**BURTON'S "PEERLESS" PERFORATOR**

MANUFACTURED BY

**Avery & Burton,**

42, 44, 46 & 48 S. Clinton St.,

Chicago, Ill.

MESSRS. AVERY & BURTON, Chicago, Ill.:

Gentlemen,—We have had one of your "Peerless" Perforators in constant use for five years, during which time it has been operated by a girl. The machine has not only given perfect satisfaction, but has become indispensable to us.

We could not replace it with any other perforator in the market. The wear and tear from use is remarkably slight, and in the five years we have used it the expense for repairs has been almost nothing when we consider the amount of work done.

Yours truly, J. S. McDONALD & CO.

THE EASIEST RUNNING AND MOST PERFECT PERFORATOR ON THE MARKET TODAY.

Send for Descriptive Catalogue.

The

# COX • DUPLEX • PERFECTING • PRESS

## AND FOLDING MACHINE.

Delivers 3,500 to 4,500 perfect papers, folded, per hour, either four, six or eight pages, from flat beds and ordinary type forms.

MR. T. C. O'HARA, the well-known expert machinist of the *Boston Herald*, under date of September 10, 1890, writes as follows to MR. H. I. DILLENBACK, manager of the Rutland (Vt.) *Herald*, the purchaser of the first of the above machines:

BOSTON, MASS., September 10, 1890.

At your request I attended the shop test of the new COX DUPLEX WEB PERFECTING PRESS, built for the Rutland *Herald*, and carefully inspected its operation and made a thorough examination of its construction. The press stood partly over a pit and partly on the floor, upon planks, and was not fastened down in any way; and it was run by a four-inch belt. At the first trial of speed, it ran at the rate of 3,000 complete papers per hour; at the second, 3,600; at the third, 4,560. Its operation during these trials caused no perceptible jar of the machine nor of the floor of the building, nor did it give any indication of strain upon the machine, and it ran with perfect steadiness and smoothness. The principle of the machine, while novel, is entirely practical, and overcomes entirely the obstacles to speed and smooth running always heretofore encountered in the construction of flat-bed printing presses, and in my opinion the invention has solved the great problem in the construction of machines for the use of newspapers of moderate circulation, desiring to print from type at high speed, in a manner destined to revolutionize this branch of printing press manufacture.

Under date of December 9, 1890, Mr. Dillenback, Manager of the *Herald* writes:

The press is running nicely. I believe it to be the press, without a rival, for newspapers desiring to secure all the advantages of a fast perfecting press without the delays, expense and other disadvantages of stereotyping; and I do not hesitate to recommend it unqualifiedly. The press runs smoothly and economically, is handled with ease by a young man who never before saw a perfecting press, is thoroughly well built, and does better work than the vast majority of presses. I know of no "outs" about it, and feel justified in saying that no one can say aught but in praise of it.

One of these presses, sold to the Toledo (Ohio) Daily Commercial Company, has been erected in their office, where it is now printing their seven-column eight-page paper daily. This press will print and fold, with equal speed, either a four, six or eight page paper, without any adjustment.

NEW YORK CITY.

# THE HUBER TWO-REVOLUTION PRESS

**DOUBLE ROLLING + SINGLE END + SIX TRACKS + AIR SPRINGS  
FRONT OR BACK DELIVERY.**

The Impression is taken over a six-track bed, which is supported every ten or twelve inches across the press. We guarantee the impression sharp and rigid, and the bed and cylinder are warranted not to spring or give way in the least degree.

The Impression can be tripped at the moment grippers close or before.

The Register is absolutely perfect at all speeds of the press, the bed and cylinder being locked in full gear twelve inches before the contact of bearers takes place, and remaining in gear for several inches after the head line has passed.

The Distribution is uniform from head to tail of sheet. This is accomplished by charging the form with fresh ink both ways from one fountain.

The Air Springs are applied vertically; the piston-head does not come out of the cylinder; no packing ever required; the pressure can be regulated while press is in motion at all speeds.

The simplicity, accuracy and durability of the bed movement is unequaled by any other machine. The double rack teeth are made of steel, with the best rolling curve known to mechanics. From two to three teeth always in contact, thus obviating lost motion.

The sheet is delivered in front, clean side to the fly, without the printed side coming in contact with anything. Fly motion positive, no strap, no slamming. The motion is the same in delivering sheet and returning for next sheet.

The Fly can be disconnected at a moment's notice.

This press is designed for the finest quality of cut and color work; can be used to charge the form both ways with fresh ink, or as a single end press, four or two rollers.

No complicated movements to get out of order.

**SIZES:**

No. 1.	4	Rollers, covering entire form.	Bed, 44	x 60	inches inside bearers.	Matter, 40½	x 56	inches.
No. 1.	3	" " " "	" 48	x 60	" " " "	" 44½	x 56	" "

"The Wise Men of the East"

... ARE USING ...

## ✦ KELGUM TAPE ✦

**SPECIAL ATTENTION** of all users of printing press tapes, whether for printing presses, folding machines, perfecting machines, or other purposes, is called to the new article which we present herewith, known as Kelgum Patent Tape. The features which particularly commend themselves to users are, that it is absolutely impervious to the action of water, steam, oils, varnishes, acids, or fumes of acids, being thoroughly *waterproof*. It will, therefore, neither expand nor contract under different conditions, and the value of a tape that will not stretch will be readily appreciated by all users of the article.

In addition to the above, tapes treated with Kelgum will not harden nor crack, and their *tensile strength is doubled*. They will not mildew nor rot, and are not affected with extremes of intense cold or heat.

It has been in use for two years in some of the largest offices, and has demonstrated that it will outwear anything of its kind ever used, besides saving all labor for frequent adjusting and taking up of stretched tapes. In folding machines of all classes, the most frequent cause of difficulty has been the loss of tension from the stretching of the operating tapes. Kelgum tape completely overcomes this trouble.

The first cost is a trifle more than the plain tape, but not to be considered in the convenience and durability of the article.

Owing to its flexibility it is especially adapted to the running of light and rapid running machinery of all kinds.

We ask you to give it a practical trial. Below are the prices:

¼ inch wide, . . . . .	per roll, \$ .75
½ " " . . . . .	" " 1.00
¾ " " . . . . .	" " 1.25
1 " " . . . . .	" " 1.50
1 ½ " " . . . . .	" " 1.75

#### A WORD TO COMPOSITORS.

*To the Editor:* BROOKLYN, N. Y., June 19, 1891.

The subject of boards of arbitration and conciliation *versus* the old barbaric strikes is coming to the front as a trade question. Let compositors read up and discuss the question on principle, not as a mere "show off," which too many discussions resemble, and arrive at a satisfactory conclusion from the light of past history as affecting strikes. Nine times out of ten, are they not a gigantic mistake, springing out of the flippant conceit of some noisy rattle brains who know more of self-assertiveness than they do of wholesome industrial questions? NOEL.

#### FROM LYNCHBURG.

*To the Editor:* LYNCHBURG, Va., June 18, 1891.

The printing business in the "Hill City" is fair at present, the book and job offices having plenty to do, and the same can be said of the newspapers.

The Virginian Publishing Company have put in a small job outfit and are ready to offer inducements by cutting prices and not paying the union scale.

The Advance Company appear to have a great deal of trouble about a pressman, they having had five or six recently. Three of the number were union men, and on finding the condition of things, their stay was short. The others were either white or colored non-union men who could not do the work. They now have under consideration one of each of the latter, with the *white* one on the ground and telegraphic communication with the gentleman of color, with chances in favor of the latter. We hope they may soon see the error of their way and bring their office back into the union and get rid of all such difficulties.

There is a movement on foot in this city to organize a federation of labor, and we sincerely hope it may prove successful.

WILLIAM.

P. S.—Since writing the above I learn that the son of Ham has secured the exalted (?) position.—W.

#### COMPETENT PROOFREADERS.

*To the Editor:* NEW YORK, June 17, 1891.

As there have been of late more than usual mistakes by proofreaders in the New York papers, I assume that possibly the warm weather accounts for some of it. I do not allude to mere literal errors, which often occur in spite of a reader, and *after* his correction, too. I refer to errors showing the want of ability to reconstruct a sentence that needs elucidating. Your mere compositor-reader is not, as a rule, equal to this task: how could he be? He has to refer the matter in such case to an assistant editor; or, spend time in hunting up a similar or parallel sentence, an effort in which he fails. I once had a hard job of it to convince a proofreader that a bass singer and a base villain were not necessarily related beyond a similarity of sound in qualifying them. I know a female proofreader now, who is doubtful as to whether the word "equipped" should have one or two p's in it. I know another who cares not to distinguish between the adjectives "causal" and "casual." This same reader cares less whether a sentence is in its middle divided by a period or a comma. I have met dozens of them who had not a

single intelligent idea on the subject of dividing words — no principles to guide them; simply what they had "picked up" as compositors, and whose employers knew no better. And to such talent the public are indebted frequently to the amusing errors which sometimes see the light in our daily papers. LEON.

#### A METHOD OF TYPE MEASUREMENT.

*To the Editor:* SAN FRANCISCO, Cal., June 17, 1891.

At last November meeting of the San Francisco Typographical Union, the executive committee was instructed to devise a method for measuring type below the standard. The committee has completed its labors in this connection, for the perfection of which many of the foremen of the leading printing offices were called in for consultation and advice. It is claimed that the following scheme will do even and exact justice to the employing printers and their workmen: "Divide the amount of the string by the number of ems contained in the alphabet of the letter set; multiply the product by the difference between the number of ems in the alphabet and the standard, and add the result to the string. The International Typographical Union standard of type is as follows: pica to bourgeois, inclusive, thirteen ems; brevier and minion, fourteen; nonpareil, fifteen; agate, sixteen; pearl, seventeen; and diamond, eighteen. The law says that 'in considering whether a font of type is up to the standard, the letters to be measured are the lower case letters from *a* to *z*, inclusive.'" Although the system may seem complex, it is claimed that any compositor who is capable of solving a problem in simple division and multiplication can with little study, easily master the problem and will be surprised at its simplicity and thoroughness. P. E.

#### FROM SOUTH BERWICK, MAINE.

*To the Editor:* SOUTH BERWICK, Me., June 16, 1891.

I find myself today in this, one of the most delightful towns in a state noted for its picturesque scenery. This is the home of Miss Sarah Orne Jewett, the well-known writer and author. Miss Jewett's residence is a fine old mansion, located on the main street of the village, which has been the home of her family for many generations. The house is surrounded and shaded by fine old trees, which unite with abundant shrubbery and flowering plants to give the place an air of comfort and quietude. The visitor to Miss Jewett finds evidences of exquisite taste in the adornment of her home. Simple in her tastes, yet she possesses the gift of imparting to everything the true artistic touch, which is the secret of success in home adornment.

Miss Jewett takes an active interest in the affairs of her native town, and is always ready to lend aid in any movement looking toward its improvement. She believes in encouraging newspaper enterprise, and is a frequent contributor to Editor Twombly's wide-awake paper, the *South Berwick Life*. Today she received from London publishers copies of the English editions of her New England stories, "The Strangers and Wayfarers" and "The Normans." Many of her books have been translated into French. James Russell Lowell is reported to have said recently that Miss Jewett has no equal as a short story writer, which coming from so eminent an authority is no slight praise. G.

#### IMPRESSION SCREWS.

*To the Editor:* BOSTON, Mass., June 1, 1891.

In the editorial columns of a printing trade publication I recently saw a paragraph relating to the use of impression screws on job presses, to which, with all deference to the writer, I must take exceptions. The idea conveyed was that when the screws are once adjusted evenly they ought not to be touched; that the impression should be regulated entirely with the tympan. To my untutored mind this doctrine appears unsound. It is undeniable that some pressmen use the impression wrench more than necessary, but there are frequent occasions where a great deal of time can be saved and much better results accomplished by changing the screws. For instance, if one end of a form is solid and

the opposite end made up of light lines, an even impression can be obtained very quickly by slightly lowering the platen at the light end, whereas the process of overlaying would be much more laborious and increase the chances of slurring. Again, the structure of most platen presses is such that when a heavy form follows a light one, and more tympan sheets become necessary, the relative position of the platen surface and the bed is so changed that more impression will appear on the bottom than on the top. Your average pressman would overcome the inequality by a judicious application of impression wrench, pet theories to the contrary notwithstanding. Theories not founded on practicability are mischievous.

G.

#### CHICAGO TYPOTHETÆ BENEFIT ASSOCIATION.

To the Editor:

CHICAGO, June 19, 1891.

At the third annual meeting of the above association a substantial lunch was provided by the employing printers, and the usual difficulties of securing a quorum avoided. The employers having given their consent, the employes proceeded to elect officers from their own ranks. Thomas D. Parker, Harry Chatterton and Samuel G. Prince, all well-known non-union men, were elected respectively to the offices of president, vice-president and secretary. The secretary's report showed that about seventy members had been expelled for non-payment of dues, twenty had left town, thirty-eight had been culled by the typographical union, and two had died.

The association still has thirty-five members, and the new president exhorted them to earnest efforts in the future. He told them to forget that they in the past had had the measles, the chicken-pox and the mumps, and promised to solicit a large sum of money from typefounders, inkmen and others, which would form a convenient fund to borrow from in an emergency.

The dues of the association are only 50 cents per month, and when a member is sick for two weeks he is entitled to \$6 per week thereafter, for several weeks.

JACK.

#### TRADE SCHOOLS FOR APPRENTICES.

To the Editor:

NEW YORK, June 1, 1891.

I eagerly await each issue of your valuable journal, and closely scrutinize the contents of every number, and find that the articles I most enjoy are those written for the advancement of printers' apprentices, who read *THE INLAND PRINTER* in order to gain a better knowledge of the "art preservative." None, to my mind, are more interesting or instructive than those relating to the establishment of printers' trade schools in Chicago and Philadelphia, where apprentices like myself can spend their evenings after the day's work is over, and develop a better and deeper education in the printing trade, thereby attaining a higher standard of excellence than they could obtain in the average office. I am glad to see that the establishment of these trade schools is being agitated in Chicago and Philadelphia, and trust that the work begun will be carried to a successful termination. Undoubtedly the procuring of competent instructors who possess the necessary knowledge and the ability to impart it to others may, perhaps, be a little difficult, but there is no question as to the eagerness with which apprentices would seize the opportunity of acquiring instruction if the chance were only given them. It is necessary, also, to see that the schools have proper financial support and encouragement, and with this assured their power for good is beyond question.

Now that the two cities mentioned above are in a fair way to have schools of this sort, the object of this letter is to ask why the city of New York, the largest city in the United States, and one containing such an army of printers and apprentices, cannot make a move in the same direction, and give its future citizens, now struggling to learn the printing trade, like opportunities. We have in our city printing houses whose work has given them a reputation not only all over the United States, but throughout the world. We have a De Vinne, a Harper, and numerous others, to whom it would be but a small matter to lend their aid in the establishment of a trade school — one that would benefit them in enabling young

men to become proficient in the art, and where they could look for workmen whose skill and experience would unquestionably qualify them to fill the most responsible positions in their establishments. Already in our city there exist institutions where almost every trade except that of printing is taught in the evening with great success. The Cooper Union, the evening high schools and the New York trade schools are all well in their way, but why should the printing fraternity, whose members are supposed to be the most enlightened and advanced in civilization, and from whose ranks the country has received so many brilliant statesmen and scholars, be behind in starting places of learning for the youth who desire a knowledge in the printers' art?

I claim that it is time to make a move in this direction in New York City, and hope that though printers are behind many other trades in inaugurating this work, that they will take hold of the matter at once, and that success will crown their efforts. It is my most earnest wish that these schools will soon be doing the good work that I am sure they can accomplish if only started right and then carefully conducted. Thousands in New York will bless the man who will start one of these schools here.

S. ROSENTHAL.

#### FROM ST. JOSEPH, MO.

To the Editor:

ST. JOSEPH, MO., June 18, 1891.

Business has been very dull here this spring and indications for the summer are not encouraging. However, the prospects for good crops this year are flattering, and merchants anticipate a rushing fall and winter trade, and of course when the merchant is doing well the printer shares in the boom.

The Combe Printing Company has purchased the lithographic plant of the defunct Inter-State Publishing Company, Kansas City, and William Kellar of the Steam Printing Company has charge of it.

The *Ballot*, which suspended publication some months ago, has not yet been sold. The material might be a bargain for somebody.

The union's representative to the International this year, Mr. W. A. Graham, is a good man for both job and newspaper men. He is "ad" man on the *Daily News*, and the best in town.

Ferd. Schlagel, for twenty years foreman of the *Herald*, has retired from the business. John Reed, assistant foreman, takes Schlagel's place.

Tony Headley, son of G. W. Headley of the *Herald*, died in Montana last week of consumption. Tony was a steady young fellow and a good printer.

W. J. Cadwell has moved his printing office and bindery to St. Joseph. It is a small outfit.

Shirley & Kessler, the commercial job printers, have been running for a year now and are making quite a reputation for good work, and doing considerable business. They have a neat, clean office on the ground floor, well lighted, and situated in the heart of the city. They run their presses by electricity. They will put in another press in the fall.

S. M. W.

#### HIS VIEW OF IT.

To the Editor:

RUSH HILL, MO., May 25, 1891.

In your April number I notice an article headed "Only a Tramp Printer," written under the name of Duncan F. Young, in which, it appears, he is in favor of forcing craftsmen to stop traveling; or, in other words, to live on mountain scenery and south breeze. Too much traveling is undoubtedly bad for the "tramp"; yet how many of those people who eulogize that same "tramp" would give him a night's work? Many an afternoon have I stood leaning against the head-letter case waiting for a rule, when I felt a goneness under my belt that would not down. How easy for one man, who is either a preferred sub or case-holder, to say to another, and not so fortunate a one, "why don't you settle down and leave the road?" Yes, that is the question, why don't you do so — on one night a week, and sometimes not that. This man, who is so ambitious as to work six nights, the limit, in order to make up a

THE INLAND PRINTER.

NEW YORK.

(See Plate on other side.)

losing from "crap shooting," or something similar, cannot comprehend why the "tramp" cannot live right royally on the bountiful, over-productive one night. I do not wish to sneer, nor to be sneered at, but it seems to me that it is not *exactly* right to make a man stay in a town whether there is work for him or not.

Perhaps the gentleman who says "when, years gone by, the framers of the typographical union constitution were legislating for the welfare of the craft of the country over, little did they think that the results of their efforts would be misapplied; little did they know the work of their heart's desire would be so degraded," never has known what it was to be out of a situation and money. It is very easy to say when you have plenty, "Go, my brother, and likewise procure for thyself," but when the song commences on the other side of the page, it is quite different. I know a "tramp" is considered something like the mule by many printers, "the only monstrosity connected with the art"; yet how are all to work when there is not employment for one-third. Please think of these things occasionally when some broken-down brother appears at the door, and do not *all* of you have business somewhere else, or be too busy to talk to him, and tell him where to find the secretary.

A TRAMP.

#### FROM BOSTON.

To the Editor :

BOSTON, June 13, 1891.

The adoption by the International Typographical Union, at Boston, of the nine-hour rule, calls to mind some remarks regarding shorter hours of labor made by a well-known Boston printer some time ago. He said he believed that nine hours was a sufficient time for a man to apply himself to work at the case or press, and that he was willing to unite with *all* the other master printers of the city in a reduction of one hour. "But," he continued, "what are we to do about the competition of suburban printers? They figure beneath us on a great deal of work now, and if we diminish our production one-tenth, without a corresponding reduction in expenses, they will have a decided advantage. It is not to be expected that they will generally adopt the nine-hour system, therefore they will handicap us with cheaper rents, lower wages and longer hours." This is an instance of crossing a bridge before it is reached. The reduction of hours should be accompanied by an increase of prices. For years there has been a gradual lowering of the scale in all lines of work, for which the country printers are no more responsible than their urban brothers. Hundreds of town reports, and similar large jobs for town governments, are annually taken by large city offices, at figures far below what printers residing in the towns can afford to offer, and it is often the case that considerable money has been invested by the local printers in material and sorts necessary for such work. Those having printing to do will naturally seek to get favorable prices, and there will always be competition, but there need be no fear that an unequal share of fruit will be shaken into the yards of out-of-town printers.

Mr. Fred H. Allen, formerly manager of the Lakeside Press, of Portland, Maine, has established an office in Boston, and will devote his attention to the production of fine photogravure work.

The Barrett boom is booming, and the *Record* man may be governor yet.

AS THE INLAND PRINTER is now mailed at Chicago on the fifth of each month, it can be obtained from Golding & Co., the Boston agents, on or about the seventh.

I am indebted to the Boston *Record* for the information that the "shake-up" in the *Traveller* office finally and actually came yesterday (June 12), when Rev. J. B. Dunn, representing the Committee of One Hundred, assumed charge of the paper. Dr. Dunn, it is said, invited Editor Winship to remain, but that gentleman declined because he is not in sympathy with the policy of the paper as it will be mapped out in its issue of today (June 13). When Dr. Dunn is not in the office, the command will be in the hands of Reuben Croke, who was managing editor during the Worthington régime. Oliver McKee, for the past year news editor, also severs his connection with the paper today (June 13). The lightning also struck the composing room, where Foreman Wilson is replaced by Mr. William H. Ruston, a union man. G.

#### FROM SOUTH AMERICA.

To the Editor :

RIO DE JANEIRO, Brazil, May 13, 1891.

Owing to the fact that Brazil has been the subject of many articles during the past few months, on account of the recently celebrated reciprocity treaty, a letter from this country may not prove altogether uninteresting to the progressive printers who read your journal.

The trade in Brazil is booming at the present time; new papers and job offices are being started daily, and in consequence the supply of printers falls far short of the demand. Many printers are 'holding 'sits' on both afternoon and morning papers. This would not be possible in the States, but owing to the short hours of labor here and the system in vogue it is easily accomplished. They do no "piece" work on the daily papers; on a morning paper a compositor is required to set 140 lines (brevier) and correct his proof, for a night's work, and when he has completed his task he can go home; the same amount is required on an evening sheet. This makes a little over 3,000 ems for a night's work. The pay is six milreis per night. At par, a little less than two milreis equals one dollar. Eight hours constitutes a day's work in job offices, from 8 A.M. till 4 P.M., and half an hour is allowed for breakfast from 11 to 11:30, so in reality seven and one-half hours is the length of a day's work.

The work turned out here would not strike an American printer as being very artistic, nor would he find any "art fakes" used; but a spirit of progress seems to be sweeping over the Brazilian printer, and a considerable quantity of American type is being imported into the country. One office here, the *Rio Novos*, the only English newspaper in Brazil, is supplied entirely with American type, and turns out very fair work, for which there is a good demand. The average presswork of the country is very poor.

A company, under the firm name of Lamoureux & Co., has been organized here to establish a typefoundry and printers' supply house. Barnhart Bros. & Spindler, of your city, are building the machines for them, and will supply them with duplicate matrices of their faces. The company will also handle printing presses, cases, stands, etc., and carry a stock of paper and ink. They will undoubtedly do a very large business and the enterprise prove successful, as the company is composed of some of the best English-speaking business men of Rio, and has ample capital to carry it through.

Rio de Janeiro has some fifteen daily papers and a large number of job offices, and would be a good place for a few first-class pressmen to come to, that is, *sober* men; a few good job hands would also be sure of good positions. But unless they are perfectly sober Brazil is no place for them.

THE INLAND PRINTER I receive is a surprise to all Brazilian printers to whom I have shown it. A printer must dwell in a foreign land if he would realize the real worth of your paper. I would not be without it "for a farm." Politically, things are quiet here, and the country is making rapid progress since the establishment of the republic, and undoubtedly has a great future before it.

SIX POINT.

#### FROM WASHINGTON.

To the Editor :

WASHINGTON, D. C., June 20, 1891.

At present, things at the government printing office seem unusually quiet. There have been quite a number of reinstatements since the first of the month, and there will be more to follow by the first of July, the beginning of the fiscal year, when the new appropriation will have been available. At present the *Record* room is filled—one-half with compositors, and the other part with printed documents and other trash not desirable to the employés of that particular department. The "boys" in the *Record* room are not making very big money just now, but we presume that they prefer struggling along at moderate wages rather than to be discharged, as was the lot of one-half the employés of that room at the end of the session of congress. In the other departments of the government printing office work is going on about as usual, and good

money is being made. At present, Public Printer F. A. Palmer, assisted by the foreman of the Printing Bureau, is busily engaged in preparing vacancies for a number of reinstatements, which are expected to take place about the first of the month. About one-quarter of those employes discharged a few months since expect reinstatement about the first of the coming month, but we fear they will be disappointed.

Rufus Darby, one of the employing printers here that refused to accede to the recent demands of No. 101, has gotten himself into trouble. After failing to secure the services of good union men in his book and job office, he resorted to the service of a number of non-union printers. These always available individuals remained with Mr. Darby for only a short period, and then they decided to leave and become union members, and joined the ranks of No. 101, and most of them are now laboring in union offices. At a simple signal these men laid down sticks, and it was seen that they had been influenced by the arguments so plentifully showered on them by union men. Darby still seems determined, and has secured more non-union men, and compels them to sign an agreement not to leave him without giving two weeks' notice.

Work in the book and job offices here is fairly good right now, and the usual quantity of printers are engaged therein. Subbing down town is also fairly good, and a large number of men are engaged by both the *Star* and *Post*, of this city. There are yet a few of the discharged employes of the government printing office remaining in the city, who seem to "catch on" at the various offices here.

There are yet a few of the striking printers who have not secured employment, and are still drawing their \$7 and \$12 per week from the funds of the International. No. 101 is assessing its members each month to assist the striking members. It is expected that these printers will have secured steady employment ere many weeks.

The book and job office of Mr. McQueen still "bars" the services of union printers, and refuses to join the rank and file of No. 101. We hope to see the day when Mr. McQueen will learn wherein he is wrong.

The delegates from No. 101 to the Boston convention report having had a grand time at the "Hub." The manner in which they were treated was simply grand, and they all express themselves as having accomplished a great deal of important business.

EM DASH.

#### FROM SAN FRANCISCO.

To the Editor: SAN FRANCISCO, Cal., June 16, 1891.

Since the time of the last communication from this city, the oldest newspaper on the Pacific coast has suspended publication. It was called the *Alta California* and has been published in San Francisco since 1849 — the pioneer journal of the coast. The publication was founded on the ruins of the *Californian* and the *Californian Star*, which both suspended publication during the gold excitement in the summer of 1848. The *Alta California* was at first published in February, 1849, as a weekly, being changed to a tri-weekly in December of the same year; and it was changed to a daily publication in January, 1850. The principal reasons which caused its demise are attributed to two things in particular — the numerous changes in its publishers, and the necessity of toning down its columns to meet the views (often clashing) of its many moneyed backers. During the last seven years of its existence it is said to have cost its owners over \$200,000.

At the last meeting of the San Francisco Typographical Union, held May 31, nine propositions for membership were received, six applicants were elected and ten candidates were initiated. An important measure, the outcome of the late strike of the union against the H. S. Crocker Company, was passed. It was resolved that in future a joint committee from the typographical union and from the typhotæ shall investigate the discharge of men from job offices. The new scale of prices was discussed, being adopted with few changes down to the "book and job" part, which has been made the special order for next meeting. After the full

adoption of this new scale by the union, it will be submitted to the proprietors of printing establishments for their approval.

The strike of the typographical union against the H. S. Crocker Company has been ended for some time. The strike proper only lasted about two days, but the settlement of the differences was not effected until last month. Several meetings of the typhotæ of San Francisco in reference to the matter were held, resulting in the passage of the following agreement or measure by the members, which will hereafter have great bearing on prospective strikes: "Any new rates hereafter made by the San Francisco Typographical Union must be submitted to the typhotæ before final action is taken on same by the said union; and if the typhotæ fails to agree, a conference committee shall be appointed from both bodies to arrange the matter. In the event of the typographical union ordering a strike in any office of the typhotæ, the members of this body will immediately discharge every union man in their employ, and will not reinstate same until the dispute is settled."

A special meeting of the typographical union was held June 14, for the purpose of taking action for the benefit of the large number of its members out of employment, owing to the extremely dull condition of the printing trade at the present time in San Francisco. It was decided that for the next sixty days all the employes on local newspapers shall only work five days out of each week. Thus the employes on evening papers will give up one day's employment per week, and those on morning papers two days per week, thereby enabling union members out of employment to secure enough work at least "to keep the wolf from the door," and to tide over their difficulties until the bad condition of affairs is passed.

E. P.

#### FROM VERMONT.

To the Editor: BELLOWS FALLS, Vt., June 21, 1891.

The journalistic field in this state is one which is being well cultivated at present. Never in the history of the commonwealth has there been so much activity among printers and publishers as there is now. All the small papers are enlarging and all the old ones are making radical changes in form and makeup, so that we hardly know our old friends in their new dresses.

The Brattleboro daily, started some months ago with so many misgivings, is proving itself amply able to take care of number one. It is now published by Spencer & Dawley, and the increase in their business has made it necessary for them to lease larger quarters and move where they have room for their trade. Their jobwork has kept pace with their other success and this firm of young men is succeeding beyond their anticipations.

The Bellows Falls *Times* has enlarged to a ten-page form and has put in new machinery to paste and fold such a paper. It is the only paper in the state having machinery for printing, pasting and folding a ten-page form. The new machinery also permits the printing of a twelve-page form if necessary. The *Times* is coming to the front fast and will soon lead in the matter of state news and town locals. Only one or two papers in the state are now ahead of it in these respects.

H. H. Woodbury & Co., of Woodstock, label printers, have the largest establishment of the kind in New England. Eleven men are employed some of the time and eight and one woman all the time. The firm do in addition to label work all sorts of fine job printing and number among their customers many city firms.

Advertisers are using the country papers more and more each year. A comparison of the files of a paper now and one of a few years ago is an interesting study.

The Vermont Press Association goes this year on the most interesting trip ever planned by them. The itinerary includes Plymouth, Massachusetts, and Sunday at Nantasket beach. The party will leave Friday, July 8, and rendezvous at the American house in Boston. That evening there will be a banquet, presided over by Col. Albert Clarke, formerly of the *Rutland Herald*. Many prominent Vermonters will be present as invited guests. The next day the party will leave for Plymouth, and after a

visit to that historic old town will go to Nantasket beach, where they will remain over Sunday, returning to their homes July 15. The trip is a most enjoyable one and reflects much credit on the executive committee who planned it.

The town of Brattleboro has more money invested in the printing business in its limits than any town of its size in Vermont. It has two large newspaper offices, publishing weekly newspapers of the first-class in many respects. Then there is the daily and job office in connection and Frank Housh's big publishing house and one or more small offices. How they all manage to struggle along and live is what puzzles some at a distance. B. H. A.

#### FROM KANSAS CITY.

To the Editor: KANSAS CITY, Mo., May 30, 1891.

Business may be said to be generally quiet. In the job printing line two large offices have closed down. The *Times* will soon remove its headquarters to a cheaper and less prominent location. No. 80 has made considerable concessions to the business management. The *Globe* is defunct, leaving its employes to "hold the bag" for a week's wages.

Teachenor & Bartberger, art engravers and designers, are meeting with success in their business.

The supply of subs on the dailies is much greater than the demand, and yet newcomers are recorded nearly every day.

The firm of Weber & Wilson has been reorganized, Mr. Wilson retiring and Mr. Weber carrying on business at the old stand. It also is stated that the office has been unionized and will employ several "square men."

The only paper in Kansas City that is making any money is the *Sunday Sun*, devoted to sensational journalism.

Messrs. A. E. Benson, and George O. and Charley Miller, have gone to Galveston, Texas, where they have secured positions in the Clarke & Courts establishment.

The typographical union is endeavoring to suppress the modern Shylock by legislation, but the great evil does not lie in the ranks of the initiated but among those over whom the union has no control.

A new monthly publication, entitled *The Bakers' Index*, has been issued, devoted to the local bakers. It is a neat periodical, and starts out with good advertising patronage.

The evening *Star*, besides having the handsomest office in the city, boasts of an editorial staff second to none in brilliancy of intellect. Mr. Al Lewis irregularly contributes a series of border sketches over the nom de plume of "Dan Quin," or, sometimes, "D. Q." They are invariably entertaining reading. It is stated that henceforth these sketches will be sold to a syndicate of newspapers. Alex. Butts is another brilliant writer (or paragraphist), who each day contributes a number of Kansas items. Alex. might occasionally vary the subject of his pleasantries, however. T. W. Johnston, the managing editor, is now on a visit to the Pacific slope and spent the 17th inst. in Salt Lake City.

The Graham Paper Company, who bought out the Inter-State Publishing Company and S. G. Spencer, recently sold a lithograph press to Pueblo, Colorado, parties. The Graham Company is now doing its own printing, having several cylinders and a press especially designed for printing roll wrapping paper. They employ union men in their printing establishment and occupy a portion of the old Inter-State building at 222 West Fifth street.

Union dues have been cut down to sixty cents per month, regardless of attendance at meetings. The financial officers urged the adoption of this rule on account of the confusion in accounts occasioned by the rebate system.

A firm in this city makes a specialty of selling printing outfits on easy payments. All accounts seem to agree that this proves a profitable business, much to the dissatisfaction, doubtless, of the typefoundries.

The Samuel Dodsworth Printing Company, of Leavenworth, Kansas, contemplate moving their establishment to Kansas City, Kansas, and Mr. Dodsworth was recently in the city, looking

over the field with that object in view. This firm draws business from all over the State of Kansas, and as the two Kansas Cities are separated only by an imaginary line, the removal would prove advantageous not only to Sunflower Union but No. 80 as well. L. E. H.

#### FROM AUSTRALIA.

To the Editor: SYDNEY, N. S. W., May 15, 1891.

The labor trouble is still agitating Queensland, but it has lost the aggressiveness which was slowly threatening revolt. The imprisonment of several leaders on a charge of treason against the state has brought the shearers to their real position, and once recognizing this they have assumed a different attitude. Several suggestions for arbitration have been made, and at time of writing there is a suspension of active agitation pending a promised means of settlement. Our own trade is bustling about just now with the usual parliamentary preliminary rush, as our legislators will assemble once more in their hall of wisdom on the 19th inst. In Melbourne many compositors have been idle for some time, and things are not any more promising just now. In the meantime the workers are sending men from their own ranks into the Victorian parliament in the hope of securing better legislation for the work. In Adelaide, Brisbane, Perth and other cities of the continent, as well as Hobart (Tasmania), the reports are to the effect that trade is quiet.

Mr. Fitzgerald, who was sent to England as the labor delegate, has returned, and met with a great reception in every city on his way up to Sidney. He is a young man of modest demeanor, and with a clear head and good tongue. A compositor by trade, coming originally from Wellington, New Zealand, he was at one time president of the Melbourne Typographical Association, and at the time he was sent to England on his mission had lost his position on one of Sydney's newspapers, through sticking up for the privileges of the craft, being father of the chapel at the time of the trouble. Readers of the *Nineteenth Century* magazine will notice in a late number an article from Mr. Fitzgerald's pen in reply to Mr. Champion.

I see the Intercolonial Trades and Labor Congress, which held its session during the latter part of April in Ballarat (Victoria), has recognized New Zealand's claim to the origin of the eight hour movement. The *Star* of the 30th ult. gives me the following item: "Mr. Tremwith, M. L. A., mentioned that the New Zealand folks were about to raise a memorial to establish a scholarship to the memory of the late Samuel Duncan Parnell, the apostle of the eight hours movement in Australasia. He moved 'That this congress recommend the associated trades throughout Australasia to assist in providing the scholarship.' Seconded by Mr. Robb, supported by Mr. Milbank, and carried unanimously."

The eight hours day in Melbourne this year, on April 21, was marred by very wet weather, but all the same it was a great success. A carnival was held in the exhibition building, at which the governor (Earl Hopetown) was present, and was an enjoyable affair. A monument to the eight hours movement was also initiated by an association called the Old Identities. The Melbourne Typographical Association made a great display, and their popular secretary, Mr. John Hancock, whom I informed you had been elected a member of parliament, was cheered all along the line.

ASMODEUS.

#### FROM NEW YORK.

To the Editor: NEW YORK, June 13, 1891.

The printing trade here has taken a slight change for the worse since my previous letter. That is not an unnatural condition at this time of year. Extra hands are being gradually weeded out, that is, in some shops; others have their books well lined with orders yet. Local firms are very busy on directories, two of which are being set up, namely, those for Brooklyn and New York. Law also keeps many hands busy just now. But, taking the entire city round, the slackness is apparent, and is admitted on the part of the firms affected. Most of the commercial work required

till the fall has been delivered. Church work has declined, since many of the edifices will in a short time be closed for two months or so. Entertainment and amusement requirements have slackened off. Lithographing is spoken of as also having quieted; but I find, as yet, no diminution in bookbinding.

There are some changes among the local city newspapers for the better and for the worse. The *Daily Continent*, the unlucky successor of the unfortunate *Star*, has shriveled up, is defunct, after a very few months' existence. It was the victim of one fixed idea, that a newspaper issued in what in the trade is known as folio size, would be sure, from that single advantage, to "catch on," nay, to bound into popularity. It was a decided improvement, as compared with the usual "double-demy," which requires a broad-chested man to open and read, if he has not the time or the will to delicately and deliberately fold it to a "demy." But it seems to have had little financial breath in its body, was not at all badly edited, but had the "curse" of its progenitor on its head, the *Star* having for a period of two years tried to woo the public, and having failed egregiously. Mr. Cockerill is the purchaser of the plant, etc., of the *Daily Continent*, which is transferred to his new paper, the *Morning Advertiser*, an adjunct of or substitution for the already existing *Commercial Advertiser*, which recently moved from Fulton street to Park Row. The *Journalist* of this city says the new paper, a week or so old, "is bought and read by everybody, is terse and breezy, and will get on." That settles the question. Its editor says the bulk of the papers in this city are too extended in size to be useful. He issues his in four pages at one cent a copy. This makes the third one cent morning paper here. He charges three cents for the Sunday *Advertiser*. That is a wise movement. The Sunday *News* at two cents has been doing a large business; few persons would imagine that three cents once a week would be a consideration to many persons in a place like New York, but it is! The Sunday *News* has not another single claim upon its readers than its price, so I conclude that five cents is by many thought too high a price for a paper, two-thirds of which, among the run of the readers, is never read. The size of the Sunday New York papers has arrived at a nonsensical point, competition alone being the incentive. No one who believes himself or herself to have any other responsibilities on Sunday reads one-half the contents. This reminds me that I might be wrong in thinking the price *alone* of the Sunday *News* had to do with its sale; it is a reasonable size too.

The *Evening Call*, of this city, has been in legal trouble recently, through tightness of money; it was thought it would permanently cease issuing, but such does not appear to be the case. The *Daily Recorder*, so far as can be learned at this early stage of its career, has progressed in public esteem considerably. If gentlemanliness and geniality on the part of a managing editor has much to do with a paper's career, it ought to do well, for in these respects Mr. Lyman is a brick. Some people are commenting upon the deteriorated get-up of the Sunday *World* for some weeks past; it has been and is printed on paper of at least two different tones of color—some of it cheap looking,—and on which the typography comes out poorly. Mr. Pulitzer, having recently returned from Europe, may alter this state of things. But the *World* is not the only paper here that suffers from the too frequent absence of its head man; the remark applies to the *Herald* at times.

The *World* has of late been making risky changes in its *personelle*: "swapping horses," it thinks, does not apply as a saying to its case, as it thinks it is *not* crossing a stream. Self-esteem is a very estimable virtue; fakirs and showmen have it largely. The loss to the *World* of Messrs. Cockerill, Graham and George W. Turner (who has gone to the *Recorder*) may be more than it is capable of estimating until it is too late. The only other change of importance is that of Mr. A. D. Noyes, who has gone from the *Commercial Advertiser* to the *Evening Post* as financial editor.

The coöperative idea in the printing trade is extending somewhat. Mr. De Vinne, of this city, proposes to divide his profits from next April with his employes, if their services are acceptable. One is glad to hear of this state of things in a country

where unconciliatory notions between employer and employed abound too much, and if the experiment succeeds the country will owe a debt of gratitude to the pioneers of the movement, who gave the needed pluck in facing the hazard.

A contemporary says it is reported that a number of well-known English authors intend establishing a printing house in New York City, so as to get out first copies of their books simultaneously with their issue in England. Not an un-cute notion, either.

LEONIDAS.

#### MARKS OF PARENTHESIS AND PUNCTUATION.

To the Editor:

PORTLAND, Ore., June 16, 1891.

Probably there is no matter of punctuation about which so great a difference of style may be observed as in the use of points about marks of parenthesis. Newspapers generally, and perhaps the larger number of books, have adopted a style which omits the punctuation mark for the pause ordinarily occurring before the first curve, and put the mark after the second curve, thus making the mark of parenthesis serve as a punctuation point. This, it seems to me, is contrary to reason and to the best authorities.

It would be hard to find a more carefully printed work than the Bible, and in that book the punctuation is invariably as it would be were there no curves used. Thus in II Corinthians, xi. 21, we read: "Howbeit, whereinsoever any is bold, (I speak foolishly,) I am bold also."

Again, in St. Mark, vi, 14: "And king Herod heard of him: (for his name was spread abroad;) and he said," etc.

In some copies of the Bible the latter example is slightly different, the second semicolon being changed to a colon.

Goold Brown, one of the greatest grammarians that ever lived, lays down the rule, in the "Grammar of English Grammars," that "the curves do not supersede other stops," and that parenthetical matter should be preceded by the point which would be inserted were the matter included in the curves omitted, and also that "the same point should be included." Bigelow says much the same thing, but insists on many exceptions. In the ordinary school grammars I have been unable to find any reference to the subject.

But it remained for Mr. H. G. Bishop, in his "Practical Printer," to cap the climax of absurdity so far as a reason for *not* using both points is concerned. He assumes that a point must be used *after* the last curve whether one is used before the first one or not, and hence gravely observes that, as the lifting out of all matter included within the curves would leave two commas together, the one before the first curve should be omitted. The following will illustrate his reason more clearly: "Simon, (whom he also named Peter), and Andrew his brother," etc.

Now lift out the curves, with the parenthetical matter, and we see Mr. Bishop's objection: "Simon., and Andrew his brother," etc.

Being founded upon an error, his reasoning could not be correct. There is absolutely no authority for putting points both before and after the curves. But suppose we put it correctly, as it appears in St. Luke, vi, 14: "Simon, (whom he also named Peter,) and Andrew his brother," etc.

Now take out the curves and the matter they inclose. Can you see anything wrong with what remains, dear reader? And what becomes of Mr. Bishop's objection?

A great many of the most carefully prepared books follow the system used by the Bible printers, and, I think, correctly. Of course there are very many cases which require no points at all, and in such instances none should be used. And in cases where numbers, or amounts of money, are used twice, as, "section ten (10), range nine (9)," it is perhaps as well to use but one mark, and that outside. But I do not think that the simple curve ever means anything more than that the matter inclosed is parenthetical. Besides, if the first curve takes the place of the punctuation mark, why, in the name of reason, does not the second? Can anyone tell? And where is the sense of such examples as this, which is a sample of almost all the credits in *Public Opinion*:

"Kansas City Times (Dem.)" I think it would be just as idiotic to put two periods after every abbreviation that closes a sentence, one on account of the abbreviation, and the other to show that the sentence is ended.

I should like to have someone who is prejudiced in favor of the one-point plan tell what reason he has for favoring it.

A. E. D.

#### FROM BALTIMORE.

To the Editor: BALTIMORE, Md., June 20, 1891.

The non-union printing office about to be started at the House of Refuge has caused Baltimore Typographical Union to rise up in its wrath, and a lively time is expected. A statement appeared in an afternoon paper that the union claims it is an outrage to put boys of this class at the case. Another objection is made that the facilities at the Refuge are insufficient to teach the boys the art preservative. A special meeting of the union was held on Sunday last and the subject thoroughly discussed.

The result was the appointment of a committee to wait on the managers of the reformatory institution and enter protest on the part of the union against the proposed measure. The union has also called in the aid of the Federation of Labor in the matter, but it is to be doubted whether the management of the Refuge will turn aside from their first intention, to teach a certain number of the boys the printers' art.

It must be remembered that at a similar institution, located near by the House of Refuge, a non-union printery has been in operation for years, where a number of boys are taught to set type. The union has made several unsuccessful efforts to have this branch of industry withdrawn here. A good many will watch this fight with interest.

The Baltimore *American* celebrated its one hundred and eighteenth anniversary on Monday last by printing 200,000 copies of the paper, each copy consisting of twenty-six pages, many of which were illustrated. For this edition 110,000 pounds of white paper were required. Each copy of the paper contained an insert, which consisted of a *fac simile* of the first number of the *American*, bearing date June 15, 1773. This excellent journal has shot right ahead since its management fell to the lot of Gen. Felix Agnus.

I have been pondering over the published statement that the originators of the New York *Recorder* have lost on that paper since February last the sum of \$380,000. But these heavy losses on newspaper ventures do not seem to deter capitalists from entering the field, oftentimes an untried field, of journalism.

The *Evening World* is now in good shape in its new quarters on Calvert street, and it has entered the illustrated field so far as to get up a local hit on its front page now and again as occasions arise. The *World* appears to be aware that Baltimore is not without a fair quota of croakers, for yesterday it had this to say of itself: "It has been prophesied that the *World* would follow in the footsteps of numerous journals that have made Baltimore their homes during their brief career. The *World* is not constructed upon that plan, however, and will go right on revolving in Baltimore."

The *Manufacturers' Record* is stepping along with the times and is about to put up a handsome new building for itself, which is conclusive evidence of its prosperity.

Messrs. Briscoe and Whittier, extra men and "swifts" on the *Sun*, left for New York last week.

Editor T. J. Wentworth, of the *Every Saturday*, met with a very singular accident while at his desk in his sanctum yesterday. While in the act of unfolding an exchange the sharp edge of one of the pages of the paper passed across his right eye-ball and cut it severely. From sympathy the left eye soon became affected, and Mr. Wentworth was compelled at once to leave the office for his home, where he is being attended by his family physician.

Mention was made in one of my letters some months ago of the formation of an organization composed of the publishers of the weekly papers of this city. Considering the enthusiasm displayed at the first meeting one might have supposed that the association by this time would be in excellent condition. But such is not the

case, for these worthy gentlemen have been so neglectful of their interest as to have failed to come together in the last three months.

The proprietors of two photogravure establishments in this city inform me that Baltimoreans will now no longer be compelled to send to other cities for half-tone pictures from photographs, that they respectively are prepared to fill all orders of such description. In this connection I will state that less than a year ago I desired a half-tone picture from a photograph for publication in a certain periodical issued in Baltimore, but was compelled to send my order to another city, from the simple fact that no engraver in Baltimore would undertake the job, all of them pleading a lack of proper facilities.

I would advise these two enterprising engravers to advertise at once, and let the public know where they are located and what they are capable of doing in the way of half-tone work.

Business in the printing line is rather quiet at the present time.

FIDELITIES.

#### FROM NEW ZEALAND.

To the Editor: WELLINGTON, N. Z., May 21, 1891.

The printer's lot has been a comparatively happy one during the past month, for work has been fairly brisk in its supply. The government printing office has been kept busy, and the pieceroom has been very full of hands for a recess season. A mass meeting of unemployed was held here last month, and on the list were the names of nine printers, who have, thanks to their agitation, secured frames at the government printing office. In the other centers there is nothing special to report. Parliament opens about the fourteenth of next month and all things seem to augur a long session. The new government promises us plenty of radical labor reforms. Time will show whether their promises are made of any firmer stuff than the average piecruft.

I promised in my last letter to give some particulars of the recent deputation sent by the executive council of the New Zealand Typographical Association to interview the Federated Master Printers' Association at Dunedin. The various delegates have sent in their reports to the branches and the executive council, but the branches have decided to keep back the report until the half-yearly meeting of members (in August next), and the council's report will not be public until the annual report is published, which will be later still. However, thanks to the influential name of THE INLAND PRINTER, your special has been permitted to glance through the report, and from that glance I am enabled to keep my promise. Let me state at once that the association considers the whole thing a farce and a most dismal failure. Three of the five delegates have informed me that it was a fool's errand, and the blame rests with the executive council for not making full inquiries before going to the expense of about \$200.

It appears that instead of meeting a general meeting of the Federated Masters, it was only a meeting of those interested in job printing, who had met to draft a uniform scale of charges for job printing, and they were not empowered to deal with anything else.

The deputation from the New Zealand Typographical Association consisted of Messrs. J. McIndoe (Otago), John Rigg (Wellington), G. Long (Napier), A. Walker (executive council), and also included Mr. A. T. W. Bradwell (Canterbury Typographical Association). Three of these were newspaper compositors, one was a job printer, and the other is employed in the pieceroom of the government printing office.

The deputation held a caucus before waiting upon the masters, and drew up the following for presentation and discussion:

1. The establishing of a uniform rate for piece and 'stab work throughout the colony.

It was resolved that \$15 should be the minimum 'stab, and 24 cents per 1,000 ens the piece rate.

2. The question of piecework in job offices, and the importation of matter by news offices.

This refers to a morning newspaper in a city setting up a long article like the government statement and then "obliging" an evening paper by sending the matter over to them for use in their

paper, or vice versa, a courtesy which often takes place here, for it saves money.

3. Proportion of apprentices to journeymen; binding of apprentices to a term of indenture.

The rules of the New Zealand Typographical Association provide that the number of apprentices shall be regulated as follows: One apprentice in any office, two where six members of the association are permanently employed, and one for every additional six members; but not more than six apprentices in any office; and the term of apprenticeship to be six years, with a legal indenture.

4. The establishment of arbitration committees for the settlement of all disputes which may arise, with a view to preventing strikes and lockouts.

After arranging the above programme, you can imagine the chagrin of the deputation when they were told, upon waiting on the masters and laying the items before them, that they were not empowered to consider such important matters. However, they derived some satisfaction from the fact that some discussion took place in explanation, and as a result the masters said they would have pleasure in laying the four items of reform before their association.

The committee of the Federated Masters' Association consisted of Messrs. Mitchell, President of the Dunedin Master Printers' Association (in the chair), Wilkie & Mackay (Dunedin), Wilkin, Smith & Russell (Christchurch), and Joyce & Smith (Invercargill).

[I regret to state that Mr. Wilkie, mentioned above, has passed to his long home since the above meeting was held.]

T. L. M.

#### FROM DETROIT.

To the Editor:

DETROIT, Mich., June 17, 1891.

Detroit union has had under consideration the revising of its constitution and scale of prices, and many important changes have been made. The most notable change was the election of officers and delegates to the International Typographical Union, which was held in the various chapels, the same as has been in vogue in Chicago and other cities. The disposition of funds has also been changed. Fifty per cent of all receipts, except special assessments, shall be paid into the general fund, said funds to be used only in defraying the actual operating expenses of the union; forty per cent shall be paid into the death benefit fund, to be drawn upon for the payment of the mortuary benefit of the union; ten per cent shall be paid into the reserve fund, to be used for any purpose not covered by the general and death benefit funds; no money can be drawn from the reserve fund except by ballot with the consent of two-thirds of the members present at a regular meeting. The death benefit amount was formerly \$1 per member in good standing. The death benefit, hereafter, will be the sum of \$300. The dues, which formerly were 35 cents, are now 50 cents per month, and are payable on or before the tenth of every month. An annual card has been issued to every member. The constitution as amended went into effect May 1.

The scales of prices were also amended, those of the daily papers being slight ones. On weekly and Sunday papers the scale was raised from 30 and 33 to 36 cents, to correspond with evening newspaper scale. On the book scale 1 cent additional was asked. The machine scale was fixed at 45 cents per hour for eight hours work and 60 cents for time exceeding eight hours; on evening papers and other day work 2 cents less per hour. The job scale remains the same, \$14, the hours of labor to be fifty-four, a reduction of three hours. This amended scale was adopted to go into effect May 11, and a committee appointed to wait on the typothetæ to apprise them of the changes and have a conference. The typothetæ declined to accede to the changes as made. In order to have the support of the International Typographical Union in case of trouble the scale was held in abeyance, and the organizer of the district, V. B. Williams, of Chicago, was telegraphed for to come to Detroit and look over the ground and report to the

Executive Council of the International Typographical Union. Mr. Williams came to Detroit and conferred with the officers of No. 18, and reported to the executive council. A reply was received that No. 18 had the sanction of the executive council in case of strike for a shorter workday. Mr. E. T. Plank also came to Detroit, and a conference of the union committee and a like committee of the typothetæ in the presence of Mr. Plank was held. A special meeting of the union was held, when President Plank addressed the members. At this meeting a proposition was received from the typothetæ that they were willing to make the hours fifty-six during the summer and fifty-seven during the winter months. This proposition was rejected by the union. A vote was then taken on the question whether a strike should be ordered or not. The result of the vote was that the members were not willing to strike, not having received the required legal number of votes. The typothetæ, at a meeting held May 20, adopted a resolution that, owing to the conciliatory action of the union, which prevented a strike, they had agreed to reduce the hours of labor from fifty-seven to fifty-six hours all the year. It appears that a number of the typothetæ were willing to accede to some if not all the union asked for, but were met with opposition in their own ranks.

All the leading offices are controlled by the typothetæ, with the exception of one or two concerns, which the union has been endeavoring to unionize, but without success, and which naturally compete with houses that pay the union scale. But the union has means and influence at its command, and is using them very effectually, too, so that not any city or country work is given them.

Detroit union has also taken steps to effect a state organization similar to that taken by the unions of the State of Indiana. A good deal of work that rightfully belongs in the city is taken out of the city to interior towns where no union exists, and where wages paid are all the way from \$5 up to \$9 per week. There is a wide field for the unions of the state to endeavor to unionize these smaller cities, and try and establish, if possible, a more uniform scale. The districts as at present divided by the International Typographical Union cover too large a territory for one man.

The Detroit *Free Press* celebrated its sixtieth birthday by issuing a mammoth paper on May 5. The regular paper was composed of sixty pages and a fac simile of the first four-page paper issued, sixty years ago. Besides a large number of "ads," the articles contributed by present and former attachés of the paper, of a reminiscent nature, were very interesting. On the evening of May 7 a reception and luncheon was tendered to all the employés on the paper. The esteem in which Mr. Quinby, the editor-in-chief of the paper is held, was also shown by the leading citizens of the city, irrespective of party, by a reception tendered him to celebrate the completion of thirty years as a publisher of a daily paper. The same was largely attended.

The Printers' Benefit Association has issued its fifth annual report, with an address to all members of the union, pressmen and stereotypers, with a history of its doings during the past five years. The cost to members the past year has been \$6; benefits paid, \$308.

Terrence W. Degan, after a long illness, died on May 11. His remains were taken to Evansville, Indiana. He leaves a wife and two children.

The *Tribune* appeared, May 21, in a new dress, and looks well enough in the eyes of the public, but is not so much admired by the compositors. The trouble is over the measurement of the same. The type is claimed on all sides to be a minion face on a brevier body. The union by unanimous vote decided that it must be measured minion. To avoid trouble at the time, the Tribune Company decided to comply with the request. The makers of the type, Messrs. Barnhart Bros. & Spindler, of Chicago, were in the city and had a conference with the officers of No. 18 for information as to what course to pursue on the question raised against the type. The Tribune Company has drawn up an appeal from the position of the union and forwarded it to President Prescott, of the International Typographical Union. A similar document on behalf of the union has also been forwarded to the same officer, to await his decision. Should the company win the day the makers of the type need not worry themselves about the matter, but should they

lose, Messrs. Barnhart Bros. & Spindler will have to make good the loss on type now in use and furnish a new dress.

The *Evening Sun* has been awarded the contract to publish the proceedings of the council.

Messrs. Clarke & Reardon, late of the Railroad Printing Office, have opened an office for general commercial printing, at the corner of Woodward and Jefferson avenues.

Messrs. T. Smith and Fred Kelley, the latter late foreman on the *Tribune*, have formed a partnership. Their office is on Rowland street.

P. A. L.

#### "COMPENSATION OF PRINTERS."

To the Editor : NEW ORLEANS, La., June 10, 1891.

"We live to learn and die and forget it all." And yet there is pleasure in learning. And what is learning but what thought leads us to? A thought new to us may be old withal, but it is great satisfaction to feel that it emanates from our mind, and justification is to be found afterward in the expression of others already made, but witnessed by us after ours has been expressed.

"A man convinced against his will  
Is of the same opinion still."

Every man, according to my idea, is entitled to his opinion. I am clear on this point because there are two sides to all questions. Just here is where the discussion between the editor of THE INLAND PRINTER and Messrs. De Vinne and Baker and myself may be presented as a simile. These gentlemen are entitled to their opinion. Likewise should I be entitled to mine. While they may be positive that I err in my opinion and wish to oppose the prevalence of an erroneous opinion, they must understand that other people can be positive too, and it is to an unprejudiced people that we must leave the question, fully and clearly stated on either side, for settlement.

In any position a man may take he must be fair, just and plain, to evoke the sympathy and goodwill of the people. By flowery language and touching epithets he may carry the wave of public opinion with him for a time, but like the dry, wave-washed weeds of the seacoast this refreshing breath leaves him and he stands out a bold subject of commiseration.

While the main position I maintain in the matter under consideration, that the workingman is the main taxpayer, seems to be an advanced idea, I by no means claim to be its originator or only supporter. I penned my idea, not fully I trow, but in such a way as would set a thinking man to thinking, and should that individual give the matter thorough consideration, with an unprejudiced mind, the thought was so palpable that the fair man would be won over to it at once. When my article appeared in THE INLAND PRINTER I found that that journal contained an editorial on my work, entitled "A One-Sided Argument." Of course it was one sided, just as "A One-Sided Argument" was one-sided. My idea has always been to present my side of the question in such a way that it might put the argument of the opposition in a feeble light, whatever it might be, and I considered that the point of every argument; but, as stated, I did not argue thoroughly the question under consideration now, because I thought it such a fair question that it needed but a mention to fetch a reasonable mind to favor it. After reading the editorial above referred to, which was a fair, courteous argument in opposition, I determined to allow the question to rest on its merits; but what was my consternation when I found that THE INLAND PRINTER again took me to task, as did also Messrs. Theodore L. De Vinne and W. B. Baker.

Having seen Mr. De Vinne's name connected with business and to a great many articles, I had learned to look upon him as a man living in an advanced age. However, he places himself beyond the pale of influence and on record in a light of which he should ever feel ashamed. I quote from the close of his article:

But this ability in management is not to be acquired by a neglect of machines or a refusal to recognize their right to exist, or by a diligent reading of treatises on political economy. If the workman chooses to study abstruse theories in preference to practical work, he has himself, and himself only, to blame if capital and machinery neglect him.

Mr. De Vinne possibly intended to convey the idea that a man would have to give all his attention to his work to master it, but

simultaneously he wished to play on my reading political economy. Let me say that there are some men in every class who never can learn anything, despite the most diligent attention given it. As for reading political economy, I think it would be wise for all business men, and especially those who leave thoughts indelibly expressed in printers' ink, as well as workmen, to study that very important groundwork of thought and information. Mr. De Vinne will understand what a ridiculous position he has placed himself in when he sees, as he must see now, that his objection to people reading political economy carries with it his objection to them reading anything else. Then who is to read his efforts? Himself? Who is to patronize typefoundries, papermills and ink manufacturing? For the sake of civilization and education I trust Mr. De Vinne regrets giving expression to such a hurtful thought.

As for Mr. Baker, I quote from the close of his article:

Mr. Young's proposition that those thrown out of employment by any change as foreshadowed, be given a pension by the government, or otherwise, would seem to me to be so thoroughly impracticable and unreasonable that I feel bound to consider it as a humorous suggestion.

It is a question in my mind if it is worth while to argue with a man who does not know the difference between humor and fact. THE INLAND PRINTER falls into the same error as do Messrs. De Vinne and Baker on the point of my opposition to the introduction of improved machinery. My position was certainly as distinct as the light of day. I did and do dislike to see the introduction of improved machinery where it militates against labor, for is it not terrible to contemplate successful competition by inanimate objects? and I shall always use every legitimate effort, where reasonable, to deter its use until the laborers, mechanics and artisans it displaces are cared for. The business-man and the workingman should be face to jowl on this point, for it should be plain to any thinking man that idleness injuriously affects commerce. But when it is settled that this machinery is demanded and will be introduced, I counsel all men, and did in the article under consideration, to meet the question with good grace and make the best of the change that combined effort and pure justice can command. I quote from my article:

Improved machinery is demanded by the requirements of the times and will be received, encouraged and supported to the last degree, so there is no use contesting with the inevitable. As in all inventions, this will have its beneficial as well as its injurious effects, opening up avenues of calling in places where it closes them in others. But while these things are regulating themselves, those affected must be provided for in some way.

That good workmen will be retained I now maintain, and did maintain in the columns of THE INLAND PRINTER over three years ago, but some men, we all agree, will be thrown out of employment because they are incompetent. Yes, the poor, old, decrepit, silvery-haired son of toil, grown useless in the sublime efforts of manhood, has become rusty and worthless. In this busy age, who will dare to say:

"Woodman, spare that tree!  
Touch not a single bough!  
In youth it sheltered me,  
And I'll protect it now."

He has set type year in and year out on the "educators" of our civilized world, but he cannot keep pace with improved machinery. It is no use for him (or anyone else) to read treatises (or anything else), or to endeavor to learn to use typesetting machines; so cast him, like his kindred beasts, upon the highlands, to feast or fast, as fortune wills.

The claim I made that the poor man pays a tax for the privilege of working, I might have stated more clearly by saying that workingmen have to pay this tax, for while workingmen are generally poor men, all poor men are not necessarily workingmen.

In maintaining this position I cannot impose on the space of THE INLAND PRINTER to detail the matter to the extent I would desire, nor as much as might be necessary to convince some people, but will content myself with a brief additional argument. In the first place, it must be understood that there are two parties to employment, work, engagement, or what you have a mind to call it. These parties are the employer (capital) and employé. Logic teaches us that one cannot get along without the other. The employer furnishes capital, the fruits of labor, and the employé

furnishes labor. What would \$100,000 invested in a printing office yield without the employé furnishes his labor? Then labor is the employé's capital. What is that labor worth? That is fixed, just as the figure of interest on capital is fixed, by the demand, and the power of the owner to maintain a high figure. The employé is in a slow business, and must turn his produce (labor) into cash readily, to enable him to buy bread for himself and family. The employer has all he wants at his command, and has the advantage, so he holds off until he can purchase the employé's labor at the former's own price. If the employer is paying \$3 a day wages, and two mills tax on his property, and the government raises the tax to three mills, the employer reduces wages to \$2.75. [Mind you, these are not exact figures; it is figuratively speaking.] While the employé was paying two mills on \$3 a day wages, he has to pay three mills on \$2.75. This, or quit work.

This line of reasoning is correct beyond contradiction, and how anyone can consider this and not understand that the workingman has to pay the government tax for the privilege of working for an individual is beyond my conception. DUNCAN F. YOUNG.

#### INK ROLLER LIFTING DEVICE.

Much has been said of late in reference to the chipping of angle rollers, and numerous plans have been suggested to avoid this; but none, to our knowledge, more effectually overcome this difficulty than the device shown in the accompanying illustration, a patent on which has recently been granted to Melvin W. Fisher,

of York, Pennsylvania. Any attachment by means of which this serious fault on all cylinder presses using angle rollers could be obviated will certainly be hailed with delight by employers and pressmen generally, and THE INLAND PRINTER takes pleasure in acquainting its many readers with this new invention.

Mr. Fisher's patent consists of lifting devices which are applied to both ends of the bed-plate, these devices having cushions which catch under the journals of the angle rollers and raise them sufficiently to allow the end of the bed to pass under them without the danger of having the bed cut the soft surfaces of the rollers, as is always the case where the bed is reciprocating rapidly and strikes the rollers forcibly at every movement. The cut gives a view of the bed-plate, showing the arms attached to opposite corners, and also a side view of one of the arms, and will enable the reader to understand the description more readily. When the bed-plate reciprocates rapidly back and forth under the rollers, it first

strikes the soft sides of their surfaces and raises them, and then as it moves in the opposite direction it passes from under them, leaving them revolving rapidly in the direction in which the bed-plate has moved, and then, before this revolving motion has had time to cease, the bed-plate strikes them with sufficient force to not only stop the revolving motion, but to raise the rollers sufficiently high to again allow the bed-plate to pass under them. The striking of the end of the bed-plate against the rollers cuts and breaks them, so that a set seldom lasts longer than a month. When the rollers are first placed in position, they are of greater diameter than later on, as they become shrunken, and hence new rollers must be raised higher by their bearings than older ones, and the bearings must be changed from time to time to accommodate rollers of different sizes. This requires adjustable bearings and frequent attention on the part of the pressman, not only to prevent the rollers being unnecessarily injured, but also to so adjust the rollers that they will properly distribute the ink.

In order to prevent the end of the bed-plate from striking the rollers and injuring them, two arms are attached in any suitable manner to opposite corners of the bed-plate and provided with slots at their inner ends, so that they can be adjusted in any desired position, and are curved or rounded to any extent upon their upper surfaces, where they extend beyond the ends of the bed-plate. The upper surfaces of the arms are grooved, and in these grooves are placed strips of leather which extend longitudinally with the arms and which are secured in position in any suitable manner. These strips of leather form a cushion or soft bearing upon the arms where they catch under the journals of the rollers, and thus prevent any unnecessary noise or jarring of the parts, as would be the case if metal struck metal. The outer ends and upper surfaces of these arms being curved, as shown, they catch under the journals of the rollers in advance of the ends of the bed-plate and raise the rollers sufficiently high to allow the bed-plate to pass under the rollers, and then the rollers are lowered upon the bed-plate just beyond its outer edge, where they act upon and distribute the ink in the usual manner. If a double reciprocating press is used, the arms will be attached to the bed-plate at both ends; but whether attached to one or both ends the use of the arms is to travel in advance of the end of the bed-plate to raise the rollers sufficiently far to prevent them from being injured, as above described. The arms here shown are adapted to be attached to any of the reciprocating bed-plates now in use without the slightest alteration, unless it is to groove the journals of the fountain-roller sufficiently to allow the arms to pass under it without disturbing it in any manner.

This attachment for the bed-plates of printing presses is beyond doubt a useful invention for the purpose intended, and will add life to the rollers by overcoming the chipping which has caused so much annoyance when rollers are used in the regular way, and promises to very materially aid in preventing this serious objection in the use of angle rollers. Mr. Fisher has been using one of these devices six months on a press running at a speed of from 2640 to 2800 per hour, and claims that he can run a form the full width of the press and get perfect distribution out to the very edge of the bed-plate, and has saved in this time at least \$13 for rollers, which is an item worth taking into consideration in these days when close competition makes it necessary for one to look well into the little details of expense in the pressroom as well as the composing room. His rollers are as clean and smooth as they were the day they were first put on the press. There is no accumulation of roller chips in the fountain; consequently the ink that is left in the fountain after a job is finished can be put back in the can as clean and free from deposits of this kind as when the can was first opened. The advantages of this device, then, become apparent, and the general adoption of this invention is, to our mind, a matter of but a short time.

THE process of marbling paper, which has heretofore been done by hand, has been improved on by Mr. C. H. Bellamy, of Holyoke, Massachusetts, who has invented a machine with which two attendants can do the work that heretofore required sixty men.

Translated for THE INLAND PRINTER.

**THE OLDEST HISTORY OF MAN IN THE LIGHT OF LATEST RESEARCHES.**

LECTURE BY THE REV. W. H. HECHLER, CHAPLAIN OF THE BRITISH LEGATION AT VIENNA, DELIVERED BEFORE THE TECHNICAL CLUB OF THE GOVERNMENT PRINTING OFFICE.

NO. II.—BY ADOLPH SCHOLL.

**T**HE Museum of Berlin contains many Hethitic and Assyrian inscriptions which had their origin in the days of Solomon, and served as mediums of correspondence, or letters, between the respective rulers of Assyria and Egypt.

A few years ago, it will be remembered, quite a number of royal mummies were found in Egypt. For some time it had been noticed by archæologists that an unusual number of statuettes,

FIG. 3.

vases, rolls of papyrus, etc., containing the names of ancient rulers, whose sepulchres had never been found, were being offered for sale. Inquiries were instituted, and most of these articles were traced to three brothers, who lived at Deir el-Bahari. They were arrested and subjected to a rigorous examination, but neither promises nor threats were of any avail. They would not divulge the secret, and had to be released. Shortly after that, however, one of the brothers came to an officer of the Egyptian museum at Bulak, and declared his willingness to show the spot where the articles had come from. When asked why he would do so now, after having refused at the examination, he gave as a reason that his brothers had taken advantage of him in the division of the spoils. The traitor then conducted

Brugsch Bey, a brother of the celebrated Egyptologist, to a shaft sixty feet deep, that led to an extensive grotto. In this grotto had been deposited the mummified remains of several Egyptian kings. A force of three hundred men was at once set to work to bring the contents of the grotto to the surface, and in three days and nights, guarded by a strong detachment of British troops, the work was accomplished. These mummies are at present in the new museum at Gizeh, where photographs have been taken of them. It is said that in loading all this treasure upon a steamer it was found necessary, owing to lack of room, to place one of the royal mummies in a row-boat and let it be towed by the steamer. At the nearest railway station it was taken up and placed on a train, and in this modern conveyance the king reentered the capital in which he had ruled four thousand years before. Upon closer examination of the mummies a number of mummified

flowers were found, and in the petal of one a mummified bee was discovered in a perfect state of preservation. Among the mummies of Pharaohs discovered in this lucky manner is one of especial interest—that of Rameses the Great. The generally accepted theory has been that he was the oppressor of the Jews in Egypt, and that the exodus took place during his reign. But from later researches and calculations it now appears that not he, but Thethmôsis III, was the oppressor of the Israelites. The dates of the respective reigns of these two Pharaohs has now been settled with considerable certainty, and I am led to place the exodus of the Israelites during the reign of Thethmôsis III, especially as the reign of Rameses II falls into a later period. Dating from the reign of Thethmôsis III, we have a picture found in a sepulchre which represents the manufact-

FIG. 4.

ure of brick by Amu (Israelites) and Egyptian slaves. The former are represented as much lighter complexioned than the latter, just as in the picture found at Beni Hassan, and this principle is faithfully carried out in all colored representations and inscriptions handed down to us. Unfortunately, the mummy of Thethmôsis III is in a bad state of preservation, and the face of this great conqueror cannot be photographed, as most of the other Pharaohs have been. The original of the bust of Thethmôsis III, given in figure 4, is in the British Museum. If Thethmôsis III really is the Pharaoh who oppressed the Jews, and during whose reign the exodus occurred, as I fully believe he is, then we also have the name of a princess and queen, Hatasu, who reigned in conjunction with her brothers, Thethmôsis II and Thethmôsis III, and it is not too much to assume that she was the princess who saved the infant Moses. At all events it is a matter of congratulation that the researches of the Viennese scholars have led to the establishment of these chronological facts. Time and again it has been asserted that the chronology of the Bible does not correspond with that of the general history of the

FIG. 5.

world. The latest studies and researches, however, prove the contrary. In my chart I have recorded biblical history as given in Holy Writ, with figures in red ink, commencing with "0," the year of the Creation. The black figures represent dates of events in the

general history of the world, and date back 4,000 years B.C. Not the slightest strain or arbitrary motive is permitted to interfere. Each history separately develops itself, and yet there is a truly

FIG. 6.

wonderful harmony between them. I do not deny that some difficulties still exist, and discrepancies remain unexplained, but the greatest of them have been mastered. In one of these historical charts I present the respective genealogies of the royal houses of Judah and Israel. The Egyptian inscriptions of oldest date now prove conclusively that the dates given in the Scriptures—the Books of Chronicles and the Books of Kings—absolutely agree with each other, and are perfectly harmonious, notwithstanding the assertions of certain Bible explainers to the contrary.\*

Repeatedly I have been asked the question: Did the Patriarchs really live such a length of time? I

\*This insinuation Mr. Hechler explained more fully at another time. In the second Book of Kings, chapter 1, verse 17, we read that Joram became king of Israel in the second year of the reign of Joram, the king of Judah. Now the third chapter opens by saying that Joram was made king of Israel in the eighteenth year of the reign of king Jehoshaphat, of Judah, and in chapter 8, verse 16, it is stated that Joram was made king of Judah in the fifth year of the reign of Joram the king of Israel. These seeming contradictions are explained in a most simple manner when we consider Joram, of Judah, as the co-regent of Jehoshaphat from the sixteenth year of the latter's reign, and interpret verse 16 of chapter 8 as having reference to the ascension of Joram as sole ruler and king. The proof of the existence of co-regents, of the fact that two or more kings ruled in one kingdom at one and the same time, has caused a material shrinkage in the number of milleniums which certain scholars have figured out as having passed before the birth of Christ. The statement in second Chronicles, chapter 33, verse 11, that king Manasse was conducted by the princes of Assyria to Babylon, notwithstanding the fact that Assyria and Babylon were separate kingdoms, is now explained by the discovery that Esarhaddon, king of Assyria, had conquered Babylon, and was ruling both kingdoms.—*Note of the Editor of Monthly Proceedings of Technical Club.*

can now answer this question in the affirmative. In order to give it a thoroughly scientific investigation, I have attempted the construction of a calendar for the year of the deluge. The theory has been generally accepted that the years of that epoch were not solar years, but lunar years, with thirty days to the first month, twenty-nine to the second, thirty to the third, etc. Upon this principle I constructed my calendar and then consulted the account of the Bible, which says: "On the seventeenth day of the second month Noah entered the ark," and he was then 600 years of age. On the chart for general history we find this date to have been the year 1656 after the Creation, or the year 2345 B.C. The Bible further says: It rained forty days and forty nights. Consequently the rain ceased on the twenty-seventh day of the third month. The next date mentioned in the Scriptures is the seventeenth day of the seventh month, on which day the ark grounded on Mount Ararat. The next date is the first day of the tenth month, when Noah discovered the mountaintops. I wish to call particular attention to the fact that so far the tenth month has been mentioned. The joy of Noah at the prospect of a release from the ark may be imagined. He waited forty days more and then sent out a dove and a raven. The dove returned to the ark, but the raven did not. A week later he sent the dove out a second time, and this time it returned with an olive-leaf. At the end of another week he sent it out a third time, but it did not return. The next event took place the first day of the first month of the new year, when Noah was 601 years of age. On that day he removed the roof of the ark, and on the twenty-seventh day of the second month God ordered him to leave the ark. We thus see conclusively that Noah left the ark on the three hundred and sixty-fifth day after entering it. Since constructing this calendar, or diary of Noah, as a reporter has called it, I have also discovered that the earliest Fathers of the Christian church claimed that Noah was confined in the ark 365 days. The year of the deluge can actually be divided not only into months, but also into weeks and days. The Bible says that Noah and his sons entered the ark on the seventh day, after God had spoken to him and ordered him to enter it,—specifically naming the seventh day, the Sabbath of the Bible. I have entered the weeks forward and back into the months, and thus find that it was the fortieth Sabbath after Noah's entry into the ark that the dove did not return.

From this representation it is seen that the years of that early period were not materially shorter than the years of the present age. The longevity of the people who lived anterior to the deluge

FIG. 7.

gradually decreased after the deluge. Joseph only lived 110 years. Abraham 175, Isaac 180, Jacob 147, Kohath 133, the grandfather of Moses, and Moses himself, only 120 years. A look at the genealogy of the biblical personages of that age shows that Moses could

easily have written a history of the Creation from tradition, as there were only five generations from Adam to Moses. The story of the Talmud may also be true that Abraham sent his son Isaac to the school of the aged Sem, as Sem lived fifty years yet after the birth of Isaac.

A cuneiform inscription on an Assyrian brick is very interesting. It dates from the reign of King Gudia, shortly after the deluge. This stone I presented for inspection to the Assyrian section of the oriental congress held in Vienna in 1886, and it was by them pronounced genuine. Prof. Jules Oppert, of Paris, gave it as his opinion that the brick was 5,000 years old. As for myself I only claim an age of 4,000 years for it, and if that is correct then it was buried about two hundred years before the birth of Abraham. What will interest you more particularly, gentlemen of the Technic Club, is the fact that both this inscription and that of Nebukadnezar were *printed*. Apparently the art of impressing the writing into the soft clay with the aid of a wooden stamp was known at that early day.

The inscription on another brick dates from the reign of Nebukadnezar, the great founder of the new Babylon. The surface of the brick, however, is so damaged that it is scarcely legible even to scholars advanced in the study of this branch of science. The deciphering has cost much hard work, but was finally successfully accomplished. Fig. 7 shows plainly, in slightly reduced size, the characters contained thereon. The translation is as follows:

1. (D. P.) Nabû-ku-du-ur-ri-ussur—Nebuchadrezzar.
2. sar Bab-îli (D. S.) —King of Babylon.
3. Za-ni-in Ê-sag-ila —Founder of Ê-sagila.
4. û Ê-zi-da —and Ê-zida.
5. Ablu a-sa ri-du —son oldest.
6. sa (D. P.) Nabû-âbla-ussur —of Nabopolassar.
7. sar Bâb-îli (D. S.) —King of Babylon.

With much assiduity, and at a considerable expense of money, the Rev. Mr. Hechler has made a fine collection of antiquities and curios bearing upon ancient history and ancient cults. This collection is known in Vienna as the "Bible Museum," and is located in a hall named the "Church Room," at No. 14 Elizabeth street. Students and others interested in ancient history should not fail to visit this interesting and instructive collection. It is kept open for the use of the public, Sunday afternoons, from 3 to 5. Visitors may rest assured of a courteous reception.

#### REDUCING THE HOURS — 44, NOT 48.

The following dialogue will be interesting reading to THE INLAND PRINTER readers, says an Australian correspondent. His informant says that the scene and words as given below actually occurred during the late strike in the Melbourne foundries:

The proprietor of a foundry near the center of Melbourne is seated in his office, when a delegation of his workmen enter.

"We've come to lay our views before you, sir, before proceeding to enforce them by striking."

"All right, fire away."

"We intend to work only 44 hours instead of 48 per week."

"At what pay?"

"Oh, the same, of course; we'll do just as much work."

"All right, fire away."

"The foreman has been rather hard; we want him sat upon."

"All right, fire away."

"That's all, sir."

"No it isn't; think again. I'm sure there's something else."

"No, sir."

"Well, I'll just tell you, then. You've arranged your hours of work?"

"Yes, sir."

"You've arranged to have the foreman reprimanded?"

"Yes, sir."

"But you've forgotten one thing, and that is to arrange to get some fool to sign your cheques on Saturday, for I won't. Good morning."

#### ELECTROTYPING.\*

NO. III.

##### BURNING DOWN THE MOLD.

The operation of burning down the mold is performed by attaching to a gas pipe a sufficient length of rubber tubing, having a burner inserted in the other end, from which a flame about two inches long is passed quickly backward and forward over the mold. This is done in order to overcome the film of wax that is forced over the rules and cups of the letters in the operation of cutting down the displaced wax on the mold. The flame shrinks back the film and rounds the openings to the rules and types, which allows the brush to enter the cavities and properly blacklead the face and sides of the mold.

##### BUILDING UP THE MOLD.

This operation consists in raising the blank spaces in the mold with wax a sufficient height to produce a corresponding depression in the plate. This is done in order to prevent the blank spaces from blacking the paper in printing, and is performed in the following manner:

The operator, having selected a properly-heated building-iron, several of which are laid on a gas stove in front of him, holds a thin strip of wax in contact with the heated iron directly over and about one-quarter of an inch from the blank spaces, the melted wax in the meantime being allowed to run down from the end of the iron and over such blank spaces as it is desired to raise.

The wax should be perfectly dry, as any moisture would cause it to sputter when brought in contact with the heated iron, thereby endangering the mold.

In order to perform this operation successfully, the operator should have a steady hand, that he may guide the melted wax smoothly and evenly over the blank spaces. An overheated tool, or a slip of the hand, is apt to cause the melted wax to run into the letters or over the face of the cut, which causes extra labor in repairing the plate, and sometimes the damage is so serious as to necessitate the remolding of the work. A safe method is to first try the heat of the building-iron, by running a little wax from the tool on the case outside of the mold.

##### CONNECTING THE MOLD.

The building-up having been properly performed, the operator now proceeds to connect the face of the mold with one or more copper strips, each of which should be half an inch wide and about six inches long. These connections are carefully and firmly embedded in the wax, by laying the heated end of the cutting-knife or building-iron on the copper strips, until they sink below the surface of the wax, after which some additional wax is run over the connection with the building-iron in order to give them additional hold.

It is essential that the wax be scraped from the surface of the embedded copper strips, and that the exposed part of the wax around the connections be polished with plumbago. This is done in order to ensure a proper connection between the copper strips and the plumbago film on the face of the mold.

After the connection strips are firmly embedded in the wax, the operator with a soft brush applies sufficient plumbago to barely cover the face of the mold. Do not *fill* the openings to the rules or the cups of the letters, as the plumbago is liable to pack in the cavities, thus preventing the brush from entering and properly polishing the sides and face of the mold.

##### BLACKLEADING THE MOLD.

Wax being a non-conductor, it is important that the mold should be well blacklead, and have a continuous and unbroken polished surface, as otherwise the deposit of copper in the vat will be defective. In order to ensure a perfect polish on the face and

\*Through the kind permission of Messrs. C. B. Cottrell & Sons, New York, manufacturers of printing presses and electrotype and stereotype machinery, we reprint from their catalogue this article on electrotyping, written for them by P. M. Furlong, foreman of electrotyping department of Messrs. T. L. De Vinne & Co., New York.

sides of the mold, it is necessary that the brush of the blackleading machine should be set perfectly level.

A convenient method is to lay a flat case, *free from wax*, on the traveling-bed of the machine, and then set the brush to the case.

The mold is then placed on the traveling-bed of the blackleading machine, and allowed to pass backward and forward under a laterally vibrating brush for about ten minutes, or until it is perfectly polished; the copper strips or connections should be turned under in the meantime and allowed to fall freely between the openings in the traveling-bed of the machine, in order that they may not become detached in the operation of blackleading.

The molder will add to the success of this operation by rubbing the plumbago well into the *sides* of the rules and types with a moderately stiff brush *before taking the impression of the form in the wax*.

#### STOPPING OUT THE MOLD.

In order to prevent the copper from depositing on such surfaces beyond the mold as have become coated with plumbago, the operator, with a three-cornered tool, scrapes the blacklead film from around the outside of the mold. This is done to destroy the conductivity of that portion of the mold where the deposit of copper is not wanted. By this means the metal case is entirely excluded from the circuit, the slow and annoying method of painting the back of the case with wax avoided, and a great deal of electrical energy and copper are thereby saved.

#### BLOWING OUT THE MOLD.

After the mold is polished, considerable blacklead still remains in the cavities, especially in the openings to the fine rules and dots of the letters, which should be entirely removed before the mold is metallized. Great care must be used in this operation, as any neglect may cause defects in the shell, it being indispensable that the superfluous blacklead should be thoroughly washed out of the mold *before* it is placed in the vat.

The superfluous blacklead is sometimes blown out of the mold with a bellows, but is best performed by a force-pump, with a rubber hose, to which is connected a sprinkler or rose-nozzle.

This operation is performed by laying the case face up on a shelf in a trough, with only sufficient water to cover the face of the mold. The water is then turned on from the pump, after which the operator passes the sprinkler backward and forward over, and about two inches from, the face of the mold, for a few minutes, or until all the loose blacklead is forced out of the cavities of the mold.

This is a reliable and economical method, as the water in use is less than ten gallons and may be used continuously for the day's work.

#### METALLIZING THE MOLD.

To Robert Murray, of England, is due the credit of first making known the use of plumbago, whereby non-conducting surfaces, such as wax, etc., are made conductive. This suggestion proved of inestimable value to those who desired to follow the art of electrotyping commercially. Without the aid of this valuable substance it is doubtful whether the art would have exceeded the bounds of experiment; but still plumbago is but an indifferent conductor, being less than one per cent as compared with copper.

It is well understood, that when a wax mold, coated with plumbago and properly connected, is placed in a sulphate of copper solution, the deposit is slow and tedious; while on the other hand, when a solid body of copper is placed in the same solution, the entire surface is immediately covered with a coating of metallic copper. In following this principle, several attempts have been made to supplant plumbago by means of bronze, copper and other metallic powders, all of which have been unsuccessful, either from a lack of proper adhesion to the wax mold, or from the solvent action on the powders by the solution in the vat.

While all efforts to supplant plumbago by means of metallic powders have been unsuccessful, it remained for Silas Knight, of New York, to discover a means whereby an instantaneous coating

of metallic copper is thrown down on the plumbago film before the mold is placed in the vat.

Mr. Murray's suggestion made it possible to coat non-conducting material with a conducting surface, while Mr. Knight's discovery, when used in connection with the plumbago film, materially reduces the time of the deposit, as the mold is thereby provided with a surface of an eminent conducting quality, by which means the uniformity of the deposit over the entire surface is insured.

Without such preparation the deposit of copper would take place slowly, and gradually spread itself over the surface of the mold. Those portions nearest the connections would therefore receive the heaviest deposit, and those furthest therefrom the thinnest.

The metallizing process, when used in connection with the plumbago film, effects in a few seconds a uniform coating of metallic copper over the face of the mold, thereby insuring a uniform and rapid deposit on the mold in the vat.

#### STRIKING SOLUTION.

This solution is used in metallizing the molds, and is composed of two pounds of sulphate of copper crystals to each gallon of water.

Do not add sulphuric acid to this solution, as it will cause the iron filings to heat, and burn the face of the mold.

