. This state of affairs will exist in any office as long as no system is carried out, and as long as the rule-cutter and mitering machine are allowed to run loose in the office.

There are several methods for the preservation of rules, but the following, if carried out in detail, will prove a success. There is but one man in the composing room capable of doing this—the foreman. He should arrange an alley for the special use of rule cases, the cutter and mitering machine, and allow no one to go there without special orders. In very large offices a small room would be better still. No compositor has use for rules until he receives his copy, and when the foreman gives it out he should select the proper set of rules. Suppose copy is given out for a title page which requires a double rule; the foreman or his assistant goes to the brass rule alley, selects a suitable set of labor-saving rules, and hands them to the compositor with the copy. By this means all mistakes are obviated and the compositor at once proceeds with his work. In case of legal or blank work which requires a large number of small rules, it would be necessary to send a case with the copy to be returned to the alley when through with. Where "fancy" compositors are employed, the use of the cutter and mitering machine will have to be at their disposal. As the rule used on such work is generally new, the foreman can supply a little at a time. The average "fancy" man would waste considerable if allowed a large quantity.

In stocking an office with rules only labor-saving should be bought. The foundry can do the work much better and cheaper than any compositor. In regard to double and parallel rules, an exception might be made which is now in vogue in many small offices. By purchasing two or three faces of this class of rules, the foreman can have the strips cut into solid pieces, varying in length from four to sixty ems pica and mitered at both ends. If a good supply is provided at the start, almost any job can be set up. The solid picas look better and waste less time in making good joints than several picas of labor-saving rules possibly can. A little study will enable almost anyone to see that a few picas will cover a good many sizes. The expense, however, is greater, and is not so practicable as that of labor-saving.

For legal and blank work it is a mystery why so many do not realize the utility and the money that can be saved by using fine dot leaders. Where such work is done to any extent, nothing can take the place of the old, reliable Caledonian or copperplate italic. Fine dot leaders are cast like spaces and quads, to line exactly with these types as well as scripts, and cost but a trifle. To do without them is folly. Two or three large jobs will pay for them.

Leads are subjected to almost, if not quite, as much abuse as rules. The remedy consists in refusing the use of the cutter to every compositor. Foundry-cut leads are generally better, but where it is necessary to do the cutting in the office one man only should do it. The only correct way is to cut them to the exact length of quads or rules, and not a shade longer, as many think necessary.—*Dashes.*

JOURNALISTIC CURIOSITIES.

The very smallest newspaper in the world is undoubtedly *El Telegrammo*, a journal which is published weekly at Guadalajara, in Mexico. This diminutive paper has four pages; each page is only five inches in length and three inches in breadth, and contains three columns of condensed news from all parts of the world. Underneath the title is printed the motto of the little journal: "Little straw and much wheat." The wheat, however, does not average sixty bushels to the acre.

The northernmost paper in the world is the *Nordkaben*, printed and published in Hammerfest. Another paper published in high latitudes is the illustrated Esquimaux paper, *Aluagaglintit*, edited by the Esquimaux printer and poet, L. Moller. It is published at Godthaab, a Danish colony on the west coast of Greenland, 64 degrees north latitude. The enterprising editor joined the expedition of Nordenskjold for the exploration of Greenland, in order to be able to supply his journal with illustrated reports of his journey, for which he deserves much credit.

INKS AND PAPER.

The Prussian authorities have lately issued a peremptory order with regard to inks. They are to be classified under two heads, and rules are laid down for testing them. Class 1 includes iron gallic inks, containing at least thirty grams of tannic and gallic acid (made from gall nuts), and four grams of metallic iron to the litre.

The second class is for inks which cannot be removed at the end of a week by the use of alcohol and water. Both inks must flow smoothly and not be pasty after drying.

The first class of inks must, however, be used only on papers made from rags, and not giving more than two per cent of ash, or on rag papers with an addition of wood fiber, straw fiber or esparto, but free from ground wood, and not having more than five per cent of ash.

Professor Karabacek lately translated from the Arabic the oldest book, perhaps, on paper making, and one of the recipes given therein for making ink is this: "Take the papyrus sheets which have been kept, burn them, and cover them so that their strength (blackness) may not be lost."

Paper, too, according to this old Arabian book, possesses great healing qualities. In the Persian pharmacopoeia we are informed that "burned papyrus contains heat and dryness in the highest degree. It is very useful in diarrhoea and dysentery, and stops bleeding from the hemorrhoids and the nose." The so-called "sympathetic" inks are named in this old book, the principal one being diluted ammonia, then heated.—*Paper Trade Journal.*

"SUMMER."

Specimen of Ives' Process Engraving, by the CROSSCUP & WEST ENGRAVING COMPANY,
907 Filbert street, Philadelphia.

A DEADLY WEAPON.

The devil came up to the earth one day,
And he called on a friend, in a casual way,
For a quiet ten minutes' chatter.
The name of that friend I had best conceal,
And I do it more willingly since I feel
That it really doesn't matter.

They'd whisky hot—I'm inclined to think
That whisky's the fiend's particular drink—
And then they began debating
A scheme for further attacks on man—
A diabolical, infernal plan—
Which the devil was meditating.

"I want to invent," said the fiend, with a smile,
"A weapon that's cowardly, fierce and vile,
For madmen and rogues to play with.
More deadly, more brutal, more cruel, more keen,
Than dynamite, dagger, infernal machine,
Or anything Christians slay with.

"I want to improve on the poisoned shaft,
On the hellish weapons of heathen craft,
On Europe's most skilled invention;
It must beat the bullet, outstab the knife,
Its wounds must torture while lingers life;
Is there anything you can mention?"

The friend went straight to his desk and took
A weapon that lay by his blotting-book,
And held it above him crying:
"Here's the deadliest weapon that woundeth men:
Can the devil improve on a poisoned pen?"
Said the devil: "I don't mean trying."

He took his hat and he said "Good-bye,"
With a gleam of joy in his fearful eye,
As he thought of the scribes inhuman
Who make of a gift that the gods might own
The deadliest weapon the world has known,
And stab at both man and woman.

—J. W., in *Duluth Industrial Age*.

THE MAKING OF LANGUAGE.

The English language is computed to be composed, roughly speaking, of 40,000 words, of which 29,000 are of Latin origin—mostly through Norman French—the remaining 14,000 are of Teutonic extraction. Of this store (says a writer in the *Globe*) the roots are insignificantly few. Take for one example the word *sal* (salt), which enters so largely into our vocabulary. To track the history of this word is to discover that salt was, in primitive times, esteemed above all other earthly possessions. The ancient greeting, "Salve!" is "May you have salt"; salary is the wherewithal to procure salt. A sale is a barter for salt, and selling a negotiation for salt. To say a man "earns his salt," is to say he gets his living. When we pronounce a place to be salubrious, what do we mean but that it abounds with salt? To salute a man is to express a hope he has enough salt. To be in safety is to be in reach of salt. A savior is only another word for one able and willing to furnish us with the salt which all need, and salvation is the happy condition of possessing as much salt as is required. In like way every word is to be traced to its root; given the root the rest will follow. Economy is the aim at the making of language. The process of varying a word in sound to give it different meanings is one of the commonest. "Born" (come into life) is the same word as "borne" (carried). Dr. Johnson, complains Walker, has made no distinction in the spelling of the participles of "to bear, to bring forth," and "to bear, to support." They both, he admits, undoubtedly come from the same common stock, but "the necessities of men are naturally urging men to make distinctions in language when there is a difference of idea." These "necessities of men," which have produced a distinction between "borne" and "born," are to be traced in every direction.

Darby and Joan retire to "rest," while the cock and hen go to "roost." Let us take the word "tick." "Tick," in the dictionary before me, is defined "to make a small vibrating noise, like that of a watch." This root is utilized in a variety of ways. Applied to the sense of hearing it becomes "tinkle," to make a quick vibrating noise; applied to the sense of sight it becomes "twinkle," a quick vibration of light; applied to the sense of feeling it is "tingle," a "quick vibration with a sensation of motion." Some crotchety people advocate the practice of spelling words "as they are pronounced." Why should we say and write "surly," when we mean "sour-ly," or "butler," when we mean "bottle-er?" The Americans are charged with vulgarity when they describe a speaker as being "highfalutin"; but this is merely "high-floating," or, as we say, "highflown." By our attempt to spell the word as it is pronounced we miss much. How many, for instance, know that "year" is the same as "ear"? To "ear" the land is to plough it. "Earth" is ploughed land. To say a man is fifty "years" old is, then, only equivalent to say he has seen fifty "ploughings." There is history in language; and the great English-speaking people, here and elsewhere, cannot, and ought not to, approve of any scheme which should insist on words being spelled "as they are pronounced."

TAXING THE APPRENTICES.

In the telegraph dispatches from Ottawa a day or two ago, among the customs rulings for September the following was stated to have been given: "THE INLAND PRINTER, 6 cents per pound and 20 per cent." To some people this would not mean much, but to a certain class it means a great deal. THE INLAND PRINTER is a publication in the United States, issued for the benefit of young printers who wish to improve themselves in the art to which they have devoted their lives. It is one of the best publications of the kind in the world and is invaluable to the young printer. There is no such publication in Canada, nor can there possibly be, as the field is far too limited. The subscription is \$2 a year, but the customs ruling referred to will add about \$1.12 to the cost, which simply means that many apprentices, and it circulates principally among them, will have to give it up. The duty does not protect anyone, it will not encourage the publication of such a periodical in Canada, it simply imposes a tax on a class who cannot afford to pay it. What does our local contemporary, which always defends what the Ottawa government does, think of it? If we mistake not there are a number of copies taken in its office. Will it defend such an unwarranted tax, which is not imposed, so far as we know, on any other similar publication? Has not the press influence enough to have it removed? —*Evening Recorder, Brockville, Oct. 5, 1888.*

THE STATUE OF HORACE GREELEY.

Alexander Doyle, the eminent sculptor, has completed a handsome model of the bronze statue to Horace Greeley which is to be erected by the printers of the United States, the initiative being due to Typographical Union No. 6, on the east side of City Hall Park, facing Printing House square, New York City.

The sculptor has depicted the great printer and editor, Mr. Greeley, in an excellent and striking pose. He is seated bare-headed in an arm-chair, under which lies a pile of books. His right foot is advanced, the toe of the boot projecting over the plinth, and the left leg is bent and drawn back. Mr. Greeley's right arm drops at full length by the side of the chair, and in the hand is a newspaper. The left hand rests on a chair-arm. The coat is thrown open, showing the vest. The expression is one of thought. The pedestal of the statue will be of granite, and the size of the statue will be heroic. It is expected that the cost of the statue and pedestal will be between \$15,000 and \$20,000. Sculptor Doyle says that when completed the pile will be a beautiful and graceful one. Those who have had a private view of the model and the designs of the statue state that the monument will be a magnificent one, and the work will reflect great credit upon the artist, and of which the American printers may be proud.

PHILADELPHIA boasts of four typefoundries, which employ an aggregate of three hundred and fifty hands. During the past year there has been a notable increase in the business.

Calendars for 1889.

Our line is now ready.
They range in price from \$1.50 to \$125.00 per 1,000.

WE ALSO MANUFACTURE A LINE OF
CALENDAR TABLETS OR PADS ←

At from \$2.75 to \$15.00 per 1,000,
from medium size to extra large.

ALL the goods we advertise we manufacture, and Printers who desire to reach first hands will do well to send for our Jobbing List of
Calendars, Cards, Panels, Banners, Folders, Etc.

Any printer who will send a two-cent stamp and *his business card*, and mention this paper, will be sent a set of our Calendars No. 374. A full line of samples, about seventy designs, on receipt of \$1.50.

COSACK & CO.

LITHOGRAPHERS AND PUBLISHERS,
90 TO 100 LAKE VIEW AVE., BUFFALO, N. Y.

THE LEADING TRADE JOURNAL IN THE WORLD IN THE PRINTING INDUSTRY.

IMPORTANT ANNOUNCEMENT.

PREMIUMS FOR COLORED WORK.—GREAT INDUCEMENTS.

COMMENCING with the October issue, No. 1, Volume VI, of THE INLAND PRINTER, a new feature will be introduced, namely, the publication of **INSERTS OF COLORED PRINTING**. For the purpose of stimulating effort in this direction, cash premiums of \$100, \$75, \$50 and \$25 are hereby offered to contestants, to be awarded under the following conditions: 1. All inserts shall be printed in three or more colors, and on paper the exact size of the pages of THE INLAND PRINTER, the type measurement of the specimens sent, however, not to exceed $9\frac{1}{4}$ by $6\frac{3}{4}$ inches. 2. Not more than two specimens to appear on one and the same page. 3. Tints and secondary colors may be the work of the engraver, but the design, body and execution of the job must be the work of the compositor. 4. No objection will be offered to the insertion of the card of any printing firm, or the business of its patrons, but this liberty shall not apply to non-advertisers connected with the printers furnishing business. 5. The award to be made by five expert printers, no two of whom shall reside in the same city. 6. The inserts to be forwarded to the editor not later than the 10th of the month.

Further information will be cheerfully given by addressing the editor of THE INLAND PRINTER.

THE SCOTT WEB PERFECTING AND FOLDING MACHINE.

Adapted for Almanac and ordinary Book Work. Speed, 12,000 per hour.

THE SCOTT WEB PERFECTING MACHINE.

Especially designed for Illustrated Periodicals and Fine Book Work. Guaranteed to produce work equal in quality to four roller two-revolution or stop-cylinder presses. Speed, 6,000 per hour.

OFFICE OF J. C. AYER CO.,
LOWELL, MASS., May 18, 1888.

MESSRS. WALTER SCOTT & CO., PLAINFIELD, N. J.:

Gentlemen,—The Perfecting Press and Folder combined, furnished us by you for printing and folding Ayer's almanac, is giving excellent satisfaction. We are running it at a speed of 10,000 to 11,000 books per hour. The inking apparatus is perfect, the distribution being so thorough that we do not find it necessary to "wash up" oftener than once in ten hours. The arrangements to prevent "off-set" are so effective that we change the tympan sheet only once a day. In this regard the machine is performing better than we expected, as we counted on the necessity of frequent changes. The printing is in perfect register, and the folding more uniform and accurate than anything we have had done on hand-folding machines. You are at liberty to refer inquirers to us for further particulars.

Yours truly, J. C. AYER CO.

PRESSROOMS OF THE J. C. AYER CO.,
LOWELL, MASS., June 7, 1888.

MESSRS. WALTER SCOTT & CO., PLAINFIELD, N. J.:

Dear Sirs,—In answer to your inquiry about the Printing and Folding Machine sent to this office by you nine months ago, will say that it is a wonderful machine, doing better work and more of it than I ever knew of being done by a Perfecting Press on this kind of work. The printing is well done to register, without any show of "off-set." The folder works exceedingly well, folding each sheet more accurately than heretofore accomplished on hand-fed folding machines where sheets were fed to points. We have no waste sheets, except where the web is broken or pasted together. The press is running at a speed of 10,800 per hour, to accomplish which it only requires a pressman and one helper on the press, and a boy to take the folded books away. The quality of the work produced will speak for itself.

Your truly, J. C. JOHNSON,
Sup't Printing Department.

WALTER SCOTT & Co.

THE DUEL.

THE CITY OF DENVER.

ITS MARVELOUS GROWTH AND PROSPERITY.—A VISIT TO ITS PRINTING ESTABLISHMENTS, ETC.

ON Thursday, September 19, we left Chicago via the C., B. & Q. R. R., for a business trip to Omaha and Denver, intending, however, as far as possible, to combine pleasure with business. After an uneventful run of thirty-three hours we were safely landed at our destination, and a short time thereafter found ourselves snugly ensconced in the *same* room in the "Brunswick" that we occupied seven years ago.

Denver, the "child of the mountains" is one of the marvels of the nineteenth century, and to the uninitiated traveler, a revelation never to be forgotten. After a lengthened and somewhat tedious journey through an apparently sterile country, he finds himself ushered into a prosperous city of 100,000 inhabitants, whose public edifices, schools, churches and private residences, will compare favorably with any on the American continent. Situated at the base of the "Rockies," with their untold store of mineral wealth, with no nearer business rivals than Omaha and Kansas City, she is the objective point of every line of road which traverses the plains, which, together with her health-giving climate, assures her permanent preëminence as an available, national sanitarium. The improvements made since our visit in 1881 are almost beyond belief. Locations which were then barren and uninviting have been covered with palatial residences, of which even Chicago might well feel proud. On the streets an air of bustling activity prevails, which speaks well for her prospects and the business energy of her people. The old air of uncertainty has departed, and the average Denverite now talks with as much assurance as a Boston schoolma'am. Nor is this to be wondered at when he points with pride to her eight-story buildings, perfecting presses and cable lines, and contrasts her position of a few years ago with what it is today.

Although we received innumerable kindnesses from old friends, which were duly appreciated, the most of our time was devoted to a ramble among and examination of the printing establishments, among which we might name the following:

THE "ROCKY MOUNTAIN NEWS."

The *Rocky Mountain News* office, situated on the corner of Seventeenth and Curtis streets, is an imposing building five stories in height, with basement, and has a frontage of 120 by 100 feet. It is one of the most commodious, conveniently arranged, best lighted and ventilated printing establishments in the United States, and shows the substantial progress the city of Denver has made during the past five years. Its workrooms are all that the most exacting could desire; indeed, we question if its newspaper and job composing rooms can be surpassed in any part of the country. The entrance to the counting room is on Seventeenth street, where eight clerks find busy employment. In the rear is the mailing department, under the management of Mr. W. B. Johnston, and the headquarters of the city circulator, Mr. J. C. Richville, who has a staff of twenty-seven carriers. Access to the newspaper, job and editorial departments is obtained by an elevator situated at the rear part of the office. The jobroom, which is situated in the fifth story, employs thirty-one hands, and is under the immediate supervision of Mr. J. E. Simmons. In the newsroom, clean, airy and roomy, thirty-five regulars work nightly, though on Saturday a much larger force is required. Mr. T. Faifer, foreman of the bookbindery, has the supervision of twenty men, boys and girls, and has the reputation, with the job office, of turning out excellent work. The editorial departments are very conveniently arranged, have direct communication with each other, and reporters have plenty of elbow-room, an advantage which cannot be claimed for some so-called sanctums with which we are acquainted. The editorial force consists of Colonel John Arkins, managing editor (an old Chicagoan); F. A. Meredith, assistant editor; W. R. Thomas, city editor, assisted by seven reporters, and Captain J. T. Smith, sporting editor. In the newspaper pressroom is a magnificent Hoe perfecting machine, capable of turning out 12,000 papers per hour, which is taken care of by Mr. Giles; while the presses in the job pressroom, ten in number, six cylinders and four jobbers, are attended to by Mr. Barney

Hogan. We shall always reckon the *News* establishment as among the few *model* offices in the country.

THE "REPUBLICAN" OFFICE.

The *Republican* building, centrally located on Sixteenth street, between Lawrence and Arapahoe, is a substantial, handsome, well-lighted three-story stone structure, with basement, all of which is devoted to the publication of the newspaper. In the pressroom are two of the latest improved Bullock perfecting presses, each adjusted to 10,000 impressions per hour, the power to drive which is obtained from a new safety steam boiler. The entire basement is used as the pressroom and for the storage of paper, and is under the management of Mr. James Wall. On the first floor is the counting room and manager's office, 22 by 40 feet, both of which are handsomely embellished and neatly fitted up in cherry. Mr. K. G. Cooper, general manager, is a genial, wide-awake gentleman, and one of the proprietors of the establishment. Ten clerks are employed in the counting room, under the supervision of Mr. F. Robinson, as energetic and whole-souled a business hustler as it was our good fortune to meet. The remainder of the first floor is devoted to the mailing and stereotyping departments, the former employing nine and the latter three men, under the respective charges of Mr. Robert Brown and Mr. Charles Bishop. The second floor, 22 by 125 feet, is exclusively occupied by the composing department, which employs thirty-nine regulars, under the efficient foremanship of Mr. John Dabler. The third story is occupied by the editorial and reportorial corps, and is a model of convenience. The following are the names of the gentlemen connected therewith: Editor-in-chief, William Stapleton; assistant editor, Robert Gauss; city editor, W. S. Alexander, and twelve reporters; telegraph editor, C. F. Rhodes; night editor, F. O. Dickensheets. In the political arena the *Republican* is a power in Colorado politics.

The entire building is lighted by electricity, and fitted up with all necessary modern improvements.

The job department, situated at 1616-1622 Blake street, employs ten men, and is under charge of Mr. C. F. Hynes, formerly of Rand, McNally & Co., of this city. In the pressroom are three Campbell book and job presses, one improved pony Potter, and two Peerless quarto jobbers. Mr. Banks B. Hall is foreman. A bindery is also attached thereto, under the supervision of Mr. Louis Williams, where five men and fourteen girls are constantly engaged. Taken altogether, the establishments are well arranged, well conducted and prosperous, and an honor to the city of Denver.

THE "TIMES" OFFICE.

The *Times* building, situated on Lawrence, between Fifteenth and Sixteenth streets, is a credit to the city, but we are sorry to say that the annex in which the newspaper, job and press departments are situated is *not* a "sight for the gods." Now that the paper has become the property of a millionaire, and new and enlarged quarters are demanded, it is to be hoped a structure will be put up in the construction of which the laws of hygiene and a due regard for the welfare of the workmen will be observed. During the time of our visit it was rumored that the job office had been disposed of to Collier & Cleveland. A handsome new perfecting press was awaiting erection, though we thought it a pity to put it up in such dingy quarters. Why it is that any hole is generally considered good enough for a pressroom is a conundrum we are unable to solve. The employés, however, are "all right," and a number of the very best printers in the city may be found at this establishment.

COLLIER & CLEVELAND.

The four-story and basement building, 25 by 125 feet in depth, 1540-1542 Holladay street, is occupied by the well-known printing and lithographing firm of Collier & Cleveland, state and county printers, who employ in the various departments from seventy-five to eighty-five hands. Their specialty, however, is executing large orders for lithographic and book work. The following named gentlemen are at the heads of the various departments: Book and job room, E. F. Russell, foreman, Daniel Mullins, assistant; engraving department, E. Eisle, foreman; artist department, T. Tenwickle; bookbinding department, A. Prater. The pressroom contains six cylinder and three Gordon presses, under the superintendence of Mr. Charles Haffey. This firm is one of the

most prosperous in Denver, and has the well-earned reputation of turning out first-class work.

THE QUEEN CITY PRINTING INK COMPANY.

We also paid a visit to the branch office of the Queen City Printing Ink Company, 25 Clayton block—R. O. Boyd, western manager—which was established two years ago in the face of many obstacles, discouragements and prognostications of failure. Mr. Boyd, however, has, with commendable energy and attention to the demands of western trade, succeeded in building up his firm's business in the territory of which Denver is the center, to a highly satisfactory degree. The company carries a well-assorted stock, and from it supplies the trade in Colorado, New Mexico, Wyoming, Utah and Montana. This shows grit, enterprise and good management on the part of its representative, who, although a young man in years, thoroughly understands the ink business and the wants of his customers.

MR. JAMES M. CULVER,

located at 1744 Blake street, who is well and favorably known in this city, is agent for the Campbell Printing Press and Manufacturing Company, and is doing an excellent business. He also manufactures printers' rollers and composition, and furnishes printers' supplies. He is a general favorite with the trade and deserves to be, for it would be a difficult task to find a more agreeable, genial gentleman.

MR. JOHN CRESWELL,

whose place of business is 1616 Blake street, also an old Chicagoan, dealer in type and printers' materials, and agent for some of the leading typesetters, is likewise doing an extensive business, and is now in a position to supply all orders with promptness and satisfaction.

We also visited the printing establishments of Smith & Ferl, Arapahoe street, one of the most prosperous firms in Denver. The Excelsior Printing Company, presided over by J. W. Nevatt, formerly foreman of the *Tribune* jobroom; Mr. John Dove, Chamber of Commerce building, and a number of others whose names and location we have unfortunately mislaid, and which for the time being must accept our apology for their non-mention.

We must not omit to mention that Denver Typographical Union is in a flourishing condition, and the utmost harmony prevails between employer and employé. The "boys" have already taken steps to entertain the delegates to the International Typographical convention, in June next, in a right royal manner. The following well-known gentlemen, all of whom are ex-delegates, have been appointed a committee to make the necessary arrangements and supervise matters, and their names are a guarantee that they never do things by halves. It consists of O. L. Smith, chairman; J. D. Vaughan, secretary; C. W. Rhodes, treasurer; John W. Hastie and William H. Milburn. The public at large have also taken an interest in the matter, and propose to give their visitors a genuine western welcome.

But our time was not altogether devoted to a tour among the printing offices. We had the pleasure of spending an hour in the company of C. J. Driscoll, deputy commissioner of labor statistics for Colorado, and his able assistant, John St. Cleveland, who was for many years connected with the *Chicago Evening Journal*, and afterward private secretary for Mayor Heath. These gentlemen were busily engaged in the conclusion of their first annual report, a work which will make an interesting volume of 450 pages, and which reflects credit alike on their research and deductions.

We were fortunate during our visit to secure the services of Mr. James P. Hadley as agent for THE INLAND PRINTER for the State of Colorado. Mr. Hadley is a young, energetic gentleman who deservedly stands high in the estimation of the citizens of Denver, and also of the craft with which he is so prominently identified. Commendation in his case is unnecessary.

We should like to continue, but space forbids. We cannot conclude our reference to this marvelous city, however, without tendering our sincere thanks for courtesies received from many kind friends during our stay, especially to Messrs. J. M. Culver, Vaughan, Smith, Rhodes, Hastie, Merideth, Johnston, Creswell, Dove and Cleveland. Also to a number of friends not identified with the printing business, all of whom we hope to meet again.

LAIID OVER.

Our "Omaha Notes" are unavoidably laid over till our next issue, but we must not in the meantime omit to mention that Mr. W. M. Kimmel has been appointed agent for THE INLAND PRINTER, and will be pleased to supply copies or take the subscriptions of those desiring it.

Written for THE INLAND PRINTER.

YE PRINTER MAN.

A curious chap is ye printer man,
Always open to just convictions;
Not given to quarrels, but all his life
A "bundle" of contradictions.

He may have a "bank," and plenty of "quoin,"
Yet never a cent can pay;
May "stick" like a martyr to the truth,
Yet be "lye"-ing the livelong day.

His "signature" not be worth a rap,
Though the "script" is fair to the eyes,
The "paper" be highly "calendered,"
And "imperial" in its "size."

He may never have a wife or child,
But of "small caps" keep a good stock;
Have plenty of "furniture" but no "form"
Of a babe in his "cradle" rock.

May have a "bed" and may spread "sheets,"
Yet never upon them lie;
May make every day and put it away,
Yet never can eat his "pi."

He may carry no revolver around,
May no gun when "tramp"-ing choose
With which to defend, yet always has
A "shooting-iron" ready for use.

A "dagger" he always has at "hand,"
But no blood sheds in strife or jars;
And, though no astronomer, has a way
(Of deftly handling "stars.")

He may work in "dead matter," and be no "rat,"
May "copy" all vain digressions;
And yet, if "boiled down," his talk will be "proof"
That he has but the best "impressions."

A "rolling" disposition may have,
Though by travel ne'er be informed;
May have a "sheep's-foot," but not the least
Be crippled, marked or deformed.

May have learned all there is to know of a "case,"
And a man of "letters" be,
But of law or medicine never a word
In his life has studied he.

He's neither policeman or jailor grim,
But in "locking-up" takes delight;
And though called a "devil," wears the crown
Of Christianity, pure and bright.

He's constantly "embracing" something new,
"Making ready" some "form" for "press"-ing,
"Making-up" for the night, yet alas, no lass,
Made happy with love's caressing.

He handles the "lever" that moves the world,
"Corrects," "errors" as they arise,
And if he has followed the golden "rule,"
Will find a "new dress" in the skies.

WILLIAM H. BUSHNELL.

PERSONAL.

DURING the past month we had the pleasure of receiving calls from the following gentlemen: W. B. MacKellar, of MacKellar, Smiths & Jordan, Philadelphia; Howard Lockwood, of the *American Bookmaker*; G. M. Cobb, *Times*, McKeesport, Pa.; John G. Greenleaf, New York City; R. O. Boyd, representing the Queen City Printing Ink Company, Denver, Col.; Harry Mason, representing H. D. Wade & Co., New York; E. F. Rychen, Queen City Printing Ink Works, Cincinnati; A. B. Stovel, of Winnipeg, and Louis Theyson, of Fredk. H. Levey & Co., ink manufacturers, New York.

CHICAGO NOTES.

BELFORD, CLARKE & Co., Chicago, have filed certificate of increase of capital stock from \$250,000 to \$500,000.

THE business of Samuel Bingham's Son, 296 Dearborn street, Chicago, has been incorporated, with a capital stock of \$20,000.

THE American Press Association, Chicago, has been licensed to effect an incorporation, with an authorized capital of \$800,000.

MR. CHARLES J. STROMBERG, of the J. M. W. Jones Printing and Stationery Company, has returned with his family from a tour of Europe.

MARDER, LUSE & Co. expect to issue their fall edition of the *Specimen* on or about November 1. It will contain several pages of new specimens of type.

MCGUERRIN, the typewriting expert from Salt Lake City, gave an exhibition recently in Chicago, writing 583 words in five minutes, or 116 words per minute.

BRADNER SMITH & Co., paper dealers, are building a new warehouse at 204 and 206 Desplaines street. It will be a brick structure, 50 by 130 feet, six stories and basement. Cost, \$45,000.

AUER & KNEDENDORF is the name of a new firm, established at 14 and 16 Calhoun Place, who are manufacturers of and dealers in bookbinders' machinery, printers' rollers, and roller composition. We wish them success.

MR. S. K. PARKER, a well-known member of No. 16, has accepted the foremanship of the *Call* (South Chicago) printing department. Mr. Parker is a number one printer, and the *Call* folks can congratulate themselves upon having secured his services.

A. B. BELFORD, of the publishing house of Belford, Clarke & Co., of this city, was married September 12 to Miss Helen M. McNally, daughter of Andrew McNally, of the firm of Rand, McNally & Co. The wedding was a notable society event, and among the bride's presents was a \$20,000 house from her father.

JAMES CONLEY, with J. P. Elliott & Co., 208-210 Randolph street, and C. O. Barnes, of A. R. Barnes & Co., have just returned from a pleasant six weeks' trip to Europe, in which time they visited Germany, France, England and Scotland, and came back recuperated in health and strength, and truer Americans than ever, if such a thing were possible.

THE HON. JOHN WENTWORTH, familiarly known as "Long John," one of the oldest and best known citizens of Chicago, died at the Sherman House, on Tuesday, the 16th instant, aged 74 years. Mr. Wentworth was for twenty-five years publisher and proprietor of the *Chicago Democrat*. He was an honorary member of the Old-Time Printers' Association.

W. & H. ERDTMANN, 252 Pearl street, New York, have opened a branch office in this city, at room 2, 341-351 Dearborn street, under the management of Mr. Gustave Varrelmann, where they carry in stock a carefully selected and complete assortment of fine dry colors, printers' and lithographers' inks, bronze powders, etc. Also a supply of the Universal Safety Quoin, which is claimed to be the simplest, safest and most efficient chase lock.

C. L. GOODRICH, of Belize, British Honduras, writes as follows: "Can an opportunity be found in Chicago, to apprentice a smart boy (to be five or six years bound) from the tropics (white boy who speaks and reads English and Spanish) to learn job printing, lithographing, electrotyping, etc., where he would be properly instructed and well

treated. If so, upon about what terms?" Parties desirous of obtaining further information should address as above.

THE Illinois Supreme Court has at last rendered a decision reversing a decree by Judge Tuley, in which he held that Mrs. Maria P. Storey, the divorced wife of the late Wilbur F. Storey, proprietor of the *Chicago Times*, was not entitled to \$2,000 alimony from the estate after the death of the latter. The Appellate Court sustained Judge Tuley's decision, and the case was then carried to the Superior Court, with the result stated. The payment of alimony was secured by a trust deed held by John Quincy Adams on the old *Times* lot on Dearborn street, between Washington and Madison streets.

AT a recent meeting of the Chicago Typographical Union, the following preamble and resolutions were adopted:

WHEREAS, an overwhelming sentiment exists among members of trades unions in this city against the harshness of section 46 of the Illinois Criminal Code (the so-called Merritt conspiracy law) as being inimical to the cause of organized labor, in that it imposes an oppressive minimum penalty for acts often trivial in their character; and

WHEREAS, Chicago Typographical Union, No. 16, as voicing this sentiment, unanimously adopted resolutions instructing its executive officers and its legislative committee to demand pledges from candidates for the legislature that they will work and vote for the modification of the existing law, and will make use of every endeavor to compass the defeat of candidates who will not so pledge themselves: Therefore

Resolved, That we, as such joint committee, knowing it to be to the interest of all labor organizations to eliminate the unreasonable and inequitable features of said section 46 from our statutes, most respectfully and urgently request your coöperation, believing that if a proper effort is made throughout the state by labor organizations to elect legislators friendly to our interest, we can accomplish this much-desired end.

A PLEASANT SURPRISE.

On September 25, 1888, the employés of Henry O. Shepard & Co. gathered in the composing room at noontime, and Mr. J. A. Van Duzer, on behalf of the firm and the employés, presented Mr. Frank C. Linden, one of the compositors, who was about to leave the office to follow the profession of physiciau, with a full set of surgical instruments, in the following neat words:

MR. FRANK LINDEN,—As you are about to leave the ranks of the followers of Ben Franklin and other illustrious men connected with the "art preservative," and become a disciple of Dr. Galen, it has been determined by your employers, H. O. Shepard & Co., and those who have been associated with you during the past four years, to present you with a token of their esteem and good wishes, and give you a "godspeed" in the profession of your choice, in which we all hope you may achieve honor and success.

Many noble and honorable men have passed before you in the profession you have adopted, and have secured the distinction and wealth that ever awaits zealous, industrious and honorable practice. That you may also be so rewarded is the earnest wish of those who now surround you; and if that wish will aid you to grasp the honor and the reward, you can appreciate it, as we all appreciate the kindness, gentleness and manliness that have characterized your intercourse with us.

This case of instruments has been chosen as the testimonial of your associate printers, and in passing it into your hands we acknowledge your worth and standing as a printer and a gentleman, and trust you will accept the same in the sense and spirit in which it is tendered, and keep a warm spot in your heart in memory of those who make the gift.

Time is a great corroder, and some of these instruments may become spotted with rust, but we hope that no stain of dishonor will ever be found upon them.

Mr. Linden responded as follows:

KIND FRIENDS AND FELLOW-WORKMEN,—For the first time in my life I find myself placed in a position such as the present one, feeling completely unable to make a suitable and fitting reply to the kind words just delivered, and to express, in an appropriate manner, my sincere gratitude to each and every one of you.

In accepting this magnificent and costly case of instruments, allow me to say that I sincerely thank you, gentlemen, one and all, for your kindness to me in years gone by, at the present time, and for your kind and generous wishes for my future welfare, and should any of you meet with trouble in which it is possible for me to render you any assistance in my power, professionally or otherwise, be it night or day, I assure you of the fact that you will find me ready and willing to do so. Again thanking you for your kind wishes and useful and elaborate gift, I trust you will excuse me from attempting to make any further remarks, as my feelings of gratitude are such that to say more would be almost impossible; so I wish you all happiness and health, and remain with great respect,

Your humble servant.

The presentation had been kept so quiet by those having it in charge that Mr. Linden was taken wholly by surprise. It was a success in every way, and was one of the most pleasant events that has happened in the office for some time. THE INLAND PRINTER wishes Mr. Linden abundant success and a long life of usefulness in his chosen calling.

SPECIMENS RECEIVED.

TRIBUNE STEAM PRINTING HOUSE, Independence, Kansas. Specimens of pamphlet and commercial work. The average register of the colored specimens is very good.

C. C. BARTGIS & BRO., Baltimore, Maryland. A few samples of good commercial printing. The firm cards are plain, neat and attractive. The presswork on all the samples received is excellent.

MCQUEEN & WALLACE, Washington, D. C. A number of unpretentious but really meritorious specimens of every-day work. They show what good workmen can accomplish with plain, serviceable material, without the aid of the grotesque, nonsensical embellishments which are too often considered necessary to produce an artistic job.

JOHN HOUGH, JR., of Guelph, Canada. Two handsomely arranged cards in colors; as also a twenty page octavo business pamphlet, on one page of which is the following: "Awarded a premium at THE INLAND PRINTER'S competition at Chicago, against a field of the best American printers." We consider Mr. Hough one of the best printers in the country.

C. B. FISK & Co., Palmer, Massachusetts. Several specimens of truly artistic work, some of them in colors. We have heretofore had occasion to speak highly of the jobs turned out by this office, and the samples now before us but corroborate our previous statements. Every line is in character, and the presswork, always an important factor, is excellent.

CARTAIN'S STEAM PRINTING HOUSE, Union City, Tennessee. Several specimens of colored work; the composition, arrangement and presswork of which are commendable. In a circular recently issued we are informed the office has just been replenished with a large and well-selected line of the latest styles of types, borders, etc. What is more, the choice has been made with excellent judgment.

HANEY & KLIPPERT, Chambersburg, Pennsylvania. A large batch of every-day, ordinary work, all clean and creditable, many of the specimens being executed in a really artistic manner. Coming, as they do, from a locality which has turned out more abominable typographic productions than any other with which we are acquainted, they are as refreshing as is a clear, cool spring of water to a thirsty traveler.

GRIFFITH & AXTELL, Holyoke, Massachusetts. A few of as perfect samples of truly artistic work it has ever been our privilege to receive; the prospectus of the Young Men's Christian Association star and special courses being especially worthy of praise. The pages, embossed at top and bottom and secured by a ribbon, are printed alternately in green and purple and on glazed paper. The designs are neat and attractive, and as a matter of course, the presswork corresponds with the composition.

ALSO from the Kokomo (Ind.) *Sentinel*; Kibbe Printing Company, Toledo, Ohio, quite a large assortment of colored work, creditably executed; John J. Daily, 267 Tenth avenue, New York; Western Printing Company, Omaha; Clapper's Printing House, Wooster, Ohio; Falmouth Local office, Falmouth, Mass.; Johnston & Speers, Toronto, Ont.; *Evening Telegram* Print, St. John's, N. F.; Lane Brothers, Hyde Park, Mass.; Bishop Brothers Company, Kansas City, Mo.; John W. Dolan Press Company, Albany, N. Y.; Louis C. Hesse, St. Louis, Mo.

OHIO PRINTERS' SPECIMEN EXCHANGE.

E. B. Wolf, of Chillicothe, Ohio, has established a Printers' Specimen Exchange for the State of Ohio, on a plan similar to that of the American Exchange of Buffalo, New York, except that he will issue two volumes each year instead of one. He asks the job printers and pressmen of his state to cooperate with him in the undertaking, feeling that it will promote the interests of the craft, by exchanging ideas in regard to different styles of work and teaching valuable lessons that could be taught in no other way. THE INLAND PRINTER wishes him abundant success in his new project, and hopes that the printers of Ohio will avail themselves of this opportunity to reap the practical benefits sure to follow. Write to Mr. Wolf for circular giving plan and cost of contributing, rules for contributors, and all information.

NEWSPAPER GOSSIP.

THE New York *World* has forty-five reporters.

DANBURY, Connecticut, has a new daily, the *Democrat*.

THE Batavia (New York) *Morning Advertiser* has suspended.

THE Finnish newspaper recently published at Ishpeming, Michigan, is dead.

EASTMAN, Georgia, rejoices in a new daily paper—the *Morning Journal*.

TWO more new monthlies for the "Hub" are the *Poultryman* and *Progress*.

PHILADELPHIA has a new republican paper in the *Saturday Evening Mail*.

THE *Chronicle* is a new daily paper recently established at Aspen, Colorado.

THE *Morning Enterprise* is the title of a new daily at Seattle, Washington Territory.

A FINNISH paper is to be started at Astoria by August Nyland, a journalist from Minnesota.

THE Conyers (Ga.) *Solid South* has come out in eight-page form, and is now printed on a steam-power press.

A HANDSOME, new, nine-column folio, the *Orleans County Herald*, has made its appearance at Albion, New York.

THE *Times* is the name of an afternoon paper just started at Tuscaloosa, Alabama. W. C. Jemison is the proprietor.

A NEW monthly in New York is called the *Scottish World*. It will be devoted to the interests of the Scottish-American community.

HON. JOHN H. NEGLEY has sold his interest in the Butler (Pa.) *Citizen* to his son, W. C. Negley, who will edit the *Citizen* hereafter.

THE *Arcanum Enterprise* is the name of a seven-column, four-page sheet, published at Arcanum, Ohio. It is devoted to home interests and is neutral in politics.

A NEW paper called the *Capital Item* has recently been established at Baton Rouge, Louisiana, by W. G. Annis and P. H. Le Sueur. It is independent in politics.

THE *Democratic Times* is the name of a neatly printed, six-column quarto paper, published at Wapakoneta, Ohio, by William M. Linn. In politics it is democratic.

RICHARD SMITH, of the Cincinnati *Commercial Gazette*, has bought the *Morning Commercial*, Toledo, Ohio, for \$28,000, and will take possession after the campaign.

FIVE prominent Louisiana newspapers are owned and edited by women. The principal of them is the New Orleans *Picayune*, which is controlled by Mrs. E. J. Nicholson.

THE Camden (N. J.) *Daily Courier* has changed hands; the price agreed upon is said to be \$20,000. Mr. John Harper, formerly of the Philadelphia *Call*, will act as managing editor.

A CLUB has been organized in the city of Mexico which is composed of newspaper men who have been imprisoned for political offences. It has a large membership of able men.

THE *Observer*, the colored men's paper at Los Angeles, California, having taken sides with the present administration, a number of the colored residents of that city are raising money to start a republican paper. The more the merrier.

WE have received numbers 1 to 4, volume 35, of *Die Abendshule*, published by Louis Lange, St. Louis, Missouri, a weekly illustrated paper, gotten up in neat style, and printed in a most creditable manner. The illustrations are good, and the matter of much interest to German readers.

WE acknowledge receipt of the *Progressive Age and Water Gas Journal*, of October 1, published semi-monthly by the Progressive Age Publishing Company, New York, a trade journal devoted to gas interests, electric lighting, manufacture and the industrial arts. It is neatly printed, and is replete with information of value to those interested in the topics of which it treats.

OF INTEREST TO THE CRAFT.

THE New York *Mail and Express* has at length become a union office.

FIVE new frames were recently given out in the New York *Times* office.

TRADE in the printing business in all parts of the country seems to be picking up.

IT is reported that the linotype machines now in use on the Washington *Critic* will shortly be discarded and hand composition resumed.

THE printers and pressmen of St. Louis have followed the lead of their New York brothers and organized a building and loan association.

SHERMAN CUMMIN, a well-known union printer, has secured the foremanship of the New York *Mail and Express*. The right man in the right place.

PRESSMAN'S UNION No. 8, of Boston, turned out on Labor Day three hundred strong, headed by a brass band. They made a fine show in dark suits and black derby hats.

IN the state printing office at Austin, Texas, seven book and two job hands are employed, and one large Hoe, one medium, and one large Gordon press are running full time.

SAN FRANCISCO Typographical Union is reported to be in a flourishing condition. It recently elected John J. Tobin an honorary member and presented him with a set of resolutions, in recognition of his services as a labor commissioner.

IT is given out in New York that there will be shown in that city, probably at the American Institute Fair, now open, a new fast-running job web press, which is about ready for the market. There is room for it if it proves a good one.

ON September 20 the contract for the state printing of Texas was let, and secured by three members of the Austin Typographical Union, Smith, Harrington and Jones, the latter a pressman. They took first-class matter at 40 cents (union scale), but there is "pick up" enough in it for them to make something.

DENVER TYPOGRAPHICAL UNION gives a ball in the Chamber of Commerce, on Tuesday, October 23, the proceeds of which are to be devoted to entertain the delegates to June (1889) session of the International. We know they will have a good time, and only wish we could accept the invitation to be present.

AT the last regular meeting of the New York Pressman's Union, No. 9, the following officers were elected for the ensuing year: James McIntyre, president; Alfred Rockwell, vice-president; Martin Burke, treasurer; John Deasy, financial secretary; F. F. Blomeker, recording secretary; John Brewer, Jr., sergeant-at-arms.

THE register of traveling cards shows that over eight hundred printers, representing every state and territory in the United States, Canada, England, Ireland, Scotland, Germany, France and Australia, have deposited their cards with No. 6 during the past twelve months, and that an equal number have been withdrawn.

A LIVELY and interesting typesetting match was performed on the afternoon of Monday, October 8, in the composing room of the *Sun*, New York City. The contest was the result of a bet made by a *Times* compositor that no compositor in New York could set up two thousand ems of solid nonpareil and correct the same in one hour. Joseph W. McCann, a compositor of the *Mail and Express*, and a member of Typographical Union No. 6, took up the bet. He commenced to set type at a quarter past one o'clock, and an hour later he had won the bet by having set 2,127 ems. McCann has won many a contest before, his record being that of the second best typesetter in the United States.

THE following, received from our Louisville correspondent, came too late to insert it in its proper section:

I have waited later than usual to forward my letter in the hope of being one of the first to announce a settlement of the trouble between the *Courier-Journal* and Typographical Union No. 10, which has existed since last January, but time has become precious, consequently I lose this chance for a "scoop"; however, I can give a synopsis of how things have thus far proceeded. The Arbitration Committee of the Trades and Labor Assembly received a request from the *Courier-Journal* Company for a conference some weeks ago. The committee responded promptly, and

a half dozen conferences have since been held, the prospects being very bright for an immediate adjustment of the trouble. President Plank, of the International Typographical Union, came down from Indianapolis and was closeted with representatives of both sides the better part of two days, after which a special meeting of the union was held Sunday, September 30, and a proposition was presented which was said to have received the sanction of the Arbitration Committee, but the union, after some consideration, concluded to refer it back to the committee for further action, which no doubt carried with it a polite request for more concessions by the *Courier-Journal*. It is extremely unfortunate that interests other than those of No. 10 and the *Courier-Journal* are receiving entirely too much consideration in the settlement of this matter, and while I am not at liberty just now to give the inside facts in the case, it can be stated that the compositors of the *Courier-Journal*, as well as the politicians of the opposite party, are making all of the capital out of it as is possible, and they will endeavor to prevent a settlement as long as possible. That it will be amicably adjusted very shortly is the earnest wish of every friend of both parties.

THE following notice has been issued by Public Printer Benedict:

TO ALL EMPLOYÉS: On and after this date all time lost (after one year's continuous service) by the employés of this office, by reason of absence with leave, or from sickness or disability, will be allowed and credited under the provisions of the acts granting leave of absence with pay to the employés of the government printing office, provided, that such leave with pay shall not exceed two and one-half days per month.

This ruling will apply to absences for the above reasons that have already occurred during the present fiscal year, beginning July 1, 1888.

Payments for such absences will not be made upon the regular pay-rolls, but on a special-leave roll, at convenient periods, either monthly or quarterly.

No such credits for leave of absence will be allowed except upon the approval of the foremen of printing and binding, or their authorized assistants, and all applications under this notice must be made to said foremen and not at the time clerk's desk.

TH. E. BENEDICT, Public Printer.

GOVERNMENT PRINTING OFFICE, October 1, 1888.

FOREIGN.

THE London *Daily Telegraph* uses from one hundred to one hundred and twenty tons of paper a week, and keeps three paper-making machines constantly going all the year round, except Sunday.

PARIS possessed on January 1, 1888, 1,648 periodical publications, distributed thus: Political journals, 94; advertising sheets, 34; commercial papers, 66; financial, 146; trade organs, 85; literary and political reviews, 83; medical and pharmaceuticals, 134; fine arts, public works and technology, 128; science, 71; educational, 72; administrative, 34; agriculture and horticulture, 43; bibliographic, 32; illustrated papers, 66; jurisprudence, 84; literature, 56; diplomacy and political economy, 16; assurance, 17; religious, 86 (of which 63 were Catholic, 21 Protestant and 2 Jewish); fashions, 60; freemasonry, 21; military, 27; sporting, 25; theatrical, 20, and miscellaneous, 143.

ACCORDING to statistics compiled during June by the scale committee at Leipsic, that town, with its suburbs, contained 103 letterpress printing offices, with 566 printing machines, 143 hand presses and 73 treadle presses. The number of overseers, readers, compositors, machine-minders and pressmen was 2,140, and there were 504 apprentices. Of the men, 119 were without work when the census was taken, 67 were on the sick-list, and 73 were pensioners for old age or infirmity. The average weekly earnings of the compositors on piece were 23 marks 14 pfennigs (about 23s. 2d.); on the 'stab, 24 m. 66 pf. (24s. 8d.); while the weekly earnings of the machine-minders and pressmen were 25 m. 29 pf. (25s. 3½d.). Only 89 workmen were earning more than 30s. per week on the average.—*Printers' Register*, London.

DURABILITY OF PAPER.

Modern methods in paper making have forced attention to the probable durability of paper for documents and other matter required to be preserved. A dissertation offered to the Berlin University was rejected recently because the paper on which it was printed contained too much wood, and its writer was informed that it must be printed on paper that was more solid and contained less adulteration. Experiments in Germany with ninety-seven weekly papers and magazines show that thirty-one of them contained so much wood and straw and mineral matter that they could not be expected to last more than fifty years. Sixty-three, made from wood pulp, were even less durable, and only three were of lasting quality. For cheap work and transient use, wood and adulterated papers are unobjectionable, even desirable. It is well, however, to have some regard in the selection of papers for printed matter to the probabilities of its value for preservation.

DUCKLINGS.

From the stock of JNO. G. GREENLEAF, Electrotypes of Fine Wood Engravings for illustrating books, magazines, juvenile and religious publications, etc., 7 and 9 Warren street, New York.

PAPER TRADE ITEMS.

IN the matter of the Detroit Paper Company, Detroit, Michigan, a second dividend of $3\frac{1}{8}$ per cent has been declared.

THE South Edwards Pulp Company, of Canton, New York, is the name of a newly incorporated company, with a capital of \$12,000.

THE Newman Paper Company is building a mill at Kokomo, Indiana. The main building will be a two-story brick structure, 60 by 125 feet.

A LARGE paper warehouse has been established at Birmingham, Alabama, which announces its intention to furnish paper, stationery, etc., at eastern prices.

THE Newman Paper Company has been organized in Kokomo, Indiana, with a capital stock of \$30,000. The main building will be a two-story brick structure, 60 by 125 feet.

THE Wauregan Paper Company of Holyoke has just issued a nice sample-book of its cream-laid linens in all the popular weights. It is a creditable book, and shows many fine samples.

It is estimated that there are 138 tons of paper manufactured by the mills in the Fox River Valley daily. Of these, 91 tons are news, 31 tons writing and book, 12 manila and 4 colored poster.

MR. WILLIAM A. RUSSELL, of the Russell Paper Company, Lawrence, Massachusetts, has purchased the right to use the process for bleaching paper pulp by means of an electrolyzed solution of chloride of magnesium.

THE Kanawha Paper Company of Charleston, West Virginia, lately reported as organized with a capital stock of \$50,000, to manufacture paper, extracts, etc., have purchased the mill property formerly operated by Thomas Wright, at Charleston.

MR. R. H. EMERSON, of Jackson, Mississippi, has stated his determination to erect a pulp mill at Toledo, Ohio, before next spring. It will, like all Mr. Emerson's enterprises, be a stock company, the capital being \$150,000. The mill will afford employment to forty hands.

THE Walla Walla Paper Mill Company is building a mill to be run on news paper at Walla Walla, Washington Territory. The mill will be run by water. A wood-pulp mill is also to be constructed at the same point, and another mill, at Milton, Oregon, to be run on straw wrapping and strawboard.

THE Whiteman Paper Mills, at Dansville, New York, have adopted a peculiar and ingenious method of securing straw. They have erected a thresher and binder on their grounds, and will thresh rye for the farmers at less than cost, while the latter carry away their grain, and pay \$6.50 a ton for the straw remaining at the mills. That's a scheme worthy of a Yankee.

THE Wisconsin paper manufacturers have secured important concessions from the railroad companies, which enable them to compete with eastern men in certain markets. The following are the rates recently established: From Fox river points to Indianapolis, $16\frac{1}{2}$ cents; from Fox river points to Louisville, $23\frac{1}{2}$ cents; from Fox river points to New Albany, Columbus, Jeffersonville, and all Ohio river points, $20\frac{1}{2}$ cents. These rates put Fox river manufacturers on an equal footing with those of the East. Another important concession is on wood pulp, the carriage of which has been reduced to regular lumber rates.—*The Western Paper Trade.*

WHAT are called "boards," as bristol-board, cardboard, binders'-board, pressboard, and the like, are simply as many sheets of paper as are necessary to make the desired thickness consolidated by pressure. The cheaper kinds, such as "strawboard," are usually made by running together the wet sheets from a number of cylinders, by an ingenious arrangement of felts between a set of rolls, which press all into one sheet simultaneously with the process of drying. Another method is still more ingenious: paper is rolled over and over the lower of a pair of press rolls, of which the upper one is so adjusted as to be raised by the thickening jacket of the lower. When the desired thickness is reached, the upper roll touches a little bell; the machine-tender, a boy, then draws a knife across a guide lengthwise of the roll, and the sheet of board drops off below.

ITEMS OF INTEREST.

THE new *World* building will also be a monster, and a marvel of completeness and beauty.

NEARLY half the newspapers published in the world are said to be printed in the English language. The total number is estimated at 35,000.

A SUBSTITUTE for bronze may be thus compounded: 30 parts of good brass (35 parts of zinc, 65 parts of copper), 16 parts of copper, 4 parts of phosphor-tin, No. O.

A CHEAP and quick method of producing pen and ink designs on stationery is to draw the sketch on smooth-finished paper with prepared ink. The lithographer presses the paper on stone to which the ink adheres. He then applies the acid, and in a few minutes it is ready for printing.

THE new *Times* building in New York, is a model of architectural taste and beauty. It is thirteen stories high; its top story will be 23 feet from floor to ceiling. Work is done on it day and night. The basement is from 16 to 30 feet below the street. The dimensions of the lot are 102 by 60 and 96 feet.

A PRINTER'S galley has been patented by Mr. Frederick Schley, of Brooklyn, New York. The side and end pieces have a rib on the outer edge at the bottom, over which the bottom piece is bent and held in engagement therewith, thus reducing the cost of manufacture and making a galley that will stand hard usage.

A NEW French invention, the thermographic press, is designed for printing on wood by means of hot type. As neat an impression is claimed as is obtained in lithography, and by the use of a specially prepared ink, it is said that cold type may be used with equally good effect. Its speed is four hundred impressions an hour on flat wood.

SO GREAT has been the success of the *Writer*, the Boston magazine for literary workers, that its publishers propose to enlarge it in January, at the beginning of the next volume, and to increase the price to two dollars a year. The *Writer* was started only a year and a half ago, but it has already made itself a permanent place among the standard monthly magazines.

To make a white varnish for paper, dissolve copal, seven and one-half ounces; camphor, one ounce; proof alcohol, one quart; then add mastic, two ounces; Venice turpentine, one ounce, and strain. This white varnish, when dry, is capable of a high polish. Another recipe is sandarach, eight ounces; mastic, two ounces; Canada balsam, four ounces; alcohol, one quart.

DURING a recent visit to Riverside Cemetery, in Denver, our attention was called to the following inscription, on a tombstone, and in the belief that some of our readers would be interested in seeing it in print, herewith present it: "O. J. Goldrick, Born in Ireland, March 30, 1834. Died November 25, 1882. Founder of the First Sunday School and First Public School in Colorado."

A BOOK of information valuable to all job printers, and especially those employed in country offices, is "The Job Printers' Companion and Guide," by D. L. Stump, of Carthage, Missouri. It gives many useful hints and "wrinkles" for those who wish to produce novelties at small expense in the printing line, and is well worth the price charged for it. Send for a copy. Price, 50 cents.

ABOUT \$2,500 has been raised for the Menasha sufferers of the Whiting paper mill accident. Appleton, Oshkosh, Kaukauna and Neenah have all sent in large subscription lists, and, together with the proceeds of the various entertainments, etc., have swelled the sum to considerable proportions. Congressman Charles B. Clark's donation of \$1,000 will be given in quarterly installments of \$250 each.

A RECENT issue of the New York *Herald* contains the following announcement:

The paragraph that is now appearing in the newspapers which purports to describe both the machine and the kind of type used in connection with my system of setting corrected and justified type automatically did not emanate from me, is altogether inaccurate and misleading, and gives wrong data from which to form an opinion of my scheme. JAMES E. MUNSON, Postoffice box 3,722, New York.

TRADE NEWS.

GLASS & Co., printers, Davenport, Iowa, have sold out.

THE Lincoln News Company, printers, Lincoln, Nebraska, have sold out.

VIRTUE & COGAN, printers, St. Paul, Minnesota, have dissolved partnership.

MORRIS & MCINTYER, publishers, Lake City, Michigan, have dissolved partnership.

SHERILL & FORMSMAN, printers, Louisville, Kentucky, have dissolved partnership.

C. B. COTTRELL & SONS have commenced building shops at Westerly, Rhode Island.

HENNIG & HOEBEL, printers and bookbinders, Minneapolis, Minnesota, have sold out.

DUDLEY & KIBBY, printers and publishers, St. Ignace, Michigan, have dissolved partnership.

THE *Evening News*, of Buffalo, New York, has added another perfecting press to its plant.

SHIELDS & Co., job printers, Mobile, Alabama, have dissolved partnership. D. W. McGaughey will succeed.

THE *Westliche Post*, St. Louis, Missouri, has put in a new Hoe press and a new dress of copper alloy type.

J. H. PARRY, formerly of J. H. Parry & Co., Salt Lake City, has opened a printers' supply house in that city.

HANEY & KLIPPERT have succeeded Charles L. Haney in the job printing business at Chambersburg, Pennsylvania.

THE Savannah (Ga.) *News* and the News building have been sold by J. H. Estell to the News Publishing Company for \$300,000.

J. H. CRANSTON, manufacturer of the Cranston printing machine, now has a Boston office at 54 Oliver street, where machines are on exhibition.

PRINTING in Austin, Texas, opened up with considerable stir in October, owing to the state department getting their reports ready for the legislature.

ANOTHER triumph for America. The gold medal was recently awarded to the new style "Liberty" press at the "Grand Concours International à Bruxelles."

THE Kibbe Printing Company, of Toledo, Ohio, have issued the third edition of their pamphlet containing specimens of society emblems. We have received a copy, for which we thank the publishers.

THE Acme Manufacturing Company, of Wilmington, North Carolina, manufacturers of tar paper, etc., will put in machinery by next year to extensively manufacture bagging from pine fiber for baling cotton.

THE Globe Printing and Publishing Company, of Springfield, Ohio, changed their corporate name on the 1st instant to The Winters Printing and Lithographing Company. They have added a lithographing outfit to their plant, and are ready for orders in this line of work.

THE Hastings Card Company, Limited, of 26 Beekman street, New York, have issued a neat thirty-four page pamphlet, entitled "Cut Cards and Cards Cut," giving full information in regard to this branch of their business, which should be on the desk of every printer in the land.

THE State Printing Board, of the State of Texas, has awarded the contracts for "first-class" printing to Smith, Harrington & Jones; second and fourth class to C. Von Boeckman; third class to Southgate & Son; furnishing printing paper, both classes, to Joseph A. Nagle, and stationery to the latter.

THE Peninsular Printing and Publishing Company, Detroit, Michigan, has filed articles of incorporation. The company will carry on the business of book and job printing and publishing, with a capital of \$25,000, of which \$6,250 is paid in. The incorporators are Fred. H. A. Backus, Theodore L. Backus, Charles F. Backus, A. D. Boyer, J. H. Gould and Charles F. Kammerhoff.

PRINTING INKS.

The following notice on printing inks, translated from the "Dictionnaire Typo-Lithographique," appearing in the *Typologie-Tucker*, may be of interest to our readers.

Ordinary printing ink is composed of a strongly-carbonized black coloring matter and a fatty substance. The coloring matter consists of materials rich in carbon, and is usually obtained by the combustion of tar, naphtha, resin, etc., to which various kinds of finely-pulverized charcoal are sometimes added. The remaining ingredient is linseed oil, which is first purified with sulphuric acid, and afterward boiled in iron, or, preferably, copper caldrons, till combustible vapors are emitted. These are ignited, and, after being allowed to burn for some minutes, are extinguished by closing the caldron.

In factories where the vapors are not ignited in a closed caldron the oil is allowed to boil until of the required consistency. Treated in this manner it does not penetrate the paper, and dries much quicker than ordinary oil. Its viscosity is increased by the addition of a certain quantity of colophony. The operation of boiling requires great care and skill, in default of which the varnish will be too stiff for use. Indeed, this is one of the most delicate operations.

The manufacture of printing ink consists of three operations:

1. Preparation of the black.
2. Preparation of the varnish.
3. Mixture and incorporation of the varnish with the black.

The products used for the preparation of the black are fatty substances decomposed by heat. The gases produced by this decomposition are ignited, and a current of air carries the black into large chambers where it is deposited.

The heavier black, which is the first to fall, is not used; but the lighter is carefully collected and employed in the manufacture of printing inks. The oil may also be burnt in special lamps instead of being decomposed as described above, and in this case the black obtained is used in the manufacture of fine inks only. But, whichever method is adopted, the black produced must before use be purified and divested of the fatty matters or tar which it may have retained. When this has been done by calcination in reverberators, the black may be mixed with the varnish. Varnishes are of two kinds, one of which is produced by boiling drying oils, especially linseed oil. The other, which is used in the manufacture of news inks, is made of resinous oils or solid resin. The oils are first purified by decantation, and afterward boiled till of the required consistency. The grinding of the varnish and its incorporation with the black is effected by three granite cylinders. Granite is employed in preference to iron on account of its hardness, and likewise because it is a bad conductor of heat. Experience has proved that whenever the cylinders become heated during grinding the varnish decomposes, and the ink is then of very inferior quality. The mixture falls into a receiver, from which it is taken up and reground if necessary, this being one of the most important phases of the manufacture. The proportions of black and oil, and the rapidity and fineness of the grinding, depend on the quality of ink required. News inks are usually low-priced and required to dry immediately. Book inks should also be quick drying, but of a deeper black than news inks. A larger quantity of black and much finer grinding are, therefore, necessary in the manufacture of these inks. Lastly, cut inks require the finest black and very slow grinding. To give an idea of the importance of this operation, it will suffice to say that the black used for fine cut inks undergoes no less than nine or ten different grindings.

Colored Inks.—The manufacture of colored inks differs from that of black inks only in the mixture of the varnish with aniline colors, cinnabar, Prussian blue, indigo, etc. The colors are previously ground, according to their composition, with a varnish compound.

THE type specimens, shown by the Dickinson Typefoundry in our pages this month, appeal to the æsthetic and practical printer. The Cursive Script is a *rara avis*, and the Outing and Jagged series are dainty and effective, emphasizing the established reputation of this concern as the leaders in originating new departures in stylish job faces. The combination gothics are shown in variety, and will be appreciated by every practical printer.

BUSINESS OUTLOOK.

Auburn, N. Y.—State of trade, good; prospects, fair; composition on morning papers, 25 cents; evening (female), 16 cents; bookwork (female), 18 cents; job printers, per week, \$7 to \$12. A new democratic daily has lately made its appearance, but will, in all probability, only live until election.

Baltimore, Md.—State of trade, dull; prospects, unfavorable; composition on morning papers, 45 cents; evening, 40 cents; bookwork, 45 cents; job printers, per week, \$16.00. Work in book and job offices is very dull. Great many idle printers in town. There is some talk about starting another morning paper here. Only hope it is true.

Bay City, Mich.—State of trade, good; prospects, bright; composition on morning papers, 30 cents; evening, 28 cents; bookwork, 30 cents; job printers, per week, \$12. Mr. J. Bourne, one of our oldest members, is having a very severe time of it with an affection of the eyes, and has not been able to do any work for over six months.

Charleston, S. C.—State of trade, fair; prospects, fair; composition on morning papers, 37½ cents; evening, 35 cents; bookwork, 35 cents; job printers, per week, \$17.

Cincinnati, Ohio.—Composition on morning papers, 45 cents; evening, 41 cents; bookwork, 40 cents; job printers, per week, \$18. Bookwork dull—fall business not having opened up. Subbing fair on newspapers.

Denver, Col.—State of trade, good; prospects, good; composition on morning papers, 50 cents; evening, 45 cents; bookwork, 45 cents; job printers, per week, \$21. State work will commence in one or two months.

Dubuque, Iowa.—State of trade, dull; prospects, not much better; composition on morning papers, 30 cents; evening, 26½ cents; bookwork, 30 cents; job printers, per week, \$14. The strike in the *Times* was declared off by the union at its last meeting, and the office rattled.

Duluth, Minn.—State of trade, nominal; prospects, good; composition on morning papers, 40 cents; evening, 35 cents; job printers, per week, \$17. The fall season is always the best for the printing business in Duluth, and the departure of many tourists and tramps for warmer climes makes more work for resident workmen. The coming winter promises to be dull.

Halifax, N. S.—State of trade, fair; prospects, fair; composition on morning papers, 30 cents; evening, 25 cents; bookwork, per week, \$9; job printers, per week, \$9. The probabilities at present are that this will be a fair winter for the trade in this city.

Hartford, Conn.—State of trade, very fair; prospects, increasing for fall trade; composition on morning papers, 40 cents; evening, 35 cents; bookwork, 35 cents; job printers, per week, \$15 to \$18. Another morning paper has been started (or rather resumed), the *Morning Telegram*; it is strongly democratic, and was seized and "cleaned out" completely, for libel, three or four months ago; so that now we have three morning and two evening papers, beside two Sunday papers.

Kalamazoo, Mich.—State of trade, active; prospects, flattering; composition on morning papers, 27 cents; bookwork, 25 cents; job printers, per week, \$10 to \$12. Not a sub. in town.

Kansas City, Mo.—State of trade, fair; prospects, good; composition on morning papers, 40 cents; evening, 35 cents; bookwork, 37½ cents; job printers, per week, \$17. The Rigby Printing and Stationery Company (successor to Rigby & Hinds) has incorporated with a capital stock of \$22,000; the incorporators are Geo. Dugan, Walter C. Carr, and Robt. M. Rigby. Newspapers are running more cases than during the summer, and advertising seems to be on the increase.

Little Rock, Ark.—State of trade, fair; prospects, not so good; composition on morning papers, 35 cents; evening, 35 cents; bookwork, 35 cents; job printers, per week, \$16. A new morning paper gives employment to about half a dozen union men.

London, Ont.—State of trade, excellent; prospects, good; composition on morning papers, 28 cents; evening, 28 cents; bookwork, 28 cents; job printers, per week, \$9 to \$11. All union men are employed. The new papers have secured a place in the affections of the people. Robt. Ormsby, who died in Denver early last month, was buried at Woodland Cemetery, the pall-bearers being Messrs. White, Melbourne, Clarke, Davidson and Fletcher.

Nashville, Tenn.—State of trade, fair; prospects, moderate; composition on morning papers, 40 cents; evening, 35 cents; bookwork, 40 cents; job printers, per week, \$18. There are enough printers here to do all the work that present and future prospects indicate.

New Haven, Conn.—State of trade, not brisk as yet; prospects, not encouraging; composition on morning papers, 40 cents; evening, 35 cents; bookwork 35 and 40 cents; job printers, per week, \$15, the scale. The *Register* has reduced its Sunday morning paper to four pages, thus sliding four frames. The trouble with the *Evening Union* still continues, but hopes are entertained of adjustment soon. When Yale University is in good running order, work will improve here.

New Orleans, La.—State of trade, extremely dull; prospects, not good; composition on morning papers, 45 cents; evening, 40 cents; bookwork, 40 cents; job printers, per week, \$18. A lockout on the *Evening News*, on account of the men refusing to work for one-third of what they make.

Ottawa, Ont.—State of trade, healthy; prospects, dull for next month; composition on morning papers, 36½ cents; evening, 33½ cents; bookwork, 33½ cents; job printers, per week, \$11. Your agent, Mr. Dunlop, secured a number of subscribers for *THE INLAND PRINTER* while here. A one dollar excursion to New York took away a few of the boys.

Philadelphia, Pa.—State of trade, rather dull; prospects, hard to tell; composition on morning papers, 40 cents; evening, 40 cents; bookwork, 40 cents; job printers, per week, \$16. The condition of trade is a shade better than last month, but nothing to get hilarious over. The town is full of "tourists," fifty-five having arrived in the last two weeks.

Portland, Ore.—State of trade, very fair; prospects, good; composition on morning papers, 50 cents; evening, 45 cents; bookwork, 45 cents; job printers, per week, \$21. The boycott has been lifted from the *Oregon Times* and *East Portland Star*. It still remains on the *Sittings* and *Vindicator*. W. E. Peck, corresponding secretary, resigned, and E. R. Bolsford was elected to vacancy. Twenty-five dollars received for Childs-Drexel Fund.

San Francisco, Cal.—State of trade, dull, but improving; composition on morning papers, 50 cents; evening, 45 cents; bookwork, 40 cents; job printers, per week, \$18. Great many travelers arriving. Heavy phalanges on some papers. Book and job work slightly better. Union men receiving more consideration (not financially).

Scranton, Pa.—State of trade, dull; prospects, not good; composition on morning papers, 33½ cents; evening, 30 cents; bookwork, 30 cents; job printers, per week, \$14. Business has never been so bad for many years.

South Florida.—Situation, gloomy; prospects, good after a frost and when business is resumed. Composition, on most papers, 25 cents; some offices pay 30 cents, while a few which employ girls pay 20 cents; job printers, \$10 to \$12 per week. There is little demand for workmen outside of Jacksonville, and few printers will care to go there at present.

St. John, N. B.—State of trade, fair; prospects, fair; composition on morning papers, 30 cents; evening, 25 cents; bookwork, 28 cents; job printers, per week, \$10.

St. Louis, Mo.—State of trade, still slow; prospects, better than last month; composition on morning papers, 43 cents; evening, 38 cents; bookwork, 45 cents; job printers, per week, \$18.

Worcester, Mass.—State of trade, very good; prospects, fair; composition on morning papers, 40 cents; evening, 33½ cents; bookwork, 35 cents; job printers, per week, average \$12. The *Gazette* has appeared in a new dress lately, and all agree that it is a great improvement on the old one. It is expected that the *Spy* is doing the same thing, but it hasn't shown up yet.

Wheeling, W. Va.—State of trade, fair; prospects, good; composition on morning papers, 35 cents; evening, 30 cents; bookwork, 35 cents; job printers, per week, \$15. Wheeling had a grand labor day on September 29, having over three thousand men in line in the parade. No. 79 took an active part.

Williamsport, Pa.—State of trade, fair; prospects, fair; composition on morning papers, 30 cents; evening, 27 cents; job printers, per week, \$13. The printing business has doubled during the past four years.

BUSINESS NOTICES.

THE Chicago Printing Ink Company, 115 Dearborn street, have just issued a new specimen book of printing inks, showing colors most in use by the trade, but not all the grades and colors which they manufacture. Any special colors not shown in the book will be furnished on application. A trial order is solicited by this firm, and they will be glad to quote prices on request. Write them when in need of ink, and ask for specimen book.

THE C., B. & Q. R. R. — THE MODEL ROAD.

The vestibule train of the Chicago, Burlington & Quincy railroad, which leaves at 1:00 P.M. for Omaha and Denver, is one of the finest equipped trains in the world, and runs through the garden of Illinois, Iowa, and Nebraska. The road-bed is the smoothest in the country, its rolling stock equal to the best, its conductors attentive, and its dining car and service thereon all that can be desired. To the traveler or man of business it affords the most direct route, while all annoyances of transfer experienced on other lines of roads are avoided.

COSACK & COMPANY.

One of the finest lines of calendars for 1889 has been issued by this company at their lithographing and publishing establishment in Buffalo, New York, and we take pleasure in calling the attention of our readers to their advertisement on another page of this issue. In addition to calendars, this firm manufactures an unusually elegant and attractive variety of cards, panels, folders, banners, etc., which printers will do well to send for list of before looking elsewhere. Do not fail to notice their liberal offer, and to send for the set of calendars mentioned.

A VALUABLE WORK ON PHOTO-ENGRAVING.

We acknowledge receipt of the American (third) edition of that useful volume, "Photo-Engraving, Photo-Etching and Photo-Lithography in line and half-tone; also Collotype and Heliotype," by W. T. Wilkinson, of London, revised and enlarged by Edward L. Wilson, 853 Broadway, New York, which contains additions to the former editions, that bring the book down to date, the most concise compendium of matters relating to the photo-reproduction processes we know of. It contains 184 pages, numerous illustrations and is neatly bound in cloth. The work will undoubtedly have a large sale.

ST. LOUIS PRINTING INK WORKS.

We have received a copy of the new specimen book, showing samples of lithographic inks manufactured by B. Thalmann, 210 Olive street, St. Louis. It is bound in cloth, beautifully printed, and contains over fifty pages of samples, of great brilliancy and richness of color. The inks used in printing this book were not made specially for the purpose, but were taken from the stock upon the shelves of the firm, and the work was done on an ordinary steam press, so that the specimen book shows to best advantage the appearance of work on which inks manufactured by Mr. Thalmann are used. Although the book does not show all gradations of color made by this firm, any special color can be furnished on request. Having had over twenty years' experience in lithographic printing and in ink manufacturing, Mr. Thalmann is in a position to produce inks that cannot fail to give entire satisfaction. Give him a trial order, and send for a specimen book.

J. H. CRANSTON PRESSES.

Printers are invited to look into the merits of this make of presses before placing their orders for any in the cylinder line. The cut shown in the advertisement of this firm in the present number is the improved two-revolution four-roller press, which is considered by all who have tried it to be a model of durability and excellence. This press has the common-sense cylinder-lifting mechanism, air springs and all modern improvements. It is a substantial, well-built press in all its details—solid castings, no wear, lost motion or strain. The popularity attained by it is due to the careful selection of all material entering into its construction, the pains taken in finishing, and its reliability under all speeds and on all classes of work. Other sizes and patterns are manufactured by this company, each with the same care in regard to all details. We ask our friends, when contemplating the purchase of a cylinder press, to send for circulars, giving sizes, prices, etc., which will be cheerfully sent on application to the manufacturer, J. H. Cranston, Norwich, Connecticut.

A TESTIMONIAL.

The following letter speaks for itself and is a sledge-hammer blow in favor of the Liberty:

Union Typefoundry, Chicago, Ill. : St. Louis, September 8, 1888.
 DEAR SIRS,—In reply to yours of September 4th we have THIRTY SIX Liberty presses in use. The first four were purchased in 1870 and are still in use. You can judge from this that we have a very high opinion of them. In fact, we think they are the strongest and handsomest presses we know of. Respectfully,
 JAMES HOGAN PRINTING CO.,
 413 to 419 North Third street, St. Louis.

We will venture the opinion that there is no one office in the West having THIRTY-SIX jobbers of any one make other than the Liberty.

James Hogan, Esq., is one of the shrewdest and most sagacious printers of the West. This could not be shown more conclusively than by his independent persistence in hunting out the *best job* press and *going after it*, instead of taking what he saw around him without investigation. When a man who has made a fortune out of printing speaks in this quiet tone of conviction about the Liberty, the printer who intends to buy and who has had no practical experience with the Liberty will surely examine the "King of Jobbers" before he decides upon any one. — *The Press and Type*.

THE STANDARD AUTHORITY.

A work that no editorial room, proofroom or printing office should be without is Webster's unabridged dictionary. Questions are constantly coming up that can only be satisfactorily settled by reference to this work, which is the acknowledged standard authority in the government printing office in Washington, in the offices of the leading newspapers of this country, and is indorsed by leading writers, poets, editors and historians of the world. THE INLAND PRINTER has used Webster as its authority since its first issue, and keeps copies at the editor's desk and in the proofroom, both of which are referred to many times in the course of a day. We commend the work to all our friends in the printing and publishing business as the best. Let no printing office be without it.

HARRIS' IMPROVED RULE CASE.

One of the most important of the late inventions in printers' outfits is this new rule case. The cut shows the way in which case is divided. No. 1 on the cut is just one-fourth the size of an ordinary blank case. No. 3 is now made in two parts, so that the four cases fit the regular blank case, and any one of them can be readily taken from the case when desired, and moved to any part of the office, without the necessity of carrying the whole case. The boxes are so constructed that the different lengths of rule are held "standing," so as to be easily and quickly taken from the case, and when in this position, the rule is less

liable to be nicked and battered by careless handling, as it often is in the old-fashioned rule case, where it falls down and lies flat in the bottom of the boxes. Case No. 1 will hold two complete fonts or kinds of labor-saving rule of eight pounds each; No. 2 holds the same quantity (16 pounds), but is arranged for one font or kind; No. 3, which is in two parts, intended to be used together, will hold 32 pounds of rule. We cannot in a notice of this kind give a full description of the case, or mention all of its advantages. It should be seen and tried to be appreciated. M. C. Harris is the patentee. Shniedewend & Lee Co., Chicago, are general agents for this case in the West. Send for circular giving full information.

ANOTHER NEW (OLD STYLE) GORDON.

The Morgans & Wilcox Manufacturing Co. advertise in this number of THE INLAND PRINTER another candidate for printers' favor in the Jones Gordon, of which they are agents. It is the latest production of a successful inventor and an experienced builder of presses. For the information of the craft we will enumerate the modifications of the old style Gordon which are made in this machine. It appears to be more heavily built, which is in itself a good feature. It has an impression set, independent of the screws, which may be adjusted even while the press is running. A good pressman, of course, can regulate his impression by means of his tympan, but this is a quicker and easier method. An extra distribution of ink can be secured also by the movement of a lever. This brings out false ways which carry the rollers in operation over the form without inking it. Many a pressman will bless this improvement. Then there is a self-locking chase hook; an automatic form starter; a fountain which attaches to the upper side of the ink disk, and a friction attachment on the steam fixtures which starts the press

gradually. The agents say they are making numerous sales and receiving enthusiastic indorsements from printers using them, among them some second and even third purchasers. It may be seen at the American Institute Fair, which opened in New York on the 3d of this month and continues till in December.

THE UNIVERSAL SAFETY QUOIN.

The following indorsements of the Universal Safety Quoin from a number of the leading printers of the United States tell their own tale:

W. & H. Erdtmann, New York:
CRAMER, AIKENS & CRAMER,
 MILWAUKEE, December 24, 1887.
 GENTLEMEN,—The Universal Safety Quoin bought from you, and which we have used for the year past, is the best thing in the shape of a quoin we have yet tried, and shall add largely to our present supply the coming year. It is all you claim for it, and has our hearty indorsement.
 Yours truly,
CRAMER, AIKENS & CRAMER.

W. & H. Erdtmann, New York:
WILLIAM P. ATKIN, 16 & 18 CHAMBERS STREET,
 NEW YORK, December 22, 1887.
 DEAR SIR,—I have used your patent quoin on one of the largest forms in my office for the past six months every week, and think it cannot be beat by any in the market. It is a *sure* lock-up, never slips, and in fact, works like a charm.
 Yours truly,
WILLIAM P. ATKIN.

W. & H. Erdtmann, New York:
THE WERNER PRINTING & M'FG CO.
 AKRON, Ohio, December 23, 1887.
 GENTLEMEN,—We are glad to state that the Universal Safety Quoin is a first-class article, and should be used in every job composing room.
 Very respectfully,
THE WERNER PRINTING & M'FG CO.

W. & H. Erdtmann, New York:
JEFFERY PRINTING CO., 159 & 161 DEARBORN STREET,
 CHICAGO, December 24, 1887.
 GENTLEMEN,—The Universal Safety Quoins for which you are sole agents have been in use in our printing establishment during several months past, and thoroughly tested. They possess all the merit claimed for them by the maker, have given complete satisfaction, and we unhesitatingly assert that they are the best quoins we have ever used, being adapted for any kind of form. Where accuracy of register is a requisite they cannot be surpassed; while their leverage is so great that the largest and heaviest form may be locked up with ease and without straining the chase.
 Yours very truly,
JEFFERY PRINTING CO.

W. & H. Erdtmann, New York:
UNIVERSITY PRESS, JOHN WILSON & SON,
 CAMBRIDGE, December 24, 1887.
 GENTLEMEN,—We have used the Universal Safety Quoins something over a year, and find them all you claim for them—indeed, cannot say too much for them.
 Yours very truly,
JOHN WILSON & SON.

W. & H. Erdtmann, New York:
ISAAC FRIEDENWALD, 32 S. PACA STREET,
 BALTIMORE, December 24, 1887.
 GENTS,—It affords us much pleasure to say that we find the Universal Safety Quoin which we purchased from you and have had in use for several months, excellently adapted to its purpose. In our opinion it is the best quoin yet devised.
 Very respectfully,
ISAAC FRIEDENWALD.

W. & H. Erdtmann, New York:
J. C. BLAIR,
 HUNTINGDON, PA., December 27, 1887.
 GENTLEMEN,—I beg to advise you that the Quoins we had from you some time since have proved to work very satisfactorily. The foreman of our pressroom is very much pleased with them, and thinks they are superior to anything he has ever had.
 Truly yours,
J. C. BLAIR.

W. & H. Erdtmann, New York:
THEO. L. DEVINNE & Co.,
 NEW YORK, May 13, 1887.
 GENTLEMEN,—The Universal Safety Quoin is worthy the attention of every printer. The surety of the lock in not unloosening, by vibration, is one of its many merits. The locking of forms requires nicety and extreme gentleness. In the hands of an unskilled workman matter will spring with wooden sidesticks, resulting in incalculable injury to the type. With this quoin the pressure in locking is downward, thus keeping the type on its feet; it bears strictly on the type, or matter proper, making the pressure equal on all parts. It is a most desirable article for all job and book printers.
 Yours truly,
THEO. L. DEVINNE & Co.

W. & H. Erdtmann, New York:
HASKELL PRINTING CO.,
 ATCHISON, KANSAS, September 1, 1888.
 GENTLEMEN,—Your Quoins and furniture are the best of the three kinds we use, and are now indispensable.
 Yours,
HASKELL PRINTING CO.

W. & H. Erdtmann, New York:
THE REED-MARTIN PRINTING CO.,
 TOPEKA, KANSAS, September 12, 1888.
 GENTLEMEN,—Replying to your request of August 29, we would willingly add our testimony to the excellence of your new patent "Universal Safety Quoins." We have had four sets of them in constant use for over a year and can honestly say they are better than what is claimed for them; no first-class printing office can afford to be without them.
 Very truly yours,
THE REED-MARTIN PRINTING CO.

W. & H. Erdtmann, New York:
LOOMIS & ONDERDONK,
 GRAND RAPIDS, MICHIGAN, September 7, 1888.
 GENTLEMEN,—We have used the combined Universal Safety Quoin and Side-stick with much satisfaction, as they save a great deal of time, and are absolutely safe. A valuable acquisition to any printing office.
 Very truly,
LOOMIS & ONDERDONK.

W. & H. Erdtmann, New York:
COURIER-JOURNAL JOB PRINTING CO.,
 LOUISVILLE, KENTUCKY, September 1, 1888.
 GENTLEMEN,—It gives us pleasure to testify to the merits of the Universal Safety Quoin which we purchased from you some time ago. We have given them a very thorough trial and think they are superior to anything we have ever used. It is the only sure lock-up we have ever seen.
 Very respectfully,
COURIER-JOURNAL JOB PRINTING CO.

INKOLEUM.

It is remarkable how rapidly this ink reducer and drier has come into public favor. But a short time ago almost unknown to the printing fraternity, it has, by its own merits, become absolutely indispensable to those who have but tried it. The Electric Manufacturing Company, of St. Paul, Minnesota, who are the manufacturers, inform us that they have recently sent 5,000 bottles to London, and have had large orders for it from Lima, Peru, and Madrid, Spain, the last order from the latter place being for thirty dozen bottles. Twenty-four dozen bottles are sent each month to Australia, and inquiries are coming from Portugal, France and Italy, and from Copenhagen, as to what it is and its merits, and before long shipments will be made to these places. One trial will convince the purchaser that it is all its manufacturers claim for it. The advertisement on another page gives full directions. We hope the printers of this country will not be behind those in other parts of the world in taking advantage of such a boon as this preparation has proved to be.

CHATTEL MORTGAGE SALE of Printing Outfit, consisting of 4 fonts of English and German body type, 16 fonts job type, stone and frame, 26 by 44 inches, 1 pair chases, 1 lead cutter, galleys, cases, stands, etc., etc. Cost originally \$265. In excellent condition; nearly new. Must be closed out at once for cash. Make offer. Address "ABBOTT," care of INLAND PRINTER.

"EL CORREO DE LA TARDE"—The only daily newspaper on the Pacific coast of Mexico. It contains news from all the world, translations of chosen English, French and German novels, and special local news of the different states of the Mexican Union. Mazatlan, Sinaloa, Mexico.

EVERY PRINTER should have a copy of "DIAGRAMS OF IMPOSITION" and "THE PRINTER'S READY RECKONER." Price, 50 cents each. To be obtained of H. G. Bishop, 96 Clinton avenue, Albany, N. Y., or through Farmer, Little & Co., New York and Chicago. These are the handiest and most useful works ever published for printers. Indorsed by everyone who has seen them. Agents wanted in every town.

FOR SALE—An old-established republican weekly paper in county seat of one of the best agricultural and stock counties in Northern Iowa; over 2,000 republicans in the county. Can be purchased on favorable terms. Address or call on BARNHART BROS. & SPINDLER, 115-117 Fifth avenue, Chicago.

FOR SALE—An old-established and well-equipped job printing office in one of the largest and best cities in Michigan. The proprietor has other business, and will sell at a bargain. For particulars address JAS. GRAY, Box 603, Bay City, Michigan.

FOR SALE—By all typefounders in Chicago, **TYPOGRAPHICAL HANDBOOK**, treating of Calculations in Typography. Contains new and valuable tables, rules and illustrations for computing every conceivable calculation connected with the art of printing. Price, 50c. Sent, postpaid, by J. H. GRIFFES, Box 420, Chicago. Liberal terms to agents.

FOR SALE—Printing, engraving and rubber stamp office, in manufacturing and growing town, established in 1877. Proprietor wishes to engage in other business. Address "FLOUR," care of INLAND PRINTER.

FOR SALE—The best 24-inch paper-cutter in Chicago, \$40. **INGAL*BROS.**, 468 Garfield avenue.

I WANT to buy a Job Office—first-class plant, but no fancy prices. **M.C. MILES**, 325 Jefferson street, Joliet, Illinois.

RARE CHANCE.—I have Vols. 5 and 6 of *Paper and Press* (unbound), perfect in every respect. Will exchange for Vol. 3 of **INLAND PRINTER**. Address, B. J. BAILIE, 326 Franklin avenue, Scranton, Pa.

SITUATION WANTED.—Young man of fifteen years' experience as reporter, editor and proofreader; strictly sober; capable of taking editorial management. Position in any capacity. Address, "G. W. S." care of **INLAND PRINTER**.

SITUATION WANTED.—Young man of good habits desires permanent employment. Experienced foreman; competent to take charge of country newspaper and job office; proofreader. References. Address **FRED. R. PUTNAM**, 241 Putnam avenue, Brooklyn, N. Y.

WANTED—By a job or news printer of eleven years' experience, a sit in town of about 5,000. Address **WILL ESKEW**, Quincy, Ill.

WANTED.—The Inland Printer Co. will pay 25 cents apiece for numbers 2, 4, 5, 10 and 12 of Volume I, if in good condition, to anyone sending them to this office, or will credit the amount on subscription, if preferred.

WANTED.

Those in need of Counters to send for Circular and Prices to
W. N. DURANT,
 Milwaukee, Wis.

WANTED.—Boy, age twenty, wants to finish apprenticeship in a good office; has had four years' experience; considered fair on jobwork, good on newspaper; can run most any platen press; recommendations as to ability and character furnished from previous employers; samples of work shown. Address **L. B. PERRING**, Kendall, Kan.

INKOLEUM Warranted to be the Best INK REDUCER and Quickest DRYER in the World.

Directions for Use:

Remove all skin from ink in can, then pour in about a spoon-ful of Inkoleum, and mix thoroughly to consistency desired. Thin for cold room; thicken for warm room or sticky rollers. Any press can be started up without washing the rollers, upon which it can be worked clear, free and easy on any kind of paper the coldest morning in winter, regardless of fire, or the hottest day in summer, by simply putting a few drops of Inkoleum on the rollers with the fingers.

Printing or Lithographic Inks of any color or stiffness can be reduced quickly without in the least impairing the color. For fine tint work Inkoleum works miracles, as it makes the ink cover charmingly, and dries quickly. No spreading of jobs necessary, and urgent work of any kind can be delivered immediately without off-setting. On rollers it *never dries*, but preserves their suction, life and elasticity. Inkoleum is a perfect "cure-all," and saves double its cost every day in the year, and makes pressmen do better work. A trial will convince the most skeptical. Testimonials from all parts of the world to prove these assertions. Price, half-pound bottles, 50 cents. For sale by all typefounders, wholesale paper and printers' supply houses; or, it will be sent anywhere in the United States, express paid, for 75 cents.

Put up only by **ELECTRINE MANUF'G CO., St. Paul, Minn., U. S. A.**

**FRANCIS & LOUTREL'S
PATENT COMPOSITION**

FOR PRINTERS' INKING ROLLERS,

Is superior to all others; it lasts for years, and is always ready for use; it does not "skin over" on the face, shrink nor crack, and seldom requires washing. Sold in quantities to suit, with full directions for casting. Give it a trial and be convinced.

ROLLER CASTING A SPECIALTY.

Our **PATENT COPYABLE PRINTING INK**—Superior to all others, all colors. In 1 lb., ½ lb. and ¼ lb. packages.

Rival Paper Cutter.

SEE DISK AND ANTI-FRICTION ROLLERS.

(Mechanical Movement Patented June 15, 1886.)

CUT OF LIGHT CUTTER.

*The Best in the Market. Has all the Improvements of other
Cutters. Greater Thickness of Paper can be Cut.
Less Power required to do the same work.*

THE patentee of this new Paper Cutter, the "RIVAL," having had many years' experience in designing and manufacturing Paper Cutters, feels confident that this Cutter will fully meet the demands of all who wish a good Paper Cutter at reasonable prices. It has all the improvements of other Cutters, such as sliding motion of knife, side and back gauges, etc.; also has rules inserted in front and back tables. In design and finish it has no superior; in workmanship and material it is first-class. Its claims of superiority over other Cutters are based on the patented mechanical movement for operating the knife, consisting in the novel arrangement of a disk having anti-friction steel rollers, this disk secured to end of lever shaft as shown in cut; by this arrangement four inches thickness of paper can be cut with perfect ease. This being the principal point to gain in a lever Cutter, we are confident the "RIVAL" will "fill the bill."

The Jones-Gordon Press.

This Press has several important improvements which make it a very valuable machine.
The Rollers may be run without inking the form, securing extra distribution.
The Impression may be changed without stopping the press.
The Chase-Hook is self-locking; the Grippers depressible; and there is an automatic Form Starter.
The steam fixtures start the press gradually by friction. It has an upper fountain which is simple and perfect.
It is heavily built, runs easy, and has no superior in the character of its workmanship.
Sizes made: 8 x 12, 10 x 16, 14 x 20.

+++

The **ECLIPSE** JOB PRINTING PRESS

*A Mechanical Triumph!
Without an Equal!*

THE ECLIPSE is the best Job Press that has yet been made.

The Ink Distribution is obtained by a new Vibrating Distributor, combined with the Disk and Fountain, which is equal to any revolving cylinder and distributing rollers, and without their complication and friction.

The Platen slides squarely against the form when the impression is made, rendering it unnecessary to move the impression screws when changing from a small to a large form. The Platen has a positive dwell when open for feeding.

The Fountain is the most perfect ever made to work in connection with a Disk plate. It cuts off completely, and cannot spring in the middle.

The Grippers lay on the Tympan when making ready. The Throw-off is simple and perfect.

A Friction Brake under the Ink Disk insures its revolving the same distance at every turn.

This Press embodies all the distinctive and important features of a perfect machine—strength, accuracy, durability, beauty and convenience.

SIZES AND PRICES.

- No. 1.—Chase 8 x 12 inches inside, with Fountain, . . . \$ 225.00
- No. 2.— " 10 x 15 " " " " " . . . 300.00
- No. 3.— " 12 x 17 1/2 " " " " " . . . 350.00

With three chases, one set (4) rollers complete, one set (4) roller stocks, one roller mold, hand roller, oil can, two wrenches, and two sets roller wheels—large and small.

LISTEN!

We want the attention of Printers, Bookbinders and Engravers.

WE are continually striving to meet the demands of the trades to which we cater and flatter ourselves that we are fairly successful. We have lately begun the manufacture of End-Wood Type, and are now prepared to furnish either **HOLLY** or **END-WOOD TYPE**, at prices which will surprise the consumer and still leave a satisfactory profit for us.

ENGRAVERS' WOOD.

Turkey, Boxwood or Maple of selected quality and superior finish.

ELEGANT CABINETS AND STANDS.

Our new Polhemus Cabinet surpasses anything put upon the market in points of utility and beauty. The ideal book compositors' Cabinet. The High Art Cabinet of the trade.

We manufacture a complete line of Printers' Wood Goods, and carry a complete line of Tools and Appliances. Send for our Catalogue and let us furnish you with our figures on anything you may want in our line.

FREDERICK H. LEVEY & Co.

MANUFACTURERS OF ALL GRADES AND COLORS OF

FINE · PRINTING · INKS

59 BEEKMAN ST., NEW YORK.

WE pay particular attention to the manufacture of FINE WOOD-CUT INKS for magazine and illustrated catalogue work, and for the appearance of our Inks refer to the following publications, which are printed with our Inks :

CENTURY MAGAZINE, - - - - -	Theo. L. De Vinne & Co.
ST. NICHOLAS MAGAZINE, - - - - -	Theo. L. De Vinne & Co.
COSMOPOLITAN, - - - - -	J. J. Little & Co.

J. J. LITTLE & CO., - - - - -	New York.
BUREAU ENGRAVING AND PRINTING, - - - - -	Washington.
GOVERNMENT PRINTING OFFICE, - - - - -	Washington.

We are exporting our Inks in large quantities to England and Australia, where they are preferred to foreign inks, for the reason that our Black Inks are brilliant and enduring; they do not change their color or fade from age, and superior results are obtained from our Colored Inks.

We can exactly duplicate the quality, tack and drying properties of any ink, no matter how long a time has elapsed since it was used, as we carefully preserve our formulas, which are the result of many years of experience.

Our Inks are ground in the latest and most approved mills, and we do not hesitate to say that, *by comparison*, they will be found the *finest* and freest from grit of any inks in the market.

BLACK AND COLORED

PRINTING INKS

117 Fulton Street, New York.

LITHOGRAPHIC AND PLATE INKS.

These Inks were awarded the First Order of Merit and Gold and Silver Medals at the Melbourne, Adelaide and Christ Church, Australian and New Zealand Expositions, over all competitors, both American and Foreign.

WHY OUR INKS ARE THE BEST IN THE WORLD:

Our Colors are **Brilliant and Permanent**. Our Blacks do not turn brown or yellow with age.

Our Inks are made from **our own** recipes, based on careful experiment and **are always uniform**.

They will not decompose in any climate, and can be used to the bottom of the package. This renders them economical to the consumer.

SPECIMEN BOOKS FURNISHED TO THE TRADE ON APPLICATION.

Special Inks Prepared to match any shade and for any purpose. In ordering through Commission Houses or other sources, be sure to specify **WADE'S INKS**.

THE PRACTICAL PRINTER.

BY H. G. BISHOP.

BUSINESS MANAGEMENT.

HAVING treated of the various processes of the printer's art, it is now necessary to consider the methods of conducting business. And at the outset it is important to emphasize the fact that there is no business more dangerous as regards the liability for failure than that of printing. Perhaps not more than one-fourth of those started ever reach a paying basis, and less than that number ever make anything like a success. Indeed, the number of successful printing businesses cannot be more than ten per cent of those which are begun. These are stern facts, and safely within the bounds of truth. Therefore, those who contemplate making a start for themselves need to be careful lest they go with the great majority.

But, at the same time, there is money in the business, if properly handled. The chief danger lies in the fact that there are so many incompetent men trying to conduct printing businesses, who take work at ridiculously low prices (many of them not knowing that they are doing so) that a new beginner is compelled to compete with them, and is in danger of losing sight of the important fact that he cannot do a job at a certain price because someone else does it for that amount. He is in danger of forgetting to figure on the cost of production, and of losing sight of the fact that someone else doing work at a loss will be no consolation when he fails. There is only one safe way of doing business, and that is seeing that a fair profit can be made on all work done. The head of one of the largest printing businesses in America lately said that the amount of net profit made on their total output for a year was only ten per cent; and it is safe to say that more than half the printers in the country do not get such good prices as does that firm. Net profit is a thing that very few men ever get to understand. They figure roughly or approximately, and flatter themselves that they are making profit when they may be getting poorer every year. They sometimes forget the amount that the capital they have invested in the business would bring them in

if invested at compound interest. They also lose sight of the fact that their plant depreciates in value to the extent of at least ten per cent per annum, to say nothing of the materials—furniture, reglet, leads, brass rule, etc.—which are being used up all the time, making the depreciation more like twenty per cent per annum! They sometimes also lose sight of the fact that their own time and labor has a market value outside of their own business.

Take a sample case: A man has \$25,000 invested in a printing business, the plant having cost \$20,000 and the working capital being the other \$5,000. Now, that amount invested at six per cent would net him \$1,500. Then add to this the ten per cent depreciation on the \$20,000, making \$3,500. Next, take his services at, say, \$2,000, and you have a total of \$5,500 a year. Now, suppose his business pays him that amount every year, what are his net profits? Just the \$2,000 which we have allowed for his services! For the interest on the money he could get anywhere, and the \$2,000 allowed for depreciation has to be spent in buying new plant to replace that which is being worn out all the time. But suppose he should draw out the \$5,500 a year, and spend it, what would he be worth when his plant was worn out? Why, absolutely nothing. Whereas he would have no difficulty in investing his \$25,000 at seven per cent interest, which would net him almost as much without his services, and he would still be worth \$25,000 all the time. And this argument holds equally good where a smaller or larger amount than that mentioned is invested.

It may be that in some instances a better result than the above might be shown, but it is just as likely that even a worse result would represent the majority of cases. There are hundreds of employing printers who have all their capital invested in their business, and who give more hours of their own time than anyone in their employ, whose net profits do not amount to more than the salary of some of their employes.

These facts are here stated for the purpose of pressing home upon the mind of the beginner the importance of adopting right methods in the conduct of his business, and to make him cautious and watchful against the many liabilities to failure and loss which are before him; for the more deeply he is impressed by the foregoing remarks the less likely will he be to indulge in cutting prices

for the sake of getting work, or to allow any other bad practices to ruin his business.

It does not follow that because a man is a good printer he will necessarily make a successful business man when he starts for himself, as many have found to their sorrow. At the same time it does follow that he will not be so likely to give his work away for less than it is worth, as will a man who has never had to earn his living as a compositor or pressman—and that is a strong point in his favor.

BUYING PLANT AND MATERIALS.

After a printer has been carrying on business for a number of years, he looks back and sees some of the mistakes which he has made during that time, and mentally remarks that if he were to have his time over again he would do many things differently.

As he walks around his establishment and takes an inventory of his plant and appliances for carrying on his business, he is apt to make a comparison between the amount of money it has cost him and its intrinsic value at the present time—the result often being far from encouraging. He sees some things nearly worn out and others quite so, and unless he has been allowing a proper amount each year for depreciation, his thoughts are likely to be very gloomy. He thinks of many things for which he has paid high prices that have not yielded him the profits he expected. Some of them he could have done almost as well without. He sees materials which have not been bought in proper proportions, the result being that one-half of such materials were never brought into profitable use. And so he mutters to himself as he returns to his office: "If I had the buying of this plant over again, I would buy differently."

Is this merely an imaginary picture? Or is it what may be found in actual fact? Nine printers out of every ten will be ready to admit that it is more fact than fiction.

Now, that being the case, will it not be of advantage to those who are only now beginning to buy if they can get some few pointers on the subject? Undoubtedly it will; and with a view to this end the writer ventures to make the following suggestions:

In the first place let it be distinctly remembered whenever purchases are being made that "the best is the cheapest." Well, of course, that saying is as old as the hills; but that is in its favor, so don't forget it. Low-priced articles are, as a rule, dear enough in the end. It is better to buy less in quantity and have more quality. This is especially the case with presses and machinery. It is best to buy presses of standard makes that have a reputation among printers generally; though there may be now and then some really good article that has yet to make its name, and in such cases it is well to look closely into its merits; but great caution is needed in buying a new invention.

Having decided to put in a certain make of press, it is better to buy several of that kind than to have a variety. And this for various reasons, not the least important of which is that all your pressmen get used to them and can easily change off from one to another. The manufacture of printing presses has reached such a point that there

really is not much choice between the several standard and accepted makes; of course, special kinds of work will sometimes call for special presses, but this does not weaken the point in the least.

The same remarks apply to machinery of every description in each department.

And type is no exception to this rule, either; for unless it come from a good foundry, where the appliances are of the most approved kind and the metal is of the best, it would be real economy to throw it away, rather than suffer the loss it will occasion if once put into use.

In buying for the job composing room great care should be exercised. Here, everything should be not only of the best, but in proper proportions. It too often happens that the contents of a job composing room gives the idea that the buying has been done by half a dozen different individuals, each acting independently of the other; for instead of there being harmony and proportion in the different kinds and quantities of types there is just the reverse.

Now, with regard to harmony of design and character, it is a great mistake to attempt to carry all the various faces that are made by all the typefounders. What should be aimed at is the bringing together of such of the best designs as will make a harmonious whole. At the same time, contrast must not be lost sight of; for contrast and harmony are both essential to make the beautiful in design or color.

Then, with regard to proportion, there is just as much care needed. It is better to buy all the sizes that are made of a certain face than to pick out two or three sizes at long intervals. If you have the whole of a series, it will be of more use to you than twice the amount picked out from several series; though, of course, where a man has limited capital and yet has to have some measure of variety, he may find it difficult to purchase the whole series of each kind of type.

But this brings us to the most important part of our subject, and that is the difference between buying many kinds and buying much of a kind.

IT IS BETTER TO HAVE FEWER KINDS AND PLENTY OF THEM THAN TO HAVE MORE KINDS AND LITTLE OF THEM.

One hundred fonts of job type, weighing four hundred pounds in the aggregate, will be twice as useful as two hundred fonts weighing the same amount.

It is safe to say, where there are so many kinds, not more than one-third of them are brought into actual daily use. The rest lie in their shrouds of dust waiting for the day when they will return to the melting pot.

Of course, all that has been said about type applies equally to wood letters. Indeed, so far as the question of small fonts is concerned, there is a special need for care in regard to wood letter, as the fonts contain fewer letters of each kind. What is the use of a three A font in an office where much poster work is done? It is worse than useless; and yet, how many such fonts there are.

Type and printing materials have two values: one is the price they will sell for, and the other is the amount they can be made to earn. But whether this latter value is commensurate with their cost depends more upon how

they were bought than upon how much was paid for them.

There is another point of importance to be mentioned, and that is the advisability of buying a sufficiency of quads and spaces, leads and reglets, furniture and quoins. These materials cost less than anything else, and yet they play a very large part in the operations of every-day business.

COST OF PRINTING INK.

A very important item of expense in running a printing business is that of ink, and yet it is often left out of calculation when prices are being given for work. Of course, it may be that in the majority of jobs the ink forms but a proportionately small part of the entire cost, but that is no reason why it should be left out of our calculations entirely, for there are times when it forms a large proportion, and if we get into the habit of neglecting it all the time, the chances are that we shall forget it when it should be thought of.

Granting that the quantity used on a single thousand of a small job is but very little, how about figuring on ten thousand of the same job? Is it not the rule to say, "Well, the composition is the same, the paper will be ten times as much, the presswork so much per thousand runs after the first thousand," and to omit the ink entirely? Then, on printing a single thousand a trifle better price is generally charged, which may cover the cost of the ink; but when a larger quantity is figured on the price has to be made proportionately lower, and unless the ink be made an item in figuring the cost, it will certainly be an item in the lost profit.

Then, again, the habit of leaving it out of our calculations entirely results in ignorance of what quantity to allow for when it has to be considered. How few seem able to calculate the quantity of ink required to run a certain number of any job! Say, for instance, on poster work. A case came under the notice of the writer where the cost of the ink used on two thousand three-sheet block bills, printed in red and black, came to one-third the amount charged for the job; whereas the person who did the figuring had just allowed a "dollar or two" extra for the red ink.

It is difficult to lay down any definite rule as to the quantity required on different jobs, as they vary so much, but what is urged is the importance of taking the matter into consideration. After a little practice any man with ordinary ability to figure will be able to calculate closely enough to prevent making a loss on that score.

It is well to bear in mind, too, that certain colors go further than others. The writer has a small memorandum book in which are jotted down points of importance in regard to ink and other matters that affect the cost of production, and on the ink page is a line which reads—"Beware of red!"

There is no economy in using poor ink because it appears cheap. A better grade will often be cheaper in the end, as it will go further and work better, saving not only on the bulk of ink used, but also saving in the time of pressmen and presses.

PROGRESS IN LETTERPRESS PRINTING.

NO. II. BY ALFRED FYE.

THOUGH there is evidence of marked progress in the typographic art during the past ten years, when we compare the productions of the present day with those of the past period, there is undoubtedly room for much improvement both at present and in the future, and in order to keep pace with the progressive spirit of the age it is necessary that the rising generation of printers should be taught how to improve the opportunities they have to learn all they can, and that thoroughly, in relation to their business. There is little use in attempting to teach a boy or young man anything unless one is reasonably certain that he will stay long enough to learn what you wish to teach him; yet, without some kind of restraint—such as an apprenticeship indenture or binding agreement for a certain term—it is more than likely that, after a little teaching, the learner will consider himself much superior to his teacher, and be disposed to wander off into fresh fields and pastures new in the hope of improving his position financially, without giving thought to the more vital interests which should guide him to a position in the front ranks of the profession in which he has elected to serve, and which would eventually bring him far higher pecuniary reward than he could ever hope to obtain by going off to fight his way through the world with his trade only half learned. Some of the older members of the profession, more especially those from the Old World, look back to the days when they had to serve seven or more years to learn the "art and mystery of printing," and when it was considered one of the most honorable professions for a young person to learn; and though at the time many of them thought it a great hardship that their freedom should be curtailed, and felt the yoke heavy to bear, yet, since they have arrived at an age when they can think and act for themselves, and judge of the value of learning, they are not slow to proclaim that the discipline was good for them, and their productions speak to the wisdom of their training and the excellence of their teaching.

It is the purpose of the writer to show by practical illustration what progress has been made in the letterpress branch of the art preservative, by reproducing specimens of work done at various times and in divers places, to the end that those wishing to still further help onward the progressive movement may see what has been accomplished, and find out what can yet be done with type, rule, etc.

A short time ago, while looking over some specimens of typography produced by various printers in different parts of the country during the past few years, we were struck by the tendency to lavish use of ornamentation in even the simplest kinds of work. While in many cases artistic talent is developed and taste shown in the arrangement and disposition of the ornaments, etc., at the compositor's disposal, in others there is such a lack of beauty and attractiveness that one is tempted to wonder why the ornaments should have been used at all, as they rather serve to smother up the reading matter than help to throw the same into prominence, which it should be the aim of

the printer to do. It does not follow that, because an office is equipped with all the latest styles in type, rules, borders, ornaments, etc., that particular office is going to turn out the *best* work. Something more is needed. The "gray matter," as the newspapers of the present day facetiously term the seat of human intellect, must mingle with and arrange the inanimate pieces of metal, in order to present them in a form that will arrest the attention of a critical public. Some printers, with a very few fonts of type, will produce far more effective results than others possessing every known face can ever hope to do, simply because they have the "knack" of arranging the material at their disposal in the best possible manner, and have

FIG. 1.

more inventive faculties. We once saw a title page of a large catalogue set entirely in light-face gothics — without rules or ornaments of any description — which struck every competent judge of letterpress printing as being a real work of art; and we have also seen a job produced in which all the latest faces have found a place, only to provoke the

FIG. 2.

remark, "Well, if I could not have made a better job than that, I would not call myself a printer."

Here are shown two specimens of business cards for comparison. Fig. 1 is a sample of a class of printing which has found favor with some; and is a style affected by a great many printers (or *alleged printers*, if you like) not many years back. Now, this is the card of a representative of a furniture dealer, but what connection the dancing bear in the upper left-hand corner, or the hungry stork, the leaping frog, or flying birds in the lower right-hand corner, have with the furniture business it is past our comprehension to determine. Here ornaments are used without regard to fitness or business association with the interests represented by the person tendering the card

to his patrons or prospective patrons. It is simply a picture card — a poor one at that — yet it was produced in one of the largest cities in the United States.

In contrast to the above we give a reproduction of a business card (Fig. 2) which, though simple in design and free from ornamentation, serves its purpose far better than the first; the nature of the business represented standing out boldly in unmistakable clearness.

Though it would not take half the time to set, the palm would undoubtedly be awarded to the workman who designed and set it, in preference to the other. This is the kind of work that is needed to place plainly before the public the aspirations and intentions of the person or persons who employ the printer to make known his or their desires; and the clearer this can be done, and the more striking the manner in which their ideas can be conveyed, the better is the printer fulfilling his mission. Though an office may be limited as to quantity, variety and newness of type, yet ingenuity will often triumph over the want of material, and produce surprising results.

THE SATURDAY HALF-HOLIDAY.

THE EFFECT OF ITS ADOPTION IN GREAT BRITAIN, AND THE EFFORTS TO INTRODUCE IT INTO THIS COUNTRY.

BY M. J. CARROLL.

IN all the industrial branches of business throughout Great Britain the Saturday half-holiday is now an established fact, and judging from the testimony of men who have had an opportunity of practically testing the effects following its introduction, the result has been a gratifying success from every point of view, and in direct contradiction to the predictions of a class of people who stoutly claimed that it would lead to nothing but idleness, drunkenness and dissipation on the part of the working classes, and consequent want and increased poverty to their families and those dependent upon them. The carefully prepared statistics of that country show clearly that the measure has been an unqualified blessing to the people who have been most directly concerned in the matter; and where drunkenness has increased, or lawlessness of any kind has become more prevalent than in former years, the cause has never been directly or indirectly traced to having any connection whatever with the adoption of the Saturday half-holiday. On the contrary, in communities where its adoption and its practical workings could be clearly traced to cause and effect, it has been admitted on all sides that its introduction has worked a marked change for the better, not only in the physical and mental condition of the working people, but also in the more cordial relations established between the laborer and his employer. That this has been the result in the only country where the measure has been tried to some greater extent than a mere experiment, would seem to be unanimously conceded at the present time.

Nothing like a fair or impartial trial has yet been given the short-hour Saturday in this country. To be

sure, efforts are constantly being made looking to a general suspension of business at the time mentioned, but so far these efforts have been devoid of energy and entirely lacking in unity of action and purpose. Different houses in various branches of business have adopted a certain hour for the early closing of their business on Saturday during a few months of the year, and the hour named varies all the way from one o'clock to six. This is the extent to which we have progressed in this matter, notwithstanding a more or less lively agitation during the past ten years. The race for wealth, which the people of other countries say we are so deeply engaged in, may have something to do with the tardiness attending the adoption of this measure here, providing the charge is true. But I fail to see wherein this race is any more eagerly contested in America than elsewhere, and if I am right in that observation, we must, of course, look in another direction for a solution of the problem. In all ages and in all countries the desire to become rich has been the prevailing passion with the mass of the people, and if a short work-day on Saturday was to seriously interfere with the money-making opportunities of the manufacturers or merchants of Great Britain, the working people of that country would not have obtained their Saturday half-holiday without far more effort than they were called upon to put forth when this measure was confirmed and made general by an act of parliament.

But the truth of the matter is that this curtailment of the working hours on the day mentioned can be brought about without any loss to the employer, and the relaxation from business during the hours contemplated will result in the long run in as much or more benefit to him than it will to anyone in his employ. The exacting attention paid to business matters by the business men of this country, and how they could withstand the wear and tear necessarily involved in so much work and care, has long been a puzzle to the observant visitor from abroad; and we have been told numberless times that we could go a little slower and attain our ends just as well. We must remember that man is in some respects a good deal like a piece of complicated machinery, capable of performing a certain amount of work before it collapses, and the shorter the period the work is crowded into, the quicker the machine will be worn out or rendered worthless. I am quite positive that if this question could be met in the proper spirit, the difficulties which now seem so hard to surmount could easily be removed, and a scale of working hours adopted that would be fully as profitable and far more pleasant than the present arrangement. The argument that the working classes would put the extra leisure time to no good use, but spend it in riotous dissipation or demoralizing idleness is one that is wholly unworthy of serious consideration. If that would prove a good argument for Saturday, it would prove equally good for Sunday, or any other day that is now given to the working people.

But how to bring about the change without throwing the burden entirely on the shoulders of either the employer or the employed is the question to be considered at present. Presuming that the employer is not only willing, but anxious, to adopt any measure that will be for the

unquestioned benefit of the people in his employ that will not place himself under too heavy a load, and admitting that the Saturday half-holiday would be beneficial to both parties, would it not be well to see if, by making some little concessions on both sides, this system could not be given a full and unprejudiced trial for at least a year? Then, if it should prove of no benefit, or if it should turn out unsatisfactory in its results, a return to the present system could not be met by any successful argument. Judging from the experiments that have been made in this city, there is little doubt but what this could be accomplished. For instance, the usual dinner time of one hour could be made shorter without any inconvenience to the working people. In certain localities, and under conditions that would admit of a man's going home to dinner, the full hour was probably a desirable arrangement. But in our large cities, where men invariably carry a lunch, or procure one at a restaurant, it has been found that one-half that time would be all that would be necessary for the actual requirement of the case. The remainder of the time is certainly not put to as good use as it could be were it all to be had at one time. Allowing this to be true, this would give us three hours in the six working days to apply on the Saturday afternoon account, and the other hour could certainly be satisfactorily arranged for, if both parties to the issue were to take it up and discuss it in the proper spirit.

The recent contention over the question of shortening the hours of labor in the printing business in America was attended by so much acrimonious discussion, and resulted in so much ill-feeling in some quarters, that I have no desire whatever, at the present time, of reopening that question. But I am satisfied that the measure I am now advocating would result in substantial benefits, and an improvement in the condition of the working classes, and at the same time could be brought about without any loss to the employer. A firm conviction in the truth of this assertion is the only thing that would induce me to open this question now, and my observations among my fellow-workmen further convince me that nothing would be lost by a fair experiment of the matter.

It may be asked what good use could be made of the time thus given to the employé, or what practical benefits he would derive were he to have a Saturday half-holiday. I will say that the uses that he could put the time to are many and various. Take Chicago, for instance. The innumerable cheap suburban trains would offer him and his family a source of enjoyment and recreation that he cannot now take advantage of. The opportunity that is occasionally called for to transact some outside business, that will now and then fall to the lot of most men, could then be done without loss of time, as is now the case. The relaxation from business cares for so many more hours at a stretch would be a godsend to him and his employer alike, while the family man would be at liberty to take those dependent upon him on some little excursion, without feeling that he was losing the time from his business necessary for their proper support and education.

But to make the Saturday half-holiday in any way enjoyable, or what it should be, it should be accompanied

by a Saturday pay-day. Of all the vexatious abominations that have crept into our business, the departure from the Saturday pay-day is undoubtedly the worst. There is no good reason why this departure should ever have been made, or, if made, why it should be continued in. There is nothing that the man working day-work grumbles so much about as the failure to receive his wages when the week's work is completed. There is no time when he can put his money to such good use, or when there are the same opportunities for a family man to lay in his supplies, as there is on Saturday, and there is no good reason why this system should be continued. It may be said that the man will squander his money in dissipation and drink if he receives it on Saturday. The same man will do exactly the same thing whenever he gets his money. But this is not a good reason why the deserving man should be deprived of his money when it is due him, and when he has earned it. Let any employer look over his establishment and see how many men he has that are liable to squander their earnings because they receive it on one particular day more than another. He will undoubtedly come to the conclusion that the number is infinitely small to what he thought it would be, and that it would probably be better for him to dispense with these men altogether than to continue to do an injustice to the really deserving men about him.

THE PLEASURES OF AUTHORSHIP.

BY GUSTAV BORHM.

AN Author! But six letters in the word, and what a siren song! What hopes and aspirations, what an amount of training, and studying, and reading, and disappointment do they inclose within their souls! They are the altar upon which many a young and striving life is sacrificed, the *fata morgana* vainly sought to be reached by numberless legions. A famous author—to become one is the desire of many; to be one is a benefit but rarely bestowed upon the few. And yet, although it is a crime that aimless, useless scribbling, daily committed at the foot of the altar called authorship, it possesses a charm of almost oriental splendor, which enchants him who has experienced it in a manner as opium does its victim. Beware! poor soul. Do not attempt the taste of that hardship, innocently believing that you may choose to stop whenever you please—once in its grip you will not be able to abandon it. To fret one's life as an unread, neglected, minor scribbler is an existence which well-nigh borders on the edge of one of life's failures. Be a cobbler if you cannot be anything better; but be that rather than one of the many who uselessly waste their lives and that of their innocent readers with the assumption to authorship. This is a standard advice given to almost every young writer by the god of his prayers, some one or the other whose luck or success would give him a position of fame and fortune.

For example, ask any one of these admired fortunate creatures, whether they would not prefer even an existence of obscurity as a writer to that of opulence in any

other sphere, and they will invariably answer you: We swear to the flag of the knights of the pen.

What explains this apparent paradox? We simply cannot explain.

We find the young—often the aged—author or poet 'way up in some garret, with cheeks reddened from the excitement due to the handling of the puppets of his own creation—the characters of his novel, his poem—satisfied with the dim light of a sperm candle in this age of electric illumination; satisfied with the covering of a blanket to keep the frost from his limbs, in this age of steam radiators and hot-air furnaces; and if we ask him why he would not choose some more profitable work, choose some occupation which will afford him greater luxuries, why he would not become a market man, cheesemonger or the like, and exchange his talents for a value, he will look at us in astonishment—yea! in amazement—with his big, moist and hollow eyes, and, with a painful smile enlightening for a moment his worried features, will tell us: Not for the diamond fields of the world, not for the riches of all India. And why should he? Is he not to be envied, with his power of imagination? Has he not millions at his disposal? Is he not king over all the masses and peoples he may choose to create in some corner of his active brain! O, do not doubt this, ye Philistine mortals! He is a god in himself with all the powers of a god at his command. He can give birth to all the beings he should desire to create; he can make them happy or miserable as he pleases; fame, fortune and the otherwise almighty tyrant of humanity, death, even humbly bow their brow before him, and unhesitatingly obey his orders.

These are the pleasures of authorship; these are the charms of an existence often bitter to the cup's very margin, for which he, who has chosen it, would not exchange a world of earthly goods and opulence. Let them smile, they who are of a more practical turn—but do not let them doubt it. It is only he who can form a judgment who himself has swung the scepter, during bitter cold nights in a hardly heated garret room, at the edge of a desk; he, alone, who has nourished his soul with the delicacies from imagination's table. There is no feeling equal—not one—which can be compared with that which fills the soul of an author who thrones above a number of manuscript sheets containing his world of imagination. Where is the millionaire who, after some lucky speculation in the money market, could be placed beside the starving poet, who has just brought a chapter or a story to a satisfactory close? One loses all feeling with the actual surroundings; one breathes and lives, suffers and weeps, with the world peopled in one's brain. Hunger loses its power, thirst its terror, circumstances fade away like pictures of a *laterna magica* before the all-powerful command of a poet's imagination.

Ask Robert Louis Stevenson; ask any of our living story-writers if it is not as I have described it; more so, ask any of the mass of scribblers who never find a market for their work, who scribble and scribble by the dim light of the candle, and who know that they aimlessly waste their time without any other purpose but to satisfy their craving to write; to create and to destroy, as they may

deem proper; and every one will answer you: It is so; there is no greater joy, no greater satisfaction on earth than the pleasures of authorship. They are a heaven which man may enjoy while on this mundane globe.

These are the psychological properties of authorship.

Let us now consider the mechanism of story writing. Although impulse is a *conditio sine qua non* of a perfect poetical creation; a quality which is at once felt by the reader; which possesses the power to vibrate that cord of the readers, the accepting individual's soul; which has originally vibrated a similar cord in the poet's, the spending individual's, soul; there is a certain amount of mechanical labor demanded to make a novel, a story or a poem acceptable. This mechanism is often hard work for the writer, and the more genial the author the harder the task to bridle his impulse, to press his boundless imagination into the yoke of the required system; but still it is imperative. An author's study is as good a workshop as that of a tradesman. His materials are ideas; he must prepare a beginning, climax and catastrophe, as the cobbler invariably handles leather, last and nails. The laws of poetry are as ancient as the system of trades. They must be complied with, even at the expense of genius. The manner of working differs with different authors. Some work during the day, some during the still hours of the night. With some it is a hard task to cast their intellectually complete story into flesh and bone, i. e., to write it down, thus imparting it to the rest of the world; while others, again, sit down at the desk and hardly look up from their manuscript, writing and writing as if some clockwork arrangement were in the back of them. Some do as Anthony Trollope did, i. e., treat the subject of writing in a rather business-like manner. They sit down to work at a certain hour and work their stipulated *pensum*, filling, with the promptness of an accountant, a certain quantity of time every blessed day, same as a clerk resumes and quits his daily task at certain hours. Others, again, wait in vain for weeks, months, perhaps still longer, the inspired moment that they may undertake to reproduce the picture of their brain in a satisfactory manner.

Habit and imaginary necessities have a good deal to do with the "poet in harness." The circumstances accompanying the work of an author frequently border very near to the ridiculous—even to insanity. One pretends that he cannot write without having his slippers on his feet; another must have a bottle of Mumm near him, to do his best; a third requires the most exact order and cleanliness of his surroundings to cover his task, while a fourth demands the very opposite—a genial disorder of manuscript, paper, postage stamps, old pen-holders, remainders of luncheon on his desk—to "write like a lord"; and I have known a prominent religious writer who could not pen a line unless a small cup of salt was placed near him. These trifles have, in most cases, a very decided character; some of the authors in question simply decline to write a single line unless the above mentioned conditions are fulfilled.

Apparently incredible, still true.

I could spin this theme into lengthy volumes, instead of pressing it within the limits of a magazine article, without

exhausting it. It is not my intention, however, to abuse the kindness of the editor, who has already been imposed upon by an undue extension of the space originally allotted to the writer. I will, therefore, close with the assurance that the indescribable charm of authorship can only be felt by those preferred beings of the human community who have the good fortune to be possessed of so much "nervous sensibility" as to enable them to create a world of their own imagination, over which they throne in godlike majesty, with unlimited power. To create and destroy, to have the destiny of so and so many beings at one's own command, is a pleasure of indescribable charm—a charm which can only be fully understood by him, or her, who has been there.

Written for THE INLAND PRINTER.

NOTES ON WOOD ENGRAVING.

NO. XLV.—BY S. W. FALLIS.

THE cuts of birds and tail pieces, which subsequently appeared in later editions, are neither as numerous nor as well executed.

Bewick's style, as shown in his cuts of "The Birds," is exclusively his own. He adopts no conventional style

of representing texture or producing effect, but adopts the most simple and expressive means which the art afforded to comprehensively and effectively represent his subject, never wasting his time in attempting to display his mechanical ability, but studiously working with the higher aim of representing nature, making every line have a meaning. The way he represents the feathers in his birds is admirable and perfectly original with him, and in accordance with the knowledge of his subjects and the capabilities of the art in faithfully translating them to graphic illustration.

The above cut of the woodcock, which is a copy of the original, is an instance of the able and comprehensive manner in which he has availed himself of the capabilities of the art, having produced a most excellent likeness of the bird by a most excellent effect and skillful arrangement of light and shade.

Among the very best of Bewick's cuts as a specimen of wood engraving is that of the common duck, which is most singularly true to nature, even in the minutest

details. The tail pieces, taken as a whole, in his first edition of "The Birds," are the best to be found in any of his works.

He was not a success as a caricaturist. While he possessed some sense of humor, he did not have the faculty of portraying successfully the ridiculous with any great ease or merit. He was too practical, and his tastes and talents were more at home with literal facts than extravagances.

When the second volume of the "British Birds" was published in 1804, Bewick had reached his fiftieth year. Although his powers as a wood engraver continued unimpaired long after this date, he did not produce anything to extend the fame already achieved. Bewick never enjoyed any satisfaction or pleasure in engraving designs and drawings made by others, and never was a success in figure drawing or engraving. He made his reputation by his representation of birds, animals and landscapes; and in this class of engraving he took great pleasure, and found true enjoyment.

His fables, which first appeared in 1818, were rather a disappointment to his friends and admirers, who had been led to expect much from his previous success in illustrating birds and quadrupeds, and the work was not very favorably received, although some of the cuts were excellent for the subjects they represented, but in these cuts the opportunity for a display of his particular line of talent was not afforded him, and as a consequence they fell short of the expectations of his friends. The cuts, however, were not all engraved by Bewick personally, or even drawn by him, but were done under his supervision by pupils.

- The letterpress was selected and arranged by Bewick personally, and one or two of the fables are of his own composition. Several years previous to his death he devised an improvement, which consisted in printing a subject from two or more engraved blocks, not in the chiaro-oscuro style, but in a manner to obtain a better variety of tint and effect than could be obtained without great labor from a single block and single impression. This improvement had been suggested by Papillon in 1768, and Bewick proceeded to carry it into effect. He chose for his subject, in which to illustrate or exemplify this new method that he considered his own discovery, an old horse waiting for death. He accordingly made the drawing on a large block consisting of four different pieces, and at once set about engraving it, but did not live to even complete this first or key block; and the second, which was to finish the picture, he never touched.

He, however, finished all of the first block except a part of the horse's head, and, when thus near completed, his anxiety was so great to see the result of his labors thus far that he had four impressions taken from the cut about a week before his death. It was on this occasion that he is said to have exclaimed when the pressman handed him the proof:

"I wish I was but twenty years younger."

The cut, with the head said to have been finished by another person, was published by Bewick's son, "Elliott," in 1832. The cut is eleven and five-eighths inches wide by eight and three-fourths high. It is entitled: "Waiting for Death." Bewick's last work, left unfinished and

intended to have been completed by a series of impressions from separate blocks printed over each other." This is the largest and last cut ever engraved by Bewick.

As he was not spared to finish it, it is impossible to even surmise the effect he would have produced had he lived to work out his ideas to their fullest extent.

(To be continued.)

Written for THE INLAND PRINTER.

REMINISCENCES.

BY JAMES BARNET.

IN looking over THE INLAND PRINTER for October, 1887, my eyes rested on "Printing in England, with particulars regarding recent changes," by John Bedford Leno, which recalls some of my experience and observation. In 1845-6, while working in Saville & Edwards' office, Chandos street, Strand, London, I had, during the dull season when society went out of town to the hills and the seashore in search of health and recreation, a job on a book, entitled the "Ballads of England." A fine wood cut embellished the first page of each piece, which had a mortice for the historical explanation. The great drawback to the compositor was in getting only a form of eight pages a week. As business resumed its wonted fullness, the "Ballads" was set aside until cuts and copy would accumulate.

Before this, the strike of the pressmen at the introduction of steam book machines had been settled, when the fine work was done on the hand press and the plain matter put through on the "Scandinavian" platen. Returning to Edinburgh, in 1847, the notion seized me of having a copy of the "Ballads of England," and, as the presswork would most likely be done by hand, nothing would prevent it from being a worthy specimen of printing. A dealer soon gratified my desire, and I turned over the leaves in disappointment to find poor ink and paper. Seven shillings and sixpence for such a specimen seemed an imposition on the public, which, no doubt, they would resent. The dealer declared that he would send back the book to London, as he could not sell it at the price charged on account of the paper and printing. An office like Saville & Edwards, which has been established nearly fifty years to my own knowledge, would surely not disgrace itself by producing poor work, considering that "Burke's Peerage" and "Landed Gentry," the "Queens of England," and other high-priced books were printed on their presses. I suspect that the publisher had more to do with the appearance of the "Ballads of England," with their love ditties, the tragic verse, and the quaint spelling, than the printer. McClurg & Co., Chicago, have some of the volumes here spoken of on their shelves, and, as I have had the privilege of turning over the leaves of the "Queens of England," I thought of its numerous notes, while the bad manuscript increased the pay of the compositor two and sixpence every form of eight pages. An incident occurred concerning the forms of a volume of this work, which were standing against the wall beside the hand press after a proof of the whole had been taken, in the composing room at the top floor of the building: So much weight at one spot cracked the supporting beam in the room below, and the typesetters did not wait to see if the building was to fall, but came down stairs pell mell, and the door of the room in which I was setting type was opened, a number rushing past crying "Out! out!" All my room-mates heard the noise of the cracking beam, and in a hurry we found ourselves in the vaults below, more scared than hurt. The foreman, being in the readers' room on the top floor, intuitively took in the situation, and ran into the composing room, shutting the door behind him, so that none should get away. He ordered everyone to take a form and move it to a different part of the building, thus distributing the weight, and averting, by his quickness, what might have been a calamity in the destruction of the office and its contents and the sacrifice of the lives of over sixty of the employes.

THE steam plate printing presses in the bureau of engraving and printing at Washington have been abolished, as far as the house can do it, by the passage of a bill providing that all government securities shall be printed on hand presses.

The "CALIFORNIA RELIABLE."

WHAT ITS PATRONS SAY OF IT.

From the Office of
THE BANCROFT COMPANY,
 Printers and Stationers,
 San Francisco, June 26, 1888.

Messrs. PALMER & REY,
 San Francisco, Cal.

Gentlemen:—Our machinery expert, Mr. Burton, has examined your "California Reliable" Jobbers at our request, and we are pleased to say that his report is that your "California Reliabilities" are much better built than the Chicago Old Style Gordons or "Challenge" Gordons. This being the case, we shall arrange to put in a line of your presses at once.

THE BANCROFT COMPANY,
 Per PARISER, Sup't Printing Dep't.

Office of **THE THEATRICAL PUBLISHING Co.,** Printers.
 San Francisco, June 18, 1888.

Messrs. PALMER & REY,
 San Francisco, Cal.

Gentlemen: Please quote us best price for two more quarto-medium "California Reliable" Jobbers. The last quarto-medium you supplied us with some few months since, gives the best of satisfaction. The Fountain also is a fine piece of mechanism.

Yours truly,
THEATRICAL PUBLISHING Co.

From **UPTON BROTHERS,** Printers,
 San Francisco, June 15, 1888.

Messrs. PALMER & REY,

The throwoff you attached to our "Challenge" Gordon is a beauty, and is a great contrast to the useless thing that was on the press before.

Yours truly,
UPTON BROTHERS.

Ashland (Or.) *Tidings*, October 28, 1887.

The "California Reliable" job presses manufactured by Palmer & Rey at San Francisco are preferred by many of the best printers to any other first-class press made. The quarter-medium purchased by the *Tidings* office about a year ago has been run on all kinds of work, often at a high rate of speed by our water-power, and has given entire satisfaction.

Yours truly,
W. H. LEEDS.

Medals were awarded this press at the San Francisco Mechanics Exhibitions of 1886 and 1887.

CHICAGO, NOVEMBER, 1888.

WE should like very much to show some of our friends who have affected to believe that there is little danger to the printing trade to be apprehended from the inroads of the "amateur," the quantity and quality of the specimens of typography we are almost daily in receipt of, and this, too, from all sections of the country. If we could, we think they would materially change their opinions. Be this as it may, we assure all inquirers, advisers and admirers that we have no intention of "letting up" or relaxing our warfare on this brood of vermin.

WHAT IS AN APPRENTICESHIP SYSTEM?

IN the opening address, or, rather, annual message, delivered by President De Vinne before the National Typothetæ of America, he is reported to have said:

We shall be asked to consider the propriety of adopting a new policy of apprenticeship. I wish some other phrase could be substituted. To all boys the word is thoroughly hateful. The apprenticeship system of two generations ago was one of the relics of feudalism. It was practically a qualified slavery. Its day is over. It cannot be reestablished, nor can any other system which binds the master to the boy and does not bind the boy to the master. It is a one-sided bargain which all our master printers rightfully refuse. To the master printers of book or job offices in our larger cities the system is especially unfair. Of what use is it to them to carefully educate a lad in the trade who has the power, and who often uses it, to leave his employer and take work in another state in which he cannot be molested? Of what use for a city office to accept the restrictions of one apprentice to every ten men, when other offices in that city and elsewhere cannot be prevented from having ten boys to one man? Of what use for one office to refrain from educating good boys when it has to accept the incompetent boys of other offices and pay for them as competent men?

This seems rather strange language to come from a gentleman occupying the position of Mr. De Vinne, for, as previously stated, we know of no sane man who seeks to recognize or revive the system in vogue two generations ago. But there is certainly a vast difference between accepting a relic of feudalism as a model and recognizing a system whose only object and effect would be to turn out qualified workmen — workmen who would be an honor to themselves and their profession, and whose employment would be a source of pride and profit, thereby supplanting a practice which is deluging the country with professional botches.

Webster defines an *apprentice* as one who is *bound by indentures* to serve a mechanic or other person for a certain time with a view to *learn* his art, mystery or occupation, in which his master is bound to instruct him. An *indenture* is a *mutual agreement* in writing between two or more parties, whereof *each party has obligations to perform*. Now we cannot imagine any system of apprenticeship which "binds the master to the boy and does not bind the boy to the master," or *vice versa*, or where mutual responsibilities are unrecognized.

But even under the so-called "qualified slavery" of the past, many excellent workmen were produced. Some years ago we forwarded a circular to a large number of the leading employers of labor in the United States, especially those engaged in shipbuilding and the manufacture of machinery, inquiring if they would, as far as possible, or compatible with their interests, acquaint us with the nationality of their workmen holding the positions of superintendents, master mechanics or foremen, and the answers in an overwhelming majority of instances proved that these positions were filled by mechanics of foreign birth who had received, in their respective countries, a *thorough mechanical education*. And they held these positions not because they were Scotchmen, Germans, Englishmen or Irishmen, but because they were *proficients*, thoroughly versed in and *masters* of their professions. We wonder what position these men, many of whom afterward became employers of national repute, would have occupied had they imbibed the idea, while

under instructions, that an apprenticeship system was "practical slavery." At a state convention we once attended, while advocating the indorsement of an apprenticeship law, we were interrupted by a somewhat breezy youth by the remark, that "the boys of this country were smart enough to pick up their trade without selling their liberty to anyone." After adjournment we were approached by a gray-haired Englishman, who remarked: "That 'ere chap who talked so loud is a fair specimen of the fellows who can *pick up* their trade without instructions. His work is slop work; but if he was set to any other job than the one he is now at, or went to a strange establishment, God pity him. I know what I am talking about, for he works with me." And the above is just a sample case out of a thousand which might be cited.

