

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### **Usage guidelines**

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### **About Google Book Search**

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

# The INLAND PRINTER

A TECHNICAL JOURNAL, DEVOTED TO THE ART OF PRINTING.

VOL. VIII.—No. 1.

CHICAGO, OCTOBER, 1890.

TERMS: } \$2.00 per year, in advance  
Single copies, 20 cents.

Written for THE INLAND PRINTER.

## THE NEW LITERARY LION OF ENGLAND—A STRIKING EXAMPLE OF HEREDITARY GENIUS.

BY MALCOLM MC PHERSON.

THE young litterateur, Rudyard Kipling, whose brilliant short stories are now the rage both in England and on this side of the Atlantic, seems to have literally leaped into fame. Like Byron, he awoke one morning to find himself famous. With Andrew Lang as a kind of literary foster father and cicerone, he has suddenly had the portals of the most exclusive intellectual society of London thrown open to him, for Lang, as a critic, occupies the unique reputation of being the literary Warwick of England, the maker or unmaker of kings in the realm of letters, whose appreciation or condemnation of an author is accepted without dispute. That the brilliant Scotchman is apt to be capricious in bestowing his favors is well known in the literary circles of London, but as whatever the opinions he chooses to express may be are always characterized by brilliance, learning and massive ability, there are few persons who care to quarrel openly with him over his dictums. It is no wonder, therefore, that when he "discovered" Rudyard Kipling, and announced throughout the world that he had found a gem of rare beauty and value, literary London at once took the young author to its arms and accepted him as the newest of intellectual lions.

Under the circumstances, it is natural that, while a great deal has been written about Rudyard Kipling's genius and personality that is perfectly true, there has also been a vast deal of nonsense, as, for instance, when some gobemouche announced the other day that Kipling was an American—a graduate of Harvard College, or something of that sort—and neither an Englishman nor an Anglo-Indian. The writer happened to have the good fortune several years ago of being intimately acquainted with the Kipling family in India, and this circumstance enables him to point out to the readers of THE INLAND PRINTER one remarkable peculiarity about Rudyard that, so far as he knows, has not been much dwelt upon by those who have been writing about the famous and fortunate young author in the

magazines and public press both of England and this country. That peculiarity is this, that Rudyard Kipling furnishes an almost perfect example or illustration of hereditary genius.

The elder Kipling was employed by the government of Bombay as one of the art professors in the Bombay School of Design. He was an admirable artist and original designer, and many a young Parsee, Hindoo, Mahomedan or Goanese, who has chosen to follow art in carving, painting or sculpture, owes today whatever success he has had to the admirable training which he received under Professor Kipling and his humorous associate, Principal Terry. One of Professor Kipling's fads—if one may call such a thing a fad—was the preservation of native art in all its original purity. He treated with the utmost scorn and indignation all attempts to debase native art by intermixing it with European notions and commercial devices. He wanted the style of Mahomedan and Hindoo architecture to be preserved and encouraged in its original purity; he deplored any influence that would make the jewelers and designers in metal depart from the unique styles of their forefathers; and to him aniline dyes were an abomination when introduced into the textures woven by the native artisans in their bazaars. His enthusiasm on this subject attracted the notice of the government of India, and when he was offered the lucrative and important position of principal of the School of Arts of Lahore, the famous capital of the Punjab, which Milton wrote enthusiastically about in "Paradise Lost," no one in India was surprised at the selection.

Professor Kipling, however, was something more than an artist. He was a prolific and delightful writer, and his literary contributions to such newspapers as the *Allahabad Pioneer*, the *Times of India*, or the *Bombay Gazette*—then the leading English papers in the East—were read by thousands with the keenest delight. But it is not alone to his father's side of the house that Rudyard Kipling owes his genius, for his mother also was a person of remarkable literary attainments. The letters, stories, criticisms and poems of Alice Kipling were admired throughout the length and breadth of India for their

easy gracefulness and exquisite daintiness of fancy. And she could be vigorous, too, when she chose to be so, for her mind had masculine characteristics which made her a favorite with men and a terror to the society of her own sex, who regarded her as something between a blue stocking and a mocking, iconoclastic demon. When the writer used to meet the Kiplings out at dinner he had many an opportunity of seeing Alice Kipling discomfit the most intellectual men at the table by her wit, her learning and her marvelous *esprit*. Judges, military men and distinguished civilians did not particularly care for entering into an intellectual contest with Rudyard Kipling's mother, for she very rarely came off second best in the encounter. As for the ladies, they were generally afraid of her, for she had no mercy on their foibles and satirized their social jealousies and fads with the most polite but galling cynicism. They prayed to be saved from that terrible *bas bleu*.

It was a fortunate thing for Rudyard Kipling that his father accepted the principalship of the Lahore School of Arts, for otherwise it is extremely doubtful whether he would be at the present moment the bronzed *fulvus leo* of England's literary world. The society of the Punjab is almost entirely a military aristocracy. Lahore abounds in regimental messes, and every cantonment in the country round has one or more of these militant institutions. It is very seldom that the government of India has not a little war of some kind on its hands along the wild frontier of India, and as the boundaries of the Punjab are contiguous to countries occupied by troublesome tribes, such as Afghans, Beloochees, Cashmerees, Swatees and Ghilzaies, British regiments quartered in that province seldom have the chance of leaving it without seeing active service. Naturally, the principal subject of conversation at the symposia of the regimental messes is war and war adventures. Here, then, was the field wherein Rudyard Kipling got most of the materials and wonderful local color for his famous stories, so that with the inherited genius of his parents and the singular character of his surroundings in the Punjab, it is less surprising that he has turned out to be the literary lion of the day than it would have been if he had not developed intellectual characteristics sufficient to make him a marked man among the English-speaking race. One thing is certain, and that is that his work has already given the printer everywhere an immense amount of work to do which he would not otherwise have had.

The writer has ridden many times with young Kipling inside the railed track on the Bombay Esplanade—the one on his raw-boned Waler, the boy on his shaggy Deccan "tat"—and there has been no more pleasant surprise for him than that the dull boy of that time should have developed into the brilliant man he is now. He is being sharply criticized by Howells and others, but he will, if he lives long enough, undoubtedly prove that he prefers to be the lion to the predatory jackal that is content to be a humble follower for his prey; hence the force of my caption—a Striking Example of Hereditary Genius.

#### A CRITICISM OF PLATEN PRESSES.

BY ALTON B. CARTY.

I KNOW of no platen press in the market that in proper hands and worked within its capacity will not do good work, and yet there are many opinions advanced as to which style of machine is the best. Some printers buy all Gordons, others prefer Universals, still others are partial to the Liberty, and so on. I am not partial to any platen press, although I am when cylinders are under discussion. In purchasing a platen press the first matter to be considered is the class of work to be exacted of the machine, as all presses are not built to stand well under equal strain, notwithstanding all claims by builders to the contrary; also as to speed, as some presses can be run at a much higher rate of speed than others and no damage result. The great mistake made by employing printers is the failure to consult with practical pressmen before making purchases. The idea that "the pressman knows nothing, and I know it all," prevails to the detriment of the employing printer. Instead of purchasing only one style of press, it may be that an advantage will accrue to have several of one kind for heavy work or slow speed and some lighter makes for fast work.

In purchasing a press the conveniences for handling the same should be first considered. The ink supply, distribution and otherwise, must not be neglected. If the work to be done requires a large amount of ink and is a heavy form and moderate speed only is expected, the Universal will prove satisfactory. But you can not run the Universal at a high rate of speed for any length of time without developing a shakiness in the movement of the platen, and also do injury to the rollers. I admire the Universal for its square impression, its ink supply when more color is required on one section than on others, and its ability to withstand strain; but the Universal has its objections. The new Gordon is a good machine for general work at a lively speed, but it is rather top heavy in its larger sizes. I admire the disk distributor for general work, especially on short runs, but the inability to secure a steady supply of ink for heavy forms is an objection to the Gordon. I have tried all the fountains I ever heard of, but I declare them all failures on the Gordon. The Duplex distributor on the Golding is a good feature of that press, but has not yet attained perfection. For fast speed on small forms the Pearl gives satisfaction, the Baltimore Jobber being too light. As to the roller movements on the different makes of presses I believe the Universal the best, as an even pressure of the rollers against the form is secured, which is not the case with other styles of machines. The short springs on the new style Gordon soon become weak and the rollers will not bear against the form in the middle sufficiently to give it a good inking. The springs need to be replaced with new ones quite frequently, although the cost is trifling. The long springs of the old style Gordon and Peerless give better satisfaction and last longer. Presses having a

square impression like the Universal and Eclipse will require but little, if any, changing of the impression screws when alternating from heavy to light forms, and vice versa, the Gordon ranking next, while the Peerless, Golding, Baltimore Jobber, and similar machines require frequent changes. The impression setting arrangement on the Golding is so simple and effective as to, in a large measure, make up the difference. It is best, where much work of the same class is done, to keep several presses exclusively for the purpose. Under such circumstances the impression screws need not be changed for months. Now, do not suppose there is nothing good in any platen press, for if such an interpretation is made of this article it is an error. I have only tried to show you the weak points, the good ones being more abundant; but knowing the weaknesses you are better able to purchase the machine you want and will be better satisfied when you purchase it. Be careful to get a press particularly adapted to the work expected of it, and there will be no trouble or regret in the future.

#### COUNTRY NEWSPAPER SERVILITY.

BY SAM G. SLOANE.

THERE is prevalent among the country newspapers a species of willing servility that must be extremely humiliating to any person possessing a spirit of sturdy independence, and a consciousness of that manly hardihood of character that makes him feel his ability to wage successfully the battle of life. This willing servility is manifested in various ways, and with many has grown to be almost chronic. Week in, week out, one reads in the columns of the country press, and often in papers with some city pretensions, such items as this:

John Smith, Esq., was in town last Monday and helped the poor printer by paying cash for six months' subscription. Mr. Smith is one of our most substantial and well-to-do citizens, and is, withal, a generous, whole-souled man. We wish there were more in this community like him.

And again like this, copied exactly as it appeared in the paper from which I take it:

We are under obligations to our friend J. W. Moore, of south of town, for a fine lot of "sass" in the way of a peck of beans and a lot of the finest sweet potatoes we have sampled this season. Jim never forgets the hungry printer when he comes to town.

And here is still another taken from a paper before me, and given verbatim:

This number begins Vol. 5. Please help us all you can. Prices of farm products have advanced, while the cost of the subscription has not. We must have more help and prompt payment, or round up. If the citizens want the *Times* to continue they have got to evidence it by giving us more to do.

Besides this class of matter, all through the reading columns (of the home sides) one encounters such heart-rending, importuning appeals as, "Patronize the poor printer"; "Pay up your subscription, we need the money to meet our bills"; "Subscribe now, and induce your neighbor to subscribe, and help us out; we need the money to keep the paper going"; "Our appeal for aid

last week was responded to by several of our citizens who generously paid up their back subscriptions, and we hope more will do likewise," and so on, *ad nauseam*. It is no wonder, after reading such items, that John Smith, Esq., and "our friend J. W. Moore," walk into the office with the airs of benefactors, and, after paying six months' subscription, and leaving a peck of beans and a few sweet potatoes, proceed to deliver pompous lectures to the editor as to how the paper should be run. When men are made to feel that they have bought the paper (and its editor, too) they naturally feel that it is their prerogative to dictate how it shall be conducted, and they as naturally follow the dictates of their feelings. Even in the starting of many papers this spirit of servility is manifested. Hardly a new venture is made in the country newspaper field that the person making it does not appeal almost directly to the charity of the people of the community in which the venture is made. The "salutatory" is freighted with the cry for aid that the venture may be made a success. Here's the style: "Believing there is 'a long-felt want' in this community for a newspaper, and that the people comprising it will take sufficient pride and interest therein to open their pocketbooks and give it a hearty support, we have determined to make the venture. Now, come forward with your subscriptions and advertising, for without them generously bestowed we shall not be able to make a success of the undertaking. Give us your encouragement and hearty financial support and we will make a paper of which the people of this town and surrounding country will be proud. Remember, the more encouragement and better financial support given us the better paper we will be able to give in return. Our books are now open; come forward, good people, and give us your names and dollars, always remembering it takes money to run a newspaper."

About the above is the wail sent out, together with the promises of many great things (impossible of accomplishment) to be done in return for the begged-for charity. Then, after the paper is thus launched upon a portion of the sea of journalism where there is scarcely depth sufficient to float even the smallest newspaper craft, the few readers and patrons are constantly importuned to continue the charity. It is actually sickening to read some of the begging items (for I can call them nothing less) in many of the papers coming under my notice. There are no defensible reasons why these should find places in the papers under any circumstances whatever. The newspaper business should be as independent of this servility as any other business, and it should be conducted on just as independent a basis. If there be need for this begging course to keep a paper alive, there is no need for the paper in the community in which it is attempted to be published. If one intends starting a paper let him look for a location as he would for any other business. Do not look for a place where a bonus can be secured, nor accept one if offered. Where a bonus is necessary to induce the venture, the odds are largely against it proving a profitable one—it can be

made so only by continuing the bonus (charity) indefinitely. All this time the publisher of such a paper is quite properly looked upon as a subject of charity, and it requires constant begging to secure that charity. Taboo all such locations; make the venture where there is room, or where room can be made; give the public something it wants and will have, then it will not be necessary to make these pitiful appeals for help. Conduct the paper upon an independent and manly basis; have the bearing of moral courage and a personal, self-reliant fortitude. If that which is offered be good and desirable, begging will not be necessary to secure purchasers. They will come of their own volition, buy, and go away feeling that they have been benefited, and not that they have dispensed a little charity for the benefit of another.

In contradistinction to the class of papers above referred to, I give the following (also verbatim) from a paper whose editor knows his rights, and knowing them has the moral courage to assert them. It has that refreshing, vigorous tone about it that at once stamps its author as a man who would scorn proffered charity no matter in what guise it came :

This paper is like merchandise, it is for sale. If you desire your part of it stopped, come and say so. We don't look upon a man with undying hate if he wants to stop his paper and does it like a gentleman ; and we don't beg him to continue it, either. It is a straight matter of business—you pay your money and take your paper. If you pay up all back subscription and order your paper discontinued, it will be stopped as cheerfully as it begun. When you hear a man blowing about his not having been able to stop his paper, you can bet your suspender buckles that he owes back subscription. And when you hear him bragging about how he crippled the paper by taking his name off the list, you can bet whisky enough to drown him that he is a fool. So don't give yourself away, friends. A few dollars on arrearages will do more toward stopping a paper than all the talking you are capable of, and the editor will be very glad to get you off the list if he ever gets even with you.

A man who makes a paper that is sought after by readers will have one that will be sought after by advertisers who will pay cash, and he will not have to fill his advertising columns with business on the due-bill plan—the bane and curse in the newspaper business.

I say to the reader, if you are a newspaper proprietor and cannot make a paper the people will want bad enough to subscribe and pay for, and that advertisers who pay money will seek after, without being obliged to lower your dignity as a man to the extent of begging them for their patronage, you have missed your calling, or the proper field in which to exert your abilities and energy (or both), and should make a change as quickly as possible. A newspaper is no more entitled to charitable patronage than any other business, but who ever heard any other business make the claims of support from the public that is daily made by newspapers. No business that expects to survive off the patronage of the community in which it locates ever asks or expects a bonus except a newspaper. Other businesses are paid bonuses, but their patronage and support are always

drawn from elsewhere than the community in which they locate.