The operation of metallizing the mold is performed in the following manner:

After the superfluous blacklead is blown out of the cavities, the mold is laid face up on a level shelf in a sink or trough. The operator then ladles out of a conveniently-placed vessel sufficient striking solution to cover the face of the mold, and immediately sprinkles thereon, from a perforated box or sieve, fine *cast-iron* filings free from dirt, oil or grease.

A fine, long-haired flat brush is used to intermix the filings with the solution, by first tapping the mixture lightly with the brush, and then quickly spreading it backward and forward over the mold. The iron having more affinity for the acid than for the copper, the latter is set free and thrown down on the mold in a bright reguline state.

Immediately after the above operation the mold should be thoroughly rinsed with a strong head of water, as the mixture is liable to heat and destroy the face of the mold. This is best performed by forcing the water through a rubber hose directly into the cavities and over the face of the mold, until all the iron filings are washed off. Should any spots remain uncovered, the operation must be repeated until the entire surface is covered with a film of copper. The operator should be careful to rinse the brush with water immediately after every operation, as the metallic copper in the solution will adhere to the tip end of the brush, and if allowed to remain, will scratch the face of the mold. The brush should be avoided on all cut-work, and the following simple and safe method adopted:

Flood the face of the mold with the striking solution, and after sprinkling the iron filings evenly thereon, reduce the supply of water in the rose-nozzle to a fine spray, which should be allowed to fall gently on the mixture until the metallic copper is set free and thrown down on the mold, after which the full head of water is turned on and all the mixture washed from the mold. This operation should be repeated until the entire surface of the mold is thoroughly covered with a coating of copper. Before the molds are placed in the vat, the solution must be made up ready to receive the work.

(To be continued.)

#### FOOLSCAP.

According to a writer in *Harper's Young People*, "foolscap" paper derives its name from the act of the English rump parliament in ordering the use on the paper of a water mark representing a fool's cap and bells in the place of the royal arms. This is the "sentimental" etymology of the word, which is really derived from the Italian foglio capo — literally "head leaf" or sheet — the name given to that particular size of paper by the early Italian paper makers.

THE INLAND PRINTER.

(See the other side of this sheet.)

## THE INLAND PRINTER.

---

Electro-Fint Engraving Co.

726 Chestnut Street,  
Philadelphia, Pa.

WE take pleasure in submitting, on reverse side of this sheet, a specimen of our process of engraving in half-tone. Having recently enlarged and equipped both of our establishments with the latest improved machinery, and with the aid of skilled labor, we are enabled to execute all orders in the most satisfactory manner and shortest possible time.

We claim for our work artistic effect, first-class printing quality and durability—three things of utmost importance; and in this connection, we make mention of the fact that we control and operate exclusively a process of etching on copper, which gives great clearness and depth, and is admitted by critics to be the best.

In requesting estimates it is necessary to give an accurate description of the kind of copy, the size the engravings are wanted, and any other information necessary to give us a correct idea of customer's needs.

Correspondence and requests for estimates will receive prompt and careful attention.

AMERICAN SYSTEM OF  
INTERCHANGEABLE TYPE BODIES.

## CAXTON OLD STYLE SERIES.

## NONPAREIL (6 POINT).

In taking a brief survey of that early period of English Typography when printers are assumed to have been their own letter-founders, we shall attempt no more than to gather together, as concisely as possible, any facts which may throw light on the first days of English letter-founding, leaving it to the historian of Printing to describe the productions which, as we have already stated, must be regarded, not only as the works of our earliest printers, but as the specimen books of our earliest letter founders. Mores and other chroniclers are, as we conceive, misleading, when they single out half a dozen names from the long list of printers between Caxton and Day, as if they only had been concerned in the development of the art of letter-cutting and founding. It is true that these names are the most distinguished; but it is necessary to bear in mind that the most obscure printer of that day, unless he succeeded in purchasing his fonts from abroad, or in obtaining the reversion of the worn types of another printer, probably cast his letter in his own moulds, and from his own matrices.

Respecting many of our early printers, our information, especially with regard to their mechanical operations, is extremely meagre. But the researches of Mr. William Blades have thrown a stream of light upon the typography of Caxton and his contemporaries, of which we gladly avail ourselves in recording the following facts and conjectures as to the letter-founding of the period in which they flourished. Adopting as a fundamental rule "that the bibliographer should make such an accurate and methodical study of the types used and habits of printing observable at the different presses, as to enable him to observe and be guided by these characteristics in settling the date of a book which bears no date upon the surface," Mr. Blades has succeeded not only in establishing a precise chronology of the productions of the first English printer, but an exhaustive catalogue of his several types, such as has never before been successfully accomplished.

Previous writers, many of them practical printers, have all failed in this particular. Most of them lacked the patience or the opportunity to make systematic study of the specimens of Caxton's press, and have been con-

## BREVIER (8 POINT).

Previous writers, many of them practical printers, have all failed in this particular. Most of them lacked the patience or the opportunity to make a systematic study of the specimens of Caxton's press, and have been content to perpetuate the account of others who, like Bagford, Ames, Herbert and Dibdin, had ample opportunity for such a study, but failed to bring to bear upon their investigations that practical experience which would have saved them from the inaccuracies to be found in their descriptions. Among such writers few have been more unfortunate than Rowe Mores, whose account of Caxton's types (although endorsed by authority of his editor, John Nichols) is as misleading as it is meagre.

As we are concerned with Caxton only in his capacity as letter-founder, we must refer the reader for all details respecting his life and literary industry to Mr. Blades' admirable biography; merely stating here that he made his first essay at printing in the year 1474-5, in the office of Colard Mansion, at Bruges; that in 1477, if not earlier, he settled as printer at Westminster, where he remained an industrious and prolific worker until the year of his death in 1491.

As we have already observed, the history of the introduction of printing into England differs from that of its origin in most other countries in this important particular, that whereas in Germany, Italy, France and the Low Countries letter founding is supposed to have preceded printing

## LONG PRIMER (10 POINT).

Supposed to have preceded printing, in our own country it followed it. Caxton had already run through one font of type before he reached this country, and it appears to be quite certain that his Type No. 2, with which he established his press at Westminster, was brought over by him from Bruges, where it had been cast for him, and already used by his preceptor, Colard Mansion. The English origin of his Type No. 3 is also open to question. There seems, however, reasonable ground for supposing that Type No. 4 was both cut and cast in England; so that Caxton had probably been at work a year or two in this country as a printer, before he became a letter-founder. It must be admitted that any conclusion we may come to as to Caxton's operations as a letter-founder are wholly conjectural. In none of his own works (in several of which he discourses freely on his labor as a translator and a printer) does he make the slightest allusion to the casting of his types, nor does there remain any relic or contemporary record calculated to throw light on so interesting a topic.

## PICA (12 POINT).

That Caxton made use of cast types, it is hardly needful here to assert. Admitting the possibility of a middle stage between Xylography and Typography, the general identity of his letters, the constant recurrence of certain flaws among his types, and the solidity of his pages, may be taken as sufficient evidence that his types were cast, and not separately engraved by hand.

It is scarcely likely that during his residence at Bruges, where, as he himself states in the prologue to the third book of the *Recuyell*, "I have practysed and lerned at my grete charge and dispense to ordeyne this said book in prynte," he would omit to make himself acquainted with the methods used in the Low Countries for the production and multiplication of types; and it is at least reasonable to suppose

**TWO OPINIONS:**

**A. O. CRAWFORD, JOB PRINTER AND FOLDING BOX MANUFACTURER.**

Messrs. GOLDING & Co., Boston:

SOUTH WEYMOUTH, MASS., May 26, 1890.

*Gentlemen.*—The No. 9 (15 x 21) JOBBER bought of you last fall gives perfect satisfaction. You will remember that I stipulated that the speed should be at least 1,500 impressions per hour, without jar or jumping, and this has been more than realized. I often run it at 2,000 impressions per hour. There are many little points about the press which make it exceedingly valuable to the pressman, such as the impression adjustment, the chase latch, the grippers, the throw-off, etc., etc., all so very convenient. I consider the press strong enough for any form that can be put onto it.

Respectfully,

A. O. CRAWFORD.

**F. A. MANGER, PRINTER AND STATIONER.**

Messrs. GOLDING & Co.:

OMAHA, NEB., May 27, 1890.

*Gentlemen.*—In regard to speed, strength, ink distribution and convenience in making ready, I consider the GOLDING JOBBER the best in the market. For this reason I ordered two more of them a few weeks ago. They also make less noise than any other machine I have used, and require less floor space.

Truly,

F. A. MANGER.

The Golding Jobber will be sold as low for cash as any press of its class, or on installments. Sent on thirty days' trial to any responsible printer.

**IF YOU NEED A NEW PRESS, WRITE TO US FOR TERMS.**

If you have an old press which you wish to trade, send us a description, state what you want in exchange, and we will make you an offer.

Special Correspondence of THE INLAND PRINTER.

### THE PRINTERS' EXCURSION TO BOSTON.

ON the afternoon of Tuesday, June 2, a pleasure-seeking and fun-loving party, comprising several delegates from the West on their way to the Boston convention, a number of ladies and gentlemen of Chicago (including two representatives of THE INLAND PRINTER), boarded the limited express train of the Baltimore & Ohio railroad at Chicago for a trip over that picturesque route, with the intention of stopping at Washington en route to avail themselves of the hospitalities of Columbia Union, No. 101, an invitation to which had been extended to all delegates and visiting printers for Thursday, June 4.

The trip to Washington was thoroughly enjoyed by every member of the party; and well it might be. The eastern half of the continent presents no finer scenery or more picturesque views than are beheld on this route. The natural gas region was reached in the early evening, and proved quite a novelty to the party. It was certainly a strange experience to those who were visiting the place for the first time, the blazing lights from the numerous burning gas wells resembling some weird and fantastic spectacular display as the train whizzed by. The scenery became more beautiful as the journey progressed, until the mountain regions of West Virginia and Maryland were reached, the effects here produced serving as a grand culmination to a thoroughly enjoyable and constantly changing panorama of nature's handiwork. It would certainly be a dull person whose sense of the beautiful would remain unstirred by the rapidly changing scenes which follow each other with such regularity in the Cheat River country, or among the heavily-wooded mountains, the valleys and ravines from which the headwaters of the beautiful Potomac find their source, the interest continuing without abatement until historic Harper's Ferry is passed.

The party reached Washington in due time, and was taken in hand by a reception committee composed of George A. Tracy, John L. Kennedy, C. C. Casterline, T. M. King, H. E. Springer and J. L. McKelvey. These gentlemen, assisted by Albert E. Ingalls, William Briggs, W. F. Dunn, E. M. Kerrott, William Ramsey and many other members of the craft in the capital city, gave the visitors (who were by this time arriving in large numbers from various parts of the country) a sample of Washington hospitality as extensive as it was cordial, and altogether of a nature that will not readily be effaced from the memory of those who were fortunate enough to be participants of it.

The day of arrival was occupied in visiting the various places of interest in this city. The spacious and well-kept avenues and squares, the numerous statues and monuments, the public parks and grounds, the magnificent government buildings, the towering Washington monument and the imposing capitol building, were among the places visited. These, with numberless minor objects of interest to be seen, will go far to make a first visit to the city of Washington a memorable event in the life of any appreciative citizen of the great Republic.

On the morning of the following day (Thursday) the entire party of visitors, augmented by the addition of several ladies and gentlemen from the government printing office, and all under escort of a committee from the local union, enjoyed a very pleasant excursion down the Potomac river to Mount Vernon, the Mecca of American patriotism. Here every attention was shown the visitors, who were courteously guided through the rooms of what was once the residence, and the death place, of the immortal father of our country. Every object of interest was fully and minutely explained. The tomb of Washington was silently and reverently viewed by the visitors, who also enjoyed the rare privilege of being photographed in a group on the lawn fronting the residence. On the return trip clam chowder and luncheon were served, and needless to say, heartily enjoyed by all.

On their arrival in Washington many of the party took occasion to visit the government printing office, where, by the courtesy of Public Printer Palmer, who was introduced to each individual member of the party, they were shown through the various

departments of that vast establishment by William Briggs and J. L. Kennedy, and where many old friends from different parts of the country were met by THE INLAND PRINTER correspondent.

But Washington hospitality was not yet exhausted, a circumstance that was quickly made apparent. In fact, the prevailing idea which appeared to govern the actions of the local craftsmen was a desire to make the most of every hour in which the visitors remained in their magnificent city. Invitations were promptly issued to each of the visitors for a banquet to be given at a well-known caterer's on the same evening, and it is safe to say that it would require a roll-call to discover the fact that there were any absentees. After full justice had been done the good things set forth—and it must be admitted that western appetites were mainly responsible for the extraordinary rapidity with which the various dishes disappeared—Mr. J. L. Kennedy, the popular president of Columbia Union, in a neat speech welcomed the visitors to Washington, and expressed the hope that the coming convention, in its enactments, would meet the expectations of the printers of the country at large. M. J. Carroll, of THE INLAND PRINTER, responded on behalf of the guests, and was followed by Messrs. Jullien, Thomas, Marston and McKelvey, of Washington; Williams, Chicago; Grubbs, Indianapolis; Halsey, Portland (Ore.); Hickey, San Francisco; Freeman, Birmingham; Wines, St. Louis; Dewey, Detroit; and Friedlander, Memphis, in songs, speeches and recitations. At midnight the party dispersed, after voting a resolution of thanks to the members of Columbia Typographical Union.

The party left Washington next morning with many regrets that they could not prolong their stay, and arrived in New York after a five hours' ride over the famous Royal Blue Line of the Baltimore & Ohio road, where they were transferred to the steamer Puritan, the newest and handsomest of the well-known Fall River line of steamboats. After a most delightful night's journey over the Sound and Narragansett Bay, they arrived at Fall River early next morning, when a two hours' ride over the Old Colony railroad landed them safely at the point of destination, the City of Boston, in time for dinner.

The Quincy House was announced as the headquarters of the delegates during their stay in Boston, and the immediate vicinity of that popular hotel presented as animated a scene during the week following the arrival of the delegates as though a national political convention was being held in the city. The majority of the visitors arrived on Saturday, June 6, and on the evening of that day attended an informal reception tendered them by Boston Union, No. 13. The energetic and popular president of the union, Mr. Augustine McCraith, in company with the reception committee, of which Mr. George Stephens was chairman (and it is difficult to conceive how a better selection could have been made), took immediate charge of the excursionists upon their arrival, and in the evening conducted them to the assembly rooms of the local union, where was inaugurated a series of entertainments and excursions as liberal and extensive in its character and execution as ever accompanied a convention of the International Union. President McCraith welcomed the visitors to Boston in so hearty a manner as to leave no doubt as to the genuineness of the hospitality of the printers of the Hub, after which refreshments of various kinds were served, the reception ending with short addresses by Chairman Stephens and a number of prominent printers from all sections of the country.

On Sunday morning the entire delegation were invited to participate in an excursion to the ancient and historic town of Plymouth, the landing place of the Pilgrim Fathers, an excursion which proved to be one of the most enjoyable and unique entertainments of the entire series. A special train had been chartered for the occasion, which left the Old Colony depot at 11 o'clock in the morning, and by way of the shore line, proceeded to the landing place of the Pilgrims. The train contained about three hundred delegates, visitors and members of the Boston union, several of whom were accompanied by their wives.

When the train came to a halt at the place of destination, there was a delegation representing the *Mirror* newspaper of the town,

THE INLAND PRINTER.

RECEPTION COMMITTEE BOSTON TYPOGRAPHICAL UNION, 1891.

## HERE'S YOUR CHANCE!

The circulation of THE INLAND PRINTER is now 8,000 copies per month, but it is not the intention of the publishers to rest at that mark. Inside of twelve months our subscription list will be 15,000.

In order to assist in this important move, we make the following

## SPECIAL OFFER

To anyone sending us a yearly subscription during the months of July or August, at the regular price, \$2.00 per year, we will place his name on our books for one year, beginning with No. 1 of Vol. IX (October, 1891), AND IN ADDITION *will send the July, August and September numbers of 1891, FREE.*

## REMEMBER

This offer holds good only during July and August, and applies only to subscriptions sent in at the \$2.00 rate, *and not to clubs at the \$1.50 rate.* In sending subscriptions, give full name, address, county and state, and remit by express, draft, money order or registered letter.

## SHOW THIS OFFER

To your friends, if you are at present on our books. This number (the July) is a Souvenir they ought to have. To secure *this issue alone* is worth \$2.00. Call their attention to this.

SEE OUR MAP OFFER on another page.

and another representing the Plymouth association, standing on the platform ready to extend the courtesies of the settlement to the visitors. Crimson satin badges, with a fac simile of Plymouth

GEORGE H. STEPHENS,  
Chairman Reception Committee Boston Typographical Union, No. 13.

Rock at the upper end, were presented to everyone on the train. A procession was formed, which marched to the National Memorial Monument, a grand and imposing work of art, the figures of heroic proportions, the whole reaching an altitude of 81 feet. When the crest of the barren sand heap, on which the monument is erected, was reached, Mr. William T. Davis, vice-president of the Selectmen of Plymouth, took up a position in the shadow of the Goddess of Morality, and gave a brief history of the movement which led to the erection of the monument, prefacing his remarks with a hearty welcome to all present to the town of Plymouth. A brief address of welcome was also delivered by Mr. P. M. Stoddard, one of the directors of the Pilgrim Society. A very elaborate dinner was served the party at Odd Fellows' Hall, followed by brief addresses by President McCraith, of the Boston union, E. F. Welling, vice-president, Hugh O'Halloran, ex-president, Charles G. Wilkins, a member of the reception committee, and August Donath, of Washington. After dinner the delegates were escorted to Pilgrim Hall, which had been thrown open for their inspection. Here a half-hour was spent in looking at the relics of the Mayflower and other curiosities, together with the really magnificent paintings which adorn the hall. The next point of interest visited was the granite-canopied Pilgrim Rock, on which our forefathers stepped, or were supposed to have stepped, when they made their landing from the Mayflower, after which the excursionists made their way to the train for the return trip to Boston.

The day was a thoroughly enjoyable one to those present, and gave the utmost satisfaction to all concerned. It can safely be said that the old puritan town seldom experiences such an invasion of its sacred precincts on a Sunday. Shade of Miles Standish! how did your righteous memory ever tolerate such a worldly, sight-seeing throng on a Sabbath day? Surely the world must have undergone many changes in the last two hundred years, to make such an event possible. On their return to Boston the delegates had but scant time to shake the dust from their clothes and take supper, when the reception committee announced themselves

in readiness to conduct them to the Park theater, where a grand concert had been arranged for their edification. The theater was filled by the visitors, the members of Boston union and their friends. The performance proved an appropriate climax to a day filled to overflowing with variety, instruction, and rational enjoyment.

The convention was called to order under the most auspicious circumstances at Faneuil Hall, on Monday, June 8, at 10 A.M. Shortly thereafter an invitation was received and accepted for a complimentary reception and excursion tendered by the ex-delegates of Boston and vicinity, which proved a great success. This was essentially a veteran's day, and was taken advantage of by all the ex-delegates who were attending the convention or resident in Boston or its immediate vicinity, to extend or receive congratulations. The party, to the number of about five hundred ladies and gentlemen, boarded the steamer New York at 2 o'clock, and steamed down the harbor. Many old timers were noticeable on this occasion, prominent among whom THE INLAND PRINTER correspondent was proud to meet such men as Harvey Ellis, E. M. Kerrott, Columbus Hall and August Donath, of Washington; M. R. H. Witter and A. G. Wines, of St. Louis; William A. Aimison, of Nashville; William J. Hammond and H. H. Cowles, New Orleans; John D. Vaughan, Denver; Frank Pelton, J. R. Jessup and James A. Peck, Chicago; James J. Dailey and Leon Farroe, Philadelphia, and William J. Quinn, James Pym, W. H. Harding and H. T. Elder, of Boston.

All present were provided with boutonnieres through the kindness of Boston florists, and songs, speeches and recitations, under the guidance of James Pym, master of ceremonies, enlivened the trip. The day was perfect, and many expressions of pleasure were heard from those on board. The clam chowder and other Boston delicacies, served in great profusion, no doubt went far toward completing the satisfaction of the excursionists, the party return-

CHARLES H. BRADLEE,  
Secretary Reception Committee Boston Typographical Union, No. 13.

ing to Boston immensely pleased with their day's outing on Boston Harbor and Massachusetts Bay.

Tuesday afternoon was set apart by the Boston reception committee for an excursion and clambake at Nantasket Beach. The convention adjourned at 12 o'clock, when a procession was formed

outside the hall, and, headed by a band of music, proceeded to Rowe's wharf, where the steamer Governor Andrew lay waiting for the party. At 12:30 the lines were cast off, and the boat steamed swiftly down the harbor on the pleasant trip to cooler shores and fresher air. The party arrived at the point of destination without further incident, and proceeded at once to take full possession of the place. A stroll along the beach by some, a ride by many over the famous Jerusalem road, the pleasures of a genuine salt-sea bath by others, and a general good time by all, occupied the time until 2:30 o'clock, at which hour the party were escorted to the great Rockland café, where plates had been laid for three hundred people.

After a sumptuous repast of clams, supplemented by all the deep-sea delicacies known to this famous resort, President McCraith, in a brief address, thanked the visitors for so liberally responding to the invitation of the Boston union. M. J. Carroll, of Chicago, was called upon to respond upon behalf of the visitors, after which the members of the party proceeded to station themselves on the steps and the broad veranda of the Hotel Nantasket, where they were photographed in a group. At five o'clock the return trip was begun, the party reaching their hotels in time to allow the delegates to engage in an evening session of the convention, and all well pleased with what was to many of them their first experience of a genuine New England clambake.

In all the long list of entertainments, excursions and hospitalities heaped upon the visitors by the printers and citizens of Boston, none were more fully enjoyed than the excursion to Deer Island and the city institutions, which was set for the hour of 1:15 o'clock on Wednesday afternoon, at which time the party proceeded to Battery wharf, where they were met by Mr. Thomas Devlin, of the Board of Commissioners of Public Works, President Barry of the Common Council and other city officials, and escorted on board the James Putnam Bradlee as guests of the City of Boston. The visitors were first taken to Deer Island, and given an opportunity to minutely inspect the institutions at that place, after which they were escorted to the chapel, where the boys of this reformatory institution entertained them with songs and military exercises, and little speeches were made by Commissioner Devlin and President Barry. President McCraith and August Donath responded in behalf of the guests, when they were escorted to the banquet hall, and invited to partake of a substantial collation. The return to the city was made in time to admit of the delegates taking part in another night session of the convention.

The courtesies of the people of Boston had up to this time been showered upon their guests so thick and fast, that it began to dawn upon the minds of many of the latter that it was about time to make some recognition of the fact. The ex-delegates set the ball rolling, when they met in Parlor G of the Quincy House, on Thursday, at noon, with M. R. H. Witter, of St. Louis, in the chair. M. J. Carroll, of THE INLAND PRINTER, was called upon, who, in a few words of thanks for the many acts of kindness and courtesy shown them, presented Mr. James Pym, Chairman of the Ex-Delegates Association of Boston, with a handsome gold-headed cane, the gift of the visiting ex-delegates. Mr. Pym was visibly affected by this unexpected turn of affairs, but modestly endeavored to return his thanks for the part he played, as well as for the association he represented.

In this connection, and with a view to dispose of this feature of the Boston trip as briefly as possible, it may be mentioned that testimonials of a similar nature were presented to Augustine McCraith, president of the local union, and George Stephens, Chairman of the Reception Committee, during a suspension of business in the convention on Friday afternoon. The former presentation was made by delegate Kidd, of Chicago, and the other by delegate Otis, of Washington. The final presentation was made to the retiring President of the International Union, E. T. Plank, on Saturday afternoon, in the convention hall, and consisted of an elegant gold watch, which was handed the gentleman with a few well-chosen remarks by delegate A. G. Davis, of Boston.

A very graceful compliment was paid the International Union in the sending to that body of an invitation to visit the Haverhill

Paper Company at Haverhill, and the Green Manufacturing Company, Berlin Falls, New Hampshire, for Thursday afternoon. As the convention was in session on that day, but a limited number were able to avail themselves of the courtesies extended. A special train containing the party left Boston at 12 o'clock, and reached Haverhill about an hour later, where they were escorted through the works by J. H. C. Hussey and Isaac B. Hasford, and shown the different processes employed in the manufacture of paper. After every attention had been paid the wants of the inner man, the visitors returned to Boston in the evening, well pleased with their afternoon's journey.

It has always been customary to wind up the festivities attending a convention of the International Union with a grand banquet, and this year no exception was made to the rule. For this occasion the American House had been selected as the proper place, and, spacious though its dining rooms are, they were filled to overflowing on Thursday evening when the guests sat down to supper.

The honorary guests included Hon. Amos J. Cummings, Gen. Charles H. Taylor, J. H. O'Neil, Harry A. M'Glenen, ex-Mayor Hugh O'Brien, Alderman Keenen, representing the mayor, Aldermen Leary and G. E. McNeill. Speech-making followed the repast, including one of the happiest efforts of which Congressman Cummings was capable, the party dispersing at a late hour.

Friday and Saturday were devoted strictly to business by the convention, which adjourned at 4 o'clock on the afternoon of the latter day, after which the visitors began departing for home, about 150 of them going by way of New York to partake of an excursion and clambake at Coney Island, an invitation for which had been extended the convention by the union of that city.

It would be difficult to express in words the gratitude of the delegates and visitors for the royal treatment they received while in Boston. The Reception Committee, of which George Stephens was chairman, and the officers of Boston union, particularly President McCraith, are entitled to high praise for the untiring, courteous manner in which they at all times ministered to the comfort and enjoyment of their guests. In this connection we must not neglect to mention the fact that ex-delegates James Pym, J. H. O'Donnell, W. J. Quinn, H. T. Elder, H. O'Halloran, J. W. Douglas and W. J. C. Harding, together with delegate A. G. Davis, deserve equal credit with any persons mentioned for making the series of entertainments attending the convention of 1891 an event that will scarcely ever be forgotten by any who were fortunate enough to be in attendance.

The Boston *Globe*, *News* and *Herald*, besides furnishing valuable reports of each day's proceedings of the International Typographical Union, ordered copies of each issue free to the delegates during convention week, a courtesy that was fully appreciated and favorably commented on.

A description of the reception in New York City, with a review of the incidents attending the excursion to Coney Island, are necessarily reserved for the next issue of THE INLAND PRINTER.

#### NO PAPERS IN THE FUTURE LIFE.

Our Australian correspondent says that recently some scandal was going the rounds of Melbourne, concerning the management of the Salvation Army Prison Gate Brigade. Two of the great journals were very severe in their comments upon the affair, and in retaliation an Army poet holds them up thus in a verse of one of the popular hymns :

Over there, over there,  
Over there, over there —  
There will be no daily papers over there ;  
The devil cannot rage  
Through the *Argus* and the *Age* —  
There will be no daily papers over there.

A CONVIVIAL Buffalo printer, while asleep, fell out of a chamber window and would have been killed had he not fallen squarely upon two reporters. They were knocked down and badly shaken, but got an item for their papers by the means.

### THIRTY-NINTH ANNUAL SESSION OF THE INTERNATIONAL TYPOGRAPHICAL UNION.

A detailed account of the proceedings has been rendered unnecessary, as they will be bound and forwarded to subordinate unions by Secretary-Treasurer McClevey in a few days. The following synopsis is therefore offered: The convention was held in Faneuil Hall, Boston, Massachusetts, commencing June 8, 1891, and prior to the regular proceedings Mr. George Stephens, chairman of the Committee of Arrangements of Boston Typographical Union, introduced the Rev. Father Bodfish, who invoked the divine blessing upon the delegates and visitors assembled.

Governor Russell being then introduced, delivered an address of welcome on behalf of the Commonwealth of Massachusetts.

Mr. Stephens then introduced Alderman Stacey, who, in the absence of Mayor Matthews, welcomed the delegates and visitors on behalf of the city of Boston, extending, on behalf of the City Council, the freedom of the city.

Mr. Augustine McCraith, president of Boston Typographical Union, was then introduced, who welcomed the delegates on behalf of Typographical Union No. 13 and the allied crafts.

President Plank responded briefly on behalf of the delegates, after which communications of greeting and good wishes were read from Fort Wayne Typographical Union, the Boston Press Club, and Mr. G. W. Childs, of the Philadelphia *Public Ledger*.

The reports of officers were submitted, and, on motion of Mr. Prescott (Toronto), were referred to committees without reading.

Resolutions were adopted revoking the charter of the Town of Lake union and merging its membership into the Chicago union, as that town was wholly within the precincts of the city of Chicago.

A resolution providing for an exhibit at the World's Fair was laid upon the table.

A resolution urging the government to assume control of the telegraph system of the country was defeated.

Resolutions were adopted making it the duty of compositors, stereotypers or pressmen to unionize any department of the office in which they are employed which may be run by non-union men.

A resolution was adopted appointing a committee to confer with the officers of the German-American Typographia relative to amalgamating with the International Typographical Union on an equitable basis.

The following resolution was adopted:

That subordinate unions are recommended to annually present their scale of prices for the employers to sign, which scale, when signed, shall be binding on both parties during the year.

Resolutions were adopted recommending the passage of a bill introduced at the last session of congress making it compulsory upon the officers of the government to enforce the eight-hour law passed in 1888.

The following was adopted:

*Resolved*, That the Federal Department of Labor be requested to gather industrial statistics concerning the printing business, and that such department institute and conduct an inquiry to that end.

An amendment to the constitution was adopted providing for the payment of the sum of \$50 for the funeral expenses of deceased members from the funds of the International Union.

The following was adopted to be embodied in general laws—

No person shall be eligible to hold office in the International Union unless he or she be an active member of a subordinate union.

Considerable time and discussion was devoted to an amendment of the general laws regulating the discharging and hiring of help, a measure that was generally designated as the priority law. This measure was finally defeated by a very decisive vote.

In regard to the Childs-Drexel Home for union printers it was decided that the dedication of the home take place on the next birthday of Mr. George W. Childs, of Philadelphia; that a monthly contribution of ten cents per member be levied for the support of the institution; and that hereafter none but practical printers actively engaged at the business be eligible for election to the Board of Trustees. In the interest of economy it was decided to reduce the number of the board to seven members, and in accordance with this resolution it was voted not to elect successors

to the members whose term of office expires this year—Messrs. Cummings, Parr and Lambert.

The following resolutions were adopted in relation to the reduction of the hours of labor:

*Resolved*, That this convention heartily indorse a movement regulating the hours of labor in the book and job branch of the printing trade to be not more than nine hours per day, except Saturdays, when not more than eight hours shall constitute a day's work, throughout the jurisdiction of the International Typographical Union, and refer the matter to subordinate unions for ratification, the same to go into effect October 1, 1891.

*Resolved*, That the secretary-treasurer submit the above proposition in a printed form to the subordinate unions to be voted upon by them at their July meeting, the subordinate unions to immediately notify the secretary-treasurer of their action, who shall report the result of said action to the executive council, August 15.

*Resolved*, That in the event of such action being favorable to said reduction, the executive council be empowered to immediately confer with the American Federation of Labor urging their coöperation.

*Resolved*, That if such action is not favorably considered by the American Federation of Labor, the executive council be empowered to act independently, and take immediate steps to have the law go into effect October 1, 1891.

A penalty of a \$5 fine was enacted, to be assessed against any member violating the six-day law in newspaper offices.

The following is the report of the committee relative to the pressmen who have seceded from the International Union, and which was adopted:

Your committee would recommend that it be enjoined upon typographical unions everywhere to use every possible effort to unionize pressrooms.

Your committee would also recommend that the interchange of cards between the International Typographical Union and the International Printing Pressmen's Union be not permitted.

After considering a lengthy report of the committee on the relations of the seceding pressmen with those who had remained in the International Union, the appointment of a committee to visit the convention of the International Printing Pressmen's Union at Detroit, the adoption of the report of the Committee on Thanks, and the disposition of a multitude of matters of minor importance, the convention finally adjourned at 4 o'clock on Saturday afternoon to meet in Philadelphia in 1892.

### OFFICERS OF INTERNATIONAL TYPOGRAPHICAL UNION, 1891.

*President*, W. B. Prescott, Toronto, Ontario.

*Vice-President*, James McKenna, New York City, New York.

*Second Vice-President*, John Von Buettner, Chattanooga, Tennessee.

*Third Vice-President*, P. J. Weldon, Chicago, Illinois.

*Secretary-treasurer*, W. S. McClevey, Chicago, Illinois.

*Organizers*.—First District, Edmund Beardley, Brooklyn, New York; Second District, J. F. Klunk, Kansas City; Third District, Samuel R. Freeman, Birmingham, Alabama; Fourth District, Victor B. Williams, Chicago, Illinois; Fifth District, J. W. Patterson, Ottawa, Ontario; Sixth District, John R. Winders, San Francisco, California; Seventh District, Charles Abernethy, Ogden, Utah.

*Delegates American Federation of Labor*.—O. A. Williams, Pittsburgh, Pennsylvania; W. C. Boyer, Omaha, Nebraska; W. E. Shields, Washington, D. C.; Frank A. Kidd, Chicago, Illinois.

William B. Prescott, the president of the International Typographical Union is said to be the youngest man who ever occupied the position, being born in 1864, at Thornhill, in the vicinity of Toronto, Ontario. He was apprenticed at the early age of thirteen years, and in February, 1883, joined Toronto union, of which he has been the presiding officer for three successive terms, besides occupying many important positions in union affairs and labor reform movements. Among the many congratulatory telegrams sent to Mr. Prescott was the following from the mayor of Toronto, Mr. Edward F. Clarke, himself a graduate of the stick and rule:

TORONTO, Ont., June 12, 1891.

To W. B. Prescott, *President-elect*, International Typographical Union, Boston:

Accept my cordial congratulations upon your election. May the craft abundantly prosper under your administration, and complete your triumph by bringing the International to the Queen City next year.

E. F. CLARKE, Mayor.

DELEGATES TO INTERNATIONAL PRINTING PRESSMEN'S CONVENTION, DETROIT, MICHIGAN, 1891.

From our Special Correspondent.

### AT THE DETROIT INTERNATIONAL PRINTING PRESSMEN'S UNION CONVENTION.

A hospitable welcome was extended to the delegates and visitors to the International Printing Pressmen's Union convention at Detroit, on Monday, June 15, and in the evening an informal reception was held at 8 o'clock, in the parlors of Gies's hotel, where a pleasant and fraternal time was passed.

Tuesday was devoted to convention business, as described elsewhere in our columns, and on Wednesday delegates and visitors were treated to a carriage ride through the principal avenues of the city, a diversion being made to accept of the courtesy of the management of the Michigan Stove Company, whose works, by the way, are the largest in the world. This large plant includes sixteen acres of handsome and substantial brick structures, covering six acres of ground. The main building is five stories in height with mansard roof, 80 feet wide and 1,250 feet deep, with an east wing fronting 500 feet on Jefferson avenue. Between 1,400 and 1,500 men find employment there, and the pay roll amounts to over \$40,000 monthly. The officers of this company are Jeremiah Dwyer, president; George H. Barbour, vice-president and manager; M. B. Mills, treasurer, and C. A. Ducharme, secretary. The visitors were conducted through the establishment by Mr. Thomas Garin, the superintendent, and members of the office staff, the explanations of the various processes which go to make the completed stove being both interesting and instructive, and strongly impressing on the auditors the merits of "The World's Best," the Garland stoves and ranges.

On nearing the exit, a most comforting scene opened upon the thirsty throng which emerged from the heated molding rooms, for here was arrayed a refectory of eatables and drinkables, admirably served and admirably appreciated, and after justice had been done this hospitality, congratulatory speeches were made by Messrs. "Joe" Labadie, T. J. Hawkins and others, in which the thanks of the departing guests were gracefully expressed, to which the assembled entertainers returned their acknowledgments. Souvenirs of the occasion were presented to the guests as they took their departure.

Upon reëntering the carriages the visitors were driven across the bridge, and around the beautiful Belle Isle, where preparations are being made in the way of appropriate floral display for the approaching Grand Army Reunion. The rain, which began to fall heavily, by no means dampened the spirits of the party, and the occasion was one of unalloyed enjoyment, the beautiful river and scenery calling forth many expressions of pleasure. The drive terminated at the Casino, where the party regaled themselves, and many a jest, speech and reminiscence passed the time away until the arrival of the boat, when the party departed, well pleased with their outing.

Thursday was entirely devoted to convention business, and on Friday afternoon the festivities were concluded by a river and lake excursion to the Flats, where a fish supper was indulged in, at the Star Island House, the return being made at 10 o'clock P.M., thus terminating a pleasant and a fraternal week, which will live long in the memory of the participants in the hospitality of Detroit Union No. 2.

The labors of the committee of arrangements, consisting of Messrs. George D. Cline, N. W. Healy, G. A. Ray, Silas Risher and Thomas Reardon, to make the stay of the visitors a pleasant and agreeable one was admirably successful, and reflects credit upon them.

The handsome souvenir issued by Detroit Union No. 2 was in charge of George D. Cline, and as it was turned out from the office of Messrs. Raynor & Taylor, it is sufficient to say that it is a work of art.

The souvenir programme, the work of Messrs. Clarke & Reardon, of Detroit, is a creditable job appreciated by the connoisseurs for whom it was designed.

Among the many pleasant acquaintances formed, your correspondent has pleasure in naming President Charles W. Miller,

Secretary-treasurer T. J. Hawkins, Messrs. P. J. Dobbs, Emil Siebecker, Edward J. Inloes, George Cline, N. W. Healey, James E. Hardy, John Love, John Ford, Al. Longenecker (eastern agent for Charles Eneu Johnson & Co.), "Bob" Pollock (superintendent of the Buffalo Ink Works), Joe Doyle (agent for Queen City Printing Ink Company) and R. F. Sullivan of the H. O. Shepard Company, Chicago.

### PROCEEDINGS OF CONVENTION OF THE INTERNATIONAL PRINTING PRESSMEN'S UNION.

The third annual convention of the International Printing Pressmen's Union was formally opened in Detroit, Michigan, on Tuesday, June 17, 1891. The address of welcome was made by Mr. N. W. Healey and the convention came to order with President Miller in the chair and T. J. Hawkins at his post as secretary. The time was mostly taken up in receiving credentials and the appointment of committees, with other preliminary arrangements. A categorical account of each day's proceedings may be dispensed with and a brief statement of the principal subjects legislated upon offered instead, as being more comprehensive.

The apprentice question has been advanced a stage so that it is now the law of the International Printing Pressmen's Union requiring the employment of four pressmen to entitle an employer to employ one apprentice. It had been proposed to establish a sick and death benefit, but the project was met with such opposition that it was referred to the next convention.

A grievance that pressmen have felt for a long time in various parts of the country is the assumption of foremen of composing rooms to dictate to pressmen employed in printing offices, notably so in the government printing office in Washington. In connection with this resolutions were adopted reciting that the convention deemed it for the best interests of the craft generally that a competent pressman should be in charge of each pressroom, Congress having by law established the office of foreman of printing as well as that of binding and defined their duties, the convention urges that congress shall by law create the office of foreman of pressroom in the government printing office and define his duties, and recommends to subordinate unions that they appoint committees to wait on their respective senators and congressmen and urge upon them the necessity of following out the course of action outlined. A committee will also draft a fair presentation of the reasons why such action should be taken by congress.

A step in line with the foregoing, but of more general application, was the adoption of the following:

WHEREAS, It has been customary in different parts of the country for foremen of composing rooms to interfere in and assume control over pressrooms, to the manifest injury of the pressmen, who should act as foremen of such pressrooms, therefore be it

*Resolved*, That hereafter no one but a pressman shall be recognized as foreman of a pressroom throughout the jurisdiction of the International Printing Pressmen's Union.

In reply to the request of the committee appointed at the late convention of the International Typographical Union to affiliate with them, the convention adopted a resolution inviting the pressmen's unions which still remain connected with the International Typographical Union to send delegates for a joint convention next year so as to arrange for a thorough consolidation of the craft.

The convention by resolution decided to create an international labor bureau for its members, so as to bring the unemployed pressman and the employer together. This bureau was placed under the control of the secretary-treasurer.

Resolutions making it the duty of subordinate pressmen's unions to organize the printers working in the newspaper pressrooms of the cities wherever they are not now organized; indorsing the blue label of the International Cigarmakers Union; also one separating the offices of secretary-treasurer and editor of the *American Pressman*, the official organ, and extending the term of the latter to three years, were adopted.

The convention completed its labors on Friday and adjourned to meet on the third Tuesday in June, 1892, at St. Louis, Missouri.

The following officers were elected for the ensuing year: President, C. W. Miller, Philadelphia, Pennsylvania; first vice-president, P. G. McCann, Ottawa, Ontario; second vice-president, J. Ford, Akron, Ohio; secretary-treasurer, T. J. Hawkins, New York City, New York.

#### CHROMATIC ATTACHMENT FOR CYLINDER PRESSES.

Progress in printing has not alone been made in the manufacture of type, in new devices to aid in the composing room, in improved machinery for the pressroom and bindery of the ordinary printing office; it has gone farther, and, by the invention shown herewith made it possible to print a newspaper in three or more colors at one impression and on a fast perfecting press.

The accompanying cut shows a chromatic attachment for cylinder presses, especially those of the perfecting type, invented by Mr. J. C. Kellberg, of Harrisburg, Pennsylvania, and used with considerable success by him in printing the *Telegram* of that city in three colors. In Fig. 1, the impression cylinder is designated by the letter A. Around this are the form cylinders B B, on which the color plates are fastened by any suitable device. There can be any number of form cylinders, necessarily one for every primary color wanted. Fig. 2 gives another view of the form cylinder. Lateral register is obtained by means of the screw F, attached to a stationary collar G. By turning this screw the form cylinder is moved either to the right or left as the case may demand. Fig. 3 represents the dial *g* fastened to gear D, and index finger *f* fastened to the center of shaft. C is the scale on the face of dial *g*, laid off so as to correspond with the inches and fractions of an inch on the circumference of the form. After pulling a proof of form a measure is taken of the amount out of register, with an ordinary foot rule. Then by placing the index finger at zero and loosening set-screws *d d* that bind the gear D fast to the shaft, the cylinder can be moved backward or forward the number of inches or fractions of an inch out of register (which is shown by the index), after which the set-screws are tightened and the register is perfect.

A plate for each form is made from original matrix, leaving such lines on each as are needed for the color intended, and the register after being adjusted as shown above cannot be otherwise than right. The arrangement of fountains to supply the different colors to the particular rollers covering each form is not shown in the cut, but can be readily understood. Samples of the papers printed with this device have been forwarded to THE INLAND PRINTER, and are indeed a novelty, and something out of the usual line of everyday newspaper work. Mr. Kellberg is to be congratulated on the success of his contrivance.

IF all the Germans and German-Americans now in New York were to leave it in a body they would still be kept fresh in mind by reason of their remarkable use of our word "already." Just as we use the word "now," saying, "See here, now," or "Well, now, you know," so they lug in "already" by the head or the heels or the middle whenever and wherever they can fit it in. And the queerest thing about it is that native-born Americans who have much to do with the Germans catch the habit from them and end every sort of sentence with that word. — *New York Sun*.

#### SPECIMENS RECEIVED.

Owing to press of matter the review of specimens received is unavoidably held over until the August issue of THE INLAND PRINTER.

#### AN ACKNOWLEDGMENT.

To the courtesy of the Souvenir Committee of Boston Typographical Union, No. 13, Messrs. Charles W. Brown, Thomas H. Gilman and Edward P. Britt, THE INLAND PRINTER is indebted for the individual portraits in this issue, which appeared in the Souvenir. In this connection we may say that much credit is due Mr. Brown, the editor of the Souvenir, for the result attained, handicapped as the committee were in the necessarily hurried preparation of the work.

#### PERSONAL.

We acknowledge calls from the following gentlemen during the past month: George F. Barden, of the L. L. Brown Paper Company, Adams, Mass.; William Reinecke, of the *Nord Iowa Herald*, Elkader, Iowa; Wilbur G. Smith, of the A. B. Morse Printing Company, St. Joseph, Mich.; C. P. Rice, Salt Lake City, Utah; Messrs. Curry and Burks, of the *Register*, Bement, Ill.; T. B. Jenkins, of the Stecher Lithographing Company, Rochester, N. Y.; H. Bronson, president Cleveland-Gordon Press Company, Cleveland, Ohio; T. B. Brown, State Printing Office, Topeka, Kan.; W. N. Hall, of the Hall & O'Donald Lithographing Company, Topeka, Kan.; H. Meyer, of Denver, Colo.

#### PRESS ASSOCIATION NEWS.

THE Missouri Press Association represents 625 newspapers, which reach 3,000,000 readers.

THE Massachusetts Press Association proposes to take a trip to Canada and up the Saguenay for its summer excursion. The members will leave Boston on July 6 and return on July 10.

THERE are now, in working order, ten ocean electric cables from America to Europe. One cable reaches each important island of the Antilles and the Caribbean sea, and to the coast of Brazil. Another cable connects with several other South America points, and the whole coast of South America is girdled by telegraphic lines reaching ocean cable stations.

WHILE inviting attention to the eighth semi-annual meeting of the Military Tract Press Association, to be held at Canton, Illinois, July 9 and 10, 1891, the cordial invitation of President Tom H. B. Camp and Secretary J. W. Strong contains the following: "You are cordially invited to attend this meeting and become a member of the association. We know that you can do us good and feel that perhaps you can learn something to your advantage from us. \* \* \* Canton is a town that has been largely built by printer's ink, her manufacturers and merchants ranking among the heaviest advertisers in the state, and it will well repay you to attend this meeting if you derive no further benefit than a personal inspection of her leading factories and business houses, and consequent ability to refer your business men to Canton as an example of the judicious use of printer's ink."

WE have received the following respecting the National Editorial Convention, to be held in St. Paul, July 14 to 17, the programme for which we are compelled to omit from overplus of matter:

To Editor of THE INLAND PRINTER: COLUMBIA, Mo., June 19, 1891.

The ensuing meeting of the National Editorial Association at St. Paul will probably be attended by representative newspaper men from every state and territory. It will be the largest assemblage of journalists ever held upon this continent. In the preparation of the programme the effort has been made to comprehend such themes and select such editors to discuss them as will insure a meeting of great practical interest. The benefits to be derived by the interchange of sentiments and intermingling of newspaper men from every section of the Union will be most decided, not only professionally, but socially and in every way. Among the features of interest will be an exhibition of typesetting machines, the first ever made. Several machines will be exhibited and it will be an exceptional opportunity for their examination. Editors and publishers everywhere may be assured that the meeting will be thoroughly practical in character, and all members of the profession are cordially invited to be present.

E. W. STEPHENS, President.

## BOOKS RECEIVED.

BALAAM AND HIS MASTER, AND OTHER SKETCHES AND STORIES. By Joel Chandler Harris. Houghton, Mifflin & Co., Boston and New York. 16mo. \$1.25.

These stories, chiefly based upon the troublous times during and after the civil war in America, are chiefly remarkable for showing the best points of the negro character, the instances of fidelity, self-sacrifice and delicacy of feeling finding a strong background in the uncouth dialect, so admirably rendered. No one can read these sketches unmoved, for the touches of humor are as bright and suggestive as the pathos is true and natural.

SWEET AND TWENTY. By Mary Farley Sanborn. No. 10—Good Company Series. Lee & Shepard, Boston, Massachusetts.

Novels ordinary are plentiful enough, but novels written to entertain, without the introduction of cunning veins of specious argumentation, are not particularly abundant. The world loves a good story, even though it has a tinge of ultraism about it, or a strain of politics or religion. But "Sweet and Twenty" has to do only with the *affaires du cœur*, and wins favor by its inherent naturalness, the unconscious *naïveté* of its principal characters who cluster about Père Hasset, and give inspiration to its society. The book is charmingly written to engage an idle hour.

FOURTEEN TO ONE. By Elizabeth Stuart Phelps. Houghton, Mifflin & Co., Boston and New York. 16mo. \$1.25.

The delightful stories of this popular author have the merit in common with many of the best works of fiction, that they linger in the memory with a pleasant savor. The reader's feelings are swayed in sympathy with the spirit of the sketches, their sweetness and simplicity of style, and power of description finding a parallel in their broad humanity. "Fourteen to One" is the initial story which gives the title to the book, the others being as follows: "The Bell of Saint Basil's," "Shut In," "Jack the Fisherman," "The Madonna of the Tubs," "A Brave Deed," "The Sacrifice of Antigone," "Sweet Home," "Too Late," "The Reverend Malachi Matthew," "His Relict," "Mary Elizabeth," "Annie Laurie," and "The Law and the Gospel," forming a volume most appropriate to the season.

WORDSWORTH FOR THE YOUNG. Selections, with an Introduction for Parents and Teachers, by Cynthia Morgan St. John. D. Lothrop Company, Boston, Massachusetts.

It is so long since a really desirable collection of the poems adapted to youth of the gifted Wordsworth has been published, that it is a genuine pleasure to look through the pages of this handsome volume. Its mission is praiseworthy to the highest extent—bringing before the child-mind the beautiful in nature, clothed in the language of nature—the rhythm of song and poetry. It cannot be gainsaid that the first imprints made upon the unfolding intellect are ineffaceable, and exercise an unending influence upon its after development and expansion. Early impressions are lasting impressions, hence the value of truth in the beginning as a guide and teacher, rather than the meaningless—oftentimes hideous—whimsicalities of the nursery. The introduction by Mrs. St. John greatly enhances the worth of the book, which is neatly printed, well bound, and finely illustrated.

THE first number of the *Pantobiblion* comes to us from St. Petersburg, Russia. In the preface the publishers explain that the object of the work is to help the literary men concerned with the applied sciences generally, and particularly those devoted to any technical studies of any specialty. A review of the work will appear in our columns at a later date. It is published monthly, at Fontanka, 64, St. Petersburg. Editor, A. Kersha, C. E. United States Agency, D. Appleton & Co., New York.

"A CHAPTER ON LACROSSE," by J. L. Moses, Jr., in *Outing* for July, tells the story of the progress of the game in this country, together with records of the important matches, etc. A fine full-page illustration shows the Staten Island team, champions of the United States. To A. G. Spalding, on his retirement from the professional baseball world, Editor-in-Chief Worman pays a graceful tribute, which, with the short sketch in which it is embodied, will prove deeply interesting to devotees of the game.

## TO SUBSCRIBERS IN CHICAGO.

S. G. Dunlop, who formerly solicited subscriptions for, and sold copies of THE INLAND PRINTER, is no longer connected with this publication in any way. All readers of THE INLAND PRINTER who have paid for subscriptions and have failed to receive the paper, will please communicate with the company. Send in agent's receipts, and in return we will mail you the regular company's receipt.

## CHICAGO NOTES.

GEORGE A. SCHROEDER, formerly rate clerk of the Chicago, Milwaukee and St. Paul Railway Company, has recently gone into the printing business. The firm is Keogh & Schroeder, and the place of business 167 Adams street. They do railroad and commercial work.

At the regular monthly meeting of Typographical Union No. 16, it was decided to participate in the Labor Day demonstration in conjunction with the Trades and Labor Assembly. A committee was elected to formulate a standard for type faces, and to arbitrate the question of the brevier-minion type of the Chicago *Daily News*.

AMONG the numbers now flocking to Chicago in the hope of securing lucrative employment on account of the World's Fair, printers from all countries are to be seen. Four French compositors, a preliminary to others, as a result of overconfidence in seeking newer fields, are now stranded in the city. A warning notice to European printers of the actual condition of things in Chicago might be the means of averting much hardship and suffering.

The members of the Typothetæ Mutual Benefit Association and their friends who attended the association's picnic at Burlington Park, June 27, had a rather unpleasant experience. After a day's pleasure, the party returned to the station only to see the regular train passing the station without stopping. A freight train passing a few hours later brought the belated excursionists into the city at 2 o'clock Sunday morning—tired and worn out, and thoroughly disgusted with picnics.

GANE BROTHERS & Co., dealers in bookbinders' machinery and supplies, formerly of 184 Monroe street, have moved to large and commodious quarters at 177 and 179 Monroe street, where they occupy the first floor and basement. They intend to carry a larger stock than they did at the old stand, and anything in the line of supplies for bookbinders can be furnished on the shortest notice. They make a specialty of leather, leatherette, straw-board and binders' board, and can supply anything needed in a first-class bindery. They will be pleased to send circulars or catalogues to anyone interested, on request.

WE acknowledge receipt of a souvenir medal made from aluminum by S. D. Childs & Co., medalists, 140 Monroe street. It is the size of a silver dollar, and weighs but a fraction of what a dollar does. The face design represents the General Grant monument which is to be erected in Lincoln Park this fall. The medal is a very handsome piece of work, and reflects credit on the house producing it. A sample of these souvenirs will be sent anywhere on receipt of 12 cents in postage. In this connection it might be interesting to mention a few facts in regard to this new metal. Following are the weights of various metals per cubic foot: Platinum 1,342 pounds, gold 1,204 pounds, lead 711 pounds, silver 655 pounds, copper 548 pounds, brass 524 pounds, steel 490 pounds, iron 485 pounds, tin 459 pounds, aluminum 179 pounds. Thus it will appear that gold is seven times as heavy as aluminum. Aluminum stands the severest tests as to discoloration, and sulphuric or concentrated nitric acid have no effect upon it whatever. When tempered it has a tensile strength of thirty-eight tons per square inch, taking a harder temper than the best of steel. It is highly sonorous, and therefore admirably suited to use in bells; is as pliable as gold or silver, and can be beaten into a thin leaf, or drawn into a fine wire. Aluminum cannot be soldered, and large sums of money have been offered for a solution of this problem.

## OF INTEREST TO THE CRAFT.

THE work of the International Typographical Union organizers the past year has resulted in the forming of thirty-eight typographical unions, ten pressmen's unions, six electrotypers and stereotypers' unions and three pressfeeders' unions.

THE New York typothetæ has considered the proposition of the journeymen printers that their working hours be reduced to nine per day after October 1, next. It was decided that it would be impossible to make the proposed reduction.

THE master-printers of Schleswig-Holstein, Mecklenburg, Hannover, Brunswick and the Free Cities have unanimously resolved to adhere to the ten-hour day, and have instructed their representatives on the Tariff Commission to vote in accordance with this resolution.

THE next quarterly meeting of the De Vinne Press Mutual Aid Association, New York City, will be held July 9. The association has a membership of 109, and is increasing rapidly at each meeting. Last year \$660 was paid out in benefits, and there is now a balance of \$600 in the treasury. It is in its seventh year.

THE typothetæ of New Haven, Connecticut, have decided to oppose the demands of the typographical union for the nine hour day, and have also decided that it would be advisable to change the time of holding the next convention of the United Typothetæ, which is to be held in Cincinnati, from October to September, in order that the convention may take some action on this question, as the nine-hour demand may go into effect October 1.

AT the last meeting of Philadelphia Typographical Union, No. 2, held Sunday, June 21, 1891, the following was adopted:

*Resolved*, That the recording-secretary be directed to request each chapel to send one representative to form a committee to provide ways and means for the proper entertainment of the delegates to the International Typographical Union, at the next annual session, to be held in this city. Said committee to meet at the call of the president of the union.

In conformity with above, chairmen were requested to hold an election in their respective chapels as soon as practicable, and report name and address of delegate so elected to the president by June 26. The delegates presented a lengthy and interesting report. A vote of thanks was unanimously tendered them by the union.

## TRADE NEWS.

E. M. HARDY, of Janesville, Wisconsin, continues the printing business formerly conducted by Hardy & Parker.

ON June 15, Samuel Booth & Co., printers, New York, assigned to G. W. Fleckenstein, with preferences amounting to \$4,187.

FIRE recently destroyed the Sanitarium printing office and building at Battle Creek, Michigan. Loss \$40,000. The entire edition of *Good Health* for June was burned.

COSACK & Co., the lithographers and publishers, of Buffalo, New York, will soon have ready a very fine line of calendars, and a full assortment of calendar tablets for 1892. Orders should be placed early.

As a memorial to their late president, J. P. Wickersham, the Inquirer Printing and Publishing Company, of Lancaster, Pennsylvania, have changed the firm name to the Wickersham Printing Company.

A. W. HYATT, of New Orleans, Louisiana, has sold his stationery establishment to the A. W. Hyatt Stationery Manufacturing Company, limited, and the business will be continued at the old stand, 73 Camp street.

THE MORGANS & WILCOX MANUFACTURING COMPANY, of Middletown, New York, have issued a new specimen book of wood type and a new price list of printers' materials, either or both of which will be sent to any address on application.

WE call attention to the advertisement of Lamoureux & Co., typefounders, Caixa A, Rio de Janeiro, Brazil, on another page. This firm deals in printing machinery and supplies, and sells paper of all kinds, and invites correspondence with consumers throughout South America. American manufacturers desiring to find a

market for their goods in that part of the world would do well to write to this new concern. In our correspondence columns will be found a letter from Rio de Janeiro that may interest those looking for an opening in South America.

THE E. P. DONNELL MANUFACTURING COMPANY, of 323 Dearborn street, Chicago, have some special bargains in bookbinders' machinery, recently purchased at sheriff's sale. If you want a good book trimmer and wire stitcher, or a ruling machine, write to them. They may have just what you want.

A CHANGE has been made in the Bigelow Printing and Publishing Company, Buffalo, New York, Mr. Walter S. Bigelow, president and one of the founders of the company, retiring. Hereafter the company will be known as the Kittinger Printing Company, Benjamin Kittinger, president, and Jesse Kittinger, secretary-treasurer and general manager.

MR. C. F. THORPE, manufacturers' agent, at 303 Hennepin avenue, Minneapolis, Minnesota, reports business as flourishing. His firm is now called the Minneapolis Printers' and Bookbinders' Supply Company, and the name indicates the scope of the business. Everything used in a bindery or printing office is kept in stock or can be furnished promptly.

J. E. HOCKETT was appointed general manager of the Card Electric Motor & Dynamo Company, of Cincinnati, Ohio, June 15, vice H. H. Walter resigned. This company seems to be in a most flourishing condition on account of the largely increased demand for the Card motor. We understand the company is contemplating increasing their facilities within the next sixty days.

THE CLEVELAND-GORDON PRESS COMPANY, of Cleveland, Ohio, have recently made arrangements with Mr. J. W. Ostrander, of 79 Jackson street, Chicago, to supply their well-known Cleveland-Gordon presses. He will carry a complete line in stock, and all orders sent him will have prompt attention. Printers contemplating the purchase of a jobber should write to Mr. Ostrander.

THE HASTINGS CARD COMPANY, of 26 Beekman street, New York City, have just issued a circular announcing that Mr. Charles W. Cox, who represented them in the West for some time past, has left their employ. They propose to solicit business hereafter by means of circulars and samples. THE INLAND PRINTER would suggest to them even a better way than this, and that is an advertisement in its pages every month.

MR. H. P. HALLOCK, for the past dozen years associated with Golding & Co., Boston, Marder, Luse & Co., Chicago, and the Omaha Typefoundry of Omaha, has now branched out for himself, and can be found at 1002 New York Life building, Omaha, Nebraska. He deals in printing machinery and printing outfits generally, and would be pleased to hear from those in the market for cylinder or platen presses, paper cutters, engines and boilers or materials.

AMONG the recent callers at THE INLAND PRINTER office was Mr. George F. Barden, of the L. L. Brown Paper Company, of Adams, Massachusetts, who has been on a trip through the West, having just come to Chicago from St. Paul. Mr. Barden informs us that the statements that have been circulated in regard to his company are entirely without foundation, and the reports have had so much publicity through the trade papers that he felt the company might have been somewhat injured thereby. Mr. T. A. Mole, the efficient treasurer of the company, has not retired, and ledger and other papers are still being manufactured as usual by the company. The unfortunate embarrassment which seemed to stare the company in the face, on account of the president having indorsed paper of other firms, was an occurrence that caused more annoyance to people who had no interest in the matter than they should have allowed it to. Their mills are running to the full capacity, and every obligation of the company will be met without a question. One of the large orders recently received by this mill was from the city department of New York City, and the general trade of the company could not be better than it is at the present time.

## ANSWERS TO CORRESPONDENTS.

P. R., Brantford. The fault is not with the presswork. The cuts are inferior, from all appearances.

B. L., Ottawa, Ontario. How or where can transparent cement be procured for uniting glass. *Answer.*—We have read that isinglass when boiled in spirits of wine produces a transparent cement, and have no doubt that this would meet your wants.

M. T., Detroit, Michigan. How can I remove ink-stains from the leaves of books. *Answer.*—Wet the soiled place with warm water, using a camel's hair brush; then wet it with a solution of oxalate of potash, or oxalic acid, one drachm to one ounce of water, then wash the place with clean water and dry carefully with blotting paper.

## NEWSPAPER GOSSIP.

THE *Commercial*, of Winnipeg, Manitoba, is now in its tenth year of continuous publication.

THE *Granite Cutters' Journal* has moved to Concord, New Hampshire, from Barre, Vermont.

THE *Boston News*, a comparatively new venture, is prospering, if we may judge from its appearance, despite the boycott.

THE *Democrat*, New Castle, Indiana, has recently changed hands, and shows a marked improvement in general appearance.

GEORGE WILLIAM CURTIS, the eminent literary and political journalist, will complete his sixty-eighth year next February (1892).

JOHN H. FARRELL and Charles S. Stanton have become proprietors of the *Albany Evening Union*, with Mr. Farrell president of the company, who takes active charge.

THE first number of volume II of the *Outing Weekly Tennis Record* for the season of 1891, was published on June 13, and it should be read by every devotee of the delightful game.

THE *Orwell Transcript* is the latest addition to the family of Vermont papers. It is a four-page sheet published at Orwell by the Brandon *Union* man and is really an offshoot of that paper.

MR. J. Y. BRATTON, for some time past associate city editor on the *Baltimore Sun*, is now filling the position of advertising agent of the Baltimore & Ohio railroad company, with office in the Baltimore & Ohio building, Baltimore.

THE *Nashville (Tenn.) Herald* has purchased the building just vacated by the Presbyterian Publishing Company, and will move in shortly. The counting room is already located there. This will give Nashville a "Newspaper Row," the *American*, *Herald* and *Banner* all being located side by side.

THE office of the *Sound Breeze*, Lynn, Connecticut, was destroyed by fire on the night of June 1. Mr. F. L. Babcock, the publisher, was presented by citizens of the town with another building, which was placed by the donors on the site of the one burned. The people of Lynn evidently appreciate their local paper and the efforts of its enterprising owner.

H. E. ROUNDS, formerly of Milwaukee, Wisconsin, has just issued a prospectus, stating that about July 4 he will commence the publication of the *Rogers Park News*, which is to be an eight-page six-column weekly newspaper. Rogers Park is one of Chicago's liveliest suburbs, and a good location for a paper such as we are sure Mr. Rounds will publish. We wish him all success.

## OBITUARIES.

ON June 6 George M. Chester died at his residence in Detroit, Michigan, after a long illness. He spent the winter at Pass Christian, Mississippi. Mr. Chester was the oldest attaché of the *Free Press* in Detroit, first becoming a member of the staff in 1858, after he graduated from the Michigan University. At the outbreak of the war in 1861 he volunteered his services to the country, and with the First Michigan left for the seat of war, commissioned as war correspondent of the *Free Press* by the late W. F. Storey. Arriving at Washington, he was assigned a clerkship in Colonel Rucker's office, where his services were found to

be invaluable. He also did good work as quartermaster at Elmira, New York, for the great draft, and handled, clothed and sent to the front all the troops raised in that great draft in Western New York. In 1864 President Lincoln promoted him to be captain and assistant quartermaster-sergeant of volunteers. He was also on the staff of General Augur. At the close of the rebellion Captain Chester returned to civil life, and resumed his connection with the *Free Press*. He also filled the position of city editor of the *St. Paul Press*, from whence he went to New York as reporter on the *Tribune*, and later as junior editor of Appleton's *Journal*, and subsequently engaged in different capacities on the New York dailies. In 1878 he returned to Detroit, and for a while managed and published *Chaff*, a society and dramatic paper. He again returned to the *Free Press*, remaining in active service until last September, when he went South for his health. He is best remembered to Detroit and Michigan readers as state editor. Mr. Chester was an exceptionally valuable newspaper worker, being a thorough, painstaking, accurate, graceful and felicitous writer and an untiring and prodigious worker.

THE death of Mr. W. O. Hickok, president of the W. O. Hickok Manufacturing Company, of Harrisburg, Pennsylvania, occurred on May 25. Mr. Hickok started business in a small way in 1846, and under his judicious management the firm has grown to be one of the largest of its kind in the world. His death will in no way interfere with or change the business as heretofore conducted, and the management will continue practically the same.

## BUSINESS OUTLOOK.

**Augusta, Ga.**—State of trade, fair; prospects, fair; composition on morning papers, 35 cents; evening papers, 35 cents; job printers, per week, \$15; book printers, \$2.50 per day. Recently expected trouble was avoided by conservative action.

**Bay City, Mich.**—State of trade, fair; prospects, fair; composition on morning papers, 34 cents; evening papers, 32 cents; bookwork, 34 cents; job printers, per week, \$14. District Organizer Williams spent a few days in this city recently, and made many friends while here.

**Columbia, S. C.**—State of trade, fair; prospects, not too encouraging; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, per week, \$15, nine hours; job printers, per week, \$18 and \$20. The *Register* is now set in minion, and makes a handsome sheet. The *Record* has a new dress of brevity, and has made improvements.

**Dayton, Ohio.**—State of trade, dull is no name for it; prospects, dubious; composition on morning papers, 35 cents; evening papers, 32 cents; book and job printers, per week, \$15. Our business men must have all gone to China with their work, for the bottom has fallen completely out of the business here. Within the memory of the oldest typo printing was never so dull here, at this time of the year, as at present.

**Dubuque, Iowa.**—State of trade, fair; prospects, fair; composition on morning papers, 30 cents; evening papers, 28 cents; bookwork, 30 cents; job printers, per week, \$14. Business slightly improved since last report. Workingmen in this city are taking much interest in the third party movement.

**Fort Wayne, Ind.**—State of trade, fair; prospects, fair; composition on morning papers, 35 cents; evening papers, 30 cents; bookwork, per week, \$13.50; job printers, per week, \$13.50.

**Galesburg, Ill.**—State of trade, job, fair; news, good; prospects, probable lull in job trade; composition on evening papers, 25 cents; bookwork, per week, \$12; job printers, per week, \$12 and \$15. College commencement is over, and prospects are that we will have a few weeks of quiet in jobwork. We elected six members at our June meeting of the union, and have four pending.

**Grand Rapids, Mich.**—State of trade, quiet; prospects, quiet; composition on morning papers, 35 cents; evening papers, 30 cents; bookwork, per week, \$14; job printers, per week, \$14. A large number of "subs" in town at present. No. 39 gave the street car strikers \$125 at the last meeting, and levied an assessment to replenish the treasury, and the end is not yet, as more assessments are likely to follow, for the same purpose.

**Hartford, Conn.**—State of trade, good; prospects, good; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 35 cents; job printers, per week, \$15. Work has been very good this summer, and the outlook is much better than was expected by all. Regular hands are at work, with extra men in some offices.

**Houston, Tex.**—State of trade, dull; prospects, dull; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$20. J. A. Cupples elected secretary, to fill an unexpired term.

**Jacksonville, Fla.**—State of trade, only fair; prospects, are slow for next three months; composition on morning papers, 33½ cents; evening papers, 30 cents; bookwork, 33½ cents; job printers, per week, \$16 to \$20. The state

work at Tallahassee has about played out, and the boys are returning. Those in are doing fairly well. The *Standard* boys give subbing out freely.

**Keokuk, Iowa.**—State of trade, poor; prospects, somewhat better; composition on morning papers, 30 cents; evening papers, 26 cents; bookwork, 30 cents; job printers, per week, \$12. Work has been poor for the past month, but is getting better.

**Logansport, Ind.**—State of trade, moderate; prospects, not very good; composition on morning papers, 28 cents; evening papers, 23 cents; bookwork, per week, \$12; job printers, per week, \$15. Trade has been good for two weeks on account of getting out directory, but that will be done this week, and no one knows what the prospects are. Enough work to keep all "subs" busy.

**London, Ont.**—State of trade, fair; prospects, doubtful; composition on morning papers, 30 cents; evening papers, 28 cents; bookwork, per week, \$9; job printers, per week, \$9 to \$10. Several printers have left the city during the month, the rush in most of the jobrooms being over. All printers in the city are now employed.

**Milwaukee, Wis.**—State of trade, dull; prospects, very poor; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 35 cents; job printers, per week, \$14 to \$18. Work for the past month has been very dull, and prospects for the summer are very discouraging.

**Mobile, Ala.**—State of trade, good; prospects, good; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$16. There are more "subs" than work.

**Montreal, Can.**—State of trade, fair; prospects, generally dull during summer months; composition on morning papers, 32 cents; evening papers, 30 cents; bookwork, 29 cents; job printers, per week, \$10 and \$11. There have been two new job offices sprung into existence during the past month, which have given employment to several who have been idle.

**New Haven, Conn.**—State of trade, good; prospects, good; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 35 and 40 cents; job printers, per week, \$15 to \$18.

**Philadelphia, Pa.**—State of trade, dull at present; prospects, not encouraging; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$16. Reports from thirty-eight offices show: 2 brisk, 1 good, 5 fair, 17 medium, 9 dull, 3 as usual, 1 suspended. *Sunday Mercury* has suspended publication. Delegates were instructed to vote for Columbia Union, 101, resolution.

**Richmond, Va.**—State of trade, not good; prospects, not bright; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$16. There are enough compositors to fill the demand.

**San Francisco, Cal.**—State of trade, bad; prospects, bad; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 40 cents; job printers, per week, \$18 and 21. Trade exceedingly bad. At least 150 more compositors here than necessary. *Alla* a morning daily, employing forty-five men, suspended on the 6th of June.

**San Diego, Cal.**—State of trade, poor; prospects, same old story; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 40 cents; job printers per week, \$18. The membership in the union is constantly and gradually increasing by missionary work among non-union men who never knew anything about the typographical union.

**Springfield, Ill.**—State of trade, good; prospects, fair; composition on morning papers, 33½ cents; evening papers, 30 cents; book and job printers per week, \$15. A new paper, *The Evening Times*, is to appear in a few days. Mr. Frank Devlin is the editor, and the subscription price is six cents a week. It has a list of over 2,000 with which to begin business—not bad for a starter.

**Topeka, Kan.**—State of trade, poor; prospects, poor; composition on morning papers, 33½ cents; evening papers, 28½ cents; bookwork, 40 cents; job printers, per week, \$15. All shops are running small forces. Work is not likely to pick up to any great extent for a year.

**Toronto, Ont.**—State of trade, dull; prospects, not very promising; composition on morning papers, 30 cents with ad's, 33½ cents without ad's; evening and weekly papers, 28 cents; bookwork, 33½ cents; job printers, per week, fifty-four hours, \$11. A committee from the union has had several interviews with the Employers' Association in regard to our proposed advance of \$1 per week on timework and a similar increase on bookwork. This matter is still under their consideration.

**Utica, N. Y.**—State of trade, slightly dull; prospects, fair; composition on morning papers, 35 cents; evening papers, 31½ cents; bookwork, 31½ cents; job printers, per week, \$12.50. The *Utica Daily Press*, which was the outcome of the *Herold* strike of 1882, has met with its share of prosperity, which is attested by the fact that it will shortly be installed in a handsome structure, now being erected for its accommodation. Its success is attributable, to a certain extent, to its friendliness towards labor.

**Victoria, B. C.**—State of trade, good; prospects, poor; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$21 and upwards.

**Worcester, Mass.**—State of trade, fair; prospects, uncertain; composition on morning papers, 40 cents; evening papers, 33½ cents; bookwork, 35 cents; job printers, per week, \$12 to \$15. Business is beginning to get rather quiet, and will possibly remain so until about September 1. 165's delegates returned home, and report lots of work done at the big convention of the International Typographical Union at Boston.

## BUSINESS NOTICES.

THE Central Typefoundry is cutting new faces of minion and nonpareil for the *St. Louis Republic*—strong ceriph letters, especially adapted to stereotyping, and of a rather peculiar cut.

GENERAL BUTLER'S forthcoming book will be one of the largest historical autobiographies ever published. It will contain one thousand large pages, printed upon high-grade paper and illustrated with several hundred wood engravings. It will be published in English, German and French. The best artists are now employed on the work. The Dickinson Type Foundry is casting type especially for it. The typography and presswork will be by the Barta Press of Boston, the first edition to be not less than one hundred thousand, probably double that number. The publishers are A. M. Thayer & Co., of Boston.

### BOOKBINDERS

Should send for a specimen book of heavy copper logotypes and of brass type to Central Typefoundry, St. Louis.

### PARAGON PAPER-CUTTING MACHINES.

Edward L. Miller, of 328 Vine street, Philadelphia, Pennsylvania, manufactures this well-known make of machines. The "Paragon" is known wherever paper cutters are used. They

have been in use thirteen years, and every year seem to meet with greater and greater success. All sizes have traverse and side gauges. They have broad clamping surfaces for general use, yet the stock can be gauged to a half inch of the knife on the smaller sizes, and to within three-fourths of an inch on the 30 and 32 inch. Any length of paper can readily be handled in front of the knife on the 25-inch and smaller sizes. They cut accurately and easily, having extraordinary power. They are made in sizes from 14 inches up to 32 inches, and for hand-power machines cannot

be excelled. Mr. Miller looks personally after the manufacture, and takes particular pains to see to it that none but the best material is used, and that the best workmanship is put upon them. The accompanying cut shows the 30 and 32-inch "Paragon." Orders can be sent direct to the manufacturer or to your nearest printers' supply house.

THE English Government postoffice officials have decided that circulars printed with Central Typefoundry typewriter type must pay letter postage, as it is impossible to distinguish them from those done on a typewriter machine.

### KEEP COOL; DON'T GET EXCITED.

When the warm summer days are with us, there are moments when the hardest thing for men to do is to concentrate their thoughts to the humdrum of buying and selling. And the more clean and cool we can be kept, the more comfortable we feel. When work is to be done, however, the materials that work easiest and best are the ones to be sought for, and preferred to all others.

For several years a company has endeavored, by good service and a proper attention to the requirements of the season, and work to be done, to deserve the custom of the best printers, with a fair measure of success. With increased facilities and good workmen, the Buffalo Printing Ink Works are capable of giving the best goods, at a price as low as is consistent with best values, and solicit the orders of good printers, feeling confident of retaining their custom when these inks are used.

THE INLAND PRINTER.

# AN UNRIVALED OFFER

To anyone sending us the names of eight subscribers at the regular club rate (\$1.50 per year each), the amount, \$12.00, to accompany order, we will send by express, charges prepaid, as a premium, a reversible

## POLITICAL AND UNITED STATES MAP,

Latest edition, printed in eleven colors ; size, 5 feet 6 inches by 3 feet 10 inches.

This double map contains on one side Rand, McNally & Co's latest United States map, showing all counties, railroads, towns and postoffices, and on the other side the following :

A diagram showing all of the Political Parties, 11 x 66.

A diagram showing all Presidents and Cabinets, 5 x 66.

A diagram showing Political Complexion of each Congress.

A diagram showing Creeds of the World, 13 x 10.

A diagram showing Standing Armies of each Nation, 13 x 10.

A diagram showing Naval Tonnage of each Nation, 13 x 10

A complete map of the World, 13 x 20.

A map of Central America, 10 x 13.

A map of Alaska, 10 x 13.

A map of South Africa, 10 x 13.

A map of Upper Nubia and Habesh or Abyssinia, 10 x 13.

A map of Persia, Afghanistan and Beluchistan, 10 x 13.

A complete map of Solar System—best ever made, 13 x 10.

The Names of all Cabinet Officers, with length of term.

Pictures of all the Presidents from Washington to Harrison.

### IT ALSO GIVES IN BRIEF

The History of the U. S. Government by Congresses.

The History of the U. S. by Administrations.

An Analysis of the Federal Government.

Issues of all Political Parties.

The History of all Political Parties in this Country.

The Popular and Electoral Vote for each Candidate.

## THINK OF IT . . . . .

We make you a present of this double map (worth \$5.00) and send it to you *free of any expense*, and guarantee its safe delivery, if you will send us a club list of eight subscribers. You can secure this valuable premium with a little effort. It is worth the trouble. For office or home the map is indispensable. Subscriptions can begin with any number. Give full street address or postoffice box number, as well as city, county and state, to insure safe delivery of papers and the map.

## IF YOU DO NOT WISH

To organize a club, we will send you the map, and THE INLAND PRINTER for one year, for \$3.00.

## THE INLAND PRINTER

Contains, every month, from 80 to 100 pages. It is a magazine that every printer, or anyone interested in typographic matters, should subscribe for. Its original articles, editorials, news items, illustrations and presswork, challenge careful reading and command the highest commendation.

Address all orders to

THE INLAND PRINTER CO., Publishers,

183 MONROE STREET, CHICAGO.

**ROMAN BOOK FACES.**

The Central Typefoundry has a new book series ready, and two more series being cut. The ideal faces for bookwork—titles, antiques and clarendons—are made to line exactly with them.

**THIS IS WORTH READING.**

While Chicago is well supplied with the representatives of machinery built in the East, it is agreeable to note that we are not a whit behind eastern manufacturers, and that those who, inspired by a spirit of loyalty to home products, prefer to invest their money where they make it, can purchase as good machinery built in this city as can be found anywhere in the world.

The "Rival" paper cutter, built by H. H. Latham, of 304 Dearborn street, Chicago, though comparatively a new machine, is making, and apparently deserves, a splendid record for itself, as the two following testimonials attest :

*H. H. Latham, Esq.:* CHICAGO, Ill., June 19, 1891.  
DEAR SIR,—Our agreement with you was for you to put up in our bindery one of your 34-inch "Rival" cutters, and we were to pay you cash after a trial of thirty days, but we are so well pleased with your machine that it affords us pleasure to pay you at the end of one day's trial.

The "Rival" works with less noise and with greater accuracy and dispatch than any other cutter we have seen as yet. Down she comes and up she goes as smoothly and noiselessly as if she cut through butter, and still it was cardboard she was cutting. The mechanism and finish we think perfect, and congratulate you on your success.

Yours truly,  
(Signed) H. H. HOFFMAN & Co.

*H. H. Latham, Esq.:* CHICAGO, Ill., April 11, 1891.  
DEAR SIR,—We have had your 34-inch "Rival" paper cutter in operation about four months. We believe it has few equals and no superior. It is our candid opinion that it stands at the head of the procession. It works to a charm, it is strong and reliable, does fine work, and its execution is perfect. Too much cannot be said in its praise.

Yours truly,  
S. D. CHILDS & Co.,  
Per J. A. Smith.

**SPECIMEN BOOK.**

The Central Typefoundry has certainly the handsomest specimen book in this country. The original faces produced by this concern have never been equaled, either in style or variety, while the quality of metal, "copper alloy," though it has lots of imitators, is away in the lead.

**WHAT A MASTER PRINTER SAYS.**

Under the above title Messrs. C. B. Cottrell & Sons, manufacturers of presses, of 8 Spruce street, New York, and 319 Dearborn street, Chicago, send out a circular worded in a way that cannot fail to arrest attention, and be read from beginning to end. For the benefit of our readers who have not seen it we reproduce it below :

The world acknowledges that for many of its best rules of conduct it is indebted to the philosophy of Benjamin Franklin. The maxims of Poor Richard have been printed in over four hundred editions in English, French, German, Italian, Spanish, Dutch, Danish, Bohemian, Swedish, Gaelic, Welsh, Russian, Polish, Chinese, Catalan, Modern Greek and Phonetic Writing.

This man was the master printer of his time. Let us see if any of these maxims—now so prized by posterity—came from his printing experiences.

If he could enlighten mankind on subjects with which he was not directly brought in contact, how much more can he teach master printers (being himself a master printer) the best rules for their printing prosperity ?

Of the nearly two hundred maxims of Franklin, six were undoubtedly suggested by his printing experiences. We give here the texts and our modern applications of them :

"A small leak will sink a great ship." The pressroom is the place to look for leaks. Expenses are just as high for a press running 1,200 an hour as 1,500 an hour. The whole difference between profit and loss is 300 an hour.

"It costs twice as much to be foolish as to be idle." In other words, to run a pressroom unwisely costs more than to close it

entirely. We have known this to be true many times in every year of our experience among printers.

"If time be of all things most precious, wasting time must be the greatest prodigality." Fast-running presses save much otherwise wasted time.

"Drive thy business; let not that drive thee." You can't do much "driving" with slow presses. Drive means speed.

"The cat in gloves catches no mice." Don't expect to make progress if you are encumbered with poor machinery.

"For want of a nail the shoe was lost, for want of a shoe the horse was lost, for want of a horse the rider was lost." Or, for want of discretion a new press was lost; for want of a new press a customer was lost; for want of a customer a business was lost.

We believe that these maxims can be profitably studied as the wisdom of the experience of the great master printer. And we cannot better close this short talk than by quoting one more of Poor Richard's sayings :

"They that won't be counseled can't be helped."

**THE TYPEFOUNDERS' WAR**

Still continues, but is likely to end in August. During the fight the Central Typefoundry "copper alloy" is the only quality of type that maintained prices.

**THE ELITE RULE BENDER.**

As promised some time ago in our paper, we take pleasure in calling the attention of printers generally to the above tool, which is an excellent one for the purpose intended. It is not claimed by the manufacturers that this invention is a *machine*, but it is a neat and practical tool, and in the hands of a man who thoroughly understands his business is capable of producing many handsome wrinkles in the line of rule work. Of course, for two dollars a printer cannot expect to purchase any very elaborate piece of machinery, but he will make no mistake in sending this amount to the Elite Manufacturing Company, of Marshall, Michigan, for one of these benders. The tool is about four inches long, and can readily be carried in the pocket. There are two sizes of cylinders having slots therein, around which rule can be twisted very readily. In addition to the cylindrical portion there is a flat blade with a slot at one end, to use in wrinkling rule. The company is receiving many orders from all parts of the country. The bender which THE INLAND PRINTER received has proved very serviceable, and we can recommend it as being worth all that is charged for it.

**MAILING TYPE.**

It is folly to think that any old stuff will do for a mail list. A well set and easily corrected list is of the utmost importance. For this reason you should have the Central Typefoundry labor-saving mailing type. All letters are cast uniform in thickness; no spacing required.

**KEYSTONE PAPER CUTTER.**

Messrs. George H. Sanborn & Sons, of 69 Beekman street, New York City, are the manufacturers of the above machine, the manufactory being in Mystic, Connecticut. In the general construction of the Keystone cutter, the best material and workmanship obtainable are employed, and many new and important improvements suggested by long experience in manufacturing machinery of this description have been embodied; the most important of these being the noiseless friction clutch. This clutch admits of the machine being run at a higher speed than ordinary, and by its use the machine can be instantly started or stopped without jar. The power of the cutter is also greatly increased, and consequently the amount of driving power required is greatly reduced. This clutch requires no adjustment for light or heavy work after once being properly put in position. The table of the machine is in one solid piece, thereby preventing any possibility

of springing under pressure when the material to be cut is clamped. By making the table in this way it is not necessary to slot or groove the face of the table in order to prevent paper getting under the back gauge, as is necessary when the table is made in two pieces bolted together by light brackets. In order to further insure against any possible displacement, two heavy adjustable braces are placed underneath the center of table. The intersecting clamp and gauge admit of material being cut up to one-half inch in width. This feature is of great importance to lithographers, label printers and all others who have occasion to cut narrow work. The knife-bar is drawn down by adjustable connecting rods at each end, and easily and quickly adjusted whenever necessary. The back gauge is made adjustable, and can be set to cut two or three sizes at one time, as may be desired. All necessary front and back side gauges are furnished and are adjustable. Graduated brass rules are set in face of table, back and front. Rules of this kind are far superior to figures stamped on face of table. The gauge-wheel is turned and graduated, thereby enabling the operator to see just how far the gauge is moved in either direction. The clamp is counterbalanced, and considerable time and labor is consequently saved. In addition to the knife-bars being fitted in the most accurate manner, adjustable gibs are provided, by which all lost motion, caused by wear, can be taken up. The gearing is made from the latest improved patterns, and runs smoothly and without noise. The manufacturers have issued a very handsome pamphlet, describing fully this machine, which they will take pleasure in sending to parties interested.

#### BOOKBINDERS' LOGOTYPES.

The enterprising Central Typefoundry is forever springing something new. This time it is HEAVY COPPER logotypes or embossing plates for commercial and edition binding. Such words as "LEDGER," "CASH," "JOURNAL," "SALES BOOK," "RECORD," "DEED," "CENTURY," "SCRIBNER'S," "HARPER'S," "VOLUME," and a large variety of other words, in various styles of type, are made and offered at extremely low prices. No binder should be without them.

#### BATES TYPOGRAPHIC NUMBERING MACHINE.

The accompanying cut shows a very useful device, designed and constructed with special reference to the requirements of the general printer. This machine is intended to be locked in the chase with the form, completely surrounded with ordinary type, cuts and rules, or used separately when nothing but the number is to be printed, and is capable of being operated in the regular printing press in common use, occupying the smallest possible space, and combining absolute accurateness with the least trouble. The machine is capable of consecutively numbering from 1 to 100,000, and its exact size is but  $1\frac{1}{8}$  of an inch in length by  $1\frac{1}{2}$  of an inch in width. It is entirely self-contained, and automatically changes each disk of figures in consecutive order from one to its full numerical capacity. Its action is derived from a vertical bodily movement of the figure disks, resulting from their depression by the platen of the press as each impression is made, and does not depend upon a plunger. The machine is made in the most durable manner, and can stand an almost unlimited amount of wear. The figures can be re-set to any number without removing the machine from the form, or taking it off the press. Every part is made of steel, and is interchangeable to the smallest screw. Any style of figure required can be furnished. On another page will be found an advertisement of this machine. Its manufacturers, the Bates Manufacturing Company, Edison Building, New York City, will send circulars giving fuller information to anyone wishing them.