We are well aware of the difficulty in securing by national legislation a uniform national apprentice law, or, under existing circumstances, of preventing a boy leaving his employer and going to another state. In referring to this phase of the question in *THE INLAND PRINTER* for December, 1883, we said:

Having thus briefly referred to a few of the far-fetched objections against, and outlined some of the more prominent provisions which, in our judgment, an apprenticeship law should contain, let us look at the *real* difficulty which stands in the way of its general adoption. There is a popular fallacy existing, even among well-informed men, that the passage of a national apprenticeship law comes within the legitimate functions of the federal government, while the fact is, *congress has no jurisdiction whatever in the premises*—all authority to enact this and similar laws being vested in the several state legislatures. Thirty-eight sovereign states imply the existence of thirty-eight state legislatures, independent of each other, and the adoption of a uniform law by these thirty-eight bodies furnishes an obstacle of no ordinary magnitude. Like the eight-hour law, to be thoroughly effective it must be general in its scope and operations, especially in what may be termed the manufacturing states. So long as a "fugitive" from Pennsylvania can find an asylum in New York, Maryland, Ohio or New Jersey, its operations are limited; whereas were its adoption general, he would simply be jumping from Scylla to Charybdis—from the frying-pan into the fire. He would not be very apt to *recommence* servitude—the only way out of the dilemma—especially if he had devoted one or two years to a particular calling; and were he to claim to have served part of his apprenticeship, his release would be demanded and examined, while its absence would necessitate an investigation into the cause of leaving his former employer. Thus the interests of the mechanic would be provided for and guarded, at all times, at all places and under all circumstances.

In view of the fact that such *national law* has not been enacted, and is not likely to be; that the existing arrangement is, confessedly by one who ought to know, a *one-sided* bargain, and that a proposition to make it a *two-sided* effective bargain, in the absence of such law, offered by a directly interested party—an authorized committee from the International Typographical Union—which was able and willing to give a practical effect, was, to all intents and purposes, rejected by a deliberative body, equally interested, is an enigma we are unable to explain.

The claim that incompetent boys *must* be accepted and paid for as competent men, is a declaration to which we are compelled to take exception, and reminds us of the girl found in tears by her mother, and who, upon inquiry as to the cause, replied: "Mother, I am thinking of the time when I *must* leave you to get married," failing, however,

to explain the force of the *must*. When in Bloomington, Illinois, last December, we paid a visit to its several printing establishments, and in one was shown letters from two young men, who, up to their departure for Chicago, a short time previously, were receiving \$7 per week, which amount we were assured by the foreman, was more than they were absolutely worth—that they were then being paid \$15 per week, and, upon inquiring the reason, received the reply: "Oh, they were *assured* employment at this rate *before* they left Bloomington, by the establishment they are working with." It is needless to add they are not now receiving the wages promised, and that as soon as circumstances warranted, their services were dispensed with. Too proud to go back and learn their business, they are doubtless scalping the country as journeymen, a nuisance to themselves and the profession at large—monuments to the declaration that the enforcement of an apprenticeship system, which would have made them proficient workmen, is "practical slavery." But where, we should like to ask, did the "*must* be accepted and paid for as competent men," apply to their case?

THE FOUR-YEAR TERM.

THE INLAND PRINTER, as its readers well know, is not a political journal. It has studiously refrained from obtruding individual opinion from a partisan standpoint, and no intention exists to change its settled policy. This much by way of explanation. The nauseating doses contained in the daily press for months past, almost to the exclusion of everything else, must have satiated the most inveterate political glutton, while the frantic appeals of the patriotic charlatan have been given with a gusto that makes a season of repose one to be devoutly wished for. Patriotism is a splendid characteristic of any nation, and the American people have certainly got their quota; but it is a serious question if its excessive display in a manner which keeps the country in a perpetual turmoil is not productive of more harm than good. Under the *four-year* tenure of office, a definite settled business policy is an impossibility, for no sooner is one election off our hands than wires are laid to control the next. A feeling of distrust or expectancy too generally prevails, to the detriment of the best interests of the country.

The advantages which would be derived from the substitution of an *eight* for the *four-year* term of service are, in our opinion, many and varied, and are fast forcing themselves upon the attention of the people. Under the latter, as stated, the country remains in a chronic state of excitement, and business interests are made subservient to the plans and plottings of political tricksters. A brood of pestiferous demagogues, fungi on the body politic, now too lazy to work, and whose principal occupation is the debauching of public morals, would be forced to earn an honest living, either in or outside of the bridewell. Civil-service reform, today a laughing stock, would become a living reality. Hundreds of thousands of young men hanging on the skirts of this or that political organization, in expectation of being installed in office and fed from the public crib, in recognition for services rendered, would strike out for themselves and become independent,

reputable citizens. The disgusting spectacle of the barter and sale of our so-called "labor leaders" for a mess of pottage, bringing both themselves and the cause they are supposed to represent into public contempt, would be avoided. A line of national and business policy could be formulated, which would at least have some of the elements of permanency.

As stated, the present seems a favorable opportunity to broach this subject. Every recurring election demonstrates the weakness of the present system, and as the country grows in population and wealth, the desirability, nay, necessity, for a change becomes more and more apparent. Let us have a president elected for a term of eight years, and we will have more statesmen and fewer demagogues; more business honesty and more business prosperity, and purer public morals.

"MOLLUSKS."

THE October issue of the London *Printers' Register* contains a deserved castigation of the British type-founders for their torpidity and entire neglect to make use of the trade journals to advertise their productions, as also for their lack of enterprise and short-sighted selfishness. As a result of such selfishness, we are informed that now fully half the type used for artistic jobwork by English printers is foreign cast, and that they have allowed all the best designs and punch cutters to be enticed from the country into the service of those who now prove formidable rivals. These Rip Van Winkles, content to rest on the laurels of the past, and evidently forgetting that the world moves, will have the conceit taken out of them in a way they little dream of, and realize, when too late, that while they have been wrapt up in a mantle of self-complacency, a more enterprising element has cut the ground from underneath them.

PAPER MAKING AND ITS METHODS.

THE Chinese are generally believed to have been the inventors of paper. They used rice straw or rags of cotton or linen, for producing their paper stock. Modern nations followed their example, but made few innovations on the ancient processes until within the last forty years. Since then every decade has witnessed great improvements in this industry. New methods, processes and machinery have been perfected; new material brought into use; and new and multifarious forms of the manufactured article now enters into the economics of modern life. Rags are gathered in all sections of the world for transportation to the United States, but they no longer furnish the main supply of material used. Paper fibers are procured from old rope, jute butts, straw of the various grains, from many grasses and reeds, and from the wood of the cypress, pine, poplar, sycamore, basswood, and other trees. Mills of extensive construction and capacity prepare the fiber stock of paper makers, who purchase it by the ton in bulk, and then work it into whatever shapes their business requires. As it costs far less to carry chemicals to the forest than it would to haul the logs, wood-pulp establishments are generally located near the source of supply.

The principal chemicals used are lime, potash, soda ash and caustic soda. These alkalies, dissolved in water to produce the cooking liquids, have been used in capacious wooden tanks, in which, because the temperature could not be carried above boiling heat, it was necessary to continue the cooking from two to three days. The advance of invention has lately rendered it possible to largely decrease the time required for this purpose.

The demand for paper in all forms for old and new uses is practically unlimited, and is being daily augmented. In no part of the world is there a greater variety of vegetable fiber than in the southern states, whose cane brakes, swamps, forests and cotton fields can furnish an almost inexhaustible supply for an indefinite period. The cotton plantations alone could probably supply every pulp mill in the United States with a product cheaply gathered and manipulated, and containing a long, substantial and fine fiber.

Verily, this is an age of wonders, and what further progress the next century may produce in the art of paper making, as well as in the materials employed in its manufacture, we dare not even guess.

WITH all due deference to the views of a number of our esteemed correspondents, we must respectfully decline to further continue a controversy relating to the establishment of a Pressmen's National Union, or the action taken at the last session of the International Typographical Union in relation thereto. We cannot see that any practical or beneficial results are likely to arise therefrom.

THE long agony is over; the blue lights have been extinguished and the curtain rung down. The country is safe, the world will continue to revolve on its axis, the stars to shine, and THE INLAND PRINTER, as heretofore, continue its monthly visits to its readers.

Written for THE INLAND PRINTER.

OUR APPRENTICES.

BY W. E. SEAPORT.

WHILE most printers do not lose sight of the deplorable fact that there are today, professing to be well schooled in the art of printing, a vast multitude of incompetent workmen, they daily manifest an utter disregard for the future welfare of apprentices who may be placed in their charge. The faithful teacher in the printing office is as necessary as the most prominent and learned college professor. To the printer whose eye may fall on this paper, the writer desires to address himself on this important subject. Count on your fingers all the *practical* men you know, and then attempt to call by name those whom you know to be incompetent. I think the majority will be included among the last named.

Now, who will take the blame for this state of affairs? Does the trouble lie with the apprentice in all cases? I think the difficulty is owing to the indifference as shown by the journeyman printer toward the apprentice, who is, unfortunately, a very much neglected individual. In

many instances the failure of the boy to show, after a reasonable length of time, any advancement in learning is due to the gross carelessness of the workmen, whose plain duty it is to lose no opportunity in teaching the candidate to become proficient in that which he has undertaken. It is true that there are a large number of dull minds among the boys who set out to study the art preservative, but none are incapable of improvement, and if the least inclination to learn is shown, the apprentice should be encouraged in every possible manner.

It appears to me that, in the matter of teaching the young apprentice in a printing office, too many of our journeymen are inclined to become impatient, and while expecting the lad to learn the whole business in a week, are very apt to lose their temper altogether. Gentlemen, this is a great mistake. Did you learn all you know of the printing business in a week? I once heard an old printer (of twenty-one years' standing) say: "I learn something every day." And then again I have heard a younger man say to a boy who had but left school within a week: "Get me the words 'Albany County' out of that brevier case, quick." The lad knew not (and how could he be expected to?) where the brevier case was located; and how long, think you, would it take him to set those two words? The man who expected the boy to accomplish so much could visit a printing office across the river and return in less time.

A great deal depends on the treatment of the young apprentice in the early days of his scholarship. In most printing offices the newcomer is introduced to some ten or fifteen pounds of assorted pi, and in this manner he gets his start in life. If it must be pi, do not serve the nonpareil between crusts of small pica and long primer, but have each variety by itself. Right here allow me to say that the accumulation of pi is a certain evidence of negligence on the part of the compositors, and the most important rule in a printing office should be to the effect that all pi should be distributed at once by the man making the same; exceptions to this rule must necessarily be made, however, in cases where a whole form is reduced to pi, and this may be effectually guarded against. But, on the whole, pi, in any quantity, is an unmistakable evidence of sloth, if not of absolute laziness, and is inexcusable.

The proper way to give the apprentice his first lesson is at the case, without the knowledge of which he cannot profitably proceed further. Point out the boxes to him, beginning with "a." Do not open school unless you have time to go over the *whole case*, fractions, stars, daggers, and all. How many printers learn the whole case thoroughly? How many ordinary "print shops" are there in this land where all the upper or cap cases are laid alike? Teach your apprentice the whole case, and under no circumstances allow him to set type until this has been accomplished. Some printers use bits of card, with the characters printed on them, and distribute them about the boxes, and then the boy is left to study the case himself. The bad feature of this method is that the lad generally is left alone too long, and sometimes becomes careless.

It is certainly a most improper mode of procedure to allow the young apprentice to begin his learning with a stick in his hand. As in the study of music, so it is in

printing. The most successful musician is he who is strictly held to the practice of the scales for a long period.

It cannot be denied that a large number of our youth who set out to learn, not only the printing trade, but other branches of industry, appear to have been born without ambition, and a boy of this stamp is certainly in a wrong latitude when in a printing establishment. I have met with numerous specimens of this kind. One pretends to be a plumber; another has grown into some prominence as a ward politician, and yet another recently assured me that he was still engaged in the newspaper business. I learned after a brief conversation that he was employed in a pulp mill, at a princely salary of \$5.50 per week. If, after a reasonable length of time, the young man is found to be indolent, lazy and indifferent, and shows no particular desire to learn, he should be dismissed forthwith.

After learning the case thoroughly, the next important point which the apprentice should be taught is even spacing. Give him a piece of reprint copy, and visit him frequently. It is a good plan to let him set the same copy in several sizes of type. Among the first things that an apprentice should be taught is to distinguish the "b" from the "d," "p" and "q" in the lower case.

After your apprentice has had a proper beginning, punctuation, capitalization and minor details will follow in their own good time.

QUADRATS.

BY PICA ANTIQUE.

RETURNING to the subject of insurance, heretofore briefly discussed, the agent of whom I made mention suggests that while low rates can be obtained upon machinery, it cannot but be otherwise upon type. With their delicate faces easily injured, and mathematically correct bodies warped or swollen so as to render justification impossible, and fonts worthless, except as old metal, fire rates must necessarily rule high.

There is something in this; more, perhaps, in another point he suggests: He insists (while freely acknowledging that there are two equitable sides to the question) that very much depends upon the manner in which the establishment is conducted; that any fair-minded agent will take this into consideration, and that, if a few practical hints are carried out, the cost of insurance will be much lessened, and that strictly sound and honorable companies have a disposition to meet printers half way to that end.

Anything tending to render insurance less onerous is well worth considering, and in the above may possibly be found the solution of a much-vexed question. Certainly it deserves a trial, and the result is one in which all members of the craft are interested. Suppose, therefore, that owners of offices make a proper test, and report the result through these columns, thus insuring a world-wide circulation.

..*

THE issue between Typothetæ and Typographical is not one to be easily disposed of. Indeed, it promises to

be gifted with as long a life as the chancery case of Jarndyce and Jarndyce, made famous by Dickens. Looking at the matter from directly opposite standpoints, and largely governed by self-interest, a speedy or easy agreement is out of the question. Thus far, at least, the chasm remains unbridged satisfactorily, and we opine will continue so until the structure is more builded upon abutments of equity, with stringers of justice, planks of conciliation, and securely fastened together with spikes of brotherly love.

That "great bodies move slowly" is (in this instance) far more to be honored in the breach than in the observance. Especially is this the case when neither party is willing to be the "under dog in the fight," and both holding back. As the case now stands, it reminds one very much of the sable servant of a Southern officer (during the "late unpleasantness") who, finding war not to his taste, declared his intention of returning home.

"Well, Jack," said his master, "if you must go, I hope you will give a good report of our army."

"Sartingly, kurnal, dat I will," replied the son of Africa. "I'll tell 'em you's doin' fust-rate, sah."

"What will you say, Jack?" questioned the colonel, who had serious misgivings about the report he would make.

"Waal, kurnal, I'll tell 'em dat de Southern army am advancin' backwards, an' de Northern army am retreatin' forward. Dat's what I'se gwan to tell 'em, sah."

But, seriously, good results may be hoped for if both Typothetæ and Typographical bring sound reason and the equality of justice to bear. Let us hope such may be the case, and all work for that much-to-be-desired end, remembering that "calm inquiry, conducted among those who have the main principles of judgment in common, leads, if not to an approximation of views, yet at least to an increase of sympathy."

.

It is written in the Talmud "The place honors not the man, 'tis the man who gives honor to the place." Acting upon this principle, very much can those serving as arbitrators between the contending factions gain by a speedy adjustment of the misunderstandings now existing between employer and employé in the broadest meaning of the term. It is for the vital interests of both that this should be done, and there should be a friendliness of feeling urging to that consummation.

It is too late to discuss causes. The effects are with us, and not pleasant to contemplate or beneficial to success. The rights existing upon either side should neither be ignored or forgotten. There should be no Cain and Abel-ism about it; no thirsting for the financial blood of each other. The outside world is combined against both, and what militates against one does against the other. There ought to be, there *can be* a satisfactory ending of discrimination and bitterness. Business as well as common humanity demands it. With lapsing time the breach will widen, the mole-hills become mountains, the war of roses become one of stinging thorns and become of more than seven years' duration, the adjustment more and more difficult.

Who will be the first to free the dove from the ark of contention, and send it, with olive branch in mouth, over the troubled waters? For that man, for those men, the honors freely bestowed by craft and craftsmen is waiting, emphasized by the benediction bestowed upon Abou Ben Adhem.

.

UPON one point both Typothetæ and Typographical must agree. It is the scalping of the scalpers. They are a poisonous growth upon the business oak that is sucking out its sap, are gnawing worms working at its roots. The question of how they do it is entirely dwarfed by the fact that they do. And it is something more than merely amateurism with its "measly" output and ridiculous abortions of art. It is the pernicious work of grown men, at least the directing, no matter what "hands" may be employed.

Almost every week circulars come to me promising to do this, and that at a price I know can scarcely cover the cost of material. A "job lot," or an auction might, upon rare occasions, leave a trifling margin for wages; but as a rule, never. Even from large cities come these "grand offers," while "the woods are full of them" in the country.

There is no statute law bearing upon the case; the infamous perpetrators can be brought before no bar, save that of public opinion; punished in no manner, save by letting severely alone. Want of patronage would be their death-blow. The education of the masses to a higher standard of business morality is the only remedy for the evil, and to accomplish it, all honorable employers and printers should work.

.

RABBI JOCHANAN is credited with having said: "He who gives becomes rich." Wouldn't it be well for the magnates of the craft to ponder upon this in connection with the home for aged and disabled printers—THAT IS'NT BUILDED?

Charity, open-handed giving, is not wanting with the craft when occasions like cholera and yellow fever arise and plead trumpet-tongued. But somehow an ever-abiding-with-us demand is permitted to drag along neglected, almost forgotten. Yet, in the meantime, men—aye, even women—are suffering and dying, who, most of all, have a claim upon the generosity of those who have grown wealthy by the very business in which those who appeal to them for aid have been disabled, or worn out of energy and usefulness. Verily the working of charity is a mystery hard to find out.

.

HERE'S a feather for your cap, Mr. Editor and gentlemen of the INLAND.

"What a classic and beautiful face!" was the enthusiastic exclamation of a lady artist upon looking at the "cut" of Hermes in the September number of this paper. "Don't you think so?" she continued, questioningly, of an old printer, who was of the party. "Yes," he replied, appreciatively, "beautiful 'color,' and perfect 'make-ready,'" and his praise was worth a thousand fold that of the other to the craft, proving the rare judgment in "tone" and the greatest excellence in presswork.

WILLIAM H. BODWELL.

WILLIAM H. BODWELL was born in Franklin County, New York, in 1832. He began work at the printing business when fifteen years of age, serving his apprenticeship in Plattsburgh, New York, and Burlington, Vermont, learning all the branches of newspaper, book and job printing. For a short time he owned and printed a newspaper in Whitehall, New York, where he was when the war of the rebellion broke out. He took an active

part in raising volunteers, and was on the point of starting for the front with a company which he had raised, when he was stricken with typhoid fever and confined to his home for nearly three months. Before he recovered his brother had gone to the front, leaving Mr. Bodwell to look after an aged mother, and precluding the idea of his doing any fighting except for the necessities of life. In 1863 he went to New York City and secured employment on the *Times*. He was soon made an assistant foreman, which position he held until 1867, when he left the *Times* to become night foreman of the *Sun*. In 1870 he was selected by the Hon. Amos J. Cummings, who was then managing editor of the *Sun*, to go to Albany as correspondent for that paper. This position he held for ten years, when he resigned it to take the general superintendency of the composing and stereotyping departments of the *Sun*, where he now is.

In 1869 Mr. Bodwell represented New York union at the session of the National Union held in Albany, when the name was changed to the International Union. At this session he championed, and succeeded in obtaining a charter for Women's Union No. 1, of New York City, it being the first official recognition of female printers by the National body. It was largely through his efforts at this session that the system of proxy representation, which had grown to be a great evil, was abolished. He also made a

determined effort at this session to have the accounts of the then secretary-treasurer, John Collins, thoroughly investigated before the election, but was defeated. Had he succeeded then, it is probable that the greater portion of the Artemus Ward fund, at least, would have been saved, and the International body spared a portion of the disgrace brought upon it.

In 1874 Mr. Bodwell again represented New York in the International body, which met at St. Louis. John Collins was still the secretary-treasurer, and Mr. Bodwell

renewed the fight for a clear showing from the financial officer before the transaction of any business. Collins made a desperate resistance, but was beaten, and the night before the report of the committee which had been investigating his accounts was made, John Collins left St. Louis, leaving no trace behind him except a bankrupt treasury to the International Union. At this session of the International Union Mr. Bodwell was elected president, and the terms of the officers were extended to the end of the session.

In 1875 Mr. Bodwell again represented New York union in the International body at the session held in Boston. At the close of that session he was reelected president, but positively declined to accept, on the ground that his

private affairs would not permit him to give the time necessary to a faithful discharge of the duties of the office.

Mr. Bodwell has always been a thorough union man. He may, however, be classed as a conservative rather than a radical.

THE Mexican *Financier* is satisfied that the utilization of Mexican fibers and vegetable textiles is at last about to be accomplished by the establishment of the most modern and most efficient machinery for the purpose. The *Financier* is convinced that Mexican estates on which these fibers can be produced will be enhanced in value, and that the fabrics produced from the ramie and cotton-stock fibers will take an important place in commerce. The work of developing these fibers will be performed by American capitalists.

Written for THE INLAND PRINTER.

THE INTERESTS OF EMPLOYERS AND EMPLOYED.

BY B. E. HARRISON.

AN article with the above heading appeared in THE INLAND PRINTER for September, 1888. The writer seems to me to be an employer, and to write from an employer's point of view. I like his idea. I think it will come nearer solving the labor question than any other new idea yet proposed. Now let me, as a workingman, advance an old idea. The hired man ought to show as much interest in his work as he would if he were working for himself. This can be done, though it is not very often. I never had my pay raised till I had for some time earned more than I was getting. I never knew an employer to raise the pay of a man who was determined to earn no more than he received. Entirely too many hands are afraid they will do too much; they must stop at quitting time, no matter what the rush may be. Rather than work fifteen or twenty minutes overtime, they will stop five or ten minutes early. I once worked in an office where fifteen compositors lost an average of half an hour each, every day, by getting in late and going out early. This required the hiring of another hand to get the full amount of work done. There was about type enough for fourteen hands to use comfortably. The help blamed their employer for having so many hands and not getting more type; yet none of them seemed to think that the whole difficulty might be obviated if they would all make full time. Earnest, conscientious, faithful work, making your employer's interests your own, will, I think, do more to bring about pleasant relations between us and our employers than all the trades' unions, typothetæ and arbitration boards in Christendom. In slighting our work, we are only biting off our own noses to spite another man's face.

One more idea. Strange though it may seem, the employer sometimes knows better how he wants his work done than the man he hires to do it. Then why not let him have his own way? My experience has been that a well-trained, thorough workman cares less about having his own way than he does about pleasing his employer. I have found that it is usually the ignorant, conceited botch who thinks it so degrading to give up his own way. To do his work well, to see how well he can please his employer, should be not merely the motto, but the controlling principle of the life of everyone that works for another. We work for money, but money is not all. We like a little appreciation. Are we sure we earn it before we complain that we do not get it? I have nothing to say about the sins of our employers. They have their faults, but there are plenty of people anxious to point them out. We workingmen must correct our own faults before we make much fuss about those of our employers. "Honest service cannot come to loss. If you serve an ungrateful master, serve him the more. Put God in your debt. Every stroke shall be repaid. The longer the payment is withholden, the better for you."

THE American Pulp and Paper Company has been formed at Tiffin, Ohio, to engage in the manufacture of strawboard.

TRAMPING IN ENGLAND FIFTY YEARS AGO.

BY J. B. LENO.

FEW English printers nowadays ever think of taking to the road; indeed, it may be considered a lost custom. The obtaining of a frame and the strengthening of hands employed in a printing office is now generally effected by advertising. This is another evidence that persons put faith in Darwin's theory of the "survival of the fittest." Indeed, no one possessed of his senses would doubt the superiority of this method to that practiced in the "days of old." That there were some excellent features attached to the died-out custom, and that it was occasionally of immense advantage to the young and inexperienced, no one will dispute; but its perils far more than counterbalanced the advantages, however important they may have been.

I am old enough, Mr. Editor, to remember the time when tramping printers were by no means a scarce article, and, what is more to the purpose, to have traversed half England over as a *bona fide* tramp. This was not brought about by choice, but necessity.

After serving seven long years' apprenticeship, I found myself destitute of work. I could not relish living on the old people, for I was not a cannibal; and although I knew that the trade was glutted, and my chances of success were small, I set off on Shank's mare, or pony. As I started, I saw the tears roll down my mother's cheeks, and the kisses that followed were as full of love and affection as those I received when, a puling infant, she clasped me to her bosom.

Little did I know of the dangers and difficulties of the life I was about to lead. I had literally no knowledge of the means employed by experienced trampers for meeting the necessities that accompany an empty purse.

I was not long in reaching the outskirts of the town. Then I had a long climb before me. Slowly and surely I reached the summit of the hill. I knew as soon as I had "rounded" it, it would be lost to me. I paused, turned round, and there, in the valley, lay the only spot I had learned to love and call by the dear name of home.

There, running through the vale, was the silvery Colne, so dear to glorious John Milton; there the mansion of the Newdyalls, where Shakespeare is said to have acted in one of the great poet's masques, and there the church steeple with the houses clustered around it.

After calling up a host of happy memories, I threw my hat high up in the air, and then continued my journey with a determination never to return until fortune had befriended me.

Like many a novitiate in gambling, I was successful in my first venture, and possibly like them I attributed my early success to every cause but the right one. All that I need say is that ere nighttime I was landed at home once more with the pleasant intelligence that I had found what I started in quest of—employment.

I had taken with me a currant cake. This, at the time of my success, I had not touched. In the exuberance of my joy, I gave this away to the first poor man with whom I came in contact. Little as I had spent, my store was all but exhausted. But what cared I; the future was no longer clouded, and over the twelve miles return journey I had literally flown.

After twelve months, I quitted the service, and having enjoyed a few weeks' rest, took to the road once more.

It was not long before I felt convinced that my first success had been won by a "fluke." In both cases, despite of my success, I had started in the wrong direction. Master printers are not to be found in villages, and, with the exception of the town where I won my first success, towns were, like angels' visits, "few and far between."

An old tramp would have made for Oxford, and failing, to the great midland towns, and then, not meeting with success, to the great cities of the north. I, in my ignorance, followed a track where a pitchfork would have been more serviceable than a composing stick; where a knowledge of rick-building was of greater importance and in greater requisition than the most accurate knowledge of typesetting. I knew nothing about assize towns and the chances they gave to outsiders during the judges' presence; nothing of election centers and the rush on lists of voters. In fact, I was completely at sea, and all my former conceit vanished.

My little store was soon exhausted and some two hundred miles left me barefoot.

Sorefooted and penniless, I still determined to press onward. How I managed to live is still a mystery. I wrote pardonable white lies to my mother; I could not have written the truth for it would have broken her heart. Had she but seen me limping along, or housed in a "padding ken" at night, or resting by a haystack, heaven knows what would have been the evil effects and consequences.

Eventually, and in a round-about manner, I reached the more populous midlands; even here I was informed that the printing trade was unusually dull, so there was nothing left but to carry out my resolve and travel on still farther.

By this time necessity had taught me a great deal. I lost much of my timidity. I put on a bold front and appealed for help at trade-meeting houses; I solicited alms from men of the trade with whom I came in contact. I laid my talent as a singer under embargo. In a word, I managed to exist in a fashion.

Forty-eight and forty-nine were stirring times. Poverty made me an extremist; and although all political meetings were then proclaimed, I offered to address the people if they would only give me audience. Prison had no terrors for me; indeed, I preferred martyrdom to the life I was leading, however much it had improved. How often have I thought of the words of a well-known statesman, "Revolutions are generally the result of a fear of starvation."

Poverty-stricken as I then was, I determined that I would not miss anything worth seeing when labor would insure a sight of it. Old castles, birth and burial places of celebrities, historic spots, cathedrals—each and all I sought out and visited.

In those days the highroads swarmed with harvest men from Ireland and elsewhere; but in all my journeys I did not run against more than a single printer, although, as already stated, tramps of the trade were more numerous than ever before or since.

I have sketched a few of the hardships; but, as I have stated, there was a bright side to the picture. The weather was bright and sunny, and nature was wearing her brightest garments. Every step brought new beauty to view. I had youth on my side, and hope never deserted me. I kept a diary, and at every rest I had something new to enter. I was winning experience—learning more of England than I had ever known. The air I breathed was pure and sweet, and the birds sang merrily from the hedgerows. When memory recalls my experience as a tramp, the shadows have but a faded existence. Reason tells me that they must have been more dark than they now appear to be. When I look back, I seem to skip the dismal spots upon which I fell. Again I stand on the site of Old Verulum, look at the house in which Dr. Johnson was born, scan the battlefield of Bosworth, gaze at the beauty of an old ruin, of the fairyland of a spot filled with enchantment. Blisters and pains are never called back without an effort—they ever appear anxious to remain in the background, and there, as a rule, I let them stay.

If, with my inexperience, I managed to "pull through" so well, how easy it is to realize the joys felt by old tramps like the "Bonny Light Horseman," who knew the run of the roads and met friends in every town and city. That even such as he met with hard times, I have no doubt; but they were hardened to them—moreover, they had the advantage of getting mileage and assistance from the trade union, which I lacked. In the metropolis, in years gone by, I have met many of these old wanderers, and I generally found them to be intelligent and happy-go-lucky mortals—brimful of stories of adventure, with retentive memories of their countless journeys, overbrimming with anecdotes and pleasant tales. Some would marry and settle down; others carried their roving propensities to the end. A few increased their income by a grand receipt for making rollers or freshening up old ones; others would join a band of strolling players, and others trust to recitals. As a rule, they were jolly dogs, with no other proverb to guide them but that which teaches neglect of the future.

From a work-getting point of view, my tramping was an utter failure, and I have reason to believe that this was too often the case. But this mattered little to men who like tramping, and the life it insures. Walking was more in fashion then, and what would be thought now to be long and exhausting journeys were thought nothing of.

The printers of today in England know little or nothing of this phase of a printer's life fifty years ago. Then you could sit at the "public," where the trade society was held, say the "George," in Pemberton Row, and see the cronies rolling in with "dust besprent"; now such scenes have passed away. Then the pressmen were almost or quite as numerous as compositors; now it can be hardly said that they exist. True, in the metropolitan printing quarter, I recently saw written up "Pressmen's Society House," but the society must be very small indeed, and a tramping pressman would, I should think, be a great curiosity.

The changes of time have revolutionized not only the printing, but every other trade. An advertisement in a single newspaper or trade journal reached farther than a man could travel in a year. The chief aims of the modern printers, if they do take to tramping, is to reach the metropolis; few, very few, make their exit from it after the old fashion, on foot, in search of employment, and in the majority of instances, unlike the fellows in days long vanished, have their places booked beforehand.

It was in the early fifties that the custom of tramping fell out of usage in England. It is doubtful if it would have lasted so long had it not been for the crowded state of the trade brought about by the railway mania, which, on its decline, left a terrible glut in the labor market, so that tramping was the result of force rather than adoption.

In a few more years the old tramps will have died out, and nothing will remain to tell of their existence save the few gathered records that have appeared in *THE INLAND PRINTER* and other trade journals devoted to old printing trade memories. It is in recognition of this fact that I have jotted down and dwelt upon these incidents in my life as a journeyman compositor. The old tramps of the trade once familiar to your American readers were doubtless kindred spirits, and the life they led, rough and smooth, resembled those of the mother country. Nay, perhaps I should not be far wrong if I stated that many of them had a decent acquaintance with the highroads of England. Whether they have declined in the same ratio, I have no means of guessing. The same causes are said to produce like results, and my impression is that as America, like England, is a land of railways and mediums of advertising, the same results are fast following. I can easily realize that tramping in America in past times was attended with greater suffering than the practice in the old country, inasmuch as England lies in a far more contracted area, and the towns employing printers are not so wide asunder.

I have been led to believe that to enjoy tramping, with all its vicissitudes, necessitates a hopeful, even a poetic, spirit. The brightest scenes are dull if not illumined by the lamp of the former and the imaginative powers of the latter. An empty stomach may not be filled without food, but the cravings of hunger are often lulled to rest by the faith bred of hope, and the creative powers that belong to vivid imaginative faculties. Dante's "Inferno" may have owed its existence to the latter, but as a rule, lively imaginations are not prone to exhaust their powers in producing scenes of darkness. Healthy imagination is like the sun that gilds the weather-cock in the cloudy sky, the spot of red that warms up the otherwise gloomy landscape. It was of priceless value to the tramps of old, and even now, when tramping has had its day, its bright pictures are ever welcome.

"Hurrah for the road!" was the song of the old tramp, as well as the bold highwayman, and I still prick up my ears whenever the least allusion is made to the old custom, like the worn-out hunter at the cry of "tally ho!"

ETCHING LIQUID FOR ZINC.

In preparing an etching liquid for zinc, 1,000 c. cm. of water is mixed in a flask with 1,200 grams of ordinary nitric acid of 40°; 80 grams of common salt is then added, and, when dissolved, 300 grams of "strong" acetic acid is poured in. Red fumes of nitrous acid are given out, and the open flask is left in an airy place for five or six days. There is then no further, or but very slight, evolution of gas, and the acid is ready for use.

The first etching is carried on with acid of from 5° to 6° Baume, and occupies from five to fifteen minutes. For later etchings, the acid may be used of double the strength given, or even more.

CONGRATULATIONS.

Specimen of Ives' Process Engraving, by the CROSSCUP & WEST ENGRAVING COMPANY,
907 Filbert street, Philadelphia.

Written for THE INLAND PRINTER.

A FOREST MYSTERY ;
OR,
LOVE 'MIDST A HUNDRED TREES.

Respectfully inscribed to Mrs. Lily Langtry.

A *cherry* cheeked *milkmaid*, whose laugh to love led,
And whose *glance* would a *monk* 'en enflame,
Whose *dapple*-pink arms, held her pail on her head ;
As she sang of her *Will* ! Oh ! the *bonny* lad's name.

This *refrain* of her hopes it *rondeau*-like plays,
From her *silvery* voice, firmly flung to the breeze ;
It's *music* a *MORR* ardent thrill now portrays ;
Slowly fades, and *all*'s still as a *calm* on deep seas.

Oh ! what *sigh* pressed those tears from her trembling blue eye ?
Superb as would *morn* beaming dewdrops appear ;
In *June* I perceive, when the lark soars on high :
Ah ! believe in the love that is *plumbed* by a tear !

As *pensively* resting, her *gaze*'ll flash 'round,
And *quick* o'er yon sea, assume a keen quest,
With heart-throb, her *charmed* eye would linger spell-bound ;
He's *plain* on the *beech* : may soon clasp her fond breast.

This *prologue* would tell what we've read : would enshrine,
The old story of maiden and *spruce* tar who came,
Met *two* lips and fond eyes, bewitching ! *divine* !
At the stile you pass, notched with *date*, figures and name.

Joys prevail, and thus make them *lock* hands with sweet smiles ;
Faith's *service* far stronger than *iron* would prove,
Scorning *meddler*'s *crabbed* craft, or a *Judas*'s wiles,
And on *brow* and in heart sets the seal of quick love.

Shall I *LACK* her sweet zest to mark off each vow ?
With no doubt to *impeach*, or truth to *revoke*,
Nor regrets to *impair*, hopes *sublime* they weave now
O'er loves *problem* on which, he to his *queen*'s spoke.

" Now *summer* tells love-time, as *seed* are winged forth,
And the bees quit their *hive*, a new *home* to seek ;
E'en the full *arch* of Heaven, *all* our truth and our mirth,
Reflects as a *rose* would it's bloom on thy cheek.

" What *place* would the *helm* guide but church, *Dolly* dear ?
Thou'lt never *repine* when my own *bonny* mate ;
But go *ranging* the sea, in my *bark*, far and near,
And so *live* that joy's flood-tide shall *float* us o'er fate."

As she *sat* in his boat, he called her " His own " ;
Sighed, " *may* plenty and peace keep *thorns* from our side ;
In thy *palm* shines the ring thy devotion has won,
A *case* here of true love run smoothly, my bride."

W. ALNUTT,
Laurel Cottage, Ballyman Grove,
Banyan Bay, co. cork.

**KEY TO THE FOREST MYSTERY OF THE
HUNDRED TREES.**

BY J. CHARLES KING, LONDON, ENGLAND.

This idyll is woven in phono-tints strange,
By forest and sea, of sheen and of shade,
Of a sailor and milkmaid whose love knew no change,
Though in awkward spelt tree names their troth is displayed.

With aspirates missed, and misplaced in soft speech,
As they ramble afar 'neath the Sycamore trees ;
By the Alder and Ash, the Arbele and Beech,
And Acacia's pale bloom, that is swayed by the breeze.

'Long the Spruce, and the Juniper path by the " Green,"
Through dells where grow Hornbeam, Wych, Plane, and Thorn,
Where Aspen leaves flutter to kisses unseen
Of zephyrs' lulled " Hush ! " on Pine odors borne.

O'er hills where the Larch and the Pine tower high,
'Neath mountains, where Firs wave a bright-bannered host,
Down glades, where the Oak and the Elm screen the sky,
And Hazel and Crab reach down to the coast.

Through the Lime grove's long vista, to Ivy-crowned church,
Embosomed in Sumac, and Holly, and May,
'Midst Laurel, and Sloe, and Service, and Birch,
And grave-guarding Cypress, Yew, Myrtle, and Bay.

But this old English scene, life's roamings will change—
Of the cot with its Rose-porch and Vine-clustered eaves,
Decked with Lilac and Rowan, Quick, meadow and grange,
With Osier-brook rippling 'neath bright Willow leaves.

Where orchards, fruit-laden, the homestead surround,
Filled with Apples, and Cherries, Peaches, and Pears ;
Where Medlars, Plums, Quinces, and Walnuts abound,
And Elder, whose mulled wine at Christmas-time cheers.

Farewell, happy scene, for a sunnier zone,
Where Aloe, Alanthus, and Lotus are found,
Where Cocoanuts, Almonds, Figs, Lemons, are grown,
Maté, and Mace, Milk, and Rain trees abound.

Where Christmas is harvest-time : June smiles on snow,
And ripens the Citron, Date, Olive, Palm, Clove.
Where Dyewoods, and Sissoo, and Laquer trees grow,
Ebony, Logwood, and Bark list to love.

Where Upas, and Judas, and Monkey trees thrive,
With Basswood, and Iron, and Gopher ; Noah's wood,
Lancewood, and Lacewood, and Sandal all live,
Teak, and Redwood, of which, ships now brave the flood.

The forests so vast seem temples profound,
The sweet odors, incense ; the bird-song a prayer.
The Tolu, Cork, Silver trees, everywhere 'round,
Mighty Cedars, and Mangroves, and Banyans are there.

The Mora, and Tulip, and Hickory trees,
The Hemlock, and Holm, and Orange groves gay ;
The Maple, and Cocoa, wave to the breeze,
And Coffee plant's clustering berries display.

Now Will and his milkmaid are still o'er the seas,
And the family branches are many and fair ;
When sitting at Tea—the last and least of the trees,
You would Langtry ere meeting a happier pair.

COPPERPLATE PRINTING.

In obtaining the extreme pressure for copperplate printing by steam power two printing rolls, each about 18 inches in diameter and 3 feet long and made of chilled cast-iron, are placed over each other. Between these the printing table, made of rolled steel, works. The bearings of the top roll are placed in boxes sliding vertically in slots in side frames, and the pressure is obtained by means of a couple of compound levers and weights. These weights can be altered and the pressure varied to any degree up to forty tons.

The rolls are geared with two cast-iron wheels of specially strong metal, in which the teeth are cut out of the solid. On the other end of the bottom roll is fixed a wheel of thirty-four teeth 2 inches in pitch, which gears into a pinion of eleven teeth, made of hammered iron, also turned and cut out of the solid. This pinion is keyed to a steel shaft which has bearings in both side frames. On this shaft is also keyed a worm-wheel of fifty teeth, the rim of which is made of phosphor bronze. The boss is of cast-iron and the rim and boss are bolted together with steel bolts driven in. The teeth in the worm-wheel are cut to a true shape by a special hob of the same size as the worm, thus insuring the working of the worm at the worm-wheel without back-lash, and bringing the greatest amount of wearing surface of the worm into use.

The worm itself is cut out of the solid in the middle of the shaft, one end of which rests in a thrust bearing fixed to the foot of the side frame, and the other end being coupled to the engine. The worm runs in a covered oil box to prevent splashing. Such a press requires a separate engine to drive it, and a small high-speed engine is usually connected to it by a worm gearing. The press, so arranged, may be put through the following cycle of movement in about three seconds : namely, start, stop, reverse, stop, start, stop, thus coming back to the original position. By such a machine, dry impressions, quite as sharp and distinct as the damp hand-made ones, have been obtained from copper plates measuring 28½ inches by 26½ inches, and where the extreme pressure has been found to slightly enlarge the sheets a system of sprinkling has been added which entirely obviates the difficulty.—*London Printing Times and Lithographer.*

Calendars for 1889.

Our line is now ready.

They range in price from \$1.50 to \$125.00 per 1,000.

WE ALSO MANUFACTURE A LINE OF
CALENDAR TABLETS OR PADS ←

At from \$2.75 to \$15.00 per 1,000,
from medium size to extra large.

ALL the goods we advertise we manufacture, and Printers who desire to reach first hands will do well to send for our Jobbing List of
Calendars, Cards, Panels, Banners, Folders, Etc.

Any printer who will send a two-cent stamp and his business card, and mention this paper, will be sent a set of our Calendars No. 374. A full line of samples of Calendars, about seventy designs, on receipt of \$1.50.

THE INLAND PRINTER.

THE LEADING TRADE JOURNAL IN THE WORLD IN THE PRINTING INDUSTRY.

IMPORTANT ANNOUNCEMENT.

PREMIUMS FOR COLORED WORK.—GREAT INDUCEMENTS.

COMMENCING with the October issue, No. 1, Volume VI, of THE INLAND PRINTER, a new feature will be introduced, namely, the publication of **INSERTS OF COLORED PRINTING**. For the purpose of stimulating effort in this direction, cash premiums of \$100, \$75, \$50 and \$25 are hereby offered to contestants, to be awarded under the following conditions: 1. All inserts shall be printed in three or more colors, and on paper the exact size of the pages of THE INLAND PRINTER, the type measurement of the specimens sent, however, not to exceed 9¾ by 6¾ inches. 2. Not more than two specimens to appear on one and the same page. 3. Tints and secondary colors may be the work of the engraver, but the design, body and execution of the job must be the work of the compositor. 4. No objection will be offered to the insertion of the card of any printing firm, or the business of its patrons, but this liberty shall not apply to non-advertisers connected with the printers furnishing business. 5. The award to be made by five expert printers, no two of whom shall reside in the same city. 6. The inserts to be forwarded to the editor not later than the 10th of the month.

Further information will be cheerfully given by addressing the editor of THE INLAND PRINTER.

CALENDAR PADS FOR 1889.

We are now ready to fill orders for Lithographed Calendar Pads, in various sizes, at lower prices than they have ever been sold. Samples on receipt of postage.

OUR LINE OF

FOLDERS, PROGRAMMES, ETC.

Is more complete than ever, and we are making extra inducements in the matter of discounts.

NEW YEAR CALLING CARDS

Are in stock, and printers can be supplied on receipt of order. Sample books of over fifty numbers, post paid, \$1.00.

THE CHANDLER & PRICE OLD STYLE GORDON PRESS.

SPECIAL FEATURES:

Steel Shaft and Steel Side Arms, forged from solid bar, without seam or weld.
The Most Positive and Practical Throw-off yet introduced.
Best Material Used. Most Carefully Finished.

We have recently greatly improved these Presses, enlarging and strengthening the parts, and so arranging the disk and roller carriers as to give greatly increased distribution, and we believe it is unequalled in this respect by any press now made.

The Most Durable and hence the Most Economical Press for the Printer.

We never have had to take a Press back!
Every one is giving Entire Satisfaction.

**IMPRESSION THROW-OFF. DEPRESSIBLE GRIPPERS.
HARDENED TOOL-STEEL CAM ROLLERS.**

FOR THE NEWS AND JOB PRINTING OFFICE.

THE ONLY PRACTICAL

Stereotype · Outfit

IMPROVED AND MANUFACTURED BY

M. J. HUGHES,

10 SPRUCE ST. + + + NEW YORK.

One among Hundreds of Testimonials:

To WHOM IT MAY CONCERN: This is to certify that we have one of Hughes' Stereotype Outfits, and the same has been in our office and in constant use for five years, and is giving and has always given entire satisfaction.

Yours truly,

Feb. 16, 1888.

O. A. CARLETON & CO.,
Book, Job, Show and Commercial Work of every description,
Providence, R. I.

THE above testimonial is only one among hundreds elsewhere given. Like large numbers of others, both large and small concerns, it has used for years my quick and superior patented devices of casting and blocking, at one and the same operation, by the use of wooden cores, bars, strips and filling of a non-conducting nature. Also, with the same outfit, all other results known to stereotyping is secured by its simple and practical construction. It is an established fact that it is the only simple, practical Stereotype outfit for the printing office in general, and that if not used successfully it is certainly the fault of the operator.

It is a great mistake on the part of the purchaser to defer purchasing until the outfit is actually needed for some special purpose. "Procrastination is the thief of time."

It is undoubtedly the best thing, taking into consideration the small amount invested, ever put in a printing office.

Send for descriptive circulars and hundreds of indorsements.

M. J. HUGHES, INVENTOR AND MANUFACTURER, 10 Spruce St., New York.

Stereotype Outfits, Press-Stereotyper, Patent-Blocks and Plate-Holders, Circular Saw and Conical-Screw Quoins.

CORRESPONDENCE.

While our columns are always open for the discussion of any relevant subjects, we do not necessarily indorse the opinions of contributors. Anonymous letters will not be noticed; therefore our correspondents will please give names—not for publication, if they desire to remain incog., but as a guarantee of good faith.

A VALUABLE HINT.

To the Editor: WASHINGTON, D. C., October 25, 1888.

Your correspondent, A. B. C., from Iron Mountain, erred in *pasting the cloth*; he should have used GLUE instead of *paste*, and, by way of suggestion, I would say to him to use ground glue, which can be prepared in a few minutes for use. Let him cut his cloth to the size of his manila cover, glue the cloth with a brush, and then cover his pamphlet by laying the pamphlet on the cloth, keeping the back of the pamphlet from him; then draw the cloth toward him over the back and rub down to dry; lay the books in layers of from four to eight between binders' boards, or any heavy cardboard, and put a weight on top. This should stand between the boards for an hour or so; then put into small piles, and put a weight on each pile. After trimming, turn every other book so as to have front and back meet, this to be tied up with a stiff cord, top and bottom, which will make a neat and workmanlike package.

I would be pleased to answer A. B. C. again, should he meet any further trouble in any line of his business. Fraternaly,

R. C. MCAULEY,
30 F. street, N. W., Washington, D. C.

ANSWER TO A THANKSGIVING INVITATION.

To the Editor: CHICAGO, October 26, 1888.

Looking over a batch of old letters a few evenings since, I came across an acceptance to a Thanksgiving dinner, written ten years ago, by a lady typo of this city. On re-perusal it seems to me as good now as when received. I had used several technical phrases in the invitation, but she rather improved on the style, as follows:

CHICAGO, November 24, 1878.

DEAR COUSINS,—Mother has handed your letter over to me to answer, and I am glad to have this opportunity to say that we cordially accept your kind invitation for Thanksgiving.

I am not fond of fat ("phat") outside of the office, but I can assure you that it will require considerable "inside matter" to fill out my "form"; and you will not find me anxious to put on a "sub" when the "pi" (e) is "divided." I think I can manage a pretty good "take" of "solid," and I will not be out of "sorts" when lighter "takes" are offered. Indeed, it would be difficult to find a "w. f." in my "case" as far as "grub" is concerned, so you may safely "distribute" your supply to me. I don't think I shall bring an "elect. plate," for I presume it will have to be changed occasionally. I'll try to "make even" with F—, although it may require "close spacing." I only hope I shall not see my great-grandmother when my "form" is "locked" in sweet repose, after having tried to "throw in" all the "matter" "passed" to me, or I'll wish I had let some "lay over."

"Craft"-ily yours, M—.

[NOTE.—F—, the sister, is very spare in form.]

I hope everybody may "strike" a good Thanksgiving dinner this year.

S. K. PARKER.

FROM FLORIDA.

To the Editor: APOPKA, October 24, 1888.

The present condition of affairs in South Florida is very irritating to all; but to newspaper men it is as novel as it is exasperating. On account of the rigid and apparently needlessly severe quarantine regulations, which overpower the railroad and express companies (all because a few swampy places are infected with yellow fever) many printers have had their supply of stock entirely cut off without any warning. In consequence several well-established newspapers have been compelled to suspend publication; or the proprietor take the alternative of going to the local merchants and secure wrapping paper, regardless of size or color, upon which to print his regular editions. He has to print upon what he can get or not send out any paper at all. One nine-column paper now appears upon a colored poster sheet about the size of a theater programme, because its invoice of paper is delayed en route by the quarantine orders.

Fortunately, a few printers, who buy in large quantities, and have only a small circulation (which is not so fortunate) will probably be able to get along with what paper they have on hand, by practicing

close economy until the cold weather kills out the fever, and the embargo is lifted. Happy day!

This ultra-quarantine racket—it can be called little else—has undoubtedly injured the present condition and blighted the future of Florida more than the ravages of the disease itself. A cool consideration of the result of the scourge shows that the death rate is remarkably low, when compared with the mortality in other places which are afflicted with diphtheria, pneumonia, croup, etc. F. H. P.

A NOVEL EXPEDIENT.

To the Editor: SULPHUR SPRINGS, Ark., October 24, 1888.

Being a constant reader of THE INLAND PRINTER, I see occasional hints thrown out to subscribers, to the effect if they have anything good to tell, to tell it through its columns for the possible benefit of some other printer.

Well, I suppose that nearly all printers, especially country printers, sometimes have occasion to pack up and move to another locality. Your humble servant has some experience in this line, and it is of a recent—hope it will be the last—move that I wish to speak. A twenty-mile journey over a rough Arkansas road, in lumber wagons, is no "picnic" to get ready for, and to set out all the cases was a larger job than the limited time to get ready in would allow; to tack the cases together without first having accurately cut and fitted some suitable material (which I didn't have) meant a very large amount of "pi" and battered letters at the other end of the line, previous experience told me, and even with the ordinarily recommended "packing" between cases, have found a good many letters "slop over." Just what to do, I was partially "up a stump." But old Mother Necessity came to my relief, and I adopted the plan of wetting paper—not too wet—and stuffing a bit into each individual box. At first the work seemed slow and tedious, but soon after getting the hang of the thing a little, I found that it could be done quite rapidly, beating at least six to one the process of setting out the average case of job letter. When so treated the cases were tacked together in bundles. On arriving at destination, the outsides of some of the cases had the appearance of having gone through a Kansas cyclone, but not a letter left its proper receptacle, nor otherwise damaged in the least—all being in as perfect condition as they were before starting.

Being so well pleased with the success of my experiment, I make excuse for this contribution.

Yours, etc.

JOHN R. HUFFMAN.

FROM LOUISIANA.

To the Editor: NEW ORLEANS, October 27, 1888.

During the past two months many changes have taken place in the printing business in this city. Efforts have been made to unionize the *Daily States*, which has been a rat nest for upward of two years; but to no purpose. The matter was placed in the hands of the Trades Assembly, and on the refusal of the *States* to arbitrate with a committee of that body, the latter issued circulars asking all friends of labor to cease patronizing said paper and those who patronize it. A committee of this union now has the matter in hand, and up to this time it has done noble work. Both sides are determined, and it will be a bitter fight, and I believe to the fatal injury of the autocratic *States*.

The *News*, the little paper established a year ago, failed for some time to pay regularly, and on the employes demanding their money two self-constituted bosses of the concern discharged them without paying them off. Though the men have not received their money yet, it is believed they will get it ere long and the *News* will be unionized.

The *Times-Democrat* has moved into new and better quarters, next door to its former place.

Though business has been very dull for some time, it is brightening up now. There are nearly always a large number of our idle home men on hand, and we have but few traveling brothers of the craft to visit us, though there are several of them among us at the present time.

Our popular financial and corresponding secretary, Mr. James L. Dwyer, informs us that collections are becoming better, which bespeaks the good fortune of securing employment by those who are not classed among that class which should be the only one termed "regulars." I say

that class which should be the only one, because I believe there will not be real success and harmony among us until the apprenticeship system and the reduction of the hours of labor are so fixed as to give employment to all of those of our members who are not regularly employed.

On the 5th instant William F. Schaumburg, an esteemed member of No. 17, passed away to life eternal at the age of thirty years, much regretted by a large circle of friends, which consisted of all of No. 17. He leaves a widow and two children to mourn his loss.

No. 17 is now negotiating for the fitting up of a hall, which will be used as a reading room and a place of rest and recreation for the members, and will be rented out as a meeting place to other associations.

D. F. Y.

FROM FLORIDA.

To the Editor: JACKSONVILLE, November 1, 1888.

With a great deal of interest have I read the various comments of other printers upon, and the excuses offered by the typefounders for, the raising of the price of their manufactures, which have been published in THE INLAND PRINTER. So far as I have observed, it seems to me that much more type, rule, and other necessary adjuncts to a well-equipped printing office would be purchased and used by printers if they could be obtained at a fair price.

There are many instances which might be quoted from other industries that go to prove what I wish to say. Look at the benefits resulting to both readers and publishers of some of the leading papers that have established low prices; notice how much the every-day travel is increased on railroads during the time that a reduction of fare is advertised; and many more examples might be mentioned. I know that I would have a new dress for my paper oftener, and would replenish and increase my stock of job fonts if type could be bought upon as satisfactory terms as it was purchased previous to the combination—two years ago. And I believe that most other printers would do likewise; for who does not prefer to throw worn-out type into the melting pot and buy new faces to bothering with necessary underlays? But when exorbitant prices are demanded, it is necessary for me to forbear making additions that I would under more favorable conditions. Presuming the statement to be true, that typefounders made a good living before they combined against their patrons, have they not, in holding their products at such high prices, practically killed the goose that laid the golden egg?

FLORIDA.

A CORRECTION.

To the Editor: ST. LOUIS, October 25, 1888.

At the recent meeting of the United Typothetæ in New York, Mr. Samuel Slawson, of this city, discussing a communication received from President Plank of the International Typographical Union, is guilty of a misstatement, which, as a member of No. 8, I feel warranted in correcting.

Speaking of separate unions for job printers and newspaper compositors, Mr. Slawson says (I quote from the proceedings as published in the *Bookmaker*):

"They are just such things as we have been working in St. Louis to secure for more than a year past. * * * We tried to get a separation of the job printers from the newspapers. * * * We would have had no strike in St. Louis if the men who worked for us had been allowed to decide the matter. * * * The newspaper men voted for it and the job men were voted down."

Instead of Mr. Slawson's statement being correct, the reverse is the fact. The job men were not forced into a strike by the newspaper men; were not voted down and compelled to go out at the dictation of the compositors. On the contrary, and at the request of leading job men, the newspaper hands refrained from voting, to a man, either yea or nay, upon the question, conceding as they did that it was a matter in which they had no direct interest, and one that should be left entirely to that branch of the craft most affected thereby. They did, however, after the struggle had been precipitated by the job men, furnish the sinews of war with which to conduct the campaign.

While upon this subject I would like to call Mr. Slawson's attention to one other fact, which he evidently forgot to make mention of in his

address to the Typothetæ. That is, there would have been no trouble in St. Louis (the International having receded from its demand for reduced hours of labor) had it not been for the fact that a leading member of the Typothetæ here had agreed to pay an advance of \$1.00 a week to his men—his being the largest office in the city. Then, after his proposition had been accepted by the typographical union, and that body committed to the demand for an advance, it was found that the aforesaid gentleman, owing to the pressure brought to bear by other members of the Typothetæ, could not or would not keep his word.

No, Mr. Slawson: the troubles in St. Louis of last fall were *not* caused by the newspaper compositors outvoting the job men; but by bad faith on the part of this member of the Typothetæ, as you well know.

I regret exceedingly that the Typothetæ politely repulsed the overtures made by the committee from the International Union. The latter body wants peace, is tired of strikes, boycotts and lockouts—one is as bad as the other. When the committee was created it was hoped and believed that an amicable understanding might be arrived at whereby future trouble could be avoided. But the Typothetæ could see nothing of common interest to be discussed, and hence would not accord President Plank and colleagues the courtesy of a hearing. It was a mistake, to call it by no other name.

O. R. L.

FROM BUENOS AIRES.

To the Editor: BUENOS AIRES, September 29, 1888.

You will perhaps be able to form an idea of what the boom is in this country when I tell you that people in the building line are working day and night. Bricklayers work at night by electric light; old buildings are being torn down and other large structures put up in their places. The earth which is dug out to lay the foundation is hauled down to the new port works and the river filled up with it. Some buildings have more under the ground than they have above; they dig down forty feet in some cases, and are not troubled with water, while others have three cellars, one above the other.

The *El Diario*, one of the leading dailies here, is putting up a large fine building and has bought two Marinoni perfecting machines and lots of new material from Paris. The C. S. A. de B. de B. have ordered five of the latest improved cylinder presses from one of the leading German manufacturers. Kidd & McKern are now negotiating to bring out a complete steel and copperplate outfit from England. Men and machines will come from that country.

In order to do good work in this country they must have their hands come from other countries that are further advanced, as the native printers cannot run a good improved machine. If they get one they do not know how to help themselves, because they have never done anything but print wet paper, and would be considered as common newspaper printers in the States; and to do good presswork here a man has many drawbacks, such as a mixture of type and material from all parts of the globe; for instance, a compositor in setting up a border will try and cram in as many different varieties of faces as possible, and, in most cases, will have a piece from a German, French, English and other foundries, with brass rules from two or three different manufacturers, and to make such a mess ready is enough to set one crazy, as the difference in height, in some cases, is from one to three cardboards. They seem to be without taste, and think the more they crowd into a thing the better it looks. When I first came to this country there was no man that knew how to mark out an overlay; now I have about a half dozen followers, and they will fool away a half day making an overlay, and then spoil the whole thing by moving the cylinder impression screws.

Another difficulty a man has here is to get feeders. They cannot feed a press without an impression trip, and will miss two and three impressions, one after the other, and get a delicate overlay all over the rollers. They are also used to feeding Wharfedales, where they can throw off the impression by the "simple twist of the wrist." I would like to see a Yankee four-roller table distribution press down here, just to show the people what a decent printing machine looks like. American manufacturers wishing to introduce their wares in this country might find it of interest to open a correspondence with the house of Guillermo Wray & Co., San Martin 305, Buenos Aires.

There are several of those new style Liberty job presses in town here, and they seem to cut quite a figure. They are nice machines, and look very neat if kept in good condition.

Manufacturers do not want to forget to send their calendars to this country; they are always good advertisements. Some of those specimens on page 780 of the July, 1888, number of THE INLAND PRINTER are about like jobwork you see turned out by some of the leading firms here.

MATH. A. MILLER,
258 San Martin, Buenos Aires.

FROM NEW BRUNSWICK.

To the Editor:

ST. JOHN, November 1, 1888.

Printing circles have been shaken to the foundation in St. John since your correspondent penned you a few lines from away down by the sea. Cause: Hugh Finlay, who had been foreman of the *Telegraph* newspaper for the past fifteen years, tendered his resignation, and departed for the States, as we say down here. Why did he leave? Oh, well, and because—that is sufficient reason in our logical era. Hugh is a fine fellow, and “before the war” handled the “movables” in the principal eastern and southern cities of the union. He was also a favorite with the boys, and the traveler was never sent empty away, but always given a “night.” The day before his departure, the compositors of the *Telegraph* surprised him by presenting him with a purse of money—bread cast upon the waters by Hugh in his dealings with the hands. Mr. Joseph Wilson, of the *Telegraph* job office, has been appointed general mechanical superintendent of the whole establishment. Joe will deal fair with the men, but they must not indulge in too deep potations. No “jumping” allowed; hence every man must turn up in good time. Strictly temperate—no putting on. Mr. Wilson will inaugurate a strict adherence to rules that will be both beneficial to the employer and employé:

The other great change is, John Law has retired from the partnership of the *Progress* office, and has accepted cases on the *Telegraph*.

The printers' trade still keeps fair to good. The different offices have their full complement of men, and all printers are employed. The *Evening Gazette* has much improved in appearance, and in the course of a few days will be enlarged. The editor says it has come to stay. Only a couple of men find employment in the office. The remainder of the compositors are females. However, as I am a believer in “woman's rights,” I don't object, especially if they get any kind of fair wages. *Progress* still keeps making a good showing.

The *Globe* has put in a new “Cranson” for jobwork. It was needed, and no doubt will be the means of bringing more grist to our mill.

The only stir in labor matters in our city is the anticipated public meeting to be held by the carpenters' union. Typographical and other organized trades will probably send delegates—that is, speakers—to take part. Reading “labor literature” for the next couple of weeks will be in order.

Congratulations on the appearance of THE INLAND PRINTER.

Yours,
WIDE AWAKE.

FROM COUNCIL BLUFFS.

To the Editor:

COUNCIL BLUFFS, November 1, 1888.

Council Bluffs is on the boom. For the past two months the *Globe* Printing Company has been publishing a morning edition, in addition to their regular evening paper. The new morning sheet has six frames, takes the *United Press* report, and shows many signs of continued existence. It was primarily intended as merely for the campaign, but rumor has it that after the vernal hustings the evening edition will be dispensed with, and the morning sheet become a permanent affair.

October 30 was the date of the formal opening of the new wagon, foot and electric motor railway bridge connecting this city and Omaha. The occasion was duly and rather uniquely celebrated, the leading features of which were the marriage of the two cities by the Rev. Dr. Newman, Methodist bishop for Nebraska, the governors of the two states, the mayors of both the “Twin Sister” cities, and their wives, representing the two states and cities. The trades procession from both cities,

in the aggregate six miles long, required two hours and forty minutes to pass a given point. I am pleased to state that one labor organization was represented—the Cigarmakers' International Union—by two floats, and banners with appropriate inscriptions.

The two cities are now connected by an electric motor line, cars every ten minutes.

No. 203 is still in a flourishing condition. The number of card deposits during the past two months have exceeded the withdrawals by a large number, but still there are no idle “subs” in the city.

The *Daily Nonpareil* observed the bridge-opening by the issuing of a twenty-four page paper on the morning of the 31st.

The *Inter-State Herald* has been moved to Omaha, where it is now published and known as the *Inter-State Democrat*. It is now running four frames, but I understand the intention is to soon put on two more.

Council Bluffs now has one continuous paved street, leading to the river, six miles long, and “tourists” who have been here in the past and found it difficult to “rustle” the necessary 25 cents to pay the *Union Pacific* fare, will now learn with pleasure (?) that the walking is good, and only a “snide 5 cents” is required for toll.

Among the late arrivals I notice James Ettinger, of Nashville, and Otto Frederici, of Omaha.

REX.

FROM DETROIT.

To the Editor:

DETROIT, November 7, 1888.

On October 28, one of the charter members of Detroit Typographical Union, Henry Starkey, was removed by death. Mr. Starkey was born on May 11, 1828, at Birmingham, New York. When five years of age he removed with his parents to Detroit. After attending school he learned the printer's trade, and became foreman of the *Telegraph*. The Mexican war breaking out, he enlisted in a cavalry regiment in the regular army. Returning, he went to work at the case on the *Free Press*. In 1852 he helped to organize Detroit union, representing the same at the convention held in Buffalo in 1854. He was proud of his certificate of permanent membership in the International Typographical Union. The members present at the convention held in Detroit in 1878 will remember him well, when he was one of the foremost to make their short sojourn in this city a pleasant one. But he never forgot his local union, and whenever he could assist No. 18 in any way he did it, feeling proud of being one of its organizers and honorary members. But his fate was destined to rise higher. Leaving his case on the *Free Press*, he was appointed, in 1855, city editor of the paper then managed by the late Wilbur F. Storey, of Chicago. He exhibited great skill and tact as a journalist. Gradually drifting into politics, he met with the same success that attended his efforts in other directions. In 1858-59, he was clerk of the Recorder's Court. When the war of the rebellion broke out he enlisted, and on August 14, 1862, was commissioned first lieutenant of Company H, Fifth Michigan Cavalry, commanded by the late Colonel Freeman Norrell, at one time one of the editors and proprietors of the *Free Press*, and later by General R. A. Alger, of this city, which regiment took part in nearly all the engagements of the Army of the Potomac. In 1863 he was mustered out of service for disability, and returned to Detroit.

In 1865 he was elected city clerk, serving three consecutive terms. In 1872 he was appointed secretary of the water board, a position he filled with honor and credit to himself, and decidedly for the welfare of the city. As a public official, Mr. Starkey made a singularly enviable record. He was a great authority on the water works system of the city. He took great pride in the present system of house numbering devised by him, which gives a number to each twenty feet of land, whether occupied or not.

He leaves a widow, two daughters, Mrs. W. H. Sanford, Miss Jennie Starkey, society editor of the *Free Press*, and son, H. S. Starkey. Also two brothers, L. Starkey, of Indianapolis, and Richard Starkey, of the Soldiers' Home, Dayton, Ohio. No. 18 will take action on the death of its late member at its regular meeting next Sunday.

The editorial staff of the *News* has been changed. Mr. J. Dee is still editor-in-chief. John McVicar has resigned as managing editor, and P. Baker, late foreman of the composing room, has been appointed managing editor. Judson Grenell is now one of the editorial writers

for the *Sunday News*. James Brennan, who learned his trade on the *News*, and late foreman of one of the Scripps papers in Indianapolis, has become foreman of the composing room. Mr. Baker has contributed many articles of Irish humor under the *nom de plume* of "Dennis Corcoran." Mr. McVicar has been managing editor of the *News* for more than ten years.

Albert J. Ulrich, late president of No. 18, having resigned and gone to Chicago, Vice-President James P. Murtagh succeeds to the presidency. President Murtagh has also been nominated by the democrats on the legislative ticket. Frank J. C. Ellis, another member, is on the legislative ticket, on the republican side of the fence. Both of them are men of ability.

The quarterly report of No. 18, just issued, shows up well for the members. Out of three hundred and sixty names on the list only about eight are liable to suspension or expulsion. This speaks well for the membership, and also for Secretary Jaffray, whose efforts were to show up a good record for the past quarter. There is also a good balance in treasury of the union. The matter of abolishing the death benefit fund, mentioned by your correspondent in a former letter to THE INLAND PRINTER, remains intact. At the October meeting the question was finally disposed of.

Detroit Union sent out to leading business houses, clubs and societies its annual circular, containing a list of union offices. Several minor concerns are still out. The same circular was sent out last year, and bore good fruit, and was the means of unionizing three large offices, who have since found it to their advantage in increased business.

The Ferguson Printing Company have increased their capacity by adding a No. 6 Babcock standard cylinder press to their establishment, which they purchased through the Gebhard Paper Company. They have a neat office, and will soon have to look for more commodious quarters.

Winn & Hammond will also have a larger building erected for their increasing business.

P. A. L.

P. S.—Since the above was written Mr. Murtagh has been elected and Mr. Ellis defeated.

P. A. L.

FROM MONTREAL, P. Q.

To the Editor :

MONTREAL, November 4, 1888.

Since my last letter some trouble came up in Union No. 176, relating to the *Gazette* office news-room not complying with the rules of the said union. The trouble was that too many apprentices were employed to the number of men; that the type was measured by the MacKellar system, which was detrimental to the men employed, and that they be paid for waiting time; that the slide be abolished, and that all the tables be corrected by the men instead of the bank-man. A committee was appointed to investigate the matter and lay their grievances before Mr. Richard White, the managing director. After a lengthy interview, Mr. White said that, relating to the apprentices, he was not free to change the existing condition. The type would be measured according to the rules of the International Typographical Union in the future, which will be a gain of a few lines per one thousand on the brier and a loss of two lines on the nonpareil, and time copy will be supplied for waiting time. Tables are now all corrected by the men, excepting one, and the prospects are that they will get that one in the near future. The pick-up of the above tables to the men average about 130,000 ems per week, which is no small item.

While writing, I may as well give an outline of the other parts of the office. The *Gazette* office, supposed to be the oldest in Canada, has been in existence since 1778. It is a complete book, poster, job and newspaper office; they also have a railroad and steamboat ticket printing department. Mr. Richard White is the managing director; Mr. William Salter is superintendent of the book and jobbing department; Mr. James Conley is the foreman in the jobroom, and I am told he has held that position for over fifteen years. In this room an average of twenty compositors are employed the year round. Mr. F. Meyers is the chief pressman, and has an able assistant in Mr. John Clendinning. All the presses used in this office are of American make, excepting the ticket machines, which are English. The press that the paper is printed on is a beauty. It is made by Hoe & Co., and prints eight pages from a

roll direct from the type, which is made up on turtles, and I should think runs about 10,000 or 12,000 per hour. In the pressroom are five Campbell double revolution, two Hoe, and one Cottrell & Babcock cylinder presses and one Peerless and two Gordon platen presses. In the ticket department there are one coupon press, which prints from a roll and numbers and cuts them, and two card machines, self-feeding, with a capacity of 8,000 per hour each—on these the local tickets for the different railroads and steamboat lines are run, and there is also a half-medium Gordon press in this room, to print conductors' tickets, etc. This room is managed by a gentleman by the name of Fitzgerald. The above office has diplomas from several exhibitions as tokens of good work.

It was rumored through the city that the employés of the office of the *Journal of Commerce* would experience a sweeping reduction of wages on the first of November of from \$1 to \$2, but up to date have only known of one man being affected.

The Montreal *Witness'* weekly edition of last week contained four extra pages, which were illustrated, showing the faces of the reverend gentlemen who attended the recent Evangelical Alliance meeting.

When a printer is drawn on the jury here, he generally kicks himself as long as the term of the court lasts. Here they are paid 50 cents per day. There is one printer kicking himself now in this city.

J. P. M.

FROM BOSTON.

To the Editor :

BOSTON, Mass., November 7, 1888.

Now that all have had their say as to who shall reside in the White House for the ensuing four years, it is expected that business will promptly increase.

One of the oldest printing houses in Boston has gone under. Saturday, October 20, the Rand-Avery Company assigned to Mr. Nathaniel J. Bradlee, and it was at first supposed to be a very bad failure, but later on the opinion gained ground that things had been painted a darker hue than necessary. At a meeting of the stockholders, October 3, at which 2,300 of the 2,500 shares were represented, it was unanimously voted to re-transfer the company's property to its manager, Mr. Thos. W. Lawsen. This was done, and the company was then petitioned into insolvency by its manager. At a meeting of the directors, held at the company's office on the afternoon of October 5, a voluntary assignment was made to the company's attorney, Mr. M. F. Dickinson, Jr., and that gentleman was appointed provisional assignee. The sentiment of the meeting was in favor of the continuance of the present management, and that the valuation as recently made by the creditors' committee was altogether too small to be accurate. The new provisional assignee will continue to run the business until pressing work is finished. Many of the hands are leaving, or have already done so, preferring to do this rather than continue along on short time and with uncertainty ahead.

In the same building with the above-mentioned company is the Rand-Avery Supply Company. This is distinctly a separate concern, and is in nowise affected by the failure of the Rand-Avery Company.

Mr. Moses King, formerly treasurer and vice-president of the Rand-Avery Company, has also failed, and will settle in insolvency. The liabilities are reported to be \$134,301.65, some of which is secured by Rand-Avery Company stock. The assets are 1,400 shares of stock in the Moses King Corporation.

The letter of "Revising," which appeared in your last issue, is worthy the attention of printers in general. His arguments are sound, and the amateur, if let severely alone, will certainly kill himself. Let him have all the rope he desires, and rest assured that his customers will soon find out that he *can't* do "Artistic Printing Of All Descriptions."

If the specimen page of Messrs. Henry O. Shepard & Co., as shown in the October issue, is a sample of what the specimens for competition will be, your readers may look forward to an unusual treat in each number of the present volume. You evidently are of the opinion that it does not pay to "let well enough alone." Of one thing I can assure you, and that is, that THE INLAND PRINTER is thoroughly appreciated in this part of the country, and none speak of it but with words of praise.

E. F. S.

FROM PHILADELPHIA.

To the Editor : PHILADELPHIA, November 3, 1888.

The demand made a few days ago by Pressmen's Union No. 4 for \$18 per week is not meeting with favor among all employers. On last Saturday, at a meeting held at 723 Chestnut street, it was reported that thirty-one offices were favorable to the advance. The Executive Committee of the Typothetæ have held two or three meetings. Most of the union pressmen are receiving the union scale of wages. The agitation for an advance, if it has not been attended by an advance in wages, has resulted in a considerable increase in membership. The pressmen of this city for many years made but feeble attempts to maintain an effective organization, but they are now, and for some time past have been, in a position to make their wishes respected.

With regard to work, there is but little slackness. Nearly all establishments are running full time, and many overtime with urgent work. During the past month, more or less work has been of a political character. Fall and winter catalogue work has been abundant, and some of it is artistically and typographically very fine indeed. The spirit of competition in catalogue work is increasing, not only among competing firms and houses, for trade, but among the printers themselves. We have had some very long runs on catalogue work, and from rumors afloat this week there will be some heavy contracts placed before long. The compositors are trudging along quietly. Their meetings are not without interest, but everything is peaceable because the printers and their employers understand each other. The printers' union in Philadelphia is, as it ought to be, a solid phalanx, and dissensions are virtually unknown. Rates of wages are regular; each man has practically a property in his situation. Some of our "dailies" have been there from five to twenty years; a few even longer.

The periodical revolution in typesetting methods has been making its rounds, as usual. I remember, years ago, going up into the "cat garret" of a house on Chestnut street, where two indefatigable gentlemen of some mechanical training spent their days, months and years in perfecting a typesetting machine. At last, one made a departure, and they separated, each pursuing his own way. They finally both went to New York, and are still at it, though the respective companies they organized have, I believe, long since become tired of paying in. One of the latest things talked of, though not a new invention by any means, is the linotype, perfected by Mergenthaler. It is in experimental use in a number of the leading newspaper offices of the country. They do say that it gets around the justification all right. You have no doubt called attention to it. A blast of air is used to drive the matrices into a receptacle in contact with molten metal. When the impression is received, the type-bar is pulled up to the tops of the tubes or reservoirs. Thus, type-bar after type-bar is formed, after which a proof is taken. This, of course, necessitates a resetting of all lines containing errors. The company expect to realize handsome returns, but their progress is slow.

A new evening paper is to be started in this city in a few days by Charles E. School, recently senior proprietor of the *Evening Star*, our oldest and one of the ablest penny dailies. This looks like a venture. The *News* tried it; the *Call* rushed in, where other mortals scarce dare tread; but they are all making out, though it is impossible to give the exact significance of the term with reference to their finances. Evening papers are much more generally read than they used to be. The service is much improved, especially the special telegraphic service; and there is room for more. The *Item*, with its corps of red covered wagons, beats all the other afternoon dailies in reaching the outskirts of the city, and has thus built up a big circulation.

Mr. Wells, of the *Press*, is now getting back some of his \$400,000 which he sunk in that paper. It took grit and sand to hold on, and Wells has both. Son-in-law Cook, of Yale boating fame, looks after the dollars. Commodore Singerly, of the *Record*, has not had Cleveland to see him and his cows for a few weeks, but there is a genuine friendship between the two men. Journalists are not half as social as they would like to be. It is no time to be social after 2 o'clock in the morning. Each has to take the will for the deed. Our club is no more. Peace to its ashes. There have been no important changes in our staffs, and, so far as known, none are contemplated. The *Ledger*

is weighted down with talent, and it is a half-day's work to read it. Childs' partner, Mr. Drexel, has just opened his ten-story \$1,500,000 building at Fifth and Chestnut, which has over four hundred big offices. Our Childs-Drexel fund grows slowly, but it is growing, and some day it will be transformed into a building that will be a credit to the craft throughout the United States. The publishers of all sorts of books are having a good year, but the craze for subscription books has subsided. The copyright law slumbers. It, and a hash of new questions and issues, will be brought up at the next session of congress. Our School of Journalism is manufacturing some good journalistic material, but those who are best fitted for that sort of work somehow glide into it without the aid of instruction. H. V. Williamson, one of our millionaires, who has \$15,000,000 or so to leave behind him, and who is eighty-five years of age, will leave the bulk of his estate to establish some sort of a general technical school. It ought to be a very well established and equipped school; but the ideas on technical and manual education are still very crude.

Over in New York everything is life, especially in journalism. The *Sunday World* has passed its quarter of a million limit, and is still mounting upward. A new man, a Mr. Barrett, has taken hold of the *Press*, which, it is understood, has been steadily losing money. It has a hard struggle before it in New York, with the bitterest competition all around it. All the other dailies are making money. At present writing, Bennett, of the *Herald*, is at home, but any day he may fly to Paris. He has a head for journalism, no matter who says to the contrary.

Typothetæ matters are full of life. There are enough members here to make it so. The annual meetings will gradually become very brilliant affairs. In trade journalism, New York is making rapid progress. Old journals that have had the dry-rot for years, are appearing under new managements. The Tribune building and the Potter building are bee-hives for newspaper men; and the Times building will be largely occupied with them. It will have extraordinary presswork and folding facilities in its thirty-foot basement. Some of the finest presses — and the biggest, too — are coming to New York. Oil, gas and electricity are the motive powers in a good many cases. The electricians are crowding their machines and machinery into places where steam has had control ever since the days of Fulton, and earlier.

Rev. Heber Newton, who is known for his advanced and extreme labor sentiments, is astonishing New York by his radical utterances on matters of religious faith. Mayor Hewitt has done a great deal to arouse American sentiments among our people, who for years have felt lost in the sea of foreign influences in that city.

The printers of New York, though a well-paid class, cannot live as comfortably as printers in most of our cities, because of the necessity for them to live near their places of work. The curse of New York is its over-crowding. Nearly one million people live in apartment houses. Rapid transit, and a number of other vital questions, will soon come up for consideration. The lithographers of Philadelphia and New York are very busy. Work has been pouring in all season. The ink manufacturers have been driven into bitter competition this year, and in consequence a great deal of inferior stuff has been thrown upon the market. The typefounders will have some very attractive styles of type for display in a few months. All of our paper houses will close, from now until next May, at 3 o'clock on Saturdays.

The paper interests are prospering. All the machinery makers are loaded up with orders for machinery for mills, south, east and west. The paper business is good; desperate cutting of prices has not yet set in. The trade are trying to manage things conservatively. The paper-producing capacity of the country is being expanded very rapidly, and there is danger, so it is said, that after awhile it will be overdone; but who knows? The chemical fiber manufacturers are over-sold, and prices may harden in consequence; but who knows? An English company is coming to this country to show us how to heat our cities at one-third less cost than at present.

Business indications from eastern financial and commercial centers are that there will be a heavy volume of trade all winter and spring. The success of the thousands of big and little industrial enterprises all over the country is encouraging thousands of investors to put their money into industry and trade, rather than into railroad building, where

they lose all direction and control of it. Business men are bent on controlling the commercial and industrial policy of this government, regardless of mere party politics. That is right. The foundation is being laid for a grand and glorious future.

I had a pleasant interview with Terrence V. Powderly the other day, not on order matters, but as old friends. Powderly is a power, and don't know it. He is one of those men who come to the front in spite of themselves. It is not for the Knights of Labor to say — or any other set of men — whether T. V. Powderly will stand in the front rank of the great redeeming agencies that are transforming this world into a better condition for the higher development of humanity. M.

FROM SCOTLAND.

To the Editor :

EDINBURGH, October 15, 1888.

The state of the printing trade of this city at the present time shows a slight improvement on the past few months, although the repeated announcements which have been made in the newspapers lately, that the depression through which we have been passing is drawing to a close, might have led us to expect it to be better. The payments from the Out-of-Work Fund for the month of September was £15 7s., while for the quarter it amounted to £40 2s. 6d.

The terms of the Chace Copyright Bill have been receiving the attention of the printing and allied trades of this city for the past few months, as, if it becomes law, it is expected it will be very detrimental to their interests, seeing that a great amount of work is done for London publishers. I understand it is intended that a large deputation will meet with the prime minister (the Marquis of Salisbury) on his visit to the city next month, and present him with a statement of their views on this subject.

A new era seems to have dawned upon the printing profession here, which, it is to be hoped, will be productive of good in the way of rearing good and competent workmen. Hitherto the usual seven years' apprenticeship, combined with the practical experience which every intelligent workman gains in his daily work, has been considered sufficient, but this month no fewer than three technical classes have been started with the view of enabling young typos to become more proficient in the art of printing.

The first of these classes has been commenced in the University Preparatory Institute, with Mr. George W. Jones, who is overseer in the Coöperative Printing Company (the *Darien Press*), as teacher. Mr. Jones holds the medal of the Society of Arts, London, for "excellence and knowledge in typography." The second is held in the newly endowed Heriot-Watt College (late Watt Institute), under the care of Mr. James Wilkie, general manager of Messrs. Neill & Co's, printers to Her Majesty's Stationery Office; and the third is in the College of Science and Technology, with Mr. W. T. Dobson, of the Ballantyne Press, as teacher.

Mr. Jones delivered his opening lecture on Saturday, October 6, when Mr. Grut, president of the Edinburgh Branch of the "British Typographia," occupied the chair and made a few introductory remarks. In his lecture Mr. Jones directed the attention of his audience principally to display work, and showed a very fine collection of letterpress printing, which included some of the finest works of the celebrated Heinrich Knöfler, of Vienna, and his son. There was also on view a number of excellent specimens of the art from America, Russia, Shanghai, Sydney and Ceylon. A beautiful case of specimens of Mr. Jones' own work, and for which he received his medal, was also on view. Mr. Jones has enrolled upward of one hundred students into his class.

The opening lecture in the Heriot-Watt College took place on Tuesday evening, October 9, and was entitled "Book Printing, Ancient and Modern." The large lecture hall was well filled. James Turnbull, Esq. (Messrs. Turnbull & Spears), occupied the chair, and in a few introductory remarks stated, that he looked upon such classes as were being opened in the college as of the greatest importance in the history of a country. Mr. Wilkie illustrated his lecture with a number of specimens of rare and curious printing, among which were: A fine manuscript book, entitled "Offices of the Virgin," written about 1400, the ornamental letters of which were of a high description, being all done

in colors; "The Game of Chesse" and "The Fifteen O's," printed by Caxton in the year 1474 and 1490 respectively; "Lucani Civilis Belli," by Aldus Manutius, 1502; "Golagrus and Gawane," by Chepmare and Myllar, Edinburgh, 1508; the celebrated "Breeches Bible," by Barker, 1599; the "History of Printing," Watson, 1711, and a number of other volumes of more recent date.

Mr. Dobson opened his class with a lecture on "Old Edinburgh Printers," on the evening of Thursday, October 11, W. S. Blaikie, Esq. (of the firm of Constable & Co.), in the chair. There was a good attendance.

The British Typographia, of which I stated some time since a branch was to be formed in Edinburgh, has now issued its syllabus for the session. The association has for its object the advancement of the members in all that pertains to the art of printing. A course of lectures are to be given, embracing such subjects as "Edinburgh Printing: Past, Present and Prospective"; "Reminiscences of an Aristocratic Edinburgh Printing Office"; "Paper and Paper Making"; "Printing Machinery"; and "The Chemistry of Printing Ink." Fortnightly meetings are to be held, at which the following papers are to be read, and discussion invited: "Correctors of the Press"; "Theory and Practice in Training Apprentices"; "The Making of Tint Plates"; "Stereotyping and Electrotyping"; "The Style of the House: Some Remarks on Spelling, Punctuation, and Word Division"; "The Principles of Display"; "Punctuation"; and "Specimen Exchange"; while at the end there is to be an exhibition of specimens and a business meeting and social meeting. Mr. W. N. Grut (of the Ballantyne Press) is elected president, while there is a thorough representative committee of managers, overseers, readers, stereotypers, pressmen, etc. The annual subscription is — for managers and overseers, 5s.; sub-overseers, readers and journeymen, 2s. 6d.; and apprentices, 1s. The introductory lecture was given by Councilor Gillis, on Friday, October 19; the lord provost occupied the chair.

An exhibition of decorative handiwork is to be held in the galleries of the Royal Scottish Academy, Edinburgh, commencing early in November, and remaining open till about the middle of January. There are eleven classes in the professional workers section, and five classes in the amateur section. Class XI (professional) is for book ornament. There are two prizes for bookbinding (design and work by competitor); one prize for same (work only by competitor); one prize for book-covers; one prize for setting in type of a title page for the Exhibition Catalogue; and another for original designs for typographic headings, tail-pieces, initial letters and borders.

The annual meeting of the Trades Union Congress was held this year at Bradford, England. There were one hundred and sixty-five delegates present from all parts of the United Kingdom, representing 816,944 trade-unionists. Mr. S. Shaftoe, of the Bradford Trades Council, was elected president, and Mr. O. Connellan, president of the Bradford Typographical Society, secretary of the Congress, while Mr. C. J. Drummond, of the London Society of Compositors, was secretary of the standing orders committee, and Mr. Henry Broadhurst, M. P., was secretary of the parliamentary committee. The report of this committee was specially interesting to printers, as in it reference is made to the unprincipled manner in which a number of religious and temperance publications are produced. The report states:

The religious teachers of the country, who might have done, and in some cases have done, much to protect the poor, are not at all free from reproach in this matter ("the sweating system"), as they are frequently guilty of using the lives of men and women to produce cheap articles. We have it on authority — and authority from our own ranks — that many religious publications that are presumed to have for their object the elevation of the people and the advocacy of their cause, are produced in printing offices where fair wages and proper trade conditions are ignored for the sake of obtaining extra profit. Several of the temperance publications are also produced in the same unfair manner. Those who are aware of these facts may, therefore, be pardoned if they look upon the movements that journals so produced represent with a considerable degree of suspicion. At the same time we are bound to say that there are some religious newspapers whose conductors make it their first consideration, before agreeing to a contract with their printers, that the trades-union scale of wages shall be strictly observed.

A deputation of French workmen was introduced to the congress, who invited the members to the International Workmen's Congress, in Paris, next year. The next congress will be held in Dundee, Scotland.

Yours truly,

W. F.

TYPOGRAPHICAL AND JOURNALISTIC INTERESTS IN NEW YORK.

To the Editor:

NEW YORK, November 5, 1888.

Horace Greeley is about to view the place of his journalistic fame. For this purpose he will be of colossal size, and will sit in an arm-chair in City Hall Park, facing the site of the old *Tribune* building. He will be bareheaded, and close beside him will lie a pile of books, while in one hand he will hold a newspaper. His clothing will be more circumspect than that which he used to wear, for the bottom of his trousers will come down smoothly over his boot-legs, the upper button of his coat will be associated with the right buttonhole, and his necktie will not be awry. The rigidity of bronze will keep the old fellow from the slouchiness which characterized him while alive, for this is the statue projected by the printers. He will hardly be able to recognize the Printing House Square of the present day. There is hardly anything left in it that was familiar to his sight when he used to trudge across to the *Tribune* office with his mind laden with anathemas for the boys whose work in that morning's *Tribune* had not pleased him. Instead of the dilapidated yellow brick structure wherein his garrety sanctum was situated there is the towering new *Tribune* building, which so nearly bankrupted his successors at their outset in the management of the *Tribune*, but which of late years has been a source of wealth to them, for its ten stories of offices are all rented out at high rates. If he turns his eyes toward the spot upon which his enemy, Henry J. Raymond, used to fight him with the *Times*, he will see, just completed as to exterior, the most ornate marble architecture in New York. Its altitude is still higher than the *Tribune's*, and also exceeds that of the adjoining Potter building, which replaced the old *World* quarters of Manton Marble's days. Glancing to the other side of his old journalistic home, he will get a little comfort from the *Sun* building, which used to be of a stature with its neighbors, but is now left only knee-high to them. Just across narrow Frankfort street, where French's Hotel was in his time a landmark, there is only a spacious hole in the ground, out of which an altitudinous stone erection for the *World* is to rise. The entrance of the Brooklyn bridge, the station of the elevated railway and the fine building of the *Staats Zeitung*, displacing Tryon Row, will complete the strangeness of the view. Aside from the *Sun* building there will be absolutely nothing, except a corner of the American Tract Society building, to convince him that he is really viewing Printing House Square.

Mr. John Gilmore Speed has become the editor of the *American Magazine*, which, under its new ownership, has already shown many evidences of vigor and enterprise. Mr. Speed, who belongs to the well-known Kentucky family of that name, is well qualified by taste and training to successfully carry out the new work he has undertaken. He has passed through all the grades of journalism, and was for several years the managing editor of the *New York World* before it was purchased by its present proprietor. Since then he has spent much time in foreign travel, and has also been a frequent contributor to the magazines and newspaper press. He has written a life of John Keats, and has edited his letters and poems. For this work Mr. Speed had peculiar advantages, as his mother, a daughter of George Keats, the younger brother of the poet, had preserved all of John Keats' letters to his brother and many of the manuscript poems to which George Keats fell heir upon the untimely death of the young poet in Rome. Mr. Speed, in turn, inherited these letters and manuscripts, and made good use of them in his edition of Keats. In conducting the magazine, it is Mr. Speed's purpose to make it all that its name implies—an illustrated monthly representative of American thought and life. He will have the hearty coöperation of competent and resourceful colleagues, and he therefore starts out with a bright prospect of making the *American Magazine* worthy of the success which usually follows well-directed effort.

Printer-journalist Amos J. Cummings resolutely refuses to be re-nominated for congress. Cummings' retirement has back of it a deeper meaning than his objection to being placed on the same ticket with Mayor Hewitt. Two years ago, when he had practically no opposition to his election, he was assessed \$5,000 by the county democracy for being a congressional candidate. The Philadelphia

method, whereby the necessary expenses of Congressmen Kelly or Randall are paid by protected manufacturing constituents on the Georgian procedure, which permits Congressman Blount to boast that his biennial election expenses are \$250, are unknown in New York. This year, when Cummings finds arrayed against him by the Tammanyites the most popular young lawyer in the district, he is assessed \$8,000 by the county democrats. Walking among and talking to his democratic followers, Cummings found that he was being unreasonably opposed on account of his relationship to the *Sun*, which is a relentless foe to Cleveland. As a result of this, rumor has it that he figured in a stormy row in the office of the newspaper luminary which claims to shine for all. However true that may be, it is certain that Mr. Cummings authorizes the announcement that he has entirely severed an almost lifetime connection with the *Sun*. His return to Bohemia is already heralded by the statement that he is about to establish a 1-cent evening newspaper in Harlem. Congressman Cummings has had his eye on this neglected field ever since he retired from the active management of the *Evening Sun*. Harlem is a city in itself of no mean proportions, and the retiring congressman will wake it up. The new paper is to be founded on the plant of the *Northern Eagle*, a weekly journal published in Morrisania, and the enterprise will be backed by a syndicate of wealthy men.

That picker-up of unconsidered trifles—newspapers—John R. McLean, owner of the Cincinnati *Enquirer*, is on the war-path again. He has had his guns trained against the *New York Star* for some time, but now he is aiming at higher game. It has been well known in newspaper circles for a long period that Nestor Charles A. Dana is anxious to unload his stock in the *Sun*, and it is this paper that McLean is after. The figure asked is high—\$1,000,000. This is for his stock alone, and when it comes to buy out the rest of the stockholders there will be a pretty good-sized hole in Mr. McLean's bank account. He has been trying to get possession of a New York paper for some years, and probably so small a consideration as money will not stand in his way.

Connecticut is proud of a brilliant and talented lady who edits the *New London Telegraph*. Her name is Charlotte Molyneux Holloway, and she writes every line of the editorials in that sheet. She was the editor of the *New London Day* in 1884-85, but resigned on mugwump principles and entered the democratic camp. The *Telegraph's* editorials are copied extensively, and are sometimes found in the democratic campaign sheet. Miss Holloway is a graduate of the New England Conservatory, and has been writing as critic, sketch and story writer for the *Springfield Republican*, *Hartford Times-Epoch* (weekly), *Godey's Lady's Book*, *Magazine of History*, and *New York Examiner*, besides reading proof for a publishing house. She is twenty-four years old, tall and stylish, with good features, and complexion fair, with black eyebrows and lashes. She is a brilliant talker, an accomplished musician, and a skilled linguist, talking four languages and translating them. Miss Holloway, who is the only woman editor in the "land of steady habits," recently refused a civil service appointment, preferring to remain in the journalistic traces.

Organized labor in Newark, New Jersey, has inaugurated a warfare upon *Des Arbeiter Zeitung* by a strike among the printers. The strike was ordered for the reason that the publishers of the paper, composed of workmen's organizations, had introduced "plate" matter in opposition to the rule of the typographical union. Seventeen of the eighteen compositors refused to return to work Monday night, October 22, and, as there is small prospect of the managers of the paper changing the rule in regard to using the obnoxious "plate" matter, the strike is likely to continue for an indefinite period. At last accounts the old compositors had found employment elsewhere, while their places were filled with non-union men. That *Des Arbeiter Zeitung*, which has hitherto been a strong and consistent labor paper, should become a "rat" sheet is regarded as a strange event among typographical union men. It is apprehended that before the close of the year at least two other papers will be run as non-union publications.

Rhode Island and Connecticut newspaper men and several capitalists have formed a joint-stock company and commenced the publication of a new 2-cent morning newspaper, at Hartford, Connecticut. It is called the *Record*, and advocates republican principles. Warren H.

Goldsmith, city editor of the *Hartford Times*, has editorial charge, and Arthur S. Pease acts as business manager. The office is run as strictly union.

Rev. Hugh O. Penticost, who recently retired from the ministry, is going to be his own anti-poverty society. He has taken out a working card with Typographical Union No. 163, of Newark, New Jersey, and will probably return to the case, at which he spent his early life. Doctor Penticost caused quite an excitement in Newark several years ago by vigorously denouncing from the pulpit the unscrupulous aggressions of the money kings, and as many of his parishioners were connected with grasping railroad and manufacturing monopolies, his resignation was demanded. Since leaving Newark, Mr. Penticost has been lecturing upon labor and political subjects.

The leading city journals, which, for some reason or other, rarely agree on anything, it is worthy of notice, are for once entirely in accord in demanding such a modification of the law of libel, in this and other states, as will protect publishers from unnecessary prosecution, often upon the most frivolous pretenses. It is a demand that ought to be heeded, not less in the interests of publishers than in order to drive from existence a class of persons who reflect discredit upon the legal profession by their dishonorable practices. The *New York Herald* but states a well-known fact when it says: "There is a class of 'shyster' lawyers who make it their business to annoy respectable newspapers in this way. They read the journals, and when they imagine that a writ for libel will lie, they run to the person concerned, magnify his wrongs and urge a writ, offering to prosecute it for a share of the plunder. Of course, in the great majority of cases such suits come to nothing. They have no justifying cause. But the shyster lawyer gets some money from his client, he annoys the newspaper, and he makes his living."

Sheriff Hugh Grant sold on Wednesday, October 24, all the right, title and interest of the American Graphic Company, including the fixtures, presses and *Graphic* newspaper, on executions for rent. The property was purchased by the Southern Trust Company. The sale took place in the *Graphic* office, 41 Park Place. The price paid was \$5,000. Nothing is known of the Southern Trust Company, or in whose name they bought the paper, but it is said that the present policy and management will not be changed. Since the starting of the *Daily Graphic* \$500,000 have been sunk in trying to keep it afloat. The originators of the venture, the Goodsell Brothers, now dead, ruined themselves in the attempt to make it a success. The purchasers have assumed \$50,000 of debts. On Saturday, October 27, the Graphic Publishing Company of New York was incorporated at Albany, with a capital of \$25,000. The trustees are: Ensign Fuller, Willis A. Barnes, John N. Simpson, George Hoffman and William Williams.

The American Color Printing Company, with a capital of \$1,000,000, has been incorporated under the New Jersey State incorporation laws. The entire capital stock is said to be fully paid in. The incorporators are: David Heston, John F. Hartranft, Henry Boyer, William H. B. Foye, George E. Vickser and Marmaduke B. Taylor. The company will start business at Camden, New Jersey, where an extensive and valuable plant is already located. The capacity of the works will be largely increased and the working force considerable augmented. It is intended to make this establishment the leading one of the kind in America.

It is announced that Editor Barrett has received a controlling interest in the *Press*, of which the able tariff expert, Robert P. Porter, is the editor. Mr. Barrett is a member of the Papyrus Club, and is regarded as a prominent representative of what is styled as the dude element in Boston. The *Press* has been sinking money.

Julius Chambers, who for several years has efficiently managed the *Herald*, is now managing editor of the *World*.

The *New York Star*, which has had a rather unprosperous voyage since the death of Governor Dorsheimer, was sold under the sheriff's hammer on Monday, October 29. The purchaser is George E. Downes. In the arrangements covering the purchase, Mr. Downes assumed the obligations of the paper, among which are said to be a \$17,000 judgment, a \$25,000 mortgage and \$750 due to employes.

The *Herald* records a new wrinkle in city journalism, or, to speak more accurately, the adoption in New York of the English club system of taking newspapers, so as to reduce the cost to each individual to a

minimum. For example, workmen, clerks and others living in tenement houses, or serving together in the same shop, store or office, have discovered that by clubbing together they and their families can read a 3-cent paper for a cent each. Naturally the newsdealers and other venders were opposed to the innovation at first, but it would appear that, unable to resist it, they are now reconciled to it.

The magnificent new building of the *New York Times* is so far advanced toward completion that the roof is on and being covered with metal. There is no other commercial building in New York so tall as this one, i.e., not counting towers and other adornments or disfigurements above the roofs. By accurate leveling measurement, engineers have determined that the top of its wall is but two feet below that of the New York tower of the East River bridge. Its upper story—the thirteenth—will be the composing room of the paper.

PRINTER-JOURNALIST.

ANSWERS TO CORRESPONDENTS.

W. H. J., San Francisco: Can you tell me how bronze ink is made, that is, run on the press, without bronzing with bronzer and cotton?

Answer.—Take one and a half pounds gum shellac and dissolve it in one gallon ninety-five per cent alcohol spirits of cologne for twenty-four hours; then add fourteen ounces aniline red; let it stand a few hours longer, when it will be ready for use. Add this to good blue, black or other dark inks, as needed, in quantities to suit; when, if carefully done, they will be found to have a rich bronze or changeable hue.

UNDER date of November 2, a correspondent writes: I must take exception to the answer to J. H. F., Auckland, New Zealand, as published in the October issue of *THE INLAND PRINTER*, page 49. I refer to that part relating to cutting and mitering machines and curving machines. The best cutting machine, in my opinion, is the Little Giant Lead and Rule Cutter, sold by Golding & Co., Boston. Regarding the miterer, the price of the Hoe upright is \$13, and of the Golding \$14. In many respects the last is the better of the two. It does not stand so high as the Hoe; has a clamp to hold any small pieces of rule that are to be cut, and the swivel is true, allowing the operator to smooth a straight edge and cut a bevel without changing. The latter is not the case with the Hoe upright miterer. The curver has at least two good points that no other one has. In using it the operator is not likely to injure the face of the rule, and by using the square die a square corner can be made. These machines, with all due deference to the opinion of others, I consider the equal if not the superior of any similar machines on the market.

THE OLD COMP.

Has it ever struck you, young fellow, that the ancient workman you so frequently snub might be accorded just a little better treatment? You are, of course, his superior; a little condescension and civility on your part would lighten his load very materially. He does not so much as pretend to be up to your standard; even that little card which you did the other day for Miss —, at a great sacrifice of your employer's time and material, would have cost the old man a most extraordinary effort, if, indeed, he could have managed it at all. It may be that you feel contempt for his ignorance of novelties, combinations and other *et ceteras*, or perhaps his appearance induces you to take liberties of speech and action; the old man's personal get-up and old-fashioned neatness offend your sense of the correct—you, who would be foolish enough to get your hair cut to go fishing. He can't get through his copy, you say, at anything like speed; he has been known to pie two stickfuls in succession when emptying (communicated information, but unquestionable), and the fact is generally recognized that "they don't stand him anywhere long." Well, as I said before, you *are* his superior, mentally and physically, and even though your flattered intelligence may, after all, be like Chinese morality, more abstract than real, yet, if you persevere in your inanities, a certain reward awaits you. Some disgusted citizen will, in the near future, dispatch you through the most convenient exit, without a safety guarantee; but the despised old man will be cherished in memory long after your sudden demise is forgotten.—*Exchange*.

RECENT PATENTS.

The following list of patents relating to the printing interests is specially reported by Franklin H. Hough, solicitor of American and foreign patents, 925 F street, N. W., Washington, D. C., who will furnish copies of patents for 25 cents each:

ISSUE OF OCTOBER 9, 1888.

390,994—Printing presses, Ink fountain for. H. Swain, San Francisco, Cal.

ISSUE OF OCTOBER 16, 1888.

391,065—Printing, Lithographic. J. W. Osbourne, Washington, D. C., assignor to W. H. Forbes, Boston, Mass.

391,178—Printing machine. R. Miehle, Chicago, Ill.

391,035—Printing with gold, silver or platinum. M. F. L. Ehrlich and C. T. Strock, Frankfort on-the-Main, Prussia, Germany.

ISSUE OF OCTOBER 23, 1888.

391,544—Printing apparatus, Ticket. G. B. Massey, Mamaroneck, N. Y.

391,515—Printing machines, Gripper mechanism for. C. B. Cottrell, Stonington, Conn.

391,733—Printing machines, Means for securing printing plates to beds or cylinders of. E. S. Boynton, assignor to the Campbell Printing Press & Manufacturing Co., New York, N. Y.

ISSUE OF OCTOBER 30, 1888.

391,820—Printing machines, Method of and apparatus for dissipating electricity in delivering sheets from. W. C. Rossney and C. L. Hunt, Boston, Mass.

392,166—Casting printers' rollers, Apparatus for. D. J. Reilly, Brooklyn, N. Y.

EDITING EXTRAORDINARY.

During the state fair at Elmira, New York, many visitors from 'way back wended their way into the newspaper printing offices. A very verdant specimen, Reuben Snyder, from Potter County, Pennsylvania, strolled into the *Telegram* engine room, and said to the engineer:

"Be you the editor?"

"No," responded that official; "you'll find the editor in the next room."

Snyder went as directed by the joking engineer, and accosted the foreman of the pressroom with:

"You be the editor, be you?"

"Yes," said the printer of paper, who understood the joke.

"How long afore you're goin' to edit some papers?" said Snyder.

"Right now; look out!" answered the pressman, pushing the lever and starting the lightning perfecting press at the same time.

As the machine went to work turning out the papers so rapidly that it made the old man dizzy, he put his hands on his knees, stuck out his elbows, opened his potato trap and yelled to his son, who stood in a distant part of the room:

"Great Scott! John, come over here and see this man edit papers!"

The suppressed laughter among the pressroom hands got vent after the old fellow retired, and fairly shook the building.—*New York Sun*.

THE MOTIVE POWER OF THE FUTURE.

Probably the most important problem that the imperfections of the present and the needs of the future have yet fairly developed for the inventors to chew over, is the question of a motive power to supplant steam by superior cheapness and availability for small powers. With all the improvements wrought within the past half-century of progress, the very best steam engine only converts into applicable power one-sixth of the latent energy of the fuel consumed. The goal of cheap manufacturing will never be reached until a great change has been wrought in this particular, and this amazing waste stopped and converted into power.

It should be remembered that electricity can never solve this problem, for it can never be made a source of power. Electricity is useful as a cheap and convenient method of distributing power, but that is all. The electric-motor is a welcome substitute for small steam engines in light manufacturing and other establishments where small power is required, and the work, trouble, noise and dirt done away with are appreciated; and supplying the electric current to numbers of such establishments from a central station is a growing and popular method of obtaining power. But while the central dynamo is turned by a steam engine or water-wheel, the process is a great remove from either steam or water power being supplanted by electricity. Something has

been done in the line of developing electric power chemically from batteries, but it is not likely that this will ever yield power in sufficient quantities to become mechanically useful.

Some form of heat engine, in which power will be developed direct from combustion without the intervention of water, seems more likely than anything else to be the motor of the twentieth century. Such a view is held by some of the most practical and far-sighted scientists of the day. Sir Frederick Bramwell, president of the British Association for the Advancement of Science, has just taken occasion to remind the world that on the semi-centennial of the association seven years ago he predicted that unless some substantial improvement was made in the steam engine, some improvement of which we have yet no notion, its days for small powers were numbered, and that the centenary of the association in 1931 would see the present steam engine only in museums. The working of heat engines without using vapor of the water, by the combustion of the gases rising from coal, or from coal and water, is now established as not only mechanically practicable but commercially economical. In some cases they are credibly reported as having effected a saving of one-third in consumption of fuel over the most economical steam engine.

We quote from Sir Frederick Bramwell the following suggestive summing up of the subject: "Looking at the wonderful petroleum industry, and at the multifarious products which are obtained from the crude material, is it too much to say that there is a future for motor engines worked by the vapor of some of the more highly volatile of these products—true vapor—not a gas but a condensable body capable of being worked over and over again? Numbers of such engines, some of as much as four-horse power, are now running, and are apparently giving good results; certainly excellent results as regards the compactness and lightness of some of the machinery. Again, as we know, the vapor of this material has been used as a gas in gas engines, the motive power having been obtained by direct combustion. Having regard for these considerations, was I wrong in predicting that the heat engine of the future will probably be one independent of the vapor of water? And further, in these days of electrical advancement, is it too much to hope for the direct production of electricity from the combustion of coal?"—*The Paper Mill*.

THE EARHART "WRINKLER."

This is the appropriate name of a neat-appearing, compactly constructed little machine for bending or curling brass rule into almost any imaginable shape, such as borders, corner pieces, line ornaments, dashes, etc., an illustration of which, as well as of a few of its productions, is herewith presented.

The machine is so simple that any printer can fashion designs out of it that will surprise him, and do it so easily that he will wonder how the results were accomplished after they had been produced. It consists of a strong iron frame, into which is pivoted a rule holder and presser. Five curling and bending tools are furnished with each machine; a sectional end view is also shown. Each tool has a dial

upon it divided into sixteenths, as herewith shown in cut below. This enables the operator to make as many pieces as desired exactly alike.

The "wrinkler" comes upon the market at a time when its services are in demand. It is literally a response to the demand of the time. Rule ornamentation is the popular craze, and the "wrinkler" can accomplish more rule-twisting in ten minutes than the most artistic printer could do in two hours; and, what is more, it will all be done with mechanical accuracy. The search for an ornament to fill an awkward space in a job need no longer be made. With the "wrinkler" you can in a moment fashion an ornament that will not only supply the need, but will have also the merit of originality. It must not be thought from this that the "wrinkler" can be used only for fancy work. It has utility also in the plainer departments of printing. Almost any kind of corner may be made with it, and a plain corner, which heretofore required to be mitered, can be made with the "wrinkler" in a moment.

The illustration of the "wrinkler" shows a piece of rule in position curled at both ends. Tools Nos. 1 and 2 were used in curling the following pieces:

The operation is very simple. If it is desired to curl a piece of rule at both ends, same as first specimen, place tool No. 2 in position, take the strip of rule and lay it in the holder with one end inserted into the slot in the tool. Now place the left hand upon the handle of the rule-holder, with the fingers pressing lightly against the side guide; then take hold of the tool handle and turn it to the left, at the same time pressing firmly (but not too hard) upon the holder, the object being to press the rule firmly against the under side of the tool while the rule is being coiled.

After the tool has been turned about three-fourths of a revolution, then insert the end of a strip of soft cardboard or blotting-paper (cut about the height of a lead) between the tool and the piece of rule, the object being to keep the curl open, as shown in the specimen referred to. Then, after placing the card in position, make as many turns as desired for the curl. Treat the other end of the rule in the same manner, being careful to make just the same number of turns as in the first instance. To make the pieces accurate, the operator must be careful to stop turning the tool when a certain mark upon the dial is directly opposite the mark upon the "wrinkler." In making the first piece shown above, the tool was turned around three times for each end.

For further illustration let us select the following design:

A strip of eight-to-pica rule is carefully stretched at intervals of one and one-quarter inches on both sides, and the full length of the rule, as indicated below:

The rule must be measured from one end, so that the marks on one side of the rule will be directly opposite those on the other side. After the rule is properly marked, take tool No. 5, place it in position in the "wrinkler" with the round side up, lay the rule in the holder and run it through the tool up to the first mark. (See sectional view below.)

Then turn the tool to the left one and one-eighth revolutions. The result will be as follows:

Then withdraw the tool, turn the rule over, place the tool in position upon the rule, move the rule along through the tool up to the next mark, as indicated below.

Then turn the tool one and one-eighth revolutions, same as in the first instance, and the rule will appear as follows:

Now repeat the operation described until the border is the length required.

Many other odd patterns can be made by marking the rule at different distances, say three-quarters of an inch, one inch or one and one-half inches. Also by turning the tool three-quarters, one or one and a half revolutions. In each case a different effect will be obtained.

A great variety of corners may also be made with the several tools alone, the quad being used for making a square. In the hands of a skillful manipulator a thousand and one appropriate embellishments and designs may likewise be produced at short notice, and with comparatively little trouble. Shniedewend & Lee Company, 303-305 Dearborn street, Chicago, are its sole manufacturers, though it is for sale by all typefounders and dealers in printing material throughout the country. Price, \$18.

Babcock Printing Press Mfg. Co.:

Gentlemen: We have been using your Country Press nearly three years almost daily on fine book work, blank book headings, etc. It registers accurately, and turns out as good work as any two-roller press can. It has given us no trouble, cost us nothing for repairs, and is fully satisfactory.

Yours truly,

T. H. Hodder & Co.

Barnhart Bros. & Spindler:

Dear Sirs:--I received your letter this A.M. In answering your question, viz: "How does the New Press work," would say: "I have been in the printing business 26 years. My father James Shoaff, started the first paper in Decatur, Ill. In all my experience with presses--over 20 years--I have never seen or worked with a press I liked better than the Improved Country Babcock. It has given entire satisfaction from the word 'go.' This is all I can say, and why should I more say, only I wish everybody had one." Respectfully,

e it of $\frac{1}{4}$ $\frac{1}{2}$ $\frac{3}{4}$

L. A. G. Shoaff.

CATTLE IN FIELD.

OMAHA.

IF Denver is a wonder Omaha is equally so; and though our visit was necessarily limited, we saw enough to convince us that there is a likelihood of George Francis Train's predictions, chimerical as they seemed, being verified sooner than anticipated. Situated in the heart of one of the finest agricultural regions in the world, peopled by an enterprising and intelligent community, with natural advantages and location unsurpassed, she is bound to go ahead in spite of all temporary drawbacks or disappearance of fictitious real estate booms. "Destiny" is on her side; and that she is *destined* to become one of the great cities of the American continent, no one acquainted with her history, surroundings or location can successfully deny. Many of her buildings would do honor to any city in Christendom, and the push and vim of her citizens, their unlimited faith, which brooks no denial, in her ability to reach the goal, is worthy of all praise, and augurs well for the future. The few hours at our disposal were devoted to a hurried visit to those establishments which interested us most, among which we may mention

THE GREAT WESTERN TYPEFOUNDRY,

located at 1114 Howard street, and presided over by Mr. Mel. S. Uhl, as quite an extensive institution. It carries in stock a complete line of Barnhart Bros. & Spindler's copper-mixed type, as also all material for the perfect equipment of an office. Knowing the requirements of its patrons and the growing demands of the West, it is in a position to promptly and satisfactorily fill all orders. It possesses a relic in the shape of a Northrup press, manufactured in Syracuse, New York, one of the first of which was used in Chicago, in 1853, in the pressroom of the *Daily Courier*, in the purchase of which the writer was interested.

THE OMAHA TYPEFOUNDRY,

successor to the Union Typefoundry, of Omaha, 419 South Eleventh street (Mr. H. J. Pickering, formerly cashier of the Campbell Press Company, in this city, manager), is agent for Marder, Luse & Co., Boston, Central, Cleveland and Manhattan Typefoundries, and is also the western branch of the Union Typefoundry of Chicago. Under Mr. Pickering's able and energetic supervision this establishment is becoming one of the most prosperous of the kind west of the Missouri.

THE REES PRINTING COMPANY,

lithographers, printers and blank-book manufacturers, which have recently removed from their old quarters to their new and commodious four-story building, southwest corner of Eleventh and Howard streets, is one of the leading if not the leading printing establishment in the city of Omaha, employing fifty hands in the various departments. "Best work and fair prices" is their motto; and, as it is carried into practical effect, the result is a handsome patronage and an excellent reputation. The officers are Samuel Rees, president; J. F. Fairlie, vice-president; Edward Haymaker, secretary.

J. O. FISHER,

formerly manager of the *Hastings (Neb.) Gazette Journal*, whose work has frequently been commended in the columns of THE INLAND PRINTER, is now located at 1011 Farnam street. His specialty is fine printing, and from the specimens shown us we should infer there is little danger of his losing his well earned reputation. With new material, new presses and good workmen there is no reason why success should not be assured. In the pressroom are three Whitlock cylinders, which are giving perfect satisfaction, and three Gordons.

We also visited the establishment of Gibson, Miller & Richardson, the *Bee* office, in which sixty men are employed, and whose proprietors are erecting a handsome eight-story building on the corner of Eighteenth and Farnam streets; the *Republican*, *World* and *Herald* newspaper establishments, all of which seemed to be doing an excellent business. Perfecting presses, equal to any in the country, told the story of Omaha's progress, and "our facilities are not equal to the demands made upon them," implied, of course, still further orders.

We were pleased to learn that the typographical union was in a prosperous condition, and that good feeling existed between employer and employé. Thus may it ever be.

MONUMENT TO HORACE GREELEY.

In the workshop of the sculptor, Alexander Doyle, at 229 East Twentieth street, is the model of the statue which is represented in the picture in this column. It is the figure of Horace Greeley, printer, journalist and politician, and some day a bronze cast of it will rest on its stone pedestal in City Hall Square, on the side opposite Newspaper Row.

The idea of doing honor to Greeley by erecting this monument to his memory originated with Typographical Union No. 6, and has been taken up by all the printers of the country. Greeley was of them, for them and with them from the time he left his country home until he died, and when the plan of making a statue of him was suggested some time ago the printers felt that to their craft belonged the duty of paying the bill. Exactly how the money will be collected has not yet been decided, but it is probable that every typesetter in the land will have a chance to chip in. This would make the burden light for each, and although the statue will cost between \$10,000 and \$15,000, it is believed that the amount can easily be obtained by 10-cent subscriptions.

Mr. Doyle sketched his model some time ago, and the design has been accepted. It stands on a platform in his shop, modeled in a rough way on a small scale, but yet showing clearly what the finished model

MR. DOYLE'S STATUE OF GREELEY.

and the bronze cast of it will be. There is to be a pedestal eight or nine feet high and of proportionate length and breadth. It will be chaste and simple in design. Mr. Doyle says the fault with too many modern statues is that they stand on pedestals so large or so ornate that the statue itself becomes dwarfed or seems secondary to the pedestal. In his design for the monument to Greeley the base is imposing in strength and massiveness, and yet so simple that it directs attention to the figure of the man above rather than away from it.

Horace Greeley was a noteworthy figure on the street or in any crowd, and the pose in which he is placed in Mr. Doyle's model is striking. He is represented as sitting in a chair—conventional or editorial, or whatever it may be—a big chair, with his back resting firmly against the frame, and his long coat hanging its tails over in front. The right leg is thrust forward, and his right hand, reaching down over the chair-arm, grasps what may be supposed to be a copy of the journal which he founded. His attitude is that of listening. The model was made without the historic spectacles, but the statue will probably have them. The good old man's whiskers, that famous covering of his neck and under chin, will also be there. Under the chair is a pile of books, just as Mr. Greeley used to have books lying around him in his editorial den. In fact, the statue will suggest Greeley as he looked when he was in his office.

It has not been decided yet just where in the City Hall Park the printers will place the stone base and the bronze statue, but it will probably be on the lawn near the street walk on the east side, facing the newspaper buildings.—*New York Sun*.

A WARNING.

We deem it a duty we owe alike to ourselves and the trade to warn them of an institution which advertises itself under the names and titles of the "Imperial Type Company," the "Geneva Publishing Company," and the "Wrinkler Company," located at Geneva, New York. We understand several trade journals have been victimized, and that their advertising bills remain unpaid. We have afforded this party every facility for payment; but, so far, all our efforts have been in vain.

CHICAGO NOTES.

Kropidlo, a Polish newspaper published in this city, has suspended.

H. H. LATHAM, 318 Dearborn street, has just furnished a \$5,000 printing machinery and bookbinder's outfit to Mr. George Halla.

CLINTON B. EVANS, formerly financial editor of the *Chicago Tribune*, has issued the first number of a new financial paper called the *Economist*.

THE Chicago Paper Company's new catalogue and price list for 1889 has appeared. The cover is of handsome design. This firm is now located at 120 and 122 Franklin street.

GEORGE H. TAYLOR & CO., 184 and 186 Monroe street, Chicago, have just issued a new sample book of the papers they carry. It is gotten up in very neat style, and contains a fine lot of samples of the goods handled by the firm.

MORGAN BATES, formerly one of the publishers of the *Marshall (Iowa) Statesman*, but more recently connected with the editorial department of the *Chicago Daily News*, is now one of the owners and business manager of the *American Poultry Journal*, of Chicago.

BUSINESS during the past month has been very quiet, and the printing trade has suffered with the others. A hopeful view of the future, however, pervades all quarters and every one talks of the outlook with cheer. Country orders have been slow, but even now are "picking up."

THE Cook County Board, on the recommendation of the Finance Committee, has decided to settle the outstanding stationery bills of the J. M. W. Jones Stationery and Printing Company, contracted by the old "boodle" board, for \$11,500. This is \$2,701.33 less than the original amount charged.

THE fall edition of the *Chicago Specimen*, published by Marder, Luse & Co., has just been issued. It maintains the deservedly high reputation which this journal has secured, and contains, among other novelties, a number of attractive pages of new type-faces and ornamental designs.

MR. J. E. BARMAN, an old-time Chicago printer, formerly connected with the *Journal* as compositor and proofreader, and latterly with the A. N. Kellogg Newspaper Company, has gone to New York to take charge of the National Press Stereotype House. Mr. William F. Wagner assumes Mr. Barman's position as correspondent at Kellogg's.

SLASON THOMPSON & CO., publishers of *America*, have purchased the subscription list, good will and business of the *Current*, and after the issue of October 13 the latter publication was merged into *America*. This leaves the field of literary weekly publications to *America* alone, and will undoubtedly build up on a more substantial foundation the excellent start *America* has already made.

THE Illinois Paper Company, corporation, organized under the state laws of Illinois, with a capital of \$40,000, succeeded the Chicago branch of Friend & Fox Paper Company, on the first of November. The officers are: John Cochnower, president; George N. French, vice-president; James White, secretary; John C. Wright, treasurer. The new company will remove from their present quarters, 151-153 Wabash avenue, to more commodious and centrally located premises, 181 Monroe street, January 1, 1889.

SPECIAL attention is called to the advertisement card of P. R. Audibert, 164 La Salle street. This gentleman has had a long experience as a first-class designer and engraver, both in Paris and New York, and we can conscientiously recommend him to the trade. His portrait work especially reaches a degree of perfection seldom found, and his cuts of

buildings, landscapes, machinery, etc., are executed with skill and dispatch. Special attention is given to all orders in half-tone work, and specimen sheets will be sent if desired.

A MEETING of the paper trade of this city was held at the Palmer House, on Tuesday evening, November 13. Among those present were J. W. Butler, Frank Butler and C. M. Davis, of the Butler Paper Company; A. T. Hodge, of the Chicago Paper Company; John E. Wright and James White, of the Illinois Paper Company; James Mix, of George H. Taylor & Co.; and J. Fred Waggoner. After a general discussion of matters of mutual interest, Mr. Waggoner was instructed to call a meeting in the near future, and to secure, if possible, the cooperation of twenty gentlemen connected with the paper trade, for the purpose of forming a local association.

THE decision rendered by Judge Horton on Friday, November 9, sustained the validity of judgments amounting to \$64,309.78, confessed by the J. L. Regan Printing Company, in favor of J. J. West and others in October last, the judgments held by Mr. West alone aggregating nearly \$40,000. The litigation to set aside the judgments was begun by Charles S. Burch, the receiver of the company, on the ground that there was fraud and a want of consideration in the execution of the notes; that the judgment notes were entered up while the company was solvent; that they had been executed by the president and secretary of the company without authority from the directors, and that the directors were trustees for the creditors and could not give preferences. All these points were dismissed by the court, who decided that the preferred creditors did not know of the insolvency until the time of the entry of the judgments. The court also held that the money loaned the company by Mr. West was loaned upon the false representation of J. L. Regan, who claimed that the concern was worth \$150,000 over and above all its liabilities. The company would therefore not be allowed to avail itself of this fraud. Its assets are about \$80,000, while the liabilities are over \$100,000. After paying the \$64,309.78, there will be a little over \$15,000 left to satisfy the claims of creditors to the amount of \$60,000. It is said an appeal will be taken from Judge Horton's decision.

SPECIMENS RECEIVED.

CHAS. BIBEAU & CO., Meriden, Connecticut. A varied assortment of general commercial printing. Creditable, neat and clean.

T. A. FERLET, Galveston, Texas. A number of good, wholesome-looking every-day jobs, many of which are far above the average received.

JAS. BARELS, Le Mars, Iowa. Several specimens of every-day work, the most unpretentious of which are the most deserving. *Ne sutor ultra crepidam*.

THAD. B. MEAD, New York. A number of specimens, each one of which is a gem in its way, even if it consists of only three lines. In embellishment, "enough and no more than enough," is evidently his motto. The presswork is also worthy of highest praise.

W. M. CASTLE, Oshkosh, Wisconsin. A large assortment of exceedingly creditable specimens in colors and black. They are evidently set up by a printer and worked by a pressman who knows his business. The business card is especially unique and attractive.

W. H. WAGNER, Freeport, Illinois. Several three-sheet campaign posters in colors; attractive, well balanced and well arranged. Freeport has no reason to be ashamed of her printing offices, or the work they turn out, and, as a consequence, her merchants get their printing done at home, which is eminently proper.

J. F. QUANE, San Francisco. Business card in colors. Pretentious and yet out of proportion—too much banner and too little balance. Bad taste to put the firm name in graphic text immediately above a line of paragon antique extended, even though printed on a tint; besides, the comma is altogether unnecessary and out of place. The bottom of the card is also out of proportion to the top. The embossed "P" is likewise too large, and detracts from what should be equally prominent features.

Also from L. L. Disbrow, Milwaukee; *Chronicle* printing office, Ingersoll, Ontario; E. V. Reed, North Abington, Massachusetts; E. W. Pierce, Greenfield, Massachusetts.

TRADE NEWS.

W. J. SMITH, Alliance, Ohio, has made an assignment.
 R. M. RIGBY & Co., Kansas City, Missouri, have dissolved partnership.
 SHERRILL & FORSMAN, printers, Louisville, Kentucky, have dissolved.
 SMALL & SCOTT, printers and publishers, Minden, Ontario, have sold out.
 KELLER & PAINE, printers, Evansville, Indiana, have dissolved partnership.
 THE M. H. Hazen Publishing Company, New York, has lost \$6,000 by fire.
 MORTON & MCINTYRE, publishers, Lake City, Michigan, have dissolved partnership.
 LEUTSCHER, SCHUBEL & Co., job printers, Milwaukee, Wisconsin, have dissolved partnership.
 THE Figaro Publishing Company, of Chicago, has been established, with a capital of \$150,000.
 J. H. BURKHARDT, job printer, Albany, New York, has been succeeded by Burkhardt & Royce.
 SCHOLL & WENTWORTH, printers, Elmira, New York, have been succeeded by John B. Wentworth.
 SMALLWOOD, DEALY & BAKER, job printers and binders, Houston, Texas, have dissolved partnership.
 THE publishers of the Hastings (Minn.) *Democrat*, Todd, Riplinger & Gere, have dissolved partnership.
 GONZALES & LAUDUMIEY, printers, New Orleans, Louisiana, have been succeeded by Laudumiey & Co.
 THE Lewis & Dryden Printing Company, Portland, Oregon, has increased its capital stock to \$40,000.
 COWAN, MASHINTER & Co., printers, Portage La Prairie, Manitoba, have been succeeded by Cowan & Co.
 T. L. GANTT'S Sons have started a printing establishment in Elberton, Georgia, and will publish a paper.
 B. B. BEMIS, printer and publisher, Oregon, Illinois, has been succeeded by the Calumet Printing Company.
 THE Champion City Times Company, publishers, Springfield, Ohio, has been succeeded by A. D. Hosterman & Co.
 THE Porter Printing Company, of Rock Island, Illinois, has increased its capital stock from \$18,000 to \$23,000.
 THE Fitchburg (Mass.) *Evening Mail* has put in a new improved heavy Whitlock cylinder press and ample steam power.
 SHUBERT BROTHERS, lithographers to the trade, have removed from Akron, Ohio, to 27 Board of Trade building, Detroit, Michigan.
 E. R. CARSWELL, Jr., Atlanta, Georgia, has formed the Southern Baptist Publishing House (capital stock, \$100,000), to publish papers, etc.

THE firm of Owen & Bibeau, printers, Meriden, Connecticut, was dissolved October 1, 1888. The firm name is now Charles Bibeau & Co.
 At a meeting of the Typefounders' Association, held in St. Louis, October 2, the following schedule of prices on type was adopted, to go into effect October 15:

	25 lbs. or over.	500 lbs. or over.	1,000 lbs.
Agate.....	74	72	71
Nonpareil.....	64	62	61
Minion.....	56	54	53
Brevier.....	52	50	49
Bourgeois.....	48	46	45
Long Primer.....	46	44	43
Small Pica.....	44	42	41
Pica.....	42	40	40

THE Child Acme Cutter and Press Company, Boston, report business good, and recent sales to J. H. Gondale Sons Company, Milwaukee, Wis.; Davis & Henderson, Toronto, Ont.; L. Crane, Jr., & Brother, Dalton, Mass.; Lowell Manufacturing Company, New York (three machines); Schilling Corset Company, Detroit, Mich.; Lindner, Eddy & Claus, New York; G. H. Buck & Co., New York; B. M. Harris,

New York; W. H. Ward Company, New York; Eaton & Peck Company, Meriden, Conn.; Donald Kennedy, Roxbury, Mass., and Hollingsworth & Whitney Paper Company, Boston.

THE Great Southern Printing and Manufacturing Company, manufacturers of paper bags, Frederick, Maryland, has increased its capital stock to \$100,000.

F. C. NUNEMACHER, the well-known printer of Louisville, Kentucky, has purchased the exclusive right to manufacture the Stromberg patent railway coupon ticket for the southern states.

AULT & WIBORG, Cincinnati, have just been awarded the contract to furnish, during one year, to the *World*, New York City, 350,000 pounds of news ink, accompanied by a very flattering testimonial on the quality of the ink heretofore furnished by this firm.

NEWSPAPER GOSSIP.

RED CLOUD, Nebraska, is to have a new daily paper.
 THE Vancouver (B. C.) *World* is a new seven-column folio.
 THE San Francisco *Occident* has entered upon its eighteenth volume.
 THE Herald Company, publisher of the *Daily Herald*, Kalamazoo, Michigan, has sold out.
 ONE day's newspaper and magazine mail in the New York postoffice was 134 tons, or 267,580 pounds.
 THE *Journalist* says that a new weekly paper will be started about December 1, to be called the *Moon*.
 THE *Gael*, published monthly, in the Celtic language, at Brooklyn, New York, has completed its sixth volume.

THE *Times* is the name of a new afternoon paper started at Tuscaloosa, Alabama. W. C. Jennison is proprietor.

IT is said that sixteen newspapers published by the colored men in this country supported Cleveland and Thurman.

R. D. KELLEY, recently of the Deadwood *Pioneer*, has commenced the publication of a democratic evening daily in Omaha.

A NEW daily has been launched at Beaver Falls, Pennsylvania. Its name is the *Democrat*, and its editor is George W. Penn.

CHARLES T. LAMBERT, Thomas W. Cassell and others have incorporated the Peoria Daily Press Publishing Company, at Peoria, Illinois.

JULIUS L. BROWN, W. T. Gentry and others have, it is reported, formed a \$50,000 stock company, to publish a paper at Atlanta, Georgia.

THE St. Albans (Vt.) *Messenger* has put in a new Cottrell two-revolution press, with a folder attached, and appears in a new and handsome dress.

THE Springfield (Mass.) *Republican* is about to increase its size by adding another column to its width, making eight instead of seven columns to the page.

THE Evening Journal Publishing Company, Dallas, Texas (capital stock, \$15,000), has been incorporated by M. H. Redfield, J. P. Jones and George Y. Byrne.

THE *Personal Rights Advocate* is the name of the new quarto, seven-column journal published in Chicago, in the German language, by the Personal Rights League.

THE *Childress County Index* is a five-column quarto recently started at Childress, Childress County, Texas. James Harrison is editor, and it is democratic in politics.

IT is said that Messrs. Cook & Sons, of the Milford (Mass.) *Journal*, have decided to issue a daily, in response to a request from over three hundred citizens of that place.

THE *Deutscher Anzeiger*, Freeport, Illinois, is about to don a new dress. It is a neatly printed and ably edited journal of twelve pages. W. H. Wagner is the publisher.

THE New York *Star* was sold at sheriff's sale on Tuesday, October 30, and was bought by George E. Downs for \$700, subject to a mortgage of \$25,000 held by S. W. Andrews and recorded judgments of about \$100,000. The person known as George E. Downs is employed

in the office of C. P. Huntington, who it is supposed is the owner of the paper. The paper is being published as usual, but the new purchaser has not yet taken possession.

A NEW YORK *Journalist* correspondent says there are a number of growing towns in Florida without a newspaper, where shrewd parties might make country weeklies pay.

THE Waltham (Mass.) *Weekly Review*, a new eight-page paper, edited and owned by Thomas B. Eaton, Esq., has made its appearance. The paper typographically is a neat one and excellently printed.

WE have received a copy of the *Rockford Furniture Journal*, devoted, as its name implies, to the manufacture of furniture and kindred industries. The trade has an organ in this paper of which it may well be proud.

THE New York *Journalist* offers a prize of \$20 for the best article on "The Relations of Amateur and Professional Journalism." The article must not be over 2,000 words in length nor under 1,000, and must be written by a genuine amateur journalist.

WE have received the August number of the *Modern Printer*, published in London, England, by M. P. McCoy, which contains the announcement that it is the last number which will be issued. A change in business is the cause assigned for its suspension. It was a very creditable publication.

PAPER TRADE ITEMS.

EFFORTS are being made by John A. Foreman and others to secure the establishment of a paper mill at Wichita, Texas.

THE Kingsley Paper Company, of Cleveland, Ohio, assigned on October 19, with liabilities estimated at \$40,000, and assets at \$60,000.

THE first paper mill in the United States was at Chester, Delaware, being established in 1714. Benjamin Franklin purchased his supplies at this manufactory.

S. B. MARKLE, paper manufacturer, at Mill Grove, Pennsylvania, has made an assignment. Judgments for \$10,000 had been previously entered against him.

IT is stated that Pennsylvania parties have made arrangements to establish a paper mill at Anniston, Alabama. This will be the first paper mill in the state.

THE Byron Weston Company, of Dalton, Massachusetts, for the manufacture of paper, has been incorporated with a capital of \$200,000. Hon. Byron Weston is president and treasurer.

THE Valley Paper Company have just put two new papers on the market—one a ledger, with the watermark "Valley Linen Ledger," and the other a superfine, marked "Valley Paper Co."

THE Winona Paper Company, of Holyoke, Massachusetts, of which the lamented Col. R. M. Pulsifer was president, has decided to increase its capital stock from \$200,000 to \$300,000, the addition to be paid in cash.

H. F. LEDDY, as agent for Robert Fletcher & Son, paper makers, Stoneclough, near Manchester, England, has taken an office at 111 Broadway, New York, with a view of introducing the papers of that firm in this country.

THE Poland Paper Company, at Mechanics Falls, Maine, which started in business about fifteen months ago, now makes five to six hundred tons a month of book and news. The company has six mills at the Falls, and other mills at Gilbertville.

AMONG the novelties of German paper-making the *Papier Zeitung* mentions envelopes made of carton. They are especially adapted for carrying cards, photographs, art sheets and samples of fine paper through the mails without injury, and are brown on the outside and white within, and are made in all sizes.

AN arrangement to overcome the froth on a paper machine is illustrated and described in a recent *Papier Zeitung*. It consists of a pipe pierced with small holes, which is screwed to a post near the end of the "sand-catch" and the entrance to the "knot-catch." This pipe is connected with the water supply by a cock, and when in use sends a fine spray upward a little and then falling strikes the froth, causing the bubbles of air to burst. This pipe can be attached at the beginning of

the collecting reservoir or at any other place where the froth is greatest, and the contrivance is especially helpful in making strong carton paper where much wood and "filling" stuffs are used.—*The Paper World*.

THE contract for supplying paper for printing the United States internal revenue stamps has been awarded to the Fairchild Paper Company of East Pepperell, which is under the management of Charles W. Gardner, formerly agent of the Carew Paper Company, of South Hadley Falls. The price for the contract is 6.7 cents a pound, and 550,000 pounds will be required.

MR. EMILE BOHN, of Galveston, had on exhibition yesterday at the Cotton Exchange samples of fiber from the cotton-seed hulls. Mr. Bohn claims that he has invented a process of manufacturing paper from the plant, utilizing the stalk and hulls, and his mission here is to introduce the matter to the attention of the capitalists of Houston, and, if a stock company with about \$25,000 can be gotten up, to erect a factory here.—*Houston Post*, September 28.

THERE are now in Japan ten paper factories, built according to European methods, and supplied with thirteen paper machines. All of these factories work rags and make principally printing paper, which is now used almost exclusive of the fine hand-made paper. This latter is made from the fibers of the mulberry-tree by a secret and tedious process, and is costly. Wages in Japan are 12 to 15 cents daily to men, and 7 to 10 cents to girls, but in these factories the employes are paid twice as much, and skilled hands get still higher pay. Rags are getting scarcer and dearer and an effort will soon be made to introduce wood-pulp and cellulose manufacture. A Japanese paper maker from Tokio has been in the United States and bought the needed machinery, and now is studying German methods in these branches of paper making.