Too many papers are started from wrong incentives. They should be started only on cold, rigid business principles. If an axe is to be ground, let those for whose benefit it is ground “put up” for the grindstone and the expense of turning and holding ; do not trust to being able to beg it from the members of some community under the guise of being a public benefactor of the community. It will not work, and the one who tries it will but bedraggle his manhood in the dust and dirt of shameful servility. A newspaper man devoid of this servility, and who makes a paper the people want, is looked up to and sought after. He is not cajoled and harrassed by would-be advisors and dictators, but his advice is sought by others. This delectable state can be reached and maintained only by manly independence and the ability to make a paper that will command the attention, respect and patronage of the community in which it is published. One cannot beg his way into this happy state.

The above does not, by any means, apply to all country newspapers. While the rule seems to be as above stated, there are many exceptions, and they stand out in bold relief beside those working according to the rule. It does me much good to get hold of one of these independent, self-reliant papers, whose editor knows what he is here for and is determined to carry out that purpose. Show me this sort of a paper and I will show you one with influence, lots of friends and a good bank account ; one whose guiding spirit is possessed of brains and that rugged, self-reliant independence which will win against all obstacles, and to whom could not be offered a greater insult than to attempt to place him in an attitude of servile dependence. Granting that “an honest man is the noblest work of God,” I place the self-reliant, independent, manly man as an undisputed second.

Written for THE INLAND PRINTER.

#### A MODEL COMPOSING ROOM.

BY M. STANISLAUS MURPHY.

THE first thing to be considered in the formation of a model composing room is the room itself. Many workrooms, at the present time, are unfit for the habitation of human beings. They are pestilential abodes, where lurk the germs of many of the diseases humanity are subject to. How can a place be healthy, permeated with the deadly fumes arising from a floor filthy with dirt and thickly coated with an accumulation of tobacco spittle, with here and there an old “soldier,” which perhaps has remained undisturbed for years? How can a room be perfectly healthy, which is never thoroughly ventilated, and where the atmosphere is at all times stifling and oppressive? “Cleanliness is next to godliness,” and in the composing room the exemplification of this fact is as apparent as anywhere. It imparts a degree of comfort which is invigorating. It imbues us with a sense of cheerfulness which seems to

lessen the effect of toil. So, in my idea of a model composing room the first essential is cleanliness, for where it abounds there may be found health and comfort.

The next thing necessary for the completion of my model print shop is a model foreman. In order to command the respect of his subordinates, he should be possessed of a certain amount of dignity, and should endeavor at all times to maintain that civility toward others which he himself should expect to receive. When asked a civil question it becomes the duty of the foreman, by virtue of his position, to grant a civil answer. It don't cost any more for him to speak to his men in a polite and gentlemanly manner than it does to address them as though he were talking to so many dumb animals. A foreman should be consistent in all things. If he has office rules he should exact a rigid enforcement of the same, and should never allow favoritism to divert him from his path of duty. One rule should apply to all, and because a law is violated by a pet of the foreman's it is no reason why his case should receive more consideration than another's. The foreman should treat all alike, exercising good judgment in all things, and by so doing he will command the respect which his position entitles him to.

The third essential thing necessary for the establishment of a model composing room is a gentlemanly force of men. Men are judged by their conversation, and if their discussions are forever upon subjects degrading, there must be a lack of intelligence. Too much vulgarity is indulged in in conversations heard in a great many of the printing offices of today, and in a great many instances it is the result of habit, which could be easily overcome if the effort were made. To ears schooled to such language the effect is not so bad, but when it falls upon strange ears—ears unused to such vile expressions—it is disgusting and repugnant. Printers are credited with possessing more than ordinary intelligence, and it has been many times proven that such credit is justly due. They are capable of entering in discussion upon any topic, and at times their arguments are really instructive, and why they should ever allow such arguments to become interspersed with language that is low and degrading is more than I can understand. There is nothing so elevating to the craft as gentlemanly traits of character, and nothing so demoralizing as actions which are ungentlemanly, and which are unproductive of any good whatsoever.

In the consummation of my model printery I must not omit mention of him, who, in the parlance of the composing room, is known as the "devil," or, more plainly speaking, the apprentice boy. No office would be complete without one. His services are indispensable. But all "devils" are not alike. There are some who seem to be naturally adapted to the business. There are others who seem by nature fitted for almost anything else. The average apprentice is satisfied to be acknowledged as a journeyman after serving his full apprenticeship. There are some who, after working a year or so at the business, get what is termed a severe attack of

"swelled head," and they are journeymen, in their own minds, before the fact becomes known to anybody else. They will give tips to the compositors, and sometimes dictate to the foreman as to how he shall make up the paper, and in various other ways will make themselves generally useless. Such "devils" would almost as soon pi a form as do a man a favor—only when there is remuneration in it. They are unobliging at all times, and as a consequence incur the enmity of everybody with whom they come in contact. But there are others who are as dissimilar to the ones I have just mentioned as darkness is to daylight; who are at all times obliging and respectful to their superiors, who in turn deem it a pleasure to assist or enlighten such an apprentice with any knowledge pertaining to the business which they may possess. Truly an apprentice like this is worthy of his hire.

#### APPRENTICESHIP A PRIME FACTOR.

BY DUNCAN F. YOUNG.

THE passage of the six-day law by the International Typographical Union has created a great deal of discussion by members of that organization, and engendered much cogitation as to what is to be done with the surplus of labor in that particular line. Some favor the six-day law while others oppose it, but all seem to be of the one opinion that something must be done to equalize the amount of work to be obtained or to relieve those who are not fortunate enough to have situations. What all this discussion will result in is difficult of determination, but it is to be hoped that it will effect the passage of a five-day law. In this connection it may be meet to say that with union printers the International Typographical Union is paramount, every member having to abide by its enactments. If the individual is dissatisfied he can endeavor to remedy, but when he comes to oppose a decided majority in a palpable cause, he has the inalienable right of severing his connection with that organization at the doors of which he will ere long be knocking.

As stated, the passage of the six-day law has created a great deal of discussion among the members of the International Union. What, then, would follow the passage of a five-day law? Since the law just passed has awakened a feeling of interest so widespread, it follows that the law suggested would arouse a deeper interest, and it would be twofold in its benefits, for it would force the man holding a situation to rest two days each week and give to those not holding situations more work; in fine it would give to those who have been in the habit of working all the time an opportunity to calmly view the situation and learn what a deplorable condition the printing business is in. Heretofore it seems that when a printer secured a situation his time for looking after the condition of the business was over, and every Tom, Dick and Harry of a bum and blacksmith could join the union for all he cared.

It may be justly conceded that all trades and callings are overstocked with labor, but these are respectively using every effort to regulate this circumstance, and

while the printing business should be the last to be overstocked, since so many accomplishments are required to make a perfect printer, it is, perhaps, the greatest sufferer from this glut, and still less is done toward ameliorating successfully this condition. The nine-hour law, the first step in this direction, failed of its purpose, and now the next step, the six-day law, is receiving condemnation by those who are secured, and if we cannot have harmony in our own ranks how can we hope to accomplish a desired object? If we do not have united effort how can we expect to succeed? If we have too many printers in the business, who is to blame? If we have too many immoral and disreputable characters in the business, whose fault is it? If wages are not commensurate with the work, who is responsible? Plainly and emphatically, the man who works too much. He is the one who has not time to look after his frater's welfare; he it is who has not time to fix conditions governing the employing of prospective learners of the business; he it is who, by his avariciousness, forces the poor wretch with empty purse and craving maw to obtain work when and for what he may.

It is never too late to mend, and since the International has taken such an effective stitch it may be that men may now have time and others the courage to take decided measures in prohibiting the wholesale employment of boys and the turning out of blacksmiths. After that you may go back to seven days, and we will endeavor to introduce an eighth day for you!

Written for THE INLAND PRINTER.

#### AMERICAN AND ENGLISH JOURNALISM.

NO. II.—BY AN OBSERVER.

“REPORTERS' English” is a by-word in both countries, but, as in everything else, the continentalists in this take the cake. They have more license than in England; their sentiments, political, religious (!) and personal, are published with impunity, though, in the vast majority of instances, they are young fellows of between eighteen and twenty-five years of age, whose opinions on most topics will turn a somersault with the mellowing influences of time. Nothing is more common in this country than to find, in one and the same newspaper, flatly contradictory sentiments issuing from the pens of the editor and the reporter! The edification of the reader is naturally an unknown quantity, and the reporter is an uncontrolled influence. More power to his elbow! The following are a few orthographic gems ordinarily employed in the daily press, some of which doubtless have a history or a local significance which an outsider is ignorant of; but on the other hand, that justification has no literary recommendation, as a newspaper man is supposed to include educated persons in his *clientele*. For instance, “governmentalism jeopardized,” for “jeopardized”; “held to the court”! brilliant phraseology for “remanded in custody”; the court for cases of insanity is referred to with much preciseness as the “insane court”; prices, etc., are “way down,” “way beyond surmise”; “the true inwardness of it”;

“a project under way”; “running races,” for simple foot races; “the case was continued,” the fact being quite the contrary on a suspended hearing; why not say the prisoner or accused was remanded, or the case was adjourned? “Brunet,” for brunette, “annex,” for “annexe”; “gilt-edge,” as applied to anything and anyone; “held up.” “B said he had had his clerk examine the law on the subject”; is that equal in clearness to “B said he had caused his clerk to, etc.”? Some such expressions doubtless are idioms or provincialisms; others, such as “held to the superior court,” are simply ignorant barbarisms, perpetrated by persons who ought to be in another vocation, whose perceptions in verbal expressiveness are “as clear as mud.” It is no wonder to see a chairmaker advertising in his circulars that “his chairs, when adopted, formed a more pleasing and comfortable position for worshipping God”! There is at least a sort of sacrilegious humor in his method, but the writer who goes in for slang as a pretense for smartness is a cad, and wants the oversight of some official who could transpose his copy into decent prose. This childish smartness in young fellows who report is overdone, so much so as to have long since lost its originality; like the pranks of a boy in his new suit of clothes, disappear when the novelty has gone. One paper refers to an official having left for St. Clair, saying “the business end of the trip was in his inside coat pocket,” in the form of certain bills; and in an endless manner the changes are rung in a vein of personal, if not imitating comment, sometimes really amusing and fresh, but in other instances dull, dreary and demented.

Who does not know of the abuse of confidence dealt out to editors and the public in the voluminous Washington correspondence, containing endless surmises on impossible combinations of events, predictions whose fulfillment is never acknowledged or desired, as the events (when not invented) carry no consequences and vanish into thin air in a few hours! Happy correspondent in such an emporium of conjectural possibilities!

Considering the frequency of communication between the old country and America, it is surprising to read the misstatements made here as to English and Irish affairs. It seems to be partly accountable for by the fact that those who correspond for American papers are glaringly committed to a well-defined set of sentiments, from whom it is simply impossible to obtain a clear, fair, unbiased statement on many phases of English social and political doings and sentiments. Then, there is, outside of this class, the correspondent who could and would represent things fairly, but who has felt his employer's pulse, and writes in a vein to please him rather than in accordance with facts. And, again, we have the editorials of men who know as little of British opinions on most subjects as busy, overworked men at a distance of over 3,000 miles away can be expected to know; only they might be a little more modest and reticent. A few days ago a Chicago editor told his readers that in England and America auctioneers made the sellers of goods pay the requisite fees. Now that is certainly not the case in England,

where he exacts a fee from both buyers and sellers, the former paying five per cent above the knock-down price. The same paper not long ago "scored" Sir William Harcourt for censuring the house of lords for its lazy session. The lords, says the *Herald*, had been as active at least as the commons, and goes on to argue in favor of the principle of delegated powers to Ireland, Scotland and Wales. Now, Sir W. Harcourt, as an advanced home ruler, is for these delegated powers, and had no responsibility for the listlessness of the house of commons as compared with the lords. The joke of the matter is that Harcourt is not in the ministry of the day though the *Herald* plainly thinks he is, else why blame him for slow lawmaking? As to the Irish question in American papers; well, they are not much worse than those in the old country where (in England) there is a psychological barrier reared up by the English mind against most Irish interests, starting with the good old conceited Puritan, but hare-brained and pot-bellied notion that Providence had intended a nation with more than five senses, like the English, to govern their inferiors, the Irish. That has been the pith of the Irish difficulty, but it is gradually being found to be an error. Excepting under electioneering influences, when there is a lot of cowardly pandering to national clamor, the papers here are sound on the subject, when not led by the nose by overzealous demagogues.

One would like to see an editor eliminate the occasional irreligious "rot" indulged in by smart young reporters, who probably have never read a line of Paley's "Evidences" or Butler's "Analogy." One of them lately said, in trying to emphasize some glaring attempt at official hood-winking, that "it was singular how a beneficent being [lower case] who was said to have sent this world spinning in its orbit should permit such doings—nay, winks at them." Fancy the religious instincts of his readers being subjected to such puerile, raw and thick-skinned soullessness, at two cents a copy! Of a kindred spirit is the treatment by some of the reporters of the salvation army in its recent advent. The writers fairly revel in "a real live lord," whom they again term "an individual" with more freedom than taste. They often treat a subject, which admits of rational, fair-minded discussion, in a gaudy, meretricious manner.

The Sunday issues of the American papers are marvels of cheapness and labor. England has nothing of the kind, except the recent issue in London of the New York *Herald's* proprietors. Taking the amount and the quality of the matter into account, they are stupendous productions, rendering free libraries almost superfluous, owing to the range of subjects treated of in a popular manner under circumstances of huge labor, with the cost added to by the accompaniment oftentimes of well got up plates and cuts. This latter art two years ago, however it may be now, was unknown in England as a common accompaniment of letterpress, whereas in this country daily if not hourly occurrences, serious and

funny, are illustrated with more or less artistic finish, probably at enormous expense.

The American sense of humor is undoubted; it seems as if in the air, and as if drunk unconsciously. You can always see through the transparency of the joke—though sometimes too early. Some persons say the faculty is acquired in crossing the Atlantic ocean. That can hardly be so, for if a new arrival fails to see through their jokes and says so, he is hanged, drawn and quartered. Probably it is only acquirable on certain steamers! Their faculty for joking on dolorous, tragical subjects is remarkable.

Written for THE INLAND PRINTER.

#### LET US REASON TOGETHER.

BY A. H. M.

OF the perplexities of the composing room, and they are numerous, those relating to punctuation are by no means the least. Watch the perspiring compositor wrestling with an involved sentence, and note the changing expression of his countenance as the emotions of inquiry, doubt, certainty, and again doubt followed by despair, flit through his mind, and then the final decision to seek the "brainery," or, with the muttered "shibboleth," as Byron calls it, recklessly plugging away, trusting that it may be right, or, feeling that the proofreader will mark it differently on principle, it is losing time for him to study over the matter longer. If he appeals to a brother typo for advice or sympathy he probably finds him differing with him as well as the proofreader.

Let any person who may be curious to test the conflicting opinions on the matter of punctuation, take a passage from an ordinary magazine article, and writing out a dozen or so copies of it without punctuation marks, pass them around the composing room with the request that the punctuation be marked in—and the differences of opinion that will be shown when the slips are compared will not be slight in the greater number of cases. Who can decide when grammarians disagree?