#### "COPPER ALLOY" IN GOTHAM.

Damon & Peets have moved into a fine large ware room, 44 Beekman street, New York, and have taken the agency for the Central Typefoundry, of St. Louis. An abundant stock of "Copper Alloy" will be kept and sold at manufacturers' prices.

#### BROWN & CARVER.

Who is there in the printing trade who has not heard of the celebrated Brown & Carver paper-cutting machines? Offices that have had these machines in use for the last ten or fifteen years can testify to the value there is in them. For durability, reliability, accuracy, workmanship, finish, and all points that go to make a first-class machine, they stand unrivaled. It is unnecessary to go into a detailed description of these machines, but a good idea can be obtained of them by referring to the advertisement on page 873. Mr. C. R. Carver, Third and Canal streets, Philadelphia, is the sole manufacturer of the Brown & Carver machine, and today not only maintains the high standard that the Brown & Carver has always held, but endeavors to improve, in every way possible, the machines that he turns out at the present time. You can have the grooved table, or plain, as desired. Circulars and full particulars will be sent to any address, on request.

ALL LIVE PRINTERS should have Bishop's "PRACTICAL PRINTER," 200 pages, \$1. Also his "DIAGRAMS OF IM- POSITION" and "PRINTERS' READY RECKONER," 50 cents each; the "PRINTERS' ORDER BOOK," price \$3, and "SPECIALS OF JOB WORK," price Oneonta, N. Y., and by all type useful works ever published for founders. The handiest and most printers. Indorsed by everyone.

A CHANCE FOR A LIVE PRINTER—For sale: an old established printing office, located in one of the largest cities in New England. The plant contains 2 first-class cylinder presses, 2 jobbers, about 300 fonts job type, 30 fonts wood type, 3,000 pounds body type, paper cutter, standing press, cabinets, and everything necessary for a well equipped office. Price low, and terms easy. For further particulars, address G. EDWARD OSBORN & CO., Printers' Warehouse, New Haven, Connecticut.

FOR SALE—A job office and newspaper in Michigan. Earning big money. \$4,000. Investigate. "MICHIGAN," care INLAND PRINTER.

FOR SALE—Complete job printing plant; 300 fonts of type, 6 presses, bindery, all necessary machinery; doing business of \$20,000 a year, state, county and bank work. Proprietor desires to devote attention to daily newspaper, and will sell at a bargain. Address, H. T. DOBBINS, P. O. Box 884, Lincoln, Nebraska.

FOR SALE—Half interest and management of the prettiest and most complete \$4,000 office with best business in good city of 50,000 people at invoice price, and \$100 per month satisfactorily guaranteed to purchaser; or will sell whole office at a bargain. Outfit new. Satisfactory reasons for selling. Address "F. G. E.," care INLAND PRINTER.

FOR SALE—Point folding machine, capable of folding 16 by 23 to 32 by 46; three or four fold; can be used for marginal machine for newspaper work. This is a new machine, has never been used, too large for our run of work; can secure this machine at a bargain. Address "B. D.," care INLAND PRINTER.

FULL and complete instructions on zinc etching, photo-engraving, etc., by Frank J. Cohen. A 38-page pamphlet, giving full information on above topic, will be mailed to any address on receipt of \$2. Address THE INLAND PRINTER COMPANY, Chicago, Illinois.

SUPPLY NEARLY EXHAUSTED—The volumes left over after supplying the members of the "American Printers' Specimen Exchange," were made up into sets and have been sold from time to time bound and in sheets at a small part of their real value, in many instances less than the original charge to members for binding alone. We offer the remaining unbound sets, comprising vols. 1, 3 and 4, at \$2.65. Every third order one of the complete sets (4 vols.) will be substituted, formerly sold at \$3.75. ED. H. McCLURE, Buffalo, New York.

THE ONLY REPRESENTATIVE COLLECTION OF AMERICAN PRINTING—We have only five unbound complete sets of the "Specimen Exchange" left, and for every third order for the set, comprising vols. 1, 3 and 4, at \$2.65, we will substitute one of the complete unbound sets, heretofore sold at \$3.75. If you doubt its worth, ask THE INLAND PRINTER. ED. H. McCLURE, Buffalo, New York.

WANTED—A few copies of the February, 1891, number of THE INLAND PRINTER; will pay 15 cents apiece for them. INLAND PRINTER CO.

WANTED—A purchaser for a good job office in Seattle, Washington; doing a good business; type and machinery nearly new; valuable standing forms and good will to purchaser. Office inventories at \$1,500. Will give satisfactory terms to right party. Call on or address, EMERSON P. JENNINGS, Trustee, 110 Madison St., Seattle, Washington.

WANTED—A Washington Press (second-hand) in good condition. BEHRING, GITTINGS & CO., Photo-Engravers, 318 Dearborn Street, Chicago.

WANTED—By a job or all around printer, a permanent position in some good office in the West. Address "A. Z.," care INLAND PRINTER.

**WANTED**—A strictly first-class designer to go South. Must be sober and reliable. One who can do first-class work in wash drawings for half-tone engravings, and get up original designs for stationery; must be good at lettering. Steady employment and good wages guaranteed. Address "DESIGNER," care INLAND PRINTER.

**WANTED**—Copies of Nos. 2 and 10 of Volume I, INLAND PRINTER. Will pay 25 cents apiece for these if in good condition. Mail or bring them in. INLAND PRINTER COMPANY, Chicago.

**WANTED**—Subscribers to THE INLAND PRINTER; per year, \$2; six months, \$1; single copies, 20 cents. Also, send to cents for circular, "How to Impose Forms," giving over fifty complete schemes of imposition.

**WANTED, TO BUY, CHEAP FOR CASH**—A small printing office, or an outfit sufficient for job and poster work; no wood type needed. A second-hand office acceptable if in good condition. Owner must be willing to sell cheap, very cheap, for cash. In replying, state lowest cash price, as we have no time for bargaining. Address Room No. 204 Penn Building, Pittsburgh, Pennsylvania.

\$2.65—For vols. 1, 3 and 4 of the "American Printers' Specimen Exchange." If you doubt its worth, ask THE INLAND PRINTER. ED. H. McCLURE, Buffalo, New York.

 Milwaukee, Wis.

The Lightning Ink Reducer and Dryer, Awarded Diploma, Paris, 1889, in London, 1887, for Unexcelled Excellence.

Inkoleum is the only article in the world that gives pressmen complete control over printing and lithograph inks, rollers and stock in any weather and climate. It refines inks of any color or shade and makes them dry quick and glossy, enabling rushed work to be delivered immediately from press without offsetting. Inkoleum never dries on rollers, but preserves their suction, life and elasticity. On starting press in morning or whenever rollers are too sticky or ink dry on them, or the ink pulls the paper, a drop or two of Inkoleum put on the rollers with your finger immediately softens the ink and makes them do the finest work, a saving of five times its cost every hour in the day.

Beware of Infringements! Order Inkoleum and accept no worthless piratical imitation, said to be just as good. Price, only 50 cents. For sale by every typefoundry in the world. Read circulars printed in five languages. Put up only by

**ELECTRINE MANUFACTURING CO.**  
 Geo. M. STANCHFIELD, Patentee. St. Paul, U. S. A.

**GENUINE GRIPPER-FINGER.**

Attachable to any Gripper.

Immovable on the Grippers. Chief in Simplicity. Any Sheet Removed. AWARDED PRIORITY OVER ALL OTHERS.

Besides the "1/4-in. Between-Line" illustrated, we make four other forms of Fingers: a "3/8-in. Between-Line" for wider spaces, a "Hair-Margin" that will nip a label or other sheet cut to the border, which saves

paper and after-trimming; a "Short L" for gripping from below the sheet; a "Long L" for lengthening the grippers and preventing large sheets from dropping over on the ink-disk or rollers.

In all orders SPECIFY WIDTH OF GRIPPERS. Otherwise, a size fitting the average gripper (1 inch), and securable on all sizes under it, will be sent. Measure across the lower part of grippers.

## The "Only Perfect" Galley-Lock.

PERFECT IN PRINCIPLE. PERFECT IN ACTION.  
PERFECT IN ECONOMY.

**ONE SINGLE MOVEMENT** adjusts it. Holds each line of type perfectly and securely. Earns its cost in time saved in three months. Saves type and galley. Years of service added to old galleys.

**ADJUSTABLE.** The "Only Perfect" Lock has a spread of over a half inch, and thus adjusts to any width of column on galley.

**MADE OF BRASS.** Light, durable, wear many years. We make a 13-INCH LOCK, for use of daily papers and job galleys. Engraving shows full size, 23 inches.

**ATTACHABLE.** By a slight change in outside bar, we make the Lock, and furnish attachments, so that in a few minutes anyone can attach it to galley. Outside bar works against side of galley; inside bar is held to top of galley, and has perfect movement back and forward. Daily papers adopt this on sight.

**SEND ORDER** to your printers' supply house. 23-inch lock, \$18.00 per dozen. Attachable lock (23-inch), with attachments, \$22.00 per dozen. 13-inch lock, \$16.20 per dozen. Liberal discounts to trade.

On receipt of \$1.50 will express you free a 23-inch lock, and know you will order a supply.

## REPORTERS' AND EDITORS' UNIONS.

BY CYRUS FIELD WILLARD.

WRITERS, proletarians and laborers, as they are in most cases, do not seem to have felt the necessity of organization until recently. Of course, a glorious exception can be found in the guild of meistersingers when Walter von der Vogelweide and Hans Sachs laid down the law as to "regular space rates."

That was many years ago, when the guilds had made all equal among freemen and was accomplishing its evolutionary work of lifting up the bourgeoisie class. The decadence of the writers' guilds and the growth of the Grub street hackwriters were as coincident as the degeneration of the stout "websters" into the poor, underfed, undersized, overworked factory weaver.

The growth of the modern newspaper brought into existence a new class of writers. These were men who made a little more money than those around them, the common test of superiority. They were men of more adventurous spirits and equally irregular habits. They spent their money freely, drank to the same degree, and, while doing good work, were often not to be found when emergency required. This was incident to the newness of the institution called the modern newspaper.

Gradually there came an aggregation of capital to the newspapers of the larger cities which has been strongly accentuated during the past ten years, the *New York World* and *Boston Globe* being notable examples. As in the handicrafts, the individual became subordinated to the system. The peculiar excellence of an individual's work was as nothing compared with steadiness. He was simply a cogwheel in the system which was like one of the big presses. Every part must run steadily and smoothly or the system would not work. Many were the bright geniuses who did excellent writing and yet were thrown out on account of their drinking habits as the superficial reason would seem. "The day of Bohemia is past," over and over again says the *Journalist*, and it cites the number of bright young

married men of steady habits and thoroughly gentlemanly demeanor who are now newspaper men. This is true, and while it may be due to the extraneous growth of moral ideas as alleged, I think not.

The growth of moral ideas is due to improvement in economic conditions. The conditions of their lives have changed. The single class of newspaper writers has become divided, differentiated and specialized. The various cogs must work more steadily, brilliancy is sacrificed to effectiveness, and the necessity as well as the opportunity for regular habits among newspaper writers becomes apparent.

We now have reporters, department editors who also report, special writers, desk editors, city editors and managing editors. These constitute the various classes of newspaper writers in the main. The names of the various editors may vary as the system varies in different cities, but the six classes above mentioned cover the ground. In the largest and most important class, that of reporter, there are several subdivisions. There is the reporter on salary, and the reporter on space, as well as the local correspondent in one town or district for the paper located in another town or district. These are the class of newspaper writers who are generally underpaid and overworked, and that do the most important work, for no matter how brilliant the editorial writers may be in this age of *news*-papers, a paper must have good reporters to be successful.

Under the head of reporters might, but for a slight variation in species, be classed the department editor. The military editor, the labor editor, the sporting editor, the horse editor, the yachting editor, the financial editor, the dramatic editor, all do more or less reporting, and, as a rule, edit their own copy. They exemplify the rule which can here be laid down as correct, "A good reporter will make a good editor, but a good editor will not necessarily make a good reporter."

The desk editors are a numerous class. They are differently denominated. Some call them "blue pencil fiends," others say they are the people who put commas and periods into other men's copy. They look over, revise, edit and, if necessary, condense the various

stories and articles as they come in. They are called copy readers in some offices.

The city editors' and assistant city editors' duties are almost always of a managerial character, and might be classified under the same head as managing editor.

Of the special writer it might be said, "There are only a few of us left." While engaged in writing up special articles they are generally of such a nature as to be readily classed under the head of reporters. They are generally paid by space rates, at so much per column.

Thus the six classes of newspaper writers can be roughly grouped under three broad heads: reporters, desk editors and managing editors. As the latter control the actions of the other classes and, in many cases, have the hiring and discharging of the men, they must for the present be considered in the light of employers whose interests are to get men at as low wages as possible to work as long as possible. It is true they are themselves working for salaries, and in economics are as much wage-earners as the office boy employed by the same corporation. But they represent the will of the employer and must, therefore, be set aside until the time comes when the proposed union of newspaper writers is thoroughly organized.

That there is a necessity for organization of the remaining two classes of newspaper writers, there can be no doubt. Some time ago I saw a small item to the effect that the newspaper compositors of Chicago averaged \$25 a week, while the reporters and editors only averaged \$20. The cause of the difference was said to be organization, and rightly enough, I believe. Joe Howard, the brilliant and erratic correspondent, has written very forcibly lately, in favor of some form of organization among newspaper men. Some newspaper man in Minneapolis (whose name I have forgotten) had an article in the *Writer* some months ago, in which he set forth the necessity of organization, and proposed a Writers' Guild. I do not propose to go into the necessity of organization, as I believe it must be apparent to all newspaper men of reflection. Everyone that I have talked with agrees as to the necessity, but doubts its feasibility. On the latter point I can say the newspaper men in New York once had an assembly of the Knights of Labor, known as the Horace Greeley Club, and were successful, I am told, in raising the space rates in that city. At the recent convention of the International Typographical Union in this city, the chairman of the Boston delegation, A. G. Davis, introduced a series of resolutions calling for such changes in the constitution of that body as would permit the issue of charters to reporters and desk editors. I had talked considerably with him as a friend, and the resolutions embodied many of my ideas. They recited the fact that there were many men in the "brainery" who had come down stairs to edit copy, as well as reporters, who have been members of the union. When they are no longer working in the composing room, their interests as wage-earners do not demand that they should be

members of the compositors' union, although it would be for their interest to be members of a reporters' and editors' union. When no longer working at the case they cannot be compelled to remain members of the local typographical union. They gradually, with some few exceptions, drop out of the union. They are the men who are relied on, in case of sudden trouble, to "get out the paper," and they have no union among themselves to back them up in case they refused. So they are forced to comply, and as a result the office is rattled.

It is easy, as the resolutions state, to bring men from other cities who know the case, but it is not so easy to bring men from other cities who know the city and its people where a strike might take place. The difficulty of obtaining *good* men as reporters is a serious one, even now. The class feeling among newspaper men is very strong, and it would be even more difficult if the men were organized, and there should be trouble. In conversation lately with one of the best managing editors in the United States on this subject, he said: "I could get the office filled in ten minutes from other offices; and, besides that, there is Harvard College at our doors, to draw from."

That set me thinking deeper on the subject, and after turning the matter over in many lights, I came to the conclusion that it would be no more possible to get reporters from other offices than it would be to get compositors. The reporter is not made in a day, and must acquire as much technical education as the compositor, if not more. His judgment as to the value of news, and the space it should be given, is not acquired in a short time. Putting his copy in shape for the compositor demands some skill and knowledge of the business. It is possible, perhaps, to get enough reporters, let us say, of such quality as to be able to go out and get certain facts, and write, in a slipshod manner, as much as they might be told by the city editor. But where would be the desk editors to lick it into presentable shape, if they were in the same union with the reporters. Under these circumstances it would be impossible to handle the copy in time for editions, and, with no men to set it, the impossibility of bringing the paper out would be a foregone conclusion. The combination of reporters, desk editors and compositors would be irresistible, no matter if the large corporations now running big newspapers have untold millions at their back.

I do not contemplate, however, that there would ever be any strike among reporters or desk editors. If they were organized they would be able, by a steady upward pressure, to raise salaries and space rates by mutual agreement among themselves, without ever being obliged to resort to that foolish, costly and unnecessary weapon of antiquated industrial warfare, the strike. There are other methods of reaching the desired end.

Of course, there might be some little friction when such a union was first organized, as many proprietors

might feel, as they do in other lines of business, that the men were trying to run their business. This would wear off as soon as the proprietors began to realize that the men had a right to say for how much they would sell their labor. There are many newspaper proprietors who treat their men well even now, but since the form of ownership is more and more being changed over into that of the impersonal corporation, the natural tendency is to make a dividend on the stock, without regard to the feelings or condition of the men.

If these unions were organized in every large city of the United States, under the banner of the International Typographical Union, they would do more good to the working newspaper man in a month than all the Press Clubs have ever done since they were first organized. The change would be beneficial to the proprietors, too, as it would require better work, done in a less slipshod manner, and when the man was at his best.

But little opposition would be manifested by the proprietors, I believe, since many of the larger ones are avowedly in favor of organization among other classes of workers. It was my good fortune to hear Gen. Charles H. Taylor, the proprietor of the Boston *Globe*, enunciate, at the banquet to the International Typographical Union delegates, in a speech replete with the ideas of unionism, the well-known formula of the labor agitators, "A fair day's pay for a fair day's work." While he pays the highest rates in New England, if the other papers were obliged to come up to his level, he would be able and probably willing to pay more. But what is the use of his paying \$30 or \$35 a week to an average experienced reporter when the other papers do not pay even \$25.

The step taken by the International Typographical Union convention in voting to organize reporters' and desk editors' unions is in the right direction, and I hope it will be voted upon favorably by every subordinate union.

The reporters and desk editors are ready for it, as I know of two local unions not attached to the International Typographical Union, already in existence. When they are assured of the support of the International Typographical Union in the formative state, it will not be difficult to organize every large city in the country.

#### FAILURE OF HIGH-CLASS PERIODICALS.

BY SAMUEL G. SLOANE.

IT is often a matter of surprise and wonder that so many high-class periodicals fail of success financially. So many have been started and failed, in the past, that now the first question to come up in one's mind when he sees or reads of a new venture is, "has it money enough back of it to make it go?" Almost without exception the cause assigned for failures in the past has been lack of patronage in the matter of subscribers and purchasers—in other words, readers. Without readers, advertising patronage could not be secured, hence

failure followed. Now, there must be some reasons for this apparent apathy of the public toward high-class literature and periodicals. I say apparent, because I do not think the apathy is real.

I do not think the cause for this apathy could be found in the business offices of these wrecked periodicals, for almost without exception they have been conducted on the best of business principles. Yet it is to the business office the fault is quite frequently charged. I think if the publishers would carefully scan their field, and then look into the editorial room, at least one cause would be discovered. Editors of, and writers for, the high-class publications almost invariably hold themselves, by their writings, too far above the mass of the reading public.

One great fault which I conceive is possessed by nearly all writers for the high-class periodicals is a too technical style or manner of expressing the ideas they desire to convey. The periodicals here referred to more particularly are those published as educators of the public—those whose editors announce that their aim is to instruct and educate their readers. In these very publications one will find almost every article is written for those who must possess a pretty thorough knowledge of the subjects under discussion to be able to understand the articles, or gain any knowledge from them. In writing to educate people, I take it, one should write so that the uneducated would be able to grasp the thoughts and ideas the writer desired, by his article, to express or convey. On the contrary, in every article one sees in any high-class publication he may pick up, the sole aim of each writer seems to be to write for those who already fully understand the subject or question upon which he is writing; and this is proven by his constant use of words, terms, phrases, etc., understood only by those educated in his subject. It seems to me the better way would be, when writing for the general public, to keep constantly in mind those who are not educated in the subjects being treated, and use such language, terms, etc., that the uneducated reader can understand what he is reading, and gain some knowledge therefrom. When necessary to use technical terms they should be explained in such manner as to fully convey their meanings. Especially ought this method of writing be observed when writing for the masses upon subjects a knowledge of which they should possess. To fully illustrate my meaning, I will mention that during the past recent years many articles have appeared in the different magazines upon the tariff question, and, with scarcely an exception, they have been written in such manner that only those possessing a knowledge of political economy could fully understand them. The average reader—the very man the writers desired to reach—would not wade through these articles, because he got beyond his depth before he had proceeded scarcely through their introductions.

If writers would bear more in mind that those who know do not need the telling, and write so those who

do not know can understand, their efforts would show greater results. This will not work hardship to the man of knowledge, because he can understand the simple, plain language intended for his uneducated brothers. Remember, when writing for the man who does not already know, that it frequently happens the mere statement of a fact will not carry a knowledge of the fact to him; he needs to have it illustrated, and, for many, several illustrations are necessary.

"But," says the critic of such articles, "you are tautological, you are prosy; your article could be boiled down to one-half or one-fourth, and convey all you have said." I grant all this true, so far as the man who is already informed upon what is being written about is concerned; but I insist it is by no means true of the large majority of those for whom the articles are intended. The man who understands an article readily and easily, can condense it for himself when reading it, while if condensed by its author it will fail entirely of

### PRACTICAL PRESSWORK.

BY A WESTERN PRESSMAN.

ADVICE in the manner of performing creditable presswork, as in many other things, of necessity carries along with it a number of provisions and conditional explanations. The artist cannot instruct a pupil by letter, without the aid of an example sketched to fill out his meaning, and a drawing submitted to his criticism when returned to the sender bears upon its face oftentimes the light touches of his dextrous hand that, guided by his trained eye, are worth more in the way of information to the discerning pupil than many pages of written explanation.

So with the art of presswork, the old adage of example being better than precept finds a fuller meaning. Many a treatise on how to do good presswork has been written and many will continue to be written, and it is well it is so. They awaken new thoughts

its mission in very many instances; the man he intends to educate will get nothing from it. Therefore would it not seem to be the better part of wisdom to look more closely after those who do not know, and let those who do know take care of themselves.

It is so much easier to read *down* than *up*, that many take the downward course, and from this tendency the publishers of the trashy literature flourish, and a namby-pamby fiction magazine or paper will flourish like a green bay tree in an atmosphere where a publication of the higher class will wither, droop and die. I think one reason for this is the one depicted above—that the writers for the higher class publications get above and beyond the mental reach of the masses by the manner in which they place their subjects before them. Let these writers come down to the masses, write for them, and they will find many readers they do not now have. Let them come down to within reach of the masses, and they will find many ready to grasp the rounds in the ladder of knowledge and climb up with them.

and ideas, and if the statements sometimes made are not correct they are contradicted, and error is exposed that might have lurked secure in the silence of self-satisfaction. But examples are more satisfactory, as has been said, and with this in mind the example of a cut printed flat without overlay and the same cut made ready is shown herewith as calculated to interest all whose vocation lies within the scope of the printing trade.

The customary advice from a pressman to the novice is to give the most careful study of the possibilities of the cut to be printed, and when the conception of the artist is fully understood, that a rigid adherence to it is necessary in order to obtain the proper result.

First, it is necessary to draw attention to the flatness of the first exhibit. There is no perspective, comparatively, and the mountain supposedly in the distance has the appearance of being perched upon the trees. The high-lights and shadows in all their gradations are undeveloped, and in this the trained eye of course detects more readily the defects. The models here

given being of the simplest, have the disadvantage of lack of marked contrast between the flat and overlaid examples; but we take the opportunity to say that this has been done purposely, as more calculated to invite criticism, and we shall cheerfully answer all questions on this subject, and be glad to have an expression of opinion.

The requirements of the artist's sketch are such as to call for but little overlay; the object merely requires that the background and foreground shall be "thrown away," that is, that they be lightened up so that the central and objective points of the picture shall be brought out, and the softened sketchy effect, which was evidently the artist's purpose, produced.

### KODAKS.

BY O. G.

**C**IVILITY pays. Have you ever noticed in an office a newcomer who acts as if he thought himself too well posted to accept "tips" from the older

best foremen are those who treat the employés as gentlemen and rarely use the "big I."

\* \*

THE writer has a great regard for the men commonly known as "chronic kickers." It is a fact that, as a rule, they are inferior workmen, but it is their close attention to details and exacting dispositions that cause employers to pay every cent earned and keep up the scale of prices. Too true they are themselves the worst sufferers, as the time lost in making and sustaining the various "kicks" is worth far more than the benefits derived. They are necessary to the well-being of the majority and should be patiently borne with.

\* \*

THERE is a vast difference between manly independence and impertinence. Too often the latter is taken for the former. A father's letter to a son about to enter on his apprenticeship is a safe rule for the guidance of both men and youths: "Always obey all rea-

employés. One rebuff, and the fellow-workman tending advice (perhaps unsought) on style, choice of display, or something in that line, will not risk a second in the attempt to aid a churl. The chances are that even if he were asked he would refuse the information, and under the circumstances he would be justified in so doing.

\* \*

HAVE you ever noticed what a great change takes place in the character and disposition of some men upon acquiring a little authority over their fellow-workmen—how arrogant and dictatorial they become to those unfortunate enough to be placed under their authority? Such men should never be kept in a position where they can insult and snub their shopmates, as they not only make enemies of all they come in contact with but are prone to almost demoralize the discipline in an office. Men of long experience in handling an office seldom find need to be harsh. In fact, the

sonable commands of your superiors. Remember that he who would command well must first learn to obey perfectly."

\* \*

PRINTER.—One who prints; especially one who prints books, newspapers, engravings, etc.; a compositor; a typesetter; a pressman.—*Webster.*

The foregoing has been the commonly accepted definition of the word "printer" for a long period. It has remained for the Frenchmen of today to separate and individualize the words so commonly used synonymously. They use "printer" in speaking of an employer, and "compositor," "pressman," etc., when speaking of an employé. Would it not be a good idea to do likewise? It is surely far more correct than the present method of using the words.

\* \*

It is a mistake to suppose that the man creating the greatest furor is accomplishing the most. Nine times in ten it is all noise and little work.

THE SHORTHAND GUIDE.

A COMPLETE TEXT-BOOK FOR SELF-INSTRUCTION AND SCHOOL USE.

NO. VII.—BY T. G. LA MOILLE.

[Copyright, 1891, by the Inland Printer Company. All rights reserved.]

Time, 1¼ minutes, R. S. Read, write in longhand, rewrite in shorthand, reread, etc. Spell in shorthand this and succeeding exercises. The key to this exercise will be found in Word Writing Exercise X. It will be interesting to guess at the words before consulting the key.

IX.—Ish-t, *chateau*; t-p-t, tiptoe; f-k-t, fact; m-k, make; hay-v, heavy; hay-ray, hairy; d-t, oddity; ish-f, sheaf; shay-lay, shell; b-n, bony; r-b, orb; ray-p, wrap; hay, hoe; p, pay; hay, aha; chay, chew; n, gnaw; chay-m, chum; t-m, team; n-m, name; m-n, money; n-n, ninny; chay-k, choke; j-k, joke; r-m, ream; ray-v, review; m-ray, marry; j-lay, jelly; j-n, Jonah; p-n, pony; k-m, oakum; b, obey; t-b, tabby.

Time, 1 minute, R. S. Write several times. Translate mentally. Naming the consonant outlines and position of chiefly accented vowel (governing position, first, second, or third), will be first-rate drills in this and the other exercises. You must become so skilled that when you hear a word, you can instantly think of its correct consonant "outline," and can also write quickly, in the proper position, this outline. Be sure you can read, without hesitation, all you write. On writing and reading rapidly hang all the law and the profits of shorthand.

- X.—1. Wring, Illinois, gash, lung, etching, meadow, shack, shadow.  
 2. Abash, lash, shallow, rally, lily, Dutch, bear, top, dub.  
 3. Farm, body, dip, pity, judge, daddy, toddy, papa, Jessie, jar.  
 4. Funny, rich, rum, Bonney, mob, pick, check, ready, dumb.  
 5. Up, at, etch, ebb, add, edge, air, ell, hook, egg.  
 6. Kittie, gap, back, rub, elm, gnash, mush, enough, kick, gag.  
 7. Mellow, knell, lair, fish, mummy, ninny, neck, muck, lack, Henry.

8. Murray, nudge, fag, limb, Adam, Jennie, tinny, thumb, ink, Nannie.

Time, 1¼ minutes, R. S. Spell in shorthand, write in shorthand, translate into longhand, rewrite in shorthand, etc. Compare your unvocalized outlines with Word Reading Exercise III. After thoroughly learning the reporting style outlines, vocalize this exercise, and practice the literary style of it until mastered.

REVIEW QUESTIONS.

86. What is the chief mark of punctuation used in shorthand? What is its favorite sign? After longhand titles which period is used? 87. What marks of punctuation are the same as in longhand? What should be written to distinguish quotations? What must not the comma resemble? What mark is not used in shorthand? How must the caret be made? Why? 88. Why are the dash and hyphen made wavy? 89. Why are the interrogation, exclamation and parenthesis varied from their longhand shapes? What two good methods are there of indicating applause, cheers, grief, smiles, laughter and great laughter? 91. How is accent indicated? 92. How is emphasis shown? How are italics indicated? 93. How are capitals represented: Small, large and initial? Is it always necessary to indicate capitals? 94. How may proper names be written? What should be used to distinguish proper names? When should a proper name be written in longhand? What is the safest way to write names? What is generally done when a name often occurs? How can you show the pronunciation of a name? What causes name-outlines to be readily prepared? How should you write an outline whose consonants might represent two, or more, names? 95. How are initials written? Name the phonographs of A, B, C, D, E, F, G, H, I, J, K, L, M, N, O, P, Q, R, S, T, U, V, W, X, Y and Z. Do we use the "nominal consonant"? Why? When is it best to write an initial in longhand? How may initials of titles be written? 96. How are numbers indicated? What should be drawn to point out numbers?

WRITING EXERCISE.

COMPLETE GUIDE, § 85-96.

Periods (three forms), comma, semicolon, colon, hyphen, dash, interrogation, exclamation, quotation, parenthesis, brackets, caret, paragraph, grief, applause, cheers, smiles, laughter, great laughter; B. S., D. D. S., D. D.; Aúgust, augúst, adó; *I* will it; Alma (l-m), Rome (r-m), Tommie (t-m). (Initials): A, B, C, D, E, F, G, H, I, J, K, L, M, N, O, P, Q, R, S, T, U, V, W, X, Y, Z. (Figures): 1, 2, 3, 4, 5, 6, 7, 8, 9, 0.

SHORTHAND INITIALS.

A	..... \	N	..... )
B	..... \	O	..... -
C	..... C or /	P	..... \
D	.....	Q	..... Q or ↗
E	..... /	R	..... / or \
F	..... \	S	..... ) or o
G	..... -	T	.....
H	..... /	U	..... <
I	.....	V	..... \
J	..... /	W	..... \
K	..... -	X	..... X or -
L	..... /	Y	..... /
M	..... \	Z	..... )

97. The Arabic numerals have arbitrary phonographic signs applied to represent them, as follows :

1, ʎ way, c wē, ɔ wū; 2, | t; 3, ʃ ish (or shay),  
 4, \ p, - o; 5, \ f, or F-hook, | i; 6, —;  
 7, / lay (or l), or L-hook; 8, / ray, ( \ r, rarely),  
 or R-hook, \ ā; 9, \ n, or N-hook; o, ) s, or o iss.

(a) The odd numbers have curved signs.

(b) All these consonants for numerals are unshaded, except ʎ way for 1. The vowels unshaded would not greatly impair legibility.

(c) The hooks (c wē and ɔ wū) for the letter W will be later explained, as will the hooks for F, L, R, and N, and the circle (o iss) for S.

(d) Although these signs for numerals are arbitrary, most of them are founded on some one of the regular shorthand elements of the numerals.

(e) It must be understood that the above signs are not the phonographic outlines of the numbers; for example, the arbitrary sign for 8 is some form of the letter R, while the regular outline would be ʎ ā-t.

(f) / ray, or the R-hook, should be used instead of \ r for 8, except where the sign for *million*, or *millions*, ( m, follows the sign for 8; for convenience of joining, \ r and ( m are written together, thus, \ ( r m, instead of / ray and ( m; thus, / ( r m, which would not usually be legible.

(To be continued.)

Written for THE INLAND PRINTER.

#### "TASTE" IN JOBWORK.

BY S. K. PARKER.

WHAT is taste? By what laws or by what criterion is it to be governed or determined? "There is no accounting for taste" is a common expression, and to no one does it come home with greater force than to the job compositor.

When a customer steps into the counting room of a printing establishment and leaves an order, after giving (or having pumped out of him) the requisite details as to quality and size of stock, number of copies, color of ink, etc., he will, as a sort of after-thought, say, "Now, I want a neat, tasty job made out of that." When the job is given to the compositor this remark, parrot-like, probably will be repeated to him. He looks the copy over, to see what its purpose is, and what treatment it will admit of. The first perplexing question now arises: "What is the customer's taste?" Having no clue to its solution, unless it may be indicated in some manner by the copy, he gives it up, and turns his attention to the next factor in the problem, namely, what will please the eye of the foreman; next, what will satisfy the powers that be in the counting room before the proof will be submitted to the customer; lastly, what is his own taste in the matter. The job may be one that is susceptible of being treated in a variety of ways, radically different, but either of which, to his mind, would have a pleasing effect. But still the original question, like Banquo's ghost, recurs, "What will please the party who is to pay for the job?" The taste of "the office," as learned by past experience, is finally determined upon as the guide, and our artist sets to work. The job set up,

and the proof turned in, he gets another job wherein all the previous questions recur. A reprint job is hailed as a blessed relief from worryment.

The proof of the first job comes back from the customer, who says, "I don't like this, somehow; please try again." Still, no clue as to what he *does* want. Our comp. begins to get either angry or indifferent, and "tries again" in a haphazard fashion, with, perhaps, no better success than before. Ten chances to one, had he set up the job in the first place according to his own judgment, unhampered by the taste of "the office," his proof would have been accepted. The writer has seen many instances where a job, having been set in the compositor's own taste, then altered or reset to suit "the office," and both proofs submitted to the customer, the original one has been returned bearing the magical O K.

Not alone in the matter of general style, but in the selection of particular faces of letter does diversity of taste present itself, with its accompanying perplexities, to the job artist.

Hansard, in his "Typographia," published in 1825, makes some comments which will be interesting to read again in this connection: "Taste, which is continually changing, has made strange revolutions in the form of our printing types."

The same author, on another page, exhibits some specimens of faces of letter which had been introduced at that period, designates them as "typographical monstrosities," and proceeds to inveigh against them in the following caustic language: "Fashion and Fancy commonly frolic from one extreme to another. To the razor-edged fine lines and ceriphis of type just observed upon, a reverse has succeeded, called 'Antique' or 'Egyptian,' the property of which is, that the strokes which form the letters are all of one uniform thickness! After this, who would have thought that further extravagance could have been conceived? \* \* \* Oh! sacred shades of Moxon and Van Dijke, of Baskerville and Bodoni! what would ye have said of the typographic *monstrosities* here exhibited, which Fashion in our age has produced? And those who follow, as many years hence as you have preceded us, to what age or beings will they ascribe the marks here exhibited as a specimen?"

It is interesting to observe that one of the faces objected to in the foregoing extract is the heavy "Antique" used very largely in railroad, theatrical and general poster work at the present day, and is found in nearly every office doing this class of work.

Another font which excites our author's indignation is a heavy face of text letter, to be found in many offices at the present time, and frequently used in church work, legal documents, etc. This, he says, is "one of the modern fanciful, but ridiculous, innovations, only called *Blacks* from the quantity of ink they are capable of carrying."

Truly, and with emphasis, may we echo the question, "What *is* taste?"

Written for THE INLAND PRINTER.

## A CHAPTER ON INTERVIEWING.

BY S. P. WHITMARSH.

IN the staff of a metropolitan daily there is of necessity a division of labor. The business of the house is the gathering and preparation of all sorts of news for market. The public who buys is supposed to be always demanding something new, fresh and startling. From the editor-in-chief to the humblest employé, each has his peculiar duty, that, promptly performed, goes to make up the character of the finished product.

But the one of all others whose productions tickle the fancy of the largest constituency is the interviewing reporter. Fairly considered, he is the wonder, as he is the peculiar invention, of the nineteenth century. He is in fact an eternal interrogation point with gimlet attachment. No skill nor subterfuge can prevent his reaching the mark of the prize of his high calling. His motto is "Excelsior," and he never allows himself to get scooped. If denied an entrance to the citadel of home, he will waylay his quarry on the street and bore for information with the pertinacity of a Jersey mosquito. When utterly baffled in procuring speech he has a resource that never fails. Forth to his chief he hies, and lays upon the table an ingenious conversation so artfully worded that it compels the irritated object to appear in print to save his reputation by denying a part and confessing the rest. At the next attempt his task is an easy one. The thumb-screw of an unfettered press, having been once applied, does not have to be repeated on the same person.

No matter how outrageously the courtesies of life are infringed by the modern interviewer, he never meets his deserts in this world. He is never run over by the cars, blown up in an explosion, smashed in a collision or extinguished by a cyclone. The reason is he is an impersonality. His name is not signed to the parcel of chips thrown out by his auger. No libel suit is seized on in retaliation, because taffy, so artfully inserted, has chloroformed the angry passions of his victim. And so the practice grows, each year increasing the field of research till no place but humble mediocrity is safe. A man who seeks political honors, after running the gauntlet of hostile ballots with success, finds, just as he takes the oath of office, an interviewer

before him, asking his opinion of the future, and promising to give the public a verbatim report of his crude fancies. And thereupon the unlucky victim puts on record thoughtlessly something that proves in after years a boomerang to his political prospects.

But for all this the public does not care. It wants to know all about the private life and opinions of prominent men and women; of defaulters—how their wives and families meet the disgrace; of elopements—how the forsaken ones feel over the event; of a scandal—what the parties thereto have to say in explanation; of a shocking and wide-spread calamity—how the afflicted survivors receive the blow. Someone must do the cruel work of extorting information to feed the remorseless maw of a morbid curiosity, just as of old Christians were "butchered in the arena to make a Roman holiday."

In thus criticising the interviewer, and the underlying forces that have contributed to his origin and development, it is not the purpose of this article to condemn without discrimination. It is only the abuse of a system, good in itself, and useful when conducted without degenerating into idle gossip and sensationalism, that deserves censure. Indeed, abuse is often heaped upon the reporter without justification, and, hardened to his profession, when occasion suits, he frequently bears stoically the insults of disappointed boodlers whose schemes he has exposed, or, with a spirit that amply displays the fact that the days of chivalry are not yet past, resents an injury to the weak and unprotected; but more particularly when, animated by high patriotic purpose, the interviewer seeks to garner the best thoughts of the wisest minds and send them broadcast to quicken the pulses and enlighten the minds of the reading public, is he a benefactor of his race.

Of old, men of note wrought and wrote without the spur of contemporary fame; and history only does justice to their lives and services. Today the press (always a power both for good and evil) searches out the heroes while in action, and through the inevitable and omnipresent interviewer gives their glowing thoughts to the masses, that they too may be lifted by a like inspiration. To the worthy actors of this generation are thus brought the laurels that had they lived in a former century would have only been laid on their tombs. And thus a nation is enabled to pay its debts of honor to living heroes and statesmen in spot cash, instead of posthumous rewards and monumental regrets.

### WOMAN IN BUSINESS.

BY F. J. HURLBUT.

"Seek to be good, but aim not to be great,  
A woman's noblest station is retreat;  
Her fairest virtues fly from public sight,  
Domestic worth—that shuns too strong a light."

LYTTLETON.

HER highest station is not there. Her manifest destiny is one for which commercial life not only furnishes no preparatory discipline or experience, but positively unfits her. The development of a valuable female clerk or stenographer or other employé is usually the spoiling of a good woman—not in a moral sense, for that is an element that I do not propose to consider, but in a sense almost as deep and far-reaching in its consequences. My position is in defense of woman; not in condemnation. I would save her from herself. It is in the nature of manhood to honor womanhood. This fact is one of the results of modern civilization, for in earlier times, and among nations of less culture even now, the reverse has been and is true. The highest delight of a true woman is to be honored by man. To pretend to despise that, is affectation—the expression of a disordered mind. This delicate sense of honor from man for woman is never so definite and keen as when their habits of life, their duties, their responsibilities, their general aims and purposes, are radically different.

The stolid foreigner who toils beside his wife at heavy farm labor knows nothing about refined affection. His wife receives at his hands the same consideration as his horse. She becomes strong and muscular, but she is almost unsexed as a consequence.

Contrast this couple with the business man and his wife, and you learn how woman has grown upward with education and civilization. We see the divine hand—the founder of natural law—in the evident fitness of woman for domestic life, and in the fitness of man to encounter the rivalry, the selfishness, the rougher elements of the outer world. She shines most brightly in her dual station of wifehood and motherhood, and the very essence of her nature is here developed to its highest fruition. His manhood is never so glorious as when with earnest effort and sterling integrity he bravely fights the battles of life in her defense. Their relations are, like their duties, clear and distinct. The labors they perform are equally necessary to the well-being of society. They are alike indispensable:

"As unto the bow the cord is,  
So unto the man is woman;  
Though she bends him, she obeys him;  
Though she draws him, yet she follows,  
Useless each without the other."

She needs his substantial support and his strong hand and heart to lean upon, so that she may devote her time to the cultivation of those higher graces which fit her for the care of home and the rising generation. He needs her affection and the refining influence of her gentler nature, because, bathing in its purifying

influence, he daily goes forth stronger to the combat of life.

In these two—the man and the woman—there is a civil entity in all its completeness. They represent the sum total of human life. She represents the home, and he the store or workshop or whatever makes possible the maintenance of the home. In these relations we find the highest realization of human happiness, and peace and virtue. Strong, self-reliant manhood, and earnest, refined womanhood, spring from families wherein these conditions are found.

Any system of society that unfits either of the sexes for the highest duties of life is radically wrong. To tincture the entire maturity of an individual with an unnatural quality simply for the sake of bridging over a few months or years is not only poor policy, but is a crime against nature; and this is the very thing that is done, in the majority of cases, where a young girl is sent out from the shelter of home and encouraged to carve out for herself a place and a record in commercial life.

I know that many so-called champions of woman will say these propositions are harsh and unkind, but I believe they are founded on a deeper philosophy than the shrill and noisy diatribes about man's oppression of woman.

Our lives are but a succession of stages, and each stage should be a preparatory school for its successor. The climax of our happiness is the home. There are laid the foundations for other homes, for human character, for nations. Let us, then, fit the man for his duties in life, and the woman for hers. We do not want a race of effeminate or brutal men, nor do we want either coarse or lackadaisical women.

Man gives his life to his business or his profession; with woman it is at most but a makeshift or temporary convenience. The young girl goes out from her home, away from the shelter and care of mother, to enter the sordid atmosphere of commerce. Domestic qualities do not thrive there. She does violence to her nature the moment she crosses the threshold of business life. She is wronged the moment she is compelled or induced to exchange the home for the store or office. She is *entitled* to the home life, for that alone can prepare her for what is really her destiny and her legitimate heritage. This is the formative period of her life, and every influence that assails her now will leave its impress for good or ill upon her whole career. What influences are felt, what qualities are awakened, in business life? Is it not the natural result of the conflict of the outer world to make us selfish, cold, sordid, incredulous, independent? Are not every one of these qualities inimical to the sweetest graces of womanhood? By nature a woman shrinks from daily contact with strangers of either sex, but presently she gets accustomed to it, though it is always at the expense of a better element.

Women need not be denied the means of earning a livelihood where the necessity actually exists, nor are

they denied it. I would, however, draw the line at *actual*, not fancied, necessity. Notwithstanding the loud complaints that women are discouraged in their efforts to enter business life, the fact is that they are too much encouraged. It is altogether too easy for them to secure the transition from the home life to a business career. The result is that they do not wait for necessity, but every young girl whose parents cannot furnish her with the luxuries or the attire possessed by her chums is frantic to learn stenography, or some other easily acquired profession, and then to take her place, not as a bread-winner, but as a money-winner, whereby she may gratify her taste for dress or her predilection for pleasures which her parents could not afford. Once established in business, she will not leave it. The jingle of dollars, all her own, in her pocket, is a new and pleasant music to her, because it suggests the possibility of a gratification of the girlish desires that are in her heart. Her ambition is innocent enough, but the method of its realization is ill-advised; she sacrifices much more than she gains. It is here that the strong arm of parental wisdom should encircle the budding woman, and protect her from herself. Vastly better would it be for her if she were compelled to remain at home, helping her mother in simple household duties, content to be an obedient child until maturer years had rounded her character into the fullness of mature womanhood.

The sense of independence that she gains while earning her living robs her of those gentler elements that are her chief attraction for honorable manhood, stifles the inherent feminine sensitiveness that is the fount and origin of the wifely and motherly instinct, and invests her with what I call a mannish nature that is entirely at variance with her own.

She may marry, but the independence acquired in business life will still cling to her. If poverty assails the couple, she looks to that for her recourse. If domestic inharmony comes to them, she holds it up as a menace to her husband, when it is really as much a menace to herself. It paves the way for separations and divorces that would otherwise be avoided.

Let anyone who knows the records of the public women of this country say if they can find therein anything to stimulate a higher condition of domestic life. The total is a history of marital discord, separations, and misery for parents and children.

Another bad feature of business life for young girls is that they unconsciously learn to estimate everything from a commercial basis; even the marriage contract suffers this fate, and its holy purposes and its sanctity are in a measure lost to sight. This is easily understood. The woman is only human, and contact with commercial life has the same effect on her as on a man. She toils, and tires of toil. She has learned to dread the labors of a housewife, and desires to give up those to which she is accustomed. Therefore her marriage is a deliberate plan to be relieved of both. It is a sort of commercial transaction, having ordinary selfishness

for its basis, and is almost devoid of the finer sentimental element which is the essence of a true marriage.

Let us, in every case where we find needy women of any age, assist them to an honorable maintenance, and treat them in business with all the deference and courtesy that is due from manhood to womanhood. But let us also keep within the shelter of a home, no matter how humble, every daughter of our land, until she is taken by the man of her choice to assist in the upbuilding of a new home that shall be an honor to them and to the nation. Let us do them this justice; we owe it to them to restrain them from plunging into an atmosphere and influence that is entirely out of joint with their divine heritage.

Written for THE INLAND PRINTER.

### YOUNG CAXTON'S UNREQUITED LOVE.

BY MALCOLM MC PHERSON.

Young Caxton loved a maid petite,  
A copy holder only she—  
And to himself he'd mutter low,  
"She's just the type of girl for me."

No primer long had he to con  
To fix him in his inclination;  
No monkish missal or brevier  
Could sway him with its wise dictation.

To roguish Cupid and his tricks  
He had become a perfect minion,  
Nor gods nor men, nor Argus boss,  
Could shake him in his fond opinion.

She was his female nonpareil,  
With agate orbs and lips of ruby;  
Emerald, diamond, pearl nor gold  
Could match in value Sally Luby.

Her form was nature's best make-up,  
Her gait seemed modeled by Delsarte;  
Although not fat, she was not lean—  
In short, a very taking party.

At least all this Joe Caxton thought,  
And, as he deftly set his stick up,  
Would sigh and say between each line,  
She proved his long desired pick-up.

Careless he grew and recked not whether  
He lagged behind upon his galley;  
Instead of watching "outs" and bulls  
He merely hummed of pretty Sally.

Alas, for love's supposed sweet course,  
For love was Joe compelled to suffer;  
And when he told her he'd been fired,  
She only said, "Why, you're a duffer!"

Pied then were all his fond affections;  
When Sal he found was not his take,  
Sadly his string he turnéd in,  
Then turned himself into the lake.

And so for Joe the jig was up;  
But as for cruel, fickle Sally,  
She simply went and married  
The "ad" man in the adjoining alley.

So printers all, both old and young,  
Beware, before you grow much older,  
Of trying to join the union with  
Some fair but saucy copy holder.

## MAKE IT 20!

When Bismarck was Minister to Paris in 1862, he summed up the character of the Emperor Napoleon III in one famous sentence—"He is a great unrecognized incapacity."

That is the verdict which must be pronounced on many presses. They are thoroughly incapable of effective service, and only remain unmolested because their incapacity is unrecognized.

Meanwhile, there are certain straws which show which way the wind is blowing. 15 per cent net profit in 1890 wasn't anything to be delighted with. It might have been 20 per cent easily.

If you would print one sentence on the outside cover of your cash book, where you could see it every day, you might finally believe and act upon it. Then 20 per cent might be reached. That sentence is this:

*Profit in printing depends on operating expenses, and operating expenses are usually inversely to first cost.*

# COX • DUPLEX • PERFECTING • PRESS

## AND FOLDING MACHINE.

Delivers 3,500 to 4,500 perfect papers, folded, per hour, either four, six or eight pages, from flat beds and ordinary type forms.

MR. T. C. O'HARA, the well-known expert machinist of the *Boston Herald*, under date of September 10, 1890, writes as follows to MR. H. I. DILLENBACK, manager of the Rutland (Vt.) *Herald*, the purchaser of the first of the above machines :

BOSTON, MASS., September 10, 1890.

At your request I attended the shop test of the new COX DUPLEX WEB PERFECTING PRESS, built for the Rutland *Herald*, and carefully inspected its operation and made a thorough examination of its construction. The press stood partly over a pit and partly on the floor, upon planks, and was not fastened down in any way ; and it was run by a four-inch belt. At the first trial of speed, it ran at the rate of 3,000 complete papers per hour ; at the second, 3,600 ; at the third, 4,560. Its operation during these trials caused no perceptible jar of the machine nor of the floor of the building, nor did it give any indication of strain upon the machine, and it ran with perfect steadiness and smoothness. The principle of the machine, while novel, is entirely practical, and overcomes entirely the obstacles to speed and smooth running always heretofore encountered in the construction of flat-bed printing presses, and in my opinion the invention has solved the great problem in the construction of machines for the use of newspapers of moderate circulation, desiring to print from type at high speed, in a manner destined to revolutionize this branch of printing press manufacture.

Under date of December 9, 1890, Mr. Dillenback, Manager of the *Herald* writes :

The press is running nicely. I believe it to be the press, without a rival, for newspapers desiring to secure all the advantages of a fast perfecting press without the delays, expense and other disadvantages of stereotyping ; and I do not hesitate to recommend it unqualifiedly. The press runs smoothly and economically, is handled with ease by a young man who never before saw a perfecting press, is thoroughly well built, and does better work than the vast majority of presses. I know of no "outs" about it, and feel justified in saying that no one can say aught but in praise of it.

One of these presses, sold to the Toledo (Ohio) Daily Commercial Company, has been erected in their office, where it is now printing their seven-column eight-page paper daily. This press will print and fold, with equal speed, either a four, six or eight page paper, without any adjustment.

THE DUPLEX PRINTING PRESS CO.,

BATTLE CREEK, MICH.

## ON ANOTHER PAGE

We offer a large Map to parties sending us clubs of eight subscribers, or a single subscription. If you are already a subscriber, and want this Map, send us \$1.25 and we will send you one.

## YOU WILL FIND

It one of the most useful maps for office or home ever published, and well worth the price asked. Its regular price is \$5.00, but through special arrangement we are able to furnish it at \$1.25.

D. L. EVANS, *Treasurer.*

ADDRESS ALL CORRESPONDENCE TO THE INLAND PRINTER COMPANY.

CHICAGO, AUGUST, 1891.

SUBSCRIPTION RATES.

TWO DOLLARS per annum in advance; one dollar for six months in advance; sample copies, twenty cents each.

FOREIGN.—To countries within the postal union, ninety-six cents per annum additional. To Great Britain and Ireland, postage paid, twelve shillings per annum in advance. Do not send foreign postal notes. Make money orders payable to H. O. Shepard.

SUBSCRIPTIONS may be sent by check, express, draft, money order or registered letter. Currency forwarded in unregistered letters will be at sender's risk. Postage stamps are not desirable, but if necessary to remit them, one-cent stamps are preferred. No foreign postage stamps accepted.

CLUB RATES.—Six or more subscriptions, sent at one time, one dollar and fifty cents per year each. Cash to accompany order.

THE INLAND PRINTER is issued promptly on the fifth of each month, and will spare no endeavor to furnish valuable news and information to those interested professionally or incidentally in printing, engraving, electrotyping, stereotyping, bookbinding, and in the paper and stationery trades. Persons connected with any of these lines of industry will confer a favor by sending news from their section of the country pertaining to the above trades, particularly individual theories and experiences of practical value.

ADVERTISING RATES.

SPACE.	ONE MONTH.	THREE MONTHS.	SIX MONTHS.	ONE YEAR.
Plain card .....	\$ 5 00	\$ 13 50	\$ 25 50	\$ 48 00
One-eighth page .....	10 00	27 00	51 00	96 00
One-quarter page .....	15 00	40 50	76 50	144 00
One-half page .....	25 00	67 50	127 50	240 00
One page .....	42 00	113 50	214 00	400 00

WANT COLUMN.—Twenty-five cents per line; minimum, 75 cents. Orders for this column *must* be accompanied by cash.

THE INLAND PRINTER publishes its net rates in each issue of the paper. No agent or representative of this Journal is authorized to deviate therefrom or make any discounts. It solicits advertisements from dealers in or manufacturers of any goods used by printers, bookbinders, stationers and similar lines of trade. Its value as an advertising medium is unquestioned. The character of the advertisements now in its columns, and the number of them, tell the whole story. Circulation considered, it is the cheapest trade journal in the United States to advertise in. Advertisements to insure insertion in the issue of any month, should reach this office not later than the twentieth of the month preceding.

THE INLAND PRINTER may be obtained at retail, and subscriptions will be received by all newsdealers throughout the United States and Canada. Subscriptions will also be received by all typefoundries and printers' supply houses.

FOREIGN AGENTS.

M. P. MCCOY, 54 Farringdon Road, London, England.

ALEX. COWAN & SONS (LIMITED), General Agents, Melbourne, Sydney and Adelaide, Australia, and Dunedin, New Zealand.

G. HEDLER, Grimmaischer Steinweg 3, Leipsic, Germany.

A RESPONSE.

WHEN merit calls from admiring friends hearty commendation for good works performed and promises fulfilled, an acknowledgment of such spontaneous expressions is but a proper courtesy. We had resolved to say nothing to draw attention to the many improvements that have been made in THE INLAND PRINTER during the three months last past, but the numerous warm expressions of approval and encouragement received make it necessary that we should bow our appreciation of their kindly intent.

The following, among the many unsolicited testimonials, are submitted as specimens of the congratulatory letters that are being showered upon us:

*The Inland Printer Company, City:* CHICAGO, July 8, 1891.

GENTLEMEN,—We received a copy of your July number of THE INLAND PRINTER with the new cover, and wish to congratulate you on the presswork and general appearance, and the way that you are sending out your publication through the mail. It is a great improvement over the old style of rolling the book in a newspaper wrapper, as it comes to the reader in a good shape now, perfectly flat. . . . The presswork on the July number is fine. We wish you success.

Yours truly,

VANDERCOOK & CO.

NEW YORK, July 17, 1891.

*Inland Printer Company, Chicago, Ill.:*

GENTLEMEN,—We wish to congratulate you on the improved appearance of THE INLAND PRINTER with its new cover, which is very tastefully designed. Your method of sending it in an envelope, flat, enhances the value of the publication to all your readers as well as your advertising patrons. Wishing you continued success, we are,

Yours very truly,

MONTAGUE & FULLER.

THE INLAND PRINTER feels justly proud of such testimonials. The improvement in the manner of mailing insures to the subscriber an unutilized and perfect copy of this "chef d'œuvre of the printer's art," as a contemporary puts it, and we beg to assure our readers that we are by no means disposed to rest content with our progress. Their appreciation has been most grateful to us, and we shall still further demonstrate that we are not in a rut, but in the van of all that is of interest or merit in printing and in the field of bookmaking in all its branches.

THE PROPOSED NINE-HOUR WORKDAY.

ONE of the most important measures which occupied the attention of the recent convention of the International Typographical Union at Boston, was that relating to the adoption of nine hours as a uniform workday for the printers of the United States and Canada. From the tone of our exchanges and the action of certain local branches of the United Typothetæ, the opinion seems to prevail that the action of the International Typographical Union in this matter was final and conclusive, so far as the journeymen printers' side of the question was concerned. Such is not the case. No such hasty or radical conclusion was contemplated by the members of the convention, the action taken consisting merely of the enactment of a law looking to the adoption of a nine-hour workday,

said law to be submitted to a popular vote of the membership of all local unions for final ratification.

According to a recent decision of the president of the International Typographical Union, it will require a three-fourths majority of all the votes cast to ratify this measure and make it an international law. This decision was based upon the fact that a like majority would be necessary to change the organic law of the organization in convention, and hence should hold good when applied to a popular vote. Much as the equity and justness of this decision may be questioned, we are inclined to think that it embodies good sense and is based upon sound principles. When a measure so far-reaching in its effects and of such vital importance to the employers' interests as the one under consideration is in abeyance, a practically unanimous sentiment in its favor should be shown to exist on the part of the workmen before they can expect to realize their hopes. In this way the full significance of the movement will be conveyed to all concerned, and the fair dealing employer will feel called upon to take up for serious consideration a question the utility and feasibility of which he has heretofore been in doubt.

The history of this movement for a fewer number of working hours has been so often and so recently reviewed in the columns of THE INLAND PRINTER that it is scarcely necessary to refer to it in but the briefest possible manner at the present time. Since the year 1866 more or less agitation in this direction has been kept alive, the employés constantly urging that the increased facilities at hand, combined with the abundance of unemployed labor to be found in all parts of the country, were factors that would render this measure not only practicable but highly necessary as well. On the other hand, the employers have steadily maintained that the state of trade, and the conditions surrounding competition in this particular line of business have been of such a nature as would render it out of the question for them to comply with these requests at any time since the inauguration of the agitation. In this connection it may be stated that many prominent cities and towns in the far west have been working on the nine-hour plan for the past three years, and candor compels us to admit that this question of competition has assumed no graver proportions since than it presented before the ten-hour rule was abandoned.

The conduct of the journeymen printers in asking for a reduction of the hours of labor is condemned in many quarters as being uncalled-for, unbusiness-like and the promptings of unrestrained selfishness. It is hardly necessary to say that such sweeping charges against a numerous class of law-abiding citizens is wholly unwarranted, and lacking every element of argument bearing on the justice of the question in dispute. It is but fair to assume that the printers of the country should form a desire to join the great army of workmen in the effort now being made to bring about a shorter working day. They would be led into this position as much by a desire to share in the beneficial

effects which are expected to attend the introduction of a shorter workday as from any other cause, and as they claim that it can be shown that the measure can be adopted without any detriment to the interests of their employers, why not give them a hearing and an opportunity to make good their claim. The United Typothetæ cannot afford year after year to take the position that the state of business will never allow any reform in the printing industry in America; and this without even the formality of hearing the other side of the question. They claim to be banded together for the purpose of resisting all unjust encroachments on their rights and prerogatives. This is a very laudable purpose, but can hardly be applied to every conceivable subject which may be brought to their attention by their workmen.

The printing fraternity of America—employés as well as employers—have always maintained the highest reputation among industrial classes for their intelligence and progressive ideas, as well as for the broad, fair-minded position they take on all questions coming under their consideration. Here is an excellent opportunity for them to prove to the world their title to the high estimation in which they are held by their fellow citizens. Let representatives of the employers and of the journeymen come together, and, by the exercise of a little good judgment, forbearance, and the exchange of mutual concessions, bring about a settlement of this matter that will be alike creditable, profitable and satisfactory to all concerned. This line of action will certainly be more to their reputation than will a resort to methods that the least intelligent class of laborers would reject as unworthy their countenance.

#### THE NATIONAL EDITORIAL CONVENTION.

ONE of the most memorable of the National Editorial Association conventions was concluded at St. Paul on July 17. From the legislation enacted the procedure will not be radically changed, but the association will be put in a better position for carrying on its work by the removal of crudities that experience has demonstrated to exist.

The conventions are, as a rule, of an instructive character rather than legislative, and the amount of practical information contained in the papers read at the session just closed and the discussions ensuing therefrom proves the value of the convention to the editorial world. The Committee on Permanent Headquarters, in its report of progress, wisely recommended Chicago as the location for a joint stock company, with a capital of \$1,000,000, to carry out the scheme. The hospitable entertainment of the delegates left nothing to be desired, and the happy combination of business with pleasure had its usual charm for the participants. From the large number of contributors of valuable papers and addresses it is difficult to single out for special mention any one in particular, yet the informal talk of Mr. J. W. Scott, of the Chicago *Herald*, on the "Management of

a Metropolitan Newspaper" was perhaps of the greatest utility to the assembly, the numerous questions asked showing the deep interest with which Mr. Scott's remarks were received.

Ex-President Stephens has a most worthy successor in President W. S. Capellar, and with the selection of such men as presiding officers, the proceedings of future conventions will lose little in interest.

ESTIMATING.

BEFORE the San Francisco Typothetæ, on May 13, 1891, Mr. Charles A. Murdock, its president, read an admirable paper entitled "Competition—Its Possible Regulation," which has been copied extensively in the trade papers of the printing industry throughout the country, and the commendation universally bestowed upon it would almost persuade the uninitiated that all are awake to the evils of competitive estimating, and that consequently an agreement can be readily come at.

Mr. Murdock's ideas cannot in our opinion be improved upon, and we trust his pamphlet will fall into the hands of the successful competitor of whom the following information comes to hand. We give our correspondent's statement, merely suppressing the names for obvious reasons:

Editor INLAND PRINTER, Chicago, Ill.: May 21, 1891.

DEAR SIR,—By this mail I send you a catalogue done in the office of this city.

The party that had the work done came to us for a bid, and as we have done similar work on several occasions and have kept a time and job ticket in each case, we know exactly how such jobs run. We figured on setting the matter partly in long primer and partly in brevier, as per enclosed sample, and the following is our estimate on the job:

2000 copies of about 128 pages—16 reams 22 by 32, 28 lb. No. 3 book.....	\$23.50
350 sheets cover paper, 22 by 28, 48 lb.....	2.50
Composition—94,000 long primer	} .....
74,000 brevier	
Presswork.....	16.00
Binding and trimming .....	12.50
Handling and miscellaneous expenses.....	3.50
	\$110.00

Our bid was \$1.28 per page, whether more or less than 128 pages.

The office bid on the same job. They figured on setting it in brevier, and their bid was a few cents (don't know just how many) over a dollar per page. This is the kind of competition we have to meet.

Please give us the price of such a job. What it is worth to do such work and make a fair profit, and compare our bid with medium-priced establishments of your city.

In the work submitted to us for an estimate we find the calculation on the number of ems to be composed, as given in our correspondent's computation, to be short of measurement. We measure the brevier to make 120,384 ems, and the long primer 82,944, by taking a page and measuring it half and half, and figuring on 128 pages. This would total 203,328 ems, which in an average printing house in Chicago would be an expense of \$121.99 for the corrected matter alone. We notice also no allowance has been made for waste in stock, of which, by the way, the weights and some of the sizes mentioned by our correspondent are not carried

by Chicago paper houses, and accordingly a Chicago printer would estimate about as follows:

17 reams 22 by 32, 30 lb. book.....	\$30.50
260 sheets 22 by 32½, 50 lb. cover.....	2.75
Composition .....	160.00
Presswork, eight sixteens .....	34.00
Presswork, cover.....	4.00
Binding .....	13.50
	\$244.75

The estimates per page would therefore run about as follows:

The office.....	\$1.00
Our correspondent.....	1.63
Chicago.....	1.90

It is due our correspondent to state that the specimens submitted by him show good composition and presswork, while the successful competitor has turned out a job that is dear at any price, being of the poorest class of cheap catalogue work. Both estimates, however, are too low in comparison with estimates of Chicago houses, taking into consideration the differences in wages, etc., that locality to a large extent governs. We consider it not inappropriate therefore to finish our remarks with the closing paragraph of Mr. Murdock's address:

"My firm conviction is, that any permanent improvement must rest on the hope of better knowledge and better feeling, taking shape in better methods. No arrangement or scheme can deliver us; we must be educated, technically and morally. We must moderate our greed, raise our standard of business honor, and treat our employés, our customers, and one another with fairness. Only so can we get out of the wilderness, and gain that self-respect which, if not success, is better than success."

PRINTING EXHIBITS.

AMONG the many proffers made to the World's Fair directorate, the proprietors of one of the largest establishments in the United States desire the privilege of putting a printing plant in the grounds and selling a daily paper, and offer to invest \$50,000 in the enterprise. Illustrated journals of every variety throughout the world are making inquiries, and it is anticipated that papers throughout the universe will have copies on file. It has been suggested that a perfect newspaper plant be put in the building, and that leading American papers be permitted to occupy the plant for one or more days and get out on the grounds a duplicate issue of their paper, of same date and containing same matter as at their home office. Exhibits of presses, stereotyping apparatus, typesetting machines and every department of newspaperdom will be in active operation. It has been stated, though not officially, that the National Publishers' Association, of which Mr. James W. Scott of the Chicago *Herald* is the president, and the National Editorial Association, lately in session at St. Paul, will, through properly appointed committees, make suggestions as to the part printing should take in

the exposition. In this connection it may be stated that Major Handy, Chief of the Department of Publicity and Promotion, was to have addressed the National Editorial Association on July 16, but was prevented by the interference of his appointment on the National Commission and consequent voyage to Europe. It has not been fully decided yet what committee will have control of the printing exhibit, though it comes within the jurisdiction of the Department of Liberal Arts. It is considered probable, however, that the Department of Publicity and Promotion, under supervision of the Press and Printing Committee, will have charge of this important feature of the exposition.

An exposition of a novel character is being held in Paris, styled "l'Exposition de Publicité." In seven halls of the Palais des Beaux-Arts are displayed over six thousand copies of newspapers published all over the globe, handbills, posters of all sizes, shapes and designs, chromos, plain and illustrated cards, in fact, everything in the line of advertising that could be brought out. To facilitate the inspection of the newspapers, they are arranged in alphabetical order on boards near the walls, while the walls themselves are covered with posters, chromos, etc., to the ceiling. The entrance fee is 50 centimes, each ticket of admission being entitled to a chance in a lottery which takes place at the close of the exposition. The prizes in this lottery consist of a year's subscription to several of the papers, gold watches and other objects. The exposition closes September 15.

In 1885 the first "Exposition du Travail" took place in the Palais de l'Industrie, Paris. It was a very successful display of all manner of products of working humanity, and every branch of industry and inventive genius was represented. A second exposition of the same nature is now taking place in the same palace, with the difference that it is international in its character, and entries may be made by foreigners on the same conditions as Frenchmen. The ministers of commerce, of public instruction and of public works have accorded their patronage to the enterprise and a great success is anticipated. A special section is established for inventors of all sorts, where the rich and the poor will have an equal opportunity to display the products of their genius. This section is under the patronage of a distinguished committee, at whose head stands Admiral Thomasset. M. Boettcher, the Commissioner General, is at the disposition of all interested in the exposition. His address is No. 15 Faubourg Montmartre, Paris. American artist printers who have fine specimens should not neglect the opportunity of displaying them.

WILL our friends who send us reports of state of trade each month please mail the information on the fifteenth instead of the first. This change is made necessary because day of publication is now the fifth, and the forms go to press before the first of every month.

#### ABOUT ART PRINTING.

BY A. R. A.

IF printing is an Art, what is Art Printing? Some printers seem to think that to produce an "art" job they must resort to something desperate, that they will have to bring out all the curlicues, slobs, beaubs, ornamentations, ludicrous cuts, etc., within reach, and throw them into their job, without regard to size, shape or effect. No matter whether the reading matter part of the job is legible or not, that seems to be but a secondary consideration; but the ornamentation must be there, or surely it cannot be an "art" job. Others again will, they think, produce "art" effects by bringing into use all the ornamental type possible, while still others will resort to the most idiotic combinations of colors imaginable. Now, printing being an art in itself, it is unnecessary to distinguish any special production of it as art work, unless it be classified as Art Work and Botch Work, and a great many will admit that in many instances we find the latter name more appropriate, and that it fits the occasion better than the first.

Art Printing, as I understand it, is merely the appellation some individuals of lofty aspirations have introduced to distinguish good printing from bad printing. Now, if anyone thinks that to produce a good job they will have to resort to the above mentioned devices, they are very much mistaken. A first-class job depends as much upon the printer knowing how to properly use the material at hand, if not more so, than the material itself. In setting up a job, don't overdo it, which is the greatest fault of the majority of printers.

In setting up a card, for instance, be careful not to get your type too large. If the business of the firm is well known, the name should be the most prominent; if a new firm, or perhaps not so well known, the business should have the most prominence, and the balance of the card should have a uniformity as to faces, only altering the sizes. Plain faces look best in crowded work. If you have plenty of space, ornamental or text letters may be used, or plain type with some appropriate ornamentation. But try to always have your ornaments lighter than the reading matter. As a rule, don't combine flourishes with ornamental letters, except in very rare cases, and then it should not be attempted except by a printer of good taste. One of the principal faults of new beginners, and a great many old ones, is in using ornamental type before they have learned how to display plain type. To properly space a job requires as much attention as setting it. Many a good job has lost its beauty by poor spacing. Remember, when spacing, to always put less space between short lines than long ones; space between words should depend upon style of type used, whether condensed or extended. Try to avoid using too condensed letters in small jobwork, better double up your lines in one style of type, if you

## THE BEST ADVERTISEMENT IS THE ENDORSEMENT OF ONE'S CUSTOMERS.

HERE ARE A FEW OF THE MANY CONSTANTLY RECEIVED

### SUPERIORITY OF OUR WORK ACKNOWLEDGED.

I am much pleased with the proofs. \* \* \* \* You have certainly done excellent work, and it pleases me immensely to feel that our old Quaker City *can do better work than Great Gotham* — which did not get the Fair.

THOS. B. CRAIG, Artist,  
NEW YORK CITY.

The Hertzog Picture is a MARVELOUS success, and all the others very satisfactory.

PROF. HENRY MORTON, Stevens' Institute Technology,  
HOBOKEN, N. J.

By express we send you subjects Nos. 409 and 834. *We have tried New York parties on 409 and none have succeeded.* We wish, therefore, to caution you as to the necessity of an extra fine plate.

CHAS. SCRIBNER'S SONS, NEW YORK CITY.

We have received the Ives Half-tone Plates (409 and 834) and consider them *both* very satisfactory.

CHAS. SCRIBNER'S SONS, NEW YORK CITY.

I wish to thank you for the good work you have done for us on our second Souvenir. It is exceedingly gratifying to know that in all orders sent you so far, you have been able to *produce the best results*, as well as to furnish cuts at time specified.

OTTIS O. HALL, Manager Advertising Department,  
MIDDLEBOROUGH TOWN CO.

I want to get some more cuts like the inclosed from photographs. Your work has always been so satisfactory that I shall prefer to have you do it, rather than anyone else.

J. B. MERWIN, American Journal of Education,  
ST. LOUIS, MO.

OTHERS WILL FOLLOW LATER.

CROSSCUP & WEST ENGRAVING Co.,  
911 FILBERT ST., PHILADELPHIA.

have the space. Don't use too many varieties of type faces in small work. Avoid using the comma in large display lines, and after the abbreviation Co., etc., it is unnecessary, and looks bad. Cap lines give better appearance in display work than lower case, except where text letters, or letters of similar character, are used. Do not scatter your lines too much.

A great many more hints could be given on small jobwork, but these are a few of the most important, and should be given some attention before attempting "art" work, which is nothing more nor less than "good" work.

Rulework, in spite of the cry that "it has seen its day," still holds its own. Why? Because with rule you can make your ornamentations fit your job instead of making your lines fit the ornamentation, and in the hands of one who knows how and has an eye for beauty, effects can be produced unequaled by foundry productions, which soon become monotonous. Some will tell you it is too expensive, but really it is not; one dollar's worth of rule can be made more serviceable in the way of ornamentation than ten dollars' worth of metal flourishes; and by proper care of your rule after printing—such as tying up each design with a piece of string and storing in a case for future use—will outlast several fonts of flourishes. Rulework has come to stay, and will stay as long as rule can be had, and the only ones to object to its use are those that don't know how to use it and for that reason try to discourage its use.

The art of printing of today is devoid of ironclad rules; original ideas predominate, and the printer who can get up his work in an original, artistic manner will always find his services in demand by those who appreciate good work.

### PRINTERS AND PROOFREADERS.

BY STANISLAUS MURPHY.

IT is an indisputable fact that the position of proofreader is a responsible and trying one. Next to the irrepressible "devil," who is abused by nearly everybody, the printorial error-detective has as much to contend against as anybody connected with a printing office. His position not only entails responsibility, but is also attended with many trials and perplexities, because at times the wrath of the entire establishment is visited upon his defenseless head.

Every possible chance to "kick" is taken advantage of by the compositor to the discomfiture of the proofreader. If an omission of a word or two occurs and the same is marked in the proof, if it is not encircled with the much-sought-after "ring," a protest is immediately filed by the suspicious typesetter. He disputes the fact of the omitted words being in the copy (which is also a distrust of the proofreader's honesty), and insists that before he will make the correction the original must be produced, and he at once institutes a vigorous search for the disputed copy. Perhaps it is the first piece he encounters, and possibly it reposes

down in a mass of manuscript, which is usually the case unless a good system is in force. At any rate ten or fifteen minutes is consumed in the search (the correction could be made in half the time), but satisfaction must be obtained. After the copy is found, the discovery is made that the proofreader was right. He is exultant, and the crestfallen compositor goes back to his case to await the next opportunity to "kick."

Much of the wrangling indulged in at times between the compositor and proofreader could be avoided, and the work of the latter greatly facilitated, if more care and intelligence were exercised on the part of the former. It seems to be the policy of some printers to follow copy in everything regardless of construction. Recently, in speaking of Italy's muddle with the United States, a careless local writer made the statement that the Italian minister was given his passbook. The compositor who put the sentence into type knew it was wrong, but it was left for the proofreader to transform a "passbook" into a "passport." It is just as easy for a compositor to make a correction in the copy before a proof is taken of the matter as it is after being marked by the proofreader. But the typo is careless and indifferent, knowing that when the error is marked in the proof, like the clown in the circus, it will be inside of a "ring."

Proofreaders themselves are responsible at times for some of the disputes arising over their work. They have rules governing their labors which ought to be strictly adhered to. It is not just to allow Slug 3, who is, perhaps, a favorite, to deviate from the rules, and compel others less favored to forever "keep a hammerin'." Nor is it right for the proofreader to show partiality in marking a proof—allowing a favorite to escape the correction of a legitimate error by resorting to that old proofreading trick of placing a "bull" in a "ring."

The position of proofreading oftentimes is used as a medium of venting spite, of getting even. If the printorial error-detective entertains animosity against any particular one or more of the compositors, he has it in his power to make it very unpleasant for them, in regard to division of words, capitalization, punctuation, etc. If the style of a paper calls for short punctuation it is not right for the proofreader to compel a compositor against whom he may entertain enmity to "run a mile without taking breath," or, in other words, to set half a dozen lines without using a single point.

There is no good reason why the compositor and the proofreader should be at variance with each other. A proofreader's intelligence should stand as a fortress against actions that are mean and belittling. The dignity of his position should act as a preventive against the venting of spite in any form, and on the other hand, it should be the aim of the compositor when engaged in his work to exercise that intelligence which is his by virtue of his position, for by so doing he will not only show a friendly spirit, but will facilitate the labors of others as well.

ART IN NEWSPAPER ILLUSTRATING.

BY CHARLES A. GRAY.

Drawn by Wm. Schmidtgen, of the Chicago Morning News.

VERY year that goes by sees a marked progress of the arts in this country, especially so where there is a demand for it in a commercial way. Among them one of more daily interest to the people in general is the illustrating of newspapers. It is to be presumed if I should speak about a "newspaper artist" in the same breath with a noted painter, art people would be greatly disturbed, but without controversy, I doubt very much if there are more than a few among the

many noted painters that could hold a job on a Chicago daily. A newspaper artist must be one of the most versatile and rapid among artists; everything is shot at him, from a map of the World's Fair grounds to

GREEN ATKINS.

Drawn from life, by HORACE TAYLOR, of the Chicago Herald.

the latest spring bonnet, and from sketches in the Italian quarter to copies of noted paintings, and everything must be out on time. To paraphrase, we might say that "the presses wait for no one." He is often sent out to make sketches of accidents, court scenes, structures of all kinds and anything of interest; he must also be ready, at a moment's notice, to originate pictures to illustrate any matter that may be given him, which may be anything from poetry to politics, and must be able to make portraits, landscapes, buildings, machinery or cartoons with equal facility.

Many difficulties surround the illustrating of a newspaper that are absent in work requiring less haste in its

LILLIAN RUSSELL.

From a drawing, by the author.

production, and where better material is used; newspaper work is always done in a hurry—everything of interest must be out while it is fresh. A sensational trial is in progress, and the artist is sent to make sketches; it is afternoon and he must make the sketches, being sure to catch the most interesting scenes, and get fair portraits of the principal actors, then rush back to the office and make careful drawings in ink, and have them ready for the photographer by six. After the photographer is through, it passes to the etcher, then the stereotyper, and finally to the pressman, who runs it through at the rate of three hundred or more per minute, where, on the score of economy, it is usually printed on cheap paper, with cheap ink. If any one of the different hands through

which the design has gone has failed to do his work in a proper manner, the print is liable to come out as a silhouette, and cause anguish in the breast of all con-

pictures in the more pretentious publications, where greater care and better material are used.

The subjects for illustration are usually selected by the managing editor, and if he be a person of artistic taste, and information, his selections will go a long way toward making the paper artistic and pleasing ; but if, on the other hand, he should be so constituted as to not be able to detect the difference between a Rubens and a chromo—should occasion require it—he will throw a double burden on the artist, who is expected to invariably make an artistic picture, whether the subject is suitable or not. For instance, it is told of a certain managing editor that he insisted on an artist's

SCENE ON THE DESPLAINES.

Drawn from nature, by ROYAL H. MILLESON, of the Chicago *Inter Ocean*.

making a cartoon of a number of persons in different positions, but to have front views of the faces in order to make a good likeness of each, which of course required a corkscrew neck in some of them, to get the desired effect. And of another, who wished to illustrate the phrase, "Out of sight," and suggested that the artist make a picture of a balloon high in the air, which the artist did, but it was objected to by the editor because the balloon *could be seen*, and was *not* "Out of sight." This class of editors, I am glad to say, however, is the exception and not the rule, as the greater part of them are men of considerable general intelligence, and take pride in the artistic as well as the literary part of their paper, and take pains to assist the artist, instead of adding useless burdens to his work.

COQUELIN.

From a drawing, by G. BENTHAM, of the *Chicago Evening Post*.

SCENE IN THE ITALIAN QUARTER.

Drawn from life, by H. HART, of the *Chicago Times*.

An artist has one advantage over others in the different departments of a paper in respect to signing his name to his work, thereby bringing his individuality before the public and oftentimes being more generally known to the readers of the paper than the editor-in-chief, while one of the most brilliant writers on the staff may labor for years without being known outside a small circle of professionals. It is very probable that the signing of the artist's name to his work has a good effect, as it undoubtedly makes him feel personally responsible to the public as well as to the paper, and

STREET SCENE, TANGIER.

Drawn from nature, by H. R. HEATON, of the *Chicago Tribune*.

quicken him to his work ; and I doubt not the case is the same with the special writer.

Nearly all newspaper artists take pride in being connected with some prominent paper, and some of the greatest journals are very justly proud of their artists. The quality of art in the illustrating of newspapers does not vary with locality in this country in a way similar to art in general, for, while the art *per se* of the country centers in the metropolis of the East, higher artistic and finer mechanical work is done on Chicago papers than on those in New York. It is only of late years that the illustrating of newspapers has become an important factor in their makeup, but the enterprise of a few leaders has driven the balance to it and now

NOONDAY SHADOWS.

From a drawing, by the author.

there are very few publications of any consequence that do not make it a prominent feature. It is also a settled fact that the people will buy an illustrated paper in preference to one that is not, as is fully shown by the best-illustrated papers having the largest circulation. All but two of the drawings published with this article were kindly furnished the writer by artists regularly employed on the leading Chicago dailies, and, as specimens of their every-day work, are marvels of beauty in original design and artistic skill; nearly all the

drawings would make excellent subjects for large paintings and some of the artists are known to be fully capable of reproducing them in rich and truthful coloring. I should have been pleased to have submitted

in the present issue specimens of the work of a number of other equally talented artists on the same papers had space permitted, namely, Messrs. Lederer and McNeill, of the *Herald*, Rigby and Ladendorf, of the *Times*, Brown, of the *Post*, Coffin and Schultze, of the *Tribune*, and Webster and Young, of the *Inter Ocean*.

Original design, by WM. SCHMIDTGEN, of the Chicago *Morning News*.

Special Correspondence of THE INLAND PRINTER.

#### EXCURSION TO CONEY ISLAND.

THE delegates and visitors attending the convention at Boston who had accepted the invitation of the Ex-delegates Association of New York, to become their guests on Sunday, June 14, with the intention of taking part in an excursion to Coney Island, arrived in the metropolis early on Sunday morning. They were met at the piers of the Fall River and Providence Steamboat lines by a reception committee, headed by President William Brennan of Union No. 6 and Chairman William H. Bailey. The visitors were conducted to the International Hotel, where arrangements had been made for their reception and entertainment.

After partaking of a substantial breakfast the party left the hotel on Park Row and proceeded down Broadway to the Battery, where, at Pier 1, a commodious steamboat had been provided to carry the excursionists to Coney Island. On the way down Broadway, the time luckily happened to be at an hour that gave the party an opportunity of hearing the famous bells of old Trinity peal forth their Sabbath-day greeting. Boarding the steamer on their arrival, a large number of the members of No. 6, many of them accompanied by ladies, were found in waiting to accompany the party on the excursion. The day was an exceptionally fine one for the journey, and the various points of interest were eagerly scanned by those on board. Castle Garden and the colossal statue of Liberty Enlightening the World were among the first objects to attract attention, these being followed in succession during the trip by views of Fort Columbus and Fort Hamilton. The numerous pleasure boats and yachts, the men-of-war, the large merchant vessels, the palatial ocean steamships, and the innumerable small craft of every description dotting the bay, all went to make a very impressive and novel scene for the guests, and for those from the western part of the country particularly.

After a most delightful trip, the boat finally reached the landing at Coney Island, when the guests lost little time in commencing an inspection of the many novelties to be found at that most democratic of all American seaside resorts. After an hour's time, agreeably spent in sight-seeing and renewing acquaintances with the old-time friends whom many of the party encountered, it was announced that dinner was ready at one of the numerous places of entertainment which abound on the Island. When every seat in the vast pavilion was occupied, ex-president C. J. Dumar, in a brief speech, gracefully welcomed all present to the hospitalities of the printers of New York and Brooklyn. It is hardly necessary to state that full justice was done the repast. The guests had by this time acquired a degree of efficiency at this sort of thing, that they might readily be regarded as professional diners. The baked clams were attacked in a manner that would convince a spectator there were few, if any, novices in this line of work at the tables. The delicacies which followed were disposed of in an equally off-hand and expeditious manner, after which the guests were given an opportunity to visit every place worth seeing at this famous resort.

The cyclorama and the monster elephant, the channel shute and the toboggan slide, were visited in turn. Many of the party might be seen during the afternoon enjoying themselves much as people do at country fairs. They were throwing base balls at "nigger" babies for cigars which they seldom won, or throwing rings for gold-headed canes which are still in possession of the men who ran the games. In all these diversions every group of visitors was invariably accompanied by one or more members of the New York union, who did everything possible to cater to the enjoyment of their guests, and who took chances on the wheel of fortune and like devices as goodnaturedly as though they really expected to win something worth carrying away.

And what a number of old-time New York printers were seen to be in attendance on this occasion? Among others THE INLAND PRINTER correspondent had the pleasure of again meeting those two veterans, Robert McKechnie and Charles Smith, men who were well known in the printing business forty years ago; and John Henderson and Edward Feeney, both of whom are now

enjoying editorial honors and responsibilities; Mannis J. Geary and Hugh Dalton, foremen respectively of the *Herald* and *News*; W. J. Kelly, editor of the *American Art Printer*; George A. McKay, formerly secretary of No. 6, but who has now attained to political honors; and editor James McKenna, of the *Union Printer*.

A very pleasant afternoon was passed by all present, many of whom took advantage of the occasion to visit the upper end, or aristocratic portion, of the island, embracing Atlantic Beach, and the still more exclusive precincts of Manhattan Beach.

The members of New York union certainly deserve great credit for the cordial though unostentatious manner in which they exerted themselves to please and entertain their guests. We cannot refrain from mentioning in this connection President Brennan and Secretary Ferguson, William H. Bailey, Mannis J. Geary, Philip Scannell and Joseph D. Weldrick, as being among those who made themselves particularly conspicuous in the direction mentioned. The party returned to New York in the evening, from whence they dispersed to their homes in various parts of the country, thus ending one of the most extensive and enjoyable series of entertainments ever contemplated in connection with an International Union convention.