TWO PRINTED PRINTERS.

Barker Bradford tells an amusing story about one of the many funny incidents in his early experiences in the publishing business:

"Fred Van Campen and I started an alleged funny paper in Chicago some years ago," said Bradford. "We set the type ourselves, and in fact did all of the mechanical work as well as attending to the editorial and business departments, such as they were. We didn't need a cashier, so we saved nothing in that department. One day, in some manner or other, 50 cents came into the office. It was in the winter time, and we were always cold and hungry. We slept on the floor, using the exchange list for sheets and the planer and Van Campen's shoes with our coats over them for pillows. When we got hold of the 50 cents there became a matter of discussion as to whether we should buy crullers and coffee or something to cover ourselves when sleeping. There was steam in the building but the pipes grew very cold in the middle of the night. Well, we 'jeffed em quads' to decide the question, and the bed clothes' side won. Van Campen said he knew where two good quilts could be purchased for 25 cents each, and off he started to obtain them. It was Saturday night and very cold, and when we lay down on the exchange list and put the quilts over us, we both felt sure that heaven was on earth, if it wasn't anywhere else. The quilts were beauties 'for the money.' They pictured all kinds of animals in printed colors—red, green, yellow, brown, black, white, gray, olive, purple, blue, orange and all other colors—and were of light calico-like material, filled with cotton-batting, which, in the night, all went down to one end like shot in a canvas bag. I don't remember just how it happened, but during the night the janitor turned on the steam. Our windows and doors were closed tightly, and the little room soon became as hot as a cheap Turkish bath house. We—poor devils—worn out from the day's struggle at the case, and weak from starvation, did not awake until it was daylight. I remember opening my eyes first. I was as wet as a sponge in a bathtub and as hot as a piece of roasting pork. I looked at Van Campen, and saw him gasping for breath. I awakened him and we both started for the window, and threw it open. I will never forget the condition poor Van Campen was in, and he says the same of me. He had a yellow dromedary on his hip, a pink lizzard on his neck, a purple toad on his arm, and all kinds of highly colored birds and beasts all over his entire frame. He said I looked like a tattooed fiend, and I thought it might be so if I looked anything like him. The paper 'busted' the next week."

ESTABLISHED 1830

ART PRINTERS

OF INTEREST TO THE CRAFT.

THE Boston *Herald* estimates that 4,437 new books were published last year in the United States.

CONGRESSMAN ROBERT J. VANCE has been elected an honorary member of the New Haven Typographical Union.

TRADE in most towns on the Pacific coast is very dull, and the outlook for the winter months is far from encouraging.

A NEW afternoon paper is shortly to be started in Philadelphia, under the management of Mr. School, late of the *Evening Star*.

TYPOGRAPHICAL UNION No. 7, of New York, has engaged an instructor to teach its members the technical points in English composition.

PITTSBURGH Typographical Union now has a membership of over five hundred which will entitle them to three delegates at the next session of the International.

READER, don't you think the colored inserts in the present issue of THE INLAND PRINTER are beauties? We do. They will stand examination and commendation.

OAKLAND (Cal.) Typographical Union has decided to raise the price of composition from 35 to 40 cents per thousand on evening papers, and from 40 to 45 on morning.

PRESIDENT PLANK, of the International Typographical Union, has commissioned Messrs. Driver, Glaser and Faries, members of No. 2, to audit the accounts of the trustees of the Childs-Drexel fund.

THE London (Ont.) *Advertiser* jobroom has secured the printing of the city directory, which is now being canvassed for. This will give employment to a good number of workmen during the winter months.

A CORRESPONDENT, writing from Los Angeles, November 6, says: "Please state in your next number, in regard to the outlook here, that printers continue to come this way, and when they arrive find nothing to do. There are thirteen cases on the *Tribune* and twenty subs."

MR. JOHN MCVICAR, whose portrait was published in THE INLAND PRINTER a short time since, twice president of the International Typographical Union, and for ten years past managing editor of the Detroit *Evening News*, has severed his connection with that paper on account of differences between himself and E. W. Scripps.

WE acknowledge receipt of complete specimen book of type, borders, cuts, etc., of George Bruce's Son & Co., 13 Chambers street, New York, which is an elegant volume. It contains, in addition to the regular specimen pages, "a collection of facts and opinions descriptive of early prints and playing cards," by Theo. L. De Vinne.

THE typesetting contest between teams of compositors of the Los Angeles (Cal.) *Tribune*, which took place a short time ago, resulted in favor of the team composed of H. P. Rennie, J. W. Noble and R. E. Schroder, who set 759,000 ems in thirteen days of ten hours each. The second team — C. D. Rogers, W. Adams and H. Wilson — set 680,000 ems, and the other two teams fell far below this record.

FOREIGN.

THE tenders for printing and supplying 955,335,000 tobacco wrappers for the Turkish government, were opened on September 19, when M. Chaise, of Paris, whose tender was by far and away the lowest, was declared the furnisher. Twenty-three firms tendered: four French, six Austrian, eight German and one Italian.

THE dispute between the Typographical Society and the master printers of Victoria has been settled, the latter giving in to the demands of the men. A conference of master printers, which sat for several days, have consented to the requests of the society that 'stab hands should be paid at the rate of £3 per week, and piece hands at 1s. 2d. per thousand.

THE establishment of a technical school has at length received the approval of the Italian government. This approval consists of an official recognition of the Milanese School of Typography, whose provisional commission have placed their powers in the hands of the new council. It is to be regretted that the Italian Typographic Association takes no interest in the question of technical education.

ITEMS OF INTEREST.

THE late Col. Royal M. Pulsifer's life was insured for \$200,000, which was made payable to his wife.

THE office of the *British and Colonial Printer and Stationer*, London, England, has been removed to 58 Shoe Lane.

MARINONI, the eminent French press builder, has recently placed on the market a new rotary machine for cut work, which is very highly spoken of.

TO MAKE labels adhere to tin, take of flour six ounces, of molasses one-half a pint, and of water one pint and a half, and boil as usual for flour paste. Or, dissolve two ounces of resin in one pint of alcohol. After the tin has been coated with the solution, allow nearly all of the alcohol to evaporate before applying the label.

NOW comes another wonderful novelty in transferotype paper, which transfers a photographic image to any substance known, whether it be metal, glass, wood, canvas or china. One of the applications of this process will be the transferring of pictures to plaques and canvas, so that they can be painted as the artist desires.

THE eighty-fourth annual report of the postmaster-general of England shows that the number of letters, post-cards, book packets, circulars and newspapers delivered in that country the past year, is 2,242,800,000, besides 13,436,000 sent to the returned letter office. In addition to this there were 39,731,786 parcels delivered and 53,403,425 telegrams.

A METHOD of removing grease-spots from paper, that is confidently recommended, is as follows: Mix burned magnesia with an equal quantity of benzole. It will soon crumble, and the grease-spots are then to be rubbed with it and the grains brushed off. Old spots require two or three applications. The mixture may be kept if put in a wide-mouthed bottle or jar with a glass stopper.

A RATHER unusual ocean trip was recently made by William P. Raynor, of Raynor & Martin. At 12 o'clock noon on Saturday, October 13, he took passage on the Cunard steamer Umbria, and arrived at Queenstown at six o'clock, on the night of Saturday, October 20. He left Queenstown, on his return, on Sunday afternoon, October 21, and was at his desk on Tuesday, the thirtieth of the same month.

GEORGE W. CHILDS never sits in a street car, says the Philadelphia *Times*, while there is a woman standing. No matter what her station in life, the moment a woman gets in he gets up. This often embarrasses some of Mr. Childs' acquaintances, who are not in the habit of giving up their seats to ladies, but they usually follow his example, so that there is rarely a woman left standing in a car in which Mr. Childs rides.

MR. F. A. BAGLEY, of Cherokee, Iowa, has invented and patented what he calls an "automatic feed gauge." It is a mechanical device which, when attached to the gripper of a job press and properly adjusted, will accurately place the sheets in the required place on the platen if placed within an inch of the proper position by the feeder. That it will do this the writer can attest, as he not only witnessed but himself made a practical test. It is made in three sizes — for eighth, quarto and half-medium presses, at \$2.50, \$3.00 and \$4.00 respectively. —*Exchange*.

THE invention of John J. Allen, of Halifax, England, is a device for feeding separate sheets of paper to cylinder presses. The component parts of this invention are few, the arrangement simple and the operation seemingly effective. The paper sheets to be printed are supported upon an inclined table, suitably mounted upon the frame of the press. Beyond the forward end of this table the sheets project slightly and rest against a fixed upright plate, or stop. Between the stop and the forward end of the inclined table, and beneath the overlapping ends of the sheets, is placed a "plunger," capable of vertical motion. A rotating "feeder-wheel" is placed above the "plunger" at such a distance as not to bear upon the pile of paper sheets upon the inclined table. It will be seen that if, at the proper time, the "plunger" be moved upward, it will raise the overlapping edges of the pile of sheets, thus forcing the upper sheet against the surface of the rotating "feeder-wheel," and the revolutions of this wheel will move the sheet forward, over the top of the stop-plate and into position to be seized by the grippers of the cylinder.

A WORD ON PRINTING PRESSES.

IN none of the various and numerous branches of applied mechanics have there been made such vast and valuable improvements during the past quarter century as in the manufacture of cylinder printing presses. Occasionally we see running a cylinder press built early in the sixties, or even previous to that; and we of this latter day, with the knowledge of the art of producing good presswork, and alive to the need of years of thought and conscientious labor to make it possible to produce it, stand marveling at the excellence of some of the presswork of those days, and in admiration of the masterhand that wrought it.

The series of articles which have appeared from time to time in THE INLAND PRINTER, tracing the evolution of the printing machine from the earliest periods to the present time, have been worthy of

NO. 1.—THE BED RACK.

careful perusal by everyone identified with the art of printing, or in its various ramifications. They were broad and general in treatment, and so thorough and painstaking throughout as to make every one who read them the wiser for the reading.

Particularly valuable were they to pressmen, the very essential of whose enlightened labor is a thorough acquaintance with printing machinery — not only the make of press which they have used or may be using, but of all styles and all makes applicable to the various classes of presswork. A pressman is not master of his trade if he be lacking in this; and yet how very few there are who know, except in a most superficial way, the advantages of this press over that, the faults of that press over this; and this very lack may, in these days of low prices and close competition, be the means of serious financial loss to himself or to his employer, as the case may be.

Hence this article. If it be the means of making known to some of those who run printing machinery the point of perfection which the printing press of today has reached, its mission will be fulfilled. To those who already, by experience, are conversant with the *new* Whitlock

impression, facility and rapidity of making ready, distribution of ink, and, when ready, the speed at which work can be gotten out.

The first of these two principles is always the first; for a machine that is not mechanically correct in all details will be found wanting in some one or other part of the work it is designed to perform.

The vital parts of a machine are those which do the heavy work, and mostly all of these are underneath the type-bed. The Whitlock presses, all, with the exception of the smallest size of the job and news series, are driven by the Napier movement, consisting of universal joint-shaft, bevel rack and pinion; but the difference between these parts on the Whitlock press and as used on other presses is, that while most all other makers use a wrought-iron joint-shaft, a cast-iron bevel rack and a cast-iron pinion, the shaft as used in the Whitlock press is made of *steel*, the pinion is made of *steel*, and the bevel-rack — that most vulnerable part of a printing press — is also made of *steel*. And not alone in the metal does it differ from the rack ordinarily used, but that each tooth in the rack is distinct and separate from the others (see illustration No. 1). Stronger and stiffer than if in one large piece, it offers this advantage: that in case of accident — and accidents will happen — a broken tooth or two, or a dozen, can be readily replaced at no cost of time, if a few teeth be kept on hand, and but slight monetary expenditure. There have been single-tooth racks before, but the liability of a tooth dropping out through carelessness or usage made them useless, so they have been discarded. This possibility has been here overcome, and each tooth is absolutely certain to remain in place.

The tracks and friction rollers on which the bed of the press travels next engages our attention. On all Whitlock presses of the job and news series there are two tracks, with the friction rollers in them three inches apart from center to center. In the Whitlock extra heavy and two-revolution presses larger than No. 3 size (bed 22 by 28) there are four tracks, with friction rollers three inches apart from center to center. The shoes are steel, as are the rollers; but the difference in shape from those used in other presses is worthy of reference to. The roller frame is the same as other frames

NO. 2.—FRICTION ROLLER FRAMES, SHOES AND ROLLERS.

are, but the steel shoes are not, as usual, merely flat steel bolted in the center of the frame, allowing the sliders to run along the sides of the shoes as the friction rollers travel on them. In the Whitlock, as one can readily see in the illustration (No. 2), the roller shoes are milled

NO. 3.—AIR CONTROLLING APPARATUS.

press this rehearsal of the claims made for it will be none the less interesting.

Two principles are minded in the consideration of the merits or demerits of a printing press. The first, workmanship — under which head comes weight, quality of metal, the use of steel, wrought-iron or cast-iron in its proper place, accuracy of adjustment, durability and finish; the other, execution — which general term includes register,

at a bevel to receive, exactly, a roller with beveled edges; the shoes on the bed itself are milled similarly; to what end? This: that where, with the shoes and rollers and sliders of all other makes of presses, the oil for the preventing of undue friction is uselessly lying in the gutters along the shoe, while the shoes themselves and friction rollers are dry, wearing all the time, causing unevenness in the bed and a greater difficulty in making ready, every

drop of oil put in the runners of a Whitlock press is taken and used to its fullest extent, the friction reduced to a minimum and the wear to almost nil! The type-bed, true in its runners, all else being correct, is absolutely true to the cylinder, and the making ready of a form a matter of the unevenness of the type or plates. Nor does the advantage end here; for, by means of the positive forward and backward running that the snugly-fitting friction rollers impart to the travel of the bed, the side lash, commonly found where the ordinary shoes are used, is entirely taken up without friction. The air springs of today are many. Most usually the air chambers are supplied with pet cocks which are opened or shut by hand, as also are the plungers moved forward and backward when the speed of the press is to be changed. There are various devices for changing the air cushion when required, but all are more or less intricate, and almost always are unused by pressmen because of that. But the air-controlling apparatus on the extra heavy and two-revolution Whitlock presses is so extremely simple and so absolutely perfect and effective withal as to make it worthy of mention here.

The illustration (No. 3) shows the air chambers, which are bolted to the frame of the press, with the pipe connection from both ends leading to the valve. This latter consists of a set of pipes for each end of the press, brought together in the valve head. The small lever F in the cut can be turned at will, opening or shutting, as the need be, one, two or all the pipes, assuring (as the marks on the outer plate will show) the proper quantity of air for the desired speed; and this in the twinkling of an eye, either while the press is running or is idle. There is neither possibility of wear nor break, and, used as it should be, will lengthen by years the mechanical life of a press.

Thus far have we shown the wider differences between the Whitlock press and those of other makers; for the parts above referred to differ

than any other press builders in this country) that devotes as much attention to the finish of the bed and cylinder as do the manufacturers of the Whitlock press.

All the cylinders on Whitlock presses receive their first turnings on a lathe, but after receiving the first turnings *the cylinder is put in its place in the frames of the press in which it is to run, and there receives its last turn and its ground finish.* The type-bed, after it is planed on the usual planing machines, as in other presses, is put in its place in the press and there filed and scraped absolutely true to the impression surface of the cylinder. Consequently, with the cylinder and type-bed perfectly true, obviously a job can be made ready quicker than on any other press built. What a saving of time and money, what a freedom from annoyance and vexation is here to be had!

The register rack on the Whitlock presses is not merely a segment, but is the full length of the impression surface of the cylinder. And this is not confined to drum-cylinder presses only, as with all other makes, but is also on the two-revolution press, thereby insuring on the latter machine the register of a stop-cylinder press at the running speed of a two-revolution. This valuable improvement is patented, and can only be used on the Whitlock machine.

All the Whitlock presses weigh more than most those of other makes, class for class, and no press outweighs

it. The best iron is cheap enough to admit of all the needed metal being put into a machine where a maker believes in producing the highest class of machinery.

The conveniences about a Whitlock press—and conveniences are to the pressman's work what spice is to food—are many. The back-up motion, of which an illustration (No. 4) is shown, is simple and positive. It cannot get out of order, can be used at any part of the run of the bed, acts as a brake, and stops a press running at high speed immediately and without jar.

NO. 4.—BACKING-UP MOTION.

NO. 5.—VIBRATOR ROLLER SOCKET BEARING.

entirely from all other makers, not merely one or two. But the end is not yet. There are still more points to be mentioned.

The type-bed and cylinder of a press, and the course of handling through which they go before they are finished, bear much weight in determining the finished product. From the largest manufacturer of printing presses to the smallest, there seems to be a uniform carelessness as to the real value of perfect finish in cylinder and bed. There is but one other firm of manufacturers (and this firm has had larger experience

NO. 6.—GRIPPER OPENING ARRANGEMENT.

The vibrator roller socket (see cut No. 5) permits of the roller being swung up and out from the cylinder without taking it from its bearings—the quicker to get a sheet off the rollers, or to make easier, when space is small, the taking out for washing up.

The gripper motion (see cut No. 6) is noiseless and the opportunity of wear nothing. Breaking, through backing up the cylinder, is

impossible. The fly fingers are movable along the fly shaft. All Whitlock presses have tapeless delivery and table distribution; and the fountains are so made that the knife, being ground directly to the roller, and the roller turned not only in a lathe on centers but in the fountain frame where it is to work, admits of the use of a minimum of ink with a maximum of effect.

Therefore, bearing all things in mind, the claims of its manufacturers for the Whitlock press, "that it can produce the highest possible effect in work, at the greatest possible speed, at the least possible expense," can be readily maintained and proven.

And now just a few words regarding the *personnel* of this house, and we have done. Mr. Sturges Whitlock, president of the Whitlock Machine Company, first began making presses for John F. Henry, of New York. It was a country press, and as contract work was then, is today, and ever will be, that country press was built to be the cheapest press sold to country newspapers, with all that that implies.

However, about 1884, Mr. Whitlock, for himself, began to build his improved press by day's work. No country press is now built by this firm, the classes being job and news, extra-heavy and two-revolution presses. Gradually the merits of the new machine came to be recognized, and wider and wider grew the field, until it was deemed necessary, in March of this year, to form a stock company to successfully handle the largely increasing business that has justly rewarded the firm for the real merits of its manufactures. The officers of the company are: Sturges Whitlock, president; G. Edward Osborn, secretary, and Julius G. Day, treasurer; and their factory and office are at Birmingham, Connecticut.

AN IMPORTANT DECISION.

In response to a general request, we publish the decision recently rendered by Judge Tuley in the suit of the J. W. Butler Paper Company and others against the John B. Jeffery Printing Company and others. It is as follows:

BUTLER PAPER COMPANY
v.
JOHN B. JEFFERY PRINTING COMPANY.

The decision of Judge Tuley in the above entitled cause, rendered on October 23, sustains all the material allegations of the plaintiff's bill of complaint. It finds that in the transaction of Jeffery in the organization of the John B. Jeffery Printing Company in February, 1884, with an alleged capital stock of \$150,000, and transferring to that company his old plant, which he had used for several years, and on which he had collected of the insurance companies which had risks thereon at the time the same was damaged or destroyed by fire in December, 1883, to the extent of \$66,500, in payment for said capital stock, he received a grossly exaggerated price for his property; that the inventory and valuation of the property so transferred was made by Mr. Bond, an employe of the company, under the direction of Jeffery and Pomeroy; that the property was afterward appraised by four persons, all of whom but one were employes of the company, who accepted the values placed upon it by Jeffery and Pomeroy at \$170,492.

The company assumed the payment of \$5,942 owing by Jeffery, and Jeffery offered to abate \$15,000 on the appraised valuation, and the property was transferred on that basis.

The court holds that Jeffery must account for the difference between the actual value of the property and the amount for which it was transferred to the old company.

The court finds that the several judgments entered on confession against the company on May 19, 1886, in favor of the following named persons for the following sums were wholly void, to wit:

Daniel K. Tenney	\$25,100.00
Emma J. Jeffery	38,611.00
Another judgment in her favor for	5,266.50
Another for	10,977.89
One in favor of Burr Robbins for	5,413.30
One in favor of the Tyler Paper Company	22,758.50

Amounting in all to\$108,127.19

That executions were immediately issued on these judgments, and the property of the corporation levied on about 5 o'clock P.M. the same day. On the next day three creditors' bills were filed upon one of Mrs. Jeffery's judgments and the judgment in favor of Burr Robbins and the Tyler Paper Company. The company appeared by Judge Cothran, and consented to the appointment of George T. Pomeroy, the secretary of the company, as receiver. Pomeroy at once took possession and continued the business of the company. Pomeroy immediately after his appointment entered into a stipulation with the sheriff, approved by the Superior Court, by which he (Pomeroy) took possession of all of the property subject to the rights of the sheriff under the levies made, with authority to finish contracts on hand, accounting to the sheriff for material used; that the business was continued without interruption; that the sheriff advertised the property for sale by a very general, if not an obscure, description; that all of the tangible property

was sold by the receiver under the direction of the Superior Court about July 25, to Daniel K. Tenney, trustee for the judgment creditors, for the sum of \$75,000, with leave of the judgment creditors to credit the amount so bid up upon their respective judgments; that afterward, about August 6, the accounts of the company that had not been collected by the receiver, and which amounted on their face to about \$38,000, were sold to Tenney for \$28,000. These were also applied in like manner upon the judgments entered on confession.

Within two days after the levy Jeffery commenced his efforts to form a new company, and he sought to get the First National Bank, the Butler Paper Company, and the old stockholders, except Hayden and Cottrell & Sons, to take stock in the new company. The Butler Company refused to take any of the stock, and Jeffery apparently abandoned the attempt, but his attorney, Cothran, and his bookkeeper, abettor and advisor, Pomeroy, using the same papers that Jeffery had commenced with, and with the assistance of the First National Bank, organized the corporation called the Jeffery Printing Company; that Pomeroy, who was Jeffery's other self in all the business transactions, declared that when he got up the new corporation it would be one that would stand, and he went through the form of having cash paid for the subscriptions to the capital stock.

The scheme was that certain attorneys and others were to subscribe for the stock, draw their check for the amount of their subscription, previously placed by the First National Bank, to their credit, and the corporation, going through the farce of a valuation of the property bought by Tenney, were to report it worth \$150,000, and buy it of Tenney for that price and pay him for the same by check on the First National Bank. This, the court finds, was done, and the plant of the old company was bought at \$150,000 in cash, and yet not a live dollar passed in the whole transaction, nor did the new company have one dollar of assets that did not come from the old corporation, unless the subscribers to the stock of the new corporation are liable upon their subscription, which was a point not involved in this case.

The Tyler Paper Company got stock in the new company equal to their stock in the old company and equal to the amount of their judgment, in all \$33,300, and Mrs. Jeffery got the balance of all of the capital stock in the new company.

Burr Robbins' judgment was paid by offsetting an account of the old company against Burr Robbins & Co., and the payment by Pomeroy of a few hundred dollars difference in cash.

An attorney of the First National Bank was put in as president of the new company, evidently for the purpose of protecting the bank; 1,270 shares of the new stock went to Mrs. Jeffery and were placed with the bank as collateral security for its debt of \$25,000 and interest, and the accounts purchased by Tenney were held by him as further security for the debt due the bank.

September 1, 1886, Jeffery was formally appointed manager of the new company and voted a salary back from its first organization; that from May 19, when the judgments were entered, and up to the time when the new company was organized, the business had been carried on by Jeffery and Pomeroy continuously without one hour's interruption, and to an outsider it was one and the same continuous business, and this notwithstanding the confession of judgments to the amount of \$108,000, the seizure of the property by the sheriff, the filing of three creditors' bills, the appointment of a receiver, sales by him exceeding \$100,000, an old corporation wrecked and abandoned, and a new one organized with an apparent cash capital of \$150,000.

The court decides that the bill of the Butler Paper Company is maintainable, and that the jurisdiction of the court therein grows out of the trust relation existing between the corporation and those in charge of its property and the creditors and stockholders of the company; that whenever those in charge of corporate property are about to do an act with intent to wreck the corporation or destroy the value of its property, a creditor or stockholder may maintain a bill in equity to restrain the commission of the act, or if the act is already accomplished, being the wrongdoing parties, an account concerning their trust or for other appropriate relief, the fraud as well as the trust gives equity jurisdiction; and that the bill and cross bills are maintainable upon another ground, namely, to compel Jeffery to account for the difference between the actual value of the plant sold by him and the value at which he sold the same to the old company.

That the First National Bank's debt, on which Tenney obtained judgment in his own name, was for money loaned, and that the same is true of the Burr Robbins judgment; that the court is unable to determine from the evidence what amount of valid debt Mrs. Jeffery had against the company; that her claim is subject to further examination.

That the judgments were fraudulently and collusively entered in pursuance of a scheme to wreck the company and destroy the value of its stock. The corporation was doing a large business; it had lost only about \$3,000; it had nearly \$5,000 cash in the bank; the debt of the First National Bank was not being pressed, and the bank had agreed to extend it until the show season closed, about two or three months; Mrs. Jeffery does not appear to have been urging payment, and the evidence shows that John B. Jeffery controlled her affairs as absolutely as he did his own; there was no debt to the Tyler Paper Company, and Burr Robbins was not in the city, and Jeffery had possession of his judgment note and also of Mrs. Jeffery's notes, except the two held by the bank as collateral security. The avowed reason given by Jeffery and Pomeroy for the entry of the judgments was because of the threats and conduct of Hayden and Cottrell & Sons that they would have a receiver appointed of the company's property.

That the entering of the judgments was not the aggressive acts of creditors or the exercise of legal or supposed legal rights, but they were entered in pursuance of a scheme, among other things, to wreck the corporation and render all the stock, but particularly the stock held by Hayden and Cottrell & Sons, valueless; that this scheme was devised by Jeffery and Pomeroy, aided and abetted by Daniel K. Tenney; that Mrs. Jeffery must also be held to be a party to it because of the unlimited power she allowed her husband to exercise over her judgment notes and business affairs, and that it was fair to presume that she knew from time to time what her husband was doing in her name; that she received 1,270 shares out of the 1,500

in the new corporation; that it was never intended or expected that any of the debts for which the judgments were confessed were to be paid by or through such confessions of judgment or by any adverse legal proceeding to be had therein, nor were they, in fact, so paid. There was no litigation between adverse parties; the judgments by confession and the creditors' bills and the proceedings had therein were all collusive and with fraudulent intent; that while it is true that Tenney and other witnesses swore that Jeffery protested against judgments being entered, the evidence shows that he went with Tenney to the safety deposit vault, opened the box, called for Mrs. Jeffery's box and took out certain judgment notes of hers and delivered them to Tenney to have the judgments confessed thereon; and that he also, as president, at the same time executed the judgment notes in favor of the Tyler Paper Company for over \$22,000 upon a liability not due; that he delivered Burr Robbins' judgment note to Tenney, and that upon Tenney's "stand and deliver" demand for all the cash on hand, he gave Tenney a check for the amount—nearly \$5,000—all the time protesting that judgments by confession should not be entered; that men must sometimes be judged by their acts in preference to their words.

That this court must treat the proceeds of the sales of the property of the old company as standing in the place of the property, and the parties receiving such proceeds as trustees, holding the same for the benefit of the corporation, its creditors and stockholders.

The court directs the entry of a decree finding that the judgments were entered in furtherance of the above mentioned scheme and conspiracy to wreck the corporation and render the stock worthless, conceived by Jeffery, and to which Tenney, Pomeroy, Mrs. Jeffery and the Tyler Paper Company were parties, aiding and abetting; that the judgment creditors be decreed to pay to the receiver in the case the amount credited on their respective judgments, and that Tenney be held to account for the amount received by him by way of credit on the judgment entered in his name as trustee for the First National Bank, leaving Tenney to settle matters with his client as best he can; that it is no excuse that Tenney was attorney for the First National Bank; he chose the position of judgment creditor, used it in furtherance of this scheme, and the court can see no reason why an attorney who so acts should not respond the same as another party. "It was the prostitution of a noble profession to a very vicious use."

That although Burr Robbins had no knowledge of the fraudulent purpose for which his judgment was entered, equity cannot permit him to retain the advantage of it, and that Tenney will also account for all moneys paid to him by the receiver.

That the Master be directed to ascertain and state the liabilities of the company on May 19, 1886, and if any liabilities have since been incurred to report those and how incurred, and to give notice to all creditors to prove their claims, and if any have been paid since May 19 in any other way than by receipt upon or satisfaction of said judgments the Master shall state and report by whom and in what manner and when the same were so paid.

The court reserves the question as to the effect of any such payments and the right of any such creditor to share in the distribution of the assets of the said John B. Jeffery Printing Company.

The court also finds that the Tyler Paper Company's debt was paid by its acceptance of stock in the new company. The court reserves until the coming in of the Master's report whether or not the debt of Mrs. Jeffery was also paid by stock in the new company, and that John B. Jeffery should not be allowed to participate as a stockholder in the distribution of the assets of the old company until the stockholders who are not parties to the scheme to wreck the corporation shall realize the market value of their stock on May 19, 1886, or if there was no market value, the actual value thereof.

The court also finds that Mr. Pomeroy is not a fit or proper person to act as receiver in the case, and that the decree to be entered shall provide for his removal and the appointment of a suitable person in his place, and that Pomeroy report to the court his acts as receiver and render such accounts as may be necessary.

CIRCULAR FROM PHILADELPHIA PRESSMEN'S UNION, No. 4.

PHILADELPHIA, Pa., October 29, 1888.

It becomes an unpleasant duty to inform you that the friendly relations that have previously existed between our members and their employers have in some cases been widely severed. Our scale was set at \$15 per week in the depression of business that followed the failure of Jay Cooke, and has remained at that princely figure ever since. Business having been good for several years past, our members thought the time had come when our wages should be restored to what we received prior to the depression. Accordingly, our union, at its monthly meeting in September, resolved that our scale should be raised to \$18 per week of fifty-nine hours, and a committee was appointed to confer with the employers. This committee reported the result of their conferences at a special meeting of the union held October 20, when the union decided to adhere to the increased scale, and notified the employers to that effect. At our monthly meeting held October 27, reports were received from the various offices, and out of forty-two offices under our control thirty-one would pay the advance, while the remainder would only pay it when compelled to. The local Typothetae resolved to resist the demand, and apparently have singled out four of the largest offices in which to make the fight, which Sherman & Co. has

already started by picking out and discharging four men in their employ who have been most active in the union. We did not desire this fight, but, being in it, are going to win if possible. Our union has never turned a deaf ear to the appeals of our sister unions, and we believe that whatever service they may be able to tender us will be given willingly, and we ask you to discourage and prevent, so far as lies in your power, any pressman from coming from your locality to our city.

Pressmen, avoid Philadelphia and give us a chance to win this fight, which at least two employers have admitted is not one of wages, but is an attempt of the Typothetae to down the union; hoping—yes, believing—that our appeal will not be in vain.

C. W. MILLER,
Recording Secretary.

C. H. SCOUT,
President.

PRESIDENTIAL CANDIDATES.

The following is a complete list of the presidential candidates of the two great parties:

- 1789. George Washington No opposition.
- 1792. George Washington No opposition.
- 1796. John Adams Thomas Jefferson.
- 1800. Thomas Jefferson John Adams.
- 1804. Thomas Jefferson C. C. Pinckney.
- 1808. James Madison C. C. Pinckney.
- 1812. James Madison De Witt Clinton.
- 1816. James Monroe Rufus King.
- 1820. James Monroe No opposition.
- 1824. John Q. Adams Andrew Jackson.
- 1828. Andrew Jackson John Q. Adams.
- 1832. Andrew Jackson Henry Clay.
- 1836. Martin Van Buren William H. Harrison.
- 1840. William H. Harrison Martin Van Buren.
- 1844. James K. Polk Henry Clay.
- 1848. Zachary Taylor Lewis Cass.
- 1852. Franklin Pierce Winfield Scott.
- 1856. James Buchanan John C. Fremont.
- 1860. Abraham Lincoln S. A. Douglas.
- 1864. Abraham Lincoln G. B. McClellan.
- 1868. U. S. Grant Horatio Seymour.
- 1872. U. S. Grant Horace Greeley.
- 1876. R. B. Hayes S. J. Tilden.
- 1880. James A. Garfield W. S. Hancock.
- 1884. Grover Cleveland James G. Blaine.
- 1888. Benjamin Harrison Grover Cleveland.

TO CLEAN RUBBER BLANKETS.

From a business circular of R. Hoe & Co., New York, we extract the following: "The use of turpentine, in removing grease and color from rubber blankets, is increasing to such an extent that we desire to make a few suggestions as to its use and effect. The quantity to be used should be small as possible, and great care taken that it is thoroughly dried out before the blanket is used in printing. Otherwise, as turpentine softens the rubber face, the blanket will be injured by the pressure of the cylinder causing wrinkles to appear on the face. It is preferable to clean the blanket after work at night, thereby giving ample time for the turpentine to dry out, rather than in the daytime when the press is in use. We strongly recommend the use of ammonia as a substitute for turpentine, and with less chance of damage to the blanket. The ammonia should be diluted to about six to nine degrees strength (eighteen degrees can be easily obtained and diluted with one or two parts water), and after using it the blanket should be dusted with powdered chalk or magnesia. Ammonia will dry out very quickly (in much less time than turpentine), and when dried out leaves the blanket perfect and ready for use."

A MACHINE TO CHEAPEN TYPEMAKING.

Francis Keehn, Milwaukee, the Second-street typefounder, has secured letters patent on an invention that seems destined to greatly cheapen and simplify the process of typesetting. Everybody knows that types are cast by machinery. The work of expert hands, however, is required to finish them and prepare them for use under the system of manufacture now in vogue. Types, when they leave the machines in use at present, have a wedge-shaped jet, somewhat similar to that on

hand-cast bullets, attached to their "feet." They are placed on circular tables, picked up, and the jets broken off by nimble-fingered boys or girls at the rate of from two to three thousand per hour. The breaking off of the jet, however, leaves a rough foot on the type, and a bur adheres to the shoulder of the type. The bur is removed by rubbing the type on stone, or filing, and the rough "foot" is removed when the types are set up, a groove being made in the "feet" of the type as they stand bottom side up, fastened in a row. The machine invented by Mr. Keehn removes the jet and bur as soon as the type is made, without the type being handled. The machine, in brief, finishes the type so it is ready for the use of the printers as soon as it leaves the machine. It leaves no groove in the foot of the type. The invention is considered quite valuable.

BUSINESS OUTLOOK.

Auburn, N. Y.—State of trade, middling; prospects, not over-bright; composition on morning papers, 25 cents; evening (female), 16 cents; bookwork (female), 18 cents; job printers, per week, \$7 to \$12. We are looking forward for holiday work, which promises to "pan out" well.

Baltimore, Md.—State of trade, very bad; prospects, gloomy; composition on morning papers, 45 cents; evening, 40 cents; bookwork, 45 cents; job printers, per week, \$16.20. The trade has never been so bad at this season of the year. At least one hundred men out of work. Would advise tourists to give this section a wide berth.

Bay City, Mich.—State of trade, good; prospects, bright; composition on morning papers, 30 cents; evening, 28 cents; book work, 30 cents; job printers, per week, \$12. Business is good here now, two new papers (daily) having been started.

Bismarck, Dak.—State of trade, good; prospects, flattering; composition on morning papers, 38 cents; evening, 35 cents; bookwork, 35 to 40 cents; job printers, per week, \$18 to \$25. Work will be good here this fall and winter, on account of the legislature, and will continue into March. The territorial reports are in the printer's hands now.

Chicago.—State of trade, fair; prospects, encouraging; composition on morning papers, 46 cents; evening, 41 cents; bookwork, 35 cents; job printers, per week, \$18. Several of the boys have got bitten by election bets, but they are paying up their wagers like little men. Now that election is out of the way, more attention will, no doubt, be paid to business, and the printing trade, along with others, will reap the benefit.

Columbia, S. C.—State of trade, fair; prospects, fair and full up; composition on morning papers, 40 cents; evening, 40 cents; bookwork, \$15 per week of nine hours per day; job printers, per week, \$18 to \$20. State work has commenced and all hands engaged; subs. on hand. State work will run to December 23, 1888.

Council Bluffs, Iowa.—State of trade, first-class; prospects, good; composition on morning papers, 35 cents; evening, 30 cents; job printers, per week, \$15. Work, plenty, and no extra men in the city.

Dubuque, Iowa.—State of trade, poor; prospects, poor; composition on morning papers, 30 cents; evening, 26½ cents; bookwork, 30 cents; job printers, per week, \$14.

Halifax, N. S.—State of trade, fair; prospects, fair; composition on morning papers, 30 cents; evening, 25 cents; bookwork, per week, \$9; job printers, per week, \$9.

Hartford, Conn.—State of trade, good; prospects, better; composition on morning papers, 40 cents; evening, 35 cents; bookwork, 35 cents; job printers, per week, \$16 to \$18. Work being brisk, there are a good many compositors in town; in fact, more than are required to do the work. Especially is this so in the newspaper offices.

Indianapolis, Ind.—State of trade, good; prospects, bright; composition on morning papers, 38 cents; evening, 36 cents; bookwork, 40 cents; job printers, per week, \$16.50.

Kalamazoo, Mich.—State of trade, good; prospects, favorable; composition on morning papers, 27 cents; evening 25 cents; bookwork, 25 cents; job printers, per week, \$10 to \$12. Things will brighten up after election a little.

Kansas City, Mo.—State of trade, good; prospects, fair; composition on morning papers, 40 cents; evening, 35 cents; bookwork, 37½ cents; job printers, per week, \$17. Mr. Thompson, late foreman of the *New York Tribune*, has been made superintendent of the mechanical department of the *Times* in place of Mr. C. E. Hasbrook, whose other duties require his attention.

Lansing, Mich.—Trade brisk, and prospects encouraging, especially for next January, when the state legislature meets. All state printing paid for by the week. Book and job printers receive \$13 per week; compositors on evening papers, 25 cents per 1,000 ems. No morning paper has been published here since the suspension of the *Morning Tribune*.

London, Ont.—State of trade, good; prospects, doubtful; composition on morning papers, 28 cents; evening, 28 cents; bookwork, 28 cents; job printers, per week, \$9 to \$11. The two new papers are still alive, though trouble has been experienced over wages, money evidently being scarce. About all men are engaged. It is improbable that both the papers will receive sufficient patronage to make them paying investments.

Los Angeles, Cal.—State of trade, very dull; prospects, discouraging; composition on morning papers, 50 cents; evening, 45 cents; bookwork, 45 cents; job printers, \$20 per week. At present there are about eighty situations here, with 165 to do the work; therefore, once more we would warn printers from coming here, as not only Los Angeles, but the entire Pacific coast is flooded. A word to the wise is sufficient.

New Haven, Conn.—State of trade, quiet; might be better; prospects, not very encouraging; composition on morning papers, 40 cents; evening, 35 cents; bookwork 35 and 40 cents; job printers, per week, \$15, the scale. The *Evening Union* is within the fold. The P. P. F's had to retire after five months' service. They are like the various typesetting machines—n. g. Hope to announce the redemption of another, the *Palladium*, in your next issue. P. P. F's must get.

Ottawa, Ont.—State of trade, prosperous; prospects, brightening; composition on morning papers, 36½ cents; evening, 33½ cents; bookwork, 33½ cents; job printers, per week, \$11. Subs are not in demand. Christmas may improve matters in this respect. The *Evening Journal* employs all boys and girls at one-third wages.

Philadelphia, Pa.—State of trade, rather slow; prospects, no better at present; composition on morning papers, 40 cents; evening, 40 cents; bookwork, 40 cents; job printers, per week, \$16. The city is overrun by tourists in anticipation of the starting of a new evening paper which will start up in about two weeks.

Portland, Ore.—State of trade, fair; prospects, good; composition on morning papers, 50 cents; evening, 45 cents; bookwork, 45 cents; job printers, per week, \$21. Since last meeting the *East Portland Vindicator* and *Oregon Siftings* have been unionized.

Sacramento, Cal.—State of trade, good; prospects, same; composition on morning papers, 50 cents; evening, 45 cents; bookwork, 45 cents; job printers, per week, \$21. Union is in good condition, and our membership is growing. Hope soon not to have a non-union man here.

San Francisco, Cal.—State of trade, fair; prospects, better than for months; composition on morning papers, 50 cents; evening, 45 cents; bookwork, 40 cents; job printers, per week, \$18. Book and job business has picked up considerably in the month. Newspaper work still dull.

St. John, N. B.—Wages—composition on morning papers, 30 cents; evening, 25 cents; bookwork, 28 cents; job printers, per week, \$10.

St. Louis, Mo.—State of trade, improved; prospects, fair; composition on morning papers, 43 cents; evening, 35 cents; bookwork, 45 cents; job printers, per week, \$18. There has been a considerable impetus given to business during the last two weeks, chiefly owing to the registration, but there is an abundant supply of labor to meet all demands, and consequently no need of importations.

Wheeling, W. Va.—State of trade, dull; prospects, not encouraging; composition on morning papers, 35 cents; evening, 30 cents; bookwork, 35 cents; job printers, per week, \$15. The ball given by No 79, on October 26, proved successful far beyond the most sanguine expectations. Over \$150 was cleared.

BUSINESS NOTICES.

J. W. BUTLER PAPER COMPANY.

This firm is by no means a stranger to our readers, having been long and favorably known and having a world-wide reputation, but a few words in regard to it will still prove of interest. Located at Nos. 183, 185 and 187 Monroe street, in one of the finest structures on that thoroughfare, with the best facilities for conducting its immense business, it is one of the largest dealers in papers, cardboards, envelopes, etc., in Chicago. It supplies printers in all parts of the United States with the very best goods required to produce fine work, and at prices that never fail to give satisfaction. Established in 1844, it has, by business integrity, enterprise and push become one of the leaders in its line. Its trade mark, "Indefatigable," has been indeed well chosen, and has been lived up to from the start. This firm manufactures and handles all kinds of paper—print and book, wrapping, building board and writing papers of the Ledger, Florence, Butler, Welland, Mascot and St. Charles mills. Its line of ruled and cut papers is complete. A department of the business that has special attention is fancy stationery. In this line are embraced wedding goods, programmes, etched and embossed folders, visiting cards, mourning goods, novelties in circulars, etc. Sample books of all these goods have been prepared, and full information in regard to them will be given upon application. Ever in the lead in having on the market novelties for the different seasons as they come around, the Butler Paper Company announce that new-year cards are now ready, and the sample book just issued shows an unusually attractive assortment, there being about sixty different styles. Before placing orders for goods handled by this house, write them for samples and prices.

"THE DAUNTLESS" PRINTING PRESS.

We herewith present to our readers an illustration of a press that has been on the market a number of years, and which has proved such an excellent one for offices where a large outlay of money is inexpedient on account of the business not warranting same, that we feel as if printers throughout the country should have their attention called to it. As an honest, substantial, low-priced press, it has no superior. It is called "The Dauntless," and P. J. Jennings, of 235 East Forty-first street, New York, is the sole manufacturer. These presses are strongly built, and are guaranteed to do the finest quality of work, and will print a full form with ease. Their simplicity is one of the greatest points in their favor—being free from cams and other intricate machinery, which cause friction and loss of motion. They can be run at a high rate of speed without injury. The bed and platen are true, strong and

rigid, and there is no danger of springing or slurring, however heavy the impression may be. They have a very simple throw-off, by means of which the platen may be thrown back instantly. The grippers are adjustable and the side-arms are forgings of the best iron, neatly finished. "The Dauntless" was awarded the medal of excellence at the American Institute, New York, 1882. When looking for a simple, strong and durable press, at a low price, we advise printers to send to Mr. Jennings for information and prices. It will pay.

A NEW METAL LEAF BRONZE.

To meet the growing want of the printer's and lithographer's trades, Fuchs & Lang have got up a new metal leaf bronze to take the place of the expensive imported French leaf bronzes now in the market. Their new bronze is especially adapted to the work of the trades named, as it can be worked on all kinds of card or paper without sticking or smutting the stock, and gives an unusually fine, bright and finished appearance.

This bronze is destined to take the place of the high-priced French gold leaf bronze powders, because it will cover as much surface, does

not adhere to the rougher kinds of stock, and possesses the same brilliancy and fineness. It is carefully made by them from the scraps of Dutch metal, the best attainable article used in making high priced bronzes. It will also preserve its color and durability.

The quality of this bronze will be maintained to a uniform standard, and its price—\$1.50 a pound—the same to all purchasers.

"FROM YEAR TO YEAR."

"One of Raphael Tuck & Sons' calendars for the year 1889 is really a gem. It is in book form, and designed by J. Pauline Sunter, with couplets by Helen M. Burnside. January shows two little girls, who come timidly along drawing behind them a little wagon full of dolls; they hold one another by the hand and look as pretty as they are innocent; their hair fluttering in the breeze and falling in masses over their foreheads, their chubby little faces aglow with good-nature, and the dolls are even laughing. Their appeal, 'Could we stay this year with you?' could not be refused by anyone. They evidently stay the year, for in the pages that follow they are shown in various occupations, feeding the birds, plucking wild flowers, rollicking in the grassy fields, and sitting by the seashore, making little rivers in the sand. On the page between June and July there is a picture of a milestone almost hidden by the flowers, but on which the inscription 'Half Way,' can be seen. Throughout the calendar they are dressed in costumes appropriate to the different months of the year. In April they take refuge from the showers 'neath umbrellas; in May they fall asleep among the daisies in the field as they murmur:

"'Nodding, nodding, to and fro,
In the grass the daisies grow.'

"In December they depart, muffled up to protect themselves from the cold, their satchels on their arms; and as the hands of the clock point to midnight they say:

"'We hope you have had a pleasant year.'

"The last page of the calendar has a candle burnt almost to the bottom, and is just dying out, indicating the close of the year."—*Art Stationer.*

This charming calendar book for 1889 has eighteen pages of color and monochrome illustrations, gold edged, silk cord and tassels.

A dainty gift, to be had at all first-class stores throughout the United States, or mailed to any address on receipt of 50 cents. Address RAPHAEL TUCK & SONS, 298 Broadway, New York.

THE CHANDLER & PRICE GORDON PRESS.

We are pleased to show in this number another candidate for public favor—the Chandler & Price Old Style Gordon Press—a cut of which appears in the advertisement of this firm, on page 124. A critical examination of this press is invited, and the special features embodied in it should be noted well. Durability is one of the greatest points in favor of this new machine. Every one turned out by Chandler & Price is giving entire satisfaction, and the company are particularly proud of the fact that *not one* has ever been returned for failure to do all represented or on account of any imperfection in workmanship. Up to the present time the firm have been unable to supply the demand for these presses, but having just completed a new addition to their works—four stories, 30 by 40 feet, of brick—they have increased facilities which will enable them to manufacture from 800 to 1,000 Gordon

presses per annum, besides other articles in the line of printers' outfit, such as proof presses, galleys, sticks, rollers, mitering machines, racks, etc. Comparison of this press with all other makes is invited. It is guaranteed in every respect. Refer to advertisement for full particulars, and write to your dealer for prices and terms.

THE BROWN FOLDING MACHINES.

The statement made by the Brown Folding Machine Company on another page of this issue may surprise many who may read it, but it is nevertheless true. "Over two hundred different sizes and styles" are actually manufactured by this company, and a visit to their works, at Erie, Pennsylvania, will convince anyone who is skeptical on this point. Among the book-folding machines which are fast gaining favor are the marginal book-folders intended to take the place of the old "point" machines. They are guaranteed to do from two to three times the amount of work of the other style, and of as perfect register. Printers requiring "point" machines can be supplied with them in all the latest patterns, and with every improvement that use has suggested. The double pamphlet folder is of great value in offices where large contracts are taken for pamphlets to be delivered on short notice. This machine will fold and paste from forty to sixty thousand or more pamphlets in ten hours. We cannot take up each make and describe it separately, but name the Challenge, Job, Triumph and Monarch combination folders, and newspaper, circular, single and special folders, as among the many styles made. The covering machine which folds a sixteen-page pamphlet and the cover, and pastes them both during one operation, is another machine made by this company that is worthy of mention. No printer needing a folding and pasting machine, no matter for what kind of work desired, should fail to investigate the merits of the Brown machines before he decides which to choose.

NEW SOLID BRASS CORNERS.

One of the most useful inventions lately brought out to make the printer's work easy and his productions have a finished look, is the feature named in the heading of this article. F. Wesel & Co., of 11 Spruce street, New York, are the makers. These corners cannot get out of shape, as there is a six-to-pica brass corner soldered around them, which holds them firmly together and at the same time gives the printer a guide in setting up his page. All printers who have been making brass corners, by mitering the rule themselves and trying to get them to fit well when locking up their pages, will appreciate these corners, as the time saved will more than pay the cost of the ready-made corners. One trial will convince the printer of their superiority. They are made of all styles and faces of rule, in thickness from six-to-pica to nonpareil body. Reference to advertisement on page 161 will give an idea of the different styles of corners. Wesel & Co. also cut labor-saving rule to point system to match any of the corners, thus making an excellent joint; also manufacture ovals and circles of solid brass tube, and make all kinds of brass and steel rule. This firm furnished the rules used by the New York *Herald*, *Tribune*, *Sun*, *Post* and *World*, and many other daily papers, and their labor-saving rule is used by some of the largest book and job offices in the country. For accuracy, fine finish and reliability, secure, by all means, the brass corners and rule made by Wesel & Co.

A CHANCE—To secure the services of a thoroughly competent and responsible printer of nine years' experience in job and newspaper work. Can take full control of newspaper and job office if required. Good references. Address "PERMANENT," care of INLAND PRINTER.

AN EXQUISITE HOLIDAY GIFT.—I have a few copies left of Vol. 1, *American Printers' Specimen Exchange*, which I offer very low. ED. H. McCLURE, Buffalo, N. Y.

EVERY PRINTER should have a copy of "DIAGRAMS OF IMPOSITION" and "THE PRINTER'S READY RECKONER." Price, 50 cents each. To be obtained of H. G. Bishop, 96 Clinton avenue, Albany, N. Y., or through Farmer, Little & Co., New York and Chicago. These are the handiest and most useful works ever published for printers. Indorsed by everyone who has seen them. Agents wanted in every town.

FOR SALE—An old-established and well-equipped job printing office in one of the largest and best cities in Michigan. The proprietor has other business, and will sell at a bargain. For particulars address JAS. GRAY, Box 603, Bay City, Michigan.

FOR SALE—A good printing office in St. Paul, Minnesota, in good running order. As the parties are going out of the printing business entirely, good will thrown in *on good terms*. Will inventory about \$7,000 or \$8,000. Apply to MARTIN DREIS CO., St. Paul, Minn.

FOR SALE—One-half interest in a job printing establishment in the most flourishing city in the South. Business 1887, \$25,000; will probably exceed \$30,000 in 1888. Well equipped with good materials and machinery, including bindery. Satisfactory reasons for selling. Address "R," care of INLAND PRINTER.

FOR SALE—By all typesetters in Chicago, **TYPOGRAPHICAL HANDBOOK**, treating of Calculations in Typography. Contains new and valuable tables, rules and illustrations for computing every conceivable calculation connected with the art of printing. Price, 50c. Sent, postpaid, by J. H. GRIFFES, Box 420, Chicago. Liberal terms to agents.

FOR SALE—A democratic weekly newspaper in a flourishing town in northern Illinois. Has two cylinder and two platen presses; body type for news and book work, 300 fonts of job type, large steam engine and boiler—a complete office, in first-class condition for business of at least \$1,000 a month. Splendid opening for morning daily. No material would be required. Will be sold at a bargain. Address "X Y Z," care of INLAND PRINTER.

I WANT to buy a Job Office—first-class plant, but no fancy prices. M. C. MILES, 325 Jefferson street, Joliet, Illinois.

NEWS AND JOB OFFICE FOR SALE—In the pine region of North Carolina. Well furnished; all point system; business men propose to support a paper; good town. If you want to come South to a healthy spot, here's your chance. Good reasons for sale. \$1,000 buys all. New quarter on all ads begins Dec. 1. If you want this, address "LEADER," care of INLAND PRINTER.

THE right man can get a bargain in a well established and paying newspaper. None but good newspaper men need apply. Little money required. Address "J. J.," care of INLAND PRINTER.

WANTED—To correspond with a lithographic printer. Address J. W. YORK & SON, Music Publishers, Grand Rapids, Mich.

WANTED—To lease, with privilege of buying, a country newspaper and job office. FRANK WOODMENCY, Plattsville, Ohio.

WANTED TO BUY—A democratic newspaper. Must be in a good town or county seat, with the county either democratic or about equally divided between democrats and republicans. A location in Iowa preferred. State price and all particulars in your reply. Address "IOWA," care of INLAND PRINTER.

WANTED—The Inland Printer Co. will pay 25 cents apiece for numbers 2, 4, 5, 10 and 12 of Volume I, if in good condition, to anyone sending them to this office, or will credit the amount on subscription, if preferred.

WANTED.
Those in need of Counters to send for Circular and Prices to
W. N. DURANT,
Milwaukee, Wis.

\$1 will be paid for a perfect copy of INLAND PRINTER, January, 1886. G. A. MANZ, Syracuse, N. Y.

THE WETTER NUMBERING MACHINE

Is the only practical and well made machine that can be offered to the general printer to be used in a printing press the same as type and do good work. All its advantages secured by letters patent and will be thoroughly protected.

Rival Paper Cutter.

(Mechanical Movement
Patented June 15, 1886.)

CUT OF HEAVY CUTTER.
(See Disk and Anti-Friction Rollers.)

*The Best in the Market. Has all the Improvements of other
Cutters. Greater Thickness of Paper can be Cut.
Less Power required to do the same work.*

THE patentee of this new Paper Cutter, the "RIVAL," having had many years' experience in designing and manufacturing Paper Cutters, feels confident that this Cutter will fully meet the demands of all who wish a good Paper Cutter at reasonable prices. It has all the improvements of other Cutters, such as sliding motion of knife, side and back gauges, etc.; also has rules inserted in front and back tables. In design and finish it has no superior; in workmanship and material it is first-class. Its claims of superiority over other Cutters are based on the patented mechanical movement for operating the knife, consisting in the novel arrangement of a disk having anti-friction steel rollers, this disk secured to end of lever shaft as shown in cut; by this arrangement four inches thickness of paper can be cut with perfect ease. This being the principal point to gain in a lever Cutter, we are confident the "RIVAL" will "fill the bill."

INKOLEUM Warranted
to be the
Best INK
REDUCER and Quickest DRYER
in the World.

Directions for Use:

Remove all skin from ink in can, then pour in about a spoon-ful of Inkoleum, and mix thoroughly to consistency desired. Thin for cold room; thicken for warm room or sticky rollers. Any press can be started up without washing the rollers, upon which it can be worked clear, free and easy on any kind of paper the coldest morning in winter, regardless of fire, or the hottest day in summer, by simply putting a few drops of Inkoleum on the rollers with the fingers. Printing or Lithographic Inks of any color or stiffness can be reduced quickly without in the least impairing the color. For fine tint work Inkoleum works miracles, as it makes the ink cover charmingly, and dries quickly. No spreading of jobs necessary, and urgent work of any kind can be delivered immediately without off-setting. On rollers it never dries, but preserves their suction, life and elasticity. Inkoleum is a perfect "cure-all," and saves double its cost every day in the year, and makes pressmen do better work. A trial will convince the most skeptical. Testimonials from all parts of the world to prove these assertions. Price, half-pound bottles, 50 cents. For sale by all typefounders, wholesale paper and printers' supply houses; or, it will be sent anywhere in the United States, express paid, for 75 cents. Put up only by **ELECTRINE MANUF'G CO., St. Paul, Minn., U. S. A.**

GORDON PRESS WORKS

No. 99 Nassau Street, NEW YORK.

HEMPEL'S PATENT STEEL QUOIN.

The Old Reliable and only Perfect
 Quoin yet introduced

In order to give these Quoins a fair test follow the Instructions implicitly :

Place the quoins in the chase as shown in Fig. 1, the quoins requiring at least **three-line pica** lockage-room. Fill the remainder of the room between quoins and type with **straight furniture** (wood being preferable, in fact it is always safest and best to have the Quoins rest against wood instead of metal).

Fig. 2 shows to what extent the quoins will lock together. If this point is reached and the form should require a firmer locking, the quoins are opened by a single twist with the key in the opposite direction; now place a reglet (nonpareil is the handiest) behind the quoin and lock it again. It will be of great advantage to keep a handful of nonpareil and pica reglets on hand, which should be at least as long as the quoins.

Figures 1 and 2 also show in which direction the quoins are to drive. The quoins next to the type must always point towards the **resting-place** of the form.

Fig. 3 shows a **mis-placed** quoin; the quoins placed in this position will shove the form apart, the same as it would if you had your side or foot stick laid in wrong with wooden quoins. In this event reverse the mis-placed quoins, and in locking them you will find them to press the form together nicely.

Be sure to always press the key down to prevent its slipping out; lock the corner quoins first and then the intermediate ones, and no quoin should be locked to its fullest extent while the other ones are loose, but pass the key from one to another until you find the form locked tight enough. **No great force should be used in locking any form.**

One end of the key-handle is so shaped as to enable the printer to tighten up large forms before inserting the quoins, such as news forms, poster forms and book forms.

Any printer of moderate skill will within a few days fully understand the practical use of these quoins, and will find them just the thing he has wished for.

N. B.—Always insert the key squarely in the center of the quoin, and when the last cog or tooth is reached take a fresh start, thus preventing the teeth or key from breaking.

1

The GOLDING JOBBER

Is by long odds the best Job Press now in the market. This is no idle claim, but is a POSITIVE FACT, and the press will prove it if given a trial. We are positive about this,

BECAUSE

We build the press and know what we are talking about.

It has a solid frame, and as a result all the bearings are kept in line, even though the press does not rest evenly on the floor.

On other presses the bolts may work loose and materially affect the bearings.

It can be easily run at a faster speed than any other press, and with less vibration.

It is noiseless and will not "pound" when printing a full form.

The Automatic Brayer Fountain gives a perfect ink supply, a result not attained by any other press with a disc.

The impression can be adjusted in a moment.

It is impossible to "slur" a Job if the tympan is put on smoothly.

Where three rollers are used, ALL OF THEM will clear a full form, and as an aid, the Duplex Distributor, under the bed, can be used.

It is a MODERN press, and was not brought over in the Ark.

Modern printers need modern time and labor saving tools, and

BECAUSE

ALL WHO USE THE IMPROVED GOLDING JOBBER WILL SUBSTANTIATE THE ABOVE CLAIMS.

SIZES AND PRICES:

No. 6.— 8 x 12 inches inside	
chase.....	\$200
No. 7.— 10 x 15 inches inside	
chase.....	275
No. 8.— 12 x 18 inches inside	
chase.....	350

We also build two sizes of the Fairhaven Cylinder, three of the Pearl and nine of the Official Presses, and furnish Complete Outfits. Send to us for anything you want. Press and Tool Catalogue sent free on application. Complete Catalogue, Ten Cents.

NEW YORK.

PATENT IMPROVED TWO-REVOLUTION PRESS

WITH patented mechanism for controlling the vertical movement of the impression cylinder. It is extremely powerful, accurately fitted, free from friction and evenly balanced. A patented automatic device is also provided which prevents lost motion, and governs the degree of impression. Its patent reversing mechanism consisting of a cross-belt and spring shifter, is operated by the foot, which places the Press under the immediate control of the feeder. These advantages, with its Sheet Delivery, Hinged Distributer, Caps, Positive Slide Motion, Noiseless Grippers, etc., complete a printing machine that in every respect is equal to the most exacting demands of the times.

THE NEW PRINTING MACHINES.

THE DUPLEX PRINTING PRESS COMPANY AND ITS MANUFACTURES.

WHEN F. Koenig erected the first successful cylinder press in the office of the *London Times*, in 1814, he gave to the world the fundamental principles upon which future printing machines were to be constructed.

Among the names of those whose genius has produced the modern printing press, that of Joseph L. Cox, the inventor of the many wonderful printing machines now being introduced by the Duplex Printing Press Company, is destined to appear in the foremost rank. Mr. Cox's inventions are strikingly original. He does not seek and follow the paths trodden by others. In this respect he is unlike all press inventors which the United States has pro-

THE COX "DUPLEX" SHEET-PERFECTING PRESS.

As James Watt furnished the model for steam engineering, so Koenig gave to future improvers the basis upon which to develop the printing machinery of later years.

The superstructure which has been reared to meet the demands of the advancing printer is the product of many of the foremost mechanical minds of the present century; and the beautiful mechanisms which are employed in the printing offices of the world bear testimony to the wonderful skill which has been exercised in carrying forward the work whose foundations were laid by the German pioneer.

duced, if those two remarkable men, William Bullock and Andrew Campbell, be excepted. Mr. Cox has an advantage over other living workers in printer's tools in being a practical printer, who, therefore, knows the needs of the craft. He began his career as an inventor when only twenty years of age, and now, in his thirtieth year, he can boast as many mechanical triumphs as can others of twice his years and experience.

The Duplex Printing Press Company was organized in 1885, at Battle Creek, Michigan, solely for the purpose of

developing the inventions of Mr. Cox, and they at once provided facilities for the construction of his first newspaper press, called the "Duplex Sheet Perfecting Press."

The success of the "Duplex" press was assured from the beginning, and during the present year the demands upon the resources of the company have been such as to compel the extension of their manufacturing facilities, until now, instead of the ten men with which they began, in 1885, nearly three hundred men are employed upon their machinery in their Battle Creek and Providence works. Beginning with the original "Duplex," they have added new machines to their list until it is safe to say that they are now prepared to meet the wants of nearly all classes of printers. In this article are illustrated some

takes an impression direct from the type forms, which have only to be made up in the same manner as for drum-cylinder or two-revolution presses. Thus, the time and expense of stereotyping, or arranging turtles, which plans are absolutely necessary in all other perfecting presses, are saved.

PLAN OF OPERATION.—The fundamental principle of this press is, that an impression is obtained with each travel of the type bed. The cylinder is set type high by the impression screws, and does not rise and fall, but is geared direct to the type bed, and reverses with it. Thus an impression is produced every time the type passes under the cylinder, and two impressions to one of any other press, even with the beds moving at the same speed. Here it is plainly seen that it can easily perform double the work

THE COX PONY "DUPLEX" PRESS.

of their most important machines, including their fast web-perfecting stereotype press with combined book folder and stitching machine, their stop-cylinder "Art" press and their "Country" press and folder. For the benefit of those interested in all mechanical progress relating to the printer's art, we devote considerable space to a description of some of these new machines.

THE COX "DUPLEX" SHEET PERFECTING PRESS,

illustrated on preceding page, is constructed for doing both newspaper and book work in a manner that is labor-saving and speedy. It is a web-perfecting press, printing from a roll of paper by a system original and novel, and by a process much simpler and cheaper than has been heretofore discovered. Let it be understood that the press

of any other machine with a single cylinder. In order to perfect, or *print on both sides* of the sheet before it leaves the press, the main frames are so constructed as to take in two cylinders and two beds. An impression is obtained from both forms each time the beds pass under the cylinder. The beds are strongly connected together, and in operation are virtually one, both operating in one set of ways and from one rack and star gear.

The above results are accomplished by an entirely *new system of feeding* paper, which has been invented by Mr. Cox. The paper, after leaving the roll, passes over and under various rollers, and then under the first cylinder, where one side is printed. From this cylinder the sheet is simply and ingeniously turned over, and is carried to and under the second cylinder, where the first

impression is backed. From this cylinder the sheet is passed upward to a set of delivery rolls, which, at proper intervals, turn the paper through to the knife, where the printed sheets are cut off with proper margins. The instant the sheet is cut, it is delivered to the bank or to the folder. This press may be operated in connection with either the Cox newspaper folder or the pamphlet folder and stitcher.

THE FOLDER is new in principle, speedy in effect, and is the only mechanical attachment ever put in combination with the printing press that will fold and bind books or pamphlets, and deliver them ready for covering.

FOR ALMANAC WORK, no machine except the Cox Stereotype Press can compare with the "Duplex" for accuracy and the completeness of its work. Books coming from the folder are ready for covering and trimming, and as they are *stitched by wire* (not pasted) in their passage

time occupied in changing the feeding device to throw from one size to another is but a moment, this being the only piece of mechanism required to be adjusted in changing the size of the work.

COX STEREOTYPE WEB-PERFECTING PRESS.

WITH PAMPHLET FOLDER AND STITCHING MACHINE.

In perfecting his stereotype machine, Mr. Cox has not lost sight of the great demand among provincial printers of daily newspapers for something simple and at a reasonable price. The above press, with Cox's newspaper folder, meets this demand. Country publishers cannot afford to pay \$12,000 to \$20,000 for a press, nor to hire the high-priced mechanics who are on the lists of the various manufacturers, waiting for the sale of a machine, with which they are promised the position of tender. Old and reliable workmen, in offices where simple mechanisms

COX STEREOTYPE WEB-PERFECTING PRESS.

through the machine, the almanac manufacturer can see the great advantage of this wonderful attachment.

Rolls of paper weighing from five hundred pounds to half a ton may be used in the press at one time. This is made possible by an invention of an entirely new device, known as the Cox Roll-Paper Governor, which works to perfection, and is the only reliable governor yet invented that will admit of the press running with a tight tension under all circumstances without breaking the paper—a result that must be obtained to secure a perfect register.

These presses are made in sizes from 17 by 20 to 41 by 60, with a speed per hour of from 2,000 to 5,000. Any of these presses will feed and print sheets of any desired length or width that will come within the dimensions of the bed; that is, a press 32 by 46 will print a one-sixth, one-fourth, one-half, or any other size, to 32 by 46, the same principle holding good with all other sizes. The

have been in use, are compelled to vacate the pressroom when the complicated web press is introduced. The invention of Mr. Cox enables the ordinary pressman to hold his position, as the most prominent feature of the Cox web-perfecting stereotype machine is the utter lack of complex movements. We do not think it an exaggeration to assert that a youth of ordinary intelligence, accustomed to operating a small job press, in a few hours could master every detail of this, *the simplest of all presses*.

In order that the reader may understand the points of excellence prominent in this machine, we cite a few:

THE SAVING IN LABOR.—Web-perfecting presses in general require from three to six men as attendants. The Cox press requires only one man and a stout boy; the man to act as pressman, the boy to help in taking away the printed and folded sheets, and to take care of the rollers. No person is needed at the roll of paper, none at the

folder, none at the "brake," nor at the wetting machine, this being the only machine ever constructed that successfully *wets its own paper in the original roll*, without having to unwind and rewind from spool to spool.

WILL PRINT A SHEET OF ANY SIZE.—All web presses are limited to the size of the paper for which they are originally designed. A 7-column quarto machine will not print a folio or a quarto sheet of any other size. Unlike all other inventions of this kind, the Cox press will print (if made for 7-column quarto) 7-column quarto, 10-column folio, 6-column quarto, 9-column folio, 5-column quarto, 8-column folio, or any size of book or pamphlet. In order to change from a large size of paper or form to a smaller size, there is less adjustment to make than on an ordinary

high grades of work, such as tympan nippers, reel rods, etc. By these means blankets may be changed rapidly, and "hard packing" substituted, and *vice versa*.

SPEED.—This machine being designed for a finer class of newspaper and book work, is, of necessity, slower in operation than machines designed solely for newspaper work; yet a speed can be obtained that is fully up to the wants of nine-tenths of the daily publications of the United States, and pasted, folded, and perfected sheets are guaranteed at the rate of from five thousand to six thousand an hour.

FOR ALMANAC WORK, or bookwork with long runs, the wonderful Cox Book Folder and Binder is attached. Several of these are running at the present time and giving

THE COX "ART" STOP-CYLINDER PRESS.

single or double cylinder press. This feature is invaluable to the printer, and places in his hands a tool with which he can accomplish what is impossible on any other perfecting machine.

DISTRIBUTION.—In order to adapt this invention to the wants of book printers as well as newspaper publishers, the manufacturers of the Cox press have secured a distribution of ink greater than was ever before introduced in a like machine. From fountain to form it has one hundred and fifty inches of distribution, against one hundred and forty-two on a stop-cylinder press manufactured for the finest illustrated work.

TO MAKE READY.—At all points the platen cylinders are accessible to the pressman, and with all the attachments usually accompanying cylinder presses designed for

the greatest satisfaction. The work leaves the press ready for covering.

THE COX "ART" STOP-CYLINDER PRESS.

FOR FINE BOOK ILLUSTRATIONS AND CHROMATIC WORK.

We here give an illustration of the famous Cox "Art" press. Here Mr. Cox leaves the domain of sheet-perfecting presses, where he is now a recognized leader, and invades the territory of the most warlike race known in the realms of mechanical industry. In this, "the front of his offending," he shows a spirit of daring which is somewhat alarming to those who have been accustomed to look upon themselves as the rightful owners of the book and job producing fields. Mr. Cox has produced a remarkable machine for fine printing, and one that is

certain to take a front place in the market. First, because it presents itself as the highest type of the printing press; and, second, because it is simpler, and can be sold much lower than any machine having equal merit.

We append a few of the claims made for it:

DISTRIBUTION.—The Cox “Art” press has an entirely new ink-distributing device (not shown in the cut) for which patents have just been allowed. It consists of an inverted, curved, vibrating table, upon which a series of rotating rollers deposit and distribute the ink from the fountain roller, whence they also carry it to a drum revolving under angle rollers. A ductor roller carries the ink from this drum to a cylinder located centrally over the form rollers from which it is taken by intermediate and vibrating rollers to the form rollers. The advantages of this device are very great. It is very compact. As the speed of the rotating rollers and of the drum can be increased at pleasure, the *amount of distribution is practi-*

of the country newspaper. It is simple as the simplest, noiseless in operation and built in the most substantial and workmanlike manner.

It has either a front delivery for job or book work, or a folder for newspapers. It is a stop-cylinder press, capable of the finest work, and yet its simplicity is of the most marvelous nature, and it cannot fail to become the most popular press ever constructed for the art preservative of all arts.

THE COX FOLDING MACHINERY.

Mr. Cox is the inventor of three of the most novel and effective folding machines which have been produced; all of which can either be attached to a printing machine or worked independently.

The first is the great Cox almanac and book folder. This machine will fold and stitch sixteen, thirty-two, sixty-four or 128 pages. It has a double delivery for sixteen and thirty-two pages, and single delivery for sixty-

THE COX COUNTRY PRESS AND FOLDER.

cally unlimited, and as the ink is delivered to the pair of form rollers farthest from the fountain at the *same time and in the same quantity* as to the pair nearest the fountain, it is laid upon the forms with perfect uniformity.

FRONT DELIVERY.—By far the most simple and most satisfactory known.

REGISTER.—Of the stop-cylinder system nothing need be said. Its registering qualities are absolutely perfect.

ITS STRENGTH is equal to that of any machine manufactured, and the best methods are employed in the distribution of iron and steel.

WORKMANSHIP and material are of a high grade.

SPEED.—As fast as any machine of this class.

OPERATION.—Surprisingly noiseless, and simplicity itself under manipulation.

THE COX COUNTRY PRESS AND FOLDER.

This machine is certainly an innovation on all recognized mechanisms heretofore employed in the production

four and 128 page work. It will run at a rate of speed equal to any web-perfecting press to which it may be attached, and by hand feeding is only limited by the power of the feeder to keep it supplied.

The second is the Cox newspaper folder for quartos or folios. Very accurate and fast! With the press or by hand.

The third is the Cox inseting folder. This machine will fold newspapers, books or pamphlets, and will inset supplements or pages either from the press or by hand. It can either be attached to the press or run independently.

The Duplex Printing Press Company are at this time filling an order of the Star Printing Company, of St. Louis, for eight of their presses, including two of the large stereotype almanac machines, with folders and stitchers, one largest size “Duplex” machine, with almanac folder and stitcher, one large single cylinder “Duplex,” one stop-cylinder “Art” press, two stop-cylinder 2-roller presses, and a pony “Duplex.”

The Star Printing Company, of St. Louis, have just erected, to accommodate this plant, a large and elegant four-story building on Fourth street, just below the Southern Hotel. The pressroom is one of the finest in the United States. It includes the entire basement and first story, excepting a small portion of the latter, utilized for a suite of elegant offices; is 28 feet from floor to ceiling, and has windows 15 feet in width by 13 feet in height, admitting a flood of light for the pressmen. The floor is solid granitoid, smooth, level and impervious to water, with the necessary pits, to accommodate the large "Duplex" machines, formed of the same material. This room contains all the above-mentioned machines, whose aggregate capacity is greater than that of several of the other largest offices of the city combined.

It also contains a large 100-horse power engine, elevator, dynamo, etc. The boiler is under the sidewalk, as is also the stereotyping room, paper storeroom, etc. In the second story is the composing room; on the third floor is the bindery, with all the latest improvements, while the fourth floor is devoted to stock, mailing room, etc.

The managing partner is Mr. George C. Hackstaff, well known to the fraternity as the founder of the first special printers' journal, *Hackstaff's Monthly*.

We have given this extended account of the manufactures of the Duplex Printing Press Company because of the general interest they are exciting throughout the country. The company is composed of energetic men of ample means, and their work will be vigorously prosecuted. Catalogues may be obtained by addressing the company, at Battle Creek, Michigan, or their general agent, R. P. Yorkston, No. 24, Beekman street, New York.

Written for THE INLAND PRINTER.

THE PRACTICAL PRINTER.

BY H. G. BISHOP.

BUSINESS MANAGEMENT—Continued.

IN figuring the cost of stock, too much care cannot be taken, as when a mistake occurs here it is likely to be a serious one. There is a great tendency on the part of printers to "guess" at the cost of stock used on small jobs. Now this is not safe in practice, for the habit of guessing in small matters will lead to guessing in large matters and a wrong guess may cause the loss of many dollars. The few minutes extra time required to arrive at accurate figures will not be time thrown away. The only safe way of conducting business is knowing without doubt just what you are doing and how much profit you are making on each transaction. To some it might appear that this would be a difficult matter. But it really is not so when once the mind is made up to accomplish it.

Certainly, in the matter of the cost of stock it is easy enough, provided you take the trouble to figure at all.

The following eight tables will be found of great service in figuring on the cost of stock used in small quantities, as they show at a glance the cost of any quantity of paper of any weight from eight to seventy pounds, and at any price from 6 to 20 cents a pound, rising by quarters of a cent.

WORKINGMEN IN POLITICS.

BY M. J. CARROLL.

DURING the past twenty-five years the workingmen of this country have made repeated and innumerable attempts to organize the industrial classes of the nation into a political party, for the avowed purpose of more surely securing whatever legislation they might deem necessary for their own welfare and advancement; or, failing in this, to form a body of voters of such proportions as would secure them the balance of power between the two principal parties, thereby forcing one or both of these parties to enact such laws as they might dictate. As the printing fraternity has always been more or less actively identified with these efforts, it cannot be regarded as out of place to review the efforts that have been made, and the results attending them, in these columns.

It must be confessed that the desires of the leaders of the workingmen in this respect have been far from realized, not to say positive failures; and I believe that the result proves that, notwithstanding the fact that there are millions of artisans engaged in this country, still the preponderance of the male population is to be found in the agricultural interests, and a failure to unite or make a common cause between the artisans and the agricultural classes furnishes ample cause for the failures that have attended this movement. But still, this will not fully explain the noticeable lack of success that has attended the various workingmen's or labor parties that have been launched upon the political sea during the past dozen or more years, as it is apparent that no party of workingmen that we have been favored with has commanded anything like a full vote of the people who are universally and generally known as the laboring classes. What has been the reason of this failure? Is it because a party of this kind has not so far presented an issue of such absorbing interest that it would serve as a magnet to draw the working people of the country to its support; or is it because the needs of the laborer, so far as legislation is concerned, are amply supplied by one or both of the controlling parties? This opinion would seem to prevail, although it would be in direct variance with the declarations and assertions of the labor agitators. During the political canvass just closed I had the pleasure of listening to just one political speech, and that one was made by the Hon. John M. Palmer, who was then the democratic candidate for governor of Illinois. The gentleman was speaking to a meeting composed chiefly of workingmen, and during the course of his remarks he said that if the laborer had failed to secure proper legislation at all times, he believed that it was owing to a failure on the part of their representatives to make their wants known in such a way as to convince the controlling party that the measures they were urging would serve the best interests of all concerned. He was of the opinion that either of the old parties would enact any law that would clearly benefit a considerable portion of the community and did not work corresponding harm to another class. Self-interest and a

love of power would compel any party to take this course. Now, if the gentleman I refer to is right — and I firmly believe he has the interests of the workingman at heart — would it not be better to act on his suggestion than to go on suffering the humiliating defeats and disappointments that have attended all efforts to establish an independent party?

The few successes that we have met with do not in any way compensate for the amount of labor and money expended in this direction, to say nothing of the demoralizing effects following a failure to accomplish anything like the expectations formed. A few members of congress, an occasional member of a state legislature, a sprinkling of aldermen in certain cities, and once or twice a mayor of a minor city, is about all that we have ever been able to attain. This, with the invariable certainty that in every legislative body where we have been able to get a foothold we have been in such a hopeless minority that we have not been a "balance of power" or anything else, is not a very promising retrospect for the champion of labor to contemplate at the present time. And it cannot be claimed that our efforts have been attended at any time with a degree of success that would warrant the conclusion that in the course of time, and with proper leadership, we will be able to do in the future what we have so signally failed to do in the past. With Dr. McGlynn and Henry George leading the workingmen of New York City some two years ago, it cannot be claimed that we were lacking in either brains or energy. In their efforts to secure the mayoralty of New York, these gentlemen displayed a spirit and intelligence that was deserving of something more than defeat. They merited success; and if such a canvass failed in the city of New York, it is preposterous to suppose that the movement can ever be successful in the country at large. For whatever measure of success we have met with has been invariably in the cities and centers of large population.

Another very discouraging feature of this matter is that the men who have floated to the surface in these movements have not always been men whose highest aim was to benefit the people they were supposed to represent. Personal ambition and a desire for place and power actuated many of them, as their utter disregard of the wishes or desires of their constituents, after their elevation to office, has so often been a matter of fact. They probably do not differ from the average politician in this respect, only in so far as that more was expected of them, and they were supposed to be under greater obligations to follow a certain line of conduct. Failure to gain our ends at the polls is not nearly so humiliating or demoralizing as the treachery or cupidity of our representatives after we have succeeded in electing them.

Is it not about time that the working people of this country came to recognize the fact that a political party such as they contemplate is out of the question, unless they have an issue to put forward that will be certain to combine all classes of the labor element, or unless they are suffering under such grievous injustice and inequalities that they can no longer bear them? The abolition of slavery was an issue of such magnitude, and was so far-reaching in its effects, its probabilities and its possibilities, as to embrace

within itself all the requisites necessary to command the attention and enlist the sympathies of a people so numerous as to constitute it one of the important political factors of its day. It remains yet to be seen whether the question of prohibition will become so absorbing as to give it a like standing before the people of the country. Has the workingman an issue of like interest or importance with either of the above on which to build a party? If not, it is worse than useless — and it is sometimes ridiculous — to be posing as an independent political party. The political requirements of this government contemplates the existence of two separate political parties, and the nearer these parties divide the voting strength of the country the better it is for all concerned.

Of course it frequently happens that the industrial classes would be benefited by the passage of certain laws, or the adoption of some specific regulations, generally of a local nature, and how the more speedily to gain the support of one of the old parties for these laws or regulations, is a question of vital importance to every working man and woman. Probably a properly constituted and wisely governed trades assembly would be the best source through which to work. But it must be an organization that will receive the unqualified support and command the unlimited confidence of the working people. It must be as little like the Trades Assembly of Chicago and some other cities that I might mention as it is possible to make it; and when a political party learns that to disregard the united wishes of the working people in regard to certain laws means unavoidable defeat at the next election, then you will be in a position to accomplish all needful reforms of a legislative nature promptly and effectually, and without the necessity of supporting a labor party — a party that, to judge from past experiences, is certain to be about wiped out of existence at least every presidential election year.

Before dismissing this subject I wish to call attention to the fact that, of the many printers who have been elevated to positions of honor and trust — such men as John H. Oberly, John M. Farquhar, A. P. Swineford, and dozens of others that might be mentioned — none that I can call to mind owe their success to any labor movement, but were invariably brought forward by one or the other of the dominant parties, as a recognition of their abilities and their fitness for the positions in which they were placed.

THE SILK THREADS IN BANK NOTES.

The paper on which bank notes are printed is called "distinctive paper," being used exclusively by the government for the printing of bonds and current notes. The mills where it is manufactured are at Glen Falls, West Chester county, Pennsylvania. An agent of the treasury department receives the paper direct from the hands of the manufacturer, and every precaution is observed in order to prevent any loss. Short scraps of red silk are mixed with the liquid pulp in an engine. The finished material is conducted to a wire cloth without passing through any screens, which might retain the silken threads. An arrangement above the wire cloth scatters a shower of fine scraps of blue silk thread, which falls upon the paper while it is being formed. The side on which the blue silk is deposited is used for the back of notes, and the threads are so deeply imbedded as to remain permanently fixed. Each sheet is registered as soon as it is made.

THE BOSS PRINTER.

BY HERBERT L. BAKER, ST. PAUL, MINN.

IN all this talk about the rights of the poor printers and all this planning for the betterment of the laborer's condition, why doesn't someone say a word for the boss printer, too? When a printer yields to the insane itch to hustle for wages for other printers, does he thereby become transmogrified into another sort of being?—one who hasn't any rights worth speaking of; one who, whatever his former character as a workman, is instantly changed by the magic of that word "employer," to a tyrant, an oppressor, a villain, a schemer, against whose arts and wiles and inherent rascality his employes must always be on the alert? The writer knows what a delightful thing it is to be a boss printer—has sipped all the saccharine quintessence of pleasure this experience affords—has bathed his soul in all the floods of glory that independent business brings; but his debts and the patches on his pantaloons (earned during his last year at the case) are about all he has to show for all this sipping and bathing business. When he finds, from his yearly balance sheet, that he has made less money than some of his employes, while he has put in all the capital, taken all the risk and worked harder than any other man in the shop, he begins to think a word for himself would not be out of place—to him the betterment of his own condition becomes of some trifling importance.

As a kid, he beheld the portly, pousy prosperity of his employer, the grasping embodiment of selfishness and greed, who heartlessly refused to pay him \$5 per week for 50 cents worth of work; and his soul yearned for the time when he would no longer have to be pi manipulator, roller cleanser, spittoon wrestler and lord high chambermaid to the office cat. He slapped his swelling chest over where his youthful lung ought to be, and resolved a deep bass resolve not to jeff with the boys, not to yield to the seductions of penny ante, not to bet his old boots on the election, nor squander his substance on hot wiener wurst and riotous living, but, at first opportunity, go into business on his own hook. Alas! the significance of that phrase did not strike him till he was hung so confoundedly high "on his own hook" that there was no getting down with either dignity or profit. Now he daren't attempt to come off the perch, for fear it will end like Darius Green's flying:

The flyin's all well enough; but ther' ain't a darn sight
O' fun in't when you come to light.

All this rot about business making a man free and independent makes him weary. Like all the rest, his caged soul wearied of drawing a snug salary Saturday night, and longed for freedom and independence. He finds them—an astonishing amount, but of rather an unexpected sort. He is now free—to take in smiling, silent rage, the abuse of cranks whose custom is valuable; free—to help himself Saturday night from a money drawer as dry as a sucked lemon after the pay roll is squeezed out; free—to work night and day with scarcely time to kiss his wife or spank his babies; free—to pay scale wages to every incompetent loafer whom the union has been careless enough to take in; free—to worry his soul gray-headed for fear the

sheriff will get a clutch on him. Oh, yes! there's plenty of freedom in business; and, when he gets tired of this sort of freedom, he is free to take himself by the nape of the neck, carry himself out behind the woodshed and bump his fool cranium on the wood pile for expecting anything else.

But life is not all a dreary waste, even for a boss printer. He has lots of fun. The most amusing oversights slip by the proofreader, and it is such a joke to do the work all over again; the trimmer, in such a hilariously funny way, has the top sheet turned wrong side around, cutting the whole job down through the middle, and that makes the boss ha, ha! He estimates on a job, to find when he gets it that he only figured in half enough paper, and that is deliciously amusing; he has a large account against some concern which unexpectedly fails—on the theory of the rhetorics, that the element of surprise is the foundation of humor, this is deliriously humorous; he gets in the middle of a job that promises to be profitable, and the men walk out, and he finds that too laughable for any use. Finally, perchance, his Damocles' sword, the sheriff, drops in, and the printer finds this action so oppressively funny that it is too much for him, and he never goes into his office again. One would suppose that with so much laughter he would grow fat, but, with a contrariety peculiarly his own, he gets poorer and thinner, till it is doubtful if he could throw his own shadow if he should meet it on the street. Why this is so, is hard to understand. True, the employer knows too well that rent, interest, pay-roll, power, expenses, etc., go right along with remorseless regularity regardless of the business done—but why should that worry him? True, foolish competition has reduced prices below living figures, so that his profits are scant on the business he does get—but what does that matter? True, he often finds it very difficult to collect his hardly-earned money, and the pay-roll makes him "scratch gravel" with all his might—but that is a trifle! True, he devotes so much time and money to keeping his business on foot, that his wife has reason to complain that he has so little to devote to her pleasure and comfort—but why should that affect him? True, claims for money and thought and energy press upon him night and day till he is fairly frantic, and often knows not which way to turn—but anyone can see with half an eye that there is nothing in this to interfere with his life being one round of pleasure unalloyed. He is a strange creature in some respects, for all these pleasant things somehow fail to satisfy him, and he often would find a word of encouragement and cheer very agreeable. He works on, hopes on, his vivid imagination ever picturing the "good time coming" just ahead, which too often proves at last a mirage of his own tropical fancy.

But whether he succeed or whether he fail, so long as he is an employer he is tabooed by the craft. If he show himself friendly, he is said to have an ax to grind; if he appear indifferent, he is selfish and cares nothing for the welfare of other craftsmen; if he have vigorous ideas of his own rights and is making a hard struggle for existence against all odds, then he is an enemy to the craft and must be humbled at all hazards. What effects this marvelous change in the status of a printer when he becomes an employer? Who knows? It strikes "the blind man up a

tree" that there is something wrong about this; that since all are working together to reach the same result, and since all are brothers of a common blood, the employer is certainly entitled to his share of the encouragement and kindly sympathy and helpfulness that there is to distribute. If he got them, who knows but they would help him to do better for himself and his employes? Who knows?

Written for THE INLAND PRINTER.

PROGRESS IN LETTERPRESS PRINTING.

NO. III.—BY ALFRED PYE.

NOTWITHSTANDING all that has been written and said about the spread and increase of amateurism and blacksmithing in the printing trade, it cannot be denied that, as a whole, the jobwork of the present time is vastly superior to anything accomplished in the line of beauty and effectiveness in the past, even so recently as five years back. Every printer deserving of the name has done his best to outvie his fellow in originality of design and care in the presentment of ideas, with the result that work is produced which is often a surprise to those who have hitherto considered themselves acquainted with the possibilities of type-metal and brass rule. Yet many specimens of work that excite our admiration do not owe their worth entirely to the ingenuity and artistic skill of the compositor and the pressman. The productions of the typefoundries play an important part in the general improvement, for, almost as soon as a design in brass rule of any merit is evolved by a first-class printer, one or other of the typefoundries straightway reproduces the same in metal, in sections for convenience of handling and adaptability to all descriptions of work; and that which cost the designer many hours of painstaking labor is placed at the command of the whole fraternity in such shape that any printer possessed of an ordinary amount of intelligence can get up an elaborate piece of work, embellished with curlicues and flourishes, with the expenditure of an hour or two in the arrangement of the various pieces to form a complete design. Instead of using up yards of brass rule—cutting, twisting, filing and hammering it into the shape that best pleases the fancy of the compositor—an order is written out and sent to the founder, and in a short time a complete set of intricate designs, mortised for setting around and between lines of type, are at the disposal of the compositor, at an outlay of less than the bare cost of the rule for making the same design, without counting the cost of time saved in the production of the work. Of course, there is not the pride felt by the compositor in getting up a job in this manner that he would feel if he had made the design as before referred to, but the result is as satisfactory to the customer, while the charges are so much less. Then, again, the type ornaments can be used over and over again in endless variety, while the brass rule designs are not so easily adapted for changing from one job to another.

Much economy, however, can be practiced in many offices where it is not possible to get material on short notice, by using many pieces of rule and old type that were formerly considered useless. An old, battered piece of brass rule can be nicked and trimmed up with a pocket-knife or file, and form a respectable ornament to fill out a

line or a blank space in a job. Old type, melted and poured into type-high molds laid upon the imposing stone, will furnish tint-blocks for use in many jobs where a streak or two of color will greatly enhance their effect. Leather or cardboard, or, in fact, any material with a surface that will take ink from the roller, can be made available for a variety of purposes in connection with job printing, and the use of them is only limited by the genius of the printer who handles them.

Previous to the introduction of so many brass-rule embellishments in jobwork, one of the most prominent typefoundries in the United States stimulated and aided the artistic ideas of the letterpress printer by furnishing such ornate specimens of type as the "Arboret," "Harper," "Chaucer," etc., with their floral, medallic, and emblematic ornaments, which opened up an entirely new field for the compositor to work in. These artistic faces held their own for quite a long time, when other foundries began to place upon the market various delicate, unique, and handsome faces of type, until each seemed bent upon outrivalling the other in the production of some novelty that would supersede all others. The result has been a bewildering array of the English alphabet in such various forms that many of the letters have apparently lost their identity, and can scarcely be recognized apart from their fellows. Rarely does a month pass by, as the pages of THE INLAND PRINTER demonstrate, without some one of the typefounders displaying a new design in lettering, or a resurrection of an almost forgotten one of the past ages, each intended to catch the wary, or unwary, eye of the modern printer, with the purpose of inducing him to purchase various sizes thereof, be the first in the field with the new letter, and thus "scoop" his ambitious rivals for public favor.

The old style of display work, in which roman, antique, celtic, doric, gothic, etc., were the only types available—though considered good enough at the time, and in many instances thought to be the very height of the letterpress printer's art—has fallen into disuse; and the printer who has not a stock of the latest designs in his office can scarcely expect to get a very large share of the public's patronage. But there is danger of overdoing, even in the use of the most modern types available. Many faces of type—beautiful in their proper place—have failed entirely of their purpose by being used indiscriminately in various jobs, without regard to the fitness of their surroundings. A few printers have, unfortunately, an idea that because they have a new type in their office every one must know it; therefore it is used in every job they thereafter get, whether it be a letterhead or an "in memoriam" card, a dodger or a wedding invitation. Such indiscriminate use of fancy type is rather a detriment than a help to the acquirement of a steady patronage. The public, though sometimes condemned in terms more forcible than polite, has some rights which printers, in common with other caterers for its favor, are bound to respect; and, though long suffering and patient, will not forever submit to have inflicted upon it such abortions as some are pleased to term "fine art printing."

THE OLDEST ESTABLISHMENT
IN AMERICA

49 & 51 ROSE STREET, NEW YORK.

THE CHANDLER & PRICE OLD STYLE GORDON PRESS.

SPECIAL FEATURES:

Steel Shaft and Steel Side Arms, forged from solid bar, without seam or weld.
The Most Positive and Practical Throw-off yet introduced.
Best Material Used. Most Carefully Finished.

We have recently greatly improved these Presses, enlarging and strengthening the parts, and so arranging the disk and roller carriers as to give greatly increased distribution, and we believe it is unequalled in this respect by any press now made.

The Most Durable and hence the Most Economical Press for the Printer.

⚙️ We never have had to take a Press back! 🛠️
Every one is giving Entire Satisfaction.

IMPRESSION THROW-OFF. DEPRESSIBLE GRIPPERS.
HARDENED TOOL-STEEL CAM ROLLERS.

Babcock Printing Press Mfg. Co's

: : : *Drum Cylinder, Two-Revolution*
and Lithographic Pat. Air-Spring : : :

PRESSSES

All our Standard Presses have the following Patented Improvements:

1st. Our still *Gripper Motion*, which registers perfectly.
 2d. *Air Valve* for removing the spring when desired, and invariably restoring it when starting the press.
 3d. The *Shield*, which effectually protects the *pistons* and *cylinders* from paper, tape or other substances, which might otherwise fall upon them.
 4th. The *Piston*, which can be adjusted to the size of the *cylinder*, so that any wear of either the *cylinder* or of the *piston* can be readily and accurately compensated. The adjustment is easy, positive and perfect, and renders the apparatus air-tight, a most important consideration, inasmuch as any escape of air, whether through a valve or around the piston, reduces the resistance, and thus impairs the efficiency of the mechanism.

5th. *Roller or Journal Bearings*, securing the following advantages: (a.) Any single roller may be removed without disturbing the others; (b.) All the rollers may be removed and replaced without altering their "set"; (c.) When desired, the *form rolls* may be released from contact with the distributor and type, without removing the rolls from their bearings.
 6th. Our *reversing mechanism*, which gives the feeder entire control of the press, and effects a large saving in time, and also insures the greatest possible number of perfect sheets.
 7th. Our *positive slider mechanism*, by which the slider is kept in the correct relation to the bed at all times, and thus a perfect impression secured.

DESCRIPTIVE CIRCULARS FURNISHED ON APPLICATION.

From the Warren, Pa., Ledger, of Nov. 20, 1885.

There may be a better press than the "STANDARD" built by the Babcock Printing Press Mfg. Co., of New London, Conn., but we have not seen it. The No. 6 "STANDARD" recently placed in our office, by the above company, is entirely satisfactory. It runs without jar over 1,800 impressions per hour; a 1,500 motion is slow. Two thousand can be made easily without injury to the machinery.

From Fuller & Stowe Co., 40 Lyons St., Grand Rapids, Mich., March 3, 1886.

BABCOCK PRINTING PRESS MFG. CO.: Gentlemen,—Your favor of the 27th came to hand, and same day your new vibrating attachment. We consider it a great improvement over the old style. We are much pleased with the operation of the machine, and shall add another of your make as soon as our work will warrant it.
 Yours truly, FULLER & STOWE CO.

Office of the Times, Lima, Ohio, Dec. 1, 1886.

BABCOCK PRINTING PRESS MFG. CO.:—Gentlemen,—Some months ago we bought from Messrs. Barnhart Bros. & Spindler, of Chicago, one of your "STANDARD" Presses, which has been in constant use in our office ever since, and gives perfect satisfaction. We have used presses of many styles, but never operated one that embraced so many good features as your "STANDARD" series. It is a first-class machine in every respect, and yet so simple as to be easily operated and capable of doing the finest kind of work. Our press (a No. 2) is capable of running as many sheets per hour as the feeder can place properly. In fact, it is just the press we were looking for, and we would not exchange it for any other press in the market.

Very respectfully yours,

O. B. SELPRIDGE, Manager *The Times Co.*

FOR THE NEWS AND JOB PRINTING OFFICE.

THE ONLY PRACTICAL

Stereotype · Outfit

IMPROVED AND MANUFACTURED BY

M. J. HUGHES,

10 SPRUCE ST. + + + NEW YORK.

One among Hundreds of Testimonials:

To WHOM IT MAY CONCERN: This is to certify that we have one of Hughes' Stereotype Outfits, and the same has been in our office and in constant use for five years, and is giving and has always given entire satisfaction.

Yours truly,
Feb. 16, 1888. O. A. CARLETON & CO.,
Book, Job, Show and Commercial Work of every description,
Providence, R. I.

THE above testimonial is only one among hundreds elsewhere given. Like large numbers of others, both large and small concerns, it has used for years my quick and superior patented devices of casting and blocking, at one and the same operation, by the use of wooden cores, bars, strips and filling of a non-conducting nature. Also, with the same outfit, all other results known to stereotyping is secured by its simple and practical construction. It is an established fact that it is the only simple, practical Stereotype outfit for the printing office in general, and that if not used successfully it is certainly the fault of the operator.

It is a great mistake on the part of the purchaser to defer purchasing until the outfit is actually needed for some special purpose. "Procrastination is the thief of time."

It is undoubtedly the best thing, taking into consideration the small amount invested, ever put in a printing office.
Send for descriptive circulars and hundreds of indorsements.

M. J. HUGHES, INVENTOR AND MANUFACTURER, 10 Spruce St., New York.

CHICAGO, DECEMBER, 1888.

THE present is an excellent time to advertise. The excitement always attendant on a presidential contest has subsided, and now that the result has been definitely settled, and accepted in good faith by the American people, society will resume its normal condition, and the claims of business force themselves upon the community. The shrewd advertiser, always on the alert, will not fail to take advantage of the opportunity.

GOOD WILL AMONG PRINTERS.

AT this season of the year there is always a large amount of good feeling engendered in the breasts of people of all classes, nationalities and colors. It seems to float in the air, and is wafted by every wind that blows. It takes the chill off the coldest breeze, and imparts to it an invigorating influence which braces the nerves and paints the cheeks with nature's own tints. There is a good deal of handshaking and well-wishing, congratulating upon successes of the past and the promises of help in the future. Those who have drifted apart, either geographically or socially, are brought together again. Reunion is in order, and bickerings and strife are relegated to the dungeons of forgetfulness. The melodious sounds of "Home, Sweet Home," are heard in thousands of homes from millions of voices, and the whole land seems to be formed into one vast hand-over-hand circle, from which the stirring notes of "Auld Lang Syne" rise like a diviner impulse, thrilling the heart with memories of the past, and moistening the cheek with the holiest of tears. As we contemplate this happy state of affairs, let us inquire what we can do to help swell this tide of good feeling until every printer is embraced in the circle.

As we take a retrospect of the past year we see much to rejoice over. There have been disputes, it is true; there have been clashing of interest and wordy wars; but the results have been in a great measure satisfactory. The air has been cleared of a good many clouds; the mists of years has been swept away, so that we can see more distinctly than ever just where we stand, and wherein our duty lies in the future. Some employers have been made to feel that they have neglected more than one of their plain duties to those in their employ; have been content to devote all their time and attention to the pursuit of their own interests without proper regard for the interests of those upon whom they were in a great measure dependent for the success of their pursuits, and left their workmen no alternative but to fight for every advance they desired to make.

Employés have had forcibly brought home to them the fact that if they are to make advances they must more accurately gauge their strength and the strength of their cause; that they must learn to know not only how to act, but when to act; must be prepared to admit the possibility of obtaining their ends in some other way and by other methods than those which they have heretofore adopted. They have been led to see that they have made some mistakes in the past which must be avoided in the future. They have come to regard arbitration in a different light, and to admit that strikes and lockouts are expensive indulgences. Let all, then, no matter what their position, at this season of good will, try and remove some of the barriers which stand between employers and employed, and evince an honest desire to recognize each others rights, and admit the fact that each is dependent one upon the other. And if they are prepared to meet each other half-way—and every reasonable man would surely do that—the breach is closed and the circle complete.

Let us then have peace and harmony. Let each individual be willing to make some little contribution to the

general fund of "good will among printers." It is astonishing how infectious a spirit of good fellowship is. One man who is filled with it can often inspire a whole organization. Now is the time to inspire! Let the circle be formed; let the cup of friendship be passed; let the hands be linked, and let the heavens ring with the shout of good fellowship and brotherly love.

NEATNESS IN THE OFFICE.

THERE are few more reliable indications of the character and merits of the work turned out in a printing establishment than the manner in which it is kept or the neatness observed in the workroom. Where the rules that "cleanliness is next to godliness" and "order is nature's first law" are practically recognized, even in the absence of positive proof, it may rationally be assumed that the surroundings and productions correspond. The foreman who insists on having a "place for everything and everything in its place," as well as the compositor educated under such auspices, is certainly more apt to recognize the eternal fitness of things, and carry out this principle in the selection of appropriate material for the composition and display of a job, no matter of what character, than the sloven who is indifferent to his surroundings, and feels just as much at home in a hog-pen as in a well-conducted office. Cause and effect go together. And such system is far-reaching in its influence, because, independent of the important fact that the one is more profitable than the other from a business standpoint, it has always seemed to us that office neatness leads to personal neatness, and has a positive influence in forming taste and developing qualifications. A slouch in a well-regulated composing room is like a fish out of water—out of his element; and one of two results is very apt to follow his employment—reformation, or discharge, either voluntary or compulsory.

A short time ago we visited two so-called first-class offices, both doing a large business. In the one everything was in apple-pie order; lead and furniture racks and rule cases well filled, and it was a pleasure to note the smoothness and celerity with which business was dispatched. There was no friction, no hunting for sorts—everything was conducted like clockwork. The foreman evidently knew his duty; knew the value of enforcing system, and insisted that the employes should comply with the regulations required to secure it—with the results stated. In the other a striking contrast was presented. Forms had been unlocked on the floor and fallen into pi; two large imposing stones were literally covered with jobs in all stages of decomposition; some compositors were picking rule, others hunting for sorts, and lifting metal furniture without tying up or securing the pages, while the foreman sat on a dirty stool before a dirty desk, apparently oblivious to the ruin going on around him. A pretentious artist (?) had just finished a title page to a catalogue, into which he had tried to cram every conceivable ornament, and, after lifting the job, took the galley, which contained a mass of pi, consisting of corner pieces, rules, dashes, leads, slugs, etc., and coolly dumped it on the stone. When leaving, we stated to the proprietor, whose office seemed in as much confusion, our surprise at the condition

of the composing room. He remarked: "You have visited us under disadvantageous circumstances; the fact is, we are so rushed with work we cannot find time to distribute," though he supplemented this statement by the admission that the printing had been run down so that there was absolutely nothing in it, and yet he never seemed to appreciate that he, and such as he, were responsible for this state of affairs. "Like master, like man." Neither employer nor foreman seemed to know what order meant, and their employes came honestly by their indifference.

Reader, which of the two offices would *you* prefer to work in?

GOOD RESOLUTIONS.

AT this season of the year it is customary to form resolutions as to our future course, and in looking back over the past year, to make especial note of mistakes committed, for the purpose of avoiding them in the year to come. Turning over new leaves, mapping out a new programme and starting afresh, is as appropriate as eating turkey or making calls. It will be well, therefore, for printers to fall into line and see what good resolutions should be made for the year upon which we are about to enter; to see wherein they have erred in the past and seek to profit by experience.

There are several excellent resolutions which may be suggested, and which, if lived up to, would prove of material benefit to all concerned, among which we may mention:

1. To have an efficient apprenticeship system.
2. To raise the prices charged to the public.
3. To promote better feeling between employer and employed.
4. To remove abuses from which all suffer.
5. To become better workmen and raise the standard of efficiency.
6. To make provision for aged and infirm members.
7. To unite more heartily in promoting the common welfare.

These are seven good resolutions which can be easily adopted, and as easily carried out, if the determination to do so exists. How best to proceed to carry them into execution may afford matter for future conference and discussion; but the old, though trite, saying, "Where there is a will there is a way," encourages the hope that "the will to do" being ours, "the way to perform" is sure to follow.

It must be admitted that, considering the qualities necessary to make a good printer, educational and otherwise, the compensation received is frequently inadequate and unsatisfactory. No class of workmen are required to be so well informed and possess such an extensive knowledge of every subject under the sun as compositors; and there are no workmen who need to be more skillful, and at the same time artistic, as pressmen; and yet there are many branches of industry in which men receive larger salaries and better treatment. *Let employers remember this.*

On the other hand, there is no business which calls for such large investment of capital and has so many risks of

loss and failure, or that as a rule shows such small returns as that of employing printers. *Let workmen remember this.* If there is one thing needed more than another it is this recognition of each other's relative positions, duties and responsibilities. At the present time, neither the workman nor the employer is reaping the advantages he should reap, either from his labor or his capital; and instead of fighting with each other, it would be far more rational and profitable to unite in an effort to secure mutual advantages. The average charges for printing are too low, as is proved by the large number of failures that are annually recorded, and a combined effort is necessary to raise the prices to a remunerative basis, that all may be benefited thereby.

That the coming year may see a great improvement in the status of all connected with the printing business is our earnest desire, and, so far as in us lies, we will do our part toward bringing it to pass. This is our good resolution for the New Year.

AND STILL THEY COME.

WHO dare say the "amateur printer" is not a typographic artist, as he invariably claims to be, after examining the samples of his handiwork furnished on another page. It will be observed that the professional cards, billheads, etc., are executed in the highest style of the art, and are doubtless the work of proficient, who think the "American" boy is smart enough to "pick up" the printing trade, without instructions or the aid of an "apprenticeship system." In a letter, inclosing one of them, the writer says, "The blacksmith who printed the inclosed made the remark to the proprietor of our leading paper house that the business men of our city were paying too much for their printed stationery, and that he was going to show them that *he* could furnish it for one-half the price now paid. What is your opinion of it?" We think the business men who patronize him are standing monuments in favor of the enforcement of a *compulsory* educational system, showing by their action that *their* education has been sadly neglected, and that their children must get their love of the beautiful from some other source than their parents. In spite of all advice to the contrary, we propose whenever we see an "amateur" head to "whack" it, because it is the only argument it can appreciate.

APPOINTMENT OF PUBLIC PRINTER.

IN reply to a number of inquiries regarding THE INLAND PRINTER's choice for government printer, under the incoming administration, we desire once and for all to say that we think it would be in very bad taste for us to use our position to advance the personal interests of any particular candidate. There are a dozen aspirants for the honor, all of whom are thoroughly qualified, and any of whom would doubtless, if appointed, make an efficient public official. What we desire to see is that a practical printer, an honest man, and one whose sympathies are with the typographical union should secure the plum, and to accomplish this purpose we shall do all that in our power lies. Further than this we cannot go.

Written for THE INLAND PRINTER.

AM I RIGHT?

BY R. M. TUTTLE.

A FEW days ago I had a visit from a friend, a brother country newspaper man. He has an office that would, perhaps, invoice at \$2,500, and he runs a very creditable weekly newspaper—creditable editorially, as well as mechanically. He has in his office a power press, which he turns with a crank, when his youth is not around, and a 10 by 15 jobber. Neither the make of his newspaper press nor his jobber is ever advertised in THE INLAND PRINTER, and there are very few of these antique presses in use compared with the numbers in use of the few standard makes. His jobwork looks well, and its faults are not with its presswork.

If there is one hobby that I have got it is in purchasing presses, paper cutters and whatever machinery I need, of the very best and most expensive kind. A few weeks ago I got tired of the 23-inch paper cutter that I had been straining my back with for several years, because it was too light to cut a ream of paper all at once, and made a trade with a supply house, by which I got them to take my old cutter and a substantial check, and send me in return therefor a new 30-inch lever cutter of the most expensive and heavy make in the market.

Three years ago I traded off a job press made by manufacturers who don't advertise in THE INLAND PRINTER, and had put in its place two jobbers, one a 10 by 15 and the other a 7 by 11, and both of them were as expensive as any presses in the market. It was not that I was so flush with money that I had to spend it for the dearest goods, but I was possessed with the idea that if a printer would have machinery that would last the longest and do the best work, and at the same time be worth the most money if he desires to sell or trade, he must get the most expensive machinery that is to be obtained. Of course there are several makes of jobbers on the market, just as there are several sewing machines, each of which is claimed to be the best, and each of which has some special features which make it desirable. It is not for anyone to arrogate to himself superior wisdom, and say that this particular press is the best in the world, because he happened to buy it and use it, and would use no other; but I think that if called upon I could name half a dozen jobbers, and my list would contain the names of absolutely the best presses for the country printer.

So much for what I have done and thought and think. But can it be that I am wrong? My friend, who looked over my expensive paper cutter, my two expensive job presses, my expensive newspaper press and my expensive steam engine, said, "I don't see why so many of you printers waste your money on the most expensive machinery you can find in the market. I would be willing, if I wanted a job press, to go into a warehouse in the dark, put my hands on the first press I came to and take it. I don't care what press it is. I can do, and so can any good printer, better work on my cheap press than some printers can on the best press you have got. That paper cutter

does no better work, and cuts with no more trueness and cuts no straighter than one that would have cost but a little more than half as much as you paid for that. I don't find any money in my business to throw away on fancy prices for machinery."

My visitor is an older man than I am; he has had a good many more years' experience in the business than I have had, though he would admit that as far as dollars and cents are concerned he has not been as successful. Whether he has taken in less than I have or spent more, I can't say. Anyhow, his surplus is not as large. I want to know if I am a fool to follow the policy which, as I have indicated, I have felt to be the only true one—the securing the best machinery the market affords. No publisher of a small daily, which has a circulation of a thousand or two, and a weekly, with a circulation of less than ten thousand, is justified in putting in a plant such as a metropolitan paper with ten or twenty times the circulation must have. But I contend that he is justified in purchasing the very best machinery of the sort adapted to his use, and I think it is cheaper in the long run. I admit that a good printer can do better work on an ordinary, cheap press, than a cheap, ordinary printer can do on a good press; but I will not admit that a good printer can do as good work with as much expedition on an ordinary press as he could on a better one. Presswork and paper-cutting need the greatest accuracy, and this accuracy is missing in the cheap presses and cheap paper cutters, especially when they have been worn awhile—at least so my experience leads me to conclude. I want the best machinery, not as I want the best carpets that are made, on my floors, but because I believe I save in time more than the additional cost. Time is an all-important factor in a printing office, and it takes but a little while to fritter away time that is worth as much as the difference between a good and an ordinary press. When the time is saved that makes the difference between the two presses, you then have your better press into the bargain.

NOTES ON WOOD ENGRAVING.

NO. XLVI.—BY S. W. FALLIS.

BEWICK had intended his cut, "Waiting for Death," to serve as one of those cheap prints to decorate the walls of cottages which had been so familiar to him in his boyhood, and he proposed to dedicate it to the Society for the Prevention of Cruelty to Animals, and, with this idea in view, he wrote a graphic biography of his broken down model as early as 1785, which is not only an excellent introduction to his design, but thoroughly characteristic of its author's literary style and his sympathies with equine misery. We herewith give it in full.

WAITING FOR DEATH.—In the morning of his days he was handsome—sleek as a raven, sprightly and spirited, and was then much caressed and happy.

When he grew to perfection in his performances—even on the turf, and afterward in the chase and in the field—he was equaled by few of his kind. At one time of his life he saved that of his master, whom he bore in safety across the rapid flood, but having, in climbing the opposite rocky shore, received a blemish, it was thought prudent to

dispose of him, after which he fell into the hands of different masters; but from none of them did he ever eat the bread of idleness, and as he grew in years his cup of misery was still augmented with bitterness.

It was once his hard lot to fall into the hands of Skinflint, a horse keeper—an authorized wholesale and retail dealer in cruelty—who employed him alternately, but closely, as a hack, both in the chaise and for the saddle; for when the traces and trappings used in the former had peeled the skin from off his breast, shoulders and sides, he was then, as his back was whole, thought fit for the latter; indeed, his exertions in this service of unflinching avarice and folly were great beyond belief. He was always late and early made ready for action—he was never allowed to rest. Even on the Sabbath day, because he could trot well, had a good bottom and was the best hack in town, and it being a day of pleasure and pastime, he was much sought after by beings *in appearance* something like gentlemen, in whose hands his sufferings were greater than his nature could bear.

Has not the compassionate eye beheld him whipped, spurred and galloped beyond his strength, in order to accomplish double the length of the journey that he was engaged to perform, till, by the inward grief expressed in his countenance, he seemed to plead for mercy, one would have thought, most powerfully? But alas! in vain. In the whole load which he bore, as was often the case, not an ounce of humanity could be found; and, his rider being determined to have pennyworths for his money, the ribs of this silent slave, where not a hair had for long been suffered to grow, were still ripped up. He was pushed forward through stony rivulet, then on hard road against the hill, and having lost a shoe, split his hoof, and being quite spent with hunger and fatigue, he fell, broke his nose and his knees, and was unable to proceed; and becoming greased, spavined, ringboned, blind of an eye, and the skin, by repeated friction being worn off the large prominences of his body, he was judged to be only fit for the dogs.

However, one shilling and sixpence beyond the dog-horse price saved his life, and he became the property of a poor dealer and horse doctor.

It is amazing to think upon the vicissitudes of his life. He had often been burnished up, his teeth defaced by art, peppered under his tail, had been the property of a general, a gentleman, a farmer, a miller, a butcher, a higgler and a maker of brooms.

A hard winter coming on, a want of money and a want of meat obliged his poor owner to turn him out to shift for himself.

His former fame and great value are now to him not worth a handful of oats.

But his days and nights of misery are now drawing to a end: so that, after having faithfully dedicated the whole of his powers and his time to the service of unfeeling man, he is at last turned out, unsheltered and unprotected, to starve of hunger and cold.

Bewick's representation in black and white is a faithful representation of his graphic pen picture just given; the landscape portion is in Bewick's usual careful and studied style of portraying nature in its detail, simplicity and grandeur.

His life affords a useful lesson to all who wish to attain a distinction in art, and at the same time preserve their independence. He diligently cultivated the talents that were his good fortune to possess, and never trusted to booksellers or designers for employment. He did not work according to the ideas or directions of others, but laid out a path for himself, and by diligently and carefully pursuing it according to the best of his own inclinations, he acquired both a competence in worldly means, and an ample reward of fame. However, his success did not render him inattentive to business, and increasing wealth did not tempt him to indulge in expensive pleasure, or live in a manner his circumstances would not justify. He frugally husbanded what he had honestly earned and prudently made provision for his old age. He did not

acquire great wealth, but a competence, for which he was grateful and contented.

He was conscientiously methodical and regular in his habits of business. Until within a few years of his death he used to come to his shop in Newcastle, from his house in Gateshead, at a certain hour in the morning, returning to dinner at a certain time, and, as he used to say, "lapping up" at night as if he were a workman employed by the day.

The following cut represents a view of

BEWICK'S WORKSHOP

in St. Nicholas Churchyard, Newcastle.

The upper room, the two windows of which are seen in the roof, was that in which he worked during the latter years of his life.

(To be continued.)

Written for THE INLAND PRINTER.

PATENT LEATHER TINT BLOCKS.

BY W. H. MONTGOMERY.

IN accordance with promise given during your recent visit to Denver, the writer will endeavor to give you some information gained by practical experience, and also from that source from which many of our fraternity have gained many points and wrinkles which tend to help them through their peregrinations over the sphere which, to the tourist, has no bounds—pick-ups—as to the adaptability and advantages of patent leather, in various forms, in the printing business.

The claims of some middle-aged prints of being *the* man who first used patent leather for tint blocks, etc.—and many of them have been met by the writer—must be taken with considerable allowance, for during his term of apprenticeship he served under a foreman who used patent leather for tint blocks, fancy pieces, etc., and he had seen them used *while he was learning his trade* in the office of Clark W. Bryan & Co., now publishers of the *Paper World*, *Good Housekeeping*, and other periodicals, in Springfield,

Massachusetts. So leather must have been used as an adjunct to metal something over twenty-five years ago.

How many printers, and good ones at that, who have seen stock certificates, orders, checks, drafts, *menu* cards and other work of like description, upon which two or more colors had been bestowed, have ever stopped to consider that everything thereon, with the exception of the letter, was the work of some handy craftsman aided by a sharp penknife, possibly a graver, a piece of patent leather and the necessary common sense? Yet such has often been proven when they have taken the trouble to investigate.

The advantages of patent leather for tint blocks, border and center-piece tints, consist chiefly of cheapness and rapidity. Suppose, for example, a tint block is wanted for the face of a stock certificate; have none in stock, a hundred or a thousand miles from a printers' supply house or foundry; job must be done at a certain time. Now comes the advantages of having at command an article which fills the bill, so far as the material of the office is concerned, and produces work fully as well as the best metal or wood block, which satisfies the customer, saves time and adds profit to the business.

Some printers, when shown the result of work from a leather plate, say, "Oh, well, it takes too much time," and claim there is no money in it for them. Now, to disprove this oft-repeated expression, herewith you will find inclosed sample proof of certificate tint,* the entire work upon which consisted of one hour and forty-five minutes, or cost to produce not to exceed one dollar and fifty cents. The cost was more than covered by extra color on first job, the same block has been used for over ten thousand impressions, and the proof sent will indicate the condition of same at present time. The ease of working, on any press, of leather surface plates, and the nicety of impression, proves conclusively to any person who has used them that they are preferable to any other for limited runs.

For railroad folders, hangers, or ground-work for any class of work, leather is handy, cheap and durable, while for other classes of work its adaptability depends to a great extent upon the taste and proficiency of the man who attempts the use thereof.

THE INLAND PRINTER has heretofore published the process of preparing the leather for manipulation, but in connection with above it might not be amiss to give a point or two. The best leather for general work is that known to carriage trimmers as dash leather, owing to its heavy patent surface and evenness of body. Procure a well-seasoned piece of wood, squared, a trifle less than type high; lock it up in chase for platen-press, and after adjusting impression and putting on say four sheets of flat paper on tympan, cover the block evenly with a thin coating of glue; place your leather on, place your form in, turn the machine to dwell of impression, and allow it to remain say thirty minutes; take form out and lay your block away until next day in order that the glue may become well seasoned. When ready for cutting, either lines, letters or figures, the transfer can be easily made by taking proof

*The tint block for the certificate referred to is $9\frac{1}{4}$ by $6\frac{1}{4}$ inches, and fills the bill to a nicety.—EDITOR.

from letters, using more ink than ordinarily; place proof face down upon leather, rub gently; remove proof and dust a little fine bronze or whiting on your transfer proof, and your outlines are now ready for your knife and exercise of your patience.

For convenience, it is well to make up several blocks of large size and keep them in stock for future use, for after three or four days' seasoning pieces of any desired size can be cut from the blocks the same as from apple or box wood.

At some future time I may furnish some samples of different classes of work, with additional remarks on the finer grades of knife and graver work on specially prepared leather blocks.

JAPANESE JOURNALISM AND TYPOGRAPHY.

BY W. A. ENGARDE.

THE peculiarities of Japanese journalism are many, and the typography of the Mikado's land is a very elaborate thing. A Japanese newspaper is a vastly different thing from what we are accustomed to find on American breakfast tables. Our last page is its first; its columns only run half the length of the page; it has no such thing as headlines or "scare" heads, and its titles run from top to bottom instead of across; it has but a few rough illustrations; it prints few advertisements, but those are paid for at a comparatively high rate; its price is low, ranging from 1 to 2 cents a copy and from 25 to 50 cents a month; and it knows nothing yet of sensational advertisements, or flaming posters, or deeds of journalistic daring.

In general, its scale is much more that of the French newspaper than of the world-moving monsters of London, New York, Chicago and Philadelphia. The only evidence of it that one sees in the streets is the newsman, either a lank and lean middle-aged man, or else a boy, clad in meager cotton clothes, trotting along with a bundle of neatly folded papers under his arm and announcing his passage by the incessant tinkling of a little brass bell tied to his waistband behind.

The internal organization of a newspaper office is a sad spectacle of diurnal struggle with troubles unknown elsewhere and really unnecessary here. The Japanese written and printed characters consist of the Chinese ideographs, those complicated square figures made up of an apparent jumble of zigzags and crosses and ticks and triangles and tails, and of the original Japanese syllabacy styled "kana." Of the former there are 20,000 in all, of which perhaps 14,000 constitute the scholar's vocabulary and no fewer than 4,000 are in common daily use, while the forty-seven simple characters are known to everybody. Therefore the Japanese compositor has to be prepared to place in his stick any one of over 4,000 different types—truly an appalling task. From the nature of the problem several consequences naturally follow. First, he must be a good deal of a scholar himself, to recognize all these instantly and correctly. Secondly, his eyesight suffers fearfully, and he generally wears a huge pair of magnifying

goggles. Third, as it is physically impossible for any one man to reach 4,000 types, a totally different method of case arrangement has to be devised.

The "typo," therefore, of whom there are only three or four on a paper, sits at a little table at one end of a large room, with a case containing his forty-seven kana syllables before him. From end to end of the room tall cases of type are arranged like the shelves in a crowded library, a passage three feet wide being left between each two. The compositor receives his "copy" in large pieces, which he cuts into little "takes," and hands each of these to one of half a dozen boys who assist him. The boy takes this and proceeds to walk among the cases till he has collected each of the ideographs, or square Chinese picture-words, omitting all the kana syllables which connect them. While these boys are thus running to and fro, snatching up the types and jostling each other, they keep up a continual chant, singing the name of the character they are looking for, as they cannot recognize it till they hear its sound, the ordinary lower-class Japanese not understanding his daily paper unless he reads it aloud. When a boy has collected all the square characters of his "take," he lays them upon it by the side of the compositor, who sets them up in proper order in his composing stick, adding the connecting kana from the case before him. Then a proof is pulled as with us and carried to two proofreaders, one of whom sings the "copy" aloud to the other. A Japanese composing-room is thus a scene of bustle, noise, laughter and weird racket, the only serious figure being the long-haired "typo" seated afar off by himself and poring over his wretched spider-web letters, like some old entomologist with a new beetle under his microscope. The "making up" and stereotyping is like that of old-fashioned offices here, and the paper is printed upon flat presses fed by hand.

The total number of persons employed on a typical Japanese newspaper, says the *Trichi Trichi Shimbum*, is as follows: One political director, one chief editor, five assistant editors, four proofreaders, one shorthand writer, twelve reporters or news gatherers, three or four compositors, each with several assistants, twelve men in the press-room, and minor employes, including distributors, making a total of one hundred and fifty persons. The reporters are the weak point, for the editor frankly states that if they cannot find news they are compelled to bring home fiction, as they are paid by results, and even then they do not earn more than £2 or \$10 a month. They, therefore, deliberately invent a large part of the news.

THE German imperial printing office consists of 1 manager, 10 deputies, 700 compositors, pressmen, machine minders, founders, folders, stitchers, etc. There are 2 steam engines, 1 dynamo-electric machine, 37 machines, and 202 other accessory machines. The weight of the type is 350 tons. The imperial printing office is not the only grievance from which German printers suffer; they are by no means satisfied with new government rules affecting trade societies. One of these is peculiarly objectionable, for it accords to the government the right of veto in respect of any of the decisions of the society. The state regulations of workmen's societies in Germany would appear to be not so much a necessity as a means of maintaining the supreme authority of those who are at the head of affairs.

PHOTO-ENGRAVING COMPANY, 67-71 Park Place, New York.

CONFIDENCE.

Written for THE INLAND PRINTER.

THE INTERNATIONAL TYPOGRAPHICAL UNION BENEFICIAL CLAUSES.

BY O. R. LAKE.

THE recent defeat of the beneficial clauses submitted to subordinate unions by the Kansas City convention, naturally leads one to the conclusion that the printers of America are living in "a fool's paradise." The result of the vote upon the *referendum* demonstrates that a majority of the membership are so thoroughly imbued with the belief that their organization is unequalled and invincible—a shield of defense in time of trouble, a fostering parent in days of peace—that they antagonize any and every proposition looking to still further building up and strengthening the International Typographical Union.

The objectors may be divided into three classes: The thoughtless and improvident; the purely selfish, and the pessimistic.

To the first, life is but a summer's day, filled with bright flowers, balmy breezes and sweet perfumes. He does not want provision made for his future; is here today, there tomorrow. Besides, it would impose burdens upon him which he would gladly escape, more especially as he would have to be prostrated by sickness, before any direct benefits would accrue. And that, of course, is an absurd proposition.

The selfish printer is one who, through purely beneficial societies, has made provision for the future; carries an insurance policy, and insists that others should do the same. He's all right.

The third class of objectors, the pessimist, maintains that any change must necessarily be for the worse; that the organization as it now exists has stood the test of time; that it was founded wholly and solely as a trade union and must be maintained as such; that any attempt to incorporate new features, beneficial or otherwise, is a perversion of its proper functions and should be frowned down as dangerous legislation. He loses sight of the fact that the times change, and men must change with the times in order to keep step with the progress of events. He conjures specters from a dead past to shake ceremonies of the grave in the face of modern ideas. Rules and laws for the government of the craft in the fifties would be antiquated and out of place in eighty-eight.

In this matter, we would have done well to have taken a lesson from our opponents. Their power to do us harm and their strength as organizations lies solely and wholly in the beneficial features which they have had the wisdom to incorporate, we the folly to reject.

Had the clauses submitted proven faulty after a trial, or inadequate to meet the demands upon them, it would have been a very easy matter to correct their crudities and enlarge their scope at a future convention. The basic principle of all organizations, trade or otherwise, should be the greatest good to the greatest number.

Had the rejected clauses been adopted and given a fair trial, they would have added largely to our membership; would have enabled us to reach out and enroll the country

printer; and, above all, would have retained our present membership. Men would not have been lax about paying dues and legal assessments, for they would have to sacrifice all benefits in doing so; they would not have been tempted to sever their connection with our organization, and thereby forfeit the provision made for their families in case of death.

But the penny-wise and pound-foolish policy prevailed, and, to all intents and purposes, we are precisely where we were twenty years ago—save only that the executive officers have been vested with certain clearly defined powers, instead of the semblance thereof.

It may be that similar features will be presented at the Denver session, in which case it would be well for delegates to the thirty-seventh session to seriously consider the subject, and make our organization the strongest, as it is now the oldest, trade society in America.

QUADRATS.

BY PICA ANTIQUE.

"THE genius of success is still the genius of labor," was an aphorism that once fell from the lips of James A. Garfield, and never has a truer history of the means by which grand results in business were obtained been condensed into as few words.

Success in life, save in very rare instances, can be traced directly to patient and continued effort. However well the root of the tree of labor may be planted, the growth will be slow and uncertain, if at all, and the leaves become yellow and fall, the trunk sapless and decay without persistent watering and care.

Largely successful business ventures are the result of long continued endeavor; rather the creeping of the tortoise than the spasmodic speed of the hare. This is especially and essentially true of all wherein type and paper may be said to be the brick and stones of which the structure is builded, and ink the cement that binds them together. From the initial number of any of the great city dailies until the time when they can count their circulation by half a million copies is a long stride; from the first modest job worked upon a diminutive hand-press until half a score of mammoth steam-driven presses, almost human in action, and with speed scarcely exceeded by the lightning, ceaselessly whirl to meet the demand, is the record of miserable failure or unflinching struggles and for the larger portion of a century.

Years are important factors in all business undertakings; time the condition precedent to success, and labor earnest and unbroken the corner-stone of triumph. Let us remember this and never fancy a great printing establishment can be builded up and sustained without time and toil.

.

NATURALLY, as the last month of every year is drawing to a close, we take an inventory of our prospects for the future equally with the stock on hand; look backward critically for errors as well as plan for increased resources and values. It is the season for closing accounts and opening new; for striking balances and gathering financial

strength for a fresh start. Before us lies a not-to-be-controverted statement of what we have accomplished, what left undone, and happy the man who can find the greater sum upon the right side of the ledger.

Years are the adjusters of many vexed difficulties; the solvers of many vexed problems; the arbitrators between man and man; the elucidators of mysteries yet to be fathomed. What has happened we know; what is to come is hidden by the veil of time. False lights have grown dim in the distance and soon will be entirely hidden beneath the dust of forgetfulness. But others will shine and dazzle and lure to destruction unless we have learned wisdom from the days gone before—the years that will never return.

.

How do we stand with the past? How are we provided against the contingencies of the future? In all that pertains to printing, the past has literally to bury its dead and not mourn over the remains. That which was new and novel twelve months since has to be laid upon the shelf—better shipped to foundry and second-hand shop—and something fresh take its place.

To command and retain trade the printer has not only to keep up with the times, but be in the van of the army of improvement and invention. The tune to which he *must*—there is no softer word to give enunciation of the *fact*—*must* march or be hopelessly left in the rear, is ever a quickstep. The “hold fast to the old” will never answer for the craft of crafts and trade of trades. *That should lead and never be led.* The demand upon its resources are constantly changing, constantly of the unexpected and imperative order, and no old-fashioned rubbish will give satisfaction either to the tasteful eyes and skillful hands of the printer or not easily to be satisfied public.

.

“PUT not new wine into old bottles,” read by the lights of the present trade, civilization and experience, inculcates the wisdom of not putting old type in new cases; that is (and more clearly), for the coming new year banish the old and out-of-style and “sort up” with the new, artistic and freshly beautiful. Not that the old may not fill the eye of printer, be unbattered in “body” and fair of “face.” The vital question is not what you think of it, but what your patrons do. The “money that makes the mare” of business go at the greatest speed and win the most remunerative purses comes from their pockets, and yours will remain empty without their generosity in filling.

Every new year requires new stock; the new challenges attention and entices work that would not otherwise be thought of. There is a seductive power in new type, properly adjusted and nicely worked upon good paper with fine ink, that few can resist. Charming the eyes is the strongest mesmeric power to open the closed hand of financial miserism, and never forgetting that as you sow even so will you reap the golden grain of business during the coming year and “sort up.”

.

THE process of “sorting up” is a mere bagatelle now to former years. There need be no running away from

home to visit manufacturers, no wasting of precious time over specimen books, no inspection of matrix or mold.

THE INLAND PRINTER brings every month to your workshop an exhaustive *ménu* of all that is new, novel and useful in typographical and mechanical feasts—the bill of fare of the educated world. You have but to gaze as one might do in Wonderland and choose. Strikingly do the pages of the INLAND give *everything for printing and printers*, and, more than that, reliable hints of value and use. In these respects (and without suspicion of fulsome flattery), it may be called encyclopedic and a cyclopedia of all worth knowing in and of the art.

By it, consequently, one can make judicious selections without fear of failure or regret, and from its wide-world gathered wisdom obtain a plant to meet every emergency and “bring grist to the mill.”

.

THE pity of it is that there is such an abundance of supplies, so much that every good craftsman would like to be owner of that he stands appalled when he looks at the smallness of his bank account. And it would seem at the first glance that invention and enterprise had outrun demand in the matter. A careful examination will conclusively prove this not to be the case. We require all we have, and more. There can never be “too much of a good thing” in this instance. Production will never exceed requirement. New wants are constantly coming to the front, and new drafts upon the seemingly impossible must be made to meet them. There is nothing of the stand-still principle—the being satisfied. At least there ought not to be. One desire is scarcely met before we are reaching forward to gratify another and greater. The pigmy of a score of years since has become a giant. Will not the giant of today be dwarfed into a pigmy with the lapsing of another decade? Printing would never have been of importance if not progressive—will never be. But it always has—always will be, and finds in the new and beautiful its profit and glory.

.

AMONG the new in printing during the coming year (according to political adjustment and rewards) will be a new *public printer*. With party arrangement we have nothing to do. But we of THE INLAND PRINTER have very much as far as pertains to the welfare of the craft and the head of the largest printing establishment in the world.

Therefore it is to be hoped the new appointee will be thoroughly educated in “the art and mystery”; be proficient and practical; a good workman himself; a judge of good work in others; that skill, sobriety and fitness will go very far in the appointment of subordinates; that they will outweigh political recommendations, and that the survival of the best craftsmen will be the rule and not the exception.

Making the government printing office a partisan machine is ever a gross error—never should be permitted; and the sooner abolished the better for the country, humanity, the craft, and the great interests involved in the production of work that will do honor to the art.

Written for THE INLAND PRINTER.

PHYSIOGNOMICAL EXPRESSION IN TYPE-COMPOSITION AND BOOK-COVER DESIGNS.

BY GUSTAV BOEHM.

CHOOSING the above title for this paper, I think I have rather done some tight-rope walking in the proper selection of the words. "Who," my gentle reader will say, "can speak of the physiognomy of job composition? Why, we may as justly expect in future a paper on the 'psychology of table-work,' or the 'anthropological character of long primer title extended,' the 'metaphysics of small pica roman' or the like." Eh bien! and still I hold the opinion that I am not wrong in choosing it. The builder who executes the plans laid before him by the architect, either gives expression to the taste of the architect or the owner of the building, who has given special orders as to its architectural features, or he follows the whim and fashion of the times; and, in the latter case, no one who ever visited the old cities of Nuremberg, Antwerp, Stockholm, etc., will deny that every building, every stone, every nail bears the physiognomy of the century in which it has been erected, and, in bearing that physiognomy, bears also witness to the character of the peoples at whose orders these buildings have been built, or who built them; thus we find the dead material of stone and wood and iron to possess that property which, my gentle reader, once more, is generally believed to condition the presence of a soul for its production. In man, surroundings, education, physical health and mental standing find their way soon enough from the inner recesses of the soul, the *prima* recipient of existing conditions, to more visible quarters, the face, and although much of Lavater's science is forgotten and forlorn, and that not at all to the injury of truth, there was a grain of value in it which still holds its own. Lavater tells us that the character of man finds its sure means to impart itself to the outer world through facial expression. His doctrine teaches us that certain emotions, certain properties of the soul, characteristics of the individual, find each and every one a definite means of expression in the physiognomy. This appears quite natural: certain emotions condition a given facial expression, and, if often repeated — as the choleric, f. i. will often be mad and impatient; the sanguinic, seldom excited — that expression which at first only appeared in moments when the soul was accordingly agitated, will, after a certain time, remain with the individual and be a characteristic sign to the world, telling with expressive, although silent tongue, who the person is. Some experience in the observation of humanity gives one soon enough that knowledge of one's fellow-men, which the Germans call, *menschenkenntniss*, and which is a very useful property to possess. But to return from man to things. I have ventured the opinion that job composition may bear physiognomic expression, and have shown in the choice of an example from the building trades, in which way I desire to have this quasi coincidence between character and physiognomic expression understood. I venture the belief, and my experience in the matter leads me to the conclusion that certain characteristics in men call for certain tastes, which bear the signs of such characteristics, and that these tastes extend to almost every nook in their lives, giving color to their inclinations and actions. Thus, following up the red cord of that premise, we accept that also the appearance of stationery will bear such characteristics as may permit certain conclusions about its owner. It is merely a few days ago that the representative of a very large business concern, the purchasing agent of the Hoboken Ferry Company, entered a printing office to place an order for printed stationery: "I have had a lot of nonsense, curves, fancy touches and the like, on my memorandums thus far," he said, "but I don't like it. I want something plain and to the point, *same as myself*." This example may serve as a living proof of my suggestions. Here was a man through whose hands went innumerable items, who purchased everything for the large company whose buying agent he was, from a nail to a ferry boat, and who was well capable of valuing time and plainness. He desired expressly to have the character of his own personality imparted to his stationery. It is, furthermore, an actual fact, that from the appearance of a firm's or an individual's printed stationery one can form conclusions. "Speak, that I know you," is an ancient saying. "Show me your card that I know you," may be put in the

field on our part. Paradox as it seems, there is truth in this. I have never met with important men or women, people who had extended business responsibilities, politicians of the more important offices or scientists of renown, whose stationery did not bear witness of their personal value and importance. People of that class refuse the ornamental letter as a rule; their taste inclines toward the bold, stern and invariably toward the plain. They have not much spare time in life to devote to filigree ideas, and they avoid everything which would tend to take up time even in selection of their printed matter, that is, they shun all the *odd series* with which our typesetters have flooded the market some years ago. The plain roman letter is their choice, and it is the best and most useful in the end.