The loss to the employing printer as a consequence of these warring opinions is no small item, and that no effort is made to recognize an authority is surprising. A letter in a recent issue of THE INLAND PRINTER emphasizes a remark that punctuation is an art, which may be taken to mean that each proofreader should punctuate according to the work in hand—and, assuming this to be the writer's meaning, his criticisms have a resemblance to the orders of a captain, who, after putting his company through a series of evolutions, finishes the maneuvers with "As you were!" There is nothing too minute in the matter of correct punctuation to be unworthy of discussion when it tends to a final settlement of any disputed point, and that the columns of THE INLAND PRINTER are open to the fullest ventilation of the varied opinions of its readers should be an incentive to all to accept of its courtesy, and give their opinions and reasons for holding them on vexed points of punctuation and kindred matters so that it may be known how great a difference there actually is. Wilson's treatise on punctuation is generally accepted as a good authority for

bookwork, and, however modified by the practice of the reader, it would at least form a basis for printers to build upon. The sparse punctuation of newspapers is a necessity for hurried composition, and should not be taken as authority by printers. The punctuation of bookwork is what is particularly referred to here, and the usage of a great and successful daily paper can have no weight except with the newspaper fraternity, and that influence would but tend to make them use a style diametrically opposite, in the desire to be original. If an agreement could be made upon a method to be employed on a certain class of work, and a text-book compiled with the requirements of which it would be the duty of printers to urge their customers to comply, it would possibly be as practical a way of remedying the evil as might be devised.

With the perfecting of the typesetting machine and the consequent closer competition and larger output of books, we will be forced to make some sort of compromise as individuals and agree on a classified authority for punctuation. Agitation in this direction has been going on in a desultory way in our trade journals for some time, and although scoffed at as impractical and absurd, the effort has not yet been made, and, until it is proved a failure, he is but an enemy of progress who would put hindrances in the way of a movement that, if but only in a slight measure successful, will be a saving of much money, time and vexation.

#### NINE HOURS SHOULD BE THE WATCHWORD.

BY OBSERVER.

THE drift of current events, and the recent achievements of inventive genius in the printing industry, indicate the near approach of an event of momentous importance to members of the craft generally and to organized typographers in particular. In short, shorter hours is an inevitable issue in the near future. And the aphorism that "Coming events cast their shadows before," is forcibly verified in this connection. For, preceding this "coming event," arise two ominous shadows—(1) Shall it be an eight-hours day or a nine-hours day? and (2) shall either of these desiderata be attained after protracted strife between labor and capital, or will the latter concede to the former simple justice if a peace conference is held between employer and employé?

The recent victory in the building trade and kindred industries in the chief business centers of the United States should admonish employing printers that a curtailment of the working day in the printing trade is only a question of a short time, and although the National Typothetæ, a year ago, saw "nothing in the state of the printing trade of the country at this time which justifies any reduction in the hours of labor," this august body of gentlemen must surely admit that signs have changed within the past year. What are these signs, and what do they portend? Let us glance at a few of them.

Typesetting machines are now an experimental certainty for newspaper and magazine work; they are, in

the near future, destined to be an expedient to be used to circumvent strikes on daily papers, where large capital is involved and plain composition mainly is required. Cheap labor (i. e., boy labor) and the female compositor are still largely utilized throughout the country, and any effective apprenticeship system seems as remote as ever. If we superadd to this the greed of some "Jonathan Works" who would like to be allowed to labor seven days out of seven, the home signs seem sufficiently complete, and we may as well include a cursory view of passing events on the other side of the big ferry.

Here we find that on August 14 the London Trades Council instructed their delegates by a vote of sixty-two to thirty to support the legal eight-hours day. Again, in a memorandum prepared for the *Board of Trade Journal* by the labor correspondent of the Board of Trade, he cites the fact that there is an increasing percentage of unemployed labor among skilled industries for the past two years. True, this does not apply specifically to the printing industry, but as facts they are very significant when it is known that for years past a nine-hours day has been customary in the printing trade of Great Britain.

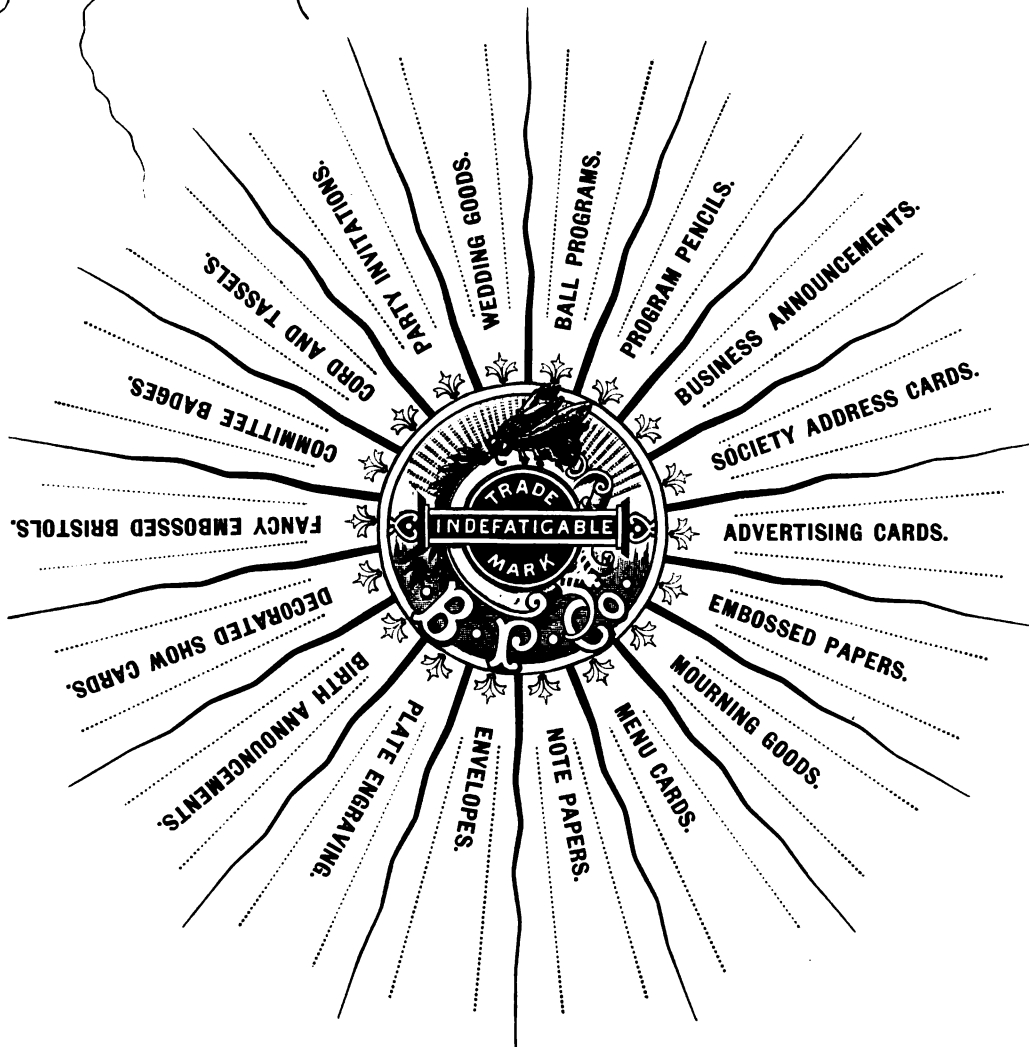

Assuming, then, that we have shown justifiable cause for a reduction of the hours of labor in the printing trade, a nine-hours day would seem to be the most rational demand at present, for the following among other reasons: The building trades agitated for and secured one hour reduction first and an increased pay afterwards; the printing business is an indoor industry, subject to no interruptions of a climatic character; it is less arduous to the muscular system than those trades now working eight hours; there are no disagreeable features in it specially detrimental to health or hazardous to life or limb; and as a trade affording steady employment it compares favorably with any of the skilled industries; and the extent to which composition by machinery may be introduced does not threaten to diminish the demand for labor in more than one branch of the business at present. Hence we advise agitation for a nine-hours day, and especially so since any attempt to force an issue by coercive measures would devolve upon organized labor.

This inference, that organized labor will have to bear the brunt of the battle for shorter hours, is not without a redeeming feature, however, for we happen to know that in the ranks of the unorganized there is a sympathetic tendency known to exist which would assert itself in the event of any united, simultaneous effort being made in a majority of the trade centers of the States. The experimental success of typesetting machines, and the consequent prospect of trouble ahead, has done more to make the whole world of printerdom akin than any other event in the printing history of the present century. But the prospective harm they may do temporarily is no justification for injudicious agitation, and we believe the craft will find that nine hours obtained without a strike will meet the exigencies of the present time, and afford opportunity for desirable calculation and cool-headed reflection as to the future.

A TECHNICAL JOURNAL, DEVOTED TO THE ART OF PRINTING.

A. C. CAMERON, EDITOR.

Published Monthly by

THE INLAND PRINTER COMPANY,  
183, 185, 187 MONROE STREET, CHICAGO.

H. O. SHEPARD, *Pres.*; C. F. WHITMARSH, *Sec.*; D. L. EVANS, *Treas.*

Address all business correspondence to the Inland Printer Company.

Entered at the Chicago postoffice as second-class matter.

CHICAGO, OCTOBER, 1890.

SUBSCRIPTION RATES.

TWO DOLLARS per annum in advance; one dollar for six months in advance; sample copies, twenty cents each.

FOREIGN.—To countries within the postal union, seventy-five cents per annum additional. To Great Britain and Ireland, postage paid, eleven shillings and fourpence per annum in advance. Make money orders payable to H. O. Shepard, President.

SUBSCRIPTIONS may be sent by express, draft, money order or registered letter. Postage stamps are not desirable, but if necessary to remit them, one-cent stamps are preferred. No foreign postage stamps accepted.

CLUB RATES.—Six or more subscriptions, sent at one time, one dollar and fifty cents per year each. Cash to accompany order.

THE INLAND PRINTER is issued promptly on the twentieth of each month, and will spare no endeavor to furnish valuable news and information to those interested professionally or incidentally in printing, engraving, electrotyping, stereotyping, bookbinding, and in the paper and stationery trades. Persons connected with any of these lines of industry will confer a favor upon the Editor of this Journal by sending him news from their section of the country pertaining to the above trades, particularly individual theories and experiences of practical value.

ADVERTISING RATES.

SPACE.	ONE MONTH.	THREE MONTHS.	SIX MONTHS.	ONE YEAR.

OUR EIGHTH VOLUME.

WITH the present issue commences the eighth volume of THE INLAND PRINTER, a journal which is known in and welcomed monthly to a large majority of the printing establishments in the United States and Canada. In this connection we cannot do better than reprint an article we penned in October, 1884, in making our second bow to its readers. It is as follows:

The present number commences the second volume of THE INLAND PRINTER. While sincerely thanking its many patrons and friends for the generous support received, both from advertisers and subscribers, in the year just closed; and in making the acknowledgment that the mede of success which has so far attended our efforts, has exceeded our most sanguine expectations, it may not be out of place, in asking a continuation of these favors, to somewhat briefly refer to our hopes and intentions for the future.

We shall aim at least to make it a representative journal, worthy the support of the craft at large; a welcome visitor alike to the counting-room of the employer and the home of the journeyman; and, to enable us to do so, we wish our brethren to feel that it is *their* paper, devoted to their best interests, seeking the mutual welfare of employer and employé, and recognizing to the fullest extent the reciprocal obligations which exist between them. We shall aim to keep pace with the demands of the times, and give to our readers the most recent developments of science as applied to the art preservative of arts and its kindred branches; we shall advocate a higher standard of workmanship, the adoption and enforcement of an apprenticeship system, and the establishment, under proper auspices, of schools of technique; we shall aim to encourage and instruct the learner, implant in the rising generation a manly independence, with an honorable desire to excel, and publish, from time to time, the experience and practical suggestions of working members of the craft. Our state of trade reports will continue to be a special feature, and as they are received direct from the officials of the local unions, their reliability may be depended on. Arrangements may have also been perfected to receive a monthly correspondence from the leading business centers, both in the United States and Great Britain, while contributions on subjects of general interest by thoroughly representative men will be found from time to time in its columns. In short, no effort shall be lacking on our part to make it all we represent and an indispensable in the hands of every progressive, intelligent printer.

The best practical thought and experience in the printing trade have been from time to time presented through its columns; and the information contained therein furnishes an encyclopedia of interest to the craft worth many times the price of a yearly subscription, and which can be obtained from no other source.

In this connection we desire to remind our readers that a subscription to THE INLAND PRINTER does not imply a feast and a famine; the receipt of a *special* edition one month, followed by an apology for one or omission of publication the next. From its first appearance twelve numbers have constituted a volume, and twelve issues have been promptly forwarded to each yearly subscriber, while the persistent aim has been to make each successive issue more instructive and interesting than the preceding one. Whether or no these efforts have been successful our patrons must judge for themselves; though we may modestly add, from the increase in its circulation and the many commendatory

letters received, it is evident they they have not been in vain. The experience of the past will, we believe, in this connection, furnish a guarantee for the future; and when we assure our readers that it will be our earnest endeavor to keep it in the van, and make it worthy of their continued patronage, we believe they will be satisfied with the guarantee. Actions, however, speak louder than words, and upon the fulfillment of these guarantees we are willing to be judged. We shall aim to make it in the future, as in the past, *the* representative printing trade journal of America, an indispensable to employer and employé, and more than this we cannot pledge.

#### THE TYPOTHETÆ PROCEEDINGS.

THE proceedings of the fourth annual meeting of the United Typothetæ of America, published in extenso in the September issue of THE INLAND PRINTER, should afford interesting reading alike to employer and workman. Their perusal should interest the employer in acquainting him with the views and proposals of an organization which claims his welfare would be subserved by connection therewith, and should interest the workmen by ascertaining what actually transpired, what may rationally be expected from a body with which his future prospects and welfare, despite all disclaimers to the contrary, are so closely identified.

The value of these and similar deliberations depend, however, in the main, on the *practical worth* of the action taken, the broad-gauge ideas inculcated, their relative bearing on the future, and the beneficent effects resulting therefrom. Advanced ideas prevail. The *meum et tuum* of the present displace the *ego* of the past. There are generally two sides to a controversy; and in a question in which the rights of labor and capital are involved, invariably two, and the man or class of men who are unwilling to concede this fact, and insist that *one is a majority of two* are simply knocking their heads against a stone wall, a contest in which the head will come off second best, no matter whether it is represented by a local or international typothetæ or a local or international typographical union. And if, approaching the close of the nineteenth century, the representatives of the art preservative, with the varied experiences of the past and their pregnant lessons, alike prefer the methods of a semi-barbaric age to settle present or future differences to those presented by the rational, sober, second thought, they have lived to little purpose.

Many of the subjects discussed, upon which, as might have been expected, a divergency of opinion existed, were handled with a freedom and ability which were suggestive of a desire to ascertain the truth, and of eventual beneficial results. While here and there an antagonistic opinion to the scope, objects, rights or past action of trades unions cropped out (and this certainly should not be a matter of surprise, or even regret, under the circumstances), a gratifying feature was the virtual repudiation of the too prevalent idea that the Typothetæ exists simply as a menace to organized labor; and that such a sentiment prevailed, it is needless to add, was gratifying to the

representative of THE INLAND PRINTER. It is true that two or three whippersnapper pigmies did their best to create a tempest in a teapot, and enlarge the breach already existing, which brought a protest from some of the delegates, and the temper of the convention showed it was unwilling to cater to any such line of policy.

Among the more important measures discussed were those of "International Copyright," "Evils of Competition," "Apprenticeship," "Shorter Hours," etc., and, although there was an evident desire in certain questions to procrastinate and a disinclination to discuss some of these questions on their merits, and face the inevitable, there was little, if any, of the ascerbity which has manifested itself on other occasions, developed. As each of the questions mentioned, and the manner of handling them, are deserving of a more extended notice than is here given, we shall refer to them in a future issue.