One of the most pleasing features incidental to the annual conventions is the large number of ex-delegates and visitors, ladies as well as gentlemen, who attend these gatherings. It certainly lends dignity and importance to the occasion when it is seen that so many people attend who are not members of the convention, and who are actuated by purely disinterested motives. The attendance of some who may have been delegates from a dozen to twenty years before show that the old spirit and feeling are still alive, and further, that the fact of their having at one time been a delegate is a circumstance the significance of which has withstood the effects of time.

Among the ladies who contributed their bright presence and restraining influences at this year's convention, were Ex-delegate Miss F. Qualtrough, of Rochester; Mrs. August Donath, Washington; Mrs. James J. Dailey, of Philadelphia; Mrs. Frank Pelton, Mrs. V. B. Williams, Mrs. John Buckie and Miss Annie King, all of Chicago. The last three ladies named took part in the entire round of festivities, which began at Washington and ended at Coney Island, and who, by their ladylike manners and good humor under all circumstances, together with their keen appreciation of all objects of interest, historical and otherwise, certainly proved themselves worthy of a place in the ranks of the excursionists to all future conventions.

Translated especially for THE INLAND PRINTER.

#### THE MÉLIN PROCESS.

TO transfer upon stone or zinc a proof printed months since, and to obtain from it a reprint as solid and complete as if the proof for transfer had just come from the hands of the printer, is the problem for which Knecht, nephew and successor of Senefelder, and after him numbers of others, have searched for a solution in vain.

M. Mélin who is not a newcomer in lithography, announces that he found the desired solution about a year since. We are in possession of some proofs prepared by him and have transferred them upon stone and zinc according to his directions. The transfers were successful and satisfactory to the most critical. We now consider the Mélin process an important acquisition to lithography.

Its application is simple and easy, and for that reason recommends itself to the craft. The proofs, when washed off and prepared, are placed between the leaves of a copy book and preserved from dampness. When it is desired to restore them to all their primitive freshness, it is done by a turn of the hand which demands no special practice.

We wish to call attention to this new method which interests all lithographers and is already in use in many of the largest houses.—*Bulletin de L'Imprimerie.*

## The "Only Perfect" Galley-Lock.

IN USE.

OPEN.

CLOSED.

PERFECT IN PRINCIPLE. PERFECT IN ACTION.  
PERFECT IN ECONOMY.

**ONE SINGLE MOVEMENT** adjusts it. Holds each line of type perfectly and securely. Earns its cost in time saved in three months. Saves type and galley. Years of service added to old galleys.

**ADJUSTABLE.** The "Only Perfect" Lock has a spread of over a half inch, and thus adjusts to any width of column on galley.

**MADE OF BRASS.** Light, durable, wear many years. We make a 13-INCH LOCK, for use of daily papers and job galleys. Engraving shows full size, 23 inches.

**ATTACHABLE.** By a slight change in outside bar, we make the Lock, and furnish attachments, so that in a few minutes anyone can attach it to galley. Outside bar works against side of galley; inside bar is held to top of galley, and has perfect movement back and forward. Daily papers adopt this on sight.

**SEND ORDER** to your printers' supply house. 23-inch lock, \$18.00 per dozen. Attachable lock (23-inch), with attachments, \$22.00 per dozen. 13-inch lock, \$16.20 per dozen. Liberal discounts to trade.

On receipt of \$1.50 will express you free a 23-inch lock, and know you will order a supply.

#### FROM NEW ORLEANS.

To the Editor: NEW ORLEANS, La., July 13, 1891.

Fifteen machines are now in use on the *Times-Democrat* — eleven nonpareil, three agate and one minion. Thirty men are now employed in the composing room, where formerly fifty were employed, besides an average of fifteen to twenty subs. Compositors are much troubled over this, many of them leaving town. There are still too many here. To add to the alarm, it is generally reported that the *Picayune* has contracted for a number of Rogers' machines. T. Stanislaus McGovern, for about five years foreman of the *Times-Democrat* composing room, has been succeeded by A. C. Weaver. Some say Mac had to quit, but he says he quit because they would not pay him \$50 a week. It is thought by some that he will get back, however. He is on a machine.

D. F. Y.

#### FROM RICHMOND, VA.

To the Editor: RICHMOND, Va., July 16, 1891.

Business is good, with sufficient printers to supply all demands. Richmond Pressmen's Union, No. 21, has gone under, for the want of proper support. At the last meeting of No. 90 a sick benefit law was passed. It provides for the payment of \$5 per week for the first eight weeks' sickness, and \$3 for the next eight weeks in one year. A tax of ten cents per month will be levied on each member for its maintenance. It will not go into operation until January 1, 1892.

It is the prevailing opinion that the nine-hour law will fail of ratification so far as Richmond union is concerned.

Messrs. J. W. Fergusson & Son, book and job printers of this city, have moved into their new building on Thirteenth street.

Messrs. Wm. Allegre and B. F. Murdishaw, who lived here some years ago, but recently have been working in New York city, are now on the *Times* and *Dispatch* respectively. D. J. Q.

#### PATENT FRICTION STARTER FOR ROLLERS.

To the Editor: PHILADELPHIA, Pa., July 13, 1891.

Credit to whom credit belongs. The angle roller lifter, the new name applied to Gamble's patent friction starter for angle rollers, with a slight change in make of starter, which is of no benefit over the original, is an infringement on my patent. M. W. Fisher's angle roller lifter is described and illustrated on page 912 of the July number of *THE INLAND PRINTER*. Gamble's friction starter has been in use since 1888, and was illustrated in the November, 1888, number of the *Printers' Circular*. The cut in that paper showed one side of the plate with starter and roller, having collar on roller stock, which gives it more surface than the stock alone, and does not interfere with the feed roller. Gamble's device is in use in Philadelphia, Reading and Lancaster, Pennsylvania, and in the government office, in Canada, where it is doing all that is claimed for it. Please make a note of this in your valuable magazine.

For the benefit of my fellow pressmen I offer the following idea: To keep handle of pallet knife clean, put ring in handle of knife, place a wire hook on extension of press, and hang knife on same by means of ring. This is better than other methods I have heard of.

JOHN GAMBLE.

#### A RULE IN PUNCTUATION.

To the Editor: BUFFALO, N. Y., July 11, 1891.

Your Portland correspondent, "A. E. D.," writing in the July number about the use of points in relation to parenthesis, says he would like someone to give a good reason favoring the one-point plan. My first reason would be simplicity. It is my aim in this case, as in others, to use the simplest method in punctuation consistent with a clear understanding of the text, avoiding the doubling of points as far as possible. "Authorities" may approve of the two point plan, as they do some others which good custom nowadays often considers obsolescent or obsolete.

In reading the sentence, "Simon (whom he also named Peter), and Andrew his brother," etc., one would naturally make a sufficiently short pause on reaching the parenthesis to require no comma, and by placing the one point after the second parenthesis it would make the punctuation complete.

This is the *rule* I follow, though I make an occasional exception to it. Judgment and discrimination are necessary here as in many other places incident to proofreading. J. I. C.

#### IMPRESSION SCREWS.

To the Editor: CHICAGO, Ill., July 13, 1891.

A Boston correspondent in the current number of *THE INLAND PRINTER* advocates the application of the wrench on job press impression screws, in preference to regulating the impression by change of tympan. He cites an instance where it is necessary to change the lower screws when a heavy form takes the place of a light one, to prevent the lower lines of the form being too black or heavy. Your correspondent is correct. It is necessary to change the screws on all job presses where the bed and the platen come together like a clam shell or a pair of shears. In presses where the bed is vertical and the platen slides vertically to the impression, as in the Colt's Armory presses, it is not necessary. On these presses it is neither necessary to change tympan or impression screws. The impression is regulated with an adjuster bar which enables the same thickness of tympan to be used on all forms. This beats working the wrench or laying on a baggy tympan. J. O. SPENCER.

#### FROM MONTANA.

To the Editor: HELENA, Mont., July 14, 1891.

Last meeting of the union was election of officers, and the following were elected: President, John Baker; vice-president, A. H. Wieber; treasurer, William McClatchy; financial secretary, George B. Staring; corresponding and recording secretary, John B. Lannon; sergeant-at-arms, M. H. Rupley; executive committee, W. Stein, George Heck, Angus Smith.

Relief committee, H. S. Rees, E. L. Morris, Mrs. Maggie Wallace.

Trade and Labor Assembly, D. McCallum, M. H. Rupley, Charles Ashton.

Fred. Freeman ("Kid"), well-known throughout the country, having accepted a position in the postoffice here, has been transferred to honorary list.

The nine-hour law is in almost unanimous favor here, there being but four votes against it.

This union is experiencing a welcome relief from sickness at present. It had more than a surfeit of it last winter and spring. G. H.

#### FROM BALTIMORE.

To the Editor: BALTIMORE, Md., July 18, 1891.

For some time past it has been necessary for the compositors of the *Daily News* to lose time waiting for copy, consequent on too large a force, and last week pay was demanded by them for "waits." This Editor Brewer declined, and the men who were foremost in the demand, and who were regular case-holders, are only extra men now. There was a little "scrap" about a proof-reader in the same office, a year or so ago. He was not a printer

by trade, though a good reader, and Editor Brewer had to let him go, and he evidently remembers this. The non-union printers struck this week at Friedenwald's, on a demand for more money for nightwork. It is said they desire to enter the union. The officers of the union have taken no part in the trouble.

The compositors on the *American* and the morning *Herald* vied with each other on the base-ball field last week. The *Herald* nine won with ease.

The managers of the House of Refuge are fitting up a printing office in that institution, in spite of the union's protest.

The extremely sultry weather makes the six-story climb to the composing rooms of the daily papers a hardship to the compositors, and complaints have no effect. The composing room of the *American* is on the top floor of the building, seventh story, and is at best a stuffy place; and the *Sun* composing room is away up too, and, being covered with one vast sky-light, is like a furnace in summer.

FIDELITIES.

## FROM MILWAUKEE.

To the Editor :

MILWAUKEE, Wis., July 15, 1891.

The printing business in Milwaukee is very dull, as it generally is at this time of the year, but little doing in the book and job offices, and the newspapers well supplied with subs. The city directory made its appearance the fore part of last week, throwing some thirty hands out of work, but that made no particular difference to the union printers, as the office where it was printed is now barred by the union, owing to grievances existing for some time between the proprietors and the union printers.

The *Sentinel*, the only English morning paper published here, is about to put in a Thorne typesetting machine, with a view of ascertaining if the introduction of machines in general would be a paying investment. Some years ago the *Wisconsin*, one of the evening papers, had a typesetting machine on exhibition at the exposition, but no practical use of it was made in the office. The printers here seem willing, and a great many of them anxious, to see the advent of these machines, the sooner the better, as they know it will be but a short time, anyhow, before their use will be general.

The union of this city has been crippled for the last few years, the result of a disastrous strike for the boys three years ago last March, when the town was thoroughly organized, the failure of which strike causing a lack of interest and falling off in membership; but now things look much brighter for the printers, and a feeling of confidence pervades their ranks.

While writing these few lines, allow me to inform the craft in general that their Milwaukee brethren are to have a picnic and ball in the evening at National Park on Sunday, August 2. A great number of tickets have already been sold, and the affair promises to be a success.

H. S.

## FROM NEW YORK.

To the Editor :

NEW YORK, July 15, 1891.

The introduction of typesetting machines has set in strongly in this city, and is creating a revolution in the trade. Numbers of compositors are idle through their substitution, and, so far as I can learn, the demand for typesetters by machine is far ahead of the supply. The *Tribune* of this city is practically all set up by them. The *Morning Journal* not long since introduced their use. Street & Smith, Rose street, book and newspaper publishers, have six of them in operation, of the Thorne make, and the economy effected by their employment can be guessed when it is known that the working cost of the Thorne machine is \$46 per machine per week. This is for two men and a boy per machine, and it is said to turn out the work of four men on an average, on skilled work. If this is so, it is satisfactory work, and means the certain, if gradual, introduction of machines all over. The Mergenthaler I understand to be the favorite so far in this city. Recently the wages of machine typesetters, at the instance of the Typographers' Union, was raised from \$18 to \$20 per week, and the union is keeping a strict lookout, to prevent the employment of non-union hands in

union shops at these machines. Men are by no means easy to get who already know how to work them. In most instances they have to be specially taught for the duty in the various shops, and there is found to be great differences in the merits of the "pupils" as to executive ability.

The intention of the Typographical Union to try and secure nine hours per day as the rule in jobbing and book shops is hardly likely to carry the day. That is the opinion of the New York Typothetæ Society, as expressed at a recent meeting, which resolved that in the existing conditions of the trade the idea was impracticable. It was said at the meeting that seventy branches of the society advocated no change at present in the matter.

There is no important change in the tone of the trade since my previous report. The output is fairly large, considering the season of the year. Many compositors are "out," indeed, through the cause referred to already, namely, typesetting machines; but the bulk of the work in hand is large. Whether the new copyright act has already caused any accession to business is difficult to say; if not, it is expected to do so in time. Some of the shops are slack — too much so.

The Messrs. Harper, of this city, have in hand, I am told, an order from an English firm which wants an American circulation — a volume of considerable size. This is an early result of the new copyright act. Formerly, under the circumstances, an English house would send a "shell" version of the intended work here; now they will mostly forward the plates of the work for printing here, according to the act.

LEONIDAS.

## FROM LYNCHBURG, VA.

To the Editor :

LYNCHBURG, Va., July 16, 1891.

The "Hill City" is very quiet at present, but we look for lively times during August among the printers, as there is strong talk of No. 116 doing something to gain the ground lost some three years ago. We have been going along all this time doing nothing to regain the offices lost in the lockout of 1888, but allowing our members and tourists to work in said offices at five cents per thousand less than the scale, but from the signs of the times we think this evil will soon end, as the members of No. 116 seem to be a unit for not working in said offices until the proprietors agree to pay our scale. We don't anticipate a long or desperate struggle before they comply with our demands, but we would advise tourists to give us the go-by for awhile at any rate, as there will be nothing to do here.

From all accounts the poor "country printer" is just as bad off now as he was before the convention of the International Typographical Union, as we can see nothing that was done to his interest, not even an office was given to a country union, and very few of the delegates served on any of the committees; but of course they should not expect anything like that; why it is a mere chance if they are allowed to voice their sentiments in the official organ, as we know of a communication that was sent it just before the convention that was sanctioned by the union of the town from which it was sent, and it was not even acknowledged; but what could they expect, as they were only "country printers," and not capable of doing anything but paying dues and assessments. We hope the organizer for this district will appoint a live man for deputy of this state, as a great deal of good could be done in this section in the missionary work.

John W. Rohr, of this city, has invented an ink fountain for platen presses that in the opinion of all who have seen it will make a valuable addition to same. The fountain goes across the disk and works with the motion of the press. When the throw-off is worked it works the fountain also. The rollers take ink from the fountain, with the impression on or off. There is also a throw-off attached to the lever that throws off the impression, so that the fountain can be thrown on or off as the pressman may desire. The screws regulating the ink are in front, and in easy reach of the pressman, and it will work every drop of ink out of the fountain. They can be made at a cost of \$6 each. He solicits correspondence from press manufacturers.

WILLIAM.

## FROM MONTREAL.

To the Editor : MONTREAL, P. Q., July 17, 1891.

Labor Day will be celebrated in grand style this year. All the unions, assemblies and societies in general will turn out. This celebration is becoming more popular every year, and this year the demonstration will be under the auspices of the Central Trades and Labor Council. The exhibition grounds have been leased for \$250. The exhibition that is to be held here after September 15 tried to make arrangements with the Central Trades and Labor Council to put off Labor Day till the opening day, and in return they were to receive 10 cents per head on all who entered the grounds. After considering the matter it was decided to hold the laboring man's celebration on Labor Day, September 7, and let the exhibition shift for itself.

J. Theo. Robinson, printer and publisher, corner Notre Dame and St. Peter streets, has failed. He is about \$12,000 short.

The *Gazette* has lately added two Colt's Armory presses to the pressroom. They are well made and nice running machines. When one looks at them the thought is sure to come to one's mind, will they ever wear out?

Montreal Typographical Union, 176, will hold their annual picnic to Otterburn Park, St. Hilaire, August 22. The committee has been working hard for the past two months on the matter and it is bound to be a success, financially and socially.

The *Echo*, started during the *Herald* trouble, is meeting with great success. David Taylor and Louis Boudreau are the proprietors, both good printers and staunch union men. They deserve the success they are reaping, and, if the truth was told, are making better returns than its oppressor.

There have been several kicks recently among the Fraternity gang at the *Herald*. Only a matter of time. The office has been closed to union men since May, 1890. Several attempts have been made to open it, but they have always been vetoed. Union men are better out than in.

The last number of THE INLAND PRINTER was excellent in every way. The man that thinks he does not get the worth of his money must be a *weather prophet*. J. P. M.

## FROM BOSTON.

To the Editor : BOSTON, Mass., July 15, 1891.

At last Boston has a penny morning paper, for which THE INLAND PRINTER should, of course, have all credit. For did not your modest correspondent call attention to the need of such a sheet several months ago? It made its bow early in June, and already has its eye and stomach teeth cut. The Hotel and Railway News Company have made a powerful attempt to crush out its young life by refusing to distribute it to their agents, but it is alive and kicking up to date. A special system of delivery was organized, by means of which those who find the sheet convenient for morning reading can easily obtain it. In politics it is stalwart republican, and special attention is paid to labor interests. The design of its proprietors is to limit the size to four pages, and to make it bright, snappy and newsy. News is to be accorded first place; advertisements come afterward. A novel feature is the rule that no advertising matter shall appear on the first page. Mr. George T. Richardson, formerly of the *Record*, is managing editor; the leading editorial writer is Mr. Herbert F. Morris, late of the *Manchester (N. H.) Union*, and Mr. John H. Grout, until recently attached to the *Record*, is city editor; Mr. Torrey E. Warder, formerly of the Boston Traveler Company, occupies the position of treasurer and general manager. About September 1, it is intended to issue an eight-page Sunday edition, which will be sold for 3 cents, and a daily evening penny edition will follow. A daily circulation of 20,000 copies is already claimed.

The Vermont Editorial Association took in Boston on their annual outing this year. They arrived on Friday last and quartered at the American House, where they banqueted in the evening. Saturday was spent in an excursion to Plymouth, and the following day was pleasantly passed at Nantasket. Monday was devoted

to seeing the sights of the city and suburbs. At a business meeting of the association, Editor R. J. Humphrey, of the *Poultney (Vt.) Journal*, was elected president for the ensuing year.

A fire in the building at the corner of Pearl and Purchase streets on the night of June 23 caused a heavy loss in the printing offices of Mr. L. N. Fredericks and Messrs. John C. Rand & Co. The office of the New England Newspaper Union, in the same building, was considerably damaged by water.

Col. William W. Clapp retired from the business and editorial management of the *Boston Journal* on June 30. His successor is Mr. Stephen O'Meara, who has been connected with the *Journal* for seventeen years—five years as reporter, two years as city editor, and the last ten years as news editor.

Editor George M. Whitaker, of the *New England Farmer*, has been nominated by Governor Russell as assistant clerk of the State Board of Agriculture. Mr. Whitaker is an indefatigable worker and eminently qualified to fill the position which he has been very wisely chosen to occupy.

The *Boston Transcript* has been awarded the contract for printing the proceedings of the city council for one year.

Business is quiet, and everybody who can get away is rusticated. This does not include G.

## THAT NINE-HOUR DAY.

To the Editor : GRAND RAPIDS, Mich., July 19, 1891.

It is a well-established fact that there are both agitators and "kickers" in nearly every organization of whatsoever kind, and the minute an individual lets go his tongue he is placed in line with either the one or the other. Having looked in vain for some one to express himself in regard to the proposed nine-hour day, through the columns of THE INLAND PRINTER, I will now place myself on record as one of the so-called "kickers."

Being foreman of a job office, I am aware that I labor under a disadvantage in carrying weight with any argument which I might set forth, inasmuch as the foreman who speaks in the interest of the employer is looked upon as doing so from pecuniary motives, and scowled down accordingly. Now, to dispel any such idea, and to show that I speak from no sinister motives whatever, let me state right here, in way of explanation, that I have given my assenting vote on the nine-hour resolution. I am a single man, have worked steadily at the business for nearly twenty years, and had charge of many offices in as many places; have visited nearly all the large cities of the West and the Pacific Coast twice. Furthermore, out of the "shuffle" I have saved enough of this world's goods to allow me to set my own hours for a day's work and live for a good many years to come. Thus it will be plainly seen that I am not at all alarmed at the coming "walkout," should it come. Now as to the advisability of a shorter day. As I understand it, this nine-hour resolution was introduced and passed at the last meeting of the International Typographical Union, with hardly a dissenting vote, which is not hard to account for when it is understood that the convention was composed, as it invariably is, almost entirely of men from the "top floor," or morning paper hands, who work entirely by the piece, and seldom, if ever, over nine hours. Consequently, this resolution will have little, if any, effect on them. But they say: "If the job hands don't like it they have a chance to vote it down." Here, again, are they handicapped, as nearly every union in the country is under the control of this same element.

But throwing all whys and wherefores aside, we will suppose the resolution ratified by all the subordinate unions. The main question now comes up: Is it *right* to ask for nine hours; can the job offices of the country stand it; will they; and if they do, will the job printers have gained any great point? There is a good old adage about "killing the goose that lays the golden egg," and whatever we do that injures the printing interests of the country injures us all. As far as short hours are concerned, we are all well aware that there is a large per cent of the men in our business who take no interest in it whatever as a business, but merely work at it as the easiest means at hand for supplying their wants,

the principal one of which is "liquid," and they wouldn't work an hour a day were they not actually obliged to. Many employing printers believe, and with good ground, too, that this nine-hour move is but a feeler for an *eight*-hour day, and are determined to fight it out now.

One hour a day doesn't mean a great deal to you and me, but to the man employing from twenty-five to fifty hands it means something more. Lessening the hours of labor is nothing more than increasing the pay of the printer, thereby increasing the running expenses of an office. The average hand says: "Let them charge more for their work, then." This is easier said than done, and I am ashamed to admit right here that among that honorable body of craftsmen known as the typographical union there are those so lost to honor who, when that eight-hour day went into effect, would take their little "all," and going into business, would run their shops from fourteen to sixteen hours a day, with the help of a few "kids," and make prices accordingly.

I am actually astonished at the total ignorance of many printers in regard to the expenses of carrying on a business. I believe I can say without fear of contradiction that there is not an office in this city making a dollar today. That may appear like a broad assertion, but I will make it still broader by asserting that the offices that are making money in this country are comparatively few, and are confined more to the newspapers than the job offices. Mind you, when I say making money I mean more than paying expenses and keeping up the plant. If a man having \$10,000 invested cannot draw out over \$1,000 every year, aside from his salary, he is on the ragged edge and had better be working for someone else and loaning his capital on farm mortgages; and just put your finger on the offices that are doing even that much and I'll venture you will have fingers enough to go round.

I have looked in vain for such an investment, of from \$5,000 to \$10,000, that will give me the salary I can now earn, but have failed to find it.

Now, as I first stated, the question is, under the existing circumstances, can we *conscientiously* ask this increase of pay and less hours, and will we benefit ourselves and our order by *demanding* it? But a few years ago there was no such thing as an organization of master printers; today that organization is one of the strongest in the country, and as a result of this constant agitation I believe after October 1 the "open shop" will predominate — and what have we gained?

B. H. H.

#### FROM PHILADELPHIA.

*To the Editor:* PHILADELPHIA, Pa., July 20, 1891.

A meeting of the Philadelphia ex-delegates of the International Typographical Union was held on Saturday evening, July 11. The object of the meeting was to adopt measures looking toward the entertainment for one day of the International Typographical Union, which meets in this city on the second Monday in June next. John W. Wharton, of the *Public Ledger*, was elected chairman, James Beatty, treasurer, and Eugene H. Madden, secretary. Committees were appointed to further the project and an assessment was voted to carry out the object of the meeting. The nature of the entertainment was not decided upon.

One of the three mammoth quadruple perfecting presses ordered by the *Press*, and which have been in course of construction at the works of Hoe & Co., New York, has been completed and will be erected shortly in the *Press* establishment. The size of the mechanical wonder is enormous. It is capable of printing, pasting folding and delivering 800 eight-page papers per minute, or 48,000 per hour. After all three of the quadruple presses are in position the *Press* will be able to print 144,000 eight-page papers per hour.

A Journeyman Bookbinders' Union has been formed here. At the initial meeting there were about fifty persons present, and the new association claims that, so far, one hundred and fifty of the two hundred and fifty bookbinders in the city have announced their interest in it and will probably become enrolled. John T. McCosland organized the meeting and Charles Nelson, of New York, president of the International Bookbinders' Union, made a short

address and swore in the new members and officers. The latter are: President, John Borser; vice-president, Matthew Glenn; recording secretary, R. T. Farley; financial secretary, T. McInerney; treasurer, John Toomey; trustees, Clarence Joyce, F. Pierson, George Shott. The bookbinders, it is said, were formerly in the Knights of Labor, but about two years ago they organized an international union, after the manner of the typographical union, and to this they claim there are attached local unions in nearly every large city in the United States.

Dunlap & Clarke, prominent printers and publishers, are erecting an extensive and splendid building on Filbert street, above Thirteenth. It was originally intended to build a six-story establishment, but now it is proposed to erect a seven-story building. The cost will be near \$60,000. The firm expect to occupy the completed structure October 1.

ARGUS.

#### TYPOTHETÆ BENEFIT ASSOCIATION.

*To the Editor:*

CHICAGO, July 16, 1891.

I noticed in the last issue of your valuable magazine a brief letter in reference to the Chicago Typothetæ Benefit Association. Your correspondent was in error in stating that the annual meeting was held on the 17th (Sunday). It occurred on Tuesday evening the 19th. I deem it important to make this correction, as two or three of the half-dozen employers who still remain members are God-fearing men, and would not allow their employes to desecrate the Sabbath.

You have several subscribers among our members, and while we were highly pleased to at last have you take cognizance of our famous institution, we had previously felt somewhat slighted. But truth and justice deserve fair play, and with your kind permission I will give a brief history of our association and the generosity of its substantial patrons. Our association was started by forty or fifty employing printers, who had a desire to conduct their offices according to the dictates of their own consciences and without the aid of union printers. Their offices had heretofore been under the jurisdiction of the union, which had called its men out on a nine-hour strike under the flimsy pretext of bettering their condition. A struggle was inevitable. Let us for a moment glance at the contestants in this strange battle — a battle for principle on the part of the employers, and for intimidation and glittering generalities on that of the men.

On one side were arrayed the forces of the union, 1,600 strong, and on the other side could be seen the employers, comparatively few as to numbers, but fully determined. As battles go, who could think the smaller phalanx would survive the first collision? For those employers who became faint-hearted and panic-stricken in the fight and who shoved out the moat-bridge and raised the portcullis of their various offices, I have no words of praise. But of the gallant half-dozen bosses who have continued the fight, regardless of worry and financial loss, I wish to speak further. These are the men who have stood by our benefit association. They have also run their offices regardless of expense. They had to have men, and they got them, even at fancy prices. In many instances, non-union men who had been receiving but \$10 per week in small offices, came forward and signed contracts for three years at \$20 per week. Inexperienced striplings from country towns and Canada, and old men from everywhere, were welcomed and given good sits at full wages. The good times of early California were almost paralleled. Several of these employers were innocent of all practical knowledge of the printing business, though good stationers. This gave one or two foremen, who had "stayed in," opportunities to place old cronies and drinking friends in fat positions, where they became fawners upon their chief and parasites upon the office.

I mention these things simply to bring out in stronger light the determination of these employers in their struggle for principle. Several old union printers who had been anxiously awaiting the completion of the "Home" at Colorado Springs, also joined our association in the interim. Soon three men were at work where one had worked before, and a head might be seen bobbing at every

case. It looked like business, but was a terrible strain on the purse strings of the firms. Of course much of this extra expense could be saddled onto customers, but always at the risk of their not returning.

But inconveniences within their offices were the least of the bosses' troubles. Bonaparte, on his retreat from Moscow, was not oftener assailed by the enemy. The obnoxious walking delegates of the union have always thought it a cute thing to spirit away our young men as soon as they became proficient. Some less proficient have been given positions as drivers on horse-cars. After some of these wicked raids few have been left between the ages of sixteen and sixty, giving us the appearance of having literally robbed the cradle and the grave, some of our members being past three score and ten. But our association is still in the field. The employing members contribute room rent, light and sometimes lunch, while we pay the secretary's salary of \$9.

AN OLD TYPO.

#### FROM WASHINGTON, D. C.

To the Editor:

WASHINGTON, D. C., July 20, 1891.

The great revolving wheel of industry among printers at the national capital is surely centered at the government printing office, and it is for that reason we give the bulk of our news from that place. The fiscal year closing on June 30, 1891, there were necessarily a great many changes at the government printing office. The fact that there were a great many leaves of absence refused during the months of May and June made it necessary to grant a large number in July, when the new appropriation became available. It is rumored that there were over four hundred leaves of absence granted to employes of this office during the month of July. This, we presume, has not been eclipsed in the history of the government printing office. Besides this fact, there have been reinstated most all of those hands discharged in April, making about two hundred in all. At present the office has more printers at work than it has had in a long time. In fact, portions of the office are crowded with workmen, and the excessive heat that is thereby experienced is unhealthy, and troublesome at times to endure. A new government printing office is needed more badly than any public building in this city.

Compositor W. Hundle, of the first division, has been temporarily detailed as copyholder in the document proofroom.

Compositor Omar Wilson, of the *Record* room, government printing office, has recently taken unto himself a handsome wife. We take this means of congratulating "Wils" for this act. We also extend our congratulations to George J. Zimmerman, of the same room, for having also lately entered the holy bonds and enjoyed a portion of his honeymoon among the roaring billows at Atlantic City.

The craft in general greatly mourn the sudden demise of Proofreader Louis H. Jullien, of the government printing office, a short time since. His death was all the more sad by being so sudden and unexpected. Mr. Jullien retired the evening before in his usual health, and at daybreak the following day he was spoken to by his wife. She receiving no response, bent closer to her husband, and was horrified to find that he was dead. The cause was heart-failure brought on by an attack of the "grippe." Deceased leaves a wife and nine children, the youngest being a babe but two months old.

Secretary Frank Padgett, of No. 101, is kept very busy just now at his office. The numerous new appointments at the government printing office necessitate him to be at his post more closely than on other occasions. Frank has the business down fine, nevertheless.

It is entirely out of the line for typos to engage in a game of baseball, for fear of receiving broken fingers, etc., as a reward, which fact, of course, renders them helpless in performing their duties at the case; nevertheless, the manner in which the employes at the government printing office manipulate the willow is even startling in the presence of an Anson or a Brouthers. They have two organized clubs in this great workshop, and some very closely

contested games have been played this season. Every noon hour can be seen lovers of the national sport exercising themselves at bat and ball.

Thos. J. Shoeber, a former employe of the government printing office, has just returned from an extended trip south, looking hale and hearty as a result. "Tommy" knows a good, healthy climate when once in it.

In our last letter we mentioned the fact that there were still a few strikers among the book and job hands that were on the pay-roll of No. 101. We are now pleased to state that all of these prints have secured employment, and have been erased from the list of idle printers. Please score another for No. 101.

President John Kennedy, of the government printing office, met with a very serious and painful accident a short time since, while boarding a street car. As a result Mr. Kennedy is compelled to use a pair of crutches. He is rapidly improving, however.

A long-felt want is being supplied at the government printing office by the addition of a new dress of type. In quantity, we are safe in stating that the order is the largest ever made out to one establishment in the history of the trade. Very little type is being placed therein save body type—nonpareil, brevier and long primer. It is estimated that about 125 tons in all is the amount of the order. We fear if all of this amount is placed in the office at one time, there will be dangerous results. At present, the "old shell" has about as much on her shoulders, as she can stand.

Work down town is said to be just a little dull at present. Many business people have hied themselves away to mountain and seashore, caring little whether "school keeps" or not. Subbing, however, is still pretty good on the *Morning Post* and *Evening Star*.

The sale of the *Evening Critic* Company a few days ago, wipes out of history a paper that has had a wide and varied reputation. The company, it is said, was purchased a year or more ago for \$30,000, and at the auction sale above referred to, it was sold, material, associated news franchise and all, for the sum of \$10,000. It was purchased by the *Evening Star* Company, of this city. The steam press—a very fine one—was bought in, it is said, by a friend of Stetson Hutchinson (its owner) for the sum of \$1,000. These are very low figures, sure, when it is known that these equipments were nearly new and in good condition.

EM DASH.

#### FROM NEW JERSEY.

To the Editor:

OCEAN CITY, N. J., July 14, 1891.

Never before in the history of New Jersey have the printing, publishing and newspaper interests been so prosperous as this season. The Philadelphia dealers, who have a large trade with the New Jersey establishments, all say that their connections are excellent and satisfactory.

The chief centers of business just now are at the seashore. All along the Atlantic coast are a line of bright and lively little cities. Prominent among them are Cape May, Atlantic City, Long Branch, Ocean City, Sea Isle City, Asbury Park, Ocean Grove, Manasquan, Atlantic Highlands, Beach Haven, Point Pleasant and Keyport.

All these places have extensive and well supplied printing and newspaper houses. At Asbury Park, some of the most artistic typographical work is turned out. The *Journal* office, which is owned and operated by John W. Wallace, one of the best all-round "journalists" in New Jersey, is prominently conspicuous for its elegant productions of "the art preservative." The *Journal* prints a summer daily, which is a beautiful model of typographical beauty. The *Shore Press*, published at Asbury Park, is a splendid newspaper. The Penfield Brothers, proprietors of the *Press*, issue a daily edition during the summer months. Messrs. Penfield also operate an extensive job printing house in Philadelphia, from which emanates some graceful specimens of typography. Mr. R. C. Penfield, of this progressive firm, was the author of an excellent article that appeared in the May issue of

THE INLAND PRINTER. Devereaux & Burt run the *Daily Spray* at Asbury Park through June, July and August, and produce a handsome and bright journal.

Long Branch has two newspaper offices, the *News* and *Record*. Both are good papers.

Cape May is a brisk, thriving summer residence city, and a large volume of business is transacted during June, July and August. Two daily papers are published during the watering season. The *Star* is a morning issue and the *Wave* is an afternoon sheet. These journals are well conducted and are prosperous. Hand & Co. publish the *Star* and E. J. Sardis is proprietor of the *Wave*.

The Atlantic City papers are the daily *Review* and *Union*. Both papers are very successful. Within a recent period, John M. Campbell has started the *Journal*, a bright Sunday sheet, which has been a great success from the start.

The Ocean City *Sentinel*, owned and edited by R. C. Robinson, is a handsome, well conducted and edited journal. The printing department is first-class in every particular. Mr. Robinson, besides running the *Sentinel*, is postmaster and commissioner of deeds. He has built a splendid and commodious building, which is well supplied with everything required to perform work promptly and satisfactorily. Besides a new Cottrell press, a beautiful and serviceable suit of brevier and a fine engraved heading for the *Sentinel* has been purchased.

The Sea Isle *Times* establishment is an extensive one. The proprietor, T. E. Ludlam, is a busy man, and his paper is bright and excellent. A few weeks ago he put in splendid new machinery, the vast increase in trade demanding such a step.

The Sea Isle Press Club has just been organized. T. E. Ludlam is president, Joseph Thacher, secretary, and Aaron G. Rice, treasurer. It has for its object the promotion and welfare of Sea Isle City and the mutual advantage of its members. Aside from those interested in journalism, associate and honorary members will be admitted.

Elsewhere in New Jersey the state of trade is good. The book, job and newspaper establishments at Trenton, Newark, Jersey City, New Brunswick, Elizabeth, Burlington and Rahway are running to their fullest extent. The National Bureau of Engraving and Printing, a very large concern at Burlington, which has been closed on account of litigation for some time, is to reopen soon.

SPHYNX.

#### FROM GALVESTON.

To the Editor: GALVESTON, Texas, June 24, 1891.

Galveston, aside from a few minor natural drawbacks, may truthfully be said to be the ideal printer's city in this section of the country. The typographical union here has a membership of one hundred, and to say that it is a strictly union town is putting it mildly. There is not a non-union printer in the place. The scale for composition on the newspapers is 42 cents, while the scale for printers who work by the week is \$20, with 50 cents per hour for overtime and double price for work done after 5 P.M. Saturday, or for Sunday work. There are three dailies flourishing at present, namely: The *News*, morning, the *Tribune* and the *Sea Gull*, both afternoon sheets. The former runs about twenty-five regular cases, while the latter two papers support a much smaller number. The principal job printing establishment is that of Clarke & Courts, which in all departments of its magnificent new building employs upward of two hundred hands, and transacts a business extending over the entire Southwest and Old Mexico. Justice cannot be done this house in brief mention, and I trust to be able to notice it more fully at a future time. Other job offices of the city are those of F. J. Finck & Co. and Strickland & Co., with two or three smaller establishments. The field of weekly journalism is filled by the *Sunday Opera Glass* and the *Mercury*. There is a most decided surplus of printers here now, and from present indications it is not likely to be materially reduced for some time.

The Texas State Typographical Union, a subordinate branch of the International Typographical Union, met in Galveston, at

the union hall, Thursday, May 28. Permanent organization was effected by the election of the following officers: M. B. Johnson, of Fort Worth, president; C. W. Hart, of Corpus Christi, vice-president; C. W. Hurwood, of Waco, secretary-treasurer, and George McCracken, of Galveston, corresponding secretary. A committee on laws, consisting of R. Y. Kirkpatrick, of Houston; C. W. Hurwood, of Waco; W. P. Draughon, of Austin; Winter Daniels, of Dallas; J. L. Mulkey, of Fort Worth (pressman); George McCracken, of Galveston, and M. B. Johnson, of Fort Worth, were appointed, whose duty it is to offer suggestions and recommendations for the welfare of the craft in general throughout the state. The main objects of the organization are to regulate and promote a uniform system of apprenticeship, the organization of the printers of the smaller towns of Texas, and adopt such other measures as will likely prove of benefit to the state organization. A delightful sail on the bay was tendered the visiting delegates by local union No. 28, and today the delegates will be shown the different points of interest in the city, the entertainment to conclude with a banquet in the evening. The majority of the delegates to the state union were elected by their respective local bodies to represent them at the annual session of the International Typographical Union, held in Boston, June 8 to 13, and they left on the Mallory steamship Lampasas, June 1, for the place of meeting.

Texas has eight typographical unions, as follows: Galveston, Houston, Austin, San Antonio, Fort Worth, Dallas, Waco and Corpus Christi.

The proprietors of the Galveston (Texas) evening *Tribune*, after fully testing one of the most approved typesetting machines, concluded that the old way of getting the paper up was good enough for them and considerably cheaper, and the machine has been returned to the factory.

The annual election of officers of No. 28 will take place at the regular meeting, the first Sunday in July. Very little interest is being manifested in the matter so far and the election will probably be devoid of excitement. The principal officers of the union who have faithfully served their constituents for the past year are: E. W. Sherrard, president; J. W. Bell, vice-president; J. E. Taylor, financial secretary, and John Carroll, chairman board of trustees.

At the regular chapel meeting at Clarke & Courts' on July 9, Mr. Frank Williams was elected father of the chapel and Mr. C. R. Miller was chosen secretary.

Mr. Mort Bookwalter arrived recently from Topeka and now has charge of the pressroom at the Texas House. Mr. Bookwalter enjoys a wide reputation as a superior pressman in the North and will undoubtedly establish an equally enviable one here.

Mr. C. P. Marye, ex-foreman of the Texas House composing room, is now foremanizing in a Denver job office.

Mr. W. G. Davenport, formerly assistant foreman at the Texas Newspaper Union office has gone to Dallas, where he accepted the position of foreman in the composing room of the Dallas Newspaper Union.

The Texas Newspaper Union of this place has suspended operations in this city and consolidated with the Dallas Newspaper Union, with headquarters in Dallas. An unsatisfactory balance on the credit side of the profit and loss account was the reason for the step taken. Five or six regular cases have ceased to exist here in consequence of the above-mentioned occurrence.

The formation of a chapel relief association is being agitated at Clarke & Courts; who, by the way, have just begun upon the publication of two quite extensive works — the Dallas, Texas, directory, consisting of seven hundred pages, and the annual report of the Texas Medical Association, a work of 250 pages. There is local talent enough in the city to perform the work. Under the management of Mr. W. P. Dougherty, the printing department of the above mentioned house is flourishing, and the gentleman, during the short time he has had charge, is producing the most satisfactory results.

A most enjoyable outing was recently enjoyed by members of No. 28 and a party of friends. The trip consisted of a thirty-mile

voyage down the gulf to the mouth of the Brazos river and a four-days' fishing excursion. The party consisted in part of Messrs. Oscar L. Knapp, E. N. Whitehead and Frank Wilson, of the *Tribune*; Eugene Spencer, of the *Nevus*; A. G. ("Nick") Nichols, C. R. Miller, J. H. Martin and Phillipps, of the Texas House.

Mr. C. S. Bell, who for some time has been incapacitated for work on account of illness is again on the active list at the Texas House.

TWO NICK.

#### FROM NEW ZEALAND.

To the Editor:

WELLINGTON, June 18, 1891.

Mr. W. P. McGirr, president of the Wellington Branch, New Zealand Typographical Association, was married to Miss Hodge on June 4. At a meeting of the branch held on May 30, advantage was taken of the approaching marriage to show the respect in which Mr. McGirr is held by members making him a present of a handsome clock and an illuminated address.

Mr. W. L. Rees, one of Auckland's members of the house of representatives, belonging to the labor party, is bringing before the the government the idea of calling together a conference of English-speaking countries, to meet at Chicago during the World's Fair, to consider the relations between capital, labor and the state.

Death has again been at work in our craft, and again the scene of his labor has been the *Lyttelton Times* office. On May 27 Mr. William Wheeler, for many years the printer of the *Times*, died at his residence, Christchurch, in his fifty-seventh year, having been in the same office for over thirty-three years. He was born at Oxford, England, learnt the trade on the *Chronicle* of that town, came to New Zealand in 1857, went bullock-punching for twelve months and then joined the *Times*. The funeral was emphatically a printer's funeral, although a few outsiders followed.

Recent events in the history of unionism in New Zealand have led to abundant criticism of the objects and methods of certain combinations. The press has naturally been largely availed of as the medium of comment, while the editorial pen has frequently been wielded in the attack and defense. But while, in the majority of cases, it is the workman who is represented as inflicting the injustice, little has been heard of actions on the part of employers which have tended to strain the relations existing between master and man. When I was in Dunedin last year I wrote THE INLAND PRINTER a letter concerning the boy labor movement in that city, particularly mentioning the case of Mills, Dick & Co., with their thirteen boys and one man. The Dunedin board have tried in every way to deal with this firm, but without success, and as a last resort the secretary was instructed to use the power of the press in obviating the grievance—hence my introduction above. From this published correspondence (in the *Star*) it appears that when the board began to move in the matter of reducing the number of boys in job offices, the general advice of employers was, "Begin with Mills, Dick & Co." After several long interviews with the members of this firm and a full discussion of the merits of the case, they agreed to fall in with the suggestions of the association's rule limiting the number of boys in proportion to the number of men permanently employed, promising to reduce the number of apprentices to six within three months. The promise was contained in a letter, the following being a copy:

Secretary Otago Typographical Association: DUNEDIN, AUGUST 15, 1890.

DEAR SIR,—Referring to conversation with you yesterday, we are willing to reduce the number of boys in our composing room (as suggested) to six by the end of the year.

YOURS, MILLS, DICK & CO.

The result of such a promise as this from such an old established firm, and such flagrant sinners, was that the other firms offending readily set about putting their offices in order. However, the end of 1890 came, but not the fulfillment of the above promise—all the other firms had done their proper part. Upon the board reminding the sinners of their negligence, you may imagine their feelings upon receiving the following letter in reply thereto:

Secretary Otago Typographical Association: DUNEDIN, JANUARY 10, 1891.

DEAR SIR,—In reply to your favor of the 30th ult., upon mature consideration we do not see our way to carry out the arrangement made as we had

intended doing. We would assuredly land ourselves in trouble by discharging three boys (who have served a considerable time) and therefore regret that we cannot do it.

YOURS, MILLS, DICK & CO.

In reply to remonstrance to this deliberate repudiation of a promise, the firm told the board they had nothing further to say. However, the board determined to give the firm every chance, and sent a deputation which pointed out its unfair dealing toward the other firms who had remedied under belief in their promise, but the only result was the firm promised to send a written reply. That reply has not yet reached the board, and after waiting for it awhile, the board published full particulars from which the above is condensed, and appealed to the public to judge the firm, then treat it according to their judgment. Appeals of the above nature are generally found of beneficial effect, and are becoming more common throughout the colonies, it being a wiser course than strikes, lockouts and angry feuds.

On the suggestion of the Wellington Branch, the Executive Council, New Zealand Typographical Association, is advertising in the newspapers on the West Coast of the South Island the rule that six years is the term of apprenticeship recognized by the association. Young men are making their way from the Coast to Wellington with five-year papers in their pockets, and as there is no branch of the association down that way, the advertisement has to do the propaganda.

TOM L. MILLS.

Translated from *L'Imprimerie* for THE INLAND PRINTER.

#### PHOTOCOLLOGRAPHY.

IT is now evident that positive proofs printed with oily inks can be easily made. When less than several thousand proofs are required from a stereotype plate, a material less expensive suffices for the application of photocollography. It is upon this principle that M. Balogny organizes a new system of impression upon flexible bichromated plates. The *savant* operator, contributor to the *Monitor of Photography*, does away with the stones and cumbersome presses. The modification of greatest importance is that which consists in replacing the lithographic stone with a simple plate of zinc. The planished zinc is best; but, in his experiments, M. Balogny has used the ordinary zinc of commerce, taking number fourteen. The results have surpassed his expectations.

As a support is required for the zinc in printing, a board about 40 by 50 inches is wedged on the press as one would wedge a bichromated lithographic stone. Then the pressure is regulated. Upon this board is placed the sheet of zinc. When the raw zinc is used it is rubbed vigorously with a pumice stone upon one side and rinsed with clear water. Without wiping it, M. Balogny fastens the flexible bichromated plate, and the adherence is obtained by means of a coat of gelatine interposed. The zinc is dried and placed upon the board and fastened by two nails being punched through to form points driven down with a hammer. Nothing is easier, says M. Balogny, than impression upon zinc. The zinc is placed just at the place where it is desired upon the paper.

When the work is finished, the zinc is lifted and preserved with the plate for proceeding later, if necessary, to make new impressions. The plate can remain attached to the zinc, and it is necessary that it should, if a number of proofs are to be made. If, on the contrary, the plate is to be withdrawn, the zinc is passed through the essence of terebinth and wiped with a linen moistened with thin oil. The small quantity of oil prevents the complete adherence and permits the zinc to be detached.

The system of M. Balogny renders the process of photocollography more practical than formerly. The suppression of the heavy stones and their expense, allows any quantity of plates to be preserved which would otherwise be effaced, and which one would be glad to find some day for further use.

THE Winnipiseogee Paper Company of Franklin, New Hampshire, have just purchased 26,000 acres of timber land in the town of Waterville, New Hampshire.

Written for THE INLAND PRINTER.

### EMINENT LIVING PRINTERS.

BY JOHN BASSETT, EDITOR AND PROPRIETOR OF THE "PRINTING WORLD," LONDON.

NO. XVII.—HENRY SLATTER.

A FEW months ago the secretary of the London Society of Compositors figured as an eminent printer; this month it is the secretary of the English Provincial Typographical Association, Mr. Slatter, who occupies that position. Mr. Slatter was born in the picturesque town of Cheltenham on October 13, 1830; his connection with his birthplace, however, was short, for in 1835 the family removed to Birmingham, where, at the proper period, Mr. Slatter was duly apprenticed to the trade.

We are continually reading of eminent printers who commenced in the same way as the majority of us, by sweeping the office, sorting "pi," and then to "dis." Some apprentices have more than their share of the latter occupation, and seeing that Mr. Slatter's early experiences were of the jobbing office, he could, it is pretty certain, vouch for the truth of this statement. Even today there are hundreds of employers and overseers who do not dream of encouraging the lads by giving them a memorandum or a circular to set until they have been in the office for a year, and perhaps two.

Like most things in this world, Mr. Slatter's servitude had an end, and after two years more spent with the Birmingham printers, he determined to try his fortune in another field—Manchester. He secured an appointment in the news department of the *Examiner* office where he remained for about fourteen years. The headquarters of the Provincial Typographical Association was then at Sheffield, but in 1865 it was removed to Manchester. Four years after the secretary resigned, and Mr. Slatter was selected for the vacant post by his brother compositors. From that time to the present he has worked hard in the interests of the men he so ably represents. When Mr. Slatter first accepted work in Manchester the wages were 30s. for a week of fifty-nine hours; now the jobbing compositor receives 35s. for a week of fifty-five hours, and the news compositor £2 2s. for a week of fifty-one hours. The wages for Manchester, however, are still poor when compared with other places, and it arises from this fact that one cannot live in Manchester near one's place of business, and consequently the railway or street car fare makes it very expensive. Mr. Slatter has achieved much, and we hope he may yet do more, for no class of men are so badly paid as compositors. You American printers appreciate ability, and accordingly reward the men with what we should say a handsome wage, consoling yourselves with the supposition that if Britishers were worth it they

would be paid more. Printing in the old country has not yet generally reached the American standard; when it does we may hope for an increased pay.

Such a large body of men working so amicably speaks well for the organization of the association. Since Mr. Slatter assumed control strikes have almost become a thing of the past, and he always advises that questions in dispute shall be talked over reasonably and fairly between master and man, believing that the best results are achieved by this friendly form of negotiation. Mr. Slatter has seen much work in connection with the Trades Union congresses. He has also taken an active share in promoting, and successfully, the Coöperative Printing Society, and was for ten years its president. The society is a most prosperous one, and pays a dividend of seven and one-half per cent to shareholders, leaving a surplus which is divided, one part to the share-

holders, one to the customers and one to the employés, which means to the latter two weeks' wages in twelve months; not a bad surplus for any workman at the end of the year.

On May 21, 1885, Mr. Slatter was made a justice of the city of Manchester, and was the first working man appointed a magistrate.

I have not enumerated all the movements Mr. Slatter is interested in, but sufficient to show that he leads a very busy life. In 1884 Mr. Slatter completed his silver wedding, and was presented with an address, a silver tea service and gold spectacles for himself and his wife.

In 1890 Mr. Slatter had served the association as secretary for twenty-one years. It was deemed a fitting opportunity by the members and friends to publicly recognize his great service in their cause, and on August 30 of that year, at the Clarence Hotel, Piccadilly, Manchester, Mr. Slatter was presented with a gold

watch and chain, with masonic appendages, and a pocketbook containing a check for £125, and Mrs. Slatter received a handsome timepiece and side ornaments.

A notable feature of the Typographical Association is the issuing of a monthly organ, demy 8vo, sixteen pages, entitled the *Typographical Circular*. It is full of interesting matter to compositors, no matter in what part of the country they may be working. The London association does not possess a journal; at one time they did have a quarterly edited by one of the staff, but since dead.

To rule a large body of compositors successfully means that a man has more than an average share of ability in this respect, for a more particular class of men never existed. I need only refer skeptical readers to a "piece clicker" in any establishment and ask his opinion of his "ship" when the day comes around for making out the wages bill. For the benefit of the uninitiated I

THE INLAND PRINTER.

may say that a "clicker" is a man who has a number of men under his charge, styled a "companionship," or "ship," and to whom he gives out the work in rotation. It invariably happens that some man or men among them (or at least so they assert) get all the "lean" copy, whilst the favorites get the "fat."

I feel sure that when Mr. Slatter reads this he will smile at the recollections it may call up of old days, and when he could set his "take" with the best of compositors.

#### WOMEN AS TYPESETTERS.

That the sphere of woman's usefulness and adaptability in the business and industrial world has immeasurably widened in the last two decades is a source of favorable comment, not merely among students of sociology, but among many who formerly regarded with apprehension the advent of female labor into domains hitherto regarded as the heritage of the male sex. The apprehension was well grounded. Women could support themselves on less money than men, and the natural consequence was that lower wages were offered to and accepted by them in nearly all the lighter mechanical trades in which they were brought into competition with men.

To labor organizations is due credit of opening the eyes of women wage-workers to the injustice that shrewd employers subjected them to in this respect. The fact that a woman's expenses are less than a man's by no means lessens the value of her labor. In the famous strike of telegraph operators in New York in 1883, the abstract justice of the strikers' demand for equal pay for equal work by both sexes was admitted by all unprejudiced persons.

Among those most forcibly struck by this demand were the followers of what is perhaps the most powerfully organized craft in America—the printers. As far back as the oldest "typo" in New York can remember, women have been employed here and there to set type, but invariably, until within a comparatively recent date, their compensation has been less than that received by their natural protectors. It is true that some time in the early '70's a Woman's Typographical Union was organized in New York, but though I am not aware of what its objects were, they certainly did not include the maintenance of a scale of wages equal to that of their male colleagues, else why the need of a "woman's" union? This organization lived but a short while. It has been difficult to obtain statistics on the subject—even the New York State Bureau of Labor Statistics having failed to make a satisfactory report; but the number of printers (not including pressmen) in New York city has been computed to be about fifty-five hundred, of whom three hundred are women. Among the five thousand members of the typographical union, there are nearly one hundred of the gentler sex. It is safe to say that the same proportion will hold good all over the United States. To the person unfamiliar with the printers' craft who might spend an hour or two in a busy composing room, it would seem that this proportion of female printers was unnaturally small, in view of their apparent fitness for the work and the absence of any restrictions by the unions regarding their employment. In connection with the latter observation, it may not be amiss to state that female union printers are everywhere treated with the utmost consideration by their brother craftsmen. In more than a score of local unions in this country, women fill positions of responsibility and honor, and at the convention of the International Typographical Union, at Atlanta, Georgia, there were two women delegates. To be a delegate to an international convention is considered by many printers as distinctive of the highest honor.

I have referred to the "apparent fitness" of women for the work. Have they no real fitness? Why are not more of them employed at a pursuit for which they seem to be as well qualified as for manipulating the key of a telegraph instrument, or operating a typewriting machine, or keeping books by double-entry, or any other of the multifarious employments in which their capability has received substantial recognition?

I shall not attempt to answer the question in detail. It certainly is not because of lack of opportunity. On different

occasions schools of instruction in typography have been started in this city and elsewhere, and female pupils were preferred; but the schools were eventually abandoned, and who ever heard of their graduates? It surely is not because of the opposition of the trades-unions, as I have already shown.

What, then, is the reason? It is because a printer, to secure lucrative and steady employment, must be more than a mere typesetter. And the ability to set type merely, is the sum total of the qualifications as printers possessed by the majority of the women at present employed in the "art preservative of all arts." When women essay to learn the trade they begin at the middle round of the ladder, instead of at the bottom, and they get no further. Note the difference: When a boy gets a situation in a printing-office he must sweep the floor, run errands, be cuffed occasionally, deluged with profanity daily, and finally, when he rises to the dignity of a "cub," or regular apprentice, he is made to feel that life is not worth living unless he sets a "clean proof," keeps his "frame" and "cases" in a neat and workmanlike condition, and evinces a desire to learn all there is to be known about the craft that had for its disciples Gutenberg, Caxton, Dürer, Franklin and Greeley. On the contrary, few females enter a printing-office to learn the business until after they have got into long skirts, and have acquired all the ideas of young ladyhood. They have to do no coarse work, but perhaps are required to "hold copy" for a proofreader awhile to familiarize themselves with manuscript; then they are taught the location of the letters in the "case," and forthwith become compositors. Their shortcomings as apprentices are glossed over, and an occasional mild reproof is all they receive for doing what a "cub" would be roundly scolded for. The scolding to the boy is invariably productive of better work, but to a "lady compositor" it would mean a shock to her feelings and a consequent flood of tears.

Most women regard the business as but a makeshift until matrimony shall take them from it (and who shall blame them?), and have no desire to excel at it. Few of them remain at the business long enough to acquire more than a superficial knowledge of it, but there is plenty of evidence that, with a determination to become proficient, and under proper instruction, women may become as good printers as the most exacting foreman or proprietor could desire.

Typesetters are for the most part employed by the piece. Other work in the composing room, such as reading proof, "making-up," etc., is done at stated weekly salaries. Printers thus employed receive higher wages, as a rule, than can be earned at the case, their pay in this city ranging from eighteen dollars per week, for day work, up to twenty-seven dollars for night work.

Very few women are employed as proofreaders, and fewer still—if, indeed, there be any—are called upon to "make-up," or do any other kind of printer's work requiring the exercise of ordinary masculine physical strength.

The earnings of female compositors equal those of their male co-workers, where equal rates are paid, as in union offices. On a Brooklyn newspaper employing sixty compositors, half of whom are women, the wages average from eighteen to twenty-five dollars per week. The most efficient women compositors are members of the union, and consequently earn the best wages. The earnings of non-union female compositors in New York city and vicinity are from seven dollars to twelve dollars per week, according to their ability and the class of work they are employed on.

When a woman applies for admission to the union, she is required to furnish the same proofs of competency exacted from a man. After she has been admitted, she has the same opportunities of procuring employment, if she avails herself of them. Only a few women have the courage to do this. One can imagine the sensation that would be caused to have a dozen women stroll into the composing room of a newspaper, and without removing their hats or wraps, lounge around until "regulars" ask them to go to work. This is what male compositors out of regular employment, and substitutes, have to do. Women printers usually obtain situations by answering advertisements or through the assistance of friends. Perhaps twenty-five have pleasant, lucrative employment

on daily newspapers in New York as "distributors"—that is, they are employed during the day, at the same rate paid for night work, to distribute type for compositors who thus prefer to reduce their working hours. The "lady distributor" is comparatively a recent innovation, but all agree that she is a most agreeable one. Her earnings depend upon the amount of work she receives, but will average about fifty cents for every hour employed. I have known some women to thus earn twenty dollars per week, from about 10 A.M. until 5 P.M. These positions, however, are in the main greatly prized and eagerly sought after by women. While there is no reason why men should not perform this work under the same circumstances, it has by tacit consent become the undisputed privilege of women.—*Charles J. Dumar, president of New York Typographical Union, in Ladies' Home Journal for June.*

**SLOWLY ADOPTED.**

Suggestions tending to the improvement of methods and appliances in the various handicrafts generally receive such prompt acceptance as their simplicity and desirability may warrant, but there are some that, being models of simplicity and convenience, form a striking exception, and are only adopted years after the subject has been made public, and then but slowly. The Hamilton-Boss lower case, here illustrated, may be taken as an

exceptional instance of such lack of enterprise in the printers of America. The facility it affords the compositor when spacing out lines, and the improvement in the relative sizes of the type compartments, would commend it at once to the favor of all practical printers. Yet from the following excerpt from the *American Newspaper Reporter*, of August 26, 1872, it will be seen that Mr. Horace E. Rounds, now editor and proprietor of the *Rogers Park News*, but at that time editor of the *Oshkosh (Wis.) Journal*, had a project of a similar character, and that practically the subject has been before the printing world for nineteen years.

**ANOTHER PLAN FOR CASES.**

Practical printers will admit that the present arrangement of type in case is not as good for rapid composition as could be desired, and although printers and case manufacturers hang on with wonderful tenacity to old ideas, I cannot but believe that if some decidedly better arrangement could be introduced, without too radical a change, it would eventually find favor with the "craft."

PLAN FOR UPPER CASE.

### ELECTROTYPING.\*

NO. IV.

#### SULPHATE OF COPPER CRYSTALS (BLUE STONE).

While it is not absolutely necessary that the operator should have a thorough knowledge of chemistry, it is essential, in order to produce a smooth and tough deposit of copper, that he should understand the composition of his solution and the laws governing the same.

Sulphate of copper crystals consist of one equivalent of sulphuric acid, 40, one of protoxide of copper, 39.75, and five of water, 45 = 124.75, or, in other words, the crystals contain about one-third acid, one-third copper, and one-third water, and are obtained by heating sulphuric acid and copper together, dissolving the soluble product in hot water, and evaporating the solution until crystallization takes place in cooling. It has a rich blue color and a strong metallic, styptic taste; it reddens vegetable blues, and crystallizes in transparent prisms, which effloresce slightly in the air, and is soluble in four parts of cold, and two of boiling water, but insoluble in alcohol. When heated, it first melts in its water of crystallization, and then dries and becomes white.

If the heat is increased to a high temperature it finally loses its acid, protoxide of copper being left. Potassa, soda and ammonia throw down from it a bluish-white precipitate of hydrated protoxide of copper, which is immediately dissolved by an excess of the last-mentioned alkali, forming a rich, deep blue solution. It is decomposed by the alkaline carbonates, and by borax, acetate, and subacetate of lead, acetate of iron, nitrate of silver, corrosive chloride of mercury, tartrate of potassa, and chloride of calcium, and is precipitated by all astringent vegetable infusions. If it becomes green on the surface by the action of the air, it contains oxide of iron. This oxide may be detected by ammonia, which will throw it down along with the oxide of copper without taking it up when ammonia is added in excess. When zinc is present, it will be taken up by a solution of potassa added in excess, from which it may be thrown down in white flocks by a solution of bicarbonated alkali.

One cannot be too careful in the choice of sulphate of copper, of which three distinct varieties are found in the market. The best is produced from the treatment of copper or its oxide with concentrated sulphuric acid.

This sulphate comes in the shape of crystals, semi-transparent and of a fine blue color; its solution is also a pure blue and is principally selected for dyeing fine woolen fabrics, where the presence of a trace of iron would injuriously affect the color. It should also be used by electrotypers, owing to its purity.

#### SULPHATE OF COPPER SOLUTION.

A very important part of the electrotype process is preparing the solution, and in such a way that the deposit will rapidly cover the surface of the mold with a *flexible* copper shell. The directions in technical works are well enough for metallic surfaces, but do not answer the requirements of blackleaded wax molds.

The best method is to fill the vat *two-thirds* full of water, *free from lime*. If lime be present in the water it will reduce the conductivity of the solution by absorbing the acid, and the result will be a brittle deposit.

Filling the vat only *two-thirds* full of water will allow for the addition of the required amount of sulphate of copper crystals and sulphuric acid, and also for the displacement caused by hanging the anodes and cathodes in the vat.

In order to saturate the water to the proper density, suspend in the upper portion of the vat (in cheese-cloth bags) *one and three-quarter pounds* of copper crystals to *each gallon* of water.

As soon as the water becomes impregnated with the salts, it becomes denser and of greater specific gravity and gradually sinks

to the bottom. Do not throw the salts in the bottom of the vat, as the layer of water in contact with them soon becomes saturated, and being denser than the liquid above, does not readily mix with, but on the contrary, forms a saturated solution surrounding the crystals. When the crystals have dissolved for some time, stir the solution with a wooden paddle and test with an acid hydrometer. When it shows a density of fourteen degrees, the bags containing the salts should be removed from the vat, and *one gill* of sulphuric acid added to *each gallon* of water in order to raise the solution to sixteen degrees. It should then be allowed to stand for ten or twelve hours to cool off, stirring frequently in the meantime to incorporate the acid well into the solution. When it has thoroughly cooled off, the copper anodes are then hung by the S hooks on the anode rod, the operator carefully observing that the point of contact between the hooks, the anode, and the anode rod are scraped perfectly clean.

If electrically-deposited or chemically-pure anodes are used, the solution will keep in a uniform condition, except as regards the loss of water by evaporation. But if impure anodes are used, the bath gradually becomes charged with soluble metallic impurities, which in time will impregnate the solution, the consequence of which will be a brittle deposit or shell.

This is a great source of annoyance to electrotypers, as the backing metal (even though containing a large proportion of tin) will not adhere to a brittle shell.

It is also of the greatest importance that not a trace of arsenic, iron or zinc should be present in the anodes, as it is well-known that one-fifth per cent of iron depreciates the conductivity of copper twenty-five per cent, while a mere trace of arsenic reduces its conductivity over fifty per cent.

A deposit from a neutral solution of copper is rough, irregular and brittle, but if tin be present the deposit is excellent and tough, even though it shows no trace of tin. The resistance of the solution is also much reduced by the presence of tin in the anodes.

When the bath becomes surcharged with iron, zinc, etc., a portion of the solution should be removed *from the bottom of the vat*, from time to time, by a siphon, and replaced by a like amount of water and a few gills of sulphuric acid. The water is added to reduce the density of the solution, while the acid dissolves the iron, zinc, etc.

Should crystals form on the anode or around the sides of the vat, add water free from lime to reduce the density and to make up for evaporation. If the solution becomes too dense (which is owing to an excess of sulphate), a burnt or sandy deposit will be the result, and, if not attended to at once, by the addition of water, the deposit will finally become brittle.

If the solution becomes too sour, which is owing to an excess of acid, streaks will appear on the back, and the shell will in time become brittle. This is remedied by siphoning about ten per cent of the solution from the bottom of the vat and adding the like amount of water.

Another method is to add about one ounce of whiting to each gallon of the solution, to neutralize the excess of acid.

It is important that close attention be paid to keeping the solution in a uniform condition, as an excess of acid or protoxide of copper, or the lack of a proper proportion of either, or the surcharging of the solution with metallic impurities, will produce imperfect results and cause expensive delays.

In order to keep the solution in proper working order, mark the height of the solution in the vat, and in the morning, before taking out the work, add water to make up for evaporation.

About once every week place twenty-five pounds of sulphate of copper in a perforated box or cheese-cloth bag, and hang it in the vat, to enrich the solution.

The operator should remember that every pound of copper crystals added to the solution contains about one-third water, one-third acid and one-third copper.

#### DEPOSITING THE SHELLS.

Having thoroughly washed out the iron filings, the molds should be placed back to back, and hung by the safety hooks on the *rubbers*

\* Through the kind permission of Messrs. C. B. COTTRELL & SONS, New York, manufacturers of printing presses and electrotype and stereotype machinery, we reprint from their catalogue this article on electrotyping, written for them by P. M. Furlong, foreman of electrotyping department of Messrs. T. L. De Vinne & Co., New York.

of the cathode rod, the case being allowed to swing freely in the solution, and about one inch from the anodes or coppers. The operator should be careful that the solution fully covers that position of the copper connection strips which are attached to the mold, in order to complete the electric circuit. He should also prevent the solution from rising to the height of the hooks by attaching an overflow pipe to the vat on a line with the solution; otherwise the copper will form a deposit thereon.

The first mold placed in the solution should face the copper at the extreme end of the vat, and should be immediately connected with the cathode rod, by placing the connection strip of the mold directly under the thumb-screw of the improved clamp, which is attached to the cathode rod. The thumb-screw should then be turned tightly down on the copper connection strip, and allowed to remain there until the desired thickness of shell is obtained.

Having properly connected the first mold, the remainder are similarly treated in regular order, until the last mold is placed in the solution opposite the anode nearest the dynamo.

In order to secure a perfect connection and a proper flow of the electric current, it is absolutely necessary that the contact point of the positive and negative poles, the anode and cathode rods, all anode hooks, and the connection strips of the molds, should be perfectly clean. These instructions are important and should be closely observed, as a proper contact is necessary to complete the circuit.

If the molds are not properly blackleaded, the copper deposit will show small black spots, especially on the sides of the letters, which, if the shell is removed, turn out to be holes. In such a case the mold should be taken from the vat and rinsed with clean water, after which a thick solution of plumbago and water, or, better still, plumbago and alcohol, is rubbed into the defective parts by means of a moderately-stiff brush. The molds are then hung on the anode rod and allowed to remain in the solution for about a minute in order to chemically clean the back of the shells, after which they are transferred to the cathode rod. By this means the defective parts will be properly covered with copper, and a proper adhesion insured between the old and new deposit, which otherwise would blister or separate in the process of backing.

#### STRIPPING THE COPPER FROM OLD PLATES.

Old electrotype plates may be utilized as temporary anodes by first depositing a thin film of copper on the molds from the regular anode, after which the plates, if large, are then hung in the solution by suitable hooks, and allowed to remain, until all the copper is stripped from the face of the plate.

Should the plates be small, a convenient method of joining the same is to lay several face down in the heated casting pan and then pour hot metal (or buttons) on the back of the plates. By this means the old plates are securely joined and may be prepared when the operator is not otherwise employed. Old shells, connection hooks and parts of anodes or other copper, may be also utilized by being placed in perforated boxes hung in the solution opposite the case or cathode. These boxes (which are usually two inches thick and the length and width of the cases) may be made from lead or from electrotype metal in use in the department and the parts joined by the same material. Never use tin or solder to connect its joints, as the tin will be acted on by the solution.

#### THE DYNAMO.

The magneto-electric machine has been displaced for practical use by the dynamo-electric machine, or dynamo, the distinction being that in the former a permanent magnet is employed, while in the latter its place is taken by an electro-magnet.

Dynamos have a high degree of efficiency, transforming, in some cases, nearly ninety per cent of the mechanical energy used in revolving the armature into the energy of the electric current. They also furnish the electric current much more economically, as well as more regularly, than a voltaic battery, since the zinc, the fuel of the latter, is an expensive and a poor fuel as compared with the coal used for the power which drives the dynamo.

In some forms of the machine, the field magnets are excited by independent currents produced by separate machines; in other

forms, called series dynamos, the current generated in the armature charges the field magnets, and is also used for the outside work. In still other forms, called shunt dynamos, a portion only of the current generated in the armature is used to charge the field magnets, the remainder being taken off for the practical outside work.

The dynamo machines in use are of many forms, but all consist essentially of one or more large electro-magnets (called the field magnets), between the poles of which an armature, consisting of a soft iron core, wound with coils of insulated copper wire, is made to revolve very rapidly. In most of these machines the principle of reduplication is involved—that is, commencing with a very small amount of residual magnetism in the field magnets, the inductive action between them and the revolving armature results in the production of a feeble current in the coils. This current is made to pass through the wire of the stationary magnets, strengthening them so that they exert a stronger inductive influence in the armature, thus producing a strong current in the coils, which again charges more strongly the field magnets, and so on until the machine is in full action.

The current generated is taken from the commutator of the dynamo by means of metallic brushes, and is almost instantly transmitted along the positive pole to the anode rod, down the S hooks to the anode, through the solution to the mold, and back again by way of the connection strips to the cathode rod, whence it re-enters the machine by way of the negative pole.

As the current passes through the vat, the solution becomes decomposed, its copper being gradually deposited on the cathode or mold, while the liberated sulphuric acid dissolves an equivalent proportion of copper from the anode, forming sulphate of copper, by which the strength of the solution is kept uniform, or, in other words, the copper is deposited on the mold at the same rate that it is dissolved from the anode—that is, so far as the impurities of the anode will allow.

(To be continued.)

Translated from *L'Imprimerie* for THE INLAND PRINTER.

#### PHOTOCOLLOGRAPHY IN COLORS.

M. Cros published last year, if we remember rightly, a process which he termed hydrotyphy, and which may be described as follows: Hydrotyphy, properly called, is a printing with aqueous inks of monochromatic proofs. A plate of gelatine is printed with a communicating coloring, then sheets of paper are applied with light pressure upon the surface of the gelatine and a succession of proofs can be made.

This species of work allows one to obtain monochromatic proofs of any tint, and can also be applied to the photographic polychromy by superposition. It is now applied perfectly to the polychromatic proofs formed of the three colors, red, blue and yellow. This is the substance of collographic impression with aqueous colors, a process capable of being carried into concurrence with chromotypography and chromolithography, but not adapted to oily inks.

It concerns us now, says M. Lion Vidal, the eminent photographer, to assist this germ to its full development, and to foresee farther yet than has M. Cros in his searchings, a means of impression polychromatic not by superposition, but by printing at a single stroke many colors. Now, photographic hydrotyphy has been practically employed many years in the contrivance known as the "chromograph," for obtaining a certain number of copies of an original manuscript or design.

If, instead of proceeding in the same manner as with the chromograph, a positive is printed upon a plate of bichromatic gelatine, the part of this coat coagulated by the light will not swell and will not absorb the liquid colorant which is put upon the surface; the parts not coagulated will, on the other hand, be able to absorb the color, and if a white sheet of paper is pressed against it, a colored imprint of the image will be obtained. The photograph serves in this case to create the reserve.

M. Vidal also explains at length a method which will lead to the possibility of an impression in many colors made simultaneously upon photocollographic plates.

<p>PRINTING is the art of producing impressions, from characters or figures, on paper or any other substance. There are several distinct branches of this important art—as the printing of books with movable types, the printing of engraved copper and steel plates, and the taking of impressions from stone, called lithographing. We have now to describe the printing of books or sheets with movable types, generally called letter-press printing, and which may undoubtedly be esteemed the greatest of all human inventions. The art of printing is of comparatively modern origin, only four hundred years having elapsed since the first book was issued from the press; yet we have proofs that the principles upon which it was ultimately developed existed among the ancient Assyrian nations. Entire and undecayed bricks of the famed city and tower of Babylon have been found stamped with various symbolic figures and hieroglyphic characters. In this, however, as in any similar relic of antiquity, the object which stamped the figures was in one block or piece and could therefore be employed only for one distinct subject. This, though a kind of printing, was totally useless for the propagation of literature, on account both of its expensiveness and tediousness. The Chinese are the only existing people who still pursue this rude mode of printing by stamping paper with blocks of wood. The work which they intend to have printed is, in the first place, carefully written upon a tablet of hard wood, with the face downwards, upon a brush is passed over with the proper degree of pressure. A similar kind of printing by blocks, for the production of playing cards and rude pictures of scriptural subjects, was in use in Europe towards the end of the fourteenth century. But in all this there was little merit. The great discovery was that of forming every letter or character of the alphabet separately, so as to be capable of rearrangement, and forming in succession the pages of a work, thereby avoiding the interminable labor of cutting new blocks of types for every page. The credit of the discovering of this simple yet marvelous art is contested by the Dutch in favor of Laurence Coster, and by the Germans on behalf of Johann Gansfleisch, of the Güttenberg family. In all probability, the discover-</p>	<p>PRINTING is the art of producing impressions, from characters or figures, on paper or any other substance. ## HERE'S YOUR CHANCE!

The circulation of THE INLAND PRINTER is now 8,000 copies per month, but it is not the intention of the publishers to rest at that mark. Inside of twelve months our subscription list will be 15,000.

In order to assist in this important move, we make the following

## SPECIAL OFFER:

To anyone sending us a yearly subscription during the month of August, at the regular price, \$2.00 per year, we will place his name on our books for one year, beginning with No. 1 of Vol. IX (October, 1891), AND IN ADDITION *will send the July, August and September numbers of 1891, FREE.*

## REMEMBER!

This offer holds good only during August, and applies only to subscriptions sent in at the \$2.00 rate, *and not to clubs at the \$1.50 rate.* In sending subscriptions, give full name, address, county and state, and remit by express, draft, money order or registered letter, and mention this offer.

## SHOW THIS OFFER!

To your friends, if you are at present on our books. The July number is a Souvenir of the Typographical Union Convention they ought to have. To secure *that issue alone* is worth \$2.00. Call their attention to this.

SEE OUR MAP OFFER on another page.

## J. WEST GOODWIN.

Accompanying this we are pleased to present a portrait which is familiar to many of our readers who have had the pleasure of meeting the gentleman, and by this means will acquaint others with him. The following sketch is taken from the *Journalist*, of New York, and is so ably written that we can do no better than print it entire.

"J. West Goodwin is one of the men who have added character and standing to the country press. He is a bright and original thinker, a sharp incisive writer and a man of ideas. He has taken an active interest in the work of the Missouri Editorial Association, and is one of the valued and valuable members of the National Editorial Association. Personally Mr. Goodwin is genial, whole-souled, with a fund of quick wit and original humor which makes

him a most delightful companion. He was born in the town of Brownville, Jefferson county, New York, October 3, 1836. He was named by his parents, who were very ardent methodists, John Wesley, but during his boyhood days he was always known as West Goodwin; hence, when he reached manhood, he wrote his name as above. The advantages for education of the subject of this sketch were very limited, and when less than fourteen years of age, April 21, 1850, he entered the printing office of the *Democratic Union*, published by John A. Haddock, at Watertown, New York, and commenced to learn the printing business. Four months later Mr. Haddock sold his printing establishment; and young Goodwin returned to the farm where he was raised. In the autumn of 1850, Aaron Goodwin, his father, removed to Canton, St. Lawrence county, New York, where he engaged in the dairy business. In June, 1851, his son, John Wesley, was stricken with rheumatism, which made him an invalid for a number of years. In November, 1854, he again entered a printing office, this time at the village of Gouverneur, St. Lawrence county, New York. A few months later the establishment was moved to Potsdam, in the same county, when it was consolidated with a paper called the *Courier*, and published by Captain Harry C. Fay. Young Goodwin here completed his trade and became a journeyman printer. In 1857 the subject of this sketch left for the West, and stopped at La Fayette, Indiana, where he worked on the *Journal*, first as pressman and subsequently as a compositor. His health failed him. He ceased to work at the case, and engaged in carrying papers, soliciting,

etc., something that would give him more outdoor work than directly at his trade. In 1858, during the exciting Douglas campaign, Goodwin went to Frankfort, Clinton county, Indiana, and conducted a paper in the interest of the Douglas democracy. After the election he returned to La Fayette and resumed work on the *Journal*, and subsequently on the *Argus*, a weekly paper, of which R. Spicer was editor. In 1859 he went to Memphis, Tennessee, and held cases on the *Enquirer*, a daily paper, since dead. He remained there only a short time and returned to the North, going to Liberty, Indiana, in the spring of 1860, where he assisted J. D. Moudy to establish a democratic paper. Three months later he bought out Mr. Moudy, and became sole editor and proprietor of the paper, which he conducted through the campaign in the interest of the democracy and Stephen A. Douglas, who was defeated by Lincoln. In 1861, when the war against the North by the South broke upon the people, Goodwin closed his office and enlisted in the Fifteenth Indiana Regiment. He was refused, owing to health and physical inability. Subsequently he enlisted in the Sixteenth Indiana Regiment, and was refused for the same reason as before by the examining surgeon. He then went to Western Virginia and joined McClellan's army, in the quartermaster's department, and served in different capacities until 1864, when he enlisted in the Sixty-second Ohio Regiment, having then regained his full health. He served in the Army of the Potomac, until the surrender of Lee, part of the time doing duty with his company, and subsequently on detached service in North and South Carolina. The war being over, he was mustered out of service at Richmond, Virginia, on November 1, 1865, and returned to Indiana. He was married December 20, 1865, to Miss Martha Torrence Hunt, near Rising Sun, Indiana. In 1866 he went to Springfield, Missouri, and started the *Press*, issuing the first number on June 1 of that year. The *Press* was the first democratic paper printed south of the Osage River, in Missouri, after the war. He published it a few months, and disposed of it to Messrs. Waddell & Kneeland. In November, 1867, he called Sedalia his home, and determined to establish a printing office there. In May, 1868, he commenced with one small press and a few type to work on Main street, in Sedalia, calling his office the Artemus Ward Printing House. On June 1, 1869, he issued the first number of an independent democratic weekly paper named *Bazoo*. On September 20 of the same year he issued a small *Daily Bazoo*, which has rapidly grown since. The *Sunday Morning Bazoo* was first issued March 23, 1873. He still continues all the *Bazoo* publications, and also operates the largest publishing and job printing establishment in Central Missouri. His paper, which has always been published on an independent basis, is one of the most influential and best-paying provincial journals of Missouri."

## WHY DOES SOLID IRON FLOAT ON MOLTEN IRON.

This question, which has puzzled a good many observers, was satisfactorily explained by Doctor Anderson in a recent paper on steel read before the Iron Institute, London. When a piece of solid iron is thrown into a pot of molten iron or steel the solid metal at first sinks, which shows that its volume is less than the melted metal. But soon the solid piece becomes heated, which causes it to expand, its volume is increased, and it rises and floats on the surface of the molten mass. The action is the same both with iron and steel. Mr. Wrightson said:

"The experiment was frequently made by throwing a piece of iron into melted steel. They could see it go down, and might think that it was on account of the impetus which the iron had attained in falling that height, but as a matter of fact if the iron were put upon a fork and lowered, it would go down; but in the course of a few seconds it came up again, and kept on expanding until the piece of iron was a considerable distance above the surface of the metal. Then it decreased in volume, and of course became of the same volume as the molten metal which it joined. Any one could see by the distance that the piece of iron went above the surface that it was of considerably less density than the molten metal."

Written for THE INLAND PRINTER.

### RECENT IMPROVEMENTS IN PLATEN PRINTING PRESSES.

BY JOHN THOMSON,

MEMBER OF THE AMERICAN SOCIETY OF CIVIL ENGINEERS, AND OF THE AMERICAN SOCIETY OF MECHANICAL ENGINEERS.

THE INLAND PRINTER having kindly offered the use of its columns at various times for the purpose of illustrating any new features relating to presses, it has occurred to the writer, in accepting this privilege, that although it should not be attempted to disguise in any manner the advertising features usual to similar articles, yet enough of the technical side of the subject will be introduced to possibly make this both interesting and instructive; thus in a measure neutralizing its commercial atmosphere, and the following is offered with that purpose in view.

The negative from which the photographic illustration, Fig. 3,

FIG. 3.

was produced, was taken direct from a half-medium "Colt's Armory" printing press, regular Style 1, and is shown to point out two comparatively recent improvements made in this machine.

The first improvement relates to the combined belt-shifter and brake, which, being mounted upon a very heavy bracket attached to the side-frame, makes the entire apparatus of the press self-contained. There is no novelty, broadly considered, in combining belt-shifters with brakes, but there are two new features in this device which, taken with the arrangement and disposal of the parts, together make up a most effective adjunct to the machine, and in which every pressman and feeder will doubtless have special interest. Close inspection of the photo-engraving will show, first, that the iron brake-shoe, which is faced with hard sole-leather, is mounted upon the short bell-crank extension of the hand lever by means of a ball and socket joint, and, second, that the position of the bracket is such, relatively to the fly-wheel, that the brake-shoe makes oblique contact upon the face of the fly-wheel. The

consequence of these two conditions is that the leather-faced shoe is free to perfectly adapt itself to this angular contact (direct contact would be made if the brake were situated under the pulleys), hence resulting in a wedge action; in other words, the effect is to greatly increase the coefficient of friction, and is equal in leverage to a hand lever of several times the length indicated. Therefore, with but a few pounds pressure at the handle, several hundreds of effective pounds may be exerted upon the face of the fly-wheel. In fact, with but one finger, a quarto medium press running at 1,500 impressions an hour, at which rate the fly-wheel makes two and a half revolutions each second, can be stopped within one revolution. The objects aimed at in this arrangement have been fully attained, namely, saving of time in stopping and starting, and reduction of accident liability to forms, press and feeders.

The second improvement consists in the platen motion, or rather to that portion of its movement during which the sheets are withdrawn and fed. The problem presented was, first, to cause the platen to slide to direct, square contact with the types, and to be then rigidly locked to prevent any false movement. This had already been satisfactorily accomplished in our earlier presses. Second, to swing the platen to and from the direct sliding movement without shock or jar, in the easiest manner and quickest time. This had also been reached with marked success by means of the rockers formed below the platen and the controlling cam, shown in the photo-illustration, Fig. 4. Third, to cause the platen to pause, or "dwell," on the out-motion, whereby feeding would be facilitated. This, too, had been obtained with an improvement over older practice, but not with the entire satisfying of the mechanical sense which can alone give rest to the "cranky" mind of progressive engineering. And in a more or less varied experience in mechanical work, I know of no better illustration than that which will now be presented of how a complex problem may often be solved by the most simple means, and that, too, with advantage from every point of view; all converging to the many ways quoted postulate, that sound theory is good practice, although the pace of good theory may often be no easy one to follow.

Figs. 1 and 2 are reproductions from the U. S. patent granted to me for the mechanical movement now under consideration, and are shown because they quite clearly illustrate the detail of the device, comparing the old, Fig. 1, with the new, Fig. 2. This is a method of illustration not generally allowable in the patent office, but was found necessary in this case. The complicated action of the dwell cams, shown in Fig. 1, will not be here described; they are now practically a thing of the past; suffice it to say that when the platen had been swung out to the position indicated by the dotted outline, 40, at the full speed of the cranks, the connecting-rod cams would then act to arrest the motion of the platen, bringing it to a stop, and holding it while the crank pins traveled forward in the slots of the connecting rods. Upon the reverse movement, the cams would act to start its platen, increasing its speed until the rate imparted by the cams equaled that of the cranks, which would then assume control. The practical difficulty was to obtain material which, under the ever increasing demands for higher speeds and heavier presses, would stand the severe duty under all circumstances. The idea then came to mind that if, instead of attempting to bring the platen to a condition of actual rest, it,

SECRETARY.

for the same period of time, could be caused to in a measure linger, or "lag" at a speed slower than that of the cranks it would not only present the same opportunity in point of time in which to feed, but a slow and perfectly steady movement would be more conducive to rapid and accurate feeding than a short period of actual rest with a quick action immediately prior and subsequent

thereto. And precisely this result was reached by simply changing the contour of the controlling cam at 53 of Fig. 2, as also see Fig. 5, so as to produce upon the platen, at its out-motion, a slight slip upon the rockers in a direction contrary to the thrust of the cranks, or while the platen was traveling from position 40 to that of 46. A portion of the first clause of the patent claim is

really a condensed description of the device, and may be here quoted: "The form and construction of the cam being such as to cause the rockers to slip upon the seats at a rate of speed differential to that of the cranks."