Considerable more outspoken than in commercial or private stationery, do we find the character expressed in the title pages of books and magazines. Here it is obvious that the character of the contents of a book or magazine must be significant in the title page or cover, and it may be considered a fact that this item has an enormous influence upon the sale of the article. Any publisher will admit this. Most people who buy books buy them without knowing *what* they buy. A standard author, such as Thackeray, Dickens, etc., will certainly not suffer in that degree as the modern unknown writer under the influence of a mean title page. He, however, will be a failure from the beginning if he brings his book under the wrong cover upon the tables of the book-stall. I remember one case, for an example. I have a friend who makes a specialty in gathering all literature referring to insanity and nervous diseases. Whether in the guise of a scientific essay, or in the more modest form of a novel or story, there is no book or booklet bearing the words or indications of "insanity," "nervousness," etc., which he will not hunger to acquire, and he will not rest until the treasure is his. Some time ago he passed a bookstall in Fulton street, New York, and to his delight found an advertisement of a book, entitled, "The Story of Two Lunatics." He rushed down into the basement of the book-stall and asked to be handed a copy. The seller complied. My friend took the small volume and, with disappointment and sadness, dropped it on the nearest table without opening it. He left the store without buying what he would have sent all over the world to procure had he read the advertisement in some catalogue. A few days after this occurrence, I happened to pass the same book-stall and noticed the same advertisement.

Knowing of the hobby of the hobby of my friend, I thought I could make him happy; walked down stairs, and bought the book. I at once noticed the awkwardness of the cover and spoke about it to the seller. Putting my copy in the pocket of my overcoat, I hastened to the abode of my friend. "G——," I said, producing my treasure, "here is something for you," and I began aloud to read the title: "The Story of Two Lunatics." To my surprise I found my friend not at all in ecstasy over my discovery, and heard him request me to tear off the cover if I intended to present the volume to him. He repeated what I have narrated above, and said that he would never have bought the book, on account of its title page, although it had cost him several restless hours to know that the book existed and he did not have it. I put my book silently into the recesses of my overcoat, went to my printer, ordered a special title page to be printed, and having

the book with this page bound in sheep, presented it smilingly to G—. He was delighted, and (I reproduce the original title on preceding page to save my friend an unjust judgment by the reader) he was not so wrong; the original title was actually, as may be seen, miserably awkward.

So much about book titles.

Magazine covers go under a similar observance. Lack of space forbids me to go into details about this subject, and as I am at present gathering material for an extensive essay on the "Character and History of Magazine Covers," which I shall publish in a future number of this magazine, I merely wish to call the attention of readers to the coincidence between the contents and the cover of their magazine. There is the solid and stern *Forum*, with its plain and characteristic title. No one, being anything of a literary connoisseur, will look for light and merely time diverting articles under *this* cover. The men who speak here do not simply speak to entertain the reader, to satisfy the palate of the causerie-liking customer, though one paragraph in the *Forum*, or the *North American Review*, or the *New Princeton Review*, and the like, contains more beef, more substance, than an entire volume of one of the lighter magazines. This is not intended as a condemnation of the others. They fill their place in the same manner, and in the same manner—mostly, at least—indicate their character by the physiognomy of their cover.

This may suffice for the present. I will, as mentioned, return to the subject in a later issue, to further prove the propriety of the phrase, "Physiognomical expression in type-composition and book-cover designs."

EARLY PRINTING IN CANADA.

FIRST to introduce printing into Canada were William Brown and Thomas Gilmore, in the year 1764; the first number of the *Quebec Gazette* appeared in French and English on June 21 of that year. Gilmore disappeared about 1774, and Brown remained sole proprietor of the journal until 1789. Brown printed several volumes, which for the period were *chefs d'œuvre* of typography.

Brown might properly be called the Caxton of Canada, while his successors, the Neilsons, might as appropriately be termed the Elzevirs.

The first book known to have been printed in Canada has the following title:

Catéchisme | do | diocèse | de Sens. | par Monseigneur Jean—Joseph | Languet, archevêque de Sens- | a Québec; chez Brown & Gilmore Imprimeur de la Province. MDCCLXV.

A little *cul-de-lampe*, of an altogether home-made character ornaments the center of the title page, which is left blank. The volume is a duodecimo and contains 117 pages and three of index.

By the word Canada, be it understood that the old provinces of Lower and Upper Canada are intended. Printing was established in Halifax, Nova Scotia, in fact, by one Bushel, in 1751, who, in January, 1752, published the first gazette ever issued in the Dominion.

In 1767 another volume, long believed to be the first Brown & Gilmore ever printed, issued from their press at Quebec. It is a small octavo of ninety-six pages in the Montagnais tongue. It contains an epitome of the Christian doctrine for the use of the Montagnais Indians.

The right of Brown & Gilmore to be considered the fathers of Canadian printing is contested. Thus, the celebrated traveler Kalm relates that at the time of his voyage to Canada there was no printing press in operation there, but that there had been one at a previous time.

Mgr. Pontbriand brought with him to Canada a small press and types presented to him by Louis XV, on condition that they should never be used for printing political documents; and it was claimed that there were in the collection of that bishop's charges pastoral letters printed at dates too near together for them to have been possibly printed in France.

There were also published at Quebec several volumes of the ordinances of the English governors, one in 1766 and another in 1767, and in all probability a previous one was issued in 1765, though of that we cannot be sure. These volumes bore the imprint: "Tous imprimés chez Brown & Gilmore, near the Bishop's Palace."

So far as is known at present the first book printed at Montreal was a 32mo of forty pages, entitled:

Réglement | de la confrérie | de l'adoration perpétuelle | du | S. Sacrement | et | de la bonne mort—A Montréal; | chez F. Mesplet & C. Berger, Impri | meurs & Libraires; près le marché. 1776.

During the same year these printers issued two other books, "Jonathas et David, ou le triomphe de l'amitié, Comédie" and "Lettre du Chevalier St. Luc de la Corne sur le Naufrage de l'Auguste."

Thomas, in his "History of Printing in America," says that Mesplet and Berger were sent to Montreal by the American congress to introduce the art of printing, and thus to make the Independence movement more general throughout North America. On June 3, 1778, Mesplet founded the *Gazette Littéraire*, the first journal published at Montreal. It existed for scarcely one year.

No doubt Mesplet went to Canada at the same time as the commissioners Franklin, Chase and the Rev. Mr. Carroll, a Catholic priest, who were sent by the American congress to stir up the subject of annexation. These commissioners arrived at Montreal accompanied by Mesplet and Berger and a complete printing outfit on April 29, 1776. Not succeeding in their enterprise they returned to Philadelphia, but Mesplet had more courage and remained behind. Some time after their departure Mesplet went to Quebec and there printed his first Canadian volume, under the following title: "Cantiques de l'âme dévote divisés en XII livres, &c." Thus we see that Mesplet arrived at Montreal on April 29, 1776, established himself at Quebec and there printed his "Cantique"; then returned to Montreal and printed the three little volumes whose titles are given above, all within the space of eight months.

Printing was introduced into the province of Upper Canada by a French Canadian named Louis Roy, who published at Niagara, on April 15, 1792, the *Upper Canada Gazette, or American Oracle*. Later the press and the paper were removed to York (Toronto).

William Kingsford, in a little volume published at Montreal in 1856—"Canadian Archæology"—stated that after consulting John Beverley Robinson, governor of Ontario, and Douglas Brymner, archivist of the Dominion, he had come to the conclusion that the first volume printed in the province, other than statutes or parliamentary documents, is the "History of the Late Wars Between Great Britain and the United States of America," etc., by David Thompson, late of the Royal Scots, Niagara, Upper Canada. Printed by T. Sewell, Market square, 1832. This is an error; at least seven other volumes printed anterior to that date, the first in 1824—"St. Ursula's Convent"—having been issued at Kingston in that year.—*American Bookmaker*.

Written for THE INLAND PRINTER.

MECHANICAL DEVICES IN TYPE.

BY CARL SCHRAUBSTADTER, JR.

PERHAPS the greatest difficulty with which the compositor must contend when brought into competition with the various methods of engraving, is the rigidity of his material. Practically, the cross-section of each character which he employs is a rectangle, and not only is the shape thus closely defined, but the size is restricted by the difficulty with which type can be cast beyond certain limits. The characters furnished him by the typefoundry are drawn to fit this rectangle, which naturally gives them a stiffness and inequality of spacing not necessary in wood-engraving or lithography, and the lines have a straightness and the characters a sameness which is almost impossible to avoid. In the various forms of engraving, after the lettering is done, the ornamentation can be put on wherever it is wanted, running around, between, or even through the characters, but with type this is an impossibility. To be sure, brass rule can be interwoven here and there, and ornaments introduced which, though cast on square bodies, have faces of different forms, but the means of variation at his command are extremely limited. The advantage that a majority of the type are carefully engraved and finely finished, giving a perfection which is difficult to attain in ordinary engraving where the letters are not mechanically duplicated hardly compensates for the sameness resulting from each letter being an exact facsimile of the original engraved type.

Various ingenious departures from the established rules have been made, both in regard to casting type on other than rectangular bodies, and in so arranging square type that they do not appear to be such.

Kerned letters, projecting as they do over the adjoining letters, help to fill out the white space, and thus even the spacing; but they are by no means as popular as they formerly were. Their decadence may be attributed to the fact that stereotyping and electrotyping are almost universal, and overhanging letters are liable to break off. Besides, in these times of hard and dry paper, and stiff ink, much greater pressure is required than formerly. The f, j and ff, the only letters which have been kerned for the last twenty years, are in all modern faces cut non-kerned, and the change, which has been greatly beneficial to the printer, has been accepted without protest, and many have probably not detected the difference. Of course, in italics kerns are necessary in order to preserve correct spacing of the letters. In such faces the cutter and matrix-fitter have a chance to exercise their ingenuity and judgment to produce the maximum of effect with the minimum of kern. A number of faces have been made kerned bodyways in order to bring the lines closer together. Inasmuch as but one of the caps and five of the lower case descend below the bottom line of the running letters, whereas all the caps, figures and a large number of the lower case come above, the kern is usually placed at the bottom. The same liability to break exists as when the kern is on the side, and to obviate this, some of the typefounders have cast an extra supporting shoulder at the bottom of the type. I believe the Penman script of the Bruce Typefoundry was the first exemplification of this idea, which has since been applied to other job faces. When such letters as V and W are brought close to such a letter as A or I., the space between them is very large, and greatly spoils the appearance of the line. To overcome this, some of the European foundries formerly kerned these letters, furnishing a space to fill out the distance when they were used in juxtaposition with letters whose face came close to their own. This system was necessarily applicable only to the larger bodies, and the trouble caused by careless workmen neglecting to place the space in the lines when necessary has prevented it from becoming popular. The same result is now achieved in a different manner, which will be noticed further on.

Perhaps the earliest departure from a rectangular shape was in script type. It is manifestly impossible to cast a heavily sloping script on ordinary type bodies. The first solution of this difficulty was the rhomboid mold. The type was cast with uniform body, but the

FIG. 1.

cross section was oblique, as indicated by the dotted lines in Fig. 1. Although theoretically correct, this system was found to be inconvenient—necessitating three-cornered quads at the ends for locking up. It was difficult to make the type accurate either in body or set, and the cross pressure in locking up, had a tendency to push the type apart instead of together. To obviate this, the script mold now in ordinary use was invented. An extra heavy beard or shoulder is provided, taking up about a third of the body. The projecting letters of the script can thus be supported by triangular supports which, fitting into the space made by the shoulders, do not interfere with the close fitting of the type, as they would in ordinary molds. The backhand script, of course, necessitates no kerning, and a number of character scripts, the first of which, the Carpenter script, was produced by the Cleveland Typefoundry, have been cut with comparatively short ascenders and descenders, and a face running relatively wide, so that little kerning was necessary. A very good idea was also first promulgated in this face, and is shown in Fig. 2. A number of the running letters having a line cut above them which lines with the cross line of the lower case t, thus adding resemblance to handwriting. This has been applied to a number of other scripts and job faces, among the latter the Bijou and Chaucer, of the Johnson Typefoundry. Flourishes and logotypes greatly improve the

FIG. 2.

appearance of script, but are not new. The latter will be spoken of later.

Another good idea is that of the Scribner series, produced by the Central Typefoundry, shown in Fig. 3. In this face the vertical lines of the cap I. and T are cast on bodies a little larger than those on which the small caps are cast. The horizontal lines of these two letters are cast on bodies exactly equal to the difference between the

FIG. 3.

bodies of the caps and small caps. This produces an effect similar to engraving. Fig. 3A shows the same form, jet end of the I. up, with the joints accentuated. A

FIG. 3A.

number of other job faces and series of initials show this idea to a less extent. The different sectional series produced by the same typefoundry, one which is shown in Fig. 4, embody a very fair idea, but the execution was too faulty, and it took too long to set up a line to allow them to become permanently popular. The type is cast in two sections divided horizontally, and by placing another line of type between the two halves the effect of laying a printed strip over a line of type is produced. To obtain satisfactory results brass rule or borders must be placed between the lines.

FIG. 4.

(To be continued.)

AN EARLY TYPE-CASTING MACHINE.

As indicative of the hostility displayed toward labor-saving machinery years ago, the following, in connection with the typefoundry business, is related by the inventor of the machine, Mr. David Bruce:

In the year 1838—we have forgotten the exact date—Bruce delivered to James Conner, founder of the United States Typefoundry, the newly conceived machine for casting type, which was destined to take the place of hand casting. The understanding was that in case the machine worked all right, it was to be purchased by Mr. Conner.

The machine was carefully placed in position, everything made ready, and with an audience composed of nearly all hands in the building, the first attempt at an improved method of producing type was made. But the contrivance failed to work. In spite of all examinations and tinkering the new invention failed to meet expectations. The inventor himself examined it, but to no purpose. Mr. Bruce finally declared that he would be compelled to take it back on his yacht to Bordentown, New Jersey, and there take it completely apart, and rebuild it.

A well-known hand caster by the name of Watson, being somewhat of a sailor, and in apparent good will, offered to sail the craft and deliver the famous machine at its destination. This offer, however, Mr. Bruce declined, being somewhat suspicious already of the casters.

After some little inconvenience the machine was placed in the workshop in New Jersey, and the process of taking it apart was completed, when it was found that a large spike nail had been driven securely into the nipple, from whence the metal is forced, thus effectually preventing the machine from working. It was afterward learned that it was part of a preconceived plan for Watson to return with the invention, and on the voyage pitch it overboard.

The machine was finally placed in position again in Mr. Conner's foundry, when, after a number of years' usefulness, it was sold to the firm of George Bruce & Son, where it may still be seen.—*Typographic Messenger*.

LETTERS or envelopes which it is desired to protect against unauthorized opening (by moistening the pasted portion), may be securely sealed by using a solution of oxide of copper in ammonia as paste. This liquid has the faculty of dissolving cellulose. When applied to the paper it dissolves the cellulose on the surface, and on drying the two partially dissolved surfaces adhere indissolubly together. The same thing may be accomplished by using water-glass (silicate of soda or potassia). In this case the chemical action is different, but when it is completed, the pasted surfaces cohere as permanently as in the preceding case.—*Pharm. Zeit.*

Calendars for 1889.

Our line is now ready.

They range in price from \$1.50 to \$125.00 per 1,000.

WE ALSO MANUFACTURE A LINE OF

CALENDAR TABLETS OR PADS

At from \$2.75 to \$15.00 per 1,000,
from medium size to extra large.

ALL the goods we advertise we manufacture, and Printers who desire to reach first hands will do well to send for our Jobbing List of
Calendars, Cards, Panels, Banners, Folders, Etc.

Any printer who will send a two-cent stamp and his business card, and mention this paper, will be sent a set of our Calendars No. 374. A full line of samples of Calendars, about seventy designs, on receipt of \$1.50.

COSACK & CO., Lithographers and Publishers,
90 TO 100 LAKE VIEW AVE., BUFFALO, N. Y.

We desire to obtain two or three good Travelling Salesmen. For particulars, address as above.

Immense Success! Second Edition Now Ready.
**THE JOB PRINTER'S
COMPANION AND GUIDE.**

Price, 50 cents, by mail, postpaid.

This little book tells how to make and print from Tint Blocks; how to do all kinds of Color Printing; how to work Colored Inks; how to make your own Ink Refiner and Dryer; how to make Padding Composition; how to do Bookbinding; how to estimate Book Composition; how to do Stereotyping; how to do Embossing; how to quickly make duplicate Wood Type for short fonts; how to interprint one form or line with another without defacing material; how to do Fine Job Work on the Hand Press; and many other "hows" which job printers should know.

Remit by postal note or money order (don't send stamps) and address all orders to
Lock Box 417. D. L. STUMP, Carthage, Mo.

RAPID TYPEWRITER, \$5.00.

Over 5,000 sold in one month. The only machine requiring no instruction. Writing equal to \$100.00 machine. The most useful invention of the age, surpassing pen or printing press. Medal awarded at American Institute Exhibition. Constructed entirely of hard metal, with copper letters. Warranted for five years. Sent to any address on receipt of \$5.00. Address,

GEO. R. BLAKELY,
BRADFORD, MCKEAN CO., PA.

IMPORTANT ANNOUNCEMENT.

PREMIUMS FOR COLORED WORK.—GREAT INDUCEMENTS.

COMMENCING with the October issue, No. 1, Volume VI, of THE INLAND PRINTER, a new feature will be introduced, namely, the publication of **INSERTS OF COLORED PRINTING.** For the purpose of stimulating effort in this direction, cash premiums of \$100, \$75, \$50 and \$25 are hereby offered to contestants, to be awarded under the following conditions: 1. All inserts shall be printed in three or more colors, and on paper the exact size of the pages of THE INLAND PRINTER, the type measurement of the specimens sent, however, not to exceed 9¾ by 6¾ inches. 2. Not more than two specimens to appear on one and the same page. 3. Tints and secondary colors may be the work of the engraver, but the design, body and execution of the job must be the work of the compositor. 4. No objection will be offered to the insertion of the card of any printing firm, or the business of its patrons, but this liberty shall not apply to non-advertisers connected with the printers furnishing business. 5. The award to be made by five expert printers, no two of whom shall reside in the same city. 6. The inserts to be forwarded to the editor not later than the 10th of the month.

Further information will be cheerfully given by addressing the editor of THE INLAND PRINTER.

CALENDAR PADS FOR 1889.

We are now ready to fill orders for Lithographed Calendar Pads, in various sizes, at lower prices than they have ever been sold. Samples on receipt of postage.

OUR LINE OF

FOLDERS, PROGRAMMES, ETC.

Is more complete than ever, and we are making extra inducements in the matter of discounts.

NEW YEAR CALLING CARDS

Are in stock, and printers can be supplied on receipt of order. Sample books of over fifty numbers, post paid, \$1.00.

OFFICE OF J. C. AYER CO.,
LOWELL, MASS., May 18, 1888.

MESSRS. WALTER SCOTT & CO., PLAINFIELD, N. J.:

Gentlemen,—The Perfecting Press and Folder combined, furnished us by you for printing and folding Ayer's almanac, is giving excellent satisfaction. We are running it at a speed of 10,000 to 11,000 books per hour. The inking apparatus is perfect, the distribution being so thorough that we do not find it necessary to "wash up" oftener than once in ten hours. The arrangements to prevent "off-set" are so effective that we change the tympan sheet only once a day. In this regard the machine is performing better than we expected, as we counted on the necessity of frequent changes. The printing is in perfect register, and the folding more uniform and accurate than anything we have had done on hand-folding machines. You are at liberty to refer inquirers to us for further particulars.

Yours truly, J. C. AYER CO.

PRESSROOMS OF THE J. C. AYER CO.,
LOWELL, MASS., June 7, 1888.

MESSRS. WALTER SCOTT & CO., PLAINFIELD, N. J.:

Dear Sirs,—In answer to your inquiry about the Printing and Folding Machine sent to this office by you nine months ago, will say that it is a wonderful machine, doing better work and more of it than I ever knew of being done by a Perfecting Press on this kind of work. The printing is well done to register, without any show of "off-set." The folder works exceedingly well, folding each sheet more accurately than heretofore accomplished on hand-fed folding machines where sheets were fed to points. We have no waste sheets, except where the web is broken or pasted together. The press is running at a speed of 10,800 per hour, to accomplish which it only requires a pressman and one helper on the press, and a boy to take the folded books away. The quality of the work produced will speak for itself.

Your truly, J. C. JOHNSON,
Supt. Printing Department.

CORRESPONDENCE.

While our columns are always open for the discussion of any relevant subjects, we do not necessarily indorse the opinions of contributors. Anonymous letters will not be noticed; therefore our correspondents will please give names—not for publication, if they desire to remain incog., but as a guarantee of good faith.

FROM LANSING.

To the Editor :

LANSING, Mich., November 29, 1888.

Business is quite brisk at present at Michigan's capital, especially at the state printing office of Thorp & Godfrey, where the boys are pulling themselves together for the rush expected at the meeting of the legislature in January next. Several changes have recently been made in the different departments, of which the latest is the promotion of W. A. Simpkins—an old member of No. 72, whose unionism has been tried, and stood the test—to the foremanship of the jobroom. He succeeds Frank Edwards, who left on November 27 in the same quiet but unceremonious manner in which he introduced himself during our late strike. His departure was much regretted—by his creditors, and, we suppose, by his wife, whom he forgot to take with him. But three of his companions of the rodent fraternity now remain. Our late delegate, A. N. Brown, upon whom has fallen the mantle of Mr. Hatch, who was forced to resign on account of illness, proves a very efficient foreman of the bookroom, while President S. G. Ruth occupies the same position in the newsroom held by Frank Rose prior to his removal to St. John.

Launt Thompson has added a newsroom to his job office since he received the contract to print the *Beacon* and *Center*, and employs an extra force of hands, with Fred. Curran, formerly of the state office, as foreman.

PAUL PRY.

FROM PHILADELPHIA.

To the Editor :

PHILADELPHIA, December 7, 1888.

The printers, using the term generally, have had a booming fall so far as work is concerned. No failures have been announced of consequence, although two or three small papers have gone under. Three or four newspaper enterprises are looming up, one of them, *The Quaker*, a semi-political, semi-social, semi all round sort of publication. All our newspaper people are in good heart and don't see much to trouble them. None of our publishers are making fortunes, but none are obliged to fly kites. The *Press* is salting down a thousand or more every week for its plucky proprietors. The *Times* does not propose to stay far behind. The *Record* is still on the revenue reform war path, and is polishing up its tomahawks for another campaign. Two of our young, but very able and bright newspaper sprouts, Dorr and Stoddard, have gone this week to New York to show the New Yorkers and the recent purchasers of the *Graphic* how it ought to be run. Elkins, Vice-President Morton, and a number of republican wheel horses have bought it out, and propose to out-puck *Puck* and out-judge *Judge* and make things lively generally and comfortable for the new stockholders' pocket-book. The last temporary owner of the *Graphic* escaped with only \$60,000 out; but what better could be expected out of a 7,000 circulation. It is going to be hard work to popularize an unpopular paper, but there is money in abundance, and hustlers in the business office.

Speaking of New York papers, the *Star* has gone, as you all know, and over \$700,000 with it. Bennett, of the *Herald*, dropped in and turned things upside down, and skipped back to Paris. Charles R. Miller, of the *Times*, I learn, is going to celebrate the completion of the new building with some rousing journalistic enterprise.

Our typefounders are busy and business is fairly good. Collections are better than for a year. People seem anxious to keep out of debt. Prompt payments are more general even among country papers who are supposed to be often paid for subscriptions in potatoes and pumpkins.

The typographical unions' proceedings, both German and English, are of a monotonous character. The wage question has ceased to be an interesting one, although a number of job offices are still in the hands of the Philistines. Wages are quite uniform; employment is regular. Comparatively few printers are arriving, and an occasional old hand packs up and hies to distant fields.

The job printers have not had much time to waste. Just now nearly all are busy, though orders are slackening up. Holiday activity is near at hand. The booksellers and art stationers are having a good run of business. Dealers in novelties and publishers of bibles and of sacred literature are keeping their presses quite busy. The fast presses are coming in. Speed is the thing. Several of our publishers are about ordering large and more perfectly equipped presses, and the press builders and agents tell me they never had as many inquiries as now. The country towns are sending in a good many orders, so say the dealers in printing material.

Typefounders are stirring up the matrix cutters for new designs in all kinds of lettering. From present indications the founders will be very busy all the winter. Newspapers are blossoming out very rapidly. Our electro-platers are having their hands full of work. Plate matter is not such a luxury as it used to be, though the companies east are still doing a good business.

We are great here on lineage. The great-great-grandson of Christopher Sower, who started business here in 1738, has just moved from Market street. G. Washington, J. Adams, and all those fellows used to loaf in the great-grandfather's office. Everybody wants a graphophone. The mill at Bridgeport, Connecticut, is sold six months ahead. The stenographers wonder if its coming is their day of judgment; but they need not fear.

The pressmen are making a very compact union, and the best men in it are selected for office. A great deal of nightwork is being done in the press and composing rooms. "We are rushed to death" is the way some of them put it. The paper makers are having things practically their own way. Paper of all kinds sells at good prices. The mills are crowded. Stocks are large and a good trade is ahead of us. The paper machinery makers have about all they can do.

Ornamental lettering has reached its limit. Typefounders are all searching after plain and neat designs. There is less room for the play of originality in this direction, at least of the ordinary sort; but a high order of designing talent will find much to develop and much to do in the way of buying out new and neat and attractive designs for letters. It is no wonder that we got away from the wildness of ornamentation that has been tangling up our advertising space of late. Everything will be plainer. Taste and judgment alike welcome the change.

Book publishers and booksellers tell us that there is a steady enlargement in the demand for books and literature of all kinds, especially that leading into scientific directions. There is less mousing into the literature of the forgotten past and more reading of current thought and the results of current investigation.

Investigators into all departments of science, in all avenues of thought, in art, in finance, in political economy, in history, are all delving after something that will make a book that will sell. Authorship is better remunerated than in years past. There is more general culture and more desire to be informed, in short, the intellectual capacity of the masses is expanding and is consequently demanding more food and sustenance.

Schools are springing up. Trade schools are prospering. Our octogenarian Williamson proposes to expend the big end of his \$10,000,000 to \$12,000,000 fortune in establishing a trade school that for size and completeness will have no equal on either side of the water. The first slice appropriated is \$2,500,000. This is for a start. Our Girard institution here has some thirteen hundred pupils. Trade education has received very little attention there, but Mr. Williamson's idea is to have a school where a great variety of trades and crafts can be practically taught. Foreign nations are outstripping us. Trade learning ought to be popularized among the American youth. Can this be done? The most unremunerative channels are crowded with American youth, while those which ultimately promise well are left to the youth of other lands or the sons of foreigners, very largely.

Our editors are all plodding along like the rest of us. There are no burning questions to divide us, no great issues to make or break the country, no topics to discuss which will give an editorial writing fame or distinction for an able mastery of them. Everything is commonplace; yet, for all, newspapers are better edited and are better educating the people than they have ever done.

M.

DIAMOND STATE PRINTING AND NEWSPAPER NOTES.

To the Editor : WILMINGTON, Del., December 6, 1888.

The destruction of Peter Brynberg's ancient printing office, at No. 403 Shipley street, revives interesting memories of one of the first newspaper ventures in Delaware. Brynberg was a printer of church and school books, who flourished in the city of Wilmington about one hundred years ago, and whose descendants are now among the leading citizens of this city. The sons of John B. Porter, a publisher and bookseller of the last generation, and who wedded Brynberg's daughter, still continue the bookseller's trade at the old house on Market street. Robert Porter, a grandson of the old printer, is a member of the publishing firm of Porter & Coates, of Philadelphia. Another branch of the family is represented by E. G. Bradford, son of the late Judge Bradford of the United States District Court, and connected by marriage with the famous French family of Du Pont de Lemouis, who settled on the Brandywine a century ago.

The newspaper of which Brynberg was the originator was the *Delaware State Journal*, which, during its last years, was ably conducted by Henry Eckel, whose death happened during this year. Eckel sold the *Journal* to Crosdale & Cameron, the founders of the *Every Evening*, and its identity was lost among several other journals now represented by *Every Evening*.

Among the earliest printing offices was that of the *Journal*. The establishment was located at the corner of Fifth and Market streets. The press, one of the most primitive power presses, was in the back basement of the building, a dark, dirty, dingy place, and in an adjoining room was a large fly-wheel with a belt running through the wall to the press. The power was furnished to this wheel by a muscular negro through the medium of a crank.

The *Journal* was whig in politics and continued so more than fifty years, became republican at the outbreak of the war, and finally democratic under Eckel's management, because, so it stated, the party and city printing, under the republican administration, was given to the *Daily Commercial*, a new city paper projected by Jenkins & Atkinson. Howard M. Jenkins is now editor of the *American*, and Wilmer E. Atkinson is publishing the *Farm Journal*, both of Philadelphia.

The business situation is excellent in Delaware. The printing establishments throughout the state have as much work as they can well handle.

The Delaware Printing Company, an incorporated concern, whose establishment is located at 224 Market street, this city, has gained an excellent reputation for fine work. The specialties of the company are high-class printing, stationery goods, bookbinding and the making of blank books. Edward F. James is president, and Warren H. Farra, secretary and treasurer.

The last journalistic enterprise here, the *Evening Journal*, is a great success. The paper is republican; it is owned by the Journal Publishing Company, which is entirely composed of the working force of the establishment. Fred E. Bach, formerly news editor of the *Morning News*, is managing editor. The *Morning News* under its present management is doing well. The *Index*, the new paper at Dover, the state capital, has more than realized the most sanguine expectations of its projectors.

The *New Era*, published at Middletown, and owned and edited by Freeman & Webber, has attained much popularity and influence. The firm has obtained several large and profitable state contracts. A stock company is being organized to establish a printing and newspaper office at Odena. It is expected that the enterprise will be in operation early in 1889.

The paper-making interest, which centers along Brandywine Creek and its tributary, is pursuing the even tenor of its way. Several of the mills have stopped a few days for necessary repairs, but active operations have been resumed, and now manufacturing is being carried on to its greatest extent. The daily production is heavy.

Thomas E. Savey, of the well-known Pusey & Jones Company, this city, who has just returned from Germany, furnished a splendid and satisfactory account of the success of American paper machinery in that nation, and asserts the superiority of American workmen, and of the

machines which they produce. A machine made by the Pusey & Jones Company is owned by the German government, and is employed in manufacturing the patented fibrous paper similar to that used by the United States in its treasury notes. This machine is jealously watched, and the possession of any of the paper by a private individual is an offense subject to heavy fine and imprisonment.

The Pusey & Jones Company are interested in extensive paper-making works at Harper's Ferry, Virginia. A number of mills have been built, and the manufactures, which comprise paper and wood pulp, are turned out in great quantities, the daily product being about ten tons. The vast and valuable woodlands of Virginia and West Virginia supply the material from which the paper and pulp are produced. The woods chiefly consumed in the works are poplar and bass, which grow prolifically in the forests of the Virginias.

The paper mills in Maryland and Chester County, Pennsylvania, are very busy, and will continue to be so for an indefinite period.

ARGUS.

AULD LANG SYNE.

To the Editor : DENVER, December 8, 1888.

"There are hands that are waved when the fairy shore
By the fitful mirage is lifted in air,
And we sometimes hear through the turbulent roar
Sweet voices we heard in the days gone before,
When the wind down the river was fair."

One of the thrice welcome features of THE INLAND PRINTER is its monthly portrait and sketch of some well-known disciple of Faust. Pleasant memories are revived with the introduction of each prominent member of the fraternity, many of whom assisted in forming the display lines of our history in halcyon days before the war. "Glad tidings of great joy" are oft conveyed to many veterans of the stick and rule as they gaze upon the familiar features of some former companion, long since removed from view. Imagine the changing countenance and brightening eye beneath the bald or snowy pate of many an old printer, as he gives his spectacles an extra rub before adjusting them for another and more critical inspection of the latest portrait in our art gallery!

The hyphen of thought vividly connects the past and present. Again is seen burning the midnight oil of a quarter of a century ago. Friendships formed in youth, attachments made in the lang syne of social enjoyment, kindle and burn anew, and for the time being one lives again days departed.

A genuine appreciation of these reproductions is shared alike by those who knew the actors of our exclusive stage and those who have succeeded them, and all await, in pleasurable anticipation, the coming number which will limn another veteran of our ranks.

The expansion of the printer's field in thirty years has obliterated from the present many of the typographical pinnacles which were then beacon lights—

"Yet there is something will not die,
Where life hath once been fair;
Some towering thoughts still rear on high,
Some Roman lingers there!"

This reappearance in artistic relief of "the quick or the dead" of our craft strikes that responsive chord of memory so nobly sung by Virgil, so sweetly tuned by Burns. It has become a craft matrice, akin to that fraternal custom, beautifully exemplified, wherein, in mystic circle, with bumpers fair, the chaplets of honored and departed brothers are kept green.

In lifting lines from forms representing well-remembered printing centers, and selecting therefrom the worn upper-case faces, that they may adorn an issue, THE INLAND PRINTER has adopted a conceit as quaint and appropriate as it is fraternal and timely. 'Tis the preservation of the fruit ere the richness and flavor are lost. Consider the feelings of loneliness and sadness of the aged tourist, as he journeys from one well-known haunt to another of former years, seeking a greeting from an associate of by-gone days! He looks, expectant, for a kindly recognition, as he saunters from frame to frame. He realizes that he is only a lost sort of an antique type; yet he becomes overjoyed if, perchance, he discovers a lonely wrong-font still lingering, superannuated, 'midst the glittering of modern electric lights. The necessities

of the one and the copy of the other are forgotten as they clasp hands and untie pages from the dead-stone of the past.

There is a labor of love in presenting old specimen types, surrounded by the new, which will be appreciated by younger swifts and artistic rule-benders, as they read the sketches of those portrayed and blend them with the traditions heard during apprenticeship. Much of the history of the craft remains, like Emmet's epitaph, and those of our guild have had to depend upon the traveling historian for such of his lore of the modern black art as time and inclination would permit.

These reflexes of former lights will add a budding warmth to laudable ambition, until a spirit of emulation takes possession of the young and talented artisan, and he, too, will look forward to the time when he may have an initial in the Book of Fame.

"Behold, fond man!

See here thy pictured life;—pass some few years—
Thy flowering spring, thy summer's ardent strength,
Thy sober autumn fading into age,
And pale, concluding winter comes at last
And shuts the scene."

Advices from many of the cities of the East and West indicate the largest attendance of ex-delegates and visitors at Denver in June in the history of the International organization. If they fail to materialize they will regret it, as the printers of Colorado are waiting with open arms to entertain all who will favor them with a visit.

While a session of the International Typographical Union in the Far West is yet an untried experiment, the prediction may now be safely ventured that, numerically, it will surpass any former meeting of that body. Those who attend will be amply repaid for the length of their journeys, and will return to their homes filled with mental pictures of mountain scenery, and regrets that they had not taken the lamented Greeley's advice years ago. If the hospitality of Denver union does not meet the expectations of some of our Eastern epicures, they will at least enjoy feasts of pure air and limpid waters unknown elsewhere in the world. The programme outlined by the committee on arrangements includes a mountain trip, with snowslide and avalanche attachments. Ex-delegates will be presented with territory for toboggan slides sufficiently large to be considered a joy forever. Delegates and visitors from the Dominion have had their climatic conditions carefully considered, while Colorado—wild flowers being found in abundance above timber line and adjacent to masses of perpetual snow. The clam-bakes of Cape Cod, the oyster patties of the bathing resorts, the gumbo of the Gulf, the elixir of the blue grass region, the Teutonic condiments of the river towns, the delicacies which abound near the Great Lakes and the fruits of the coast will serve as side dishes to our mountain menu. As for scenery, job lots, extensive and magnificent enough to discount all previous efforts, have been set aside for those who will remain during the summer. If any are hesitating under the impression that there are not takes enough on the hook, let them hesitate no longer. A western welcome awaits all, with special inducements for the ex-delegate and visitor.

Preparations for the reception of the International Typographical Union delegates in June will soon assume definite shape, the committee having charge of the same being now actively at work. Honorable O. L. Smith, a well-known Colorado representative to the International Typographical Union, was the unanimous choice of Denver union for chairman of the committee having general charge of arrangements. The selection was the best that could have been made, and the honor a deserved one. Mr. Smith had been untiring in his efforts during the past five years to secure for Denver a session of the International body, and to him, above all others, belongs the credit of final success. He has associated with him ex-delegates, having varied experience, justifying confidence in the result of their work.

The mention of Captain William M. Meredith's name in connection with the position of public printer affords much pleasure and satisfaction to members of the craft in Colorado. The action of Chicago Typographical Union in unanimously indorsing him for that position is heartily commended by all veteran printers of the Great West who are acquainted with Captain Bill. His tried and true record in union ranks, taken in consideration with his well-known business ability and practical experience, justify the prediction that President-elect Harrison will do

the right thing at the right time in selecting William H. Meredith for that position, which embraces honor, trust, executive ability and craft knowledge.

The *Evening Times* has assumed metropolitan proportions, and is crowding the morning journals in ability and enterprise. All of the Denver dailies are now a source of pride to the craft as well as to the state.

The contract for the state printing for the ensuing two years will be awarded this month, the legislature meeting in January.

Printing business is never dull in Denver. At times there is an oversupply of printers, as is the case at present.

As this is the season of the year when reigns "Peace on earth and good-will to men," I will join Tiny Tim in saying, "God bless everyone."

JOHN D. VAUGHAN.

A PROSPEROUS OUTLOOK IN NEW YORK CITY.

To the Editor :

NEW YORK, December 10, 1888.

The printing, publishing and kindred interests, which have been in a somewhat languishing condition for several months, are recovering, and it is indicated that all the industries will enjoy more than the usual prosperity during the winter. The leading job printing, lithographing, engraving and book binding establishments are crowded with orders, and the outlook is encouraging and pleasant. It is true that there are many unemployed printers, lithographers, and other workmen, hanging about the city, but investigation reveals the fact that these men constitute the class who are generally idle, they being chiefly composed of incompetents. First-class workers in all lines find employment, notwithstanding all reports to the contrary.

Never before in the history of the printing, lithographing and engraving interests has the demand been so great for holiday goods. The manufacturing stationers and book publishers are pressed with orders for original, novel and attractive products. This season will witness the production of novelties that will be real surprises. Among the firms here that have produced lines of beautiful and striking goods is the Moss Engraving Company. The stereotyped subject entitled "The Young Huntsman" is a splendid morceau, and reflects much credit upon the Moss process. The Christmas and New Year's souvenir cards and gift books are wonders of the printer's, lithographer's, engraver's and bookbinder's arts. The call is so great that the houses producing these holiday articles are running until late at night, while hundreds of extra hands are employed to fill the influx of orders.

The literary field here is being filled with scores of bright women. The leading journals are employing cultured writers of this class, and are fast dispensing with old hacks, who are useless. Woman in New York journalism is becoming not less a potent literary influence, but a great power. There is scarcely a prominent journal that is not indebted to her pen for some of the most thoughtful editorials, not as occasional contributions either, but as part of the regular staff. Not a few of the ablest book reviews and essays on moral and social reforms, to say nothing of dramatic and art criticism and the entire field of *belles lettres* are from that source; but, as a rule, they are not adepts at, probably because they have rarely any taste for, the metaphysical or mathematical themes, and consequently the amount of labor of that kind intrusted to them is comparatively small. I speak now more particularly of the daily press. Women had always found more or less congenial and profitable employment on the literary weeklies and the monthly magazines, but the field was contracted, being restricted for the most part to love stories, poetry, society gossip and the latest fashions, but their destined identification with the more exacting functions of metropolitan journalism dates no further back than say thirty-five or forty years ago. Mrs. Ann S. Stephens, so long connected with *Peterson's Magazine*, and whose memory is still cherished in Philadelphia as it is in New York, may be said to have paved the way as literary critic and editorial contributor to the *New York Express*, a position which she occupied for an extended period, notwithstanding an accumulation of other literary labors in the world of romance, including not a few novels, such as "Fashion and Fame," which at the time achieved a remarkable popularity. Mrs. Stephens was followed on the same paper by another authoress, only less known to fame, Mrs. Elizabeth F. Ellet, best known,

perhaps, to the reading public as the author of "The Women of the Revolution," and later on Mrs. R. N. Cromwell, author of "Meum et Tuum," made her mark as a poetical contributor to the same columns. The civil war at this time had something to do in giving the women their opportunity in taking the places of many clever writers, who were off at the front as correspondents. Meanwhile the *Times*, *Tribune*, *World* and other dailies were availing themselves in like manner of the best female talent they could get for special writing, and from that period to the present it has always found a good market when supported by faithful industry. In the less conspicuous paths of daily journalism, it need hardly be mentioned, women are not only quite numerous, but are among the most efficient and conscientious workers. As reporters and interviewers they have a quick tact which serves them well, but in the rough work of a political campaign, such as that through which the country has just passed, they are out of place, nor do they seek to fill it. But at many of the churches on Sunday, when preachers of note occupy the pulpit, they may be seen at the reporter's table, along with those of the masculine gender, without exciting the surprise that would be felt by minister or congregation in former years, when such an innovation was undreamed of. The fact is worth recording, not only as showing the increasing opportunities which are now presented for women to utilize their intelligence and industry, but also as evidencing an abatement of the narrow prejudice that formerly prevailed against the application of woman's abilities to any field of usefulness beyond the strictly domestic circle.

Mr. David G. Croly, formerly managing editor of the *World* (under the Manton Marble proprietorship), is lamenting the disappearance of so many journalists from active life, and for that matter from life itself, within the past twenty-five or thirty years. Mr. Croly, states, "he had an editorial position on the *Herald*, from 1856 to 1859. That is over thirty years ago. Yet if he entered the editorial rooms of that journal now he would not meet one of his old associates. A few, a very few, have dropped out, but at least nine out of every ten have joined the great majority. It is remarkable how rapidly the personnel of journalistic staffs change. There are probably not more than three persons on the *World* who were associated with him when he resigned, in 1872, to become editor of the *Graphic*. A newspaper seems to have a life of its own quite apart from the persons who contribute to its columns." The last statement no doubt, is, in some sense, correct. The persons who contribute to its columns "may come and go," but the newspaper, like the purling brook, "goes on for ever." But Mr. Croly may take comfort from the reflection that his experiences are by no means exceptional. At the time he entered the *Herald* office there was another journal, the *Morning Express*, at that time a competitor of the old *Journal of Commerce*, which still exists today as the compound *Mail and Express*, but, with a solitary exception, not one of the numerous writers that constituted its numerous and well-equipped staff is alive now. Other city papers, if they call the roll, dating that far back, would receive as little of a response. But what then? People said, when Henry J. Raymond and Horace Greeley died, the *Times* and *Tribune* would be likely to die also, but, so far from that being the case, the two journals have attained a degree of prosperity and influence that was never dreamed of, perhaps, while the two distinguished editors were still in the flesh. So that while it is correct to say that "a newspaper seems to have a life of its own, quite apart from the persons who contribute to its columns," it would, at the same time, be an erroneous deduction that there must be something in the journalistic profession inimical to longevity. There is no such thing. As a rule, it depends a good deal upon the journalist himself, as regards habits, temperament, associations, etc. If these are all right he can stand any amount of mental strain, day and night, and even thrive off it. Of course, it is quite possible to push the strain, as it often is pushed to a perilous extreme, in which case Nature is apt to exact her penalty, but then may it not be said that the same is measurably true of all other vocations of life.

The copyright, good-will and United Press franchise of the *Star* newspaper, as well as the lease of its premises, have been sold by W. P. Sullivan, receiver. Previous to the sale, Lawyer Henry H. Anderson, attorney for Andrew K. Van Deventer and other judgment creditors, read a formal notification to all intending bidders that the "right, title

and interest in the visible and tangible property, such as the press, machinery, type and furniture, had been purchased at sheriff's sale, on October 30, by George E. Downs, and the last sale now made subject to the rights of said purchaser." Joseph F. Clinch, lessor of the premises, also gave notice of an arrearage of \$9,000 in the rental of the property, which must be promptly settled by intending publishers of the paper, under penalty of rejection. The first bid was \$5,000, by J. F. Acherman, representing Perkins, Goodwin & Co., creditors. This was followed by one of \$10,000, made by William Shillaber, to whom the property was subsequently knocked down for \$15,000. Mr. Shillaber said that he "represented himself and others," and added that he was "not at liberty to say anything further at present." Receiver Sullivan is reported as saying that the paper will be issued as usual until the purchasers have decided what they will do. The *Star* people, during the past three years have sunk \$500,000.

The Industrial Information Company has been incorporated with the following trustees: Sidney W. Hopkins, Jr., Albert H. Ely and Jesse R. Betts. Its capital is \$25,000, and its objects are to publish books and newspapers, and to collect and supply items of news.

That remarkably versatile journal, the *Herald*, has introduced a new conceit into its "make-up," namely, drawing upon Shakespeare and other poets, and even the Psalms of David, for its headlines, the authorship being duly credited. The experiment implies no little ingenuity, not to say scholarship, on the part of the gentlemen who have charge of the several departments, and if it is to be a permanent feature, it will be curious to observe what is to be done when the Dictionary of Quotations is exhausted. However, it is best not to anticipate trouble, even in such a case. The quotation is made to fit the subject with happy effects. Thus, an article on the approaching ball season leads off with, "On with the Dance," from Byron; another, giving a list of forthcoming marriages, with, "Hail Wedded Love," from Milton; another, reviewing the amateur dramatic season, "All the World's a Stage," from Shakespeare; another, reviewing the labors of the Brooklyn pastors, with, "Behold the Upright," from the Bible, and so on to the end of the chapter.

G. S. Ellinger & Co., printers and publishers, 7, 9 and 11 New Chambers street, have made a general assignment, without preferences, to Lausen N. Clark.

PRINTER-JOURNALIST.

FROM OMAHA.

To the Editor:

OMAHA, December 10, 1888.

The state of the printing trade in Omaha at the present time shows a vast improvement over that of last year. Omaha is fast coming to the front in the printer's art, and we bespeak for it a bright future and a high place among the really good towns of the country. Its newspapers are improving day by day, and are bright, newsy journals, such as the public demands at the present age, and we think they are, with one or two exceptions, perhaps, paying good interest on the investments. In the past year there have been a number of new papers and job offices started in Omaha, and, as far as we can learn, they are meeting with deserved success. We would estimate that at the present time there were at least fifty more "situations" for printers in the city than at this time last year, and the "pan-handlers" are growing beautifully less, for we can now meet them with a situation at almost every turn. There is no need of a printer (no *bums* need apply) to be idle in Omaha if he wants work, as the newspapers are all running full forces, and the jobrooms are crowded with men to their utmost capacity, and a few of them running night and day to get their contracts out, owing to a rush of holiday work.

Among the new papers that have recently made their appearance before the Omaha public, is the *Omaha Dispatch*, a bright penny-sheet, with J. C. Wilcox and R. D. Kelley at the masthead. The *Dispatch* is an evening paper, shows enterprise, and we bespeak for it a bright future. It caters to the laboring classes and supplies their every want. R. D. Kelley is an old-time printer and handles the "forms" as if he had seen 'em before, besides doing considerable pencil shoving. He is a rustler.

The *Omaha Herald* has passed into the hands of R. A. Craig, late of the *Chicago Times*, Mr. McShane having received the sum of

\$80,000 for the plant. The *Herald*, under its new management, will still remain the leading democratic organ of Nebraska. A number of changes have been made in the reportorial force, and it is whispered on the quiet that a change of foreman in the newsroom is contemplated. We will be sorry if this is the case, as Mr. McDermott is worthy of the position, and has held it creditably for a number of years.

The *Inter-State Democrat*, formerly the *Inter-State Herald*, has been moved to this city from Council Bluffs, and it is a welcome addition to Omaha newspapers. We understand there is a jobroom attached.

The Omaha *Excelsior* and the *Watchman*, both weekly papers, issue holiday numbers next week, and they are promised to be handsome issues. The *Excelsior* will be a business number for business men, containing cuts of all the principal buildings of Omaha and South Omaha, and articles on all branches of industry in our city.

In our meanderings we noticed Lew Moulton on the "forms" at the *Republican* office. Mr. Moulton has held the position as foreman of the *Republican* before, and we were glad to see him back in his old position. Patsy Boyle, the former foreman, resigned, and is now holding cases on the sheet. Mr. Boyle was one of 190's delegates to the International.

We learn that C. E. Crittenden, formerly a member of the finance committee of 190, but now of Tacoma, Washington Territory, has been elected corresponding and recording secretary of the union there. Mr. Crittenden has only been in Tacoma about three months, and his friends here, who are legion, will be glad to hear of his success.

The job offices of Blinn & Kueck and Mr. Gideon have been consolidated, Mr. Gideon removing his office from the *Herald* building to Blinn & Kueck's old stand, corner Sixteenth and Dodge streets, the same to be known as the Franklin Printing Company. Mr. Blinn retires from the business and firm, and we understand he intends leaving town. We wish the new firm all the success imaginable.

The Adams & Bridge Company, job printers and engravers, on Dodge street, who recently failed, are now quietly winding up their affairs and will retire from the field in a day or so.

We learn, just before mailing this, that S. O. Fisher has sold his job office to Chicago parties, but have no time to learn particulars.

MIKE.

FROM BRAZIL.

To the Editor:

RIO DE JANEIRO, October 1, 1888.

Nearly two years ago, Mr. Editor, I addressed you a letter descriptive of the printing interest in this country, but never heard more of the communication. A year later the correspondence was repeated, yet, if the same result didn't ensue! The loss was indeed provoking. Resolved to send in nothing further, quiet was maintained until a few weeks ago, when, observing that (by the letters from neighboring republics) you do take an interest in affairs in South America, again was a desire possessed to let your readers hear concerning subjects typographical in this state. So your correspondent tries another time to appear in THE INLAND PRINTER with an epistle from Brazil.

Trade among typographers in the capital city, in Pernambuco, Bahia and the large towns, is very brisk — always, in fact, plenty of labor to get through. This condition of things will, it is expected, last for many years to come; in truth, while the country continues to receive from all parts so many emigrants, it cannot be otherwise.

Italians form a major part of the newcomers. They are very industrious, and support a goodly number of papers printed in their idiom. A couple lie before me — *La Voce del Popolo*, directed by G. Luglio, at rua de Lenado 31, and the *Corriere d'Italia*, conductor of which periodical is Leo F. Spandonari, at rua Sete-de-Setembro 75; both in Rio de Janeiro.

Then the Germans, leaving alone Portuguese and French citizens, are pretty strong. Two of their publications are the *Rio-Post*, edited by C. Bolle, rua dos Ourives 47, this city, and the *Deutsche Blätter*, at rua Riachuelo 24, run under management of A. Lindemann, and indifferently impressed in the tortuous — aye, trying — gothic characters.

An important, interesting predecessor of our trade journal, *La Revista Typographica*, of which notices have appeared already in the

United States and United Kingdom organs, was the *Bibliographia Brasileira*, a monthly review of the Brazilian press, still published at rua Gonçalves Dias 46, in this city. Number 1, brought forth last January, consisting of twenty-four pages, contains the first installment of what will prove a valuable dictionary of this land's newspaper press, the Rio journals being primarily treated. For a directory of the kind, there's no cause to murmur at the information given of *publicações*. The second portion of the initial issue contains an accurate list, with addresses of booksellers, wood engravers, lithographers, photographers, bookbinders, etc., in the capital of Brazil; also a lengthy enumeration of the printing offices, lithographic establishments, typefounders and stereotypers, and houses practicing the diverse photo-illustrating processes known. From this index to the trades people mentioned, it transpires there are in the city of Rio de Janeiro 58 printeries, 14 lithographies, 14 engravers, 17 photographic concerns, 29 book shops and stationers, 6 stereo-electro firms, and 23 binderies.

The *Bibliographia Brasileira*, a publication of the Centro Bibliographico, will be found most useful. The subscription price is \$2 per year.

Among Saint Paul papers are: *Diario Mercantil*, conducted by G. da Silva and Léo de Affonseca, and appearing from rua do Commercio 50; *A Redempção*, which editor Antonio Bento de S. e Castro sends out from the thoroughfare 7-de-Setembro (started as an abolitionist organ, it has no more work to do), etc.

A Provincia do Espirito-Santo, a daily consecrated to provincial interests, organ of the liberal party, sadly needs a new dress of type, which renovation I sincerely hope will be entirely North American. (United States material of all descriptions, permit it to be parenthetically remarked, is highly esteemed throughout Latin America, although prices may be a bit higher than inferior European goods; but the natives know what's cheapest in the long run.) Joao Coutinho, rua General Osorio 1, Victoria, is printer of the newsy diurnal above named, which in English would be known as *The Province of Saint-Spirit*.

The dailies, *Cidade de Santos* and *Diario de Santos*, in the southern town of Santos (the former owned by Marques y Cia, and the latter published at Santo Antonio 36-38), advertise for printers (!). Now, why can't they use a fitter expression, and say bricklayers? How professions are misnamed in this universe! Some northern type journals landed down there would edify a good many.

The proprietor and chief editor of *Liberal Mineiro* (Ouro Preto, provincia de Minas Geraes), Bernardo P. Monteiro, feels proud of the new type-face his paper has lately assumed. The letter is as French as French could be — a cruelly thin type. Lucky it is that piecework is exceptional in this state.

I will close down these random notices on some of Brazil's papers with a fling at the abortions. *O Baependyano*, property of Amaro Carlos Nogueira, resident at Caxambú (Minas), and *O Leopoldiense*, the organ dedicated to public interests, of which the editor-proprietor is Luis Botelho Faloao, whose printing office is at rua Municipal 46-48, Cidade Leopoldina (Minas). The get-up of this last is sorry all through; but the typographic appearance of its contemporary, primarily penned, is — well, let it alone.

I acknowledge my indebtedness to the *Rio News* director, A. J. Lamoureux, Sete-de-Setembro, 79 (typ. Aldina), in the capital, for kindly placing facilities in the way that quickens the penning of these notes. Long life to his beautifully-composed journal, the nattiest, best-printed American newspaper on the American continent of *Latina-Americana*.

Commenting upon well-produced publications, a remark upon one (an Irish monthly), cannot be resisted. Your correspondent saw recently, with great pleasure, a copy of the *Irish Textile Journal*, issued from Donegal square east, Belfast, and printed in that city by, I think, the concern of Allan. It is truly a most sumptuous and handsome publication, equal to the best printed art serials going; the letterpress and perfect register are the apex of perfection. Possibly, the *Irish Textile Journal* is, outside of the printing profession, the best produced trade-journal on the globe.

Not long since I saw a copy of a lithographers' and photographers' directory, issued by a New York house, claiming to contain the latest addresses of people of the trade in the United states, South

America, Mexico, etc. Like all works attempting to index the South American field, and going to work the wrong way, of course, the result has proved a miserable failure. A score or so of firms — half of them long since dead and forgotten — are given out of as many hundreds, while the grossest, stupidest and most glaring blunders are made in the spelling of individual names and street and town addresses, that a schoolboy could not but understand; and thus are directions formed complete and reliable, compiled up to date! Better construct a list properly, or leave the thing alone — not sail under false titles and gull people into buying the supremely ridiculous; and this is applicable also to compilers of so-called world's press directories, or any others tackling the vast South American market half-heartedly, as though it were as easily manageable as the Vaterland.

Seeing that THE INLAND PRINTER has for the past three years been having a special commissioner in the neighboring republics writing upon the printing, lithographic and kindred establishments of those parts, charging nothing for its information, although obtained at the expense of a pretty tidy figure by the Chicago journal (the many contributions I read with exceeding interest, and for their strict accuracy can vouch), the errors that are made by bogus South American "directors" are inexcusable. A reference to back numbers of THE INLAND PRINTER for past ten months would have given better information than could be obtained anywhere else, from the penny periodical just started to the biggest old-established type and litho offices out.

Advertisements of North American printing machinery, type and inks are conspicuous in several of the native newspapers of this and proximate states. Manufacturers who thus advertise act wisely, for, by so doing, their notices are seen by nearly all interested in the land. Far superior is this to advertising in those exceedingly doubtful publications known as export journals — papers issued in the States and Europe, and into whose columns merchants are ensnared by the mere fact of their being printed in Spanish. A serious question with advertisers is: Are these periodicals seen generally by parties concerned in South America? To which question I give in answer a vigorous *No!* The penner of these paragraphs has seen the interior of hundreds of typographic offices (great and little) this side the line, but never observed a copy of any of the papers under remark, or been told that they were received (with one solitary trifling exception). Those export journals usually claim to be "extensively circulated throughout South America." They have a nominal annual subscription price, but it is very questionable if more than a few have a single *bona fide* subscriber on their mailing list. As to gratuitous distribution, that notion must be condemned, for the publications are practically unknown, let alone being read. Perhaps a consul may have a spasmodic batch for giving away to deadbeat sailors who would like to see "that 'ere pictur' book"; but, though myself a visitor to many consulates, I never saw a fragment of any of the journals now commented upon. In printing houses, the same; they may have bundles forwarded them for handing to customers, but are too lethargic to do so, allowing the package to rot away in the custom house or in some dark, humid cellar — which is a pity, as mostly those publications are models of good printing, being in get-up far away superior to the class of organs issued in London. Why, the Spanish edition of one British trade journal not alone puts off its supporters by a poorly-produced magazine, but cheats them into a belief that the little-known, contemptibly servile *papelucho* is perused wherever Castilian is in vogue, in addition to which it is notorious for systematically defrauding its literary contributors.

If any manufacturer has ever seen the money he has spent in advertising in export journals back again in trade, with profit to himself, it is indeed a wonder. The journals not ever being distributed gratuitously, the cash is literally as if flung into the bowels of the earth. I consider the whole South American native press the best advertising media possible to reach *all* residents of these parts, and am desirous of seeing our journals encouraged. Give us printers the work to do, and we will do it well and satisfactorily. Favor the honored craft of a nation whose custom you want. If doing business with these countries, let me give this warning: Never send goods on credit, or you will most assuredly be done. "Terms, cash," must be the immutable basis.

All the republics have their printing-trade journals, and United States people would do well to favor them with their notices; then the

attention of most every printer in the state would be caught. Why, it is not long since that a beautiful, large eight-paged typo's monthly journal came up from Buenos Aires — *La Tipografía Argentina* — published by Lluch y Ramos, calle Lavalle 982 (N. M.), the representative journal of the Plata printing industry.

While advertising in the *native* press is excellent, yet

Personal representation is most important. One bright lieutenant will do more in a week than can be accomplished by months of correspondence, for people are not often persuaded to step out of the beaten track by letter. It is different, however, when they are approached personally, and even in times of greatest business stagnation no capable commercial traveler ever leaves without having reaped some benefit from his visit. — *United States Consul (Venezuela)*.

Now, Mr. Editor, I will close down, and will just wait and watch to see if this correspondence, repeated for the third time, appears before writing again.

Yours fraternally, F. G. N. L.

FROM MILWAUKEE.

To the Editor:

MILWAUKEE, December 4, 1888.

Two years ago the labor party carried everything in this county, and among the lucky candidates at that time was Barney Doyle, a printer, who was elected to the office of Register of Deeds of Milwaukee County, which is said to be the fattest office in Wisconsin. Barney boasts now that he will come out of his two years' term with \$32,000 clear cash as the proceeds of the fees he collected in the register's office. This year the labor party polled only 4,500 votes, while two years ago its candidates received 13,000, and only last spring at the city election, it cast within 800 as many votes as the republican and democratic parties combined. But this fall the tariff cry of the republicans scared the workingmen out of the ranks of the labor party.

Barney Doyle announced some time ago that he was going to start an independent morning paper, but after looking the matter over carefully, he came to the conclusion that if he started the sheet he would sink all the lucre he had gathered during the past two years, and so he gave up the scheme. Then "Boss" Hinsey came forward, and announced positively that he would have a first-class morning democratic journal in running order by the first of January, and many printers and newspaper men have gathered here in anticipation of securing positions on the prospective paper. He still sticks to it that the paper is going to be started, but he does not speak in such a positive manner as formerly, which has led persons to form the opinion that there will be no new paper in Milwaukee after all.

The *Sentinel*, the only English morning paper in Milwaukee, has an enormous advertising patronage, and it is understood to be making a barrel of money. There is no competition, practically, and the paper is being on run a very economical plan in every department. Since the strike, the expenses in the composing room have been greatly cut down.

The *Daily Journal* has a new perfecting press. There are now five perfecting presses in Milwaukee.

The *Daily Review*, the paper started by a dozen union printers during the printers' strike two years ago, is still running and is meeting with a fair measure of success. It is the only strictly union newspaper office in town.

Fred W. Stearns, foreman of the *Daily Review* office, has been chosen secretary of the union, and he is getting things in good business shape. The union has gained in strength rapidly of late, and it now numbers nearly as many members as before the strike.

Captain Arnold, whom all the old-time Milwaukee printers will recollect, has cases on the *Sentinel*, and although he is an old man now, he can knock out all the young men in the office as far as hard and continuous work is concerned. His endurance is something wonderful.

Colonel Hooker, that well-known soldier, printer, editor, is still in Milwaukee, and is employed about the job offices when he is not stopping at the Soldiers' Home.

Otto Sontag and Louis Breithaupt, two union printers, started a job office last summer and they have met with success so far.

JUSTIFICATION.

FROM PHILADELPHIA.

To the Editor: PHILADELPHIA, November 30, 1888.

Pressmen's Union No. 4 at its last meeting, recognizing that an injustice was being done several large firms who were paying their Adams pressmen \$18 per week, while others, through the supineness of their pressmen, were only paying \$16 per week, unanimously adopted a dual scale of wages, fixing cylinder pressmen at \$18 and Adams pressmen at \$16. During the recent agitation of the pressmen for an advance there have come to this city four or five pressmen, brought hither by the hope of being able to take advantage of the situation and secure for themselves a large salary; in only two cases were they successful, thus showing that the demands of the pressmen of this city had no great attraction for unfair men.

Business at the present time, as a whole, is only fair, though several houses are quite busy, notably Ashmead's, Fell's, McLaughlin's, Dando's, Dunlap & Clark's, Dornan's, Morrell's and Lippincott's. Several of the others have not as yet been able to remove the dense cloud of dullness which overspread their places about the time the pressmen desired to enforce the uniform scale of \$18 per week.

Mr. Harry Dunlap, of Dunlap & Clark, and formerly of E. C. Markly's printing and binding establishment, is a candidate for public printer, and is strongly backed politically and unionly. Though not personally acquainted with Mr. Dunlap, from what I hear I believe he would be a good man for the position. He is, I believe, a good executive and thoroughly practical.

Mr. W. J. Law has been elected financial secretary of Pressmen's Union No. 4, to fill the unexpired term of W. J. Mellen, resigned. Mr. Columbus Hall, second vice-president of the International Typographical Union, has paid us two visits recently, and in connection with the other officers of the International Union, did everything possible for him to do in settling our recent difficulties. M.

FROM SCOTLAND.

To the Editor: EDINBURGH, November 24, 1888.

The *Board of Trade Journal*, in reviewing the state of trade in Great Britain for the past three months, states that the improvement in the state of the national industries has been fairly sustained. So far as the labor market is concerned there is a marked difference in the number of men out of employment, compared with the corresponding months in the years 1886 and 1887. From eighteen societies who have reported, with an aggregate membership of 186,000, the proportion out of work at present is 3.5 per cent, while in August and September, it was 3.9, and in 1886 and 1887 it was 10 per cent and 8.6 per cent, respectively. While the printing trade and some others have been passing through a very dull season, and the proportion out of employment has been much above the average, the general trades of the country have been fairly employed, while industry, on the whole, is in a more prosperous state than at any time during the last five or six years and wages still tend to increase.

Two of the technical classes, which I mentioned in my last note as having been opened, have met with a good deal of success. Mr. Wilkie's class in the Heriot-Watt College, has now over eighty students (both male and female), while Mr. Jones, in the University Preparatory Institute, has enrolled over one hundred. The third class (Mr. Dobson's) has not been so successful in numbers, and it is expected will shortly close.

The Exhibition of Decorative Handiwork was opened on Friday evening, November 9. So far the exhibition has not met with that amount of support which its promoters expected. Amateur and professional artisans do not seem to have contributed to any great extent, and the exhibition seems to be more confined to specimens of ancient carving in wood and furniture, also brasswork, pottery and tapestry from mansions within a short distance of the city. Only three specimens were entered for the prize offered for title page for the official catalogue, none of which were used. They are: title page or cover for catalogue in type, by Mrs. J. Jamieson (Nelson & Sons); design for cover, by W. Baxter (Morrison & Gibbs), and another design by A. Carpenter, while there are several designs for chapter headings, and also specimens of decorative card printing.

The branch of the British Typographia started last month has now got fairly set to work, and Mr. Grut, of the *Ballantyne Press*, read, on October 26, a paper entitled "Correctors of the Press," which was of a very interesting nature. The second public lecture was also delivered on Friday evening, November 9, by Mr. S. Kinnear, the subject of lecture being, "Reminiscences of an Aristocratic Printing Office." Mr. Kinnear, in the course of his lecture, sketched the history of the Old King's Printing Office, which was better known in Edinburgh phraseology, some years ago, as "The Auld King's Hoose." The office came into existence in the year 1798, when Sir David Hunter Blair, baronet, and James Bruce, of Falkland, applied for and obtained the appointment of "Printers for Scotland to the King's Most Excellent Majesty." The patent they obtained gave them the sole right of printing bibles, prayer books, The Confession of Faith, acts of parliament, etc.; also of supplying the printing and stationery for the various government offices. The first manager of the concern was Mr. William Waddell, who conducted the business for the long period of thirty-seven years, while Mr. Kinnear's father acted as overseer for thirty-six years, he dying in the year 1835, aged seventy-five years. Mr. Waddell was educated in Heriot's Hospital, and served his apprenticeship in the office of Mr. William Smellie (who was the first editor of the *Encyclopedia Britannica*), in whose memoirs he is spoken of as being rather clever as a reading-boy, owing to the amount of French and Latin he had learned in the above institution. A three-storied house was provided for the manager, at the south end of the printing office, besides a stable in the back court for his *riding-horse*. Mr. Waddell was also a magistrate of the city. He died very wealthy, having purchased the estate of Sydsarf for £15,000. The business was carried on in a building built expressly for it, in Blair street, which is now occupied by Messrs. Macniven & Cameron, paper makers. The patent expired in the year 1839, having lasted for upward of forty years, when the present bible board was created, and the supply of government printing and stationery was thrown open, in some measure, to the trade. Mr. Kinnear remarked there were only four of the employes of the old house alive at the present time; one aged ninety-one, another eighty-eight, a third eighty-two, and himself, the youngest, aged seventy-two. He also stated that, possibly, at some future time, should circumstances permit, he might give "Twenty-five Years in Messrs. Blackwood's Office."

The surplus left over from the Edinburgh International Exhibition of 1886 has now been finally disposed of, when, among other objects to receive donations, the public library is to receive £1,500 to assist in furnishing a technical section.

The Glasgow exhibition closed on Saturday, November 10, after having had a very successful run. It is expected, after clearing all liabilities, there will be a surplus of over £50,000, which, it is expected, will be expended partly on a building for the Mitchell Free Library.

W. F.

FROM WICHITA.

To the Editor: WICHITA, Kansas, December 7, 1888.

After a twenty-two hours' ride from Denver over the Missouri Pacific Railway, your correspondent arrived in what should be known as the "Wonder of the West," the city of Wichita, Kansas, which, for the benefit of those of your readers who may not be familiar with the lay of the land this side of the river, will state is situated in the south central portion of Kansas, 140 miles from Missouri, 50 miles from Indian Territory, and distant 580 miles from Denver.

The city was organized in 1870; in 1882 had 5,779 inhabitants, and now claims 40,000. The "boom," one of the characteristics which go to make or kill every western town or city, has been, but not to kill, for Wichita today has more manufacturing establishments, packing-houses, stock yards, and finer four, five and six storied buildings, better business firms, and greater riches than any 40,000 city in the world.

In advancing with such rapid strides in building and mercantile matters, the enterprising printer has kept pace with the procession, and the city has now in operation fifteen printing, publishing and lithographing institutions, with an aggregate capital of \$121,000, turning out for the year ending June 1, 1887, business amounting to \$155,000, employing one hundred and ten people, and paying thereto salaries and wages

reaching the handsome figures of \$65,000. The paper house in business that year recorded sales of \$59,871, employed nine people, and paid \$7,200 in salaries.

The oldest and largest printing establishment in the city is the Eagle Printing House, owned by the Murdock Brothers, M. M. and R. P.

The Wichita *Eagle* (republican) was established in 1872, and is the leading daily of Kansas. The job business, in connection with the paper, has grown to mammoth proportions, and now the business fills the entire space of their own three-story and basement building, located on East Douglas avenue, the finest street in the city. The basement is used for stock-storage purposes, while the first floor is used for business office and pressroom, in which is a fine Scott web-perfecting press, two Cranston and one Cottrell cylinder, and four platen presses, run by day with a powerful gas engine, and by night with steam power. The press-room is in charge of Sanford Treat and Alf. Goodwin.

The second floor, which is well lighted, is occupied by the job-composing room and a very complete bindery. The job department is in charge of an old shopmate of Mr. H. O. Shepard, Mr. W. O. Stemburg.

The bindery is well taken care of under the supervision of Mr. O. W. Smith, an old Chicago boy, who has from twelve to twenty people in his department.

The third floor is used for composing room, stereotyping, reporters' quarters and sanctum of the managing editor, Mr. M. M. Murdock, who can claim the most elegant quarters of any editor of America, not excepting G. W. Childs, every article in the room being the gift of the citizens of Wichita.

The composing room is under charge of Mr. Jeff. Hall. The managing editor controls every department of the paper, having no city, state, or any other kind of editor. Mr. Elmer Ingalls does the telegraph, while Captain Shields is chief reporter. The *Eagle* employs from seventy-five to one hundred people, and has a large trade throughout the entire West. Daily, is seven columns, eight pages, with twelve and sixteen page Sunday issues, part German.

The *News-Beacon*, the democratic paper, is the only evening publication receiving associated press dispatches, is located at 117 West Douglas avenue, first floor. It was established in 1872, as a weekly; has changed hands many times; has had a hard struggle for existence, but has come out on top, and never missed an issue. It is now owned by Messrs. Richardson & Peck, two practical newspaper men, formerly of the *Chicago Times*, Mr. John S. Richardson being editor and Frederick N. Peck publisher. The firm employs from twelve to sixteen people; use a Cottrell & Babcock press, which is run by a gas engine. Under its new management the paper has flattering prospects.

The Beacon Job Printing Company is an entirely different concern from the newspaper, and under control of Messrs. Holmes & MacDonnell. They have a neat office, run five platen presses, and have all the work they can do. In connection is a good bindery. They are practical men, and do their own foremanizing.

The *Daily Journal*, the republican evening paper, though but a little over one year old, under the management of Mr. John Hoenscheidt, has become firmly established, has a good force, and is doing nicely. From the same establishment is issued two weekly German papers, the *Wichita Herald* and *Kansas Staats Anzeiger*. The force employed consists of twenty-five people. G. W. Tew is foreman, and the following occupy the several designated positions on the paper: John Hoenscheidt, managing editor; S. A. Harburg, Leo L. Reiding, associate editors; F. K. Albright, city editor; E. B. Stearns, engraver. The *Journal* uses a mammoth Babcock press, which is kept busy from morn till night.

D. G. Millison & Sons, located on Main street, have a well-balanced outfit, run four Pearl presses, and do a strictly commercial line of printing. Engraving is carried on in connection with their business. Established in 1872, and employ from seven to ten people the year round. Samples of work done by the younger member of the firm, seventeen years old, does credit to the workman and the city in which he works.

The Wichita Lithograph Company, located at 116 North Market street, has been in business one year, and has become one of the institutions of the state, and the members of the company are deserving of the success they have attained, for they are turning out some of the

finest work ever produced this side of the river. The company does an exclusive lithograph business, and being practical men, young and full of energy, have built up a fine business. One large cylinder and two hand presses are in use, and steam power is used from their own boiler and engine. H. H. Van Clief is president; John B. Sherly, treasurer, and Chas. Sahn, secretary.

Ward & Vorpahl are proprietors of the Queen City Printing Company, have three presses in operation, and are doing a nice business.

Owing to limited time, your correspondent was unable to visit the offices of the *Mirror*, the Sunday paper, the *Commercial, Independent, Express, New Republic*, Mr. Richards, Mr. Sawyer, the Wichita Printing Company, and two others; but the fact that they are all doing a good business, comparatively, shows that Wichita is not a dead town in any sense of the word.

Wichita Typographical Union, No. 148, was organized in November, 1886; has a good membership, and union men are employed in almost every office in the city. The scale for newspapers is as high as any city in the state, 30 and 35 cents. For job printers, \$15 per week. The union is officered as follows: President, T. H. Corbin; vice-president, A. C. Goodin; recording secretary, Charles S. Gunn; financial secretary, Charles A. Morgan; treasurer, Jefferson Hall. Plates occupy an unlimited space in every paper in the city.

Before closing, your correspondent wishes to return thanks to the secretary of the board of trade, Murdock Brothers, of the *Eagle*, and every newspaper man he came in contact with; Messrs. Van Clief and Sherly, the Cole Brothers, and others, for courtesies extended.

W. H. MONTGOMERY.

ANSWERS TO CORRESPONDENTS.

E. O. K., Cuyahoga Falls, Ohio: Has Bancroft's non-mutilating process of color printing any particular merit?

Answer.—No.

J. F. R., Elgin, Illinois, asks: Can you inform me if there is a house in St. Paul that handles \$60 ruling machines (for wood engravers' use), or send me their address, or the address of any house that handles them? I understand there is one in St. Paul, Minnesota.

Answer.—We do not know of anyone in St. Paul dealing in engravers' ruling machines. J. J. Watrous, Cincinnati, Ohio, sells a ruling machine (the Kirby) at \$75. This is the only cheap machine we know of. Baker & Co., of this city, make a very handsome small machine, ten-inch line, at \$165 complete, perspective, and all attachments. The Kirby is a good, plain machine, and very cheap. The Baker & Co. is a better and more complete machine, and just as cheap in proportion.

A. B. C., Iron Mountain, Michigan, writes: I see advertised the "Wetter Consecutive Numbering Machine," which is a very small one, and judging by the price of it, a very valuable machine. In the illustrations of it the "No." appears to stand about a nonpareil higher than the face of the numbering wheels, I presume a nonpareil higher than type. If this is the case how is it that the rollers pass over the machine without jumping, and how do they ink the figures and lines that may be alongside the machine.

Answer.—This depends on circumstances. In presses where the rollers are not secured, and have nothing but their own weight to keep them on the form, there would be danger of jumping. Where, however, they are secured by riders, the pressure they bring to bear will be sufficient to ink the figures and lines alongside, and prevent any such results.

MAJOR GILBERT, of Palmyra, New York, who is well known as the compositor of the first Mormon bible, celebrated his eighty-sixth birthday the other day by doing a good day's work at the case in the office of the *Palmyra Courier*. He is hale and hearty, and delights in the fact that he can still set as good a proof as most any younger man. He saved the first sheet of the Book of Mormon printed from each form, and preserved the book until a short time ago, when he sold it for \$500.

HENRY O. SHEPARD,

Head of the firm of Henry O. Shepard & Co., and president of THE INLAND PRINTER COMPANY, whose portrait is herewith presented, one of Chicago's representative business men, was born in the town of Eaton, Madison County, New York, May 23, 1848. In 1852 his family removed to Norwich, Chenango County, where he resided until he was nineteen years of age. Being of an ambitious turn of mind, and having a natural desire to become a printer, by permission of Mr. James H. Sinclair, of the *Chenango Union*, he was granted the privilege of setting type before and after school hours, with the result that when he went to learn his trade in the office of the *Chenango Telegraph*, he was the equal of any compositor on the paper. Leaving Norwich, he went to the village of Oneida, where he worked a year as a journeyman printer. In September, 1866, he moved to the city of Appleton, Wisconsin. Not being satisfied with the location, however, he shortly after gravitated still farther west, to Des Moines, Iowa, where he engaged in the milling business. Tiring of this, he came to Aurora, Illinois, and there worked for a year in the *Herald* and *Beacon* offices. Returning to Des Moines, he secured employment on the *Register*. While there he engaged in a typesetting contest to settle a controversy as to who was the swiftest compositor, in which he came out victor, beating his competitor by eight hundred ems.

In 1871 he came to Chicago, entering the establishment of Church, Goodman & Donnelley, where he remained between four and five years. It had been the custom of this firm, who were the printers of the Directory of the City of Chicago, to award, for the purpose of expediting its publication, a weekly bonus of \$20, \$15, \$10 and \$5, respectively, to the four compositors getting up the longest string, and Mr. Shepard captured the highest premium for three consecutive weeks over eighty competitors. In 1876 he assumed the foremanship of Knight & Leonard's, one of the best known printing houses in Chicago, 105 and 107 Madison street, which position he retained until August, 1880, when he formed a copartnership with Mr. William Johnston, under the firm name of Shepard & Johnston, at 146 South Clark street. Fortune smiled on

their endeavors, and business accumulated to such an extent that, in a short time thereafter, they were compelled to seek more commodious quarters, which they secured at 140 and 146 Monroe street, occupying 90 by 90 feet. Here they remained for five years, securing, during that time, a reputation second to that of no printing firm in the United States. Again, however, business demanded increased space and facilities, which, after a prolonged search, were obtained in the premises located at 181 to 187 Monroe street, to which they removed in March, 1887. In September, of the same year, Mr. Shepard purchased the interest of his partner, Mr. William Johnston, since which

time the business has been conducted with phenomenal success under the firm name of Henry O. Shepard & Co. This establishment has not only secured a local, but a national reputation, and is at present recognized as one of the most prosperous and best conducted of its kind in the United States. Each department is under the immediate supervision of tried and experienced workmen, and a casual inspection of its various workrooms impresses the visitor with the fact that order is there recognized as nature's first law. There is a place for everything, and everything is kept in its place. It has been the boast of the house that its imprint is a guarantee of good work, no matter what its character; and in corroboration of this statement, we may mention the fact that no solicitors are, or have been, employed in any capacity. The composing room is 60 by 120 feet, and the pressrooms 59 by 60 and 20 by 160 feet, respectively. The force employed varies from eighty to one hundred and twenty-five.

Mr. Shepard is in the prime of life; is an active, wide-awake, agreeable man of business; devoting his undivided time and energy to the interests of his large and growing establishment. As a man, he is courteous and affable; as an employer just and considerate, and ready and willing at all times to listen to and remove any grievance; as a friend, genial and whole-souled; as a printer, an honor to his profession; and if present indications may be accepted as a criterion by which the future may be judged, has a bright and prosperous career before him. He is also prominently identified with Masonic interests, is a member of the Illinois and La Salle clubs, and a life member of the Press Club of Chicago.

ANDREW C. CAMERON,

Editor of THE INLAND PRINTER—whose portrait and biographical sketch are herewith presented, at the earnest request of many old-time friends and fellow-craftsmen—was born in the historic town of Berwick-upon-Tweed, Scotland, September 28, 1834. After receiving a thorough elementary education, he was placed in his father's office, then corporation printer for the borough, where he remained until the spring of 1851, when, in company with his parents and family, he removed to the United States, locating on a farm near the village of Wheeling, Cook County, Illinois. Here he sojourned for a comparatively short time, when he secured, through his father's means and influence, an interest in the *Courant*, the first penny paper issued in Chicago, published by Colonel William Duane Wilson, formerly of the *Chicago Tribune*, and edited by J. Burke Fisher, a protégé of Horace Greeley, an able writer though somewhat erratic in his habits, which was printed upon the pioneer Northrup press sent to the Northwest. This journal was subsequently named the *Young America*, and afterward the *Chicago Times*, the recognized organ of the Hon. Stephen A. Douglas, then in the zenith of his fame, of which General Daniel Cameron, his brother, became one of the principal proprietors, who, through a strange coincidence, when commander of Camp Douglas, in which 12,000 rebel prisoners were confined, on order of General Burnside, department commander, was compelled to suppress the very newspaper he had helped to establish.

In 1855 he purchased an interest in a flouring mill at Buffalo Grove, a village half a mile west of Polo, Ogle County, Illinois, where he resided for a year, but, through the dishonesty of his partner, lost his investment, and again returned to Chicago, working at his trade in the *Post* and *Times* job offices, and with the firm of Dunlop, Sewell & Spalding, then one of the principal printing offices in the city. For sixteen years he was editor and proprietor of the *Workingman's Advocate*, the recognized representative of organized labor in the United States, a journal which wielded a powerful influence among the various trades throughout the country. He was, likewise, for a number of years, somewhat prominently identified with the labor movement, having been for six consecutive sessions delegate to and chairman of the platform committee of the National Labor Congress, as also treasurer and member of the national executive committee. He was elected secretary of the national convention which met in Columbus, Ohio, in 1872, and nominated Judge David Davis, of Illinois, for president, and Governor Joel Parker, of New Jersey, for vice-president, and was appointed one of the committee to wait on these gentlemen and notify them of their nomination; and has now in his possession the celebrated dispatch from the former that an American citizen should neither seek nor

decline a nomination for public office. In August, 1869, he was unanimously elected, at the New York session of the National Labor Union, American delegate to the International Labor Congress at Basle, Switzerland, representing a constituency of 450,000, and, although he received a royal welcome, refrained from taking an active part in its deliberations owing to the radical character of the principles advocated. While abroad he paid a visit to several of the coöperative institutions in Great Britain, and also formed the acquaintance of a number of gentlemen prominently identified with the interests of the industrial classes, which afterward proved of material advantage. He was for four years president of the Trades Assembly of Chicago; also president of the State Labor Association, the State Eight-Hour League, the Coöperative Association, and for three years one of the directors of the Mechanics' Institute. He has been a member of the Chicago Typo-

graphical Union since 1853, during which time he has been honored by it with many positions of responsibility, the last being that of one of the arbitrators appointed by that body to amicably settle the differences between the proprietors of and the compositors employed on the daily newspapers of this city.

In 1868 he was nominated for the legislature, his opponent being Judge Shepard, now a circuit judge of Cook County, and his colleague, Col. Thomas Grosvenor, who was shot by a cadet on the grounds of the Chicago University, shortly after the memorable fire of October, 1871; and although he ran considerably ahead of his ticket, was defeated, which sealed his political aspirations for the future.

But, while a staunch advocate of trades unions, and occupying the positions referred to, arbitration and coöperation have always been his hobbies, and he has strenuously, consistently and persistently opposed the views and actions of the ultraists, his experience convincing him that their influence was and is baneful to the best interests of society, and that in all disputes between employer and employé, reason, instead of a resort to strikes

or lockouts, should be the arbiter; and age but confirms him in the correctness of these sentiments.

At present he is president of the Old-Time Printers' Society; a member of the Press Club of Chicago and the State Press Association of Illinois, as also of the board of managers of the St. Andrew's Society, and one of the incorporators of the Burns Monument Association. He was married in March, 1861, to Eliza Hough, and has four living children, one son and three daughters.

For the past five years, he has devoted his undivided time and energies to the interests of THE INLAND PRINTER—endeavoring to make it the representative journal of the craft—with what success he leaves the company, its patrons and subscribers to judge. He has a large circle of acquaintances—whose warm friendship he values—in every state in the Union.

Yours Faithfully
A. C. Cameron

ANOTHER FAST PRESS.

IT is many months since I had the pleasure of writing for THE INLAND PRINTER, apart from my series of articles under the head of "The Practical Printer." I am, therefore, glad to have an opportunity of doing so once more, and I venture to think that though there may be more business than poetry in my present subject, it will, nevertheless, be of interest to the many thousands of printers who peruse these pages and are always on the lookout for something they may turn to their advantage and which will help them to reach the goal where creditors cease from troubling and the mind can be at rest. It may be said that few printers ever get there. Well, some do, and that is encouraging; but I am inclined to think that many more could if they went the right way about it. There are two roads which lead to this result—one is raising prices to the consumer and the other is lessening the cost of production. I have said a good deal on the former point from time to time, and I try to practice what I preach in my own sphere of action; but the second point is the one I now wish to emphasize.

Another fast press, the "Eckerson," is just being introduced to printers in the East, and those who have seen it declare it to be a "daisy." Having heard its praises sung, I took an opportunity of going to see it running. To say that I was exceedingly well pleased with what I saw is but mild praise, and yet I do not care to say more lest I might be suspected of partiality.

Let me simply describe it as it appeared to me on the occasion mentioned. It is a platen job press, built especially for running at fast speed. It feeds from the roll and prints, cuts and delivers in an even pile ready for shipment. The average speed is from 3,000 to 4,000 impressions an hour, though it can be run even faster than that with perfect safety. By means of four cutters it is possible to print a job five on a sheet, which will give 20,000 copies an hour (printed, cut and stacked) by running at a speed of 4,000 impressions.

The chief features of its construction are:

First. The very few main working parts. By these I mean the parts which do the most of the work and on which there is much wear and tear, and these are built so strongly and on such principles as to reduce to a minimum the chances of producing lost motion.

Second. Its compactness, all its working parts being compressed into as small a space as possible and no parts projecting inconveniently.

Third. The almost entire absence of noise and vibration. This is accounted for by the natural continuous movement of every part, without sudden jars or jerks.

Fourth. The perfection of its adjustments for regulating all its operations—the correct tension of the paper, the length and width to which the sheet requires to be cut, etc.

Fifth. The position of the bed on which the type rests. Being horizontal instead of vertical there is less liability of spaces and quads working up.

Sixth. The method of inking the form. This is novel as well as effective, the five rollers passing once, and only once, over the form for each impression and doing the work admirably.

As I stood and watched this little wonder, my mind went back to the time when, as a boy, I ran a small hand press at the rate of 250 impressions an hour, with the assistance of another boy, and with large blisters on my small hands which used to smart pretty badly when the potash found its way into them. What a change! This press was doing twelve times as much work with no one to feed and no one to roll. Printers in these days ought all to be millionaires if in those days they could live at all! But, alas, the majority give away to the public what by rights belong to themselves, and therefore do not reap the benefit they should do from all the improvements that have been and are being constantly made and put into their hands. Of course, improved machinery must necessarily lower the prices charged, which results in larger quantities of work being done, but I am sure that the rule with most printers is to charge their work too low.

But I must now leave off philosophizing and return to business. *Dictum sapienti sat est.*

Instead of the platen descending onto the form, the bed rises with the form to the platen, and the paper, which passes under the platen,

stands still while the impression is being made, and then moves on just so far as to let the next impression be made in the right place; then the printed part passes along to the knife, which cuts it the proper width and it then drops onto the delivery board. So that the form lies in the most natural position all the time and is subject to no movement that is likely to make it work loose, or spring, or cause the spaces and quads to rise.

The rollers work from side to side across the form. On one side is the ink fountain and revolving disk and on the other side is another revolving disk. The rollers pass right across the form to the disk, on opposite side, and while they are passing over the disk the impression is taken, the bed is lowered and they pass back again, and so keep moving backward and forward alternately with the rising and falling of the bed. And yet there is no hurry. The rollers move so leisurely and quietly as to give the idea that they had not half enough to do. But this slow, steady movement is a great advantage, as every printer will readily see, the inking being done much better than if they moved rapidly twice across.

The arrangement for making ready is quite unique. Just under the platen is an iron frame like a hand press tympan, which slides in and out for the purpose of making ready; so that after an impression has been taken, this tympan can be pulled out and the making ready can be done in the lightest part of the room and then be put back in precisely the same place.

There ought to be no difficulty in printing every kind of work on every kind of paper that can be obtained in rolls, and it safe to say that very soon it will be possible to get every kind of paper that is required in rolls.

There are three sizes being built at present, eighth medium, quarto and half medium. That this press will have a large sale seems more than likely and if anything I have said will help it along I shall be exceedingly glad.

All information as to details can be had of the Morgans & Wilcox Manufacturing Company, general agents, Middletown, New York.

In closing let me say that this is no amateur press, or I would not waste my time in writing about it, for of all the evils against which printers have to fight, I believe the "amateur press and outfit" curse is the worst.

H. G. BISHOP.

THE FIRST PRINTING OFFICE ON THE PACIFIC COAST.

We are indebted to the Chicago *Ledger*, and its correspondent, Moses Folsom, for the following illustration and description of the first printing office on the Pacific coast. It was built by two missionaries named Whitman and Spaulding, who settled on Lapwai Creek, a branch of the Clearwater, and twelve miles above Lewiston, Idaho. Here was built the first house, which is still standing.

It was originally a two-story building, though only the ground floor remains. The cut herewith gives a pretty fair idea of how the structure looks. It is now used by the Indians for a stable. In this building the first printing office west of the mountains, on the Pacific coast, was established. The material was originally sent by the American Board of Foreign Missions at Boston, in 1809, to the Sandwich Islands, and in 1840 was presented by the first native church of Hawaii to the Lapwai Mission. E. O. Hall came along with it to set the type. Part of the New Testament was set up and printed in the Nez Perce language and distributed among the Indians. The press is now in the state library at Salem, Oregon. The government subsequently established a military post at Lapwai, but it was abandoned a couple of years ago, and the buildings are now used for Indian schools.

TO USERS OF LEATHER BELTING.

We ask all who desire to purchase the best Oak-tanned Leather Belting to favor us with a trial order. To every consumer we recommend our Belting as an article upon which the fullest reliance can be placed. We guarantee every Belt to give entire satisfaction with fair usage, and will replace any that may prove defective.

Those who purchase of us may rest assured that there will be no misrepresentation, and that they will obtain a good article of Belting, which we warrant to be well stretched, and to run true upon the pulleys and to do good service.

Hoping to be favored with a sample order, we are,

Yours respectfully,

THE UNION TYPE FOUNDRY

COPPER AMALGAM TYPE

A. T. H. BROWER,
TREASURER AND MANAGER

337 339 DEARBORN STREET
TELEPHONE 1040

~~CHICAGO~~ CHICAGO 29 Nov. 1889

Gentlemen:

No type has been made heretofore which so exactly imitates the work of a type-writer machine as does that with which this is printed. It was no easy matter to achieve this end, for the conditions under which a type-writer produces its work are very peculiar, and the results obtained are, consequently, all the more difficult to imitate. In fact, the only way we brought about the effect you now see was by copying the actual work done by a NO. 2 STANDARD REMINGTON MACHINE. We shunned the meretricious practice of having some letters out of alignment, or crossed out, or defaced in any way, because, now-a-days, the improvements in type-writer machines make such work inexcusable, and an operator who does not do good work, and have her machine kept in order, cannot keep her place.

Our effort has been, therefore, to make a type which shall, to a nicety, resemble the actual work turned out by good operators on improved REMINGTONS, and other first-class machines. We believe we have succeeded in this, and that you will endorse our opinion, as well as that of Messrs. Wyckoff, Seamans & Benedict, on next page, who as the manufacturers of the Remington Machines, are certainly about the best possible judges of such a question.

Very respectfully,

THE UNION TYPE FOUNDRY,

Treas. and Mgr.

THE EDITOR'S TABLE.

There's a little box of pills, there's a heap of lengthy bills,
 There's a caustic letter from a country reader.
 There's a ticket for a stall, there's another for a ball,
 There's a circular about a patent feeder.
 There's a pack of cigarettes, there are letters of regrets,
 There's a proof of highly-colored lithographing.
 There's a solitary ace, there's a photo of her face,
 There are articles to start the angels laughing.
 There's a pretty chiming clock, there's some Western mining stock,
 There are stacks of verse in every sort of meter.
 There's a cotton office hat, there's a badly ragged mat,
 There's a pipe-bowl than which nothing could be sweeter.
 There's a gaily ribboned cork, there's a map of all New York,
 There's a guide to Palestine and one to Russia.
 There's the latest opera score, there's a lump of iron ore,
 There's relics of a Harvard football rusher.
 There are pots of ink and glue, there are letters old and new,
 There are piles of odd exchanges and of paper.
 There's a narrow pair of shears, there's a glass of that which cheers,
 There's a double-backed-and-pointed paper-scraper.
 There's a partly smoked cigar, there's an ornamented jar,
 There's the circulation-swearer's weekly fable.
 Oh, the sight will tickle you, if you ever catch a view
 Of the editor while writing at his table.

Written for THE INLAND PRINTER.

GOVERNMENT PRINTING OFFICE VACATIONS.

BY SAM. L. LEFFINGWELL.

NOTE in the September number of THE INLAND PRINTER a few brief comments on "vacation" in the government printing office at Washington. These comments appear to have been written by the editor, and to express a degree of pleasure over the fact that the printers have been granted a like vacation to other employés in the government service—thirty days' leave of absence—with pay.

Now, upon calm, considerate and reasonable reflection, I should like to inquire upon what grounds, or upon what just and equitable consideration, the workmen in the government printing office, or the employés in any other department of the government service, are granted thirty days' leave of absence, with pay, or any other privilege more than would be granted the employés of a private firm or corporation.

The whole civil service of the government is based upon a system of spoils. If not peculation, it so nearly resembles that peculiar atrocity, as to nearly approach embezzlement. There is scarcely an employé in the departments at Washington, although lately guarded by the rules of civil service reform, that does not owe preferment to partisan political influences; in many cases, of the most bitter partisan persuasion, and in some instances so vile as not to be referred to publicly. Once in position, their salaries are graded in sums extravagantly out of proportion to those paid for like service in any private business concern in the world. From a minimum of \$600 they run all the way up, according to class, to \$2,500 and \$3,000 per annum. All this for eight hours per diem service, and an added thirty days' leave of absence, *with pay*. "Congress regulates the pay by law," says some wise observer. Of course it does; and congress regulates its own pay. Members and senators get \$10,000 for two years' service. Taking the long and short sessions together they do about eleven months' work and have the other thirteen of the twenty-four to attend to private business at home or elsewhere; that is to say, they draw over \$900 a month for service rendered the government—over \$30 per diem—and spend the largest portion of their time at private business and among their constituents, building fences to more securely inclose a retention of office and power.

And how, in the past, have these appointments been made to positions in government service? Never, save upon the recommendation of a member of either the house or senate, and always with strong political bias to the party in power; always from among that class of constituents which would bring the party recommending the largest

possible amount of political preference at home. This is the very essence of spoils and corruption. It matters not that it is done by those high in authority, and that it is the general government which is being bled. The expenses of the government are drained from the people, no matter in what particular form or shape—no matter how small in amount from the individual. It is a betrayal of honorable trust; it is peculation; it is embezzlement; it is robbery.

And the government printing office can be classed as one of the worst among the bad. In several of its features it far oversteps the bounds of decent regulation, and is conducted in open violation to correct and well-established principles governing the craft everywhere else but in Washington throughout the land. There is not an employé in the government printing office that was not placed there upon the recommendation of either a cabinet officer, a senator or a representative in congress. The superintendent, who is really the foreman, has no option. The senator or congressman, from whatever section of country, names his man, or half dozen of them, and the superintendent makes places for them. Competency or honorable standing in the craft has nothing whatever to do with it. The party admitted may have spent years of honorable service at the case and be artistically competent in various branches of typesetting—newspaper, book or job; or he may be the veriest "blacksmith" that ever dropped a filthy case; he may be a runaway apprentice, or a rat of vilest reputation and disgrace—it's all the same; in he goes, and about the only restriction placed upon him is that he must join the membership of Columbia Typographical Union, No. 1, and then his fortune's made. There are many, very many fair, honorable and thoroughly competent printers in the government printing office, all passing through the same channel to get there; but think of the hundreds of incompetent "shoemakers" and disreputable "scabs" with whom they have been forced to affiliate upon fraternal equality. Then think of the pay that some of this class are called upon to accept. Four dollars for eight hours' work, when it is probable a large number of them have scarcely ever been able to earn half as much more in an entire week in the blacksmith shops from which they brought their diplomas.

There may be nothing dishonorable or censurable in accepting positions by this method of procedure, there being no other way by which a printer, competent or incompetent, can obtain possession of a frame in the government office; but what would be thought of a man who would force himself into any office in the country, book, job or newspaper, upon the recommendation of anyone, proprietor or other party, if he did so in direct opposition to the desire, will or wishes of the foreman? If he did so in one of the large daily offices, the chapel would possibly order the father to pull out the nail where he would hang his coat, and he would indeed be fortunate in some instances if he reached the ground floor by any other means than by a fall from one of the upper-story windows.

But to return to the original proposition. Is it honest, is it fair that a man should be allowed to absent himself from his work for thirty days and receive from his employer full pay for the time of his absence, thirty days, at \$4 a day—\$120—simply because he is in *enforced* employment, and is to be paid by the government. The position taken herein will meet with objections in certain quarters, and the writer will most likely be designated as an old crank. Those who find fault with the restrictions herein given will either be found holding positions where they may reap the benefit of thirty days' leave, with pay, or among others who are anxiously awaiting a change of administration when they expect, through the methods of spoils and corruption, to reach a favorable position by which they may reach down into Uncle Sam's pocket and take more than honestly belongs to them. A majority of the human family are probably prompted by more of selfishness than of pious regard for the rights of others; will acknowledge the wrongfulness of the act, but will willingly accept its rewards for the temporary pleasure of its enjoyment.

But then, it is robbery all the same.

EDWIN CLARKE, business manager of the New York *Tribune*, died suddenly at his home in Brooklyn, November 23, in the fifty-fifth year of his age. He was a native of Portland, Maine, and was at one time financial editor of the *Tribune*, succeeding his brother in that position.

ELECTRICITY IN PAPER.

We are indebted to the *Boston Journal of Commerce* for the following illustration and description of a device, by the use of which, it claims, electricity in paper and the great annoyance it causes in the pressroom are overcome. After referring to the frequent failures met with in providing a remedy therefor, and the results of the experiments made based on the idea that electricity was engendered by friction induced by the crushing force of the cylinder and type form as the sheet passed between them to be printed, discarding the theory that it was put on in the paper mill, it says:

"In the course of our investigations we were also struck by the fact that on some days the electricity was more troublesome than others, and at other times there was an entire absence of it, nor could it be coaxed into showing itself by any artificial means. Some mornings the sheets would run out all right until about 10 o'clock, when electricity would appear and trouble us until about 4 o'clock in the afternoon, when it would gradually depart as silently as it came. Reasoning from these premises it was apparent that it was an atmospheric condition that we

contact with the printed sheet after it had been charged with electricity in passing through the press. We also tried the hot air theory by placing pipes under the fly frame and passing steam through them, so the sheet of paper as it passed down the fly frame would receive a high degree of heat, but with no favorable results. Mr. Pilz says, in the extracts which we have given from his address, that by 'holding a sheet over a flame the electricity is lost, and the same happens when a needle point is passed over the paper at distances of half an inch.' If the sheet of paper is held long enough to catch fire and consume, we have no doubt Mr. Pilz's assertion would prove to be correct, but if he should attack electricity in one of the sheets of our paper by holding it over a flame, or by putting his needles half an inch from the paper, he would find our American electricity couldn't be coaxed to move on and out by any such operation, whatever he might do with the German kind.

"Making our deductions from these premises the two main points to be met with and overcome were atmospheric conditions and the engendering of electricity when these conditions were favorable. As this electricity was of the frictional kind by which each fiber of the paper

had to deal with, and without a recurrence of these conditions there could be no trouble from electrically-charged paper. From further observations it was also apparent that in weather where it was considerably moist there was no recurrence of this electrical state, but when the weather was cool, dry and crisp, as in winter and early spring and fall, these conditions were particularly favorable for its development. This would also go to show that the reason for the appearance of electricity between 10 and 4 o'clock, as related, was owing to the abstraction of moisture from the atmosphere by the heat of the sun, thereby establishing favorable atmospheric conditions.

"The intensity of this electricity differs, of course, in degree according to the amount of saturation in the atmosphere, which renders the paper more or less susceptible to excite electricity through friction. It is held by some that when a pressroom is kept at an even temperature electricity will give no trouble, but our experiments show differently; as for instance, in the morning, when our pressroom would be naturally colder than later in the day, electricity would not appear until between 9 and 10 o'clock in the morning, when it was several degrees warmer. We also tried the experiment of letting steam out into the room, so as to restore in part, at least, the moisture absorbed by the heat, but we could never effect any good results until we brought steam in direct

seemed to be charged independently of itself, and wouldn't move nor act in unison with other fibers unless each fiber had a special wire of its own—which would neither be practical or possible—it was decided that other means must be brought to bear to reach each particular fiber, and at the same time to establish an atmospheric condition detrimental to its presence. Everything seemed to point to steam as the element to be harnessed to do this work; but how to apply it, in a way that would not affect or injure the surface of the paper on account of moisture, was a serious consideration. It would not answer to project steam against the surface of the paper, as it would require too great a volume and fail to distribute itself over so large a surface, neither would it do to distribute the steam, through perforated pipes, as the steam would condense therein and the water be thrown out of the perforation and wet the paper in spots, which would be as bad as the electricity itself. With these points constantly in mind we felt our way along the pathway of experiment until the device which is shown in the illustration herewith was finally evolved; and it has practically proved the correctness of our deductions, by successfully ridding us of our troubles in this direction.

"For the benefit of those who may be interested in its method of operation we will briefly describe this device. The agent employed to

do the work is steam. To practically use it a series of perforated pipes is placed in a steam receiver, the perforations being masked so as to deflect the steam downwardly into the receiver. Over this receiver is placed a wire covering of very fine mesh, through which the steam rises and comes in contact with the sheet of paper as it passes down the fingers of the fly frame. The action of the deflector and wire covering is such as to break up and disseminate the steam in the receiver so that it will come in contact with the sheet evenly over its entire surface. As will be seen by the illustration, the inlet pipe connects with the steam supply system by a piece of rubber pipe, an outlet pipe conducting away the condensed steam. The steam is shut off and on by the pressman at will, being controlled by valves. The device is placed directly under the fingers of the fly frame, and attached to the flyer rest by means of two lugs placed upon the upper side, upon which it rotates, the lower side having a chain at each end upon which it rests. By lengthening or shortening these chains the device can be adapted to any position and not interfere with getting readily to the press.

"It will be seen by this description that the operation of the device is such that the sheet of paper passes through a continuous volume of steam on its way down the fingers of the fly frame, this steam reaching every fiber of the paper, and providing by this means a vehicle for the electricity to pass off, and also helping to establish in the pressroom an atmospheric condition unfavorable to its creation.

"We have had this device in operation in our pressroom for nearly three years, during which time we have experienced no trouble from electricity, and it has never failed to take care of it effectually. It has saved labor, paper and time, enabled us to run our press and folder at their full speed and relieved us from the annoying delays which electricity formerly occasioned."

REMINISCENCES.

HALL & SMITH'S CITY DIRECTORY.

BY JAMES BARNET.

SOME years before Smith & Du Moulin's directory appeared I was almost a stranger in town, not knowing a single employer. I called on John Shanks, the *Journal* office engineer or fireman, and while there I was asked by a youth if I was a hand pressman. "Yes," I said, "I am a hand pressman," although at the same time I did not have a love for the work. The extreme weather affected the rollers so much as sometimes to render them useless, and where piece-work was the pay at 25 cents a token, it was almost impossible without a steady run of work to earn \$10 a week, that being the union terms. As to making rollers, I shied out of the responsibility when it was possible, as I had noticed so many failures in turning out first-class inkers. Sometimes the fault would be in the cooking; again, it would be in renewing old stock; then, it would be improperly oiling and fixing the mold; and then it might be bad glue without the proper proportion of molasses. These miscalculations either gave too much or not enough suction. Innumerable were the troubles attached to poor rollers, not the least being blistered hands for the "devil," and anxiety for the pressman at the appearance of his work.

This was before treadle presses were in common use, or roller-making firms had a being. The muscular exercise, however, of the hand press cannot be overestimated or praised too highly, for it brought strength to the growing bones and a bloom on the cheek. To a young man it was invaluable, and far surpassing any health-lift that has been invented. The swarthy, portly appearance of the past generation of hand pressmen form a strong contrast to the sickly, white-faced compositors of the present.

As I said I was a hand pressman, I got duly installed to do the presswork of a city directory in twelve-page forms, along with the youth referred to as an assistant, or, as sometimes heard, "to play the devil." The week before, a compositor had worked off the four first forms and then got tired, thus leaving room for another to fill his place. My assistant, during the working of the fifteen hundred copies, constantly reminded me that the other man was far quicker at the press than I was. I told him that I could not see how there could be much difference in time, else his rolling would prove defective. One day the absent man appeared, and I said to him that he could have his job

again as far as I was concerned; but he declined the acceptance. Then a controversy arose between him and the employer about a settlement, when the question was asked me by the latter, "How much paper do you wet down for a form?" [The paper printed on the hand press was all wet down between boards; after awhile it was turned and weights placed on top to equalize the dampness. Cards and fine paper were put within damp sheets, and after being printed and dried were placed in layers between pressing boards and squeezed, so that the original gloss would reappear and the impression on the back would be unnoticed.] The question was easily answered: "Fifteen quires and fifteen sheets, adding, of course, a few sheets for making ready and registering." The discussion between the two grew warm and serious, as it turned out that the boss had given the compositor the paper for the four forms to wet down, and there was a shortage of four hundred copies on each. Did ever such a mistake happen with those who knew the multiplication table in their younger days? I very much doubt it. The appliances now at hand and in the pages of THE INLAND PRINTER, however, obviate all kinds of erroneous enumeration respecting paper and cardboard. It was a costly blunder, while one was accused of giving out insufficient paper, and the other for charging six token press-work. How the dispute ended I cared not to inquire. At the finish of the job, the forty-eight pages were reset, and I earned a corresponding figure in completing the shortage.

The compositor was quicker, no doubt, at the hand press than I could be. Afterward, the assistant was as close as a clam on account of the incident.

PAPER FOR BUILDING.

The use of paper fabric for building purposes — by the term paper being meant, broadly, a flexible sheet, made of vegetable or other fiber, which has been reduced to a pulp, and then pressed out and spread and dried — is now advocated by some builders on the following grounds: First, continuity of surface; that is, it can be made in rolls of almost any width and length, is flexible, or, by gluing several layers together, may be made stiff, and will stop the passage of air, because there are no joints. Second, it has no grain like wood, and will not split. Third, it is not affected by change of temperature, and therefore has an advantage over sheet metal as roofing material. Fourth, whereas in its natural condition it is affected by moisture, it may be rendered waterproof by saturating with asphalt, or by a variety of other methods. Fifth, it is a non-resonant, and well fitted to prevent the passage of sound. Sixth, it is a non-conductor of heat, and can be made also of incombustible material like asbestos, or rendered fire-resisting by chemical treatment. The combination of paper with other substances, and solidifying the mass by pressure, renders practicable the production of a material capable of replacing wood for many purposes; and not the least among its characteristics of adaptability, says the *Manufacturer and Builder*, is the ease with which it may be made into sheets of any width and thickness, that will not warp or shrink from heat, cold or dampness.

HOW MANY?

The periodical publications now issued in the United States and Canada are found to be divided as follows:

Daily, 1,512; tri-weekly, 50; semi-weekly, 194; weekly, 12,322; bi-weekly, 67; semi-monthly, 239; monthly, 1,792; bi-monthly, 25; quarterly, 109, making a total of 16,310.

When credited to the states in which they are published, the geographical distribution of these periodicals is shown to be:

New York, 1,636; Pennsylvania, 1,169; Illinois, 1,157; Ohio, 940; Kansas, 807; Iowa, 787; Dominion of Canada, 755; Missouri, 674; the territories, 661; Michigan, 632; Massachusetts, 614; Indiana, 612; Nebraska, 521; Wisconsin, 484; Texas, 468; California, 463; Minnesota, 371; New Jersey, 297; Georgia, 242; Tennessee, 227; Kentucky, 222; Virginia, 217; Colorado, 215; North Carolina, 194; Arkansas, 181; Maryland, 180; Connecticut, 173; Alabama, 167; Maine, 155; Louisiana, 142; Mississippi, 139; West Virginia, 138; Florida, 121; New Hampshire, 107; Oregon, 105; South Carolina, 101; Vermont, 69; District of Columbia, 54; Rhode Island, 52; Delaware, 34; Nevada, 27.—*Printers' Ink*.

M. R. H. WITTER,

The subject of the present sketch, is forty-two years of age, and a native of the State of Missouri, though of New England parentage. At twelve years of age he entered the printing office. At seventeen he was one of the publishers of a country paper established to support the Union cause in Missouri, from which enterprise he withdrew to enter the Union army, before his eighteenth year. Not long after the close of the war he went to work at his trade in the city of St. Louis, where he has since resided. For the past five or six years he has been foreman of the composing room of the St. Louis *Globe-Democrat*, having previously filled the various subordinate positions in the office.

Mr. Witter joined the typographical union immediately upon his arrival in St. Louis, and has been an active member ever since. In 1884 he was a delegate from the St. Louis Typographical Union to the convention of the International Typographical Union at New Orleans, and was reelected to the New York session of 1885, and in both conventions was chosen president of the International body. His term of president was marked by a prosperity unexcelled by any equal period in the history of the International Union. During the second year of his term there were numerous and extensive strikes in various branches of industry throughout the country, and the relations of labor organizations to each other was the subject of much discussion. The pretense was set up in some quarters that loyalty to the cause of labor required unquestioned support by all crafts of any organization which became involved in dispute with employers, and on at least one occasion members of the typographical

union were ordered to quit work in support of a strike which had no relation whatever to the printing trade. Against such preposterous and ruinous claims Mr. Witter took a firm stand, claiming for the union the right to regulate its own business without dictation from other trade unions. In this position he was unanimously sustained by the International Union at the Pittsburgh session of 1886.

As a union man, Mr. Witter is a staunch conservative. He believes implicitly in the benefits of labor organizations, and that employers receive a large share of those benefits. He advocates conference, concession, and arbitration; is in no sense a pessimist, but believes in the progress of men, and that a candid interchange of ideas will yet show to both capital and labor that friendship, and not enmity, is their true relation. Few men are held in higher esteem, and deservedly so, than this high-minded, honorable representative of the craft.

**THE AUTO-STEREOTYPE PROCESS.**

How to obtain a fac simile plate from printed matter is a problem that has long exercised the ingenuity of inventors, and some very elaborate processes have been devised. While any such process is liable to abuse, by affording facilities for piracy, it has a wide field of useful and legitimate application. A correspondent of the *English Mechanic* describes an auto-stereotype process which was invented in Switzerland, and successfully used at the celebrated establishment of Orell, Fussli & Co., Zurich. It appears to be simple, and requires no costly appliances. It is thus described: Plaster of paris, best quality, is mixed with water to make it a thin putty without lumps, and to this

a little alum or salt is added to make it set quickly. To every 5 pounds of the plaster are then added: silicate of potash or silicate of soda, 3 ounces; phosphate of lime, 2 ounces. The mixture thus obtained is then put upon a perfectly level piece of plate glass of the desired size, around which iron rods are placed, and left to get hard. The plaster cast ought to be at least type high, to prevent breakage. While the mass is setting, the back ought to be scraped level, and should remain undisturbed until it is perfectly dry and hard. After that it may be taken off, and it will be found to be as smooth as the glass itself. The paper to be reproduced is next placed with the side to be copied down, in a dish which contains the following transferring solution: Distilled water, 16 ounces; alcohol, 90 degrees, 5 ounces; acetic acid, $\frac{1}{4}$ ounce; phosphate of soda, $\frac{1}{4}$ ounce. Care should be taken not to get the solution on the back of the paper, which is not to be transferred, as it is then liable to print through when it is

drawn through the transferring press. Should the print to be copied have been printed for some time, it is desirable to warm the solution and float the paper longer on it. The sheets should be left on the solution for at least two hours to insure perfect action. In the meantime the plaster of paris plate, which was completely dried before, is prepared in a darkroom. A solution of 5 ounces of gelatine in 12 ounces of water is prepared by letting the former soak for half an hour and then heating it to about 190 degrees. Care must be taken to prevent the boiling of the solution. To this, 6 drams of citrate of iron and ammonia and 2 ounces of alcohol are added and well filtered. This is when still warm. Put into a flat dish covered to a depth of about $\frac{1}{4}$ inch. It is well to put this dish upon a hot metal plate, as it gets hard quickly when getting cold. The plaster of paris plate, which itself is warmed first, is dipped in the solution on the smooth side for a moment, thus letting it

take up some of it, whereupon it is taken out and dried in the dark. When dry, the copy is transferred upon it in the usual way, the plaster having been placed between rubber sheets to prevent it from breaking. Of course, also, this has to be done in the darkroom—that is, at lamp or gas light. The plate is then dried once more and exposed to direct sunlight for fifteen minutes. When taken out, the places where the light has acted will be found to be quite hard, while at the other places the plaster is soft, and will fall off as fine powder as deep as the solution has penetrated, if brushed with a hard brush. After that the plate is ready to be stereotyped.

PAPER FROM SAWDUST.

It is evident that the Ottawa *Herald* does not keep an expert paper maker as a staff attaché, when it says: "The Howell Paper Mill, at the Chaudiere, was opened recently, and from sawdust rough paper will be manufactured.

"The sawdust is taken from Bronson's Mill, and brought by carriers to the basement of the paper mill. Here it is put into a revolving wire screen which acts as a separator. From here the mash passes to a cylinder, and has the appearance of thick starch.

"Pumps are employed to carry the material to the floor above, where it is ground and squeezed, and sent to the top floor, where the manufacture is completed by being passed through a succession of rollers.

"The pulp is subsequently put through hot rollers, which gradually dry the paper, and send it out ready for use. Mr. Howell thinks that when in full order the mill can turn out six tons a day, and a better quality of paper will also be manufactured."

Nothing has been said as to how the sawdust is reduced to fiber: if it is reduced, or merely stuck together by beating with other stock. The writer had quite an experience, several years since, trying to grind sawdust so it could be used with drainer stock.

The sawdust was furnished into a tub fitted for the experiment. Three grindstones were put on the spindle, in place of the usual roll and knives. A stone bed-plate was put in place of the ordinary steel bed-plate. After running a dose of sawdust eighteen hours, a fine polish was found to have been given to the stones on the spindle, and the sawdust—well, it was very good sawdust even then.—*Manufacturer's Gazette*.

MARRYING AN EDITOR.

"Yes, I'm Mrs. Peter Snow, an editor's wife. I well remember the day when Mr. Snow asked me to become his wife. I confess I liked Mr. Snow, and thinking it would be a fine thing to be the wife of an editor, I said 'Yes,' as prettily as I knew how, and I became Mrs. Snow. I have seen ten years of married life, and find my husband to be an amiable, good-natured man. He always spends his evenings at home, and is in that respect a model man; but he always brings a pile of exchanges, which is only limited by the length of his arms, and reads while I patch the knees and elbows of his pantaloons and coat. After we had a Quaker meeting of an hour's length I broke the stillness by asking:

"Mr. Snow, did you order that coal I spoke to you about?"

"What did you say, my dear?" he asks, after a minute's silence.

"Did you order that coal I spoke to you about?"

"Indeed, my dear, I am sorry, but I forgot all about it. It shall come tomorrow."

Another hour's silence, which is relieved by the baby's crying, and rather liking a noise of that sort I made no effort to quiet him.

"My dear," says Mr. Snow, after he has cried a minute or so, "you had better give the baby some catnip tea to quiet him; he troubles me."

The baby is still. Another hour passes without a breath of noise. Becoming tired, I take a lamp and retire for the night, leaving Mr. Snow so engaged with his papers that he does not see me leave the room. Toward midnight he comes to bed, and just as he has fallen asleep the baby takes a notion to cry again. I rise as quietly as possible and try to still him. Then another baby begins to scream at the top of his lungs. There is no other course but to awake Mr. Snow, so I say:

"Mr. Snow! Mr. Snow!"

The third time he starts up and cries, "What, Tom! more copy?"

As though I was Tom, the little imp running about the office. I replied tartly:

"No, I don't want any more copy—I have had enough of that to last me my lifetime! I want you to see what Tommy is crying about."

Mr. Snow makes a desperate attempt to arouse himself; as Tommy stops to take a breath he falls to sleep again, leaving me to pace the room in as much vexation as I can comfortably contain. The next morning at breakfast, when I give Mr. Snow an account of his last night's troubles, he says:

"Indeed, my dear, I am very sorry the children trouble you."

This is always the way. If I complain it is, "Indeed, I am very sorry."

But should the very same thing occur the subsequent night directly before his eyes very likely he would not see or know anything about it, unless it happened to interrupt his train of ideas. Then he would propose catnip tea, but before I can get it into the infant's stomach he would be far away into the realms of thought, leaving me not a little vexed at his stupidity.

He knows the name of every paper published in England or the United States, but he cannot for the life of him tell the names of his children. He knows precisely the year of every American journal, but he does not know the age of his own baby. He knows how every contributor looks, but I do not believe he can tell whether my eyes are black or blue.

They say Mr. Snow is getting rich. All I know is, he gives me money to clothe our boys, and that, too, without complaint of poverty. I hope the world is right in opinion, and when I am satisfied it is I shall advise him to resign his editorial honors and spend a few months in becoming acquainted with his wife and children. The little ones will feel flattered in making the acquaintance of so literary a man.—*Rochester Advertiser*.

A CANADIAN'S VIEWS.

A Canadian publisher, in renewing his subscription to THE INLAND PRINTER, writes as follows:

"Almost any publication about printing is always interesting to one who has served a regular apprenticeship; and everyone who can appreciate first-class printing is sure to have a hearty welcome for each new number of THE INLAND PRINTER.

"Of course, you do not meddle with politics, not even as to retaliation against Canada for all its alleged offenses against the United States. But what if all disputes between the United States and Great Britain and Canada were referred to a joint committee of editors and printers—whether protectionists or free traders—of the United States and the Dominion; would not some satisfactory solution soon be found with which professional politicians would understand that they had better not meddle? I have lived in by-gone times for many years in the United States, and consequently, whenever I get a chance to pay a visit to your side find myself just as much at home as I do on less frequent trips to England; and as far as my experience goes it is just as easy to be on friendly terms with genuine Americans—those who can count a few generations of their families born on this side of the Atlantic—as with Scotchmen, Irishmen, Welshmen or Englishmen. But it is no use your politicians talking 'manifest destiny, or annexation, or purchasing Canada.' We can manage our own affairs, under our own institutions, to our own satisfaction, and can rely upon ourselves to work out our own salvation. Free trade between the United States and Canada—the more the better, but without closer political partnership."

TO TEST printing paper, apply the tongue for sizing, and compare opposite sides together for equality of surface. Look through a sheet against strong light for spots, and note whether the paper be "regular." Printing paper ought to "rattle" well, and have good strength and surface. When there is a great "rattle," and if the paper has a glistening brilliancy of texture, then most likely straw is present in the fiber, which, when introduced in excessive quantities, causes the paper to break when folded. The paper should, therefore, be creased and then examined.

AS THEY ARE.

OFFICE OF

PERSONAL.

During the past month we have received calls from the following gentlemen: E. G. Fuller, of Montague & Fuller, New York; R. N. Perlee, of George Mather's Sons, New York; J. H. Cranston, Norwich, Conn.; Alonzo Dolan, Leader Publishing Company, Bloomington, Ill.; C. W. Battell, of Sheldon Collins' Son & Co., New York; Fred. L. Sweet, Kalkaska, Mich.; George M. Stanchfield, Electric Manufacturing Company, St. Paul, Minn.; Robert O. Boyd, Denver, Col., representing Queen City Printing Ink Works; Fred. N. Bert, printer, Buffalo, N. Y.; D. A. Creed, Bloomington; Geo. E. Boos, Helena, Mont.; L. L. Klinefelter, *Express-Republican*, Mason City, Iowa.

TRADE NEWS.

KELLER & PAINE, printers, Evansville, Indiana, have dissolved partnership.

THE Post Job Printing Company, Vicksburg, Mississippi, has fitted up a printing office.

THE Ida County Publishing Company, Iowa, has been incorporated with a capital stock of \$8,000.

CREED & LASWELL, printers and publishers, Bloomington, Illinois, have dissolved partnership.

F. A. HOUGHTON & Co., printers and stationers, San Francisco, California, have made an assignment.

GOULD'S Peoria Directory Company, Peoria, Illinois, has been incorporated, with a capital stock of \$10,000.

THE Maxwell (Iowa) *Tribune* has recently added a C. Potter, Jr., & Co's 33 by 48 country press to its establishment.

IT is stated that a \$100,000 stock company has been formed to publish a republican paper at Memphis, Tennessee.

THE Kansas Catholic Publishing Company has been incorporated at Topeka, Kansas, with a capital stock of \$10,000.

THE capital stock of the Times Publishing Company, Richmond, Virginia, has been increased from \$20,000 to \$100,000.

J. W. FRANKS & SON, printers and publishers, Peoria, Illinois, have been incorporated, with an authorized capital of \$30,000.

THE lithographic artists and engravers of Denver have formed an association under the title of "The Denver Lithographic Artists."

SMITH & LUCAS, job printers, Trenton, New Jersey, have dissolved partnership by mutual consent. The business will be continued by Lucas & Co.

ARTICLES of incorporation have been filed by the Wisconsin Anti-Prohibition Publishing Company, Milwaukee, Wisconsin. Authorized capital, \$2,500.

R. E. CRAIG, J. T. Hardie and others of New Orleans, have organized the Shreveport Gazette Publishing Company (capital stock, \$25,000) to publish a daily paper at Shreveport, Louisiana.

THE material of the Rand-Avery Company, Boston, has been offered for sale. It is the general impression that some party will purchase it in its entirety, and resume operations.

THE number of presses in the establishment of Messrs. C. W. Calkins & Co., Boston, has recently been increased by the addition of a large new Campbell two-revolution book press, with front delivery.

L. PRANG & Co's Christmas and New Year publications are of very superior merit. They have taken great pains to secure the best designs, and they have brought them out with care and artistic excellence. This year's line is particularly strong in art books.

THE Dickinson Typefoundry (Boston) specimen page of its new, quaint, open series in the December INLAND PRINTER, is the first showing of a strikingly original letter. Its shapes were modeled by an eminent American artist, and will be admired by appreciative printers.

MR. L. E. BATHRICK, inventor of the electric dissipator, noticed on another page, has made J. H. Bunnell & Co. sole agents for it, except in the New England states. That these dissipators have merit there is no doubt. Harper & Bros., New York, having placed them on ten presses in their establishment, wrote J. H. Bunnell & Co., as follows:

"The Bathrick electric dissipators now applied to ten of our largest presses are giving entire satisfaction, and in view of the failure of all other appliances we have tried in the past, we can recommend your attachment as a means of effectually removing electricity from the paper in use, both in the printing and in subsequent handling."

BISHOP BROTHERS book and job printers, 401 Wyandotte street, Kansas City, made a voluntary assignment, December 10, to William M. Osborne. The assets are estimated at \$12,000, and the liabilities are not yet known.

THE Sewell-Clapp Manufacturing Company (successors of the Sewell Envelope Manufacturing Company), Chicago, have been organized for the manufacture of envelopes, calendars, advertising novelties and stationery specialties. Alfred L. Sewell is president and Clement L. Clapp secretary and treasurer of the new enterprise.

A NEW patent seamless galley has just been invented and manufactured by Golding & Co., Boston, Massachusetts. It is made of one piece of metal, either brass or zinc; is light, strong and durable, and, having no wood to warp and shrink when wet, its superiority to the old-style galleys is at once apparent. The galley is an excellent one, is sold at a low price, and will have a large sale.

PAPER TRADE ITEMS.

THREE hundred tons of manila are daily used in the United States.

A NEW paper mill at Waterloo, Iowa, is expected to be in operation by January 1.

THE A. W. Keeney Paper Company, Rockford, Illinois, has changed its mill to strawboard.

THE American Pulp and Paper Company, at Tiffin, Ohio, has been formed to manufacture strawboard.

RIDGEWAY & SHIPLEY, dealers in paper and paper stock, Wellsville, Ohio, have made an assignment.

A SUIT for \$30,000 has been instituted against the California Paper Company, et al., San Francisco, California.

C. W. HOWARD, at Neenah, Wisconsin, is turning out five tons of print paper per day, and is disposing of it easily.

EDWARD VORSTER, New Orleans, Louisiana, is making efforts to organize a \$200,000 stock company to manufacture paper fiber.

THERE is a good opening for strawboard and rag-paper mills at Des Moines, Iowa. The city has seventeen railway outlets, abundant and pure water, and cheap fuel.

THE New York *Herald* has awarded the contract for its supply of paper to Crocker, Burbank & Co., Fitchburg, Massachusetts, and the York Haven Paper Company, York Haven, Pennsylvania. The price is 4¼ cents.

THE National Paper Roll Company has just been organized in Cincinnati, Ohio, with \$50,000 capital stock. The incorporators are Andrew Hickenlooper, Samuel Ramp, A. L. Ross, Charles H. Rust and W. S. Ross.

FIRST premiums have been awarded by the Richmond (Va.) Exposition to the Albemarle Paper Company, of Richmond, for the excellence of its blotting paper, and to Norman V. Randolph & Co., of the same place, for paper drug boxes.

THE Western Straw Wrapping Trust, the principal members of which are located in Iowa and Illinois, has voted to raise the price of its produce from \$30 to \$35 per ton. The product represented in the trust is about two hundred tons a day.

THE Kankakee Paper Mill is the style of a firm composed of L. B. Cobb and W. Bonfield, succeeding the Union Strawboard Company of Kankakee, Illinois, which succeeded to the Kankakee Paper Company. The new concern will make straw wrapping-paper.

SAYS the Omaha (Neb.) *Bea*, of October 31: "The wheels of the Lincoln paper mills commenced to run today. This inaugurates a new industry and enterprise for the capital city that promises to be more than a spoke in an ordinary wheel. It is stated that the mills will employ forty men and keep them in constant work. This alone is no small item, for it means several hundred dollars each year for the grocer,

merchant and clothier, as well as an income to the company from all parts of the state that will necessarily be remunerative from the very nature of the demand for the article manufactured. It is also stated that the plant will turn out eight tons of paper each day. The prices of paper will be such that it will be to the interest of dealers throughout the state and especially the city of Lincoln."

NEWSPAPER GOSSIP.

THE Washington *Press*, the successor of the *National Republican*, has made its appearance.

THE Hartford (Conn.) *Courant* has just celebrated its one hundred and twenty-fifth birthday.

THE Kenton (Ohio) *News* has been enlarged. It is one of the best prohibition papers in the state.

ON November 7, the day after the election, the Boston *Herald* printed and sold 441,738 copies.

A NEW paper recently started at Ida Grove, Iowa, is called the *Watch*. Wonder if it will run "on tick."

THE Nebraska *Methodist* is a new publication, issued from the Wesleyan University, at Lincoln, Nebraska.

MISS LIZZIE O. THOMAS, of South Carolina, has just been added to the staff of the Atlanta (Ga.) *Sunny South*.

R. D. KELLEY, recently of the Deadwood *Pioneer*, has commenced the publication of a democratic daily at Omaha.

THE St. John (N. B.) *Progress* is preparing a holiday edition of 12,000, which will probably be increased to 15,000.

BOULDER, Colorado, has a new six-column quarto, called the *Local Miner*, of which Lewis L. Gray is editor and proprietor.

MR. CHARLES BRADSHAW is now proprietor of the Carrollton (Ill.) *Patriot*, and has recently moved his office into new quarters.

THE *Daily Democrat*, of Nashville, Tennessee, has been consolidated with the *Daily American*, leaving but one morning paper in the city.

THE *Carolina Watchman*, published at Salisbury, North Carolina, recently printed the last issue of its sixtieth year. It is the oldest paper in the state.

THE Omaha *Dispatch* made its first appearance October 27. J. E. Wilcox is proprietor, and D. R. Kelly managing editor. It is issued daily, Sundays excepted.

PALMER & REY, San Francisco, have recently established a coöperative list in Los Angeles. It is called the "Southern Pacific Newspaper Union," and comprises twenty papers.

JOHN C. REID, who has been managing editor of the New York *Times* for a long time, has resigned. Mr. George Finney, late Albany correspondent of the paper, has assumed the managing editorship.

THE *Evening Star*, the only evening paper published in Washington, D. C., has increased in size from a four to an eight-page paper. It has added another perfecting press to its establishment.

O. H. ROTHAKER, of the Council Bluffs (Ia.) *Herald* declares that "journalism is a beastly profession, anyhow," and that "one-half the brains expended in any other direction would bring ten-fold the results."

THE holiday editions are ripening, and many publishers are preparing for the "greatest effort of their lives" in this direction. The issuing of holiday editions is becoming a regular feature with many publishers, and their works are both creditable and profitable.

THE franchise, subscription list, good will, etc., of the Birmingham, (Ala.) *Age* have been bought by the Herald Company, and a new company organized, with a capital stock of \$200,000. It now appears as the *Age-Herald*, and is issued from the former *Herald* office.

THE Camden (N. J.) *Daily Telegram* has passed into the hands of the Telegram Publishing Company, composed of practical newspaper men, who give their own labor to the enterprise. The paper has been greatly improved in every way, and is now one of the brightest and best papers in New Jersey.

THE *Daily Gazette-Journal* of Hastings, Nebraska, has gone into the hands of a receiver, and the office closed up. The Nebraska Loan and Trust Company is the principal creditor. The liabilities are \$35,000, and the assets are about the same. The affair has created quite a sensation.

ONE of the enterprising daily papers of central Illinois is the Decatur *Morning Herald*. Its proprietors, Messrs. Hall & Hostetter, are young men of energy and ability, and believe in the adage which says, "Take what's in sight and rustle for more." They certainly are worthy of the success they have achieved.

THE Topeka *Daily Commonwealth*, the oldest republican paper in Kansas, which is in its twenty-seventh year, has been sold to J. K. Hudson, proprietor of the *Daily Capitol*, for \$40,000. It is reported that the purchaser will sell the franchise to C. N. Holliday, publisher of the *Evening Democrat*, who will publish a morning paper.

CHICAGO NOTES.

THE Denny Tag Company, of Philadelphia, have rented premises on Canal street for the manufacture of their articles.

THE Calumet Paper Company has obtained a contract for school tablets from the Chicago Board of Education, amounting to several thousand dollars.

WILLIAM PENN NIXON, of the *Inter Ocean*, is mentioned as the probable successor to Postmaster Judd, in the Chicago postoffice, under the forthcoming administration.

THE Chicago Press Club entertainment given at Central Music Hall, on Friday evening, December 7, was a most successful affair, the receipts, after paying all incidental expenses, netting over \$1,550.

AT a meeting of the Press Club of Chicago, held at its rooms on Sunday, December 9, resolutions indorsing Captain William M. Meredith for the position of public printer were unanimously adopted.

JUDGE TULEY has denied the motion of D. K. Tenney for a rehearing in the case of the Butler Paper Company against the John B. Jeffery Printing Company, which was lately decided against the latter corporation.

THE McCormick paper contract, amounting to \$25,000, has been awarded to the Polands Paper Company, Mechanic's Falls, Maine, but at rates which our local dealers say leaves them no cause to shed tears over its loss.

IT is rumored that John R. McLean, of the Cincinnati *Enquirer*, who for some time past has been ambitious to purchase a metropolitan newspaper, has made a bid for the Chicago *Times*, and that his offer will probably be accepted.

WILLIS B. HAWKINS, a bright, energetic, painstaking journalist, for some years past connected with the press of this city, took editorial charge of the Toledo *Commercial* December 1. THE INLAND PRINTER wishes him success in his new field of labor.

MR. GEORGE H. TAYLOR, 184 Monroe street, has on exhibition an ingenious and beautiful little paper-testing machine, which operates on the principle of atmospheric pressure. It is noiseless, and works with great nicety and precision. Mr. Taylor will be pleased to show it to any parties interested.

ELIJAH W. HALFORD, editor of the Indianapolis *Journal*, has been selected by President-elect Harrison as his private secretary. Mr. Halford is of English birth and a practical printer, and was for two years connected with the *Inter Ocean* of this city. He is highly spoken of, and has a host of friends.

ON Saturday, November 17, the employés of the *Journal* pressroom presented Mr. Peter Balken, foreman of that department, with a gold-headed cane, the occasion being the thirty-second anniversary of his connection with the office. The cane was suitably engraved. Mr. Balken subsequently entertained the men at his home at River Forest.

ELECTRICITY as a motive power has come to be recognized as one of the most useful of modern inventions. The motor made by the Sprague Electric Railway and Motor Company, advertised on page 274 can be used to run any machinery that can be driven by steam power. These motors are in use by many printing offices with the best

results, the points of superiority over any other power securing for them a place in offices in all parts of the country as fast as their merits become known. We invite our readers, when in Chicago, to inspect the ten-horse power motor in the establishment of Henry O. Shepard & Co., printers of THE INLAND PRINTER, at 183 Monroe street.

A MEETING of the Executive Committee of the Illinois Press Association will be held at the Grand Pacific Hotel, Chicago, on Friday, December 21, 1888, at 12 o'clock, noon, for the purpose of deciding upon place of holding annual meeting, to arrange programme, and to otherwise transact business of importance to the prosperity of the association.

THE royalty, patterns, etc., and the right to manufacture the Rival Paper Cutter, have been purchased by H. H. Latham, 318 Dearborn street. He is now manufacturing the machine here, P. A. Noyes & Co., Mystic River, Connecticut, having discontinued making it. Mr. Latham has sold within a short time fifty of these cutters, which speaks well for the "Rival."

J. P. TRENTER, 84 Market street, Chicago, has in press a new catalogue, which will be out the first week in January. It will show all the different faces of brass rule manufactured by him, and prices, etc., of all the goods he sells. A new feature in Mr. Trenter's business is the manufacture of metal furniture. This he makes in all sizes, perfect in every respect, and can furnish in any quantity. Those needing brass rule and other goods in Mr. Trenter's line should send for a copy of his catalogue.

THE following received the unanimous indorsement of Chicago Typographical Union, No. 16, at its regular meeting, held November 25, 1888:

WHEREAS, Captain William M. Meredith, an honorary member of this union, is mentioned as an applicant for the position of public printer, and as the government printing office employs more skilled workmen than any other establishment under the government, and the law provides that the appointee shall be a practical printer, therefore,

Resolved, By the Chicago Typographical Union, No. 16, that the life-long loyalty and fidelity of Captain Meredith to the interests of organized labor renders him specially acceptable to the members of our craft, while his large experience as successful manager of the largest establishments demonstrates his high executive ability and the possession of the necessary qualifications to conduct the office in such manner as to subserve the best interests of the government, and fully meet the just expectations of the printers of the country.