THE proposition lately submitted by the International Typographical Union to local unions to levy an assessment of \$1.00, to be assessed at 10 cents per month for a period of ten months, to be used in building and maintaining the Childs-Drexel Home for Union Printers, was carried by a vote of 5,433 to 2,198. A strange feature connected with this result is that Philadelphia, the home of the philanthropists who made the donation which rendered the project a feasible one, cast 273 votes against to 227 for the proposition. The Town of Lake, Illinois, and Houston, Texas, cast their full vote, 113 and 80 respectively, against, while Omaha on the other hand gave every vote polled, 206, in favor of the proposition.

THE publication of lottery advertisements in the newspapers in the United States has been practically ended by the exclusion of the journals publishing them from the mails. A short time ago the postmaster at Washington, D. C., refused to accept copies of the *Sunday Chronicle* of that city for transmission by mail because it contained lottery advertisements, and about the same date the postoffice authorities at Montgomery and Birmingham, Alabama, seized all copies of the *Age-Herald* of Birmingham, and the *Weekly Constitution* of Atlanta, Georgia, on the ground that these papers were guilty of violating the law.

A GREAT deal of unmeaning twaddle about the illegality and tyranny of the six-day work rule, adopted by the International Typographical Union at the Atlanta session, has lately made its appearance, though we are pleased to note the action taken thereon is favorably received by the great majority of the craft. A man who refuses to admit the justice of a law guaranteeing a sub one day's work in seven, is a very small specimen of humanity.

WHILE we believe in the fullest scope for legitimate criticism, we have no sympathy with the hyper-criticism which appears on the American press in the present issue.

**THE RASTALL SYSTEM OF TYPE MEASUREMENT.**

**I**N reply to a correspondent as to the merits and availability of what is known as the Rastall system of type measurement, we publish the following circular and explanatory table prepared by Mr. Rastall himself:

It having been contended that the Rastall system of type measurement was impractical in its application to book and job offices on account of the numerous fonts of type used and the varying column widths upon which the compositors are required to labor, the undersigned has endeavored to show the fallacy of the objection by the following exhibit. In this exhibit it is assumed that the scale is established at 24 cents per 1,000 letters. Then follows a complete list of fonts of type in a book and job office, the space in ems of 1,000 letters being assumed. The first is supposed to be a very "fat" font of nonpareil, the 40 alphabets or 1,000 letters measuring 720 ems in space occupied. If 720 ems are worth 24 cents, 100 ems will be found to be worth  $3\frac{1}{3}$  cents. All the other columns up to 1,000 ems are filled out accurately by simple multiplication. Thus only one calculation is necessary on each font. It would take but a short time to arrange such a table for any office. This exhibit should be kept for the use of foremen and compositors, and a line added when a new font comes into the office. By this means the work could be measured up as formerly, but paid for at the scale, 24 cents per 1,000 letters.

	VALUE OF

**W**E have received some encouragement in regard to our proposition in the September issue to establish, under proper auspices, a school of instruction for those journeymen and apprentices who are anxious to become proficient printers, but so far not enough to warrant the undertaking. However, Rome was not built in a day, and we have every reason to believe that the enterprise will shortly prove a success. Let us hear from our friends in relation thereto.

Written for THE INLAND PRINTER.

**STEREOTYPING.**

NO. XII—BY CARL SCHRAUBSTADTER, JR.

**T**HE thickness of the plate depends upon the bearers, or "gauges" as they are usually called. Pica has been the standard for a great many years, although large open work, requiring great depth of counters, is sometimes made thicker. Of late, with the object of saving metal, the thickness has been gradually reduced until in the majority of cases it is long primer, and in many places even less. If care is taken with these thin plates equally good results can be obtained as from those of pica gauge, but for those intended to be mounted on patent blocks nothing less than pica should be selected, as thinner ones are apt to warp and bow out of shape under pressure of the tightening devices.

The bearers may be made from almost any material. Wooden reglets have been used, as also ordinary metal slugs smoothly covered with a layer of paper to prevent them from melting when cast against. Generally they are made of iron, steel or brass. In case they are made of iron or steel they are planed and filed. The greater the accuracy in finish the more even will be the plate cast between them. In most cases the edge of the bearer next to matrix is beveled or rounded off in the same form as

FIG. 1.

the bearers shown in Figs. 1 and 2 and in a former article, but this is not necessary, the only difference being that the cast is a little wider when they are not employed and the shoulder caused by the depression must be sawed or planed away. This is oftentimes advisable, as, unless the bearers have been heated by repeated casts, they are liable to chill the edge of the plate and detract from its sharpness. The bearers may be either loose or in the shape of L-bars. (Fig. 1 shows the former.) The bottom piece, A, usually rests against two

pins, slots being cut into the bearer to receive them. If but one width of plate is to be cast in the box, as for standard newspaper or book work, the bottom piece is mortised to receive the side gauges, B B. These gauges are retained on the sides by the pins, N. If, however, as in most job foundries, various widths are to be cast, only the bottom gauge is held in place by pins, the side gauges being square at the bottom, and being moved according to the width of the cast so as to rest against the counter of the matrix. The tops of the side bearers are usually rounded off, and made to extend about six inches beyond the top of the box, but may with advantage be provided with wooden handles as shown in Fig. 2. In using them the side gauges are removed from the box, and the lower edge of the matrix slipped beneath the bottom bearer until the counter is even with the edge. The side bearers are then laid on. The L-bars are shown in Fig. 2. This form of bearers is generally confined to those intended for making type-high casts. If made in pica or long primer

FIG. 2.

thickness they are apt to be weak and break at the corners. Even if strong enough to avoid this they are liable to bend, and after a short time the two uprights will no longer be parallel. For type-high casts this form is preferable, although "parallel bars" are also used. These are two bars of the proper thickness, provided at each end with slotted pieces which allow them to be adjusted to various widths. When used, two pieces of heavy rule or type-high iron furniture are put inside of the slotted pieces, between the side bearers, which are moved together until the inserted standards are held tightly. If these last are of equal length, and the bars true, the resulting cast will be exactly parallel. Their disadvantages are that the bars must be loosened each time after a cast has been made, and that their adjustment is slower than that of L-bars. The top strip must extend beyond the box, and to a certain extent interferes with casting. Besides this, metal is liable to run in the slots, and is difficult to remove. L-bars may be bent from single pieces of steel and afterward trued up, or each bar may be made of two pieces squarely fitted at the corners and fastened together with screws and pins.

This construction is as strong as the first-named, and admits of more exact workmanship at a smaller cost. The piece which forms the lower bearer, and that which is parallel with it, are made to extend beyond the side of the box so as to clear the clamp. On account of their form, these bars are liable to spring a trifle at the top. If it is desired to make casts which are exactly parallel, a slotted gauge may be permanently attached to one bar, so that a set screw in the other bar slides in the slot. The bars can then be set by a standard. Of course the sliding gauge must be beyond the top edge of the box.

In some cases the bearers are covered with paper or other substance non-conductive of heat, but this is not advisable, as the casts made from such bearers are not exact or even. Their only advantage is that a cast can be made close to their edges without heating the box by taking blank casts or "slugs."

Type-high casts are usually cored, as otherwise they use up too much metal, and are more difficult to handle. These cores are generally permanently attached to the top of the casting box, but for jobbing work they may be made separate and laid in the bottom of the box, the surface being prevented from touching the matrix by small lugs on each end of the bar. Such a construction is shown in the second illustration.

Written for THE INLAND PRINTER.

#### NOTES ON WOOD ENGRAVING.

NO. LXII—BY S. W. FALLIS.

JOHN H. HALL, the third pupil of Dr. Anderson, was in a manner self taught (taking but few lessons from Anderson), and was a native of Coopers-town, New York. He began engraving in 1826, and afterward practiced the art at Albany in 1830, finding employment with Carter, Andrews & Co., of Lancaster, Massachusetts. From Albany he removed to New York. His best work appears to have been done about 1832-3 for the "Manual of the Ornithology of the United States and Canada," by Thomas Nuttall, and published by Hillard, Gray & Co., of Boston, some of the drawings being made in pencil by Hall himself, copied from Bewick and "Wilson's Ornithology," while others were drawn from nature by William Croome. The engravings are executed in the manner of Anderson and Bewick, and will rate equal to Dr. Anderson's efforts; and the engravings from Croome's drawings deserve special credit, as the invention and application of the lines and directions depended entirely on the ingenuity and ability of the engraver.

Hall also did some good work for the Smithsonian Institute at Washington. In 1849 Hall was stricken with the gold fever, and went to California, and died there.

William Croome was a pupil of Bowen, his style of engraving being very similar to that of Hall. Much of it is from his own drawings. He also worked after drawings by Tisdale and Johnson. His wood engraving consists of cuts of fables, animals, landscapes, figures,

lettering and a general class of work, and generally equal to any of his predecessors in the art. Later in life Croome gave up engraving and devoted his time to designing for banknotes. He drew well on both wood and steel, and was also a good painter in water colors.

Croome came to Chicago to fill an engagement with the Western Bank Note Company (established by Knickerbocker and Cheeney) about 1864-5 (I cannot give the exact date), where he worked, I think, one year. After this engagement he worked at drawing on wood for W. D. Baker for some time. As old age was creeping on, Croome's hand became a little unsteady and lost its former usefulness for drawing on steel. He was a very careful and proficient draftsman. His drawings on wood (of which the writer has engraved a number) were very careful, clean and effective. As he felt the effect of his declining years he returned to the East to end his days among old friends and associations, where he died, I think, prior to 1870. I esteemed the venerable gentleman very highly, and felt honored with an acquaintance at that time with the oldest draftsman on wood in America.

From 1830 to 1835 some engravings were made by Ezra Atherton and Alonzo Hartwell, who claimed to be the best of Bowen's pupils. Others, about this same period, were produced by Fairchild, Alden, Wright, Greenough, Minot; also by George Loring Brown, the painter, whose work averaged with that of his contemporaries, with prospects of excelling. He went to Paris in 1832, and worked for a time on "Musée de Famille." There were very few engravers there then, the best being Charles Thompson, a brother of John.

Cuts at this period, by Devereux, deserve notice. Two or three, copied from cuts in the second series of "Northcote's Fables," 1833, were very accurately and feelingly executed. Several others of his cuts also show a talent that was not excelled in those days of early American engraving; even the best work of the venerable Dr. Anderson could claim no superiority over these few cuts of Devereux.

In 1850 Hartwell received the silver medal of the Massachusetts Charitable Mechanics Institution for the best specimen of engraving on wood.

#### PRACTICAL TALKS ON PRESSWORK.

NO. VII.—BY A PRESSMAN.

**T**HERE is today among pressmen a widespread belief that one of the grandest achievements of our age, the modern printing press, is almost wholly the result of ideas that have occurred to pressmen, and which have been snapped up and appropriated without credit or emolument to those whose experience and brains furnished the basis for the improvements which have been constantly added to the printing press.

Much of this is true. Who is there in our craft who has not noticed that the hint dropped as to a possible improvement in the presence of some representative of

the manufacturer, is adopted in probably the next press built. And yet apart from the probable injustice to the individual pressman whose ideas are thus appropriated, no blame can attach to the manufacturer. He certainly is within his right in striving to make his product take the lead. In doing so he is simply following the natural law of gratifying his desires with the least exertion, and being natural it must be right.

The motive of all this is to show that as the method spoken of having succeeded in producing such an almost perfect piece of mechanism, and that manifestly being for the benefit of all of our craft, to say nothing of the rest of the human family, it follows that the knowledge that each one of us has by his suggestions or improvements helped to accomplish this good, should be sufficient reward; not only that, but a sufficient inducement to go on and aid as far as possible in bringing to absolute perfection the greatest missionary of right and progress the world has yet seen, the printing press.

Having said so much, I wish to ease my mind of an idea (how rare they are) in relation to the procuring of an even, perfect running of the cylinder of a printing press over the impression.

Every pressman will have noticed that there is more or less wear in the boxes or journals in which the shaft of the cylinder revolves. This in its turn involves a lifting of the cylinder when the impression is on the form. Almost all cylinder presses show a bright spot on the bearers at the point where the impression leaves the form, or in a line with the channels or head and foot margins, if it is a book form that is being printed.

This is caused by the aforesaid wear, and to avoid it many pressmen set their cylinders down so that the bearing is against the top of the journals, the cylinder being lifted when it first strikes the bearers and falling when it leaves them.

Now it is obvious that a press running in such a manner is not at its best, register is not certain, and the life of the press, as well as of the type or plates being printed, is necessarily shortened. To overcome this and enable the pressman to have his press in more perfect control, it seems to me that a device to take up the lost motion in the journals, something, for instance, like that in use on the crank arm of the ordinary stationary engine, would prove very acceptable to my confreres, and the manufacturer that first adopts it can have the suggestion "without money and without price."

\* \* \* \* \*

It often happens, in printing matter with a border around it that the sheet contracts until, the lower portion being reached, a wrinkle is developed. We have all had our share of it, and it is probably not wide of the truth when I say that, while each pressman has his own infallible method for stopping it, there is not one but has seen all his efforts set at naught, and the sheets persist in wrinkling despite all he could do. There are several causes, more or less ascertained, for this annoyance; one that I have heard advanced, and I think with a good deal of reason, is that the paper being green, the

edges drying more rapidly than the center produces an unevenness, or baggy condition which in turn produces the wrinkle. Certainly some paper is more liable to wrinkle than others, as may readily be seen by taking some better seasoned stock and running it through the press on a job that is showing this blemish.

A soft packing, permitting the impression to sink into the paper, is frequently the cause of a wrinkle. This being ascertained, the remedy is obvious—use a hard packing and work close to the cylinder. In nine cases out of ten this will cure the trouble.

I remember, when a lad, almost thirty years ago, reading of some genius who advanced the theory that a wrinkle was produced by the confinement of air within the space inclosed by the border, assuming that the cylinder closed the top as the bed did the bottom of the form. Even at that day I enjoyed a quiet laugh at the idea that a cylinder printing only such a small portion of the form at any particular moment, could accomplish such a result. I certainly never expected to meet with the notion in actual practice, but I have lately been printing some large maps, and the pressman who had them in hand before I received them had evidently had trouble with the wrinkling of the paper. He had, in this year of civilization, 1890, actually bored holes through the plate, just inside the lower border, and then through the block on which it was mounted, so that the air he supposed was confined there might escape at the side.

I found, on examining the condition of the blocks, that they were, by underlaying, etc., nearly a nonpareil over type-high, and that when they were reduced to their proper height and firmly locked on the bed in such a manner that all spring was avoided, the trouble was over with.

From all of which I think it may fairly be deduced that in placing any form of blocks on a cylinder press, one of the first things the pressman should ascertain is that they are type-high, neither more nor less; that, when a border surrounds the matter, and there is any fear of a wrinkle showing, instead of making ready in the usual manner by using seven or eight sheets of soft paper to get an impression to mark out, the hard packing on the cylinder should be increased, and by means of one carefully prepared underlay and, if possible, not more than one overlay, bring the impression even. By using a very hard manila top sheet over all, seeing that every gripper bears equally hard on the sheet, setting the guard bands in such a way that they will be equally divided over the length of the sheet, and all bearing equally, wrinkles can be for the most part avoided.

Another thing that should be looked after in every case, but more especially where the matter to be printed is to be surrounded by a border, or where accurate register is required, is that the paper should always lie flat. Very often, for convenience sake, paper in cases is stored in such a manner that it stands on end. In every case this will be found to produce wrinkled or

wavy edges, and is very difficult either to get register on or to work without wrinkling.

I would like to see my fellow pressmen give their experience and views on this subject an airing in *THE INLAND PRINTER*. It would benefit us all greatly, for while it is said that "too many cooks spoil the broth," it is also said, and with at least equal truth, "that in a multiplicity of counselors there is wisdom."

Written for *THE INLAND PRINTER*.

#### CHEAP DRYING FRAMES.

BY JAK.