The immediate consequence of this modification was to dispense with two cams, two steel friction rollers, two steel friction

roller pins, two loose gun-metal crank-pin sleeves and the slots in the main connecting rods, while the durability and safe working speed of the platen were increased indefinitely. I purposely use this word "indefinitely," for the reason that I have never heard of a failure during the past year and a half, either in durability or satisfactory performance, at any speed at which the press could be fed. In the case of some heavy cutting and creasing presses I have known over 1,500 impressions an hour to have been made, in which instances the platens and moving parts connected thereto have a total weight of nearly 1,600 pounds, that is to say: without the use of springs or cushions this mass of metal is swung quietly and smoothly through an arc of about sixty degrees every one and two-tenths seconds of time! This could only result from the fact, of which it is a demonstration, that the action is almost theoretically perfect in principle, as it is practically so in its development and mechanical application.

Inspection of the old style cam, Fig. 4, and the new style, Fig. 5, both of which are photo-reproductions from the actual parts, will show how slight was the modification which produced such far-reaching results. The duty required of the cam is very slight, the friction roller alternately traveling along one wall and then on the other. During the instant of the impression the cam performs no function whatever, the lower right-hand extension being recessed as shown to relieve the cam of any strain that might otherwise be transmitted to it.

**J. H. BONNELL & CO'S EMBARRASSMENT.**

J. H. Bonnell & Co., limited, the old printing ink establishment at 29 Rose street, New York City, has finally yielded to its financial difficulties, and July 17 its affairs were placed in the hands of a receiver. This was the direct result of a meeting of the company's directors, held July 16, to consider the advisability of applying for a temporary receiver. Judge C. H. Truax has appointed Herman Ritter to fill this position.

The origin of the company is one of the earliest. J. H. Bonnell & Co. sprung from the old firm, W. D. Wilson & Co., which started in business early in the sixties. J. Harper Bonnell, of the present company, was a firm member of that old firm, and in 1879 bought out the interests of his partners. The present limited corporation was organized in 1886 with a capital of \$200,000, all paid in, and Messrs. Bonnell, Haight and Harper chief owners. At this time this company ranked second in the country in the manufacture of printers' ink. The concern's factory was at Long Island City, where it covered a large area of ground and employed a large number of hands.

About six months ago the company began to experience difficulty. There were large outstanding accounts aggregating many thousands of dollars which it was impossible to collect. On the other hand, over \$250,000 in notes, long overdue, which had been liberally discounted by the banks, were outstanding against the company. C. T. Reynolds, of New York, also had large claims against the company. Suits were brought by this company and the various banks, and as a result judgments aggregating \$10,500 were entered July 17 against Bonnell & Co. This hastened the impending collapse of the company which had threatened for some time.

According to Mr. Harper, the treasurer, however, the company, though undermined by these suits brought, will be able to meet its liabilities. He puts the assets at \$570,000 and the liabilities at \$370,000. This balance in the company's favor will no doubt shrink considerably when a settlement has

been effected, as the company's claims will in many cases have to be settled at a sacrifice.

The officers of the company are J. H. Bonnell, president; Theodore Haight, vice-president; W. D. Harper, treasurer; A. S. Burlingham, secretary; and A. Bonnell. The majority of the stock is held by Messrs. Bonnell, Haight and Harper, their

interest being more than three-fourths of the total stock of the company.

A meeting of the creditors, held July 17, decided to let the company continue in business. Everything will be satisfactorily adjusted in a few weeks, and the many friends of the concern will be glad to know they have overcome their temporary embarrassment.

#### WINTERS' SHEET PERFECTING PRESS.

Perfecting presses are becoming more and more a necessity as progress is made in printing, and as speed in getting out work is considered more important than it was in former years, printers who can gain this very important point and at the same time lose nothing in the character of work produced are looking about for presses of this description. The press described in this article, and shown in the accompanying outline view, is simple in construction and looks very much like the ordinary stop-cylinder press. The frame is of the regular box pattern, strongly built, and the bed is firmly ribbed, and driven by the well-known crank

the fly by the delivery cylinder which is also fitted with a set of grippers.

As each form is inked by separate inking apparatus the sheet can be printed in two distinct colors upon opposite sides. The cylinder can be tripped at will or can be entirely thrown off to distribute the ink. The sheet can be of any size, and can be printed upon one side only or upon both sides in one or two colors, as desired.

One of these presses is in operation in the pressroom of the Winters' Printing and Lithographing Company, Springfield, Ohio. The patent on the press was issued July 7, 1891. R. P. Winters is the inventor and patentee and will furnish fuller particulars if any of our readers desire them.

#### MISSOURI MAY SUPPLY THE WORLD.

Lithographers predict, says the *Chicago Tribune*, that in a few years Missouri will be supplying the world with lithographic stone, just as Bavaria, Germany, has been supplying the world for years.

movement, giving a smooth and rapid motion without the aid of springs and bumpers. The cylinder is geared direct to the bed and reverses with it, thus insuring the perfect register of a stop-cylinder press, and has two impression surfaces and is fitted with two sets of grippers and reel rods. The two reversing cylinders, under the feed board, are each fitted with a set of grippers that take the sheet from the impression cylinder, reverse and deliver it again to the impression cylinder in exact register ready to receive the impression upon the second side at the reverse stroke of bed. A simple offset device prevents all smut or blur. The ink is supplied from fountain at each end of press, the distribution being thoroughly effected by a set of inking devices consisting of a table, feed roller and four distributing rollers with top riders. Four form rollers with vibrating roller and top rider double roll each form.

The sheet is fed to the press in the usual way. The first set of grippers back up and grip the sheet while the cylinder is at rest — the press being on the reversing point. The sheet receives the impression of the first form and is then taken by the reversing cylinders, reversed and delivered to the second set of grippers on the impression cylinder. The sheet upon the return stroke of the bed receives the impression of the second form and is delivered to

This prediction is based on the discovery of the valuable quarry near Hannibal.

Year by year the Bavarian quarry — a single quarry on which the entire world drew — has been less productive, and in a short time its store of the valuable stone will be exhausted. Every year the lithographing industry has paid \$10,000,000 to the owners of the Bavarian quarry. In 1890 the United States imported over thirteen tons of the stone a day. This stone is worth at least \$250 per ton, which would figure up over \$1,000,000 for the year's outlay. The demand for this stone has been so great that the quarry in Bavaria can no longer supply the trade with material of the first quality, it having been exhausted.

The great value of this stone has caused it to be sought for all over the world, but up to the present time none has been found that contains all the requisities for producing fine lithographs. Stone resembling the lithographic has been found in Italy, Canada, Kentucky, California and Colorado, but when first put to the practical test of lithographing has failed.

The quarry discovered in Missouri covers eighty acres of land, and the stone ranges from 30 to 100 feet deep. Stones taken simply from the outcroppings of the quarry have been sent to lithographers in different parts of the union and tested most

thoroughly in all the various kinds of lithographing — crayon, pen-work, rub-tint, transfer work, and drawings of all kinds — and, it is said, have been pronounced equal to the German stone. For engraving, the most difficult work that is done on stone, it is said to be the best in the world. The best stone today is what is technically called the blue-gray, and it is claimed all the stone in the Missouri quarry is of this variety.

Lithography is one of the most progressive and promising arts of the present age, and the essential basis which supports the art is good lithographic stone. It is today a valuable adjunct to the art preservative. To show its progress in Chicago it may be stated that before the big fire there were eighteen lithographic presses; today there are forty-four, and more being added every month.

The company formed to work the Missouri quarry has a capital stock of \$1,000,000, a controlling interest of which is held by Chicagoans. Machinery costing \$11,000 has been put in for quarrying purposes alone.

### THE TYPEFOUNDRIES OF THE UNITED STATES.

#### NO. IV — THE CINCINNATI TYPEFOUNDRY.

The origin of the Cincinnati Typefoundry dates back to 1817 — seventy-four years ago. In that year, Oliver Wells — formerly connected with the White Foundry (Farmer, Little & Co.), New York — journeyed by flat boat, with a few boxes of typefounders' tools, to the village of Cincinnati, and established, on lower market, above John P. Foote's grocery, the first letter foundry this side of the Alleghanies. It was not a very extensive concern: a few hand molds, a few roman faces, and a kettle to melt the metal — that was all; but it was sufficient for the demand of the time and the locality. Competition with other foundries was, on account of their great distance and the bad roads, out of the question; and thus it was that, notwithstanding its meager facilities and primitive tools, this foundry was quite able to supply the wants of the printers in its immediate neighborhood. A typesetter's day's work, at that time, was about five pounds of long primer — and very poor stuff it was, too, compared with the productions of the present day; but at that period the printers thereabouts were not so particular as they are nowadays, while the public was satisfied if the print was readable.

The original heads of the enterprise were Oliver Wells, Horace Wells and John White. In 1830 the partnership was changed to a corporation, the stockholders being Elihu White, of New York; Oliver Wells and Nathan Guilford, of Cincinnati. About the same time press building was added to the manufacturing of type — hand presses, of course; for this was only sixteen years subsequent to the appearance of the first cylinder power press in London, England, the invention of one König, a German.

About 1840 a great improvement was introduced, the foundry adopting the Bruce Typesetting Machine, by the aid of which one man was enabled to do as much as could be done by six men with hand molds, turning out, besides, a better quality of work.

After the retirement of Oliver Wells, in 1833, the management passed into the hands of his oldest son, Horace, who died in 1851, and was succeeded by Lemuel T. Wells. The latter, in 1861, transferred the business to Charles Wells, who, assisted by Henry Barth and William P. Hunt, managed the concern until his death, May 10, 1885. These latter have remained, since that time, the officers of the company, as president and treasurer respectively.

In 1861 a very dark period in the business life of their city affected them severely. All their business relation with the South was paralyzed by the war, while, in the North, lead was used for making bullets — not for type; in fact, there was no business doing at all. But they were not idle during this period of depression. They knew that everything — even a war — must come to an end, at some time; and so, having no outside business to attend to, they gave their undivided attention to internal affairs, and bent their entire strength and energy to the task of bringing their facilities, mechanical and artistic, if possible, to a higher standard than those of their competitors. This was a hard and tedious

undertaking, but they succeeded, and, in ten years, reorganized the whole foundry. From that time on all their productions have ranked with the best, and the local concern of former years has become a base of supplies for printers all over the world. Cincinnati type and machines are found in England, France, Australia, South and North America — in the latter from Maine to Mexico, from New York to San Francisco.

The progress made has not been confined to letter making, but extends to all other branches; printers' and typefounders' machinery has received equal attention, and from the small beginning — the building of hand presses — has been developed one of the best machine shops in the West. Their specialty in this department has, of course, been the manufacture of printers' tools. In 1853, they built some of the first platen job presses; in 1855, the first cylinder presses west of the Alleghanies; in 1860, the well-known and never excelled Nonpareil presses. The first color (chromatic) press was also their own invention, with many other novelties, which cannot be specified within the limits of this article. Their principle, in all their transactions, has always been to make the most serviceable articles in preference to cheap ones, believing that good work at fair prices will — if slowly, yet surely — win in the long run. Consumers are best convinced of the value of goods by their usefulness; therefore, though it sometimes happens that a poor, inferior article, by means of persistent advertising, drumming, etc., appears to be in the lead, its success is only temporary, and the genuine article gets ahead entirely on its own merits.

One of their very latest improvements is the complete typesetting machine (patented January 24, 1888) as shown in the

accompanying cut. Several machines of a similar description have already been built in Europe, but they are not adapted to the wants of the American typefounders, who have to furnish their customers with harder, better and more correct type than is considered necessary by their brethren on the other

side of the Atlantic. The European machine being altogether worthless for their purpose, they set to work themselves to make a machine capable of answering their requirements, and they succeeded. Their machines turn out type absolutely correct, mathematically, and they can cast metal superior, in hardness and durability, to any used heretofore. Besides this, the quantitative capacity of their machines is at least fifty per cent higher than that of the foreign ones. At first they had but a limited number of machines running, which they used in casting material needed for tabular work, which, as all are aware, requires the utmost accuracy, but now they have a sufficient number to cast all their book type by the new method.

Besides manufacturing type, the company keep on hand a large assortment of printing presses and printers' supplies generally, as well as inks.

The first printing press in this country was set up in Harvard in 1639, and W. Lewis Frazer, the artist lecturer, finds that the first American-made illustration appeared in Tully's Almanac of Boston in 1698. Increase Mather's "Ichabod," published in 1703, contained an American copperplate portrait, and from 1720 books were regularly illustrated in this country by American workmen. Mr. Fraser says he has every reason to believe that Benjamin Franklin was an engraver either on wood or type metal. If that is so, then three men who figured conspicuously in our revolutionary war were illustrators. Paul Revere was a copperplate engraver; Isaiah Thomas, the printer who distinguished himself at Lexington, was another, and Franklin was the third.

## THE NATIONAL EDITORIAL CONVENTION.

Seven hundred editors attended the National Editorial Convention at St. Paul, which opened on July 14, the city being gay with decorations in honor of the occasion, the newspaper offices as a matter of course putting on gala attire.

The convention was held in the Grand Opera House, the delegates being seated by states in the main body of the house, which was beautifully decorated, a conspicuous adjunct being the association's American flag that on the Fourth of July, 1889, was flaunted on the summit of the Eiffel Tower to kiss the breezes of a sister republic.

President E. W. Stephens having called the convention to order, Archbishop Ireland invoked the divine blessing in an eloquent prayer, and the committees being appointed, Governor Merriam, Mayor Smith and Senator Davis welcomed the visitors, the latter in a most eloquent address. President Stephens responded, amid frequent bursts of applause, in his usual graceful and scholarly manner. The afternoon was spent in a drive around the city and suburbs. Among the numerous telegrams received during the morning, the following was read before the body and received with much applause:

CHICAGO, July 15, 1891.

E. W. Stephens, President National Editorial Association, Grand Opera House, St. Paul, Minn.:

THE INLAND PRINTER tenders congratulations and most cordial greetings to the delegates of the National Editorial Association in convention assembled. May the deliberations result in benefit to the nation, and the hospitalities of the Twin Cities be ever a pleasant memory to each delegate.

HENRY O. SHEPARD, President.

In the evening President E. W. Stephens delivered the annual address, in which he congratulated his hearers upon "this the largest assemblage of journalists ever witnessed," and upon the fact that "the newspapers of the United States are the most eloquent expressions of its freedom and progress." Following, A. H. Seigfried, of New York City, eastern business manager of the Chicago *Daily News*, read a paper entitled "Criticism of the Counting Room," full of helpful thoughts.

Wednesday's morning session was taken up in speeches and addresses. Andrew Patullo, of Woodstock, Ontario, president of the Canadian Press Association, thanked the association for the invitation extended to the Canadian press and invited delegates to the next annual meeting of the Canadian Press Association. The first address of the morning was made by J. W. Scott, manager of the Chicago *Herald*, on the management of a metropolitan daily, which was listened to with the closest attention. Mr. Scott gave ready replies to all the numerous questions asked him during his informal talk. Mr. Adolph S. Ochs, of the Chattanooga *Times*, followed with a paper entitled "The Interior Daily."

In the afternoon the delegates left by train for a visit to Fort Snelling and Minnehaha Falls.

At the evening session the subject of "Interior Dailies" was discussed by Hon. George D. Perkins, of the Sioux City (Ia.) *Journal*, followed briefly on the same subject by Mr. Gibbs, of the Norwalk (Ohio) *Reflector*. The relative merits of "boiler plates" and Associated Press dispatches for evening newspapers were discussed, and Col. J. A. Hoyt, editor of the Greenville (S. C.) *Courier*, gave a bright address on "The Country Weekly."

Thursday morning, the 16th, the first speaker in the discussion on the weekly newspaper was E. L. Martin, of the *Mississippian*, Jackson, Miss., followed by J. W. Shannon, editor of the *Huronite*, of Huron, and ex-Governor Hoard, of Wisconsin. Dr. Hunter, of the Lawrenceburg *Indian Register*, read a paper on "The Secular Press; Its Power for Good and Evil," being followed by A. Frank Richardson, of New York, who ably defended the advertising agent.

The treasurer's report was read at the afternoon session, showing a balance of \$271.11 from last year, and a total of cash in hand of \$1,685.61. It was accepted with applause.

Theodore L. De Vinne's paper on "The Mechanical Department" was read by E. W. Fletcher, Mr. De Vinne being unable to attend the convention.

W. H. Hills, of the *Writer*, read an interesting paper on the "Editorial Department," which the Hon. Owen Scott, of Bloomington, Ill., in the discussion which followed, said was practically the whole newspaper. Mrs. A. E. Whitaker, of Boston, closed the afternoon with a paper on "Woman's Interest in Journalism."

During the afternoon the ladies were treated to a trip to White Bear Lake, going out on the St. Paul and Duluth railroad in time to witness a special regatta arranged for their benefit, and returning in time to enjoy the reception given by Gov. Merriam at the Capitol, and a second and later reception at the rooms of the St. Paul Press Club. The local newspaper men were assisted in this reception by the Minnesota Press Association.

President Stephens announced, during the afternoon, the following committee to visit the World's Fair Commissioners and arrange with them regarding the newspaper exhibit: Major Bundy, of Chicago; R. M. Woods, of Illinois; Owen Scott, of Illinois; J. A. Bossler, of Indiana, and J. A. Schlieser, of New York.

Friday, July 17, the last day of the association, was confined to the reports of committees and the election of officers. The legislative committee recommended that active steps be taken to secure such legislation as will repeal the present law which permits the government to print return requests on envelopes. The resolutions adopted tendered the thanks of the association to the railway officials, the citizens of St. Paul, and all who had taken part in the entertainment of the visitors. The new officers elected are as follows: President, W. S. Cappeller, of Ohio; first vice-president, B. B. Price, of Wisconsin; second vice-president, T. Sambola Jones, of Louisiana; corresponding secretary, J. M. Page, of Illinois; financial secretary, William Kennedy, of Pennsylvania; recording secretary, Miss Virginia Clay, of Alabama; treasurer, A. H. Lowrie, Elgin, Ill. At night the convention was royally entertained by St. Paul at Lake Minnetonka, where the festivities lasted until long after midnight.

## FROM COLONEL LAMBERT.

Colonel Lambert has the following in the *Typographical Journal* of July 15:

HOUSTON, Tex., June 18.—As the members of the board will remember, I was compelled to leave Boston before the labors of the late convention had been completed. Anent this, the following paragraph from the *Houston Post* of yesterday will suffice:

"At 8 o'clock this morning, at Christ Church, Rev. C. M. Beckwith will join in wedlock Mr. J. M. Golledge and Miss Bertie Lambert. The young people will take the 9 o'clock Central train for Ardmore, Indian Territory, their future home. They are to be mutually congratulated upon this auspicious event, when a most worthy young man and a lady of inestimable worth are to be united by ties that will bind them willing captives for life, and the wishes for their continued happiness that on all hands go out to them are not idle and meaningless, but come from the hearts of loving relatives and friends. May their lives be happy and peaceful, with a full measure of all that is good."

The readers of the *Journal*, I am persuaded to believe, will indulge a little of "papa's pride" when he gives a retrospective view of all parties to the above happy union: Mr. and Mrs. Golledge, parents of the groom, were married in this city, as also were the mother of the bride and the writer. Mrs. Golledge (*nee* Montgomery) and Mrs. Lambert (*nee* Black) were companions and schoolmates at a time when their future husbands were pasting their strings at 65 cents a thousand in Galveston and Houston, respectively. Their marriages were only a few months apart. Mr. Golledge, Jr., and Miss Bertie were each the first born to their respective parents, this city being their birthplace. In 1873-4, while Mr. Golledge, Sr., was publishing the *Daily Advance* in the city of Waco, the writer was carrying a hump-backed rule on the *Daily Examiner* in the same city, and during those days their children were playmates, and no doubt it was then the tender feeling sprang up in their young hearts, ripened into love as the years advanced, and in the presence of many relatives and warm friends yesterday morning, while standing at God's holy altar, this young couple consummated the full fruition of "love's young dream."

Mr. Golledge, *per se*, is at present president of Houston Union, No. 87, and day foreman of the *Post*, while the writer is hustling to keep up with the boys as a sub on the same paper.

"All's well that ends well." Fraternally,

WILL LAMBERT.

THE INLAND PRINTER extends its cordial congratulations and good wishes to the happy pair.

SUGGESTION FOR TYPEFOUNDERS.

Designed especially for THE INLAND PRINTER by Will H. Bradley.

## OUR DESIGNS.

WITH the advent of process engraving the demand upon the versatility of designers has increased in proportion with the greater facility in transferring their ideas to the printed page. Prior to the invention of process engraving, however, the talent and ingenuity of these artists were considerably exercised, and are at the present time, in the production of type faces and borders, combining originality, beauty and utility. In the June number of THE INLAND PRINTER, the suggestion to typefounders, submitted by Mr. Will H. Bradley, was received with marked favor by our readers, and we are enabled this month to present in the colored insert another suggestion from the same artist that contains in an eminent degree the three qualities we have named as the criterions of merit. The originality and beauty of the faces offered are without question, and taken in combination with the lanceolate or laurel border design the *tout ensemble* has a delicacy and finish that will commend itself to the discriminating critic. To anticipate criticisms upon the applicability of the examples shown, it may be well to state that no degree of elaboration has been attempted by the artist in this regard. The general effect can be produced in various ways.

The book-cover design "Cupid" is intended for embossing upon a steel-gray or blue-gray linen book cover, the outside border and the wording to be in gold with the balance in white ink. The chasteness and elegance of the design thus exemplified instances in some degree the delicacy of taste and just discernment displayed by Mr. Bradley in the treatment of his subjects.

## TYPOTHETÆ NOTES.

At a special meeting of the New Haven (Conn.) Typothetæ on June 22 the following named gentlemen were elected delegates to the National Typothetæ, to be held in Cincinnati the coming fall: C. S. Morehouse, L. L. Morgan, George M. Adkins, John B. Carrington, John N. Near; alternates: W. H. Lee, W. H. Marigold, R. S. Peck, J. M. Emerson, E. B. Sheldon. At the same meeting the following vote was passed: "Resolved, That the state of the printing business in Connecticut at the present time is such that the New Haven Typothetæ is unanimously opposed to any reduction in the hours of labor."

At a meeting of the typothetæ of Omaha, held May 5, the following officers were elected: President, Charles H. Klopp; vice-president, Harry Burkley; secretary and treasurer, Julius T. Festner. Executive Committee—Samuel Rees, M. H. Redfield, E. W. Bartlett. Delegates to the fifth annual convention of the United Typothetæ of America, at Cincinnati, October 20, 1891—Delegates: Samuel Rees, Henry Gibson, Julius T. Festner, John Campbell, Frank Hammond; alternates: M. H. Redfield, Daniel Shelley, George B. Eddy, Harry Burkley, John Rosicky.

THE St. Louis Typothetæ, in common with many other branches of the National Typothetæ, has adopted resolutions deciding to oppose the granting of the nine-hour day, should it be demanded.

A CORRESPONDENT sends the following: "A little instance came to my notice lately quite like some that I have read in THE INLAND PRINTER. On account of a fire and the accompanying wetting, an afternoon daily of 3,000 circulation was obliged to put out its presswork for a month. The proprietors of the job office which did the work figured that the work was worth \$6 a day to them, but in a spirit of neighborly accommodation sent in a bill for \$4.50 per day. Their surprise can be imagined when the bill was returned as exorbitant. They at once offered to leave the matter to disinterested printers for settlement, but this was declined and the bill finally paid, the proprietor remarking as he did so, that he would be glad to do such a job for \$3. Fifty cents a thousand, two sets of forms!"

## ST. LOUIS NOTES.

Business in general has not been and is not now very good, and the prospects until the fall are not very flattering. All the job offices with a few exceptions have been quite slack.

On June 19 a new monthly journal made its appearance under the name of the *Building Association Record*, having as its editor Elliott C. Bennett. Its name denotes its objects in life and it is a neat, readable sheet.

The partnership which has existed between Claus & Barclay for the past sixteen months has been mutually dissolved and Jacob Claus will continue the business at the same locality. They have given special attention to fine printing since embarking in business and had built up a nice trade. Mr. Barclay, we understand, retired because of poor health and intends to recuperate for a time.

The goodwill, printing materials of all kinds, including presses, of the *Daily Price Current*, a financial paper which has been published by Pritchard & Scott for a number of years past, was recently purchased by the *Post-Dispatch*, who have incorporated its business and reports into its daily evening edition. The materials and presses have been disposed of by the *Post-Dispatch* in small lots to different printers.

The June edition of the *Chaperone* came to hand filled to a great extent by the literary productions of local authors. The journal is kept up to the high standard which it adopted in the first issue.

A Mergenthaler typesetting machine has been introduced into the composing room of the *Star-Sayings* and is giving reasonably good satisfaction so far. There was a good deal of difficulty experienced in coming to terms as to compensation for the operators, but finally a scale satisfactory to the management and the Typographical Union was arrived at. We anxiously await the results of this first machine in the city.

Typographical Union No. 8, at its meeting in June, voted to put in a typesetting machine of a standard make for the purpose of instructing its members in its use, recognizing that soon the typesetting machine will be a fixture in most of the daily papers at least. The plan met with scarcely any objection.

John Quinn, who had been the foreman of the composing room for the Buxton & Skinner Printing and Stationery Company, was recently discovered to be short in his accounts with the firm. It seems that he had been making out the weekly pay-roll and been returning time for persons who had not put in the time, and which money was appropriated by the foreman. The firm took the charitable view of the case and no prosecution followed, and now there is a new foreman. The amount involved was in the neighborhood of one thousand dollars.

At recent elections in the chapels at the *Globe-Democrat* and the *Post-Dispatch* the result was that Lew H. Bird was chosen chairman, C. W. Ferguson secretary, and Len Thomas constable, of the *Globe-Democrat* chapel, and James McGuire chairman of the *Post-Dispatch* chapel. Both elections were very spirited and much rivalry existed.

The *Star-Sayings* was awarded the city printing for the coming year after two bids had been advertised by the city authorities, the first bids having been rejected. The bids as accepted were: 2½ cents per line for newspaper publication, 85 cents per page for the proceedings of the Municipal Assembly, \$1.00 per page for pamphlet work and 55 cents per page for the proceedings of the Board of Public Improvements.

Christian Wissman, a long-established and well-known stationer and bookbinder, with place of business at 328 Market street, died during the early part of the month and his body was cremated on the 9th. His wife will conduct his business.

The Missouri School Book Company, capital \$100,000, was incorporated under the laws of this state, on July 12. The stockholders are C. B. Woodward, 3,000 shares, and James C. Jones and W. B. Manny, 3,500 shares each.

William Wilson, who has for many years conducted the *Mechanic and Tradesman*, more recently located at 926 North Broadway, has been missing for the past month and no one is aware of his whereabouts.

OUR CRAFT'S

BUNKER HILL.

SPECIMEN OF BRASS RULE WORK.

Made by H. C. Hansen, typefounder, 26 Hawley street, Boston, Massachusetts. Designed by E. P. Britt.

## BOOKS RECEIVED.

THE *London Phonographer* is a new venture by Mr. John Bassett, editor and publisher, the initial number appearing in June last. It has every appearance of success, and is bright, newsy and handsome.

THE Electricity Newspaper Company, Chicago, got out the first number of *Electricity* on July 22. It is well printed, and it seems to have a long-felt want to fill, in that it aims to cover its field in a popular and practical way as well as technically. Mr. J. W. Dickerson, formerly of the *Western Electrician*, is the editor.

THE *American Pressman* for July has a fine half-tone portrait of Mr. L. F. Gibbons, of Philadelphia, winner of the L. K. Bingham award for fine printing. Mr. Gibbons is foreman of the pressroom of the printers of *Paper and Press*. Mr. T. J. Hawkins' energy and ability are well displayed in the pages of the *Pressman*.

THE printers of the United States have reason to be proud of the typographical appearance of the various monthly publications of the present day, and among these handsome periodicals none is more welcome to our table than *Paper and Press*. The high grade of its typography and the admirable technical articles render it an essential to every printer.

AS NOTED in our June issue, we are indebted to the courtesy of Messrs. Raithby, Lawrence & Co., publishers of the *British Printer* for the eleventh volume of "The Printers' International Specimen Exchange." Mr. Hilton, the compiler of the work, is to be congratulated on the result of his labors, and the publishers are deserving of the highest credit for the admirable manner, in binding, etc., in which they have sustained the beauties of the compilation. We note but three firms contributing from the United States. The richness in coloring of the German contributions is admirable. The French display, not very numerous, is good, and the British in the majority have some fine specimens, and some that have no excuse for being in the book.

A BENEFACTOR whose life has been one long history of cheerful giving, whose friends are numbered among both the highest and the humblest of the earth, of whom none are too exalted to be glad to call so good a man "friend," and none, however humble, afraid that their regard is without estimation. Such is George W. Childs, whose "Recollections," now published in book form, lies before us. The subjects contained in the book are: The Stratford-upon-Avon Memorial Fountain, The Memorial Windows to Herbert, Cowper and Milton, The Andrews and Ken Reredos, and The Printers' Banquet, comprising a handsome volume of over four hundred pages. The "Recollections" first appeared in *Lippincott's Magazine* in 1889, and attracted a widespread interest and favorable comment from the press, an earnest wish being universally expressed for their appearance in a more permanent form, which has now been fulfilled. All who revere the founder of the Printers' Home will have the deepest interest in this pleasantly written and handsomely printed book. Published by J. B. Lippincott Company, Philadelphia, Pennsylvania.

MESSRS. FUNK & WAGNALLS, 18 and 20 Astor Place, New York, have in preparation a new standard English dictionary, advance sheets of which have been recently circulated. In size of pages and typographical appearance it will closely resemble the Century dictionary, embodying many new principles in lexicography, and containing nearly 2,200 pages with over 4,000 special illustrations, and 200,000 words—70,000 more, it is claimed, than any other dictionary. Theodore W. Hunt, professor of Rhetoric and English Literature, of Princeton, says of it: "The Century is a lexicographical luxury. Yours will be the English People's Word Book." It has received praise from the most eminent scholars of the day, but what especially attracts us is the serious attempt to solve the perplexing problem of compounds, which department is in the hands of Mr. F. Horace Teall, who for years has been doing similar work on the Century Dictionary. Among the editors the names of such eminent scholars as Professor Shaler of Harvard, Professor Theodore N. Gill, Professor Simon Newcomb and

Professor Huxley are to be found, and there is no doubt of the accuracy and thoroughness of the work. The price of the dictionary when issued will be \$12, with a reduction to \$7 for advance subscriptions.

A POPULAR LIFE OF CHRISTOPHER COLUMBUS. By Edward Everett Hale. G. L. Howe & Co., Chicago, publishers.

Most opportune in meeting the awakened public interest, the publication of this book will be received with appreciation by those who desire to brush up their historical knowledge by the perusal of a pleasantly written narrative. The work is in a handy and convenient form and contains 320 pages.

WAS SHAKESPEARE A BARBER? and Other Papers. By E. Murray Day. Press of E. M. Day, 121 W. Fifteenth street, New York. 34 pages, 10 cents.

The ingenious arguments contained in the pamphlet are well written and are the work evidently of one who will be a formidable rival of Mr. Donnelly. The excuse for the existence of the work seems to be in the motto on the cover, "Some things can be proved as well as others."

POCKET MEDICAL DICTIONARY. For the Use of Students of Medicine. By Professor Ch. Gatchell, M. D., of the University of Michigan. Era Publishing Company, Chicago. Price \$2.

This valuable little work contains ten thousand words, including all the essential terms used in medicine and the allied sciences. It has over three hundred elegantly printed pages, gilt edged and rounded corners, neatly bound in morocco. Invaluable in the proofroom as well as to the profession.

ARTICLES ON CASES OF INTOXICATION RELATED IN THE CHRISTIAN SCRIPTURES. By Elijah Rawson.

This neat volume of one hundred and fifty-two pages is the work of a well-known Milwaukee printer, and reveals a close study of the Scriptures. The interpretation of the word "intoxication" is taken in its broadest sense and additional light is thrown upon many obscure passages. The work had the commendation of the late Bishop Welles, of Milwaukee, and many eminent divines. Price 50 cents each, five copies \$2.00. E. Rawson, 405 Florida street, Milwaukee, Wisconsin.

THE AMERICAN DICTIONARY OF PRINTING AND BOOKMAKING. Part 2. Howard Lockwood & Co., 126 and 128 Duane Street, New York.

The installments of this valuable work are being received with increasing favor. The amount of information contained in the numbers received, and the concise treatment of the subjects, are without parallel in the printing textbooks. The article on "Bookkeeping" exhausts nearly three pages and should be read by every employing printer. Short biographies of prominent printers are included in the work and will be of absorbing interest and utility. An example of the manner of explanation of any subject may be given: After the definition of the word "Brevier," the author says: "It is called *petit texte* in French, *Petit* or *Jungfer* in German, *brevier* in Dutch and *testino* in Italian." The work can only be obtained by subscribers to the *American Book-maker*, who will receive the parts as issued without extra charge.

## ANSWERS TO CORRESPONDENTS.

M. N. T., Joliet, Ill. In a set of resolutions should the word "whereas" at the commencement of the paragraphs preliminary to the resolution be set in small capitals, and should the word "resolved" before the wording of the resolution be in italics. Is it the duty of the foreman to follow the instructions of the proof-reader in such matters. *Answer*.—We answer affirmatively to all three questions.

E. R. M., Paw Paw, Mich. Should points of punctuation be inside or outside quotation marks. I invariably see the comma and period placed before the quotation marks, but notice other punctuation marks are treated both ways. *Answer*.—The rule generally followed, and as given in Bigelow's handbook of punctuation, is as follows: "In quoting words or sentences the period and comma always come before (or rather under) the closing quotation mark; but the interrogation or exclamation, the colon or semicolon should come before or after the quotation mark according as it is a part of the quotation or not."

## CHICAGO NOTES.

THE book departments of nearly all the large offices are at a complete standstill.

WALTER HAWES, proofreader, of the *Morning News*, has returned from his vacation.

WILLIAM C. ROBERTS was elected chairman of the *Herald* chapel at its last quarterly meeting.

WILLIAM OLDS is the collector of the Herald Relief Society, and reports that society as flourishing.

JOHN CANTWELL presides over the *Inter Ocean* chapel, and is assisted by Frank Radeker as secretary.

EX-GOV. WILLIAM D. HOARD, of Wisconsin, has become the editor of the agricultural department of the *Chicago Inter Ocean*.

THE new relief society of the *Herald*—the Franklin—has now over one hundred members. This society is but two months old.

THE following officers preside over the *Times* chapel: Chairman, H. B. Gimmell; secretary, Otto Coleson; treasurer, Louis La Croix.

GEORGE McNAMARA, formerly employed at Stromberg & Allen's, has accepted a lucrative position in a Kansas City printing establishment.

THE ticket departments of the book and job offices are working their forces overtime to answer the requirements of summer excursions on the several railroads.

THE Trades and Labor Assembly honored Chicago Typographical Union, No. 16, by choosing Mark Mitchell secretary at its semi-annual election a short time since.

SECRETARY-TREASURER McEVoy, of No. 16, reports eighty cards as having been deposited during the last month. For the same period eighty-five were withdrawn.

THE Town of Lake Union, No. 74, has been merged into Chicago Typographical Union, in accordance with the action of last session of the International Typographical Union.

THE remains of John J. Hand, formerly employed on the *Herald*, were laid to rest in Calvary, July 14, in the presence of a large concourse of friends and members of No. 16.

"ROBERT S. HATCHER has drifted into newspaper work and is now on the *Chicago Tribune* staff," says the *La Fayette* (Ind.) *Journal*, and predicts a bright future for the talented linguist.

WE are indebted to the courtesy of Messrs. Oleson, Barnard & Stolz, engravers, 113 Adams street, Chicago, for electros of examples in the article on "Practical Presswork," on pages 956 and 957 of this issue of THE INLAND PRINTER.

THE membership of No. 16 has increased very rapidly during the past year, and is now over two thousand. This makes Chicago's union the second largest in the country, No. 6 of New York being very near the five thousand mark.

MR. JAMES RUSSELL, head proofreader of the *Chicago Herald*, is, according to letters received from him, having a "real good time" in Scotland. He will return to his desk within a few days, and be tendered a welcome reception by his colleagues.

EX-PRESIDENT FULLERTON now devotes his time to coaching and encouraging his baseball colts, the *Tribune* nine, who are struggling manfully to win the printers' championship. The *Times*, *Post-Herald* and *News* nines, however, lead the *Tribunes* in the championship race.

PRESIDENT PRESCOTT, of the International Typographical Union, to whom was referred the question on the standard of type manufactured for the *Detroit Tribune* by Messrs. Barnhart Bros. & Spindler, of Chicago, has rendered a decision adverse to the Typographical Union.

SLASON THOMPSON, owner of a printing office at 180 Monroe street, has filed a bill against D. H. Talman and the Midland Company. He alleges they charged him usurious interest and induced him to buy stock of the Midland Company, which was worthless. In April, 1890, he borrowed \$5,000, and although, he

says, he has paid more than is legally due he fears that judgment may be entered on an outstanding note.

THE new Chicago directory is not a volume over which the New York book reviewers will go into ecstasies, but it nevertheless is a most interesting work. Its stories are all short, but have all a literary and business merit, and there are so many of them that they occupy over three thousand pages.

CHICAGO TYPOGRAPHICAL UNION, No. 16, held its regular monthly meeting Sunday, July 26, which was largely attended. Many important matters were taken up and disposed of, among them being the nine-hour proposition, the fifty-nine-hour law, the machine committee report, and the report of the committee on arbitration with the Newspaper Association. The Committee on Allied Trades was ordered to take into consideration the practicability of organizing a printing trades council, which will report at the next meeting. An effort was made to rescind the action of the previous meeting with reference to a parade on Labor Day with the Trades and Labor Assembly, but the union again decided to take part in the parade of that organization. Ten new members were initiated, and the receipts for the last month were large.

A PARTY of pressmen, representing the leading newspapers of St. Louis, visited Chicago early in July. Among the number were: James O. Smith, of the *Republic*; Joseph Curtin, of the *Globe-Democrat*; Burt Allen, of the *Post-Dispatch*, and W. C. Sheldon, of the *Sunday Sayings*. These gentlemen were on business connected with their respective newspapers, and to look into the improvements being made on the great Chicago dailies, notably the *Herald*, the *Evening Post* and the *Daily News*, all of which are supplied with the best modern improvements in mechanical devices for the prompt and rapid production of morning and evening papers. The visitors named are at the top of their profession and were agreeably surprised at the improvements in machinery witnessed. They were royally entertained by their fellow-craftsmen, and enjoyed themselves hugely. John Claus, Frank D. Colburn, Millard F. Bingham, Charles M. Moore, Irving Stone of the *Daily News*, Joseph Bichl of the *Herald* and *Post*, John Mangan of the *Inter Ocean*, R. F. Sullivan of THE INLAND PRINTER, John Leander of the National Printing Company, Michael Kiley of Poole Bros., Martin Knowles formerly with Knight & Leonard Company, Mr. McKenzie of Samuel Bingham's Sons, James Rowe, machinist, Mr. Gaussman and other gentlemen representing R. Hoe & Co., Charles Nibbe, J. G. Van Horn and Philip Masterson of the *Tribune* were among the entertainers.

## PRESS ASSOCIATION NOTES.

THE Michigan State Press Association held its annual meeting at Kalamazoo in July.

THE Pennsylvania Editorial Association's nineteenth annual outing at Atlantic City was as usual a pronounced success in interest and enjoyment.

THE West Texas Press Association held its semi-annual meeting at Baird on July 14. The mayor turned the town over to the delegates and a grand good time resulted.

A PRESS club has been formed at Chautauqua, New York, which gives promise of being a source of much pleasure as well as of much value to the members of the press located there.

THE Upper Des Moines Editorial Association convened for a three days' session in Fort Dodge, Iowa, on July 9. About fifty editors were in attendance and a pleasant and profitable session was held.

THE Woman's Press Club of New York is making arrangements for building an apartment house for professional women. There will be suites of rooms arranged for co-operative housekeeping, and a restaurant will be run for those who prefer boarding.

A CALL has been issued for a national convention of the American Trade Press Association, to be held in Boston August 27. This association was organized only a year ago, but its membership already includes nearly all of the more prominent trade

THE INLAND PRINTER.

CUPID BREAKING HIS BOW.

Specimen of half-tone engraving, from photograph of painting, by **BLOMGREN BROTHERS & Co.**,  
175 Monroe street, Chicago. (See the other side of this sheet.)

ESTABLISHED JUNE, 1875.

INCORPORATED MARCH, 1890.

# BLOMGREN BROS. & CO.

PHOTO-ENGRAVING,

ZINC ETCHING,

HALF-TONE ENGRAVING,

WOOD ENGRAVING,

ELECTROTYPING,

STEREOTYPING,

175 MONROE ST., CHICAGO.

We are prepared to execute promptly all orders for any of the above classes of work. Our facilities are unexcelled. We make a specialty of Process and Half-Tone Work. Notice plate on the other side, as a specimen of our productions.

journals published in the United States. Applications to the number of forty are now on file, and will be acted upon at the convention. A trade journal exhibit at the World's Fair, Chicago, in 1893, is one of the important subjects that will receive special attention.

MEMBERS of the Georgia Weekly Press Association arrived in New York July 16 on a sightseeing trip and enjoyed themselves as only newspaper men can when they have a chance to lay down their pens and give themselves up to the luxury of doing nothing for a few days.

It is announced that, owing to the continued serious illness of President Rufus Shoemaker, of the Northern California Press Association, the meeting of that organization projected to be held in Grass Valley in September will not be held there, Mr. Shoemaker feeling that he cannot under the circumstances make the arrangements he would desire.

#### SPECIMENS RECEIVED.

THE WEEKLY UNION, Sheridan, Arkansas. Sample copy of the paper. It is a ghastly freak.

L. C. CHILDS & SON, Utica, New York. Advertising booklet in colors. Admirable in design, and well and tastefully executed.

W. G. SAMSBURY, Montague, Michigan. Letterheads and bill-heads, which, considering the experience of the compositor, are deserving of commendation.

GAZETTE PRINT, Hackettstown, New Jersey. Advertising hanger and calendar in colors. Much too crowded, rendering the whole composition ineffective.

GRIFFITH, AXTELL & CADY COMPANY, Holyoke, Massachusetts. Advertising circular, embossed in colors. As usual with this company's productions, the result is pleasing and artistic.

P. B. MEDLER, Montpelier, Vermont. An assortment of general work of average excellence in composition. A little restraint in the use of ornaments would be desirable. The presswork is fair.

E. T. W. DENNIS, Scarborough, England. Specimen of block printing in colors, in form of advertising card for Scarborough Patent Tiled Floor Cloth Company. The work is deserving of high commendation.

P. C. DARROW PRINTING COMPANY, Chicago, Illinois. Advertising card, embossed and in colors. The red devil looks decidedly warm, despite the adjuration to "keep cool." The design is "catchy," and the execution fair.

LOUIS L. PRICE, Seneca Falls, New York. Samples of wood printing, comprising foot rules, advertising boards, dominoes, etc., and it may be said that Mr. Price thoroughly understands this branch of the business. The composition is perfect, and the presswork equal to any done on paper or cardboard.

ST. JOHNSBURY CALEDONIAN, St. Johnsbury, Vermont. This journal is published weekly, and in its new form presents a highly creditable appearance. It is set in bourgeois, brevier and nonpareil, point system, all Benton, Waldo & Co's self-spacing type, which the publishers consider a perfect success.

VANDEN HOUTEN & Co., New York. Firm advertising booklet, on every page of which is shown the taste and appropriate conceptions of an artist. *Chacun à Son Goût* is the title, which is obligingly translated for those who know not French to mean "everyone to his taste," and this firm show a high cultivation in this regard, from the work before us.

COMSTOCK & BALDWIN, Sheffield, Alabama. An assortment of general work of moderate merit. A disposition to the use of too much ornament is shown; a little more care in proofreading would not be amiss; the presswork is poor on some of the examples, and we would suggest that double rule is more appropriate than a border around a time-table.

A LARGE number of specimens are unavoidably held over for criticism until the September issue.

#### PAPER TRADE ITEMS.

NEBRASKA CITY, Nebraska, is working to secure a paper mill.

THE Kalamazoo (Mich.) Paper Company is now making lithograph paper.

CRANE & Co. are to place a new plater in their paper works at Dalton, Massachusetts.

A NEW paper mill to employ one hundred hands is contemplated at Oregon City, Oregon.

EICK & LEWIS, wholesale paper dealers, Newark, New Jersey, have been succeeded by the Eick & Lewis Company.

THE old Newman paper mill at Kokomo, Indiana, is being enlarged and improved by the new company which recently purchased the same.

THE Passumpsic (Vt.) Pulp Company have added a new cutting engine to their pulp mill and are now turning out a better quality of pulp than ever.

THE pulp mill at Haverhill, New Hampshire, is to start up again under new management. The machinery is being put in order and repairs made.

THE United States government have lately given the largest order received by the Keith Paper Company of Turner's Falls, Massachusetts, for their ledger papers.

BACHMULLER BROS. & Co., of Manayunk, Pennsylvania, claim to be the originators of vegetable parchment paper, which can be had of them in circles and odd shapes of any size.

THE Western Coated Paper & Card Company, of Chicago, expects to have its first goods on the market not later than September 1. The advance orders and inquiries are very encouraging.

D. H. SHARTLE & Co., of Kaukauna, Wisconsin, have started their new tissue mill. The machinery consists of a 1,200-pound engine, and a 68-inch Black & Clawson machine with four 48-inch driers.

BOORUM & PEASE and the J. G. Shaw Blank Book Company, two of the largest blank book manufacturers in New York, have adopted Byron Weston's celebrated linen ledger and record paper for several lines of their best books, and they report a steadily increasing demand for them.

MANAGER BARDEN, of the L. L. Brown Paper Company, reports a very satisfactory business in the linen and ledger paper made by the mill. A large order was recently received from Paris, a gratifying testimonial to the merit of the goods, as France does not buy largely of fine paper of other countries.

PULSIFER, JORDAN & Co., of Congress street, Boston, have secured the contract for the year's supply of paper for the state printing, having been the lowest bidders. The amount required is more than two hundred tons of book paper, twelve tons of flat papers, and the proportionate amount of wrapping and cover papers.

A COMPANY has been formed to erect and run a paper mill at Alberni on the west coast of Vancouver Island, and expect to be in working order by the fall. There is an unlimited supply of material and power in that locality. The company could have secured a good bonus by starting in Victoria, but preferred Alberni without any.

"LATE intelligence brings the pleasant news," says *The Paper World*, "that W. H. Eaton, of New Haven, has so far recovered that he has been able to conclude the purchase of the Housatonic mill at Lee, which will, doubtless, soon be put in running order. Hon. Wellington Smith visited New Haven in order to conclude the transaction."

COL. BROWN, superintendent of the government mill, received on June 29, at Pittsfield, Massachusetts, a sample sheet of new distinctive paper to be used for United States bills. The paper is called "localized fibre paper," and is entirely different from that used heretofore. The new paper will be distinguished by two lines of scattered red and blue silk threads one-quarter of an inch long,

crossing the bill from top to bottom. The lines will be an inch wide, each an inch and a half from the center of the bill. The reverse side of the bill opposite the lines will be left blank so the fibre may be easily distinguished. The new paper is deemed far superior to the old, and its manufacture will begin soon.

THE Crescent Paper Manufacturing Company, of Hartford, Indiana, make the following announcement: "We will be ready to run about July 15 or 20. The mill has been rebuilt entirely, no expense having been spared to make it superior to the majority, and equal to any other in the country. We have our own wood pulp plant, guaranteeing to us uniformity of that stock. Appliances have been added that enable us to handle all classes of stock, and our fuel is natural gas."

#### TRADE NOTES.

FRANK E. WRIGHT, printer, of Pawtucket, Rhode Island, has transferred his business to John W. Little & Co., who will continue at the old stand, 330 Main street.

R. M. SCRANTON has opened up a well-equipped job office in Alliance, Ohio. He has a large trade in railroad and general commercial work, and despite the close competition is away behind in orders.

THE Wisconsin News Company, a branch of the American News Company, New York, has just commenced business at 298 East Water street, Milwaukee, Wisconsin, with Abraham Bancker as manager.

THE printing establishment of Conrad Lutz, at Burlington, Iowa, is said to be the most thoroughly equipped and best conducted office in that city. In his new quarters he has facilities not heretofore obtainable.

THE large printing and book publishing house of B. F. Wade Company was destroyed by fire in Toledo, Ohio, on the night of July 2. Loss estimated to be \$60,000, nearly covered by insurance. Origin of fire unknown.

H. L. COLLINS COMPANY, of St. Paul, was incorporated July 11, to do printing, lithographing, engraving, etc., capital stock \$40,000. Incorporators, Howard L. Collins, Morris R. Conable and George H. Brown, all of St. Paul.

HENRY GIBSON COMPANY succeed Gibson, Miller & Richardson, lithographers, printers, binders and stationers, at Omaha, Nebraska, whose plant was completely destroyed by fire recently. The company are western agents for the Woodward & Tiernan Printing Company, St. Louis.

GRANT C. SNYDER, 1836 Lawrence street, Denver, Colorado, the western representative for Barnhart Brothers & Spindler, typefounders, Chicago, announces this fact in a neat card headed "Type Talk." The man who tells his customers in a circular what drawer the cigars are in certainly deserves business, and we trust Mr. Snyder will "get there."

S. CREW & Co., the oldest firm of booksellers and stationers in the state of Kansas, with headquarters at Lawrence, made an assignment on June 27. The assets are said to be \$30,000 and the liabilities about \$50,000. It was a great surprise to those who knew them best. It is stated that the cause of the assignment was that the firm had been branching out too rapidly and widely.

THE Trow Directory, Printing and Bookbinding Company has been organized under the laws of the state of New Jersey, with a capital stock of \$1,500,000. The business of the Trow City Directory Company, now carried on in its building, corner University Place and Eighth street, New York, was established in 1786, one hundred and five years ago. It has published the New York city directory ever since. The business of Trow's Printing and Bookbinding Company was established in the year 1826, and its capacity as a printing and bookbinding establishment is the largest, and its plant one of the most perfect in the United States. The property conveyed to the Trow Directory, Printing and Bookbinding Company comprises the real estate, Nos. 205, 207, 209 and 211 East

Twelfth street, New York, the leasehold property at University Place and Eighth street, and the presses, type, machinery, tools, fixtures and other plant of both the old and new companies. This property, together with the working capital, which the vendors undertake to contribute, is valued at \$1,432,749.35.

#### OF INTEREST TO THE CRAFT.

THE Kansas City (Mo.) *Post*, a German daily, headed off a strike July 16, by discharging its force of five union printers. The printers threatened to strike because the paper would not discharge a couple of apprentices. The rule of the union is that not more than one apprentice for every ten journeymen shall be employed.

A COMMITTEE of the Cheyenne Typographical Union waited on Governor Barber lately in regard to the report that printing was to be sent outside of the state to be done. They report that their interview was in every way satisfactory and that this course will not be adopted. The union committee included Robert W. Breckons, W. J. Cranwell and W. S. McCoy.

THE company owning the Mergenthaler typesetting and setting machine say the machines are in commercial use in the following New York City and Brooklyn offices, namely: *Tribune*, *Herald*, *Commercial Bulletin*, *Morning Journal*, New York; *Staats Zeitung*, *Voice*, *Freeman's Journal*, *Wall Street Journal*, *National Grocer*, *Market Journal*, *Standard-Union*, Brooklyn.

THE following is a list of the union printing establishments in the city of Peoria, working under the rules and regulations of Typographical Union No. 29: *Journal*, *Transcript*, *Herald*, H. S. Hill Printing Company, J. W. Franks & Sons, Hine & Co., Brus & Schaeffer, *Industrial Tribune*, Nixon Brothers, *Saturday Evening Call*, *Modern Woodman* and Rud Vonachen.

UPON the receipt of the news of President Prescott's election to the presidency of the International Union, a number of the members of Toronto union were called together to convey to Mr. Prescott No. 91's appreciation of his worth, and at a special meeting of the union a handsome gold watch was presented to him previous to his departure for the west, Mayor E. F. Clark making the presentation in a neat speech.

S. D. PERRY, pressman in the Rock Island (Ill.) *Argus* met with a painful accident July 3. The cloth of his shirt caught between a pair of cogs and dragged him into the paper folder attached to the press with such force as to stop not only the folder but the press and electric dynamo furnishing the power. As soon as possible he was released from his position, when his left arm was found to be severely lacerated.

A COMPOSITOR, by the name of Baker, employed on the Houston (Texas) *Post*, will not soon again come in the close neighborhood of electric lights. On the night of June 26 he attempted to turn on the light at his case and the incandescent light or connections were out of order some way, and he received a fearful shock which knocked him down and rendered him unconscious for several hours and badly scorched his fingers.

A PRINTING pressmen's union was organized July 16, at Grand Rapids, Michigan, under the auspices of the International Pressmen's Union, and the following officers were chosen: A. Officer, president; Henry Patterson, vice president; T. S. Estheridge, recording secretary; R. E. Parks, financial secretary and treasurer; William E. Byrnes, sergeant-at-arms. There were eleven charter members and it is expected that all the pressmen will join. The new organization is starting out under the best of auspices.

PRESIDENT J. L. KENNEDY of the Washington Typographical Union, has expressed his views on the introduction of typesetting machines into the government printing office. He contends that the opinions of other than practical men are worthless in matters of this kind, and that the only part of their opinions that printers will care to discuss is the general statement that "all labor-saving machines are fought by the workingmen," and the half-expressed fear that the printers will oppose the introduction of these machines. His argument is that the machines can only do straight

composition, and if stockholders who are "stuck" on the machines employ a lobby to aid them in dumping on the government, possibly the printer, not yet convinced that the machine is a success, would be just patriotic enough to take a hand in the business and enlighten congress as to the true inwardness of the scheme.

#### ITEMS OF INTEREST.

A PRINT of Mergon's etching, "L'Apside de Notre Dame," was sold at auction in London, July 17, for £125. The artist sold the original, when starving in Paris thirty years ago, for a franc and a half.

THE late Hannibal Hamlin, like so many other eminent personages in American history, began his long and honorable career by learning the printer's trade, though he did not very long follow the calling.

INK dries quickly upon any paper dampened with water mixed with glycerine. Placards composed of large letters dry in from fifteen to twenty minutes with paper thus moistened, while several hours are required where only water is used.—*L'Imprimerie*.

AT a recent sale in Boston, a bit of Massachusetts paper money, for twenty shillings (February, 1690) of the first issue of such currency in the English-American colonies, was sold, after spirited competition, to a Philadelphian for one hundred and thirty-six dollars!

THE Fifth Annual Corn Palace Festival will be held in Sioux City, October 1 to 17, 1891, inclusive. In the words of the announcement: "All are invited, and Sioux City is prepared to entertain them. She gives confident promise of such an exhibition as the world has never before seen."

THE WESTERN COATED PAPER & CARD COMPANY, recently established in Chicago, at 181 Monroe street, announce that they are prepared to furnish lithographic, book, chromo, glazed, colored, card, and every description of fancy papers. Their factory is at Riverview, a suburb of Chicago.

"A CASE which 'Reciprocity vs. Hogocity,' in the July number of THE INLAND PRINTER, called to mind," writes a correspondent, "was that of a printer who underbid another on a job of labels and then borrowed his form in order to do the job, and this form was partly borrowed from another office."

ONE of the most influential men in Copenhagen is Herr Councilor Fersler, who owns five newspapers: *National Tidende*, *Dagens Nyheder*, *Aftenposten*, *Dags-Tele rafen* and *Dagbladet*. With the exception of *Berlingske*, the *Tidende* and *Avisen*, Herr Fersler controls every conservative paper in the Danish capital.

A BOOK is being published in London containing the Lord's Prayer in 300 different languages, each in its own special characters. This work is considered a marvel of typography, surpassing a similar work issued by the imperial printing office, of Vienna, some fifty years ago, which contained the same prayer in 200 languages.

A NEWSPAPER man, who evidently believes in telling things just as they are, says: "Do not swear. There is no occasion to swear outside of a printing office. It is useful in proofreading, and indispensable in getting forms to press, and has been known to assist in looking over the paper when it is printed, but otherwise it is a very disgusting habit."

A CURIOUS property of melted sulphur has been noted in the Society for the Encouragement of National Industry by M. Lepierre. If melted sulphur is run on a sheet of paper bearing characters printed or traced with ink or crayon, the sulphur is charged with the coloring matter and after cooling presents a reversed proof of the letters.—*Bulletin de L'Imprimerie*.

IT is said that lectures were not known in Paris until 1862, when Charles Dickens came; but his audiences were mostly English residents in the gay French capital who willingly paid \$5 each to listen to their distinguished countryman. The first native lectures were given as a means of putting political opinions against the

empire before a people whose press was stifled. At that time it was proposed to Sarcey to give a lecture on Corneille. The audience was very small. Four years later he gave his second lecture at a theater. It was a great success. His next lecture was given before a play, and was also favorably received.

THE *Scottish Typographical Messenger* says that in spite of the large number of composing machines invented in Germany, such as the Brakelsberg, the Fischer and Langen, the Hagemann, etc., very few are actually at work in that country, and these few with very doubtful profit. In Austria-Hungary, forty-five machines of the Lagermann type are said to have been sold up to the present time, principally to the large offices in Vienna and Budapesth.

THE Typographic School of Brussels is managed by a mixed committee of masters and workmen. The pupils pay no fees, but must be employed in one of the contributing printing offices. The proprietors of the latter, in accepting the statutes of the school, pledge themselves to employ no young people under fourteen years of age, or who may not have received sufficient elementary education. The classes are held every evening from eight to ten o'clock, and both technical and elementary instruction is given.

IT has been suggested that Planté's method of engraving on glass and crystal, of which but little practical application has hitherto been made, could be very advantageously utilized for making process blocks for printing in newspapers, a process in which it would be likely to effect a great saving in time over existing methods. The process consists in covering the plate with a concentrated solution of nitrate of potash, connected to one pole of a battery, and tracing the design with a platinum point connected to the other pole.

#### NEWSPAPER GOSSIP.

R. H. TITHERINGTON is editorial manager of *Munsey's Weekly*.

THE Oakdale (Wash.) *Globe* is the newest newspaper venture in the state.

THE Canton (Ohio) *News-Democrat* has two libel suits and isn't a bit sad.

THE office of the Ottawa (Ont.) *Citizen*, was gutted by fire on July 1. Loss \$30,000; insurance \$17,000.

MR. E. B. EWING, of the Jefferson City (Mo.) *Tribune*, has the honor of being an ex-consul-general to Mexico.

MR. A. C. BALDWIN, late editor of the Sedalia (Mo.) *Gazette*, is now editor and proprietor of the Macon (Ga.) *Evening News*.

THE Geneva (N. Y.) *Courier* office is now owned and managed by William O. Bunn, formerly of the Homer *Republican*, and Elon G. Salisbury.

HON. JAKE CHILD, late Minister to Siam and ex-editor of the Richmond (Mo.) *Conservator*, is at his Richmond home busily engaged in writing a book.

MR. F. R. ROBINSON, editor of the Huntsville *Item* and secretary of the Texas Press Association, was married July 8, to the accomplished Miss Laura Meredith.

JUDGE WILLIAM TOMAN, who has been identified with newspaper interests in Iowa for the past quarter century, has sold his interest in the *Bulletin-Journal* at Independence to Messrs. Farwell & Chandler, and will retire.

PAPERS have been filed in Philadelphia by which Edward W. Bok, editor of the *Ladies' Home Journal*, becomes one of the owners of that periodical. Mr. Bok is twenty-seven years of age, and until a year and a half ago resided in New York.

BURGLARS entered the residence of Edgar W. Coleman, editor of *Der Herold*, Milwaukee, Wis., during Thursday evening, July 9, and ransacked the house from top to bottom, taking everything of value, including silverware and jewelry, in all valued at about \$2,500.

COL. G. B. M. HARVEY, who has just been appointed managing editor of the New York *World*, is one of the youngest men in the country to hold so important a position. He is thirty years

old and was born among the Green Mountains. While yet a raw-boned youth he began work in daily journalism on the Springfield *Republican*, and since then he has gathered valuable newspaper experience on leading papers in Chicago and New York.

WILLIAM HYDE, formerly managing editor *Missouri Republican*, has accepted the political desk on the Salt Lake City (Utah) *Herald*, the organ of democracy in this territory, and is expected within the next few days to assume the duties of his new position. He will not be managing editor.

#### OBITUARIES.

HARRY R. BARBER, superintendent of the Lambertville (N. J.) Paper Company, died at his home June 20. He was born in London, was about forty-eight years of age, and was highly esteemed by all who knew him.

MR. E. S. DURBAN, of New Castle, the veteran editor, died at University Hospital, Philadelphia, July 21, where he had been taken for treatment for acute heart trouble. He was in the seventieth year of his age and leaves a family of grown children.

JAMES DOUGLAS, superintendent of the Packerock mill of the Reading (Pa.) Paper Mills, died June 16, of paralysis, aged fifty-two. He was a native of Scotland, and for many years lived at Windsor Locks, Connecticut, where he was buried. He was a man highly esteemed.

COL. THOMAS FITZGERALD, of the Philadelphia *Item*, died in London, England, from an attack of the grip on June 25. Colonel Fitzgerald founded the *Item* in 1847 and saw it to grow to be the most prosperous paper in the city of Philadelphia. He was seventy-two years of age at his death.

THE death is announced of G. C. McKay, at Los Angeles, on May 5, after a brief illness of typhoid pneumonia. The deceased was without a superior as an artistic printer, and as a member of the typographical union was held in universal esteem. The remains were sent to relatives in Chatham, Ontario, for interment.

JAMES F. MARSHALL a well-known paper maker of Turners Falls, Massachusetts, died at his home in that village, July 5, after an illness of six weeks. He was a brother of George Marshall, learned the paper making business in his father's mill at Groton, and had served with great credit as superintendent of mills in various parts of the country.

HERMANN RASTER, for many years in editorial charge of the *Illinois Staats-Zeitung*, and called the ablest German journalist in the United States, died at Cubowa, a city in southern Silesia, Germany, July 24. For the last few years Mr. Raster had been anything but a well man. He had been troubled with complications of chronic diseases, which latterly grew worse, until a few months ago he was compelled to give up his work entirely and seek health in rest and travel. When he left Chicago it was his hope and that of his friends that a transatlantic trip, revisiting the places of his youth and receiving the benefit of the best continental physicians and spas, would restore to him the strength he had latterly lost.

#### WHAT THE MARKS INDICATED.

"I never saw such funny writing as George's is," said the beautiful young girl, as she held an envelope up for the inspection of her married friend.

"It is rather illegible," was the reply.

"O, I don't mean that," was the quick response. "He puts such funny marks in it. You know he's only written me three or four letters since we've been engaged because he's been in the city all the time, but when he does write one it looks so funny. It's all filled with marks like this — '•' — and then he makes character 'ands' like this — '&' — and puts a ring around them. And at the end of all his sentences he puts a cross like this — 'x.' Then, when he makes a figure he puts a ring around it, and always draws two lines under his signature. And sometimes he draws a line down through capital letters, and once he crossed a word out and

then drew a ring around it and marked it 'stet.' It's awfully funny. I can't make anything out of it."

"My dear," said the married woman, as quietly as her excitement would allow, "have you no suspicions?"

"Suspicious!" exclaimed the beautiful young girl, in alarm. "No, no! Of what?"

"Has he never confessed?" persisted the married woman, with Spartan firmness.

"George confess!" cried the fair maiden. "Martha, you alarm me. Are they counterfeit's marks?"

"Worse," was the solemn answer. "Ethel, your husband will be out nights. He will come in at all hours. Most of his work will be done under cover of darkness. He will miss his dinners and be constantly changing the hours. He cannot be depended on to be at home at any certain time or to leave at any certain time. Ethel, the man you are engaged to is a newspaper man."

"No, no; it cannot be!" cried the dark-eyed beauty. "I will not believe it."

"Ethel!" She was very impressive. "Did he ever draw a straight line through all the pages of a letter?"

"Yes, and it was one of the best he ever wrote."

"Alas, Ethel, it is too true. He is a newspaper man, and he has absent-mindedly put in the marks for the printer. Poor girl! Try as he might, he couldn't conceal his identity."

Then the young girl cried, "Horrible!" and burst into tears and refused to be comforted.—*Chicago Tribune*.

#### BUSINESS OUTLOOK.

**Akron, Ohio.**—State of trade, good; prospects, good; composition on morning papers, 30 cents; evening papers, 25 cents; bookwork, 30 cents; job printers, per week, \$12 to \$15; pressmen, per week, \$15. At regular meeting of No. 182, card of Stephen Keys was revoked for "ratting" on *Beacon*. Joseph P. Keating was elected secretary-treasurer, vice W. B. Taueyhill, resigned.

**Auburn, N. Y.**—State of trade, good; prospects, good; composition on evening papers, 16 cents; bookwork, 16 and 18 cents; job printers, per week, \$8 to \$12. The newspapers have had a trifle better time of it since the *Daily Herald* ceased to exist, but are not "coining money" by any means.

**Bay City, Mich.**—State of trade, fair; prospects, fair; composition on morning papers, 34 cents; evening papers, 32 cents; bookwork, 34 cents; job printers, per week, \$14. Work is fair in this city at the present time, a number of boys having gone to Detroit to work.

**Boston, Mass.**—State of trade, very dull; prospects, not very good; composition on morning papers, 45 cents; evening papers, 38 cents; bookwork, 40 cents; job printers, per week, \$15.

**Columbia, S. C.**—State of trade, fair; prospects, fair; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, per week, \$15, nine hours; job printers, per week, \$18 and \$20.

**Dayton, Ohio.**—State of trade, no good; prospects, no better; composition on morning papers, 35 cents; evening papers, 32 cents; book and job printers, per week, \$15. Printing has not improved any since last report. A large number of home printers are idle, but this does not prevent tourists from coming here in squads. Their pickings, however, are necessarily small.

**Dubuque, Iowa.**—State of trade, fair; prospects, fair; composition on morning papers, 30 cents; evening papers, 28 cents; bookwork, 30 cents; job printers, per week, \$14. More transient printers in the city at present than ever before known. It is again reported that the *Daily Telegraph* will shortly begin the publication of a state directory.

**Galesburg, Ill.**—State of trade, quiet; prospects, very dull; composition on evening papers, 25 cents; bookwork, per week, \$12; job printers, per week, \$12 and \$15. Work is very quiet now, and will likely be so until the middle of September.

**Grand Rapids, Mich.**—State of trade, light; prospects, light; composition on morning papers, 35 cents; evening papers, 30 cents; bookwork, per week, \$14; job printers, per week, \$14. Job offices are not employing extra help owing to the dull season. News offices are full of "subs." The vote on the nine-hour proposition resulted, yes, 38, no, 16; about one-third vote.

**Hartford, Conn.**—State of trade, not very good; prospects, poor; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 35 cents; job printers, per week, \$15. Work has been very good, but it has taken a turn, and it looks now as if we would be dull the rest of the summer.

**Helena, Mont.**—State of trade, fair; prospects, fair; composition on morning papers, 50 cents; evening papers, 45 cents; job and book printers, per week of fifty-three hours, \$21.

**Houston, Tex.**—State of trade, poor; prospects, poor; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$20.

**Logansport, Ind.**—State of trade, moderate; prospects, not good; composition on morning papers, 28 cents; evening papers, 23 cents; bookwork, per week, \$12; job printers, per week, \$12.

**Los Angeles, Cal.**—State of trade, quiet; prospects, not good; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$20. The *Times* continues to dwell in the printers' protective fraternity camp.

**Mobile, Ala.**—State of trade, fair; prospects, good; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$16. There are plenty of "subs" here to do the work.

**Montreal, Can.**—State of trade, fair; prospects, good for this season of the year; composition on morning papers, 32 cents; evening papers, 28 and 30 cents; bookwork, 27 cents; job printers, per week, \$10 and \$11. The trade this season has been very good compared with last summer, probably because there has not been an overabundance of hands, therefore not many idlers.

**New Haven, Conn.**—State of trade, fair; prospects, dull; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 35 and 40 cents; job printers, per week, \$15 to \$18.

**Peoria, Ill.**—State of trade, dull; prospects, not encouraging; composition on morning papers, 36 cents; evening papers, 33 cents; bookwork, 38 cents; job printers, per week, \$15, \$18 and \$21. E. F. Parker & Co's office has been closed to union men, the firm refusing to comply with union rules.

**Richmond, Va.**—State of trade, not good; prospects, not encouraging; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$16. We would advise compositors looking for employment to seek other fields, as there is a constant flow this way all the time.

**Springfield, Ill.**—State of trade, moderately fair; prospects, fair; composition on morning papers, 33½ cents; evening papers, 30 cents; book and job work, \$15 per week. The Springfield Printing Company, which has been located at its present stand for a number of years, are moving to a finer and more commodious building, 219 South Fifth street. The value and usefulness of their plant will be increased by the addition of two new job presses. The *Evening Times* failed to materialize, and the *Evening News* still remains the only evening paper published here. Mr. A. Gurney, formerly publisher of the *News*, has retired, and has been succeeded by H. T. Schlick, a member of No. 177, and Harry Kumler, son of a leading minister in this city.

**St. John, N. B.**—State of trade, fair; prospects, fair; composition on morning papers, 30 cents; evening papers, \$10 per week; weekly papers, 27 cents; job printers, per week, \$10.

**St. Louis, Mo.**—State of trade, not good; prospects, indifferent; composition on morning papers, 43 cents; evening papers, 38 cents; bookwork, 45 cents; job printers, per week, \$18. Trade is dull in job offices.

**San Diego, Cal.**—State of trade, dull; prospects, better; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 40 cents; job printers, per week, \$18. The outlook for the fall months in this locality is bright, and everything tends toward better times than for the past two years.

**San Francisco, Cal.**—State of trade, bad; prospects, bad; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 40 cents; job printers, per week, \$18 and \$21. The trade is in a very bad condition.

**Toronto, Ont.**—State of trade, fair; prospects, fair; composition on morning papers, 30 cents, office setting the advertisements, 33½ cents; evening papers, 28 cents; bookwork, 33½ cents; job printers, per week, fifty-four hours, \$11. Toronto printers do not relish the resolution submitted by the International Typographical Union for a nine-hour day. For nearly twenty years past we have had a nine-hour day, with the provision that one hour extra may be worked daily for the privilege of a Saturday half holiday. We will not like it a bit if what we have enjoyed for so long is to be taken away now. Our week's work is fifty-four hours, to be arranged between employer and employé. In nearly every case the Saturday half holiday is given. In a great many other trades this system prevails. It is even taking hold of retail stores. No. 91 held a joint picnic with Hamilton Union in Dundern Park, Hamilton, on July 25, which was a great success.

**Utica, N. Y.**—State of trade, quiet; prospects, fair; composition on morning papers, 35 cents; evening papers, 31½ cents; bookwork, 31½ cents; job printers, per week, \$12.50. Preparations are being made for a grand demonstration on labor day. Organized labor is unusually strong in this vicinity, and a united effort will be made the first Monday in September to ably attest this fact.

**Wichita, Kan.**—State of trade, quiet and dull; prospects, uncertain; composition on morning papers, 35 cents; evening papers, 30 cents; job printers, per week, \$15. Lots of men in town, coming and going every day. Trade quiet in all branches.

**Worcester, Mass.**—State of trade, poor; prospects, uncertain, at present; composition on morning papers, 40 cents; evening papers, 33½ cents; bookwork, 35 cents; job printers, per week, \$12 to \$15. Considerable interest is being manifested concerning the nine-hour day. Your correspondent has been informed that an official of the Worcester Typotheta is quoted as saying that he hoped it will be adjusted satisfactorily to all concerned, and further stated that nine hours is enough, just as was told them at their banquet recently by one of their guests. Good for our employers.

## BUSINESS NOTICES.

THE KENDALL FOLDER, a cut of which appears on page 1036, has proved to be one of the lightest running, simplest and most accurate folders manufactured. Printers visiting Chicago can see them in operation at 184 Monroe street, in the office of Blakely Printing Company. The machines are sold on thirty days' trial. Write to C. E. Bennett, care of above company, for particulars.

THE MORGANS & WILCOX MANUFACTURING COMPANY, of Middletown, New York, advertise, in connection with their steel furniture, steel slugs in six and twelve-point sizes, in any lengths, cut labor-saving or to newspaper measure. These steel strips ought to be useful in stiffening large job forms. This firm has a new specimen book of wood type and new catalogue of printers' materials, either of which will be sent on application.

## WETTER NUMBERING MACHINES.

These machines are manufactured by Joseph Wetter & Co., 20 Morton street, Brooklyn, New York, and have been adopted and are in constant use by the government printing office and by leading printing establishments throughout the country. For simple and practicable machines to run in the form with type, or to use separately, they have a reputation of which the makers may well be proud. The simplicity of construction and the excellence of materials used in the manufacture gives the Wetter machines the greatest durability. On another page will be found an illustration of these machines, and a list of a few of the offices using them. Full particulars and circulars will be sent on request.

## A NOVEL MACHINE.

A new and novel folding and pasting machine has just been built by the Brown Folding Machine Company of Erie, Pennsylvania, for the *Ladies' Home Journal* of Philadelphia. It is the first of its kind constructed in this country, and commands attention on account of its possibilities. The *Ladies' Home Journal* is now composed of thirty-six pages—two sixteen-page forms with a cover making the total number of pages. The machine requires three feeders; one for each sixteen-page section, and one for the cover. Each sixteen-page form is folded and pasted one within the other and covered. The mechanism is so arranged that each of the section feeders has complete control of the cover, and should either feeder miss a sheet, he can instantly prevent the cover entering the machine. Should the two sixteens or a single one pass through the machine without a cover it is easily detected in the packing box. The possibilities of the machine are not confined to the above work alone, as it will fold and paste a single sixteen, also cover same, making twenty pages. The capacity of the folder is, at a conservative figure, 2,000 per hour; greater speed being obtained in accordance with ability of the feeders.

## RACINE SAFETY BOILER.

On page 990 will be found the advertisement of the Racine Hardware Manufacturing Company, of Racine, Wisconsin, manufacturers of the Racine Automatic Engine with safety boiler, and automatic oil burning and feeding device. The body of boiler is of heavy hydraulic pipe with ends welded in. The tubes are threaded into the body, so that there are no riveted seams to cause leakage, thus making it practically impossible to explode it. Among the special features of this engine are the automatic fuel and water supply regulators, which are exceedingly simple and effective. Users of small engines have been obliged to use old style throttling engines because the automatic governors have been too costly to apply to such sizes, but these difficulties have been overcome in the Racine automatic, and a saving of thirty per cent of steam is effected, and the consequent saving of fuel, as against the old style engine. All sizes are double jacketed, and require

no brickwork. Every outfit, up to and including six-horse power, has engine and boiler on same base, fully equipped, ready to operate, making it one of the most compact and useful engines on the market. Circulars and full information will be furnished by the company. If about to put in an engine, write to them for prices.

#### COVER PAPERS.

Almost all paper houses furnish these, but not all of them furnish a paper which is entirely satisfactory. The Illinois Paper Company, of 181 Monroe street, Chicago, make a specialty of this class of goods, and also sell book and manila papers, and make them to order. As showing the favor with which their covers are received, we print the following extract from an order recently received by them: "If the good Lord will forgive us, we will never order any more cover paper from any house but yours. We have been tempted to let a few lots of cover come from other houses with other goods, and have regretted it every time. We inclose sample of about what we want, also sample of what we got last time, from a good house, too. Once in a while we may get a good article but it is an exception. Thus far your house has never disappointed us." When you want anything in their line, write to them.

#### A PROGRESSIVE MOVE.

The W. O. Hickok Manufacturing Company, of Harrisburg, Pennsylvania, has recently sent out the following "Facts for the Thoughtful Bookbinder and Paper Ruler," in the form of a little leaflet, which shows that they are "up with the times":

"One ambition of the present management of this company has been to establish a small but complete bindery equipment at the works, with a competent binder in charge, where the inventions, suggestions, new and improved devices, etc., which we are constantly working upon and perfecting, might be thoroughly tested, and where might be shown to our customers, in a practical way, our manufactures. Another, and not the least desirable end to be reached in this connection, was that of having on our premises an expert paper-ruler and a competent bookbinder, at whose hands each machine and device should be thoroughly inspected and tested, in addition to inspection of same by practical machinists, before shipment is made. Such a move, we believed, would be of decided service to the general trade, and would be appreciated and commended by every employing and employed bookbinder and paper-ruler. It is simply necessary for us to add that our ambition in this direction has been realized, and we invite your increased confidence in our goods and your belief in our progressiveness."

#### FACTS ABOUT THE "ACME" PAPER CUTTER.

The "Acme" is a genuine automatic self-clamping cutter. The self clamp is more powerful than any hand clamp. The pressure varies automatically with the resistance to the knife; the harder the cut the more it clamps. It saves all the hard work and time of turning up and down the hand clamp. The Acme makes fifteen cuts per minute, or 9,000 per day of ten hours. To do this with the hand clamp requires turning clamp up and down 18,000 times a day. Why not save all this time and strength? The Acme is a most economical cutter, is very strong and accurate, and is adapted to all the classes of work of printers, bookbinders, box makers, cloth manufacturers, lithographers, etc., doing nearly double the work of the hand-clamping cutters. The back gauge is moved by a graduated band, in half the time of the crank and screw movement, and with no back-lash. The round woods, of the best hard maple, give forty cutting surfaces, instead of eight, as on the square woods. A treadle clamp and hand clamp are combined with the self clamping, all three working together or separately, making it a most complete machine. Great care is used in manufacturing, and many new devices and improvements have been added which have brought the Acme to a high state of perfection. The largest variety of sizes and styles are manufac-

ured, including lever, hand wheel, steam and hand, regular double gear, extra heavy, and paper mill cutters, from 28 to 62 inches in width. The Child Acme Cutter and Press Co. are the makers, 64 Federal Street, Boston, Massachusetts, and Montague & Fuller, New York and Chicago, are general agents.

**ALL LIVE PRINTERS** should have Bishop's "PRACTICAL PRINTER," 200 pages, \$1. Also his "DIAGRAMS OF IM- POSITION" and "PRINTERS' READY RECKONER," 50 cents each; the "PRINTERS' ORDER BOOK," price \$3, and "SPECI- MENS OF JOB WORK," price \$2. Sold by H. G. Bishop, Box 13, Oneonta, N. Y., and by all type useful works ever published for foundry. The handiest and most printers. Indorsed by everyone.

**A CHANCE FOR A LIVE PRINTER**—For sale: an old established printing office, located in one of the largest cities in New England. The plant contains 2 first-class cylinder presses, 2 jobbers, about 300 fonts job type, 30 fonts wood type, 3,000 pounds body type, paper cutter, standing press, cabinets, and everything necessary for a well equipped office. Price low, and terms easy. For further particulars, address G. EDWARD OSBORN & CO., Printers' Warehouse, New Haven, Connecticut.

**A GREAT BARGAIN** in a job office—One 10 by 15 Peerless, one 7 by 11 Pearl press and steam fixture, throw-off; one 30-inch cutter, hand or steam; one 1-horse power electric motor; 116 fonts of job type and cases, eight cases body type, four double and two single job stands, two cabinets, leads, brass rules, leaders, galleys, and other material usually attached to a first-class job office. Everything as good as new; cost over \$2,000; will sell it quick for \$750. Address LOUIS HAMMERSLOUGH, Kansas City, Mo.

**FOR SALE**—A job office and newspaper in Michigan. Earning big money. \$4,000. Investigate. "MICHIGAN," care INLAND PRINTER.

**FOR SALE**—To a practical pressman and business man, a half interest in a pressroom doing about 500,000 impressions per month; a snap for the right man; \$3,000 required; all new machinery. Address J. NEWTON NIND, Minneapolis, Minn.

**FOR SALE**—Complete job printing plant; 300 fonts of type, 6 presses, bindery, all necessary machinery; doing business of \$20,000 a year, state, county and bank work. Proprietor desires to devote attention to daily newspaper, and will sell at a bargain. Address, H. T. DOBBINS, P. O. Box 884, Lincoln, Nebraska.

**FOR SALE**—Point folding machine, capable of folding 16 by 23 to 32 by 46; three or four fold; can be used for marginal machine for newspaper work. This is a new machine, has never been used, too large for our run of work; can secure this machine at a bargain. Address "B. D.," care INLAND PRINTER.

**FOR SALE**—A well-equipped book and job printing office in a beautiful manufacturing city of nearly 20,000. Established eleven years; four cylinders and two job presses, power cutter, engine and plenty of material. Business last year over \$19,000, without soliciting; can be largely increased. A good opening for one or two live young men. Good reasons for selling. Address W. H. W., care INLAND PRINTER.

**FULL** and complete instructions on zinc etching, photo-engraving, etc., by Frank J. Cohen. A 38-page pamphlet, giving full information on above topic, will be mailed to any address on receipt of \$2. Address THE INLAND PRINTER COMPANY, Chicago, Illinois.

**IMPORTANT TO EDITORS AND NEWSPAPER PUBLISHERS.**—The souvenir volume of the Michigan Press Association, just issued, is the handsomest and most elaborate book of the kind ever issued, the cost being over \$1 per copy. Contains 130 pages 7 by 10 inches in size, contents of unusual interest, is beautifully printed on fine plate paper, has almost two hundred half-tone engravings, is bound in a rich and attractive cover embossed in white and gold and tied with silk cord. The few remaining copies will be sold for 35 cents per copy postpaid. This is a rare chance to get a beautiful and valuable book for only a third of what it cost. Order early or you will be too late. Address FRED SLOCUM, care Detroit Journal, Detroit, Mich.

**METROPOLITAN NEWSPAPER OUTFIT**—For sale at a bargain, the entire outfit of the daily Kansas City Globe, with one of Hoe's latest style presses; prints four, six, eight or twelve pages of six, seven or eight columns; for all practical purposes better than a new press. Address GLOBE NEWSPAPER COMPANY, Kansas City, Mo.

**SUPPLY NEARLY EXHAUSTED**—The volumes left over after supplying the members of the "American Printers' Specimen Exchange," were made up into sets and have been sold from time to time bound and in sheets at a small part of their real value, in many instances less than the original charge to members for binding alone. We offer the remaining unbound sets, comprising vols. 1, 3 and 4, at \$2.65. Every third order one of the complete sets (4 vols.) will be substituted, formerly sold at \$3.75. ED. H. MCCLURE, Buffalo, New York.

**THE ONLY REPRESENTATIVE COLLECTION OF AMERICAN PRINTING**—We have only five unbound complete sets of the "Specimen Exchange" left, and for every third order for the set, comprising vols. 1, 3 and 4, at \$2.65, we will substitute one of the complete unbound sets, heretofore sold at \$3.75. If you doubt its worth, ask THE INLAND PRINTER. ED. H. MCCLURE, Buffalo, New York.

**WANTED**—A few copies of the February, 1891, number of THE INLAND PRINTER; will pay 15 cents apiece for them. INLAND PRINTER CO.

**WANTED**—Subscribers to THE INLAND PRINTER; per year, \$2; six months, \$1; single copies, 20 cents. Also, send 10 cents for circular, "How to Impose Forms," giving over fifty complete schemes of imposition.

\$2.65—For vols. 1, 3 and 4 of the "American Printers' Specimen Exchange." If you doubt its worth, ask THE INLAND PRINTER. ED. H. MCCLURE, Buffalo, New York.

**The Lightning Ink Reducer and Dryer,** Awarded Diploma, Paris, 1889, in London, 1887, for Unexcelled Excellence.

Inkoleum is the only article in the world that gives pressmen complete control over printing and lithograph inks, rollers and stock in any weather and climate. It refines inks of

any color or shade and makes them dry quick and glossy, enabling rushed work to be delivered immediately from press without offsetting. Inkoleum never dries on rollers, but preserves their suction, life and elasticity. On starting press in morning or whenever rollers are too sticky or ink dry on them, or the ink pulls the paper, a drop or two of Inkoleum put on the rollers with your finger immediately softens the ink and makes them do the finest work, a saving of five times its cost every hour in the day.

Beware of Infringements! Order Inkoleum and accept no worthless piratical imitation, said to be just as good. Price, only 50 cents. For sale by every typefoundry in the world. Read circulars printed in five languages. Put up only by

Dictated by L. A. SHERMAN. PORT HURON, MICH., June 23, 1891.  
 MR. CHAS. E. BENNETT, Chicago, Ill.:  
*Dear Sir,*—We have been running the Kendall Folder in connection with  
 our two (2) Cottrell newspaper presses during the past two months, and at the  
 present time it is working to our entire satisfaction. It folds evenly and  
 smoothly, pastes the sheets together securely, trims square and uniformly,  
 and gives very little trouble. We think it an excellent machine in all respects.  
 Yours truly, THE SHERMAN CO.

JOURNAL OFFICE, LOCKPORT, N. Y., April 17, 1891.  
*Gentlemen:* It gives us much pleasure to commend the Kendall News-  
 paper Folder as the simplest, nearest to noiseless, and most satisfactory  
 newspaper folder which is known to us. We are now running it at a speed  
 of 2,500 per hour, a rate much higher than it was guaranteed for, and it does  
 the work perfectly. The pasting arrangement is splendid. A newspaper  
 without one of these folders is missing a good thing. Yours truly,  
 WARD & COBB.

# THE HUBER SHEET PERFECTING PRESS

•• Double Rolling each Form • Six Tracks • Air Springs • Back Delivery. ••

The Impression is taken over a six-track bed, which is supported every ten to twelve inches across the press. We guarantee the impression sharp and rigid, and the bed and cylinder are warranted not to spring or give way in the least degree.