A TYPESETTING contest for \$250 a side came off in the office of THE INLAND PRINTER, 183 Monroe street, November 25, the competitors being Leo Monheimer, of the *Herald*, and Peter Thienes, of the *Mail*. The type used was 7-point minion, 25 ems measure, the stipulations being two stretches, of three hours each, with a recess of half an hour for dinner. Both contestants started at eleven o'clock, and though somewhat nervous at first, soon settled down to work. The record was not broken, yet the composition done by both was creditable on the whole, as there was not a paragraph in the two galleys of matter. When time was called at half-past five the record was as follows:

First stretch—	MONHEIMER.	Lines.	Ems.
First hour		70	1,750
Second hour		75	1,875
Third hour		75 9½ ems	1,884½
Total		220 9½ ems	5,509½
Second stretch—		Lines.	Ems.
First hour		75 6½ ems	1,881½
Second hour		75 22 ems	1,890½
Third hour		75 11 ems	1,886½
Total		226 14½ ems	5,658
Grand total			11,167½
First stretch—	THIENES.	Lines.	Ems.
First and second hour		141	3,536
Third hour		73 19 ems	1,844
Total		214	5,380
Second stretch—		Lines.	Ems.
First hour		75	1,875
Second hour		74	1,850
Third hour		71	1,775
Total		220	5,500
Grand total			10,880

In correcting Monheimer lost nineteen minutes, each minute so employed deducting a line from his total, which was reduced by 475

ems. Thienes occupied thirty-two minutes in correcting, and was then unfinished. Mr. Charles Cobb, of the *Inter Ocean*, was referee. Mr. Monheimer's interests were looked after by M. Gantz, and Mr. Thienes' by William Binks. The attendance was quite large, between two and three hundred members of the union being present during the contest.

CHANGE OF BASE.—It will, no doubt, interest the readers of THE INLAND PRINTER to learn that Mr. Edward A. Blake, who, for ten years past, has been the efficient western representative of C. B. Cottrell & Sons, the well-known press manufacturers, as also manager of the Empire Manufacturing Company, has dissolved his connection with that firm and associated himself with Mr. John J. Clause, the web newspaper press builder of this city, under the name of Clause & Blake, the factory of which is located at 114-116 Market street, and the office at 325 Dearborn street. We consider the combination an eminently appropriate one, Mr. Clause being recognized as one of the ablest mechanics in the United States, while the acknowledged tireless energy and practical experience of Mr. Blake, and his long and extensive acquaintance with the requirements of the trade and its representatives, preëminently qualify him to assume the business management of the new enterprise. Under their joint endeavors, we shall look for a greater demand for the Clause press, which has long been recognized as one of the best in the market. THE INLAND PRINTER wishes the new firm abundant success in their enlarged field of enterprise, and takes pleasure in calling the attention of the trade throughout the country to this announcement.

SPECIMENS RECEIVED.

JOHNSTON & SPEERS, Toronto, Canada. Attractive business circular in purple.

C. B. WELLS & Co., Springfield, Massachusetts. Plain, though exquisitely neat, business folding card in script.

ASHLAND NEWS (Wis.) jobroom. Notehead, which would look a great deal better if the rule-twisting had been a little more accurate.

BOOMERANG JOB OFFICE, Laramie, Wyoming. Billhead for office, worked on tint block covered with patent leather. It is a very creditable specimen of typography.

CURTIS PRINTING COMPANY, St. Paul, Minnesota. A neatly executed calendar for 1889, each page of which is printed in different colors and designs, all of which are original and attractive.

A. J. LILLY, Dixon, Illinois. Several samples of programmes, invitations, etc., which would be a credit to any office in the country. They are set up with taste and good judgment, possessing just enough of the ornate to be attractive; besides, the presswork is first-class.

UNITED BROTHERS PUBLISHING HOUSE, Dayton, Ohio. A sumptuously gotten-up, printed and illustrated pamphlet of sixteen pages of the Union Safe Deposit Company, of that city. It is printed on coated paper, and is certainly an honor to the establishment turning it out.

ERNEST HART, Rochester, New York. A number of specimens in colors, artistically executed, which, we understand, are the work of Mr. F. Seaman, formerly with Haight & Dudley, Poughkeepsie. The designs, execution and exquisite coloring show the hand of a master.

JOHN J. DALY, 267 Tenth avenue, New York. A large and varied selection of fancy and commercial printing. The material is new, the selection of type has been made with admirable judgment, is used with discrimination, and we can honestly commend each specimen before us as a clean, neatly executed and well worked job.

F. N. BURT, Buffalo, New York. A large assortment of general commercial printing. Also, a variety of label printing for druggists, plain and in colors. Taken as a whole, we deem them worthy of commendation, though we should like to have seen some of the miters a little more perfect. The firm circular in colors is both unique and attractive.

ALFRED MUDGE & SON, Boston. A handsome brochure of thirty-four pages, printed on thick, highly-finished glazed paper, containing artistic illustrations and descriptions of the various departments of their printing establishment, as also samples of some of the work turned out

thereat. The composition and presswork, it is needless to add, is worthy of the reputation of this well-known firm.

A. W. STETSON, Quincy, Massachusetts. Firm letter and bill head, both of which are worked over a tint which was made by pasting a piece of lace on tint block.

ALSO from Hoser Brothers, Germantown, Pa.; Gruber & Marshall, Washington, Ohio; W. A. Baker & Co., Newark, N. J.; Caldwell Printing Company, Birmingham, Ala.; Conrad Lutz, Burlington, Iowa, and the Silver Moon Art Press, St. Paul, Minn.

OF INTEREST TO THE CRAFT.

THE Washington (D. C.) *Evening Star* has added a Potter perfecting press to its establishment.

THE name of G. W. Clarkson, of the Des Moines (Iowa) *Register*, is mentioned in connection with the government printer.

PRESIDENT PLANK recently visited Bloomington, Illinois, and it is needless to add the boys were very pleased to meet him.

THE stereotyping department of the New York *Mail and Express* has been brought under the jurisdiction of the stereotypers' union.

ROBERT DALGLEISH, 565 Abbey street, Cleveland, is anxious to know the whereabouts of Robert Dalgleish, a printer, who worked in Cincinnati four years ago.

CANDIDATES for public printer are fast coming to the surface. As only one will be successful, there will probably be some soreheads when the announcement is made.

MR. L. C. HAY, first vice-president of the International Typographical Union, has been elected to the Kansas Legislature from the Leavenworth district. A good selection.

THERE are rumors to the effect that the management of the New York *Tribune* intend to discard the machines now used on that paper and employ a full force of union printers.

DORY CURREN, a compositor on the Kittanning (Pa.) *Times*, has two perfectly developed thumbs on his left hand, one of which he uses to follow the types in his stick. It is an odd freak, but Dory can "rattle 'em up" with the swiftest.

THE indications for the trade in Montreal, are that the printing offices will soon experience a boom, as there will be a large amount of holiday work, and several of the daily papers will get out a Christmas number, as also many of the weeklies.

ON Tuesday, November 6, Mr. D. J. Vaughan, the popular secretary of Governor Adams, of Colorado, was made the recipient at the State House, Denver, of a handsome gold watch, upon which was engraved the following words: "Presented to John D. Vaughan, by State House friends on November 6, 1888." The presentation speech was gracefully made by Auditor Kingsley, in the presence of all the state officials, including the governor. Mr. Vaughan responded in his usually felicitous manner.

AT a meeting of Indianapolis Union, No. 1, December 2, the following preamble and resolutions were unanimously adopted:

WHEREAS, Captain William M. Meredith, of Illinois, has announced himself as a candidate for the position of public printer, at Washington; and,

WHEREAS, Captain Meredith was for many years a member of Indianapolis Typographical Union, No. 1 — one of its charter members — and has always been in the front rank in the cause of unionism; therefore, be it

Resolved, That this union does most heartily indorse his candidacy, and we hereby pledge ourselves to give all the aid possible toward securing his appointment to said position of public printer.

THE great excitement attending ordinary elections fades into insignificance in comparison with the interest which was manifested over the annual election of officers of Typographical Union No. 6, which was held Wednesday, December 5, at the headquarters, in Frankfort street, New York City. The following members were elected officers for the ensuing year: President, W. E. Boselly; vice-president, Duncan McLeod; secretary, Everett Glackin; treasurer, Ezra B. Harvey; trustees: D. Trimshull, Stephen Binnington and Alexander Klebold; sergeant-at-arms, Thomas J. Robinson. Executive committee: John Armstrong (*World*), P. McQueen (*Herald*), John Spott (*Times*), Robert Costello (*Press*), Charles S. Ayres (*Evening World*), William

W. Kilpatrick (*Telegram*), William Baile (M. B. Brown's), Walter Dumody (National Railway Publishing Company), John Taylor (*Evening Post* bookroom), James King (De Vinne's), J. R. H. Hall (Albert J. Robert's).

THE original typographical union fund of \$10,000, contributed in 1886 by George W. Childs, publisher of the Philadelphia *Ledger*, and Anthony J. Drexel, the banker, has been doubled, and the amount now standing to the credit of the organization in the hands of James J. Daily, treasurer of the fund, is \$20,376.67. The quarterly statement of the union up to November 1 furnishes a recapitulation of the contributions to the original fund, as follows: Mr. Drexel's birthday in 1886, \$1,020.34; Mr. Childs' birthday, 1887, \$4,333.61; Mr. Drexel's birthday, 1887, \$1,038.51; Mr. Childs' birthday, 1888, \$2,782.30; Mr. Drexel's birthday, 1888, up to November 1, \$212.95.

A PRINTERS' building and loan association has recently been formed in New York City, by the working staff of the New York *Sun*, which offers membership to all over twenty-one years of age. It has two classes of members, the "borrowing" and the "investing." The investing member merely pays his weekly dues and participates in the profits. There are really no losses, as the association holds no property except the mortgages and securities on its members' property. No money is loaned to non-members. Mr. Wm. H. Bodwell, of the *Sun*, is superintendent, and Mr. Horace L. Well, of the *Evening Sun*, secretary. John W. Touly, associate editor of the *Shoe and Leather Reporter*, heads the list of trustees.

FOREIGN.

LAST trade reports from Australia are as follows: Brisbane, brisk; Melbourne, fair; Sydney, dull; Adelaide, fairly busy; Launceston, very dull.

AT last accounts there were no fewer than 1,648 newspapers and periodicals published in Paris. Of this number Freemasonry claimed twenty-four.

THE activity of printing in Norway during 1886 is shown by the following figures: There were published 956 books and pamphlets, 120 magazines, 109 political and commercial papers, 916 law publications, society rules, etc., 132 parts of music, 24 geographical maps, 13 parts of lithographics, wood cuts, etc., forming a total of 2,270, which were issued from 129 letterpress and 9 lithographic offices and some xylographic ateliers.

ITEMS OF INTEREST.

THE point of a drawing pencil should never be wet. It hardens the lead, spoils the pencil and ruins the drawing.

A NEW blotter is arranged in a white metal frame with a wire spring handle, which flattens with pressure, making its use exceedingly convenient.

WHEN verdigris gathers on the face of brass rule, and it will not print sharp, take a little diluted oxalic acid and wash the face. Never scrape it with a knife.

THE first printing house established in Boston was in 1675, by John Foster, a Harvard college graduate. He was noted as a calculator and publisher of almanacs.

THE press and composing room of the Queen's County *Frei Presse* at College Point, Long Island, has been destroyed by fire. The loss will reach \$7,000, on which there is an insurance of \$3,000.

A DANISH engineer has evolved a machine for printing wall-paper in colors, printing all the colors desired at one impression. Hitherto every color has necessitated a separate run through the press.

MRS. PAMELA C. CALHOUN is said to have been the first newspaper woman of the Northwest. She assisted her husband, John Calhoun, in publishing the pioneer Chicago paper, the Chicago *Democrat*, from 1833 to 1838. It was afterward continued by John Wentworth.

MR. A. V. HAIGHT, of the firm of Haight & Dudley, Poughkeepsie, is a candidate for the office of public printer. When Public Printer Benedict took that position he had Mr. Haight, as an expert, take an inventory of everything in the department of public printing. We should like to see a man of Mr. Haight's superior qualifications at the

head of this important department of the government. He has no superior as a practical printer.—*Middletown Press, Congressman-elect M. D. Stivers, editor.*

THE first printing press set up in America was in the autumn of 1638, at Cambridge, and the original printer was Stephen Daye. The earliest work issued from this press was styled "The Freeman's Oath."

ONION juice is said to be an unfailling glue for making paper or paper board adhere to a metal surface. The metal should be cleaned with soda and rubbed dry with a clean rag. Cheap clock dials are prepared in this way, being printed on paper which is pasted on zinc.

A NEW departure is about to be made by the London *Graphic*. This is the publication of a penny illustrated weekly, bearing the same relation to the present sixpenny as the *Penny Illustrated* does to the *Illustrated London News*. The *Penny Graphic* should be a great success.

THE composing stick was first introduced as a printers' tool in 1480. Previous to this the method of composition was by taking the letters direct from the boxes, and placing them side by side in a coffin made of hard wood, with a stout bottom, and kept tight when completed by means of screws at the foot.

TO MAKE labels adhere to tin, take of flour six ounces, of molasses one-half a pint, and of water one pint and a half, and boil as usual for flour paste. Or, dissolve two ounces of resin in one pint of alcohol. After the tin has been coated with the solution, allow nearly all of the alcohol to evaporate before applying the label.

IT is stated that printed matter can be copied on any paper of an absorbent nature by dampening the surface with a weak solution of acetate of iron and pressing in an ordinary copying-press. Old writing may also be copied on unsized paper, if wet with a weak solution of sulphate of iron mixed with a simple solution of sugar syrup.

AN improvement in stereotyping has been patented by Lucius Goss, of New York City. His invention covers a method of casting and cutting plates of single column width, to be used to extend across two or more columns of a newspaper page, to facilitate the arrangement of pictures in the cast matter and by "ready print" newspapers.

A NEW recipe for stopping rat-holes is to moisten old newspapers and knead them into *papier maché*. Dip the pulp thus formed into a strong solution of oxalic acid, then press the mass while wet into the holes. The rodents will be kept away by the acid, which makes their feet sore and prevents their gnawing. The paper will dry and can be papered or painted.

PRINTERS in Germany are greatly irritated with the new government rules for trade societies. One rule is peculiarly objectionable, for it accords to the government the right of veto in respect of any of the decisions of the trade society. The state regulation of workingmen's societies in Germany would appear to be simply a means of maintaining the authority of those who are at the head of affairs.

AT Aix-la-Chapelle there is a newspaper museum, founded by Oscar Von Forckenbeck, which contains files of specimens of more than seventeen thousand different newspapers in the world, and it is daily receiving copies of the remainder from all quarters of the globe. The great curiosity of the collection is No. 46 of the *Texas Democrat*, published at Houston on March 11, 1864, when the exigencies of war time made it necessary to print it on wall-paper.

MR. JOHN GAMBLE, a Philadelphia pressman, has patented a little device for saving rollers on table-distribution cylinder presses. It is called a "patent friction starter," for setting the roller in motion before the plate strikes it, and, it is claimed, will save a hundred per cent in the wear and tear of angle rollers. Arrangements are now being made for manufacturing the "starter," and they will soon be for sale. The device can be placed upon any table-distribution press.

WE notice in *L'Imprimerie* that M. Joseph Eberle, of Vienna, Austria, has discovered a method which is likely to transform the lithographic art, if all is true that its inventor claims, namely, that the principal advantages of the new process may be thus summarized: Drawings on stone will resist the strongest acids; the impression of crayon or pen and ink drawings is equal to the originals; long numbers

do not affect the drawings; bad paper does not interfere with the beauty of impression; corrections can be done with the greatest facility; printing on dry paper is simplified, and it is easy to print machine, crayon and pen drawings, united in the same engravings; powdering is avoided, and in chromo work the colors preserve a sharpness of tone hitherto unattained.—*The American Lithographer and Printer.*

THE New York *Herald*, the morning after election day, printed a perfect *Herald* in London. It was a duplicate of the American edition, in appearance, with twelve thousand words by cable, eight thousand words by wire from Paris, six thousand from Berlin, and the chat and gossip of every European capital. This one issue cost \$20,000, but it sold enormously, and was literally the talk of London. It gave the election news before the English papers had thought about getting it.

GERMAN journalism has just entered on its third century. In 1688 Christian Thomasius, who thought that the exclusive use of Latin was an impediment to learning, and who wanted to see Germany free from the influence of scholastic pedantry, established at Leipsic a monthly periodical in the German language, in which he showed great skill in dealing with the few questions which interested him. Thomasius' monthly lived two years, and was the first journal or periodical printed in the German language.—*Journalist.*

TO TEST printing paper, apply the tongue for sizing, and compare opposite sides together for equality of surface. Look through against strong light for spots, and note whether the paper be "regular." Printing paper ought to "rattle" well, and have good strength and surface. When there is a great "rattle" and if the paper has a glistening brilliancy of texture, then most likely straw is present in the fiber, which, when introduced in excessive quantities, causes the paper to break when folded. The paper should, therefore, be creased and then examined.

WE submit the following scale of prices as nearly the real value to be charged for presswork:

Eighth medium press, per 1,000 impressions	\$0.80
Quarter medium	1.00
Half medium	1.20
Medium cylinder	1.50
Double medium cylinder	2.00
Average value	\$1.39

These figures we consider about 50 per cent advance on the cost of the work for regular jobwork, from which reasonable discounts may be made for large quantities. For short runs the first 100 should be equal to 400 impressions.—*Employing Printer.*

S. A. GRANT, of Springfield, Massachusetts, has completed and patented an envelope machine intended for printers' use, which prints, gums and folds at one operation. The drying-chain is upright, and the machine occupies a floor space of but 24 by 35 inches. It is simple, compact, runs smoothly, and every movement is positive. It requires no alteration in changing from heavy wrapping paper to that of the lightest quality. We have seen the machine in operation, running at about two thousand an hour. It is practical and we believe it will be in demand among printers. It will first be offered to the New England trade. Mr. Grant has invented several envelope machines now used in America as well as in England, Australia and other countries.—*Press and Printing.*

PRINTERS and their allies will be very glad to know how to prevent screws from becoming fixed with rust. It is well known that iron screws are very liable to rust, more especially when they are placed in damp situations. When employed to join parts of machinery they often become so tightly fixed that they can only be drawn with considerable trouble—a fracture sometimes resulting. In order to avoid this inconvenience screws are generally oiled before being put in their places; but this is found to be insufficient. A mixture of oil and graphite will effectually prevent screws from becoming fixed; moreover, protect them for years against rust. The mixture facilitates tightening up; is an excellent lubricant, and greatly reduces the friction of the screw in its socket.—*Exchange.*

WE regret very much to state that a large number of communications, interesting and instructive, have been received too late for insertion in the present number.

THE FISH HAWK.

From the stock of Jno. G. Greenleaf, Electrotyper of fine wood engravings for illustrating books, magazines, juvenile and religious publications, 7 and 9 Warren street, New York.

LEO. MONHEIMER,

The winner in the recent typesetting contest referred to on another page, was born at Lancaster, Schuyler County, Missouri, December 4, 1864. Before he was a year old his parents removed to Bloomfield, Iowa, where he attended school until he was ten years of age. Even

at this early age the lad developed a fondness for the art preservative; and, after school, instead of playing ball and sharing in the other sports popular among boys of that age, he frequented the printing offices and acquired a knowledge of the rudiments of the printer's trade. In January, 1877, he went regularly to work in the office of the Bloomfield *Democrat*, where he remained two years, transferring his services at the expiration of that time to the *Legal Tender Greenback*, in the same town. His speed as a compositor first attracted attention during his stay with the latter paper. On one occasion, while crowded with matter, he commenced at 7 o'clock in the morning, distributed his own cases, and set and corrected 14,300 ems brevier in less than ten hours. This performance helped the paper "out of a hole," and won for young Monheimer an editorial notice. Conscious of his powers, the young man naturally longed for a more extended field, and, in May, 1879, he went to Chicago, where he did his first work on that year's edition of the Chicago directory, afterward setting type on the *Times*. In November of the same year, he joined the typographical union, being one of the youngest members ever admitted. Returning to his home, in Iowa, he remained six months and then started out on his travels anew. He set type on the Milan (Mo.) *Sentinel*; played a brief engagement of two nights on the Burlington *Hawkeye*, and finally returned to Chicago, where he worked on the *Inter Ocean*, and in various book and job offices.

In August, 1882, he made a record of 13,000 ems small pica per day, for eight weeks, on law bookwork, at Madison, Wisconsin, receiving a complimentary notice in the *Organette*. The Milwaukee *Sentinel* was his next engagement, and in April, 1883, he again returned to Chicago and commenced work on the *Daily News*.

While on this paper he lost a bet that he would set 16,000 ems in a night's work, falling short of the required number by 100 ems. For six days' work on the *News* he once turned in a bill for 99,700 ems. With the exception of a few days' work at Cincinnati during 1883, Mr. Monheimer remained in Chicago—most of the time on the *News*—until October, 1887, when he visited St. Louis and worked on the *Globe-Democrat* for two nights, his composition footing up 40,000 ems, but part of this amount was "bonus." Returning to his old love, Chicago, in February, 1888, he went to work on the *Herald*, where he still holds cases. A short time since he set 101,000 ems in six days, or 45½ hours; and the week following, in seven days, placed 108,300 ems to

his credit. There was no "fat" nor "bonuses" in either case. Mr. Monheimer was fifth in the typesetting contest at Chicago in 1886, but the conditions of the tournament were, on several accounts, unfavorable to him. In the match mentioned, Barnes, the winner, averaged 1,867 ems in stretches of one hour and a half. In his match with Thienes, on Sunday, November 25, of six hours, Monheimer averaged 1,782, and was evidently not hurried to his best speed.

HOW TO TELL ONE'S AGE.

Just hand this table to a lady and request her to tell you in which column or columns her age is contained, and add together the figures at the top of the columns in which her age is found, and you have the great secret :

1	2	4	8	16	32
3	3	5	9	17	33
5	6	6	10	18	34
7	7	7	11	19	35
9	10	12	12	20	36
11	11	13	13	21	37
13	14	14	14	22	38
15	15	15	15	23	39
17	18	20	24	24	40
19	19	21	25	25	41
21	22	22	26	26	42
23	23	23	27	27	43
25	26	28	28	28	44
27	27	29	29	29	45
29	30	30	30	30	46
31	31	31	31	31	47
33	34	36	40	48	48

SOME FACTS ON FIBERS.

The scarcity and augmented price of rags has led scientists to investigate the question of substituting other materials in the manufacture of paper.

Much time and money has been spent in experiments, and many patents have been issued, both in this country and abroad, for substances that would presumably take the place of rags. The problem, however, has not been solved satisfactorily, as most of the proposed materials have been found more expensive than rags.

Some of them, however, have proved useful. Esparto grass has been largely imported from Spain, and has been pronounced an admirable substitute. The supply, however, has become scarce, for instead of cutting the grass, the avaricious Spaniards tore it up by the roots, probably with the idea that it would enhance in value.

The ancient Egyptians so successfully exterminated the papyrus plant, with the same end in view, that they were obliged to have recourse to other methods of making paper. An inferior kind of esparto grows in Africa, and is not capable of producing such a good quality of paper as the Spanish species.

Paper can be made from almost any fibrous substance, but it has been generally found that it was better to mix them with rag pulp. Many indigenous Australian plants, belonging to the group of endogenous plants, have been found useful in paper making. The East Indian ramie, which is identical with the ramie grown in the southern states, has also been employed in this manner.

Pineapple fibers from which the transparent manila handkerchiefs are made, and the celebrated pigna cloth, produces excellent paper, as has been demonstrated.

Bamboo is extensively used in China and Japan for paper making; the plant must be crushed or split when freshly cut.

Bagasse, which is the refuse matter after the juice has been extracted from sugar-cane, has been found useful for the purpose. Bagasse yields forty per cent of fiber and bamboo sixty per cent. This substance is put to no other use on sugar plantations than to serve as fuel.

In England experiments have been made with cotton-seed, but they were not eminently successful.

A Mr. Plunkett, of Dublin, manufactured paper from four different plants, the mallon, red clover, hopvine and yellow water iris.

In Florence the roots of the asphodel have been used for making cardboard and writing paper.

In England paper from potatoes was made, and also from the common cat's-tail. The latter has been found useful in the manufacture of paper hangings.

Stephen Allen, of Massachusetts, made a paper he called tibillia leather, which was made from leather scraps and other animal fibers. This could be beautifully embossed.

During the late war paper was made from corn husks and cobs.

In Illinois, where vast quantities of sorghum are grown, the fibers have been used for this purpose.

J. McElfatrick, of Illinois, found that the bolls of the sycamore tree produced a short staple of a buff color, which was useful in paper making.

A discovery was made in England, that the leaves of the bracken or common fern could be made to yield a pulp for paper making; also flags, rushes and even the vegetable remnants of manure.

In Germany the red and white pine has been used to advantage. From the resinous nature of the substance no size is required.

At a recent exhibition in St. Louis, Missouri, paper was shown made from the common cane, which grows on the banks of the Mississippi.

In Scotland the hollyhock was made into paper.

Ivory shavings mixed with rags makes a desirable quality of paper. Paper from seaweed was made at one time in England.

A stonemason by the name of Albert Grantless made paper from stone.

Harry Crosby, of London, made paper from a mixture of refuse tan and hop stalks.

Paper has been made from the banana, but as there was too much waste, it was not found profitable.

R. A. Brown, of London, discovered a method of making a very strong kind of paper from the gutta-percha tree.

In the Algerian department of the London Exposition, paper was shown made from the Alfa fiber which grows on both sides of the Mediterranean.

In Demerara paper was successfully made from the plantain.

A process for making paper out of leaves was patented in Paris. The leaves were cut and pressed into cakes and reduced to a pulp by being steeped in lime water.

Some of the French paper makers use wood cut into thin shavings. These are soaked in water for eight days, then dried and reduced to powder, which is mixed with rags. None but white woods are suitable for the purpose.

A French inventor patented a method for utilizing the ligaments of asparagus which was unsuccessful.

In Sweden paper has been made from beet roots, also of white Russia matting.

In Ireland an inferior kind is made of peat.

In Mexico paper is so profitably made from the fibers of the maguey plant that congress passed an act to prohibit the use of other substances.

Cyprian Berard used decayed wood mixed with old waste paper.

In France leather cuttings, combined with refuse paper, has been tried.

In London experiments have been made to produce paper from old sacking and nettles.

In 1817, E. B. Ball, of England, made an extremely white and durable paper from floss silk, hemp and Russia linen combined.

Louis Poisson, of Paris, France, made paper from licorice root and scraps of pasteboard reduced to a pulp by maceration.

The Chevalier Landolini, of Sicily, experimented with the leaves of a plant growing near Syracuse, which is similar in appearance to the Egyptian papyrus.

A Frenchman brought a quantity of frog spittle to a paper mill in the Catskills, from which he made an inferior quality of paper.

Matthias Koop made paper from straw, wood and other vegetable matter, without the addition of any other paper stuff.

In 1801 some genius found a means of extracting ink from paper so that it could be used over again.—*Exchange*.

HOW TO ORDER SORTS.

The following suggestions will be useful in ordering sorts :

In ordering sorts to match the type you already have, state the name and number of the face, as well as the size of the body; or, if you cannot do this, send a capital "H" and a lower case "m" (as little used as possible) of the fonts the sorts are to work with. Also state the number of pounds or ounces you want of each particular sort.

The twelve square boxes directly in front of the compositor, containing the letters a, c, d, i, m, etc., will hold about 2 pounds each.

The boxes half the size of the "a" box will hold 15 ounces each, containing the letters f, b, g, l, p, etc.

The small square boxes containing the letters k, j, q, etc., will hold 6 ounces each.

The "e" box 3 pounds, and the cap case 5 ounces to the box.—*Exchange*.

RECENT PATENTS.

The following list of patents relating to the printing interests is specially reported by Franklin H. Hough, solicitor of American and foreign patents, 925 F street, N. W., Washington, D. C., who will furnish copies of patents for 25 cents each :

ISSUE OF NOVEMBER 6, 1888.

392,566—Printing, Graining plates for surface. J. G. Harris, assignor to Harris & Jones, Providence, R. I.

392,540—Printing machine, Rotary. J. L. Cox, assignor to Duplex Printing Press Company, Battle Creek, Mich.

ISSUE OF NOVEMBER 13, 1888.

392,882—Printers' drying-rack. H. T. Koerner, Buffalo, N. Y.

ISSUE OF NOVEMBER 20, 1888.

393,267—Composing stick. J. R. Risdon, assignor of one-half to Franklin H. Hough Washington, D. C.

393,177—Printing presses, Inking apparatus for. W. Scott, Plainfield, N. J.

ISSUE OF NOVEMBER 27, 1888.

393,471—Printing machines, Set-off mechanism for. B. Huber and W. K. Hodgman assignors to Huber Printing Press Co., Taunton, Mass.

390,480—Printing presses, Feed-gauge for. E. F. Megill, Brooklyn, N. Y.

AS AN example of "stick-to-it-iveness" worthy of emulation, I would mention Mr. Thomas D. Price, of the Carrollton (Ill.) *Gazette*. Mr. Price entered the *Gazette* office as an apprentice in June, 1846, and assisted upon the first issue of that paper, which made its appearance on the 26th of that month. The office was owned and the paper established by Mr. Price's father, Mr. George B. Price, who is still living, being now six years past the allotted three-score and ten. Thomas D. became part owner of the establishment with his father in 1856, and has been at the head of the concern since 1870. Mr. Price, Sr., retired from business some fifteen years ago. In addition to being continuously in the *Gazette* for the past forty-two years, either as an employé or member of the firm, Mr. Price, Jr., was one of the members of the firm which started and established successfully the Jacksonville (Ill.) *Courier*. The material with which the *Courier* was started was made up of that contained in two small offices in Jacksonville, which the firm purchased, and a goodly quantity taken from the *Gazette* office at Carrollton. The *Gazette* occupies a building built for it by Mr. Price, this being the second building erected by him for this purpose. He is still the owner of both of these buildings. The present *Gazette* owners are Price & McNabb, Mr. Price being the mechanical and business manager. The office is one of the best of its class in the state, has a large and profitable business, and bids fair of still having many years of prosperity and usefulness yet before it. S. G. S.

THE
COLT'S ARMORY
PRINTING*PRESS

COMPLETE ILLUSTRATED DESCRIPTIVE CATALOGUE ON APPLICATION.

ADDRESS **JOHN THOMSON,**

NO. 143 NASSAU STREET, NEW YORK CITY.

THIS SHEET WAS PRINTED ON A HALF MEDIUM COLT'S ARMORY PRESS BY THE LOCKWOOD PRESS, 125 AND 128 DUANE STREET, NEW YORK.

REPORT OF PRINTING PRESSMEN'S UNIONS.—SECOND QUARTER.

Table with columns: LOCATION OF UNION, No. of Members in good standing, No. of Members in Arrears, Total number of Members, No. of Members employed, No. of Members unemployed, No. of Pressmen Non-Union, Scale of Wages, Members received since last report, Condition of Trade, SECRETARY'S ADDRESS.

CHEROKEE.

INDIAN COMPOSITORS — CHEROKEE ALPHABET — LAZY JOE.

In our last issue reference was made to the printing of the first elaborate book in the Cherokee language. By request, and as a matter of interest to our fellow-craftsmen, we herewith append the alphabet, from which the laws of the Cherokee nation were printed :

Characters of the Cherokee Language. A decorative box containing two rows of Cherokee characters and their corresponding Latin letters, along with punctuation marks.

In the execution of the work, the greatest difficulty experienced was keeping the Indian compositors in working condition. Among the most obstreperous was a tall and athletic son of the forest called "Lazy Joe," who, notwithstanding our remonstrances, persisted in visiting a neighboring saloon every few hours, and there loading up with fire-water, as the other Indians called it.

sailing until a "snag" was reached, and then it puzzled proofreader interpreter and all hands in the office to determine its meaning. We came to a full stop. At first it was concluded that it was not Cherokee, but the language of one of the lost tribes which broke out in "Lazy Joe" under the inspiration of the fire-water.

BUSINESS OUTLOOK.

Auburn, N. Y.—State of trade, fair; prospects, good; composition on morning papers, 25 cents; evening, 16 cents; bookwork, 18 cents; job printers, per week, \$7 to \$12.

Bismarck, Dak.—State of trade, lively; prospects, never better; composition on morning papers, 38 cents; evening, 35 cents; bookwork, 35 to 40 cents; job printers, per week, \$18 to \$25.

Cincinnati, Ohio.—State of trade, fair; prospects, fair; composition on morning papers, 45 cents; evening, 41 cents; bookwork, 40 cents; job printers, per week, \$18. The Telegram, afternoon paper, has started a 2-cent Sunday morning edition, eight pages.

Columbia, S. C.—State of trade, fair; prospects, not good; composition on morning papers, 40 cents; evening, 40 cents; bookwork, \$15 per week; job printers, per week, \$18 to \$20.

Council Bluffs, Iowa.—State of trade, very fair; prospects, good; composition on morning papers, 35 cents; evening, 30 cents; bookwork, 30 cents, or \$15 per week; job printers, per week, \$15.

Denver, Colo.—State of trade, good; prospects, good; composition on morning papers, 50 cents; evening, 45 cents; bookwork, 50 cents; job printers, per week, \$20.

Dubuque, Iowa.—State of trade, poor; prospects, fair; composition on morning papers, 30 cents; evening, 26 1/2 cents; bookwork, 30 cents; job printers, per week, \$14.

Halifax, N. S.—State of trade, fair; prospects, fair; composition on morning papers, 30 cents; evening, 25 cents; bookwork, per week, \$9; job printers, per week, \$9. A patent inside, the *Weekly Globe*, has made its appearance. There is some talk of a new paper, in the interests of the prohibition party, but nothing definite is known yet.

Hartford, Conn.—State of trade, fair; prospects, increasing; composition on morning papers, 40 cents; evening, 35 cents; bookwork, 35 cents; job printers, per week, \$15 to \$18. Travelers still continue to come here, and they have to go away again, there being already more subs than can be accommodated. We have three morning and two evening papers, besides two Sunday papers.

Kalamazoo, Mich.—State of trade, rushing in all departments; prospects, good; composition on morning papers, 27 cents; evening, 25 cents; bookwork, 25 cents; job printers, per week, \$10 to \$12. Subbing is good.

Kansas City, Mo.—State of trade, poor; prospects, fair; composition on morning papers, 40 cents; evening, 35 cents; bookwork, 37½ cents; job printers, per week, \$17. The union gave a ball on the 27th ult., which was a success financially and socially. About \$100 were realized. C. A. Parks has bought a half interest in the *Traveler*, an obscure 1-cent evening paper, and a stock company has been formed with a capital of \$50,000.

Lansing, Mich.—Trade good and prospects favorable. Book and job printers receive \$13 per week; compositors on evening papers, 25 cents per 1,000 ems. On Friday evening, December 7, the compositors on the *Tribune* took Mr. Bert. H. Gustin, city editor, by surprise, and presented him with an address and gold-headed cane, previous to severing his connection with that paper. "Gus" leaves the *Tribune*, with which he has been connected for a number of years, to enter the newspaper business for himself, and intends starting a new daily paper here about January 1.

London, Ont.—State of trade, fair; prospects, bad; composition on morning papers, 28 cents; evening, 28 cents; bookwork, 28 cents; job printers, per week, \$9 to \$11. The city is full of idle men, the decease of the *Times* being the cause. *Times* employes are out \$600 in wages. The *Speaker* continues to run, but its demise is daily expected. The men are all union, and have difficulty in getting their money.

Los Angeles, Cal.—State of trade, dull; prospects, gloomy; composition on morning papers, 50 cents; evening, 45 cents; bookwork, 45 cents; job printers, per week, \$20. Our union now numbers one hundred and fifty members, divided as follows: number of situations, seventy; number of subs, eighty; so any one can see at a glance that this is a good place to keep away from this winter.

Milwaukee, Wis.—State of trade, very dull; prospects, dubious; composition on morning papers, 40 cents; evening, 35 cents; bookwork, 35 cents; job printers, per week, \$14 to \$18. The "old, old story" of a new paper, has brought in too many "prints," but the democratic paper does not appear, nor is it likely to.

Newark, N. J.—State of trade, fair; composition on morning papers, 40 cents; evening, 36 cents; bookwork, 36 cents; week hands, \$17. The outlook is encouraging. First-class jobbers are scarce. The *Sunday Call* is putting in a new *Cast* press, capable of printing 20,000 copies per hour.

New Haven, Conn.—State of trade, very quiet; prospects, not encouraging; composition on morning papers, 40 cents; evening, 35 cents; bookwork 35 and 40 cents; job printers, per week, \$15. For this season of the year, work is decidedly quiet, but reports do not seem to deter tourists from coming this way. It is to be hoped that the advent of the new year will make a beneficial change.

Ottawa, Ont.—State of trade, pretty dull; prospects, will be fairer in a month; composition on morning papers, 36½ cents; evening, 33½ cents; bookwork, 33½ cents; job printers, per week, \$11. Session opens February 1. A number of printers are idle here now. No serious difficulty. The *Journal* is non-union. Government Printing Bureau not yet finished.

Portland, Ore.—State of trade, fair; prospects, good; composition on morning papers, 50 cents; evening, 45 cents; bookwork, 45 cents; job printers, per week, \$21. The proprietors of the *Northwest* have signed a contract with the union to hire none but union men, and to observe the apprentice clause.

Rome, N. Y.—State of trade, very good; prospects, bright; composition on evening papers, 25 cents; bookwork, 25 cents; job printers, per week, \$8 to \$12. The employing printers here have a new competitor in job printing, the Deaf Mute Institute, supported by the various companies of the state, having gone into the business. No convict pauper labor for us.

San Francisco, Cal.—State of trade, very dull; prospects, none at all; composition on morning papers, 50 cents; evening, 45 cents; bookwork, 40 cents; job printers, per week, \$18. A great many cards are still being deposited, and the arrivals have filled to overflowing all branches of the trade. A hard winter is on us.

Springfield, Mo.—State of trade, good; prospects, for the better; composition on morning papers, 28 cents; evening, 25 cents; bookwork, 28 cents; job printers, per week, \$12. The union could be made stronger by more concerted action. There are too many petty spite and prejudices that are aired, to the detriment of better organized work.

St. John, N. B.—State of trade, good; prospects, good; composition on morning papers, 30 cents; evening, 25 cents; bookwork, 28 cents; job printers, per week, \$10. The trade is working smoothly in St. John at present, and all hands are employed.

St. Louis, Mo.—State of trade, improving; prospects, better; composition on morning papers, 43 cents; evening, 38 cents; bookwork, 45 cents; job printers, per week, \$18. Although trade has considerably improved during the past month, there is still no lack of printers; in fact, the demand can be more than met by the supply.

Utica, N. Y.—State of trade, medium; prospects, fair; composition on morning papers, 35 cents; evening, 35 cents; bookwork, 31½ cents; job printers, per week \$12.50. A decline in the advertising space on two of our dailies has caused a large increase in the amount of plates used, and it is not gratifying to compositors.

Wheeling, W. Va.—State of trade, dull; prospects, not encouraging; composition on morning papers, 35 cents; evening, 30 cents; bookwork, 35 cents; job printers, per week, \$15. The *Evening News Letter* suspended publication immediately after the election, throwing eight or ten compositors out of work.

Wilkes Barre, Pa.—State of trade, fair; prospects, fair; composition on morning papers, 33½ cents; evening, 30 cents; job printers, per week, \$12. G. W. Laycock, foreman of the *Record*, has purchased the *Nanticoke Sun*. "Henny" Thomas has just returned from New York.

BUSINESS NOTICES.

FOR building special machinery for printers and binders, and any general machinist work, we commend to the trade Mr. James Rowe, of 77 and 79 Jackson street, Chicago. Mr. Rowe was formerly with R. Hoe & Company, is thoroughly posted in all the requirements of business, and employs the most competent workmen. Repairing is given special attention, and shafting, etc., is put up in the most skillful manner. The Inland Printer Company has just had some work in the line of shafting done by Mr. Rowe, and considers it first-class in every respect.

THE CALUMET PAPER COMPANY.

Few out-of-town customers of the Calumet Paper Company know of the magnificent structure occupied by this company, and to give them an idea of it we present the accompanying illustration. The building is 85 by 150 feet, located at 262 to 268 Fifth avenue, Chicago. This

portion of the city was at one time considered a little remote from the center of printing and publishing, which was formerly Monroe street, but since so many printers have removed south to Dearborn street the locality could not be better. The store and salesrooms rank among the largest and handsomest of the paper houses in Chicago, and all departments, including the shipping, ruling and cutting, are arranged with a view to filling, in the most expeditious manner, every order that comes into the house. A complete catalogue of the goods handled by the company has just been issued.

As they are the headquarters for the Whiting Paper Company's celebrated loft dried writing paper, such as Standard Ledger and Linen

Ledger, "W. P. Co." water-marked superfine, "Calumet" water-marked superfine and the Clingstone and Hadley wove fine papers, the Calumet Paper Company can supply these goods in any quantity. In book papers the firm has a large line, and can fill orders—large or small—on short notice. Among the brands we name "Extra," "Laurel," "XX," "Sterling," "KK" and "Monico." The "Laurel" blotting paper, sold by this house, is unrivaled, and has the reputation of being one of the finest blottings made. In cardboards and manila papers their stock is complete, and no better assortment of envelopes can be found in the city. This firm supplies roll papers to newspapers in all parts of the country, and invites correspondence from publishers using this kind of paper. The department of wedding and fancy stationery, programmes, cards, etc., contains an unusually fine assortment. The firm has just issued, at great expense, a specimen book of these goods, which is acknowledged by all who have seen it to be one of the handsomest gotten out by any company. New-year cards, in great variety, are now ready, and a special specimen book of these cards is also out. The officers of the Calumet Paper Company are: E. M. Adams, president; John T. Ustick, secretary; George A. Mason, treasurer.

BURLINGTON ROUTE.

DAILY EXCURSIONS TO THE PACIFIC COAST, COLORADO,
WYOMING AND UTAH.

Railroad ticket agents of the Eastern, Middle and Western States will sell, on any date, via the Burlington Route from Chicago, Peoria or St. Louis, round-trip tickets at low rates to San Francisco, Los Angeles, San Diego, Portland, Tacoma, Seattle, Vancouver, or Victoria; also to Denver, Cheyenne, Colorado Springs, or Pueblo. For a special folder giving full particulars of these excursions, call on your local ticket agent, or address P. S. EUSTIS, General Passenger and Ticket Agent, C. B. & Q. R. R., Chicago, Illinois.

THE S. K. WHITE PAGING MACHINE.

Mr. S. K. White, the inventor and maker of this machine, for many years has been the most prominent designer and builder of special machinery in Chicago. His own superior skill has been used in his business instead of the skill of hired mechanics. Some four years ago his attention was called to the requirement of a paging machine, and since that time he has made greater advancement in this kind of machinery than has been made by all others combined during the past twenty-five years. The conceded best machine heretofore on the market, and owned by an eastern house, was invented by this same Mr. White, and this, his latest improvement, has at last satisfied his highest ideals and conceptions as to what a perfect paging machine should be, and he now rests contented with his work, defying competition.

The points of advantage of this machine are solidity of base and poise or balance of the various parts. This feature will cause the machine to outlive a half-dozen of the old style make. It cannot become rickety, disjointed or loose at any point. The movements (especially of the head) are in grooves of finest tool steel, which prevents *rattle*, and gives absolute *register* and *alignment*, and makes it almost *noiseless*. The heads and other essential parts are of hardened steel, and smooth as glass. The head can be turned to front view by simply drawing a pin with the right hand and turning the head with the left, and when returning the head in the position, to continue printing, the pin, automatically, springs to its place, stopping the head at the required number to proceed with the numbering without skipping or omitting a number. The ordinary operator can easily manage every feature of the machine without calling an expert or foreman.

By the simple adjustment of a "dog" on a horizontal slide, the machine is made to repeat the same number at will, once, twice, three or more times, namely, 2, 2; 3, 3, etc.; 2, 2, 2; 3, 3, 3, etc.; 2, 2, 2, 2; 3, 3, 3, 3, etc. The machine can also as readily be made to print alternately, namely, 2, 4, 6, 8, etc., or 1, 3, 5, 7, 9, etc. The superiority of this machine in the points of repeating and alternating, are particularly in the simplicity with which the changes are made. The repeaters

are a part of the machine—not attachments to be put on or taken off as in other machines.

The inking apparatus, or fountain, is probably the most important feature, so far as economy of time to the operator is concerned. Each color of ink has its separate fountain, which is air-tight, and as abso-

lutely free from dust as if in an unopened can. To change color of ink you lift off one fountain and put on the one of the desired color. The flow of ink appears at a single spot on the revolving plate, and the flow is regulated by a fine screw of the fountain head. Each fountain holds about a dozen thimblefuls of ink—enough to last a number of days of constant use. No ink is wasted by drying or getting dusty on a distributing plate or stone, or on a brayer. The ink in the fountain, though unused for years, is always fresh and ready for instant use. The flow can be lessened or augmented instantly.

The throwing of ink by the rapid movement of the roller is obviated by the decreased space which the roller is required to pass in its movement. The roller simply passes over the figures and back to the edge of the inking-plate; from that instant the plate moves over the roller instead of the roller moving over the plate, consequently the excessive rapid working of the roller, as heretofore, has been decreased or divided between the roller and the plate. This renders possible more rapid numbering, while the action has been actually decreased. As a feature in mechanics, and as economy in wear and tear of machinery, this point is important and useful. The machine is made for either steam or foot-power. The steam attachment is so arranged as to always automatically leave the head up, or at the highest point when stopped.

The C. L. Hawes' Company, of 178 Monroe street, Chicago, are agents for the White machine, have one on exhibition in their sales-rooms, and will give all information in regard to it. Notice their advertisement on page 212.

THE INLAND PAPER CUTTER.

We present herewith an illustration of a machine having many valuable features, and which may be considered a new departure in the line of paper-cutting machinery. It excels as a book and paper cutter, in convenience, accuracy, power, and durability, and as a time and labor saver stands unequalled. Having no chains or other noisy elements, being operated by screw movements, it is noiseless and extraordinarily powerful.

The clamp, propelled by a screw, independent of the knife, is adjustable to any degree of pressure, moves quickly, stops automatically, is controlled with the foot, and it, as well as the knife, may be arrested instantly, and the motion reversed from any point. The full rise of the knife is six inches, but by a simple adjustment it may be made to rise

various experts, and the company is prepared to furnish unqualified guarantees that they are all that is claimed for them. By permission they refer to the Strobridge Lithographing Company, the Frey Printing Company, the A. H. Pugh Printing Company, Carpenter & Ranshaw, and H. C. Sherick, all of Cincinnati, Ohio, who have the machines in use, and can speak understandingly of their advantages.

The following extracts from recommendations received in reference to the Inland paper cutter explain themselves :

Its qualities combine great strength, accuracy in cutting, rapidity of action, easy and perfect adjustment of the knife and clamp, with simplicity of construction and noiselessness in operation, and we do hereby recommend the same to receive a SILVER MEDAL.

GEO. B. FOX,
JOHN F. HENNEGAN,
J. GRUBER,

} *Examining Committee, Cincinnati Centennial Exposition.*

only so far as the work requires and to return from that point, a manifest advantage in saving time on large jobs. By withdrawing a bolt from the knife by means of a hand wheel on the top of the knife bar, it may be swung outward to a horizontal position (as shown in the cut), locked, and the edge whetted without detaching it from the machine. This, however, necessitates having a knife short enough to swing between the uprights, and makes a difference of seven inches; thus a machine that with a long knife will cut forty-five inches, will with a knife short enough to swing outward as above stated, cut only thirty-eight inches. Each machine is furnished with two knives, a long and a short one, or two long ones, as the purchaser may prefer. Although the clamp and the gauge are both solid (unslotted), it will cut to within three-eighths of an inch of the rear edge of the paper.

These machines have been most thoroughly and severely tested by

We have a 45-inch Inland Paper Cutter in use, and also two other cutters. We can say for the Inland, that it is superior in all respects to any other paper cutter we have ever seen, and we like it still better the longer we use it. It is more convenient than the others, and its work is more satisfactory.

THE A. H. PUGH PRINTING COMPANY,
A. H. PUGH, *President and Treasurer.*

We have a 34-inch Inland Paper Cutter in use in our bindery, and we are very proud of it. It has many points of superiority over every other cutter that we have ever seen. We would not be without it, and can recommend it most highly.

THE NATIONAL BLANK BOOK MFG. Co.,
Pittsburgh, Pa.

The machines are on exhibition at the establishments of the C. L. Hawes Company, either in Dayton, Chicago, or Cincinnati, where inspection is invited. All information in regard to this cutter will be furnished on request.

GEO. H. BENEDICT & CO.

The engraving establishment of George H. Benedict & Co., 175-177 Clark street, Chicago, is a striking example of what may be accomplished by close attention to and continual reaching out for business. This firm is one of the very few in the United States making photo-zinc-etching a specialty; reproducing artists' drawings, engravings, etc., for newspaper, magazine or book illustrations. The zinc method is not only the cheapest, but also the quickest and best for newspaper and magazine work; the plates possess great durability, high relief and fine printing qualities. During the past year Messrs. Benedict & Co., have purchased the plant and succeeded to the business of the Chicago Photo-Zinc Engraving Co., located at 159 Fifth avenue, also the Graphic Illustrating Co., of 114 Dearborn street.

It is believed that by this combination of machinery and other facilities, the firm is now able to produce a finer grade of work, and in larger quantities than any other firm in America outside of New York City. The fact that they are doing the work of all the Chicago daily papers, is the best evidence of the superiority of their productions.

In the relief line (wax process) engraving they are practically alone in the western field, and have a good trade with New York publishers. This process is conceded to be the best and only practical method for producing maps and diagrams, architectural and mechanical outline cuts for letterpress printing. The distinguishing characteristic is the lack of necessity for elaborate copy. The work being made as well from a pencil sketch, blue print or photograph, as from finished drawings. Mr. Benedict, who gives his entire attention to the details of the business, has had fifteen years' experience in the various branches of the printing, publishing and engraving business, and his customers frequently find his experience very useful to them in deciding points which require a knowledge of business as well as art. He is highly spoken of by the trade generally, and has an unbroken record for honesty, square dealing and success.

GANE BROTHERS & CO.

Among the dealers in bookbinders' supplies and machinery in Chicago, none stand higher or have a more enviable reputation for furnishing first-class goods than the firm named above, whose office and salesrooms are at 182 Monroe street. Every kind of machinery manufactured for binders' use can be supplied by this company, and all materials needed in conducting a bindery are kept in stock ready to ship by them upon the shortest notice. Orders for complete bindery outfits of any size are given special attention. Those desiring any goods in their line should write to them for prices and information. The patent press point sold by this company, mentioned on another page, is the best thing for the purpose made. All printers pointing work for folding machines will appreciate this useful little article. See the advertisement on page 212.

J. W. OSTRANDER.

At Nos. 77 and 79 Jackson street, Chicago, will be found the establishment of J. W. Ostrander, dealer in electrotype and stereotype machinery, paper cutters, typefounders' and bookbinders' machinery, and presses of every kind. Mr. Ostrander is ready at all times to give estimates on any machinery furnished by him, and desires that those wishing to purchase correspond with him before placing orders elsewhere. Having been many years in the business, he is posted in regard to the wants of his customers, and can please the most exacting. He makes a specialty of furnishing cylinder presses of the Scott make, either for printers or lithographers, and puts them up complete, ready to run, in the best manner, and on short notice. Send to him for circulars and price lists.

A LITTLE book which is having an immense sale and giving entire satisfaction, is the "Job Printer's Companion and Guide." (See adv. on page 207.) The color printing processes and recipes given are not only entirely successful, but they are also inexpensive. Everything required is cheap, and easily procured everywhere. Every job printer should have a copy; it will help him out whenever he gets "stuck" and does not know just what to do. Send 50 cents to D. L. Stump, lock box 417, Carthage, Missouri, and get a copy.

DONNELL'S PATENT FOOT-POWER WIRE STITCHER.

Many inventors have "tried very hard" to place a hand or foot power wire stitching machine on the market, but such has always proved a failure, both in mechanism and results. The trouble has

been that the machines would clog up in spite of all careful adjustment, and also would not use different sizes of wire for saddle and flat work. The Donnell machines, built under his patents, May 11, 1886, and July 31, 1888, to all who have seen and operated them, appear to be a grand success. They are simple in construction, and any boy or girl can operate them from the start, either with flat or round wire. The accompanying cut shows their simplicity, but at the same time they are *most durable* machines, being simple, practical and well built, not only being handsomely finished, but all wearing parts being made from the best steel, all being interchangeable, as they are built by gigs, and any or all parts can be furnished in case of accident to the machine, and sent by mail. All are on a lever movement—no cams—but a direct movement from the treadle. There are many printers and binders throughout the United States who have no steam-power, and who have long felt the need of a machine of this kind, which is all they could wish, and is sold at a price that will save

them immensely over any thread stitching machine. The Donnell wire stitching machines have proved themselves a thorough success, as they are already used in all the establishments in the United States that do book or pamphlet stitching, or which have any use for stitching machines. They are what they are represented to be, and supply a long-felt want in the trade. For full particulars, price lists, etc., write to the E. P. Donnell Manufacturing Company, 327-329 Dearborn street, Chicago.

PRINTING FROM CELLULOID.

We have received from the National Printers Materials Co., of New York, a tastily displayed specimen sheet, printed from celluloid, and specially gotten up by them to show, that even in the way of fine printing, their light-weight plates and cuts are not behind electrotypes. In our August number, we gave a short description of the way in which celluloid is made, and the variety of purposes for which it is used, rendering it a subject of interest to all. Celluloid, however, seems peculiarly suited for a printing surface.

While hard it is not brittle, and gives off the ink more readily than metal. In color work also, it is especially valuable; no change occurs, such as is apt to arise from the chemical action of metal on ink; being non-porous also, the colors do not get mixed, an inevitable result, sometimes, from the absorption of ink by wood-type and tint blocks.

The industry of making printing plates and type from celluloid was started some five or six years ago, under the name of The Celluloid Stereotype Co., who were succeeded by the National Printers Materials Co.; until a recent change, however, in the management, their work seems not to have been uniform in quality, or to have given entire satisfaction. This, it appears, was greatly due to carelessness in manufacture and to an attempt to make zylonite serve the purpose of celluloid. Calling in at the factory a little while since, we were much interested to see the perfection to which, after much hard work and expense,

the process has been carried. In these days of broadcast advertising with fac simile plates, the postage of metal forms a large item in the expense. A saving of two-thirds of this is a notable reduction in the cost, and when is added a less price for an equally serviceable article, and one which, dropped into the mail without wrappers, arrives at its destination "unbattered," publishers, agents and advertisers must surely have found a real boon for their purposes. The rapidity with which they can be made forms another feature of convenience. Some 1,000 to 3,000 cuts a day, according to the size, are turned out with a comparatively small staff.

An inspection of the type department illustrated the economy in manufacture. Three or more metal matrices, on which are laid sheets of celluloid, with blocks of wood for backing, are placed in a steam-heated hydraulic press. In about ten or fifteen minutes they are removed, the celluloid molded into a corresponding number of full fonts of type, mounted on wood, or, as they style it, enameled wood-type. These are then planed down "type high," sawn into separate letters and with very little trimming are ready for the market.

Testimonials from tag-houses and printers seem to show that in addition to the advantage of a "non-porous," smooth surface, it stands the wear better than plain wood-type.

Many substitutes for metal and wood surfaces have from time to time been attempted, but celluloid seems to be the article, combining, as it does, lightness and good printing surface.

A THOROUGHLY qualified printer, well known to the readers of THE INLAND PRINTER, is open to accept a position as manager of a printing establishment, or in some other capacity where his practical knowledge of all that pertains to printing may be put to good and profitable use. Address "MANAGER," care of editor of THE INLAND PRINTER.

EVERY PRINTER should have a copy of "DIAGRAMS OF IMPOSITION" and "THE PRINTER'S READY RECKONER." Price, 50 cents each. To be obtained of H. G. Bishop, 96 Clinton avenue, Albany, N. Y., or through Farmer, Little & Co., New York and Chicago. These are the handiest and most useful works ever published for printers. Indorsed by everyone who has seen them. Agents wanted in every town.

FOR SALE—A good printing office in St. Paul, Minnesota, in good running order. As the parties are going out of the printing business entirely, good will thrown in on good terms. Will inventory about \$7,000 or \$8,000. Apply to MARTIN DREIS CO., St. Paul, Minn.

FOR SALE AT A BARGAIN—Complete job office, containing two job presses, paper cutter, cabinet, stands, imposing stone, over 100 job and poster fonts, and six fonts of body letter, galleys, sticks, etc. Parties desiring to obtain a bargain should address A. C. CAMERON, editor of INLAND PRINTER.

FOR SALE AT A BARGAIN—The best paying newspaper and job plant in the finest portion of Kansas. Only democratic paper in a rich and rapidly growing county seat of 5,000 population. Price, \$12,000; half down, easy terms on balance. Write if you mean business. Address "E. A. W.," care of INLAND PRINTER.

FOR SALE—Bellevue Gazette. Established 1866. Paying subscription of forty quires, with good advertising and job patronage. Town at the junction of three railroads, and in the center of a good agricultural district; 3,500 inhabitants. Will be sold cheap for cash. Address STONER & CALLAGHAN, Publishers, Bellevue, Ohio.

FOR SALE—By all typefounders in Chicago, **TYPOGRAPHICAL HANDBOOK**, treating of Calculations in Typography. Contains new and valuable tables, rules and illustrations for computing every conceivable calculation connected with the art of printing. Price, 50c. Sent, postpaid, by J. H. GRIFFES, Box 420, Chicago. Liberal terms to agents.

FOR SALE—\$1,500 cash will buy the only paper in rapidly growing Southern town. The advertising patronage alone will pay for plant in less than a year. Office nearly new and cost over \$1,200. Good reasons for selling; investigate. Possession given any time between now and April 1, 1889. Address "BARGAIN," care of INLAND PRINTER.

JOB AND NEWS BUSINESS FOR SALE.—We have for sale the finest small job plant in eastern Kansas. Cylinder, two jobbers, lots of type, etc., invoicing about \$4,000 (nearly new). Has best paying job trade in county. Also newspaper, weekly, circulation 600, growing; fine advertising patronage. This is a bargain. Write for terms. Proprietors going into other business. OTTAWA PRINTING CO., Ottawa, Kansas.

PERMANENT employment by young man of steady habits; experienced foreman; first-class proofreader; competent to take charge of newspaper and job office. FRED. R. PUTNAM, 241 Putnam avenue, Brooklyn, N.Y.

RARE CHANCE—Write to Great Western Typefoundry, Chicago, Ill., if you want to buy a well established, finely equipped weekly newspaper, in one of the best county seats in Iowa. This is a rare opportunity for the right man.

SITUATION WANTED—By a first-class job printer. Change of climate, West or South most desirable. Best of reference from former employers. Address W. H. SMITH, 1188 North Sixth street, Columbus, Ohio.

WANTED—An Allen printing press; size of chase 7½ by 14 preferred. SPRINGFIELD ENVELOPE CO., Springfield, Mass.

WANTED.—The Inland Printer Co. will pay 25 cents apiece for numbers 2, 4, 5, 10 and 12 of Volume I, if in good condition, to anyone sending them to this office, or will credit the amount on subscription, if preferred.

WANTED.

Milwaukee, Wis.

THE BATHRICK ELECTRIC DISSIPATOR

Overcomes all difficulty from Electricity while printing in any weather and with any paper.

FULLY WARRANTED.

J. H. BUNNELL & CO., Sole Agts.

106-108 LIBERTY STREET, NEW YORK.

INKOLEUM Warranted to be the Best INK REDUCER and Quickest DRYER in the World.

Directions for Use:

Remove all skin from ink in can, then pour in about a spoonful of Inkoleum, and mix thoroughly to consistency desired. Thin for cold room; thicken for warm room or sticky rollers. Any press can be started up without washing the rollers, upon which it can be worked clear, free and easy on any kind of paper the coldest morning in winter, regardless of fire, or the hottest day in summer, by simply putting a few drops of Inkoleum on the rollers with the fingers. Printing or Lithographic Inks of any color or stiffness can be reduced quickly without in the least impairing the color. For fine tint work Inkoleum works miracles, as it makes the ink cover charmingly, and dries quickly. No spreading of jobs necessary, and urgent work of any kind can be delivered immediately without off-setting. On rollers it never dries, but preserves their suction, life and elasticity. Inkoleum is a perfect "cure-all," and saves double its cost every day in the year, and makes pressmen do better work. A trial will convince the most skeptical. Testimonials from all parts of the world to prove these assertions. Price, half-pound bottles, 50 cents. For sale by all typefounders, wholesale paper and printers' supply houses; or, it will be sent anywhere in the United States, express paid, for 75 cents. Put up only by ELECTRINE MANUF'G CO., St. Paul, Minn., U. S. A.

..... PROMPTNESS ASSURED

THE FASTEST JOB PRESS IN
THE MARKET.

The

GOOD WORK WITH 3,000 TO 6,000
IMPRESSIONS PER HOUR.

ECKERSON AUTOMATIC PRINTING MACHINE.

THIS is a fast Job Press, printing from a roll and cutting its own paper at a speed of 3,000 to 6,000 impressions per hour.

It feeds itself, prints, trims and slits the paper to any width and cuts it to any length required by the job. It re-winds the paper and backs its own form if desired.

A horizontal bed rises to a stationary platen, and sinks only enough to allow the rollers to pass, which (five in number) go over the form but once to each impression.

The short distance through which the bed moves and the single passage of the rollers permits high speed with a deliberate impression and slow rolling.

There is distribution of ink on both sides of the press, and the fountain can be regulated or shut off at will.

THE platen-holder is movable, and the make-ready, which is easy, can be saved any length of time by the use of extra holders.

The press feeds, prints and cuts any thickness or quality of paper, from tissue to card manilla, and is adapted to all kinds of work which can be done from the roll.

It does not only fast but good work, and at fast speed will probably do better work than any other job press on the market. Its use saves the expense of both feeding and paper cutting.

It is comparatively noiseless, takes little power to run it and is easily managed.

A counter goes with each machine.

It is made in three sizes, 8 x 13, 11 x 15 and 13 x 19 inside chase. The floor space occupied is 4 x 4½, 5 x 6 and 5 x 7 feet. Weight, 1,800, 2,500 and 3,100 pounds.

The opinions which the press has won have been universally and strongly in its favor.

Mr. A. Dougherty, the well-known New York playing card manufacturer, for example, says of it: "It is the best thing of the kind I have seen." Other prominent printers have said in substance the same thing. Here is the statement of the purchaser of the first press sold, Mr. Henry Stowell, of Troy, N. Y.: "After using the Eckerson Press some six months on nearly all kinds of paper, and using ink from 10 cents to \$1.50 per pound, I can say that it gives perfect satisfaction. The make-ready is easy and the construction strong and durable."

MIDDLETOWN, N. Y.

The Chicago Paging and Numbering Machine.

FOOT AND STEAM POWER.

IN presenting to the trade the **Chicago Paging and Numbering Machine**, I desire to call your attention to its simplicity. The figure-heads are *all steel*, and devoid of all spiral springs to break, or pins to wear and cause friction. Each disk is complete in itself, and the head is easily and quickly taken apart for cleaning. Each machine is supplied with two repeaters, one for duplicating 1-1, 2-2, 3-3, and one for triplicating 2-2-2, 3-3-3, 4-4-4. Others for repeating the same figure any number of times up to 12, will be furnished at a slight cost. These repeaters are easily adjusted, and can be put in and removed in an instant. To number alternately 1, 3, 5, 7, or 2, 4, 6, 8, it is only necessary to change the position of the pawl.

With the steam-power attachment, it is the only machine in which the impression regulates itself to any thickness of work. The operation is positive and is under the control of the operator, who can start or stop at pleasure. The inking attachment is perfect. The smut-belt works automatically with the treadle, always presenting a clean surface for each impression. When not wanted it is easily thrown out of action.

The table is raised and lowered by a rack and pinion, and allows for paging the largest blank-book. These machines are built in my own shops, under my own supervision, of the best material and by skilled workmen. The frame is strong and durable, and the whole machine compact and light working.

PRICES:

FOOT-POWER PAGING, one figure-head of four roll, all steel heads.....	\$150 00
FOOT-POWER NUMBERING, one figure-head of six rolls, all steel heads.....	170 00

J. J. LITTLE & CO., - - - - -	New York.
BUREAU ENGRAVING AND PRINTING, - - - - -	Washington.
GOVERNMENT PRINTING OFFICE, - - - - -	Washington.

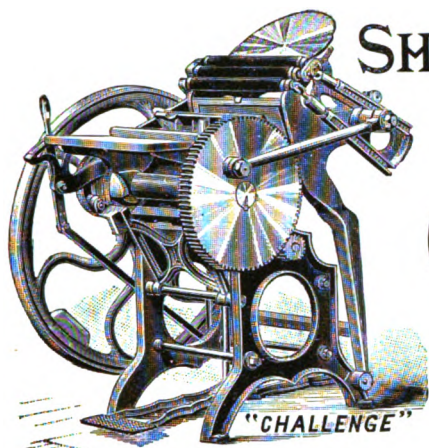

We are exporting our Inks in large quantities to England and Australia, where they are preferred to foreign inks, for the reason that our Black Inks are brilliant and enduring; they do not change their color or fade from age, and superior results are obtained from our Colored Inks.

We can exactly duplicate the quality, tack and drying properties of any ink, no matter how long a time has elapsed since it was used, as we carefully preserve our formulas, which are the result of many years of experience.

Our Inks are ground in the latest and most approved mills, and we do not hesitate to say that, *by comparison*, they will be found the *finest* and freest from grit of any inks in the market.

PATENT IMPROVED TWO-REVOLUTION PRESS

WITH patented mechanism for controlling the vertical movement of the impression cylinder. It is extremely powerful, accurately fitted, free from friction and evenly balanced. A patented automatic device is also provided which prevents lost motion, and governs the degree of impression. Its patent reversing mechanism consisting of a cross-belt and spring shifter, is operated by the foot, which places the Press under the immediate control of the feeder. These advantages, with its Sheet Delivery, Hinged Distributer, Caps, Positive Slide Motion, Noiseless Grippers, etc., complete a printing machine that in every respect is equal to the most exacting demands of the times.

THE INLAND PRINTER

A TECHNICAL JOURNAL, DEVOTED TO THE ART OF PRINTING.

VOL. VI.—No. 4.

CHICAGO, JANUARY, 1889.

TERMS: { \$2.00 per year in advance.
Single copies, 20 cents.

Written for THE INLAND PRINTER.

AUTOMATIC ENGRAVING: TECHNICAL AND HISTORICAL.

BY JAMES SHIRLEY HODSON, F.R.S.L.

Author of "An Historical and Practical Guide to Art Illustration," etc.

(Continued from page 476, Vol. V.)

REFERRING to the classification of the subject given in the first paper with the above heading, we now come to the consideration of the second division of the

stipple. A resting place is thus provided for the ink, from which it can readily be transferred to paper in the process of printing. All the older forms of manual engraving provide this essential condition—line engraving, etching, and wood engraving employing the line method, while mezzotint and aquatint make use of a grain or stipple. When the picture to be reproduced is a drawing in wash or monochrome, the conditions above pointed out are not provided ready to hand, but must be produced

HALF-TINT — REPRODUCED IN STIPPLE—(SCENE ON THE WISSAHICKON).

subject, treating of photographic relief processes, including photo-typo-zincography in line and in half tint.

It is desirable here to point out the conditions which are essential in all methods of engraving, whether manual or automatic, in order to provide the capability of indefinite multiplication by means of printing. In the case of manual engraving, the subject of the picture, both in outline and in shading, is produced by means of lines or

in the resultant plate either by chemical or mechanical means.

In printing by the Collotype process, or by Woodbury-type or Stannotype, this important condition may be entirely dispensed with, because the gelatine film forming the printing surface is capable of reproducing every gradation of tone that may be required, just as in an ordinary silver print. Indeed, anything and everything that can

THE SCOTT WEB PERFECTING AND FOLDING MACHINE.

Adapted for Almanac and ordinary Book Work. Speed, 12,000 per hour.

THE SCOTT WEB PERFECTING MACHINE.

Especially designed for Illustrated Periodicals and Fine Book Work. Guaranteed to produce work equal in quality to four roller two-revolution or stop-cylinder presses. Speed, 6,000 per hour.

OFFICE OF J. C. AYER CO.,
LOWELL, MASS., May 18, 1888.

Messrs. WALTER SCOTT & CO., PLAINFIELD, N. J.:

Gentlemen,—The Perfecting Press and Folder combined, furnished us by you for printing and folding Ayer's almanac, is giving excellent satisfaction. We are running it at a speed of 10,000 to 11,000 books per hour. The inking apparatus is perfect, the distribution being so thorough that we do not find it necessary to "wash up" oftener than once in ten hours. The arrangements to prevent "off-set" are so effective that we change the tympan sheet only once a day. In this regard the machine is performing better than we expected, as we counted on the necessity of frequent changes. The printing is in perfect register, and the folding more uniform and accurate than anything we have had done on hand-folding machines. You are at liberty to refer inquirers to us for further particulars.

Yours truly, J. C. AYER CO.

PRESSROOMS OF THE J. C. AYER CO.,
LOWELL, MASS., June 7, 1888.

Messrs. WALTER SCOTT & CO., PLAINFIELD, N. J.:

Dear Sirs,—In answer to your inquiry about the Printing and Folding Machine sent to this office by you nine months ago, will say that it is a wonderful machine, doing better work and more of it than I ever knew of being done by a Perfecting Press on this kind of work. The printing is well done to register, without any show of "off-set." The folder works exceedingly well, folding each sheet more accurately than heretofore accomplished on hand-fed folding machines where sheets were fed to points. We have no waste sheets, except where the web is broken or pasted together. The press is running at a speed of 10,800 per hour, to accomplish which it only requires a pressman and one helper on the press, and a boy to take the folded books away. The quality of the work produced will speak for itself.

Your truly, J. C. JOHNSON,
Sup't Printing Department.

WALTER SCOTT & Co.

CHICAGO, JANUARY, 1889.

NOTICE.

MR. SAMUEL G. SLOANE, a gentleman well and favorably known to the trade, has taken charge of the advertising department of THE INLAND PRINTER, and will shortly call on a number of its advertisers for a continuance of their patronage. We bespeak for him a favorable reception wherever his business engagements may call him.

A REMEDY WANTED.

THE letter of our Chicago correspondent, under the caption of "A Remedy Wanted," is certainly worthy of the consideration of our typefounders. The grievance complained of is one to which we have previously called their attention, namely, that the unequalized sorting of small fonts of display type renders them practically useless where more than two or three letters outside of the "A" and "E" are required to complete a line. While, as a rule, these are the two characters of the alphabet most frequently called into requisition, there is no reason why their numbers should be so greatly out of proportion to that of the "l's," "o's," "r's," "s's," "t's," etc. How aggravating it is to know that "just the line you want" is short an "l" or "o," while there are three or four idle "a's" or "e's" in the case; and this occurs so frequently that a "duplicate" font presents itself as the only remedy. The necessity for a change or an enlargement arises from the fact that fonts of the character referred to are generally appropriate for display lines of business, firm names, streets, etc., which frequently require more than the allotted number of characters. Of course, the plan suggested would entail extra expense, but this is of secondary importance when the benefits which would be derived therefrom are taken into consideration.

We are well aware it is impossible to please everybody, or to make an allotment that would invariably prove acceptable, but the addition of even *two* letters to a font of the characters referred to would enhance its average availability, and consequently its value, a hundred-fold. For example, there are fifty cities and towns in Illinois, having printing establishments, ending in "ville," which render a six "A" font practically useless, in using it for the name of the locality and state, even with an abbreviation, while the effort to set the single word "Belleville," would prove abortive.

Of course, there are exceptions to the rule. There are localities, which no doubt present themselves to our readers, where even this plan would prove of little benefit. In all such cases, however, common sense furnishes the remedy, in securing an extra number of the special letters required, at the time the order for the font is given, and a failure to do so leaves no one but the negligent party to blame for the result; because the disproportionate expense of a subsequent order, generally attended with protests and grumbling, would thereby be avoided.

It may be claimed that these objections only apply to the *smaller* offices. Exactly so, and this is just where the shoe pinches; but it should also be remembered that the "smaller" offices are, fortunately or unfortunately, in the majority both in the cities and country towns, consequently their proprietors cannot afford the outlay which their more favored brethren can indulge in. Thus, even from a selfish standpoint, we believe the plan proposed would prove a paying venture for all parties interested, and that hundreds of printers who now decline to invest in new faces of type, for the reasons stated, would become willing purchasers, were it put into practical operation. We insist it is at least worth a trial.

THE CHACE COPYRIGHT BILL.

ON another page will be found the text of the statement recently presented by the printing and kindred trade representatives in Edinburgh, to the Marquis of Salisbury, in relation to the Chace copyright bill now before the American Congress, and proposing an addition to the British copyright act of a provision that all books published in the British empire must be printed from type set within its limits; or, that her majesty may, by order of council, direct copyright to be given to authors whose books have been printed in a foreign country, provided that such foreign country gives copyright to books printed from type set up there. As there are two sides to the question, we suppose tit for tat is fair play.

WHO IS CORRECT?

A VALUED correspondent, whose name and location it is unnecessary to publish, sends us the following communication, under date of December 24, 1888:

Allow me to compliment you on the very handsome December number just received; there seems to be more than the usual quantity of good things in it. I expect to take a considerable amount of satisfaction out of the perusal of the whole number.

I presume that you will not question my criticism of a matter when you come to look at it; for instance, on page 254, you present some specimens of job printing as they have been done, and on page 255 you present specimens of the work in the way it should be. Allow me to call your attention to the fact, that while I am not a practical printer myself, I would say that the compositor who set up page 255 failed to grasp one of the most important features of successful job composition. Take, for instance, the card of A. C. Bressler, as set up by your compositor; on that little card there are no fewer than six different fonts of type. The Rayner card is hardly any better, and it is a criticism that is applicable to every card on the sheet, that it comes nearer to being a sample sheet of the different fonts of type that the office could show, rather than harmonious and artistic work.

Pardon me for making these criticisms, but as you hold yourself as critic on all printed work done by some amateurs on page 254, the critic must of necessity receive in good spirit whatever criticisms may be placed on his work which is done to show "How they should be." It is just such freedom of comment that does us all good, and I trust that you will accept what I have said in good spirit.

If you care to have us do so I will take pleasure in mailing you some specimens of our work from time to time. I say *our work* simply because I am the proprietor of the establishment, and not because I have anything to do with the composition or presswork; I am an ignoramus as far as a printing office is concerned, I could not lay a font of type to save my "neck from the gallows," but I can tell good work (at least I think I can) when I see it, and I am very free to praise or condemn our people's productions from time to time when they submit their specimens of day's work in the evening. * *

While we cheerfully admit that "freedom of comment does us all good," and assure our correspondent that such advice is received in "good spirit," we cannot help remarking that the examples cited, and his criticism thereon are most infelicitous. But, for the purpose of affording our readers an opportunity of judging for themselves the merits of his strictures, we here reproduce the specimens referred to. We should have been pleased, however, to have had him tell us what, in his opinion, the most important features of successful job composition are. Failing to do so, we propose to present ours, and then apply them to the samples given. The most important features to be observed in the composition of jobwork

are: appropriate selection of material and display; harmony of design, effectiveness, correct length of lines and correct spacing between lines. This may smack somewhat of tautology, but the end justifies the means. Now apply these rules to the composition of the following makeshift for a card (the example cited), and what do we find?

- * A. C. BRESSLER, * -
 * JOB PRINTER, *
 BILL HEADS, LETTER HEADS, CARDS,
 STATEMENTS, CIRCULARS, TAGS,
 ENVELOPES, LABELS, ETC.
 - CHROMO ADVERTISING CARDS -
 * A SPECIALTY *
 NO. 8 W. MARKET STREET.
 YORK, PA.

An indefensible violation of every one of them; a hodge-podge, an eyesore; a verification of the adage that a bad shearer never gets a good hook, for, even with the material used, with proper judgment the composition could have been improved *fifty per cent.* Who but a botch would have made the two leading lines the same length, or inserted unsightly dashes or flourishes where they are entirely out of place; or produced such a disproportioned, ill-shaped, shockingly spaced, badly punctuated and arranged business card, as a *printer's advertisement*? Give such a person the resources of a typefoundry and the results would be unchanged.

On the other hand, we have a neat, unpretentious, symmetrical, properly spaced job—purposely followed like the copy in arrangement—in which the trifling attempt at embellishment could be executed by an intelligent six-months' apprentice. The force of the objection

that the above specimen contains *six different fonts of type* (seven is correct), and that "it comes nearer to being a sample sheet of the type that the office could show, rather than harmonious and artistic work" may be inferred from the fact that the hieroglyphic sample contains exactly the *same number*. No, no; with all due respect to our correspondent, he cannot make a whistle out of a pig's tail; he cannot successfully defend what is indefensible, nor yet can he successfully compare the work of a blacksmith with the work of an artist at the expense of the latter.

ORIGINALITY IN DESIGNS.

THE typographical art is certainly one which is advancing. Almost every day is productive of novelties, either in new designs by some individual gifted with originality, or by a new and attractive combination of old wrinkles. To the young, progressive printer, who desires to perfect himself in his chosen profession, and is determined to reach the goal of his ambition, every new design he sees should be carefully studied, and its specially attractive features, or the points which give it a new and novel appearance should be noted, and, if possible, a copy of the job procured; otherwise, a pencil sketch of that portion of the design should be made. Every printer with a love for his art ought to be able to sketch sufficiently well to do this. He could then paste these copies and pencil sketches in a scrap-book, kept for that purpose, where they would be available for future reference.

The studying of and making new and graceful typographic designs too frequently consumes more time than the employer can afford, and more than can be legitimately bestowed on the average work at the present state of keen competition in the printing business; but a collection of unique or meritorious designs, kept in the manner specified, will save the average compositor much time and trouble. By this means he is enabled to set up almost at a glance some ribbon, panel or other ornamental device which will suit his purpose for the proposed job, and can thus produce, by a combination and a little alteration, a piece of work the novelty and beauty of which will be limited only by his ideas of harmony, skill in execution, and attention to detail. New ideas are not originated every day, and when one is noted it should be carefully preserved.

The wide-awake typographic artist can get many new and valuable ideas which may be used advantageously in his business by observing the free style in which much of the lithographic, steel and copper plate work is executed; also the fancy-painted window curtains of private residences will furnish him with many available, original and handsome designs. When one is selected as appropriate to the work in hand, proper attention should be paid in detail to its execution. If rule-work, the miters should be perfect, so as to come together exactly; because the effect is invariably spoiled when unsightly white spaces appear, as is too often the case. If a circle line, it should be true; not with a depressed center or broken back, and partly straight ends, which so often spoil an otherwise creditable job. Better far a less pretentious design, creditably finished, than one whose execution shows inability which would otherwise be unobserved.

There is another feature to this question to which it would do well to refer, and which should never be lost sight of, namely, the exercise of a sound judgment in selecting appropriate emblems for the work to be executed. We have known compositors whose judgment was as execrable as their mechanical execution was commendable. In other words, while from a purely mechanical standpoint their productions were comparatively faultless, they

invariably displayed a lack of technique, judgment or appreciation of the "eternal fitness of things," which robbed them of their merits as well as of their effect. In this, as in most affairs in life, skill, directed by intelligence, will prove the victor.

A TRUE NOBLEMAN.

WHILE we are no man-worshiper, we cheerfully recognize the fact that there are philanthropists who, by the possession of traits of character which dignify humanity, tower so much above their fellows as to make them worthy of being recognized as "nature's noblemen." Among such none occupy a more conspicuous position than George W. Childs, of the Philadelphia *Ledger*—a man who, by his many acts of kind consideration and unostentatious benevolence, not only to his employés, but to the craft at large, has made his name a household word among the typographic fraternity, and who is honored and beloved wherever a self-respecting, intelligent printer is found. This is not fulsome eulogy; it is a simple statement of facts. On Christmas, 1888, he crowned his many acts of generosity by distributing the princely sum of \$40,000 among the various employés of his establishment. The Washington correspondent of the *Chicago Tribune* thus refers to an episode connected therewith:

One of these employés, an assistant editor, found in his pay envelope, besides his usual salary, a crisp, new \$500 note. The man was amazed. It was a great temptation to put that \$500 bill in his pocket, for he is a poor man with a large family on his hands. But he thought the cashier had made a mistake, and with a face pale and resolute he fought off the tempter and presented himself at the cashier's window, the pretty new bill in his hand.

"A mistake has been made; this bill does not belong to me," he said.

"You had better go see Mr. Childs," responded the cashier.

So into the private office of Mr. Childs walked the assistant editor.

"This is all right," said Mr. Childs, "merely a little Christmas gift, you know. After you have been here longer you will understand it better."

"But, Mr. Childs," gasped the editor, "I've worked for you only six weeks, and this is a greater sum of money than I ever owned at one time in all my life. I can't take it. My short service is not sufficient to make it right that I should take it."

"You are a member of our family," said Mr. Childs, "and the time you have been here does not make any difference. Just you take that bill and get out on Chestnut street and buy some Christmas presents with it as quick as you know how."

Wealth in the hands of such a man is truly a blessing, and certainly no one but a misanthrope can grudge him its enjoyment. His name will be honored by future generations, and his life pointed to as an example worthy of emulation, while the "marble shafts" to the memories of those who amassed fortunes only for selfish aims and enjoyment, and whose lives were never marked by a generous impulse, will simply serve as reminders that they cover the remains of men as bloodless as the monuments which bear their names.

WE direct the attention of lithographers to the letter in the present issue, from New York, referring to a new invention as a substitute for lithographic stones.

GOVERNMENT VACATIONS.

THE December issue of THE INLAND PRINTER contains the following paragraphs from the pen of Mr. Samuel L. Leffingwell, of Indianapolis :

I note in the September number of THE INLAND PRINTER a few brief comments on "vacation" in the government printing office at Washington. These comments appear to have been written by the editor, and to express a degree of pleasure over the fact that the printers have been granted a like vacation to other employés in the government service — thirty days' leave of absence — with pay.

Now, upon calm, considerate and reasonable reflection, I should like to inquire upon what grounds, or upon what just and equitable consideration, the workmen in the government printing office, or the employés in any other department of the government service, are granted thirty days' leave of absence, with pay, or any other privilege more than would be granted the employés of a private firm or corporation?

We are not aware that the article referred to by our correspondent could be construed into an indorsement of the *system* he so vigorously condemns, and it is not our intention at this time to argue for or against its continuance. But so long as the practice prevails, we shall insist that no discrimination is made in favor of other departments at the expense of the employés of the government printing office.

TAKE ANOTHER STEP FORWARD.

BY J. A. VAN DUZER.

NO greater advance was ever made in the composing room of a printing office than that accomplished by the introduction of labor-saving rule. Crude, indeed, were the first rules made as labor-saving appliances, for the typefounders of that time had but little idea of interchangeable bodies, and the rules were made to no standard, being neither 4, 5 nor 6 to pica; and if they had been, the pica varied so much in body that no two makers were alike in the size of that body; consequently, the compositor still had to submit to the inconvenience of justifying his tabular work with leads and cardboard and paper. A few years ago, however, single labor-saving rule was begun to be made 6 to pica, and this has been found to be a great improvement.

With the acknowledgment of the great advance made in convenience, and the saving of time and labor and material, there remains still a great imperfection in the adaptation of labor-saving rule to all the requirements of tabular work. This work has continually grown in complication and elaborateness, and has multiplied in quantity many hundred times during the last twenty years, until the ordinary labor-saving rules fail in perfecting the work to the best advantage. Let us now take another step forward.

First, every printing office having a large quantity of tabular work needs two thicknesses of rule, 4 and 6 to pica, for the perfect justification of columns to cross-rules and headings.

Second, all labor-saving rule should be cut to one-fourth ems pica, say as follows: one-fourth, one-half, three-fourths, commencing with 1¼, 1½, 1¾, 2, 2¼, continuously to 9¾; and then the half-pica sizes should be continued to 10½; that is, 10, 10½, 11, 11½, etc.

With these two thicknesses of rule, cut in lengths as indicated, it would never be necessary to cut a piece of rule for tabular work. For instance, if you have a heading embracing two columns, each two picas wide, the rule separating the columns, if 4 to pica, would match the two columns and dividing rule to a heading and rule 4¼ long; again, if your heading includes three columns, two dividing rules, each 4 to pica, would match a head rule of 6½ picas; and if you have four columns, the columns and three rules 6 to pica would make the heading and rule 8½ ems pica.

The following blanks show the possibilities to be attained by the combinations here suggested. The first blank is composed entirely of 4 to pica rule. The figures show the lengths of rules, and widths of columns.

10					9¾			
5		4¾			4¾		4¾	
2¼	2¼	1¾	1¼	1¼	2¼	2	2¼	2
		2¾			10¾			7¾
2¼	2¼	2	2	2	2	2	2	2
	7¼—6 to Pica.						7¾—4 to Pica.	7¾—4 to Pica.

The above illustration might be extended indefinitely without making the idea more plain. It will be seen that, with the foregoing combination, the cutting of rules for cross-headings would be a thing of the past, and the saving of time and labor and material would, in a short time, pay for the extra cost of rules and cutting as indicated, and the work turned out would be as perfect as human skill could make it.

Written for THE INLAND PRINTER.

NEATNESS IN THE OFFICE.

BY PETER S. BOGART.

IN the December number of THE INLAND PRINTER there appears an article under the above title, which states facts truly, as many of us know. I will try and describe one of the first or "order is nature's first law" offices, with which I am acquainted. The frames are all "Eagle" cabinets, placed near the windows, in positions where the light can be utilized to the best advantage; six in number, beside which there are five three-quarter cabinets, two standing racks, four imposing stones of various sizes, under each of which are racks to place "live" matter, two ordinary frame stands, and a galley rack, which it may be well to describe. It is placed against the wall, as usual, but is incased on two sides, the front being covered by a spring

window curtain, cut to the size. The type is all kept in series, gothic, clarendon, celtic, antiques, italics, titles, etc., from nonpareil to the largest size of the series, all properly labeled with name, size and from what foundry, on the outside of the case, and woe be to him mixing quads or spaces. There is plenty of material here, all kept in its proper place.

Let us see how things go during working hours. From twenty to thirty minutes before the time to begin, the foreman arrives, ventilates the room thoroughly, opening all the windows, from ten to fifteen minutes, according to the weather. By this time the men begin to arrive, and each places his name and time of arrival in a book at the door, kept for that purpose. He then proceeds to the wardrobe closet, and after placing his apparel within, carefully draws the curtain; everyone following him has to do the same, no matter how close they come together. He then receives his personal time-book for the day, and, perchance (not often, I am glad to say), finds a printed slip after this style: "Empty galleys must not be left upon the stand"; "spaces and pied lines must be put in their proper cases at once"; "job cases must be returned to their respective cabinets each evening or when through using"; "composing sticks must not be left upon the cases over night," and so on, for numerous faults of the previous day. Then work begins in earnest, and not an unusual sound is heard until noon. Then some go out to lunch, and others remain. Those remaining are not allowed to drop a crumb on the floor and let it remain there. After they are through, they take their crumbs, lunch papers, etc., and place them in a receptacle in the pressroom especially for them. This keeps away rats and mice. The afternoon is a repetition of the morning. Two young men are kept busy distributing, clearing the space around the cutters and mitering machine, and keeping leads and rules in order. No leads or small pieces of rule are long remaining on the bench containing these tools, for if the compositor does not put them in the drawers underneath, put there for scraps, the distributor soon has them out of sight. At 5:25 all work is stopped, and sticks and copy are placed in a large drawer in one of the cabinets, cases are all put back into their respective places, and one of the distributors goes around and sees that all are closed tight, time-books are returned to the foreman's desk, and another day's work is finished.

What's that I hear someone say? Too much red tape! Not at all. True, men who have slovenly habits do not remain long, as it goes against their grain, but the conscientious workman soon sees the advantage gained by strict discipline and a strict and just foreman, one who is not showing favoritism to one and hatred to another, true to both employer and employé, and commands his respect in every instance. It is needless to state the quality of work turned out of such an office.

But what about the other "first-class" office spoken of in your article? We have all seen more or less of such institutions, and comment on them is unnecessary, but anyone who has tried to reclaim one could tell how utterly impossible seems the task, and what little encouragement he receives from even the proprietor.

MECHANICAL DEVICES IN TYPE.

NO. II. — BY CARL SCHRAUBSTADTER, JR.

THE introduction of logotypes to produce varied effects is old, the earlier faces often having more combinations than regular matrices. To a certain extent, of course, they added beauty, but the cumbersome case required and the memory necessary to keep the different sorts in mind, soon eliminated them. Some still remain, such as the diphthongs "æ" and "œ," but as these were not intended to add freedom or beauty they cannot properly be spoken of here. It may be noted that owing to the infrequency of their use they are omitted from most of the modern faces. The "f" combinations, made necessary by kerning of the "f" (and, until the "f" was dropped, the "ff" combinations) were the last remnants of this old idea, although, curiously, the "ct" still remains in a large number of modern old styles, though it is never seen in any other faces. Why this particular logotype survived has never, I believe, been satisfactorily explained. Another remnant of these logotypes is our "&," a corruption of the Latin *et*. In modern times we are again using logotypes to add to the beauty and elegance of faces, but by no means with the reckless profusion of the earlier typefounders. The most usual of these logotypes are the "and" and "the." These are to be found in many of the faces of the Central, Chicago, Cleveland, Great Western and Johnson foundries. Other faces where this idea is further carried out purely for artistic effect are, Santa Claus (Fig. 5), Scribner (Fig. 6) and Grimaldi, of

the Central Typefoundry, the Critic, of the Chicago Typefoundry, and the Chaucer, of the Johnson Typefoundry. A number of scripts, notably those of the Bruce and Johnson foundries, introduce enough logotypes to fairly imitate handwriting.

Very similar to this idea is that of having two characters for the same letter. This has cropped out in a number of places. One of the first examples was the Obelisk, of the Johnson Typefoundry. It has duplicates of some of the lower-case letters, one with a descending tail; but the Central Typefoundry's Scribner, Harper (Fig. 7), Morning Glory and Santa Claus (Fig. 8) have, perhaps, carried

it further than any of the others; the idea being, of course, in the rough faces, to give as close a counterfeit as possible of modern reproductive work, and in the finished faces, to give variety.

A number of faces have been produced with white letters on black ground, such as the Albino series, of the Boston Typefoundry, and the Mezzotint, of the New

England Typefoundry ; but, generally speaking, they may be said to be impracticable, as the joints between the characters will show. Some of the European faces have been cut on tint grounds, having lines parallel with the sides of the type. The Bruce Typefoundry shows such a face, but, although the idea is a good one, the execution is faulty and the letters are not well drawn, so that it has never come into general use. The Johnson Typefoundry has overcome this defect in their Relievo face by having several indistinct lines, parallel with the joint, running all over the body of the ground. This hides the prominence of the joint. In the Relievo No. 2, another difficulty had to be contended with, inasmuch as the letters in this face appear to be raised from the surface of the black ground like punches set in line. As each letter is continued in the lower part of the next letter beyond it, it is obvious that this shading must be continued in the spaces and in the adjoining letters which do not completely fill out the body, and this has been very skillfully done ; nevertheless, the character of the face is such that it has never become very popular. In this face is suggested an idea more fully shown in the Arboret series, a few letters of which are shown in Fig. 9. Instead of placing the letter in the middle, as is usually done, thus allowing a joint to show on each side, the type is rubbed close on the left-hand side, leaving the letter incomplete, allowing the next type to complete it, and making only a short and unnoticeable joint at the top and bottom.

FIG. 9.

Written for THE INLAND PRINTER.

TECHNICAL EDUCATION.

BY A. DE FOLLETT.

HOW can the increase of unskilled labor be stayed? A solution to this query must be found soon, or serious consequences will be the result.

Two years ago, Charles F. Peck, Commissioner of the State Bureau of Labor Statistics of the State of New York, made this assertion : "I am inclined to think that the average American boy looks upon a trade as a disgrace, and that he imagines that he can reach the top round of the ladder quicker by other means. The present school system is responsible for this state of affairs. The schools turn out clerks, bookkeepers and professional men at a great rate. In many of the trades men receive better pay than clerks and bookkeepers. The state should, of course, educate its children, but it should adopt some system of educating boys in mechanics. I favor manual training. The great complaint of workingmen is immigration ; and if our boys learn trades there will not be that inducement for emigration that there now is in other countries. It will take years to bring this about, but it can be done."

Beyond the shadow of a doubt this is the true solution of the apprenticeship question. Thousands will take to education who thoroughly despise the very idea of an apprenticeship, which they look upon simply as a slavish service. Our trade is an art, but this truth is not learned until late in the life of most of our printers. Were it learned earlier, much of the labor that seemed menial

would have been wrought under a brighter and more cheering aspect. Technical education is becoming more and more recognized, and it is well to consider what can best be done as a foundation to the establishment of these schools in connection with the art of printing and its allied trades.

The following may serve as an illustration for the formation of a system to bring about this method of education : Divide the art under four heads, namely, plain composition, display and job composition, presswork and proofreading. Not to interfere with the daily vocations of those who wish to avail themselves of the privileges of these schools, hold them in the evening, in printing offices already established, and let classes be formed in numbers according as the facilities and capacity of the offices where held will admit. No doubt printers of ability could be found who would volunteer to act as instructors. The instruction should be both theoretical and practical. For example, a lad just beginning his service would be taught the theory of typesetting, shown the manner of holding his stick and allowed to set type under the eye of an instructor whose criticism would lead him to become expert in this branch. If he already had a smattering of the knowledge of plain composition, the theoretical instruction should be given just the same, and the teacher could correct any faults he had acquired and place him where he belonged in practice.

In job or display composition, theory would be still more important, and practice would be simplified thereby. The student would need to know more of the relative sizes of types, their symmetry in combination, etc., know the necessity of which lines should be displayed and the possibilities and limitations. This information would be from a mathematical and scientific basis upon the one hand, and extend into the realm of the fine arts upon the other, for the best work demands the cultivation and possession of taste in the student if he is to become the artist.

So, too, imposition and presswork should be taught by theory and practice ; the latter especially, for no matter how well designed and composed a work may be, the whole effect may be lost by imperfect presswork. In cut work the best results are achieved by the practical hand and the trained eye, the cultured mind which is able to discern and carry into effect the motive of the artist as far as the limitations of the engraver and press will permit. How the man of soul can thus be rescued from the dead level of mediocrity by art !

Proofreading possesses its own technicalities in addition to what the student has already learned in the other departments, and would demand a thorough education in orthography, grammar, etc., and, beyond this, the greater the range of knowledge, enabling the proofreader to the more intelligently guarantee the correctness of what passed under his eye, the better. Many other things not mentioned should be taught, as the mechanical principles involved in the construction of presses, cutters and tools used ; the care of type, leads, rule, machinery, etc., so as to save time and the waste of material ; quantities and sizes of paper, and its adaptability to different classes of work. The range and volume of knowledge useful to the

printer which the instructors would soon come to embody in their lectures would be a matter of surprise. Each of the allied trades, when analyzed, would disclose a profitable division into theory and practice and a subdivision into departments.

Another important department would be one dealing with the business aspect. A system of bookkeeping adapted to each branch could be taught with profit that the student might become competent to follow each job on paper from its reception to completion. Another very essential department would be a knowledge of how to properly estimate upon jobs. The duties of foreman or superintendent would be a profitable study, and one that scarcely receives proper attention at this time.

Lectures upon theory and practice could be delivered to large numbers, while the actual practice should be given in groups. Eventually, there should be a museum and library for the collection and exhibition of everything relating to the allied trades, whether of value historically or technically. Here could be shown the improvements in tools and machinery, and here would be gathered samples of work done by expert craftsmen in the different departments, illustrating not only the skill of the individual but the possibilities of the processes used.

To carry out such a plan requires the coöperation of many men, of employers and employes, of those who will give the use and service of their offices, their time and the contribution of specimens. Is it worth all this? We think so. We hold to the old truth of doing unto others as we would be done by. Every man should not only take an interest in his own well-being but in the welfare of his trade in general. Such influences would prove beneficial alike to employed and employer. If deemed advisable, certificates could be issued to students who follow a certain prescribable course of instruction, and then should become guarantees of a skillful and desirable workman.

Whether it is possible to carry out such a plan as is here outlined at this time, is not for us to say. We should like to see a trial made, but should nothing come of it now, we feel convinced that this will prove the solution to the query introduced at the commencement of this article.

NOTES ON WOOD ENGRAVING.

NO. XLVII.—BY S. W. FALLIS.

HE (Bewick) used almost always to work with his hat on, and would only remove it for a moment when called on by a nobleman or gentleman. He also had a great habit of whistling while at his work, and was seldom seen without a quid of tobacco in his mouth.

His favorite cane was one which had belonged to his brother John, generally carrying it in his walks, and on entering his workshop had a certain place where he always put it. He was very partial to a drink of water just before leaving his workshop, in the afternoons.

He was a man of athletic build, being nearly six feet tall, and proportionately stout. He possessed great courage, and in his younger days was not slow to repay an insult with personal chastisement.

Though hard-featured and strongly marked with small-pox, his facial expression was manly and open, and his dark eyes bespoke intelligence. There is a good bust of him in the Literary and Philosophical Library, at Newcastle-upon-Tyne. The best portrait of him is the one painted by Ramsey, of which the engraving shown in a previous portion of these "notes," is a copy.

In 1828, Bewick visited London, but he was undoubtedly in declining health, and had lost much of his former vigor of both body and mind, and failed to become interested in almost anything he saw or heard, and he longed to return to the banks of the Tyne.

On his return to Newcastle, he appeared to enjoy his usual health and spirits for a short time, but after a brief illness he breathed his last at his home, on the Windmill Hill, Gateshead, on November 8, 1828, at the ripe age of seventy-five years. He was buried at Ovingham, near the west end of the church. An iron railing encircles his tomb. Two tablets, erected to his memory and that of his brother John, grace the exterior wall of the old church near by; the inscriptions on which are the following:

In memory of
JOHN BEWICK,
Engraver,
Who died December 5, 1795,
Aged 35 years.
His ingenuity as an
Artist
Was excelled only by his conduct
as a man.

The
Burial place
of
THOMAS BEWICK,
Engraver,
Newcastle.
Isabella, his wife,
Died 1st February, 1826,
Aged 72 years.
THOMAS BEWICK,
Died 8th November, 1828,
Aged 75 years.

On the Saturday before Bewick's death he took the block of the old horse, "Waiting for Death" to the printers, and had it proved.

The following verse appears in Wordsworth's "Lyrical Ballads":

"O now, that the genius of Bewick were mine,
And the skill which he learned on the banks of the Tyne;
Then the muses might deal with me just as they chose,
For I'd take my last leave both of verse and of prose."

This eloquent tribute to Bewick appeared in *Blackwood's Magazine*, of June, 1828:

Have we forgotten in our hurried and imperfect enumeration of wise worthies — have we forgotten

"The genius that dwells on the banks of the Tyne,"

the matchless, inimitable Bewick? No. His books lie on our parlor, bedroom, dining room, drawing room, study table, and are never out of place or time. Happy old man! The delight of childhood, manhood, decaying age. A moral in every tailpiece. A sermon in every vignette. Not as one fountain flows the stream of his inspired

spirit, gurgling from the Crawley Spring, so many thousand gallons of the element every minute, and feeding but one city, our own Edinburgh. — but it rather oozes out from unnumbered springs; here from one scarcely perceptible, but in the vivid green of lonesome sward, from which it trickles away into a little mountain rill; here leaping into sudden life, as from the rock; here bubbling from a silver pool, overshadowed by a birch tree; here like a well asleep in a moss-grown cell, built by some thoughtful recluse in the old monastic day, with a few words from Scripture, or some rude engraving religious as Scripture, *omne bonum desuper; opera dei mirifica.*

Bewick's younger brother, John, was born in 1760, and was apprenticed as a wood engraver to his brother and Mr. Bailby in 1777. Among the earliest cuts known to have been engraved by John Bewick, on the expiration of his apprenticeship, are those contained in a work entitled "Emblems of Mortality," printed for T. Hodgson in 1789. These cuts are very indifferently executed, and are copies, occasionally altered for the worse, of the cuts in Holbein's "Dance of Death."

(To be continued.)

Written for THE INLAND PRINTER.

CARING FOR HIMSELF.

BY R. M. TUTTLE.

CAN the Dakota newspaper publisher take care of himself? This is the pertinent question that was asked a few days ago at a little gathering of Dakota editors at the capital, and it was very generally decided that no class of men could do it better. But sometimes I question if this question should be answered in the affirmative. A short time ago I received a proposition from an eastern publisher to club with him. His journal sells for 50 cents a year; he would club at the ridiculously low figure of 25 cents, and would send a copy free to the editor if he would give one insertion of an inclosed article. It would have cost me 48 cents to set this article up. But sure enough, a number of papers with which I exchange had the circular printed in their columns with marvelous promptitude. It looked as though they seized the piece of copy with avidity—as a hungry dog would a leg of a turkey.

A New York house sends me a proposition every little while, which, for pure gall, is refreshing. They make, or profess to make, a press, which, from the accompanying cuts, I take to be exceedingly simple; in fact, it is about as cheap looking a machine as will be found in all pressdom. They want a given number of columns of my weekly edition for a press. The advertising space that they want for a year I regard as being worth, in cash, \$1,000. I would not sell it for less to anybody. The list price of their press is \$200; I think that for a man who wants that sort of a machine it might be worth half that figure.

I came to the conclusion, a few weeks ago, that I had not learned the lesson thoroughly of taking care of myself. I, in an unwise moment, undertook, a year or two ago, to receive subscriptions for a farm journal. I advertised the journal, in response to the suggestions of the publisher. He told me how I could increase my own circulation by a clubbing arrangement, and I took the bait. One of the new subscribers I obtained for the journal in question, when his term expired, brought to me the money for a renewal.

I duly reported this and remitted. Another year rolled around, and the subscriber brought me a postal card he had received from the paper, claiming two years' subscription, and he added, by way of parenthesis, that they had been sending him two copies a month during the year. A few letters one way and the other resulted in straightening the matter out, but not until I had made up my mind that in future all farm journals that send me seductive offers may reinforce their subscription lists by the labor of Uncle Sam's efficient postmasters rather than from my efforts.

I have come to the conclusion that there are some Dakota editors who cannot take care of themselves, and some can. I have come to the additional conclusion that editors of other territories and of the states themselves are very much like their Dakota contemporaries.

MAKING-UP.

The London *Printers' Register* gives these rules for making up. They will be appreciated by all practical printers:

It is not always convenient to make up pages as the matter is set up. When there is a possibility of the pages being overrun to any extent it is by far the easiest, and in the end the wisest plan, to pull the first proofs on galleys, leaving the make-up until the final corrections are made.

See that all the corrections are made in the galleys before attempting to make up.

Set the headlines and accompanying whites preparatory to moving the matter. It saves time, and is more business-like, to set them all at once.

If the type is small, and the matter solid, do not risk a "smash" by moving it dry. Wet it, especially around the edges. If the matter is leaded, see that all the leads are of a length corresponding to the full measure, in order to prevent the points and other letters of small bulk from slipping at the end of lines.

Have a gauge cut to the required length of the pages—either reglet, rule or slug. Make up each page with mathematical exactness, for remember that perfection of register owes much to correctness of make-up.

Pages consisting of the same number of lines are, of course, true enough; but it is always well to gauge them off, for surety's sake, taking care at the same time that no leads or whites have been left out or misplaced during correcting.

Guard against three faults:

1. Letting the last line of a page finish with a divided word.
2. Turning a single line over.
3. Having the first line of a paragraph at the bottom of the page.

Of these, turning over the last line of a paragraph is the least excusable. Nothing looks worse. Yet how often do we see a lesing line turned over in a column of news, where the make-up is easy and the white plentiful. Two or three leads taken out or inserted would alter it either way. Anything may do for a paper—especially a provincial paper—but it is wrong, nevertheless. If possible, limit the number of turnover lines to three, except when the second line happens to be a full one. Such minute considerations improve the appearance of bookwork.

Always let a paragraph commence with two lines at the bottom of a page, and not one only, if it can be managed. It is often preferable to see a page a line long or a line short to cover an awkward "fall," though this remedy should always be avoided when not imperative.

Some would prefer the alternative plan of spacing out the paragraphs.

In making up poetry, try and get all the rhyming lines to fall on the same page. Four-line verses or couplets should not be divided, nor, indeed, should any verse if it could be helped. Do not, however, be led into the opposite (and worse) blunder of creating great gaps of white to bring about this result.

GOOD-BYE.

REMINISCENCES.

BY JAMES BARNET.

FATHER DUTCH OF THE COMMERCIAL ADVERTISER.

IN August, 1852, while sauntering along Randolph street, east of Clark, on a warm summer's day, a sign or bulletin, hanging out at the bottom of a stair which led up to the second story, attracted my attention. It read, "Compositors Wanted." So up I went, and while walking through the passage leading to the rear building, a door opened and a woman emerged, facing me with the interrogation, "Are you a printer?" "Yes," I answered. "Then go to *my* foreman and he will set you to work," she further said, and went inward, shutting the door, which prevented me from seeing what kind of a room she occupied. I was not prepared for being questioned by a lady as to my business, from my antiquated ideas as to a woman's place.

My first impression of the lady was not one of admiration. Had she been an angel in disguise, I would have thought she was out of her sphere. The expression "my" foreman, seemed enough to satisfy me that the work would not suit my Old World ideas. I surmised that they must be awfully hard up for men in this small town when a woman had to exercise the imperious role of a commander. On I went, however, until I found a room studded with frames and cases and a stone in the center; also a man wearing a white beaver sitting on the stone, quietly smoking a fragrant Havana. "Do you want to set type?" saluted my ears, as I gazed around at the silent space, "Perhaps," I replied. "There was a lady accosted me in the passage, who said that *her* foreman would give me a case," I continued. "Oh! yes," he went on, "there are plenty of cases, and you can go to work right away." I thought it was my turn now to ask questions. With that idea in my head, I said, "What's come of all the hands?" "They're on strike," was answered. "What for?" "They want their money," the foreman responded. Whew! "If I went to work, do you think I would get mine?" I asked him. "Don't know," he coolly replied, and puffed away at his favorite cigar. I turned around and left the solitary occupant of the *Commercial Advertiser* office to his quiet cogitations and enjoyment of smoke. In the passage, the door again opened and the lady asked me if I wanted work. This was coming to the point. "If I should want a job, I will call again," I answered. I never called, nor did I ever see the lady or the man with the white hat afterward, to my knowledge.

On inquiring of a friend as to the office I had been into, where a lady was the boss, "Oh!" said he, "that is where Father Dutch holds out. He's away just now, at La Salle, reporting the gathering at the opening of the new railroad bridge over the river at that town, and his wife is acting in his absence." Brave woman. I then modified my opinion of her outward appearance in consideration of her inward, ambitious spirit. The opening of the bridge referred to was a matter of considerable importance at the time. Leading men and editors from all the country towns were participating in the ceremony. The contractor and builder of the bridge, George Barnett, had earned wealth and reputation from his connection with the Illinois and Michigan Canal, which George Smith, the banker, helped to pull through to a finish.

In 1849, cholera visited Chicago as it had seriously affected other places. Many public men, Father Dutch among the rest, gave whisky the credit of encouraging the ravages of the dreaded scourge. He thereupon became a prohibitionist. The question was freely canvassed then as it is spoken of now, without the changing tactics that are followed out by the brewery corporations of New York, as they invest millions in saloons, which plan may operate here to a less extent. Five years after this, Father Dutch went around with a petition to enlarge the liberty of the liquid referred to, when he came across the Rev. A. M. Stewart, of the Reformed Presbyterian church, Fulton street, and a parley was the consequence. Mr. Stewart was astonished at finding the petitioner standing on the other side, and exclaimed, "Oh! Father Dutch! Father Dutch! What's this I find you doing?" "Oh! well, you know, Mr. Stewart," slyly retorted the ever-ready Father, "there

is always two sides to a question." Mr. Stewart did not forget that, as afterward I heard him repeat the conference, and with glee he raised his voice to a higher key as he sung out "Oh! Father Dutch! Father Dutch."

Finance was the great hobby of Father Dutch and the *Commercial Advertiser*, its exponent. Whether he had the erudition of Adam Smith, John Stuart Mill, or Hugh McCulloch, I would not venture to assert, but he continued to the end his favorite theme. The subject was one, however, that considerably exercised business men before the war in figuring out what a pocketful of southern state bank bills might be worth in the morning as they flung their trousers over the back of a chair on going to bed at night.

The Caledonian Club was favored with a lecture by Father Dutch one evening in the Metropolitan Hall, Robert Hervey, the learned lawyer, being in the chair. After warming up to the weighty subject of money, and considering how the ancients enjoyed their shekels, he commenced quoting Latin from Horace, as indicating a deep knowledge of the abstruse question. He might, with more propriety, have spoken to the club in Gaelic. As he commenced the next verse, the audience expressed dissatisfaction by stamping their feet and clapping their hands. This he mistook for encouragement, and he flung verse after verse at his audience until he found the chairman taking an innocent smile to himself at his heroic effort to enlighten with a foreign tongue the sons of the heathen.

It was only some months before he died, while he was an employé of the postoffice, that I had the pleasure of being button-holed by Father Dutch, at the corner of Washington and La Salle streets. He was not slow to talk, for he had so much to say rehearsing his struggles in the newspaper business during a long series of years, the financial question being above all other issues. To listen and hear the affectionate words he breathed forth about his departed wife and the great loss he had sustained in being torn from her side was enough to break me down instead of the old man eloquent. Time slid away unconsciously until my cooling feet warned me of a chill. Words would fail to fill the aching void in the kindly heart of the mourning Father, and with a shake of the hand I bade the genial soul a solemn, sad "good-bye."

INDEX MAKING.

"What," I am sometimes asked, "is the least troublesome way of making an index?" Can the plan I follow be bettered? It may be assumed that the index to be manufactured is not of a special nature, requiring subdivisions of subjects. Galley slips being obviously useless for the purpose, one must wait until a complete proof of the book, "made up" into numbered pages, is to hand. Beginning at chapter one, the author carefully dictates to a shorthand amanuensis every separate item and its page, completing cross-references as the work proceeds, and bearing in mind that a good index cannot be too full. When the last page is reached, the amanuensis will write out the references, leaving a blank line between each, on sheets of ruled paper of uniform size. A second assistant will then call over the whole of the written-out references and cross-references, which will be carefully checked by the book.

During the progress of this tedious business, and in fact until the index is completed, the author may be a man of leisure.

Mistakes corrected, the sheets are scissored through the blank lines into separate slips, and each placed under its own letter in an open case divided into compartments marked from A to Z. Such a case, made of cloth or leather, with collapsible gusset pockets, may be got for two or three shillings. All the A slips are now taken out, arranged in proper sequence (Aa, Ab, etc.), and pasted in their proper order on one side of sheets of paper of uniform size, which for the printer's guidance should be consecutively numbered. The other letters follow, and, with perhaps as little trouble to the author as he could reasonably expect, the work comes to an end. The written slips having been previously checked, the index, when in type, can be safely corrected from them, and the wearisome task avoided of separately looking up in the book every reference for verification.—*Andrew W. Tuer, in the Leadenhall Press.*

THE INLAND PRINTER.

THE LEADING TRADE JOURNAL IN THE WORLD IN THE PRINTING INDUSTRY.

TO EMPLOYERS AND FOREMEN.

In order to stimulate subscriptions we desire to introduce our **CLUBBING** feature into every reputable printing establishment in this hemisphere. We therefore ask you to appoint some suitable employé of yours to canvass your staff for subscriptions to **THE INLAND PRINTER**. For a Club of six or more we will allow a rebate of fifty cents on each yearly subscription, order to be accompanied by cash.

Knowing, as we do, the inestimable benefits as well as pleasure to be derived by journeyman or apprentice from a perusal of its columns, we bespeak your kind coöperation.

Respectfully,

THE INLAND PRINTER CO.

PATENT IMPROVED TWO-REVOLUTION PRESS

WITH patented mechanism for controlling the vertical movement of the impression cylinder. It is extremely powerful, accurately fitted, free from friction and evenly balanced. A patented automatic device is also provided which prevents lost motion, and governs the degree of impression. Its patent reversing mechanism consisting of a cross-belt and spring shifter, is operated by the foot, which places the Press under the immediate control of the feeder. These advantages, with its Sheet Delivery, Hinged Distributer, Caps, Positive Slide Motion, Noiseless Grippers, etc., complete a printing machine that in every respect is equal to the most exacting demands of the times.

WESTERN AGENTS: H. HARTT & CO., 65 THIRD AVE., CHICAGO.

The advertisement features a large, ornate logo for Blomgren Bros. & Co. on the left side. The logo is set within a decorative, shield-like frame with a palm frond extending from the top right. The text "BLONGREN" is at the top in a large, bold, serif font. Below it, "BROS. AND CO." is written in a similar style, with "AND" in a smaller font between "BROS." and "CO.". Underneath the main name, "PHOTO AND WOOD" is written in a smaller, simpler font, followed by "ENGRAVING" in a large, stylized font that curves along the bottom of the logo's frame. Below the logo, the services "ELECTROTYPING" and "STEREOTYPING" are listed in a decorative, outlined font. At the bottom of the logo area, the address "175 MONROE ST. CHICAGO" is written in a decorative, outlined font.

On the right side of the advertisement is a detailed illustration of the Blomgren Bros. & Co. building. The building is a multi-story structure with a classical architectural style, featuring arched windows and a prominent entrance. The text "ELECTROTYPING STEREOTYPING" is visible on the upper part of the building's facade. Below that, "PHOTO AND WOOD" and "ENGRAVING" are also visible. The main entrance is labeled "BLONGREN BROS. & CO." and "175". The illustration shows several people walking on the sidewalk in front of the building, and a horse-drawn carriage is visible near the entrance. The building is topped with a decorative finial featuring an eagle.

LISTEN!

We want the attention of Printers, Bookbinders and Engravers.

WE are continually striving to meet the demands of the trades to which we cater and flatter ourselves that we are fairly successful. We have lately begun the manufacture of End-Wood Type, and are now prepared to furnish either **HOLLY** or **END-WOOD TYPE**, at prices which will surprise the consumer and still leave a satisfactory profit for us.

ENGRAVERS' WOOD.

Turkey, Boxwood or Maple of selected quality and superior finish.

ELEGANT CABINETS AND STANDS.

Our new Polhemus Cabinet surpasses anything put upon the market in points of utility and beauty. The ideal book compositors' Cabinet. The High Art Cabinet of the trade.

We manufacture a complete line of Printers' Wood Goods, and carry a complete line of Tools and Appliances. Send for our Catalogue and let us furnish you with our figures on anything you may want in our line.

CORRESPONDENCE.

While our columns are always open for the discussion of any relevant subjects, we do not necessarily indorse the opinions of contributors. Anonymous letters will not be noticed; therefore our correspondents will please give names—not for publication, if they desire to remain incog., but as a guarantee of good faith.

A REMEDY WANTED.

To the Editor:

CHICAGO, December 27, 1888.

If you will kindly give me space in your valuable journal, I would like to draw the attention of printers generally to the *modus operandi* of type manufacturers, in this and other countries, in selling to the trade. I have had my special attention directed to this matter by Mr. J. W. Jefferson, an old and true exponent of the "art preservative of all arts," and doubtless there are many others the world over, who have given the matter more or less attention. I have before me a series of condensed runic, one font of which contains six cap "A's" and ten lower case "a's." Now, after purchasing this font (or perhaps the series) I find myself hopelessly "balked" the first time I attempt to set up a line, inasmuch as the caps are almost useless, for the reason that the six "A's" with two and three of each of the other letters of the alphabet are about all there is to the font. Why is it that the manufacturers do not give us something like an even supply of letters—for instance, six "A's," six "L's," six "O's," and so on to the end of the alphabet? The same thing applies to all jobbing letters. If, in order to do this, they have to increase the cost to the purchaser, the pleasure of being able to set up a line will offset any figure the extra expense would cut. It looks to my mind very much like a system of petty fraud, and a remedy should be brought about at once. Will you give us an article on the subject in your next issue? Yours truly,

A. D. B.

FROM TORONTO.

To the Editor:

TORONTO, January 7, 1889.

As it is so seldom we see any correspondence in reference to Toronto, or, in fact, Canada, in general, in THE INLAND PRINTER, I have taken it upon myself to write a few lines hoping you will not reject a little information from the Queen City. Trade is very fair at present, with brighter prospects. Warwick & Sons have secured the government printing, and before long will be taking on more hands.

The proprietors of the *Mail* job department are contemplating starting a branch office in Montreal, which will, however, only give employment to three or four hands at first. This firm also has control of the Hamilton *Spectator*, as well as a job office in St. Thomas.

Edward Clarke has been proclaimed Mayor of Toronto for 1889, and general satisfaction is felt everywhere. "Ned" is a member of No. 91, that body, a year ago, manifesting the esteem in which he was held by presenting him with an illuminated address, nicely printed on satin, and handsomely framed, the work receiving complimentary remarks from many of the papers in this city.

A labor directory has just been issued here, compiled up to December 21, by J. P. Griffin, a member of Toronto union. This directory is printed on card 11 by 14 inches, and contains the different labor organizations of Canada, together with the date of meeting, where held, and the name of the secretary. This work will no doubt be welcomed by union men everywhere.

The office of Hunter, Rose & Co. has been declared union once more. This firm has been in opposition to the union since 1872, and is considered a big victory for 91.

O. H. P.

IMPORTANT TO LITHOGRAPHERS.

To the Editor:

NEW YORK, December 27, 1888.

We beg to call your attention to the new invention in the line of substitutes for lithographic stones, which is exciting the minds of all lithographers and dealers in lithographic stones in this country.

There have certainly a good many processes made their appearance to replace the costly genuine lithographic stones by an artificial plate, but so far none of them has succeeded beyond anything but a short living existence. From the results, however, which have been obtained

from the new lithographic zinc plate of Mr. Oscar Kindermann, in Eutritzsch-Leipsc, patented in the United States, under No. 237,582, it appears that they beat everything that has been brought out in this line hitherto. The plates are not to be compared to those which are coated with a layer of artificial stone, because they are only prepared in so simple a chemical way, that they can be made without much contrivance in every printing establishment. They are particularly adapted to original transfers as well as for originals in pen and crayon work on both steam and hand press; engraving can also be done on these plates and printed direct from the original on the steam press.

Large editions have been printed already from one and the same plate, with the result that even after five thousand copies have been taken, which a stone would not stand, design and plate are without the least injury and still in splendid working order.

We have made arrangements with the inventor for the exclusive sale of both plates and patent in the United States, and will with pleasure give any further information that may be required.

Yours very respectfully,

BERGER & WIRTH.

FROM ST. JOHN, N. B.

To the Editor:

ST. JOHN, December 26, 1888.

At this season of the year man's better nature generally "wells up" in thankfulness, from sentiment or some other cause. Whatever is the reason I am not prepared to say, but such is the fact. Taking a bird's-eye view of the printer's trade in St. John for the past year, we have nothing to complain of. Work has been good, and all hands seemed to have got a share, both in job and newspaper offices. Wages have remained steady, with no signs of fluctuation either way. At present work is fair.

During the past week we have had a couple of Christian acts. The proprietors of the *Globe* always made a practice of presenting the "married men" in the office with turkeys, but this year they extended their generosity and all employes fared alike. The *Sun* employes were also recipients of birds for their Christmas dinners. May the good work continue.

The new evening paper, *Gazette*, is still running, and claims that it has come to stay. Its style is something out of the general run in our city. It is antagonistic to the *Globe*, and says all sorts of things about its contemporary, while the *Globe* holds its peace.

A number of the newspapers issued the usual "Christmas Supplements," but unlike other years they were "made to order" out of boiler plate. The choice selections (?) were served up like boarding-house hash, for nearly every supplement contained the same "selected and original stories," and such stuff. The story is told of a singing master who, when he heard a new pupil try to sing, fell upon his knees, and lifting up his hands cried, "Merciful heavens! what did I ever do to deserve this?" so in like manner the general public might ask: What sin has been committed that such trash is imposed upon us, and how long are we to suffer? But a day of reckoning is surely coming, and the sufferings of Dante's characters in his "Inferno" will be bliss to the pangs that that patient humanity will yet inflict upon the publishers of the "best productions in boiler plate of famous authors."

In a recent number of *Progress* appeared an article about Colonel James Domville in connection with his transactions at a "bucket shop." The paper said that Domville bought stocks on margin at New York, and dropped \$600, but when the colonel looked into the matter he found that if the bucket shop had acted square he would have been "in," therefore he would take the law on them, but the proprietors paid a sum of money to keep quiet. The colonel met Mr. Carter, editor of *Progress*, on the street, and wanted to know by what authority his name was used, but getting no satisfaction, he undertook to wallop the editor. The accounts published as to the result of the conflict are very different. The editor holds he had the best of it, while others maintain when the colonel fell it was next to impossible to see the heels of his opponent. However, the affair has created a little stir. The colonel is bound to have "blud," and a couple of days ago again attacked the editor. Nothing serious, however, happened. Domville at one time was quite an important personage; he ran a bank, which was a bad

thing for the public; he also sat in the house of commons, but now, alas! his greatness has departed, and only the spurs remain.

St. John union is doing well, and the ranks are being welded together. A committee has been appointed to prepare plans for celebrating the anniversary, and next month the boys will sit at the round table, loaded with the kindly fruits of the earth, and eat and — no, not drink — be merry with song, music and story.

Yours,
WIDE-AWAKE.

FROM MONTREAL.

To the Editor:

MONTREAL, January 5, 1889.

The Montreal *Daily Post*, printed and published by a joint stock company, has been in financial difficulties since the early part of December. A sale of the newspaper and effects of the company was held on Friday last, and Mr. John P. Whelan purchased the same. The new proprietor is an enterprising man, and will at once put the *Post* on a sound financial basis. A complete new outfit of type and machinery is being purchased to replace the old. The craft in general hope to see the *Post* under the new management flourish in the field of sound honest journalism, and be as good a friend to the union printers as heretofore.

Work for the past six weeks has been good owing to holiday work, but is somewhat slack just now. The morning and evening papers are crowded with subs at present, but in a couple of weeks, when parliament sits at Ottawa, many of them will go there. The newspaper scale is 28 cents for day and 32 cents for evening; fair wages are made at that. The book and job printers and pressmen, however, are not well paid. The average of the wages earned by the best are \$10 per week, with a rare exception of \$11 to a very old hand. The living here is very expensive as house rent takes at least a fourth of what a man earns, besides paying the taxes. The workingmen have organized into an association, called "The Tenant's Defense Association," to protest against levying the taxes mostly on the workingman. Their membership is increasing rapidly, and they have already got some of the city council preaching their doctrine.

Typographical Union No. 176 is in a good financial condition. Several new members are initiated at each meeting.

The *Gazette* office has lately added another two-revolution Campbell, and is now putting in a Cox "Duplex" perfecting press, same as appeared on the first page of the December number of THE INLAND PRINTER.

The weather is not very favorable for our carnival in February. The river not being frozen over, the ice is taken from the canals to build the ice palace with. The winter has been a very open one so far. The coldest day we have had was 15° below zero. A big time is expected.

J. P. M.

FROM LOUISVILLE.

To the Editor:

LOUISVILLE, Ky., January 5, 1889.

The printing business at this point is in a splendid condition, and prospects are favorable for a continuation of the rush for some time to come. The Apostolic Guide Publishing Company purchased the defunct *Sunday News* plant, and removed their headquarters from Cincinnati to this city.

Col. E. Polk Johnson, managing editor of the *Courier-Journal*, was today appointed public printer for the State of Kentucky, by Governor Buckner, to succeed Dr. John D. Woods, resigned. He will take charge of the office next Monday.

The *Labor Record* was compelled to go the road nine-tenths of the labor papers go. It could not live on glory, and its owner, Mr. Lew B. Brown, who had made of it an extremely bright paper, was forced to make an assignment. Mr. W. H. Munnell, who conducted the Louisville *Democrat* for many years, concluded that he would do better as an evangelist than as an editor, and his paper is now known as a thing of the past.

The Anzeiger Company had quite a serious accident about three weeks ago, and it was a miracle that at least eight lives were not lost. The three-story building in which their pressroom is situated collapsed, burying the new double-cylinder Hoe press that was put in less than three months ago, together with a new engine and folding machine.

Those employed in the pressroom had not been out of the building five minutes when the accident happened. They are rebuilding, and have sent what is left of the press to New York for repairs.

President L. T. Davidson, of the Courier-Journal Job Printing Company, was complimented with being elected councilman by a handsome majority at the election last month.

Mr. Henry Sweeney, foreman of Clark & Longley's pressroom, of Chicago, spent Christmas here at his home. Chicago air seems to agree with Henry.

Mr. J. H. Douglas, of the Campbell Press Company, was in town yesterday, with orders for quite a number of presses in his pocket, taken at Frankfort and Lexington.

Mr. Fred E. Loeffler, late with the Standard Printing Ink Works, has taken charge of the pressroom of the F. C. Nunemacher Co. After eight months' trial he concluded that a pressroom was a much more congenial place than being on the road.

Mr. Eugene Bell, for many years identified with the Orphanage Printing Office, has branched out for himself, and has secured splendid quarters in the Johnson building, on Main and Fourth streets.

The *Southern Trade Gazette* has ceased to exist, owing, no doubt, to a lack of patronage from an unappreciative public.

While in St. Louis recently, your correspondent learned that considerable progress has been made looking to a federation of all of the trades allied to the printing trade in that city. This is as it should be, and will, without doubt, be of great benefit to each of the organizations taking part in it, and organizations in other cities would do well to keep an eye on this federation and pattern after it.

The *Republican Star*, contrary to numerous predictions, continues to exist, and from all accounts is on the high road to success. It is owned by four of the striking compositors from the *Courier-Journal*.

Mr. Val. Roth has retired from the firm of Charlton, Roth & Co., and the firm now is Charlton & Stoepler.

C. F. T.

FROM NEW ORLEANS.

To the Editor:

NEW ORLEANS, January 2, 1889.

Since my last a number of changes have taken place in this city. We have had a fight against the *Daily States* for upward of two years, and in August last the *Daily News* was lost to us; and notwithstanding the fact that the International Typographical Union in a measure condemns members of other unions going into a town where there is trouble, our city has been flooded with the traveling fraternity for more than two months. Some of these, however, finding no El Dorado here, have departed, but we have too many here yet, for we have many of our own men, who are so situated that they are unable to go elsewhere, here idle.

I am told that in St. Louis many of the chapels have resolved that no regular can work over five days a week, so as to enable the poor sub to eke out an existence. In our opinion this is a wise move, and would it were universal. Heretofore it has been the poor sub who has suffered when a strike took place, or an unusually large number of tourists arrived in a certain town. Let the regular divide his work with the sub; he can afford it, and if he does not willingly do it, make him do it. What inducements are there to men to stand on the street corner, hungry, and maintain prices for certain men who *always* have situations.

We would advise all union men to stay away from this city. The printing business is in a terribly bad condition, and as far in the future as we can see it will be so. This city is so situated that a printer reaching here without money is obliged to deprive the home subs (I say subs in a positive manner) or else walk out of town.

While we have not won the fight on the *States*, which has been a long one, we are satisfied that they are feeling our force, and we are sanguine of ultimate success.

Mr. W. A. Kernaghan and Hon. John Fitzpatrick purchased the plant of the *Daily News* on Saturday last, and on Monday they had a force of union men at work on said paper.

Mr. W. H. Dumas, who, in 1857, was vice-president of this union, left, with a great deal of apparent satisfaction to himself, for the Soldiers' Home in Ohio. He carried with him the regrets of nearly every

printer; yet they are glad, for he had long since become too decrepit to care for himself, and, as he put it, he "will get three drinks a day in the Home."

E. A. Saunier is dead. Many will learn this with sorrow, for none came here but to form a deep attachment for the old "judge." No. 17 also mourns the death of H. W. Weaver and W. Schmidt.

Respectfully,

D. F. Y.

FROM PHILADELPHIA.

To the Editor :

PHILADELPHIA, January 4, 1889.

The wood engravers were threatened with extinction a few years ago, but they will not "extinct." The new processes have made wonderful claims, and have in a wonderful way substantiated them; but there are limits beyond which the new processes cannot go. They have greatly enlarged the field for that kind of work. They have made a demand which nothing but their processes can supply; they have rendered a service which no other agency could have rendered, and have developed a degree of taste and efficiency which is creditable to them, but the wood engraver still remains. His services are in greater request than heretofore. He can do what no process can do, no matter how complete it may be; skill, no matter in what craft or vocation it may be found cannot be driven out. It is a permanent factor.

I have before me a circular of another patent process or photo-engraving company against which I wish to enter a protest. It is like all others that I have ever seen, i. e., made up of reproductions of very fine wood engravings. Now, this strikes me as a very mean theft, for in taking these specimens they take the brains and skill of those whom their lying and stealing are most injuring, and they are lying to the trade by purporting that they can produce such results, when they know they cannot do so without the aid of the original wood cut. If they are honest and truthful let them show only what they produce from the whole cloth, namely, from the direct photograph or from their pen-drawings, and let the public choose between them and the wood engraver.

John A. Greenleaf, of Lewiston, Maine, has just closed a contract with the Shawmut Fiber Company for the erection of the largest pulp mill in the United States, if not in the world. It is to be built at Somerset Mills, Maine, and ex-Governor A. H. Rice, of this state, is one of the projectors of the enterprise. The buildings will be nine in number.

Who will be public printer? A dozen or more good men have been named in various localities, and have had their respective indorsements. Typographical Union No. 2 lately indorsed Henry C. Dunlap of this city for the office. All Philadelphia is at its back, but Philadelphia is not the whole country.

The National Copyright Association which was recently held in Boston was well attended by publishers and publishing interests in this section of the country. Some of the printers have been circulating objections against the movement which is being pushed by the association. The Typographical Union of New York has denounced it, and hopes that the movement will come to naught, on the grounds that the best reading matter will not be obtainable without paying for it.

"Wanted, Compositors," is an advertisement frequently met with in some of our daily papers. To all appearances work is abundant, especially in offices that have an established run of work. Some few who do particularly fine work are crowded. In order to avoid the bitter competition in printing offices and pressrooms some printers are making a specialty of particularly fine work where they can secure the coöperation of publishers; they certainly succeed, but it costs money. Some of our trade publications are models of neatness and elegance, the very best paper and ink being used. The finest advertisements are displayed, and in this work there is a general ability displayed. The presswork is first-class and the general appearance of some of our publications command the highest respect from an artistic point.

In fact, there is a departure in fine printing work and presswork. For years past we have given, perhaps, too little attention to art in printing. Competition is showing itself in this direction. *Puck*, by the way, is an example of what can be done, also the publication issued in Atlanta, *Dixie*, considering the place it comes from, as printers and

publishers in the South have in times past been driven to neglecting the artistic side. The publishers of this paper deserve credit for what they are doing. Very likely this spirit of excellence will develop itself, and a great many trade, technical and other like journals will be compelled to reorganize their offices and put in new type. Some of our trade publications are simply horrible, yet not as to their make-up, but as to the kind of type used.

Our Mr. Handy had a little \$1,500 fire at his house in West Philadelphia, and lost papers and things. Our editors are not making much stir. They are not overdoing themselves editorially. There is nothing to incite them to deeds of daring at present. No great political issues are up. Scandals are scarce, and sensational material is almost out of the question. Last week we gave columns to the description telling how one poor Dutchman killed another. We are in need of material, of something to write about. There seems to be a dearth all over the country. Even foreign publications have nothing to write or talk about. The Parnell business and the Paris Exposition are flat issues. Over in New York everything is moving along in a quiet way. Trade publications prosper and four or five new ones will start in time for the spring trade. All the old concerns are doing well. Trade journalism is prospering better than ever. Two new textile journals have started in this city.

The printers' unions are making but little stir; wages are satisfactory. The spirit of unionism is strong as ever, but in the absence of any occasion for agitation there appears to be an indifference which is only on the surface. Philadelphia expects to have a representative in the cabinet. A storekeeper and a banker are the favorites. Both young men.

Philadelphia is gradually taking a forward place not only in book publishing but in literary matters, particularly in what one might term the heavy sort. Its medical, law and historical publications possess recognized merit among scholars and literary men. Lippincott's continue to bring out their usual supply. There is very little of the trashy order emanating from the presses of this city. The bible houses are quite busy furnishing the markets of the country with their special literature, and the publishers of encyclopedias are doing a good business. Printers engaged on catalogue work are turning out some of the finest ever published. The paper makers are running their factories full time, and prices for all kinds of mill products are about as high as they have been at any time within the past twelve months. More or less machinery is coming in all the time. Our paper machinery makers are crowded with work; the combinations in the trade are helping to keep competition under control.

M.

FROM BALTIMORE.

To the Editor :

BALTIMORE, Md., January 3, 1889.

In reading the pages of THE INLAND PRINTER, I have been very sensibly impressed with its spirit of fairness, not only in its editorial utterances, but in giving space readily elsewhere to the "plain talk" of both employer and employé. This is as it should be. The bane of many journals of today that claim to be published in the interest of the industrial classes, and some of another persuasion as well, is the total ignoring the fact that there are two sides to a question. These, from fear of offending a certain class of readers, admit only *ex parte* evidence, and from such testimony, extract material to give shape and form to editorial comment. I here refer principally to a certain class of publications known as labor papers, but admit at the same time a number of worthy exceptions.

New Year's Day was most inviting for outdoor exercise, and being down town among the newspaper offices, I took occasion to drop into the *Sun*. (No pun intended.) The underground world of this journal is truly a labyrinth, where one unfamiliar with its devious ways might find it difficult to reach the upper air without a guide. The two large latest improved Hoe presses here, with a capacity each of 24,000 an hour, are said to be insufficient to meet the demand of increasing business. When Virginia's colored pulpit orator says that "de sun do move," he makes no mistake, if any reference is made to Baltimore's luminary. One of Edison's dynamos, the first introduced in this city, lights the establishment throughout, and one man is especially employed in its manipulation. The top story of this iron building has just been fitted up for a composing room, a visit to which will well repay anyone

interested in the art preservative, such is the complete outfit in every particular appertaining to first-class newspaper appointments. The *Sun* came out a few days ago in a brand new outfit of type, the total number of pieces of its new font, weighing 20,000 pounds, count up to 13,000,000. Thirty years ago, seventeen compositors were all-sufficient to set up the matter, today the *Sun* employs eighty typesetters in getting out the paper. There is no coffinmaker employed on the *Sun*, neither will a blacksmith remain long, but the man who sets up the obituaries, who has set 'em up for the past thirty-nine years, had his little joke with me as I paused for a moment in front of his case. His name is James H. Haddinger, and while not an undertaker, as he facetiously remarked, says he is not altogether separated from mortuary matter. There are thirty printers engaged on this journal who have worked on it regularly for the past thirty years. Notably among this number is W. T. Stansbury, who assisted in getting out the first number, over fifty years ago. He set up the first telegram that came to the paper (three lines). It was also the first dispatch sent over the wires to any paper, and came from the national capital. Stansbury, who is seventy-two years of age, sets up agate without winking, and has never used glasses. The chapel honor him on his birthdays' by holding a special meeting, and passing complimentary resolutions, wishing the "vet." typo many happy returns, etc. John M. Ziegler is foreman of the composing room, and has been employed on the *Sun* for thirty-seven years. All the compositors on the paper and those in the jobroom are members of the typographical union. To be equal to any emergency, that the doings of "colored society" may secure place in the paper, the *Sun* has recently engaged the services of a reporter of African descent, a new departure in this section altogether without precedent.