ONE of the most important articles of useful furniture in a job office is a drying frame. How often do we go into an office of good repute and see the freshly printed work scattered on the tops of tables, stones or piles of paper, or even taken right from the press and tied up in bundles? Is it any wonder that work is offset and smutty? A simple and cheap remedy is available to every office in the land. I have a drying frame which will hold the day's work of six presses in a

neat manner. The entire outfit occupies a floor space of 30 by 48 inches and is 48 inches high, the entire cost being less than \$2.50. I got two bundles of laths of the best quality and sorted them carefully, throwing aside all that were not free from knots or other imperfections. Then they were planed slightly to take off all slivers. Take pieces about 30 inches long by 2 by 1 inches and with steel brads nail the laths about  $2\frac{1}{2}$  inches apart, and make say twenty or twenty-five crates. Then take four posts 3 by 3 inches by 4 feet, nail on 1-inch boards 36 inches long on the inside. Also take strips 1 by 2 inches, nail them to the boards far enough apart to allow the frames to be run in and out freely. Then board up the back and top (matched boards are best), put in your slides and you have a neat and handy drying frame. Also a table on which to put your stock for each job.

The reason for making the frame 6 inches wider than the slides is to facilitate the placing of the work upon them; also the gathering. By pushing the frames

close to the back it will allow a clear space of 6 inches in front, so the slide can be pulled out far enough to expose the entire surface. I always leave all work on the frames until the following morning, when it is gathered, brought to the packing table, inspected, and tied up and delivered. I would advise my fellow-craftsmen who are short of room to try it, and at the end of six months they would not take \$100 and go back to the old system. By being boarded up close on top and three sides it is nearly dust proof, and, if advisable, a set of doors or curtains can be so arranged which will make it absolutely so.

### EMINENT LIVING PRINTERS.

BY JOHN BASSETT, EDITOR OF THE "EFFECTIVE ADVERTISER," LONDON.

NO. IX — HERR ALEXANDER WALDOW.

GERMAN printing has for many years past exercised a kind of mystical influence throughout the United States, England and other countries. To what cause is this attributed? Many will at once say, to their unique borders. Quite so; but again the Germans are far ahead of other founders in the production of initials, ornaments, borders, etc.—so much so that if anything striking in this line is required, invariably the specimen books of the German typesetters are sought out, and, without any exaggeration, herein one may find that which is wanted.

Most of these novelties appear in their trade journals, and consequently the printers are as a rule better educated in this respect than is the case with any other country laying a claim for good printing. Foremost among trade papers in Germany is the *Archiv für Buchdruckerkunst*, a magnificent example of what can be achieved by an energetic man like Herr Waldow, a name that will ever be remembered in the annals of German typography.

Herr Waldow was born in the year 1834, at Stolze, in Pomerania,

and at sixteen years of age he was apprenticed to a printing firm of some repute. Here he soon gave promise of what his future would be, as every man has done who makes a name for himself in after life. Good business men, like poets, are born, not made. In every printing office there is always one boy who is looked upon by his fellow apprentices as somewhat superior, and accordingly his advice is sought on scores of technical matters that they would not think of asking a journeyman; in this way the master mind is early trained to the requirements of business. After remaining long enough in the first office to gain a thorough knowledge of the art, Herr Waldow determined to seek fresh experiences. For this purpose he worked in some of the leading offices of the Fatherland, and to this may be attributed many of the all-round qualities which he possesses. Men of Herr Waldow's stamp are very chary of giving to the world particulars of themselves, thinking, quite erroneously, that their *confrères* might deem it of the nature of a puff. I say without the slightest hesitation that articles of this description in detailing the doings of great men of the time have

been the means of making many a boy, and has stimulated many men in what to them up to that time had been a hopeless task. Herr Waldow in his twenty-third year was intrusted with the management of a printing house at Frankfort-on-the-Main, a position he held until 1860. On relinquishing this he commenced business on his own account as a master printer, and very soon began to be talked about as a printer of more than ordinary ability. Herr Waldow never does things by halves; all his work will bear close scrutiny; no point is left unconsidered that would even to a practical eye tell in its favor. For real artistic jobwork his office stands probably unexcelled, and the truth of this statement may be amply corroborated by a reference to the supplements issued monthly with the *Archiv für Buchdruckerkunst*, which was started by Herr Waldow. The paper is now in its twenty-eighth volume.

In mentioning this periodical it must not be forgotten that Herr Waldow's great reputation is also to some extent derived from his excellent publications of technological handbooks which embrace almost every branch of the craft, including even a splendidly got-up German translation of Mr. W. D. Richmond's "Grammar of Lithography." These works are to the Fatherland what "Wyman's Technical Series" are to the English printer. The publishing of all these handbooks are quite overshadowed by Herr Waldow's *magnum opus*, "The Illustrated Encyclopedia of the Graphic Arts," which is unquestionably the best and most comprehensive modern book of the kind. It must have entailed a vast amount of research and labor, for the result is such that any country might be proud of the production. There are about two thousand eight hundred distinct articles arranged alphabetically, and embellished with nearly six hundred illustrations, a sufficient idea that the book is something out of the ordinary run of technical works. In all Herr Waldow has published nearly fifty technological handbooks, so that the young German's education may be said to be very well looked after.

The master printers of the Fatherland hold Herr Waldow in very high esteem, and as affording some evidence of this he has been intrusted with the technical training of the sons of the leading German printers from time to time. It is as necessary for a boy to learn the intricacies of printing as it is for him to know his A B C. In the course of a conversation with a well-known German printer in London a short time ago, he says the art in Germany is given more serious attention than is usually accorded to it in other countries. Why this should be cannot easily be accounted for, but we may all rest assured that the sooner all lads are trained in a proper manner, so will the improvement of printing be noticed. Large houses would find a material benefit were they to instruct a man in each establishment to teach the boys something of their trade. In nine hundred and ninety-nine cases out of a thousand the lads are allowed to roam about at their own sweet will, and as a consequence the trade suffers from what is nothing less than gross negligence. If this article should stir any employer to do better with his boys, then it will not have been written in vain.

From the foregoing brief cursory notes it will be seen that Herr Waldow well deserves a niche in the Temple of Fame of famous typographers of the nineteenth century, and his sterling character and personal worth well entitle him to the high regard of the disciples of Gutenberg.

### HENCOOPS AND LOAFERS.

It is undoubtedly true, as President Lee of the National Editorial Association says, that the country editor has power in his own field commensurate with that of his metropolitan brother, and that the chronicling of the painting of a hencoop is more creditable than to deify brutes or bar-room loafers. It is to be hoped, however, that President Lee didn't mean to cast any reflections on metropolitan newspapers by this illustration. Deifying brutes and loafers is not the occupation of the metropolitan newspaper any more than deifying hencoops is the business of the rural newspaper. The deifying business isn't in their line. They tell the news and make such comments as the facts seem to warrant. That's all.—*Boston (Mass.) Herald.*

### THE PRINTING OUTLOOK IN ENGLAND.

BY JOHN REDFORD LENO.

THAT the reading public in England are becoming rapidly more numerous, is an admitted fact. The population is yearly increasing, and as year succeeds year the work that is being done by our school board becomes more and more apparent. It may fairly be estimated that ninety-five per cent of our young are being fairly well educated.

In my day few newspapers were published at a less price than sixpence, and no journal below a penny per copy. Their exact circulations we have no means of ascertaining, but without machinery they could not have been great.

As I have already led readers to suppose, all is changed. From sixpence newspapers have been reduced to one penny, and if that is not cheap enough they are to be obtained at one-half penny. The rage for cheapness has recently attacked journals, and within these past few months no less than five or six are advertised at the lower figure, one-half penny. The four following are now lying before me: *Short Cuts*, *The Ha'porth*, *Funny Cuts*, *Comic Cuts* and *Illustrated Chips*.

Each of these seem to be run on pretty near the same lines, their contents consisting of short stories, English and American witty sayings, short, interesting paragraphs of a more solid nature, current jottings, society news, society verse, and so forth. Little of the contents is paid for, and much is stolen. The last named two are illustrated, and to this end old printing offices are raked over and cleared out, and old persons are continuously running against old friends whom they thought forever banished from their vision.

As an example of the mode in which these old cuts are treated take the following: The engraving was originally devoted to a pathetic story, and first saw the light in a New York publication. The picture is formed of an interior of a place of public accommodation, eating house, restaurant, or whatever you please to call it, in which may be seen an aged waiter, a middle aged gentleman and a young lady, who was originally intended to represent the daughter of the latter. The middle aged gentleman is leaving the table and the room, something that he has eaten evidently having disagreed with him. The mode in which the picture is made to serve a comic purpose, and so raise a laugh, is by adding the following words, which are printed beneath: "WAITER—It is not the meat that has upset him, but the blooming tart." Other cuts are doubtless treated in the same fashion.

The rapid manner in which old cuts from America are being used up will be realized when I state that, in some half dozen largely circulating journals of this order, I counted no less than one hundred and forty in a single week's issue.

The number of serials devoted to the publication of stories is even yet more alarming. Many of these stories hail from America, and all, whether English or American, with few exceptions, are miserable trash. The large circulations these and the older periodicals enjoy give employment to many engaged in the printing business, and tend to prove that printers in England have a busy time before them.

As time advances, the quality of the cheaper journals will improve, or rather their contents will become more varied. The technical schools now springing up in all trades and directions are certain to be followed by journals devoted to technical subjects and matters of a more important kind, less frivolous and more solid.

The feeling against gambling is becoming stronger and stronger and I can clearly foresee the time when the endless number of papers who live upon it will be considerably lessened. To show how strong it is becoming, the proprietor of the *Echo* has this very week determined to give no more tipster's articles. This is undoubtedly a great sacrifice on the part of its proprietor, Mr. Passmore Edwards, for it is a well-known fact that men interested in racing events are in the habit of purchasing copies of every edition as soon as published for the purpose of ascertaining

the results of each race at the earliest possible moment. This will be, if followed, as in all probability it will be, with a law against assisting betting in any way, a serious loss to the printing trade. Whether such a law will be successful or not, I will not venture to prophecy. "Time tries all," says the old proverb, and I am content to wait the result. I do not deny, but I am not prepared to accept the universal application of, O'Connell's assertion that a coach and horses are to be driven through every act that it is possible to pass. I readily admit that the laws relating to betting have been broken, are broken daily; but this has been, and is still, with the connivance of the police, who, strange to say, are strongly given to gambling, and are not beyond being "palmed" by the "bookies." To adhere to printing, it has been estimated that if an effective law was passed, more than one-half the sporting papers would cease to exist.

Printing businesses, old and new, are being rapidly converted into companies. One of these has already absorbed a dozen at least. Not content with printing, they are buying up the business of publishers. Whether the speculation will pay, is more than doubtful. Certain it is that many of them were losing concerns when conducted privately, and, as a rule, companies are seldom carried on with greater economy than concerns run by individuals. Some of these newly-formed companies are starting periodicals. This appears to me to be a dangerous game, and if their shareholders do not suffer I, for one, will be agreeably surprised.

It is difficult to understand why the neighborhood of Fleet street has been chosen as the most fitting site for the erection of printing offices; it is certainly not with a view to cheapness, for the ground rents there are fabulously high and are bound to range still higher. Yet the cry is "still they come."

No few have entertained the idea that this settlement has arisen from its being so near to "The Row." This is, however, a mistake. True, "The Row" and the neighboring streets situate on the north side of Saint Paul's are full of publishers, but as I have already stated, book printing has taken, to a large extent, its departure from London. It is found that it can be done and is done cheaper in the country. The last book of "The Grand Old Man," and Ruskin's reprints, have been done by a well-known house, as advertised by Mr. Gladstone in a recent speech, in the country.

The Fleet street firms are known to retain a fair share of the commercial work of the city, and that has of late considerably increased. Whether the new law regarding company floating will act as a deterrent remains to be seen. Had the act passed as originally proposed, it would have lessened the volume of trade flowing from this source at least one-half; few inveterate "guinea pigs" would have hesitated to put their names to the prospectuses of the hundreds of bubble companies that are daily floated in its confines.

Dealers in boxwood, never a numerous body, artists and wood engravers once formed a considerable portion of the dwellers in the streets contiguous; but these have become "small by degrees and beautifully less." The foremost have nearly utterly disappeared; artists have taken themselves off to the suburbs and the wood engravers have ceased to exist. The whole of the cheap illustrated papers are adorned by process blocks, save in so far as wood engravings are to be picked up second hand. Wood engravers, once a well-to-do body of men, are miserably poor, and utter nothing but complaints. Fortunately, as I have already stated, their numbers are much reduced. Even the *Illustrated London News* and the *Graphic* have ceased, or nearly ceased, to employ the engraver; *Punch* alone clings to it. The king of engravers, W. J. Linton, has recently delivered a series of remarkable lectures, but he cannot put life into an art that belongs to a bygone age. A master engraver has just informed me that his only chance is by undercutting the prices charged for "process," and this is often lost by his inability to compete with regard to time.

The new buildings devoted to printing are not handsome, but their ceilings are loftier than the old ones and their appurtenances are better arranged. Better light is provided, and the atmosphere

is purer. Printing ink manufacture has developed into much larger proportions, and the heads of such firms are reported, like our wholesale stationers, as having a tight grip on many of our largest printing offices, both in the city and elsewhere. I am inclined to the belief that matters are far from being as rosy as they appear to be. These new and imposing buildings are costly affairs, and most of them, if I have not been misinformed, are not yet paid for. Slow and sure masters have had to give way to a totally different class of men—men who trade on credit. It remains to be seen whether they will be able to weather the storm that, sooner or later, will shake them to their foundations. I recently had occasion to make repeated visits to a well-known publisher, and was astonished to find as often as I called an accountant inspecting the books, whom I well knew to be connected with a large wholesale stationery warehouse. The latter was speedily announced to be in a state of bankruptcy. In a few months afterward the said publishing firm was known to be in liquidation.

Whether for good or evil the printing trade in England is in a transition state, the small men are being swallowed up by the larger. I have yet to learn that the companies of which I have had occasion to speak are doing well. Upon the contrary, I have a firm belief the shareholders will come out roughly. The clubbing together of twenty rotten affairs is not calculated to make a sound one. The appointed managers, as a rule, are not practical men. They are pitchforked into responsible positions by friends whose sole aim is to quarter them on the funds of others. If successful they have got rid of these "old men of the mountain," and if otherwise, the result does not materially differ.

Among the list of directors I find the names of men who have been elected members of the British parliament for anything rather than a knowledge of the business to which they have allied themselves, and yet I find them talking as glibly about the art of printing as though they had been born in it. I was recently reading the speech of one of these hoary-headed senators, and as Charles Matthews was wont to exclaim after he had climbed Vesuvius and looked into it, "There was nothing in it!" Every one with ordinary common sense knows printing to be a useful art, and that there is not necessarily any disgrace in being engaged in it. It would have been far more to the purpose if he had spent his wasted time in showing shareholders and those likely to become shareholders how a dozen bankrupt businesses could be made to pay by the tacking on of a manager, ignorant of the business, with a yearly salary of one thousand a year, and a lawyer at five hundred.

## POLYCHROME TYPOGRAPHY.\*

### HARMONY OF COLORS.

**P**rinting in many colors being much in vogue at present, every printer has need to understand the combinations which produce the best effects without making costly experiments. To possess this knowledge it is necessary to become acquainted with the laws which govern the harmony of contrasts, in point of colors, and above all to study the composition of colors.

There are the primary colors, the secondary or complementary colors, and the tertiary or neutral colors. The primary colors are red, blue and yellow; they re-unite into white light. The secondary or complementary are those which, added to one of the primaries, produce black; green is the complement of red; violet of yellow; orange of blue. Secondary colors are composed by mixing two primaries; green is the result of blue and yellow; violet the product of red and blue; orange is composed of yellow and red.