The Impression can be tripped at the moment grippers close or before.

The Register is perfect at all speeds of the press.

The Distribution is uniform from head to tail of sheet; each form is charged with fresh ink both ways.

The Air Springs are applied vertically, the piston-head does not come out of the cylinder, no packing ever required; the pressure can be regulated while press is in motion at all speeds.

The simplicity, accuracy and durability of the bed movement is unequaled by any other machine. The double rack teeth are made of steel, with the best rolling curve known to mechanics. From two to three teeth always in contact, thus obviating lost motion.

The sheets are delivered in the back by positive motion.

The Fly can be disconnected at a moment's notice.

No complicated movements to get out of order.

This press is especially designed for the use of book printers and publishers of weekly and monthly papers, pamphlet and almanac work.

It is constructed upon the two-revolution principle and has four rollers for each form; aside from it having two impression cylinders, it is substantially the duplicate in construction of our Two-Revolution Book Press.

The sheet is fed in the usual manner from the feed board on to the first impression cylinder, and passing between the bed receives an impression from the first form; it is then taken by the grippers of the second cylinder, and around between the bed again, where it receives an impression from the second form, thus printing both sides at one feeding.

Any off-set deposited from the first printed side, on the second cylinder, is at once removed by our Patented Off-set Device, and ordinary work can be run from ten to twenty hours without change of tympan sheet.

Either or both cylinders can be tripped at the will of the feeder, before or at the time grippers close, and at all speeds.

The speed in sheets per hour is practically the same as single presses of same size, and, as it prints both sides of the sheet in perfect register, the result is equivalent to the product of two presses.

We believe that printers and publishers will appreciate this press to its full value, filling as it does a long felt want, of a press capable of large or small sheets, and after one operation delivering it upon the fly-board finished.

SIZES:—	NO.	ROLLERS.	BED SIZES.	MATTER.	SPEED.	We furnish with press, counter-shaft, hangers, cone pulleys, driving pulleys, two sets of roller stocks, wrenches, boxing and shipping, at Taunton, Mass.
	1	4	44 x 60	40½ x 56	600 to 1,000	
2	4	36 x 52	32 x 48	800 to 1,200

## -KILLING A PRINTING OFFICE.

BY HERBERT L. BAKER.

**D**ID you ever notice how almost impossible it is to kill a printing office? A dry goods business runs down until its cash and credit are exhausted, there is a "grand closing out sale" or a lump sale to a "shark," and it has utterly disappeared. A manufacturer finds business unprofitable, closes down his works, the machinery is sold off, the buildings moved or let for other purposes, and the old factory is gone beyond all resuscitation. If a sausage grinder or a face scraper or a footgear tapper finds business dull, he moves to another locality, or stores his tools and hunts up a job at his trade. If a restaurant fails to attract more customers than flies, its furniture and fixtures go to the auction shop, and the place thereof "knoweth it no more forever." If a pawnshop, or an old dispensation "old clo' shop" plays to losing business, it catches fire some dark night and the insurance men buy it in ashes for twice its value.

But a printing office has more lives than a six-toed tabby. It hangs on long after it ceases to pay its bills except in infrequent paroxysms. It sinks deeper and deeper in the mire of debt, with an occasional struggle to get out, only falling back deeper as a result. Its creditors finally begin to realize that they are "stuck" for their claims; but, hoping against hope, they still extend a little more credit in order to keep the business going and increase their chances of getting something out of it in the end. Knowing they will get little or nothing if collapse comes, they foolishly increase the amount at risk, and take the chances on the future rather than face the certainty of present loss.

The writer knows a case where a large power cutter was sold to an almost moribund concern, the machine being delivered freight free, without a cent of cash being paid upon it. Notes for the entire purchase price were taken, secured by mortgage on the cutter, which mortgage, at the request of the buyers, was not recorded. Not long after, another firm sued for an account, got judgment, levied on the new cutter as the

only thing not mortgaged on the records, bid it in and moved it away, leaving it a total loss to the sellers.

Similar cases are known in every city. The anxiety of manufacturers and wholesalers to make sales impels them to take unwise risks, and explains how some concerns are kept afloat long after being really bankrupt beyond all redemption. Long after local jobbers have concluded they are "in" as deep as they care to be, outside jobbers continue to fill orders for the business corpse, and keep up the necessary supply of paper, ink, etc.—a sort of galvanism which keeps it still kicking, if not alive.

When a concern gets in that condition, it is ripe for the most irresponsible price-slashing; then it becomes the dread of all honest competitors. It was such a printer who replied, on being asked how he could afford to print noteheads at \$1 per thousand, "As I can't be compelled to pay for anything, the orders look like all profit to me." Even though the printer retain a spark of the desire to pay as soon as able, there is no great consolation in this fact to the victim, though, as Palmer says: "It is *so* much better to have a man owe you all his life than beat you out of it!"

Friendship among business men is often taken advantage of to help over a crisis. Money is borrowed here to pay a note there; or a friend is asked to exchange checks for a few days; or an indorsement is asked on short-time paper; or a job is taken below cost on condition that the customer advance part of the price. Many are the devices of the ingenious individual when facing the problem how to keep afloat a little longer. All these agencies help him to do it for a while; but in many cases it is the opposite of kindness to give this sort of help. If a man must fail in the end, it were better could he do so now, rather than struggle along and waste time he might spend more profitably on a salary or at other business. The old lady's plan is sometimes a real kindness in business: "Yes, John died hard," she sighed, "but I put a pillow over his face and sat on it, to help him all I could!"

When a man has reached the far end of his rope, is sucked dry of his last resource, after cutting prices all

to pieces for his competitors in the effort to get business, is his plant scattered to the four winds and his competitors given a chance to laboriously work prices up again? Not by any manner of means! There is always some rashly confident individual who "buys" the plant without a cent of cash, and, having nothing to lose, grinds the same old story to the same old end — no, not end, for on it goes forever, it being almost impossible to put an end to the mischievous life of such a printing plant.

Written for THE INLAND PRINTER.

#### A PLEA FOR THE "NIPPERS."

BY S. K. PARKER.

THERE is a little tool to be found in the vest pocket of nearly every job compositor which has been the subject of considerable condemnation from old-fogy foremen and so-called "master printers." It has been denominated "the friend of the typefounders," and "the modern heretical tool." This denunciation, in the opinion of the writer, is unjust and founded on prejudice, not on practical experience. Perhaps the best refutation of the aspersions heaped upon this little implement is found in the fact of its universal use in spite of all that is said against it, and in spite of the attempt sometimes made to taboo it. The argument against it is placed solely on the ground that it is destructive to the face of the type upon which it is used.

While admitting that under some circumstances and methods of use of the nippers this is true, yet I claim that, if properly used, damage to type will seldom occur, and that when it does occur, the compensating advantages largely outweigh the slight loss that may be occasioned. Like every good thing on this earth, the trouble with the nippers lies not in their *use* but in their *abuse*.

My apprenticeship and a number of years of journeywork were passed before the tool in question came into general use. The aforesaid old fogies will say that it can be gotten along without as well now as in the past. To this I reply that we might as well dispense with stop-cylinder and fast perfecting presses and go back to the old Adams and Washington hand presses.

It is a noteworthy fact that nearly all of the objectors belong to the class who have graduated and passed beyond the case and stone, and who have never fairly realized the utility of a good pair of nippers.

To get back to the main point: The first requisite to insure the proper use of a pair of nippers, is that the inner serrations of the points should be *sharp*. Secondly, that the type or material on which they are used should be loose, not locked up. Thirdly, the attempt should never be made to use them on script or any font with large overhanging kerned letters.

The nippers being sharp and strong, a good firm grip taken as low down the shank as possible, and the type being sufficiently loose, the liability to slip and damage the face becomes very small, while the great advantage is that, in withdrawing the faulty letter or

figure, its neighbors are disturbed in the minimum degree. For fixing up squabbled and pied matter the nippers are almost indispensable.

The only occasion when it is justifiable to run the risk of damaging a letter is when it is desirable to avoid unlocking a form on stone or on press, when the time and loss of register that can be thereby saved is infinitely greater than the value of the letter liable to be sacrificed.

It would be an interesting experiment to place one of these old fogies back at the case or stone and give them a fancy job to set or a railroad folder or timetable to correct and debar them from the use of a pair of nippers, requiring them to do the job in the same time and as well as a progressive compositor would do similar work with its aid.

Written for THE INLAND PRINTER.

#### "DULL TIMES."

BY THE LATE WILLIAM H. BUSHNELL.

THE complaint is frequently heard coming from the lips of those professing to be printers that the times are dull and they cannot get work at their occupation. This we believe to be a statement often so utterly at variance with facts that it bears its refutation upon its face. As a necessity, hinging upon an easy or tight money market, and other cotemporary causes, there are and will be fluctuations in printing as in all branches of trade. Yet the truth is patent to every one who dives deeper than the surface, and seeks the fountain head of complaint that the fault more frequently lies *with the man than with the demand*.

Looking over the history of printing for the last half century throughout the civilized world since it has in reality asserted its right to be foremost in usefulness, and conferring the most of benefit for the outlay, there has been no time, at least no extended time, when skilled labor was not sought after and at fair prices. And it could not be otherwise with printing when, without exception, all branches of trade, professions, commerce, both inland and oceanward, are dependent upon it if they would be known and succeed.

Every unadvertised business is as a sealed book to the masses—the covers, be they ever so profusely illuminated, giving no index to the contents. The sign, gilded ever so brightly, or the store, if a wonder of architecture, fails to impress upon the mind what can be found upon the shelves within. The ship, proud in bunting and snowy with sails, gives no bill of lading as to the riches stored in the hold. Type, ink and paper, presses and rollers are the tongues, and printers are the "familiar spirits" that set them in motion and syllable their individuality and worth.

The idea is preposterous that mere cubes of metal can be arranged, or complicated machinery run without the motive power of mind. Steam may act upon the massive driving wheel, and electricity illuminate the dark interior, but beyond, more important, greater than both, is the human mind. Without it and its mysterious

forces, matters becomes inert, and useless. In proportion to the power and brilliancy of the mind are the results produced; in proportion to the skill and reliability of the printer, the seeking for his services. In "dull times," it follows, as a natural sequence to supply and demand, that there will be something of the survival of the fittest, the keeping only of the most skilled and most to be depended upon, the most useful hands, of those whose labor returns the best interest for the capital invested.

This is the natural order as between employer and employé the world over, and no Utopian ideas or insane socialistic pronunciamento will ever overturn it from the firm foundations of common sense. The widened, and often carelessly so, circle of labor shrinks to the utmost possible limit with the curtailment of patronage, with the non-requirement of production. Expenses, to avoid failure, have to be cut down and the least competent hands, as a general rule, are discharged, whereas those who have made a close and patient study to excel in their chosen occupation, even in dull times find their services at a premium.

Written for THE INLAND PRINTER.

#### WE WANT MORE LABOR-SAVING DEVICES AND MATERIAL.

BY AN OLD-TIME PRINTER.

Ben Franklin's body lies buried in the ground—  
His soul is marching on!

THE printer who lived sixty years ago knew but little more of the art than did Benjamin Franklin. His lines were not cast in pleasant places, and much of his time was then spent in doing work that is now furnished to his hand in the shape of labor-saving appliances and machinery. The shears and the file, dull and worn almost smooth in most printing establishments, were about the only implements at command. What would the printer of today think, should he engage to work in an office where there was no labor-saving rule or furniture, no slugs, no mitering machine or patent cutters?

But the soul of Franklin is marching on, and his inquiring mind, inherited, we might say, by hundreds of men, is still reaching out for far greater results in the field of printing.

It is difficult to understand why the printers of our time (some of them) should oppose the introduction of any machine that would hasten the execution of any class of work. Days have been reduced to hours, and hours have become minutes, in one branch of the printing industry (the pressroom), and who will venture to assert that any living person has been permanently injured by the gradual process of the development? It would be an utter impossibility, with the old hand press, to meet the demands of the times. And in the composing room the facilities for doing work have been quadrupled since the days of our patron saint, Benjamin Franklin.

In view of the advance already made, it would seem unreasonable to reject any further improvement.

Everyone would welcome the introduction into the composing room of anything calculated to eliminate annoyances or to shorten time in the execution of work—say a larger variety of labor-saving rule of various thicknesses, etc., to abate the nuisance of scissors and cardboard, and a better stock of leads and slugs to save doubling up in wide measures—yet when the typesetting machine is mentioned, a protest is at once made that it will be an everlasting injury to those now employed as compositors.

Let us reason a little in the light of our experience with other appliances. Have any of the things mentioned—presses, cutters, labor-saving rules, leads, slugs and furniture—proved a detriment to any journeyman printer? Have they not, on the contrary, enabled all to do more work and get better pay for it? And may not the dreaded typesetting machine prove equally advantageous in a very short time? After almost sixty years spent in picking up type, one by one, the writer is prepared to welcome anything that would relieve hands and brain from what might be termed a "tread-mill" life.

In this connection a suggestion might be made as to an equitable division of the pecuniary profits arising from the use of the typesetting machines. It has been the general usage, on the adoption of any device to lessen the cost of production, to give the lion's share of the profit that might accrue to the general public, after deducting a small percentage for the benefit of the owners. The middleman, or the one that formerly did the work, reaps no advantage for a considerable time after the machine has been in operation. Those who have small ideas are disposed to think that this individual has little or no interest at stake; that he must be pushed aside for one, two, or three years to make room for the more profitable appliance. Now it is both equitable and possible to so adjust matters that the men who would at first be thrown out of work should receive the employment and wages to be earned in working the machines, until such time as the matter would regulate itself.

All who are imbued in part with the spirit or the soul of Franklin can see at a glance the justice of this suggestion, and it will be hoped that their actions will show that they have some regard for the welfare of their fellow beings.

On the other hand, there are those who are so short-sighted and soulless that it would be impossible to convince them that there is either sense or justice in the proposition here made, and the following quotation will suit:

"All men have souls, but some are small indeed,  
Not larger than a small brass pin's small head.  
Now take just such a soul  
And place within a small pipe bowl,  
And with your thumb the open space defend—  
In vain is all your care,  
You cannot keep it there;  
'T will make a turnpike of the little end!"

O the days of boyhood Fancy turns with a wistful retrospection, and through the vista of years she sees a boyish figure absorbed in a stolen view of the beauties of a specimen book. In the plastic mind of the child what images are conjured up by the kaleidoscopic verses, bon-mots, epigrams and whimsicalities that the genial compositor has used in displaying the new type faces, and how the impressions thus imparted linger through life, for these broken jewels of literature, used merely as a background to display mechanical conceptions, have even more effect upon the imagination than when given in the master-pieces to which many of them belong.

The transitions are abrupt. A grand sonorous verse is oftentimes broken off to give place to some absurdity, and yet the heart throbs in unity with the varied measure; and when the light and musical verse of brilliant Tom Moore is chosen, cannot imagination hear the clink of glasses, the genial laugh, and the bright gay prelude he knew so well wherewith to charm the hearts of his drawing-room audiences, and here in a printer's specimen book the elevating influence of his genius is felt in the freshness and joyousness of his buoyant strain:

They may rail at this life, from the hour I began it  
I've found it a life full of kindness and bliss,  
And until they can show me some happier planet,  
More social and bright, I'll content me with this.

With the spirit tuned in the melody of the lines, the eye of the reader roves over the varied beauties of typography displayed in some of the richest of the English classics, and the recollection of early studies

and favorite authors crowd upon the memory, while ever and anon, the dignity and sweetness of some Shakespearean selection chords in harmony to the name of some glorious patriot:

His life was gentle, and the elements  
So mixed in him that Nature might stand up  
And say to all the world  
— This is a man!

When in these day-dreams a soft, melodious verse sweetly sounds a saddened strain, and the mental vision sees a gray sky with a fading evening light, the rain softly falling upon the leaves of the trees, and a languorous melancholy breathes its influence:

I see the lights of the village  
Gleam through the rain and the mist,  
And a feeling of sadness comes o'er me  
That my soul cannot resist;  
A feeling of sadness and longing  
That is not akin to pain,  
But resembles sorrow only  
As the mists resemble rain.

The lines are broken for the type display; and the name of the letter, the price, and the sizes of the fonts, have the same effect upon the searcher for literary crumbs that a patent medicine "ad" upon one of the pyramids would have upon an Egyptologist. There is no cloying of the mind with continued sweetness, for when a tender lullaby has won the feelings to its theme —

Sweet and low, sweet and low,  
Wind of the western sea,  
Low, low, breathe and blow,  
Wind of the western sea,  
Over the rolling waters go,  
Come from the dying moon and blow,  
Blow him again to me  
While my little one, while my pretty one  
sleeps

— the measure is altered, and, like a clarion note, sends the blood tingling in accord:

And broader still became the blaze, and louder still  
the din,  
As fast from every village round the horse came spur-  
ring in;  
And eastward straight from wild Blackheath the war-  
like errand went,  
And roused in many an ancient hall the gallant squires  
of Kent.

The martial clang that imagination seems to hear as  
the accompaniment of the ringing lines, is stilled at  
once when the eye, searching further, meets

**DOWN WENT MCGINTY!**

in capitals, staggering the senses in the abruptness of  
the change, while the lower-case of the series confi-  
dentially whispers,

*To the Bottom of the Sea,*

to which a heavy letter responds, with a trombone for-  
tissimo,

**HE MUST BE VERY WET!**

The "strength" or "weakness" of the lines, in  
printers' parlance, seem vocal, and oftentimes a pa-  
thetic sentence brings to the hearing almost the sad-  
dened cadence of the voice that uttered it. Withal the

compositor must have had the words of Madame de  
Stäel's dying niece in sympathetic recollection when he  
chose her plaintive

**JE ME REGRETTE**

wherewith to show the style of type to the patrons of  
the foundry. When the recollections and incidents  
of the typesetter's reading has become exhausted he  
falls back on his own ideas.

**THEORY OF STORMS.**

**INFANT SQUALLS. Neighborhood Brawls.**

has something quaintly comic in its suggestion, and in  
this department the compositor is unique, for he has  
the field to himself in the specimen book, and no critic  
can mar his efforts, so he gives full license to his fancy  
in filling out the lines.

As a compilation of moral precepts and adages  
there are few that surpass the specimen book. "Poor  
Richard" is the favorite, and many a sound truth is  
taken from writers of world-wide fame.

The irrelevancy is the spice that gives the humor its  
peculiar flavor, and "Five aces in the deck!" "Off  
with his head!" when coupled with

"Never again will the roses blow  
For us as the roses we used to know,"

extracts many an appreciative chuckle from the pre-  
cocious urchin as well as the prospecting customer.

Written for THE INLAND PRINTER.

### CUTTING PRICES.

BY MASON.

IS there a remedy for the downward tendency of prices in the printing business? I know everyone will say that all you have to do is to make a price and maintain it; but all the inventions claim to aid the printer in doing his work cheaper, but they are offset, and frequently more than offset, by the increased price of labor, rent, etc., in all the large cities.

A man who builds a house this year pays a certain price. If he builds the same kind of a house next year, and his property has increased in value, he expects to pay about the same price, and does pay, perhaps, a considerable increase in cost over the one he built last year. A firm have a large catalogue printed this year, and, perhaps, through the aid of the printer, their business is considerably increased by next year; but when they conclude to get out their catalogue next year they expect, and most always are successful, in having it printed considerably cheaper than the year before. The printer who does it gives a percentage of his profits rather than see it go to another firm; or, if it is done by a new firm, they are given the figures of the year before, and they must come under them to get the job. I am aware that most printers will deny this, but it is true, all the same.

In conversation with the manager of one of the large railroad offices of the country recently, he told me that the prices of that line of work had been reduced over 25 per cent in ten years. Admitting that there has been that much of a reduction in the price of stock in that time, and even that the improvements in machinery have increased the output of his office to a considerable extent, with no increase of force, does anyone believe there is any good grounds for such an enormous decrease in prices? I do not know how it is in Chicago, but I am well convinced, from my experience, that the increased cost of rent and other items pretty nearly overbalance the reductions in cost of material ten years ago.

The contracts were let at Washington for the printing for the money-order office of the postoffice department a short time since, and the prices of four years ago are cut fully twenty-five per cent, and, in some cases as much as fifty per cent. No such reduction has been made in the prices of paper and inks in that time, and in no city in the country has there been any reduction in the price of labor to speak of. The prices at which this work was let four years ago would not pay, I am sure, anything more than a fair profit, and yet the same firms who did the work cut their own rates to fully the amounts I speak of. How is this reduction to be made? The only way I can see is by reducing the cost of labor, and when the price of labor is brought down to the rates that will allow these firms to make a profit now, they will bid four

years hence a lower price, and expect to reduce the rates of wages again.

Who are the persons most responsible for this state of affairs? I claim it is the pressbuilder, the typefounder, and the ink manufacturer. No class of people will sell to irresponsible firms as these people will. The introduction of the electric motor has done more to demoralize prices in the printing trade than any other invention. No objection is made to their introduction into any building, and the supply man will put one in for any "jim crow" firm in the same manner that he will sell them a cylinder press, and then they are fully equipped to bid on work of which they know nothing of the cost, and the firms who do a legitimate business are compelled to cut and cut to meet the competition. It is all very well to say, don't do it. But one firm does it to save themselves with one customer, and another firm to save another, and so it goes. It does not make any difference to Mr. Supply Man that several of these firms fail in each city every year. He gets his profits on his sales of machinery, and then he sells it over to another of the same class, and little does he care that each one of these firms he starts in business is an injury to the business in general.

What do you think of a pressbuilder who would put in a cylinder press, listed at over \$2,000, for a couple of boys, and all the pay he got was an old Universal, and they are not to pay him a cent of cash for two years, and then only \$25 per month? That is only one instance of several transactions of the kind that have occurred in Washington within a few years. Two years that firm of boys have to cut the prices on work they are not in any way fitted to do, and then, perhaps, the pressbuilder will get his press back.

What is the remedy? The only one, I can see, is organization—organization by the *employing* printers—not for the purpose of fighting organized labor, but for making the pressbuilder, the typefounder, the paper dealer and the ink manufacturer stop their cut-throat business in making sales, or to form a trust; and let these gentlemen who build presses, make type, etc., own all the printing plants in the country, and pay us a percentage for operating them.

### AN UNGENTLEMANLY PRACTICE.

BY JOHN CHAMBERS.

INTIMIDATION cannot win friends. The man who is forced, through bullying and intimidating, to give up his own principles and accept those of another, does so with a secret belief in his former convictions. There are some members of the typographical union who seem to think that, in order to strengthen their ranks, they must resort to a system of blackguarding, intimidation and abuse, which they shower on the heads of those who are so unfortunate as to be outside the pale of the union, to the utter disgust, not only of those they should endeavor to convert to unionism, but of

PRETTY LITTLE CHICKADEES.

## POLITICAL AND UNITED STATES MAP,

Latest edition, printed in eleven colors; size, 5 feet 6 inches by 3 feet 10 inches.

This double map contains on one side Rand, McNally & Co's latest United States map, showing all counties, railroads, towns and postoffices, and on the other side the following:

- |   |  |
|---|--|
| A diagram showing all of the Political Parties, 11 x 66.  | A map of Alaska, 10 x 13.                                  |
| A diagram showing all Presidents and Cabinets, 5 x 66.    | A map of South Africa, 10 x 13.                            |
| A diagram showing Political Complexion of each Congress   | A map of Upper Nubia and Habesh or Abyssinia, 10 x 13.     |
| A diagram showing Creeds of the World, 13 x 10.           | A map of Persia, Afghanistan and Beluchistan, 10 x 13.     |
| A diagram showing Standing Armies of each Nation, 13 x 10 | A complete map of Solar System—best ever made, 13 x 10     |
| A diagram showing Naval Tonnage of each Nation, 13 x 10   | The Names of all Cabinet Officers, with length of term,    |
| A complete map of the World, 13 x 20.                     | Pictures of all the Presidents from Washington to Harrison |
| A map of Central America, 10 x 13                         |  |

IT ALSO GIVES IN BRIEF

- |   |  |

## THINK OF IT . . . . .

We make you a present of this double map (worth \$5.00) and send it to you *free of any expense*, and guarantee its safe delivery, if you will send us a club list of eight subscribers. You can secure this valuable premium with a little effort. It is worth the trouble. For office or home the map is indispensable. Subscriptions can begin with any number. Give full street address or postoffice box number, as well as city, county and state, to insure safe delivery of papers and the map.

## IF YOU DO NOT WISH

To organize a club, we will send you the map, and THE INLAND PRINTER for one year, for \$3.00.

## THE INLAND PRINTER

Contains, every month, from 80 to 100 pages. It is a magazine that every printer, or anyone interested in typographic matters, should subscribe for. Its original articles, editorials, news items, illustrations and presswork, challenge careful reading and command the highest commendation.

Address all orders to

THE INLAND PRINTER CO., Publishers,  
183 MONROE STREET, CHICAGO.

their associates whose principles forbid such a mode of missionary work. We have all seen the enthusiastic union man who cannot see a non-union printer pass on the street without shouting "rats," or indulging in some other derogatory remark. This same man seldom misses an opportunity, when within hearing of a non-unionist, of throwing out some slur or threat, intended for his ear, which, instead of drawing him toward the union organization, but strengthens his hatred for those principles, and perhaps causes him to resolve to oppose more vigorously than ever those from whom he receives nothing but unkindness. This style of agitation is decidedly wrong. The mischief wrought by one glib-tongued, unprincipled fellow in one short week might require the united efforts of a dozen men months to repair.

Good example is a silent but powerful influence, and often works more good than long and eloquent speeches. Should each and everyone of the many thousand members of the typographical union resolve to use his endeavors in a gentlemanly and courteous manner to convert the unorganized, a vast amount of good might be accomplished. Our union is strong and healthy, and an organization of which its members ought to feel proud. Yet it is not strong enough. We ought not to feel satisfied until the country is so thoroughly organized that it will be next to impossible to secure a competent workman outside the union ranks. Let the agitation be conducted, however, in a manner that will win the respect and confidence, not only of the men we would convert, but of the public at large.

Written for THE INLAND PRINTER.

#### A NEW IDEA CONCERNING POSTAL CARDS.

BY TUNIC.

IT is a well acknowledged and much deplored fact among printers all over the country that the printing of postal cards has become the most undesirable class of work which they are called upon to handle.

The issuing by the government of the postal card at its small cost to the buyer at once opened up a method of communication and an economical means of advertising before impossible and unknown in the United States. The introduction of this new departure met with hearty favor in the mercantile world, and it came at once into universal popularity and use. The almost innumerable means to which the postal card adapts itself as an advertising medium naturally created a new and extensive field of work for the printer. At first the profits of printing advertisements and other matter on the cards were all that could have been desired, but ere long, like upon many other necessities in business circles, prices for printing this class of work were broken down, and for several years they have continued to dwindle until at the present time no other class of work is so unremunerative to the printer as this. This not only for the reason that prices for the work itself have been so materially reduced, but the majority of business houses send their orders for postal cards to

their printers, expecting them to furnish the "stock," as in cases of the general run of work, and include the whole amount in the regulation monthly bill. Thus it is that an outlay of sometimes many dollars is necessitated upon which the return is far from compensating. The government gives the wholesale buyer no inside figures on postals whether he buys few or many; "round lots" cut no figure in their purchase; the price never fluctuates, but remains the same—one cent apiece. Consequently, the natural wish among printers is to effect a remedy for the existing evil and elevate the much vilified postal card from its present degraded position to one among the classes of work that are at least reasonably profitable and desirable. It is thought that this result could be brought about by a very simple method upon the part of the government without additional cost to itself, and with no advance to the consumer upon the printed stock. The printing of shipping tags singly at present prices would be of no source of profit to the printer, but being furnished in "gangs" they afford a fair compensation for the work done, as several forms can thus be worked at each impression. The idea regarding postal cards is to have them manufactured in the shipping tag "gang" style, as well as singly, for the benefit of the printing fraternity. Suppose they were furnished in "gangs" of four. The size would not be unwieldy, and in this way, upon large orders, by running four forms, the press-work would be reduced in the ratio of four to one; and thus, while the business man would be required to pay no more than at present for the work, the long-suffering printer would be enabled to approach at least a realization of his just reward for services rendered and goods delivered. The plan is certainly a commendable one to the printing world at large, and will no doubt meet with hearty approval. This proposed remedy for an acknowledged evil is submitted with the hope that it will attract the notice of "the powers that be" among the postal authorities, and that eventually the postal card "gang" scheme will be inaugurated and given a fair trial.

#### LARGE WORK—DOES IT PAY?

BY F. W. THOMAS, TOLEDO, OHIO.

THIS article is addressed solely to young men. It follows that I am writing almost entirely to the proprietors of comparatively small establishments, and my remarks in this connection are to be construed as applied to such offices only.

A great many printers are never happy until they owe some manufacturer \$1,000 or so for a cylinder press. They seem to be deluded with the idea that a "big press" logically results in "big money." It unquestionably does, in the expense account, but hardly ever adds much to the net profits of a small establishment. A large stock company with plenty of capital and a large run of work suited to them, can afford cylinder presses. A young man of comparatively

small financial resources, while he can always get such a press, is seldom as well off with it as without it.

Let us trace for a moment the results which attend the young man who with limited capital undertakes to found a mammoth printing concern. His first grand break is a cylinder press. This acquisition is a breeder of a host of wants, all of which must be supplied at once. More room, greater power, more labor-saving material and a considerable increase in supply of body type all demand immediate attention. In this extremity, typefounders and dealers are sought and the needed purchases made on time at prices which include ruinous rates of interest. These payments fall due with unceasing regularity, finally burdening the poor proprietor beyond endurance and he *takes a partner*. This is the second fatal step. Now *two* men must live out of the business. Facilities must again be increased. More debts are contracted, and finally our once independent and ambitious young man loses his identity in the depths of a stock company, and ekes out the remainder of his existence on a salary of \$1,000 or \$1,500 per year, and not only has to work hard, but also carry the responsibility of making wages for workmen, interest for stockholders, and lastly his own salary and that of his partner. Do you think this overdrawn? Investigate the history and financial condition of two-thirds of the large printing houses and you will find that the above fits them perfectly.

How much better it would have been for our young man to have operated platen presses only, enjoyed a low expense account and more satisfactory and immediate profits. So much for the results of straining for large work.

The next obstacle in the path of the young printer is his inordinate desire to take every job that comes along, only considering whether it can be locked up in the chase of his largest press, or even if it can be worked by making two impressions of it. A great many printers feel it a sort of professional disgrace to be unable to turn out anything, from a milk ticket to a bound volume of Tennyson. They go on year after year, adding one department after another, until they are catering to a variety of trade simply appalling.

Let us look at the result of this policy. It may all be summed up in the expressive old phrase "too many irons in the fire." First, the enormous amount of capital necessary to bring facilities in each of these lines to perfection makes it necessary for the proprietor year after year to invest all his profits, save a bare living, in endeavoring to complete his plant. Even if this could be done, the result would not be a profitable office, because it would be utterly impossible for one man to bestow sufficient attention upon each department of such a business to successfully combat the extreme competition now necessarily faced in every calling.

There is but one place where there is any excuse for running a *general* job printing office, and that is in a small country town where of necessity there can be but one office, and that one must do everything from the

tickets to the display posters for the amateur minstrel shows, etc.

So much for the illusive effects of striving for too great variety of trade. Now what *is* the most profitable kind of an office for a young man to have?

Any man who will take pains to think will see that all business is resolving itself into *specialties*. And that tendency can be more favorably taken advantage of in printing than in almost any other business. The young man who would succeed in business today in the hurry and hustle of our cities *must* have a specialty. Close competition robs business of the cream of its profits. You must get out of the reach of close competition by doing something which everyone else cannot do.

Study your opportunities and pick out that line of work which your facilities, location and acquaintances best fit you for handling. Then bend all your energies to developing that line of trade. Stick right to it. Turn other work away to just as great an extent as possible. Devote some brain labor to the better arrangement of your office for that particular work. Leave no stone unturned to get the public educated up to the idea that you are *the only* printer in your line.

You can do this in one line of business, and gradually all such work will come to you, will leave the general job offices, and then the advantages you will labor under will be almost incalculable.

In the first place, apart from the great mechanical saving in handling one line of work, you will not have to labor forever in order to accumulate a plant sufficient for handling a special business. Hence in a reasonable length of time you can devote the profits of your business to your personal account instead of, year after year, making \$2,500, and putting \$2,000 of it into increasing your facilities. There is, to be sure, an element of satisfaction to a printer in being surrounded by a large institution and many workmen, and in knowing that he is increasing his plant even if the typefounders and pressbuilders do get all his ready money. But say, boys, there is nothing so conducive to healthy sleep and genuine satisfaction in doing business as the hard cash in the shape of a handsome bank balance at the end of the year. It is well to "work and wait," but not for such an indefinite forever as fittingly implied in the expression "complete general printing office."

In the next place, the extra facilities and expertness you will have in your special work will enable you to *produce* it cheaper than anyone else. Please note that the word "produce" is in italics. I do not mean that your selling price should be lower than others. You should get more than others, for you can do the work better. Now then, if the work costs you less and is sold at a better price, you will really make some money out of the printing business.

In your old age you can clip coupons for a living, which, by the way, is an occupation of which few printers have ever even dared to dream.

KEITH PAPER COMPANY,

TURNER'S FALLS, MASS.

**KEITH LEDGER PAPERS** are well made, strong, hard sized, rule nicely, write easily, erase and rewrite without difficulty, and have been given the preference by good judges in competitive tests with all other leading brands of Ledger paper.

**RAVELSTONE** Flats are made in Laid and Wove, White and Perfection Tints, and are used by Lithographers, Stationers and Printers for first-class Commercial Stationery for Banks, Insurance Offices and Business Houses generally. These papers are also put up ruled and folded, in the usual sizes.

**WESTLOCK** Flats are well known and highly prized for their good color, cleanness, freedom from imperfections and all adulterants, strength, hard sizing, and are used for all kinds of commercial work, being especially preferred by makers of Blank Books, because they are thicker for the weight than other papers. These papers are put up folded, and in Note, Letter and Bill Heads, etc.

The above Papers are offered to the Trade through Agents located in the principal centers of distribution throughout the Country.

THE ACKNOWLEDGED LEADER!

THE CELEBRATED, ORIGINAL and ONLY **BROWN & CARVER PAPER CUTTING MACHINE.**

ANOTHER MANUFACTURER, unable to build a machine to compete with it, has copied it as nearly as possible, and where prevented from copying, by patents, claims great merit in the omission. I can build you a "Brown & Carver" with or without the grooved table, which is a valuable invention, in no way mars or injures the paper, and is condemned by him only because he DARE NOT use it.

There is NO MACHINE of ANY DESIGN that COMPARES with the BROWN & CARVER in

- DURABILITY,
- ACCURACY,
- RELIABILITY,
- WORKMANSHIP,
- FINISH,

And all points that make VALUE.

C. R. CARVER,

**SANBORN'S**  
**NEWEST**  
**CUTTER**

For a thoroughly GOOD hand and power Cutter at a comparatively small figure, the "ECLIPSE" leads all of its competitors.

The "ECLIPSE" is guaranteed to excel, in all the points requisite in a good machine, all other low-price Hand and Power Cutters in the market.

**"ECLIPSE"**

THE construction is simple, the power and strength warranted, the fitting and finish first-class. Only small exertion is necessary to operate by hand, and the fly-wheel is made extra large as an additional advantage. The pulley for power is always ready for the belt when needed. The knife cuts from left to right; has a sliding, draw movement, which is uniform and rapid and can be stopped at any point in the cut. There are gibs in the frames for the adjustment of the knife-bar. Either the usual style of clamp and gauge or the intersecting clamp and gauge is furnished, as may be preferred. The back-gauge is split, thus admitting of two sizes being cut at one operation. In the front table is a brass measuring rule divided into eighths of inches. Only SPECIAL boxing charged for.

Sizes Inches	Size of Pulley.		Speed for Power	Ship- ping Weight	Price at Factory
	Inches face	Inches diam.

A TECHNICAL JOURNAL, DEVOTED TO THE ART OF PRINTING.

[Entered at the Chicago postoffice as second-class matter.]

Published Monthly by

THE INLAND PRINTER COMPANY,

183, 185, 187 MONROE STREET, CHICAGO.

GUARANTEED MONTHLY CIRCULATION, 8,000 COPIES.

H. O. SHEPARD, *President and Managing Editor.*

A. H. McQUILKIN, *Associate Editor.* Dr. JOHN E. HURLBUT, *Vice-Prest.*  
C. F. WHITMARSH, *Secretary.* D. L. EVANS, *Treasurer.*

ADDRESS ALL CORRESPONDENCE TO THE INLAND PRINTER COMPANY.

CHICAGO, SEPTEMBER, 1891.

SUBSCRIPTION RATES.

TWO DOLLARS per annum in advance; one dollar for six months in advance; sample copies, twenty cents each.

FOREIGN.—To countries within the postal union, ninety-six cents per annum additional. To Great Britain and Ireland, postage paid, twelve shillings per annum in advance. Do not send foreign postal notes. Make money orders payable to H. O. Shepard.

SUBSCRIPTIONS may be sent by check, express, draft, money order or registered letter. Currency forwarded in unregistered letters will be at sender's risk. Postage stamps are not desirable, but if necessary to remit them, one-cent stamps are preferred. No foreign postage stamps accepted.

CLUB RATES.—Six or more subscriptions, sent at one time, one dollar and fifty cents per year each. Cash to accompany order.

THE INLAND PRINTER is issued promptly on the fifth of each month, and will spare no endeavor to furnish valuable news and information to those interested professionally or incidentally in printing, engraving, electrotyping, stereotyping, bookbinding, and in the paper and stationery trades. Persons connected with any of these lines of industry will confer a favor by sending news from their section of the country pertaining to the above trades, particularly individual theories and experiences of practical value.

ADVERTISING RATES.

SPACE.	ONE MONTH.	THREE MONTHS.	SIX MONTHS.	ONE YEAR.
Plain card .....	\$ 5 00	\$ 13 50	\$ 25 50	\$ 48 00
One-eighth page .....	10 00	27 00	51 00	96 00
One-quarter page .....	15 00	40 50	76 50	144 00
One-half page .....	25 00	67 50	127 50	240 00
One page .....	42 00	113 50	214 00	400 00

WANT COLUMN.—Twenty-five cents per line; minimum, 75 cents. Orders for this column *must* be accompanied by cash.

THE INLAND PRINTER publishes its net rates in each issue of the paper. No agent or representative of this Journal is authorized to deviate therefrom or make any discounts. It solicits advertisements from dealers in or manufacturers of any goods used by printers, bookbinders, stationers and similar lines of trade. Its value as an advertising medium is unquestioned. The character of the advertisements now in its columns, and the number of them, tell the whole story. Circulation considered, it is the cheapest trade journal in the United States to advertise in. Advertisements to insure insertion in the issue of any month, should reach this office not later than the twentieth of the month preceding.

THE INLAND PRINTER may be obtained at retail, and subscriptions will be received by all newsdealers throughout the United States and Canada. Subscriptions will also be received by all typefoundries and printers' supply houses.

FOREIGN AGENTS.

M. P. McCoy, 54 Farringdon Road, London, England.  
ALEX. COWAN & SONS (LIMITED), General Agents, Melbourne, Sydney and Adelaide, Australia, and Dunedin, New Zealand.  
G. HEDELER, Grimmaischer Steinweg 3, Leipsic, Germany.

OUR EIGHTH VOLUME.

AS the eighth volume of THE INLAND PRINTER is completed by the present issue, we desire to express our thanks to our contributors, correspondents and patrons for their continued support and encouragement during the twelve months past. The appreciative words we have received, particularly during the last few months, have the ring of genuine enthusiasm, and it is such a feeling we aim to create as most calculated to awaken a desire to improve and raise the standard of taste in typographic art and literature. It is not by any means our intention to rest content with our progress to the present time, however; the demands upon THE INLAND PRINTER are that it shall be in advance of all journals of its class, and this position it purposes to keep despite weak imitations of its style and methods.

A POPULAR AUTHOR'S OPINION.

MISS SARAH ORNE JEWETT, in the course of a letter received at this office dated August 14, expresses her opinions on authors and printers as follows, while claiming a fellowship with the latter by right of long association: "I have often thought that if we writers took more pains to acquaint ourselves with the art of printing, it would be a very great help to those with whom we form a sort of partnership. I know something more about printing than I did when I got my first proofs, at the incompetent age of eighteen, and looked anxiously into the back of the dictionary to see how to correct them, but I do not know half so much as I wish I did. I should like to make my apologies here and now for the trouble I must have given through ignorance and carelessness in the early years of my work. If I were to confess to you all my pleasure in a fine piece of printing, I could make you sure that I hold the craft in high honor. I have had so much to do in late years with the Riverside Press that I begin to feel a right to say 'we,' and to take my share when people praise the beautiful work that is done there."

THE VOTE ON THE NINE-HOUR LAW.

THE vote recently taken on the proposition to establish a nine-hour workday, while it failed to receive the three-fourths majority necessary to secure its adoption, nevertheless proves conclusively that printers employed under the weekly wage system are ripe for the adoption of this reform.

The total vote cast by the 192 unions from which returns have been received was 12,896, a number that fully represents the men employed by the week in these unions, and includes all the larger and more important centers of the printing industry in America. Considerably over three-fourths of these votes are shown to be in favor of the adoption of the shorter workday. A strong objection urged by many was that the time that was to elapse from the taking of the vote until the law should become operative was not of sufficient duration to allow of the necessary

preparations being made for the adoption of so important a measure. Had this feature been properly provided for, the result would undoubtedly have been an almost unanimous vote for the nine hours. We herewith give a synopsis of the vote cast :

Total vote .....	12,896
Necessary for adoption .....	9,672
Votes cast in favor of adoption.....	9,340
Against the proposition.....	3,556
Number lacking the required majority .....	332

It is conceded by most people connected with the printing business that the shorter workday is one of the inevitable conditions that must be provided for in the near future. The result of the recent vote, as given above, shows that, so far as the journeymen printers are concerned, another year will find them practically unanimous in its favor. Now, as in the past, we urge that representatives of the contending interests come together and effect a satisfactory and amicable adjustment of this long-disputed controversy.

#### TYPESETTING MACHINES.

THE problem as to how far typesetting machines will accomplish the work for which they are designed, and thereby replace the present typographic system, is one that is now fully before the printers of the country for their consideration. While it will be acknowledged that remarkable progress has been made in the direction of perfecting these machines, considering the inherent difficulties attending the subject, it is still a doubtful question whether the gloomy and nervous expectancy displayed by so many of the craft as to future prospects is fully warranted or not. That a large amount of the type now set by hand will, in the immediate future, be done by machines, is a foregone conclusion. Admitting this, it does not follow by any means that great hardship will attend their introduction, or that any large number of men will be deprived of employment as the result of their instantaneous adoption throughout the country. This difficulty will be avoided to a great extent by the fact that the machines are intricate in their mechanism, and therefore costly and slow of manufacture.

This view of the case will be strengthened when we remember that while absolute perfection has been claimed for each distinct machine while it was in a constructive state, practical demonstrations have proven in every case that the perfect typesetting machine has not as yet made its appearance. About a dozen separate machines have so far been placed upon the market, differing widely as to their speed and accuracy in every instance. Of these, the Thorne machine, for bookwork, and the Mergenthaler linotype machine, for newspaper work, seem so far to have gained the greatest favor in this country, to judge by the number of machines of different patent and style of manufacture now in actual operation. The Paige machine, though operated to some extent in private, has not as yet been placed upon the market. It is

claimed for this machine that it is capable of setting 10,000 ems an hour, at a cost of about 5 cents per thousand. The cost of this machine will approximate some \$12,000 or \$15,000, a circumstance that may have some restricting influence on its universal adoption. Another machine, the advent of which is awaited with considerable interest, the most wonderful reports of its capacity having been freely circulated, is the one now being manufactured by the Chicago Matrix Machine Company. The projectors of this machine appear to have the greatest confidence as to its ability to outclass all other inventions of a like nature so far brought to public notice.

But, so far as this whole subject is concerned, the interest of the journeyman printer undoubtedly centers around the main question as to how far the projected innovation will revolutionize existing conditions, and to what extent it will curtail the amount of labor that will be required in the printing office of the future as compared with that of the present day. Perhaps a brief review of the marvelous transformations that have taken place in the construction and capacity of the printing press during the past fifty years, will answer the purpose of a possible comparison between past events and the probabilities of the future as well as anything that could be suggested at the present time.

When the primitive hand press was about to be superseded by the steam-power press, the prediction was made that a large amount of labor would necessarily be dispensed with, and that fast running machinery would supply every want with a modicum of the labor formerly found indispensable. This prediction was verified but to a very limited extent. It was quickly ascertained that the improved facilities brought the cost of printing within the reach of a larger mass of the public, and that workmen of fully as high a grade of skill would be required under the new method as under the old. Improvements in the printing press came thick and fast, and in the course of time the newspaper pressrooms were equipped with the mammoth six, eight and, in a few instances, ten-cylinder presses. These machines were considered marvels of mechanical skill and inventive genius. It was believed that the acme of perfection and speed had been reached, and that no further improvements would be possible. As a matter of fact, it would be a difficult matter to find one of these machines in operation in any part of the United States today. They have been completely driven out of existence during the past twenty years by the web perfecting press, a much faster and better machine in every way.

But what has been the result of these vast improvements in the printing press? Simply, that fast running machinery and improved methods have placed the daily newspaper within the reach of all, and this circumstance has been taken advantage of to so large an extent that the newspaper pressroom of today requires just as large a force of men and fully as much room as they formerly did. We do not have to seek far for the

reason of this condition of affairs. Every measurable reduction in the cost of production has increased the consumption in a ratio that about equalizes matters all around in the end. It is said that history repeats itself, and why may not this be another instance where this interesting phenomenon is about to occur, and where the experiences attending the evolution of the printing press may be repeated in connection with the introduction of the typesetting machine. In the meantime, it will be the part of wisdom for every printer to make himself master of the details necessary to a successful operation of these machines. This much he owes to himself and those depending upon him. As an indication of the importance of this course, we would invite every compositor to carefully read the brief communication from our New Orleans correspondent in the August number of THE INLAND PRINTER.

#### TECHNICAL INSTRUCTION.

ARGUMENTS in favor of technical schools have appeared at frequent intervals in THE INLAND PRINTER, and their influence has in a number of instances resulted in clubs or schools being formed for a more thorough study of the technique of the printing trade than is possible during working hours. The following excerpt from a communication lately received from an apprentice indicates in some degree the feeling among apprentices in regard to this matter, and the eagerness wherewith the opportunity put within their grasp may be taken advantage of: "I would like to see a club of some description formed by apprentices, with men of experience at the head of it, whereby apprentices could attend lectures on printing. I would also like to see them have a collection of samples of good printing, books, pamphlets, catalogues, cards, etc., for apprentices to examine and study to better fit themselves for the 'art preservative of all arts.' I believe if a few good fellows united together in the different cities they would be able to have one started. Here is a good chance for the union to lend a helping hand. Members of the club could pay a monthly fee to the typographical union if they were to undertake it. If they had charge of it, it would not be likely to fail for want of encouragement."

#### A PRINTERS' FÊTE.

THE annual fêtes of St. John have been celebrated this year by the disciples of Gutenberg all over continental Europe with more than usual zeal. St. John's day being the St. Patrick's day of the European printer, typographical societies celebrate it as patriotic Americans celebrate the Fourth of July. Where local societies are too small, several of them combine and hold their festivities in unison in one or the other of their respective cities, in honor of our patron saint, John Gutenberg. Extensive preparations had been made for the occasion at Marseilles, and according to the *Intermédiaire des Imprimeurs* it was a colossal success. All the branches necessary to produce a book or paper — the compositors,

pressmen, binders, lithographers, electrotypers, everybody embraced in the graphic family — fraternized and joined hands. After a sumptuous banquet, speeches were delivered by the president of the local society, M. Ferrà, and other speakers, among them several proprietors and editors, who felicitated the assemblage upon the perfect harmony which prevails between the employers and the employed. A musical entertainment followed, and a ball ended the festivities.

Pretty much the same programme was carried out in Avignon. At sunny Nice, Frenchmen and Italians united in celebrating the day, and according to all accounts the affair was an undoubted success.

The French-speaking Swiss typos celebrated the day at Neuchâtel. A fine new banner was presented to the Neuchâtel section, the choral society of La Chaux-de-Fonds rendered several musical selections, good speakers entertained the assembly, and the festivities ended as all the others — in a ball.

At these celebrations, convivial as they all were, the speeches partook of a nature not exclusively convivial, but rather practical and more serious. The apprenticeship question, especially, which now agitates French typos to a considerable extent, was discussed by able speakers, as well as other topics of interest to the whole craft. One significant fact in connection with these festivities was the attendance of many proprietors in person or through representatives, thus showing the spirit of harmony between employer and employed pervading the trade of western Europe. The same can be said of Germany, where the day is celebrated with equal fervor by the disciples of the black art.

Why could we not have a printers' holiday in this country similiar to that of our European brethren? Of course we have our National Labor Holiday, where all the laboring classes combine in a parade, picnic, etc., but a celebration of Gutenberg Day by the whole typographic family — all branches — certainly could only result in benefit to all. It would foster a feeling of fraternity and solidarity which unhappily does not now exist to the extent it should. What do you say to this suggestion, fellow-craftsmen?

WE are highly gratified by the interest shown in "La Moille's Complete Shorthand Guide," and in response to many inquiries we desire to state that we expect to publish the work in fine book form in a few months.

OCTOBER will begin the ninth volume of THE INLAND PRINTER, and no better time in the year is afforded for starting a subscription. The dull summer months are past, trade is looking up, and the small amount needed to pay a six months' or a year's subscription is easily parted with. Let those now upon our lists, whose subscriptions expire with this number, forward their renewals at once; and those yet unacquainted with the benefits and pleasures to be derived from a monthly visit of our magazine fall into line without delay.

Written for THE INLAND PRINTER.

**RULEWORK.**

BY A. R. A.

COGNIZANT of the fact that some printers have an idea that rulework is on the decline, I will endeavor to convince them to the contrary. If they will but "look backward" a few years—not necessarily a half a century, a score of years or less will suffice—they will see the vast strides rulework has taken. A few years ago the old brass flourishes were about the only ornamentation in rule that was

attempted, and those were shaped at the foundry, except, perhaps, the plain straight rule used for borders around pages and labels, nearly all of which were also mitered and cut at the foundry; and the "artist" who could combine these already-manufactured designs in rule into "fantastic shapes" was indeed a "great artist," and looked upon by his fellow workmen with envy. But time brings many

changes, which it undoubtedly has in rulework, and the artist of the past would have to do more than "build block houses" if he would want to keep pace with the artist of today. Go into any job office, large or small, and you will find printers with some pretensions as to rulework; even in the newspaper offices can be found the individual who, in a modest way, will resort to some original and appropriate design in rule when he gets the opportunity. Compare the foundry

specimen sheets of today with those of a few years ago, and see the varied designs in rule faces which have made their appearance of late, many of which

were copied from the work of the printer with original ideas, while some of the latest productions in metal can also be traced to his ingenuity; and still they say rulework is on the decline. Look over the field carefully, and I am sure that you will agree with me when I claim that rulework is on the increase instead of

on the decrease, and that rule is now more generally used for ornamenting jobwork than ever before.

Rulework is really the only branch of the printing business where a printer of artistic inclinations has an opportunity to show his good taste, because there is nothing that pleases the eye better than a well executed piece of rulework; and, then again, what is more abominable than rulework poorly done? There

is no work, perhaps, in the printing line that will receive as much criticism as rulework (unless it be presswork), therefore, whatever is attempted with rule should be as near perfection as possible, and not hurried and thought "good enough." If you have not the time to do it right, if your foreman or employer will not give you the time to do the work,

why, give them a good, plain job, which is ten times more preferable than a "poor ornamental job."

"Curves are really easy to make," so certain individuals claim; but, judging from the efforts made at rule curving in the pamphlet from which the above quotation is taken, one would naturally think that

the "artist" could not have been sincere when he made the statement, as his specimens certainly do not look as though *he* found rule ornaments "really easy to make." Design marked No. 1 is a reproduction of one of his efforts — an improvement upon it, if anything — what do you think of it? It is but one of many similar efforts with like results shown in his pamphlet.

No very extensive kit of tools is necessary to do your work. Nearly all offices are equipped with a mitring machine, rule cutter, curving machine and a vise, so that all that is necessary for a printer to supply

himself with is about three good files, tweezers, knife, small pliers, an old key or a saw set (which I find the best tools for kinking or waving rule). There are many new devices on the market to facilitate rulework, but with the above outfit you can accomplish as good results as desired; if you cannot, the latest improvements will avail you nothing.

By glancing over the few specimens of rulework shown on this page, you will notice that we do not

have to rely entirely upon the products of the type-foundry to enable us to ornament our work. Dashes in great variety can be made, which you cannot buy at the foundry. Useful designs in all kinds of rule can

be made. Perhaps the most useful rule for light ornamentation is twelve-to-pica, it being the cheapest and easiest handled. It is unnecessary to anneal it, unless you want to make a very small curve. Heavier rule is, of course, better to work with when the temper is taken out of it. To do this hold it over a flame until it has a dead sound when struck by a piece of metal—in

other words, when the ring is out of it—then lay it aside until cool.

When you get your curves or scrolls made, don't get them out of shape by locking up; merely tighten sufficiently to keep them in place, being sure to get all the rule resting squarely on the stone, and then use plaster

of paris; don't be foolish and try to do without it; it is cheap and saves time, and has no substitute.

The accompanying designs are not intended as great masterpieces, but only to show a few rule-curving designs which are useful, and may be used over and over again as long as properly taken care of.

Written for THE INLAND PRINTER.

## THE SHORTHAND GUIDE.

A COMPLETE TEXT-BOOK FOR SELF-INSTRUCTION AND SCHOOL USE.

NO. VIII.—BY T. G. LA MOILLE.

[Copyright, 1891, by the Inland Printer Company. All rights reserved.]

ARBITRARY signs are provided thus: For *hundred* or *hundreds*, / chay; *thousand* or *thousands*, ( ith; *million* or *millions*, ~ m.

(a) The context will readily tell whether the singular or plural number is indicated by / chay, ( ith, or ~ m, for the hundred, thousand, or million.

(b) The / chay, ( ith and ~ m are written after the numerals' signs, the same as the similar consonants or vowels would be joined in writing words; as, / ray-chay, 800; ( k-ith, 6,000; ~ 9,000,000.

99. Half-lengths (adding t, two) may be employed for consonant numerals.

100. Where only one figure occurs, it may be best to make it by the Arabic notation, surrounded by a circle; 1 and 6 should be carefully made, to not be mistaken for certain phonographs.

101. Some writers use the regular phonographs of 1, ~ wen, and 6, skays, and write the other numerals in figures.

102. *Ordinals* may be shown, if deemed necessary, by their regular signs after figures; as, 20 (, ith, twentieth; 23 \, ard, twenty-third; 3 |, d, third.

(a) When | d might be mistaken for 1, indicate surely such a | d by drawing a wavy line over it, as above in § 102.

(b) The *pronunciation* of the *ordinals* and *adverbs* will imply their signs, and save their signs being inserted, for the context will show what is meant.

103. *Adverbs* may be shown by a wavy line underneath them; as, ~ once. Better write adverbs with regular phonographs.

104. *Numerical Periods* may be indicated by the usual commas; as, \, (, 5,000; or by a slight space between the signs; as, | \ \ | 2,046,062.

105. *Fractions* are written as usual, by separating the parts by a hyphen; thus, \-| way-t, one-half; or by writing one part above the other, with a wavy line between; as, ~ k-n, §.

106. To not confuse these special numeral signs with the regular phonographic outlines of words, underline these signs, or draw a circle around them. The context will tell you what is meant.

107. A good way to memorize these signs is to write the numbers. (See the following tables.) When you have practiced them several times, and think you have them mastered, go to a railway and take the numbers of the cars in some passing freight train. If you can do that easily and accurately, you will have tested an accomplishment always valuable, for you can keep books, etc., with much less labor. Your employes, or employer, can quickly and easily learn this plan of

representing numbers by single marks, and your mutual tasks be thereby lightened very much.

[NOTE.—§ 108, "La Moille's Tables of Shorthand Numbers," is in the hands of the engraver, and will be published later.]

## REVIEW QUESTIONS.

97. Name the special arbitrary phonographic signs of the Arabic numerals. What signs are used for the figures: 1, 2, 3, 4, 5, 6, 7, 8, 9, 0? What kind of signs do the odd numbers have? Are the consonants for numerals shaded? Which consonants are not shaded for numerals? Are these numerical signs the exact phonographic outlines of the numbers? In writing 8's sign when must r be used in place of ray? Why? 98. What sign is provided for hundred or hundreds? Thousand or thousands? Million or millions? What will tell whether the singular or plural number is meant by chay, ith, or m? 99. What may be used for adding 2 to consonant numerals? 100. What may be safest in writing one figure? How should such solitary figures be pointed out? In such a case how should 1 and 6 be made? Why? 101. What is the practice of some phonographers in writing one and six? In writing the other numerals? 102. How may ordinals be shown? When d in 3d might be mistaken for 1 how do you indicate with certainty such a d? What will the pronunciation of the ordinals and adverbs do? 103. How may adverbs be indicated? What is the best way to write adverbs? 104. How can numerical periods be indicated? 105. How can fractions be written? 106. How may these special signs for numbers be not confused with regular phonographic word-outlines? 107. What is a good way to memorize these signs? How may you well test your numerical nimbleness?

## LESSON V.

## SIGN-WORDS AND CONTRACTIONS.

109. Certain words are called sign-words and contractions, because briefer signs are used for them; as, ~ n<sup>2</sup>, any; | d<sup>2</sup>, had; — k<sup>2</sup>, come; like some words are indicated in longhand by abbreviations; as, P. M., Pd., Rev.

(a) A sign-word is the printed form; the word-sign is the written, or engraved, form.

(b) A word-sign, or a contraction, is an *incomplete representation* of the word from which it is derived.

(c) *Common words* are expressed by sign-words and contractions because they often occur.

(d) *Forming* the word-sign, or contraction, we use some prominent and suggestive feature, or features, of a word; as, | t<sup>2</sup>, it; | d<sup>2</sup>, do; \ a<sup>2</sup>, an or and; ~ a<sup>2</sup>, a; \ ray<sup>2</sup>-f, refer or referred; / n-j<sup>2</sup>, knowledge.

110. *Difference between a word-sign and a contraction.*—(a) A word-sign contains only one stroke, with or without a circle, loop, or hook; as, / e<sup>2</sup>, he; \ iss-b<sup>2</sup>, subject; | tel<sup>2</sup>, till or tell.

(b) A contraction contains more than one stroke, with or without a circle, loop, or hook; as, \ p<sup>2</sup>-k, peculiar or peculiarity; \ ray<sup>2</sup>-efs, refers or reference; ~ wen-v<sup>2</sup>, whenever.

(c) A word-sign may be a vowel or a consonant; a contraction may be vowels, or consonants, or a combination of vowels and consonants.

111. *Derivatives.*—(a) A sound, or sounds, prefixed, or affixed, to a word to make a derivative is called a formative sound, or a *formative*.

TREASURER.

C. S. LAWRENCE,  
SECRETARY.

(b) *Derivative joined.*—Creating a derivative from a word-sign, or a contraction, usually join to it the formative sound by some expressive sign if the first, or the last, sound of the primitive is shown in its word-sign, or contraction; as,  $\sim$  n<sup>2</sup>-k, uncommon, from the consonant of un and — k<sup>2</sup>, the word-sign for common;  $\sim$  k-lay<sup>2</sup>, commonly, from — k<sup>2</sup>, common, and  $\curvearrowright$  lay, the sign of the affix *ly*;  $\updownarrow$  i<sup>1</sup>-d, eyed;  $\updownarrow$  i<sup>1</sup>-t, hight;  $\updownarrow$  i<sup>1</sup>-r, or  $\downarrow$  i<sup>1</sup>-ur, higher.

(c) *Derivative disjoined.*—Creating a derivative from a word-sign, or a contraction, usually disjoin it from the formative sound if the first, or the last, sound of the primitive is not shown in its word-sign, or contraction; as,  $\curvearrowright$  b<sup>2</sup>†r, objector, from  $\curvearrowright$  b<sup>2</sup>, object, and  $\curvearrowright$  r disjoined, but close together. (*Objector* may also be written b<sup>2</sup>-ür.)

112. *Dagger.*—We shall use the dagger (†) to indicate that the signs are not joined, yet close to each other. (See b<sup>2</sup>†r in § 112, c.)

113. *Dotted line.*—A dotted line stands for the line of writing, and indicates the positions of the word-signs and contractions, the same as it indicates positions of words in the Reporting Style. (See § 63 to 84 and the chapters on the Reporting Style.)

(a) A second position word is written, or printed, without the dotted line; as,  $\angle$  j<sup>2</sup>-n, Jennie.

(b) The small figures, called “superiors,” indicate the position of the sign by which they are placed; as,  $\updownarrow$  t<sup>1</sup>, time, first position, or above the line;  $\backslash$  p<sup>2</sup>, up, second position, or on the line;  $\nearrow$  j<sup>3</sup>, joy, third position, or through the line;  $\smile$  n<sup>3</sup>, now, third position, or just below the line.

114. *Hyphens and Double Terminations, or both.*—(a) A sign-word, or contraction, printed with a hyphen, is meant to have the same phonograph for each form; as,  $\sim$  r<sup>2</sup>-gay, irregular-ity, irregular or irregularity.

(b) A sign-word, or contraction, printed with a double termination, is meant to have the same phonograph for each form; as,  $\nearrow$  ish<sup>2</sup>, shall, shall or shalt.

(c) A sign-word, or a contraction, printed with a hyphen and double terminations, is meant to have the same phonograph for all its forms; as,  $\curvearrowright$  imp<sup>1</sup>, improve-<sup>ment</sup>, improve, improved, or improvement.

115. *Brackets* inclosing sign-words and contractions signify that words so inclosed are not exactly sign-words nor contractions; but that their signs are given to prevent acquiring improper forms.

116. *Parenthesis* is used to denote a vowel, or diphthong, sign disjoined from the consonant, or consonants, of the word; as, lay<sup>2</sup>(ó)-lay,  $\curvearrowright$  Lollie.

117. *To avoid confusion* word-signs and contractions are sometimes written out of their natural position:

(a) Because that natural position is occupied by one or more other words.

(b) Because it is most convenient to write upon the line of writing.

(c) Because a word might be mistaken for another word having a similar consonant outline, and whose

accented vowel (usually governing position) would bring it in the same position.

118. *Past Tense and Perfect Participle.*—(a) A verb's past tense, or perfect participle, can generally be safely indicated by the primitive form of that verb, for the context usually shows which form of the verb is used; as,  $\curvearrowright$   $\curvearrowright$   $\backslash$ , i<sup>1</sup> lay<sup>2</sup> b<sup>2</sup>, I will object;  $\curvearrowright$   $\backslash$ , m-ray<sup>1</sup> b<sup>2</sup>, Mary objected.

(b) If deemed necessary, the past tense will be fully shown by adding to the verb's primitive form a |d for *ed*, joining or disjoining this |d; as,  $\curvearrowright$   $\curvearrowright$  | | lay<sup>2</sup>(i)-lay lay<sup>2</sup>† d<sup>2</sup> t<sup>2</sup>, Lily willed it; or by  $\curvearrowright$  using the halving principle, explained later.

(c) The perfect participle will be fully shown by using  $\smile$  ing; as,  $\smile$  i<sup>1</sup> m<sup>2</sup> gay<sup>1</sup>-ing, I am going.

119. *Commit to memory* the sign-words, their word-signs, and the contractions. The best ways to learn them are:

(a) Cover the common type lists and name them from the engraved lists.

(b) Cover the engraved lists and name them from those in common type.

(c) Write all the lists many times in shorthand and longhand, naming each word, and its position, and character as you write, or read, it. Read everything you write.

(d) Have some friend read all the lists to you faster and faster, but not more rapidly than you can accurately write them.

(e) Frequently review the lists of word-signs, sign-words, and contractions.

(f) Notice and mentally describe every sign-word and contraction you read or hear.

(g) In your private writing use the word-signs and contractions as fast as you acquire them. Use these abbreviated forms instead of the full outlines of the words; as,  $\nearrow$  chay<sup>2</sup>, which, instead of hay<sup>2</sup>-way(i)-chay.

(To be continued.)

## THE TRADE USURER—CAN THE EVIL BE ABATED?

BY MALCOLM MCPHERSON.

THE “printer's Shylock,” as the gentleman is named who lends out money at usurious rates in large printing establishments, is not a singularly estimable person as a rule, but it is only fair to consider the fact that he has been called into existence and made an actual possibility and fact by the positive faults of many members of the typographical fraternity. These, for reasons of their own, are generally impecunious, and, in the aggravation of their necessities, do not care whether they borrow money from a shylock at the rate of three hundred per cent a year or even six hundred. All they want is the immediate dollar or fifty cents. By battenng on the failings or legitimate wants of their fellow-men, many of these shylocks become wealthy. Some of them, when they have accumulated capital enough, become saloonkeepers and are enabled thereby

to become more ferocious, mischievous and unrelenting usurers than ever. They discount a poor devil's "string" at a tremendous rate of interest, and then get back the money they have loaned by pushing vile potations over the bar every time that his victim's all-consuming appetite craves for a drink. There can be no doubt that usurers of this description require to be suppressed, squashed, eradicated, root and branch, because they not only make men worse loafers who are already loafers, but keep them permanently in the same wretched moral and physical condition.

It would obviously be unfair to class all "printers' shylocks" as men of the disreputable type who first make money of their fellow workmen and then make more money out of them through the damning influences of a common taproom. There are undoubtedly usurers in typographical departments who, so far as they go, are respectable and honest citizens. When they charge for the pecuniary accommodations they grant at the rate of three hundred or six hundred per cent per annum, they are simply following up what has unhappily become a custom in the body of the craft.

But the impecunious printer needs to be protected frequently against himself. There is a lot of sentimental claptrap written about the poor tramp printer, without the fact being recognized that there are plenty of good men in the country who get poor and comparatively helpless through a combination of circumstances over which they have no control. It is easy to call spirits from the vasty deep, but, as Hotspur pertinently asked Glendower: "will they come?" When a man gets broken in purse through adverse circumstances — perhaps an unreasonable foreman, perhaps the jealousy of fellow workmen — he ought not to be left to the tender mercies of a shylock when he arrives in a new city and strikes a job. This is one of the practical subjects which ought to be discussed in the assemblages of typographical unions, wherein a good many gentlemen are more ambitious to display their eloquence upon abstruse questions than upon concrete evils. The question might be discussed, for instance, How can printers, good men, who are temporarily broken up, be relieved without falling beneath the claws of the typical shylock? It would seem to be feasible that every chapel in the country should establish a relief fund and that the father of the chapel or some other specially delegated individual should distribute relief at the very lowest possible rate of interest on the obligation. If a workman contributed only a nickel a week to such a fund he would never miss the price of a glass of beer, while at the end of six months or a year, when the funds were divided up, he would find himself a substantial pecuniary gainer at the same time that he would have the satisfaction of knowing that he had helped several brothers in distress to tide over their bad luck and make themselves solid and substantial men again.

The system of granting necessary loans to men — good men, be it remarked with emphasis — ought to

be taken out of the hands of professional shylocks, and managed by printers themselves. As the shylock system is at present in vogue, it is an encouragement to a class of men who are a distinct detriment to the craft's character for respectability. As the relief-fund system might be established in every large printing establishment in the country, there seems to be no practical reason why the shylock system should not be supplanted by a fund which would really be a mutual benefit fund for all participants concerned in it. The propagation and fulfillment of such a plan would certainly be a blessing to many a deserving man who, at present, must be at the mercy of men who are unscrupulous usurers, only differing according to the height of their ambitions. For instance, when the height of a shylock's ambition is to own a saloon with his rapacious gains off the needs of his fellow man, and therein to pursue even a more rapacious career of scoundrelly rascality than he had done before, he has no conscience in his pecuniary dealings, and only a jury, so to speak, of good men and true, can legitimately decide what class of temporarily hard-up men should be relieved, and what amount of interest should be exacted for a temporary pecuniary accommodation.

It would seem that this is a subject worthy of serious consideration by every local and national typographical convention in the country. The present shylock system is an unmitigated curse to the typographical fraternity, inasmuch as it perpetuates the breed of undeserving tramps, and tends to bring the "art preservative" into disrepute.

#### THE COMMITTEE ON LAWS.

BY M. J. CARROLL.

WHEN the present constitution of the International Typographical Union was adopted at the Kansas City convention, an article was inserted providing for a Committee on Laws, whose duty it should be to consider all amendments to the constitution, by-laws and general laws of the International Union, and report their conclusions thereon to the convention. This provision was intended to aid in meeting the growing difficulty attending the consideration of the multitude of amendments being introduced at each annual convention.

The article referred to has rather intensified than diminished the evil it was intended to rectify, a circumstance owing altogether to the fact that the measure, in the first place, invited amendments from the entire membership of the local unions, and, in the second place, to a neglect to limit the time, either before or during the convention, when it would be proper to introduce such amendments. After providing for the appointment of the committee and giving a general outline of its duties, the first section of the article says: "It shall be competent for any subordinate union, or member in good standing of any

subordinate union, to submit such information, data or propositions." The second section of the article is as follows :

The committee shall meet at the city where the International Union is to convene at least three days before the beginning of the sessions, and shall proceed assiduously to consider all such information, data and propositions. It shall submit a printed report in full of all propositions favorably acted upon, and the substance of all propositions adversely acted upon. To this committee all amendments submitted during the session shall be referred without debate. It shall have leave to sit during the sessions, and shall have the right to report at any time to the convention.

The privilege accorded in the extract given above from the first section of the article is one that has been freely taken advantage of by some members of subordinate unions, and is one that is not allowed by any other large organization that can be called to mind at the present time. The universal practice of making it incumbent that every amendment or resolution should be fathered by a member of the convention for which it is intended, is based upon experience and good sense. In our case it frequently occurs that a union does not feel able, or is indifferent about sending a delegate to the annual convention. There have been instances where a member of one of these unrepresented unions has sent in as many as twelve or fifteen amendments to the Committee on Laws. In due course of time a certain proportion of these amendments will reach the convention, when the edifying spectacle is presented of a body of men discussing a number of propositions that have nobody to explain or defend them.

While this state of affairs is in every way unnecessary, it but adds slightly to the general confusion attending the receipt of the never-ending stream of amendments pouring in on the annual convention through the misconstruction of this law. It is an old device, frequently resorted to by what is known as the rainbow statesmen of the national legislature, to go to Washington to attend their first meeting of congress well loaded down with an assortment of bills, very few of which are ever seriously considered, much less enacted into law. There is seldom any disappointment on the part of the sponsors of these bills at their failure to become a part and parcel of the law of the land. When they secure a separate mention of the statesman's name in the *Congressional Record* for every bill presented, they serve the purpose for which they were intended. It is frequently asserted that newly elected delegates resort to this device of introducing amendments to the constitution and general laws with the intention of making a record for themselves in the printed proceedings.

However much or little truth there may be in this view of the matter, certain it is that the amount of work of this nature annually sent to the convention is far in excess of what could reasonably be expected to receive careful disposition at their hands, even though the whole session of the convention were to be devoted

to the consideration of amendments. When men are elected to serve as delegates to the International Typographical Union, they have a right to expect that their motives should be above question, and that they are actuated solely by a desire to advance the general good of all. From this standpoint one would be led to believe, from the volume of amendments annually showered upon the convention, that the laws of the International Union must be a compilation of reckless and unconsidered inconsistencies from start to finish.

Take the recent Boston convention as an example, and what do we learn? The Committee on Laws met there the stipulated time previous to the opening of the convention, and, when that event did take place, the committee were ready with an amount of business that, if carefully considered, would have retained the delegates in Boston for fully a month's time. But this was only the beginning of the difficulty. Day after day a deluge of amendments were read and referred to the Committee on Laws; and day after day the committee reported back a batch of amendments with varying recommendations for the consideration of the convention. And in all this time and through all this mass of business, there appeared to be but one member who had the wit to offer an amendment of real importance in this convention, and that was one calculated to put a stop to all of this tomfoolery in future conventions.

Not having a copy of the proceedings at hand, I cannot say what disposition was finally made of this particular amendment, or to what extent it would have modified the present article of the constitution relating to the Committee on Laws. Certain it is that the amendment should not be lost sight of until that part of the first section conferring delegatorial powers indiscriminately upon members of subordinate unions be entirely eliminated, and the second section so amended as to limit the time in which amendments can be offered to some specified time before the opening of the convention. The first of these propositions would leave the work of amending the laws where it rightfully belongs—in the hands of the delegates; while the second would have the effect of enabling the committee to place a printed copy of their entire work in the hands of every delegate on the opening of the convention, thus allowing him to give a fair amount of consideration to projects upon which he is supposed to exercise some intelligence when it comes to a vote. This plan would have the further advantage of allowing time and opportunity for the convention to consider other matters, often of more importance to the craft in general than would be the adoption of any number of amendments to the constitution and general laws. The only work of this nature that should be expected of the Committee on Laws during the sitting of the convention should be confined to such amendments as might be referred back to them for certain modifications.

## STANDARD FACES OF BODY TYPE.

BY P. A. L. GARIST.

HAVING conversed with several gentlemen concerning the typographical union standard, I find that, besides the printed standard, different local unions seem to have some unwritten law on the subject.

One city local union says that, if, when the ascenders of the font are put below the descenders and there is room enough to put a twelve-to-pica lead between them, the face is to be considered as belonging to the next smaller body (except in the sizes nonpareil, agate and pearl, when the space should only be half a twelve-to-pica lead). Another local union says that half of the alphabet (presumably a to m and n to z) should measure half of the standard. Still another says that the five vowels — a, e, i, o, u — shall measure at least one-sixth of the standard.

Take the brevier standard, 14 ems brevier or 112 points, as correct, the following would be the proportionate length of the other sizes (I have given the typographical union standards in second column in points for comparison):

	LENGTH OF ALPHABET.	
	Exact proportion.	Typographical union standard.
Pearl .....	70	85
Agate .....	77	88
Nonpareil .....	84	90
Minion .....	98	98
Brevier .....	112	112
Bourgeois .....	126	117
Long primer .....	140	130
Small pica .....	154	143
Pica .....	168	156.

It will be seen that by exact proportion the standard is high on the three smaller sizes, if the brevier is correct; right for the minion, and low for the four larger sizes.

Were the faces carried out in exact proportion, it can also be seen that the smaller sizes would *look* too condensed and the larger sizes *look* too extended. A nonpareil letter is cut a little wider and a little heavier in proportion than a brevier, and a pica letter is cut a little more condensed and a little lighter than a brevier to keep the "eye proportions" — a series cut in any other way would seem distorted, though it might be in regular proportion and weight of stroke.

An example: A cap H of a certain nonpareil letter measures  $5\frac{3}{4}$  points wide and a cap H of the pica of the same series (the series being cut in correct eye proportion) measures only  $9\frac{3}{4}$  points wide. If cut in exact mathematical proportion the pica cap H should measure  $11\frac{1}{2}$  points wide, a difference of  $1\frac{3}{4}$  points on a single letter.

The objection to the first unwritten law which I have cited is in the following: A lean face generally has long, lean ascenders and descenders; a medium face, medium length descenders and ascenders; and a fat face, short, stubby descenders and ascenders. If a fat face has short descenders and ascenders and measures *above* standard, and you could put a twelve-to-pica

lead between the d and p, when put together thus  $\frac{p}{d}$ , that unwritten law would stamp that face as of the next smaller body and compel the newspaper man to put on a long, lean face with long descenders and ascenders which would come just within the standard — the paper possibly would not look as well, but the proprietor would feel considerably elated because he would not have to pay, say, minion price for setting brevier, and the compositor would earn much less, because the face now in use is much leaner than the old face. It is the old story of "straining at a gnat and swallowing a camel."

There is less of objection to the "half alphabet" or the "vowel" measurements, either or both of which in connection with the standard now in use would do much to lessen the difficulty of arriving at a satisfactory standard. As regards the question of photographing type faces, while quite feasible, a much simpler method would be to fix a scale for solid and leaded matter, the solid to be in the neighborhood of a tenth more than the leaded.

## RECEPTION TO J. D. FITZGERALD.

The return of Mr. J. D. Fitzgerald, the delegate sent to England by the unionists to represent them concerning the great strike, was made the occasion for a great display in Sydney. Mr. Fitzgerald is a compositor, and was a short time ago president of the New South Wales Typographical Association. He met with a very kindly reception from the best men of the progressive party — John Burns and Mr. Gladstone being equally pleased to meet him — and Mr. Drummond (secretary of the London Society of Compositors) and his society received the typo from Australia with open arms and banqueted him. The only rebuff Mr. Fitzgerald met with came from the agent-general of his own colony in London, and it happened thus: the Emperor of Germany having expressed a desire to meet Mr. Fitzgerald, the latter applied to his colony's agent-general for a credential to the kaiser, when he was told that he (the agent-general) was sitting uncomfortably on the picket fence which divides capital from labor, and was afraid he would overbalance and fall on the wrong side if he gave a labor delegate credentials to insure his safety in Germany.

Upon his return to Sydney, the trades unions, through the Trades Council, decided to give him a great reception, as a fitting finish to a brilliant mission. The steamer Birkenhead, registered to carry six hundred passengers, went down the harbor to escort him with bands playing and crowds cheering, and after he had landed, his time was fully occupied with receptions, banquets, and mass ovations.

## AN EYE TO BUSINESS.

A visitor to a western Ontario village had the misfortune to trip on a loose plank in the sidewalk, thereby seriously damaging a pair of city-made trousers. In his wrath he penned the following terse note to the village reeve: "Sir,—A loose plank in your damned old sidewalk caused me to fall last evening. My trousers are ruined. I want to know what you are going to do about it?" The rural dignity thus addressed was reeve, postmaster, general storekeeper, United States Consul, etc., all in one. Although his orthography and calligraphy were not of the most approved style, he had, nevertheless, a keen eye to business. His reply ran this way: "deer sir: if yore pants is past mendin come right down to Joshua Slingsby & sons on the mane street and git a new pare. they can make you a pare of first-class spring botoms in Canadian tweeds from 3 dolers up to 4 dolers 15, also braces, tobako, salt pork and chese kep in stock. Am sorey about yore pants. Joshua Slingsby."—*Monetary Times*.

## The "Only Perfect" Galley-Lock.

**PERFECT IN PRINCIPLE. PERFECT IN ACTION.  
PERFECT IN ECONOMY.**

**ONE SINGLE MOVEMENT** adjusts it. Holds each line of type perfectly and securely. Earns its cost in time saved in three months. Saves type and galley. Years of service added to old galleys.

**ADJUSTABLE.** The "Only Perfect" Lock has a spread of over a half inch, and thus adjusts to any width of column on galley.

**MADE OF BRASS.** Light, durable, wear many years. We make a 13-INCH LOCK, for use of daily papers and job galleys. Engraving shows full size, 23 inches.

**ATTACHABLE.** By a slight change in outside bar, we make the Lock, and furnish attachments, so that in a few minutes anyone can attach it to galley. Outside bar works against side of galley; inside bar is held to top of galley, and has perfect movement back and forward. Daily papers adopt this on sight.

**SEND ORDER** to your printers' supply house. 23-inch lock, \$18.00 per dozen. Attachable lock (23-inch), with attachments, \$22.00 per dozen. 13-inch lock, \$16.20 per dozen. Liberal discounts to trade.

**On receipt of \$1.50** will express you free a 23-inch lock, and know you will order a supply.

## BURTON'S "PEERLESS" PERFORATOR

MANUFACTURED BY

**Avery & Burton,**  
42, 44, 46 & 48 S. Clinton St.,  
Chicago, Ill.

MESSRS. AVERY & BURTON, Chicago, Ill. :

*Gentlemen,*—We have had one of your "Peerless" Perforators in constant use for five years, during which time it has been operated by a girl. The machine has not only given perfect satisfaction, but has become indispensable to us.

We could not replace it with any other perforator in the market. The wear and tear from use is remarkably slight, and in the five years we have used it the expense for repairs has been almost nothing when we consider the amount of work done.

Yours truly, J. S. McDONALD & CO.

THE EASIEST RUNNING AND MOST PERFECT PERFORATOR ON THE MARKET TODAY.

**BUT**

Can you lay out a Sixty-Four Page form?

**TEN CENTS PAYS FOR IT!**

### The Inland Printer Co.

AS USEFUL AS ANY WORK COSTING MANY TIMES AS MUCH.

183 MONROE STREET, CHICAGO.

**M**AKING-READY the old way involves locking up the form, taking a proof, and, while the press is standing idle, unlocking it so that high blocks can be scraped down and low ones underlaid by guesswork. Incidentally it means shifted rules, pied lines, loss of time, and profanity.

The new way is to take the blocks before they are locked up, and passing them beneath the height gauge, make them exactly type high. There is no guesswork about this system, the economy is great, as making ready is confined to overlaying, and the cost (\$7.50) insignificant. If interested, send for circular. We manufacture machinery and supplies for photo-engravers, electrotypers and stereotypers. If you wish any information on these subjects, write us.

## WEIGHING ITS VALUE.

---

Sir Walter Raleigh once made a wager with Queen Elizabeth that he could weigh the smoke from his tobacco pipe ; he won by weighing the tobacco before smoking and the ashes afterward.

Using the same process, you can estimate the value of a Cottrell Press by weighing the price before purchasing and the profits afterward.

The profits come in various ways : much less demand on the pressman's time, greater ease in making ready, any desired speed, perfect accuracy in register, and the numerous patented appliances which minister directly to the pressman's convenience.

In one sense of the term the Cottrell Press is not low-priced, but in the highest and truest sense it is the cheapest press that can be bought, for it needs no repairs, and only asks the privilege of showing you that with good machinery your pressroom will be to you the most attractive department of your business.

#### CAST CUTS TO PICA.

*To the Editor:* DUBUQUE, Iowa, July 31, 1891.

Among the many communications which appear in each issue of *THE INLAND PRINTER*, it has often been a matter of surprise that someone has not written a few words in advocacy of all "cuts"—electrotype or stereotype—being cast to pica. This is a matter that has often puzzled the writer. He has, on different occasions, been employed on catalogues where there were from thirty to forty "cuts" to be justified, and among the entire number not one could be found to justify with pica, being either a couple of leads too long or too short. If cast to pica, they would save a great deal of time wasted in cutting leads or cardboard. What enterprising typesetter will be the first to make a move in this direction?

D. J. S.

#### FROM GLENS FALLS.

*To the Editor:* GLENS FALLS, N. Y., August 9, 1891.

Our sister villages of Glens Falls, Sandy Hill and Fort Edward are giving the printers all the work they can do at present, and no idle printers are about.

Robert O'Conner, formerly of the *Republican* (Glens Falls) has lately been engaged by the *Sandy Hill Herald* for an indefinite period.

A majority of No. 96 favor shorter hours and the proposed death benefit.

The printers and cigarmakers of this town and vicinity propose to get up an excursion for themselves and friends on labor day.

An organization of printers and publishers has been formed here. They call their society the typhotetæ. I am unable to learn whether it is a branch of the national organization.

J. C.

#### FROM AKRON.

*To the Editor:* AKRON, Ohio, August 13, 1891.

The printing business in this city is booming at present; each shop and each department has all the work it can handle. The Werner Printing Company's press room and bindery, after having a slack period since June 27, resumed operation August 3.

The souvenir for the G. A. R. national encampment, recently held at Detroit, was executed by the Werner Company, and is a very creditable job to the house turning it out.

Akron Typographical Union, No. 182, voted in favor of the nine-hour workday.

The Werner Company has now in hand copy for the Ohio State Roster, after waiting two years for same, and the book comps are happy.

Only paper in the city, the *Beacon*, is non-union. To a man up a tree it looks as if there was a site here for a good live daily paper.

K.

#### FROM SAN FRANCISCO.

*To the Editor:* SAN FRANCISCO, Cal., August 8, 1891.

The depression in the printing trade continues in this city. The proposed relief which the typographical union endeavored to afford the union men out of employment in town was abandoned at a special meeting held shortly after the regular one, at which it was decided that the compositors working on daily newspapers

should only work five days per week during the sixty days following, the remaining days' work to be given to the union men out of employment, to assist them in passing over the dull period. However, many of the unemployed printers have left San Francisco for interior and coast towns. It is anticipated that things will soon adjust themselves, and that few will be out of employment.

A new journal, called the *California Irrigationist*, has just been issued in this city, which for make-up and general appearance is unexcelled. The publication is deserving of special consideration, as irrigation is conceded to be the greatest factor in the development of the agricultural and horticultural interests of the Pacific slope; and the work undertaken by the publishers, G. F. Weeks and W. B. Winn, if the number of "ads" is any criterion, is meeting with the success it deserves. Mr. Weeks is particularly adapted for the editorship of a journal of this character, having been a special writer on the *San Francisco Chronicle* for twelve years, during which period he has prepared for that newspaper two special irrigation editions, a twenty-five year's history of California, the agricultural editorials, and weekly whole-page descriptions of the resources of different localities in the state.

E. P.

#### FROM GRAND RAPIDS.

*To the Editor:* GRAND RAPIDS, Mich., August 15, 1891.