The *American*, whose imposing tower looms up just opposite the *Sun*, worked off its edition today for the first time from its new press, which is a very fine one indeed, being R. Hoe & Co's latest pattern, with a capacity, as Gen. Agnus, its publisher, informed me, of 96,000 an hour. It cost, it is said, \$60,000. It will print from two to sixteen pages, cut, paste and fold, taking on paper 7 feet 2 inches wide. The *American* employs about sixty compositors on the paper and one-third that number in its job department, all of whom are members of the typographical union. Unlike the *Sun*, the *American* will accommodate the advertiser with the big display cut, the former named journal drawing the line here most rigidly under all circumstances. Thus it was that the *Sun* was not involved in a question that arose some time ago between the compositors on the *American*, *News* and the *Herald* and their respective proprietors. The matter was settled on the basis that where justification was unnecessary the cut space should not count for the typesetter.

Baltimore has no representation in the Typotheta, and the employing printer or publisher is left alone to contend against any demand made of him in running his office, let that demand be ill-advised or otherwise. Last fall a year ago, however, it was intimated by some members of the local printers' union that nine hours were about to be declared a day's work. The result was a card published in the papers signed by the proprietors of the *American*, *News* and the *Herald*, protesting against any movement of the kind, and the matter dropped.

All the daily offices work under the jurisdiction of the International Union, the rates paid being 45 cents on the three morning papers, and 40 cents on the other, the *News*, the only afternoon paper in the city. And isn't that fact most remarkable for a town of nearly 500,000 inhabitants? I may, perchance, in future correspondence, lay before the readers of THE INLAND PRINTER some very interesting unwritten history of newspaperdom in Baltimore.

It may prove of interest to mention a recent case of supposed *casus belli*—on the part of the plaintiff—which involved one of our leading papers. It came about in this way: In the rotunda of the court house a clerk posted up, among other regular notices of cases to be tried on certain days, the trial day set apart for a fellow charged with assault. By a clerical error this particular notice in question stated that the man was to be arraigned for larceny. Along came the reporter, who carried it to his journal, not the legal paper, but the information that such a person, giving the name of the man charged with assault, would be tried for theft on a certain day in the criminal court. And thus it was

published, hence the suit for damages. The court decided that the newspaper could not be held responsible for publishing what it believed to be the facts in the case.

I learn that Mr. George S. Stewart has sold out his interest in the Baltimore *Free Press* to his late partner, Mr. J. F. Roxbrough. Mr. Stewart founded the paper here, and was its editor for nearly six years.

As to job printing in this latitude, it may be said, as to the legitimate trade, to be greatly depressed. I hear of two job offices, both attached to newspapers, carrying extensive plant and large general outfit, that talk seriously of dropping out of the unequal contest, where numerous rat and amateur concerns are competitors with practical printers paying living wages to their employés.

It is estimated that there are one thousand amateur presses doing jobwork in Baltimore.

The paper trade is considered fair, with good profits, but competition close.

FIDELITER.

GRADED PRESSMEN.

To the Editor:

CLEVELAND, December 20, 1888.

Over six months have elapsed since the pressmen delegates to the International Typographical Union assembled in convention at Kansas City, at which a second vice-president was elected for the ensuing term, whose special duty it was to look after the special interests of the pressmen's organization connected therewith. I have scanned the columns of THE INLAND PRINTER since the adjournment, in the hope that I could find therein some valuable suggestions from his pen on the subjects that were presented to the pressmen's delegation thereat, and as I have failed to find them, I have concluded to refer to a subject of importance to the trade, which was discussed at Kansas City, and which I believe requires our official's immediate attention. It is simply this: *The pressmen want some practical plan presented by which they can enroll as members of a pressman's union any person claiming to be able to run a printing press, each member to be classified according to his experience and ability as a workman; and a traveling or working card issued to correspond with each classification.*

It may be answered by some that "this is impossible, because all members of a union are rated alike." Yes, and this is just where the trouble exists. I insist there is no *standard* of ability. Such a thing is impossible to obtain. Why, then, should not a traveling and working card be issued to a man just according to what he can do? Is it right for the competent to carry the incompetent? Is it justice to ask an employer to pay for that which he does not receive?

But this may be thought a too radical change. Well, let us have something radical we need. If an employer is willing to put up with the services of a third or even fourth class man, who should stop him?

The question may be asked, How and by whom are the classifications to be made? It is for the president and others to answer this question. In lieu of a better plan, I would suggest that a special meeting of pressmen be held in some centrally located city, each union to be represented by two delegates, and let them devise some method of classification, by which a competent "web" or "news" pressman can be distinguished (by his card) so that he is not classed with an amateur or an apprentice. If he is an artist in a news pressroom, let him be given an artist's card as a *news pressman*. Again, if a man is an artistic book pressman, why should he not be granted a card which will tell an employer at once that his best hold is on bookwork, and that he is recommended as a *book pressman*? Also, the practical color and poster pressman should be distinguished from either of the above, as in order to be successful in this branch of the business requires as much, if not more, study and preparation than either of the others.

Now we come to the platen pressmen—are there not artists in this branch of the business; young men who take a pride in doing first-class work, and the more difficult the job the better they like it? Why not demonstrate that their branch of the business is an important one, and grant them a card that a slouch might well envy. Under the present system all are ranked alike. The pressman who has given his particular branch of the business a life study is ranked with the upstart who has jumped his apprenticeship, and by some hook or crook gained admission to a pressman's union. To adopt a scale low enough to pay

such a person living wages (all that he deserves) would be taking away the wages of the competent and giving them to the incompetent.

Further, let each local union be furnished a key to the classification as adopted by the pressmen delegates. Then let the delegation petition the International Typographical Union to ratify the action taken and adopt the classification recommended. To determine what card an applicant should be granted, let each union have prepared an application question blank, worded something as follows :

Name

Residence

Married or single

Where did you serve your apprenticeship?

Where have you been employed?

How long have you worked at the business?

What work and presses are you the most familiar with?

Have you ever had charge of a pressroom?

If so, where?

Can you furnish a recommendation from your last employer, for competency and sobriety?

Can you furnish a recommendation from your present employer?

How long have you held the position you now hold?

How long have you been out of employment?

Have you ever been discharged for intoxication?

Are you temperate or intemperate in your habits?

What has been your average salary per week?

We believe the above questions are truthfully answered.

..... } Committee.
 }

With the knowledge obtained by the above blank, the investigating committee of a local union will be able, with the assistance of the classified key, to determine in what classification the applicant belongs, and can recommend that Mr. — be granted a No. 1, 2, 3 or 4 card as the case may be, a scale of wages to be adopted by local unions for each classification.

If a member has removed the obstacles that prevented him from receiving a first or second rate card, let him make application to his union and show *why* he is entitled to a higher rate card; then let a committee be appointed to verify his statement.

Perhaps this is all wrong. Perhaps pressmen's unions are only organized to benefit a few in each city, who are members for revenue only; but would it not be better to bring all under the wholesome influence of an organization that will recommend a man for what he can do? In the event of a strike is it not the second, third and fourth rate men that are benefited? I say, label every man according to his ability. If he is a paper "butcher" or a press-destroyer, put the mark of Cain on him, so that an employer will know it before he has a chance of doing any damage, and thus solve the "apprenticeship system" problem, as far as pressmanship is concerned.

I believe this plan will receive the indorsement of every employing printer, as under it they can expect a pressman's union to furnish just what they are willing to pay for in regard to help in their pressroom.

J. C. E.

FROM PHILADELPHIA.

To the Editor : PHILADELPHIA, January 12, 1889.

This city has a remarkable printing establishment—the Globe Printing House, located at 112 and 114 North Twelfth street—the enterprise resulting from the finding of a five-dollar note. The proprietor, Walter E. Hering, has, within a recent period, enlarged his office building by the construction of a four story and high basement addition, forty feet wide and one hundred feet deep. It is contemplated to build an eight-story building in the near future. Nos. 112 and 114 North Twelfth street is a large, old-fashioned double mansion, owned and occupied for many years by Dr. Constantine Hering, one of the oldest practitioners of homeopathy in America, whose death occurred in 1880. Walter E. Hering is a son of the doctor, and was born and has always resided in the house. Early in life he displayed a taste for the printer's art, and in 1867 he found a five-dollar note in the street, and this "find" he expended in a modest printing outfit, which he placed in his father's garret. The same year he became an apprentice to the printing trade with the old firm of King & Baird. He worked all day at their Sansom street office, and at night he was usually

engaged in filling small "orders" at his home. These "orders" augmented to such an extent that after two and one-half years' apprenticeship, and before he became of age, he embarked in business on his own account, his father building a one-story office for him in the yard of his house. In 1871 another story was added to the establishment, and a few years after a three-story building was raised to meet the increasing business of the young follower of Gutenberg.

In 1882 he found it necessary to take his father's stable and use it as a pressroom. With all these enlargements Mr. Hering found the rapid increase of his business necessitated more room, and early in 1888 he determined to erect a building that would accommodate his business for some time to come. After a consultation with a prominent architect it was arranged to construct an eight-story building, and a contract looking to the final completion of this large operation has been outlined.

Mr. Hering gives employment to one hundred and fifty workmen, and when his new building is in complete operation the complement of hands will, it is understood, be increased by at least one hundred. Mr. Hering makes the statement that William Baetzel, who was his foreman when he was an apprentice at King & Baird's, was the first printer he engaged when he commenced business, and is still employed by him as foreman of the composing room.

The new building is plainly but substantially built. A brick inclosed staircase, located at the west end, leads from the basement to the top floor, supplemented by a large freight elevator adjoining. The building was designed for the purpose in every respect. In the basement are vaults for storing stereotype plates and keeping papers. The engine room, the only place in which fire will be kept, is made what is considered thoroughly fireproof. The first floor is occupied as the Adams and cylinder pressroom. On the second floor are the job presses, the job composing-room, the numbering room, and the bindery. The upper floors are used for composing rooms.

The first and only Methodist Episcopal church was recently dedicated at Winfield, Long Island, with appropriate ceremonies by the pastor, Rev. Robert Pierce, who also preached the historical sermon. The sacred edifice was crowded to the doors. Rev. Mr. Pierce, through whose efforts the church was built, and who is pastor, is a man with an interesting history, the recital of which is a powerful sermon in itself. He was born in Liverpool in 1848, and was apprenticed to the printing trade, beginning as the office "devil." In time he was advanced to the case. Among all his wild companions he was a sort of chief. He excelled in boxing and wrestling, played a first-class game of cards, and could drink as much beer and liquor as most of them. He was a "good fellow" generally. His earnings went either over the bar or across the gambling table. Becoming dissatisfied with his surroundings, he came to this country in 1873, when twenty-five years of age, and secured a place in a job printing office. His old habits stuck to him, and he was one of the most profitable customers of the saloonkeepers. About two years after his arrival, when he was foreman for Rogers & Sherwood, this city, a position he held for eight years, he was attracted through curiosity to a meeting in the Church of Sea and Land, of which Dr. Hopper, recently deceased, was pastor. He was so impressed with the discourse that he vowed to change his life, and has since adhered to his promise. After leaving Rogers & Sherwood's, Mr. Pierce became foreman in the *Churchman* office, and later, when the *New York Observer* was burned out, he refurnished the office of Funk & Wagnalls and assumed the foremanship. He remained there until he went into business for himself, about a year ago, at No. 53 Lafayette Place.

Mr. Pierce removed to Newton, Long Island, about eight years ago, and joined the Presbyterian church. The pastor of the Methodist church was Rev. Mr. Hammond, and the two had many a warm argument. The aggressiveness of each attracted the other, and, finally, from a Presbyterian elder, Mr. Pierce became a Methodist layman. Four years ago he received a license to preach, and hired a room in Winfield. He drove from his home in Newton to Winfield every day. He resolved, however, to build a church, and how successful his efforts have been was displayed by the dedication of the new edifice. From a riotous printer's devil, caring little for anyone and less for himself, Mr. Pierce has become a Methodist minister.

W. A. E.

INTERESTING LETTER FROM H. G. BISHOP.

To the Editor:

ALBANY, N. Y., January 7, 1889.

At the close of my last letter I said I had just reached Washington and that I would give particulars of my visit to that city in my next.

Well, to begin with, it is a beautiful city, and I can well understand that, in the summer time, when all the flowers in the ornamental grounds are in bloom, it must be magnificent. I had always heard that in the layout of the streets it was similar to Paris, and as I have been in the latter city I can verify that statement. I visited most of the places of interest and was well pleased with all that I saw.

However, my theme is printing, so I must return to it.

I went to the government printing office and saw Public Printer Benedict, who received me in the most cordial manner. I had quite a long conversation with him on matters connected with the printing business generally and also in regard to the establishment over which he has control. He was very frank in speaking of his "late unpleasantness" and was good enough to give me a printed copy of the proceedings in that matter, which is a bulky volume of over twelve hundred pages. He also gave me a copy of his last annual report. Without attempting to read through the whole of these books, I, nevertheless, read as much as would give me a general idea of the subjects dealt with, so that I might be able to form some opinion of Mr. Benedict's position.

After going slowly and attentively through the establishment in company with the chief clerk, speaking to the foremen and assistant foremen, noting certain improvements which had recently been made, observing the appearance of the men in each department and examining the system adopted for keeping track of the work throughout the whole building, I was forced to the conclusion that anyone who puts Mr. Benedict down as a fool only proves his own title to that designation. My opinion of him is that he is a live business man, having a large amount of executive ability, and that he has made improvements in the layout of the various departments and in the methods of conducting the business which entitle him to respect and confidence. The trifling matters which are cited to prove his incompetency, such as his not knowing how to lay down pages for imposition, etc., do not, in my mind, deserve to be considered. There are many men who understand all those details (and I wish there were more), but there are not many among them who could fill the chair of public printer.

With the political aspect of the affair I have nothing to do, except to say that such positions as that which Mr. Benedict fills ought to be taken out of the reach of politics by United States law. I must tell you that I was at the government printing office twice, about two hours one day and three hours the next, so that my observations are not hasty nor superficial.

I called on many of the printers in the city, and found that as a contributor to the pages of THE INLAND PRINTER I was among friends. I stopped in at the office of the *Craftsman*, where I had a pleasant conversation with the proprietors, who appear to be very busy men. But one of the pleasantest calls I made was at the house of Mr. W. H. Bushnell ("Pica Antique"), whom I had never met, and yet whom I claimed as a friend and a brother, as we had written side by side for so long in the columns of THE INLAND PRINTER. I found him to be most pleasant and agreeable, and that his abilities as a conversationalist were on a par with those displayed in his writings. To smoke a good cigar and chat with such a man is a pleasure which does not come often enough. It reminded me of similar times that I enjoyed with you when I was in Chicago.

You will notice that I sent some new subscribers from Washington, and I should have sent more but that Mr. Thomas Moylan, in the government printing office, had undertaken to work that field, in which I wish him every success.

But I must mention one pleasing incident. I went into one office where I found four young men who desired to subscribe for THE INLAND PRINTER, but had not the money with them. I spoke to the proprietor, and he gladly advanced the money for them. If there were more such employers we should soon have more competent men. I also sold five of my "Diagrams of Imposition" in the same office.

My next stop was Richmond, Virginia. Here I was reminded of another "late unpleasantness," but thank God that is all past and gone, and it is the duty of every lover of his country to seek to make it forgotten, by promoting good feeling and harmonious action among those who once differed.

The printing business is very well represented in Richmond. There are some really good printers there, and if they are not making money as rapidly as in some other cities, I am inclined to think that what they do make is sure, and they know how to take care of it. Of course, there are too many of them, as in every other place, and the result is lower prices for their work. I made some new friends for THE INLAND PRINTER, as well as to shake hands with a good many of its old friends.

I spent a very enjoyable time with Mr. Everett Waddy, who is the corresponding secretary of the United Typothetæ. I sought to impress upon his mind, and upon the minds of other members of that organization in the city, the importance of their recognizing the fact that while they seek by combination the protection of their interests they must be prepared to recognize the legality of the typographical union as a combination of workmen for similar ends. I quite hope it will soon come to be recognized that both organizations can run along parallel lines, and that what is wrong in either will have to be dropped for the general good. The fact that an employer is admitted into the Typothetæ ought to be a guarantee that he is a fit and proper person to be engaged in the business, and that his methods are straightforward and his treatment of his employés just and fair; and so a man's being admitted to the typographical union should be a guarantee that he is a competent man, and one who deserves the confidence both of his employer and his fellow members.

I was pleased to notice in most of the offices in Richmond a more orderly and methodical arrangement of the contents of the several rooms than is generally found elsewhere. This may arise from the fact that the Southern people move about more slowly and carefully. There is not the constant "rush" which characterizes the Northerner.

I visited their opera house, and saw for the first time what is called a "nigger's heaven," which is a small, uncomfortable-looking gallery near the roof, set apart for colored people. The audience appeared to be the happiest lot of people I had ever seen. The performance consisted of one of Hoyt's bundles of fun which I had seen performed in some city in the North, where the people just laugh as though they were afraid or ashamed to be caught doing it. But there is no restraint here. Oh! no. The people literally yelled with delight. They shouted, stamped their feet, beat their canes on the floor, and laughed till the tears ran down their faces. I laughed, too, but I confess it was more at the audience than the play, though that is laughable enough. They reminded me very much of the French people—excitable and easily aroused to enthusiasm. I think it would do you and me good to get such a laugh once or twice a week.

It was my intention to have gone further South for another week or ten days, but I received a telegram from my wife which compelled me to return home at once. So my narrative is ended for the present. Perhaps at some future time I may take another trip in that direction, and if so, I shall be glad to resume my letter writing.

Sincerely yours, H. G. BISHOP.

IMPROVED STATE OF TRADE INTERESTS IN NEW YORK AND ELSEWHERE.

To the Editor:

NEW YORK, January 10, 1889.

The new year has opened auspiciously for the printing trade and kindred interests. Notwithstanding the lull that usually predominates in all business operations after the holidays, the situation is generally much better than at the corresponding period last year. It is indicated in all quarters that typographical and publishing interests are destined to be attended with much prosperity during the season. Many of the leading printing firms have filed large contracts that will require a number of months and largely increased forces to fill. There is a general brushing up in the establishments located in Printing House Square, and other great centers of trade, to meet properly, promptly and satisfactorily the anticipated influx of orders. The typefounders

machinery manufacturers, printing-supply people and paper makers are crowded with orders. Taken altogether, the condition of things must be regarded as assuring and reasonably satisfactory.

The inauguration of new business enterprises seems to be the order of the day, and, with the increase of printing and publishing houses, the employment of the large army of idle, though competent and deserving compositors, pressmen and other workmen, who depend upon the typographical, book publishing and newspaper interests for support, must eventuate at no distant period. The labor situation, while not being as pleasant and encouraging as it should be, is unquestionably easier and brighter than it has been for several years past. There have been no disputes recently between the employers and employed, and it is not likely that any union trouble will happen soon. Good, reliable printers are at present being paid all they are worth. The incompetents, as usual, have a hard time to exist.

The Typothetæ Society, which is composed of the representative master printers and publishers here, have made extensive arrangements to celebrate the one hundred and eighty-third anniversary of the birth of Benjamin Franklin, at the Hotel Brunswick, on January 17. An elaborate dinner will be given, and speakers invited from all sections of the country. Mr. Thomas Lee is chairman of the Entertainment Committee, and is making great preparations for the event.

Among the oddities that will be exhibited will be a Benjamin Franklin press, produced before rollers were invented. The contrivance will be worked during the banquet, and the guests afforded an opportunity to see the crude methods employed a century and a half ago. The ink was then distributed over the type by "dabbers," and will be so spread while the wines are washing down the good things.

Hon. Jonathan Chace, United States senator from Rhode Island, recently told a correspondent of the London *Athenæum* that he had very little doubt of being able to carry his international copyright bill through both houses of the next congress.

Among the notable New Year's receptions was that given to the morning newspaper compositors at 119 Washington Place. Miss May König, Miss Emma Boggs and Mrs. Frank Cohick performed the honors of the occasion, and made every printer who paid them a visit feel that he had struck a "fat take." Between two hundred and fifty and three hundred compositors called during the day and partook of the hospitality. They represented the composing rooms of every daily paper in the city. A number of job and book hands, as well as pressmen, were also among the day's callers.

The third annual dinner of the Electrotypers' and Stereotypers' Association of New York has taken place. Some forty gentlemen assembled in the large dining room of the Hotel Hungaria, Union Square, which was handsomely decorated for the occasion. The menu was an epicurean one, and fully enjoyed by the members and their friends. There were a few formal speeches, delivered by F. A. Ringler, the president of the association, R. H. and T. A. Raisbeck. The committee in charge of the affair were: F. A. Ringler, R. H. Smith, R. Hornby, J. H. Ferguson, and J. W. Naughton. Among those present were: T. A. Raisbeck, Henry W. Lovejoy, J. A. Johnson, Charles Hurst, D. H. Cardoso, C. B. Crashe, I. W. Wilson, of Bridgeport, Connecticut; W. H. Lockwood, of Hartford; John Polhemus, W. L. Mushon, of Rahway, New Jersey; P. E. Connan, of Baltimore, and others.

While Mayor Hewitt was being prodded at the recent municipal investigation, ex-Assistant District Attorney Dr. Lancy Nicholl, in the course of the senate committee's examination of the *City Record*, a mysterious allusion was made by the young lawyer to "a person who took printing bills home with him in order to facilitate their payment by auditing them rapidly, and who was paid for his extra work by the contractor."

It was ascertained that Stephen Angell, the printing expert of the finance department, was the person referred to, and that Comptroller Myers at once advised an investigation. Mr. Angell's testimony was in substance to the effect that in 1872, when he was first employed in the office, his compensation was by the hour, and he frequently worked overtime for such people as Martin B. Brown, the city printers, who have large accounts with the city, which they desired settled as speedily as possible. To facilitate this, he checked their bills out of office

hours. In 1876 he was placed on a stated salary, and in 1871, when Mr. Allan Campbell was comptroller, the fact that he earned those perquisites was made public through a suit brought against the city by Clarence Levy, a dealer who had supplied it with stationery and blank books. On the advice of Mr. Campbell, he discontinued the practice of doing extra work.

Mr. E. Rosewater, editor of the Omaha *Bee*, has been East, looking at the prominent newspaper offices for suggestions to be adopted in his own newspaper establishment, which will be one of the finest in the country. It seems remarkable that an inland city like Omaha should boast a building expressly erected for newspaper work that puts in the shade most of the newspaper houses in the East; but the *Bee* is a busy one, and is conducted on the liberal principles of a metropolitan daily. It is published every day in the year, morning and evening, and is one of the brightest papers in the United States. Its new office building is a magnificent structure of granite and brick, more than one hundred feet square, and is to cost nearly \$500,000. It is almost ready for occupancy, and one of the objects of Mr. Rosewater's visit East is to secure every modern improvement for use in his composing room.

Philadelphia Typographical Union, No. 2, has followed the example of New York Typographical Union, No. 6, by starting an organ. The title of the new labor paper is the *Union*. Its object is to advocate the organization of labor in every kind of industry, and foster the interests of labor already organized. The *Union* promises that it will be "the advocate of no harsh measure, no illegal measure, and certainly of no unjust measure. But it will use all the influence it can gather and all the forcefulness at its command to secure to workingmen the ordinarily fair treatment which is all that they ask." It is a bright paper, filled with news of the labor organizations, and of matters and things in which labor organizations are interested.

The disappearance of Manuel Klein, a member of the excise board of Trenton, New Jersey, and president and treasurer of the W. S. Sharp Printing Company, of the same city, has occasioned much comment. Mr. Klein, who had an extensive business acquaintance here, was last seen in Trenton. For some days previous to his disappearance his friends observed that he was depressed in spirits and kept himself secluded. On the day of his mysterious departure, the bookkeeper of the Sharp Printing Company received a letter by mail from Mr. Klein, in which it was stated that he had severed his connection with the company for good, and that he regretted the step. His losses, he stated, had made him almost frantic. The bookkeeper says Klein's accounts are all right. It is feared he has committed suicide. He was a prominent member of the Grand Army of the Republic, and enjoyed the greatest esteem of his business and other associates.

The Board of Trustees of the New York Press Club have decided to have the annual dinner of the club at Delmonico's Wednesday evening, February 27, and have fixed the price of tickets at eight dollars. Joseph Howard, Jr., will be the principal orator of the occasion.

Judge Patterson, of the Supreme Court, has overruled the demurrer interposed by the *Daily Register* to the answer of the *Law Journal* in the suit brought to determine which is the official law paper. This decision upholds the action of the Supreme Court judges in choosing the *Law Journal* as the official law paper, and in awarding it the allowance annually granted by the state. The *Register* will protest by appeal to the general term of the supreme court, and, if not successful there, to the Court of Appeals.

Representative Beriah Wilkins, of Ohio, has entered into partnership with Frank Hatton, President Arthur's postmaster-general, and purchased the Washington (D. C.) *Post* from Mr. Stilson Hutchings, for \$140,000, not including the *Evening Post*. The first installment of the purchase money has been paid. Mr. Wilkins is a democrat, but on the tariff and some other questions he has always considered it his right to act independently. He will not be a member of the next house of representatives, and will, therefore, have time to look after the interests of his newspaper.

The Washington *Post* was started about ten years ago by Mr. Hutchings, and of late years has not always enjoyed a very savory reputation. Back in June last a syndicate was formed, with William Henry Smith at its head, to gather in the *National Republican* and the *Evening Critic* under the same management. Smith and Hutchings

were interested in a type-setting machine, and the idea was to give it a fair trial and boom it. Mr. Smith finally drew out of the combination; the machines were thrown out, and the property reverted to Mr. Hutchings. Since then the *Post*, its franchises and plant, have been in the market. It is considered a fairly good property.

PRINTER-JOURNALIST.

FROM KANSAS CITY.

To the Editor: KANSAS CITY, Mo., January 6, 1889.

Quite a number of changes have occurred in the metropolis of the Northwest during the past month which may interest your readers. The Union Bank Note Company, hitherto doing only lithographing and engraving, has bought the material belonging to the late firm of Bishop Brothers, and is now turning out fine specimens of letterpress printing. As its name implies it is a union concern, and furnishes employment to about five compositors.

The Rigby Printing Company has been unionized and runs a force of six to eight printers.

December 29 J. H. Ramsey made an assignment to H. S. Millett, who is now conducting the business and finishing the jobs on hand. The firm of Ramsey, Millett & Hudson was the largest printing house in the city, doing binding, lithographing and engraving in addition to a large amount of book and job work. When the firm dissolved some time ago, his partners took the building and some real estate adjacent, leaving Mr. Ramsey the printing office. In obtaining control of it he incurred obligations which he could not meet as they fell due, hence the assignment to his former partner. It is probable that the shop will start up under some management in a short time. The plant is valued at \$70,000. About a dozen printers are thrown out of employment.

Business is decidedly dull in most of the large job offices. One of the reasons is the lull in real estate, for agents, whatever may be their failings, use printers' ink very freely. The *Real Estate Record* suspended about two months ago owing to a lack of patronage. It was a weekly, varying from sixteen to forty pages, printed on calendered paper and was one of the handsomest publications in the West. Its publisher, Clifford F. Hall, is still conducting the *Modern Miller*, a monthly periodical.

Another reason is the cheap and ruinous competition of the small offices, often run by the proprietor and a boy to kick press. This so-called printer is usually content to make rent, stock, wages of boy and \$2.50 a day for himself. Here is an advertisement of one of these concerns, clipped from a daily paper:

1,000 BUSINESS CARDS FOR \$1; FIRST-CLASS WORK AND material. Economical Printing Company, 20 Delaware blk., 7th and Delaware.

Taking into account the fact that the stock cut from fair three-ply bristol, forty-eight to the sheet, must cost at least 70 cents, without counting cutting, composition or presswork, it is hard to figure a profit. In consequence, more misspelled, poorly designed and badly printed jobs can be seen here than in any place I ever visited.

The *Times* has cut down its force from forty-three to thirty-five regulars and is phalanxing about eight cases a night, setting much of the matter in minion, which makes the poor subs suffer, as it is the only union morning paper in town. Miln, the Minnesota rusher, set 13,000 minion in seven hours one night last week. The *Times* will appear in a new dress this month. The order was placed with Marder, Luse & Co., and consists of 2,500 pounds of minion, 3,500 of nonpareil and 1,200 of agate, with a full line of display.

The *Globe*, a 2-cent morning paper, will appear next month with R. B. Gelatt, of Detroit, as editor and Robert E. Corregan as business manager. It is reported to have a capital of \$100,000. It will be four pages, seven columns, set principally in nonpareil and agate, and will run from eighteen to twenty cases, with B. C. Merrigan as foreman. Mr. Gelatt was formerly one of the stockholders in the *Evening News* of this city. There seems to be a good opening for such a paper, the *Times* and *Journal* being respectively democratic and republican, thoroughly partisan and charging 5 cents, while the *Globe* will be independent. This enterprise will take up the idle typos of the town, of whom there are many on the market.

E. P. Monroe, better known as "Aggie," died a month or more ago, leaving a large family. He was an old Missouri Valley printer, has held various offices of trust in this union, and his loss was generally regretted. During the trying times in this city his unionism was never questioned. Lon Sinclair, another old-timer, and Tom Livingston have been down for some time with consumption. The sick benefits paid last month by this union exceeded its total receipts by over \$25.

A trades and labor assembly has been formed here representing eighteen organizations. It is not political and promises much good to labor interests in this vicinity.

Can any of your readers suggest a remedy for the close adherence of letters, which will obviate the tiresome and destructive but necessary pounding of stereotyped matter? The type is squeezed and baked until it is dryer than the sands of Sahara, or the itinerant and professional panhandler. If water can be induced to percolate through the matter the problem is solved; but there's the rub. Will the application of steam, or placing the dead type in a sink and flooding it with water accomplish the desired end? Any plan which will bring about this result will be a great benefit to proprietor and printer, saving type to one, and pains, "pi" and profanity to the other.

Why can not foundry cast all body type with three nicks? The difference in speed to any compositor, especially with an imperfect light, is fully 100 ems per hour. The nicks can be arranged differently for the various sizes, for instance, brevier and nonpareil alike with two deep and one shallow nick, or one a little higher up, and minion and agate with three close nicks, carrying this system throughout the sizes. By this device no printer can mix his cases. The nicks should be placed near the bottom and never half-way up. Whatever increases the speed of the compositor without detriment to the quality of the work is a saving to the proprietor, whether he hires by the piece or week.

KICKER.

ANSWERS TO CORRESPONDENTS.

M. A. D., Philadelphia: Being troubled greatly with electricity in paper, can you give me any information in regard to overcoming it? I am a young pressman, and have never met anyone that seemed to know much about it. Oiling the cylinder helps it sometimes, but not always. Answer through THE INLAND PRINTER.

Answer.—We have replied to a similar query at least half a dozen times. For further information, we refer to pages 250 and 270 December number INLAND PRINTER.

C. B., Detroit, asks: Will you publish a list of the candidates for public printer, so far as you know?

Answer.—As far as we have been able to learn, the names of the candidates are as follows: Captain W. Meredith, Chicago; M. R. H. Witter, St. Louis; A. V. Haight, Poughkeepsie, New York; Henry C. Dunlap, Philadelphia; H. T. Osborne, Los Angeles, California; Herman A. Hasslock, Nashville, Tennessee; Lewis Payne and C. Rubens, New York City; Colonel Holloway, L. H. McDaniel, and John R. Rankin, of Indianapolis, Indiana; August Donath, Chester, Pennsylvania; M. D. Helm, Muncie, Indiana; Robert Lillard, Cincinnati; and Hon. John Nichols, Raleigh, North Carolina.

J. H. S., Attica, New York, writes: Please inform me through your valuable journal where I can obtain ink for printing photograph cards that will stand *burnishing* without the ink blurring or rubbing off. The cards look all right until they are put through the burnisher; some of them are all right then, and others look bad. I used Johnson's quick-drying job ink. Please tell me what kind of ink to use and where to get it. I find lots of information in the Answers to Correspondents column, but fail to find anything about printing on photograph cards.

Answer.—Use a number one quick-drying ink. Let the cards lie twenty-four or even twelve hours *before* burnishing, and the trouble you complain of will disappear. You must remember that cardboard has not the immediate absorbent qualities that paper has.

ADVICE TO YOUNG AUTHORS.—"Never write on a subject without having first read yourself full on it, and never read on a subject till you have thought yourself hungry on it."—*Jean Paul Richter*.

INTERNATIONAL YACHT RACE: "VOLUNTEER" LEADING.

Reproduced by "Hafone" Process, by F. D. MONTGOMERY, 213 State street, Chicago.

THE TYPEFOUNDER.

The founders, forsooth, take my silence in dudgeon,
So I'll now have a smack at each leaden curmudgeon ;
These Nonpareil heroes, these paragon sparks,
Shall rue that they ever provoked my remarks.

They swear their base metal they'll shoot at your rhymer ;
They cast many cannons, and keep a Great Primer ;
But these English Hebrews I'll boldly attack,
Their tastes are Bourgeois, and their character Black.

Yet they puff themselves off, and each swaggering elf
More Capitals sells than great Eyton himself ;
Small Capitals, too, they profusely dispense,
And of weighty quotations their stock is immense.

Their flowers will not blow, though often they are blown on,
Their Antiques are such as the ancients could show none,
Of jewels they boast, but I'm sure that no girls
Would wear in a necklace such Diamonds and Pearls.

Base counterfeits all from beginning to end,
Their Pearls are all black, and their Diamonds will bend,
'Twill be hard if they 'scape from the treadmill of fetters,
When the postoffice knows how they send double letters.

At Carthage in torments poor Regulus bled,
But these fellows plunge him each day in hot lead ;
Their customers seem to be still sterner stuff,
For they often complain he's not melted enough.

Greeks and Persians at once these tormenters will burn, as
The tyrants of old, in the fiery furnace ;
To plague some poor bodies these demons agree,
One Nick's not enough, so they cast two or three.

With one sweeping censure I'll close my objections :
No mortals are known with such great imperfections.
My point-case runs low, and your vocalist's dry,
So "finis" I'll fix to this furious fry.

—*Songs of the Press.*

DISSOLUTION OF A VENERABLE PAPER-MAKING FIRM.

The old firm of James M. Willcox & Co., paper manufacturers and dealers, Philadelphia, was dissolved January 7. This is stated to be the oldest established commercial establishment in the United States which has maintained an uninterrupted existence. It dates back to the year 1727, when Thomas Willcox erected the Ivy Mills, in Delaware county, Pennsylvania, and the business thus founded has descended from father to son until it now is in the fifth generation of the family. The Ivy paper mill was the first established in Pennsylvania. In 1836, James M. Willcox erected the Glen Mills, near Media, Delaware county, and in 1839 he commenced business at No. 529 Minor street, Philadelphia. His paper warehouse was the first opened in the street, which is now a center of the paper trade. He traded under the firm name of James M. Willcox & Co., a firm name which was continued by his sons and grandsons down to January 1, 1889, when these grandsons, James M. and William F. Willcox, sons of the late Mark Willcox, dissolved. William F. Willcox, having purchased the interest of his brother, James M., in the mills, and the house in Philadelphia, will in the future continue the business, at the same place, under the firm name and title of the James M. Willcox Paper Company. In this manner the old style title is virtually perpetuated, and the establishment will doubtless sustain in future its active, prosperous, and honorable career. At the Willcox mills was made the paper used by the colonial government for bank notes prior to 1776, and that used by the United States government for security notes and federal currency during the wars of 1776, 1812, and 1862. The fibrous paper upon which the national currency is printed at the present time is manufactured at the Glen Mills.

THE CHACE COPYRIGHT BILL.

The following is the text of the statement recently presented by the printing and kindred trades representatives in Edinburgh, Scotland, to the Marquis of Salisbury :

"The Chace copyright bill now before the American House of Representatives, proposes to give a copyright in America to foreign (i. e., British) authors. The result of this undoubted boon will be the opening to British authors of an additional market—the American. But this concession is given to them on the condition that *the books shall be printed from type set within the limits of the United States. What will be the result of this?* Most authors will naturally desire to avail themselves of the double market thus opened, and will send their books to America to be there set up in type, in order to secure the copyright offered them in America. Consequently, for editions required for Great Britain, either the books will be printed in America and sent to the British market, duty free, or stereotype plates will be sent over to print the British edition. This will vitally affect the interests of the British compositor, typefounder and stereotyper, and to a lesser, but still serious extent, the other trades connected with printing. But the evil by no means ends here, and it is very important to notice the full extent of it. Authors will naturally desire to get the full benefit of the new copyright open to them, and will quickly see the advantage of arranging with American houses to print and publish their works. Editions will consequently be *printed* in America, but *copyrighted in both* countries. In this way the supremacy of the British publishing trade as the center and seat of English book production will be destroyed, and the headquarters of English literature will be transferred to New York. The magnitude of such a disaster to this country will be obvious.

"The bearing on the trade in Edinburgh and its neighborhood is briefly this: The production of books is the staple trade of the city and district. There are engaged in typefounding, printing, bookbinding, paper making and cognate trades upward of 11,000 persons. A very large portion of the book printing done in Edinburgh comes from London publishers. The paper mills of Edinburgh and neighborhood also, to a great extent, supply the English metropolitan and provincial markets. It has been calculated that, should the Chace bill pass, one Edinburgh printing house alone, employing upward of 400 persons, will require to reduce by at least one-fourth its whole staff of employés; and this proportion may be taken as the average rate of the reduction in the printing trade. It would probably be higher in the typefounding trade, and lower among bookbinders.

"REMEDIES.—In order to settle the question of preserving the book manufacture for the British market and the British empire, all that is necessary is to add to the copyright act a provision that the book must be printed from type set in the British empire, and published within its limits; or that her majesty may, by order in council, direct copyright to be given to authors whose books have been printed in a foreign country, provided that such foreign country gives copyright to books printed from type set up here. It would be futile in the present state of American feeling to reason with the Americans on the bill. Senator Chace has desired to settle a question, which is really international, entirely with an eye to American national interests. But the British nation can and must act with a view to its own national interests. The present copyright acts make it a necessity that, to obtain a British copyright irrespective of nationality, a book must be first *published* in Great Britain. This law was made when there was no prospect of British books being printed in America, and the idea of publishing included printing. A settlement of the question on the lines of either of the foregoing remedies would, under existing circumstances, be the most satisfactory solution of the question. The British author would retain the same rights he has at present in the British empire, and such a provision as is now proposed would open to him the great American market from which he is at present excluded. The American author would enjoy in this country equal privileges with the British author—subject only to the safeguarding of British labor interests in the manner now submitted. Negotiations might thereafter be initiated, under more favorable conditions, for concluding with the American government a thoroughly satisfactory international copyright treaty."

MARK L. CRAWFORD,

Whose likeness is herewith presented, was born on a farm near Pierceton, Kosciusko county, Indiana, December 7, 1848. Owing to his father's financial reverses, he was obliged, at the age of fourteen, to look out for himself. After engaging in several enterprises for over a year, he entered the office of the Plymouth (Ind.) *Democrat*. Here he remained for nine months, when he entered on his first strike, the cause of which was as follows: He had been required to carry a bundle of 24 by 36 print paper from the paper warehouse, about half a mile, to the office every two weeks. Not being at that time large or strong, after having done it for a number of months he refused to do it longer, and threw up his situation. Returning to Pierceton he went to school for a year. When a little over eighteen years of age, in partnership with S. S. Baker, he purchased the Warsaw (Ind.) *Union*. The paper had been suspended for over a month at the time of the sale, and Mr. Crawford had had but

nine months' experience at the printing business. The office was purchased on "time"—plenty of time and no money. After publishing the *Union* for eighteen months, they sold the paper out, and Mr. Crawford went to school again for over a year, and then engaged to teach one of those typical "hoosier schools," that Edward Eggleston has so well portrayed. At the end of the school term he went to Findlay, Ohio, and worked on the Hancock *Jeffersonian* for some time, after which he went to Columbus, Ohio. The first thing he did after arriving at Columbus was to deposit \$2 with the financial secretary and take out a working permit. He joined No. 5 in 1871. He did his first work on a daily paper on the *Ohio State Journal*, and he tells the following incident, that he says he will never forget, and which we give in his own language: "I thought when I left the field of small pica and long primer (the country printing office), that I knew all there was to know about the printing

business. So I started in on my first night's work confident of making a good showing. The first 'take' I got off the hook was a page of General Comly's manuscript. He was then editor-in-chief of the *Journal*. I had been taught in the country printing office that when I came to the word 'though,' if it occurred at the end of a line and I could not get it all in, to make it read 'tho', rather than space wide. Well, that condition of affairs occurred in my first 'take,' and I brought into operation my country lore. Those who knew General Comly knew he had no patience with anyone who did not know about as much as he did. Well, my proof came up, and the old gentleman had carefully erased the 'tho' and written on the margin 'shoemaker.' I examined it carefully, and was bewildered. My limited knowledge taught me that 'shoemaker' and 'though' were not synonymous. With no little amount of temerity I inquired of my neighbor if that fool of a proofreader wanted that word 'shoemaker' in that line, and that I could see no sense to it. He laughed at me and explained that that was a way the General had of calling a

compositor's attention to a bad break. In other words it was rapping ignorance over the knuckles. It knocked the props all out from under my pride and self-confidence, and came very near ending my printing career. But I worried through the night, and came round the next morning and took my turn in marking hieroglyphics on the paper over the 'takes' I had set, to designate to the foreman what 'shoemaker' had set the type. At that time there were no 'dupes' taken in that office. I had determined, however, to end there and then my career on a daily paper, but a friend in the office came to me and explained that I had unfortunately got on a case where there was in reality a 'shoemaker' as a regular, and that it was an every-day occurrence for him to get a rap like that, and the General thought he was working that night. The explanation, as you see, did not improve matters any, but it 'riled' me, and I determined to show that there was something else in me besides a 'shoemaker.' I left the office, however, and went over to the *Statesman*.

But there I also met trials. It was during the Franco-Prussian war, and the telegraph was not edited—everyone had to do his own editing. It was simply amazing what a 'difference of opinion' there existed between 'Graf' Pearce and myself as to how to spell the names of a number of French and Prussian generals, as well as a number of cities in France and Prussia. 'Graf' was foreman and proofreader, and I was a compositor, hence the difference of opinion."

Mr. Crawford worked but a short time in Columbus and then went to Cleveland. After subbing on the Cleveland *Plaindealer* a month or so, he went to Toledo and worked for a number of years on the Toledo *Commercial*.

He was one of the principal movers in the reorganization of Toledo Typographical Union, No. 63. At the time it was reorganized he was chairman of the Committee on Constitution, and was its first financial secretary. He was working in the *Blade* jobroom at the time of its organization, and the next day was at work when "Nasby" (who had

heard that a union had been organized, and who was then bitterly opposed to trades unions, owing to the fact that he had a fight with the old union, and it had cost him thousands of dollars to "rat" his office and burst up the old union) came into the room and ordered every man to leave the office who had joined the organization. As had been previously arranged by the men who had joined the union, he, as well as all the rest, remained at work, forcing Mr. "Nasby" to find out, if he could, who had joined. "Nasby" got down off his high horse, however, and no one was discharged. Leaving Toledo, he worked on the Bellevue (Ohio) *Gazette* for nearly a year.

He came to Chicago in the fall of 1872, where he has remained ever since. Worked in the office of A. N. Kellogg for twelve years, leaving there when elected chief organizer of the International Typographical Union. After his term of office expired he worked on the *Evening Journal* up to April, 1886, when he was engaged to edit the *Switchmen's Journal*. He was a delegate to the Trades Congress, held at Terre Haute, Indiana, from Typographical Union No. 16,

and was elected by the Trades Assembly of Chicago to the session held in Pittsburgh, where he was elected secretary of the convention. He was also elected by the Trades Assembly to the third session held in Cleveland, Ohio, and has held the following positions in the Trades Assembly: Financial secretary, two terms; treasurer, three terms, and president three terms. Was a delegate from Typographical Union 16 in the assembly for over eight years. He was likewise elected a delegate from the same union to the session of the International Typographical Union held in St. Louis, in 1882, and was there elected secretary-treasurer of that body; Mr. George Clark, recently deceased, being elected president for the second term at the same convention. During his term of office forty-two unions were organized, an unprecedented number in the history of the International organization up to that date. The president and himself being fast friends they worked harmoniously together, and to their energy may be credited this large showing. Having been reelected by No. 16 as one of the delegates to the Cincinnati convention in 1883, he was there unanimously elected the successor of Mr. Clark. At the end of his term of office, in 1884, he was unanimously elected chief organizer by a standing vote.

Mr. Crawford is still a bachelor, but declares it is not his fault, as no one has taken advantage of leap year, and he is too modest to make the first advances.

PRINTING FOR THE BLIND.

Printing for the blind is a French invention, for which we are indebted to Valentine Haiig, who, in 1784, produced works in relief letters at Paris. He took the idea from a map in relief, the invention of a German. He adopted a form substantially similar to the roman letters. The Academy of Sciences reported in its favor; a school was established, and exhibitions took place before Louis XVI. For want of energy the institution languished, until Dr. Guillie took charge in 1814. The first book in relief in the English language was printed by Dr. Gall, of Edinburgh, in 1827. Gall's alphabet (1826) was a modified roman, but in the process of simplification attained a certain resemblance to some old characters, among which may be cited the Runic, Oscan and Greek. He published a book in this character in 1836, and the Gospel of St. John in 1829-34. Gall is regarded as the principal promoter of the art in Great Britain. He afterward modified the character of his type, and published a number of other books of the New Testament. The bible was printed in Glasgow by Alston (1848) in raised roman capitals. It was comprised in nineteen volumes. There are about a dozen other systems of reading for the blind, all necessarily more or less complicated. There are also two or three modes by which blind persons can print for themselves, though little progress is made in that direction, owing, perhaps, to the enforced slowness of the operator.—*Press News, London.*

MARGINS.

The blank margin is to a typographical job what the plain mount — in reality a margin — is to a water-color drawing. It has fallen more than once to the lot of most printers to set up a job to a given size which when pulled was seen to be heavy and inharmonious. Critically examined, the job bore strict scrutiny, and yet the effect as a whole was distinctly unsatisfactory. Happy thought! Pull it on a paper of larger size. What happens? Simply this, the effect is now perfect.

But of late years, in bookwork especially, there are printers who have run "margin mad," and nothing appears to content them but an oasis of type in a Sahara of margin. The idea is of course to set off by contrast the central type embodied in an expanse of fair white paper by which the text is not only thrown into relief, but the margin lends to it added importance. It is unquestionably better both in job and book work to err on the side of a liberal than a parsimonious margin.

What rule, it may be asked, should be followed in regard to margins? *One's own good taste and sense of fitness.*

The main object of a margin is not to scribble on, as too many subscribers to Mudie's and Smith's libraries seem to think, but to relieve the eye so that it may pleasantly follow the text without effort. Well printed and set out with ample margins, the pages of a tastefully got-up book always look well, while the advertisements at the end, over

which is wasted no end of talent in the way of display, as invariably look badly, the reason being that they are crowded out to the full measure. If a publisher really wishes the pill and poultice advertisements of his clients to look well, he should make the measure of both text and advertisements correspond. Then we should have a handsome book throughout.—*The Paper and Printing Trades Journal.*

FIRST NEWSPAPERS.

The first newspaper in the world was printed in 1457, in Nuremberg, and called the *Gazette*, while the first daily made its appearance in 1615, and was called the *Frankfort Gazette*. In 1622 the first newspaper was started in England. Nineteen years later, or in 1641, the first attempt at parliamentary reporting was made. The first advertisement in any paper appeared in 1648, and the first paper devoted exclusively to advertisements and shipping was published in 1657. The *Gazette de France*, published in Paris, in 1731, was the first French newspaper. It was issued daily after May 1, 1792. England, however, had a daily ninety years before this, for the *Daily Courant* was started in 1702. A paper, called the *St. Petersburg Gazette*, was started in Russia in the following year.

At present the European papers that are over a hundred years old are as follows: *Frankfort Gazette*, established 1615; *Leipsic Gazette*, 1660; *London Gazette*, 1665; *Stamford Mercury*, 1695; *Edinburgh Courant*, 1705; *Rostork Gazette*, 1710; *Newcastle Courant*, 1711; *Leeds Mercury*, 1718; *Berlin Gazette*, 1722; *Leister Journal*, 1752; *Dublin Freeman's Journal*, 1755, and *London Times*, 1785.

The first newspaper in this country was published in Boston, in 1690, by Benjamin Harris. It was a monthly sheet, called *Publick Occurrences, Foreign and Domestick*. It lived but twenty-four hours, as the government suppressed it after the first edition. The first permanent newspaper was its successor, the *Boston News Letter*, published in 1704.

The first political paper started in this country was the *Journal*, of this city, published in 1733. In 1744 the *Advertiser*, of Philadelphia, the first daily, made its appearance. The *Recorder*, of Chillicothe, Ohio, published in 1814, was the first religious paper, and the *American Farmer*, of Baltimore, started in 1818, the first agricultural paper. It was in 1822 that the *Price Current*, of New Orleans, the first commercial paper, made its appearance. New York claims the honor of publishing the first penny paper. This was the *Morning Post*, started in 1833. The *New York Herald*, started in 1835, has the honor of being the first independent paper in this country.

The first illustrated paper, the *Atlas*, was published in Boston in 1853, and the first religious daily, the *Witness*, in this city in 1870. The pioneer of the illustrated religious press is the *Christian Weekly*, of this city, organized in 1871. The *Republican*, of St. Louis, Missouri, which was started in 1808, was the first newspaper west of the Mississippi river; the *Graphic*, of this city, is the first illustrated daily of the world; it was established in 1873.

The papers in this country over a hundred years old are the *Gazette*, of Annapolis, Md., established in 1745; *Gazette*, of Portsmouth, N. H., 1756; the *Mercury*, Newport, R. I., 1758; *Courant*, Hartford, Conn., 1764; *Journal*, New Haven, Conn., 1767; *Gazette*, Salem, Mass., 1768; *Spy*, Worcester, Mass., 1770, and the *American*, Baltimore, Md., 1773.—*New York Telegram.*

BEATS THE RECORD.

"Type often refuses to print what a fellow wants it to," says the editor of the *Cleveland Press*, but the other day the *Press* type beat the record. Clothier Steinfeld desired one of his many advertisements to begin:

HELLO! IS THIS THE FAMOUS CLOTHIER?

What the type stated was:

HELL! IS THIS THE FAMOUS CLOTHIER?

We hasten to assure clothier Steinfeld's many friends that the blasphemy is not his, but the type's.

MANUFACTURERS OF

Folding and Pasting Machines

3737 FILBERT STREET,

PHILADELPHIA, PA.

OUR NEW PAMPHLET and BOOK FOLDING MACHINE (patents applied for) is the *cheapest* Folder in the market, and is the *most accurate* one ever made. It folds to register, making 1, 2, 3 or 4 folds, thus producing sections

of 4, 8, 16 or 32 pages. It occupies less room than any other folding machine, and we do not hesitate to claim that its work is unrivaled. With one operator the 16-page folder is guaranteed to fold from 1,200 to 1,600 sheets per hour, and the 32-page folder from 1,000 to 1,500 sheets in the same time.

THESE MACHINES WERE INTRODUCED TWO YEARS AGO, AND ALL OF THEM HAVE GIVEN SATISFACTION.

Our PASTING MACHINES paste the sheets before they leave the table, and the operator can see that every sheet is thoroughly pasted before it is folded.

All machines sold on 30 days' trial, and guaranteed to do all that is claimed for them. Write for circulars, prices and all information to-----

THE ONLY PRACTICAL

Stereotype Outfit

IMPROVED AND MANUFACTURED BY

M. J. HUGHES,

10 SPRUCE ST. + + + NEW YORK.

One among Hundreds of Testimonials:

To WHOM IT MAY CONCERN: This is to certify that we have one of Hughes' Stereotype Outfits, and the same has been in our office and in constant use for five years, and is giving and has always given entire satisfaction.

Yours truly,
O. A. CARLETON & CO.,
Book, Job, Show and Commercial Work of every description,
Providence, R. I.

THE above testimonial is only one among hundreds elsewhere given. Like large numbers of others, both large and small concerns, it has used for years my quick and superior patented devices of casting and blocking, at one and the same operation, by the use of wooden cores, bars, strips and filling of a non-conducting nature. Also, with the same outfit, all other results known to stereotyping is secured by its simple and practical construction. It is an established fact that it is the only simple, practical Stereotype outfit for the printing office in general, and that if not used successfully it is certainly the fault of the operator.

It is a great mistake on the part of the purchaser to defer purchasing until the outfit is actually needed for some special purpose. "Procrastination is the thief of time."

It is undoubtedly the best thing, taking into consideration the small amount invested, ever put in a printing office.

Send for descriptive circulars and hundreds of indorsements.

M. J. HUGHES, INVENTOR AND MANUFACTURER, 10 Spruce St., New York.

REBUILT PRINTERS' MACHINERY

ON A NEW BASIS.

HAVING neither machinist, workshop nor second-hand warerooms, and dealing only in genuine machinery of standard makers, I send second-hand machines to the shops of their own manufacturers for rebuilding, or to the best available expert on each machine, whose name in every case will be given, whose guarantee goes with it, and on whose premises it is open to the examination of purchasers or of their expert. Some years of dealing on this basis have shown that no other can be more satisfactory to customers or to myself.

The Six Best Machines.

THE SMYTH BOOK-SEWING MACHINE

Sews with Thread more Books than Five or Six Girls, and gives a Handsomer, Stronger and more Flexible and Durable Book.

THE ELLIOTT THREAD-STITCHING MACHINE

Stitches with Cotton, Linen or Silk Thread more Pamphlets than Five Girls, and much better. Ties an Absolutely Square, Hard Knot.

THE CHAMBERS FOLDING MACHINE

The only Folder adapted to Fine Work. Folds either from Points or Gauges, with Four Times the Speed of Hand, and with Greater Accuracy.

THE ACME PAPER-CUTTING MACHINE

The original and only Simple, Automatic, Self-Clamping Cutter made. Does Twice as much and Saves all the Hard Work of Cutting Paper. Has more Improvements in Saving Labor, Time and Space than any Cutter extant.

THE GIANT SIGNATURE PRESS

Compresses Signatures for tying up. Saves cost of Smasher and does Better Work. Preserves the Life of the Paper and Stability of the Bound Book.

THE IMPROVED SEMPLE BOOK-TRIMMER

Is the original and most perfect Book Trimmer. Trims Printed Books or Blank Books with accuracy and unexcelled speed. Built from new patterns with increased capacity and made more durable.

PARTS AND SUPPLIES.

These machines are sold subject to trial, and guaranteed by their respective manufacturers, in addition to the guarantee of the agents. These six machines stand on their merits as being each the most successful one in its class. No first-class Bindery can afford to do without them, or to accept unsatisfactory substitutes.

TRADE NEWS.

THE Recorder Printing Company, Brockville, Ontario, has been dissolved.

E. UPTON & SON, publishers of the *Times and Sentinel*, Bath, Maine, have sold out.

THE Hocking Valley Printing and Publishing Company, Athens, Ohio, has sold out.

GOLDIE BROTHERS & MORGAN, printers, Sioux City, Iowa, have dissolved partnership.

FERGUSON & HEAD, printers, Jefferson, Iowa, have been succeeded by Ferguson & Benerly.

THE Outlook Publishing Company has been chartered to publish a daily paper at Richmond, Virginia.

THORPE & GODFREY, state printers and publishers of the *Republican*, Lansing, Michigan, have dissolved partnership.

J. T. MITCHELL & Co., printers, Springfield, Ohio, have dissolved partnership. D. H. Mitchell succeeds to the business.

THE Lincoln Pulp Mill, at St. Catharines, Ontario, was, on January 2, destroyed by fire. Loss, \$30,000; insurance, \$9,500.

P. A. NOYES & Co., manufacturers of printers' and bookbinders' machinery, Mystic River, Connecticut, have dissolved partnership.

OUR contemporary, the *Export Journal*, of Leipsic, has been awarded a silver medal at the International Competition in Brussels.

STANLEY & USHER, printers, Boston, Massachusetts, have dissolved partnership by mutual consent. The business will be continued by Mr. Usher.

THE Examiner Publishing Company (capital stock \$5,000) has been chartered by J. A. L. Wolf, R. T. Seay, R. W. Carpenter and others, at McKinney, Texas.

THE Saratoga (N. Y.) *Union* has been sold by Hon. James L. Scott, receiver. It was bid in at \$9,500 by Mr. C. W. Pierson, who immediately appointed Col. B. F. Judson temporary manager.

THE printing establishment of Owen Brothers, Santa Cruz, California, was burned out on the morning of December 11, but the firm announce that they will be in a condition to resume business in a very short time.

THE printing establishment of Rand & Avery, Boston, was sold at auction on Tuesday, January 8. It is understood that a city capitalist was the party chiefly interested in the purchase, and that Mr. Lawson will again manage the affairs of the great concern.

THE United States Fiber Company have recorded articles of incorporation in the county clerk's office, at Newark, New Jersey. The capital stock is \$600,000, and the incorporators are Amos B. Pierce and Martin C. Noble, of Newark, and John G. Green, of New York.

THE partnership heretofore existing between J. E. Hamilton and William B. Baker, Two Rivers, Wisconsin, manufacturers of wood type, borders, etc., has been dissolved by mutual consent. The business will be continued by "the Hamilton Manufacturing Co.," who will collect all accounts due the late firm, and pay their liabilities.

WALTER SCOTT & Co., Plainfield, New Jersey, report that their web perfecting machines, for illustrated periodicals and fine bookwork, are meeting with great success, and have several orders for them. They have lately succeeded in making a machine which produces electroplates on the curve, in equally as good shape as usually done on a flat bed. This overcomes the last difficulty in printing from cylinders, and is an achievement of which this company may well be proud.

THE value of trade exhibitions in centers where members of the branch regularly come together is being better recognized every day. Our friends of the paper printing and stationery branches are invited by the Middle German Paper Union to send contributions to the trade exhibitions which are now held in Leipsic at Easter and Michaelmas, on the occasion of the celebrated Leipsic fairs. As Leipsic is the recognized center of the continental book and paper trades, there can be no better opportunity for bringing our productions immediately before the eyes of our continental friends. Mr. G. Hedeler, of Leipsic, who is a member of the Exhibition Committee of the union, has undertaken to furnish information and assistance to intending exhibitors from this country.

PERSONAL.

WE acknowledge calls from the following gentlemen during the past month: William G. Welch, of Woodward Bank Note Company, St. Louis; John H. Prack, Woodward & Tiernan Printing Company, St. Louis; W. M. Patton, of the *Paper and Press* and *Art Stationer*, Philadelphia; John Rychen, president of the Queen City Ink Works, Cincinnati; L. A. McLean, president Illinois Press Association, Urbana; L. A. Tipton, *Gazette*, Girard, Ill.; W. H. Hinrichsen, *Herald*, Quincy, Ill.; Charles E. Beaumont, with L. P. Allen, Clinton, Iowa; John H. Onstoll, *Democrat*, Petersburg, Ill.; Eugene B. Fletcher, secretary Illinois Press Association, Morris; H. J. Pickering, treasurer and manager of the Omaha Typefoundry, Omaha, Neb.; W. D. Peak, Elgin, Ill.; Lewis Theyson, representing F. H. Levy & Co., printing ink manufacturers, New York.

SPECIMENS RECEIVED.

H. O. SHEPARD & Co., Chicago. Illustrated annual for 1889, consisting of twenty pages. It is written in a humorously attractive style, and shows the gradual growth of this now immense establishment from its unpretentious commencement in August, 1880, to the present time. Its handsome engraved cover page is in blue and brown. The illustrations, some thirty in number, including a view of the business office, composing and press rooms, etc., are in blue-black, and the body in red-brown, and are surrounded with a beautiful border in lilac, the effect of which is pleasing in the extreme. It is printed on super calendered book paper, and, taken altogether, is a work of art of which the publishers have every reason to feel proud.

WANNOP & FORBUSH, Los Angeles, California. Two exceedingly neat and attractive business cards; Volkszeitung job office, St. Paul, Minn., concert card, in German, in red, blue, green and gold, an exceedingly creditable piece of work; James N. Peers, Collinsville, Madison county, Ill., business card in black, green, red and gold; H. Buckle, Sons & Co., Winnipeg, Man., handsome hand-made bristol folder, the composition and presswork of which are an honor to the firm; Turck, Baker & Peyton, Chicago, neat business circular in colors; Johns, Bumback & Co., Cincinnati, circular in colors, the design of which is original, and like every job we have seen from this office, well printed; the McKeesport (Pa.) *Times* New Year's address, the composition, designing and arranging of colors, being the work of G. M. Cobb, and the presswork by Joseph Jackson. It is a gem.

CALENDARS.—From L. Barta & Co., 54 Pearl street, Boston, neatly arranged memoranda calendar; F. H. Hesse, 314 North Third street, St. Louis; Bingham & Runge, 74 Frankfort street, Cleveland, Ohio; pocket calendar, D. Lothrop Company, Boston; Chicago, St. Paul & Kansas City Railway; the Press Company, 18 Beaver street, Albany, N. Y.; the Curtis Printing Company, St. Paul, Minn.; Wild & Stevens, Boston, Mass.; Henry B. Myers, New Orleans, La.; Follansbee, Tyler & Co., Chicago; Bingham, Daley & O'Hara, 49-51 Rose street, N. Y.; Parsons Paper Company, Holyoke, Mass.

A HANDSOME engraved folder comes to us from the Great Western Typefoundry, Kansas City, announcing removal to their handsome new building erected especially for them. The design of the folder tells the tale of removal.

TRANSFER PRESSES.

There are few people who know what a transfer press is, for there are very few in use, the treasury department and the bank note establishments being the only ones that have use for them. It is a peculiarly constructed press, with a very powerful leverage of many tons pressure, and is used for transferring or duplicating steel plates. They have a tremendous power, and only a small steel roll about four inches in diameter, and six inches long is used in the press. The manner of transferring or duplicating a bank note plate is as follows:

First a hardened or tempered engraved plate is placed in the press on a solid foundation or bed plate, and directly underneath the soft steel roll aforesaid, then with a powerful leverage a pumping process occurs by which the roll picks up or takes the impression from the plate on to the roll. It has to be a very careful process to keep from doubling. Then the roll is hardened and any number of impressions exactly alike

in every particular can be transferred from the hardened roll to a large, soft plate. Six impressions or duplicate bank notes are usually put on one plate, the object being to print six of them at a time as readily as they could one. Another and principal reason is, if the original plate is damaged or worn out, they have the roll to duplicate any number. These plates are printed from the same as copperplates.

JOHN RYAN, TYPEFOUNDER.

On the 8th day of May of the present year (1888), the death was announced of Mr. John Ryan, president of the John Ryan Company, typefounders, Baltimore, Maryland.

Mr. Ryan was born in Baltimore county, on May 6, 1820. In early life he went to New York City, where he learned his trade by the side of the younger Conners, Farmer, the Smiths, Bruce and other men who have since become well known over the country in that occupation. The trade was in its youth when Mr. Ryan learned it, and he belonged to the second generation of men who were engaged in it. He remained for several years in New York after attaining his majority, and about 1848 he came to Baltimore to take employment in the Lucas typefoundry. In 1853 he went into business for himself, having his foundry located first on Holliday street. The business was afterward removed to Baltimore street, and about twenty years ago to its present location, in the Consolidated Building, at the corner of South and German streets. The deceased stood very high as a business man. He was thorough in all that he did, and educated many young men in Baltimore in the typefounder's business. He was very conscientious in all his transactions, and a very pleasant, unassuming man in his manner.

For many years Mr. Ryan was vice-president of the Typefounders' Association of the United States, of which Mr. Thomas MacKellar, of Philadelphia, is president. Mr. Ryan was held in very high esteem by the late Mr. James Conner, with whom he was on very intimate terms. A widow and three daughters survive him.—*Typographic Advertiser*.

A NEW ORLEANS paper tells of a printer who, when his fellow workmen went out to drink beer during the working hours, put in the bank the exact amount which he would have spent if he had gone out to drink. He thus kept his resolution for five years. He then examined his bank account and found he had on deposit \$521.86. In the five years he had not lost a day from ill health. Three out of five of his fellow workmen had in the meantime become drunkards, were worthless, and were discharged.

VERMILION IN LETTERPRESS PRINTING.

Vermilion is one of the finest reds. It is in great favor with color-printers on account of its bright and lively tone. Well ground, its use is easy, provided the surface on which it is printed be without influence over it. But vermilion is a sulphuret of mercury, easily decomposed if brought into prolonged contact with certain metals. When liberated, the mercury combines with the metal, with which the sulphur forms more or less colored sulphurets.

Vermilion is not generally used in the pure state, but in combination with another color, in order to insure greater brightness. This, however, is a mistake, for the brightness soon gives place to a dull and cloudy red. The printer immediately inveighs against the ink-maker, when he should in reality blame his own want of foresight.

The metal most easily attacked by vermilion is copper, the resulting sulphuret being black, whence the absolute necessity of refraining from using vermilion with electros, unless these be previously coated with a deposit of steel or nickel.

Neither nickel nor iron have any affinity for mercury, and consequently exert no influence over vermilion. As a rule, it would be well to coat with steel or nickel all copper or zinc plates to be printed in vermilion.

Vermilion is met with in the natural state. It is the cinnabar found at Ydria, Amalden, and above all at Dialicetto, a small and little-known district of Tuscany. But cinnabar needs purifying, and makers generally prefer manufacturing sulphuret of mercury.

Vermilion is often adulterated with minium, red oxide of iron, and ochres. The fraud is, however, easy of detection, as pure sulphuret of mercury sublimates without leaving a deposit.

What has been said of the use of vermilion in typography applies equally to the colors of which it is the base, crimson and scarlet shades, for instance. To avoid the drawbacks attending the use of vermilion, recourse should be had to special colors without mercurial base. These may generally be obtained of good ink-makers, and advantageously substituted for vermilion, with which they are nearly identical.—*Printing Times and Lithographer*.

THE "Printer's Order Book and Record of Cost," recently issued and copyrighted by Mr. H. G. Bishop, simplifies the rules in regard to figuring on the cost of work in such a manner that no excuse is afforded for the continuance of the "guesser." It is both systematic and explanatory, and is really an indispensable in every well-conducted office. Price, 5s. For sale by Farmer, Little & Co., New York and Chicago; Lord & Thomas, Chicago, or from H. G. Bishop, care of INLAND PRINTER.

THE EDITOR'S LIFE.

A young man writes from one of the rural villages of Tennessee to the *Louisville Courier-Journal*: "I have been teaching school ever since I quit school about a year ago, but I do not like it. It is time I had chosen a profession, and I think I would rather be an editor than anything else, for I like ease and comfort and plenty of money, and do not like to work. To be an editor, to sit in an elegant sanctum, with nothing to do but write when I feel like it, to have plenty of money and to go where and when I please, free of cost, and lead the editor's quiet life of ease, without care or trouble of any sort, is the height of my ambition. My friends think I ought to study law or medicine, or keep on teaching; but to be a lawyer or doctor requires too much study, and too much brains to start with, and teaching is too much work. Under these circumstances, would you not advise me to become an editor?"

We certainly would; your ideas of the life of an editor and of his surroundings and freedom from care and toil are singularly accurate. An editor is the happiest being on earth. He has little or nothing to do, and his pay is all that heart could wish. His sanctum, with its Persian rugs and Turkey carpets, its costly rosewood furniture, its magnificent mirrors, its beautiful pictures, its complete library of splendidly bound books, its buffet stocked with the finest wines, liquors and cigars which cost but a puff or two, its silver bells to summon an attendant whenever a julep or a cocktail is wanted, and, in short, with everything that human ingenuity can devise for comfort and pleasure, is a perfect little paradise, where he sits or lounges and reigns a young lord—with the world of fashion and pleasure at his feet. And then anybody can be an editor—no study, no brains, no preparation, nothing but a little money to start with, and once started the money pours in upon you in a steady stream, and the chief effort of your life is to spend it. As for the labor of editing a newspaper, that is mere moonshine. A mere glance at the columns of a newspaper is enough to convince you that it requires no labor to edit it and less brains. It is certainly a glorious life, that of an editor, a life of luxurious ease and elegant leisure—a life for the gods, filled like that of the young lover in his first sweet dream of requited love, with flutes and roseleaves and moonbeams,

While not a wave of trouble rolls
Across his peaceful breast;

and that all men are not editors is one of the strangest things beneath the stars.

THERE are in the United States 1,311 daily newspapers, 11,605 non-dailies, ranging from tri-weeklies to semi-monthlies, and 1,790 monthlies, bi-monthlies and quarterlies.

WILLIAM M. MEREDITH,

Whose portrait is herewith presented, was born at Centerville, Indiana, April 11, 1835, and began to set type as soon as he had learned to read. During his boyhood he worked in his father's office (the *Wayne county Record*), afterward under instructions in the *Richmond Paladium* office, and finished his apprenticeship with John D. Defrees in the *Indianapolis Journal* office, Mr. Defrees at that time being state printer for Indiana. Mr. Meredith joined *Indianapolis Typographical Union, No. 1*, in 1855, and represented it as a delegate to the National Union in the sessions of 1860 at Nashville and 1865 at Philadelphia. At the beginning of the rebellion he enlisted and marched into Camp Morton at Indianapolis with the old City Grays of that city, which

entered General Lew Wallace's famous regiment, the Eleventh Indiana. One day, after marching into camp, Meredith was appointed by Governor Morton assistant to the commissary-general of Indiana, and in that position superintended the issuing of rations to all the Indiana troops during the first six months of the war, and assisted in the instruction of regimental quartermasters until July, 1862, when he was appointed sergeant-major of the Eleventh Infantry. Before he could report for duty, however, he received from Governor Morton a commission as second lieutenant, with authority to recruit a company. In a few days he had enlisted a full company, many of his recruits being representatives of the "art preservative," was commissioned first lieutenant, and when his command was mustered in as Company E of the Seventieth Indiana Volunteers he was unanimously elected captain, and commissioned the same day that Benjamin Harrison received his commission as colonel of the regiment. Unlike other regiments the companies of the Seventieth were lettered through from

right to left, so the fifth or right center company, which was the color-guard of the regiment, was E company. The commissions were dated August 12, 1862, and the same day the regiment was ordered to the field. Captain Meredith served meritoriously with his command until August, 1864, when he was honorably discharged on account of disability resulting from injuries received in the service. Returning to his home in Indianapolis, as soon as he had partially recovered his health the governor commissioned him for important service in the sanitary commission, in which service he continued until the end of the war.

After the war, Captain Meredith, before settling down to "business," worked for a time in New York and Philadelphia, "subbing" on the dailies, and returned to Indianapolis, where he was employed in the *Journal* book and job office until 1869, when he assumed the foremanship of the *Daily Journal* newspaper, which position he filled creditably, for a time running both a morning and evening edition, until 1872, when he was induced to remove to St. Louis and take the fore-

manship of the *St. Louis Democrat*. In June, 1875, upon the consolidation of the *Globe* and *Democrat*, Mr. Meredith came to Chicago and accepted service with the Western Bank Note and Engraving Company—the largest establishment of the kind in the West—as superintendent of the steelplate printing department. He has been active during his manhood in support and maintenance of the principles and objects of the typographical union, and of organized labor generally; was a charter member at the reorganization of Indianapolis Union, No. 1, and since his residence in Chicago has taken an active personal interest in the success and prosperity of Chicago Typographical Union.

Captain Meredith is a prominent candidate for the position of public printer, and has received the indorsement of Chicago, Indianapolis, Denver and Wichita Typographical Unions; also of the Press Club, and Pressmen's and Stereotypers' Unions of Chicago. Should he be the choice of the incoming administration for this responsible position his selection will give the utmost satisfaction to the craft at large, as his qualifications admit of no denial. In politics he has always been a staunch republican.

CHICAGO NOTES.

THE Illinois Paper Company are now established in their new and commodious quarters, 181 Monroe street.

THE Hanscom Printing Company, of this city, has been changed to that of William Johnston Printing Company.

D. R. CAMERON, W. A. Amberg and J. H. Amberg have incorporated the Amberg File and Index Company, at Chicago, with a capital stock of \$100,000.

H. L. GOODALL & Co., publishers of the *Drover's Journal*, Stock Yards, have recently added to their establishment a two-revolution Scott cylinder press.

THE Chicago Paper Manufacturing Company has been incorporated with a capital stock of \$100,000. The incorporators are: William F. Smith, F. Gerritt Yates and Charles C. Yates.

WE are gratified to learn that Mr. George D. Forest, of the Chicago Paper Company, who has been confined to his house for five weeks, with typhoid fever, is again at his desk, prepared to see his many friends, and attend to the wants of the patrons of the house.

CONFESSIONS of judgment were entered in the Superior Court, December 31, against the John B. Jeffery Company, Chicago, in favor of the First National Bank for \$25,487 and Burr Robbins for \$12,222. A creditor's bill was filed and George E. Lloyd was appointed receiver.

AT its last regular meeting, Chicago Pressmen's Union, No. 3, adopted a new constitution, which changed the name of the organization to the "Chicago Printing Pressmen's Union, No. 3." A resolution was also passed unanimously indorsing the candidacy of Captain William M. Meredith for the position of public printer. At the next meeting the nomination of officers for the ensuing year will be made.

IT is rumored in New York that Surgeon-General Hamilton will resign his office in order to accept the editorship of the *Journal* of the American Medical Association, which is published in this city. Being anxious to avert this action the officers in the service have signed a petition urging him to remain in his present position, especially now that congress has appropriated \$500,000 to equip national quarantine stations.

PRESENTATION.—Mr. John Allen, for eighteen years connected with the J. M. W. Jones Printing Company, who recently severed his business connection therewith, to form a partnership with Mr. Chas. Stromberg, formerly superintendent of the same establishment, was, on leaving, presented with a magnificent silver set by the employes of the ticket-room, of which he had charge. The presentation address was made by Mr. John Stewart, his successor, who in fitting terms referred to the high estimation in which Mr. Allen was held by all who had been associated with him, and the courtesy and good will he had ever manifested to them, at the same time wishing him abundant success in his new field of labor. Mr. Allen responded in a feeling and felicitous manner, thanking the donors for the beautiful and substantial token of their regard, which he should ever cherish, and expressed the belief

that the same kindly feeling to which reference had been made would continue under the administration of Mr. Stewart. THE INLAND PRINTER joins in the expression of good will, and trusts that prosperity may attend the efforts of the new firm.

THE annual election for officers of the Chicago Press Club, held on Thursday, January 3, resulted as follows: President, James W. Scott, the *Herald*; first vice-president, Frank S. Blain, the *Inter Ocean*; second vice-president, Stanley Waterloo, the *Mail*; third vice-president, John E. Wilkie, the *Tribune*; recording secretary, Homer J. Carr, the *Tribune*; financial secretary, John B. Waldo, *Commercial Bulletin*; treasurer, George Schneider; librarian, William H. Freeman, the *Investigator*; directors, Charles Lederer, the *News*; Harry F. Boynton, *Inter Ocean*; Opie P. Read, the *Arkansaw Traveler*; Joseph Henderson, the *Times*; Eugene Wood, the *News*.

THE PAPER TRADE.—The Chicago correspondent of the *Paper Mill* says: "From statistics annually compiled here, the total sales of paper for 1888 aggregated \$28,750,000, an increase of 25 per cent over 1887. The sales of paper stock amounted to \$6,261,750, an increase of 15 per cent. The wholesale stationers sold \$6,600,000 worth of writing paper and blank books—about the same as in 1887. The increase in the sale of paper is most marked, and clearly demonstrates that Chicago is destined to become the great paper-distributing center of this country. We have one paper concern here whose sales now exceed that of any competitor east or west. All our dealers are financially healthy, and are cheerful over the future outlook of business."

SEVENTY of the women press workers of this city met at the Sherman House on Thursday evening, January 10. Of those present forty were regularly employed on daily and weekly newspapers, thirty-five in editorial positions. It was resolved to have permanent headquarters. An entertainment will be given in Central Music Hall next month in the joint interest of the Press Association and the Women's Protective Agency. The following officers were elected: President, Miss Mary Allen West; vice-presidents, Mrs. S. M. Moses, Mrs. R. C. Claghy, and Mrs. Louise Rockwood Wardner; recording secretary, Dr. Odellia Blinn; assistant recording secretary, Mrs. Mercy Thirds; corresponding secretary, Miss E. S. Bass; assistant corresponding secretary, Miss Emily A. Kellogg; treasurer, Mrs. Frances E. Owens.

THE Chicago Paper Trade Club, at a special meeting, adopted the following series of resolutions as a tribute to the memory of Oliver M. Butler:

WHEREAS, It has pleased the Great Ruler of the Universe to call home our esteemed fellow-citizen, friend, and co-worker in the paper industry of the West, Oliver M. Butler; and

WHEREAS, In his death a kind father, brother, and the pioneer paper manufacturer of Illinois has been removed from us; therefore, be it

Resolved, That we shall ever revere his memory, and think of him as one who lent honor and trustworthiness to a noble industry.

Resolved, That we tender our warmest sympathy to his children, brother and sisters in this their hour of affliction.

Resolved, That a copy of these resolutions be placed on the minutes of the Chicago Paper Trade Club, and also that a copy be sent to the city dailies and trade journals for publication.

THE following are the resolutions adopted at a recent meeting of the Press Club of this city, relative to the candidacy of Captain W. M. Meredith for the position of public printer:

WHEREAS, Captain W. M. Meredith has been named in connection with appointment to the office of public printer of the United States, and

WHEREAS, Captain Meredith has long been a valued and efficient member of the Press Club of Chicago in good and regular standing, and is believed by his fellow members to be, both as a practical printer of extended experience and as a gentleman of character, integrity and other sterling qualities, well fitted to fill the office named, and

WHEREAS, The Press Club of Chicago would feel honored in having one of its members appointed to an office of such importance and trust, be it therefore

Resolved, That the Press Club of Chicago expresses its hope that the appointment of Captain Meredith to the office of public printer will be made by President Harrison.

Resolved, That a copy of these resolutions, signed by the president and secretary of the club, be sent to Senators Cullom and Farwell, and to Congressmen Taylor, Lawler, Mason and Adams.

AN OLD PRINTER GONE.—William De Vere Hunt died on Monday, December 31, 1888, and was buried at Rosehill, January 3, 1889. Mr. Hunt was widely known and esteemed by a great number of printers in

Chicago, New Orleans and Canada. He was a man of fine character, unassuming, and of a bright and cheerful temperament. An excellent workman, well read, and devoted to his family, he was also an enthusiastic lover of music. Mr. Hunt came of a family of high character, and well-known in the North of Ireland and the southern counties of England. His father was an officer in the British army, and served with distinction on foreign service. The funeral services were of a quiet nature, attended by many of his oldest friends—the office for the burial of the dead of the Episcopal Church being read by the Rev. J. H. Knowles, himself a bookbinder in his earlier days, and a firm friend of printers and workmen generally. The pallbearers were Messrs. Gillespie, Simpson, Hewett, Thompson, Prince and Parker, five of whom were printers, and long acquainted with the deceased.

PAPER TRADE ITEMS.

THE Niles (Mich.) Paper Company are building a large addition to their mills.

THE Powers' Paper Company, of Springfield, Massachusetts, removed to Holyoke, January 1.

THE National Paper Roll Company has been organized at Cincinnati with \$50,000 capital.

A PHILADELPHIA paper-mill man contemplates the removal of his concern to Lynchburg, Virginia.

THERE are wood pulp mills in twenty-four different states. The principal woods used are poplar, spruce, cottonwood and fir.

THE New York *Times* has made a contract with the Turner Falls Paper Company for its paper supply for 1889. The price is said to be 4½ cents.

THE people of Alfred, Maine, desire either a pulp or a paper mill to locate there. William Emery is chairman of a committee in charge of this project.

THE Smith Paper Company's Valley Mill, at Lenox Furnace, Massachusetts, recently ran off 121,440 feet of paper from its small machine without a break.

JOHN MASHIMA, of Tokio, Japan, has recently made a tour of the United States, in the interests of a Japanese paper mill, examining the various processes and machinery employed in the United States.

RICE, KENDALL & Co., Boston, have been awarded the contract for supplying N. L. Munro, of New York, with paper for the coming year. The contract is said to be for 75,000 reams, but the price is not stated.

AFTER a long struggle between competitors, the contract for supplying the Philadelphia *Press* with paper has been at last awarded. The Rochester Paper Company is the successful bidder, and the price is reported at 3.65 cents.

A MEETING of the leading manufacturers of wrapping paper and bags was recently held at Indianapolis, Indiana, to consider the matter of forming a trust, and it was decided to call a general meeting of those interested some time this month.

A FRENCHMAN has taken out a patent for sizing paper on one side only. The paper is made on a double cylinder machine. In the pulp sheets of one cylinder, unsized pulp is put in, and in the other cylinder, sized pulp, and the two paper webs meet on the common felt.

THE Lucknow Paper Mill, of Bridgeton, New Jersey, Walter Morehouse, proprietor, is reported financially embarrassed. The creditors, it is said, have allowed an extension of time, which will probably allow the mill to continue business. Unfortunate sales are assigned as the cause of the trouble.

ON January 22, all proposals submitted for the supply of paper for the public printer will be opened at Washington. The book printing paper, of all grades, to be figured on, amounts to nearly 100,000 reams. The writing paper required, of all sizes and grades, will be some 35,000 reams; plate paper, 75,000 lbs.; map paper, 75,000 lbs.; wood cut paper, 50,000 lbs.; coated lithographic paper, 50,000; cover paper 1,200 reams; manila, trimmed, 500 reams; tissue, 1,000 reams; artificial parchment, 10,000 lbs., and cardboard, of all qualities, 2,215,000 sheets.—*Paper Mill.*

NEWSPAPER GOSSIP.

THE Olean (N. Y.) *Times* has become an evening paper.

THE *Graphic* is the name of Denver's new Sunday paper.

THE Aurora (Ill.) *Daily Advertiser* has suspended publication.

THE Addison (Mich.) *Courier* has recently placed a new press in its office.

THE *Call* is the name of a new Sunday paper recently started at Pittsfield, Massachusetts.

N. A. WATSON has commenced the publication of the *Evening Journal*, at Bristol, Pennsylvania.

A NEW paper called the *Stage* is the latest venture in theatrical journals, published in Philadelphia.

COLONEL JOHN A. COCKERILL, of the *World*, has been re-elected president of the New York Press Club.

THE Pike's Peak *Herald*, published at Manitou, Colorado, has suspended publication until next summer.

AN editorial association composed of the editors of Humboldt and Pocahontas counties, Iowa, is talked about.

THE Detroit *Evening News* has offered \$500 for the apprehension of the murderer of Policeman Thayer, of that city.

A DAILY paper has made its appearance at Brazil, Indiana, conducted by Robert Henkle, formerly of Crawfordsville.

THE Wilkesbarre (Penn.) *Telephone* is the first newspaper in that city to be printed from a press run by an electric motor.

A NEW morning paper is to be established at Peoria, Illinois, by Alexander J. Jones, ex-United States Consul to Columbia.

MR. H. L. TAYLOR, the well-known Illinois publisher, has returned to the control of the Wenona *Index*, after a year's absence.

A. A. HOLBROOK has purchased the *Valley Times* from B. F. Dilly, and will continue its publication at Kingston, Pennsylvania.

THE Pueblo (Col.) *Star* has recently been started by Colonel John C. Moore, formerly managing editor of the Kansas City *Times*.

J. H. C. APPLGATE has sold his interest in the Bridgeton (N. J.) *Evening News* and *Dollar Weekly* to his son, David C. Applegate, for \$7,000.

THE *Lumberman's Journal* is a recently established, four-column quarto, published at Otsego Lake, Michigan, devoted to the interests of lumbermen.

JOVE is the title of a neatly printed comic (12-page) illustrated monthly, published at Brattleboro, Vermont. Published by Frank E. Housh & Co. Fifty cents per year.

THE editor of the Kenton (Ohio) *News* (prohibitionist) has received more onions on subscription than he can use this winter, and offers them for sale for 25 cents per bushel.

PROBATE JUDGE WICKERSHAM is suing the Tacoma (W. T.) *Ledger* for \$50,000, for the publication of charges of seduction and fraudulent land transactions against him.

THE *Welch Crescent*, published at Welch, Louisiana, is the name of a neatly printed, well gotten-up, five-column quarto. It is edited by L. S. Scott, and is republican in politics.

THE Albany *Morning Express*, the only republican morning paper in Albany, has been sold to William Barnes, Jr., a nephew of Thurlow Weed, and brother of Thurlow Weed Barnes.

THE *Epoch*, the New York weekly paper, is to have a new editor. Mr. Edmund Collins, who has until recently occupied the position, retiring to more productive fields of literary labor.

THE *Sugar Bowl and Farm Journal* is the name of an ably-conducted 16-page weekly, published at New Iberia, Louisiana, devoted to sugar, rice and fiber interests and general agriculture. \$3 per year.

THE *Deutscher Anzeiger*, of Freeport, Illinois, now in its thirty-sixth year, appeared in a new dress on the 1st of January, 1889. It is a ten-page all home print, making it the oldest and largest German paper published in northwest Illinois. It makes its own advertising rates, and adheres to them, an example which other publishers would

do well to follow. It is a well edited, well conducted sheet, and as a result its circulation is rapidly increasing.

THE Robinson (Ill.) *Argus* recently celebrated its quarter-centennial anniversary with a banquet to its business patrons and a few friends. Several appropriate speeches were made, and a good time had generally.

THE *Journal of Irrigation* is a seven-column folio, recently started at Las Animas, Colorado, devoted, as its name implies, to the irrigation, fertilization and cultivation of the vast plains and valleys of the great Northwest.

THE office of W. H. Miller, publisher of the Shelby (N. C.) *Aurora*, was recently burned to the ground, entailing a loss of \$4,000. Two weeks thereafter it was re-issued from a brand new office. This is what we call commendable enterprise.

THE January 1, 1889, issue of the Seattle (W. T.) *Post Intelligencer* is a nine-column sixteen-page closely printed journal, containing a valuable review of the resources and trade of that territory. It is one of the most creditable productions which has ever come to our table.

MCKINSEY & CARTY have succeeded the Times Publishing Company at Frederick, Indiana. This new firm have started a new evening paper, called the *Daily Times*, which is neat typographically and well edited. Folger McKinsey is editor and Alton B. Carty business manager.

ELECTRIC POWER is the name of a new thirty-six page monthly journal devoted to the interests of the electric railway, and of the transmission of power by electricity for industrial purposes. It is published by the Electric Power Publishing Company, 150 Broadway, New York. Price, \$3 per year.

THE Burlington (Vt.) *Free Press and Times* appeared on December 1 in a new dress furnished by Farmer, Little & Co., New York. It was printed on a new web press, constructed by the firm of Walter Scott & Co., Plainfield, New Jersey, capable of printing 12,000 copies per hour. It is twenty-one feet over all, eight feet wide, seven feet high, and weighs nineteen tons.

MRS. FRANK LESLIE, having tired of the business details of the large New York publishing house, whose affairs she has conducted since the death of her husband, has established the Frank Leslie Publishing Company, with a capital of \$1,000,000, and will start about the first of February on an overland trip across the continent to Southern California, accompanied by a corps of writers and artists. The partners are John W. Simpson, Philip G. Bartlett, John G. Foster and L. H. Cramer, but the amount of stock held by each, as well as the amount retained by Mrs. Leslie, is not made public.

THE Philadelphia *Sunday Republic*, which has been published continuously since 1867, has suspended. The last owner was J. Morris Harding. The *Republic* was originally started by four compositors, Hales, Dunkel, Keyser and Swain, who bought the type of the *Sunday Press* after the demise of that paper. The original firm continued until Mr. Dunkel became secretary of internal affairs of Pennsylvania, when he withdrew. In 1886 Mr. Keyser purchased his partner's interests, and in July, 1887, the journal became the property of Mr. Harding. J. R. Duntison has been its editor from its birth to its death.

OF INTEREST TO THE CRAFT.

H. T. OSBORNE, of Los Angeles, is a candidate for the office of public printer.

HON. JOHN NICHOLS, of Raleigh, North Carolina, has been indorsed by the typographical union of that city for the position of public printer.

WILLIAM S. WAUDBY, formerly a well-known employé in the government printing office, but recently connected with the bureau of labor, sailed for Europe a short time ago on official business.

THE contract for the department printing at Albany, New York, has been awarded to the Argus Company, by Secretary of State Cook and Comptroller Hemple. This is a victory for the union printers.

WHEN the will of the late Oliver Ditson was opened, it was found that he had made several bequests to charitable institutions. Among them was \$1,000 to the Franklin Typographical Society, of Boston.

WE acknowledge with thanks an invitation to attend a ball given by the Boston Typographical Union on Wednesday evening, January 23. Though unable to be present we appreciate the compliment all the same.

COLUMBIA (Washington) Union has secured quarters for its secretary on the third floor of the new building 425 Twelfth street northwest, as also a suitable room for the meetings of the committees of the union.

THE Boston union, at its last meeting, chose a committee to take charge of the abolition of the department system. The *Leader* says that every man in the *Post* chapel hopes to see the committee meet success that the system of "daylight robbery" may be abolished.

MR. WALTER W. BELL, ex-president of the International Typographical Union, and for many years foreman of the Philadelphia *Inquirer*, is now prominently identified with building association matters, and has an office in connection therewith at 914 South Broad street, Philadelphia.

THE following is a list of the officers of Typefounders' Union, No. 2, of San Francisco: President, John Quinn; vice-president, Charles Hukes; treasurer, George W. Dettner; secretary, George R. Faulkner; sergeant-at-arms, Ed. F. Condon. The address of the president and secretary is 405 and 407 Sansome street.

HERE is an order *verbatim*, as received from a printer (?) by a dealer in materials: "Send me 10 cents' worth of thin spaces for a six-column quarto paper." The order was filled without further light, and the party got what he wanted, too, for he supplemented it with an order for more. He wanted, and got, 6-to-pica leads, 13 ems pica long.

AT a meeting of the Boston Typefoundry Mutual Benefit Association, held Tuesday, January 1, the following officers were elected: President, Joseph F. King; vice-president, George A. Grant; secretary, John H. Eaton; visiting committee, Henry F. Pratt, George C. Creighton, Robert Huke. The association is in a flourishing condition, has paid out \$500 for sick and death benefits during the past year, and has \$1,000 in the treasury.

THE following resolutions, indorsing the candidacy of Captain William M. Meredith for the position of public printer, were unanimously adopted by Denver Typographical Union:

Resolved, That Denver Typographical Union, No. 49, join the many other sister unions, in indorsing the candidacy of Captain William M. Meredith, of Chicago, for the position of public printer.

Resolved, That we recognize in him all the qualifications necessary to conduct the affairs of our national printing establishment in a manner that will promote accurate and prompt service.

Resolved, That his standing among the printers of the nation for a period of thirty-five years deserves this recommendation from the printers of Colorado.

Resolved, That an engrossed copy of the foregoing be prepared, with the seal and proper signatures and forwarded to His Excellency, Benjamin Harrison, President-elect of the United States, earnestly praying for the favorable consideration of this our petition, for an honored citizen, a brave soldier, and a thorough printer.

THE Philadelphia Typographical Society held its annual election for officers on Saturday morning, January 5, at the hall 723 Chestnut street, Philadelphia, resulting in the annexed: President, Clifford Comly; vice-president, L. M. Meyer; treasurer, Nathan S. Hales; recording secretary, William F. Lacey; financial secretary, Jacob Semler; stewards, northern district, L. L. Rudduck, southern district, I. Walter Hastings; Beneficent Fund Committee, Eugene H. Munday, John W. Keating, William J. Adams, Laurence M. Meyer, Samuel Macmenz. After the election the members of the society were pleasantly entertained by an eloquent and interesting address from E. T. Plank, president of the International Typographical Union, who was introduced by James J. Daley, a well and favorably known Quaker City printer, followed by recitations, singing and other amusements. The evening was passed in an enjoyable manner by those present. The annual report of the treasurer showed the excellent work that had been performed during the past year in ameliorating the suffering condition of members and their families. The veteran, Harry Enochs, and a number of old-time minstrels—many of them former printers—had volunteered to be present and give a concert but, on account of the sickness of John Corcoran, the leader of the band, were unable to do so.

THE ILLINOIS PRESS ASSOCIATION.

The twenty-fourth annual meeting of the Illinois Press Association will be held at Danville, Illinois, Tuesday, Wednesday and Thursday, February 12, 13 and 14, 1889. The following is the programme, as arranged by the Executive Committee:

Tuesday Evening, February 12—7:30 o'clock.

Prayer.
Address of Welcome. L. A. McLean, President.
Response - - - - -
Appointment of Committees.

MEMORIAL SERVICE.

To the Memory of Mrs. C. B. Bostwick, of Mattoon,
By Mrs. Elizabeth Boynton Harbert, of Evanston.

Wednesday Morning, February 13—9 o'clock.

Executive Session.
Reports of Officers and Committees.

GENERAL TOPIC—"THE NEWSPAPER."

BUSINESS DEPARTMENT.

Advertising, - - - - - Thomas Rees, *State Register*, Springfield.
Soliciting and collecting, - - - - - Julius Schneider, *News*, Joliet.
Bookkeeping, - - - - - C. C. Marquis, *Pantagraph*, Bloomington.
Purchasing, - - - - - M. H. Peters, *Times*, Waukesa.
Schemes, - - - - - W. H. Henrichsen, *Herald*, Quincy.

Wednesday Evening—7:30 o'clock.

Address, - "The Republic of Mexico," Owen Scott, *Bulletin*, Bloomington.
Address, - - - - - Hon. M. W. Mathews, *Herald*, Urbana.

Thursday Morning, February 14—10 o'clock.

EDITORIAL.

Editorial Writing, - - - - - F. W. Havill, *Register*, Mt. Carmel.
Exchanges, - - - - - Richard Butler, *Public*, Clinton.
Markets, - - - - - C. M. Tinney, *Gazette*, Virginia.
Special Articles, - - - - - C. Boschenstein, *Intelligencer*, Edwardsville.
Local, - - - - - C. B. Turner, *Old Flag*, Pittsfield.

MECHANICAL.

The Printing Office - - - - - A. C. Cameron, *INLAND PRINTER*, Chicago.
Miscellaneous Business.
Election of Officers.
Reports of Committees.

Thursday Evening.

Banquet to be tendered by the Citizens of Danville.

DAVID M. PASCOE ACQUITTED.

THE CASE OF THE EX-SECRETARY-TREASURER OF THE INTERNATIONAL TYPOGRAPHICAL UNION TRIED AT PHILADELPHIA.

The case of David M. Pascoe, who had been charged with the embezzlement of \$2,200 while secretary-treasurer of the International Typographical Union of North America, was tried at Philadelphia on Wednesday, January 9. The allegations were that after a discrepancy in Pascoe's accounts had been unearthed he resigned. There was likewise a shortage of \$51 in his accounts of the Childs-Drexel Fund, but that deficiency was made good. Pascoe, when asked by Edward T. Plank, president of the union, to repay the \$2,200, stated that he was not indebted to the union on the outside more than \$1,000. He also asserted that he was unable to return the amount which he did not owe, and that he had received the sum which he was charged with receiving for the union. The custom of the union had been to fix the salary of the treasurer and secretary by resolution, and Pascoe stated that he had expected his salary would be increased to \$1,800 or \$2,200, and that the money had all been applied by him to the purposes of the union. These allegations about constituted the case.

Judge Gordon said that the only evidence against the defendant was the confession. No accounts were submitted to the jury, nor were experts examined to show how much he had collected. There was a contention as to his salary, and there was a rule of law that in all confessions the defendant must be given the benefit of any doubt that may arise from them, and under all the evidence he did not consider that his statements were admissions showing him to have been guilty of any criminal intent. Mr. Pascoe was thereupon acquitted without being required to go into a defense.

We direct the especial attention of our readers to the Book of Instruction in Metal Engraving for gold and silver marking, advertised in the present issue. The information and illustrations it contains are worth many times its cost. Send 50 cents to the Inland Printer Company and get a copy.

ITEMS OF INTEREST.

THE Pratt Institute, Brooklyn, New York, has among its pupils a number of boys who are being instructed in the typographic art.

In our November issue, in referring to the increase of capital stock of the "Porter Printing Co.," we inadvertently located it at Rock Island, instead of at Moline, Illinois.

PAGE cords are said to be much more durable if they are immersed for an hour in a solution of lime, dried and immersed in tannin, again dried, and finally saturated in oil.

T. C. CRAWFORD, the well-known newspaper correspondent, has sailed for Europe. He will make Paris his headquarters, and will send news letters to a syndicate of American newspapers.

QUITE a number of editors, after attending the National Editorial Association at San Antonio, Texas, made a flying trip to the City of Mexico, and were received with great honor and bounteous hospitality.

TO MAKE indelible pencils, take kaolin, 8 parts; finely powdered manganese dioxide, 2 parts; silver nitrate, 3 parts; mix and knead intimately with distilled water, 5 parts. Then dry the mass and inclose it in wood pencils.

THE employes of F. C. Nunemacher, the well-known printer of Louisville, presented him with an elegant silver water set, as a Christmas present. We are pleased to learn that the relationship existing between them are of the most pleasant character.

THE December *INLAND PRINTER* contained a specimen page of Grace script, but there was nothing on the page to designate by whom it was made. It is the production of Messrs. Barnhart Bros. & Spindler, and no doubt is meeting with the demand it merits.

AT Caledonia, one of the banana plantations has been named "Eschol" the reference being to the Old Testament; Numbers xiii. If this only leads some people to turn up their bibles, one end will be served.—*Belize (Honduras) Independent, December 6.*

WILSON'S *Photographic Magazine*, successor to the Philadelphia *Photographer*, published by Edward L. Wilson, 853 Broadway, New York, is beyond all question the best publication devoted to the interests of photography, which is published in this or any other country.

VALUABLE HINTS.—A single plate of perforated zinc about a foot square, suspended over a gas jet, is said to retain the noxious emanations from burning gas, which it is well known destroys the binding of books, tarnishes the gilding, and vitiates the atmosphere for breathing.

RECIPE for an elastic mucilage that, it is said, will not crackle: Twenty parts alcohol, one part salicylic acid, three parts soft soap, three parts glycerine, all to be shaken well together and then mixed with a mucilage made with ninety-three parts of clear gum-arabic and 180 parts of water.

THE following is a reliable recipe for making the so-called silver ink:

- White gum arabic..... 1 part.
- Water (distilled)..... 4 parts.
- Silicate of soda (solution)..... 1 part.

Triturate with the best silver bronze powder sufficient to give the solution the required brilliancy.—*American Lithographer.*

WE acknowledge, with many thanks, the receipt of an exquisite souvenir from the De Vinne Press, a tiny book of 96 pages, the sizes of which are 2¼ by 1½ inches. It is handsomely bound in embossed morocco, and contains a setting of humorous poetry in brilliant types, from the well-known foundry of Miller & Richard, of Edinburgh, Scotland. The preface—an interesting one, replete with valuable information—is from the pen of that model printer, Theo. L. De Vinne, Esq., and like every production which emanates from his establishment, this gem is executed in the highest style of the art.

TO MAKE stereotype casts or molds of plaster of paris from metal types, without being troubled with air bubbles, or picks, as they are sometimes called, use the finest and purest plaster of paris obtainable. When filling a mold, beat up the requisite quantity of cream quickly, and with care to avoid making it too thick. In pouring this in, use a good camel's-hair brush to displace air bubbles; a mere surface cover of this thin cream is all that is requisite. While doing this, have ready

the thick plaster, of the consistence of light syrup, and fill up the mold at once. In about twenty minutes open the mold; if the plaster is pure and has been properly mixed, if too much oil is not put on the type, and the brush is used properly, it will result in clear, sharp molds.

THE printer girls of Topeka, Kansas, have organized a club, to be known as "The Leslie Club," after Mrs. Frank Leslie, who is their model. In addition to the usual musical and literary features of the club, these girls will issue a monthly magazine to be called the *Printer Girl*, the only organ of the kind in the United States. The magazine will contain articles by the printer girls, sketches of their lives, and social and printing experiences. Each number will contain one or more portraits of girl compositors and writers.

WE acknowledge the receipt of a number of photographic views of the interior of the various departments of the printing establishment of F. C. Nunemacher, Louisville, Kentucky, a casual glance at which convinces us that cleanliness and order are there enforced, and that in such an office a sloven would be out of his element. They embrace views of a group of employés, the ticket and tariff departments, cylinder and job pressrooms, stock rooms and general and private offices. The composing room is 22 by 60 feet; the pressrooms 20 by 100; the ticket department 20 by 60; and the stock rooms 20 by 40 and 20 by 60, respectively. The employés average 38 in number, and if outward appearance is a criterion by which to judge, are an intelligent, contented lot of people.

DENVER TYPO. UNION ARRANGEMENT COMMITTEE

— FOR —

I. T. U. CONVENTION IN JUNE.

O. L. SMITH, Chairman. J. D. VAUGHAN, Secretary.
WM. H. MILBURN.
C. W. RHODES. J. W. HASTIE.

Address Secretary, 1516 Arapahoe Street, Denver, Col.

BUSINESS OUTLOOK.

Auburn, N. Y.—State of trade, good; prospects, good; composition on morning papers, 25 cents; evening, 16 cents; bookwork, 18 cents; job printers, per week, \$7 to \$12. Our latest democratic daily has "sung its last lay"—a fact appreciated by the other dailies.

Baltimore, Md.—State of trade, good; prospects, favorable; composition on morning papers, 45 cents; evening, 40 cents; bookwork, 45 cents; job printers, per week, \$16.20. Bookwork has improved during past month, and morning papers have been doing an excellent business. This seems to be the stopping place for all traveling printers, hence the town is continually crowded.

Bangor, Maine.—State of trade, good; prospects, fair; composition on morning papers, 25 cents; evening, 16½ cents; job printers, per week, \$9.50 to \$12. Evening composition done by females.

Bay City, Mich.—State of trade, good; prospects, fair; composition on morning papers, 30 cents; evening, 28 cents; bookwork, 28 cents; job printers, per week, \$12. At the annual election, on January 6, the following officers were elected: President, A. X. Grant (re-elected); vice-president, M. W. Campbell; financial and corresponding secretary, Melvin Hodgins (re-elected); recording secretary, Will H. Sheward, Jr.; treasurer, Geo. Callahan (re-elected); sergeant-at-arms, J. E. Saunders (re-elected); board of directors: M. P. Connelly, F. J. Wharton, Will F. O'Brien. Mr. W. A. Clark, late of Detroit, is now foremanizing on the *Tribune*, taking the place of Mr. Will H. Sheward, who is now mechanical superintendent of the *Evening Press* and morning *Tribune*.

Chicago.—State of trade, nothing to boast of; prospects, not very encouraging; composition on morning papers, 46 cents; evening, 41 cents; bookwork, 35 cents; job printers, per week, \$18. As stated, work is slack, and there are a great many idle printers in town.

Cincinnati, Ohio.—State of trade, fair; no prospects; composition on morning papers, 45 cents; evening, 41 cents; bookwork, 40 cents; job printers, per week, \$18. The *Evening Telegram* has bloomed forth into a 2-cent morning paper. Bookwork dull. Subbing on papers has improved since holidays.

Columbia, S. C.—State of trade, fair; prospects, not encouraging; composition on morning papers, 40 cents; evening, 40 cents; bookwork, \$15 per week; job printers, per week, \$18 to \$20.

Dayton, Ohio.—State of trade, fair; prospects, good; composition on morning papers, 35 cents; evening, 32 cents; bookwork, 33½ cents; job printers, per week, \$15 to \$18. Business fair, but no lack of idle printers.

Duluth, Minn.—State of trade, brisk; prospects, encouraging; composition on morning papers, 40 cents; evening, 35 cents; job printers, per week, \$17. The holiday trade has been very fair, and the local real estate activity promises to pull the printing business through the winter in good shape.

Halifax, N. S.—State of trade, fair; prospects, fair; composition on morning papers, 30 cents; evening, 25 cents; bookwork, per week, \$9; job printers, per week, \$9. The new paper hinted at last month has become an established fact. It is called the *Canadian Voice*, and is published in the interest of the third (or prohibition) party of Canada. They expect to have an office of their own soon. It is now printed in one of our job offices.

Hartford, Conn.—State of trade, brisk; prospects, very good; composition on morning papers, 40 cents; evening, 35 cents; bookwork, 35 cents; job printers, per week, \$15 to \$18. Work is very good now, and we all hope it will continue so, and there are enough men to do the work. The legislature convenes this month, and that alone generally makes work for the printer.

Kansas City, Mo.—State of trade, dull; prospects, better; composition on morning papers, 40 cents; evening, 35 cents; bookwork, 37½ cents; job printers, per week, \$17.

London, Ont.—State of trade, fair; prospects, poor; composition on morning papers, 28 cents; evening, 28 cents; bookwork, 28 cents; job printers, per week, \$9 to \$11. The city is burdened with idle men, thrown out by the demise of the *Speaker*, the second paper to fail within a few months. The bailiff is in possession, and the men are owed a total in wages of about \$200. Their chances of being paid even a portion are slim indeed.

Los Angeles, Cal.—State of trade, very dull; prospects, not at all encouraging; composition on morning papers, 50 cents; evening, 45 cents; bookwork, 45 cents; job printers, per week, \$20. All of the papers have issued handsome and elaborate New Year's editions, thus making work very good for a few weeks, but phalanxing is again in order, as the rush is now over.

Lynchburg, Va.—State of trade, good; prospects, fair; composition on morning papers, 30 cents; bookwork, 30 cents; job printers, per week, \$12. There is soon to be another paper started in this city, the plant having been purchased. Plenty of printers here to do all the work.

Manchester, N. H.—State of trade, good; prospects, encouraging; composition on morning papers, 30 cents; evening, 20 to 23 cents; bookwork, 25 cents; job printers, per week, \$10 to \$12. The third annual concert and ball of No. 152, held December 7, was a success, financially and otherwise.

Milwaukee, Wis.—State of trade, good; prospects, not so good; composition on morning papers, 40 cents; evening, 35 cents; bookwork, 35 cents; job printers, per week, \$14 to \$18. Several catalogues on hand at present that keep all busy, one big history of the G. A. R. that is very difficult, causing trouble; it should be paid for by the week, at least \$16.

Newark, N. J.—State of trade, poor; prospects, not very bright; composition on morning papers, 40 cents; evening, 36 cents; bookwork, 36 cents; week hands, \$17. The *Journal* recently laid off three men, and the *Press-Register* is setting the whole paper in brevier, thus dispensing with two or three men. The *Sunday Call* of the 6th instant was run off on their new Scott perfecting press, which proved a great success.

New Haven, Conn.—State of trade, fair; prospects, encouraging; composition on morning papers, 40 cents; evening, 35 cents; bookwork, 35 and 40 cents; job printers, per week, \$15. Business has been "booming" since my last communication, but is now pretty flat. There is talk of the *Evening Union*, a democratic sheet, having been sold to the Palladium (rep.) Company, to be issued in the interest of that party.

Omaha, Neb.—State of trade, fair; prospects, not what we would like; composition on morning papers, 40 cents; evening, 37 cents; bookwork, 37 cents; job printers, per week, \$16 to \$18. Matters in printing circles are quiet. A good many idle printers in town, and more coming.

Ottawa, Ont.—State of trade, very good; prospects, fair; composition on morning papers, 36½ cents; evening, 33½ cents; bookwork, 33½ cents; job printers, per week, \$11.

Portland, Ore.—State of trade, fair; prospects, good; composition on morning papers, 50 cents; evening, 45 cents; bookwork, 45 cents; job printers, per week, \$21. New officers: John O'Brien, president; Ada Coburn, vice-president; W. F. Osburn, financial secretary; E. R. Botsford, corresponding secretary. Business is fairly good, but we have plenty to do it.

Rome, N. Y.—State of trade, brisk; prospects, very good; composition on evening papers, 25 cents; bookwork, 25 cents; job printers, per week, \$8 to \$12. Our jobrooms are overflowing with work, with fair prospects of its continuance for some time.

San Francisco, Cal.—State of trade, dull; prospects, none; composition on morning papers, 50 cents; evening, 45 cents; bookwork, 40 cents; job printers, per week, \$18. The winter has brought none of its usual life to the printing trade. About one hundred men too many in town. Union adopted new constitution, to go into effect February 1, 1889.

St. John, N. B.—State of trade, good; prospects, fair; composition on morning papers, 30 cents; evening, 25 cents; bookwork, 28 cents; weekly wages, \$10. Everything moving along smoothly.

St. Louis, Mo.—State of trade, improving; prospects, better; composition on morning papers, 43 cents; evening, 38 cents; bookwork, 45 cents; job printers, per week, \$18. Although business has considerably improved since the holidays have passed, yet there is no lack of labor, the supply being unexhausted.

St. Paul, Minn.—State of trade, fair; prospects, encouraging; composition on morning papers, 42 cents; evening, 37 cents; bookwork, 35 and 43 cents; job printers, per week, \$16. State work about February 1; work in the job and book offices is dull; the remarkably warm weather has been good for subs; would advise no one to come to the "Great Northwest"; all the dailies are well supplied with subs, and the phalanxes are heavy.

SPECIMEN FOR COMPETITION.

Geo. D. Barnard & Co., PRS., ST. LOUIS.

BUSINESS NOTICES.

THE Dennison Manufacturing Company, Chicago, makes gummed suspension rings, both single and double, of paper or cloth, which are very useful, and can be substituted for eyelets on all kinds of hangers. Try them the next time an order for a hanger comes in.

FOR SALE AT A BARGAIN.

Parties desirous of securing a small printing office, can hear of a bargain by addressing A. C. Cameron, editor INLAND PRINTER.

STEEL FURNITURE.

The Messrs. Morgans & Wilcox Manufacturing Company, of Middletown, New York, have brought out a new article, which will be especially appreciated by printers who do much blank work. It is a skeleton steel furniture. The cut here given shows its use in a form.

The idea is that a skeleton form can be thrown around a blank space much quicker than it could be filled in in the usual manner with ordinary wood or metal furniture. The pieces come in pairs of equal and exact lengths, varying by three inches from six to twenty-four. As the pieces are all interchangeable a large number of forms of different sizes can be formed from a few pieces. It will, therefore, go much further than furniture that fills the space. In an office where many blank forms are kept standing or are in use at once, a supply of this material would be found valuable.

THE DOOLEY PAPER CUTTERS.

These machines, which are claimed to be the simplest and strongest paper cutters in the market, are manufactured by the Atlantic Works, East Boston, Massachusetts, builders of general machinery of every kind, whose reputation for turning out none but first-class work is unquestioned. The Dooley cutters are built of the best material obtainable, are well finished and fitted, and are constructed with a view to great strength. Over four hundred are now in use, and giving good satisfaction. The cut shown in the company's advertisement on page 298, is the 32-inch hand-power machine. Other sizes are made up to 48-inch, of either steam or hand power. The catalogue issued by the Atlantic Works, which will be sent upon application, shows views of the different styles and sizes, and gives prices and list of firms using the machines. J. W. Ostrander, 77 and 79 Jackson street, Chicago, is the agent for these machines in the West.

BELMONT MACHINE COMPANY.

Messrs. Taylor & Shoemaker, proprietors of the above company, of 3737 Filbert street, Philadelphia, have bought the folding machine business of the Belmont Iron Company (formerly Manly & Cooper Manufacturing Company), and intend making a specialty of folding and pasting machines of the most perfect description. The mechanical experience of the firm is embodied in a gentleman of long known ability in this particular line of machinery — one whose name appears in the patent office reports for the last twenty-five years, and the machines turned out by the company will be as perfect in every respect

as any machines made. The prices of the folding and pasting machines manufactured by this firm will be as low as good machines can be made for, and every machine is guaranteed to be accurate in register and of great speed. Machines are sent on thirty days' trial if desired. Every folder in use is giving the best of satisfaction. Write to Taylor & Shoemaker for full particulars, prices and circulars.

ACME OIL ENGINE.

A recent purchaser of a two-horse power, says: "The engine arrived safely and we set it up ourselves. To say we are pleased with it, would be putting it mildly. From the first it started out without a balk, driving our 6,000-pound Cottrell cylinder press on forty-five pounds of steam at the rate of 1,200 per hour. We can run it faster if desired. One gallon of coal oil does work for which we have paid \$1.50. It is a powerful machine and all that was claimed for it. The only reason that every printer in the country doesn't have one is because he doesn't know what it is." For sale by W. H. Robertson, 51 S. Canal street, Chicago. See page 363.

COLT'S ARMORY PRINTING PRESS.

This press, designed by Mr. John Thomson, 143 Nassau street, New York, author of the very interesting article on the "Art of Embossing," published in the October (1888) number of THE INLAND PRINTER, is so well known to printers and pressmen everywhere that lengthy mention of it now would add nothing to the reputation already achieved by it. We cannot, however, refrain from calling the attention of our readers to the illustration of the press on page 317, and asking them to look well into its merits, which claims to be the most perfect machine of its type, when about to add a platen press to their office. It is a machine of which its designer and maker may well be proud. The complete inclusive catalogue and price list referred to in the advertisement gives full information about this press as well as all the others made by Mr. Thomson. By all means, send for it.

A CONVENIENT CALENDAR AND STAND.

The most convenient, valuable and novel business, table or desk calendar for 1889, is the Columbia Bicycle Calendar issued by the Pope Manufacturing Company, of Boston, Massachusetts. It is in the form of a pad of 365 leaves, 5 1/8 by 2 3/4 inches, with blanks for memoranda. The leaves are sewed at the ends so that any entire leaf can be exposed whenever desired. The pad so rests upon a portable stand that the entire surface of each leaf is brought directly before the eye. The upper portion of the stand is made of pressed pulp, with "Columbia" in raised letters at the top, the whole handsomely gilded and practically indestructible. Besides the date and ample room for memoranda, upon each slip appear quotations pertaining to cycling and about typewriting and stenography, with occasional mention of the new Becker typewriter. Although this is the fourth year of the calendar, the quotations are fresh and new, and the information would, if placed in book type, make a fair-sized volume.

COSACK & COMPANY, BUFFALO.

The calendars issued by this company for 1889 include an almost endless variety, embracing artistic designs, portraits and comic views to please almost any taste. The colors are attractive, and are arranged harmoniously. Any house wishing "taking" advertisements should purchase a line of these calendars. This firm has branches in all parts of the country, where its goods are on exhibition and sale. The establishment in Buffalo, New York, where the work is done, is one of the finest in the land, and is arranged with especial reference to executing best work on the shortest notice, while the staff of artists and workmen employed is second to none. Mr. George M. Hayes, formerly in the novelty department, is no longer connected with the house. Mr. W. H. Lyman, a gentleman of long and valued experience, formerly of Chicago, and manager of the Baker Publishing Company, is now in charge of this department, the principal feature of which is advertising specialties, and will give his entire attention to this particular branch of the business. The firm is to be congratulated on securing the services of so able a manager.

CENTRAL TYPEFOUNDRY, ST. LOUIS.

The entire edition of this foundry's new and beautiful specimen book, showing the combined products of the Central and Boston typefoundries, was destroyed by fire, on the evening of December 15 ultimo, in the establishments of Messrs. Little & Becker and W. H. Becktold & Co., at the corner of Second and Pine streets, St. Louis, Missouri. The book was nearly completed, and would have been sent out on the first of the year. It is not likely now that it can be issued before the first of March, but the company are constantly sending out sheets of their novelties, and will keep their customers supplied with them. A circular sent out December 20, announcing the fire, was set in steelplate script, one of their newest letters. It is a fine imitation of steelplate work, and will meet the approval of printers everywhere. Write for their sheets of novelties.

THE WETTER NUMBERING MACHINES.

Joseph Wetter & Co., 28 and 30 Morton street, Brooklyn, New York, manufacture these very useful machines, a cut of which appears in their advertisement on page 364. They have patented all the practicable means of operating numbering machines made type-high to use in the form along with type upon any printing press, and during the last few years have furnished hundreds of them to printers in all parts of the world. That they have given perfect satisfaction is attested by the fact that not a single complaint has been received from anyone using them. Besides being used by large and small printing houses in all parts of the country, the government printing office at Washington has adopted them and keeps them in constant use. Joseph Wetter & Co. guarantee every machine sold, and furnish the most improved methods of numbering known to the practical printer. The machines are made to print consecutively, or to skip any numbers as desired, when running two or more on same sheet. Durability is one of the greatest points of superiority claimed for the Wetter machines, there being practically no limit to the amount of wear they will stand. Printers should examine the merits of the Wetter machine before purchasing numbering machines.

SPRAGUE ELECTRIC MOTORS.

In last month's INLAND PRINTER we mentioned these motors, and recommended them for printers' use, and showed an illustration of the machine in the advertisement of the company which manufactures them—the Sprague Electric Railway and Motor Company. For the benefit of our readers who desire to obtain information in regard to the motors, or to examine same, we print below a list of agents of the company in different parts of the country. Any of them will take pleasure in answering all correspondence and giving full particulars as to the Sprague motor. Following is the list: F. A. Dowd & Co., 239 Broadway, New York; Messrs. Sawyer & Blake, 55 Oliver street, Boston, Mass.; Messrs. Chadbourne & Haselton, 935 Drexel building, Philadelphia, Pa.; D. W. Guernsey, 506 Olive street, St. Louis, Mo.; J. R. McLaughlin, 172 Griswold street, Detroit, Mich.; Wm. Oswald, 118 Barronne street, New Orleans, La.; C. W. Foote, 34 Blackstone block, Cleveland, Ohio; Gaynor Electric Co., 439 West Main street, Louisville, Ky.; W. S. Elliott, 705 Kansas avenue, Topeka, Kan.; J. A. Duncan, 706 Liberty street, Pittsburgh, Pa.; H. O. Woodruff, 125 Fifth street, Des Moines, Iowa; Van Zile, MacCormick & Co., Broadway and Thacher street, Albany, N. Y.; Edward E. Higgins, 202 Main street, Buffalo, N. Y.; R. M. Jones, Laramie Electric Light & Fuel Co., Laramie, W. T.; J. A. Devereux, Roaring Forks Electric Light & Power Co., Aspen, Col.; Western Engineering Co., Lincoln, Neb.; B. B. Powell, Edison Electric Illuminating Co., Sault Ste. Marie, Mich.; John H. Barnard, Asheville, N. C.; J. M. Sprague, 127 East 127th street, New York City, N. Y.; J. Read Shaw, York, Pa.; Ruffin & Hairston, 413 Main street, Danville, Va.; Benton & Carpenter, New York City; N. W. Electric Supply & Construction Co., Seattle, W. T.; Chas. M. Ayer, Edison Co., Grand Rapids, Mich.; C. A. Murray, Marshall, Tex.; H. H. Carpenter, Care Mining Industry, Denver, Col.; R. B. Smith, 606 Pennsylvania avenue, Washington, D. C.; W. T. Mottram, care Seth Miller, Dallas, Tex.; Chas. Hewitt, Manager Edison Co., Paterson, N. J.

EVERY PRINTER should have a copy of "DIAGRAMS OF IMPOSITION" and "THE PRINTER'S READY RECKONER." Price, 50 cents each. To be obtained of H. G. Bishop, 96 Clinton avenue, Albany, N. Y., or through Farmer, Little & Co., New York and Chicago. These are the handiest and most useful works ever published for printers. Indorsed by everyone who has seen them. Agents wanted in every town.

FOR SALE—The whole, or a half interest in an old-established newspaper and job office in a live Southern California town. First-class investment and splendid business opportunity. Address LOCK BOX 263, San Buena Ventura, California.

FOR SALE—A snug job office between two and three years old, with a profitable patronage, located in a live town in central New York. Good reasons for selling. Complete printed inventory on application. Address STICK AND RULE, care of INLAND PRINTER.

FOR SALE—A good printing office in St. Paul, Minnesota, in good running order. As the parties are going out of the printing business entirely, good will thrown in *on good terms*. Will inventory about \$7,000 or \$8,000. Apply to MARTIN DREIS CO., St. Paul, Minn.

FOR SALE—We have the following electrotype and stereotype machines for sale at a low figure: 1 Ostrander & Huke saw machine; 1 Ostrander & Huke mortising saw and drill; 1 Ostrander & Huke 16 by 20 molding press; 1 furnace pot, 20 by 26; 1 electro-backing pan; 1 12-inch Weston electro-dynamo; 1 shoot board and 2 planes; 1 electrotypers' finishing plate. Correspondence solicited. RAABE ENGRAVING CO., 86 Mason street, Milwaukee, Wisconsin.

JOB PRINTING OFFICE, fully equipped for small work. Would take part in work. ANDREWS, Ann Arbor, Michigan.

NO NEED OF A MACHINIST.—Printers, learn how to take the "dish" out of the bed or platen of your job press, in your own office and with little expense. Full instructions sent on receipt of \$2. C. L. ADAMS, Trumansburg, New York.

POSITION WANTED in a typefoundry or printers' warehouse, by a competent man, who is also a first-class printer. Steady, temperate and reliable. Best of references. Address MR. PHINNEY, Dickinson Typefoundry, Boston, Massachusetts.

PRINTING OFFICE FOR SALE.—The Brewster job printing office, 410 Locust street (opposite Savery House), Des Moines, Iowa. This office has always done a good business and paid a good profit. Will be sold to the right party at a bargain, and on reasonable terms. Office invoices at \$2,300. Invoice furnished on application. Call on, or address DEXTER MANUFACTURING CO., Des Moines, Iowa.

WANTED—An Allen printing press; size of chase 7½ by 14 preferred. SPRINGFIELD ENVELOPE CO., Springfield, Mass.

WANTED.—The Inland Printer Co. will pay 25 cents apiece for numbers 2, 4, 5, 10 and 12 of Volume I, if in good condition, to anyone sending them to this office, or will credit the amount on subscription, if preferred.

WANTED—Position as general manager or superintendent of large publishing house, or paper and publishing combined. Twenty-five years' experience in the business. Habits exceptional. Eastern city preferred. Address, X, care INLAND PRINTER Co.

\$5 (Little more than the cost of binding) for Vol. I of *American Printer's Specimen Exchange*, elegantly bound, gilt top and title. Over 100 fine specimens of printing from all parts of United States, Canada; Great Britain, Mexico, etc. Only a few copies left, so order early. Sent prepaid for \$5. ED. H. McCLURE, Buffalo, New York.

THE BATHRICK ELECTRIC DISSIPATOR

Overcomes all difficulty from Electricity while printing in any weather and with any paper.

FULLY WARRANTED.

J. H. BUNNELL & CO., Sole Agts.,
106-108 LIBERTY STREET, NEW YORK.

INKOLEUM Warranted to be the Best INK REDUCER and Quickest DRYER in the World.

Directions for Use:

Remove all skin from ink in can, then pour in about a spoonful of Inkoleum, and mix thoroughly to consistency desired. Thin for cold room; thicken for warm room or sticky rollers. Any press can be started up without washing the rollers, upon which it can be worked clear, free and easy on any kind of paper the coldest morning in winter, regardless of fire, or the hottest day in summer, by simply putting a few drops of Inkoleum on the rollers with the fingers.

Printing or Lithographic inks of any color or stiffness can be reduced quickly without in the least impairing the color. For fine tint work Inkoleum works miracles, as it makes the ink cover charmingly, and dries quickly. No spreading of jobs necessary, and urgent work of any kind can be delivered immediately without off-setting. On rollers it never dries, but preserves their suction, life and elasticity. Inkoleum is a perfect "cure-all," and saves double its cost every day in the year, and makes pressmen do better work. A trial will convince the most skeptical. Testimonials from all parts of the world to prove these assertions. Price, half-pound bottles, 50 cents. For sale by all typefounders, wholesale paper and printers' supply houses; or, it will be sent anywhere in the United States, express paid, for 75 cents.

Put up only by ELECTRIC MANUF'G CO., St. Paul, Minn., U. S. A.

Sorts Without Delay.

The Central Typefoundry of St. Louis and the Boston Typefoundry of Boston are owned and controlled by C. Schraubstadter and J. A. St. John. These gentlemen show that they appreciate a printer's wants by this one fact: they guarantee to deliver sorts of their make within from one to three hours from receipt of order.

To Bookbinders.

The Central Typefoundry of St. Louis will make for you, in brass, any style of type you want; it is the only concern in America casting brass type.

Type for Australia.

The Central Typefoundry have just made a shipment of *copper alloy* type, several tons weight, to Australia. This is the fourth large shipment within six months.

Copper Alloy Type.

While most foundries have been on short time from lack of business, the *Central Typefoundry* have had to run overtime; the demand for copper alloy type never was so great. The *Fort Worth Gazette* and *Little Rock Gazette* have just put on entire new outfits of copper alloy.

Brass Type.

The Central Typefoundry are first in the field, as they have been in most everything else. They are supplying the bookbinders all over the country. The brass type made by the Central Typefoundry of St. Louis is more accurate and cheaper than that imported.

A Typefoundry for Siam.

The Central Typefoundry of St. Louis have just shipped a complete plant for a typefoundry to Siam; every bit of the machinery was made by the Central Typefoundry in their splendid building, corner Fourth and Elm streets, St. Louis.

Copper Alloy Type in England.

Frederick Ullmer, Cross street, Farringdon road, London, is the agent for Central Typefoundry. He has built up a splendid business in the sale of "copper alloy" type; the English printers prefer it because it is so much more durable than type made at home, and costs no more.

Roman Face for Stereotyping.

The Central Typefoundry have produced a splendid series of faces especially intended for newspaper stereotyping; the hair lines are strong and the counters very deep. It is the most readable series for daily paper work yet produced.

Beautiful Type Faces.

Joseph Eichbaum & Co., of Pittsburgh, Pennsylvania, have in press a twenty-sheet specimen book of artistic printing; every type used upon it was cast with "copper alloy" metal by the Central Typefoundry of St. Louis.

Imitation the Greatest Flattery.

The Central Typefoundry has been making "copper alloy" type for years, notwithstanding the combined efforts of other founders to cry it down, and say such metal could not be made. Those very foundries are now advertising and pretending to make a similar metal; but they can't fool the printers—it is not copper alloy.

Philadelphia's Art Printer.

G. H. Buchanan says he has made a careful and exhaustive test of various type metals, and none will compare with the "copper alloy" made by the Central Typefoundry of St. Louis.

Pittsburgh's Art Printer.

Jos. Eichbaum & Co. say, in speaking of "copper alloy" type made by the Central Typefoundry: "We consider your type decidedly more durable, consequently cheaper, than any we have knowledge of."

An English Printer's Views.

Thos. Bushell & Son, of Coventry, England, writing the Central Typefoundry, say: "We are now in a position to speak of the durability of your 'copper alloy' type. Your type has been in constant use in our office ten months, and is as good as the day it arrived. We are more than satisfied."

A Canadian Printing Office.

The London Free Press Lithographing Company say of Central Typefoundry "copper alloy": "Of the superiority of your type over any other we have seen we are fully convinced."

Press News, London, England,

Says, in speaking of the "copper alloy" type made by the Central Typefoundry of St. Louis: "This foundry is turning out some of the most durable type in the world."

A. N. Kellogg Newspaper Co.

Mr. F. C. Wood, the St. Louis manager of A. N. Kellogg's establishment, says in a letter to Central Typefoundry: "The type we put on of your manufacture has worn longer and looked better by far than the make of any other foundry we have tried. Our tests have been severe, but the 'copper alloy' has more than sustained its reputation and what you have claimed for it."

Away Down East.

Gordon & Paine, of Lewiston, Maine, say in writing Central Typefoundry: "We are using some of your 'copper alloy' type and wish our office was stocked with it, for it wears *twice* as long as any other metal."

Dennison Tag Co.

Mr. Dennison, in speaking of type metals, said: "We have always had trouble in getting a metal to stand on hard tagboard stock, until we tried Central Typefoundry 'copper alloy' metal. That will stand the racket."

It Tells the Tale.

Many of the specimens of artistic printing exhibited each month in *THE INLAND PRINTER* are set with Central Typefoundry "copper alloy" type.

Looks Like an Exposition.

This remark was made by a printer after having spent several hours examining the great variety of presses, paper cutters and printers' tools in the wareroom of the Central Typefoundry, St. Louis. It is the largest display in the country.

Fine Dot Metal Leaders.

The Central Typefoundry have sold tons and tons of fine dot leaders cast with *copper alloy* metal, to take the place of brass leaders. No other foundry has dared to put their metal to such a test.

THE STAR IN THE EAST

Was the guide for the wise men of old. The Diamond **B** is the modern guide to the Golden Mecca on which all printers' hearts are fixed. We are the manufacturers of the Peerless **B** Line Advertising Specialties, and furnish all goods at first cost, saving middlemen's profits.

Serious, thorough business.

"THE WETTER"

Consecutive Numbering Machine.

PATENTED.
May 26, 1885.
October 16, 1888.

PRICE
\$25.00

These machines have astonished the printing trade all over the world. They are now in use in the leading printing offices throughout the United States and Europe. Every postal note and post-office money order issued by the U. S. Government is numbered by them. There is no class of consecutive numbering, from the simplest ticket to the most carefully executed bank note or bond, that cannot be numbered by them more economically than by any other known method. Every machine we make is guaranteed, and sold subject to the same. We caution printers to be careful in purchasing machines that infringe on our patents, and solicit correspondence for circulars and prices. Address,

Skeleton Steel Furniture.

A LABOR-SAVING APPLIANCE FOR PRINTERS
AND PAPER-BOX MAKERS.

.. ESPECIALLY ADAPTED TO BLANK WORK ..

MADE in steel, with notched ends as shown above, in lengths of 6, 9, 12, 15, 18, 21 and 24 inches. A skeleton frame resembling a chase is quickly thrown around a blank space, instead of filling it with labor-saving wood and metal furniture.

It is accurate, simple, saves time, makes a light frame and square lock-up. From the 21 pieces in one set, no less than 105 different sized frames can be formed.

PRICE, per set, - \$15.00.

In use in the Government Printing Office, Washington; in office of Haight & Dudley, Poughkeepsie, N. Y.; H. O. Shepard & Co. (THE INLAND PRINTER), Chicago; Russell, Morgan & Co. and A. H. Pugh & Co., Cincinnati.

PRINTERS' ORDER BOOK, AND RECORD OF COST.

(COPYRIGHTED.)

Printed and ruled so as to afford a simple plan of recording the different items of cost of every job done.

These items of cost are easily arrived at by the use of a "Job Ticket" and "Daily Time Slip," samples of which are sent with each book, and can be printed by anyone. Each book contains 100 leaves, 10½ x 16, half bound, cloth sides, and provides room for entering 3,000 jobs. Printers who have seen this book pronounce it the best of the kind. The price is less than half what it would cost any printer to make a single book.

JUST PUBLISHED. (COPYRIGHTED.) *PRICE 50 CENTS.*

AS HANDY AS A WATCH AND QUITE AS USEFUL.

DIAGRAMS OF IMPOSITION FOR THE POCKET.

PRINTED ON BOND PAPER. BOUND IN RED LEATHER.

Showing all the most useful Schemes for laying down pages; with Notes and Explanations.

Few subjects are so important and yet so little understood as that of Imposition.

This little book gives the whole subject in a nutshell.

Every Compositor and Pressman should have it in his pocket for reference.

SECOND EDITION. — THE — *PRICE 50 CENTS.*

PRINTERS' READY RECKONER

(COPYRIGHTED.)

Showing at a glance the cost of stock used on job work;
Showing the quantity of stock required for jobs of from 50 to 10,000 copies;
Showing the number of sheets contained in any number of quires;
Showing the equivalent weights of paper of various sizes.

GOLDING & Co's
 ... IMPROVED ...
FURNITURE

Compactness, originality of design, and excellence of workmanship are characteristics of all our productions in this line. The Extension Case Brackets used on all of our stands and cabinets save six inches in floor space. By using steel runs, which are stronger than wood, though only 1-16 in. thick, we put six extra cases into an ordinary single cabinet without increasing its height. The cases in these cabinets are just like any others, the fronts only being shaved down. Two of our new style double cabinets will hold over 100 cases, all within easy reach of a single compositor. The Case Brackets on our Boston stands and cabinets can be reversed so that news and job compositors can work on opposite sides of the same stand without interference.

BOSTON DUPLEX CABINET.—Front.

- D 1.—Single Cabinet, with 20 cases.....\$36.00
- D 2.— " " " 26 " 45.00
- D 3.—Double Cabinet " 40 " 70.00
- D 4.— " " " 52 " 88.00

These prices include pair of News Cases for top of single cabinet, and two pairs for double cabinet. Their value will be allowed if not wanted. Improved steel runs are used in styles D 2 and D 4. All these cabinets have paneled backs and sides. Plain cabinets, without galley on top, plain backs, \$3.00 less for single, and \$6.00 less for double cabinets.

We also make Type Cases, Galley Cabinets, Furniture Racks, etc.

OBSERVATIONS AND ADVICE.

BY GUSTAV BOEHM.

NEW YEAR SURPRISES—APPARENT SUCCESS AND ACTUAL LOSS—CAUSES—UNDERSELLING: THREE STYLES—KEEP YOUR HANDS OFF—REMEDIES—A GOOD METHOD—AN ILLUSTRATION OF THE METHOD—HOW TO REMAIN ON THE SAFE SIDE—IMAGINARY OBLIGATIONS—IF NOT MORE, IT WILL SAVE YOUR HONEST NAME—SUGGESTIONS CONCERNING A PROTECTIVE COMBINATION OF PRINTING HOUSES—ADVICE: FOUR IMPORTANT POINTS.

THE beginning of the year or rather the end of a year, is apt to be full of surprises to business men, and frequently full of disappointing surprises. In reviewing the doings of the late year, one of those who have been in the habit of doing an *apparently* rushing business, finds that the balance at his bank is below the sum deposited to his credit when he started out at the beginning of his fiscal year. He, as well as those who know him—all who dropped in upon him and always found him “too busy to have a few minutes’ spare time” to attend to them—all who have seen and heard his presses rattle away as hard as steam would carry them, are surprised, astonished, amazed, at the totality of the picture of the past year, which, at the beginning of the new one, unrolls itself before the eyes of the observer *in figura* of the annual balance sheet.