By mixing two secondary, or one primary and one secondary color, the tertiary or neutral color is obtained. They are so called because they do not have any influence upon the primary colors

\*Translated from L'Imprimerie by Miss Ella Garoutte for THE INLAND PRINTER.

which may be placed by them; on the contrary, they set them off to an advantage.

Before employing the colors, the printer should consider whether the work is to be viewed by day or by night; whether it is to be exposed to the rays of the sun or to artificial light. A fact which many ignore is that this last changes completely the brilliancy and the shade of certain colors. An impression of which the colors will appear perfectly harmonious by day, will not appear the same by night.

One of the laws of the harmony of colors which must be observed, is that each secondary color forms the complement of that primary color which is not found in its composition. Thus, orange harmonizes with blue, violet with yellow, green with red. If these complementary colors are used by the side of the primaries, it will be observed that they stand out mutually; primaries and secondaries appearing more lively and intense. The result of these combinations is termed the harmony of contrasting colors, and it is necessary to give to it all possible care, when success is wished to crown the efforts.

The effect of the contrast of colors increases as they become more glaring; the two colors seem to deepen. This is explained by the fact that the eye receives the sensation at the same moment as the impression of the two colors. This may be called the effect of active contrasts.

Sometimes it happens that there is not time to color a proof in advance, and still it is necessary to know if the colors unite well, before working off. Under such circumstances bits of paper of the colors to be used, placed side by side, will enable one to decide if such and such colors harmonize well. Papers powdered with dry colors will answer the same purpose.

Black does not harmonize well with dark colors, more particularly with dark green or purplish red; the preponderance of dark neutralizes the effect. By contrast, the light colors are improved by the side of black; thus in a multicolored border where there is much black, it would be well to leave a white space; it separates the dark from the light colors with good effect.

The use of too much black must be avoided, as it spoils the effect of the other colors and destroys the harmony. A pale gray can be used with advantage against black, as the neutral colors gain in delicacy when employed with a dark border not too large.

As combinations of colors corresponding to the laws of harmony and good effect for *works in two colors*, we recommend: Scarlet and dark green; orange and violet; light blue and dark red; yellow and blue; black and carnation red; black and light green; black and light blue; carmine and emerald green.

*Works in three colors:* Red, yellow and blue; light orange, black and light blue; light carnation red, dark green and scarlet; dark brown, orange yellow and dark blue; crimson, light green and black.

*Works in four colors:* Black, light green, dark brown and sienna brown; scarlet, dark green, brown or pale gray and black; ultramarine blue, or cobalt blue, vermilion red, bronze green and lilac; sienna brown, dark blue, light red and black.

The nomenclature of colors is somewhat vague in the printing profession—typographic or lithographic—so that an acquaintance with the various manufacturers' inks is necessary, as the colors are not the same with all.

In closing, let us remark that the tint of the paper must be considered, as the shade of paper may change completely the combinations based upon white paper.

To be a good proofreader one should not only be well acquainted with the technology of the printing office, but also possess a general knowledge of affairs, since he is not only expected to correct errors of spelling and grammar, but even to point out errors of statement. Hence the proofreader should have good intellect and good eyesight. A skillful man draws fair pay—better, as a rule, than the typesetter. The duties are severe and confining where one has much to do, as in a large office, especially that of a morning newspaper.—*Phrenological Journal*.

**ADVERTISING SPECIALTIES**

THE INLAND PRINTER COMPANY

OFFERS THREE GOLD MEDALS

Properly inscribed, valued respectively at \$100, \$75 and \$50, for the most artistic Colored Inserts furnished for insertion in its pages during 1890. The awards will be made by entirely disinterested experts, the features in connection therewith to be considered being originality of design, availability, execution, harmony of colors, and presswork. For full information as to conditions, number of copies required, and all particulars of contest, write to

A. C. CAMERON, Editor,  
183 MONROE ST., CHICAGO.

# THE THORNE

## Typesetting and Distributing Machine.

WESTERN · THORNE · TYPESETTING · CO.

156 Lake Street, CHICAGO.

# THE HUBER TWO-REVOLUTION PRESS

**DOUBLE ROLLING + SINGLE END + SIX TRACKS + AIR SPRINGS**  
**FRONT OR BACK DELIVERY.**

The Impression is taken over a six-track bed, which is supported every ten or twelve inches across the press. We guarantee the impression sharp and rigid, and the bed and cylinder are warranted not to spring or give way in the least degree.

The Impression can be tripped at the moment grippers close or before.

The Register is absolutely perfect at all speeds of the press, the bed and cylinder being locked in full gear twelve inches before the contact of bearers takes place, and remaining in gear for several inches after the head line has passed.

The Distribution is uniform from head to tail of sheet. This is accomplished by charging the form with fresh ink both ways from one fountain.

The Air Springs are applied vertically; the piston-head does not come out of the cylinder; no packing ever required; the pressure can be regulated while press is in motion at all speeds.

The simplicity, accuracy and durability of the bed movement is unequalled by any other machine. The double rack teeth are made of steel, with the best rolling curve known to mechanics. From two to three teeth always in contact, thus obviating lost motion.

The sheet is delivered in front, clean side to the fly, without the printed side coming in contact with anything. Fly motion positive, no strap, no slamming. The motion is the same in delivering sheet and returning for next sheet.

The Fly can be disconnected at a moment's notice.

This press is designed for the finest quality of cut and color work; can be used to charge the form both ways with fresh ink, or as a single end press, four or two rollers.

No complicated movements to get out of order.

**SIZES:**

No. 1.	4	Rollers, covering entire form.	Bed, 44	x 60	inches inside bearers.	Matter, 40½	x 56	inches.
No. 1.	3	" " " "	" 48	x 60	" " " "	" 44½	x 56	"
No. 2.	4	" " " "	" 37½	x 52	" " " "	" 34	x 48	"
No. 2.	3	" " " "	" 41½	x 52	" " " "	" 38	x 48	"

**DIMENSIONS, WEIGHT AND SPEED:**

No. 1.	4	Rollers.	Length over all, 15 ft.	Width over all, 9 ft. 3 in.	Height over all, 6 ft. 4 in.	Weight boxed, about 9 tons.	Speed, 900 to 1,300.

# THE HUBER SHEET PERFECTING PRESS

•• Double Rolling each Form • Six Tracks • Air Springs • Back Delivery. ••

The Impression is taken over a six-track bed, which is supported every ten to twelve inches across the press. We guarantee the impression sharp and rigid, and the bed and cylinder are warranted not to spring or give way in the least degree.

The Impression can be tripped at the moment grippers close or before.

The Register is perfect at all speeds of the press.

The Distribution is uniform from head to tail of sheet; each form is charged with fresh ink both ways.

The Air Springs are applied vertically, the piston-head does not come out of the cylinder, no packing ever required; the pressure can be regulated while press is in motion at all speeds.

The simplicity, accuracy and durability of the bed movement is unequalled by any other machine. The double rack teeth are made of steel, with the best rolling curve known to mechanics. From two to three teeth always in contact, thus obviating lost motion.

The sheets are delivered in the back by positive motion.

The Fly can be disconnected at a moment's notice.

No complicated movements to get out of order.

This press is especially designed for the use of book printers and publishers of weekly and monthly papers, pamphlet and almanac work.

It is constructed upon the two-revolution principle and has four rollers for each form; aside from it having two impression cylinders, it is substantially the duplicate in construction of our Two-Revolution Book Press.

The sheet is fed in the usual manner from the feed board on to the first impression cylinder, and passing between the bed receives an impression from the first form; it is then taken by the grippers of the second cylinder, and around between the bed again, where it receives an impression from the second form, thus printing both sides at one feeding.

Any off-set deposited from the first printed side, on the second cylinder, is at once removed by our Patented Off-set Device, and ordinary work can be run from ten to twenty hours without change of tympan sheet.

Either or both cylinders can be tripped at the will of the feeder, before or at the time grippers close, and at all speeds.

The speed in sheets per hour is practically the same as single presses of same size, and, as it prints both sides of the sheet in perfect register, the result is equivalent to the product of two presses.

We believe that printers and publishers will appreciate this press to its full value, filling as it does a long felt want, of a press capable of large or small sheets, and after one operation delivering it upon the fly-board finished.

# The Huber Two-Color Press.

BED, 36 x 52. FORM, 32 x 48. PAPER, 33 x 50. SPEED, 900 to 1,200 per Hour.

DOUBLE ROLLING EACH FORM \* SIX TRACKS \* FRONT DELIVERY.

THE above cut represents our Two-Color Press as now built with air springs and double rolling device, thereby charging the forms with fresh ink both ways, also the double rack pinion bed-movement, and all patented improvements fully described in our Book Press Catalogue. The following is a short description of the construction and operation of the Press:

There are two impression cylinders, which engage a separate form each during the forward stroke of the bed, as in an ordinary two-revolution press. A fountain at each end of the press supplies the separate forms with ink in usual manner. Between the impression cylinders is a transfer cylinder which takes the printed sheet from the first impression cylinder and delivers it, in absolutely perfect register, to the second impression cylinder, from which it is delivered directly to the fly, clean side next the fly-sticks.

**OPERATION.**—The sheet is fed to the grippers of the first cylinder in the usual manner, and after receiving the first impression is taken by the grippers of the transfer cylinder and delivered to the grippers of the second impression cylinder. About this same time another sheet is fed to the first impression cylinder, and at each forward stroke of the bed both sheets are printed with a different color. The sheet with the two printings is then delivered to the fly, the sheet with one printing transferred to the second impression cylinder, and the first cylinder supplied with a clean sheet by the feeder.

We refer you to the following firms running Two-Color Presses: Crump Label Co., Hinds, Ketchum & Co., McLaughlin Bros., American Bank Note Co., Martin B. Brown, New York; Forbes' Litho. Mfg. Co., Boston, Mass.; C. I. Hood & Co., Lowell, Mass.; Rand, McNally & Co., Chicago, Ill.; National Bureau Engraving and Mfg. Co., Philadelphia, Pa.; Dickman-Jones Printing Co., San Francisco, Cal.  
Twenty-eight presses running in the above offices.

It will be seen by the above description that we have in reality *two* presses in *one*; and, while running at a comparatively slow speed, which insures perfect register and "long life" to the press, it is actually doing about twice the work of an ordinary press of the same size. Having a separate impression surface for each form, a job is "made ready" exactly the same as for an ordinary press.

The principal advantages of this style of press over all others are: *First*—Comparatively slow speed, which lengthens the "life" of the press, and at the same time produces twice the usual amount of perfect work. *Second*—As the sheet is fed automatically from the first impression surface to the second, the risk of the feeder making a mistake is reduced fifty per cent. *Third*—As the sheet is fed but once for two colors, the handling of stock is reduced fifty per cent. *Fourth*—In illustrated bookwork, the advantage of using a better quality of ink upon the cuts than upon the type; thereby producing a finer class of work at a less expense.

This press is built on the same solid and substantial plan for which all our presses are justly noted, and has all latest improvements, including six roller bearings to support bed, noiseless and positive fly, safety gripper mechanism, ball-bearing, bed-reversing teeth, and air springs that can be regulated when press is in motion at any speed.

# THE HUBER TWO-REVOLUTION SUPER ROYAL "MUSTANG."

**NO SPRINGS + CRANK BED MOVEMENT + BOX FRAME.**

**THE FASTEST RUNNING PRESS OF ITS SIZE BUILT.**

WE take great satisfaction in calling the attention of the printing trade to this press, which is our latest production, and which has in its construction the novelty of being a combination of the best points of both the Stop-Cylinder and Two-Revolution style of presses.

The Bed is driven by means of a crank, which gives the smoothest reciprocating motion known to mechanics, and does away with the necessity of springs and the accompanying extra strain and wear, which more especially is liable to occur in a small size press having a large variety of speeds, from their non-adjustment.

The Cylinder is driven in a constant direction and at a speed to correspond exactly to the varying speed of the bed, by means of a perfectly shaped cam-gear. This cam-gear makes two turns to each complete stroke of the bed, and the same gear teeth are in mesh during the printing of every sheet, thus making the register absolutely correct. The cylinder never comes to a full stop when the press is in operation, but keeps moving slowly when the bed is reversing, until the speed of the bed is equal, when it increases in unison with the bed. The sheet is taken by the grippers when the cylinder is moving slowly, another point in favor of perfect register.

There are no complicated cam or stop motions to get out of order, or limit the speed of the press, and we guarantee every machine to print twenty-two hundred sheets per hour, when properly fed, in perfect register and without jar or extra wear.

The cylinder can be tripped at the will of the feeder, and up to the moment when the grippers have taken the sheet.

The bed is supported, under the line of impression, by four large adjustable rollers, journaled in stands, which are fastened to a rigid box stay that cannot spring or give in the least degree.

The side frames are of the box pattern, and every part of the machine is constructed with an eye to great strength and durability.

The sheets are delivered in front of the cylinder, clean side to the fly, which is positive and noiseless in its action.

We unhesitatingly pronounce this press the most simple, complete and serviceable of its size ever introduced, and we invite the closest inspection and comparison.

BED.	FORM.	NO. ROLLERS	SPEED.	WEIGHT.

# THE LINOTYPE

TO PRINTERS AND PUBLISHERS.

All known Linotype Machines, and the product therefrom, are covered by Letters Patent Nos. 362,987, 313,224, 317,828, 345,525 and other patents controlled by the undersigned company.

The public is cautioned that the use of any machine which casts, as a substitute for movable type, linotypes or type bars, each bearing the characters to print an entire line, unless purchased from this company, will render the user liable to a suit for infringement.

The Linotype Machine, made by this company under its patents, is now for lease or sale; is capable of an average speed of 8,000 ems per hour, and the print from its product is superior to that from movable type. Any size of type from agate to pica can be produced upon the same machine. We earnestly invite your investigation.

MOONLIGHT IN HARBOR, DORDRECHT.  
Reproduced in half-tone from photograph, by ELECTRO-TINT ENGRAVING COMPANY,  
726 Chestnut street, Philadelphia, Pennsylvania.

While our columns are always open for the discussion of any relevant subjects, we do not necessarily indorse the opinions of contributors. Anonymous letters will not be noticed; therefore our correspondents will please give names—not for publication, if they desire to remain incog., but as a guarantee of good faith.

#### A WORD WITH CORRESPONDENTS.

We hope our valued corps of correspondents will not take offense when we ask them to **BOIL DOWN** their effusions in future as much as possible. We are very glad to hear from every section of the country, but our correspondence feature has assumed such proportions that it is impossible to publish all that is sent us. Friends, be brief and to the point, and **THE INLAND PRINTER** readers will think all the more of your contributions for their being so.

#### A NEW COPY-HOLDER.

*To the Editor:* BUFFALO, N. Y., September 24, 1890.

Wishing to suggest a means of preventing the annoyance to which printers are subject by having their copy blown on the floor, and sometimes out of the window, I send you by mail a device which will serve as a copy-holder, and which anyone can make with little trouble and expense. As you will observe, it consists of a clothespin, such as is used in printing offices for holding printed sheets while drying, to which is attached, with four quarter-inch screws, a piece of six-to-pica rule about sixteen ems long, cut to the width of the pin, bent, tapered and sharpened at the ends. It can be attached to any box in the cap case or in any of the small square or long boxes of the lower case, and it does not cover the box up so that the type cannot be taken out without removing the holder. The manner of attaching it to the case is very simple; place the holder diagonally over the box, allowing the brass attachment to enter the box; then turn the holder around square, keeping it firmly on the case, and the sharp ends of the rule attachment will enter the sides of the box, holding it in place. For nearly two years I have used one of these pins, although with a different attachment, and have found it very convenient. The device is not patented, and I send it to you hoping that you may deem it of sufficient value to explain its mechanism to the readers of **THE INLAND PRINTER**.