Trade in the job offices is exceptionally dull. "Subbing" is fair, in spite of the large army of tourists that has camped out on us. The *Daily Eagle* received a "phat take" from the common council recently. It has been awarded the second printing of the council proceedings, which will probably add a couple of cases to that sheet.

The *Telegram-Herald* has introduced the typesetting machine in Grand Rapids, which has caused some commotion among the boys, who have, however, decided not to kick against the inevitable. The operators of the three machines at present are: Payne, Jack Gibbs and the "Dummy." It is said that the Dummy operates his machine more deafly than the other two. The company assert that the machines will add to rather than decrease their composing-room force.

A. L. C.

#### FROM BOSTON.

*To the Editor:* BOSTON, Mass., August 17, 1891.

At the July meeting of Boston Typographical Union, No. 13, Mr. George Stephens, in behalf of the reception committee that was appointed to entertain the delegates of the thirty-ninth annual session of the International Typographical Union, made a detailed report, showing just what sums were contributed from sister unions, received from the souvenir, master printers, etc.; and also just how every dollar was expended. The local treasury was called upon for less than one-half of the actual expense of the convention. Everybody appeared well pleased with the management of the affair, and the union passed a unanimous vote of thanks for the excellent manner in which the committee had performed the duty assigned them.

Mr. William J. Murphy has left the employ of the Campbell Press Company, for whom he has been traveling for the past year, and is recuperating at his home in beautiful Melrose.

C. W. B.

#### FROM TRENTON.

*To the Editor:* TRENTON, N. J., August 15, 1891.

The gavel has fallen in the several book and job offices in this city, and about one-third of the membership of the union are "turned loose" for an indefinite period. Surely the lot of a printer is not a happy one. We are praying for the adoption of the nine-hour law as a partial relief, and to that end the unanimous vote of the entire union was cast in favor of its adoption.

We intend trying our hand at entertaining the International Typographical Union for one day next year, provided, of course, Philadelphia will concede so much, and at the last meeting of the union the following gentlemen were appointed a committee to

make all the necessary arrangements: James W. Cook, S. Mellor, Jr., William Gaunt, Manuel Kline, D. Mahaney, Charles Cook, T. Cassidy, E. Cook, Frank Kresge and Peter Howell.

The State Federation of Trades will meet in annual convention on August 17, and will be called to order by President Sam Mellor, of No. 71. Sam has held this position for three years now, and has declared his intention to step down and out this time.

Christopher Ledden, foreman of the Sharp Publishing House, was burned out on Saturday last, and has the sympathy of the prints. He will commence housekeeping over again at an early day, and will doubtless see to it that some insurance company foots the bill for the next fire on his premises.

The tourists continue with us, and appear to be well satisfied with the existing condition of affairs. They don't want the earth, and so long as they are hospitably treated by the resident members of the craft, just so long will they remain "wid" us.

INJUN.

#### STRIKE OF SAN FRANCISCO PRESSMEN'S UNION.

To the Editor: SAN FRANCISCO, Cal., August 7, 1891.

The strike of the pressmen's union of San Francisco against the Dickman-Jones Lithographing Company has been ended for some time, but the members of the union claim that the facts have not yet been truly stated in any of the eastern journals. A delegation appointed for the purpose called upon your correspondent and requested him to forward the following statement: "There are but two pressmen employed in this establishment. During the strike the Dickman-Jones Company stood off the union by lithographing its work, and using the non-union pressman, on account of the employment of whom the strike was ordered. The union has lost the strike, but not through having been defeated legitimately. The other man has returned to work, being unable to resist the temptation of accepting the increased wages offered him. He has been expelled from the union for having deserted it and for having broken the pledges which each member is under. We paid him the full amount of his salary during the strike, and his desertion was unwarrantable."

E. P.

#### FROM VERMONT.

To the Editor: BELLOWS FALLS, Vt., August 15, 1891.

R. S. Warner, a job printer of Ludlow, has hit upon success in the publishing business in quite a novel way. He started in some months ago to get out a small advertising sheet for the benefit of a few advertisers in the local field and since then he has started a monthly which is meeting with good success.

The editorial excursion to Boston, Plymouth and Nantasket this year was a great success. The only serious drawback was the non-attendance of the editorial fraternity, as a body. R. J. Humphrey, of the *Poultney Journal*, was elected president; Warren Gibbs, of the *St. Albans Messenger*, F. W. Stiles, of the *Springfield Reporter*, and C. H. Davenport, of the *Brattleboro Reformer*, vice presidents; Arthur F. Stone, of the *St. Johnsbury Caledonian*, secretary; H. E. Parker, of the *Bradford Opinion*, chairman of the executive committee. The next place of meeting was left to the committee to decide upon later.

There seems to be a dearth of good typesetters and printers in all parts of this state at the present time. A short time ago it was cried in this part of the country that all the young women were learning composition. Where are they now? One may advertise for weeks and not find a single answer. They have quit and gone at something else; that is all. The boys no longer see the charms in printing they once saw, and go at something else. A boy who wants to learn the all-around country printer's business is a scarce article nowadays, in this state at least. The tendency is toward specialism in printing as well as in other businesses and when a young fellow gets a start he takes up some particular branch and follows that. The result has been a serious detriment to country offices, as a whole, in this state, but a general improvement to

printing as a business. It may perhaps be said, then, that it is better as it is. True, in a degree, but when the old men who are now running the all-around offices out here in the country want to step down and out who will take their places? It will need something besides a fancy color printer or a pressman to take charge of the office. The men who are now in them have amassed fortunes and there are fortunes awaiting the young men who are willing to follow in their footsteps. Where are they? There is plenty of opportunity and the field is ripe for the harvest in more than one locality. Don't drive out the old-fashioned apprentice yet.

B. H. A.

#### FROM LYNCHBURG.

To the Editor: LYNCHBURG, Va., August 19, 1891.

The printing business is very dull in Lynchburg, and we are glad to say subs are becoming very scarce on the newspapers.

Our union has been crippled for the last few years, the result of the lockout just three years ago, when we were thoroughly organized, the failure to reclaim the offices causing a lack of interest and falling off in membership; but now things look brighter, and a feeling of confidence pervades our ranks. We would here take occasion to again ask the traveling fraternity to give us the go-by, as by so doing they can help us in our efforts to reclaim the offices.

A deed of assignment from John W. Rohr, printer and binder, of this city, to W. M. Lile, trustee, was filed August 6, in the clerk's office. It conveys all the presses, type and other property of the office, to be disposed of for the benefit of the creditors, all of the effects in the printing office being subject to the lien of a deed of trust to C. F. Button, to secure \$2,500 due to C. W. Button.

WILLIAM.

#### TYPOTHETÆ BENEFIT ASSOCIATION.

To the Editor: CHICAGO, August 20, 1891.

Our regular monthly meeting was held August 18, President Parker in the chair. The employing members were absent on vacations and had neglected to make provision for our lunch, still seventeen members were present. The president was pleased, under the circumstances, to "see such a large proportion of the membership present. Their presence effectually refuted the aspersions of some, that they attended the meetings simply for the loaves and fishes, or, more literally, for the sandwiches and coffee."

Several schemes to raise money to liquidate indebtedness were discussed, and it was finally decided to levy an assessment of 20 cents a month on each member in addition to monthly dues.

Two white men made application for membership. One was objected to by the secretary on the ground that he was "too much inclined to take solid comfort out of a bottle," whatever that might mean; but as both applicants had solemnly promised to pay their initiation fee as soon as they secured work and a boarding house, they were accepted. Our colored membership was also increased by one. The secretary, who endeavors to please all, will "see to it that watermelons form a part of the lunches in the future." While speaking of the lunch feature of our meetings, I am moved to say that the social equality within the charmed circle of our lunch table is commendable, for all meet as brothers, and employers sit *vis à vis* with foot-sore and travel-stained "tourists."

AN OLD TYPO.

#### FROM AUSTRALIA.

To the Editor: SYDNEY, N. S. W., July 15, 1891.

The trade has been a trifle brisker in this colony, owing to the opening of parliament in Sydney, which ceremony was rendered somewhat lively by the demonstrations of a few socialists, who gave the Governor (Earl of Jersey) a warm reception, of a kind which he has not hitherto been used to. The shearers' strike in Queensland has collapsed, but at time of writing the shearers of Sydney and Melbourne are trying to fan the flame again. There is likely to be an immediate ballot of our typographical societies as

to the necessity for raising a defense fund of \$200,000, of which more anon. There is still a large number of unemployed in Melbourne, 200 being the last number to hand. The other places report things in a quiet state, with the exception of Brisbane (Queensland), where it was reported last week that trouble was likely to arise at no distant date, owing to the master printers stating their determination to reduce the scale of charges and wages at present existing. The present scale was fixed some two or three years ago, after a very hard struggle and some striking; but Brisbane has always been a place of strikes, and it is round that district where the shearers have been causing trouble.

The Victorian (Melbourne) Chamber of Manufactures, at a meeting last week, affirmed the desirableness of participating in the World's Fair to be held in Chicago. This is the first notice taken of your fair by our colonies, and I have no doubt it will lead to many more of the same nature, and that when it finally comes off, you will find us well to the fore.

It is worthy of mention, by the way, as interesting with regard to the position which our craft takes in progressive movements, that the three most prominent unionists in Sydney are compositors, namely, Mr. H. W. Sharp, president of the Trades Council; Mr. T. J. Houghton, secretary of the same body, and Mr. Fitzgerald.

ASMODEUS.

## FROM BALTIMORE.

To the Editor: BALTIMORE, Md., August 17, 1891.

A fire broke out yesterday morning in the Franklin Printing Company office at Howard and Franklin streets, resulting in a damage to type and presses to the amount of \$200.

Mr. Fred Polmeyer, business manager of the Baltimore (Md.) *German Correspondent*, arrived home this week from a sojourn of several weeks in the Adirondacks, New York, where he had gone for the benefit of his health.

Hugo Heinrich, a young German pressman employed at the establishment of A. Hoen & Co., committed suicide at 1 o'clock yesterday morning.

A compositor on the *News* answered an "ad." in a morning paper some weeks ago, which set forth that the Otto Mergenthaler Company wanted a printer to learn to run one of its typesetting machines. His application was successful, and he went to work at \$12 per week. As this typo was a member of the union, he was very soon called up before that organization to answer the charge of working under wages. He was informed that he must receive at the linotype factory not less than \$16 20 per week, if he desired to remain in the union. As the Mergenthalers declined to pay him that amount, he left their employ and got cases again on the *News*.

Job printing is dull here, more typos being unemployed than for some time past.

FIDELITIES.

## FROM PHILADELPHIA.

To the Editor: PHILADELPHIA, Pa., August 14, 1891.

Business is dull in all its branches and the newspaper offices are overrun with "subs."

President Ira Somers, in point of age, may be said to be the youngest presiding officer that Philadelphia Typographical Union ever had. Despite his youth he fills the office with dignity, and his decisions are, generally speaking, of a fair and impartial character. To the fullest extent he has the confidence of his fellow members.

Typographical Union No. 2 recently manifested its sympathy for the striking weavers of Manayunk, employed at Dobson's Mills, by a generous contribution to their treasury. The strike is now ended and work has been resumed.

On the evening of August 11 there was a ripple of excitement among the typos connected with the *Daily Times* office. For some time past a young lady, Miss Rowena Simpson, has held a frame in the office, and by her good qualities soon won and held captive the heart of a brother in the chapel, Mr. William H. Musk. On the evening above noted, at the church of St. Simeon, the two

were made one, by the Rev. Frank E. Groff uniting them in marriage. It is needless to say that the happy couple have the best wishes of their fellow workmen for their future life, and this expression is heartily concurred in by your correspondent.

The excursion to Atlantic City on August 5 under the auspices of Typographical Union No. 2 was participated in by a large number of its members, accompanied by their wives or best girls, who spent a most enjoyable day at the city by the sea. Financially speaking, the excursion was a success.

Philadelphia printers' excursion to Cape May will take place on August 31, via steamer Republic. Object, enlargement of the entertainment fund.

Labor Day is drawing near, but indications seem to point to a non-sympathetic movement on the part of the printers of Philadelphia as an organized body, to make a public display.

W. F. K.

## FROM LOUISVILLE.

To the Editor: LOUISVILLE, Ky., August 13, 1891.

A better feeling is now existing, and a lively fall and winter trade is expected, as is evidenced by numerous orders for new machinery and material placed by Louisville firms recently, as well as inquiries for prices from quite a number of others.

The failure of the Star Printing Company the other day was not the outcome of the dull summer so much as it was to their inability to tide over the severe blow dealt them by the cyclone of a year ago. That they made a desperate effort to pull through is known to everyone who was at all acquainted with their business and the difficulties that lay in their path. The *Sunday Star*, which was a part of the Star Printing Company, was sold to Mr. Thomas H. Starke, of the Moore & Starke Paper Company, some months ago, and as a consequence did not suffer from the assignment.

The George G. Fetter Company has been incorporated, with Messrs. George G. Fetter, Thomas B. Hubbell, J. Edward Reese and E. A. Wedekemper as incorporators. Mr. Fetter is well known as one among our best hustlers in the printing line, he having built up a splendid business during the past six years. Mr. Hubbell was for many years superintendent of the *Courier-Journal* jobrooms; Mr. Reese is a pressman of many years experience, both in the job and newspaper line, and Mr. Wedekemper is connected with the Bremaker-Moore Paper Company. This firm is looked upon as one of the coming printing firms of town, and the individual members are surely deserving of success.

Mr. Eugene Bell has resigned his government position that he might be enabled to give his entire attention to his printing business.

Mr. H. C. Forsman has removed to better and more commodious quarters on Main street, between Eighth and Ninth streets.

Mr. Lew. B. Brown, for many years connected with our local press, has purchased the *Spencer Democrat*, and will in future make his home at Taylorsville.

Mr. A. J. Carroll, city editor of the *Evening Times*, was recently elected a member of the state legislature without opposition.

The adoption of a new constitution for the state by the people, on August 3, changes the mode of letting the public printing. Under the old constitution a public printer was elected by the legislature, who was allowed certain compensation for all work done. The new instrument requires all public printing to be given to the lowest bidder.

The Baptist Book Concern placed an order a few days ago with Mr. J. H. Douglas, of the Campbell Press Company for a 42 by 60 improved book press, and a 24 by 36 job and book press.

Mr. H. L. Morrow has removed his printing establishment to Main street, near Third.

Mr. David Barfield is now in charge of the composing room of the *Courier-Journal* Job Printing Company. Mr. Henry C. Gathof remains in charge of the pressroom.

C. F. T.

## FROM KANSAS CITY.

To the Editor : KANSAS CITY, Mo., August 15, 1891.

The typographical field in Kansas City shows no signs of great improvement, though in consideration of the depression prevalent throughout the West, Kansas City has ample reason for congratulation that matters are no worse.

S. G. Spencer has started in business again on a commercial jobwork scale. Mr. Spencer has a numerous clientage.

Mr. Ford Allen has severed his connection with the *Times* as proofreader, and is working with the National Printing Company.

The Bradner-Andrews Printing Company has also undergone a change. Mr. George McNamara, formerly with Rand, McNally & Co., of Chicago, has purchased an interest in the firm, and the name of the company changed to the National Printing Company.

Mr. Tony Duke, a member of Typographical Union No. 80, is president of the Industrial Council.

The printers on the German *Post* have trouble with the business management, and are now on the "outside." The printers claim the trouble arose over the apprentice question, while the management claims that no question of union conduct is involved. The trouble comes within the jurisdiction of the German union, and involves four or five men.

Mr. James Rhodes has been appointed by No. 80 as a delegate to the Industrial Council.

Mr. A. R. Johnson, of the Tiernan-Havens composing room, is absent on a visit to Colorado Springs. Mr. Johnson is an "old-timer" in printing and union matters, and deserves the pleasant holiday he is enjoying. L. E. H.

## FROM OMAHA.

To the Editor : OMAHA, Neb., August 10, 1891.

Omaha is involved in one of the largest "strikes" that has been known to the West in many a day. Outside the printing fraternity, it is generally termed a strike, but in reality it is a lock-out. The new state eight-hour labor law took effect August 1. Two days previous the following notice was laid on the cases of each man at the Republican Printing Company :

From and including August 1, 1891, all employés of the Republican Printing Company will be employed and paid by the hour for the number of hours they work, at the same rate of wages now paid, and not by the day.

Any employé who is unwilling to work the same number of hours as heretofore, at the rate of wages heretofore paid him, will report in writing at once to the undersigned.

July 30, 1891.

\* \* \* Receipt of the above rule and regulation is hereby acknowledged. I am willing to continue in the service of the Republican Printing Company subject to the same.

July 30, 1891.

The *Republican* employés declined to sign. At the Festner Printing Company the same notice was presented, and met with a similar response. The next day, July 31, all the offices whose proprietors are members of the typothetæ laid the same notices before their employés. Every union man in the city, with one exception, refused to sign the enforced agreement. It was claimed that it was an open defiance of the state law. At most of the large offices, the next morning—the long-to-be-remembered Saturday, August 1, 1891—all the men were told they must either sign or quit. All were then thrown out of employment, except the one above referred to.

The typographical union has changed its scale. It is now \$16 per week for job and book hands, at an eight-hour day. The scale was formerly a sliding one, \$18 for job men and \$16 for book hands, for a ten-hour day.

The following offices agreed to the new order of things, and have been running without interruption : F. A. Marger, Chase & Eddy, the *Mercury*, L. Rober, Lee Hartley, J. M. Sirpless, Young Men's Journal Publishing Company, Kramer & Chandler, W. M. Kimmel, Calvin & Lincoln, Omaha *Times*, Universal Printing Company.

A few days later, Ackerman Brothers & Heintze, one of the largest of the offices, agreed to the scale. At this writing, the following offices are still "out" : The Republican Printing Company,

Rees Printing Company, Festner Printing Company, and *Pokrok Zapadu*, the Bohemian paper ; Burkley Printing Company, Swartz & McKelvey, Redfield Printing Company, Klopp, Bartlett & Co.

It is to be regretted that both sides failed to get together until just upon the eve of August 1.

W. E. B.

## COMPETITION IN SAN FRANCISCO.

To the Editor : SAN FRANCISCO, Cal., August 10, 1891.

There are many reasons to be advanced to account for the dull state of the printing trade. Many of these will be found in the paper entitled "Competition and Its Possible Regulation," which was recently read before the Typothetæ of San Francisco by Charles A. Murdock, the president of that organization. This covers the ground very thoroughly and advances very excellent methods of remedying the prevalent state of affairs. The remedy suggested would necessitate extremely firm action on the part of the employing printers—a firmer stand than has probably ever been taken by any class of trade in carrying on business. The temptations in the way to underbid below a recognized standard would be great and some strong incentive must be prevalent to imbue the printing trade with the necessary stamina to agree to the enforcement of such a system of business. Yet the lamentably poor condition of trade calls for some remedy, and the fact of this season's dullness may have beneficial results if from it is begotten measures conducive to the welfare of the trade.

Another cause which is steadily decreasing the work of the printers in this city is the cheap rate at which lithographing is being done for the business houses. Within the last two or three years it has become noticeable that the number of business firms in this city who use lithographed letter and billheads has increased to an enormous extent. In fact, there are few establishments at the present date which have printed stationery of this character. The prices are so low, on account of the close competition, that in large quantities it is as cheap, and in some cases cheaper, to have lithograph work done, as it is to secure like quantities of printed material. There is no doubt but that this fact is making serious inroads upon the business of the printing firms. However, the other fields are sufficiently extensive should the employing printers combine to insure fair rates and regulate competition to a legitimate standard.

E. P.

## FROM TORONTO.

To the Editor : TORONTO, Ont., August 15, 1891.

Saturday, July 20, was a printers' picnic day. The *Mail* job department held a very successful excursion. The Methodist bookroom took a large crowd to Oakville and enjoyed themselves thoroughly. The chief trip, though, was to Hamilton, where a joint picnic was held in Dundurn Park. About 600 went from Toronto by train, and were joined by several hundreds of Hamilton prints and their friends. The weather was all that could be desired. The excellent band of the 13th Battalion was in attendance and sustained their good reputation. Mr. S. P. Grant superintended the games. It was 7:30 P.M. when the last event was decided. A baseball game between picked nines from No. 91 and 129 resulted in favor of Hamilton by 17 to 13. It is now said that Hamilton had the umpire selected for that purpose, but we are not taking much stock in that. The trophy was a valuable silver cup.

The result of the games was as follows: 100 yards race—G. Hunter, Hamilton, 1; H. Dowling, Hamilton, 2; W. Cumming, Toronto, 3. Married men's race (100 yards)—J. T. Later, Toronto, 1; D. H. Wilson, Toronto, 2; W. Richardson, Hamilton, 3; T. H. Fitzpatrick, Toronto, 4. Apprentice race (100 yards)—G. Crammond, Toronto, 1; F. Shipman, Hamilton, 2; G. Moore, Toronto, 3; H. Modland, Hamilton, 4. Single ladies' race (50 yards)—Mabel Rattray, Hamilton, 1; Nellie Morrison, Hamilton, 2; Mabel Dowling, Hamilton, 3. Fat men's race (75 yards, 180 pounds and over)—F. Crow, Toronto, 1; John Armstrong, Toronto, 2; J. G. Buchanan, Hamilton, 3; John Cronin, Toronto, 4. Married ladies' race (50 yards)—Mrs. Tremble, Hamilton, 1; Mrs. D. Wilson, Toronto, 2. Single men's race (100 yards)—Fred Shipman, Hamilton, 1; J. M. McKay, Toronto, 2; Vincent Smouze, Toronto, 3. Running hop, step and jump—John McKay, Toronto, 1 (43 feet 1 inch); G. Hunter, Hamilton, 2 (40 feet 6¼ inches); A. Minke, Hamilton, 3 (39 feet 5

inches). Union championship race (150 yards) — J. M. McKay, Toronto. Old men's race (40 yards) over 45 years — John Mills, Toronto, 1; J. A. Mayerhoffer, Toronto, 2; G. Cloutier, Toronto, 3; R. Munn, Toronto, 4. Smoking race (100 yards) — Sam Thompson, Toronto, 1; J. T. Later, Toronto, 2; R. Ferguson, Hamilton, 3. Standing jump — J. Murphy, Hamilton, 1 (9 feet 11½ inches); L. Stewart, Hamilton, 2 (9 feet 8 inches); W. Cumming, Toronto, 3. Stewart and Cumming at first tied at 9 feet 7 inches. Girls' race (50 yards) — Mabel Mulligan, Toronto, 1; Teresa Meehan, Toronto, 2; Mary Meehan, Toronto, 3. Boys' race — Charles Glebe, Hamilton. Throwing the baseball — M. J. McGarry, Toronto, 280 feet. Hamilton won the tug-of-war in two straight heats.

There was a drawing for a number of valuable prizes, the first being a valuable silver cup presented by Mayor Clarke, which was won by a Toronto man.

W. G. F.

### AN OUTRAGE TO PRINTERS.

To the Editor: OWEGO, N. Y., August 9, 1891.

Much has already been written in regard to the outrage the government is continually practicing on the printers of the United States in printing the stamped envelopes, and still more should be said against this evil until it shall cease entirely.

There are many ways in which this evil can be remedied, and I think of one which I have not as yet seen put forth, it being as follows:

The government now charges for one grade of envelopes, including the printing of the return card, \$21.80 per thousand, thus allowing \$1.80 for the envelopes and printing. Now, any printer knows that the envelopes in the quantity they use, can be bought, at least, for 75 cents per thousand, thus allowing over a dollar or a dollar for the time, and five cents for ink, which is plenty. Now, why should the government charge such an enormous profit for this work, which any experienced printer will say is a "fat" price for this work, considering the amount of it done.

Why cannot the government sell stamped envelopes to printers for, say \$20.75 per thousand or thereabouts, and leave the profit of printing to the printers in their respective towns. All the merchants, banks, manufacturers, etc., would have to do, would be to order their stamped envelopes of the printer the same as any other class of printed matter. There need be no more trouble or expense to the consumer than there is at present.

As it is now, the consumer has sometimes to wait a long time before he can get his order filled for envelopes printed by the government.

At present the government will not sell stamped envelopes in five hundred or one thousand lots, or any quantity in fact, any cheaper blank than if they were printed.

If the printers are bound to break down this evil there is still another way to get around this business, and one which I am trying to some extent, and that is to furnish as good an envelope as the government does and print the business card thereon for parties, buying and stamping the envelopes myself, which can be done at a small expense, aside from the printing, leaving a fair profit for myself.

Hoping, in the near future, to see this evil entirely done away with, I remain, Yours for protection,

L. L. B.

### AN EXHORTATION.

To the Editor: BOSTON, Mass., July 15, 1891.

"Wanted: A competent foreman or superintendent." A rare bird just at present, Messrs. Master Printers, very rare, isn't he? Down in Rhode Island the other day the proprietor of a large printing office, employing fifty hands or more, told me that he was willing to pay almost any price to a man with whom he could entrust the entire mechanical department of his establishment, but repeated trials had proven the futility of attempting to find a workman of sufficient general knowledge and experience for trust. One would be a skillful compositor and take good care of the type department, but would be entirely lacking in knowledge of pressroom affairs. Another knew all about presses, but failed signally in keeping the composing room wheels in motion. Still another professed to know everything and turned out to be a

dismal failure all around. This is only one instance. Similar complaints are constantly heard by those who go about among offices and talk with employers. Printers of the old school, who learned their trade from A to Z and fitted themselves for service in any capacity, are passing off the stage, and in their places are coming up a class of men of equal ability, but by force of circumstances limited in practical knowledge to one of the two branches into which the trade is divided — composition and presswork. The lesson to be learned from this condition of things is that men who aspire to fit themselves for places of responsibility must make a study of their trade. It is not enough for them to do well whatever is given them to do in their particular capacities as journeymen, but should seek to gain a general knowledge of everything. Observe, read, study, my ambitious friends. Subscribe for THE INLAND PRINTER, and other high-class technical publications, and read them through, advertisements and all. If you have any ideas that you think will interest others, express them in writing as well as you can and send them to the editor. The experience will benefit you, and if your productions are printed — which they doubtless will be — you may give some light to others struggling toward the same end. Some of our best master printers are now contributing valuable papers to the trade magazines, and you can have the benefit of their experience for a trivial outlay. Time spent in study is never lost and the knowledge gained will help you over many an ugly obstacle when you have an office of your own, or find yourself occupying a foreman's chair. G.

### FROM WASHINGTON.

To the Editor: WASHINGTON, D. C., August 15, 1891.

Trade down town is rather slow, about the busiest printing establishment is that of Judd & Detwiler's.

The employés of the government printing office, who aspire to base-ball fame, make a very good showing upon the diamond. Their two games last week with the attachés of the *Cincinnati Enquirer* resulted in the visitors receiving a severe drubbing in each contest. The guests were well entertained and enjoyed themselves hugely while in the city.

On Monday last a new branch office of the government printing office was established in the War Department and occupies a building in close proximity thereto. It is said that there will be employed in this branch office about forty compositors. There have been already a number of compositors from the main office detailed for duty in the new branch. The office is under the able foremanship of Mr. William H. Fisher, late time-keeper of the first division of the government printing office.

Among those who fell victims to the "mighty ax" at the government printing office in March and April last, the following have been reinstated during the past month: Messrs. L. B. Terhune, Preston B. Wright, Charles C. Morton, Howard Branson, W. K. Martin, J. D. Conier, J. F. Moore, Richard Taylor, William Turner, William Raymond, S. L. Evans, C. C. Conlee, Lloyd Prather, George and McCutcheon.

William Hickman, assistant foreman of the *Record* room, has just returned from an extended leave of absence, looking greatly benefited thereby.

The *Record* boys are now, and have been during the greater part of the summer, making big money, a number of the "swifts" signing the pay-roll at the end of the two weeks' "turn in" to anywhere from \$60 to \$80.

Baseball enthusiasts, T. M. Ring and C. H. Cassavant, hugely enjoyed themselves while the *Cincinnati* boys were in the city and strained every nerve to show them lots of fun.

Messrs. D. S. McConnell, L. H. Wisener, D. L. Sandoe, A. P. Beatty and F. C. Kernon have returned to their positions in the first divisions, after an extended leave of absence.

Charles H. Leeds, of the first division, is at present time-keeper of that room, and makes a very impartial and obliging official.

On Monday, August 17, Typographical Union No. 101, of this city, gave its third annual excursion to Marshall Hall, a very cosy

little resort on the Maryland shore of the classic Potomac. There was lots of fun during the stay at Marshall Hall, and besides dancing, there was a prize military drill exercise, participated in by a number of the district guardsmen; the winner was presented with a handsome gold medal in a neat little speech by President John Kennedy. Then came some very pretty fancy dancing by two young ladies, and some expert and daring feats were performed on a bicycle by two young men of the city. All this took place in the handsome dancing pavilion. The Mandolin, Banjo and Guitar Club rendered some very sweet music on the return trip in the evening. Much credit is due the committee of arrangements, Messrs. Thrush, Hinton, Caddick, Stelle, Seagraves and Watson, for their labors to make the affair a success and to see that everybody had a good time. All in all, the union's treasury is much larger than it was before.

EM DASH.

#### "MARKS OF PARENTHESIS AND PUNCTUATION."

To the Editor: ONEONTA, N. Y., August 1, 1891.

Under the above head your correspondent "A. E. D.," in last month's issue, referred to my book, "The Practical Printer," in a manner which calls for some reply from me, and I trust you will allow me the opportunity of publishing that reply in your pages. Referring to my remarks about the use of parentheses he says: "He assumes that a point must be used *after* the last curve whether one is used before the first one or not."

Now, I do not "assume" nor say anything of the kind; what I do say is: "A good many compositors will often put a comma before and after parenthetical matter, which is decidedly wrong." And this statement I am prepared to stand by. But in order that my ideas on this subject may be fully understood I will quote the whole paragraph in my book to which he refers:

*Parenthesis* ( ). The chief use of the parenthesis is to inclose a sentence which is inserted in another sentence for the sake of strengthening the argument or point to be demonstrated, but which could be left out without breaking the sense of the original sentence. For example: "The defendant alleges that before the death of her husband (not after his death, as stated by the plaintiff) Mrs. Jones signed the agreement," etc. Parentheses are also used in other ways, but in all cases the punctuation is not affected by them, and points should be placed just as they would be if no parenthetical matter were there. A good many compositors appear to be in doubt as to this, and will often put a comma before and after such parenthetical matter, which is decidedly wrong; for if they were to lift out the parentheses, and the words which are inclosed, they would be left with two commas instead of one. For example: "The proceedings, as stated by Blackstone, (Chapter III of Commentaries), were all written," etc. Now if the parenthetical matter were lifted out and the other words closed up you would have two commas left. The comma after "Blackstone" should not be there. Sometimes a few words may be put in parentheses at the end of a sentence, and the compositor is puzzled to know whether the period should be put inside or outside. It should be outside. But where a complete sentence is added, and parentheses are marked, then the period should be inside. A few examples may be of service here, as it is well that this point should be thoroughly understood.

"Aconite (Monkswood).—For all feverish and inflammatory affections (with thirst and dry skin), pleurisy, neuralgia and rheumatism (generally the result of cold). (See also Belladonna.)" "Deposit required (except from members of the A. P. A.)." "Reformed Church, Bedford avenue (E. D.); Rev. C. Terhume."

If the reader will carefully compare this passage with the statement made by "A. E. D." he will see where the error lies.

But taking his whole position with regard to points and parentheses I respectfully beg to differ with him. And I am glad to notice that THE INLAND PRINTER is with me, for I counted at least a dozen instances in your last issue where you adopt the same rule that I do and not one case could I find where you adopted the idea suggested by "A. E. D."

Perhaps the weakest part of his argument in favor of his plan was his reference to the Bible. The very passages which he quotes are printed in three different ways in the seven bibles I have before me while writing, and it is significant that in the Oxford Teachers' Bible, Bagster's Bible and the New Translation (three of the newest publications), there is no uniformity, nor is his theory borne out. In a New Testament published by the American Bible Society the passage quoted from Luke is printed with parentheses and without commas.

H. G. BISHOP.

#### SHARP PRACTICE IN BUSINESS.

To the Editor: BALTIMORE, August 15, 1891.

The daily press for some time past has devoted much space to the subject of reciprocity between nations, but the kind of reciprocity that I would call attention to here is of a character which has a bearing upon the craft generally in dealing with others of a kindred calling.

I may not say as to what extent unfair dealing is practiced in other sections between the printer and the bookbinder and the engraver, but in Baltimore there is much complaint as to a matter of the kind.

A well known master printer of this city who has a large office on Baltimore street, down town, gave me some of his experience lately in such connection. This gentleman has no bindery connected with his office, in which bookwork is done chiefly, but it often comes his way to throw a good job of binding into the hands of his neighbors who may have agreed to allow him a certain percentage. Now, his grievance is that most of the bookbinders to whom he has sent customers have broken faith with him, not that they did not pay over percentage, but that they have told said customers that, had they brought their work to a given bindery in the first place, without having consulted with "Mr. Dash," the job would have cost them so much less. This sort of thing is of too general occurrence in Baltimore, and if this statement should meet the eye of any of these unfair men, it may cause some calm reflection on their part, which may lead them to abandon such a short-sighted policy.

Although not quite relevant to the subject of my letter, an instance comes to my mind of a little misunderstanding in a job office down town the other day that might be chronicled in this correspondence in the way of a pointer. The printer man in question, if he sin in connection with a matter of placing his imprint, it is not in the way of omission, for he has a *penchant* for putting it on about every job he does, regardless of any possible impropriety in doing such a thing. But in this particular case he caught a Tartar. He shall be nameless here, but the incident must be told. In printing several thousand billheads for a merchant he put the imprint of the office thereon as usual; but when the merchant discovered this, what he termed a little bit of free advertising at his expense, he refused to take the job. The outcome of the matter was that the printer had to furnish the paper at his own cost, and do the work over again without extra pay. Advertising is a good thing in its way, but one should discriminate at times as to just where one should place that sort of thing.

#### A DENIAL FROM AUSTRALIA.

To the Editor: SYDNEY, N. S. W., July 15, 1891.

A cable message from Vienna to the colonial papers the other day stated, with reference to the strike of compositors in that city, that a strike of printers was to take place shortly, embracing England, the continent of Europe, America and Australia. Now, although I have read that the compositors of America wish to make their grievances known in the shape of a May-day eight-hours agitation, I cannot see any grounds for bringing England's name in, seeing that the London Society of Compositors have won renown quite recently, through their delegates, with a delegation of masters, obtaining a rise of 4 cents per 1,000, not by means of a strike, but in calm conference of argument; which certainly upsets any rumor of a strike in England. As to Australia's part in the business, I am in a position to give a most emphatic denial to the message. There are no two trades unions in the world which have such unanimous control of their districts as the Typographical Societies of Sydney and Melbourne, and such is their power that their grievances have been settled some time ago. Nearly every printer in Melbourne belongs to the society, and the same may be said of Sydney, and the rule which compels every unemployed member to report himself to the secretary every morning tends to strengthen the society's control. The society's offices in these cities are unemployed bureaus, where

We are prepared to execute promptly all orders for any of the above classes of work. Our facilities are unexcelled. We make a specialty of Process and Half-Tone Work. Notice plate on the other side, as a specimen of our productions.

the unemployed's name is put on the book, and when any office requires hands a telephone message is sent to the secretary, who sends down the men whose names are first on the book, and it remains with the employer to take these men (some of whom may be good, others bad) or send for others to take their place, there being no binding or compulsory employment rule.

The other colonies, also, although not so firmly established as the above two, have no reason for a general strike.

But the best argument I can give against the truth of the message is that the whole of the Australian typographical societies are governed in strike matters by their Federation, the Australasian Typographical Union, and, as I have told you above the position of the two premier bodies, that fact would prohibit the union from thinking of such a thing as an Australian strike.

The Australasian Typographical Union is considering the advisability of taking a ballot of all members affiliated on the question, Shall we raise the Defense Fund to £40,000 (\$200,000)? and if this is adopted, a small weekly levy will be struck upon each member. This has no connection with the above rumor, having been under consideration for some time past, being, perhaps, brought promptly forward now as a preventive of the trouble which the master printers of Brisbane state is likely to ensue owing to a desire on their part to cut down wages. Perhaps, after all, it is a politic move.

T. L. MILLS.

#### FROM GALVESTON.

To the Editor : GALVESTON, Texas, August 8, 1891.

Business is decidedly dull, though better times are anticipated soon. The cotton crop will soon be moving at a lively rate, and the proceeds of this great southern staple never fail to lubricate the wheels of trade. These prospects do not justify the incoming of any more printers at present. There are plenty of the craft in the Galveston field to gather the harvest. Besides, it is not a wise move for the northern printer to come south earlier than October. If he does come, even should he "catch on," more than likely the climate will knock him out for a while, and he will wish himself out of it.

A very promising relief association has been formed here in typographical circles, with the following named officers: A. E. Benson, president; Claude R. Miller, vice-president; E. W. Sherrard, secretary-treasurer; T. G. Croft, A. P. Delano and Frank O. Millis, executive board.

The Dallas city directory and the annual report of the Texas State Medical Association, two quite extensive contracts upon which Clarke & Courts have been engaged for some time past, have been completed. The directory is pronounced by competent judges to be one of the finest jobs of the kind ever turned out in the country.

Frank H. Williams, William Hardwick and A. G. Nichols sailed a few days ago on the Mallory steamship, Concho, for New York, where they will cast their lot with the commercial printers of the metropolis.

At a recent meeting of the Texas House chapel, A. E. Benson was elected father.

Several of the northern printers who recently located here are contemplating an exodus towards the Rocky Mountains. The semi-tropical sun, together with a lack of steady employment, renders the heart of the northerner anything but glad at this season of the year.

Since my last letter, H. H. Granger and F. Klink have arrived from Topeka and Chicago respectively. The former is doing the "make-up" in the bookroom at Clarke & Courts', while the latter is holding down a frame in the same office.

The vote here on the nine-hour amendment stood 67 for and 7 against, with 3 blank ballots and a number of members not voting at all.

At the semi-annual election of officers of No. 28, the following principal officers were elected: President, John W. Bell; vice-president and chairman executive committee, J. Sandilands; chairman board of trustees, E. W. Sherrard; chairman finance

committee, J. E. Taylor; financial secretary, J. M. Carroll; recording and corresponding secretary, J. J. Dirks; sergeant at arms, Claude R. Miller.

The printing of the supreme court reports of Texas, over which there has been considerable trouble, has been awarded to Clarke & Courts, of this city, notwithstanding their bid was the third from the lowest made. The work was formerly awarded at different times to two other firms in the state, but for various reasons neither were able to go ahead with the contract. One of these establishments, the Von Boeckman Company, of Austin, declined it on the ground that the work is required to be performed within the state, and as he runs a non-union office and could expect no aid from the union printers, his fears of not being able to secure enough non-union help made his action necessary. If all states were like the "Lone Star" in this respect, the typographical millenium would surely be near at hand. The work referred to will embrace about 4,000 pages. It will be begun at once.

The several amendments to the international constitution will be voted on this week, and it is probable that they will all carry.

At the August meeting of No. 28, a committee was appointed to revise the scale of prices. This means no radical change in the scale, but it is sought to get it into a little better and more intelligent working shape.

Ex-president S. J. Triplett has returned from El Paso, and is at present working on the *Tribune*.

Forty-eight subs were reported at the *News* a few days ago. This does not look as though the midsummer sun of the far south had much effect in decimating the ranks of newspaper printers in this neighborhood.

A \$500 monument will be erected by No. 28 on its cemetery lot, to mark the resting place of those of our brothers who become weary and lay down the stick and rule forever among us.

TWO-NICK.

#### A FRENCH JOURNAL'S THIRD CENTENNIAL.

The third centenary of the establishment of the printing office of the *Courrier du Pas-de-Calais* has just been celebrated at Arras, France. In 1591 Guillaume de la Rivière, master printer, and Charles Pouillet were granted a decree by the Communal Council of Arras permitting them to establish a printing office, exempting them from certain duties, and giving them the citizenship of Arras. That same year La Rivière printed a book on his press, the title page of which is now reproduced by the *Courrier* with perfect likeness by means of photogravure.

In 1673 the family of Rivière became extinct, but the establishment founded by him has continued since without interruption. Nine names have figured at the head of the house in the 300 years, M. Laroche being the present director.

As a souvenir of the second century of the existence of the house, the *Courrier* reproduces the title of an almanac printed in 1791, which is still extant, but exceedingly rare and much sought for by collectors. The first attempt at the publication of a regular paper was made May 30, 1789, and was called *Feuille d'annonces*. It appeared every five days. The name was changed to *Feuille d'affiches, annonces et avis divers de la ville d'Arras* (rather long), and was published twice a week. Copy of advertisements had to be furnished two days in advance of publication. In 1826 the administration elongated the name to *Affiches et Annonces judiciaires, administratives et commerciales de la ville d'Arras et du département du Pas-de-Calais*, and showed the further enterprise of publishing the names of the respective saints which ruled the next three days, the rising and setting of the sun and moon, and the hours for the opening and closing of the city gates. Such was primitive journalism in the North of France. Today the insignificant *Feuille d'annonces* of the early part of this century is the *Courrier du Pas-de-Calais*, a large, influential modern daily. The 300th anniversary of the foundation of the establishment was celebrated by a banquet, which all connected with the house and many visitors enjoyed.

## DAVID CLAPP.

David Clapp was born in Dorchester, Massachusetts, February 6, 1806. In 1822 he entered, as an apprentice, the printing office (then 47 Marlborough street) of John Cotton, Jr., who had just finished serving his time with Munroe & Francis, on the south side of what is now Washington and Water streets. Young Clapp finished his apprenticeship in the office after it had passed into the hands of John Cotton, Sr., receiving a certificate of faithful service from the Massachusetts Charitable Mechanic Association, signed by the Hon. Samuel T. Armstrong, president, which he now holds. He still remained in the office, having the chief care of it, till 1831, when a brief partnership was entered into with Mr. Cotton, Sr., and Mr. Henry S. Hull, the firm taking the name of Clapp & Hull. This partnership was soon dissolved, when Mr. Cotton and Mr. Clapp became partners, and continued such, adopting the firm name of D. Clapp, Jr., & Co., till 1834, when Mr. Clapp bought out the office, and continued the business on the old corner (then 184 Washington street) till 1861. Franklin street was then widened at its head, the corner building taken down, and the printing office, having remained in that place for a period of thirty-nine years after Mr. Clapp entered it, was removed to No. 334 (afterward 564) Washington street. In 1864, his oldest son, John Cotton Clapp, was taken into partnership with him, and the firm has since then continued the business under the name of David Clapp & Son. In 1882, after Mr. Clapp had been located on Washington street for sixty continuous years, the office was removed to No. 35 Bedford street, and again in 1889 (the building being demolished) to its present location at 115 High street.

While Mr. Clapp was an apprentice with John Cotton, in 1823, the publication of the *Medical Intelligencer* (a small quarto), the first weekly medical periodical in the country, edited by Dr. J. V. C. Smith, was commenced in the office, and in 1828 was united with another periodical, enlarged and continued in octavo form as the *Boston Medical and Surgical Journal*, edited at first by Drs. J. C. Warren, Walter Channing and John Ware. It became the sole property of Mr. Clapp in 1834, and was issued from the office, without the omission of a single weekly number, till 1875, when it was purchased by a company of medical men, and its place of publication removed. It was the only scientific weekly medical periodical in the country, was several times enlarged, was well patronized, and furnished a fair income. Mr. Clapp had been connected with it as proprietor and publisher for about fifty years.

The Boston directory was printed in the office, corner of Franklin street, from 1829 to 1846, when for a consideration it was transferred by Charles Stimpson, the publisher, to the late Mr. George Adams, by whom and his successors it has since been continued, and very greatly enlarged. The present *Christian Register*, then first begun, was also printed in the office when

Mr. Clapp first entered it, and among his earliest apprentice errands was the weekly carrying to the stage taverns in the city, copies of that paper for out-of-town subscribers.

All the presswork in the old office, for the first year, at least, was done on the Ramage press, then in common use, having a 12 by 20 wooden platen, which covered but half a sheet of medium paper, thus requiring two "pulls" each side of the sheet. Inking the type was done by the old-fashioned clumsy pelt balls—the "beating" and "pulling" rendering presswork of that day a laborious occupation. This Ramage press is still in existence, and may sometime be brought from its hiding-place and excite the curiosity of a future generation of typos. The improved iron presses, with composition rollers, soon took the place of the Ramage and inking balls, which in turn were followed by the power presses for book and job printing now in general use.

On the opening of the Boston and Worcester railroad in 1834 or '35, the first superintendent, James Freeman Curtis, brought into the old office a short notice to be printed on a slip of paper, for which a fractional part of a dollar was charged. This was repeated, and led the way to more printing for this and other railroads, which has continued in some form to the present time. Much miscellaneous book and pamphlet, as well as job work, emanated from Mr. Clapp's press; and the imprint often announced that he was publisher as well as printer. Mr. Clapp has long been a member of the New England Historic Genealogical Society, whose quarterly *Register* has been printed by the firm for the past twenty-five years.

Mr. Clapp has never been in public life—his retiring habits causing him to go but little about, and his chief business attention has been given to the affairs of the office,—he often spending therein daily, in his earlier life, more hours in each of the twenty-four than were left to spend elsewhere; neither has much of his time been lost, as he says, "by sickness or vacations." In 1839 he became a member,

and is now a life member, of the Massachusetts Charitable Mechanic Association. In connection with this membership, it may prove interesting to state that one of Mr. Clapp's early partners in business, John Cotton, Sr., was an original member of this association in 1795, was for several years afterward its president, then its treasurer, and died a member in the latter part of 1837, thus making an almost unbroken membership of the two partners in succession, up to 1891, of nearly one hundred years.

Mr. Clapp may be daily seen on the streets of Boston. He still continues in "the harness," and withal finds time to contribute to the press many valuable reminiscences of the past. In this respect the public have been much indebted to him of late, through the "Notes and Queries" department of the *Boston Transcript*. His personal modesty would object to anything more than a mere recital of his business career; but we cannot close this sketch without attesting to the universal esteem in which he is held by the general public.—*The Printers' Bulletin*.

### "THE TEXAS HOUSE," OF GALVESTON.

Few northern readers of *THE INLAND PRINTER* are aware of the extent to which the printing and stationery manufacturing business has grown in the South, and especially is this true of Galveston, Texas, the Gulf City, the home of the oleander, where roses bloom the year 'round, and myriads of semi-tropical flowers continually lade the balmy air with their fragrant perfume. Galveston with justifiable pride claims the location of the most extensive printing and stationery house west of Chicago in the United States.

The firm of Clarke & Courts was organized in 1880, the members consisting of Robert Clarke and George M. Courts. Mr. Clarke came originally from New Orleans, where he learned the practical part of the printing business, both in the pressroom and at the case. This knowledge, combined with his thorough business qualifications and indomitable energy, has had much to do with the success of the house which bears his name. Mr. Courts is a native Texan of marked business ability, who perfected himself in the stationery business with the late Walter Robinson, and the welfare of the establishment has been greatly enhanced by his keen business foresight and wise counsels.

The business, modestly endowed with capital at first, has enjoyed uninterrupted success, and in 1886 the demands upon the establishment became so great that enlargement was found necessary, and the present stock company was organized. The stockholders are principally Galveston men, and the amount of paid-up capital is \$200,000. The name, "The Texas House," was adopted at the beginning, and over the entire southern country it has become a name synonymous with good work and fair dealing. In addition to the extensive line of their own manufacture the firm carries a complete line of everything to be found in the modern wholesale stationery house, including all kinds of office furniture. The principal field from which the establishment draws its patronage consists of Texas, Louisiana, Arkansas, Tennessee, New Mexico and Mexico. This territory is regularly covered by a force of traveling men, numbering from ten to fifteen.

The present quarters, of which the accompanying cut conveys a fair idea, were occupied in January, 1891. The building is of brick, covered with cement, and artistically finished, which gives it the appearance of stone. It is the finest structure of a business kind in the city. The frontage on Twenty-fourth street is 120 feet, and on Mechanic street, 86 feet. It is five stories high, the several floors containing a working space of 50,000 square feet. The cost of the building and ground was \$100,000. The number of persons employed approximates two hundred.

The ground floor is occupied by the offices of the company, the wholesale and retail stationery departments, the shipping department and the engine room.

On the second floor is located the bindery, which is fitted up with all the modern appliances and latest styles of machinery with which to turn out the great amount of work called for in this line. Mr. M. P. Tidd presides over this department, ably assisted by W. P. Tidd.

On the third floor are found the various branches of the lithographing part of the business, and the electro and stereotype foundry, all in active operation, with unsurpassed facilities for executing the artistic work for which the house is noted. The gentlemen in charge here are Richard Helms, foreman engraving department; Alex. Machin, foreman transfer department; Charles G. Marks, foreman pressroom; H. G. Ketchum, in charge of electrotpe foundry.

The fourth floor presents the busiest scene in the whole building, for here is the printing office with its tons of material being handled daily by the many compositors, and the twenty power presses turning out piles of work unexcelled anywhere. Mr. W. P. Dougherty, as general manager of this department, is ably assisted by D. B. Skinner, foreman of the bookroom; Mort. Bookwalter,

foreman of the pressroom; F. L. Robinson, head proofreader.

The stock department occupies the fifth floor, and here come all packages of material and stock, where they are opened, and as occasion demands, sent to the various departments of the building for use. Mr. C. Epersen is head stockkeeper, with Alexander Reifel as assistant.

The building as a whole is a model of its kind. Constructed after the plans of practical men, who designed it especially for convenience and comfort, it presents a degree of perfection well worthy of more extended notice than our space will permit. Light and air

have free access from four sides, and the internal arrangement throughout leaves nothing more to be desired.

The future of the "Texas House" is bright. The constant development of the great Southern Empire affords a gigantic field for future as well as present operation, and the application of this firm in the past if continued in the business cannot fail to produce results, the magnitude of which it would be difficult to estimate.

THERE is not now a single descendant in the male line of Chaucer, Shakespeare, Spencer, Milton, Cowley, Butler, Dryden, Pope, Cowper, Goldsmith, Byron or Moore; not one of Sir Philip Sidney, nor of Sir Walter Raleigh; not one of Drake, Cromwell, Hampden, Monk, Marlborough, Petersborough or Nelson; not one of Bolingbroke, Walpole, Chatham, Pitt, Fox, Burke, Grattan or Canning; not one of Bacon, Locke, Newton or Davy; not one of Hume, Gibbon or Macaulay; not one of Hogarth, Sir Joshua Reynolds or Sir Thomas Lawrence; not one of David Garrick, John Kemble or Edmund Kean.—*Chicago News*.

Written for THE INLAND PRINTER.

### THE PRINTER'S LOVE.

BY ERNEST W. BAGG.

The galley sails have long been set,  
Her lovely form at last I see;  
It glorifies the *alphabet*,  
The type of all that's fair to me!

Her cheeks with roses would I *print*  
And on her lips Love's *proof* bestow;  
I'd go to *press*, with ne'er a stint,  
Her hand in mine — I love her so!

I dream I stand within the church;  
The very *font* seems out of *sorts*;  
My rival, badly in the lurch,  
To love him my fair one exhorts!

The *bold-faced minion* then I took  
(My wrath a saint would *justify*);  
I used the *stick*, then fiercely shook  
The knave into a hopeless "*pi*"!

Her humble *page* would this subjoin  
And *publish*, that the world may know,  
Though all unused to lover's *quoin*,  
I *mitre* married long ago!

Her *composition*, full of grace,  
So far transcends my feeble praise,  
I'll never weary in the *chase*,  
But follow *copy* all my days!

### GEORGE D. PRENTICE AND GEORGE FRANCIS TRAIN.

A correspondent sends us a clipping from the Fairhaven (Wash.) *Democrat*, with an explanatory note attached, as follows: The occasion of the following was a lecture by George Francis Train in our opera house on the evening following his last trip around the world, starting from and arriving at New Whatcom, Washington. There were many distinguished men present on the stage with the lecturer, and many reminiscences were related. Col. W. L. Vischer, editor of the Fairhaven *Herald*, an old acquaintance of Mr. Train's, was present, and Mr. Train insisted upon his giving the audience a description of his (Mr. Train's) visit to George D. Prentice, of the Louisville *Journal*. As Colonel Vischer is something of a mimic, and paced the stage in the same manner as Prentice, the audience went into an uproar of applause, none enjoying it more than Mr. Train who corroborated every word.

Many years ago George D. Prentice, the famous editor, wit and poet of the Louisville *Journal*, for that was long before the *Journal* and *Courier* were consolidated, was at work in his private editorial room in the Journal building dictating to his amanuensis. Prentice always wrote with the aid of an amanuensis because he was afflicted during the last twenty years or more of his life with *chorea scriptorum* — writer's paralysis. While thus engaged there came a rap at the door, and the amanuensis opened it to see who was there. A very handsome young man, with a crown of wavy black hair, a graceful moustache and a suave manner stood there. He was dressed in a blue cut-away or "swallow tail" coat, of the old style, with smooth brass buttons. His vest was of some heavy white material, his pantaloons black doeskin, his shoes of patent leather and on his head he held a broad-brimmed soft hat. He presented his card, which bore the name "George Francis Train," and on it the owner had written in blue or red pencil, *Civis Americanus Sum*. He was presented to Mr. Prentice, and soon the two were in easy and pleasant converse on all manner of subjects. After a stay of perhaps thirty minutes, Mr. Train took his leave, and when he was gone Mr. Prentice began to walk the floor in his slip-shod way, and presently said to his amanuensis, "Write and I will dictate a paragraph concerning Mr. Train," and he dictated as follows, punctuating his matter as he went, as was his custom:

"(Fist) ~~to~~ A locomotive that has run off the track (comma) turned upside down (comma) with the cowcatcher buried in a stump and the wheels making a thousand revolutions a minute (full stop) A kite in the air that has lost its tail (dash) a human novel without a hero (dash) a man who climbs a tree for a bird's nest (comma) out on a limb (comma) and in order to get it saws the limb off between himself and the tree (full stop) A ship without a rudder (dash) a clock without hands (dash) an arrow shot into the air (dash) a sermon that is all text (dash) a pantomime of words (dash) the apotheosis

of talk (dash) the incarnation of gab (full stop) Handsome (comma) vivacious (comma) muscular (comma) as neat as a cat (comma) clean to the marrow (comma) a judge of the effect of clothes (comma) frugal in food and regular only in habits (full stop) A noontime mystery (dash) a solid conundrum (dash) a cypher hunting for a figure to pass for something (semicolon) with the brains of twenty men in his head (comma) all pulling in different directions (semicolon) not bad as to heart (comma) but a man who has shaken hands with reverence (full stop) This is George Francis Train (full stop)"

### WHAT IS A "FAKE?"

"Fake" is a very expressive term. It is a hard-worked word. Possibly because those who use slang as their daily speech are not blessed with a superabundance of vocabularies, "fake," like its synonym "do," has a rich variety of applications, something like the use to which "fix" is put in the mouth of an average American with a scanty vocabulary. "Do," like "fake," means both to "do" and to do something dishonest, as in the phrase he was "done" out of it, or for short "done." Probably "fake" is derived from "facere," and "fakement" from "facimentum." The widest sense of the word is to do something, to make, to construct, then to forge, to cheat, to steal. In the autobiography of Lord Chief Baron Nicholson "fake" means, in one case, an old lag, which being translated in the vulgar tongue is interpreted "returned convict" in the style of Jean Valjean. In the once famous ditty, doubtless written by the learned Dr. Maginn but claimed by Harrison Ainsworth, "Nix my dolly, pals, fake away," it means to push on stealing. "Fake a cly" in the same classic poem means "pick a pocket." A faker — so and rightly spelt in Hotten's Slang Dictionary — is one who fakes. A fakement is anything used for a fake. So an actor's materials for "making up his mug," adorning his face for his part, are called fakements. Any trade, trick, contrivance, invention, is called by "the White-chapel pals" of the "Artful Dodger," and their successors, a fakement. In the old song of "The Tater Can," the bearer of said contrivance for selling hot potatoes boasts that "to every fakement he is fly." In the same region now rendered notorious by Jack the Ripper, a tailor advertises his goods in the slang of the prigs, cadgers and costermongers of the locality. He offers a "pair of mole-skins, any color, built hanky-panky, with a double fakement down the sides and artful buttons at the bottom for half a monarch." This means mole-skin trousers with double seam down the side, pearl buttons at the bottom for ten shillings, half a sovereign. Our American slaves of the press are undoubtedly wrong when they write and print fakir with an *i*, meaning, as Hyde Clarke says, "a Mahometan monk," for faker, with an *e*, one that fakes, a thoroughly English word and character which American pressreaders insist on clapping a turban upon and making a Mussulman of. Faker is the genuine form.—*Exchange*.

### CELLULOID FOR PRINTING PLATES.

Among the objects exhibited during the last meeting of the "Fachtechnische Club" of the State Printing Office in Vienna, there were some celluloid plates by Mr. August Denk, proprietor of the embossing establishment at Vienna, containing transfers from copper engravings. These celluloid plates, which have a milk-white appearance, are somewhat transparent and flexible, and are so hard that they may be printed from the same as a copper plate. The proofs exhibited demonstrate that the impressions are as clean and perfect as those made from the original plate.

Celluloid may thus be employed to good advantage in copper engraving establishments. If, on account of celluloid being so ignitable, one should hesitate to use such plates, they may be employed with great advantage for reproducing original plates by making celluloid negatives, instead of using silver, and making electrotype printing plates from these negatives.

Celluloid printing plates which were exhibited and which had been rubbed in with ink were really works of art, which could easily be used as window transparencies or tops for toilet and other fancy boxes.—*Exchange*.

**MECHANICAL MOVEMENTS ON CYLINDER PRESSES.**

Outside of the fact that the improvement of cylindrical designed printing presses must continue, in speed and in other respects, in order to keep pace with the demands of the times, no other mechanical problem pertaining thereto is assuming greater importance than that which has practical reference to the best methods of directing and controlling the bed and cylinder movements of this make of machine.

The purchaser of a bed and cylinder printing press today keenly realizes the necessities of his growing business; the speed at which he must turn out work in order that he may make a profit on it; the wear and tear on his type and plates from the use of inferior or erroneously constructed printing machinery, and also to the

Much comment has been expended on the merits and demerits of the "universal joint," or Napier movement; the Middleton movement; the Taylor movement, etc., all popular and well known.

If the reader will follow us, we will endeavor to make plain some reasons why the Scott movement under consideration is one of the more recent and valuable in its application to the work to be done by it from different standpoints. Let us, therefore, observe, to begin, the entire absence of the universal joint, and in its stead is placed a solid bed-driving shaft, without a joint, which is fitted with a spur and bevel gear wheel on one end, and a star gear wheel on the other. The simplicity of this device is apparent. It is actuated and controlled by reciprocal movement from the driving gear, which is also spur and bevel geared, thereby insuring to bed and cylinder a positive, instantaneous and harmonized movement,

SECTIONAL VIEW OF THE "SCOTT" PRESS MOVEMENT.

liability of being compelled to duplicate his presses too often should they be built on principles of an objectionable or hazardous character.

These considerations, if no other were forced upon him, are sure to become closely allied to his thoughts when in need of new presses, and if his judgment has been ripened by experience he will not forget to practice the lesson which it has taught him. Whatever this experience may have led him to do, as to the study of printing machinery, he should not overlook the important fact that the device which actuates the movements of the bed and cylinder of a printing press should be his first consideration.

By way of illustrating one of the more modern devices which has been applied to and in use on fast-running presses, and which is deserving of our attention at present, we show a sectional drawing of the "Scott" movement.

because there are no secondary parts to militate against perfect unison, and because the diameter and precision of the gears are never disturbed by extreme angles, the propelling or directing points of the shaft being so far separated from each other as to, at all times, be in true fit in the gears.

It may be asked, what special benefit is derived by having the shaft in one solid piece, and distinct from movements which have a complex character, yet are still in general use?

(1) The advantage of a solid shaft is to dispense with the double-jointed device known as the universal joint, which, from its combination, hazards durability and absolute action by its operation with the bed and cylinder from the points of contact with the intermediate and alternating pinion gearing.

(2) In placing the hanging rack well to the right of the bed, the driving forces of the press are more properly equalized, and as one

large air-cushion cylinder is better than two small ones, this is properly placed under the center of the bed. Besides, the farther the hanging-gear rack is located from the driving-gear, the less angling is on the gears, or on a universal joint, if that device was in use.

(3) The single shaft truly possesses and conveys more direct and uniform power than is possible with the Napier movement, simply because it is a perfectly even, whole and continuous motion from one end to the other. In other words, the bed-driving shaft, being in one piece and its gearing, bevel or spur (according to the way the bed is moving — forward or backward), is in absolute contact with its driver, tooth for tooth (as in ordinary constructed gearing), having a fixed axis, it is impossible to vary either in direct motion or in register with the cylinder, when that important function is being performed.

(4) In the case of the movement under consideration, we find that we have meshing together two spur gears when the bed is moving to print, and two bevel gears when the bed is returning. In each case the action and contact is as perfect as if fixed continuously in one position. In the Taylor movement this is not possible; for when the press is moving forward or backward one bevel and one spur gear mesh together, practically forming a non-theoretical and imperfect mechanical combination, which, from its imperfect mechanical harmony, must be productive of considerable lost motion, or "back-lash," and, consequently, bad register, and finally become a weak and faulty construction. It may be asked, is the destructive force of bed and cylinder (while printing a form) more apparent on one part of a form than on another? To this question let us answer that we cannot see why there should be any difference in a movement such as we are describing, because there is no lost motion in driving the bed in unison with the cylinder. Any device which reduces the angle of the shaft while printing reduces the irregularity of the bed's motion. In the Scott movement, the shaft is absolutely straight from end to end when printing, and but slightly angled on the return motion, which is equally adjusted by means of the beveled gear at the shaft and the intermediate point.

(5) The Taylor movement, notwithstanding its inherent defects, has elicited much praise, and its adoption, in some shape or other, by several of the leading press builders, has added to its popularity. Scott has, obviously, utilized a few of the more important features of this movement, and added to and improved such as he has deemed applicable to his own devices. This difference between Scott and Taylor is apparent by the manner in which Scott has placed the star-wheel driving shaft on a level while the bed is moving in one direction — printing — and at a short angle when returning in the opposite direction. Also, in driving by two gears on the outside to the main gearing on a spur, and the other on a bevel. When the shaft is level, the spur gear is driving; when the shaft is at an angle, the bevel gears are driving. Thus we have a correct movement or train of gears while the bed is running in either direction. These gears are held rigidly between bearings, the teeth of the bevel being on the same parallel line as those on the spur gears. The Taylor movement has a rocking two-faced gear, meshing into a spur gear, and not as reliable, in regard to register, as its firmest adherents desire (although superior to the universal joint). Indeed, one press builder using the universal joint has been induced to put a "shoe-brake" on his cylinder to enable the bed to drop into register with it. If this "brake" had been put on the bed, instead of the cylinder (as it certainly appears to be the cause of variations in register), there might have been a more effective remedy to the defective register, if such existed.

In the several respects alluded to, the Scott movement differs from all other fast printing and registering machines, and may, with propriety, be placed in the forward rank of improved mechanical reciprocal devices for scientifically uniting bed and cylinder, and for durability and absolute register. — *The American Art Printer*.

LORD ASHBURNHAM'S famous "Textus of the Gospels" is valued at \$50,000 and is on view at the Bookbinder's Exposition in London with the Mazarine Bible and Mary Tudor prayer-book.

#### BOOKS RECEIVED.

AMONG the new foreign publications in the scientific field is the *Pantobiblion*, edited and published at St. Petersburg, M. A. Kercha, editor. The object of the book is to serve as a guide or handbook to all interested in the exact sciences regarding the selection of the proper literature treating on the different branches of modern science. To accomplish this end, the *Pantobiblion* gives a list of all new scientific works published in a living language, or series of articles criticising and reviewing the more important books in the language in which the book is written, a critical review of all journals or periodicals devoted to polytechnic and the sciences. The first number of this new and interesting publication contains the names of about 1,200 new books, 80 criticisms, and the summaries of 270 journals, the whole including the French, English, German, Italian, Spanish, Portuguese, Dutch, Swedish, Danish, Hungarian, Roumanian, Russian, Polish and Bohemian languages.

COMPETITIVE BIDDING, WITH ITS RESULTANT EVILS; a paper read by Thomas Todd before the Master Printers' Club, Boston, Massachusetts, June 18, 1891.

Within the compass of twenty-two  $4\frac{1}{2}$  by  $2\frac{1}{2}$  long primer pages, Mr. Todd presents the results of a deep insight into the evils of competitive bidding, and his treatment of the question finds its keynote in the exhortation "Do not estimate whenever you can avoid it."

LABOR DAY SOUVENIR OF THE CHICAGO TRADE AND LABOR ASSEMBLY. Danks & Co., publishers, Walker & Robertson, printers, Chicago.

This souvenir contains a large amount of interesting information on labor problems with statistical matter compiled from various sources. Its editor, Mr. T. H. Morgan, has performed his part with credit, while the ninety-six folio pages and colored inserts, and cover of red leatherette printed in gold bronze, derive their mechanical excellence at the hands of Messrs. James Johnston and B. Nolan, foremen of Messrs. Walker & Robertson's composing and press rooms respectively.

SOUVENIR VOLUME OF THE MICHIGAN STATE PRESS ASSOCIATION: A Story Written by the Editors Themselves. Compiled and arranged by Fred Slocum, Secretary. 130 pages; 35 cents.

This handsome brochure is highly attractive in its typographical appearance. The cover is embossed in white and gold, and tied with a white silk cord. It is printed on fine plate paper and has almost two hundred half-tone engravings. The contents are of absorbing interest, the history of the association's travels being taken up by the editors one from another, the result being altogether unique and attractive. Address Fred Slocum, *Detroit Journal*, Detroit, Michigan.

OSBORNE OF ARROCHAR. By Amanda M. Douglas. Lee & Shepard, publishers, Boston, Massachusetts.

Of this volume the *Providence Journal* says that it is the nineteenth novel on Miss Douglas' list, and yet her hand has not lost its cunning, nor her imagination its power to create. This popular writer embodies in her latest romance the same ingenuity in the construction of the plot, the same abundant resources in its development and the same power to arouse an absorbing interest that mark all her work. She occupies a field entirely her own. Her command of language is marvelous, her style is earnest and realistic, and her characters play their parts with an individuality so pronounced that no confusion arises on account of the large number that mingle in the action. Miss Douglas has done no better work than this book bears witness to. It is strong, earnest, intensely interesting, graphic in portraiture and vivid in description.

At a regular meeting of the St. Paul Typothetæ, held August 6, the following were elected as delegates to the National Typothetæ, to be held at Cincinnati, October 20: David Ramaley, George M. Stanchfield, C. P. Stine, T. J. Price, B. B. Anderson. Alternates — H. L. Collins, W. L. Banning, Charles H. Evans, A. E. Vose. W. T. Rich, secretary.

**I**LLUSTRATIONS in Half-Tone for all illustrative purposes. We make a specialty of this process, and our success is demonstrated by the opinions of our patrons and by our specimens (see other side).

We have two establishments well equipped with the best appliances and apparatus, and employ none but the highest skilled labor, and our combined facilities enable us to furnish the best work at reasonable prices, and with dispatch.

Below we note some testimonials, but a trial order will convince you of our ability to please you.

**FROM WM. J. KELLEY, ED. "AMERICAN ART PRINTER," N. Y. CITY.**

The writer does not desire to flatter your merit beyond any degree of merit when he says, that after examining the work of other parties, he considers yours as equal to, and in some respects above, the average.

**FROM "LEISURE HOURS," PHILADELPHIA.**

We must congratulate you on the excellent reproduction of the last plate made for us. It was absolutely perfect. The light and shade charming. Keep up the good work.

**FROM L. C. HASCALL, PRES. FRATERNITY PUB. CO., BOSTON.**

I am very much pleased with the cuts made for the new book, and I have no cause and your concern highly. I consider you do the best work of any concern in the country, and you are at liberty to refer to us at any time.

**FROM AMERICAN PRINTING HOUSE, PHILADELPHIA.**

As the requirements of the work in which we used the sixty-five cuts you recently engraved made us rather severe and exacting it is but just to add to the credit due our talent satisfaction and delight at the results. We were able to proceed to and finish with little or no trouble with the press-work. They were printed system at the impression, and only needed about two washings to give 1,000 impressions.

The above, and many others which we have, show the high appreciation in which our work is held by parties who have tried it.

Correspondence and requests for estimates are cordially invited, and will receive our prompt and careful attention.

# THE COX DUPLEX PERFECTING PRESS AND FOLDING MACHINE.

Delivers 3,500 to 4,500 perfect papers, folded, per hour, either four, six or eight pages, from flat beds and ordinary type forms.

MR. T. C. O'HARA, the well-known expert machinist of the *Boston Herald*, under date of September 10, 1890, writes as follows to MR. H. I. DILLENBACK, manager of the Rutland (Vt.) *Herald*, the purchaser of the first of the above machines :

BOSTON, MASS., September 10, 1890.

At your request I attended the shop test of the new COX DUPLEX WEB PERFECTING PRESS, built for the Rutland *Herald*, and carefully inspected its operation and made a thorough examination of its construction. The press stood partly over a pit and partly on the floor, upon planks, and was not fastened down in any way ; and it was run by a four-inch belt. At the first trial of speed, it ran at the rate of 3,000 complete papers per hour ; at the second, 3,600 ; at the third, 4,560. Its operation during these trials caused no perceptible jar of the machine nor of the floor of the building, nor did it give any indication of strain upon the machine, and it ran with perfect steadiness and smoothness. The principle of the machine, while novel, is entirely practical, and overcomes entirely the obstacles to speed and smooth running always heretofore encountered in the construction of flat-bed printing presses, and in my opinion the invention has solved the great problem in the construction of machines for the use of newspapers of moderate circulation, desiring to print from type at high speed, in a manner destined to revolutionize this branch of printing press manufacture.

Under date of December 9, 1890, Mr. Dillenback, Manager of the *Herald*, writes :

The press is running nicely. I believe it to be the press, without a rival, for newspapers desiring to secure all the advantages of a fast perfecting press without the delays, expense and other disadvantages of stereotyping ; and I do not hesitate to recommend it unqualifiedly. The press runs smoothly and economically, is handled with ease by a young man who never before saw a perfecting press, is thoroughly well built, and does better work than the vast majority of presses. I know of no "outs" about it, and feel justified in saying that no one can say aught but in praise of it.

DUPLEX PRINTING PRESS CO., Battle Creek, Mich. :

Office of TOLEDO DAILY COMMERCIAL, TOLEDO, OHIO, June 24, 1891.

Gentlemen,— Permit me to congratulate you upon your success in fulfilling the contract recently made with you to build a flat-bed perfecting press and folding machine to produce the *Toledo Commercial* at a speed of from 3,500 to 4,000 copies per hour. I have carefully studied the machine, so far as the pressure of business permitted, while being erected and adjusted in our pressroom, and I this morning personally witnessed the production of a full edition of the *Commercial* at the rate of 3,600 per hour—which we may call the final test—and upon which the machine was accepted.

I take this means to acknowledge my satisfaction with the test, and hereby formally accept the machine under the contract. The money in full for the press has been deposited to your credit, and now awaits your order.

The experience obtained in this brief trial of your press justifies the hope that large savings will be made in the pressroom over the necessary expenses to be met in stereotyping and operating a stereotype press, such as we have heretofore been using.

Very truly yours,

P. C. BOYLE, Pres. Toledo Commercial Co.

This press will print and fold, with equal speed, either a four, six or eight page paper, without any adjustment.

# PRINTERS, TAKE NOTICE!

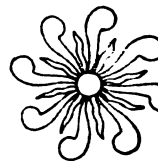

The WETTER CONSECUTIVE NUMBERING MACHINES are covered by the following U. S. Patents:

- MAY 26, 1885.    OCT. 12, 1886.    DEC. 7, 1886.    DEC. 13, 1887.    DEC. 13, 1887.
  - AUG. 21, 1888.    OCT. 16, 1888.    NOV. 5, 1889.    APRIL 15, 1890.    APRIL 15, 1890.
- AND FURTHER PATENTS PENDING.

These different patents embrace every conceivable method of operating numbering machines that are made the height of type, to be used on printing presses without attachments of any kind.

Many attempts have been made to infringe on our patents by parties substituting numbering machines of a construction likely to deceive the purchaser. In view of such facts, we feel it our duty to caution printers to be careful not to purchase an infringing article. Our machines have been in constant use for the past five years in the leading printing offices throughout the United States and Europe, and have proven to be of incalculable value wherever used.

The following are the representative printing houses using the WETTER NUMBERING MACHINES:

	<p>AMERICAN BANK NOTE Co., . . . . . New York. " " " " . . . . . Philadelphia. " " " " . . . . . Boston. FRANKLIN BANK NOTE Co., . . . . . New York. HOMER LEE BANK NOTE Co., . . . . . COMPOSING-ROOM FOREMEN OF CHICAGO DAILIES.

## COMPOSING-ROOM FOREMEN OF CHICAGO DAILIES.

THOMAS E. SULLIVAN,

Foreman of the *Tribune*, the subject of this sketch, was born in Troy, New York, October 16, 1842. He removed from his birthplace to Vermont when but a child, thence to Ohio and finally settled in Manitowoc, Wisconsin, where he entered upon an apprenticeship to the printing trade. After serving his time he came to Chicago in June, 1865, and at once entered the composing room of the *Tribune* as a "sub." He was advanced to "regular," proofreader, and finally to the foremanship, which position he now holds. He is gentlemanly, dignified yet genial, courteous and impartial, filling his position with honor and credit to himself, and to the satisfaction of both employers and employes. Mr. Sullivan has been a life-long and consistent member of Typographical Union No. 16, and in point of service is the oldest foreman in the city, having acted in that capacity continuously for the last twenty years. He was married December 22, 1870.

WILLIAM KENNEDY

For about eighteen years past has been foreman of the *Inter Ocean* composing room. He is about forty-seven years of age, and next to Mr. Sullivan, of the *Tribune*, has seen the longest service as foreman of any man on a daily paper in the city. He is fearless, strong in his positions, almost gruff in his blunt honesty at times, and well liked by everybody. His popularity was sufficient in 1873 to elect him delegate to the session of the International Union which met in this city. Mr. Kennedy's exemplary conduct during the troublous times of 1878 won for him the highest esteem both of his employers and the members of No. 16, and as an evidence of its approval of his course at this trying time No. 16 again made Mr. Kennedy its representative to the International in 1888. Mr. Kennedy is an exceptional foreman in his interest in union affairs generally, being very regular in his attendance at its meetings, and, while always having his "say" in the discussions before that body, still invariably gives a cheerful acquiescence to the verdict of the majority and as heartily enters into the work outlined, even if in opposition to his original ideas. It was at his suggestion that the new office of Organizer of No. 16 was created.

A. B. ADAIR,

Foreman of the *News* composing room, was born October 9, 1850, in Venango county, Pennsylvania. He left school at the age of twelve to enter an apprenticeship in the office of the *American Citizen*, Butler, Butler county, Pennsylvania, where he worked one year, then going to Mercer and completing another year of apprenticeship on the *Western Press*. He became a journeyman in the office of the Canton (Ohio) *Repository*. He afterward migrated to Illinois and farmed for three years; went to Kansas and returned to the printing business, in the office of the Lawrence *Tribune*. He joined the union there, and traveled to St. Louis, where he worked three years on the *Globe* and *Globe-Democrat*, and came to Chicago in the fall of 1875; worked on the *Tribune* and *Courier*, and then took charge of the *Daily News* composing room, where he has remained from its first day of publication to the present. Mr. Adair has been quite prominent in labor and greenback politics, being at one time the nominee of the greenback party of Illinois for lieutenant-governor. He was also a prominent member of the united labor party of Cook county. He is recognized as a ready debater and a forcible and effective speaker. Always taking an active interest in the affairs of his union, he was honored by No. 16 by being elected one of its delegates to the International session in 1880, where he was prominent in the furtherance of that body's legislation.

FRANK H. EHLEN,

Foreman of the *Herald*, was born at Phillipsburg, New Jersey, but removed with his parents to Chicago when but a few months old. After attending school at St. Michael's and afterward the public school he became errand boy in the printing firm of Piggott, Webster & Co., which, after the great fire, became the Pictorial

Printing Company. In 1876, at the expiration of his apprenticeship, he joined Chicago Typographical Union, No. 16, and very soon thereafter became foreman of the office in which he was employed. In 1881 the business changed hands, the incoming firm declining to recognize the typographical union, whereupon Mr. Ehlen and his entire force left the office. His next experience was that of a "sub" on the *Herald*, and in the course of a year became foreman, where he has remained to the present time, advancing step by step with the phenomenal growth and success of the Chicago *Herald*. Mr. Ehlen has seen his force in the composing room grow from 17 men to 135, and the pay-roll reach to between \$2,700 and \$3,000 per week from \$360 per week, the amount paid out the first week he took charge of the paper. Mr. Ehlen's constant aim has been to improve the conditions under which his force work, and with every advance made by the newspaper he controls he has kept that end in view. As a consequence the *Herald* composing room is one of the pleasantest in the city to work in and Mr. Ehlen is held in high esteem by the craft generally.

CHARLES A. PEARSON,

Foreman of the *Mail*, was born in Hamilton, Canada, April 25, 1858. At the age of fourteen he entered the office of the *Globe*, Toronto, to learn the art preservative, where he remained two years, and then drifted into the office of the *Presbyterian*, working there about one year. The desire to roam seized him, California being the objective point. Arriving in Chicago lack of funds prevented further gratifying his desire for travel, and he secured work as an apprentice in the office of the Lakeside Publishing and Printing Company, following the fortunes of that concern for some time. Again his roving disposition had to be catered to, but this time his compass was pointed south, he arriving at Memphis, Tennessee, shortly after the raising of the quarantine which had existed owing to the yellow fever epidemic. Three months of the South was enough—then Chicago again. Although "subbing" on the *Daily News* was not very good at that time, it was the point from which he started to work up till he reached the day foremanship, which position he held until July 1, 1888, when he secured the situation which he now fills.

HERBERT PRESTON,

Foreman of the *Times*, was born in Philadelphia, Pennsylvania, January 21, 1857. Mr. Preston has had a varied business and professional career, having in the '70's been engaged in the real estate business, and also for a time was employed by a railroad company. He studied law meanwhile and was admitted to the bar by the Illinois Supreme Court in 1886. He joined Chicago Typographical Union, No. 16, in 1888. Prior to joining No. 16 Mr. Preston for a long time rendered invaluable service to its officers in their efforts to unionize the *Times*, which had for nearly fifteen years been without the fold of unionism. Mr. Preston became a benedict in 1879. He makes an admirable foreman, and is highly esteemed both by his employers and the typographical fraternity generally. Mr. Preston has also served on important committees of the union, and his work has met with the hearty approval of its membership.

CHARLES G. WILSON,

The pleasant, affable gentleman who presides in the composing room of the *Post*, was born in Washington, Iowa, December 10, 1860. He remained there and attended school until seventeen years of age, and then became an apprentice in the *Gazette* office of that town, where he worked until, in 1882, he came to Chicago, joined No. 16, and began his career as a journeyman printer by "subbing" on the *Morning News*. He held various positions in that office until the advent of the *Evening Post*, April, 1890, when he was given the foremanship of that journal. He is wide awake and progressive, and believes in keeping thoroughly abreast of these stirring times, typographically.

CHARLES H. HARDING,

Foreman of the *Evening Journal*, served his apprenticeship and worked as a journeyman for several years in the office of which

he now has charge. He is still young, being about thirty-five years of age, and has spent almost his entire life in Chicago. Mr. Harding is genial and kindly, and enthusiastically imbued with a love for his work, devoting himself untiringly to the improvement of his office and the advancement of his force. He is very popular with the proprietors of the *Journal* and much esteemed by his fellow craftsmen generally. He has been a member of No. 16 from the time he completed his apprenticeship.

JOHN P. SCHNEIDER,

Foreman of the *Globe*, was born in Chicago, February 16, 1866, and is consequently the youngest foreman in the city. He served his apprenticeship in the office of Carhart, Wright & Co., and joined Typographical Union, No. 16, in February, 1889. He went to work on the *Daily Globe*, where, after over two years at the case, he succeeded Charles Boyer as foreman of the composing room, which position he now holds. Mr. Schneider is companionable and popular, and keeps well in line with the younger and more progressive element of the union, of which he is a bright and consistent member.

#### FOLDING PAPER BOXES.

The Archer process for making folding paper boxes, the patents of which are controlled by the Liberty Machine Works, of 54 Frankfort street, New York, facilitates immensely the manufacture of folding paper boxes, now of so much importance to the com-

as to justify with the ordinary metal furniture now in use. This material is put up in fonts, assorted, or may be had in separate sets or sorts. The cutting rule is made of steel, just type high. The creasing rule is made of brass, and a trifle lower than the cutting rule, so that when the one cuts through the paper, the creasing rule only creases it sufficiently to make it bend without cracking. Both kinds of rule are put up in fonts, cut labor-saving, so that with a font of the hooks, catches, etc., and a font of each style of rule, any style of box may be made on any of the job presses now in use, and any job printer can add this new branch to his business by an outlay of from fifty dollars upward, according to the amount of business he can control.

With an outfit of this material the form for cutting and creasing a folding paper box can be set up as quickly and easily as any form of rulework, by using metal furniture as a basis, and the cutting can be done on any job printing press. There is not a village in the country that now supports a printing office in which it would not pay to put in one of these outfits. Druggists, confectioners, ice-cream saloons, dry goods stores, milliners, and manufacturers of all kinds of small wares such as tacks, nails, hominy, farina, starch, patent medicines and all kinds of specialties, are using these boxes, and many others would use them if they could get them conveniently and in small quantities. Then again, every box has to be printed and the "box maker" always does the printing, so that by being able to furnish the boxes you can also increase your printing business. By having this outfit you not only add this new branch

but increase the value of what you already have. You are not confined to folding boxes, for with an outfit of this material stiff paper boxes can be cut and scored in any shape or style desired out of straw board, printer's blanks, etc., as quickly and cheaply as they can be done on any machine built on purpose for the business; and with the assistance of a few girls all kinds of pill, powder, jewelry, wedding cake and similar boxes can be made without any extra outlay for plant.

The accompanying diagram shows a form locked up in chase ready for the press, with all the pieces of cutting and creasing rule in position. It can be readily understood that by this process work can be easily produced that under the ordinary condition of things would be

mercial world. The novelty consists in the means employed to reënforce the cutting and scoring rules, whereby they are rigidly kept in position in the form while the press is in operation. Heretofore a press built especially for the purpose has been necessary to do the work, but with this material any ordinary job printing press may be used.

The invention consists of bending or stamping pieces of the steel cutting rule into any desired shape, so as to form hooks, tucks, catches, thumb holes, round corners, or any of the irregular shapes used for cutting paper boxes, and in casting around them a body of metal so as to hold the rule firmly in place, and to form a solid base for same. The bodies of these pieces are all cast in type molds, the same as type, and measured on the "point system" so

next to impossible. As stated above, the power required for cutting by this process is inconsiderable, and ordinary presses will do the work. A full description of this process can hardly be given in an article of this kind, but by writing the Liberty Machine Works an illustrated pamphlet will be mailed you which will explain fully in regard to it and give all necessary information.

It was very annoying to the members of the Slabtown board of trade to read in the local paper that they had held "an infernal talk" with the town council. The editor explained that it should have read an *informal* talk, and it cost him \$1.14 for drinks all around.

Copyright, 1890, by C. B. COTTRELL & SONS.

### ELECTROTYPING.\*

NO. V.

#### REMOVING THE SHELL FROM THE MOLD.

When the desired thickness of shell is obtained, the mold is taken from the vat and placed in the sink in a slanting position, and the connections liberated by means of a sharp-pointed tool or knife, after which the operator pours hot water over the back of the shell and gently lifts one corner. The heat of the water melts the surface of the wax immediately in contact with the under part of the shell. This allows the operator to relieve the shell from the mold while the water is being poured over it. The shell should be removed carefully and with a slight tension, in order to keep it straight and free from kinks.

A great deal of extra and expensive labor may be avoided in finishing the plates by carefully handling and backing the shells.

#### EVAPORATING THE WATER FROM THE WAX.

While the shells are being removed from the wax molds, considerable water is retained in the blisters that gather on the face of the composition, which should be entirely removed before the wax is again used. If allowed to remain, the water will injure the working qualities of the composition, besides showing itself by small pin-holes and blisters appearing on the face of the mold, after the impression is taken.

Some molders evaporate the water by placing the wax in an iron pot over a gas flame or over the heated metal. This is an unsafe method, as dry heat destroys the glutinous nature of the composition, and should the wax overflow into the flame or metal pot the results would be threatening, if not seriously dangerous.

The best method is to use two steam wax-pots, one of which should be directly under the overflow pipe, into which the melted wax from the table is allowed to flow, and remain until all the water is evaporated.

After the moisture is entirely evaporated, the wax may be transferred to pot No. 2. The remaining cases are now placed on the steam table, and the melted wax allowed to flow into pot No. 1. The operator in the meantime proceeds to run the wax into the cases from pot No. 2.