“My good gracious,” does he say, “I have been busy all year ’round; I had frequently more to do than my office could accomplish; I had but few slack weeks, and still I am behind.” It appears to him a mystery as well as to others who were in the habit of believing that the firm was doing a “grand business.” But the facts are here: the *focus* in which real prosperity and gain of a business house centers, the true and only reliable witness of actual prosperity, the bank account, proves without a shadow of doubt, that, notwithstanding all the apparent business done during the year; notwithstanding all the continuous rattling of presses and the rush in the composing room, the firm has made nothing, if it has not even lost, in the course of the past year.

I have known cases in which the result of the annual or semi-annual examination has almost driven the parties

concerned to despair; not because they have been losers, but because they could not explain why they lost, while they thought themselves on the right path to a fortune.

And just at this season it appears to be in place to remind our friends of the dangers which present themselves to their judgment during business transactions, and the manner of avoiding or fighting them, “for future reference.”

The *real cause*, the most frequent cause of loss in a printing office is primarily the underselling of the article. Very many, if not the majority of printers, in giving an estimate try to figure so low (that is, they do not count all the expenses in time, etc.), in order to get the work, that, after they have done it, they are really out of pocket. They suffer from the imaginary idea, “Oh, we will get through all right,” an idea which generally proves to be but an *idea*, and develops in reality the property of a corrosive acid, eating right into the bank account of the firm. Competition, let me say over-competition, forces the printer of the present to go right down to the bottom of the sea, but that does not justify him in endangering the life of his business, in entangling himself in the seaweed of impossibilities which are apt to hold him tight, and after several attempts deprive him of his pecuniary strength to again reach the surface. It is, as a rule, the false basis of calculation which causes loss in the printing business; and yet, it is not ignorance of the business, generally considered, which induces that undervaluation, but the endeavor to get the work at almost any price, *to keep the hands busy*, as the term stands. Now, my dear friends, this is foolish and costs many of you your heart’s blood.

There are several methods of keeping clear of this most dangerous rock, various considerations to be accepted.

In estimating on work you may be underrated in various styles, namely:

- a. By one who has better facilities.
- b. By one who does not know the value of his manufacture.
- c. By one who willfully takes the chances, knowing what he is doing; who runs the risk to come out all right.

This premise, this trilogy of circumstances, is based upon the supposition that you understand your business and know how to make your calculations.

Now, in all these three possibilities it is best for you to leave well enough alone, and not accept the work at the other man's figures. To compete with him whose facilities are above those of your office means loss to you.

To accept the terms of the other two parties is simply commercial suicide. In all three cases you will ruin your business.

The golden rule for every printer, no matter what the dimensions of his office are or what his facilities may be, is to remain absolutely within the limits of such dimensions or facilities, and to make his estimates upon a sound commercial basis, comprising all the expenses to be incurred by the work, incidentals not excluded, as is so often done, and not to trust the chance that he will go through all right. Work as low as you can, though allowing a reasonable profit to yourself. It is cheaper to remain idle than to work at a loss.

My experience teaches me that much trouble and annoyance, as well as pecuniary loss, is brought upon printers who try, or believe that they must, in order to retain a customer, execute work which is not within the power of their office. They calculate from the false premise, that if they will let this work slip, or refuse to accept the order, other jobs within their facilities, such as they are just looking for, will be lost, or they even fear they will lose their customer entirely. In most cases which I can trace it would have been much more beneficial to their trade if such work would have been refused from the start. It cannot (under the circumstances) be executed to the satisfaction of their customers or themselves. A printer whose plant permits him only to do good work to the dimensions of a quarter-sheet show-card, and who tries to do a half-sheet, will find disappointment, anger, trouble and pecuniary loss all around. There are circumstances in which one is obliged to oblige, but in such cases rather accept the work, and have it done outside of your own office, than attempt the assault upon good taste and proportion in composition of the lines. If you only have an eight-line letter and you need a sixteen, it will never do to use the former. The connoisseur will tell you at once where the fault is to be found; your customer, who probably understands nothing of the technicalities of the business, will shake his head and claim that he does not understand why this job is not as good as others which you have made for him; the general observer will say, "This work was done by a miserable printer; the fellow knows nothing about his trade." Should you have been so careless as to attach your imprint to such work, it will undoubtedly serve as a guard against patronage. The public will be shy to trust any work to you. As a resumé, let me say that I always found, and others did the same, that it pays better to do a job which was undervalued in estimating even at a pecuniary loss, than to attempt to

cover the mistake in figuring by turning out poor work, poor ink or poor stock.

Another item worth considering is the following very commendable method adopted by a house with which I have been connected for some time. This firm invariably shows samples of an inferior grade or weight of stock than it actually furnishes with the job. If it contracts for 40-pound paper, for instance, the customer gets a 45-pound with the job. This protects the proprietor from the start against claims and complaints often caused in consequence of the irregularity of the sheets. As everyone knows, paper is sold by the ream weight (as a rule) and not by the thickness of the sheet. Let us see. You sell a man a 40-pound paper and give him actually the weight you sold him. A few days after the delivery of the job your customer enters your office, and claims that the paper is lighter than the one you showed him. You protest, being well aware that you ordered and were billed the right weight; he becomes indignant and produces a sheet, proving by evidence that he is in the right. You test the sheet, compare the sample, and must sheepishly admit, if you are honest, that your stock is actually lighter than the sample. You are beaten, and feel as a criminal who purposely committed a swindle. The excuses stammered will not alter the cause. Your customer will either insist upon new work, a reduction in the price, or, if he should be very considerate, he will leave your office with an opinion of your character and that of your business transactions which may influence his further trading with you. This is the first act of your defeat. Now comes the second. You have examined your paper bill after his departure and assured yourself that you paid for the right weight. Now is your time to create a disturbance; you storm to your wholesaler and put before his eyes and ears the facts as told above; the claims of your customer, the two sheets of paper and his own bill. Your dealer investigates and smilingly tells you that you should weigh the ream you purchased, and if it does not weigh forty pounds he will refund you \$1.00 for each pound minus. This example, permit me to state, is not an imaginary one; it has actually happened. The paper dealer claims it will occur that some sheets run lighter than others, but that the ream *in toto* always weighs for what it is sold. You are again beaten and must retire defeated. The information of the wholesaler does not change the matter so far as your humiliation is concerned. Your customer received perhaps only a quarter of the ream, what object is it to him that you cannot claim damages from your dealer? It is therefore very advisable to follow the above stated example of the firm in question, and secure yourself against the annoyances often caused through unevenness in the sheets of a ream of paper.

Speaking of estimating below the value of the goods, irrespective of cutting prices, it is well to state, that, as a rule, it is the middle class of business houses which are mostly affected by its disastrous result. *Competition is the life of trade*, is an old, perhaps a true saying (scientists

at least assure us of it), but as all extremes are liable to turn into the opposite direction of their intended purpose, we also find in the commercial *strata* over-competition to be of a most obstructive if not a ruinous character. I have said it is the middle class of printing houses which is mostly affected through it, and the reason for this is the following.

Large houses are generally governed by absolute business principles; their managers are not only good printers—at least, are supposed to be such—but also are, in the first place, very careful and experienced business men. They know the exact sum of the expenses necessary to run the business at a profit, which is not an imaginary or hazardous sum, but a sum based upon mathematical certainty, which must be reached or the job will not be accepted, and they will not work below their expenses and profit. The fact that the competition of such houses consists in the competition with other firms of equal principles makes their existence much pleasanter and more secure, than of those houses of the second class, whose competitors very often are firms of unscrupulous character or with “imaginary ideas” about gain and loss. We must further accept that the former class generally possesses all the improved material and best facilities, and has a capital in the back of all that, thus making it easy for the house to work at comparatively low figures, and yet at a handsome profit. The second class generally do not possess all these facilities. Their business is very often based upon the supposition “Well, we’ll try to make it pay.” They are mostly affected by the cutting done by the small, insignificant competitor, who kicks his own press and has no cause to wrangle with expenses. The second class, that class which runs at a weekly expense of fifty to one hundred dollars, shows the most victims of the cutting system. The customer furnished with an estimate from one of the third-class, one-man concerns, enters the office of the second-class firm, well knowing that the same would turn out his work much better than the man with the small office. He asks the price, hears it, appears indignant, and offers to pay so-and-so much, the figures of the low concern. In nine out of ten times his offer is accepted, under the previously mentioned supposition: “Well, I’ll try to make it pay.” Dear friends of the second class, do not try, you will never succeed. Remember, your expenses at the end of the week will tell; if *you* have worked without a profit *your workmen* have not; your steam bill is the same and your incidentals are not less. You must pay hard cash every pay day, cash which your “profits” must furnish. Remember, if your competitor of the third class has worked a day without profit, he will simply eat a sandwich for dinner instead of a warm meal, and his imaginary trial-sheet will balance. *You* cannot do the same at a profit. Your expenses are such as must be met every pay day or you will soon find yourself out in the cold.

The question arises, How can this second class meet the inconvenience of a competition with the small concerns at the expense they have? It must be admitted

that this class is in an awkward position, and yet it is the largest class of the trade. They are like a match between two fires; on one side the small printer, down to the amateur—for even he affects the prices and their business—on the other side an expense list which must be met, without having the protection of the large concern, namely, that none but an extensive printing house can estimate and undertake the work, which, in itself, is a guarantee (more or less) against undervaluation. Considering the matter carefully, one arrives at the conclusion that there is only one way out of the dilemma: to refuse to do work under the value, no matter what the figures of the other firms, already in the hands of your customer, may be. Figure as low as you can under the circumstances under which you are doing business, and no lower. Give up the work rather than cut your price. Adhere to this principle under all circumstances. It will lead you to success, protect you from losses and failure; at least it will preserve an honest name for you. Follow it even if you should be compelled to give up the struggle. This latter, under the circumstances, would have occurred anyhow; with the plan laid down here the disastrous step will merely have to be made a few months earlier, and then it will be made by an honest man, who has tried to keep up, to pay his bills, and has refused to continue unless he can do so, and not by a man who did not care who would lose if he had to give up. If every second-class printer—do not misunderstand this term; I have used it through this paper in the meaning of business extension, and not as a degree of workmanship—would adhere to this principle, the man (it is almost too much to call him so) who gets his prices from the amateur concern, and endeavors to get his goods from the second-class printer upon these terms, will find himself at an early date compelled to give up his trick, or rather in the position to either accept the miserable work of the estimating concern or pay a value for the good work to the other. I may here add that an experience of almost fifteen years leads me to believe he will rather pay the value and accept good work than to do otherwise. But as long as printers hunger after work *at any price*, this unprincipled patron will have easy play at the expense of the prosperity of the printer AFFLICTED with his orders. If a combination of printers of the second class could be instituted in every prominent city of the United States, with a superior government at one of the centers of trade, to fix prices and work on a given basis, I am led to think it would help their business a great deal, and would pave their way to success. But this is merely a suggestion which, perhaps, needs as much discussion as the celebrated international copyright question, which may find room in THE INLAND PRINTER at a future date. Until then let the printer to whom I have alluded remember and act on the following advice:

1. Never accept work beyond the capacity of your office.
2. Do not accept work under the lowest figure for which you can furnish it at a reasonable profit.

3. Do not try to make up the deficiency in price by deficiency in workmanship. If once miscalculated, rather incur the loss than furnish inferior work.

4. Make it a principle to furnish better class of stock than samples shown to your customer.

Under the flag of these principles, I am certain, much trouble, dissatisfaction, loss and disappointment, will be avoided.

Written for THE INLAND PRINTER.

PROGRESS IN LETTERPRESS PRINTING.

NO. IV.—BY ALFRED PYE.

PREVIOUS to the introduction of the large number of fancy types now at the disposal of the letterpress printer, his chief aim was to copy closely the work of the copperplate engraver when setting a notehead, [letterhead or statement of account, and for this purpose scripts and gothics were largely used. Few job printing offices were considered complete unless they possessed three or four fonts of script of various sizes, and these, in many instances, were used to such an extent that it was not long before the fine connecting lines began to show signs of wear, and the resemblance between copperplate and letterpress printing was not nearly so perfect as when the type was new. As the constant renewal of script fonts constituted a heavy drain upon the purse of the printer, other faces of type, more durable and less liable to

contrast to the style of work that is looked for from a fine art printer of the present day. The interpolation of curved, oblique, straggling and chopped rule was not then thought of, and it is very doubtful if it would have improved the appearance of the work had they been used in combination with script type.

Looking to the use of a more serviceable letter than script, but still holding to the idea of copying engravers' work, shaded letters, similar in style to those used by copperplate engravers in their more fanciful designs, were used by the letterpress printers, and for a long time the sameness in appearance of the typography of commercial work became almost wearisome. But a few venturesome spirits began to break away from the

show signs of wear, were gradually introduced into the before mentioned class of work, until now it is rarely that a job of that character is seen.

We reproduce a statement heading in the style referred to (Fig. 1), which is very neat, but in marked

trammels that had long bound them down to a particular style, and innovations began to creep into commercial job printing, which slowly, but surely, revolutionized the existing order of things. Some of the patrons of those

printers who deviated from the established custom entered protests more or less vigorous against the change, but were persuaded that it was for their good, and that a novelty in the shape of a bill or letter head would be almost as helpful to their business as a high-priced

advertisement in a newspaper. It did not take a great while for other printers to see that it would be for their benefit to adopt the innovation, as they soon realized that responsible houses were disposed to take their printing to the specialists who

made a feature of their "art" productions in the line of letterpress printing.

It is needless here to reproduce examples of the various styles that have followed each other in succession, from the plain to the ornate, and from the commonplace to the unique, in letterpress printing in the classes of work under consideration; but by way of contrast to the sample above shown, we give a duplicate of a statement heading such as is used at the present time (Fig. 2), which, though far from being the best of its class, fairly represents the change that has taken place in the matter of design in relation to every-day work. Flourishes, ornaments, rule and type of every face and description are now worked into a harmonious whole, and the printer no longer tries to keep to a uniform style of type in any job, no matter what its nature may be. Book covers, titles, business cards, advertisements—in fact, almost every job that is issued from some of the printing offices of the present day is of a more or less ornamental character. Even the unpretentious corner card of an envelope has not been allowed to escape. The two or three lines of plain caps or small caps that

TYPOGRAPHICAL MISCELLANY.

A BRIEF REVIEW OF THE RELATIONS EXISTING BETWEEN THE
APPRENTICE, THE JOURNEYMAN, THE FOREMAN
AND THE EMPLOYER.

BY M. J. CARROLL.

THE EMPLOYER.

IN the following article I propose to invert the natural order of things, and, commencing at the top, work downward.

In accordance with this determination the employer will perforce be the first to receive attention; and I think that I am justified in this course, for notwithstanding a deep-rooted conviction held by many in the office that in his own particular person is to be found the most important and useful individual in the concern, still there is a lurking suspicion in the minds of some that the employer is really an essential appendix about a printing office; and this fact will become more apparent when pay day comes around, even if it should in a manner have escaped our observations previously.

Human nature is human nature, which somewhat homely though forcible aphorism will be found as applicable to the owner of a printing office as to men in any other walk of life. In their ambition to succeed in important undertakings, their desire to outstrip their competitors, the satisfaction they experience in gaining a business advantage, their irritability when defeated in their likes and dislikes, their prejudices and preferences, in fact in every way we find them much the same as other people. But while as a class they do not differ from the rest of mankind, as individuals their characteristics will cover as wide a range of peculiarities as can be found among the same number of people in any other mercantile pursuit. In their desire to improve the condition of their workmen, and their fair-mindedness in settling disputes, a comparison with the methods of other employers will be to the decided advantage of the printers. In a somewhat extended acquaintance with employing printers I have noticed one trait of character that is more prevalent in our business than in others, and that is that most employers, no matter how elevated their position or how wealthy they may have become, are ever ready to pleasantly recognize the humblest person in their employ. The purse-proud visage and arrogant bearing characteristic of a certain class of employers, are rarely to be met with in the printing business. And their liberality is fully commensurate with their means. While the number of employing printers in America who contribute largely to public and promiscuous charities may be very few, the number who are not found ready to relieve meritorious people in their own business are fewer still. If we should feel like criticising their want of public

FIG. 3.

set forth in their humble way the fact that "if not called for in ten days," etc., have given way to something more elaborate, after the style shown in Fig. 3.

When first introduced, this kind of letterpress printing was looked upon as a "craze" that would soon die out, but time has proved that it is something durable, and the favor with which patrons regard it, and the persistence with which they demand it, are evidences that it will be a long time before the rule and type combinations will be allowed to drop into oblivion.

Many of the designs formed by means of rule, such as shields, bands, ribands, etc., are made to stand out prominently by using a tint for the ground-work, and this has been the means of introducing color into many jobs with manifest advantage to the appearance thereof at a very slight increase in the cost. The inducements held out to printers to turn out first-class work, more especially in the growing cities of the United States, are many; and those who wish to attain a prominent position in the profession cannot do better than watch the signs of the times, and be ever ready to meet the changing views of their patrons with something novel in the line of letterpress job printing.

(To be continued.)

generosity, we must remember that they are not engaged in a business that yields large fortunes, as fortunes are estimated now. A more intimate knowledge with the inside workings of their business would probably too often reveal the fact that instead of a large fortune in sight, it may be a desperate struggle to keep their heads above the breakers that are persistently threatening to engulf them in commercial ruin.

THE FOREMAN.

But if we should be at times impressed with the notion that the employer does not always come up to our expectations as to what he should be, it is undoubtedly true that the foreman will fail to meet these expectations nine times to the employer's once. Why is this? Is it because the position is one inherently more difficult to fill than the employer's, and that proper care has not been taken to select a man combining good executive qualities with a sense of strict justice, and a will that enables him to do what is right by his employer and those under his charge.

All that a fair-minded employer can require of his foreman is that he will take a position between himself and his employes, and see that the full measure of justice is meted to each. While his knowledge of the practical and technical work of the business should be sufficient to enable him to intelligently direct the work placed in his charge, he should at the same time insist that every man should do his whole duty in fulfilling the contract, implied or otherwise, that he undertook when accepting the situation. He should also have strength of character ample to prevent an unscrupulous employer from imposing upon his men. To lean too much to one side or the other is equally bad. An overweening desire to meet the favor of his employer will result as poorly as giving undue license to those under his charge. Let the reader look back over his own experience, and see how many foremen he has met that will come up to these requirements.

THE JOURNEYMAN.

The ambition of the journeyman printer to appear to better advantage than his fellow is a strong one, and is the cause of a great deal of the friction that a close observation will bring to the surface in the internal workings of nearly every printing office in the land. Perhaps the ideal establishment would be one having an employer who was kind, considerate and conscientious in his treatment of his workmen; a foreman combining these qualities, together with a rigid policy that would preclude the possibility of skulking on one man's part and incessant driving of others, be they friends or strangers; and a force of men who would good-naturedly assist each other to surmount whatever difficulties might present themselves in the course of the day.

But this is not the situation of affairs as we find them. It is generally "every man for himself, and the devil take the hindmost." It is this desire to take advantage of our fellow-workman that would lead one to the

conclusion that we were gifted with a good deal of the characteristics of the genus hog. We see a certain number of men put on a job, with instructions to hurry it. The "smart" fellow will immediately gather up the available material necessary for the execution of the work, and will probably make better time than the others. The rest of the men, and particularly the strangers in the office, will necessarily have to hunt around for the required material to finish the work, and an unthinking foreman will jump at the conclusion that if he had more men like the one first mentioned he would be very fortunate. Again, we see a man looking on when he knows that a fellow-workman has misunderstood his instructions, and is proceeding in the wrong direction. He will say nothing, consoling himself with the reflection that it is none of his business to interfere. Of course, the mistake reflects discredit upon the offending workman, no matter who was responsible for the mistake. The firm is compelled to stand the expense of doing as much of the work over again as was done wrong; the workman in the case will probably lose his situation on the first plausible pretext, and all for the lack of an *esprit de corps* that will enable the men to lay aside their petty jealousies and animosities, and work with a common view of rendering the greatest service to their employers. The instances I have cited do not by any means exhaust the list of these disreputable practices. Go into almost any printing office where you can procure employment, and for one day note the many little acts of selfishness that will come under your notice in that time—little things that their perpetrators would indignantly spurn the suggestion of outside of a printing office. These reflections are not by any means intended to apply to every member of the craft. There are many honorable, and, in every way, fair-dealing men in the business, but there are probably enough of the other kind to reflect discredit on all.

THE APPRENTICE.

As every ambitious boy who secures a situation in a printing office is confident of one day becoming the owner, or at least the general manager, of a large printing establishment, I would like to say to those among them who are readers of THE INLAND PRINTER that they cannot commence too early to fit themselves for the responsible positions they have in view; and, perhaps, they will find that, outside of their assigned duties in the office, one of the best ways to fit themselves for future responsibilities would be found in regularly reading the contents and studying the designs presented in a first-class journal, such as the one just named.

It will be well for you to remember that the pool-table is *not* the most direct road to the accomplishment of your desires, and that whatever prominence you may attain will be the result of your own industry and frugality. In the office, be of a quiet behavior but of an inquiring mind. Ask for an explanation of anything that puzzles you. Capable men are always ready to assist a boy who shows an inclination to get ahead. Take advice from anybody who is kind enough to offer it,

as it frequently happens that the most practical method will be advance from the most unlikely quarter. Make yourself master of every detail of the business ; cheerfully do whatever task is laid down for you ; be civil and obliging, and some day you may occupy a seat in the counting room, thinking how foolish boys are in not applying themselves to business as you did when you were of their age.

HOW TO FEED A SHEET LARGER THAN THE PLATEN.

BY J. B. C.

FREQUENTLY, in the experience of the average job printer, a job of full size billheads, and other work will be encountered, which needs but a small amount of printing on the end or side. The end which is blank, unless skillfully held, will fall over the platen and cause the printing to blur or be crooked ; or fall toward the disk and be caught by the rollers, ruining the sheet and causing vexatious delay.

After considerable trial of patience and some study I have arrived at a very satisfactory solution of the matter.

It consists of a temporary extension of the platen by using a strip of 6-to-pica brass rule. Bend the rule squarely, from an eighth to a quarter of an inch from the end, to insert under the tympan band, and let the other end project as high as desirable. The rule will resemble a very much condensed gothic L. Two or more of these may be made ; and if needed, different lengths.

When needed, and the form is ready to be worked, remove an inch in width of paper from the tympan, directly under the band, so the band will not be sprung, and insert the short end of the extender. This provides against the sheet falling over the platen, and with care large sheets may be worked more rapidly than on a larger press. To guard against sheets being caught by the rollers we make extension grippers from very stiff cardboard, glued to the regular gripper and extending upward as far as desirable.

They may be fastened on the gripper by means of two slits, crosswise, the width of gripper, and two or three inches apart, putting end of gripper through the lower slit, then back through the upper slit. The better way, however, is to glue the strip of cardboard to the gripper.

The extension principle can, to a lesser extent, be used on the lower edge of the platen as well as the upper, excepting that the rule must be bent at each end and in opposite directions : . Or the extender may have stout muslin stretched over it, under which, however, tough cardboard should be placed, in which gauge pins may be inserted at will.

THE Boston *Budget* states that shirts are now made out of paper at a factory in a New Jersey town. They are made of manila paper, combined with other properties, and are peculiarly adapted for winter wear owing to the properties possessed by paper as a non-conductor.

MECHANICAL DEVICES IN TYPE.

NO. III.—BY CARL SCHRAUBSTADTER, JR.

IT has been seen in discussing script type that rhomboid bodies and three-cornered quads were used a considerable time ago. The idea of making type which fitted into each other was of more recent development, and must have occurred to many printers and typefounders, but the trouble and expense associated with it deterred them from carrying it into execution. It was very recently that the Johnson Typefoundry brought out its mortised series, a few letters of which are shown in Fig. 10. In

FIG. 10.

FIG. 11.

Fig. 11 an F and C are shown upside down, giving a cross section of the face, the short white space in the middle being the groove. Fig. 12 shows a letter of a handsome

FIG. 12.

series of initials by the same foundry, the right hand letter being upside down to show the shape of the body. Type may readily be placed in the blank spaces, or wide-spaced letters, such as A and V, closely put together, giving much the effect of engraving. The Johnson Typefoundry has produced several other faces of this description, such as the Mortised No. 2 and the Pencraft, and the Chicago Typefoundry has also recently done something in this line, and, besides, casts such letters as A, V and W in a great many of its larger job faces on bodies of such shape as to admit their being spaced correctly. A view of this is shown in Fig. 13.

FIG. 13.

Slanting lines are usually introduced by putting leads or rules on each side, and locking the line into position by means of quads, slugs, etc., but of course, in such cases, it is difficult to lock the slanting line securely, and the upright lines being at right angles with the base line, do not run parallel with the side of the paper. In the Lining Gothic series of the Cleveland Typefoundry, shown in Fig. 14, this is overcome by casting the type of uniform thickness

FIG. 14.

in set, and furnishing spaces which, if placed above or below the letters, will make the line run out to the exact angle, and thus allow the bottom lines to be on the same plane, and the upright lines to be at right angles with the

base of the job. The only objection is the change of shape which necessarily follows in making letters of uniform set and the trouble of setting up the job. The Rogers series recently produced by the Boston Typefoundry embodies the same idea.

Curved lines have been used in jobwork for a very long time, and by most printers the old method of placing the lines of type between curved rules or leads, and then filling out the forms by means of quads and spaces, is still in use, but the liability to squabble has caused a number of expedients to be adopted. One is to pour plaster of paris, or similar material, into the form to strengthen and hold it together. Another, the casting of quads or ornaments having one side with a curve and the others rectangular, to admit locking up. A third device consists of curved brass reglets with locking devices on the ends, which render the type line comparatively stiff. Perhaps one of the best, and at the same time most complicated devices is that embodied in the Sloping Gothics of the Cleveland Typefoundry mentioned above, and shown in Fig. 14. By adding another series, sloping in the opposite direction, lines of any curvature may be set up. Fig. 15 is an example of this type, the upright lines of which are still perpendicular, and consequently parallel. The liability to mix the seven different slopes—partially avoided by casting a different number on the shoulder of each—and the aversion which most printers have for complicated ideas, has prevented them from coming into general use.

In lithography, and the various forms of engraving, lines of letters are frequently underscored or surrounded with lines. The single and double Scored Gothics of the Boston Typefoundry have lines on each letter which join to produce the effect of scoring. End ornaments and cross-line spaces are added, which enable the compositor to copy an engraving effect, often used; but the liability of the joints to show, particularly after a little wear, has been a serious objection to them, and this effect is usually produced by means of brass rule.

Written for THE INLAND PRINTER.

UNSKILLED WORKMEN: THE REMEDY.

BY ALBERT DE FOLLETTE.

IT is very apparent to an impartial observer, that, despite the wild utterances of socialists and others, there is a true desire on the part of a large portion of the middle and upper classes to help the workingman. This desire is not always gracefully expressed, and may take a sentimental rather than a practical form, and attempts to help, when unskillfully made, result in disadvantage rather than in advancing the cause sought to be benefited, as, for instance, when wealthy or aristocratic people seek to help men by flattery or patronage. But, underneath all the blunders and mistakes that social reformers make, there is a real desire on the part of good

men among the thinkers to bridge the chasm which divides them from the workers, and this is one of the most hopeful signs of the times, and one which will no doubt prove fruitful of good results, by the blessing of God.

Some of the most pathetic passages in the lives of workmen who have made for themselves names which will ever be monuments to their memory, is the record of their struggles for education. Fifty years has wrought a marvelous change in the educational facilities of our land, and today we are blessed as no other country is in the availability with which it is possible for the poorest among us to obtain that learning so necessary for the cultivation of the mind; an influence which, if attained, does so much to sweeten and ennoble life. The influence of education is getting to be within the reach of the sons and daughters of the artisan, as with the youth of the middle or higher classes, and the problem is not so much how to obtain educational influences or institutions, but rather how to get people to take advantage of them when they are obtained.

It would, however, be a great mistake to conclude from this, as many may do, that the chances of the working men and women to obtain for themselves a fair share of the good things of this life are, on the whole, equal to those of the other classes of society. Things have improved for them, beyond a doubt, because society has improved, and society has improved because we have reached a higher stage in our moral evolution, since moral progress is the source of all other progress; but there remains much to be done still, and if the shrieking of the socialists serves to emphasize this, we can easily forgive them if their voices *are* a little harsh. The problems which we have to face today do not to any great extent concern the skilled artisan. He, as a rule, does not want help, and certainly does not want patronage from the classes which are regarded as above him, as he is usually able to help himself. But it is a good thing for all concerned when he gets from them sympathy; good alike for them to give and for him to receive. It is unskilled labor which is the puzzle and the despair of those who would see the world a better place to live in than it now is for so many; unskilled labor, which will fetch so little because there is so much of it to be had, but which, alas, is all that so many have to face the struggle for existence with. For there is no denying the fact that there is, year by year, a steady increase in the number of those in the labor market, "who are willing to do anything," which is only another way of declaring that they have been taught to do nothing. It is from these that the chronic poverty, which is such a black stain upon our civilization, comes; it is these who so readily follow the men who proclaim that the only way to better things is by revolution; and there is but little reason to blame, or to wonder at them for it, since semi-starvation is not conducive to soundness of thought or clearness of political vision.

The question, then, for which we must find an answer is, can the increase of unskilled labor be stayed? Upon

the reply which we give will depend very largely the solution of the problem of chronic poverty which faces us today. The poverty which is not chronic, and which, great evil though it be, is a temporary evil which working people may, it is true, suffer severely from, but which they eventually tide over, does not concern us in this connection, but belongs to another set of conditions, and needs other remedies. It is the poverty that is always with us that is most important. I mean the poverty of idleness that comes from the thousands that can do nothing well, and from which we are overburdened. If this cannot be remedied, but goes on increasing, then the socialist prophecy will be fulfilled, and revolution will come, and will be followed by its inevitable reaction, which leaves the last state of the nation worse than the first. A nation which knows how to make the best use of its resources is only created by individuals who know how to make use of their resources, and this is what the majority of our boys and girls are not taught to do, and it is too late to learn the lesson when they become men and women.

For, great as has been our intellectual progress and development, admirable as is our educational system in many of its aspects, it is a radical defect of it that it does nothing toward educating people how to use either their hands or their opportunities. In any state of society, even in the millennium glory which is the dream of the socialist, the man who can do nothing more than hew wood and draw water will remain a hewer of wood and a drawer of water to the end of his days, though it may be hoped that his remuneration for such services as these will improve as the world grows wiser, and men realize more their duties one to another. What is wanted is, that the whole man shall develop more, and one of the first steps in this direction is the establishment in all our schools of a technical education. And this does not mean simply that a boy shall be taught his trade at school instead of at the workshop. It means that he shall be taught to work like an intelligent being, instead of by routine, or by rule of thumb. It means that he shall learn that a trade is an art, too, and that art is only at its best when it is working in subjection to law. It means that he shall learn these facts early in life, when he can profit by them, and not as now, when it is too late to do so. Most intelligent workmen learn these things, but they do not learn them until half their life is given to the experience. The majority of men do things in a particular way because they are told to do so, or because their fellows have done so before them, and so, like the horse in the mill, walk in one path all their lives, and, if chance sends them out of it, they are lost.

Will the working classes rouse themselves and consider this aspect of social reform, and demand a system of education suited to the needs of the times? If they will, they will obtain it. It means far more than appears at the first glance. It means that the intellectual capacity of the nation will be developed to the fullest extent possible, and therefore that we shall be better able to face and to overcome the evil which is ever struggling

with the good, let that evil take what form it may. It does not mean, and it would be mere idle talk to say that it did, that all poverty and suffering will disappear, but it does mean that we shall be better able to cope with them. The words "the poor ye have always with you," are as true now as ever. Moral, mental and physical weakness are some of the causes of poverty which are, and will be in a greater or less degree, always among us; and these, no doubt, have their influence in the production of the unskilled laborer. But these bring with them no cause for despair, but rather for increased work, in the faith and hope that no honest and intelligent effort for human good will ever be wasted or entirely vain.

Written for THE INLAND PRINTER.

QUADRATS.

BY PICA ANTIQUE.

EQUALITY, like liberty, is a precious delusion of sense, comfort and property. There can never be the perfectness of either in this world—could not be in fabled Arcadie. Every man is more or less indebted to his fellows. All others have rights as well as ourselves, and the result is ever far below the theory. Strain the principles of either to the utmost and a point is reached beyond which neither can go.

Until every man is born with the same powers of mind, the same brilliancy of genius, the same strength of will, the same vital force, the same endurance, the same wealth, equality is a senseless catchword. As there is a middle, even so there must be a top and a bottom, and the weak will perish beneath the crushing footsteps of vaulting ambition and more ponderous weight. The poor man can no more successfully cope with the Jay Goulds and Vanderbilts of Wall street than the pale-faced, nerveless student can with Kilrains and Sullivans in the prize ring. Above the humble structure will always tower some Washington monument; above the masses some intellectual giant of a Webster and dramatic Shakespeare; some electric Edison; some warlike Bonaparte. There must be leaders as there are men to follow—a general, as there are rank and file.

Thus it will ever be in business. Capital is the foundation upon which it is builded, and without it, combined with brains and energy, the superstructure of fortune will never rise. Every movement upon the vast checkerboard of the earth's enterprises proves and demonstrates inequality; the want of some essential quality in the physical or mental organization, in head or pocket to be a successful leader. It is the rankest bosh to talk otherwise. All men cannot be the heads of great establishments any more than all can be president. There must be employers and laborers to the end of time. Solomon's temple was not builded by Solomon's hands; railroads and canals are not by the "Chief Engineer"; the pyramids, by a single hand but hordes of workmen, and the palaces of "imperial Rome" by swarms of slaves.

A very much abused and very little understood word is equality. The angels in heaven cannot claim it.

Above the highest there is a higher, until the great God-head overmasters and overshadows all. And so is it in mind and affairs—in statesmanship, army, navy, down to the lowest in the list of occupations. Why, then, pompously and vauntingly talk of a ridiculous impossibility; of a state of affairs that cannot exist? Why endeavor to abolish laws created with creation; why seek to make lesser stars equal in magnitude and far-reaching splendor with the greater; why idly dream of an agrarianism of thought, power and good that will only cause a more bitter awakening.

Better to learn the lesson aright; to more firmly establish the relation between capital and labor; between employer and employé, to the end of harmony, justice and a fair division of the joint proceeds thereof. Anything else will be gall and wormwood, strife and anarchy, snares and delusions. * *

EQUALITY was an unknown quantity in the work of creation. Worlds are no more equal than men. There was but one Harvey to teach the reason why the cheek crimsons; but one Jenner to save life by inoculation; but one Daguerre to utilize the pencil of the sun; but one Locke to teach the secrets of our mental powers; but one Bacon to rightly direct our course of study; but one Linnaeus to tell of leaf and flower; but one Lyell to open the volume of geology and permit us to read upon the stony pages the autobiography of the earth; but one Newton to unvail the stars; but one Franklin, printer, sage and philosopher; but one Sheridan, though the thought of nature breaking the die was not original with Byron, great poet as he unquestionably was. * *

THERE is no equality in books. One stands foremost and above all others, and to the everlasting glory of the craft was the first issued. (Mazarin Bible, 1450.) In the "embalmed essence of volatile thought," there is as wide a difference as in minds, and, as some French writer says, "The multiplicity of facts and writings have become so great that everything will soon be reduced to extracts." * *

Is this not so? Is not he considered the best author who gives the reader the most knowledge and takes from him the least time, and is not authorship great and to be honored labor? Of it Carlyle says, "Among these men (literary toilers) are to be found the brightest specimens and the chief benefactors of mankind. It is they who keep awake the finer parts of our souls, that give better aims than power or pleasure, and withstand the total sovereignty of mammon on earth. They are the vanguard in the march of mind, the intellectual back-woodsmen, reclaiming from the idle wilderness new territories for thought and activity." To this Emerson has added, "They prize books most who are themselves wise." * *

TRULY, authorship is to be highly honored, but yet not always remunerative. When thinking of it we cannot fail to remember that Homer begged for bread; that

Cervantes and Otway died of hunger; that Southey and Johnson were poor; that Walter Scott was forced to write for bread when paralyzed; that the most immortal of poems were sold for a crust, and books that have run through many editions went begging for publishers. * *

If the art of printing had never been discovered, how little of value there would have been in books—the rapid and cheap reproduction from the original manuscripts being impossible. Take a recent publication of some *seven hundred pages* now sold in "open market" for the alarmingly low price of *25 cents* or the *twenty-four to thirty-two paged daily paper* thrown into my "den" for a nickel, three hundred miles from the office of publication. True, the value to the reader is not lessened by cheapness; the thoughts remain as bright and glowing; but eternal as may be intellectual genius, what principle of immortality would they have possessed had not the little type been cast and the strong-armed press done its work? "Truth is heavy, therefore few care to carry it," says the Talmud, and this appears emphatically correct when books are spoken of. The author is lauded to the skies, but the printer who gave to his thoughts form, color, substance and lasting properties is rarely mentioned. Yet it is his "imprint" that causes wide circulation, and his inventive brain and skilled labor that have caused books to be distributed broadcast over every land and placed in every hand for a song. In this respect the old Rabbinical proverb that "Silence is the fence around wisdom" is proven, re-proven and removed beyond even the questioning of scoffing doubters. * *

EQUALITY being thus simply a dream of visionary enthusiasts, the one thing remaining is to stand upon the plane with the highest, to be as large as possible, if not in exact proportions with the greatest in the sphere of business, thought and action. Life, as a rule, gives the same opportunities to all, and chance or birth have little governing powers. The presidential chair is not barred against any; fortune has nothing of favoritism; success rests with the man, not with the profession or trade. The doors of printing are open for all, are not closed against any, and the quality of equality can be tested to the uttermost. If you will you can become the peer of any man, and in no position can you find more of honor than as an "embalmer of thought"—a printer.

CULTIVATION OF SISAL-GRASS.

The Bahama government is taking an active interest in the culture of the agave or sisal-grass, and has sent a commissioner to Yucatan to obtain the fullest possible information, with the view to introducing the industry into the islands. It is proposed to ship a supply of plants sufficient to stock 5,000 to 15,000 acres. There are vast tracts of lands in the Bahamas believed to be adapted to the growth of sisal that are useless for other purposes. A field of sisal will last fifteen or twenty years with proper attention, and it is estimated that the yield there could be made to bring a revenue of \$5,000,000 a year, ten times the present value of all the exported produce of the islands.—*The Paper World*.

HERE ARE A FEW COMMENTS MADE BY ITS USERS.

- "The movement of the press is beyond all praise—a poem in steel."
- "I would not hesitate to state that the very finest class of work can, without any difficulty, be executed."
- "The new bridge motion works fine. Have never had a break or any trouble with the machines, and they are running every day, over 1,500 an hour."
- "It is a genuine pleasure to be able to report that 'it is a daisy,' and we have all fallen in love with it."

PRESSSES

All our Standard Presses have the following Patented Improvements:

1st. Our still *Gripper Motion*, which registers perfectly.
 2d. *Air Valve* for removing the spring when desired, and invariably restoring it when starting the press.
 3d. The *Shield*, which effectually protects the *pistons* and *cylinders* from paper, tape or other substances, which might otherwise fall upon them.
 4th. The *Piston*, which can be adjusted to the size of the *cylinder*, so that any wear of either the *cylinder* or of the *piston* can be readily and accurately compensated. The adjustment is *easy, positive and perfect*, and renders the apparatus *air-tight*, a most important consideration, inasmuch as any escape of air, whether through a valve or around the piston, reduces the resistance, and thus impairs the efficiency of the mechanism.

5th. *Roller or Journal Bearings*, securing the following advantages: (a.) Any single roller may be removed *without disturbing* the others; (b.) All the rollers may be removed and replaced without altering their "set"; (c.) When desired, the *form rolls* may be released from contact with the distributor and type, *without removing the rolls from their bearings*.

6th. Our *reversing mechanism*, which gives the feeder *entire control* of the press, and effects a *large saving in time*, and also insures the greatest possible number of perfect sheets.

7th. Our *positive slider mechanism*, by which the slider is kept in the *correct relation to the bed* at all times, and thus a perfect impression secured.

From the Warren, Pa., Ledger, of Nov. 20, 1885.

There may be a better press than the "STANDARD" built by the Babcock Printing Press Mfg. Co., of New London, Conn., but we have not seen it. The No. 6 "STANDARD" recently placed in our office, by the above company, is entirely satisfactory. It runs without jar over 1,800 impressions per hour; a 1,500 motion is slow. Two thousand can be made easily without injury to the machinery.

From Fuller & Stowe Co., 40 Lyons St., Grand Rapids, Mich., March 3, 1886.

BABCOCK PRINTING PRESS MFG. CO.: *Gentlemen*.—Your favor of the 27th came to hand, and same day your new vibrating attachment. We consider it a great improvement over the old style. We are much pleased with the operation of the machine, and shall add another of your make as soon as our work will warrant it.

Yours truly, FULLER & STOWE CO.

Office of the Times, Lima, Ohio, Dec. 1, 1886.

BABCOCK PRINTING PRESS MFG. CO.:—*Gentlemen*.—Some months ago we bought from Messrs. Barnhart Bros. & Spindler, of Chicago, one of your "STANDARD" Presses, which has been in constant use in our office ever since, and gives perfect satisfaction. We have used presses of many styles, but never operated one that embraced so many good features as your "STANDARD" series. It is a first-class machine in every respect, and yet so simple as to be easily operated and capable of doing the finest kind of work. Our press (a No. 2) is capable of running as many sheets per hour as the feeder can place properly. In fact, it is just the press we were looking for, and we would not exchange it for any other press in the market.

Very respectfully yours,

O. B. SELPRIDGE, Manager *The Times Co.*

CHICAGO, FEBRUARY, 1889.

WE direct the special attention of the members of the craft interested, to the circular of Secretary McClevey, in the present issue, referring to the date for the election of delegates to the next session of the International Typographical Union, and the method thereof. Under the constitution adopted at Kansas City, a failure of a union to comply with these requirements will, as stated, "cause the credentials of the delegate or delegates from such union to be submitted to the convention, thus debarring said delegate or delegates from participating in the proceedings pending the decision of the convention."

TIME TO CALL A HALT.

ANOTHER disastrous failure in the printing business, and yet another—a repetition of the old, old story. Misplaced confidence or an unavoidable business misfortune? No; no such palliating circumstance attends them, because had a wise discrimination been exercised in the first place, the inevitable result would have been foreseen, and at least one establishment been prevented from helping to swamp legitimate business enterprise, and entering upon a ruinous competition, aided by those who in other cases exact the utmost farthing from responsible customers. It is a duty THE INLAND PRINTER owes to itself and to the trade whose interests it represents, to emphatically protest against the longer continuance of such a system—a system which handicaps every honest and honorable employer, and virtually places a premium on crime. Studied neglect on this important question or a further pursuance of the policy which has heretofore characterized the dealings of a number of our press and ink manufacturers, typefounders and printers' supply houses will evoke a protest which bodes no good to them in the future. They must understand that they can no longer remain in the field as the real though disguised competitors with firms whose legitimate business is printing, and whose capital is invested in printing machinery and material.

Gentlemen, it is time to call a halt, and there is no use in mincing phrases. Self-preservation is nature's first law. You have no right to expect the patronage of reliable firms whose orders mean cash, while you nominally transfer the plant which you own, and which has fallen back on your hands through unjustifiable carelessness, in the first instance, and place in charge thereof figureheads, adventurers or wreckers; men, or rather apologies for men, who act on the principle, nothing venture, nothing win; who have everything to gain and nothing to lose, no matter how reckless or dishonest their administration; men who eventually can make nothing for themselves, certainly nothing for you; who ruin the trade and leave a worthless legacy to their successors. Is it just, is it honorable to those patrons who pay their debts, who, even under legitimate competition, frequently find it difficult to meet their obligations, to use such plant to crush them, because their *real competitors* are, as stated, the press builders, typefounders, ink manufacturers and paper dealers? If a favor can be shown, why not dispense it to the reputable instead of the disreputable element? Would it not pay you better in the long run to dump every piece of material thus transferred into Lake Michigan, the Mississippi or Ohio rivers than use it as a club to knock down your best customers? And this is just what some of you are doing. This is strong though justifiable language, because appeals or remonstrances have so far proved in vain, and because the grievance complained of is *not* an exceptional one, but occurs with alarming frequency. If you prefer the uncertain patronage of those in whom you can place little, if any, confidence, and whose past careers should make wise men steer shy of them, to the patronage of those who do

business on sound business principles, well and good. Let the fact, however, be understood; but you cannot serve two masters. You cannot serve God and mammon, or run with the hounds and race with the hare. Choose ye this day whom ye will serve. If the Lord be God, follow him: but if Baal, follow him.

LABOR-SAVING MACHINERY.

AN ardent student of political economy, who is regarded as an excellent and reliable authority in matters relating to that great science, while discussing the growth in popularity of labor-saving machines, lately gave utterance to these interesting remarks:

It has never been questioned that machinery has added greatly to the productive power and possessions of mankind. A mischievous fallacy has, however, been often accepted by the un-instructed to the effect that machinery has a tendency to dispense with hand labor, and so benefit the consumer at the expense of the workingman. To clear away this false belief it is only necessary to remember that machinery itself must be made with hands; that the capital of a country will not be diminished by the employment of machinery, and that such capital must continue to be employed in paying wages as of old. It is true that there is a shifting of the parties to whom the wages are paid.

Arguments on this important subject have been quite frequent within a recent period. They naturally become more general as the use of labor-saving machinery extends. All do not coincide as to the effect that the introduction of machinery has on the wage earner. Many contend that it is injurious, depriving him of employment. It is of frequent occurrence, when the calling into use of machinery has been the cause of throwing large numbers of men out of profitable employment, that adverse criticism has been engendered. Agitation eventuated, but it quickly subsided, for the reason that the majority of those wage workers whose services had been superseded by the machine had found other employment. During the last quarter of a century great and remarkable progress has been made in the invention and manufacture of labor-saving machinery, particularly in the United States. Yet, notwithstanding the fact that the population has increased with wonderful, and at times with alarming rapidity, the great majority of the bread winners are remuneratively employed.

A mechanical contrivance which has only been brought to that state of possible perfection where it has become a thing of real and actual use is the typesetting and composing machine. There are quite a number of them in operation in newspaper and book publishing houses throughout the country. They are not, however, in the opinion of many, so useful as those in the office of the *Hartford (Conn.) Post*. In a recent issue of that journal it was announced that the entire paper had been set by machines. It is the first office in the country in which such a feat has been accomplished.

The typesetting machine is an old invention. It was first made and operated in England. It was invented by an individual named William Church. On the records of the English Patent Office the specifications of the patent appear, under date of March, 1822. After a

lapse of twenty years this was followed by a number of others, hardly a year passing without one or more being patented. Two men, named Young and Delcambre, became quite celebrated through their untiring efforts to perfect it. They were unsuccessful, after sinking all their available funds. For more than half a century the construction of a useful typesetting machine has been the rather knotty problem which a number of inventive spirits have tried hard to solve. It is only within the past few years that there has been anything more than the mere appearance of success. The want of an efficient distributing machine has hitherto been a great drawback, but now a Scotchman, named Fraser, heretofore referred to in columns of *THE INLAND PRINTER*, has constructed one that promises to supply the need. It separates the different letters by a series of switches acted upon by keys similar to those of the composing machine. On the depression of a key the corresponding switch is opened and the type guided to its proper compartment in the composing machine reservoir. Each machine used by the *Hartford Post* is capable of performing the work of three men, and at about one-third cost. Instead of kicking against the pricks, or fighting the inevitable, it behooves the printers of the United States to accept the situation with becoming grace, and utilize these labor savers as best they can to their own advantage. A stitch in time saves nine. ⁷

STEAM VERSUS HAND PRESSWORK.

ABOSTON correspondent, under date of January 24, sends us the following:

I want to ask a couple of questions, to be answered in your columns, as I think they may be of general interest. There was a discussion in the House of Representatives on the 23d on the appropriation for the bureau of printing and engraving, which brought up the matter of steam presses. I would ask what kind of presses they are which the labor organizations seem anxious to do away with and what is the basis of their opposition to them? Also, the reason for the extraordinary royalty of \$1.00 per thousand impressions?

On September 30, 1887, an agreement was entered into between the secretary of the treasury and the patentees of what was known as the Milligan presses, of which the following is a part:

And the said party of the second part hereby covenants and agrees to and with the said parties of the first part, in consideration of the foregoing covenants, to pay the said parties of the first part, or their assigns, the sum of \$7,500 for the construction of six of said Milligan presses; the said sum to be paid as follows, to wit: The sum of \$1,250 when each of said presses shall have been delivered at the bureau of engraving and printing of the treasury department, and shall have been inspected and accepted as satisfactory, both in construction and in operation, by the proper officers of that bureau, and a royalty of \$500 for each press on its delivery to and acceptance by the chief of said bureau, and a further royalty for the continuous use of said presses of \$1 for each one thousand perfect impressions thereafter printed thereon, and to keep and furnish the parties of the first part a true and correct account of the number of impressions so printed.

After a thorough test of these presses, the charge was made that the bills printed on them were much more easily counterfeited than the bills printed on the hand

press, and on request, a committee, of which Mr. Wheeler, of Alabama, was chairman, was appointed to investigate and report upon the matter. In August last the committee reported that the charges had been substantiated by expert testimony, and shortly after an act passed the house, by an almost unanimous vote, declaring that in future all government work in the bureau of engraving and printing should be done by hand presses. The discussion to which our correspondent refers was the result of an effort on the part of those favorable to the continuance of the steam presses, and the payment of the royalty of \$1 for each one thousand impressions. It assumed a wide range, and was participated in by a number of the members. On the one hand it was *claimed* that the opposition to the employment of the steam presses came from a faction who were opposed, under all circumstances, to the introduction of labor-saving machinery, and that their use saved at least \$100,000 to the government. On the other hand, it was *demonstrated* that the so-called labor machinery did not meet the requirements of the situation; that this mode of printing, in addition to rendering counterfeiting easy and simple, burned the sap out of the paper, so that after a short use it became ragged, defaced and wrinkled; that the claim that their use saved \$100,000 annually to the government was altogether unwarranted, as \$1,250 was paid for each press, \$500 additional by way of royalty, and \$1 for each one thousand sheets, or impressions, by way of royalty; and that \$8,000 had been expended in their repair, which sums had not been deducted from the amount referred to. And, further, that even were the statement true, the amount was a mere bagatelle in comparison to the millions of dollars jeopardized by their continued use.

We cannot do better than here present the remarks of Hon. John Farquhar, a gentleman well and favorably known to the readers of *THE INLAND PRINTER*, and let them form their own conclusions as to the merits of the case. He said:

This house has already settled the question whether the steam presses shall remain in the bureau of engraving and printing. By an act passed at the last session — passed almost unanimously — this house declared that all this government work in the future shall be done by hand presses.

Now, Mr. Chairman, after one of the committees of this house has sat for weeks and weeks, after all its members have gone in person to the bureau of engraving and printing and practically examined all this work, and after the committee has come in here with a unanimous report against steam presses and in favor of hand presses, it is very remarkable that at this late day we find men on this floor resorting to special pleading on this question and bringing up arguments which have been settled for at least one whole year, which were turned out of the doors of the committee-room one year ago.

Now, I call attention first to the fact that this house has already declared that the steam press shall not stay; and next I wish to refer to the condition in which the United States government is tied up under this contract with Steele & Milligan. You will notice all through the report of Mr. Graves (this matter has been partially brought to the attention of the house in a speech of the gentleman from New Jersey) there is not one favorable word from this bureau for the hand press. For years that man has stood

there in defense of this patent and as the champion of Steele & Milligan; and this firm (Steele & Milligan) have taken \$65,000 from the United States treasury — for what? For having patterns of presses cast by the United States, assembled by the United States, repaired by the United States, and royalty paid by the government at the rate of \$1 for every thousand impressions coming from those presses.

Why, let the house only think for one minute of this fact. I believe, to the best of my knowledge, while we were investigating this matter we discovered that there had been at least twelve valuable improvements made on this Milligan press since it was put in the office in 1878, made during the employment by this national government, paid out of the treasury, by a man hired by Mr. Graves, and these improvements are now owned by whom? By Steele & Milligan. And according to my last and best knowledge of that transaction, Mr. Chairman, the poor man who made these improvements had not received one cent from Steele & Milligan, but his wages only from the government.

* * * * *

Mr. Chairman, I say independently of this sophistry of steam machinery, this special plea put in here to save this monopoly, I say no skilled man in the bureau of engraving and printing dare, under the solemnity of an oath, say the steam press does work equal to the hand-press. I put it fairly, I do not speak as an expert printer, I say you can go and ask the foremen (guaranteeing them their places that they will not be turned out of employment), and from the engraver down to the wiper they will condemn these steam presses.

More than that, it only wanted the presence of that committee to go through that whole building to find out about it. I went and examined, sheet by sheet, what was turned out by the hand press and what was turned out by the steam press, and as a practical mechanic I condemned the latter. I condemn it because I believed it is dangerous to put anything that is liable to be counterfeited in the hands of the poor and ignorant.

From the foregoing we should infer the steam presses condemn themselves, instead of the labor organizations doing so.

ANNUAL REPORT OF THE PUBLIC PRINTER.

THE annual report of Mr. Benedict in regard to the operations of the government printing office for the fiscal year ending June 30, 1888, recently presented to congress, is a document of more than ordinary interest, especially to the printing trade. It is accompanied with exhibits which show the expenditure of all moneys; "gives full information in regard to all contracts, whether made by the joint committee on printing of congress or the public printer; exhibit in detail all purchases made outside of contracts; and presents all the information necessary to make clear certain facts of the highest value in their bearing upon the administration of the office and the work it has accomplished." These exhibits indicate that during the past fiscal year there has been a marked increase in consumption of material as compared with a like period three years ago; also that the output of completed work is the heaviest ever presented in any report to congress of the result of a single year's operation in the office; and go a great way to vindicate the administration of Mr. Benedict from the aspersions and odium which have been so freely and, we believe, unjustly cast upon it.

Exhibit II shows an increase of upward of twelve per cent in the amount of printing and writing papers consumed during a period of six months of the fiscal

year of 1888 over a similar period of 1886. It also indicates an increase of over sixty-seven per cent for the same period of the present fiscal year of 1889 over a similar period of 1888 in the use of the same class of papers; which constitute the bulk of paper used by the office. This does not include any ledger papers nor any stationery, envelopes or wrapping paper furnished by congress or the departments.

Exhibit III shows an increase of over twenty-four per cent in the number of department requisitions for executive work for a period of six months of 1888 over a like period three years ago.

Exhibit IV shows an increase of over fifty-eight per cent in printed pages and over eighty-four per cent in printed copies of work delivered to congress during the fiscal year 1888 over the amount of same delivered during 1885.

Exhibit V shows an increase of over fourteen per cent in the number of bound volumes delivered to congress by the bindery during the calendar year 1888 over that of 1885. There was delivered to congress from the bindery from July 1 to December 31, 1888, inclusive, 819,608 bound volumes.

Exhibit VI shows an increase of work in the press-room of the main office of over sixteen per cent in printed forms and over fifty-three per cent in printed tokens during a period of six months of 1888 over a like period of 1885.

After referring somewhat in detail to the amount of work turned out and cost thereof (that delivered to congress alone footing up \$1,075,586.06, the average consumption of material approximating twenty tons daily, and continued increase of the same) Mr. Benedict says, "I think I may justly claim that the work of the government printing office, as at present conducted, represents the maximum of output at the minimum cost possible under existing appropriations and contract prices and with the present buildings and plant." He strongly urges the necessity of larger appropriations, additional space and greater facilities, it being a mechanical impossibility for the office to further increase its daily work under existing circumstances, its presses, in many instances, having been compelled to stand idle, with work awaiting them, simply through the inability of other divisions of the office to handle their full product. In fact, he advocates the early adoption of plans for the erection of a new and capacious building in another and more convenient locality for the purpose of the public printing, both for business and sanitary reasons—want of room, on the one hand, and the malarious neighborhood in which the present establishment is located seriously interfering with the health and comfort of the employés, on the other. In the meantime, the erection of a temporary building, with the utmost speed and adjoining the main office, is suggested, as the best means of affording the desired relief.

Taken altogether, the report, as stated, is an exceedingly interesting one, and reflects credit on the office, under Mr. Benedict's incumbency.

ENTERPRISE RUN TO SEED.

IT is to be devoutly wished that the fad of illustrated journalism has about run its course, for it has certainly been run into the ground. That reputable journals will continue to disgrace their otherwise handsome pages with such unsightly, meaningless, idiotic, meritless caricatures, the workmanship of which is execrable, while the slang, generally intended for a pun, is of a similar character, is beyond comprehension. As artistic as a whitewash daub, and as interesting as last year's almanac, they are alike a travesty on good taste and an insult to the intelligence of their readers. A short time ago, a Philadelphia daily published what purposed to be the likeness of a murdered man, as he looked after death, and another in the same city, not to be outdone, presented a ghastly picture of the victim in his coffin, with "closed eyes, naked breast, grinning teeth, agonized expression, and all," as an evidence of "journalistic enterprise." The plea that the public favor such exhibitions is meritless, because it is the duty of the press to elevate instead of help debauch public sentiment.

TO CORRESPONDENTS.

WE are pleased at all times to receive articles relating to the printing business from those who have something of *practical value* to communicate. We desire the printers of the United States and Canada—employers and employés alike—to look upon THE INLAND PRINTER as a journal devoted to their special interests, ready and willing at all times to act as a medium of intercourse between the representatives of the craft. The value of such expressions of opinion and narration of experience cannot be overestimated. This is emphatically an age of progress. Every day develops some new idea or wrinkle of advantage to the trade, and it is for this reason that we ask our readers to contribute their quota from their storehouses of knowledge to the columns of their representative journal.

NOTES ON WOOD ENGRAVING.

NO. XLVIII.—BY S. W. FALLIS.

WHETHER he engraved these cuts in London or not does not appear, but it is definite he was living in London in the following year, and continued to reside there until 1795. He then designed and engraved the cuts for "The Progress of Man and Society," also the cuts for the "Looking-glass of the Mind," published in 1796, as well as those published in the same year for a book entitled, "Blossoms of Morality." Some of these cuts display no mean talent, but his best efforts are shown in "Poems by Goldsmith and Parnell," 1795, and in "Somerville's Chase," 1796, both published in quarto, and are works of merit throughout. Robert Johnson designed three of the principal cuts, but receives no credit in the preface, although he was a very talented young man and deserving more than a passing notice. The cuts in the "Chase," with one exception, were designed

by John Bewick, but owing to declining health he was not able to engrave them, and soon after finishing the drawings on the blocks he left London for the North in hope of being benefited by the change. He, however, failed to improve in health, but gradually grew worse, and a few weeks after his return he died at Ovingham, December 5, 1795, at the age of thirty-five years. The cuts in the "Chase" were all but one engraved by Thomas Bewick, and are superior in execution to those in the "Poems of Goldsmith and Parnell."

John Bewick, as a designer and engraver on wood, never reached the excellence of his brother Thomas, though many of his cuts are very meritorious in point of design, but generally deteriorated by the harsh and unfeeling manner of the engraving. The difference in the style of the two Bewicks is quite marked. The greater portion of John Bewick's cuts are much better conceived and artistically drawn than engraved, and while his cuts were well conceived they were engraved in such a tasteless and harsh manner that the real merit of the drawing was almost totally destroyed, and it is not at all probable that he would have ever excelled as an engraver had his life been prolonged. Robert Johnson, though not an engraver, deserves some praise for the excellence of his designs of several of the best pieces in Bewick's "Birds" and his having made most of the drawings for the cuts in Bewick's "Fables." He was born at Shotley, in Northumberland, about six miles southwest of Ovingham, in the year 1770, and was placed as an apprentice to Beilby and Bewick, to receive instructions in copperplate engraving, in 1778. The plates ascribed to him during his apprenticeship possess very little merit of any kind.

His greatest pleasure seemed to be derived from sketching from nature and painting in water-colors, and he early displayed great talent in this branch of art, and during his apprenticeship he was frequently employed by his master in making designs and drawings. In his leisure hours he embraced every opportunity of improving himself in his favorite art. On one occasion the Earl of Bute was shown a portfolio of Johnson's sketches. He was so pleased with them that he selected a number of them and paid Beilby and Bewick £40 for the same. They appropriated the money on the ground that as he was their apprentice his drawings were legally their property. Johnson's friends, however, instituted legal proceedings and recovered the amount. On the expiration of his apprenticeship Johnson, in a great measure, abandoned the practice of copperplate engraving and applied himself almost exclusively to drawing. The Messrs. Morrison, booksellers, of Perth, engaged him, in 1796, to make drawings from the original paintings of portraits for "The Scottish Gallery," published in 1799. He caught a severe cold while copying some portraits at Taymouth Castle. Not giving the matter proper attention it increased to a fever, and in the violence of the disorder he became delirious, and through the ignorance of those around him he was bound and treated like a maniac. A physician was, however, called in, who

ordered blisters applied and adopted a very different course of treatment. Johnson recovered his senses, but only for a short time, he being of delicate constitution, and soon sank under the disorder, and died on October 29, 1796, in the twenty-sixth year of his age, at Kenmore.

Another, and one who wears the laurels of being the best of Bewick's pupils, is Charlton Nesbit. He is ranked as one of the best wood engravers of his time. He was born in Snolwell, in the county of Durham, about five miles west of Gateshead. He was apprenticed to Beilby and Bewick to learn the art of wood engraving when about fourteen years of age. During his apprenticeship he engraved some of the tail pieces in the first volume of the "British Birds," and all except two of the head and tail pieces in "Goldsmith and Parnell's Poems," published in 1795.

Shortly after the expiration of his apprenticeship, he began the engraving of a large cut, a view of St. Nicholas Church, Newcastle-on-Tyne, from a drawing by his fellow pupil, Robert Johnson, in water-color, the original of which is still in the possession of a Newcastle collector. Nesbit executed this engraving in 1797 or 1798. Up to this time this was the largest cut ever engraved in England. The cut is engraved on a block or series of twelve blocks, firmly clamped together, and mounted on a plate of cast-iron to prevent their warping, making a cut 15 inches wide by 12 inches high for this cut, which was first published in 1799. Nesbit received from the Society of Arts the lesser silver palette when he presented them with an impression of the cut. About 1799 he went to London, and about 1802 he obtained a silver medal from the Society of Arts for engravings on wood, being then described as "Mr. C. Nesbit, of Fetter Lane." In 1815 he returned to the place of his nativity, where he lived in retirement, working at rare intervals for the London and Newcastle booksellers. He visited London again in 1830, and died at Queen's Elm, Brompton, in November, 1838.

Nesbit's numerous works of excellence stand as living monuments of his refined taste and ability as the most accomplished engraver on wood of his time.

The two principal designers on wood when Nesbit first went to London were John Thurston, a copperplate engraver, and William Marshall Craig, a miniature painter, water-color painter and artist and Jack-of-all-trades; the former thoroughly understood the requirements and drew with great skill; the latter, who called himself "Drawing Master to the Princess Charlotte of Wales," was a person of greatly inferior abilities. "Nesbit, sc.," is to be found on the frontispiece of Bloomfield's "Farmer's Boy," as early as 1800, from a drawing by Thurston. Nesbit's name, among others, appears in the commonplace "Scripture Illustrated," from drawings by Craig, published in 1806. Many of the cuts in Watt's and Scholey's "History of England" also bear Nesbit's imprint, but his best work of this date is to be found in the "Religious Emblems" published in 1809.

(To be continued.)

GAMBLING PROPENSITIES AMONG ENGLISH PRINTERS.

BY JOHN BEDFORD LENO, LONDON.

FAR be it from me to libel a body of men whom I have ever looked upon as friends and fellow workers. The vice of gambling, for it is nothing but a vice, is widespread in England, despite the many efforts upon the part of successive governments to put it down. I remember the time when betting lists by the scores were exhibited in the leading thoroughfares of the metropolis. That is so no longer; but, in lieu thereof, we find endless peregrinating bookmakers, more especially in Fleet street (where printers most do congregatè), who advertise no address; who push their nefarious calling under the noses of our police. That the closing of betting shops has failed in its intended object is, moreover, made apparent by the increased number of English newspapers dependent for their success upon sports, of which horse-racing is undoubtedly the chief. Many of these are known to circulate largely and to have become valuable properties. Then, again, our leading dailies, more especially those published in the afternoon and evening, devote a considerable portion of their space and the attention of their writers and contributors to racing matters. Even the well-known Sunday paper, the *Observer*, would be possibly unprofitable were it not for the abnormal sale which periodically results from the passionate desire upon the part of backers to learn, at the earliest opportunity, the result of the racing in France, which usually takes place on the Sabbath.

The statement I am about to make regarding the members of the printing profession, is, I believe, undeniable. Those engaged in this industry in England furnish an unusually large contingent of the supporters of the pencilers or traders in betting. This is remarkable, inasmuch as they belong to a class of persons that should, nay do know the evils arising from this special vice. At any rate, they are in a position to know.

Despite of this fact, the evidence that convicts them of this folly and warrants all I have set forth, is overwhelming. There is one large printing establishment outside the entrance to which a bookmaker is ever to be found, while in many large houses, and possibly the one referred to, there are workmen, who possibly make more by bookmaking than by book printing.

If yet more proof be wanting, it may be found in the drinking houses and the eating houses dotted over quarters where printing offices flourish. Listen to the conversation of those seeking refreshment. See how eagerly they look for the latest quotations of the betting markets, and then say whether the gambling mania does not flourish in printing circles.

Nor is this curse of gambling confined to printers who have become adults. It has infected mere boys who have barely reached their teens. No one was better known to printing youths than the late Fred Archer, the greatest of all English jockeys. They are well posted in the doings, and can canvass the merits and the doings

of every popular or rising rider. I have known mere urchins able to give the pedigrees of successful horses and a complete list of their recorded victories.

To show more completely how this vice has spread among the rising generation of printers, I may mention the damning fact that there are at least a few "bookies" who specially lay themselves out to catch this small fry, who take stakes ranging from a penny (two cents) upward. That this absorption of a boy's attention has a detrimental and degrading influence is certain, for how is it possible, if impregnated with the gambling fever, that his full powers can be devoted to the acquirement of trade knowledge on which his future welfare rests?

Let us see how it is that the young engaged in the business of which I am writing have become so largely impregnated with this vice. The "boys of a larger growth," with whom they are bound, more or less, to associate, are, say pecuniarily, interested in a certain race, for instance, the Derby or the St. Leger. The result of either of these, and other races, are published in the windows of shops devoted to the publication of sporting papers, say in Fleet street, as soon as known. A lad, the last possibly to enter the printing office, who knows little or nothing about betting, is sent out with a pencil and a slip of paper in order that he may copy the published results; in other words, the first, second and third. Who wonders that he catches the fever or becomes entangled in the spider web of the professional gambler? The wonder would be that he succeeded in escaping it. He hears, moreover, that by staking a shilling a certain compositor or machinist has won a pound, but little of his numerous losses. He seeks to and does copy his example. Thus early he is impressed with the belief that he is taking part in a perfectly just and honest game—a game that is equitable between himself and the man who "lays the odds." No one is by to tell him his opponent is gaming with loaded dice; that the chances, in the long run, are dead against him; that he is encouraging and multiplying the vilest and most dangerous class existing, and imperiling his own good name by increasing the temptations that lead youth astray from the paths of honesty. The old metal dealer in the street around the corner could, if he chose, tell how fonts mysteriously diminish and brass rule takes wing. The money the stolen portion has been exchanged for has been spent over "the good goods" and "the certainties" that never turned up, the nest eggs that have almost invariably turned out rotten. Even suppose the boy is not tempted to commit a directly dishonest act against his employer, is it certain that he has not been tempted to rob himself?

He leaves his parents each morning with a few pence with which he is supposed to purchase his dinner and tea and possibly his supper, if knowingly he will have to work late. Is it not a fact that such moneys frequently pass into the hands of Cerberus, in other words, the bookmaker who haunts, if he does not guard the entrance, and that the boy's body is robbed of its proper

nourishment? I have myself known instances of boys independent of or without parents, who, having so lost their entire week's earnings, have had to bear the cravings of hunger till the next pay day arrived, their only chance of relief being small loans from their fellows, who had retained their money or been more fortunate.

This habit, so fatal to honesty, is far-reaching in its influence. It will often be found the parent of drunkenness and profligacy. Once acquired, and if in youth especially, it will be found difficult to suppress or eradicate. It is, if I mistake not, the direst and the most terrible curse that ever got footing in this, or indeed, any other trade; alike to master, man and boy, disgraceful morally and intellectually.

I am fully aware that attempts are often made to defeat this vile habit by a *tu quoque* line of argument, that there are those who say that racing is supported by government, that many of its leading members are known to bet heavily, that masters bet, that stock exchange transactions consist of a series of bets, and that trading is naught but a game of chance, or rather chance, foreknowledge and judgment. But such arguments will not bear examination. The best answer to them is the old one that two blacks can never make a white, that the doings of wicked acts, foolish if you will, can never justify the copying of such examples.

One thing is certain, the devotees to this vile habit cannot escape acts of injustice. Possibly they are thus guilty unintentionally and unknowingly. In some cases, the sufferers are members of their own family, in others, it is their masters, but in the majority of cases, it is both.

I have known men enter their own doors on a Saturday evening with a lie upon their lips to palliate or remove a suspicion of their follies. They have had "a bad week," whereas their earnings have been unusually large, the truth being that the greater portion of their earnings have gone into the pockets of the cormorant "bookie" who haunts their places of business.

But, how, you may ask, does the master get robbed? Is it not a fact that when a printer, or any other workman, sells his services to another, he parts with his rights for a consideration that he deems adequate to engage in a course of acts that, as I have already shown, are almost certain to contaminate the young around him? I might go further and say, that when a man sells his services, he parts with his right to enter into engagements that are known to claim so much attention or absorb so much thought as the backing of horses entails.

I find it impossible to leave this subject without detailing the particulars of one fact that came within my own observation, and although no reader, let alone one engaged in printing, can be ignorant of hundreds equally condemnatory of the evil habit of betting, I am justified in this course, this hawking of stale facts, from its occurring within the trade, every member of which I am at least attempting to prevail upon to leave off being a *betting* in order to become a *better* man.

A trusted servant in one of our leading newspaper offices was engaged to pay the weekly bill for machining,

this being done out. The paper in question was the *Dispatch*, and the machinists Messrs. Taylor & Son, in a court hard by. The weekly bill amounted to £39 for an equal number of thousands of copies, that is, 39,000. This occurred in 1851, that is, before that paper was lowered to its present price, and before machining was done at the ruling prices of today. The greatest confidence had, up to this period, been placed in him by his employers, and that confidence was warranted by the honesty that had characterized all his former actions. Just previous to the act I am about to relate, he took to betting, and within a few months he was charged with stealing the above named sum of money. This act of theft was the result of the acquirement of the dangerous habit of backing racehorses, from a belief in a "straight tip" that a certain horse was bound to win, which, as usual, proved to be nowhere when the race was finished.

For the welfare of all concerned in the printing business in London and, for that matter, elsewhere, this vile system of betting ought to be stopped, if necessary by the most drastic measures. A man or a lad known to bet within a printing office, or even its precincts, should be instantly discharged, and professional betters found lurking about its exits be at once handed over to those who, in accordance with the law, are in duty bound to assist in the overthrow of this debasing custom. Unfortunately, the majority of our London police would rather encourage it than put it down, inasmuch as it is a source of profit to them, as it affords a ready mode of extorting blackmail.

Written for THE INLAND PRINTER.

THE AMATEUR.

BY W. E. SEAPORT.

VIEWED as a competitive adversary, that ignorant,arrant knave, the amateur printer, is, after all, a harmless individual, all things considered—offensive though he may be, and truly is. Usually he is in our midst but a short time, and like the pestiferous house-fly in the sultry summer months, he soon vanisheth away. This analogy is only used here to illustrate the amateur's inherent gift of annoying people; he never thrives as does the fly, which pest is at least endowed with cunning, and exhibits some degree of knowledge in its positive preference for light rather than darkness. The amateur printer is nothing if not ostentatious and arrogant, and he struts along the street with an order for a hundred business cards in the pocket of his well-worn coat, as though he was the heir presumptive to the country, and was contemplating the erection of a fence around his prospective possessions.

While we need have no misgivings concerning the amateur, from a pecuniary standpoint, yet we dislike his egotistical business methods. We pay him too much attention, though he may possibly deserve all he gets. He notes with pleasure the strange and unnatural craving with which we lay hold of specimens of his handiwork. And true it is, odd though it may appear, that we prefer to line our walls with his productions rather than our

own. He is honored by this show of recognition, and after a while his samples begin to arrive by mail; but we have become hardened to it. His honest opinion is that he is making a decided hit in typographical circles, and no one dares to oppose him.

Sometimes this fellow has the bold effrontery to come to us bearing the information that he has a rush of work, and asks us to come over and help him out in the evening. His impudence is truly astonishing, and if we peremptorily deny him admission to our office, he goes about telling the people that we are jealous of his *success*, and that all the printers in town have combined to crush him. Heaven forbid that we should incur the enmity of the amateur printer.

The name of this parasite is legion, yet there is nothing to fear from him: He is transitory at the best, and in most cases goes to the dogs simultaneously with his only set of rollers. The amateur's estimate on a job is completed in a moment, the price of stock being invariably the only item of cost taken into consideration. He will take an order to print anything from a visiting card to a chromo. He buys his paper by the quire, regardless of size, weight or quality, and his ignorance on all matters pertaining to his "calling," is pitiful to behold. Taken all in all, the opprobrium heaped upon him is perhaps unmerited, for the dozen fonts of type, for which he has paid a good round sum, will soon be in the melting pot. During a short and unsuccessful business career, it would appear that all his efforts are directed against the face of his type, usually of the hair-line variety. His press has been strongly built, and the bed and platen will not part company to save the delicate printing surface from destruction. Every impression brings the face nearer to the first nick, and the bearers are all that prevent the leads in the form from showing an impress on the tympan.

In some cases, however, his staying qualities are remarkable; especially does this apply to the fellow who has served an apprenticeship of several weeks or months in some reputable printing office. He has learned it all, from case to press. In a few days after his dismissal, a hand-press, a quantity of body type and other paraphernalia are landed at his door, and an indulgent mother pays the bill, which is plainly marked "C.O.D." And then comes the "long-felt want," a four or five column folio, and the smallest type we see on its inside pages is small pica (the outside is a ready print). The ink used on this beautiful specimen is the purest kind of swamp mud (liberally applied, as though with a brush), and the impression which he has given it "speaks for itself." This journalistic venture, when received by the editor himself is an immense success; the fairly printed patent outside is hidden from view by the heavy impression and off-set, and he sees nothing but his own handiwork. When the amateur enters the field of journalism, well might it be said that he is nearing the end of his tether. About four weeks of "heavy brainwork," and the young editor becomes weary. His type and press soon find their way into the hands of the dealer in second-hand

printing material, and so the amateur printer comes to an untimely end.

The amateur has been thoroughly dissected by writers for years, while comparatively little has been said of his patron. Now, just a few words anent this class of so-called merchants or tradesmen. Take one case, for instance, and give him the familiar name of "John Smith." John has been prevailed upon by the importunities of the amateur printer to order a hundred business cards. The printer buys two sheets of bright blue card, which he cuts into pieces (3 by 2 say) with a jack-knife, using a piece of reglet for a clamp, and in short order the name of John Smith appears in a 36-point gothic letter, while his business is represented by small pica caps. It doesn't matter to the printer nor John either whether the street number is set in nonpareil or double pica, the main point being to make the name *immense*. The price paid for this "job" is not more than 25 cents, and after carefully distributing his cards among his neighbors and friends, Smith fails to see wherein the enormous amount of judicious advertising has benefited him commensurately with his out-put. This gracious advertiser forever after looks upon the "printer man" as a pilferer, and ultimately follows in the wake of the premature disciple of Gutenberg.

But did you ever visit John Smith's store before he succumbed to the inevitable? Well, if so, you noticed that his sign was painted by himself, or perhaps by someone who, like the printer discussed above, learned to paint all at once. I have tried to imitate it; look:

JOHN, SMITH'

Note the symmetry; how suggestive of the ram's-horn. It occurs to me that the fellow whose skill is shown on this sign board was playing at "donkey party" with a comma on the end of a brush, and that his knowledge concerning punctuation and the use of capital letters had been gleaned from the teacher who, upon being shown a miserable drawing of a cow, by a youthful scholar, said, "That's good enough, a blind man would be glad to see it."

Now, does any intelligent printer want the patronage of John Smith? No. Well, then, the amateur is welcome to it.

ARTEMAS WARD'S WILL.

Charles F. Browne (Artemus Ward) having left property in this country, and also legatees in the United States, Judge Barnett, of the supreme court at New York, has signed a decree establishing the validity of the will, in order that the bequests may be made. The will was executed on February 20, 1867, at Southampton, England, where the humorist died. After making a few minor bequests, the residue of the estate is left for life to the testator's mother. After her death the greater portion of the principal is to be devoted to founding an asylum for worn-out printers in the United States. At the death of his mother, the testator directed that the children of John G. King, of Waterford, Maine, should receive \$1,000 each. Hence the application to have the will probated here after it had been duly probated in England.

Mosstype Engraved by the Moss Engraving Company, 535 Pearl street, New York.

CUPID AND THE BUTTERFLY.

THE DEPARTED EDITOR.

The editor's sanctum is silent and bare,
A sadness hangs over his quaint oaken chair ;
His old leaden inkstand is empty and dry,
And his porcupine quill slumbers idly by.

His porcupine quill ? Ah, what language would slip
From the long slender tube with its ivory tip !
What a leader the old fellow used to turn out,
With the aid of the *Times* and a pint of brown stout !

He would write his own Letters from London — the rogue !
And would pad them with scandal — a plan much in vogue !
Like a charger, the battle he'd scent from afar,
By writing a "special" "direct from the war."

When matter was short and he wanted a hit,
He would take up his pen and a murder commit ;
He was good at a burglary, smart at a ball ;
But at writing up "ads" he'd no rival at all.

He was ne'er at a loss — with all branches he'd cope ;
And could handle the tar-brush or wield the soft soap ;
But now he's departed this valley of woe,
And has gone to the land where good editors go.

Well, then, peace to his soul ! It is under the eye
Of the spirit's Great Editor up in the sky ;
Let's hope it will join the cherubial ranks,
And not be "declined," but "accepted with thanks."

And we'll speak of him kindly ; no longer on earth
Will his rubicund countenance flavor our mirth ;
He has gone far away from the world's busy hum,
And we'll write as his epitaph — "Scissors and Gum !"

— *Wellburn in Hull Miscellany.*

NEWSPAPERS AND PRINTING IN INDIA.

There have recently been published some interesting statistics which have been compiled by the officials of the Indian Home Department with reference to the number of presses, and the various newspapers, periodicals, and books published in India. In the year 1885-86 — the year dealt with in the return — there were 1,095 presses worked in India. Of these 294 were in the Northwest Provinces and Oude, 229 in Bengal, 228 in the British territory in Bombay, and 20 in the native states, 200 in Madras, 71 in the Punjab, 26 in Burmah, 16 in the central provinces, 5 in Berar, 4 in Assam, and one in Coorg. The number of newspapers printed in English during the same year was 127, as against 117 in the previous year, and of newspapers printed in the vernacular or bilingual 277, as against 259 in 1884-85. The Punjab is not reckoned in the circulation, as the returns do not separate the English and the vernacular papers, but give a total of 67 for both. By far the greater number of the vernacular newspapers are published in the Bombay Presidency, which supports no less than 104, the Northwest Provinces and Oude coming next with 72, and Bengal next with 54. In Madras there are only 29, and in Coorg no newspaper either in English or in the vernacular is published. The number of periodicals published in India — excluding the Punjab — was 284, of which 102 were in English and 182 in the vernacular. In the Punjab there were 122 periodicals published during the year. Bombay is again at the head of the list of native periodicals with 88, while in Madras 40 English periodicals were published, and only 21 in the vernacular. The number of books published in the vernacular was much larger than in 1884-85, when it was 6,726. In 1885-86, the number was 7,990, of which Bengal contributed 2,414, Bombay 1,855, the Punjab 1,527, the Northwest Provinces and Oude 1,251, and Madras 718. On the other hand, the number of books printed in English has decreased — 734, as against 770 in the previous year. Of these Bengal contributed 317, Madras 154, Bombay 168, the Punjab and the Northwest Provinces and Oude 39 each. — *London Printing Times and Lithographer.*

TYPE RUSTING: ITS CAUSE AND CURE.

The *Austrian Printer's Gazette* has the following on the causes of type rusting, and on caustic lye as a preservative. It is written by Alois Sassik, head of the Imperial Printing Establishment, in Vienna : "With zincotypes the greatest possible cleanliness is most important, as oxidation takes place very rapidly in this kind of engraving. Zinc oxidizes very quickly when exposed to the air or to alkaline liquids ; when the oxide is once formed, it freely develops under the influence of the soda potash. We would recommend the use of benzine or spirits of turpentine, then dry with a rag, leave a moment in the air, and place the zincotype in a drawer.

"When washing forms, dirty water, or such as has already been used is often taken. This latter always contains potash, petroleum and spirits and dirt. This is another cause of rusting. Another habit is no less injurious. When the potash does not act quickly enough, some washers are accustomed to pour spirits of turpentine on the brush or on a rag and to rub the rebellious spots, without taking the precaution, however, to use a little potash and clean water afterward.

"It has been ascertained by chemists that the spirits of turpentine, especially when old, absorbs oxygen from the air and ozonizes it — that is, it transforms it into an active and positive oxide that acts very energetically — so that any spirits remaining on a form not only favors, but actually excites the development of the oxide on the type.

"The principal causes of type rusting may be assumed from the foregoing as follows: 1. Bad proportioned alloys. 2. Improper metals in the composition. 3. Placing the type in damp places, especially when not previously dried. 4. Want of care on the part of the washers of the forms.

"Let us now say a few words on potash of soda and the introduction of the fatty matters of soap into the potash. What we have said goes to show that the soda lye does not produce the oxidation, but is rather neutral toward the type, and that the causes must be sought in negligence in washing and rinsing. Soda lye is the best caustic that we know, and it would be difficult to replace it ; it makes the use of spirits of turpentine superfluous, and is only surpassed by benzine for cleaning zincotypes and wood engravings, as this latter oil prevents the wood from changing. The great point, therefore, is to make a good lye ; there is no lack of recipes, but still there are complaints of the results obtained.

"Solid soda or soapstone, although dear, is excellent in its way, as it is put up in air-tight boxes and retains all its natural causticity and strength. Trade papers often give formulas in this matter that a chemist, the only judge, would not approve. The quantities for the mixtures are given, but no mention is made of the manipulation, nor the time required for boiling, nor the degree of heat, nor the quality of the substances — matters that are equally as important.

"In country towns the ashes of hardwoods, the beech, etc., are wetted with boiling rain water, some lime is added, the product is drawn off, and a very good lye and one that does not injure the type is obtained. In large cities, however, we have to follow another plan. The following recipe we have found excellent : Dissolve 2 kilograms of crystallized soda (carbonated sodic oxide), or 0.75 kilo of sub-carbonate of calcined soda, in 24 kilos of river water that contains no calcareous matter. Heat the mixture in boiler to boiling point. While boiling, slacken 2 kilograms of quicklime in 6 kilograms of river water, make a kind of jelly of it and pour it into the solution while it is boiling ; stir, lift from fire, cover up carefully and let cool and settle. Then pour the clarified part — the caustic solution — into stone jugs and cork hermetically, to prevent the carbonic acid gas of the air from entering. There will be a deposit of carbonate of lime on the bottom of the boiler ; pour some river water on this, stir up and boil again. This second solution is weaker, and will serve for cleaning inking tables, cleaning rags, etc. The first solution should only be used for the forms. We have tried silicate of potash and found it inefficient ; it contains but very little caustic soda."

A. R. HART.

The success achieved in the art of photographic engraving within the last few years is one of the marvels of the present day. A revolution has been brought about in the world of art and literature by its products, and it has been truly said that the dream of the artist to see his work faithfully reproduced, and the desire of the publisher to meet a growing demand for better illustrations without additional expense, are fully realized by its agency. To bring these results to a successful issue has taken years of investigation, experiment and careful study, and no individual in America has labored more zealously to achieve them than the gentleman whose portrait we herewith present — Mr. A. R. Hart, general manager of the Photo-Engraving Company, of New York — who is emphatically a self-made man, and a marked example of what "clear grit" and unceasing perseverance will accomplish. He is the son of a shipbuilder, and was born in Clayton, New York, in 1854, where he received a common school education, and remained until he was twelve years of age, when his parents removed to New York City, where, after a few years' residence, he entered the law office of Judge George W. Lord. When twenty-one, he joined the banking firm of Frank & Darrow, as law clerk, and traveled throughout the West in its interests. But all this time his natural fondness for artistic work — for engravings, good pictures especially — which had manifested itself in early childhood, continued to grow upon him, and in the spring of 1876, an opportunity offering, he became connected with the Photo-Engraving Company, and put aside his law books for this more congenial pursuit. So well did he familiarize himself with the details of the business that at the lapse of two years he was made manager of the company, which position he still holds.

At the time he became connected with the company, its employes in all branches did not number twenty; today they exceed two hundred. That it has been his constant aim to study and supply the needs of the trade can be vouched for by all who have been patrons of the establishment, and how far he has succeeded is attested by the marvelous improvements in the high art work which has been produced under his immediate supervision, and which has given the establishment a national reputation. To his efforts are entirely due the introduction of the photo-engraving process in the scientific publications of the government, the first plates of which were made for Prof. Spencer F. Baird, of the

Smithsonian Institute. They were technical plates relating to a scientific process. The way in which Mr. Hart brought about this success in Washington is interesting. He knew that the government was using a large number of illustrations in its publications and was having them made by very expensive methods, and he also knew that the process could be adapted to meet the wants of the men engaged in making out the government reports. He thereupon concluded to make the attempt to introduce photo-engraving at Washington. He went there and spent some time discussing the subject with such noted scientists as Prof. Baird, Dr. Elliot Coues, Prof. G. B. Goode, Dr. Gill, and others, and showed them that the same work could be done for one-half the price the government was then paying. Finally, he was permitted

to try the experiment. The result was the adoption of his process, and since that time, and in consequence of such adoption, the government has been enabled to publish twice as many scientific illustrations as ever before without extra expense.

The most noteworthy of these publications is that of "The Fisheries and Fishing Industries of the United States." It is in two quarto volumes of 1,000 pages each, and contains 600 plates. The illustrations include all the food and game fish, and all fur-bearing amphibious animals of North America. In fact, there has been such a demand for the work that congress has been called upon for an appropriation for another edition. Among the other recent books illustrated by the company of which Mr. Hart is manager, are the "Doré Bible Gallery," a collection of 100 of the choicest illustrations of the Doré gallery; "Atala," magnificently illustrated; Doré's "Wandering Jew," and "Art Gems of the Hoffman House." This last contains a reproduction of the hand-

some paintings which adorn the hotel, and is the most magnificent hotel book ever published. Many of the finest illustrations of Harper & Brothers, the Century Company, Appleton & Co. and, in fact, every other first-class publishing house are now done by the Photo-Engraving Company.

Besides its headquarters in New York, it has branch houses in Chicago and Philadelphia, and also a large and well-equipped printing department, where the higher grades of printing for publishers is made a specialty. One fact connected with its productions which is worthy of particular mention, and which will doubtless be appreciated by those most interested, is that all the early defects of photo-engraving have been overcome by it, and the plates now produced by it are equal in all respects to the best wood engraving, the lines being as deep and as sharp as hand-engraved plates.

Mr. Hart is of the firm of Hart & Von Arx, manufacturing stationers, and is also the head of the firm of A. R. Hart & Co., the well-known publishers of the late General Logan's work, "The Great Conspiracy," the demand for which has been unequaled, except by that for the Grant memoirs. While comparatively young in the trade, the success of the firm has been phenomenal, and it is now recognized as occupying a front rank among American publishers.

Mr. Hart is deservedly considered one of the best posted men in the printing fraternity, and is frequently consulted by the leading printers and publishers of his city, being fully versant with all the newest devices, improvements and equipments which go to make up the perfect modern printing establishment. He is president of the famous Amaranth Society, of Brooklyn, the largest social organization in the city; is a Mason of the thirty-second degree and a member of Mecca Temple, of New York City. The name of Mr. Hart has been prominently mentioned for appointment to the position of public printer under the administration of General Harrison.

A BISHOP'S EXPERIENCES AS A PRINTER.

In the January part of the *Quiver* there is an interesting article by the Rev. John Horden, D.D., Bishop of Moosonee, relating his experiences among the Indians in the Hudson's Bay Territory. After mastering the language, he began teaching the Indians reading and writing, and he then began to find the necessity of printed books. He says: "Reading soon became pretty general, and the providing of books, all written by hand, became a heavy tax upon me. As soon as I found myself capable of doing the work satisfactorily, I prepared a translation of a portion of our English prayer book, and sent it home to my friends of the Church Missionary Society, requesting that a thousand copies might be printed and sent out to me by the next ship. The word "ship" recalls many reminiscences, some of a painful character. Our ship is looked for with deep interest, and should it not arrive at its accustomed time, our minds become filled with anxious forebodings. But in the year when the books were looked for the ship arrived somewhat early. Large cases were consigned to me, which I had hoped would be filled with books; but what was my amazement, on opening the first, to find reams of unsullied paper, a font of type in the syllabic character, a printer's roller, a drum of ink; while in the second case were what appeared to me the parts of a printing press, and many other things, of the use of which I had not the slightest conception. It then dawned upon me that my friends had sent me out everything necessary to set up a first-class printing and bookbinding establishment, but had entirely forgotten to send out the printer and the bookbinder. What was to be done? It would never do to allow these things to remain idle, so I set to at once to see what I could do with them. I selected a smart little boy from my school, and we at once began our work. We were first carpenters, and made the frames to support our font of type; and then we looked at the parts of the printing press, and the sight seemed to fill us with dismay. But we were not to be easily beaten, and after many trials the completed press stood before us an accomplished fact. I now took my composing stick in hand, and stood before my frame dropping in type after type. It was at first slow work, but became more rapid as I proceeded, and I felt extremely proud when I saw my first page tied up and put aside. But I had to set up sixteen pages before I could be assured of success, such being the number required for a single sheet, and this occupied me many days. All this time the Indians were watching me, and they noticed that I was extremely silent, and that my look was anxious. Thoughts soon arose in their minds, and those they soon expressed in words: 'The minister has troubled himself so much about his book he has gone quite mad.' I made no reply, but kept steadily on at my novel employment. At length all was ready, and I had the satisfaction of seeing the result of my work in a proof in which the characters were as clear and bright as in any book I had ever seen. With my sleeves turned up, I took the printed sheet in both hands and rushed out of doors, among a body

of Indians assembled outside, crying out, '*Pache kunawapatumok oma, pache kunawapatumok oma!*' ('Come and look at this, come and look at this!') They came, they looked, they stared; I was no longer a madman, but the greatest conjurer they had ever seen. And now sheet succeeded sheet, until the work was completed. I had next to undertake bookbinding. In this I was equally successful, and by the end of May, when my Indians returned from their hunting grounds, I was able to present each of them with a well-bound book of common prayer, after which our services gradually assumed the form of the usual church service. A hymn book followed, and that again was followed by a bible history in the form of a catechism, after which the four gospels, which made a volume of considerable size, passed through the missionary press."

PHOTOGRAPHY ON WOOD.

The *Revue Photographique* gives the following directions for photographing upon wood. Measure out:

Gelatine.....	8 grams.
White Soap.....	8 "
Water.....	500 c. c.

The gelatine is allowed to swell; is dissolved in the water bath, and the soap is added to it gradually, stirring all the time. The mixture is then filtered through muslin. A little zinc white is added to it, and it is then rubbed well into the wood to be used and then left to dry. The film should be as thin and equal as possible. A coating of the following solution is then applied to the wood by means of a broad brush:

Albumen.....	30 grams.
Chloride of ammonia.....	1.2 "
Citric acid.....	0.2 "
Water.....	24 c. c.

Whip the albumen to a froth, let it settle, and then add (in order) the water, the chloride of ammonia and the citric acid. When dry, this film is sensitized by pouring on it a little of the following solution and spreading it with a glass rod:

Nitrate of silver.....	3.2 grams.
Water.....	31 c. c.

Pour off any excess of the sensitizer and allow it to dry again. Print as usual. It is not necessary to overprint. When sufficiently exposed, hold the printed surface of the wooden block for three minutes in a weak solution of salt; in this the print will become slightly paler. Wash under the water tap, and fix for four or five minutes in a concentrated solution of hyposulphite of soda. Wash again for ten minutes under the water tap, and dry.

AN OREGON PRINTER GIRL.

The East Portland (Ore.) *Vindicator* has a pleasant story of a plucky and skillful girl compositor. Until a few months ago the foreman of the San Francisco *Examiner* peremptorily refused to permit a girl printer to work on that paper. Numerous applications were made, but he remained inexorable in his refusal to employ any but male compositors. During the latter part of last summer, Miss Hattie Ross went to San Francisco for the purpose of securing employment. It was not long after her arrival until a printer with whom she was well acquainted had occasion to lay off a day or two, and he engaged Miss Ross to take his place during the interval.

The foreman reluctantly consented to the arrangement, and the Oregon girl took her place as a substitute at her friend's case. The tyrant of the composing room watched her with evident interest, as the type went click, click, click with almost lightning speed into her composing stick. He went away, and returned several times, still watching her intently. Hattie paid no attention to anything except the work in which she was engaged, and next day, when the work of each of the forty printers in the office was measured, she had the top string by several thousand ems. There was no more opposition to the young lady from Webfoot setting type in the *Examiner* office, and she now has steady employment. She made over \$17 in two nights' work.

TYPE

COPYRIGHTED

SUPPLEMENT TO THE INLAND PRINTER

No. 13.—The body type used in these pages is *Mimion*, No. 13, of the *Riverade* series, modeled by Mr. H. O. Houghton, the eminent printer and publisher. The face was cut in steel, cast from copper matrices, and is without what is usually termed a hair line, the surface being firm and flat. Specimens of the completed series will be sent upon application to Dickinson Type Foundry, Boston.

OURSELVES

TYPE is here to show you attractively new styles of the Dickinson's own and other founders' design; to tell the printer of the latest improvements connected with his craft, and to gossip, in a general way, about the trade and its belongings. It has no nauseating self-glorification to offer you, but bends a listening ear for the pleasant words that friends may kindly shower upon it. Let generous orders accompany them, please, and the TYPE's mission will be accomplished, and modesty will have its own reward!

STANDARD JOB SCHEMES

The work of changing over job fonts from the old schemes to those adopted by the Type Founders' Association is an important and expensive task, which the Dickinson Type Foundry expects to complete at an early day, and be able to fill all orders with the new-scheme fonts. The advantage to the purchaser will be in always knowing by the number of a's specified in the specimen just what a font contains, wherever bought.

SPECIMEN PRIZE OFFERS

The variety in type designs seems without limit. Many of them are simply crude imitations, cheaply gotten up, of original styles that cost the founder much thought, care, and money. The Dickinson Type Foundry has never imitated but has sought to originate. It now wants to attract and interest the printer, both employer and employed. It wants him to *think*, to *express his thoughts*, and to see the result of his ideas cast into graceful metallic shapes, of benefit to him and his craft. The Dickinson appeals to the *printer*, to his pride in his profession and in its advancement, and it shall be disappointed if the result is not something original, and helpful to all.

COPPER IN TYPE

The first introduction of copper into type-metal, of which there is any authentic knowledge, was made in 1848 by the late Michael Dalton, a former proprietor of the Dickinson Type Foundry. This fact is established by record and by his personal statement.

Mr. Dalton was a persistent investigator into everything pertaining to his business as type-founder, and possessed a large practical knowledge of those metals which are compounded into type. He was early impressed with the value of copper as an ingredient, and worked out a formula for a composition which largely overcame the difficulties of thoroughly amalgamating copper with tin and lead. This formula was placed with the Revere Copper Co. of Boston, for convenience in mixing at their works, some 32 years ago, and was constantly used by the Dickinson Type Foundry

in its type-metal until 1868, when the present proprietors began to increase the percentage of copper.

New and extensive experiments have recently been completed, and the Dickinson Type Foundry now announces that by its present process it is enabled to use a much larger quantity of copper than has ever before been successfully attempted by any founder. The result is an exceedingly tough and springy compound, durable without being brittle and much lighter than the ordinary metal, the latter quality largely increasing the number of letters in a pound, with economy to the printer.

Within the past twenty months nearly all the casting machinery and moulds at this foundry have been rebuilt, and the already extensive list of matrices has also been greatly added to, all of which are especially adapted to the using of this metal. The intense heat under which the metal is worked requires frequent renewals of machinery and tools, at a large expense.

With uniform prices among all reputable type-founders, the Dickinson Type Foundry does not seek business by falsehoods or by belittling its neighbors, but by increasing the *quality* of its productions without increasing the prices.

DICKINSON FOUNDRY SPECIMENS

QUAINT and QUAINT OPEN, are the freshest type offerings of the new year, and their designer (a leading printer) has shaped a quaint and suggestive letter.

THE CURSIVE SCRIPT shows pleasing varieties of Mediæval forms, in both capitals and lower case, exact transcripts by the masters of early printing.

THE OUTING's delicate lines and shapes appeal to the æsthetic printer, and, combined in caps and small caps, are full of unique possibilities.

THE JAGGED is original, and capable of excellent effects in the hands of an appreciative workman.

TYPOTHETÆ CLUBS

These meetings of printers have a healthful tendency. They beget confidence in place of distrust; they broaden trade sympathies by the exchange of personal experiences; they develop a self-respect that prevents a man from breaking in private an open promise made to his fellow-craftsmen; and they require one to see beyond the narrow confines of a locality into the national outlook of a business, thus inevitably making employers inclined to deal with trade questions a larger, more thoughtful manner.

OUR MUTUAL FRIEND

One rather admires the brisk, aggressive concern which wants the earth and claims it. The rattling whoppers which no one is expected to believe, but which read spicily, the personal modesty which patronizes the whole trade, and embraces all the knowledge pertaining to the craft's past, present, and future, are amusing and exhilarating, and fill a unique place of the concern's own development. Such a concern does not lie for business. It does not lie for pleasure. It simply lies because it cannot help it—and without hope of being believed!

EASTERN TRADES CURRENT

THE PAPER TRADE the past year has been a prosperous one. New England, with her enormous output has made much money, and individual concerns have waxed exceedingly rich. Every grade and quality have felt the heavy demand, and prices on large contracts have been excellent.

PRINTERS are generally looking happy, and appear good-natured when talking shop. Composition in the larger book offices is plentiful and at good prices. Pamphlet, job, and miscellaneous work keeps about all the other printers busy, but not at wholly satisfactory prices. Press-work is plenty, at fair rates, excepting some unusually long runs, which are figured closely.

PRINTING PRESS concerns report a larger demand for the past year than ever before, but printers are more exacting in their demands as to terms, etc., and the business is hard and discouraging. The variety, and manufacturing capacity exceed any possible market. The country is glutted with second-hand printing machinery, with a probable large increase in the near future.

TYPE FOUNDERS in the East are busier than their western brethren, not from a larger sale of their products, but because the point system of type-bodies which was first adopted at the West, has finally worked this way, and made requirements upon the eastern concerns that have taxed their resources heavily to stock up for.

DICKINSON TYPE FOUNDRY AGENTS

For the convenience of printers at a distance from Boston, the following parties, in addition to the list of type founders, will fill all orders for its specialties with promptitude, many of them carrying a stock for immediate necessities:—

W. C. DOBSON, Atlanta, Ga.; N. C. HAWKES, San Francisco, Cal.; J. & F. B. GARRETT, Syracuse, N. Y.; J. B. PRICE, Detroit, Mich.; A. C. KERR & Co., Pittsburgh; THE SHIEDKWARD & LEE Co., Chicago; TATUM & BOWEN, San Francisco; W. G. SCARFF & Co., Dallas, Texas; L. GRAHAM & SON, New Orleans, La.; G. A. STRAUDE & Co., Los Angeles, Cal.; JOHN CRESWELL, Denver, Col.; KANSAS NEWSPAPER UNION, Topeka, Kansas; GREAT WESTERN TYPE FOUNDRY, Kansas City, Mo.; ST. LOUIS PRINTERS' SUPPLY CO., St. Louis, Mo.; N. C. HAWKES, San Francisco; H. L. PELOUZE & SON, Richmond, Va.; WATKINS & BRESNAN, New York; GEBHARD PAPER CO., Buffalo, N. Y.; R. M. MYERS & Co., Rochester, N. Y.; GEBHARD PAPER CO., Detroit, Mich.; BARNES, ALLEN & Co., Syracuse, N. Y.; UNION TYPE FOUNDRY, Chicago, Ill.; J. F. W. DORMAN, Baltimore; GARDEN CITY TYPE-FOUNDING CO., SIMONS & Co., A. N. KEI LOGG NEWSPAPER UNION, CHICAGO NEWSPAPER UNION, CHICAGO G. S. NEWCOMB & Co., Cleveland; E. B. PEASE & BRO., Detroit; WESTERN NEWSPAPER UNION, Des Moines; R. ROWELL, Louisville; MORGAN & WILCOX MANUFACTURING CO., Middletown, N. Y.; JULIUS MEYER, New Orleans; R. HOE & Co., Vanderburgh, Wells & Co., New York; W. C. BLELOCH, R. W. HARTNETT & BROS., Philadelphia; KING & GILFILLAN, Pittsburgh; SIOUX CITY PRINTING CO., SIOUX CITY; NELSON CHEMAN & Co., St. Louis; JOHN H. MILLS & Co., Washington.

INDESTRUCTIBLE TYPE

The Boston Pilot has printed over 21,000,000 paper upon its present dress of type, furnished by Dickinson Type Foundry six years ago, which it is about to replace with a new one. The old type is still serviceable and will be sent South.

TO PRINTERS

WE ARE TYPE FOUNDERS. Many of you are now using type of our manufacture with evident satisfaction to yourselves. We expect our list of customers to be constantly augmented from your numbers in the future.

In the meantime we want you to know us more thoroughly, and to learn what we are doing. We want to interest you in our productions, and to receive the benefit of your ideas and experience as printers, and to *pay you* for them.

Among all the printers in this country, there must be some who have fresh ideas for designs in type, borders, etc., and who will be glad to express them if so invited.

As an incentive for you to put those ideas into shape for the type founder's use, and for the benefit of the printer generally, we make you the following

PRIZE OFFERS:

To the printer sending us the best practical design for a series of type, single or combination border, combination flourishes, combination ornaments, or brass rules, before May 1st, 1889, we will send a *Cash Prize of Fifty Dollars*; to the second-best, *Twenty-Five Dollars*. No elaborate drawings are required, but a design must contain all the letters of the caps, or caps, lower case and figures, and if of border, flourishes or ornaments, the several pieces that complete each. *Originality* is the main requisite. The design must bear the author's address, carefully written out, with date when sent.

THE STAR IN THE EAST

Was the guide for the wise men of old. The Diamond **B** is the modern guide to the Golden Mecca on which all printers' hearts are fixed. We are the manufacturers of the Peerless **B** Line Advertising Specialties, and furnish all goods at first cost, saving middlemen's profits.

We make **FANS** by the million; **CARDS** by the ton, and **PANELS, BANNERS, FOLDERS,** etc.; by the mile, **FOR ADVERTISING PURPOSES.**

Increase your profits, enlarge your business by having these goods to offer your customers. No other branch of your business will pay you as well. Inclose us your business card and we will mail you our jobbing prices on all goods we manufacture, or inclose us 6 cents in stamps and receive a set of Niagara Falls Cards. Full line of Fans now ready. Send for price list. Set of samples of Fans, \$1.50 by express. Liberal discount to the trade.

WEBSTER'S UNABRIDGED DICTIONARY.

WITH OR WITHOUT PATENT INDEX.

STANDARD AUTHORITY
IN THE
GOVERNMENT PRINTING OFFICE
FOR NEARLY TWENTY YEARS.

GOVERNMENT PRINTING OFFICE,
WASHINGTON, April 23, 1873.

Webster's Dictionary is the Standard Authority for printing in this office, and has been for the last four years.—A. M. CLAPP, *Congressional Printer.*

GOVERNMENT PRINTING OFFICE,
WASHINGTON, D. C., April 20, 1882.

I shall continue Webster's Dictionary as the Standard in spelling, pronunciation and definition in the Government Printing Office.

S. P. ROUNDS, *Public Printer.*

GOVERNMENT PRINTING OFFICE,
WASHINGTON, D. C., October 21, 1886.

Webster will continue to be the Standard in the use of the English language in this office.—T. E. BENEDICT, *Public Printer.*

STANDARD AUTHORITY
WITH THE
SCHOOL BOOK PUBLISHERS.

NEW YORK, August 26, 1887.
Webster is, as it has been for years, the Standard of Orthography for both our Educational and Miscellaneous Publications.—D. APPLETON & CO.

NEW YORK, January 6, 1882.
We make Webster the Standard, and in Orthography build all our books on it.

A. S. BARNES & CO.

NEW YORK, August 24, 1887.
In all our publications we adhere strictly to the Orthography of Webster's Dictionary, regarding it as the Standard.—IVISON, BLAKEMAN & CO.

CINCINNATI, O., August 25, 1887.
In all our publications we adopt Webster as the Standard.—VAN ANTWERP, BRAGG & CO.

The publications of the four houses named, aggregate over 17,000,000 volumes annually. To this may be added the publications of nearly all the remaining School Book Publishers.

Webster is Standard Authority with the U. S. Supreme Court. It is recommended by the State Supt's of Schools of 36 States, and by the leading College Presidents of the U. S. and Canada. Sold by all Booksellers. Illustrated Pamphlet sent free.

Published by **G. & C. MERRIAM & CO., Springfield, Mass.**

*Printers who Desire to Make
Money in 1889*

Will secure a sample line of our Advertising Cards, Novelties, Folders, Programmes, Fans, etc., and solicit orders in their own and adjoining cities. Many have done so with success in 1888, many more can do so in 1889.

Write us for full information.

J. J. LITTLE & CO., - - - - -	New York.
BUREAU ENGRAVING AND PRINTING, - - - - -	Washington.
GOVERNMENT PRINTING OFFICE, - - - - -	Washington.

We are exporting our Inks in large quantities to England and Australia, where they are preferred to foreign inks, for the reason that our Black Inks are brilliant and enduring; they do not change their color or fade from age, and superior results are obtained from our Colored Inks.

We can exactly duplicate the quality, tack and drying properties of any ink, no matter how long a time has elapsed since it was used, as we carefully preserve our formulas, which are the result of many years of experience.

Our Inks are ground in the latest and most approved mills, and we do not hesitate to say that, *by comparison*, they will be found the *finest* and freest from grit of any inks in the market.

OLD MACHINERY FOR SALE.

Government Printing Office.

Washington, D. C., Dec. 11, 1888.

The old Printing and Binding Machinery described below is for sale at this Office:

- 1 Rotary Pasteboard Cutter.
- 3 Rotary Card Cutters.
- 1 Rotary Card Cutter, Small.
- 1 Patent Back-forming Machine.
- 1 Case Bender.
- 1 Guard Folder, Large.
- 1 Guard Folder, Small.
- 1 Leather Skiving Machine.
- 1 Perforating Machine.
- 2 Numbering Machines, Small Single.
- 1 Numbering Machine, Single Head (or Pager).
- 2 Wire Stitching Machines.
- 1 Thread Stitching Machine
- 1 Acme Cutting Machine (Broken).
- 2 Calendering Machines.
- 1 Small Steam Chest for Stereotypers' use.
- 1 Stereotypers' Casting Box (Papier Mache Process).
- 1 Curved Plate Shaving Machine.
- 1 Lead Shaving Machine.
- 1 Jig Saw and Mortising Machine.
- 1 Emery Knife Grinder.

Parties desiring any of the above Machinery will please submit prices therefor to the Public Printer. Opportunity to examine the same will be afforded upon application at this office.

"THE WETTER"

Consecutive Numbering Machine.

PATENTED
May 26, 1885.
October 16, 1888.

PRICE
\$25.00

These machines have astonished the printing trade all over the world. They are now in use in the leading printing offices throughout the United States and Europe. Every postal note and post-office money order issued by the U. S. Government is numbered by them. There is no class of consecutive numbering, from the simplest ticket to the most carefully executed bank note or bond, that cannot be numbered by them more economically than by any other known method. Every machine we make is guaranteed, and sold subject to the same. We caution printers to be careful in purchasing machines that infringe on our patents, and solicit correspondence for circulars and prices. Address,

JOSEPH WETTER & CO.,

CORRESPONDENCE.

While our columns are always open for the discussion of any relevant subjects, we do not necessarily indorse the opinions of contributors. Anonymous letters will not be noticed; therefore our correspondents will please give names—not for publication, if they desire to remain incog., but as a guarantee of good faith.

A QUESTION ANSWERED.

To the Editor: St. LOUIS, Mo., February 2, 1889.

In your January number, "Kicker," your Kansas City correspondent, asks if anyone can suggest a remedy for close adherence of letters in stereotyping, to avoid the destructive but necessary pounding to separate them. In answer, I would say, that a device has just been put on the market, for which a patent has been applied for, which is a positive remedy, and the Central Type-foundry will fit chases with the patent sidestick and foot slug for \$15 each. It is the invention of Mr. Joseph Dayball, pressman of A. N. Kellogg Newspaper Company, St. Louis, and has been in use in that office nearly a year. No daily paper can afford to be without it.

"Kicker" also asks why all types are not made three-nick. "Kicker" can have all three-nick type if he orders them that way. If he has any doubt on this point let him send in his order.

J. A. ST. JOHN.

FROM NEW ORLEANS.

To the Editor: NEW ORLEANS, January 24, 1889.

Business in this city is dull, and has been so for some time; but it is beginning to show itself again, as all printing offices are doing something—a few having a rush. For instance, L. Graham & Son have all they can attend to for some time to come, especially bookwork.

Messrs. Hunter & Genslinger, printers and stationers, 48 Camp street, are energetic and enterprising men, having for the last two or three years improved their office in regard to type, presses and required facilities. So at that rate they will, sooner or later, be able to compete with the rest of the larger offices.

Until recently this city has been without a trade pressroom, but realizing its necessity, one of our most practical pressmen, James E. Prendergast, has branched out in this line. Mr. Prendergast has lately received an extra heavy four-roller table distribution Cottrell press, with all modern improvements, and can now boast of having one of the finest and second largest machines in the city, which will enable him to turn out a six-column quarto newspaper, as the bed measures 32 by 46. This venture of Mr. Prendergast has succeeded beyond his most sanguine anticipations, and he will soon be compelled to put in another machine. The press referred to was put up by Mr. William H. Daugherty, of this city, pressman at the *Daily News* office.

The Crescent Steam Printing House, 110 Chartres street, owned by Messrs. E. & P. Marchand, who are doing the state work, will shortly make some changes. They intend putting in a large assortment of type and material, expecting to make a first-class office. They have received four new presses, which will be put in place of the old ones. This firm is determined to turn out first-class work or none at all, in which endeavor I trust they will be successful.

R. J. S.

FROM BOSTON.

To the Editor: BOSTON, February 1, 1889.

The printing trade is greatly stirred just now by the auction sale of the largest book and job printing establishment in New England. The one referred to is that of the Rand-Avery Company. It was recently bought of the assignees by Mr. J. F. Jordan, it being generally understood that the establishment would resume operations under the management of Mr. Thomas W. Lawson. With this end in view the heads of the departments and foremen were reëngaged, but later on it was found that the Rand-Avery Supply Company had leased the building, and as the expense of moving this great plant would be enormous, the idea was abandoned and

the entire stock advertised to be sold at auction without reserve. The sale commenced last Monday, and has been attended by prominent printers from all over the country. Among them were representatives of the J. M. W. Jones Printing Co., R. M. J. Donnelly and J. L. Regan, Chicago; Frederick J. Fiske and Weinkoop, Hallenbeck & Co., New York; F. X. Hooper, Baltimore, and a great many others, while every printer of this city and vicinity has been seen in the building more or less during the sale. The Rand-Avery Supply Company has been one of the largest buyers. Some of the Adams presses went for a song, while several cylinders brought good prices. On the whole, prices have ruled very good. When the right to use the name "Rand, Avery & Co." and "Rand-Avery Company" was offered for sale, it was started at \$500, and rapidly run up to \$7,500. The bidding was confined to two parties, and the right was finally bought by Mr. Fred Joy, a lawyer. Tomorrow, it is expected, will close the sale.

The Franklin Typographical Society held its sixty-fifth annual meeting on the evening of January 4, and the reports of the secretary and treasurer showed a healthy financial condition, notwithstanding the fact that heavy expenditures have been made the past year on account of sickness. Fifty names were added to the membership last year, there being now 40 honorary and 335 active members. Thursday evening, January 17, this society celebrated the birth of Benjamin Franklin by a dinner at the United States Hotel.

Typographical Union No. 13 scored another social success at its annual grand ball, January 23, and the large number of tickets sold added a handsome sum to its relief fund. The hall was beautifully decorated, and pretty toilets were numerous among the ladies. The order of dances was unique and interesting, and was designed and executed by Messrs. A. T. Bliss & Co.

Mr. E. P. Fisher, of the Boston Typefoundry, so well known to printers of this vicinity, is spending a few weeks in the Bermudas. This trip was a necessity on account of impaired health. It is the sincere wish of all his acquaintances that he will soon be among us again, fully recovered.

It will surely be of interest to the Chicago printers to learn that Mr. George B. Richardson has connected himself with the John W. Lovell Company, of New York City, where he assumes a responsible position. We are sorry to lose him from among us, as we like this sample you have sent us of a Chicago printer.

Mr. C. F. Shirley, formerly with the Rand-Avery Company, is now with the Forbes Company. S.

FROM BALTIMORE.

To the Editor: BALTIMORE, February 4, 1889.

A question which has for a twelvemonth past been exercising the leading spirits of Baltimore Typographical Union, was finally settled at the last regular meeting of that organization. The point at issue involved the Baltimore *Telegram*, a weekly paper published by Mr. James Young, and edited by Mr. William T. Cook, the latter named gentleman, by the way, being father-in-law—of somewhat recent date—of one of the editors of a Chicago weekly, Captain Dandy. The *Telegram*, now in its twenty-eighth year, has been rated a union office since it came into the possession of Mr. Young, a half score of years back, but its regular quarto form a year ago took on an additional sheet, making the paper ten pages. It was this enlargement, under peculiar circumstances, that caused the local typographical union to appoint a "business" committee to wait on the proprietor of the paper, to learn why he persistently violated a law of the union. To state the matter more plainly, the enlargement of the *Telegram* had brought no additional revenue to union compositors, the extra twelve columns having invariably consisted of stereotype plates, which were bought outside of this city. It should be remembered that three years ago the Baltimore Typographical Union notified all union newspapers hereabout that were then using plates—and that number included the large majority—that the use of plates must be discontinued, or otherwise such offices would be declared unfair by the union. The outcome of this action was an unconditional

surrender, on the part of said publishers, without further parley. The encroachment made of late by the *Telegram* has been the cause of much informal talk in and out of union circles, by members of the craft, and by some newspaper men as well, leading up finally to results as above intimated. Just how the matter was settled, as far as the union goes, may be told in a few words. Publisher Young stated to the committee that as he had not decreased his regular force of compositors in adding to the attractiveness of his paper in the way of a supplement at nominal cost by the use of plates, he could not see how the union could fairly interpose objections to his using plates under the circumstances. When the interview ended it had been decided upon that the committee should propose that the publisher of the *Telegram*, as of late, be permitted to paste a supplement in his paper printed from plates, in which advertisements shall not appear, while no reduction in the regular force of compositors shall be made. The typos composing the committee favored the proposition in the publisher's office, offered the same as a resolution before the union, and then voted against it, for they soon discovered, upon the call of "question," that they had reckoned without their host. The union voted unanimously that Mr. Young could not use plates in his paper and continue his office in the union. In reply thereto, it may be stated the *Telegram* announced, editorially, while the plate question was pending, having discarded the somewhat pictorial supplement in the meantime, that it would appear with ten pages, as formerly, in the course of a few weeks. Whether this implies the further use of plates and defiance to the union remains to be seen.

The plate question is one upon which printers on the whole divide, according to the locality in which they may happen to reside. That the free use of what someone has dubbed, grotesquely enough, "boiler iron," in the make-up of newspapers published in Baltimore, would throw out of work a considerable number of home compositors, goes without saying in this section. Nor would the law of compensation apply, for this city has not one establishment engaged in getting out plate matter that might employ some of the surplus labor deprived of work by a reduction of force caused by such means as indicated here. In cities where a large number of union compositors find steady employment in setting up matter for duplication in the way of plates for shipment to other localities principally, the case is different, of course; and hence we find in this instance, from a Baltimore printer's standpoint, at least, that after all a rule may be good and not work both ways. At some other time I shall say something about plate matter as affecting the interest of those who *write* for the newspaper press.

There is something almost pathetic in the demise of a public journal, not that its collapse affects its admiring patrons so much, but its editor and proprietor more. And the Monumental City, I am sorry to say, has a fat journalistic graveyard, strewed with the wrecks of many an enterprise in the newspaper way, which gave promise at the start that they had "come to stay." In this connection I am reminded that I stood with the sad-eyed editor but yesterday in the sanctum and in the deserted composing room of the Baltimore *Argus*, a late weekly paper here with democratic proclivities, whose light went out a few weeks ago, leaving its proprietor stranded high and dry. The *Argus* had lived one year, and died without making any sign, going down, as it were, like some ill-fated ship at sea,

"When the heavens are all tranquillity."

After suspension the whole outfit of this paper was offered very low to private parties, but without takers. It was quietly sold to the John Ryan Typefoundry Company, of this city. In disposing of his office the *Argus* man learned with wrath of the existence of a nice little combination among the typefounders, namely, that 5 cents a pound, when buying, is the maximum price agreed upon all around among the founders for second-hand type. As the *Argus* fonts were all about new a twelvemonth ago, and had made but fifty-two impressions, the ex-editor is, I learn, much disconcerted.

It has been some years since work in the building line in Baltimore was so dull as at present. While there is no unusual demand

for compositors, both book and newspaper men inform me that about everyone in the business who counts for anything is employed.

The public schools of this city cost the taxpayers last year the sum of \$800,796.

A new paper is promised in a day or two. It is to be published monthly, in the interest of, and by, the cigarmakers' local union, but it will advocate, I presume, the cause of organized labor generally, as its projectors solicit especially the advertising of all union labels. The publishing committee and editor-elect are all cigarmakers; but none of these, it may be conjectured, will handily set the type, make up the forms or make ready.

A young woman playing at Albaugh's Lyceum Theater last week, in "A Royal Tramp," was hissed by the audience. On the playbills she passed as Blanch Lamar, but she proved to be none other than the wayward daughter of the late Fred Marsden, the well-known and popular playwright, who took his own life a short time ago in New York on account of the bad habits which his girl had fallen into. Marsden was a native of Baltimore.

FIDELITES.

DEMORALIZED PRINTING INTERESTS.

To the Editor:

PITTSBURGH, February 10, 1889.

The unsettled, uncertain and unsatisfactory condition of the iron manufacturing, coal-mining operations and other large industrial interests, has so seriously affected the printing business that the general situation is an unpleasant one. The typographical industry has experienced great depression since last fall, and though there was a spurt during the holidays, the business has a downward tendency since the first of the year, and there is little prospect of better times until the opening of the spring trade, and there are those who believe that there will be small change for the better even upon the advent of spring, on account of the terribly demoralized state of the interests upon which the printing trade depends for support. The dullness is not confined to Pittsburgh alone, but the recumbency extends to all parts of the Allegheny and Monongahela valleys, whose chief products are iron and coal, and just so long as iron manufacturing and coal production are dull will the stagnation continue in the typographical and publishing world.

Last September Pittsburgh Typographical Union, No. 7, had a new scale signed. It made the wages of such workers \$18 instead of \$16.05, and fixed fifty-nine hours as a week's work. There is also an organization of printers in the Knights of Labor. The latter was not consulted by the typographical union in forming the scale, and the Knights have threatened to refuse their aid to the members of the union in the event of a strike.

Many of the employers do not regard the new rate of compensation favorably, and it is indicated that trouble must ensue at no distant period. What strengthens the belief that a conflict is about to eventuate, is the fact that a local Typothetæ association has been formed, and all the firms and individuals unfriendly to the scale made last year have joined the organization. While there are no positive or definite signs of a disagreement between the union and master printers, the above facts are given for what they are worth.

As is generally known the Smoky City has been the scene of several severely contested printers' strikes, and these battles have always ended in a victory for the union men. The *Leader* people and Typographical Union No. 7 were at outs for an extended period, but about a year ago the *Leader* office was reclaimed and is now a strong union establishment. Notwithstanding this fact some members of the *Leader* Publishing Company are bitterly opposed to some of the regulations of Typographical Union No. 7, and it is now understood that an officer of the *Leader* company is coöperating with and assisting the nearly organized Typothetæ. Estimating from this fact, it is apprehended in union quarters that an attempt will sooner or later be made to "rat" the *Leader* office again.

Pittsburgh and vicinity are notorious for botchwork, and the city and neighborhood are overrun with cheap, incompetent hands, "blacksmiths" generally predominating. A concern here that prints patent outsides and insides, turns out ready-printed sheets

that would be condemned anywhere but here. It is such concerns that bring slouchy, alleged printers to Pittsburgh, and just so long as these miserably offices exist will the city be the refuge for ignorant "blacksmiths."

In the anthracite coal regions, where there are scores of good offices, where excellent work — job, book and news — is turned out, and where fair wages are paid, there has been trouble recently. At Wilkesbarre, the coal capital of Luzerne county, on Saturday, January 12, all the compositors working on the three daily papers of the city — the *Record*, the *Newsdealer* and the *Leader* — went out on a strike. The strike was one for principle more than financial difficulty. All of the publishers acceded to nearly all the demands made by the printers, but the trouble was caused by some of the rules of the union. The publishers asserted that they were determined to run their own business, especially when they were willing to pay the wages demanded. On the following Monday, January 14, at a special meeting of the union the strike was declared unconstitutional. The men employed on the *Morning Record* returned to work at the same pay they received last year. The afternoon paper, the *Leader*, which has employed union hands for some years past, first sent to other places for non-union hands, but subsequently reinstated the old hands. The *Newsdealer* refused to reemploy the discontents, and advertised in Philadelphia for new men. Failing to obtain the necessary number of compositors, the proprietors conferred with their former hands, and, an amicable and satisfactory arrangement being agreed upon, the discontented printers returned to the office and took their "frames." At this writing peace reigns supreme, and is likely to continue so indefinitely. As a natural consequence, Wilkesbarre was temporarily flooded with "tourists" for a short time, but these birds of passage, finding it useless to apply for "sits," have departed to "fields more green and pastures new."

GUTENBERG.

NEW ORLEANS ITEMS.

To the Editor :

NEW ORLEANS, January 29, 1889.

Although a printer's life is one of continuous changes, the circumstances attending these changes being such as to make the latter a habit of his life, creating an almost intolerable anxiety for bustle and excitement, yet withal there is a wearisome monotony greeting every located printer which is borne with impatience for a time only, the restless disposition, the ungovernable desire for a wild life springing forth, like the rosebud watered by an April shower, in individual arguments, rousing meetings of their unions and joyful little carousals with toasts to the bumper. Perhaps these are made more strenuous, more exciting, by the restrictions this monotony, conjoined with the thousand and one little responsibilities engendered by a low salary and chapel legislation, entails upon the individual. Where is the man who would not consider it monotonous to go to an office at 12 o'clock each day, doff his coat and gloves (if he has any), roll his sleeves and don an apron; paste his little string of seven-four of last night's work, when he is ready to distribute the cold, wet, inky type; 1 o'clock, and not even a bottom on his case. Oh, the monotony of this gratuitous work! At 3 o'clock the distribution of the little type is slowly but gradually progressing, and is it not a relief of this monotony when Old Sober-sides, whose stand is situated in a central portion of the room, expresses himself upon a question none too complex in his estimation in this manner: "I'll bet 5,000 (ems), and you can cut it off my string tomorrow, that if this tobacco revenue measure passes congress it will be the deathknell of the democratic party, for don't you see, there are many members of congress who are personally interested in tobacco, and will use every effort to secure the passage of the law. The main body of the party, of course, will object on the ground that it is individual legislation, tobacco men reaping a big benefit, while wool growers and others are obliged to uphold the expense of government. Therefore, there will be dissensions, disruption following." "What's the matter with you?" is the reply. "Don't you know that we can get tobacco twice as cheap as now if the revenue is taken off?" Another goes on to tell of the merits of his favorite prize fighter,

while another tells of a portion of a speech he set up last night, and what eloquent language was used and all the sound sense encompassed within that little portion of speech he had set up. At 5 o'clock, the majority having finished their distribution, the boys begin to file out, one to a restaurant, another to his home in the far-distant suburbs. At 7 o'clock the office is being rapidly filled by the comps, and at 7:30 time is called. For five or ten minutes there is a hubbub, above which you hear the man with 2X yell out, "Who has 1X? Are you using full points in these names? This metropolitan sheet will have a wide circulation tomorrow if everybody whose name is in it buys a copy!" "Say, 3T, do you end even?" "Of course. Ain't your take marked even?" After we hear the man who secured the river table gloating over his success, and betting he "will get up ten-two tonight," quiet is restored. Save the tick, tick of the little type in the scores of sticks, the only sound heard is the breathing of the man with the river table, who, with his tongue out, is "pulling out" for all he is worth. A rapid compositor, having finished his take, comes out at last and gets another take, and is soon followed by others, who, as they return to their cases, stop and get some leads from the lead rack. The man with 2X, looking out of the side of his eye, says to himself, "Leaded on the file!" and as his hand hurries up to the cap case and back to the period box, he groans with anger to know that the foreman cuts objectionable takes so large, and thinks if he was foreman he would "get back at him." At last 11 o'clock, supper time, has arrived, and to see them run to the supper table would remind one of his school days at recess. This is the time for conversation, and amid the tumult and loud talk we hear discussions on points which agitate the minds of our greatest statesmen. To such an extent has this been indulged in that one of our local wits, employed in the *Times-Democrat*, has seen fit to dub the men working in that portion of the building facing Camp street, the senate, and those in the rear portion or Bank alley end, the house, and the foreman and his assistants the cabinet. In fifteen minutes nearly every man has a chew of tobacco in his mouth or a cigarette or pipe, and is back at his case. Quiet is again restored, and with the exception of a "bad break" or two by some of the "kickers," each man sticks to business till about 3 A.M., when the "jig" is up. Then slowly the dusty, bleary-eyed, fatigued printers file out to seek a few hours' repose, to come the next day, the characters of the monotony of the day before.

It can well be imagined with what degree of inmost satisfaction the *News* chapel, during last week, was relieved of this multitudinous, every-day sameness by the following incident: On Monday, 10th instant, Mr. W. A. Kernaghan purchased the good will and corporeal rights of the Daily News Publishing Company. He employed two men, Waters and Kiernan, who had, by some peculiarity of law and justice, made themselves defendants in the case, as editors, and when Mr. Kernaghan made the purchase, as above stated, these two men struck and yet remained in the building, on the ground that the lease had not been sold, and they, as officers of the company (extinct), held the fort. The paper was issued, however, and on Tuesday the matter was brought to an issue by the aforesaid Waters and Kiernan, aided and abetted by John McMahon, Esq., endeavoring to publish an item in the *News* pronouncing the fact of the sale false. The sheriff was called on, and he decided that he had sold the property to Kernaghan. The latter's lawyer advised removal, and if ever a newspaper was removed hurriedly it was the *News*, for within two hours it was located next door, in the job office of L. McGrane. Wednesday was more exciting, if could be, than the day previous. At 11 o'clock the first forms were sent in and printed on Mr. Prendergast's press, in the rear of the building formerly occupied by the *News*, after which the forms were pounced upon by two of the trio named, ending in a scuffle between them and the pressman. Officers came to the rescue and escorted all parties to jail, McMahon and Waters being fined \$1 each and the pressman being discharged. In the scuffle one of the forms was pied, and before long some one put his foot through the other. Finally an injunction was secured enjoining the two from interfering with the business of the office, and quiet was once more restored. On Saturday the

News was removed to a four-story building in Camp street, No. 114, and is now being published under auspicious circumstances. It is said Waters and Kiernan are now connected with the *Mascot*.

In the wake of this excitement the entire union was thrown into a furore by a member agitating the five-day rule. The matter will probably come up at the next meeting of the union, and it is now generally believed it will be adopted. It is very essential that such should be the case, for we have numbers of men who do not obtain enough work to support them, and there is a growing feeling that it is grossly unjust that men who obtain but little work are compelled to pay equal dues with those who reap the benefits of the scale maintained mainly by those who are not regularly employed. "Equal rights and equal benefits from a common good to those who strive for a common good" must and soon will be the maxim of the members of the International Typographical Union. In connection with the five-day rule it is thought the International Typographical Union law regarding the refusal to receive cards in a union where trouble exists will be strictly enforced here, as the fight against the *States* still continues.

E. A. Brandao has purchased a new press, the Whitlock, from Birmingham, Connecticut. It is placed, but has not yet been worked. Mr. Brandao thinks its capacity will be between 1,500 and 1,800. It is a very large press, and I think it will be used exclusively for newspaper work, as Mr. Brandao is doing a great deal of work in that line.

J. E. Prendergast, not long since, purchased a new double cylinder.

It is probable the *News* will soon purchase a perfecting press.

D. F. Y.

FROM LOUISVILLE.

To the Editor:

LOUISVILLE, Ky., February 5, 1889.

The month of January, just passed, was about the best, in a business way, that Louisville printers have had the pleasure of encountering for many moons, and the future has still a bright appearance. The failure of the Rogers-Tuley Company was an event that surprised the knowing ones. Their liabilities are \$33,849.03, and assets \$44,424.79. The assets, however, are said not to reach the amount given by \$11,400.00, which, if true, will make assets and liabilities about even. Several meetings of the creditors have been held, and at the last one it was decided to continue the business for a time, at least, and the Fidelity Trust Company was appointed trustee. At the same time Mr. William B. Rogers was made manager by the Trust Company.

Echoes from the banquet given by the Cincinnati Typothetæ, several weeks ago, continue to reach this city, and if all accounts be true it was a veritable love feast. It is whispered (on the quiet, mind you) that Mr. Eugene Merz, president of Typographical Union No. 3, covered himself all over with glory by making by far the best speech of the evening.

That the typesetting machines, or lineotypes, as they are termed, have made wonderful progress in the field they started out to fill is shown by the small number of compositors now employed on the *Courier-Journal* of this city compared to the time previous to the advent of the machines. When the type was all set by hand it required not less than sixty men to get the paper in type, while now with twenty machines, with one man to each machine, only about eight or ten additional men are required, making a total of about thirty men. Frequently the *Evening Times*, which is owned by the same company, gets along without the assistance of more than two men, the machines doing all of the work except the heads and "ads." When the machines were first introduced here almost everyone gave a sly wink and wondered what Mr. Halde- man was thinking about by putting so much money in what they were pleased to term an impossibility, that of putting a newspaper in type in any other way than by hand. Fortunately for the compositors, however, the machines require brains to manipulate them, the most successful operators being men who had made their mark as rapid compositors. The steady click of the type being put in its place in the stick by the compositor is now a thing of the past,

having made way for the busy and noisy hum of machinery, scoring another victory for the wonderful inventions of the nineteenth century.

Speaking of inventions reminds me of the fact that before long we are to have a mill in operation here which will give employment to many thousand men in the manufacture of steel by a process recently discovered. It is said to be superior in quality to any now in the market, and can be manufactured and sold at about one-fourth the prevailing price. Printing machinery builders may profit by keeping their eyes on Louisville.

In connection with the lineotypes, I learn that Mr. B. du Pont, owner of the *Commercial* and *Evening Post*, is to be present at the trial which is to be given to five different kinds of machines in New York this month, with a view of equipping his office with the kind that makes the best showing. When this is accomplished machinery will have superseded compositors on every English daily in the city.

The Anzeiger Company, by dint of great perseverance and the unstinted use of money, have succeeded in getting everything into shape again. Mr. Aaron Reidell, of the Hoe Press Company, has been here helping along with the good work.

A sad affliction has overtaken Col. W. H. Chilton, for seventeen years financial and commercial editor of the *Courier-Journal*, he being considered one of the best writers on financial subjects in the country, the demonetization of silver becoming almost a hobby with him. Naturally of a quiet and what seemed, to many, a cold disposition, he recently developed a taste for the other extreme, and it was found necessary to incarcerate him in the Anchorage Asylum for the Insane. A hope that the enforced rest and quiet may restore to him his reason is expressed by everyone who knows him.

Last Saturday afternoon the employés of the Rogers-Tuley Company gave their manager, Mr. W. B. Rogers, a pleasing surprise by presenting him with an elegant silver service. Dr. Dudley S. Reynolds, editor of the *Medical Progress*, made the presentation speech. Mr. Rogers was so taken by surprise that he could not do justice to the occasion, and he requested Mr. W. W. Morris to make his reply of thanks. Mr. Morris did so in a handsome manner.

A contract was closed last week between R. Hoe & Co. and the *Courier-Journal* for two perfecting presses capable of printing from a four-page paper to a twenty-four-page paper. The price is said to be \$37,500 each, and the first press is to be delivered within two months. This reminds me that last Sunday a new-fangled elevator air cushion received its first test in this building with rather unexpected results. Workmen had been busy for ten days putting in the cushion, and Sunday morning the elevator was permitted to take a sudden trial drop from the fifth floor to the air cushion in the basement. Pedestrians along Fourth avenue thought another earthquake had taken place, every one taking out his watch to note the exact time of its occurrence. Upon investigation it was found that by the time the elevator reached the first floor above the basement it had accumulated sufficient air to blow out a 6 by 12 foot plate-glass show window in the *Times* counting room.

The following commercial tourists have visited Louisville within the past ten days: A. P. Longenecker, who always has a brand-new joke for his friends; Arthur Scott, who has affected whiskers of an ebony hue; Frank Ibold, who can always say a good word for "my pardner"; S. P. du Laurans, who will go to Europe in June and bring back that rich legacy; John Rychen, who knows all about "H. D."; B. C. Garbrock, who hadn't recovered from the effects of the Cincinnati Typothetæ banquet, and Bob Reed, whom everyone likes.

Mr. John Lintner, of George H. Dietz's pressroom, visited National Park last Sunday and became so infatuated with a large monkey that is there that several of his friends, who have been grooming him as a candidate for delegate to represent No. 28 in Denver, became seriously alarmed for his safety.