GEORGE P. FAIRBAIRN.

#### FROM PITTSBURGH.

*To the Editor:* PITTSBURGH, Pa., October 6, 1890.

Last month's number of **THE INLAND PRINTER** marked the close of a very interesting volume. In one establishment of this city nearly every printer and pressman will have last year's volume bound.

The Pittsburgh Exposition has been open for several weeks. An exhibit of interest to pressmen is the operation of a job press by electricity. William G. Johnston & Co. have a handsome exhibit of commercial binding. Joseph Eichbaum & Co. have also a very fine exhibit.

On October 5 No. 7 took action upon the "six-day law" passed by the International Union. The penalties for violations of this law were fixed. It will cost \$4 for the first offense, \$25 is the fine for the second offense, and expulsion will follow the third offense. The members of No. 7 do not approve of the light penalties which have been fixed by some of the subordinate unions. Pittsburgh printers resolved to make the violation of the law as obnoxious as possible.

About October 15 a new paper, the *Sun*, will shed its light upon Pittsburgh journalism. It will be an eight-page nonpareil paper. There is plenty of subbing on the papers and the establishment of a new paper is causing a good many "tourists" to head for this city. Job printers are not very busy. MEMO.

#### FROM OREGON.

*To the Editor:* PORTLAND, Ore., September 27, 1890.

The real estate boom in Oregon is not what it was a few months ago, as people have begun to see that they do not want to buy town lots six to ten miles from the city. They are pushing an ordinance to tax real estate dealers \$25 per year, which will have the effect of driving all the wildcat firms out of existence. They amount to nothing, anyway, and do not benefit the printers in the least, as they want their advertising and jobwork done at starvation prices. They go from office to office getting bids on jobs of 500 to 1,000. One came to our office the other day for a bid on 500 contracts, and we gave him a bid of \$3. Next day he came in for another bid on 500 slips, and when he got it he said, "Good gracious; you fellows want too much; why, the job you bid on the other day at \$3, I got over at E. & S. for \$1.25." I told him we were trying to make a living, and that is why we charged living prices, and if E. & S. were making a living at such figures they would be short-lived.

The printing business is beginning to pick up just now, and lots of work is looked for the coming month. There are quite a number of amateur job printers here, and some of the work turned out by them is justly entitled to a place in your collection of monstrosities. One of these printers advertises thus: "Wanted, a good Christian girl or boy to learn the printing trade; one living with their parents."

All the union printers have been called out of the office of F. W. Baltes & Co., as this firm has failed to recognize the rights of the union.

The Oregon editors held their fourth annual meeting here August 14, 15 and 16, and judging from their programme they had a royal time, the business men of Portland donating very freely.

The great Northwest Industrial Exposition opened September 5 and closes October 31, and promises to be a grand affair.

The federated trades recently gave a picnic at Gambrian Garden for the benefit of the locked-out coal miners of British Columbia, and a glorious time was had and a big crowd was present.

Yours,

W. NIHS.

#### FROM ST. JOSEPH.

*To the Editor:* ST. JOSEPH, Mo., September 30, 1890.

The Posegate Printing & Lithographing Company is a new corporation that has absorbed the St. Joseph Steam Printing Company. Its capital stock is \$50,000 (the same as the old company). Its stockholders are: J. W. Johnson, secretary and treasurer, \$40,000 (Johnson is the old secretary and treasurer); Frank M. Posegate, president, \$5,000 (Mr. Posegate was president of the old company); and M. Lawler, \$5,000 (Mr. Lawler is one of the publishers of the *Catholic Tribune*, and was formerly solicitor and collector for the St. Joseph Printing Company). The new company promises large improvement—new machinery, new type. They talk of five new 8 by 12 Gordons and a cylinder or two. The newest of their presses is about fifteen years old, some of them twenty. But they talk more largely of lithographing. To this branch they promise special development. Their work has heretofore been done on hand presses, and this is a good point for lithography. The wholesale houses here are very large; the wholesale trade of the city is as large as that of Omaha and Kansas City combined, with nine hundred traveling men on the road. I only mention these items to give an idea of the market the new company expects to have, as all these houses use lithography and have been getting it away from home. Maybe some of your advertisers can secure a good deal of trade with the new company.

The Sheridan & Clayton Paper Company (printed wrapping paper, etc.) are putting up a new building, three-story and basement, 40 by 140, for their own occupancy.

The *Ballot*, Col. William Hyde's new paper, seems to be rapidly coming to the front. They run a Hoe perfecting press. Colonel Hyde is popular.

The Wathena (Kansas) paper has been moved over to this city. Its publisher has joined forces with Chapman Bros., small job

printers of this city, and they will do jobwork and print the paper here and publish it in Wathena. It is only five miles away. They have a Guernsey, two Gordons and a Washington jobber.

The new building to be occupied jointly by the daily *Herald* and the daily *Gazette* is rapidly coming along. It is said that they will use a web press together.

The town is pretty full of printers, that is offices, because it is a good lithographic town. It is not good for printers, and prices are low. The other day an order for 10,000 No. 4 tags was taken for less than \$5. There are fifty presses on jobwork, four cylinders on news and two web presses; pretty good for a city of 52,000 inhabitants. G. R.

**A NEW CASE.**

To the Editor: EMMETSBURG, Iowa, September 25, 1890.

A good while ago it occurred to my mind that the printer's lower case was of a somewhat awkward construction, and the oftener this thought recurred to my mind the more I wondered why some inventive genius had not devised a better scheme for laying the types to facilitate the labor of taking them up. The

7	8	9	0	,	k		b	l	w	v
6	j	ff	\$			e				ff
5	p			d			i	s	f	g
4	!	c								fi
3	z	m		n		h	o	y	p	,
2	x							r		Em Quad
1	q	u		t		3-em Sp.	a		En Quad	
								Thin Space	.	-

result of all this bothersome thinking and wondering was the evolving of the case, a not very handsome photograph of which is inclosed in this letter.

The material changes which have been made from the old case are: The reduction in size of the *u*, *m*, *c*, *i*, *s* and *r* boxes; *b*, *l*, *w*, *v*, *f*, *g*, *y*, *p* are given different positions and differently shaped boxes, and — the whole case generally torn up.

As an excuse for doing all this I find these to be facts:

That the compartments which have been reduced in size are still plenty large enough. That changing the boxes *b*, *l*, *w* and *r* to the right-hand side of the case, and nearer the *e* and *i* boxes, has made composition more rapid and with less awkward movements — for example, the words or word-endings, "will," "ville," "ble," and all combinations of those letters — whereas, before, it was necessary to make an awkward movement across the case to procure them. That by changing the position of the thin-space and en-quad boxes there is an inducement to better spacing; it is more conveniently and quickly done. That changing the size and shape of the *b*, *l*, *w*, *r*, *y*, *p*, *f* and *g* boxes prevents an overflow and certainly makes it more convenient to get the types.

I have been using this case for several months and I am much pleased with it. Especially in "jumping" from it to another case do I see the great difference between the two, and it seems to me it is in favor of the new one. The new invention has neither patent, "patent applied for," nor copyright, and probably never will have. I am of the firm conviction that there is much room for improvement in the laying of the lower case, and I offer the

suggestion in the hope it will cause someone to exert himself to bring it nearer to perfection.

The case was manufactured for me L Simmons & Co. of Chicago. Trusting I have succeeded in breaking the everyday monotony of your editorial life and caused a wan smile to relax your features, I am, respectfully and fraternally, yours,

W. S. B.

**FROM TORONTO.**

To the Editor: TORONTO, Ont., October 6, 1890.

Upon receipt of your September number I was reminded that another volume had been completed, and an excellent one it has been. At the same time I was reminded that my subscription had run out, which I take this opportunity of renewing, together with which I send a new subscriber's name. Each succeeding issue seems superior to its predecessors, and I now look upon THE INLAND PRINTER as a luxury as well as a necessity to every ambitious printer, be he compositor or pressman.

There is to be another attempt made to run a labor paper here. I have not yet learned the name of it, but it is to be edited by Mr. Phillips Thompson, a man in whom its readers can safely place confidence, and one who has had considerable editorial experience. He is now associate editor of *Grip*, and with the aid of his pen and blue lead pencil our new paper is sure to succeed.

The *Canadian Nation* purchased Patterson's office lately, and is now printed as well as published by the proprietors.

I have another new venture to chronicle. Messrs. Imrie & Graham are the publishers and printers of a new weekly, entitled the *Scottish-Canadian*. It is to be devoted to the publication of Scotch news, and will contain articles of peculiar interest to the many Scotchmen who now live here.

Mr. R. G. McLean has removed to more spacious quarters on Lombard street, and Messrs. Simms, Moore & Co. are to move into McLean's old place this week.

Mr. W. E. Bennett, the able editor of the *Breton World*, one of our brightest country papers, has entered into a contract with Miss M. W. Barrett, assistant editor of the *Canadian Statesman*. Hereafter this couple will be known as man and wife.

The *Globe*, our oldest daily, has added another enterprising event to its history. The city, having decided to extend Victoria street to King street, and the *Globe* being on the land to be thus used, they had to find new quarters, which they did at the corner of Yonge and Melinda streets. They have had the old building that stood there remodeled and constructed so as to make it an excellent home for a large daily. Mr. Farrer, late editor of the *Mail*, is now the chief editorial writer on the *Globe*, and that paper is improved in consequence.

At the last meeting of our union we were addressed by a delegation from the Single Tax Association, which showed how the abolition of all personalty taxation would benefit workmen.

While reading reports of the Labor Day proceedings of other cities, in Canada as well as the United States, I asked myself why Toronto does not have a Labor Day. Surely we can bring together enough of our workingmen one day in the year to form a procession that would be worthy of the name. Let us try next year.

The eight-hour movement is to be discussed by delegates from the several labor organizations of the city on October 31. Much expectancy is manifest.

JIM DEE.

## FROM BOSTON.

*To the Editor :*

BOSTON, Mass., October 7, 1890.

The printing business in and about the Hub has fully recovered from the temporary dullness which follows the annual exodus to pleasure resorts, and the coming season bids fair to be brisk.

On October 1 the exhibition of the Massachusetts Charitable Mechanics' Association was opened at the immense building of the association on Huntington avenue. To all interested in the advancement of American arts and manufactures, these fairs have for many years afforded exceptional opportunities for observation and study, while a liberal policy toward exhibitors has retained their confidence and won their fullest coöperation. The printing exhibit at the fair now in progress is not so large as it has been in some former years, but those of the trade who attend will find much that is new and well worth seeing. J. H. Cranston shows three presses: one of the drum cylinder pattern and a brace of two-revolution machines. Among the new features noticeable on these presses is an ingenious backing-up appliance recently invented by Mr. Cranston as a substitute for the device known to all users of these presses. By the improved method the power for reversing is communicated by a narrow auxiliary belt running from a pulley on the counter shaft to another pulley below, and one of the rubber friction rolls is dispensed with.

Near this exhibit some Sanborn and Acme paper cutters are shown, and a little farther on a line of Prouty presses claim the printers' attention. On the same aisle the Campbell Printing Press & Manufacturing Company have one of their well-known combination presses and a new size two-revolution pony press running. The fair paper is printed on the larger of these presses by the Croke Printing Company, its publishers. The little pony surprises everyone by the high speed of which it is capable and the ease with which it is handled. Golding & Co. do not exhibit any presses this year, but have filled their space with tastefully arranged cases of printers' tools and supplies of superior design and workmanship. Stacks of "Owl Brand" ink barrels, cans of "Owline," a new ink reducer, elastic cement for binding, and anti rustine, a composition for preventing rust on polished metal surfaces, form an effective background for a group of cabinets and job stands.

In another part of the building Mr. Charles Currier Beale has an exhibit of interest to literary workers, which includes a collection of instruction books on shorthand, from the first known publication, in which, like the Chinese language, every word has its symbol, to the latest, simplified phonography, Mr. Beale's own system. Considerable attention is also given in this exhibit to Volapük, the new "world language."

The income of Daniel S. Lord, proprietor of the *Youth's Companion*, is estimated at \$200,000, of which it is said he gives one-half to charity.

The Newspaper Club dined at the American House on the evening of October 19, Editor-in-chief Alexander presiding. There was a large attendance.

On the evening of October 3 the Star Printing Company, of Lynn, whose office was entirely destroyed in the sweeping conflagration in November last, were again visited by fire, and property to the value of about \$2,000 burned. The loss was confined chiefly to manufactured labels, of which the company make a specialty, and paper stock.

The heirs of Benjamin Franklin are endeavoring to get their grip upon the accumulation of the printers' benefit fund, established by their illustrious ancestor. The fund, which amounted originally to £1,000, has by careful fostering been increased in 100 years to \$368,741.12, of which the city proposes to devote \$300,000 toward the payment of the debt incurred in the purchase of land for Franklin park.

The *Youth's Companion* office completed on September 19 600,000 sixteen-page premium lists. The work was done on a special new perfecting press, from one set of plates.

The latest meeting of the Suburban Press Association was devoted to the consideration of the question of advertising rates.

From data furnished, the conclusion was reached that the average charge per inch for each insertion in suburban weeklies is 10 cents.

Mrs. Allie E. Whitaker, of the *New England Farmer*, has charge of the exhibition of farmhouse industries in the woman's department of the Mechanics' fair.

Next month I shall have something to say about our national copyright system. G.

## GOVERNMENT PRINTING OFFICE AND CIVIL SERVICE RULES.

*To the Editor :*

WASHINGTON, D. C., October 7, 1890.

A contributor to your valuable journal a few months since undertook to poke fun at the idea of such a thing as civil service law being applied to compositors or pressmen.

I think it would be a good thing if carried out properly; for instance I do not think that it should be left to compositors to make rules for the examination of pressmen as to the particular examination that they should be capable of undergoing and the knowledge requisite to successfully manipulate a printing machine.

In a few of the departments at Washington—for instance the war department, agricultural department and census office—a series of questions was fixed up some way or other to meet the wants of these departments, by three compositors detailed for that purpose from the government printing office. I am at a loss to know what kind of questions they formulated; whether the applicant for the positions they wished to have filled was or was not a person who gained his knowledge out of such books as are termed technical treatises on book and job work and an aid to imposition, or, as pressmen term it, book learning. A young man with a fair education might be able to retain for a short while a few of the answers contained in such publications; and when such examiners as I have stated propound their peculiar ideas and ask such questions as this: "What would you do when you receive a new machine to run?" and the applicant for position would make answer thiswise: "I would oil my machine the first thing," it would seem a very plausible answer. But if the examiners were a committee of pressmen, they should say to the applicant, "Here, sir, is a press; strip it. Here is a form; make it ready. Here is a sheet; mark it out and over-lay it. What effect does over-lay have in contradistinction from under-lay? What is meant by the color looking gray? What do you understand by the term, the fountain being buckled? Describe a slur. How do you overcome a slur? What is meant by the term muggy? What do you know about rollers? Of what ingredients are they composed? Give the names of the principal press builders of the United States. Describe how to set rollers." And other questions too numerous to mention, all of which are of practical utility to test the qualifications of applicants, but to a person not conversant with the pressman's branch of the art would seem very foolish. It is necessary that a person claiming to be a pressman should know these things, in order to be of use and benefit to the one who should employ him, and such knowledge can only be acquired by practical experience. Any number of compositors, together with the inventor of the particular printing machine they require a pressman for, will never be able to test the qualifications of persons seeking positions as pressmen in the various departments of the government printing office.