#### CLEANING THE SHELLS.

A film of wax adheres to the face of the shell when it is being relieved from the mold, which must be removed before the shell is tinned. If the wax is allowed to remain it will be burned to carbon and form in hard crusts under the shell in the process of backing, thus causing innumerable sinks and extra labor in finishing the plates. This wax is removed by laying the shell face up on a flat board, placed in a slanting position over the lye pot, while the operator pours hot lye over the shell, and at the same time rubs it lightly with a soft brush until the wax is entirely removed. The lye should be allowed to flow back into the pot, and the scum taken off from time to time and thrown into the waste barrel.

After having removed the wax from the face of the shell, the back is thoroughly rinsed in clean water, in order to remove any lye that may have gathered thereon.

If the lye is allowed to remain on the back, it will prevent the tin foil from uniting with the shell in the process of tinning.

Having cleaned the shells, the operator places them in a shallow lead-lined box about 18 inches wide, 20 inches long, and about 4 inches deep. This box is nearly filled with water, to which is added 2 per cent of sulphuric acid. The shells are allowed to remain in this solution until ready for the tinning process. This is a necessary precaution, as the solution prevents the back of the

\* Through the kind permission of Messrs. C. B. COTTRELL & SONS, New York, manufacturers of printing presses and electrotype and stereotype machinery, we reprint from their catalogue this article on electrotyping, written for them by P. M. Furlong, foreman of electrotyping department of Messrs. T. L. De Vinne & Co., New York.

shells from becoming oxidized or tarnished. This solution should be renewed about once every week.

#### TINNING SOLUTION.

Electrotype metal will not of itself amalgamate with copper. It is therefore necessary to unite the metal with the shell by means of tin foil, and as the tin foil will not adhere properly to the shell unless the back is made chemically clean, a tinning solution becomes necessary.

This solution is prepared in a wide-mouthed glazed earthen jar or bottle, as follows:

Pour about one pint of muriatic acid into a quart jar, and add half a pound of zinc scraps. A strong boiling action takes place immediately, the fumes of which are very dangerous to persons having weak lungs. It is therefore necessary that this solution should be made in the open air, when the wind is blowing in the opposite direction. When the boiling action has ceased and no more gas is given off, pour the clear solution (now muriatic of zinc) into a wide-mouthed jar, and add about one-third water to reduce the acid, and one ounce of sal-ammoniac to neutralize the salts of zinc. When the sal-ammoniac has dissolved the solution is ready for use.

Before the tinning solution is applied, the shells should be examined, and if any holes appear, dry blacklead should be rubbed in on the face by means of a soft brush, or the backing pan may be rubbed with a mixture of half oil and blacklead before the shells are tinned. Either of these methods will prevent the backing metal from coming through the holes in the shells.

#### TINNING THE SHELLS.

The next operation is tinning the shells, and is performed by laying sufficient shells face down to cover a level board cut to the inside measure of the backing pan.

After the shells are laid on the board, the operator, with a moderately stiff brush, rubs the tinning solution well into the cavities and over the back of the shells, after which they are held on edge over the jar, to drain off any excess of the solution.

Sufficient tin foil to fully cover the back of the shells is then laid thereon, after which they are immediately placed in the previously heated backing pan. It is absolutely necessary that the pan should have a smooth and level surface, and should always be kept in that condition, as any irregularities on the surface of the pan will assert themselves on the face of the shell in the process of backing.

The pan containing the tinned shells is then placed on the molten metal in the casting pot. The temperature of the metal should be kept uniform, and heated sufficiently to color a dry white paper dark brown.

Do not overheat the metal, as the tin is liable to burn and form as dross on the surface of the pot. If the metal becomes too hot it will distort the shells, causing extra labor in finishing the plates.

When the pan has attained the same heat as the molten metal, the tin foil melts and amalgamates with the copper shells.

Particular attention should be paid to pouring the molten metal on the shells *immediately after the tin fuses*, as the heat evaporates the acid of the tinning solution, leaving the salts of zinc in a soft state on the shells. This salt, when soft, will float to the top of the cast if the operator pours the molten metal on the shell as soon as the tin fuses. But should the shells be allowed to remain too long in the heated pan, the salt (having lost its acid) will form hard white crusts in the bowls of the letters, and tenaciously remain there while the metal is being poured on the shells. This crust prevents the molten metal from entering the cavities of the shells, in consequence of which the metal bridges over the openings and causes what is termed in the trade "soft-faced" letters. These soft-faced letters are a great annoyance, not only to the electrotyper, but to the pressman, as sometimes no outward indication of their presence is noticeable until after the plates are made ready on the press.

Immediately after each cast the operator should wipe the surface of the backing pan with a wet cloth or swab. This is done

that the wax may not form in hard crusts when cold, and also to prevent the acid from corroding the face of the pan.

#### ELECTROTYPE BACKING METAL.

In order that the backing metal may properly adhere to the tinned shells, it should be made up of

100 pounds of lead,  
3 pounds of tin,  
4 pounds of antimony.

Do not use either type or stereotype metal in backing electrotype shells, unless the same is reduced by lead to the proper proportions of electrotype metal, as the antimony (being in excess and having a greater affinity for the tin than tin has for the copper) absorbs the tin from the back of the shell, causing what is termed in the trade "peeling."

Stereotype metal is composed of

100 pounds of lead,  
8 pounds of tin,  
15 pounds of antimony.

Type metal contains

100 pounds of lead,  
16 pounds of tin,  
30 pounds of antimony.

#### BACKING THE SHELLS.

After the tin foil has fused on the shells, the backing pan is then removed from the metal pot and placed on a perfectly level stand in order to insure a uniform thickness of metal in the cast, after which the operator *immediately* pours the molten metal through a *heated* perforated ladle on the shells. By this means the weight of the body of metal is checked and falls in fine streams, gradually distributing itself over the shells, after which the cast is allowed to cool off. This is rapidly done by means of a small blower placed in a convenient position, and connected to a wide-mouthed funnel under the backing pan. Or the blower may be reversed to exhaust the foul air from the room while cooling the pan.

(To be continued.)

#### LABOR DAY DEMONSTRATION.

Since the establishment of Labor Day, among its most attractive features has been the display of Chicago Typographical Union. The demonstration this year, it is expected, will greatly exceed former efforts in this line, as the union has made many accessions to its membership. Labor Day is looked upon as especially the trade-unionist's day, since the American Federation inaugurated it, and many of the state legislatures, including Illinois, made the first Monday of September a legal holiday. The following is the order of parade: Members will assemble on La Salle street, south of Monroe, and march to Bricklayers' hall at 9 o'clock sharp, Monday, September 7, there to assume their proper position in the line, heading the third division, as follows: Chief marshal, Nelson Bowerman; aid to chief, Charles Ross; Aldine band, forty pieces; carriage, drawn by four horses, with officers of union and banner; United States flag; *The Times* Chapel, *Daily News* Chapels, *Herald* Chapel, *Tribune* Chapel, *Inter Ocean* Chapel, *Journal* Chapel, *Mail* Chapel; United States flag; band, forty pieces; Cameron, Amberg & Co. Chapel, H. O. Shepard & Co. Chapel, John Morris Company Chapel, J. M. W. Jones Chapel, William Johnston Printing Company Chapel, Stromberg & Allen Chapel, J. C. Winship & Co. Chapel, A. R. Barnes & Co. Chapel, Stock Yard *Sun* and *Drovers' Journal* Chapel, Early & Halla Chapel, A. N. Kellogg Chapel, Newspaper Union Chapel, W. C. Hollister & Bro. Chapel, Walker & Robertson Chapel, M. B. McAbee Chapel, Edward Keogh Chapel, Skeen, Baker & Co. Chapel, Max Stern & Co. Chapel, Illinois Printing Company Chapel, Western Newspaper Union Chapel, American Press Association Chapel, National Printing Company Chapel, Kehm, Fietsch & Wilson Chapel, *America* Chapel, Amundson, Kirchner & Co. Chapel, Foster-Hines Company Chapel, *Railway Review* Chapel, Empire Chapel, Graphic Chapel, J. F. Higgins Chapel, Poole Bros. Chapel, Corbitt & Skidmore Chapel, La Monte, O'Donnell & Co.

Chapel, Winterburn Show Printing Company Chapel, Howard Bartels & Co. Chapel, miscellaneous weekly publications and job offices, *Morning Globe* and *Post* Chapels, in carriages; Pressmen's Union, Stereotypers' Union, Press-Feeders' Union.

Translated from *L'Imprimerie* for THE INLAND PRINTER.

#### THE PHOTOGRAPHY OF COLORS.

The photography of colors has been discovered by M. Lippmann, member of the Institute. This is a marked event in the history of science, for until the present time the problem of direct photochromie was not capable of solution consistent with scientific work. M. Lippmann has succeeded, we are assured, in unalterably fixing the colors of the solar spectrum. His method registers the colors in the gelatine as the phonograph registers the sound on a cylinder of wax.

This method rests upon some considerations of physics which suppose an acquaintance with the undulatory theory of light. M. Alphonse Berget, attaché of the laboratory of researches conducted by M. Lippmann, has published a work on the "Photography of Colors" which precisely recalls these ideas. This little book renders intelligible to all this new process by illustrating the mechanism of operating.

#### AUTHORS' NOTES.

MR. STEPHEN O'MEARA, editor of the *Boston Journal*, is a relative of the late Miss Kathleen O'Meara, the brilliant author of several novels.

MARAH ELLIS RYAN, whose story "A Voice from the Crowd" will be concluded in the next issue of the *Graphic*, is a writer whose work is rapidly gaining public recognition. Her home is at Lafayette Springs, Pennsylvania.

THE enterprising Chicago firm of young women publishers, Misses Searl & Gorton, announce forthcoming editions of popular booklets by well-known authors; they will be comprised in "The Young Patriot Series," "Our Dumb Friends," "Mother Goose's Christmas Party," "How the Rose Found the King's Daughter," and daintily bound in gold embossed and illustrated covers; they will be among the prettiest booklets of the season.

THE edifice known as the Poe cottage, near the village of Fordham, New York, has been purchased by Clyde W. Bryson, of New York City, who intends preserving the cottage in memory of Edgar Allen Poe, of whom he has always been an ardent admirer. A large sum was paid for the cottage and \$50,000 has been set apart to keep the house and grounds in order. It was in this place that "The Raven" was written. It is old-fashioned in exterior appearance and quaint to a marked degree in interior arrangements. The cottage is admirably preserved and is just about as it was in the days of Poe.

DR. JOHN WILLIAMSON TALMER, a very distinguished literary man and a native of Baltimore, who is engaged on the "Century Dictionary," visited old friends in Baltimore, Maryland, lately. The *American* made a note of this, remarking that Dr. Talmer during the war served in the Confederacy, and was at the same time the New York *Tribune's* war correspondent in the land of Dixie. He is the author, it is claimed, of "Stonewall Jackson's Way." And all this leads the *Catholic Mirror* to observe that Dr. Talmer must have been a remarkable man to serve Jefferson Davis and the New York *Tribune* at the same time.

THE will of James Russell Lowell, filed in the Middlesex probate office, Boston, Massachusetts, August 19, disposes of substantially the whole of his property for the benefit of his daughter and her children. He gives, however, to Harvard College such books from his library as the library of the college does not possess, or of which for any reason the editions in his library are preferable to those in the college library. He gives all his manuscripts to Charles Elliott Norton, making him his literary executor. The executors of the will are George Putnam and Moorfield Storey. The amount of property left by Mr. Lowell is not large, for he was far from being a rich man.

THE INLAND PRINTER.

of this sheet.

## CHICAGO NOTES.

W. J. RAY, of the *Post*, has left the city to locate in the farther West, probably Denver.

ISAAC HELLER, of the *Herald*, who was seriously ill with pneumonia for several months, is again at work.

FIFTEEN of the improved Mergenthaler machines have been contracted for and will be put upon the *Inter Ocean* in a short time. The price of the paper has been reduced to 2 cents.

WEBER & TRIVESS have established a warehouse for the storage of printing and binding machinery and material at 27 and 29 Market street.

THE last International Union Convention adopted a resolution to enforce the six-day law for composition under a fine of \$5.00 for each violation.

T. W. & C. B. SHERIDAN, dealers in bookbinders' machinery at 415 Dearborn street, report that the establishment of a branch here has proved a great success.

MARDER, LUSE & CO., typefounders, do not let summer interfere with the production of new type faces, as the page of "half-tone" in this issue will attest.

MICHAEL COLBERT, of the *Tribune*, represented his lodge at the grand council of the Ancient Order of Foresters, which met in Brooklyn, New York, recently.

KNOWLEDGE of the whereabouts of George A. Kinney, who was last heard of in Fort Wayne, Indiana, in December last, is desired by his brother W. D. Kinney, care of Chicago *Tribune*.

THE parade committee of No. 16 has accepted an offer from City Attorney Kern of a handsome silk banner, to be given to the chapel presenting the best appearance in the parade on Labor Day.

THE number of extras placed on the *Herald* daily has been increased from eight to fourteen. This is only a slight evidence of the greater benefits to be derived from a shortening of the hours.

ATTENTION is called to Farmer, Little & Co's specimen page of Fashion Extra Condensed, shown upon another page. It is a letter which printers ought to have. C. B. Ross, the western manager for this firm, will supply this or any other type at the shortest notice. Call and see him, at 109 Quincy street.

LETTERS received from Millard F. Bingham, Samuel Bingham's son, manufacturer of printers' inking rollers, 22-24 Custom House place, Chicago, at present traveling on the European continent, give interesting accounts of the principal cities of France, Germany, Belgium and the United Kingdom. Mr. Bingham sailed on July 11, per steamship Eider. His return is anticipated about October 1.

AS BASEBALL experts the employes of THE INLAND PRINTER have had almost uniform success, having only lost one game out of six played this season during the Saturday half holidays. Much of this success is due to the able management of H. A. Mitchell. The club is composed of the following members: Hargreaves, p.; Delaney, c.; Johnston, 1st; Stoike, 2d; Byrth, 3d; Powers, s. s.; Griswold, c. f.; Ivins, l. f.; Malchester, r. f.

BLOMGREN BROS. & CO., the engravers and electrotypers, of 175 Monroe street, are now thoroughly settled in their quarters on the fourth, fifth and sixth floors of the recently remodeled S. P. Round's building, now known as the Jefferson building, and are in shape to handle work in the most expeditious manner. They are giving particular attention to half-tone work, and will show a number of very handsome plates in THE INLAND PRINTER in a short time.

MEMBERS of the printing craft who have been rusticated, or sojourning in other lands, are returning to business refreshed by their outing; among them we note James Maddigan, foreman of the *News*; Thomas Sullivan, foreman of the *Tribune*; N. A. Fort, night foreman of the *Herald*. Secretary-Treasurer McEvoy and Organizer Francis have returned from their vacations, while James Russell, head proofreader of the *Herald*, has returned from a three-months' trip to Scotland.

## ANSWERS TO CORRESPONDENTS.

L. T., Aurora, Illinois. For overstrained or tired eyes bathing them in hot water several times a day is a remedy that has been found beneficial. Consult an oculist.

H. B., Lincoln, Nebraska. Please give the punctuation for the following sentence: How did he come by this knowledge do you ask. *Answer*.—How did he come by this knowledge, do you ask?

A. W., Council Bluffs, Iowa. To settle a little difference of opinion among printers please suggest what is the best tympan for small Gordon, light jobs, everything being entirely new. *Answer*.—Hard tympan; the harder the better for new type. Soft tympan wears the corners and edges down.

## TRADE NEWS.

HERMAN RIDDER, the receiver for J. H. Bonnell & Co., Limited, printing ink manufacturers, of New York, announces that the business of the firm will be continued as heretofore, and all orders promptly filled.

THE W. L. Smith Printing Company, of Detroit, Michigan, has been succeeded by the Wilton-Smith Company and the location changed to 11 Atwater street, west. The firm does every description of printing, and is prospering.

GEORGE H. BENEDICT & CO., photo-zinc etchers and map and wood engravers, 175 and 177 South Clark street, Chicago, announce that they have completed the alterations in their building, and the consequent moving of machinery, and improvements and additions to their plant.

COSACK & CO., the lithographers, of Buffalo, New York, have just issued a handsome set of four cards for advertising purposes, showing the new United States cruisers, Chicago, Boston and Charlestown, the battle-ship Maine and dispatch-boat Yorktown. The cards are 4¼ by 6½ inches in size, the coloring is attractive, and the pictures faithful reproductions of the originals.

THE Card Electric Motor & Dynamo Company, of Cincinnati, Ohio, have issued a handsome circular of their electric motors and dynamos, appropriately entitled "Light—Power," and the display therein emphasizes their claim to furnish the best electric motors and dynamos that years of practical experience and the most advanced theory have as yet been able to produce. The composition and presswork are by Messrs. Earhart & Richardson and well sustain the reputation of that house. The lithographed cover by the Macbrair Lithographing Company is most appropriate and effective.

## RECENT PATENTS.

The following list of patents issued during July is specially reported by Franklin H. Hough, solicitor of American and foreign patents, No. 925 F street N. W., Washington, D. C.:

- E. S. Jones, Providence, R. I., securing device for zinc printing plates.
- G. P. Fenner, New London, Conn., printing press.
- R. P. Winters, Springfield, Ohio, printing press.
- J. Brooks, Plainfield, N. J., cylinder printing press.
- J. Brooks, Plainfield, N. J., printing press inking mechanism.
- J. Michaud, Paris, France, stop-cylinder printing machine.
- C. B. Cottrell, Westerly, R. I., inking apparatus for printing press.
- W. Wickersham, Worcester, Mass., printer's quoin.
- T. Bickford, Branford, Conn., color printing apparatus.
- T. McDowell, Niagara Falls, N. Y., printing machine.
- J. T. Hawkins, Taunton, Mass., rotary chromatic printing machine.
- W. McKay, New York, N. Y., bed for metallic printing plates.
- L. K. Bingham, New York, N. Y., apparatus for making printers' rollers.
- W. Scott, Plainfield, N. J., oscillating cylinder printing press.
- C. B. Cottrell, Westerly, R. I., sheet delivery for printing press.

## OUR DESIGN.

RT effects in a reproduction of the antique find an exemplification in the menu design offered on the opposite page. The strength of treatment for which the earlier engravers were remarkable is admirably rendered, while the lines are softened into the grace of the modern school. To give the antique effect a rough paper should be used, tinted or colored, with an appropriate ink giving a soft tone. Mr. Bradley has in this design shown a conception meeting the popular taste in a manner displaying a thorough understanding of the capabilities of the subject. It is the purpose of THE INLAND PRINTER to show an original full-page design for cover, or menu title, in each issue for the next few months, and we announce for October a very elaborate production, which will no doubt be admired by every lover of art in designing. In addition to these page designs several pages of original initials and head and tail pieces will be shown, all drawn especially for this publication.

## NEWSPAPER GOSSIP.

THE old Bellows Falls *Times* has gone, and in its place has arisen one of the best weekly papers ever published in Vermont, taking into consideration all the points which go to make up a family paper.

THE new building of the Chicago *Herald* is being rapidly completed, but it will be several months before it will be occupied. Some of the new iron frames have already been placed in the composing room.

IN the dispute between the Typographical Union and the *News* and *Journal* concerning the use of typesetting machines, H. B. Hurd, the arbitrator, has decided that the papers are not bound to employ printers to run the machines.

MR. FRANK HALL has resigned the position of editor of the *Midland Mechanic*, Kansas City, Missouri, and has gone to Baltimore, Maryland, to reside. He has been succeeded by Mr. W. J. Winfield, who proves himself a worthy successor.

THE number of weekly, monthly and other regular publications at present, exclusive of daily papers, in the German empire is 3433, as against 3204 in 1890, 2982 in 1889 and 2729 in 1888, an increase of 704 publications in the last four years.

EMIL KARPOWSKY, formerly secretary of the German branch of the Young Men's Christian Association, Milwaukee, will take the city editorship of Joseph Brucker's *National Zeitung*, of Chicago, which is to come out as a daily after September 1.

THE announcement is made that Dr. Munford has resigned the editorial chair of the Kansas City *Times*. This means that the management of the *Times* is revolutionized from top to bottom. It will, however, continue to control its patronage as in the past.

A MEETING of the stockholders of the Paris *Petit Journal* took place last month. The total income of the enterprise for the fiscal year is 15,428,098 fr., the expenses 10,283,604 fr., a net profit of 5,144,494 fr. The daily circulation of the paper is over a million copies.

THE Chicago *Daily News* will probably occupy its new building the latter part of September. The presses are now being placed in the basement, and it will be but a short time until the printers employed on that paper will enjoy more commodious and healthful quarters.

THE Kansas City *Grocer*, issued by the wholesale house of Gregory Grocery Company, lately added an artistic cover page and exhibited other signs of improvement, making it still more valuable as a trade publication. It is now issued by the publishing house of S. F. Woody, Kansas City, Missouri.

THE Fairfax family is about the wealthiest newspaper family in Australia, being the owners of the Sydney *Morning Herald* and its various offsprings. Mr. Geoffrey Fairfax was married the other day, and the occasion was taken advantage of by the

employés of the firm to present the bridegroom with some handsome pieces of silver. In making the presentation, Mr. Samuel Cook said it was to be hoped the present would serve to awaken in the domestic circle of Mr. Geoffrey occasional memories of the kindly relations which existed between him and his co-workers, from the highest to the lowest.

THE *Daily Journal* of Kansas City has undergone a radical change in business management. Col. R. C. Van Horn occupies the editorial chair, and Mr. M. H. Stevens, formerly of Minneapolis, is now business manager. Under the new directory, the *Journal* is brighter than ever, and elicits considerable commendation from its contemporaries.

MR. PAUL RAY, of the Chicago *Herald*, and Miss Effie Hunt, of Kansas City, were united in marriage at the home of the bride's parents, 1425 Harrison street, July 21. The same day Mr. and Mrs. Ray left for Chicago, where they will make their future home. Mr. Ray is a former resident of Kansas City, and has an extended acquaintance among newspaper men in the West.

MR. FRANK W. ADAMS has assumed charge of *Speed*, of Baltimore, Maryland, a journal devoted to the interests of horsebreeders, owners and trainers of that city and state. The management of this new weekly promises to furnish its readers with the freshest and most reliable horse news from all parts of the country as well as matters of local interest, which will be a special feature. *Speed* is an eight-page paper and is issued every Saturday.

THE corner stone of Col. Elliott F. Shepard's new building, at 203 Broadway, New York City, was laid August 19. The building when completed will be the home of the *Mail and Express*. Frederick Taylor delivered the address. The stone was lowered by Master Shepard, the colonel's son, with these words: "In the name of the Father, and of the Son, and of the Holy Ghost, eternally one God, I lay this corner stone. Amen."

MR. WEB WILDER, formerly of Kansas, recently issued the initial number of the *Insurance Magazine* in Kansas City, Missouri. The press comments concerning it are very flattering. Mr. Wilder is a publisher of thirty years' standing, and lately was insurance commissioner of the State of Kansas. His annual reports made mighty interesting reading to the "wild-cat" insurance companies that from time to time were barred from doing business in the state. Hence Mr. Wilder's magazine will possess more than usual interest to the insurance fraternity.

MR. OTTMAR MERGENTHALER, of Baltimore, Maryland, of the Ott. Mergenthaler Company, makers of the linotype, or typesetting machines, has been awarded the John Scott bronze medal of 1891, by the city of Philadelphia, on the recommendation of the Franklin Institute. The medal is four inches in diameter, and bears on one side the arms of Philadelphia, and on the other the inscription giving the circumstances of its presentation.

THE Galveston (Texas) afternoon daily *Sea Gull* is no more, the name of the paper having been changed to that of the *Evening World*. The office has been removed to more commodious quarters, and many improvements are promised by the new management who recently assumed charge. It is stated that the sheet is now supported by ample capital, and if this is true there is no reason to predict for the *World* a bright future, for its field for operation is ample.

PAUL WOLFF, Washington correspondent of the New York *Staats-Zeitung*, has been selected to succeed the late Herman Raster as editor-in-chief of the *Illinois Staats-Zeitung*. This is in accordance with a written request left by Mr. Raster. Mr. Wolff is a graduate of German universities and of the Royal School of Military Engineering. While a mere youth he had a distinguished record of field service in the German army, and was severely wounded at Königgratz. He came to this country in 1886, and soon began to write for the German press. He has made his way rapidly in journalism, and for several years he has held a very conspicuous place in Washington, D. C., in the service of German journals in this country and in Europe. He is exceedingly popular and held in high esteem.

ORIGINAL DESIGN FOR MENU TITLE.

Electrotypes of above design, mortised, \$5.00 each.

## PERSONAL.

We have received calls during the past month from the following gentlemen: R. A. Hart, Battle Creek, Mich.; Sam G. Sloane, editor *Iowa Citizen*, Charles City, Iowa; Harry S. Merrill, *Rural Californian*, Los Angeles, Cal.; J. K. Huff, foreman *Truth*, Elkhart, Ind.; J. B. Foulk, St. Joseph, Mo.; Julius G. Day, of the Whitlock Machine Company, Birmingham, Conn.; J. Rookus, Grand Rapids, Mich.; Joseph M. Anderson, San Francisco, Cal.; George E. Roberts, Fort Dodge, Iowa; Clarence E. Crippin, of the Chance-Matthews Printing Company, Indianapolis, Ind.; A. B. Morse, of the A. B. Morse Printing Company, St. Joseph, Mich.; Albert L. Thomas, of Walter Scott & Co., New York; Mr. Bush, of Brown Folding Machine Company, Erie, Pa.; J. E. Griffith, treasurer Griffith, Axtell & Cady Company, Holyoke, Mass.; W. M. Shirley, of Shirley & Kessler, St. Joseph, Mo.; D. H. Arment, Akron, Ohio; Z. H. Denison, Marshall, Mich.; S. J. Potter, state printing office, Topeka, Kan.; W. P. Kidder, of the Kidder Press Company, Boston, Mass.; W. R. Pooley, editor *Reporter*, Williams, Iowa; Lewis A. Hurst, Muncie, Ind.; J. C. Forman, of Short & Forman, Cleveland, Ohio; H. C. Lippincott, superintendent Roberts & Son, Birmingham, Ala.; J. H. Prack and H. O. Siegmund, of the Woodward & Tiernan Printing Company, St. Louis, Mo.; H. M. Bishop, of the George R. Dickinson Paper Company, St. Louis, Mo.; A. M. Geesaman, of Geesaman & Murphy, Minneapolis, Minn.

## OF INTEREST TO THE CRAFT.

MENTION was made in the August issue of this journal that George T. McNamara, of Chicago, had accepted a lucrative position in Kansas City. This is misleading. Mr. McNamara purchased a third interest in the National Printing Company, of Kansas City, formerly the Bradner-Andrews Company, and has charge of the composing room department.

THE Melbourne Typographical Society has a library of 2,000 volumes (including twenty-three volumes of the "Encyclopædia Britannica"), which is for the use of members, honorary members, and females and apprentices employed in offices recognized by the society, at the small subscription of 60 cents. This library, with its reading room, is found of great benefit to the unemployed.

THE late government printer of South Australia (Mr. Leader) was a thorough believer in having a library attached to a printing office where a large number of men were employed, and during his reign was the means of establishing one in his office, liberally donating books, and acting as chairman up to his death. At the last annual meeting of the library, the present government printer (Mr. C. E. Bristow) was elected chairman. Progression was the tenor of the report, the membership being 122 and number of books 1,720.

IT is rumored that the recently purchased type for the *Record* room at the government printing office, Washington, D. C., will be ready for the compositors by the first of September. New cases, of three-quarter size, have also been secured for the use of that room, and it is said each compositor will be obliged to have two sets of brier cases, and one nonpareil case, in order to have a sufficiency of type to last him during a long night on the *Record*. The cases are of a specially ordered character, and very convenient in every particular.

A CORRESPONDENT has this to say about learning to manipulate typesetting machines: "Six weeks is about the average time required to become tolerably familiar with the work, but some men, after double this length of time, are quite unreliable, or too slow to be of any use in the competition between hand and machine work. Judging by the well-known fact as to typewriting—a very similar performance in most respects—youths from thirteen upward would be the aptest learners as to speed, and after being specially drilled in orthography, they would oust grown-up men in five cases out of six. This would be another piece of economy for proprietors, and, as a fact, may sometime hence cause a new

trouble for the union, which lays down such very stringent conditions as to the employment of boys in other respects. As a mere matter of quickness in manipulating the keys of the machine, which means a question purely of speed, I would back any average boy of twelve to do double the work of any middle-aged man after any amount of practice from six weeks to six years.

AT present there seems to be a disposition with the union throughout the country to increase their membership by recruiting the country boys, and in fact anything that can pass a blind muster; and right here I am afraid much harm will result. There is no reason why we, as a laboring body, should not follow some of the rules practiced by secret fraternities, in their selection of members, namely, a thorough and rigid examination of moral conduct and social standing. In the erection of a substantial building, only the best of material is used. Who would think of braving the tempestuous seas upon a craft constructed of driftwood? Don't let us adopt this course, brethren, for only ruin can be the result. — *W. H. Winn in Typographical Journal*.

## PAPER TRADE ITEMS.

THE Sandy Hill (N. Y.) pulp mill turns out 50 tons of dry pulp each week.

KEENEY BROTHERS' paper mill at Manchester, Connecticut, has started up again.

A PAPER factory is among the possibilities in Belleville, Illinois, in the near future.

P. T. SEXTON is about to start up the Star paper mill at Shortsville, New York.

THE Boston Wall Paper Company has moved its machinery to South Boston, Massachusetts.

CRANE BROTHERS have recently placed a new water wheel in their lower paper mill, at Westfield, Massachusetts.

THE entire plant of the Appleton (Wis.) Paper and Pulp Company was destroyed by fire about midnight, August 19. Loss \$60,000.

IT is reported that the Manufacturing Investment Company will build a paper mill as an adjunct to its fiber mill at Madison, Maine.

THE S. E. Barrett Company, tarred paper manufacturers, of Chicago, have bought a site at Minneapolis, Minnesota, and will erect a plant.

THE George R. Dickinson and the Connecticut River Paper Company, at Holyoke, Massachusetts, have been awarded, by the government contracts for linen ledger and flat cap papers.

T. O. METCALF & Co., manufacturers, printers and paper dealers, 48 Oliver street, Boston, Massachusetts, announce the withdrawal of Charles G. Wheelock from the firm, taking effect July 1, from which date Arthur W. Glines will have an interest, the firm name to be unchanged.

THE Bardeen Paper Company at Otsego, Michigan, contemplates the erection of two additional paper mills at that place, which, when completed, will give that company the largest plant of the kind in the state. The four mills will have a total floor surface of 247,320 square feet, operated by 2,733 horse power and 461 employes.

A RECENT issue of a souvenir number of the Philadelphia *Record* furnished in hours and minutes the actual time consumed in preparing that paper for sale, from the chopping of the poplar tree to placing the paper upon the newstands, as follows, based on 10,000 papers: First, chopping one and one-half cords of poplar wood, stripping and loading on boat, 3 hours; second, time consumed in manufacturing wood pulp, 12 hours; third, manufacturing the wood pulp into paper, 5 hours; fourth, transporting from Singery station to *Record* office, 1 hour and 20 minutes; fifth, wetting paper preparatory to printing, ½ hour; sixth, printing 10,000 *Records*, 10 minutes—making a total from tree to printed paper, 24 hours. If this can be beaten we would like to hear of it.

## OBITUARIES.

JANE (PARKER) PIM, a much-loved sister of Thomas and Samuel K. Parker, of Chicago, died in Toronto, Ontario, on July 22, in her fifty-seventh year. She had been afflicted with paralysis of the right arm for many years, and a stroke which paralyzed the muscles of the tongue and throat was the immediate cause of death.

FRANCIS N. DAWES, who has been employed in the composing room of the *Sun*, Baltimore, Maryland, for twelve years past, died suddenly last month, of hemorrhage of the lungs. He was a member of Baltimore Typographical Union, and in 1877 was delegate to the convention of the International Typographical Union, held at Buffalo, New York.

HOWARD LOCKWOOD, a native of Buffalo, New York, died in this city August 24, after a four months' illness, of consumption. He was at one time an employé of THE INLAND PRINTER composing room, and was held in high esteem for his genial and gentlemanly qualities. The funeral, under the auspices of the Chicago Typographical Union, was held August 26, to the union lot, Rosehill cemetery.

At a regular meeting of the Chicago *Herald* chapel held on August 6, the following resolutions were adopted :

WHEREAS, The Ruler of the universe, in his inscrutable wisdom, has seen fit to take from our midst our friend and co-worker of many years, John T. Hand, be it *Resolved*, That while we bow to the will of God, yet we deeply deplore the loss of one who, by his many good qualities, had endeared himself to all among us; who never faltered in the cause of unionism, which is so near to all our hearts, and who was always steadfast in defense of its principles. *Resolved*, That these resolutions, as but a faint token of our esteem for the departed, be spread upon the minutes of the *Herald* chapel and be sent to the *Typographical Journal* and *Union Printer* for publication.

SAMUEL SANDS, the oldest printer in the United States, and who, when a boy, in 1814, first "set up" the "Star-Spangled Banner" from Francis Scott Key's manuscript, died July 28, in his ninety-second year, at his son's home, at Lake Roland, Maryland. From 1811 until his death Mr. Sands was either printer, editor, or publisher. He was a "printer's devil" in the office of the *American* when Judge Nicholson, on the day after the bombardment of Fort McHenry by the British, brought the manuscript of the famous national anthem into the office to be printed. All the compositors were at North-point defending the city, and young Sands was given the poem to "set up." Next day it was being sung all over the city.

With the death of Albert G. Fornhof, of Chicago, which occurred at Oakland, California, on July 31, where accompanied by his mother he had arrived several weeks previously, there was cut short the career of a bright and talented artist. While but nineteen years old at the time of his death, as a member of the Chicago Society of Artists he already gave promise of remarkable excellence in his art. Since April, when Mr. Fornhof was taken ill, he had steadily declined in health and the journey from Chicago to California was taken in the hope of restoring it. On July 28, his brother William was notified by telegraph of his low condition, but arrived too late to see him alive. The body was embalmed and brought to Chicago for interment in the family lot at Graceland cemetery. The funeral was held August 9 and was attended by numerous artist friends of the deceased and members of Chicago Typographical Union.

## SIZE FOR ATTACHING GOLD LEAF TO SILK.

A good size for attaching gold leaf to silk and satin is made by beating the whites of eggs thoroughly, allowing the resultant mass to subside, forming liquid albumen, reducing the albumen by the addition of an equal quantity of water. The size is applied and allowed to dry. The gold leaf is laid on and the type or die is warmed and pressed upon the gold leaf. Wherever the albumen size is heated by the die it is coagulated and rendered insoluble. The leaf remaining on other portions of the fabric may be brushed off or wiped off with a damp cloth.—*Scientific American*.

## SPECIMENS RECEIVED.

JOHN W. LITTLE & Co., Pawtucket, Rhode Island. Specimen of bookwork and firm advertising blotters of fair execution.

E. JOHNSON, Kansas City, Missouri. Assortment of general commercial printing of average quality of design and execution.

D. R. FORBES and Frederick Reynolds, *Press* office, Oxford, Pennsylvania. A general assortment of commercial printing cleanly and acceptably executed.

ROCHESTER PRINTING COMPANY, Rochester, New York. Business advertising booklet in colors and bronzes. Original and tasteful in design and masterly in execution.

W. C. DILLINGHAM, *Daily Journal*, Los Angeles, California. Business cards and billheads in colors and tints, the designing on which are unique and original, and the execution perfect.

AMUNDSON, KIRCHNER & Co., Chicago, Illinois. Firm circular and business card in colors, the designs, composition and presswork of which show thorough workmanship and artistic taste.

KING & CROMBIE, Lincoln, Nebraska. An assortment of general work in which the taste displayed is cultivated and artistic, the designs original and the mechanical execution of a high grade.

M. CULLATON & Co., Richmond, Indiana. Specimens of printing and firm circular comprised in a pamphlet of twelve pages and cover 10½ by 12½ inches. In designs, engravings, composition, selection of bronzes and colors and in presswork the result is almost without a flaw.

J. W. WOOD, Tacoma, Washington. Assortment of society programmes and cards, including souvenir programme for ball of Typographical Union No. 170. The work is not of uniform excellence, the presswork being defective at times, but capability is shown to remedy this.

## ITEMS OF INTEREST.

At Colby University, in Maine, some time ago, in the oratorical competition between the students, one young man recited with good taste and effect a speech delivered by Printer-Journalist Amos J. Cummings, in the national congress, on the proposed removal of General Grant's body from New York. Congressman Cummings won first prize, which means that he may figure in the school readers of the future along with Demosthenes, Cicero, Lord Chatham, Patrick Henry, Daniel Webster, Henry Clay and Sargent S. Prentiss.

PRINTERS often find it convenient to have several specimens of certain electros, and often have them reproduced in the usual manner. The question has been raised by the Berlin Typographical Society as to whether this practice is not a violation of the new German patent rights law. The matter was referred to Professor Dambach, of Berlin, the author of the law, and his opinion is that the purchaser of any cut or electro may reproduce the same as much as he desires for his own use, but has no right to sell or otherwise dispose of such reproductions.

THE "camper out" enjoys to the utmost his vacation, says Olive Ohnet in the *Graphic*. He returns for a while to the savagery of primitive man, and, if he does not make the fatal mistake of taking a well-stocked larder and a cook, must get his sustenance direct from nature. He never enjoyed any food as he does the meals prepared by his own hands and cooked over a fire of brushwood. The coffee may taste smoky, the fish be underdone and the "roasting ears," stolen from some convenient cornfield, taste of the ashes, but it is all delicious, nevertheless, and he enjoys it. The tramp of half a mile to the spring for water is a joy, although at home he would feel aggrieved if a single faucet in the house were out of order, and he will fish hours in the sun, or tramp miles over the hills after game and congratulate himself that he is "having a glorious time." Spiders, flies, bugs and mosquitoes may invade his tent, and if he cannot drive or smoke them out he smiles and endures it. There is something about the open-air life that relegates the trifles, food and apparel, to their proper place in

the scheme of existence. Every man may not be a philosopher or poet, but at heart he is something of a savage, and has the stoicism of the one and the unconsciousness of the other. He likes to shake off civilization once in a while and live untrammled. It is then that he seeks some choice soul and they "camp out" together.

"DICTATED to and transcribed from the phonograph," was the printed notice on a letter received from a Buffalo correspondent one day last week. If the telegraph, telephone, phonograph, typewriter and shorthand clerk do not help the modern business man to keep abreast of the times, what will? Touch a button, a telegraph messenger is at your hand in a few seconds. Whir-r-r! whir-r-r! and a friend miles away is at your ear. In the quiet of your own office you speak to an inanimate object, turning a crank the while. Your shorthand man comes in, takes it away, again turns the crank. The conversation with the phonograph slowly echoes forth, and as fast as it can be ticked off on the typewriter, sentence after sentence is transferred in clear-cut characters to the letter paper, copied into the letter book, sealed, stamped, and whiffed off down the pneumatic tube to the post box! Your Arabian Night's romances pale in the presence of nineteenth century ingenuity in action.—*Monetary Times*.

#### MARK TWAIN ON SPELLING.

LADIES AND GENTLEMEN,—I have been honored with the office of introducing these approaching orthographical solemnities with a few remarks. The temperance crusade swept the land some time ago, that is, the vast portion of the land where it was needed, but it skipped Hartford. Now comes this new spelling epidemic, and this time *we* are stricken. So I suppose we needed the affliction. I don't say we needed it, for I don't see any use in spelling a word right, and never did. I mean I don't see any use in having a uniform and arbitrary way of spelling words. We might as well make all clothes alike and cook all dishes alike. Sameness is tiresome; variety is pleasing. I have a correspondent whose letters are always a refreshment to me; there is such a breezy, unfettered originality about his orthography. He always spells Kow with a large K. Now, that is just as good as to spell it with a small one. It is better. It gives the imagination a broader field, a wider scope. It suggests to the mind a grand, vague, impressive, new kind of a cow. Superb effects can be produced by variegated spelling. Now there is Blind Tom, the musical prodigy. He always spells a word according to the sound that is carried to his ear. And he is an enthusiast in orthography. When you give him a word he shouts it out—puts all his soul into it. I once heard him called upon to spell orang-outang before an audience. He said, "O, r-a-n-g, orang, g-e-r, ger, oranger, t-a-n-g, tang, oranger tang!" Now, a body can respect an orang-outang that spells his name in a vigorous way like that. But the feeble dictionary makes a mere kitten of him. In the old times people spelled just as they pleased. That was the right idea. You had two chances at a stranger then. You knew a strong man from a weak one by his ironclad spelling, and his handwriting helped him to verify your verdict. Some people have an idea that correct spelling can be taught—and taught to anybody. That is a mistake. The spelling faculty is born in a man, like poetry, music, and art. It is a gift; it is a talent. People who have this gift in a high degree only need to see a word once in print and it is for ever photographed upon their memory. They cannot forget it. People who haven't it must be content to spell more or less like—like thunder—and expect to splinter the dictionary wherever their orthographical lightning happens to strike. There are one hundred and fourteen thousand words in the unabridged dictionary. I know a lady who can spell only one hundred and eighty of them right. She steers clear of all the rest. She can't learn any more. So her letters always consist of those constantly recurring one hundred and eighty words. Now and then, when she finds herself obliged to write upon a subject which necessitates the use of some other words, she—well, she don't write on that subject. I have a relative in New York who is almost sublimely gifted. She can't spell any word

right. There is a game called Verbarium. A dozen people are each provided with a sheet of paper, across the top of which is written a long word like kaleidoscopic, or something like that, and the game is to see who can make up the most words out of that in three minutes, always beginning with the initial letter of the word. Upon one occasion the word chosen was cofferdam. When time was called everybody had built from five to twenty words except this young lady. She only had one word—calf. We all studied a moment and then said, "Why, there is no l in cofferdam!" Then we examined her paper. To the eternal honor of that uninspired, unconscious, sublimely-independent soul be it said, she had spelled that word "caff!" If anybody here can spell calf any more sensibly than that, let him step to the front and take his milk. The insurrection will now begin.

Translated from *L'Imprimerie* for THE INLAND PRINTER.

#### AN INSTRUCTIVE VISIT.

The typographic pupils of the Estienne School of Paris, accompanied by their professors, visited, during the Easter vacation, the national printing house. The director furnished them with special employés, among whom was M. Pian, the young and intelligent superintendent of the Oriental department, where all foreign languages are composed. The pupils were able to examine into all the details of the studies of composition, of printing, of stereotyping, of galvanoplastie, of chemical graving, of casting, binding, stitching, ruling, pressing, lithography, the library, the collections, immense resources, etc. The collection of foreign characters astonished the boys above all else, and they listened to the explanations of their amiable *cicerone* with great interest. In seeing this great variety of characters, among which is the Chinese, having twenty-eight thousand different signs; the combinations of the hieroglyphic text, into which enters twelve thousand signs; the fantastic appearance of many of the Oriental alphabets, etc., the young apprentices were enabled to realize to some extent the vast territory which is included in the art of typography.

#### IT WORKED.

"Bayard Taylor," writes Mr. Nathan Haskell Dole, "Mr. Stoddard, and another well-known poet, met once (so I was told) and began to talk about the praise that was lavished upon them. They agreed each to write a poem made up of the most arrant possible nonsense, but couched in very high-sounding verse, and see how it would be received. They did so, and were delighted to find that their efforts had been rewarded; the discriminating critics discovered in them meanings worthy of those extracted by the maddest Browningsites from the obscurest of his misprints."—*The Critic*.

Written for THE INLAND PRINTER.

#### MONDAY.

BY ENO.

Of all the days to work in,  
And of all the times to shirk in,  
Monday takes the "bun."  
If you fail in all you try,  
Drop a form and make a pi,  
Monday it is done.

But, although it makes you tired,  
Don't take the chance of getting fired;  
Monday be on hand.  
You may make some good excuses,  
And be clever, too, at ruses;  
Monday they won't stand.

If from work you wish to stay,  
Choose almost any other day;  
Monday you'll be missed.  
If you fail to work on Monday,  
You had a "jag on" Sunday,  
The boys will all insist.

“SAY YES! DARLING.”

Specimen of half-tone engraving from photograph, by J. MANZ & Co.,  
107 Madison street, Chicago.

**LIFE'S EPITOME.**

A burst of light and song and stars,  
Of hopes and dreams and some-time glory—  
Day's begun!  
A little praise, a little blame,  
A little floating breath of fame,  
A little sitting in the sun, a little sigh—and  
Day is done!

—Annie E. P. Scaring.

**A FRIENDLY HAND.**

When a man ain't got a cent, and he's feelin' kind o' blue,  
An' the clouds hang dark an' heavy, an' won't let the sunshine  
through,

It's a great thing, oh, my brethren, for a feller just to lay  
His hand upon your shoulder in a friendly sort o' way!  
It makes a man feel curious; it makes the teardrops start,  
And you sort o' feel a flutter in the region of the heart.  
You can't look up an' meet his eyes; you don't know what to say.  
When his hand is on your shoulder in a friendly sort o' way!  
Oh, the world's a curious compound, with its honey and its gall,  
With its cares and bitter crosses; but a good world after all.  
And a good God must have made it—leastways, that's what I  
say

When a hand rests on my shoulder in a friendly sort o' way!  
—Atlanta Constitution.

**HE KNEW HIS GAIT.**

At 10 o'clock the other night a dainty young man, with a step  
as mincing as a rabbit's, was sailing down Lexington avenue  
with an umbrella over his head when a policeman growled at him:  
"You don't expect a thunder-shower, do you?" "No, thir. I  
dont expect no thunder-shower," replied the young man.  
"Didn't know but you were carrying that umbrella to keep off  
the rain." "No, thir. I am carrying thith umbrella to keep the  
dew off my ears, thir. The dew makes a fellah's ears look red, ye  
know, and red ears ith not the style, you thee, and good night to  
you, old man!"—New York World.

**A FEW SMILES.**

AN envelope is like a woman: It can't go anywhere without  
address.

WHY is a comp like a cripple? Because he can't get along  
without his stick.

"THIS," said a reminiscent grammarian, "is the anniversary of  
Lindley Murray's birth."

"Let us *parse* it in a suitable manner!" chorused his irreverent  
listeners.

**THE OPEN SEASON.**

"You think you are getting a little fly, don't you?" said the  
man to the trout, as he leisurely pulled him in.

"I do seem to be catching on," replied the trout.—Life.

A BOSTON puzzle editor printed a fac simile of Jay Gould's  
signature and asked his readers to guess whose it was. Among the  
persons to whom the autograph was credited were: T. Reed, Inger-  
soll, Ike Weir, Baron Hirsch, H. Greeley, Jubal Early and  
Inspector Byrnes. Six experts in handwriting guessed the riddle.

GREAT Editor—I advertised for a private secretary, whose  
chief duties will be to sit in the ante-room and keep poets, bores  
and other undesirable persons at bay. The position requires  
something of a diplomat as well as a fluent linguist. You would  
not do at all.

Ricketts (who stutters a trifle)—That's wh-wh-where you make  
a mum-mum-mistake, 'squire! As sus-sus-soon's a bub-bore cuc-

cuc-came in I'd bug-bug-begin to tell a l-l-ong s-s-story, and before  
I'd gug-gug-got half through, bub-bub-between whu-wh-what I'd  
sus-sus-say and wh-what I'd tut-try to sus-say, I'd have him cuc-  
cuc-completely tut-tut-tired out. I ain't mum-mum-much of a  
dud-diplomat, perhaps, but as a l-l-linguist I'm a cuc-cuc-caution!  
—American Art Printer.

**A GOOD COMBINATION.**

Reporter—Here is my account of the wedding of that Boston  
man to the Chicago girl.

Editor—Have you put a head on it?

Reporter—Certainly. "Pork and beans."—Judge.

**THE DIFFERENCE.**

"What is the difference between biography and autobiography,  
papa?" asked Johnnie.

"One shows a man as he is and the other shows him as he  
thinks he is."—Baltimore Life.

Reader (to holder)—"What is that pattering noise, raining  
again?"

Holder—"No; Mac's 'dissing' small pica for solid 13-em  
copy."

"Do you believe in fair play," inquired the type of the chase.  
"Yes."

"I don't, by a long shot. Look at this—three to one." as  
journeyman goes over form with planer and mallet.

**APROPOS TO THE SEASON.**

The delights of a musical block were thus described by  
"Bob" Burdette some years ago:

"Hark, and oh hear, the piano is banging—  
(Sonnet and canticle, chant and glee),  
The fellow upstairs his guitar is a-twanging,  
The children are singing a jubilee.  
Just over the way there's a banjo, I think,  
With its 'Pink-a-punk pank, punk, pink, pank, pink';  
And down at the corner the man with the flute  
Is rending the night with a tootle-too-toot.  
And oom pah-pah, oom pah-pah, bra-a, bra-a, boom!  
The brass band is practicing in its room."

**THE MODERN "AD."**

The old hauteur with which the advertiser telephoned to the  
public from superior heights is done away; he who has wares to  
sell nowadays descends from his altitudinous Rosinante, and  
mingles with his patrons on terms of equality and long time. His  
vocabulary also hops from its stilts and accompanies him. The  
most accepted form of advertising nowadays runs thus:

"Good evening! Do you ever blow your nose? Get Bump's  
Pat. Swipes, and be blown."

"Ah, there! If you don't wear pants, you will get cold and  
be frowned upon. Blarney Stone Pants will keep you in good  
health and society. Pair to order for two-cent stamp."

"Take a tumble to yourself! Rinx's Roller Resort furnishes  
pads with every pair of skates."

"Don't be a darned fool and wear resurrected socks, when you  
can get new ones for five cents a dozen from Moneymaker. (Post-  
age stamps taken.)"

"Where did you get that hat? We give those away at Tiler's,  
where you can also buy *decent* hats."—Puck.

MISS SARA JEANETTE DUNCAN, whose "A Social Departure"  
and "An American Girl in London" are now so much read,  
served her literary apprenticeship on the Toronto *Globe* and other  
Canadian journals under the name of "Garth Grafton." The  
"Social Departure" is the story of her own adventures in a trip  
round the world with a lady friend.—Baltimore Life.

## WHY DON'T YOU ADVERTISE?

He sat at the door at noonday,  
Lonely, glum and sad ;  
The flies were buzzing about him,  
Led by a blue-winged gad.  
Not a customer darkened his portal ;  
Not a sign of business was there ;  
But the flies kept on buzzing  
About the old man's hair.  
At last, in misery, he shouted,  
" Great Scott ! I'm covered with flies ! "  
And the zephyrs that toyed with his whiskers said :  
" Why don't you advertise ? "

—*The London Phonographer.*

## BUSINESS OUTLOOK.

**Akron, Ohio.**—State of trade, good ; prospects, good ; composition on morning papers, 30 cents ; evening papers, 25 cents ; bookwork, 30 cents ; job printers, per week, \$12 to \$15 ; pressmen, per week, \$15.

**Bay City, Mich.**—State of trade, fair ; prospects, fair ; composition on morning papers, 34 cents ; evening papers, 32 cents ; bookwork, 34 cents ; job printers, per week, \$14.

**Boston, Mass.**—State of trade, very dull ; prospects, not very good ; composition on morning papers, 45 cents ; evening papers, 35 cents ; bookwork, 40 cents ; job printers, per week, \$15.

**Columbia, S. C.**—State of trade, fair ; prospects, very fair ; composition on morning papers, 40 cents ; evening papers, 40 cents ; bookwork, per week, \$15, nine hours ; job printers, per week, \$18 and \$20.

**Concord, N. H.**—State of trade, good ; prospects, good ; composition on evening papers, 20 cents ; bookwork, 25 cents ; job printers, per week, \$10 to \$13. Concord's Union, No. 297, has just been formed, with the following officers : President, W. G. Gast ; recording secretary, W. E. McPherson ; financial secretary and treasurer, Lewis E. Murphy ; corresponding and recording secretary, C. R. Davison ; sergeant-at-arms, A. B. Cross.

**Dayton, Ohio.**—State of trade, slight improvement since last report ; prospects, not encouraging ; composition on morning papers, 35 cents ; evening papers, 32 cents ; book and job printers, per week, \$15. Work in job offices is very slack. The United Brethren Publishing House is leading in bookwork. Plenty of printers here to do all the work. No. 57 voted against the nine hour law.

**Dubuque, Iowa.**—State of trade, dull ; prospects, poor ; composition on morning papers, 30 cents ; evening papers, 28 cents ; bookwork, 30 cents ; job printers, per week, \$14.

**Fort Wayne, Ind.**—State of trade, fair ; prospects, discouraging ; composition on morning papers, 35 cents ; evening papers, 30 cents ; bookwork, per week, \$13.50 ; job printers, per week, \$13.50.

**Galesburg, Ill.**—State of trade, quiet ; prospects, not very bright ; composition on evening papers, 25 cents ; bookwork, per week, \$12 ; job printers, per week, \$12 and \$15.

**Grand Rapids, Mich.**—State of trade, slow ; prospects, uncertain at present ; composition on morning papers, 35 cents ; evening papers, 30 cents ; bookwork, per week, \$14 ; job printers, per week, \$14. The *Telegram-Herald* has put in three typesetting machines, and it costs about \$1.18 per thousand to run them.

**Hartford, Conn.**—State of trade, not good ; prospects, not encouraging ; composition on morning papers, 40 cents ; evening papers, 35 cents ; bookwork, 35 cents ; job printers, per week, \$15.

**Houston, Tex.**—State of trade, dull ; prospects, only medium ; composition on morning papers, 40 cents ; evening papers, 40 cents ; bookwork, 40 cents ; job printers, per week, \$20.

**Jackson, Mich.**—State of trade, fair ; prospects, fair ; composition on morning papers, 33 cents ; evening papers, 30 cents ; bookwork, per week, \$13 ; job printers per week, \$13.

**Keokuk, Iowa.**—State of trade, good ; prospects, good ; composition on morning papers, 30 cents ; evening papers, 26 cents ; bookwork, 30 cents ; job printers, per week, \$12. Our union elected officers last week, namely, W. E. Strimback, president ; F. J. Martin, vice-president ; Edward Sanford, recording secretary ; Arthur De Moss, financial secretary ; James Roberts, treasurer ; W. E. Pringle, J. F. Lutz and C. P. Darlington, executive committee.

**Little Rock, Ark.**—State of trade, dull ; prospects, poor ; composition on morning papers, 35 cents ; evening papers, 35 cents ; bookwork, 35 cents ; job printers, per week, \$16.

**Logansport, Ind.**—State of trade, improving ; prospects, better ; composition on morning papers, 28 cents ; evening papers, 23 cents ; bookwork, per week, \$12 ; job printers, per week, \$12 ; work is picking up.

**London, Ont.**—State of trade, good ; prospects, fair ; composition on morning papers, 30 cents ; evening papers, 28 cents ; bookwork, 28 cents ; job printers, per week, \$9 to \$10.

**Los Angeles, Cal.**—State of trade, extremely dull ; prospects, no better till late in fall ; composition on morning papers, 50 cents ; evening papers, 45 cents ; bookwork, 45 cents ; job printers, per week, \$20.

**Mobile, Ala.**—State of trade, good ; prospects, good ; composition on morning papers, 40 cents ; evening papers, 40 cents ; bookwork, 40 cents ; job printers, per week, \$16.

**New Haven, Conn.**—State of trade, dull ; prospects, dull ; composition on morning papers, 40 cents ; evening papers, 35 cents ; bookwork, 35 and 40 cents ; job printers, per week, \$15 and \$18. This city has been overcrowded with printers during the past month.

**New Orleans, La.**—State of trade, dull ; prospects, bad for next two months ; composition on morning papers, 45 cents ; evening papers, 40 cents ; bookwork, 40 cents ; job printers, per week, \$18. The *Times-Democrat* pays \$4 per day on machines, and also on case work. No day work is done by compositors. Type is distributed by others during the day.

**Omaha, Neb.**—State of trade, poor ; composition on morning papers, 40 cents ; evening papers, 37½ cents ; job and book printers per week of 48 hours, \$16.

**Peoria, Ill.**—State of trade, very dull ; prospects, not encouraging ; composition on morning papers, 36 cents ; evening papers, 33 cents ; bookwork, 38 cents ; job printers, per week, \$15 and \$21. Trade has been very dull here, and the arrivals and departures numerous.

**Philadelphia, Pa.**—State of trade, medium ; prospects, not encouraging ; composition on morning papers, 40 cents ; evening papers, 40 cents ; bookwork, 40 cents ; job printers, per week, \$16.

**Richmond, Va.**—State of trade, dull ; prospects, not good ; composition on morning papers, 40 cents ; evening papers, 40 cents ; bookwork, 40 cents ; job printers, per week, \$16. Business is duller now than it has been for some time.

**St. John, N. B.**—State of trade, fair ; prospects, fair ; composition on morning papers, 30 cents ; evening papers, per week \$10 ; weekly papers, 27 cents ; job printers, per week, \$10.

**St. Louis, Mo.**—State of trade, bad ; prospects, not good ; composition on morning papers, 43 cents ; evening papers, 38 cents ; bookwork, 45 cents ; job printers, per week, \$18.

**San Diego, Cal.**—State of trade, fair ; prospects, encouraging ; composition on morning papers, 40 cents ; evening papers, 35 cents ; bookwork, 40 cents ; job printers, per week, \$18.

**Seattle, Wash.**—State of trade, fair ; prospects, better ; job printers, per week, \$21. The newspapers of this city are working on the eight hour and time system wages. Morning and evening papers \$4 per day. Job offices work nine hours, and the wages are \$3.50 per day.

**Springfield, Ill.**—State of trade, not very good ; prospects, uncertain ; composition on morning papers, 33½ cents ; evening papers, 30 cents ; book and job printers per week, \$15.

**Toronto, Ont.**—State of trade, dull ; prospects, fair ; composition on morning papers, 30 cents ; without ads., 33½ cents ; evening papers, 28 cents ; bookwork, 33½ cents ; job printers, per week, fifty-four hours, \$11.

**Utica, N. Y.**—State of trade, dull ; prospects, gloomy ; composition on morning papers, 35 cents ; evening papers, 31½ cents ; bookwork, 31½ cents ; job printers, per week, \$12.50. There are a great many subs in Utica at present, too many for the amount of work given out.

**Wheeling, W. Va.**—State of trade, fair ; prospects not encouraging ; composition on morning papers, 35 cents ; evening papers, 30 cents ; bookwork, 40 cents ; job printers, per week, \$15. This city is full of printers ; more than was ever known to be here before at any one time.

**Wichita, Kan.**—State of trade, only fair ; prospects, fair ; composition on morning papers, 35 cents ; evening papers, 30 cents ; bookwork, per week, \$15 ; job printers, per week, \$15.

**Worcester, Mass.**—State of trade, very quiet ; prospects, about same ; composition on morning papers, 40 cents ; evening papers, 33½ cents ; bookwork, 35 cents ; job printers, per week, \$12 to \$15.

## BUSINESS NOTICES.

THE attention of the trade is directed to the fac simile letter printed on page 1117 of this issue which explains itself. Since his resignation Mr. R. O. Boyd has gone into business for himself, and his old friends and customers will find him at 4 Jacobson Block, Denver, Colorado, where he will be pleased to serve them with anything in the way of printing ink and special roller composition.

## SEND FOR A CARD.

The Buffalo Printing Ink Works have gotten out a card showing an assortment of fine staple colors used by all job printers, and offering to sell at a low price to introduce their colors to some who may not be familiar with their inks.

**HEBER WELLS' NEW SPECIMEN BOOK.**

This recently issued work, containing 132 pages, and showing specimens of wood type and borders manufactured by Heber Wells, of 8 Spruce street, New York, is a neat piece of work, and has an assortment of faces in this line of type that cannot fail to suit the most fastidious printer. The page is smaller than customary, but still wide enough to allow of the lines showing caps and lower case together. For convenience in ordering, Mr. Wells has added a number before the name of type, but has retained the old titles as in his former catalogue, in case it is necessary to refer to them by name. The book contains a classified index, which renders it easy to select any letter, and a simple price list for catch words, corners, etc., a great improvement over the former book. The various series are arranged together, and it is not necessary to turn from one end of the book to the other to find the different sizes of a particular letter, as in many specimen books. In old styles and gothics Mr. Wells has a fine line, and other letters are shown in great variety. Copies of this work will be furnished to those contemplating the purchase of wood letter upon application. Mr. Wells will issue his general catalogue in a short time.

**ROTARY WEB PERFECTING PRESS.**

It is with pleasure we announce that Mr. Wellington P. Kidder, of Boston, Massachusetts, has at last perfected the above machine, having one in successful operation in the office of McIndoe Brothers in that city, and that he expects shortly to furnish more to be placed in offices already wanting them and anxious to secure the first ones produced. That years of study and trial and expense have passed before success was reached no one will deny, and none know better than Mr. Kidder himself the satisfaction felt at a realization of fond hopes so long deferred. It is not necessary at this time to mention the difficulties encountered, the vexatious problems met, and the expenses incurred in bringing this piece of mechanism to its present successful period. Suffice it to say that the embryotic stages of the work are over and from now on the printers and publishers of the world can obtain a machine long needed, and one that promises great results.

The new machine is intended for fine magazine, illustrated catalogues, book, periodical and commercial printing, and is adapted to half-tone engravings on both sides of enameled or coated papers, entirely avoiding offset. It is quickly adjustable to any and all sizes of sheets or forms, within the maximum, without limitations to fractions of an inch. Can be fed from the roll, or sheets (size 29 by 42 inches), fed by hand in the usual manner, at will. It is built in all desired sizes up to 38 by 54 inches. The maximum speed is 8,000 impressions or 4,000 perfected sheets per hour.

We regret that it is impossible in connection with this to show an illustration of the press, which is a compact machine occupying a floor space eight by ten feet, and being five feet high. Its weight is eight tons. The arrangement of the impression cylinders, the form-carrying cylinders, the fountains, the fourteen vibrating distributing cylinders, the twelve form rollers, the feeding and cutting mechanism, the auxiliary feed, the impression throw-off, the offset web of manila paper and its rewinding cylinder, the dampened air-float delivery and other parts of this wonderful machine can only be named, and the full description and explanation of same left for a future issue, or for elucidation by means of the catalogue of the company.

Among the advantages claimed for the Kidder machine are: that it has a capacity six to eight times that of the ordinary flat-bed cylinder press; that having, on the rotary principle, the comparative maximum of speed with the minimum of motion, the surface velocity of its cylinders and distributing rollers is not more rapid at three thousand revolutions per hour than an ordinary cylinder press at fifteen hundred; that with its unsurpassed distribution, any fine printing which, on the ordinary press, can be done at fifteen hundred revolutions is equally well performed by

this machine at three thousand revolutions, or six thousand corresponding impressions per hour; that ordinary electro-plates — plates that have been used on ordinary flat-bed presses — are precisely suited to this machine, being curved quickly without injury, and also straightened again successfully when desired, and the plates or forms are made up on detachable shells or turtles; that all sheets register accurately and back to exact hair-line register, without slur; that the dampened air-float delivery avoids electricity, both at the piling table and at the feed; that the form-carrying cylinders and fountains are piped for steam, to warm quickly in cold weather, and that the utmost convenience in adjustment and accessibility of parts is provided throughout.

It will thus be seen that an important invention in printing is about to be put upon the market, and if the press is all that its inventor claims for it, large printers and publishers would do well to correspond with the manufacturers, the Kidder Press Manufacturing company, 24 Norfolk avenue, Boston, Massachusetts, and obtain fuller information in relation thereto.

**EMMERICH BRONZING AND DUSTING MACHINE.**

On page 1074 will be found a cut of the above machine, which will bronze and dust from 900 to 1,500 sheets an hour. The sheets are fed similar to those of a cylinder printing press; are held by grippers, and delivered with the bronzed side of sheet up. Heavy card-board or the lightest paper are bronzed equally as well as sheets of ordinary weight, and there is no adjusting of the machine required for paper of different thicknesses. There is positively no waste or escape of superfluous bronze, which is tightly confined in the machine, thus permitting it to be placed between or in the immediate vicinity of the printing presses. The feeding of bronze for wide and narrow work, or for short and long sheets, can be regulated while the machine is running; also, since the invention of the new adjustable feed motion, which deposits bronze only upon the printed surfaces, ceasing to feed after the sheet has passed the fountain, the bronze consumed is reduced to a minimum quantity. It requires but a few minutes to change from one color of bronze to another, or for magnesia and soapstone when machine is utilized for drying purposes. The machine is in every respect well constructed, and there are no tapes, strings or bands used, or any material which requires frequent renewing. Eight sizes are manufactured, taking sheets from 12 by 20 to 36 by 50 inches. Emmerich & Vonderlehr, the makers, 191 Worth street, New York, will give all particulars and quote prices promptly on application.

**ALL LIVE PRINTERS** should have Bishop's "PRACTICAL PRINTER," 200 pages, \$1. Also his "DIAGRAMS OF IMPOSITION" and "PRINTERS' READY RECKONER," 50 cents each; the "PRINTERS' ORDER BOOK," price \$3; and "SPECIMENS OF JOB WORK," price \$2. Sold by H. G. Bishop, Box 13, Oneonta, N. Y., and by all type foundries. The handiest and most useful works ever published for printers. Indorsed by everyone.

**ART ADVERTISING**—"IDEAL MASTERPIECES, FROM FAMOUS ART GALLERIES" is the handsomest and most elaborate art advertising specialty issued. Large advertisers, advertising specialists and printers should see it. Newspaper publishers will find it a taking supplement. Send 6 cents in stamps for samples and prices. GRIFFITH, AXTELL & CADY CO., Holyoke, Mass.

**"COLORED SPECIMENS"**—Specimen-book for 1891 now ready. Printed on heavy coated paper, and contains a nice assortment of color work. Price 25 cents, prepaid. Address E. N. ALLING, New Haven, Conn.

**FOR SALE**—A job office and newspaper in Michigan. Earning big money. \$4,000. Investigate. "MICHIGAN," care INLAND PRINTER.

**FOR SALE**—Point folding machine, capable of folding 16 by 23 to 32 by 46; three or four fold; can be used for marginal machine for newspaper work. This is a new machine, has never been used, too large for our run of work; can secure this machine at a bargain. Address "E. D.," care INLAND PRINTER.

**FULL** and complete instructions on zinc etching, photo-engraving, etc., by Frank J. Cohen. A 38-page pamphlet, giving full information on above topic, will be mailed to any address on receipt of \$2. Address THE INLAND PRINTER COMPANY, Chicago, Illinois.

**PRESSMAN**, cylinder and job, desires position; habits and workmanship perfect; finest New York references. JAMES DORIN, 1950 Fulton street, Brooklyn, N. Y.

**SITUATION WANTED** as bookkeeper in printing office; ten years' experience. Address "BOOKKEEPER," care INLAND PRINTER.

**SUPPLY NEARLY EXHAUSTED**—The volumes left over after supplying the members of the "American Printers' Specimen Exchange," were made up into sets and have been sold from time to time bound and in sheets at a small part of their real value, in many instances less than the original charge to members for binding alone. We offer the remaining unbound sets, comprising vols. 1, 3 and 4, at \$2.65. Every third order one of the complete sets (4 vols.) will be substituted, formerly sold at \$3.75. ED. H. McCLURE, Buffalo, New York.

**THE** services of an experienced, energetic Chicago correspondent may be secured by addressing "D. C. F.," INLAND PRINTER, Chicago.

**THE NOVELTY OF 1891, EMBOSSED TRADE CARDS**—Entirely new and original; 12 businesses now ready; bronzed, illustrated, chaste, intensely elegant and specially suited for fastidious trade. Big button (you press) for printers and specialists. Full line of samples, with particulars, for five 2-cent stamps. GRIFFITH, AXTELL & CADY CO., Embossers, Holyoke, Mass.

**THE ONLY REPRESENTATIVE COLLECTION OF AMERICAN PRINTING**—We have only five unbound complete sets of the "Specimen Exchange" left, and for every third order for the set, comprising vols. 1, 3 and 4, at \$2.65, we will substitute one of the complete unbound sets, heretofore sold at \$3.75. If you doubt its worth, ask THE INLAND PRINTER. ED. H. McCLURE, Buffalo, New York.

**WANTED**—A few copies of the February, 1891, number of THE INLAND PRINTER; will pay 15 cents apiece for them. INLAND PRINTER CO.

**WANTED**—Subscribers to THE INLAND PRINTER; per year, \$2; six months, \$1; single copies, 20 cents. Also, send 10 cents for circular, "How to Impose Forms," giving over fifty complete schemes of imposition.

**WANTED**—A partner to purchase a one-third interest in a well-established and paying printing office and blank book manufactory. Man must be competent to take financial charge of the business. Other two partners are both practical men. A good chance for a good business man. Address "B. H. H.," care INLAND PRINTER.

\$2.65—For vols. 1, 3 and 4 of the "American Printers' Specimen Exchange." If you doubt its worth, ask THE INLAND PRINTER. ED. H. McCLURE, Buffalo, New York.

\$1,100—\$500 down, balance long time—takes job office paying \$110 per month; invoice, \$800; \$300 worth of work on hand; nearly new; growing town; just the place for printer with weak lungs. Address R. M. ROBERTS, Trinidad, Colorado.

**PROOFREADER.**

The Brandon Printing Co., Nashville, Tenn., doing a general printing business, which includes jobwork of all kinds, from letterheads to stock catalogues of pedigree, want a good proofreader, one capable of reading proof for technical as well as other errors. The duties of a proofreader will keep him busy about three-fourths of his time. They prefer a man capable of setting type when not engaged at his desk. To a man of that kind a pleasant situation and a fair salary is offered. Please write.

**GOOD JOB AND BOOK COMPOSITORS,**

desiring work in the large cities, will please address with reference as to ability and character,

THE UNITED TYPOTHETÆ OF AMERICA,  
Box 695, CINCINNATI, O.

**CUTS FOR ALL PRINTING PURPOSES.**

HALF-TONE.

SEND FOR SPECIMEN BOOK.

The Lightning Ink Reducer and Dryer, Awarded Diploma, Paris, 1889, in London, 1887, for Unexcelled Excellence.

**Inkoleum** is the only article in the world that gives pressmen complete control over printing and lithograph inks, rollers and stock in any weather and climate. It refines inks of any color or shade and makes them dry quick and glossy, enabling rushed work to be delivered immediately from press without offsetting. Inkoleum never dries on rollers, but preserves their suction, life and elasticity. On starting press in morning or whenever rollers are too sticky or ink dry on them, or the ink pulls the paper, a drop or two of Inkoleum put on the rollers with your finger immediately softens the ink and makes them do the finest work a saving of five times its cost every hour in the day.

**Beware of Infringements!** Order Inkoleum and accept no worthless piratical imitation, said to be just as good. Price, only 50 cents. For sale by every typefoundry in the world. Read circulars printed in five languages. Put up only by

# THE KENDALL FOLDER

Any number of Folds desired.  
 Pasting and Trimming Attachments for Quartos and Octavos.  
 Attached to any kind of Press.  
**SUFFICIENTLY ACCURATE FOR PAMPHLET WORK.**  
 Eight and Sixteen Page Folding, Pasting and Covering Machines.  
Supplement Insetting and Pasting Attachment for Folios and Quartos.

THE KENDALL FOLDER has proved itself, by use in almost every kind of an office, to be the **EASIEST RUNNING, THE NEAREST NOISELESS, THE SIMPLEST, MOST ACCURATE, and THE MOST SATISFACTORY IN ITS LINE.**

Write us for estimates on special machines.

Dictated by L. A. SHERMAN. PORT HURON, MICH., June 23, 1891.  
 MR. CHAS. E. BENNETT, Chicago, Ill.:  
*Dear Sir,*—We have been running the Kendall Folder in connection with our two (2) Cottrell newspaper presses during the past two months, and at the present time it is working to our entire satisfaction. It folds evenly and smoothly, pastes the sheets together securely, trims square and uniformly, and gives very little trouble. We think it an excellent machine in all respects.  
 Yours truly, THE SHERMAN CO.

JOURNAL OFFICE, LOCKPORT, N. Y., April 17, 1891.  
*Gentlemen:* It gives us much pleasure to commend the Kendall Newspaper Folder as the simplest, nearest to noiseless, and most satisfactory newspaper folder which is known to us. We are now running it at a speed of 2,500 per hour, a rate much higher than it was guaranteed for, and it does the work perfectly. The pasting arrangement is splendid. A newspaper without one of these folders is missing a good thing. Yours truly,  
 WARD & COBB.

E. K. DUNBAR & CO.,  
 GENERAL AGENTS,  
 BOSTON, MASS.

Sold on 30 days' trial.  
 PRICES  
 From \$150 to \$500.

 184 & 186 MONROE ST., CHICAGO, ILL.

We have "Kendalls" in operation in Blakely Printing Co's pressrooms.

# You Cannot Make Money

By using old-fashioned slow presses. THE ECKERSON SELF-FEEDING, FLAT-BED PERFECTING PRESSES are the latest and most successful of modern inventions.

They cost more than the slow ones, but they do FIVE TIMES AS MUCH WORK.

They are built in all sizes, from 11x15 to 36x58. They do their own feeding, cutting, counting and delivering, and save twelve per cent in the quantity of paper needed to get full count.

Send for our new illustrated catalogue, and say when it will suit you to have us call and talk the matter over.

THE ECKERSON PRINTING PRESS CO.

## Campbell Printing Press & Mfg. Co.

NEW YORK: 160 William Street.

CHICAGO: 325 Dearborn Street.

Denver , Colo. July 22 1891.

To whom it may concern:-

This is to certify that we have made a thorough and careful investigation of the books and accounts of Mr R, O, Boyd, Manager of our business in this city, and find them correct and to our satisfaction; That the action taken by us to recover an amount supposed to be due us was an unwarranted and hasty action <sup>up-</sup> on our part which we regret; The errors that existed in our respective accounts was due to the failure upon our part to give proper credit for remittances received from Mr Boyd; Mr Boyd wrote us to come to Denver and make settlement with him and give him a full release as he desired to ~~discontinue~~ in our service; We received an anonymous letter reflecting upon Mr Boyd that had its bearing upon ~~this~~ our action;

We acted without investigation when we brought suit against Mr Boyd and published that he was no longer our Manager—we regret having done him this injury and believe it due Mr Boyd that we thus set him right and in this we take pleasure. Mr Boyd has resigned of his own free will

## PATENT IMPROVED TWO-REVOLUTION PRESS.

**W**ITH patented mechanism for controlling the vertical movement of the impression cylinder. It is extremely powerful, accurately fitted, free from friction and evenly balanced. A patented automatic device is also provided which prevents lost motion and governs the degree of impression. Its patent reversing mechanism consisting of a cross-belt and spring shifter, is operated by the foot, which places the Press under the immediate control of the feeder. These advantages, with its Sheet Delivery, Hinged Distributor, Caps, Positive Slide Motion, Noiseless Grippers, etc., complete a printing machine that in every respect is equal to the most exacting demands of the times.

C. POTTER, JR. & CO., 12 and 14 Spruce Street, New York.

# Number ❖ Nine!

This will be the number of the next volume of **THE INLAND PRINTER**.

Eight years of marvelous growth are closed, and with the October issue begins another era of unexampled prosperity.

The gradually increasing size of the bound volumes attests this remarkable journal's success.

Its "onward and upward" policy will not permit it to rest, even though the laurel wreath of victory crowns its brow.

**P**ROMISES are as nothing, unless fulfilled. **THE INLAND PRINTER** has never made one that has not been carried out to the letter. Its statement as to what Volume IX is to be, can be told in a few words: It will surpass in beauty of execution the productions of former years, and its many readers may rest assured that in its pages will be found at all times the brightest and newest things in matters typographic that it is possible to secure. The July, August and September issues have been but a feeble forecast of the joys that are to come to all lovers of art in typography who read this magazine. There is no better time than the present to start a subscription, or renew an old one just expiring.

## NOTE THE FOLLOWING:

**1** WE FURNISH THE PAPER AT \$1.50 PER YEAR IN CLUBS OF SIX OR MORE.

**2** WE GIVE A VALUABLE MAP PREMIUM TO THE PARTY GETTING UP A CLUB OF EIGHT....SEE THE OFFER ON ANOTHER PAGE.

**3** WE OFFER A COPY OF "MAC KELLAR'S AMERICAN PRINTER" TO ANYONE SENDING US A CLUB OF TEN.

**4** WE FURNISH A COPY OF BOUND VOLUME IV TO ANYONE SENDING US A CLUB OF TWELVE.

**5** WE WILL MAIL THE INLAND PRINTER FOR ONE YEAR FREE, TO ANYONE SENDING US FOUR NEW SUBSCRIBERS AT THE REGULAR RATE OF \$2.00 PER YEAR EACH.

## PRESS COMMENTS.

The August issue of THE INLAND PRINTER is a typographical beauty, in which Chicago may take a justifiable pride. It is replete with interesting articles and is handsomely illustrated with half-tones and excellent zinc etchings.—*Inter Ocean, Chicago.*

THE INLAND PRINTER for July is one of the handsomest specimens of typography that has ever been issued from any press in this country. The engravings are superb and the letterpress perfect. It contains many instructive articles for compositors, stenographers, writers, editors and publishers.—*Chicago Herald.*

The current number of THE INLAND PRINTER is a publication which certainly does honor to the craft. Every detail of paper, type, illustration and make-up bears evidence of taste and ability. Among the illustrations is a group of ex-delegates from Boston to the International Typographical Union.—*Boston Herald.*

The last issue of this prosperous publication has been received. As usual, it is replete with valuable suggestions from practical persons connected with the "art preservative," notes and letters of interest to the craft generally, and contains many fine specimens of the typo's skill, as well as the latest styles of types and printing machinery and material.—*Washington Post.*

THE INLAND PRINTER for August is a delightful surprise and is in keeping with the marked improvements inaugurated with the July number. The letterpress is perfect. The contributions are written by experienced and practical persons, and the selections and news matter are of the best. Its advertisements are examples of artistic work to every printer in the land, while the illustrations call forth only commendation.—*Albany (N. Y.) Evening Journal.*

THE INLAND PRINTER for July comes out with a bran-new cover, which is a vast improvement on the old. The "art preservative" is personified by a vigorous male figure holding aloft the enlightening torch. The drawing of the cover in general is of a high order, while the figure itself shows the hand of a master. The whole effect is strong and bright, and we feel more than reconciled to the loss of the round-shouldered goddess who has heretofore answered as a distinguishing mark for THE INLAND PRINTER.—*Creyer's Stationer.*

THE INLAND PRINTER is a marvelous epitome of the immense stride typography has taken within the memory of printers who can by no means lay claim to being the oldest of the craft. The letterpress work is like copperplate, the engraving artistic, delicate in shading and expressive in design, and the literary department worthy of the mechanical effect. It makes a true printer proud of his connection with a guild that can portray so many subjects with such a delicate and excellent touch.—*New Orleans Daily City Item.*

THE INLAND PRINTER for July is a marvel of typographical art and neatness. Among the half dozen full-page half-tones, any one of which is worthy a frame, is a particularly beautiful picture called "Ariel"; the figure is so exquisitely light and airy that she seems just ready to flutter away. Besides these there are a great number of most admirable portraits, including some of the most widely known printers in the country. It is a very acceptable souvenir of the last annual convention of the Typographical Union.—*Rocky Mountain News, Denver.*

## OPINIONS OF OTHERS.

Hurray for the new cover of THE INLAND PRINTER. It is a dandy. THE INLAND PRINTER is evidently "in the swim."—*Sam. G. Sloane, Charles City, Iowa.*

July number received in very good shape. If the envelopes are not too expensive we hope you will continue using them.—*George C. James & Co., Cincinnati, Ohio.*

The July number of THE INLAND PRINTER is your best. I do not know how it could be bettered. All your subscribers here are well pleased with it.—*R. A. Martin, Nashville, Tenn.*

THE INLAND PRINTER is a very welcome guest at my office, and I cannot do without it. I have been taking it for a long while and it grows better each month.—*R. M. Scranton, Alliance, Ohio.*

Allow me to congratulate you on the greatly improved appearance of THE INLAND PRINTER. The department headings are simply immense; also the cover.—*E. L. Richmond, Battle Creek, Mich.*

We must congratulate you upon the handsome appearance of the July number; with its new cover and handsome presswork it is indeed a "thing of beauty." Long may THE INLAND PRINTER prosper.—*New York Engraving & Printing Co., New York.*

We wish to congratulate you upon the improved appearance of the last two numbers of your journal. We think it the best publication of its kind in existence, and would not do without it for twice its cost. The impartiality shown in "specimens received" speaks well for the critic.—*McCullough & Whitcomb, Albert Lea, Minn.*

We wish to congratulate you on the improved appearance of THE INLAND PRINTER with its new cover, which is very tastefully designed. Your method of sending it in an envelope, flat, enhances the value of the publication to all your readers as well as your advertising patrons. We wish you continued success.—*Montague & Fuller, New York.*

The last edition of THE INLAND PRINTER, with its new frontispiece, has attracted much favorable comment among the fraternity in San Francisco. The printers unite in declaring it the most excellent piece of workmanship ever turned out, and the quality of the contents has called forth great appreciation and admiration from all sides.—*Edgar Painter, San Francisco, Cal.*

If you will permit me to voice the opinion of every one of your many readers here, I will say that your July and August issues were as handsome works of art as can be found anywhere, and the new envelope arrangement adds very materially to the appearance of the book. Nothing but praise can be heard on all sides for THE INLAND PRINTER.—*Charles F. Taylor, Louisville, Ky.*

We cannot refrain from expressing our gratification with the perfect manner in which our plate, "Breakfasting," was printed in your July number. As a trade journal, THE INLAND PRINTER is undoubtedly far in advance of all other publications of its kind in the country, in the skillful arrangement of its several departments, in the taste and beauty of workmanship displayed throughout its pages, in the valuable character of its contents and, especially, in that in which we are most interested, its skillful and successful printing of half-tone plates.—*Crosscup & West Engraving Co., Philadelphia, Pa.*

We are not in the habit of writing letters such as this might be construed to be. But, after years of prodding, coaxing, advising and urging in an educational manner, the printers of the United States, and beyond them, to attempt to a successful termination, advance and improvement in putting types together artistically, and in connection with presswork to produce better results than had yet been accomplished, the July number of THE INLAND PRINTER shows that we did not work in vain. We are more than pleased with it, and join the multitude of the critic printers of the United States and elsewhere in saying "well done"; and, while you seem to have reached the top, there is still more room for improvement.—*MacKellar, Smiths & Jordan Co., Philadelphia, Pa.*

## WHAT RECIPIENTS OF OUR MAP SAY.

It more than meets my expectation, and is by large odds the biggest fund of correct information I ever got for the money.—*A. J. Milliette, Camden, N. J.*

I received the map all right, and I and my friends who have examined it say it is the best they have ever seen. There is more information to be gained from it than I thought could be put in a map.—*Geo. D. Morris, Jersey City, N. J.*

I was very much pleased with the elegant map. Everyone who has seen it speaks in the highest terms of its worth as a work of reference, and the masterwork of the compiler, the engravers and the printers. It is a big offer for a premium, and shows the rapid strides THE INLAND PRINTER is making as the leading trade journal of the "art preservative."—*Charles P. Graesser, Buffalo, N. Y.*

I am very much pleased with the map, and consider myself amply repaid for trouble in getting up club for your valuable trade journal. The map is very complete, and to those who need one in their business it is well worth the price—five dollars—and to all others its possession will be a source of pleasure and profit, not only to those who travel, but to searchers in political matters.—*Geo. P. Penfold, Lockport, N. Y.*

# THE HUBER TWO-REVOLUTION SUPER ROYAL "MUSTANG."

**NO SPRINGS + CRANK BED MOVEMENT + BOX FRAME.**

**THE FASTEST RUNNING PRESS OF ITS SIZE BUILT.**

WE take great satisfaction in calling the attention of the printing trade to this press, which is our latest production, and which has in its construction the novelty of being a combination of the best points of both the Stop-Cylinder and Two-Revolution style of presses.

The Bed is driven by means of a crank, which gives the smoothest reciprocating motion known to mechanics, and does away with the necessity of springs and the accompanying extra strain and wear, which more especially is liable to occur in a small size press having a large variety of speeds, from their non-adjustment.

The Cylinder is driven in a constant direction and at a speed to correspond exactly to the varying speed of the bed, by means of a perfectly shaped cam-gear. This cam-gear makes two turns to each complete stroke of the bed, and the same gear teeth are in mesh during the printing of every sheet, thus making the register absolutely correct. The cylinder never comes to a full stop when the press is in operation, but keeps moving slowly when the bed is reversing, until the speed of the bed is equal, when it increases in unison with the bed. The sheet is taken by the grippers when the cylinder is moving slowly, another point in favor of perfect register.

There are no complicated cam or stop motions to get out of order, or limit the speed of the press, and we guarantee every machine to print twenty-two hundred sheets per hour, when properly fed, in perfect register and without jar or extra wear.

The cylinder can be tripped at the will of the feeder, and up to the moment when the grippers have taken the sheet.

The bed is supported, under the line of impression, by four large adjustable rollers, journaled in stands, which are fastened to a rigid box stay that cannot spring or give in the least degree.

The side frames are of the box pattern, and every part of the machine is constructed with an eye to great strength and durability.

The sheets are delivered in front of the cylinder, clean side to the fly, which is positive and noiseless in its action.

We unhesitatingly pronounce this press the most simple, complete and serviceable of its size ever introduced, and we invite the closest inspection and comparison.

BED.	FORM.	NO. ROLLERS	SPEED.	WEIGHT.
26 x 35	23 x 32	2	1,000 to 2,200	7,000 pounds.
26 x 35	19 x 32	3	1,000 to 2,200	7,000 pounds.