Mr. John E. Simon, manager of the *Glaubensbote*, has much to be proud of, as he has made a most excellent journal out of that paper.

Mr. August Straus is now on a pilgrimage to your lively city, whether to buy the town or a font of job type deponent knoweth not.

C. F. T.

THE PRINTING AND PUBLISHING INTERESTS IN NEW YORK.

To the Editor:

NEW YORK, February 3, 1889.

Never before in the history of the printing and publishing interests has such a deep and increasing interest been manifested in the passage of a bill as that directed toward the Chace copyright bill, now pending in the United States House of Representatives. Publishers and printers alike, are doing everything in their power to hasten the passage of the bill. Not only have prominent publishers and employing printers visited Washington to aid its passage, but the typographical unions have dispatched delegations to interest themselves in its behalf. Recently President Bosilley, of New York Typographical Union, No. 6, and Messrs. Kennedy and Burke, delegates from "Big 6," were at the capitol, interviewing members of congress in the interest of the bill. Their special purpose was to counteract the effects of petitions which have been sent to Washington, opposing the Chace bill. These petitions, it is said, have been signed, in numerous cases, by printers through misunderstanding. Subsequently, at a large and enthusiastic meeting of Columbia Typographical Union, held at Washington, action was taken on the bill. At the close of a general discussion by the president and other members of the New York union, resolutions indorsing the law were adopted, and ordered to be sent to the speaker and members of the house, under the seal of the unions. A committee from the local unions was appointed to urge the passage of the bill.

The master printers, members of the typographical unions, and all trade organizations, directly or indirectly interested in the eastern states, manifest the greatest desire to have the law passed, and are using their influence to accomplish the end that is devoutly wished for. No less than 10,000 people are championing the cause in New York and the New England States. The printers, publishers, engravers, lithographers, bookbinders, press and other printing machinery manufacturers, manufacturing stationers, and kindred producers contemplate taking an active part in the celebration of the one hundredth anniversary of the inauguration of General George Washington, as the first president of the United States, next April. A great industrial parade will be a conspicuous and magnificent feature of the occasion, and a programme has already been partially outlined. The printing trades will make a splendid display. Representative houses will have presses in running operation as the procession moves along, and thousands of *souvenirs* of the West will be printed and distributed. It is intended to make a fine and comprehensive exposition of the progress of the typographical, publishing and associated interests during the period since Washington's inauguration, and it is confidently believed the pageant will be the greatest and most interesting ever witnessed in the United States. Prominent printing firms and other concerns in other cities have signified their intention of taking part in the celebration. The typographical union will be well represented.

The celebration of the one hundredth and eighty-third anniversary of the birth of Benjamin Franklin by the New York Typothetæ Society was a grand success. The entertainment given on Thursday night, January 17, by the master printers, in honor of their illustrious fellow craftsman, was attended by two hundred people, at the Hotel Brunswick. Among the followers of "the art preservative of arts," were the following: Thomas Lee, E. P. Cody, Theo. B. De Vinne, Francis E. Fitch, William Charles Rogers, Willis MacDonald, A. R. Hart, J. H. Eggers, Martin B. Brown, William P. Atkin, John Polhemus, Charles C. Shelley, John C. Rankin, Jr., W. S. Andrews, W. P. Hamilton, William E. Hallenbeck, Douglas Taylor, Walter Gilliss, P. F. McBrun, Samuel Crump, John F. Baldwin, F. B. Mitchell and H. Rosi.

A handsome portrait of the printer-patriot-philosopher, wreathed with smiles, gazed down benignantly upon those who were assembled to revere his name. The *menu* was a novel and elegant little pamphlet, a splendidly engraved production by the Homer Lee Bank Note Company. It commenced with a chronology of the principal events in Franklin's life, and to every course

was filled an appropriate excerpt from his writings. The final extract was the couplet:

"Friend, thou hast eaten and drank enough,
'Tis time now to be marching off."

At nine o'clock President Martin B. Brown made a brief speech of welcome, at the close of which he introduced as the first orator General Thomas Ewing, who was followed by General W. Swayne, Roswell Smith and Joseph Howard, Jr., D. R. F. Randolph, and others.

During the progress of the festivities a special messenger arrived from Washington, D. C., and presented the Typothetæ with splendid photographs of the new statue which had been unveiled in that city during the day. The pictures were a gift from Mr. Stilson Hutchins.

Among the novelties exhibited in the dining hall was an old Franklin press, which was made long before the American revolution. The press was operated so that those present could witness the way printing was done in Franklin's time. The ink at that period was distributed over the type by means of wool and sheepskin balls, called "dobbers." This press was carried in the memorable procession which celebrated here the completion of the laying of the first Atlantic telegraphic cable.

The New York master printers, in conjunction with their brethren of Philadelphia, propose to make a display of their products at the Paris exposition. At a recent meeting of the Philadelphia Typothetæ it was decided to take an active interest in the French industrial exhibition next spring. A number of the members of the Typothetæ will send specimens of fine book and color printing to the exhibition. A circular will be issued to all master printers requesting their coöperation and assistance in this highly commendable project. Since the meeting of the Philadelphia association some of the members have conferred with printers and publishers here, and the result has been the formation of a compact that will eventuate in an extensive and magnificent display of elegant and attractive American letterpress and illuminated printing. From what has been learned by THE INLAND PRINTER correspondent, it is not in the least improbable that the publishers and printers generally of the United States will combine with the New York and Philadelphia people and add excellent contributions, so that the typographical exhibition will be a vast and important one.

The Frank Leslie Publishing Company, which began operations as a joint stock on January 15, is now the largest incorporated printing and publishing concern in New York State. The newly organized company has a paid-up capital of \$1,000,000, and Mrs. Frank Leslie is the president. The managers of the company are: Mrs. Frank Leslie, John G. Foster, L. H. Cramer, John W. Timpson, Philip G. Bartlett, Thomas Thacker and William Williams.

New York has presented a candidate for public printer in the person of A. R. Hart, one of the prominent publishers of this city. Mr. Hart will have the support of many of the influential men of New York State, besides a strong backing from the West.

The Leonard Scott Publication has removed its business office and printing establishment from Philadelphia to this city.

Asa B. Taylor, at one time one of the most prominent newspaper and job printing-press makers in this country, died recently at his home, in Newark, New Jersey.

The failure of the great school-book publishing house of Knight, Loomis & Co., which has previously been reported, was a startler to the trade, and continues to cause widespread comment among its representatives, particularly in those sections where the firm's connections extended. It is alleged that there are some mysterious features connected with the crash, and the creditors are carefully investigating the matter, and will institute proceedings to protect their interests. Ever since the reconstruction of the firm, on December 31, 1886, the business has been gradually depreciating. Trade connections are reported to have been sacrificed in Pittsburgh, Toledo, Galveston, Fall River, Wilmington, Delaware, and a number of other cities and towns, where extensive

sales had formerly been made. The house seemed to have lost its spirits and business ability, and was outstripped by more active rivals. The liabilities aggregate \$214,000, A. S. Barnes & Co. being the largest creditors, the amount owing them reaching \$100,000. The Valley Paper Company is owed \$27,000 and the Giles Lithographic Company \$3,000.

PRINTER-JOURNALIST.

FROM ENGLAND.

To the Editor:

SHEFFIELD, January 26, 1889.

During the last three or four months the printing trade has been reported to be far from satisfactory, many men being unemployed in nearly all the leading centers of the trades associated with the typographical industry. Nevertheless it is gratifying to be able to state that work seems much more plentiful, all things considered, than was the case a year ago, and a steady, though slow, move is being made toward securing a share of the prosperity which gradually seems to be drawing on the commercial interests of our country. The depression has been predominant in London, the funds of the Society of Compositors having suffered considerably thereby; in several of the larger towns, however, business has been quite steady. The paper trade is very quiet. The past publishing season has been a remarkably good one. A large number of books have been put on the market, and readily purchased by our eager reading public. The prospects of the literary world give promise for a much better time than publishers have experienced of late years.

The movement in favor of the higher technical education of printers has made marked progress during the year, the most important towns having one, and in some cases several, classes in earnest working order. Printers see clearly that the immediate future will expect much more of them intellectually, and have shown themselves quite eager to acquire a thorough knowledge of the art if they are presented with an opportunity, and consequently be able to hold their own in the time that is coming. Apprentices are especially anxious to reap the benefits of these useful organizations. The reproach as to the superior technical knowledge of continental workmen, which has for so long been held glaringly before members of the craft, bids fair to be soon withdrawn.

Female printers are more or less a rarity in England, but it is estimated that 4,500 members of the other sex owe their livelihood to the calling, which proves female labor to be increasing.

It is rumored in London that a gentleman of great wealth contemplates starting a rival newspaper to the *Times*.

An unsuccessful attempt has been made to introduce the phonograph as evidence in the criminal court. The judges refuse to accept it.

It is reported that the proprietors of the New York *Herald* have purchased large premises in London, with the intention of starting a morning daily, on similar lines to the Paris *Herald*.

Journalism is becoming quite a fashionable feminine amusement in England; though that idea has for so long been viewed with scorn, innumerable titled ladies now add substantially to their income by its pursuit. It is not improbable that women will have the sole control of one or two eminent papers in the near future.

All British journalists feel much elated at the success of the newspaper libel bill, which, in spite of considerable opposition, has just become law. This measure makes it possible to publish any information or criticism of matters or individuals, within reasonable limits, which can be proved to be for the "benefit of the public."

"Hansard's," who for the past half century reported and supplied printed reports of the proceedings in the legislature, have been supplanted. An entirely new arrangement is now in force, to which the sum of £5,000 per annum is allotted to meet probable expenses. Messrs. Macrae, Curtis & Co. have secured the new contract for this work in competition with five other firms.

Mr. George Routledge, head of the well-known publishing firm, has just passed away. He started to face the world in very low

circumstances, but, owing to his perseverance, he succeeded in entirely revolutionizing the demand for cheap, healthy literature. The death is also announced of Mr. William Rivington, of the firm of Gilbert & Rivington, famous throughout the world for its oriental and classical work; indeed, this enterprising firm have appliances for printing no less than 120 different languages.

A successful "penny dreadful" has just changed hands in London at the unprecedented high figure of £30,000.

The popularity of the typewriter is in the ascendant. Though it has been long before the country—this useful nineteenth century requisite being viewed with much suspicion by our merchants and those who have to do with quill-driving—the instrument is at last being freely imported from the United States, and all first-rate firms consider its possession a necessity. An exhibition of the "Remington" typewriter has recently been held, representing the various stages of evolution the instrument has undergone since its inception twenty years ago. A typewriting contest took place in London a week ago, and the highest rate of speed attained was seventy-nine words per minute, over twenty words per minute slower than the best American writer.

The publishers of the English translation of M. Zola's novels have been mulcted in heavy penalties, and the circulation of the books entirely suspended.

The great political trial of modern times is the "Parnell Commission," which fills the newspapers, and will result either in a great triumph or a severe and costly defeat for our leading journal. The trial is estimated to cost three guineas a minute, the calculation including the whole expenses of all parties concerned. It is probable that the trial will last for still another month.

A curious sign of altered public taste is seen in the extraordinary want of interest excited this year by the Christmas numbers of the various illustrated periodicals. Though the proprietors have exhibited a large amount of liberality and enterprise, they have entirely failed to secure the interest of the public, owing, it is assumed, to the immense number launched forth during recent years. This state of things has resulted in a great loss to the trade.

A new small cylinder press has just been put before the trade, upon which it is possible to run 3,000 per hour with ease.

It is thought in England that the international American copyright bill will not become a law. The feeling of printers is strongly against it, whatever that of authors may be; they fear its adoption will tend to change the center of the English-speaking world from London to New York, owing to certain unsatisfactory provisions contained in the bill, which would decidedly give typos of the new world a great advantage over their brethren in Europe.

"IMPRIMEUR."

CELEBRATING FRANKLIN'S BIRTHDAY.

To the Editor:

PHILADELPHIA, February 5, 1889.

The Philadelphia Typothetæ honored Franklin's birthday by holding a reception in the rooms of the Penn Club, on the evening of January 17. As a memento of the event, a small souvenir book, entitled, "Benjamin Franklin as a Printer," which was reprinted from the "History of Printing in America," by Isaiah Thomas, edition of 1810, was presented to each guest.

The president of the Typothetæ, Colonel Clayton McMichael, editor of the *North American*, made an address, in which he alluded to the "great statesman, great philosopher and great printer," and in which he mentioned the objects and benefits of the Typothetæ association, the other officers of which are J. R. McFetridge, first vice-president; William H. Hoskins, second vice-president; John W. Wallace, recording secretary; W. M. Patton, corresponding secretary, and William B. MacKellar, treasurer.

Among the printers, publishers, typefounders and others present, were Eugene Mundy, Harry P. Stern, Nathan Billstein, Louis E. Levy, H. L. Taggart, Oliver Braden, Henry S. Morais, J. R. Jones, M. F. Bennman, William F. Geddis, Jr., Edward H. Hentz, George H. Buchanan, P. Garrett, George W. Allen,

J. P. Witherow, George Brooks, George S. Ferguson, Irwin N. Megargee, J. Lonabaugh and Joseph Wright.

The initial number of the *Princeton College Bulletin* has appeared. It is the official bulletin of the college, and is edited by President Patton. Several of the leading professors of the institution are contributors. It is a quarto magazine of about fifty pages. It contains, besides information about the college, scientific and philosophical papers from the professors. It will be a quarterly.

Another new weekly, called the *American Citizen*, has just presented itself to the public. It announces that it will combat ecclesiastical interference with our public schools, and advocates, among other things, commercial union with Canada and suffrage to women on temperance and school matters.

The *Upholsterer* is a new trade journal, edited by C. R. Clifford, formerly of the Philadelphia *Carpet Trade*. The first number, which has just been issued, is remarkably handsome, being clearly printed and tastefully illustrated.

Philadelphia Printing Pressmen's Union, No. 4, held a reunion and gave a banquet in commemoration of the anniversary of the birth of Philadelphia's master printer, Benjamin Franklin. Covers were laid for 140; a number of the masters or employers have been invited. Charles Gamewell, chairman of the Committee of Arrangements, presided, he opening the speech-making by remarking, "The reputation established by our body is so well and favorably known that it is almost unnecessary for any introductory. Whatever may be the character of an organization it is well that the social features should be encouraged. This event is one which we looked forward to with much pleasure, and those in charge have endeavored that it should be the same marked success as former occasions."

President Con. Stout responded to the toast of "Pressmen's Union No. 4," in an appropriate manner, referring to the elevated place now being held by the union among organizations of its kind, and of its character and steady growth, there being a membership of 180 in good standing in the union.

The associate editor of the Washington (D. C.) *Craftsman*, August Donath, responded to the toast of the "International Typographical Union."

In response to the toast, "The Day we Celebrate," William J. Adams remarked, "Benjamin Franklin, the typical American of his time, was indeed a man to be honored among men, and more especially among printers, for of all the honors he ever received none appeared so fitting or so pleasing to him as to be known as 'Franklin the printer.' Franklin, as a young man, might very well be styled a Jack-of-all-trades; but, unlike one who comes within the ordinary meaning of the term, he was at least a master printer, for, while we discern him a useful man around the office, his labor evinced ability of the highest character. Franklin regretted the follies and indiscretions of his youth, though he makes no attempt to hide his faults, but warns young men to beware of the evil temptations that strew their path through life. And, take Franklin's life as a whole, his example is worthy of emulation, and his standard should have a good following."

A. M. Dewey, editor of the *Journal of United Labor*, replied to "Organized Labor." He dwelt upon the benefits of organization generally, and of printing crafts, pressmen and printers in particular. The speaker mentioned Franklin's discovery and utilization of electricity, and the progress in that direction made since his time.

Eugene Madden happily responded to the toast of "Typographical Union No. 2."

"Our Employers" was replied to by Messrs. George W. Gibbons and Daniel J. Gallagher. The "Childs-Drexel Fund" was responded to by James J. Daily, treasurer of the fund. Remarks were also made by Thomas Harrison and William F. Fell. Excellent recitations and songs were rendered by the members and their guests. The Committee of Arrangements were Charles Gamewell, chairman; William J. Adams, James Hennessey, Charles Griffith, Martin Bowes, Thomas Kelley and John Callahan.

The Lucknow Paper Mill, located at Bridgeton, New Jersey, which ceased operations in December, on account of financial

troubles, has resumed. The proprietor, Walter Moorhouse, has formed a co-partnership with J. I. Lenhart, of Philadelphia, and the new firm will manufacture and deal in paper and paper stock. They have opened a business office at No. 18 Decatur street.

The partnership between A. B. Bayliss and John D. Whaley, trading as the Bayliss Printing House, has been discontinued. John D. Whaley will continue the business, under his name, at No. 510 Minor street.

The death of the Princeton *Review* exhibits, to a striking degree, the difficulty of establishing a new periodical successfully nowadays. This venture was backed with ample capital and pretty much the whole of Princeton College, yet it succeeded in expending \$5,000 a year, or more, during the three years of its existence, and died so quietly that few people were aware of its end. The Princeton *Review* was published by Professor Libbey for many years at a great loss, and the new one, with all the energy and push put into it, has succeeded no better. J. B. Lippincott, of the old J. B. Lippincott Company, of Philadelphia, used to say, "Some people keep fast horses, others steam yachts, but my little extravagance is keeping a magazine. It costs about as much as a yacht, but I take more pleasure in it." The promoters of the new Princeton *Review* evidently did not regard the publishing of a periodical as an altogether pleasant pastime.

The old Philadelphia *Inquirer*, which has been published many years by W. W. Harding, is to undergo a change. James Elverson, of *Saturday Night* and *Golden Days*, will be president of the new company soon to be chartered as the "Philadelphia Inquirer Publishing Company." W. W. Harding, the present proprietor of the paper, will retain an interest, and Colonel J. H. Lambert, of the *Press*, who is to be chief editor, and W. W. Galluf, of Baltimore, will be stockholders. J. H. Heustis, of the *Times*, is to be managing editor, and it is said the office force will be entirely reorganized and improved, and a new plant, with perfecting presses, will be purchased as soon as possible.

ARGUS.

AN INTERESTING LETTER FROM DENVER.

To the Editor:

DENVER, February 2, 1889.

Removed from the *dolce far niente* of a soft sit to a mercury-in-the-bulb realization of something tangible in free land and single-tax theories, there is at least a sentiment of independence in being able to mount an old hobby on the day-shift. The ex-government printer speaks of Drake's with the same terms of endearment that the graduate of West Point alludes to Benny Havens. The boy, or middy, has the same reverential regard for his first ship in after life that animates the matron as she reverts to her graduating dress. While not the return of a prodigal to the fatted calf, it is the renewal of the journey of life in search of fat—vegetable, animal or mineral—the first love, as it were, of a typo.

There is much of the realistic in an attempt to get there before time is called on a January morning for one who had held a biennial post without standing a morning watch. After a lightning toilet, a short-take breakfast, there is a novel pleasure in being once more a little late for the street car. How vividly reappears the scene of many a stealthy, fruitless attempt to reach the coat-rack without attracting the attention of Rider Haggard's unwritten Him, who rules a czar in his realm, and is feared more than the devil. Then can be witnessed the precursor of the crack of doom—the break of day—by those whose slumbers have been badly broken by bad breaks. Now restored are the poetic beauties of the birth of glorious morn—the chromatic press copy of the resplendent east, the glinting rays of an emerald sun-burst tinging the floating, fleecy clouds which form an illusive veil-fascinator, half-concealing the snowy crests of the main range as they receive the matutinal salute of the king of day, who bids the world awake. Then the golden hues adorn the verdant tints of Nature's garb, timber-line décolleté. The treasure-box of memory is open; the jewels and precious stones of the orient of youth are exposed, revealing the old oaken bucket, the gourd by the spring; and the music in lifting an old, rusty latch is followed by the busy hum of chapel hummers, as they expose in the box a copy of Poe's poem

of "The Bells," and remark that nine hours constitute a day's work in Denver. The quick step of the go-as-you-please pedestrian of necessity ceases at the case, leaving the serious reflection of "what might have been" had the election returns been different.

Trite, yet apropos. While the metaphorical simmer and bubble that annually agitate the election cauldrons of local typo unions and quicken latent ambition and hope are now seen on the surface, incantation cannot dispel a dread of the ides of March. The patriarchs may lead their Isaacs to the altar, yet the uncertain voters furnish the fagots, i. e., delegates for Denver. The sacrifice should be chosen as of old. The first of the fruits and flocks (special reference to flocks not entertained) should be sent to the foot of the mountain, that the decalogue taken therefrom may be acceptable to all the tribes, even unto Philadelphos and Tacoma. The caravan from the East should be composed of wise men, that they may direct the council of Arapahoe. Chipeta will furnish her wickiup from the streams, mountains and plains wherewith to refresh the weary pilgrims. The gathering of the tribes will be great. The braves will not hunt in vain for the feast. Monte and wild stallion are on the range, and their trail may be found. The signal fires of Manitou burn brightly to guide into the pass (Pass A l'Outre for the Crescent). Lo and Logan may greet the last of the Aztecs, while Colorow tarries in the happy hunting grounds. The mound builders and cliff dwellers will lend age to the green corn dance and tarantula test. Minnehaha and Minnetonka will lave the tenderfeet. A Pocahontas welcome awaits the young brave Not-Afraid-of-his-Mouth, so long as he listens to the words of wisdom spoken by Think-a-Heap. The big chief of the mountains has extended the boundaries of his corral, and there are blankets and robes for all. Ugh!

Evidently there is an election at hand. Already the shoulders of good men and true are thrown back that the mantle may be placed. Four-line-pica aspirants now deplore the festive features and social attachments of International Typographical Union conventions, pronouncing them demoralizing and productive of loss of time which should be devoted to legislation. They would have their admirers and others believe that a first-water Daniel had come. That campaign card has nothing novel or winning on its face. It has proved successful for many in the past; still, among the long list of permanent members of the International Typographical Union, deponent is unable to select a single shining example of one who refused to enjoy a carriage ride, excursion or banquet in order to express his disapprobation. There are several on record with resolutions conveying an ardent desire for succeeding conventions to be conducted on an austerian plan.

Candor compels plaintiff to admit preference for annual sessions of the International Typographical Union, with sufficient of good-fellowship surrounding the daily meetings to relieve the brain and throat. The precedents in church, state and civil life are in favor of social courtesies. The delegates who may be elected to attend the Denver convention can safely promise their constituents in advance that they will devote the entire time for business—some other session. On return to their respective homes, they may safely attach the blame to Denver union and her committee of arrangements, who know how it is themselves. From a glance over the long list of permanent members, the thought comes of the great good that might be secured for the craft of the nation if an annual gathering of all might be had, if only for social reunion.

The members of the Denver committee of arrangements are discussing the advisability of having a number of ladies on the reception committee, as advices indicate a large representation of the fair sex with the delegates, ex-delegates and visitors.

There appears to be more interest manifested in Denver in the personnel of the reception committee than in that of the officers and delegates to be elected. Strange to relate, at present date there is not a pronounced candidate for delegate in the field, out of a membership of over three hundred. This can only be accounted for as follows: A dark-horse candidate was the winner

on the third ballot last year, and there is a concealed desire to enter as shady equines this time, or else the delegate timber prefers to represent abroad, where the critical eyes of constituents will not scan the board.

A delegate-at-large, lately arrived, having secured quarters in advance, is now coaching members of the union as to improved methods of entertaining. He appears to have had experience at several sessions, and claims to be up in union politics. The following was furnished by him to one of Denver's popular members, who refused to take advantages to be derived from the effusion:

In the hands of my friends,
I have entered the race
For delegate honor that ends
In free-for-all struggle for place.
I'm in on a track leading west;
Pure business — not pleasure for me;
Let's send of our statesmen the best.
Thus modest my candidacy.

"Reward is for merit," I claim;
And "Knowledge is power," I vow;
Your suffrage I seek, just the same —
The crown only fitting my brow.
A statesman from far away back,
With voice of the P. Henry brand;
Up in lore of an art that is black:
On friendship I'm strong — here's my hand.

A reliable voter, you know;
And long in the ways that are dark,
On combines and slates I'm not slow.
My rival is only a mark.
For one term and short, I will make
"Rotation in office," my cry;
I'll preach, yet not practice the fake —
A Joe-Dandy candidate — sly.

Our laws are defective, I ween;
Our treasure not safe in its sack;
My plans will in Denver be seen.
An economy racket I'll back.
Every line of our code I'll revamp;
With strike-funds to meet every case;
A relief clause to suit every — camp.
I've the pole, and am setting the pace.

"Have something with me," while we chat.
"Yes, call up your friend!" it's my way.
Your pard has a card, and all that —
He's not the sub-candidate? Say!

Colorado Springs, Leadville and Aspen unions are desirous of having a visit from the typographical solons and their friends in June, and correspondence to that end has been received by the local committee.

It has been asserted that some of the unions at extreme points in the East will not send full delegations, owing to distance. Denver ex-delegates claim to have trustworthy advices to the contrary, and state that our visitors will number five hundred as it is much easier to reach Denver from Boston or Quebec than it is to journey to Boston or Quebec from Denver. Financially, this is correct — and Denver manages to send a full delegation every time — full as to quota only.

Denver union mourns the loss of John B. Robinson, one of her most popular young members, who died on Tuesday morning, January 29, of heart disease. He had just finished his night's work on the *Rocky Mountain News*, and in company with two of his fellow typos had gone into a restaurant for a morning lunch, when the Great Foreman called time. "Robby," as he was generally styled by all, was a general favorite with every member of the craft, and the news of his sudden departure spread gloom in every chapel. He was a Canadian by birth — his relatives still residing in London, Ontario — and a young man of fine ability as a printer, genial and generous with all. He had been a resident of Denver about four years. The esteem in which he was held was evidenced by the floral tributes from the *News* and other chapels and the attendance of members of No. 49 and K. of P. No. 45 at the funeral services, which were held Thursday afternoon. His remains were forwarded to his relatives.

J. D. V.

FROM H. G. BISHOP.*

To the Editor :

WASHINGTON, D. C., Jan. 10, 1889.

You will, no doubt, be glad to hear from me, and to learn something of where I am and what I am doing. You may remember that in a recent letter I told you I was thinking of taking a two or three weeks' trip through the South for the benefit of my health, which had run down, owing to an extra heavy year's work. Well, I left Albany last Friday week (November 30) and went to New York stopping at a couple of places on my way down.

I stayed two days in that city visiting a few old friends and making inquiries as to the state of trade and other matters pertaining to the printing business. I spent a pleasant half hour with Mr. Theodore L. De Vinne, who was very free in expressing his views on several important subjects. His ideas on the apprenticeship system you already know, and have commented upon in the pages of THE INLAND PRINTER.

On one point he was very outspoken, namely, the probability of typesetting machines being soon in such a state of perfection as to supersede the manual labor of compositors who work on straightforward composition, and in this I think he is right. It therefore behooves every man who wishes to hold his own to make himself acquainted with something else than lifting types. Either he must learn the other and more important branches of his business or find some employment outside of the printing business.

I went from New York to Philadelphia. It was my second visit to that city, and whereas, on the first visit I was very well pleased, on my second visit I was extremely delighted. The grand public buildings of Philadelphia are not only a credit to that city but to the whole United States. Of course, we know that in comparison with the go-ahead style of Chicago business houses those in Philadelphia are somewhat slow, yet it is quite possible that in some respects the former might well take a few lessons from the latter.

However, printing is my subject, so let me return to that more particularly. I found a good many prosperous and lively printing businesses. Of course, there were plenty of the one-horse, bobtail affairs that are not worthy of the name of printing offices, and some of these filled me with very unpleasant feelings. One, in particular, I will mention. I noticed a small new-looking sign announcing that so-and-so, a job printer, carried on business on the second floor. So I went upstairs and found a back room about twelve feet square, with three feet of it partitioned off to give the idea of a separate business office. As I entered I heard a press running, but when the proprietor came forward, on hearing the door open, I noticed that the press stopped, so I concluded that it was he who had been running the press. And I was not mistaken, for I was invited in to talk while he went on with his work.

He was running a small bag for retailing cigars in, and I suppose the price paid for such work would not be more than 25 cents a thousand. He was working in a black frock coat (for the purpose, I suppose, of being ready to see any customers who might come in), and looked to be an intelligent, respectable man. I cannot describe the mingled feelings of pity and disgust that filled my mind as I looked at that man kicking a press and earning at most about \$2 a day, whereas, if he knew anything at all about the business he might have been earning \$16 or \$18 a week as a journeyman. Such men not only injure themselves, but also do harm to every legitimate printing business in the city.

I called at the well-known Lippincott establishment, where I was well received, and where THE INLAND PRINTER is well appreciated. I had quite a long talk with Mr. J. B. Lippincott, Jr., who has charge of the printing department of their large business. He gave me an introduction to the gentleman in charge of the two composing rooms, Mr. McMeeney, who is a thorough printer as well as a thorough gentleman. After a very pleasant conversation with this gentleman I went around among the compositors and made a few new friends for our journal.

*NOTE.—This communication should have appeared in the January issue.—[EDITOR.]

I visited at least fifty offices, large and small (though mostly small), and found that wherever THE INLAND PRINTER was known it was highly appreciated.

While speaking of Philadelphia, I must not forget to mention a subject that I took a good deal of interest in, and in which I endeavored to interest others. A Mr. Williamson, of that city, has recently placed the sum of \$5,000,000 in the hands of a committee for the establishment of a school of industry for boys. He has also promised to supplement it with another \$7,000,000 (making \$12,000,000 in all) if the project is rightly taken hold of and managed properly. Now, it occurred to me that it would be a good thing if, among the other trades that are to be taught in that institution, printing should find a place. And here let me say that whereas Mr. Williamson's own personal idea seemed to be that the boys should be kept at work till they became men—that is, till they reached the age of twenty or twenty-one—some of his advisers undertook to suggest that the boys should leave the institution as soon as they had learned sufficient of any one branch of trade to enable them to earn their own living. Now, I think there can be no doubt in the minds of practical men that Mr. Williamson's own idea is the more correct one. There are too many half-taught youths in every trade at present, and it would be better for them and all concerned if they could be kept till they were worthy the name of journeymen. I talked this whole matter over with Mr. De Vinne and also with Mr. Appleton, and trust the result will be their suggesting to Mr. Williamson the advisability of giving printing a place in the studies, and that the boys will be kept in training until they are men.

I then left Philadelphia for Baltimore, and began to feel that my trip South had begun. But I found very little in the latter city to distinguish it from the cities of the North. In fact, I must say that I was rather disappointed in my first Southern city. I had always heard that Philadelphia was a slow place. But Baltimore! Oh, my! wasn't it slow, and quiet, and dull! The printing business appeared to be particularly low down, and the printers almost despondent. It seemed to me that this arose from two causes: First, that trade generally was very bad; and secondly, that there were twice as many printing businesses as the city could support. There were some few offices that appeared to have a little life in them, but the great majority were in the last stages of consumption. However, I managed to get four or five new subscribers, and flatter myself that I fanned a little life into the smouldering embers.

Why is it that so many men will rush into business for themselves when they see all around them so many examples of the folly of so doing? I suppose that in most cases it is the desire to be one's own boss! Fatal mistake! A journeyman has more money, more liberty, more time to himself and much less anxiety and trouble than a man who is trying to run a small business in such a crowded field.

But I am now in the city of Washington, where I expect to find plenty to occupy my attention for a few days, so I will close this letter, and shall hope to tell you all I can about Washington in my next.

Sincerely yours, H. G. BISHOP.

ANSWERS TO CORRESPONDENTS.

A. M. H., Eau Claire, Wisconsin, writes: There is a dispute in the office as to which is the proper side of a letterhead to be tabbed, provided it is tabbed on top and one side. Please decide the question for us.

Answer.—There is no absolute rule. The custom, however, is to tab the *left* side. Why, we cannot say, unless it is supposed that as a letter is written from left to right the sheet may be more quickly separated from the left than from the right, though we do not agree with this opinion, because the *right* corner of the sheet is much more apt to curl than the left. But there is no need to tab either side, as with care, the tabbing of the head is sufficient.

THE London (Eng.) Society of Compositors has a membership of 7,125, the increase during the year being 440. It is reported that the year has been fairly prosperous.

Written for THE INLAND PRINTER.

UNVAILING A STATUE OF FRANKLIN.

BY W. H. BUSHNELL.

ON Thursday, January 17, 1889, there was unveiled in the city of Washington, D. C., a statue of Benjamin Franklin.

The place was most appropriate, the absence of pomp and ceremony fittingly in concord with the tastes and character of the man whose name and fame were to be perpetuated.

The withdrawing of an American flag by the hand of Mrs. M. W. Emory (*nee* Bache), the widow of General William H. Emory, and great-granddaughter of Franklin, was all. There was no laudatory oration; no ambitious poem; no martial music; no cheering, waving of hats and clapping of hands, but the silence and reverence appropriate to the simplicity of manners and severe grandeur of the man.

At precisely ten o'clock, upon the one hundred and eighty-third anniversary of Benjamin Franklin's birth, Mrs. Emory, accompanied by her two daughters and her nephew, General Duncan S. Walker (the three being great-grandchildren), and in a severe rain-storm, pulled the cord, and the statue was given to the admiring and appreciative eyes of the public. But immediately, and as if heaven smiled in benediction, the sun burst through the clouds, and lovingly shone upon the earth.

The statue, chiseled from the purest and whitest of Carrara marble, selected with great care, and imported especially for the purpose, is of heroic size. It stands eight feet and six inches from foot to crown; the pedestal, of Massachusetts granite, eleven feet two inches above the level of the street, making the entire height of the whole nineteen feet and eight inches. It was erected at the junction of Pennsylvania avenue, D and Tenth

street (a special act of congress authorizing), and an open and conspicuous place—as much so as could be found between the White House and Capitol.

The statue was designed by the same artist as the one in Printing House Square, New York City, Mr. Ernst Plassman; is

a somewhat reminder of that, though essentially different, and pronounced by competent judges a decided improvement, the general effect more pleasing, more characteristic, and clearly demonstrating the superiority of marble over bronze for fine delineation of expression and revelation of character.

From the carefully and patiently wrought model, with keen appreciation and enthusiastic labor, Mr. Jacques Jouvenal chiseled the marble into life-like semblance, guided and encouraged by the generous donor, whose heart, equally with his purse, had for five years been in the work.

The statue weighs about two tons, was cut from a stone weighing eleven tons, and is said to have been the largest ever imported.

The right hand of the colossal figure is half raised; the left held a roll of manuscript partially opened; by the side of the right foot is a pile of books, and leaning against them an open one, as if laid down after reference. The coat—a carefully reproduced copy of one known to have been worn by Franklin when he appeared before the Court of France, at Versailles, on occasion of the ratification of the treaty between that country and the United States, following the recognition of the republic by Great Britain—has the fac simile of a fur collar and cuffs. The

weight of the body rests upon the left leg, the right being in an easy attitude, with slight bending of the knee. The main plinth of the pedestal has four sides, on which are inscribed in raised letters, "PRINTER, PHILOSOPHER, Patriot, PHILANTHROPIST," and

upon the south side and directly under the base of the statue is the name, ever to be remembered and revered—"FRANKLIN."

The pedestal was designed and executed by Mr. J. F. Manning, a Washington stone artist of more than ordinary ability and celebrity, and has an estimated weight of ten tons. The most rigid scrutiny fails to detect either flaw or stain in statue or pedestal, so careful were the selection and workmanship. In one corner of the large stone is imbedded a bronze plate, bearing the following inscription :

ERECTED JANUARY 17, 1889.
Ernst Plassman, Designer.
Jacques Jouvenal, Sculptor.
J. F. Manning, Designer of Pedestal.
Commissioners of the District of Columbia :
W. B. Webb, S. E. Wheatley,
C. W. Raymond.

The donor of the statue was Mr. Stilson Hutchins, formerly of the *Washington Post*, well known throughout the country as one of the most liberal, energetic and successful of newspaper men. And this, the crowning act of his journalistic life, must forever endear

him, not only to all craftsmen, but to all lovers of a character that stands out in bold relief as the true founder of American journalism—"the creator of periodical and newspaper—as the instructor of the people."

Perfectly comprehending the character of the man the world was forced to respect—that he stood side by side and co-equal with Washington in the struggle for independence and right; that he was above petty jealousy and false ambition; despised ostentation and never bent the knee in homage to royalty—Mr. Hutchins declined all suggestions of parade and (as he plainly put it) "fuss," and carried out his plans of simplicity to the end.

When Horace Greeley was called upon to speak at the unveiling of the statue in New York City, he said, "Do you ask me to sum up the character of Franklin in the fewest words that will serve me? I love and revere him as a journeyman printer who was frugal and didn't drink; a parvenu who rose from want to competency, from obscurity to fame, without losing his head; a statesman who did not crucify mankind with long-winded documents or speeches; a diplomatist who did not intrigue; a philosopher who never bored; an officer who did not steal."

Such, without doubt, would have been the expressed sentiments of Mr. Hutchins had he uttered them, and would have shadowed

the opinion of the character, as the statue does the physical, of the man his liberal outlay has honored above others and for which not only Washington but the country and the craft should ever hold him in grateful remembrance.

In this connection it is eminently proper to give a brief résumé of the life of the man whose name and stalwart figure have been thus perpetuated to the ages.

The earliest information to be obtained of the family is of their being settled upon a freehold estate in the village of Ecton, in Northamptonshire, England, about three hundred and fifty years since—the eldest sons generally being blacksmiths. They were, as our Franklin himself wrote, "of the reformed religion, and, through the reign of Mary, sometimes in danger of persecution."

Josias and Abiah his wife, the parents of Benjamin Franklin, emigrated to Boston, Massachusetts, where, upon January 17, 1706, the latter was born, being the fifteenth of seventeen children. The parents died respectively at the ages of 87 and 85, and the son caused to be placed over their graves a memorial stone telling of their virtues at considerable length and closing with these lines :

He was pious and prudent,
She discreet and virtuous.

Their youngest son, from a sentiment of filial duty, consecrates
This stone
To their memory.

The father was a tallow chandler and soap boiler. The son Benjamin was intended for the ministry. Circumstances preventing, he was for a couple of years employed "in cutting wicks and filling molds"; desired to become a sailor, and at last was bound as an apprentice to his brother, who had learned the "trade of printing" in London and settled in Boston. For having dared to write and publish some of his own ideas, Benjamin was "severely lectured for his presumption and treated with great severity," and without question (as he subsequently asserted) "this harsh and tyrannical treatment impressed him with the aversion to arbitrary power which stuck to him through life."

Leaving Boston he journeyed to New York, and, not finding employment, to Philadelphia, a poor wanderer of whom Brissot de Warville wrote: "Who would have dreamed of his becoming one of the legislators of America, the ornament of the New World, the pride of modern philosophy?"

From Philadelphia, lured by false promises, Franklin departed for London and (1725) found employment in "Palmer's printing office." Eighteen months later he returned to America, a clerk on a salary of £50 per annum. His employer dying, he resumed stick and rule, and, with a young man by the name of Meredith, published a paper, supplementing his income by the sale of books and stationery, and distinguishing himself as a political writer.

In 1732 "Poor Richard's Almanac" was first given to the world, and Franklin, with others, originated the "Library Company." At the age of twenty-seven he mastered Spanish, French and Italian and commenced the study of Latin. In 1741 he started the "General Magazine and Historical Chronicle," and the following year invented the stove that still bears his name. In 1746 he witnessed (in Boston) some experiments in electricity, and soon acquired dexterity in the use that made him world-famous. He was the first who "fired gunpowder, gave magnetism to needles of steel, melted metals and killed animals of considerable size, by means of electricity."

In 1751 he was appointed deputy postmaster-general, and vastly improved the system of transportation of mails; advanced large sums from his private purse to assist General Braddock; when his defeat was ascertained, introduced a bill establishing a volunteer militia, accepted a commission as commander, raised a corps of 560 men, and went through a laborious campaign.

In 1757 "Colonel Franklin" visited England to settle "an unpleasant dispute," in which Pennsylvania was a party. While there the degree of Doctor of Laws was conferred upon him by the University of Oxford, those in Scotland, and was elected a fellow of the Royal Society.

In 1762 he returned to America, hoping for rest. He was disappointed. New difficulties having arisen between the "province

and proprietaries," he was again forced into active service. While abroad (February 3, 1766) he displayed so "much firmness, readiness and epigrammatic simplicity of manners, and information so much to the point on subjects of commerce, policy of government, finance, etc., his precision of language was so remarkable, that the repeal (taxation of the colonies) became inevitable." In this connection Chatham eulogized him as "one whom Europe held in high estimation for his knowledge and wisdom, who was an honor, not to the English nation only, but to human nature."

A little later Franklin returned again to his native land. He was enthusiastically received, elected a member of congress, exerted all his influence in favor of the Declaration of Independence and was one of its signers. In 1776, supplies being necessary for the infant republic, he visited France as minister plenipotentiary, became (after the surrender of Burgoyne) in high favor at court, was sought in society and "became extremely useful in forwarding the views of the government and obtaining supplies."

The treaty with France and the capture of Burgoyne changed the policy of England from coercion to reconciliation and to all questions propounded as to terms, the uniform answer of Franklin was, "Nothing but independence." In 1782 he earnestly pleaded to be recalled, but the request was refused. He continued to reside in Paris for about five years, where his venerable age, his simplicity of manners, his scientific reputation, the ease, gaiety and richness of his conversation all contributed to render him an object of admiration to courtiers, fashionable ladies and *servants*. Upon his return to Philadelphia, and after having served his country for fifty-three years, he filled the office of president of the commonwealth of Pennsylvania, was a delegate to the federal convention of 1787, and approved the constitution thus formed.

Dr. Franklin died April 17, 1790, with his faculties unimpaired, and lies buried at the corner of Arch and Fifth streets, Philadelphia, by the side of his wife.

Imperfect as this sketch necessarily is, sufficient is shown of the life and character of Franklin to account for the mourning at his decease and the honor paid to his memory even at this late day. It was his great pride to be considered a printer; his example and precepts are a sacred legacy to the craft, and it is very much to be feared that "Nature, the vicar of the Almighty Lord," will never permit the world "to look upon his like again."

The thanks of the writer are most cordially given to Mr. West, of the Washington *Daily Post*, for his courtesy and use of the cuts illustrating this article.

THE SUCCESSFUL FOREMAN.

In an office where there is plenty of work at fair prices, it depends chiefly on the foreman whether there is profit or loss in the job composing room.

To arrange the work so that it will move along quickly and smoothly; to get the best results from each workman; to see that plenty of material is available at all times for the work in hand, and that no delays are occasioned through lack of material; to see that every minute of time is properly accounted for and charged to the office or the work in hand; to see that each compositor does his work by the most direct and workmanlike methods; to suggest styles; to prevent botchwork and waste of material; and in every way secure the greatest output each day, are among the duties of the foreman. They require ceaseless vigilance on his part, and if he properly attends to all of them his position will be full of hard work and conscientious anxiety.

The best workman does not necessarily make the best foreman, but to be a complete success it is essential that the foreman be an expert printer, capable of dictating the style of every job done, and of showing a compositor how to do his work most expeditiously — for a great deal of time is lost by not knowing how to start on a job. An expert foreman will quickly stamp his ideas of style on the work passing through his department, and will certainly not hazard his reputation by allowing any work to pass without his personal supervision. To be a success, if he is otherwise capable,

the foreman should have full power to engage and discharge his help, and should be the best judge of all matters within his department, especially of its needs in the way of material, and should insist on his requisitions for material or tools being honored. Many employers hamper their foreman by depriving them of proper authority, and no really competent foreman can undertake to run his room profitably or satisfactorily with insufficient facilities. A good foreman will surround himself with first-class help, and in the selection of assistants all personal feeling or preferences should be subordinated to respect for the capacity of the men. We have known men who were promoted to foremanships to fail simply because they could not refuse the importunities of old chums for employment. No man who does not conscientiously and energetically do his best for his employer can be called first-class.—
British Printer.

CASTING OFF.

Mr. Arthur Oldfield, of Birmingham, England, under the caption of "How to Prepare for the City and Guilds Examinations in Typography," is publishing in the *Printers' Register* answers to various questions for the benefit of those who desire to prepare themselves for examination, but who are unable to attend any of the classes now being held in various parts of Great Britain, and the first question is as follows:

"Suppose a manuscript to consist of 26,000 words, each word to average 5 letters, about how many pages would it make in pica type, the size of page being 20 ems pica wide, and 33 clear lines long?"

"Here a difficulty may be experienced as to the exact requirements of the question. Does the 33 clear lines long include white lines or only reading matter? Taking the wording of the question, '33 clear lines long,' it would seem to imply *matter* only, or it would have stated 'including head and white lines.' Arguing the matter still further, we might say that, in actual experience, in casting off the number of pages a certain amount of manuscript would make, we should reckon each page as having a certain number of lines of type, without thinking of or taking into account the head and white lines, because they have nothing to do with the actual matter. Again, if an estimate were asked for of a work of a certain number of pages, each page to contain a certain number of lines, we should count only the lines of matter, and in giving such estimate as to the number of pages the manuscript would make, we should not take heads and whites into account at all. The question really takes the form of a person asking for an estimate as to the number of pages a manuscript containing a certain number of words will make. Otherwise it would have more the appearance of a catch question. In teaching, I have always held that heads and whites were not taken into account at all in this and the following question, but that in answering the questions it would be well to state 'without reckoning head and white lines.' It may be said that the second question would necessitate the addition of the heads and whites. As to that there may be difference of opinion, but I should say no. In the first place, the question does not lead to that, but simply asks for the wages value of 16 of the previous pages, that is, 16 pages as stated (without head and white lines).

"Returning to the question itself, which by a little variation might be made much more difficult, we will first deal with it as it is, and afterward explain how any variation or change in the manner of putting may be met. Care must be taken to note, in answering this question, that space must be allowed for after each of the 26,000 words. In ordinary matter it will be sufficient to allow an en quad for space, but in leaded matter rather more, say one-fourth the total number of letters. The answer would be as follows: Multiply the number of words in the manuscript (26,000) by 6 (allowing 5 ends for each word and 1 for space), and divide the product by the number of ens in the given pages, which will be obtained by multiplying the number of lines in depth (33) by the number of ens in the width (40 or 1,320), worked out as follows: Multiply 26,000 by 6, and divide the product by 1,320, the answer being 118 pages and a fraction, say 119 pages."

THE HAMILTON MANF'G CO.

SUCCESSORS TO HAMILTON & BAKER,

MANUFACTURERS OF

WOOD-TYPE

AND

PRINTERS' WOOD GOODS,

TWO RIVERS, WIS.

DURING the past year we have doubled our facilities for the manufacture of Wood Type, Borders and Printers' Wood Goods, we have added new and improved machinery and devised many new methods of manufacture, which enables us to produce goods that are excelled by no concern in America. We manufacture both **Holly** and **End-Wood Type**, also Cases, Stands, Cabinets, Imposing-Stone Frames, Sort Cabinets, Drying Racks, Press Boards, Job Sticks, Engravers' Box-Wood and Maple, Paper-Cutter Sticks, Galleys, Galley Racks, Newspaper Files, Reglet and Furniture, Planers and Mallets, Roller Frames and Stocks, Standing Galleys, Wood Quoins, etc. Send for complete catalogues and Prices.

REGLET CASE No. 3.

Reglet Case No. 3 contains 4,200 pieces of Reglet (550 yards), half pica and half nonpareil. The pieces run from 10 to 51 ems long, 100 pieces of each length, varying *one pica only*. This is a very convenient case for the compositor, as he has within reach any length desired, without cutting and wasting reglet for each job. Price, \$15.00.

No. 4 same as No. 3, with 50 pieces of each length instead of 100. Price, \$8.00.

No. 5 same as No. 3, to which are added lengths from 55 to 150 ems, varying in length by five picas. This case contains 1,500 yards of reglet, cut into 6,300 pieces, and is the most convenient Reglet Case ever offered to printers. Price, \$38.00.

No. 6 same as No. 5, half size. Price, \$20.00.

HAMILTON'S PATENT CUTTING STICK FOR PAPER-CUTTERS.

DESCRIPTION.—Our Cutting Stick consists of Main Body Piece A, which has a groove or recess cut the entire length of same to receive a small strip B $\frac{1}{4}$ of an inch square. This removable strip is the cutting surface, and is held in place by a steel clamp C, which is drawn up by the bolts D. This removable strip, being square, can be used on four sides, thus giving the same amount of cutting surface as large sized stick.

WE CLAIM: 1st. That the steel strip running the entire length of Main Body Piece and screwed thereto *absolutely* prevents warping or springing.

2d. That there is a saving of 75 per cent in cost of cutting sticks after the first cost of Main Body Piece; and by buying one Main Body Piece and four dozen small strips, the first cost is less than that of four dozen ordinary sticks.

3d. That the strips can be shipped by express in bundles of 100 or more at trifling cost, where one dozen of the ordinary sticks are so bulky that they must be boxed and shipped by freight.

4th. That we make the slot in all body pieces of a standard size, so that strips can be ordered at any time with an absolute certainty of their fitting.

DIRECTIONS FOR ORDERING.

In ordering a Body Piece for your cutter, cut off and send us a small piece from end of a stick you have used; this will give us the exact size of slot in your cutter, and will also show us where the knife strikes on the stick. Be particular to see that the piece you send us fits the slot in your machine nicely; in addition to this give us the length of stick your machine requires. In ordering the small strips, it is only necessary to give length of stick, as we cut them all to a standard gauge and have but one size.

PRICES.

Main Body Piece, any length up to 38 inches.....	\$5.00
" " " from 38 to 54 inches.....	6.00
Strips, per doz., any length up to 38 inches.....	.25
" " " from 38 to 54 inches.....	.30

The Leader.

This machine has the following points of superiority over any other lever cutter :

FIRST.—The power is applied in the direction of the cut instead of in a right angle or diagonal direction, as in most cutters, actually saving one-third the power usually required.

SECOND.—The back gauge, which in other cutters is moved slowly by a screw, can be moved instantly any distance in the "Leader" by a lever and then adjusted by the screw at great saving of labor and time.

THIRD.—The octagonal stick has sixteen cutting faces, and it cannot be drawn out by the knife.

FOURTH.—The lever is hung in the most convenient position, midway between the floor and the top of the machine.

FIFTH.—It cuts within an inch of the back gauge.

SIXTH.—The front table is 16 inches wide instead of the usual 12 inches.

Made in 23, 24, 30 and 32 Inch Sizes.

THE ONLY PRACTICAL

Stereotype · Outfit

IMPROVED AND MANUFACTURED BY

M. J. HUGHES,

10 SPRUCE ST. + + + NEW YORK.

One among Hundreds of Testimonials:

To WHOM IT MAY CONCERN: This is to certify that we have one of Hughes' Stereotype Outfits, and the same has been in our office and in constant use for five years, and is giving and has always given entire satisfaction.

Yours truly,
O. A. CARLETON & CO.,
Book, Job, Show and Commercial Work of every description,
Providence, R. I.

Feb. 16, 1888.

THE above testimonial is only one among hundreds elsewhere given. Like large numbers of others, both large and small concerns, it has used for years my quick and superior patented devices of casting and blocking, at one and the same operation, by the use of wooden cores, bars, strips and filling of a non-conducting nature. Also, with the same outfit, all other results known to stereotyping is secured by its simple and practical construction. It is an established fact that it is the only simple, practical Stereotype outfit for the printing office in general, and that if not used successfully it is certainly the fault of the operator.

It is a great mistake on the part of the purchaser to defer purchasing until the outfit is actually needed for some special purpose. "Procrastination is the thief of time."

It is undoubtedly the best thing, taking into consideration the small amount invested, ever put in a printing office.

Send for descriptive circulars and hundreds of indorsements.

M. J. HUGHES, INVENTOR AND MANUFACTURER, 10 Spruce St., New York.

Specimen of Ives' Process Engraving, by the CROSSCUP & WEST ENGRAVING COMPANY,
907 Filbert street, Philadelphia.

PERSONAL.

We acknowledge the pleasure of a call from the following gentlemen during the past month: F. C. Nunemacher, Louisville, Ky.; H. P. Hallock, vice-president of the Omaha Typefoundry, Omaha, Neb.; W. C. Gage, of William C. Gage & Son, Battle Creek, Mich.; R. M. Tuttle, *Daily Pioneer*, Mandan, Dak.; E. F. Rychen, Queen City Printing Ink Company, Cincinnati, Ohio; C. H. Klopp, of Klopp, Bartlett & Co., Omaha, Neb.; J. E. Hamilton, of the Hamilton Manufacturing Company, Two Rivers, Wis.; Oscar Freese, Danville, Ill.

CHICAGO NOTES.

CHARLES A. GASKELL and others have incorporated the United States Publishing House, with a capital stock of \$50,000.

CAPT. JOHN C. PHILLIPS has filed a bill against John R. and Catherine Coffey, asking for an accounting and settlement in regard to the defunct *Western Catholic* newspaper of this city.

It is reported that the Chicago Paper Company has offered to build a plant to cost \$60,000 at Pontiac, if the citizens will furnish the ground and take \$5,000 worth of stock.

W. D. MESSENGER & Co. have removed to 179-181 Randolph street, near Fifth avenue, where they occupy the whole building, and to their former business of wrapping papers have added a general stock.

THE Huber Printing Press Company have opened a branch office at 110 Dearborn street, this city, under the charge of Mr. H. W. Thornton, its affable and indefatigable representative. Although a comparatively new competitor, this machine is rapidly forging ahead, and has become a favorite wherever its merits have been tested.

At a meeting of the Pressmen's Union of this city, held on Saturday evening, February 2, Mr. Martin Knowles received the caucus nomination for delegate to the Denver convention. The selection is an admirable one, and, if elected, there is every reason to believe that this gentleman will reflect honor alike on himself and the society which sent him.

H. O. SHEPARD & Co., 183 Monroe street, have just added to their printing establishment a perfect pamphlet bindery, fitted up with the latest and most approved appliances for turning out at shortest notice, and at as low rates as are consistent with the production of first-class work, all classes of pamphlets, periodicals, check and certificate books, folders, etc. The well-earned reputation of this firm for producing first-class printing will be maintained in this the latest feature and addition to their establishment.

MR. T. H. CHAMPLIN, formerly connected with the press works of C. B. Cottrell & Sons, Westerly, Rhode Island, has recently been appointed representative of the interests of the company in this city. He will be assisted by Mr. V. C. Chase, as salesman, who for the past thirteen years has been associated with Benton, Waldo & Company, of Milwaukee. We hope the success of both these gentlemen will be commensurate with their merits and those of the press they represent.

UNDER authority from Judge Shepard, receiver George E. Lloyd has sold the plant and property of the Jeffery Printing Company to Burr Robbins, the circus man, who was one of its principal creditors, for \$56,000. The court also ordered the receiver to pay off therewith the two mortgages which at present rest on the property, amounting to \$37,996.92, one held by the First National Bank for \$25,000, and the other by George Mather's Sons, for \$12,996.92. An inventory filed showed \$23,580.54 worth of stock besides the machinery, which is valued at upward of \$75,000.

MR. FREDRICK W. BIDWELL, treasurer of the Manufacturers Paper Company, which has its offices in the Tribune Building, New York City, committed suicide by cutting his throat with a razor, in his room, at the Hotel Grace, this city, on Monday, January 24. At 4 o'clock on the afternoon before the suicide, Mr. Bidwell entered the hotel and walked directly to his room. At 11:30 o'clock next morning a chambermaid went to the office and

informed Manager Frost that Mr. Bidwell had been hurt. Receiving no response to her raps, she had forced open the door and found him lying at the foot of bed. Manager Frost found Mr. Bidwell dead. His head was nearly severed from his shoulders and a razor lay near his right hand. He was not undressed. Mr. Bidwell left no letter explaining his shocking death. He was about thirty-five years of age, and had had his headquarters in Chicago for the past five years.

MR. JAMES McMAHON, for a number of years a compositor in the printing establishment of H. O. Shepard & Co., has been compelled by the declining health of his wife, to seek a more genial clime, and has selected California as his future home. We take pleasure in recommending him to our craftsmen on the Pacific coast, as a sober, reliable, first-class union printer, and any establishment in need of a thorough workman, who can be depended on under all circumstances, cannot do better than avail itself of his services. He carries with him to his new field of labor the best wishes of his many friends and associates, who will always be pleased to learn of his welfare.

A PARAGRAPH is going the rounds of the press to the effect that the Chicago *Times* has a million dollar libel suit on its hands. This reminds us of a conversation we heard when a boy, between a stalwart recruiting sergeant of the Forty-second Highlanders and a hind, whom he was urging to accept the shilling, and enlist in a regiment which had shed such imperishable luster on the British army. "I wouldna' be ony good to you if I did enlist," said the countryman, "for I would run awa' the first chance I got." "Weel, that's a' right," responded the sergeant, "there wouldna' be any trouble about your running awa', its about the *coming back* that we should talk, d'ye see?" So about the million dollars involved—they're all right, but the trouble would be to collect them. Newspapers are not in the habit of paying million dollar suits, and juries are not in the habit of awarding them.

ON Monday, January 21, ten confessions of judgment were entered against the Clark & Longley Printing Company, of this city, amounting, in the aggregate, to the sum of \$50,000. The parties interested are as follows: Fort Dearborn National Bank, \$22,000; D. H. Toffman, \$5,400; H. Hartt & Co., \$4,000; Milton George, \$3,500; W. B. Conkey, \$3,400; J. W. Butler Paper Company, \$3,400; Emmert Proprietary Company, \$3,000; Lincoln National Bank, \$2,500; A. Zeese & Co., \$1,400, and Charles R. Bliss, \$1,000. The original concern bought out the printing establishment of C. E. Southard, about five years ago. In 1886 the same establishment failed for \$30,000, under the firm name of Clark & Longley, after which the present company was formed, with a capital of \$30,000. Mr. Longley, shortly thereafter, however, sold his interest to his partner, who has been the sole stockholder since. The value of the plant is estimated at \$60,000, and the stock at \$5,000. Among the publications issued therefrom was the *Northwestern Lumberman* and the *Orange Judd Farmer*.

SPECIMENS RECEIVED.

GLASS & BELL, Battle Creek, Michigan. Specimens which show good taste in the selection of material, and ability to properly use it. The firm envelope is both unique and original, and is very creditably executed.

GIES & Co., Buffalo, New York. Several samples of job printing. The fact that Mr. Joseph J. Rafter is superintendent of the mechanical department is of itself a guarantee that all work turned out at this establishment will bear inspection.

G. A. SMITH, Lyme, Connecticut. A number of specimens of exceedingly neat and well-worked letter, note and bill heads. The colored samples are especially deserving of commendation, and show what a *good* printer can accomplish with comparatively limited facilities.

RAITHBY & LAWRENCE, Leicester, England. This firm, one of the most enterprising and progressive in Great Britain, send a handsomely bound forty-page specimen book, containing a number

of samples of letterpress printing, all of which are works of art. American type, however, is used in the main, which is a recommendation of no mean order. The pages in colors and gold are worthy of special mention, while the presswork is all that the most exacting could desire.

POST JOB PRINT, Lindsay, Ontario. Several samples of creditable every-day work. Our Canadian brethren are keeping their end up in great shape, and are making advances of which they have every reason to feel proud. We have two suggestions to make, however, in connection with the specimens referred to. Some of the designs are much better than the execution displayed therein, especially so when applied to miter joints and rule-twisting, and the presswork can be materially improved.

C. B. FISK, Palmer, Mass.; S. B. Newman & Co., Knoxville, Tenn.; Daily Messenger Job Office, Owensboro, Ky.; Boomerang Job Print, Laramie, Wyo.; E. P. Mills, Early, Iowa, a number of specimens worthy of the highest commendation. Will L. Hough, Rome, N. Y.; Observer Publishing Company, Dover, Me., a package of every-day jobwork, all of which deserve a good word. W. H. Travers, South Gardner, Mass.; Vogt Brothers, Morristown, N. J., letterhead in colors. August Becker, Brooklyn, N. Y.; Moss Engraving Company, New York; William Johnston Printing Company, Chicago; The Curtis Printing Company, St. Paul, Minn.

PAPER TRADE ITEMS.

THE capacity of the Bath Paper Mill, Bath, South Carolina, is to be increased.

A TRAVELER just returned from the South states that an extensive paper mill is projected in the town of Conyers, Georgia.

DIEM & BLICKLE, wholesale paper dealers, Cincinnati, Ohio, have been succeeded by the Diem & Wing Paper Company.

A PAPER MILL is to be built at Lexington, Virginia, to cost at least \$50,000. Northern people are the promoters of the enterprise.

JAMES M. WILLCOX & Co., paper makers, Philadelphia, Pa., have been succeeded by William F. Willcox, under style of the James M. Willcox Paper Company.

THE Gilbert Paper Company, of Menasha, Wisconsin, are now running their mill almost entirely on fine writing papers. This company is successfully managed by Mr. Frank Gilbert.

O. C. BARBER has closed contracts for the Diamond Match Company, Akron, Ohio, for a new strawboard mill, which will be, when completed, the largest in the country, and will cost about \$300,000. It will be located in eastern Indiana or northwestern Ohio.

THE Smith Paper Company and the Cleveland Paper Company have been awarded the contract for supplying print to the Cincinnati Post, St. Louis Chronicle, Detroit News and Cleveland Press for 1889. The papers are in a league. The price is reported to be $3\frac{3}{8}$ cents a pound.

THE Troy Times fathers the statement that the first paper mill in northern New York was erected by Mahlon Taylor, in 1792, on the bank of the Poestenkill. It soon passed into the hands of others, and became a good market for the paper-rags gathered in all the neighboring country. The second paper mill was built on the site of the present straw-paper mill on Campbell's highway.

JOHN A. GREENLEAF, of Lewiston, Maine, recently closed a contract with the Shawmut Fiber Company for the erection of the largest pulp mill in the United States, if not in the world. It is to be built at Somerset Mills, Maine, and ex-Governor A. H. Rice, of Massachusetts, is one of the prominent projectors of the enterprise. The buildings will be nine in number. These buildings will take over 3,000,000 feet of lumber, 2,000,000 shingles, 12,000 clapboards, and about 350 ship's knees.—*Exchange*.

PRACTICAL steps have been taken toward the construction of a new paper mill at Constantinople. Early last year the sultan's grand chamberlain, Osman Bey, obtained a concession for the construction of a paper mill near Constantinople, having at the

same time secured the monopoly of sales for the whole country. Hitherto Turkey has been indebted to foreign countries, and especially to Austria, for her supplies of paper, the yearly imports amounting to nearly thirty million piasters.

THE contracts for supplying paper for the public printing have been awarded by the joint committee on printing to Irwin N. Megargee & Co., of Philadelphia; Raiguel & Co., Philadelphia; Elliot & Co., Philadelphia; Mount Holly Paper Company, Mount Holly Springs, Pa.; J. B. Sheffield & Sons, Saugerties, N. Y.; Train, Smith & Co., Boston; Kastner & Williams, Holyoke, Mass.; Dobler & Mudge, Baltimore; O. F. H. Warner, Baltimore; Armstrong, Craig & Co., Philadelphia; Conrow Brothers, New York; Garrett & Buchanan, Philadelphia; Woolworth & Graham, New York; T. M. Simpson, Philadelphia, and W. M. Singerly, Philadelphia.

NEWSPAPER GOSSIP.

THE Washington (D. C.) *Sunday Capital* has been sold for \$6,000.

THE *Daily Republican* is a new paper published at Salina, Kansas.

THE *Bugle Blast*, a farmers' paper, has been started at Jackson, Louisiana.

THE *Progress* is the name of a new daily newspaper published at Clarksville, Tennessee.

THE *Morning Herald*, a new paper, has just made its appearance at Decatur, Alabama.

A NEW democratic daily, the *Evening Herald*, has made its appearance at Sedalia, Missouri.

PECK, of *Peck's Sun*, won \$4,000 on the election, and is giving it out in sums of \$20 to needy widows.

THE Providence (R. I.) *Telegram* claims that it was the first paper in the state to introduce a folder.

THE *Evening Herald* is a newspaper published at Nashville, Tennessee, with Colonel Cooper as editor-in-chief.

MR. HENRY L. STODDARD, who represents a syndicate of republicans, has obtained control of the New York *Graphic*.

THE *Evening Post*, a democratic daily, has recently been started at Columbus, Ohio. It is an interesting and well-edited sheet.

J. C. CALKINS has resigned his position as city editor of the Burlington (Iowa) *Hawkeye*, and contemplates moving to Colorado.

THE Lawrence (Mass.) *Eagle* provides its carriers with whistles, on which they blow a shrill blast at every door they deliver a paper.

THE *People's Tablet*, published at Sioux Falls, Dakota, is the name of a new venture, devoted to the interests of agents and canvassers.

THE La Crosse (Wis.) *News* is to be published hereafter by an incorporated company, with a capital of \$10,000, divided into four hundred shares of \$25 each.

THE New York *Herald* is trying to secure libel laws in every state that will exempt an editor from responsibility when matter over which he has no control slips into his paper.

E. DECKER, of Casco, Wisconsin, has purchased the Green Bay *Advocate*, one of the oldest newspaper establishments in the state, having been founded in 1846 by Charles D. Robinson.

IN its editorial department, the Detroit *Free Press* has eleven persons whose service averages over seventeen years. The aging editor was engaged in 1865; the editor-in-chief in 1861.

THE Richmond (Va.) *Times* has purchased the subscription list, advertisements and good will of the *Whig*, of that city, and the latter suspended publication on December 27 last, after an existence of sixty-four years.

THE Butte (M. T.) *Miner* recently published an illustrated holiday edition of ninety-six pages, in which it gives a full description of Montana's mining interests and a concise history of the territory, together with much valuable information regarding the

surrounding country. It is finely gotten up and ably edited, and while being a souvenir of Montana, it is a worthy specimen of the typographical art as it exists in that territory.

THE EMERSON (Barton county, Ga.) *Graphic* is a new candidate for public favor. It is a neatly printed, nine-column quarto, and devoted to the interests of northwestern Georgia.

THE *Westmoreland Democrat*, of Greensburg, Pennsylvania, began a new volume on January 2. It was founded in 1798, and claims to be the oldest democratic journal west of the Alleghanias. It is a nine-column folio, published by Vogle & Winsheimer.

THE *Journalist* is about to issue an extra number, devoted solely to the women of America. It will be fully illustrated, and will contain portraits and sketches of many prominent literary women, together with articles written for this special issue by them.

WE acknowledge the receipt of the *Widner Star*, published at Freelandville, Indiana. We think it is a first-class botch production. It is fearfully and wonderfully made, both mechanically and editorially. It seems incredible that any community should tolerate, much less patronize such an abortion. The sight of it makes us sick.

THE *Presbyterian Journal*, of Philadelphia, has been consolidated with the *New England Presbyterian*, of Boston. It is to continue to be published in Philadelphia, under the Rev. R. M. Patterson, D.D., LL.D., as editor, with the Rev. T. L. Scott, of Boston, as New England corresponding editor, and with a New England department.

TRADE NEWS.

J. M. PADGETT, printer, Morganville, Kansas, has sold out.

R. & M. MUNK, printers, San Francisco, have dissolved partnership.

THE Blairstown (Iowa) *Press* has been sold to a strong stock company.

SPEAR, JOHNSON & Co., printers and stationers, Toledo, Ohio, have sold out.

ALLEN & SUTTON, job printers, Sioux Falls, Dakota, have dissolved partnership.

THE Rockford (Iowa) Paper Company has incorporated, with a capital stock of \$8,000.

H. M. DIAMOND, printer, Indianapolis, has been succeeded by Diamond & Warrington.

THE Compton Lithographing Company, at St. Louis, Missouri, has put in a new \$5,000 press.

B. E. LINN & Co., printers, Milwaukee, Wisconsin, have been succeeded by Hake & Brunon.

MASON, REYNOLDS & Co., printers and publishers, Ottawa, Ontario, have dissolved partnership.

THE Berry Printing Company, Kansas City, Missouri, has passed into possession of the mortgagee.

CARTER, RICE & Co., of Boston, have appointed Frank S. Thayer their agent at Denver, Colorado.

THE National Fly Paper Company, Cincinnati, Ohio, has been incorporated with an authorized capital of \$25,000.

J. HIRSHBERG, wholesale paper dealer, Atlanta, Georgia, has been succeeded by the Hirshberg Paper Company.

ANDREWS, BAPTIST & CLEMMIT, Richmond, Virginia, have dissolved partnership. The J. L. Hill Printing Company are their successors.

KLOPP, BARTLETT & Co., printers, 11-14-16 Farnam street, Omaha, have just added another latest improved Potter press to their plant.

P. E. DOWE, formerly with C. B. Cottrell & Sons, has severed his connection with that firm, and is now secretary and treasurer of the Johnson & Dowe Manufacturing Company, Richmond,

Virginia, which corporation is now ready for business, as electrotypers and dealers in printers' general supplies.

THE Peoria Herald Publishing Company has been incorporated, at Peoria, Illinois, with a capital stock of \$8,000, by Andrew J. Bell and others.

WEED & KNICKERBOCKER, of the Syracuse (N.Y.) *Sunday Times*, have made an assignment. Liabilities about \$15,000, and assets about the same.

MARTIN G. NEIL and others have incorporated the Missouri Lithograph Stone Quarry Company, at East St. Louis, with a capital stock of \$500,000.

CHARLES A. DRACH & Co., electrotypers, of St. Louis, have in press a specimen book, which will contain a very large line of cuts, many of which have never yet been shown in any specimen book.

WILLIAM C. GAGE & SON, printers, of Battle Creek, have recently placed in their pressroom a Cox country stop-cylinder, from the Duplex Printing Press Company, of that city; and have just ordered a four-roller stop-cylinder.

THE Historical Publishing Co., Philadelphia, Pennsylvania, are hereafter to do their own binding, and have placed their entire order for machinery, amounting to many thousands of dollars, with Messrs. George H. Sanborn & Sons, of New York.

BENTON, WALDO & Co., Milwaukee, announce the removal of their St. Paul stock, and the transfer of the management of the same to Averill, Carpenter & Co. This will enable printers to order their paper stock and type and materials of one house, thus expediting matters for the consumer, and is a convenience that will be appreciated by all.

THE Photo-Engraving Company, 61 Park Place, New York, has recently issued a handsome book of specimens, embracing portraits, landscape scenes, buildings, groups, etc., the work of their establishment and executed by the various processes for which this firm has become famous. It is needless to add that it fully sustains its well-earned reputation.

C. W. CRUTSINGER, of St. Louis, is working upon a paper which he has promised shall be given to the printers of the world first through THE INLAND PRINTER, and which he says will contain some entirely new points, of great value to the craft. Though patentable, Mr. Crutsinger has determined to give the printers the benefit, without discrimination and without price.

THE Denver branch of the Queen City Printing Ink Company, has, owing to the great increase of business, removed to more commodious quarters, located at 1516 Arapahoe street, where it will carry a full line of printing and lithographic inks of all grades and colors, varnishes, bronze powders, etc. It is under the wide-awake management of R. O. Boyd, a gentleman well and favorably known to the trade, who is prepared to fill all orders with satisfaction and dispatch.

MESSRS. MARDER, LUSE & Co., of Chicago, have purchased the controlling interest in the Omaha Typefoundry, located at 419 South Eleventh street, which establishment will henceforth carry a complete line of their type and material. The capital stock of the concern has been increased to \$20,000, so that with enlarged facilities and energetic management, there is every reason to predict for it a prosperous career. Its business interests will be looked after as heretofore by Mr. H. J. Pickering.

THE Times Publishing Company, of Orillia, Ontario, was recently organized for the purpose of publishing a daily paper and carrying on a general printing business. The first issue of the *Daily Times* appeared on February 1, and is a neatly printed, seven-column folio, twenty-four by thirty-six. Mr. A. Murray, the senior member, has been for twenty-two years engaged in the newspaper business, connected with the Orillia *Weekly Times*, now entering upon its twenty-third volume. The prospects of the new company are highly encouraging, and there is little doubt that in a short time it will occupy the leading position in journalism in the northern part of Ontario.

SAMUEL HALDEMAN,

Whose portrait accompanies this sketch, was born in Perry county, Pennsylvania, November 24, 1838. His first experience in a printing office was in 1852, as a "roller boy," in Harrisburg, the capital of the state, and, after serving an apprenticeship of six years, became a member of Philadelphia Typographical Union, No. 2. He was a compositor on the *Congressional Globe* in Washington when the first battle of Bull Run was fought. Shortly afterward he went north, and near the end of the war enlisted in the 78th Pennsylvania Volunteers. At the time of General Lee's surrender he was stationed at Nashville, Tennessee, and was mustered out of service at Camp Curtin, Harrisburg, in September, 1866. Mr. Haldeman then came to Washington, where he has resided ever since, working at his trade in the capacity of foreman, proofreader and compositor, and speaks with justifiable pride of the fact that during his thirty years' experience as a journeyman printer he has never been without a card "in date."

In 1873 he was elected delegate from Columbia Union to the sessions of the International Typographical Union, held in Montreal, but on account of a business engagement was unable to attend. Owing to the sickness of one of the delegates elected to represent the local union at the session of the International, which met in Washington, June, 1879, Mr. Haldeman was appointed to fill the vacancy. At this session he was elected president of the body, which office he filled to the satisfaction of the craft. The following year he was again elected a delegate from Washington to represent No. 101 at the Chicago convention, where he declined a nomination for reelection as president, although it was apparent

he was almost the unanimous choice of the body for that position.

As a foreman, Mr. Haldeman showed great executive ability. For the young and inexperienced he always had a kindly word of advice, and was most lenient to their defects, taking the greatest pains to impress upon them the absolute necessity of thoroughness in their work. He is one of the most influential members of No. 101, and owes the proud position he occupies in that body today to his earnestness of purpose, to his rugged honesty, rather than to any ability as a talker. Frequently in the past, when about to take hasty action on important matters, has his union been brought back to the sober second thought by his cautious words, uttered with all the earnestness of his most earnest nature. He is a cogent, logical thinker, and takes a most sober view of life, though of genial, social habits. His judicial, cautious temperament has led his intimates to call him "Squire," to which title he is well entitled by the fairness with which he decides the many questions which arise in the daily routine of a printing office.

Mr. Haldeman is an uncompromising trades unionist, and while always ready to cooperate with outside organizations in advancing the general interests of labor, is utterly opposed to permitting their members a voice in the management of a typographical union. He is an earnest and sensible, though not a frequent talker; is neither an obstructionist nor an agitator, but when he has an objective point in view, no amount of badgering or sharp practice will turn him from his purpose. He has an interesting family, and takes great pride in his home affairs, and is employed as a compositor on the *Washington Star*.

A RAPID GUMMING MACHINE.

There is a law, well defined and widely recognized, which governs the development of new inventions connected with

machinery, that, while intricacy and more or less uncertainty mark its progress, yet simplicity and accuracy are the chief features of its final and perfect operation. Much of the machinery now used in envelope making exemplifies this truth. We have machines which unite the process of gumming the sealing flaps with that of making, and in one case even printing the envelope. The desired economy of production is obtained at the sacrifice of appearance, both in the gumming and folding, together with a large amount of waste in the running. As an important move in the direction of simplicity, economy and perfection of appearance, Pellatt's patent gumming machine has been introduced. By it envelope blanks and wrappers are automatically spaced out, gummed, dried and delivered at the rate of twenty thousand to thirty thousand per hour without waste, and with a beauty of finish which no other method can approach.

The machine, which is

unerring in its action, is fed without stopping, and occupies a space of only ten by three feet, and by its use the ultimate saving of waste covers the cost of the operation. The leading envelope makers in Europe are now using this machine with the best results, and the inventor will be in this country for a few weeks from January 7, and bring a machine with him which he will be prepared to erect and start for the first purchaser. Letters on this subject may be addressed to the *Paper World*.—*The Paper World*.

TYPOGRAPHIA No. 1, German Printers' Union of Philadelphia, on Saturday night, January 26, elected the following officers: President, Harry K. Stephan; vice-president, Peter Peterman; recording secretary, R. Fichtl; corresponding secretary, Julius Wayda; financial secretary, Peter Vogt; treasurer, Adolph Uhl; agent, R. Hoffe; librarian, N. Brueggmahn; finance committee, Messrs. Benzenhoffer, Keyler and Pabit; trustees, L. Stoll, O. Simons; committee on probation, John M. Link, Paul Wendler, A. Zeller.

THE LATE JOHN K. ROGERS.

We are indebted to the last issue of the *Printers' Bulletin*, published by the Boston Typefoundry, for the accompanying excellent likeness of the late John K. Rogers, who was so long and so prominently identified with the interests of that institution. The following tribute to the deceased, from *Rounds' Printer's Cabinet*, we deem worthy of a place in the columns of THE INLAND PRINTER: "Mr. Rogers' history is typical of the self-made men of our country, for he rose from obscurity to his high position in the world of typography, clearly by his own merits. It was not his fortune to follow in the wake of another who had pioneered the way and made 'rough places smooth' for him in the battle of life. He was his own pioneer, as he was the architect of his own fortune. In manner he was quiet and unobtrusive; yet his opinions were graced with that spirit and resolution which are characteristic of men of his class.

"Mr. Rogers was devoted to literature, and was an unusually well-informed man, besides being an art critic of unusually fine perceptions. This was of great value to him in the prosecution of the typefounding art, for as his natural proclivities lay in grooves that were calculated to its promotion, so they were of great assistance to him in the higher development of an art that has done so much for the elevation of the human race. Indeed, it will not be denied that in this relation the Boston Typefoundry, under Mr. Rogers' management, has produced some of the most artistic faces in scripts and job letters that have ever yet been offered to the trade; and true it is, also, that they maintain their place and position today, even under the opposition of the ablest men in the business. It is well known that the typefounder's art is full of technicalities and endless detail, and that suggestions for improvement in every department are of daily occurrence. Mr. Rogers was always ready to receive any advice in this relation, and was quick to adopt any commendation of value and significance.

"Mr. Rogers never was engaged in business outside the limits of his own native heath. He went to Boston early in life, and entered the counting room of the concern that he afterward purchased and incorporated, and continued with great success until the time of his death. His name will ever be remembered for his sagacity and downright integrity, and will be chronicled among the typefounders of the United States as one who left the world better than he found it. *Requiescat in pace.*"

It is announced that a school of printing will shortly be opened at Brussels. The committee, which consists partly of master printers and partly of journeymen, has selected five printers to act as technical professors, and the use of three extensive apartments in the Palais du Midi, Boulevard du Hainaut, has been granted by the municipal authorities, and these have been fitted up to suit the requirements of the school.

ATTACHING LABELS TO TIN.

This is one of the constantly recurring queries, and as it has not been replied to in detail for some time, we will quote a number of the methods recommended or used for the purpose.

1. If the paper is well sized and will resume its original color when the paste is dry, use a solution of balsam of fir, 1 part; in oil of turpentine, 2 or 3 parts.

2. Soften 1 part of good glue in water, then pour off the excess, and boil it with 8 parts of strong vinegar (about 8 per cent). Thicken the liquid, while boiling, with enough of fine wheat flour, or dextrine.

3. Make starch paste; add to it, while warm, a little Venice turpentine, so that the latter will become evenly distributed through it.

4. Add to starch paste, or any other similar aqueous paste (except that made from gum arabic) some solution of shellac in borax. The quantity may be easily determined by trial.

5. Paint the spot where the label is to be put with solution of tannin, and let it dry. Affix the label previously gummed and wetted.

6. Paint the spot over lightly with a camel's-hair or other brush dipped into chloride of antimony.

7. Make a dilute solution of white gelatine, or, better, of isinglass, about 1 in 20. This is said to adhere without the addition of anything else. We have not tried it.

8. To mucilage of acacia, starch, dextrine, or tragacanth-paste, add a little ammonia.

9. Or, add a little tartaric acid. A trifle of glycerine may be added besides.

10. Mucilage of gum arabic may be rendered much more adhesive by heating 100 parts of it with 2 parts of sulphate of aluminium, previously dissolved in hot water, to boiling, and then allowing to settle. A little tartaric acid

and some glycerine added to the clear liquid, after it is decanted, will improve it.

11. Make a mixture of mucilage of tragacanth, 10 parts; honey, 10 parts; and flour, 1 part. We have no experience with this.

12. Roughening the spot with fine emery paper, wiping the place clean, and then attaching labels with ordinary paste, or such as have been rendered more adhesive, is one of the surest ways we know of.

The difficulty of insuring the permanent adhesion of labels on tinned iron, or "tin," as it is usually called, has induced many manufacturers to abandon the use of plain tinware, and to substitute therefor the so-called japanned tin, which can be had (in plain tints) at almost the same price as the naked tin itself. There is no difficulty whatever encountered in making labels adhere to the japanned tin by any of the usual kinds of pastes.—*American Art Printer.*

We are indebted to the courtesy of Mr. West, of the Washington, (D. C.) *Daily Post* for the use of the illustration of the Franklin statue, which appears in the present issue of THE INLAND PRINTER.

EXPOSITION UNIVERSELLE, PARIS.

Walter Lodia, formerly correspondent of *THE INLAND PRINTER* in South America, returns to Paris about the middle of April next, in order to make a prolonged study of the Grand International; and being desirous of doing business at the same time, he offers his personal services to any firm or firms in the printing and allied trades contemplating exhibiting, and desiring a competent, reliable representative. By engaging his services they would have the assiduous attention of a practical printer, with perfect impartiality and strict reserve, superintending their individual interests, and this at a moderate charge. Parties desiring to negotiate with him should address 370 West Eleventh street, New York.

INTERNATIONAL TYPOGRAPHICAL UNION.

OFFICE OF SECRETARY-TREASURER.
INDIANAPOLIS, January 26, 1889.

To the Officers and Members of Subordinate Unions:

GENTLEMEN,—Your attention is respectfully directed to Article II of the Constitution, and particularly to the following sections thereof:

ARTICLE II.

SECTION 5. The election of delegates to the International Union shall be held on the last Wednesday of March preceding the meeting of the International Union.

SEC. 6. Returns (under seal) of such delegates-elect must be made to the secretary-treasurer within fifteen days after an election.

SEC. 7. The secretary-treasurer, before the meeting of the International Typographical Union, shall prepare a roll of the delegates-elect, and place thereon the names of those persons, and such persons only, as shall be shown to have been elected in accordance with the laws of the International Union and of subordinate unions. In cases of contests, the names of the parties claiming election shall be submitted to the International Union for decision. Where unions have not complied with the laws of the International Union, the names of delegates from such unions shall also be submitted.

The object of the above sections, as will be observed, is to remove the necessity for a committee on credentials (except in contested cases and in cases where unions have not complied with the laws) and thus allow the convention to utilize the time heretofore necessarily consumed awaiting the report of such committee.

There is no discretionary power vested in the secretary-treasurer, and it is therefore requested that the sections above quoted be strictly complied with, namely:

That delegates be elected March 27, 1889.

That returns (under seal) of such delegates-elect be made within fifteen days therefrom.

That all indebtedness to the International Typographical Union be promptly paid. (See Section 96, General Laws.)

The failure to comply with any of the above provisions by any union will cause the credentials of the delegate or delegates from such union to be submitted to the convention, thus debarring said delegate or delegates from participation in the proceedings pending the decision of the convention. Fraternally,

[SEAL]

W. S. McCLEVEY,
Secretary-Treasurer, I. T. U.

THE CHILDS-DREXEL FUND.

The *Denver Times* of January 25, contained the following:

"Senator Noble yesterday introduced a bill to authorize the sale of a tract of school lands on which to erect a National Typographical Institute. The object of the bill is to establish a home for aged or disabled typographers. Beyond this there is the hope of drawing to Denver, as an endowment for the institute, the Childs-Drexel fund, either in whole or in part. This fund, established by George W. Childs and one of the Drexels for the establishment and maintenance of such an institution as is contemplated in the bill of Senator Noble, now amounts to \$30,000.

"It is known that the trustees of the fund favor Denver as the location for such a home. There is also to be considered this fact: The International Typographical Union holds its annual meeting in Denver next summer, and the undoubted advantages of Denver

for such a home will be made apparent to the fraternity of typos at large. The object of the bill is a commendable one, and in view of the exceptional circumstances at the present time, it is particularly desirable that favorable action should be taken now.

"The bill meets with the approval of all the typographers in Denver, and they consider the chance of obtaining aid from the Childs-Drexel fund more than a probability. Senator Noble is to be commended for introducing this bill, which is not only for the particular benefit of a deserving class, but also for the general benefit of the state."

JOURNALISTIC JOTTINGS.

In 1662 the first newspaper was started in England.

In 1744 the *Advertiser*, of Philadelphia, the first daily, made its appearance.

The first newspaper in the world was printed in 1457 in Nuremberg, and was called the *Gazette*.

The *Graphic*, of New York, is the first illustrated daily of the world; it was established in 1873.

The *Republican*, of St. Louis, which was started in 1808, was the first newspaper west of the Mississippi.

The first permanent newspaper in the United States was the *Boston News Letter*, published in 1704.

It was in 1822 that the *Price Current*, of New Orleans, the first commercial paper, made its appearance.

The first political paper started in the United States was the *Journal*, of New York, published in 1733.

New York claims the honor of publishing the first penny paper. This was the *Morning Post*, started in 1833.

The New York *Herald*, started in 1835, has the honor of being the first independent paper in the United States.

The *Gazette de France*, published in Paris in 1731, was the first French newspaper. It was issued daily after May 1, 1792.—*Exchange*.

RECENT PATENTS.

The following list of patents relating to the printing interests is specially reported by Franklin H. Hough, solicitor of American and foreign patents, 925 F street, N. W., Washington, D. C., who will furnish copies of patents for 25 cents each:

ISSUE OF JANUARY 1, 1889.

395,499—Printing cards, etc., Machine for. S. McAuliffe, Rochester, N. Y.

ISSUE OF JANUARY 8, 1889.

395,934—Printers' galley. F. Wesel, Ferdinand, N. Y.

395,728—Printers' rules, Machine for cutting. F. Wesel, Ferdinand, N. Y.

395,966—Printing machines, Sheet-delivery apparatus for. R. Miehle, Chicago, Ill.

395,710—Printing machines, Means for reciprocating the ink distributing rolls of. H. C. A. Frost, Sydney, New South Wales.

ISSUE OF JANUARY 15, 1889.

396,288—Printing machines, Feeding apparatus for. W. Nurse, Toronto, Ontario, Canada.

ISSUE OF JANUARY 22, 1889.

396,387—Printers' inking rollers, Composition for. J. T. Baylis, Philadelphia, Pa.

396,390—Printers' cylinder. W. Berri, Brooklyn, N. Y.

396,612—Printing machines, Inking apparatus for. W. Scott, Plainfield, N. J.

396,592—Printing machine, Rotary. J. Michaud, Paris, France.

396,502—Printing presses, Gripper for platen. R. Mingay, Jr., Saratoga Springs, N. Y.

ISSUE OF JANUARY 29, 1889.

396,896—Printing machines, Sheet-delivery apparatus for. W. Scott, Plainfield, N. J.

THE school for printers' apprentices at Leipsic now numbers 200 pupils, who are divided into six classes. Eleven teachers, three of whom are compositors and two pressmen, instruct on four week-day evenings. Besides instruction in the technicalities of the trade, the German and Latin languages are taught, as well as accounts, drawing, and geometry. Several times during the year the pupils are conducted over paper mills, machine factories, and other establishments connected with printing. The school is under the directorship of Professor Dr. Nieper, the head of the Leipsic town schools.—*London Printing Times and Lithographer*.

OF INTEREST TO THE CRAFT.

THE speaker of the Texas House of Representatives is a printer.

Mr. A. R. HART, of New York, is a candidate for the position of public printer.

THE owner of the Columbia (Pa.) *Courant*, Paschall & Stultz, have launched the *Evening News*.

THERE is a move on foot to get up a typesetting contest in Boston, and Joseph McCann has been invited to participate.

Two Philadelphia compositors have been made happy and comfortable by securing a prize in a lottery, from which each realized \$7,500.

THE Los Angeles union has indorsed the Hon. Henry Q. Osborne, of the *Evening Express* of that city, for the position of public printer.

THE *Union Printer*, New York, has changed hands, Mr. William S. Rood retiring and Mr. George Brown assuming the management. THE INLAND PRINTER wishes the *Union Printer* unbounded success.

THE Louisville Typographical Union, at a meeting held January 6, passed a series of resolutions requesting the President-elect to appoint a member of a typographical union to the position of public printer.

THE union printers of San Francisco have a mutual aid society. The initiation fee is \$15, payable at \$1 per week until the full amount is paid. Its benefits are \$10 per week, and it also furnishes a physician and medicines.

AT a recent meeting of Vancouver Typographical Union, the following officers were unanimously elected for the ensuing year: President, A. A. Anderson; vice-president, George Spiers; secretary, M. Garvey; treasurer, S. J. Peake; guard, W. Saunders.

THE Hon. Philip Coughlan, Sr., the printers' representative in the Missouri general assembly, from St. Louis, has been placed on two important committees, the committee on retrenchment and reform, and committee on rules. The appointment gives general satisfaction.

THE Newspaper Stereotypers' Union No. 2, of Boston, has elected the following named officers: President, G. W. Williams; corresponding secretary, F. W. Bigelow; financial secretary, W. H. Worthing; treasurer, W. B. Chase; trustee (for three years), G. R. Boodry.

A BILL has been introduced in the New York assembly, establishing a state printing office, creating the office of superintendent of state printing, at a salary of \$4,000, and calling for an appropriation of \$200,000 to fit up a building at Albany for use as a state printing office.

AT a regular meeting of Typographical Union No. 6, held on Sunday, February 3, a resolution was adopted asking President-elect Harrison not to do violence to the feelings, or alienate the sympathy of the organized toilers of the land by the appointment of Whitelaw Reid to any office within the gift of the incoming administration.

SANSOM SCRIPT.—We herewith republish the two pages of Sansom script, one of the most handsome and serviceable designs we have ever shown, the production of the MacKellar, Smiths & Jordan Typefoundry, which appeared in the December issue of THE INLAND PRINTER, owing to the fact that the former were seriously injured in transit to Chicago.

THE Boston *Herald* says: "The Franklin Typographical Society of Boston, with its three hundred and odd members and its splendid record as a benefit association, has about \$16,000 in hand toward 'a local habitation and a name,' and its ripe age of sixty-five years entitles it to consideration, not only from members of the printing fraternity, but from all good citizens. The printers stand in close relations to the body politic, though they leave their work mostly to speak for itself. But a society which has counted in its long existence some of our foremost citizens among its members, and has an unrivaled reputation for the care of its sick

and suffering, should be better established than St. Paul was when he lived in his own hired house at Rome, and its members are starting none too early toward locating themselves where they shall be their own landlords and have opportunity to expand their usefulness according to their opportunities."

AT a stated meeting of Denver union, held on January 3, the attendance embraced fully one-half of the active members—a good indication of the interest manifested in craft matters, particularly in the work of the committee of arrangements for the June convention. Denver union has now on its rolls the names of over three hundred printers—the largest in the history of the organization. The arrangement committee presented an outline of entertainment for the delegates and visitors who will assemble during the convention, which was approved of by a decided vote of those present. If successfully carried out in detail, Denver will continue to sustain all that is implied in the phrase, "western hospitality."

THE following is a copy of the memorial drafted by Denver Typographical Union, No. 49, and forwarded to President-elect Benjamin Harrison, in relation to the candidacy of Captain William M. Meredith, of Chicago, for public printer:

MEMORIAL TO HIS EXCELLENCY BENJAMIN HARRISON, PRESIDENT-ELECT OF THE UNITED STATES.

The members of Denver Typographical Union, No. 49, hereby join the many other sister unions in indorsing the candidacy of Captain William M. Meredith, of Chicago, for the position of public printer.

That we recognize in him all the qualifications necessary to conduct the affairs of our national printing establishment in a manner that will promote accurate and prompt service.

That his standing among the printers of the nation for a period of thirty-five years deserves this recommendation from the printers of Colorado.

That an engrossed copy of the foregoing be prepared, with the seal and proper signatures, and forwarded to His Excellency Benjamin Harrison, President-elect of the United States, earnestly praying for the favorable consideration of this our petition for an honored citizen, a brave soldier and a thorough printer.

[SEAL]

Attest: JAS. P. HADLEY, Secretary.

Respectfully submitted,
WM. H. MILBURN, President.

FOREIGN.

THE printing establishment of M. Schultz, Paris, France, has been formed into a company, with a capital of 175,000 francs (\$35,000), and will in future be known as the Strasburg Works, under the direction of M. Schultz.

IN the Austrian Budget the sum of 525,000 florins is set down as a first installment for the erection of a new building for the Austrian state printing office, the whole cost being expected to reach 1,725,000 florins, or more than £170,000.

TRADE reports from Australia are as follows: Brisbane, very quiet; Sydney, slack; Launceston, very slack; Adelaide, fair; Newcastle, very dull; Wellington, looking up somewhat, except in the Auckland district where affairs are dismal.

IT is understood that James Gordon Bennett, of the *Herald*, has purchased the old *Globe* office, in the Strand, London, with the intention of shortly starting a morning daily on the lines of the *Paris Herald*, which has proven a financial failure, and an expensive luxury.

THE compositors employed in the principal printing offices at Vienna, with the exception of the newspaper offices, have decided to strike for an increase of wages to 12 florins, or rather less than 20 shillings weekly, instead of the 11 florins at present paid, and a reduction of the hours of labor from ten to nine and a half.

THE final sitting of the Intercolonial Printers' Conference was held at the Trades Hall, Melbourne, on Saturday, December 8. Among the business agreed to was a resolution in favor of appointing missionaries to travel the country districts, with the object of augmenting the membership and acquainting parents with the resolutions passed by the conference regarding the apprentice question. It was also resolved to recommend the establishment of an intercolonial journal. It was decided that the next conference should be held in Sydney, two years from date. In the evening the delegates were entertained at a banquet at the Trades Hall.

NOTES FROM ST. LOUIS.

MR. CURRAN, formerly with S. F. Myerson, in the capacity of foreman, has entered the firm of Noble, Fox & Co. as a partner.

BUSINESS is generally good with all offices in the city, a great many being compelled to work overtime, and the outlook is very bright.

MESSRS. LITTLE & BECKER have moved from the building on Pine street, which they had occupied for many years, to 314 North Third street, and have fitted up a fine place.

THE Johann-Palmer Printing Company, since removing to their elegant quarters on Pine street, have purchased a large new cylinder press. This firm is having a good patronage.

THE *Star-Savings* has recently removed from the third to the second story of their building, and have fitted up elegant quarters thereon. This evening paper is enjoying a good patronage.

H. B. CRALE & Co. and Miller & Spalding have each increased their facilities within the past month by addition of job presses, and Woodward & Tiernan have added a large cylinder to their already extensive plant.

A COMPANY styled "Continental Publishing Corporation," with offices in New York and St. Louis, has opened the St. Louis office with J. E. Mangan & Co. They will do a general publishing business. We welcome all such.

BUSINESS with the typesetters is very good, the demand for additions to old offices being brisk, and many new offices are being started. Collections are fair, and prospects for a year of great activity in the printing trades lines are excellent.

THE Nixon-Jones Printing Company, since being damaged by fire, have removed their pressroom from the third to the first floor of their building. Immediately after the fire this firm leased the presses of the Star Printing Company and got out all their work on time.

F. F. GOTTSCHALK & Co., who became embarrassed about a year ago, have perfected the organization of a stock company, under the style of Gottschalk Printing Company, with Frederick F. Gottschalk president, and Ferdinand G. Gottschalk secretary and treasurer. They will continue the business at the old stand.

THE Star Printing Company has been purchased by Mr. James Hogan, of the James Hogan Printing Company, after a short and rather eventful career. We are much pleased to see Mr. Hogan secure this plant, as it consists of the latest and most improved machinery and a fine line of type and materials, and all being situated in one of the finest arranged and furnished buildings for a printing office in the country. Undoubtedly he will make it a model "printery."

D. A. HAILMAN, who suffered a large loss by fire a few weeks ago, has purchased new material and presses and is now doing business, in the heart of the printing territory, on North Third street. Mr. Hailman now has an office much larger than the one burned. He is a fair example of the success that will come from printing when it is conducted on a business basis, as he started into the business some five years ago, with his brother, they having a very small office. During the five years he has been enabled to purchase his brother's interest, and his plant is now very large and valuable. His brother is engaged in the business in Kansas City.

THE local Typothetæ held a banquet and ball at the Mercantile Club on the evening of January 17, and had a large attendance, there being about eighty-five plates laid. Mr. Richard Ennis responded to the toast "Franklin," making a fine speech; Colonel D. P. Dyer responded to "Missouri" in a humorous vein, which completely captured the company; Mr. T. Dimmock responded to "The Press," as only he can; Mr. R. S. Elliott to "St. Louis," in a happy manner, and Mr. Samuel Slawson treated "The Craft" in an able address. After the banquet, all who desired took part in a hop. A noticeable feature of the meeting was the large number of ladies present. Altogether, it was a very enjoyable affair, and we hope it may be repeated soon. THE PRINCESS.

ITEMS OF INTEREST.

THE new course of journalism at Cornell University is pronounced a great success.

THE birthday of Benjamin Franklin was celebrated by a banquet by the Typothetæ of St. Louis and the Typothetæ of Chicago.

MR. PULITZER has accepted the plans for the new *World* building. It will be two stories higher than the New York *Times* building.

TO REMOVE mildew from white silk, dip a piece of flannel in alcohol and water, and well rub the place; iron on the wrong side, putting a piece of damp cotton cloth between the iron and silk.

A THERMOGRAPHIC printing press, capable of turning off four hundred impressions an hour from hot type on wood, is a new French production. It is said to yield results equal to lithography.

IT requires 1,400 thicknesses of gold leaf to equal a sheet of thin paper, and 280,000 to form an inch. It is said that one establishment in Cincinnati each year beats out 21,000 gold dollars into gold leaf.

THE first newspaper printed in Germany appeared in Strasburg in 1609, and one year later a newspaper was published in Berlin. The oldest German newspaper now in existence was published in 1684. Its name is *Der Postillon*.

GEORGE W. CHILDS, of Philadelphia, possesses the original manuscript of Dickens, "Our Mutual Friend." It is the only manuscript of Dickens, with the exception of a few short stories, outside the Kensington Museum. Mr. Childs has refused \$6,000 for it.

SOME famous German oculists have given it as their opinion that writing paper ruled with blue lines is injurious to the eyesight; and therefore an order has been issued to all the school boards within the grand duchy that from January 1, 1889, every copy book shall be lined with black lines instead of blue.

IN an engraving published by Jodocus Badins in Paris, 1520, showing the interior of a printing office, there are three people at work—one man pulling the press, another man rocking the ink balls and one woman sticking type. It would, therefore, seem that woman forced her way in this "domain" at a pretty early date.

THE following is said to be a good formula for making tracing paper: Melt 6 parts lard and 1 part yellow wax, and triturate the mixture in a heated mortar, with 1 part of fine lampblack. The melted mixture must be added gradually, and the trituration thorough. While still apply, fluid with brush or otherwise, a thin coating to ordinary tracing paper, and wipe off the excess.

HUGO FRIEBEL'S brass-type factory in Leipsic-Reudnitz announces brass types in one piece with hollow foot. The advantages which this innovation offers over the wooden types, which are a constant source of complaint, will doubtless commend themselves to printers. A. Waldow, of the *Archiv für Buchdruckerkunst*, says that he has tried them and found them clear, durable, and cheap.

THOMAS H. SENIOR, for many years associated with Andrew Campbell in the manufacture of printing presses, died January 11, in Brooklyn, from heart troubles. Printers of Chicago will ever remember Mr. Senior from the generosity shown at the time of the great fire in 1871. He had openly challenged the world to a contest at the Industrial Fair to be held in New York that year. Type and mixed forms of the most difficult character were designed to test the merits of competing presses, and a committee was selected to decide which press was entitled to the award of superiority. Pending the settlement of the dispute the news of Chicago's calamity reached Senior, who at once decided to donate his two presses on exhibition to the Relief Committee, to be sold for the benefit of the sufferers. That action may be truly stated to mark the dawn of the success of the press he represented. He was a dignified gentleman, of warm-hearted impulses, and will be sincerely mourned by a large circle of friends.

REPORT OF PRINTING PRESSMEN'S UNION.—THIRD QUARTER.

LOCATION OF UNION.	No. of Members in Good Standing.	No. of Members in Arrears.	Total number of Members.	No. of Members Employed.	No. of Members Unemployed.	No. of Pressmen Non-Union.	Scale of Wages.	Members received since last report.	Condition of Trade.	SECRETARY'S ADDRESS.

COLORED INKS.

It is not possible to give any satisfactory table to cover all classes of colored work.

Upon fine work, the price of the ink used is generally double and often treble that of the ordinary black used for presswork. When two or three light-faced lines are used in a job, the extra expense of colored ink is trifling, and may be reckoned as covered in the charge for cleaning up the press and the rollers.

It is a well understood fact among printers, that fancy colored printing on the average scarcely pays the expense of doing the work. Everything about a fancy job kills time, and the real value of the work done is so disproportionate to the price of plain work, that if the printer asks but a fair price, he is regarded by his customer as endeavoring to take advantage.

Color work, when made a specialty, may be brought to a paying basis; and the ordinary run of job offices in cities would make money by transferring all that class of work to a special office.

TABLE OF PRICES FOR COLORED INKS, TO BE ADDED TO THE USUAL CHARGE FOR ONE-PRESS WORK,

on the sizes of forms designated; but the prices do not include a charge for making up the extra color forms, which charges must be added thereto, if taking up much time.

TO BE ADDED TO THE COMPLETE PRICES ON BLACK INK.	1/2 Med.		Med.		Double Med.	
	1/2 Med.	Med.	1/2 Med.	Med.	Double Med.	Double Med.
Extra for blue or green instead of black, first 100.	\$ 50	\$ 50	\$ 50	\$ 1 00	\$ 1 50	\$ 1 50
Additional 100 copies.	2	3	3	7	15	15
Extra for good red instead of black, first 100.	70	70	80	1 25	1 50	1 50
Additional 100 copies.	5	5	8	12	25	25
Extra for two colors, black and red, first 100 (2d impression added).	1 00	1 20	1 50	2 00	3 00	3 00
Additional 100 copies.	12	15	25	40	70	70
Extra for two colors, neither black.	1 50	1 75	2 00	2 50	3 50	3 50
Additional 100 copies.	15	20	35	50	75	75
Extra for two colors, one black.	2 00	2 25	2 50	3 00	4 00	4 00
Additional 100 copies.	24	30	50	80	1 20	1 20

The above figures, being extra to one-press work, will serve as a guide to the additional expense of colored ink over black, using inks of a value not exceeding \$3 per pound.

As a rule, colored work should be done on time, so that the printer who takes pains to do his work well may be paid for his labor.—From David Ramaley's Price List for Job Printers.

APPARATUS FOR CASTING ROLLERS.

A recent American invention is an apparatus for casting printers' rollers, where many rollers are required, by which the operation is facilitated and provision is made for injecting the composition into the molds from the bottom instead of pouring it in at the top, so as to thoroughly expel the air. The usual perpendicular cylinder and mold tubes are provided, but the cylinder is made to revolve on an axis, over the base plate. Perforations in the bottom of the cylinder correspond to the mold tubes in a line from the center. A gutter extends from the center of the plate to its edge, terminating in a connection with the reservoir of melted composition. The cylinder is turned till the gutter is under the perforations, above which are the molds. The composition is forced through the gutter and upward into the mold tubes till they are full. Then the cylinder is turned till an empty row of tubes is brought over the gutter, and the process is repeated. The base plate prevents the escape of the composition from the molds till it cools and hardens.—Paper World.

DENVER TYPO. UNION ARRANGEMENT COMMITTEE

FOR

I. T. U. CONVENTION IN JUNE.

O. L. SMITH, Chairman. J. D. VAUGHAN, Secretary.

WM. H. MILBURN.
C. W. RHODES. J. W. HASTIE.

Address Secretary, 1516 Arapahoe Street, Denver, Col.

BUSINESS OUTLOOK.

Auburn, N. Y.—State of trade, good; prospects, good; composition on morning papers, 25 cents; evening, 16 cents; bookwork, 18 cents; job printers, per week, \$7 to \$12. Subbing on morning papers is rather slim, and printers may well give us the go-by.

Baltimore, Md.—State of trade, fair; prospects, not very encouraging; composition on morning papers, 45 cents; evening papers, 40 cents; bookwork, 45 cents; job printers, per week, \$16.20. Bookwork has been good, but is now dull. Paper offices crowded with subs. City directory being finished, has thrown thirty men out of employment.

Bay City, Mich.—State of trade, good; prospects, fair; composition on morning papers, 30 cents; evening, 28 cents; bookwork, 28 cents; job printers, per week, \$12 to \$15. The Evening Times, a new venture in the newspaper line, is a decided success. This makes four dailies here, one morning and three evening, and all doing well.

Bismarck, Dak.—State of trade, fair; prospects, not very good; composition on morning papers, 38 cents; evening, 35 cents; bookwork, 35 cents; job printers, per week, \$18. The *Tribune* employs forty men at present—legislative work; bill room, small pica, 45 cents day, 50 cents night; house and council journal, in news room, 43 cents.

Buffalo, N. Y.—State of trade, poor; prospects, not much better; composition on morning papers, 35 cents; evening, 33 cents; bookwork, per week, \$15; job printers, per week, \$15. Bookwork is mostly done by the week; otherwise, 35 cents per 1,000. Lots of printers in town.

Butte, M. T.—State of trade, fair; prospects, fair; composition on morning papers, 50 cents; evening, 45 cents; bookwork, 50 cents; job printers, per week, \$24.

Cheyenne, Wyo.—State of trade, fair; prospects, good; composition on morning papers, 45 cents; evening, 40 cents; bookwork, 45 cents; job printers, per week, \$21.

Columbia, S. C.—State of trade, fair; prospects, not encouraging; composition on morning papers, 40 cents; evening, 40 cents; bookwork, per week, \$15; job printers, per week, \$18 to \$20. THE INLAND PRINTER cannot be beaten.

Dubuque, Iowa.—State of trade, poor; prospects, poor; composition on morning papers, 30 cents; evening papers, 26½ cents; bookwork, 30 cents; job printers, per week, \$14. The *Daily Independent*, our one-cent paper, has suspended publication.

Indianapolis, Ind.—State of trade, fair; prospects, good; composition on morning papers, 38 cents; evening, 36 cents; bookwork, 40 cents; job printers, per week, \$16.50. While state of trade is fair, there are plenty of printers here for all demands.

Kalamazoo, Mich.—State of trade, fair; prospects, good; composition on morning papers, 27 cents; evening, 25 cents; bookwork, 25 cents; job printers, per week, \$10 to \$15. Dwight H. St. John, secretary of Kalamazoo Union, No. 122, died December 25, after a week's illness, aged thirty-one years. I have just found these blanks, and that is why you have not heard from us before.

Lincoln, Neb.—State of trade, good; prospects, fair; composition on morning papers, 35 cents; evening papers, 30 cents; bookwork, 33½ cents; job printers, per week, \$15. The state legislature being in session causes considerable increase in the amount of work.

London, Ont.—State of trade, fair; prospects, uncertain; composition on morning papers, 28 cents; evening papers, 28 cents; bookwork, 28 cents; job printers, per week, \$9 to \$11. The remains of the late J. H. Robinson, who died last week, in Denver, were followed by members of No. 133. "Johnny" was well and favorably known here. The funeral took place on the third. Alex. Davidson and Jack Fletcher departed the other week for British Columbia, where they intend permanently locating. Idle men are numerous.

Los Angeles.—State of trade, fair; prospects, not very encouraging; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$20. Owing to the suspension of several papers in the southern part of the state, our city has been flooded for some time. Printers throughout the country will profit by keeping off the coast this summer.

Lynchburg, Va.—State of trade, good; prospects, good; composition on morning papers, 30 cents; evening, 30 cents; bookwork, 30 cents; job printers, per week, \$12. Joseph L. Adams, a member of No. 116, died on Sunday, January 27. This is the first loss by death since our organization, nearly three years ago.

Manchester, N. H.—State of trade, good; prospects, good; composition on morning papers, 30 cents; evening, 20 to 23 cents; bookwork, 25 cents; job printers, per week, \$10 to \$12.

Milwaukee, Wis.—State of trade, good; prospects, uncertain; composition on morning papers, 40 cents; evening, 35 cents; bookwork, 35 cents; job printers, \$14 to \$18. Printers who "learned the business last winter, and can average 7,000 a day, on brevier," are looking for jobs here.

New Haven, Conn.—State of trade, fair, not as good as last year; prospects, reasonable till June; composition on morning papers, 40 cents; evening, 35 cents; bookwork, 35 to 40 cents; job printers, per week, \$15. Business improved a little since my last report, and is now in a fair condition, and will be good while the directories last in Price, Lee & Co's.—that is till June.

Ogden, Utah.—State of trade, fair; prospects, better in spring; composition on morning papers, 50 cents; evening, 45 cents; job printers, per week, \$18, minimum. There are sufficient "subs" to fill all calls, at present; three applicants for admission to the union—one resident, two respectively from Michigan and Wyoming.

Omaha, Neb.—State of trade, good at present; prospects, fair; composition on morning paper, 40 cents; evening, 37 cents; bookwork, 37 cents; job printers, per week, \$16 to \$18. Nothing of importance has occurred since last month's report.

Portland, Ore.—State of trade, fair; prospects, good; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$21. The *Pacific Christian Advocate* has been declared unfair.

Richmond, Va.—State of trade, fair; prospects, fair; composition on morning papers, 40 cents; evening, 40 cents; bookwork, 40 cents; job printers, per week, \$16. There is some talk about a new Republican morning paper, which, if started, will help No. 90 considerably, as we have had no legislature this winter business is duller than it ought to be.

Rome, N. Y.—State of trade, rushing; prospects, good; composition on evening papers, 25 cents; bookwork, 25 cents; job printers, per week, \$8 to \$12. It is rumored that a new daily is soon to be given to our citizens, who are perfectly willing to have a little more variety in their reading matter.

Salt Lake City, Utah.—State of trade, fair; prospects, better; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$18. Movement on foot for federation of trades unions, and much interest and enthusiasm manifested will likely prove of great benefit to all concerned. Typographical union gets the presidency and chairman of executive committee. Number of members to our union now foot up forty-seven. INLAND PRINTER in great favor.

Seattle, W. T.—State of trade, good; prospects, bright; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$21. Publications: one morning, daily except Sunday; one morning, daily except Monday; one Monday morning; two evening; three Sunday; one weekly, religious; one weekly, caricaturist; one monthly; job offices, six. Rumor has it that the *Daily News*, recently suspended in Portland, Ore., will be revived in this city. A rush of printers here last month has made the supply far in excess of the demand. Number of members at date, ninety-three.

St. Johns, N. B.—State of trade, fair; prospects, good; composition on morning papers, 30 cents; evening, 25 cents; bookwork, 28 cents; job printers, per week, \$10. Everything is running along smoothly. No trouble of any kind. All hands employed.

St. Louis, Mo.—State of trade, fair; prospects, good; composition on morning papers, 43 cents; evening, 38 cents; bookwork, 45 cents; job printers, per week, \$18. Trade in job offices has been good during the past month, but the newspapers are crowded, and men are still coming into the city.

St. Paul, Minn.—State of trade, not very good; prospects, fair; composition on morning papers, 42 cents; evening, 37 cents; bookwork, 35 to 43 cents; job printers, per week, \$16. The legislature is now in session, but as nothing but local bills are being passed, the printers' work does not amount to much. As soon as both houses get in active session, business will pick up. Prospects of trouble or a raise in the large book office.

Syracuse, N. Y.—State of trade, fair; prospects, good; composition on morning papers, 35 cents; evening, 33 cents; job printers, per week, \$14. Our jobrooms have been having plenty of work for the past month, and there are fair prospects of its continuance for some time.

Topeka, Kan.—State of trade, very good; prospects, bright; composition on morning papers, 33½ cents; evening, 30 cents; bookwork, per week, \$15; job printers, \$15. While the printing business in its various departments is in a very flourishing state, the session of the legislature has drawn many tourists to the town, and there are now some idle men.

Wheeling, W. Va.—State of trade, dull; prospects, not very bright; composition on morning papers, 35 cents; evening, 30 cents; bookwork, 35 cents; job printers, per week, \$15. There has been no evening paper here since the *News Letter* went under in November, and there is not likely to be for some time to come.

Wichita, Kan.—State of trade, fair; prospects, extra good; composition on morning papers, 35 cents; evening, 30 cents; job printers, per week, \$15. Another "boom" is expected here this spring, and if it should come to pass, Wichita will be the print town of the West. Also the opening of Oklahoma interests us not a little.

BUSINESS NOTICES.

AMONG the many useful appliances connected with the printing business, the Universal Paper Scale or fractional sheet measure deserves special mention as being a complete innovation on old methods. By it any job can be quickly measured from the size stock which will cut with the least waste, without the use of a foot-rule or liability to mistake by complex figuring. The chart is geometrically perfect. The price, \$1, is reasonable, considering its value. The St. Louis Printer's Supply Company, of St. Louis, are the agents.

MARDI-GRAS—NEW ORLEANS AND MOBILE.

February 25 to March 3, the Chicago & Eastern Illinois Railroad, Evansville Route, will sell tickets to New Orleans and return at \$25, and to Mobile and return at \$23, which will be good returning until March 23.

It is the only route running coaches, and Palace Buffet Sleeping Cars, Chicago to Nashville, without change, and is eight hours quicker than any other. Daylight ride through Nashville, Decatur, Birmingham and Montgomery. Fast train leaves Chicago (Dearborn station) 3:35 p.m., daily.

For further information, address City Ticket Office, Evansville Route, 64 Clark street, or William Hill, General Passenger and Ticket Agent, Chicago & Eastern Illinois Railroad, 501 First National Bank Building, Chicago.

THE HAMILTON MANUFACTURING COMPANY.

This firm succeeds the well-known firm of Hamilton & Baker, Two Rivers, Wisconsin, manufacturers of printers' wood goods of every description. They manufacture and keep constantly in stock end-wood type, holly-wood type, wood border, wood rule, engravers' boxwood and maple, reglet, furniture, cases, stands and cabinets, roller cores and frames, mallets, planers and coins. Printers needing anything in their line would do well to write to them. The holly and end-wood type made by the Hamilton Manufacturing Company is especially commended by all who have tried it. Try it next time you find it necessary to have wood letter.

THE LEADER PAPER CUTTER.

The Morgans & Wilcox Manufacturing Company call attention to the merits of the Leader cutter in the advertising columns of this number. The application of power in this cutter is direct, and a saving of one-third of the usual amount of strength required is claimed for it. Then the back gauge, which comes close to the knife, is moved by a lever, and the fine adjustment only is made by the screws, saving again in both labor and time. Sales are reported to be rapidly increasing for the Leader, which has won its way thus far on its merits, as it has been little advertised.

This firm also report a brisk sale of the new automatic job press which they are placing on the market.

CHANDLER & PRICE.

The full-page advertisement of the above firm appears in this issue of THE INLAND PRINTER. They gave it a three-month's trial advertisement of a half page, and now, at the expiration of the trial, have contracted for a full page. They know a good thing, and want more of it.

By reference to their advertisement it will be seen they are manufacturers of printing presses, printing machinery and appliances, and are located at Cleveland, Ohio.

This firm commenced business about three years ago, but in this short time have achieved results of which they may justly feel proud. They are owners of the building in which they have their offices and factory, as well as the lot upon which it stands. The cut in their advertisement is a faithful representation of the building.

The most important of their manufactures are, of course, their old-style Gordon presses. These presses, as made by Messrs.

Chandler & Price, have many special features which must commend them highly to the craft. Among the special features mention may be made of the throw-off, which is claimed to be the most positive and practical yet introduced; steel shaft and steel side-arms, forged from solid bars, without seam or weld; hardened tool-steel cam-rollers; depressible

grippers; best materials to be procured, and the most carefully finished machines throughout. Besides these special features, Messrs. Chandler & Price have greatly improved their machines over the original old-style Gordons, by enlarging and strengthening the parts and so arranging the disk and roller carriers as to largely improve and increase the distribution, and they assert their machines are unequalled in this respect by any press now manufactured. Their machines are made entirely under the sole, personal supervision of Messrs. Chandler & Price, from the very best materials the markets provide, with the latest and most

approved machinery and tools, numbers of the machines used being of their own special construction, for the sole purpose of securing the best possible results in their products.

A valuable attachment for the presses manufactured by this firm, and almost a necessary part of the machines, is their Buckeye fountain, which was invented by them and patented June 5, 1888. It is a short roller fountain which feeds the ink uniformly on both large and small jobs, and its small size makes it practicable to use expensive inks, as it can be done without waste, the bottom being so constructed as to permit *all* the ink to run down to the roller. It can be changed from one press to another without removing the attachments, and the roller is easily and readily removed for cleaning. The price of the Buckeye is \$10. They also manufacture a full-length fountain designed for classes of work requiring a greater supply of ink than can be obtained from the Buckeye. It is known as the Chandler & Price fountain, and sells for \$20.

Besides presses and fountains, Messrs. Chandler & Price manufacture mitering machines, proof presses, steam and overhead fixtures, lamp brackets, shooting sticks, galley rests, job and proof roller cores and frames, composing sticks, etc.

The manufactures of Messrs. Chandler & Price are carried by all first-class dealers in printers' materials, and printers cannot go amiss by designating them when making purchases.

A FEARFUL FALL OF THE UNION CLUB'S ELEVATOR.

Shortly after 3 o'clock yesterday afternoon the elevator of the Union Club took a downward plunge from the top story of the building to the basement floor, a distance of seventy feet. There were three persons in the elevator at the time of its fall, but strange to relate they all escaped unhurt, not one receiving even the slightest bruise or jar. Their escape from instant death was undoubtedly due to the fact that at the bottom of the shaft was one of Ellithorpe's air cushions, upon which the heavy elevator landed as lightly as a snowdrop touches the earth. The gentlemen who occupied the elevator when it fell were W. C. Van Osdell, of Chicago, and Walter Birch and H. C. Biggs, of the firm of William H. Birch & Co., who are the sole agents and builders of the elevators in California. Among those who witnessed the plunge of the elevator were many prominent architects and builders, and members of the Union Club, who were there in response to an invitation extended by the agents of the Ellithorpe air cushion and air brake, to attend a test of that invention. The 3,500-pound cage was hoisted to the top story of the Union Club building, where Foreman Green, of William H. Birch & Co's establishment, detached the four wire cables, each capable of sustaining a weight of five tons, and fastened in their place a single rope. Then eggs were placed on the floor of the elevator, together with several glasses of water. The gentlemen who had volunteered to make the dangerous descent into space shook hands with their assembled friends, said their last fond adieux, and stepped into the elevator. Despite the fact that all present knew that the drop was to be a test, the cold perspiration gathered in large beads on the foreheads of the spectators as they saw Mr. Green test his keen blade. The knife touched the rope, and a shudder passed through the crowd, while some turned away so that they could not see the fall. Zip! The knife passed through the rope, and the spectators uttered a gasp of horror as the huge cage flashed with tremendous velocity down the shaft. Around the door of the elevator at the bottom of the well the crowd soon gathered, half expecting to see the mangled remains of the three daring men brought forth, but when the door opened, and the occupants of the elevator stepped out of the car with smiles upon their faces, and not a hair displaced by the descent, a sigh of relief, followed by a cheer, went up from the group of spectators, and the hands of the voyagers were shaken with a will. The elevator had landed on the air cushion with a jar so slight that not an egg was cracked, and of the water in the glasses not a drop was spilled. The agents of the air cushion, whose elevator works are situated at 119 Beale street,

were heartily congratulated on the success of the test to which their air cushion had been put. The Ellithorpe air cushion is a Chicago invention, which has received many severe tests in eastern cities, and is now in use in many large buildings. It has already been the means of saving several lives in cases where elevators have fallen from great heights, while loaded with people. In every case where an elevator has fallen on one of the air cushions the occupants have not failed to emerge from the car none the worse for their tumble, and sometimes hardly able to realize that they had fallen. It is impossible to realize how many lives have been lost in elevators that did not possess the air cushion. William H. Birch & Co. intend to make an effort to have them introduced into every elevator in this city. There can be no doubt that in the introduction of these air cushions into the elevator shafts of high buildings in this city, lies the only sure road that leads to absolute security against such fearful accidents as those, the recurrence of which startled San Francisco a few months ago. Had one of these air cushions been at the bottom of the shaft of the elevators which fell in this city a short time since, the passengers who took the fatal trip would have stepped out from the cages in the same condition as those who fell in the Union Club's cage yesterday. It will be short-sighted policy if house owners fail to have the air cushion put in their shafts immediately.—*San Francisco Chronicle, January 25, 1889.*

PRESSMAN WANTED—First-class in every particular. Address, stating terms, experience, last place employed, etc. M. GEO. CONLEY, General Delivery, Dayton, Ohio.

PRINTING OFFICE FOR SALE—The Brewer job printing office, 410 Locust street (opposite Savery House), Des Moines, Iowa. This office has always done a good business and paid a good profit. Will be sold to the right party at a bargain, and on reasonable terms. Office invoices at \$2,300. Invoice furnished on application. Call on, or address DEXTER MANUFACTURING CO., Des Moines, Iowa.

SPECIAL BARGAIN—For \$600 I will sell a Taylor printing press, 3 revolution, single small cylinder, 2 rollers, bed 37½ by 56¼ inches; just repaired by makers. Address C. H. BROWN, 743 Broadway, New York.

WANTED—An Allen printing press; size of chase 7½ by 14 preferred. SPRINGFIELD ENVELOPE CO., Springfield, Mass.

WANTED—The Inland Printer Co. will pay 25 cents apiece for numbers 2, 4, 5, 10 and 12 of Volume I, if in good condition, to anyone sending them to this office, or will credit the amount on subscription, if preferred.

BUSINESS OPPORTUNITY—Wanted, A No. 1 printer of experience, with \$3,000, to take an interest in and manage a first-class book, newspaper and job office, the best here. Address P. O. Drawer 9, Tacoma, W. T.

EVERY PRINTER should have a copy of "DIAGRAMS OF IMPOSITION," and "THE PRINTER'S READY RECKONER." Price, 50 cents each. To be obtained of H. G. Bishop, 96 Clinton avenue, Albany, N. Y., or through Farmer, Little & Co., New York and Chicago. These are the handiest and most useful works ever published for printers. Indorsed by everyone who has seen them. Agents wanted in every town.

EXCHANGE—I will exchange my lot, worth \$75, located in Claremont, Virginia, for job type, new or second-hand, if in good condition. Address, for further particulars, M. H. NOVOTNY, Argyle, Minnesota.

FOR SALE—A good printing office in St. Paul, Minnesota, in good running order. As the parties are going out of the printing business entirely, good will thrown in on good terms. Will inventory about \$7,000 or \$8,000. Apply to MARTIN DREIS CO., St. Paul, Minnesota.

JOB OFFICE, or any part, for sale cheap; 8 by 12 Peerless press; 22½-inch Paragon cutter; ½-horse power engine; 6-horse power boiler; about 30 fonts latest style job type, without cases; inks, furniture, etc. H. WALBACH, 208 West Madison street, Peoria, Illinois.

INKOLEUM Warranted to be the Best INK REDUCER and Quickest DRYER in the World.

Directions for Use:

Remove all skin from ink in can, then pour in about a spoonful of Inkoleum, and mix thoroughly to consistency desired. Thin for cold room; thicken for warm room or sticky rollers. Any press can be started up without washing the rollers, upon which it can be worked clear, free and easy on any kind of paper the coldest morning in winter, regardless of fire, or the hottest day in summer, by simply putting a few drops of Inkoleum on the rollers with the fingers.

Printing or Lithographic Inks of any color or stiffness can be reduced quickly without in the least impairing the color. For fine tint work Inkoleum works miracles, as it makes the ink cover charmingly, and dries quickly. No spreading of jobs necessary, and urgent work of any kind can be delivered immediately without off-setting. On rollers it never dries, but preserves their suction, life and elasticity. Inkoleum is a perfect "cure-all," and saves double its cost every day in the year, and makes pressmen do better work. A trial will convince the most skeptical. Testimonials from all parts of the world to prove these assertions. Price, half-pound bottles, 50 cents. For sale by all typefounders, wholesale paper and printers' supply houses; or, it will be sent anywhere in the United States, express paid, for 75 cents.

Put up only by ELECTRINE MANUF'G CO., St. Paul, Minn., U. S. A.

MANUFACTURERS OF

BLACK AND COLORED

**PRINTING
INKS**

117 Fulton Street, New York.

LITHOGRAPHIC AND PLATE INKS.

These Inks were awarded the First Order of Merit and Gold and Silver Medals at the Melbourne, Adelaide and Christ Church, Australian and New Zealand Expositions, over all competitors, both American and Foreign.

WHY OUR INKS ARE THE BEST IN THE WORLD:

Our Colors are **Brilliant and Permanent**. Our Blacks do not turn brown or yellow with age.

Our Inks are made from **our own** recipes, based on careful experiment and are **always uniform**.

They will not decompose in any climate, and can be used to the bottom of the package. This renders them economical to the consumer.

SPECIMEN BOOKS FURNISHED TO THE TRADE ON APPLICATION.

Special Inks Prepared to match any shade and for any purpose. In ordering through Commission Houses or other sources, be sure to specify **WADE'S INKS**.

PATENT IMPROVED TWO-REVOLUTION PRESS

WITH patented mechanism for controlling the vertical movement of the impression cylinder. It is extremely powerful, accurately fitted, free from friction and evenly balanced. A patented automatic device is also provided which prevents lost motion, and governs the degree of impression. Its patent reversing mechanism consisting of a cross-belt and spring shifter, is operated by the foot, which places the Press under the immediate control of the feeder. These advantages, with its Sheet Delivery, Hinged Distributer, Caps, Positive Slide Motion, Noiseless Grippers, etc., complete a printing machine that in every respect is equal to the most exacting demands of the times.

THE MANAGEMENT OF A PRINTING OFFICE.

AN ADDRESS BY A. C. CAMERON,

DELIVERED BEFORE THE ILLINOIS STATE PRESS ASSOCIATION, AT
DANVILLE, WEDNESDAY, FEBRUARY 13, 1889.

NAPOLEON'S definition of genius—*success*—like most of his aphorisms, possesses more truth than poetry; for, no matter how much we may apologize, extenuate, defend or explain, the world is more interested in unmerited triumph than in heroic failure; in successful results than in fruitless endeavors, and this applies as equally to the business as to the social and political worlds. Investigation proves, however, that the success to which we all aspire, contrary to the opinions entertained by many, is, as a rule, more the result of unwearied industry, the exercise of common sense, and the observance of recognized business principles than the possession of special advantages or brilliancy of intellect—of systematic endeavor than pyrotechnic display. It is true that despite all precautions, "the best laid plans of mice and men gang aft a-glee," and that misfortune sometimes overtakes the efforts of the most deserving, but it is equally true that in a large majority of instances the tombstones in the graveyard of "Failure" are evidences of criminal carelessness and utter disregard of necessary business precautions rather than monuments of deserving, unavailing effort. While a life insurance policy in and of itself is no assurance of longevity, tabulated estimates, founded on practical experience, furnish a rational basis upon which to *average* the lives of the insured; so, while a non-failing business system cannot be guaranteed, there are certain fundamental principles, which if observed where no insuperable difficulties exist, justify us in expecting success to crown our efforts in the financial and mechanical management of a printing office.

The men or firms which expect to succeed in this age of excessive competition, must realize that they live in an age of progress; that they must keep pace with the demands of the times, and that in no branch of business has this progress been more clearly developed than in the printing business. This statement is verified by a

cursory glance at the improvements made therein in a few decades—inventions and improvements which have superseded the old token Washington and Columbian, with the perfecting press, moving like a thing of life, capable of turning out the almost incredible number of 96,000 sheets per hour; which, by the aid of improved machinery, material and processes, produce designs which challenge the efforts of the photographer, and by which a forest tree may be cut down, sent to the paper manufacturer, ground into pulp, made into paper, sent to the printer, and on which the following morning may be read the latest events of interests occurring in every portion of the habitable globe. The effects of this material progress are distinctly observable, having permeated all ranks of society and all sections of the country, to a greater or lesser degree; elevated public taste, diffused knowledge, relegated the antediluvian to obscurity, and placed the advantages secured within the reach of those to whom a short time ago they were unattainable.

There is no longer excuse for slovenly work, or reason why the country merchant should not be able to get his printing done as satisfactorily at home as in the larger cities; no reason why a country printing office should not be as well equipped, as well conducted, and turn out as acceptable work as a city printing office. That such can be the case I may mention the fact that many of the best specimens of typography I receive are the productions of so-called country printers. In fact, there are mushroom towns in Kansas and Nebraska, and even in the British northwestern territories, managed by progressive workmen, which turn out jobs that many a city office would be proud to father. In this, as in other examples which could be cited, it is not as much the craving after the impracticable as the proper appreciation and use of what is possessed that shows the inherent qualities of the man or develops his resources. Contrast, for example, the complaint of the chronic croaker, who always makes a mountain out of a molehill, or the shearer who never gets a good hook, with the man who accepts the situation; who utilizes to the best advantage the material at his command; determines half a loaf is better

than no bread, and that necessity is the mother of invention, and I will show you the difference between success and failure. Indeed, a country printing office is one of the best training schools to show the material of which a workman is composed. Let us take a common example: A display line, set in wooden type, lacks a certain letter. The "croaker" curses fate and folds his hands, deploring his lack of opportunities; the other takes an impression of the letter desired, pastes it on the bottom of one of a similar width, and with the aid of a sharp blade of a pocket-knife, duplicates, in a short time, the character required. A tint-block is indispensable: the "chronic" growls about his want of facilities; the other, equal to the emergency, procures a piece of patent leather, glues it to an old electrotpe block, or in its absence, manufactures one, and secures what is needed; if an outlined tint is preferred, a piece of lace pressed into the leather with a hot iron obtains the object in view. A new roller is required. The old foggy, never-learn-by-experience printer putters over the old glue and molasses compound, and wastes more time in turning out an inferior article than it is worth; while the wide-awake workman secures, without fuss or delay and at less expense, a composition roller made to order, specially adapted to climate and the season of the year when used. Another press is demanded; one picks up a discarded rattle-bang, foolishly imagining he can save a few dollars by so doing; the other selects a modern improved, trusting to find his recompense in increased patronage, and the means at his command, to retain it—and his judgment is generally correct, because in the pressroom, as in other departments, the best will be found the cheapest in the long run. I might continue, but the examples cited are sufficient to illustrate the idea I desire to convey.

The country compositor, educated under proper auspices, is, in truth, the hope of the trade, so far as the production of a good all-round printer is concerned. The mammoth establishments in many of our large cities which adopt the department system or which confine themselves to a certain class of work have their drawbacks as well as their advantages, because the learner and journeyman employed therein alike move from day to day in the same old rut; and even in the smaller offices the *specialty* system is gradually superseding the "general run of work," hence the necessity for the proper training of the country printer. The specialist is well enough in his sphere, but change the character of his work or base of operations, and he feels and acts like a fish out of water. Instead of being able to perfect himself in every detail, as formerly, the subdivision and creation of special departments limits his practical knowledge and too frequently destroys his opportunities for future advancement. He may be able to produce a railroad card in colors and yet unable to impose a twelve-page pamphlet; to cast up and set a rate or tariff sheet, and powerless to produce a creditable letter or bill head from manuscript; to compose a business card and unable to justify and lock up an intricate blank, and so on to the end of the chapter. I do not claim, however,

that the most careful, varied or persistent instruction, under the most skillful master, will develop equal ability in all learners, because in the printing, as in other trades, will be found those who have mistaken their calling; neither do I claim that equal tastes or adaptation for all classes of work will be equally displayed, but I do claim that under the system pursued in many establishments a great injustice has been done, and is being done the printers of the future by the practices referred to, and that it is to the country printing office we must look to furnish the corrective.

So much has been said and written, and so much can be profitably said and written on the subject to which I have been assigned, "The Management of a Printing Office," that I have preferred to present a few plain, practical, unpretentious, common sense suggestions, gleaned from and based on experience rather than strive after anything original or specially attractive, and briefly refer to some of the rules and regulations which should be observed, the enforcement of which, in my humble judgment, would be conducive to success; and as you have been saturated with ideas regarding the management, business, editorial and financial, of the newspaper, my remarks will be directed in the main to another and equally important feature—the management of the job department. Among them I would suggest:

*Whenever practicable, furnish your office with type bodies cast on the point or self-justifying, interchangeable system, even if you have to make a temporary sacrifice to do so. The eventual recompense will amply repay both yourself and customers; and I have yet to meet the first printer making the change who would go back to the old order of things under any circumstances. The delay, annoyances and time wasted in paper and cardboard justification alone, which have so frequently rendered perfect register impossible, will be avoided, while your facilities for turning out work will be increased at least *one-fourth*. Have your rules and leads cut to regular lengths, placed in proper cases, and insist upon their being kept so. Some compositors seem to have a penchant for chopping, no matter what the character of the job given. Such men sometimes waste more material than their services are worth, and the sooner they receive their congé the better.*

Exercise judgment in the selection of type faces. There are certain standard serviceable series which never grow old, which in the hand of the intelligent, qualified compositor are rendered becoming in all classes of work, and which are indispensable in every office. Gothics, antiques, clarendons, celtics, etc., are certainly more appropriate even in so-called fancy jobs, and can be used to more profit and advantage therein than half the fantastic, grotesquely absurd, nondescript productions, yecept "art faces," the use of which offends good taste and depletes the pocket. Better half a dozen available series, and fonts in series are always preferable, than a score which simply lumber up the office. But it does not follow that the country printer must play second fiddle to the city graduate, even in art printing. If the

use of the curving or mitering machine or wrinkler is impracticable in the average country job office, their choicest productions are now available, and can be kept in stock. The wind has been tempered to the shorn lamb; and to know when and where and how to use them to advantage depends as much on the taste of the artist as his ability to produce them.

Secure the best presses the market affords, because good presswork is essential to good work, newspaper or job; and because the best is invariably the most economic in the end—and see that you get men who know how to take care of them. Get rid of your wheezing, whooping-cough machinery—the sooner the better. Good presswork can make an inferior job a passable one, while the production of the most artistic compositor can be and is too often ruined by defective machinery or incompetent workmen. A pure stream does not flow from an impure fountain, and good work cannot rationally be expected from apologies for machines which would appear to better advantage in the junk shop than in the pressroom. Tastes and preferences will vary; nor yet is it my purpose to advance the interests of one manufacturer at the cost of another, but when presses capable of turning out first-class work can be obtained at present prices and terms, no excuse is afforded for the retention of worthless machinery.