I have heard that great inventor, Campbell, of the great Campbell Press Works of New York, now deceased, assert to a friend who was in the act of making ready a cut form, "Oh, my, such loss of time! Now, sir," mentioning the pressman's name, "you ought to know, sir, that my press does not need any over-laying. I have it so nicely adjusted." Now, he certainly labored under false hopes. Neither he, nor all the press builders of the world, can make a machine that will overcome the imperfections of type, press blocks or plates; and there comes the test to show the qualifications of an applicant for the position of pressman. A committee of pressmen are the only and proper persons to test the qualifications required of one of their profession. A series of questions may and could be arranged for the purpose of filling the

various positions in the pressroom in the government printing office, or any pressroom, in order to fill the various offices from foremen down to apprentices; but at present, to fill a position a grade higher than a journeyman in any of the departments in this city, you must be backed by either social or political influence in order to get it.

As the examination is made now, the thing is a farce, and I suppose that is one of the reasons why your former correspondent objects to civil service in the government printing office.

It could be made of practical benefit if carried out properly; if all the employés were permitted to enter the field to test their fitness for the various positions requiring skill and experience; and then would come the time when those who should be relegated to the rear would receive their just dues, and the worthy and most competent pressmen would then be able to receive their just compensation, which at present they are debarred from receiving.

A PRESSMAN.

#### FROM SAN FRANCISCO.

To the Editor: SAN FRANCISCO, Cal., October 4, 1890.

Trade in printing circles has increased to a marked degree during the past month. As the first half of the year was unusually dull the latter part will not succeed in making anything like a fair average unless it be proportionately lively. All indications, at the present time, point to a continuance of the good state of affairs now existing and a much more cheerful feeling is noticeable among the printers. The five days' celebration of California's Admission Day, by the "Native Sons of the Golden West," gave a large amount of work to the printers. Since that time the preliminaries of the coming election have called for sufficient printing to keep the trade lively, and between the present date and the day of election, November 4, more work will be required than during the same period preceding any previous election ever held in this city, owing to the large increase in the number of precincts.

The following unique advertisement of a prominent printing firm of San Francisco appeared in the last number of the *Pacific Union Printer*, the official organ of the local typographical union:

We use few imprints; employ no solicitors; do work as promptly as we can and as well as we know how, and charge what we think it is worth. Estimates given, but not very cheerfully; guesses inexact and dangerous; can tell much better what the bill ought to be when we get through. Advise those who are satisfied with their present printers to stick to them. Good work and honorable treatment our only reliance for keeping present customers or gaining new ones.

The boycott which has been in operation against Bacon & Co. during the past year has been raised by the San Francisco Typographical Union, and their employés have been admitted into the union. This has been the longest fight of its kind on record, and extremely bitter on both sides. However, the differences have all been adjusted and it is understood that Jacob Bacon will soon become a member of the Typothetæ of San Francisco.

At the last meeting of the San Francisco Typographical Union which was held on Sunday, September 28, S. H. Jenner presiding, there were 400 members present. Twenty-four new members were initiated. A communication was read from Henry George, thanking the union for placing his name on the honorary list. The death of E. B. Goodwin, a member of the *Chronicle* chapel, was reported. Nothing definite was accomplished in reference to the admission of the electrotypers to membership.

The following amendments to the scale of prices and rules of Typographical Union No. 21 will be acted upon at the next meeting:

SECTION 30. Composition on dialects exceeding five lines shall be paid for at the rate of price and one-half. [This section shall be construed as follows: Where the number of words constructed differently from the recognized English method of spelling, either by abbreviation or otherwise, shall equal one-half or more of the total number.]

That manuscript of such a nature as to delay the work of a compositor shall be left to regulation by the chapel, said chapel to be given the power to charge more than single price with the consent of the Executive Committee.

A decided improvement is perceptible in the appearance of the rooms of the Typographical Union of San Francisco. One of the features of the new quarters is the new banner recently purchased

by the union, which is inclosed in a glass case and serves as an embellishment to the officers' apartments. A compositor setting type, painted in oil, is the groundwork design. Drapery of purple silk on top and white silk on the bottom sets off the painting to great advantage. On the top drapery are the words "San Francisco," the bottom containing the remainder of the designation of the organization, "Typographical Union No. 21."

The next meeting of the Typothetæ of San Francisco will be held on Wednesday, October 8. At this meeting the conference committee appointed to confer with a like committee from the typographical union, will report. It is understood that the differences of opinion in regard to requiring all offices to use type up to the standard have been settled, concessions having been made by the committee of the union. All type purchased in the future by proprietors of printing establishments must be up to the standard. In reference to the apprentice question no decision has been reached up to the present date by the two committees. A. Rollins and Charles H. Crocker, the two delegates to the annual convention of the United Typothetæ of America, recently held at Boston, are still in the East. Mr. Crocker is expected to arrive in San Francisco in about ten days. The members of the San Francisco Typothetæ were disappointed to learn that the next annual convention cannot be held in this city on account of previous arrangements existing which make Cincinnati the meeting place. However, as San Francisco in all probability will have the convention two years hence, the disappointment to the printers is much less than it otherwise would be.

C. A. Murdock & Co. have in press a three volume edition of *Blackstone*, edited by William G. Hammond. The presswork is nearly completed, and the fine printing and the excellent quality of paper used reaches the ideal of art printing. The title pages are illustrated by two cuts, one of *Blackstone* and the other of Mr. Hammond, the editor. The printing executed by this firm with these electrotypes, made from process plates, as nearly reaches perfection as is possible, and the work so closely resembles that of steel plates that the difference is distinguishable only to the most experienced eye.

Among the exhibits at the Mechanics' Fair, now being held in this city, is one by Brunt & Co. which is attracting great attention. They not only have on exhibition show cases containing samples of fine work executed, but also two presses in operation day and night—a Prouty and a Pearl. They print visiting cards for visitors gratis. The extent of an advertisement of this character is easily perceptible, as is also the expense entailed.

E. P.

#### FROM BALTIMORE.

To the Editor: BALTIMORE, Md., October 4, 1890.

In the cozy little hall adjoining the printing establishment of Sapp Brothers, on Baltimore street, near Calvert, a number of employing printers met Wednesday evening and effected an organization to be known as the Baltimore Typothetæ. A preamble and constitution were adopted. The preamble reads as follows: "To improve the trade, to cultivate a just and friendly spirit among the craft, and with the view of exchanging information and of protecting and assisting each other when necessary, the master printers of the city of Baltimore form themselves into an organization designed to include all houses in practical business, and hereby agree to be governed," etc.

The following officers were elected to serve until December: J. Y. Boyle, president; N. C. Killam, vice-president; Albert Weil, second vice-president; T. B. Sapp, secretary; J. Edwin McGinley, treasurer. Executive committee, Ed. A. Hammond, J. G. Schonfarber, L. C. Schneiderreith, Charles J. Fleet and William F. Hoffman.

Just at this time there is a little unpleasantness among some of the employing printers. For a number of years past the printing of the city's registration list has been a bone of contention among a number of the craft. This job was given out the other day to the W. J. C. Dulaney Printing Company, at 12 cents per name. It appears, however, that outside of three or four firms no other

printing house was solicited to bid for the work. It is contended that a procedure of this kind is unfair, both to taxpayers and to those printing establishments which were ignored in the matter. The disgruntled ones declare that they would have printed the list at 8 cents per name. As there are 90,000 voters, it is readily seen that at 8 cents per name a big save would have been made to the city. It is alleged that a pool was formed among three or four firms, the lowest to get a big price and then divide up the job. There is another side. In the first place a bond of \$10,000 must be given for a faithful performance of the work, which must be finished in three days after the sitting of the registrars. Then, again, the printer must post the list at twenty-five points in each precinct. Two years ago 15 cents per name was paid.

The Dulaney Company is composed of Messrs. W. J. C. Dulaney, John M. Dulaney, Henry M. Martindale, Adolph Lohmeyer and John P. Poe. This last-named gentleman is a lawyer and a politician and was a member of the last legislature.

A delegation from Baltimore Typographical Union attended yesterday the funeral of Richard C. Lane. The deceased was forty-three years old and was employed on the *Sun*. He died of consumption.

Mr. George M. Upshur, of this city, and one of the commissioners of the World's Fair, returned from Chicago a few days ago. He is enthusiastic over the outlook, and says the show will be the grandest the world has ever seen. Notwithstanding the fact that our monumental city has been called "Beautiful Baltimore," Mr. Upshur says Chicago is decidedly the handsomest city in the United States, and that its people are the most enterprising in the country. He is also of opinion that the next census will place Chicago in the lead of American cities.

For the past twelve months Baltimore Typographical Union has been wrestling with the formula of a new constitution. It has been completed at last and will go into effect on the 15th of the present month. There have been no radical changes made, however, nor any advance in the current price list. The union, with the assistance of the Federation of Labor, is still fighting the *Globe*, the new afternoon paper. Plate matter is the cause of the trouble. The union has also called out their printers engaged on the *Trade* and the *Free Press*, both weekly papers. The reason assigned for this is too much "boiler-iron," as some compositors are pleased to call stereotype plates. These publishers are indignant at this interference with their business, and in leading editorials condemn in unmeasured terms the action taken by the union.

Is it legitimate for one newspaper to clip ads from a rival sheet and mail the same to advertisers with an offer to insert at lower rates? There are two morning papers here that resort to this sort of thing in order to increase their business. But all things, they say, are fair in love and war, and perhaps the publishers of the *American* and the *Morning Herald* view a matter of this kind in just such a light.

The *Globe* of late has been pitching into the *Evening News*, accusing that journal of being at the bottom of the boycott now being waged against the late newcomer. The *News* never makes reply. Union printers laugh at this charge and say that the *News* would be only too glad to see the *Globe* win the fight; that while the *News* is a union office, it is so under protest all the time.

A portion of the book and job offices are taxed to their utmost with hurried work, while some again are doing very little. The printing of the registration list, and other matters in connection with the coming election, are giving work at present to quite a number of typos. This job is divided up in four offices.

The ring politicians of the democratic persuasion are very sore just now from recent lashings administered by the *Sun*. This paper is democratic, but it does not hesitate to condemn in vigorous language questionable methods practiced by some members of its own party. The *Sun* can also deal heavy blows to local contemporaries. A day or two ago it declared that the paths of journalism in this section were infested by a newspaper banditti. This remark had reference to a number of newspapers here which

advocated a gas monopoly bill before the legislature and some other proposed measures in which there were millions—for the projectors and some part for their organs.

Things in printerdom generally are quiet. FIDELITIES.

#### FROM CINCINNATI.

To the Editor: CINCINNATI, Ohio, October 5, 1890.

Rev. E. P. Foster, who was forced to resign as pastor of the Storrs Congregational Church, of this city, on account of his expressed sympathies with organized labor and the labor movement, has started a small weekly paper called the *Golden Rule*, to print which he has established an office of his own. Mr. Foster has, of late years, been very eloquent in his appeals for the bettering of the condition of the laboring classes, and it is hoped that they will respond heartily with subscriptions to his paper.

Rev. Doctor Lockwood, another of labor's champions in the ministry here, is also having trouble in his church, principally caused by his sympathies with organized labor and the prohibition party. Evidently it does not pay for prominent ministers to orate on the wrongs of the working classes before wealthy congregations.

On September 27, the Caxton Printing Company, doing business on East Third street, was seized by the sheriff. The concern has been shaky for some time. A few days previous they gave a chattel mortgage for nearly \$4,000 to the father of one of the proprietors. When this fact became known other creditors prepared to make good their claims, fearing a failure. The Diem & Wing Paper Company was the first to make a move, they suing in the Superior Court for \$377 on an account for goods sold. An attachment was at once issued and the establishment was seized by the sheriff. Charles Schwarz and Max Miersway were the company. The Caxton Printing Company was one of the cheapest printing concerns in the city, their estimates on work running way below those of other printers. Louis J. Snider's Sons Company have since followed the example of Diem & Wing and sworn out attachment for \$980 due for paper, and in their petition allege fraud in the chattel mortgage given Mr. Schwarz. It is likely the concern will not be able to resume.

The typographical union sent a committee, consisting of Frank Rist and George Silvey, before the Board of Public Improvements of our city to protest against the giving of official advertising to papers who did not employ union labor. The protest was aimed at the *South-West*, a non-union sheet published in the interest of the brewers, of limited circulation, but which had been receiving from two to five columns of official advertising weekly. Messrs. Donham, Reemelin and Montgomery, of the board, expressed themselves as heartily in favor of the union and agreed that, hereafter, no more anti-union sheets would receive official patronage. Another member of the board—Mr. George B. Kerper—put himself on record as opposed to all unions, saying that it was not a matter of concern to the city whether union labor was employed or not. Mr. Kerper was formerly president of the Mount Adams & Eden Park railway, and it was through his instrumentality that the organization of street railway employes was broken up.

The democratic and republican campaign committees have been visited by committees from the union, and have agreed that all their work will be given to offices on the union list. Several members of the union are members of the executive committees of both parties, and will watch this matter very closely.

The Frey Printing Company, one of the members of the label combine, recently established, will move into more commodious quarters in the near future.

Business here in the job and book lines is very dull, and the newspapers are crowded to overflowing with "subs," and I would advise printers to steer clear of Cincinnati for awhile at least.

One more office has been added to the list of union offices the past month, and prospects are good for the addition of two and possibly three more next month.

Chris C. Kenney, of the *Enquirer* composing room, is becoming quite a politician. He is now a member of the city

council, city board of equalization, and also one of the democratic campaign committee. It is needless to say that the latter committee will be kept in the straight path as far as its printing is concerned.

The National Typothetæ will hold its next annual session in this city in the fall of 1891. The members of the local Typothetæ are already paying money into a building association for the purpose of raising funds to defray the expenses of the "blow-out." If it pans out as members here predict, the national association will meet with a finer reception than any yet held. SCRIBE.

#### FROM WASHINGTON.

To the Editor: WASHINGTON, D. C., October 4, 1890.

During the past three months we have made a good deal of noise through the columns of THE INLAND PRINTER regarding the adjournment of congress, and at last we can safely state that it is now a thing of the past. Both House and Senate closed their doors on last Wednesday, at 5 o'clock, and by the time this number of THE INLAND PRINTER will have reached its many readers the majority of those lawmakers will have gone to their homes, only to return in a month or so to resume operations. The fifty-first congress was one of an unprecedented character in many ways. Notwithstanding a great deal of business was transacted, there were a great many proceedings during the session disgraceful, to say the least, to such an intelligent body. The pugilistic displays alone by the several members will have a strong tendency to blight the records of both the House and Senate journals. The adjournment of congress, of course, meant the suspension of the *Record*, and to say the least this was keenly and severely felt by quite a number of employés thereon, who consequently suffered the loss of a good situation. At this early date we cannot mention the names of any of those who were thus unfortunate, except the sublist, comprising about thirty-five compositors. Among this list Messrs. T. M. Ring, McClellan Jones and Charles H. Cassavant received appointment elsewhere in the government printing office. At this writing a "red-letter" day is said to be near at hand when the "mighty ax" will surely fall upon a large number of "regulars." Instead of being totally discharged, most all of the "night bill force" were retained, and will possibly receive employment at night until the next session of congress. At present all hands are anxiously awaiting their twenty per cent, which will be very acceptable to many who want to "get out of town."

At a recent meeting of No. 101, of this city, a preamble and resolution were adopted, setting forth that as "one hundred and twenty-eight members of the House of Representatives from both political parties have evinced their friendship for us by casting an affirmative vote upon the proposition to restore the wages of the employés of the government printing office to the rate from which they were unjustly reduced, the sincere thanks of this union are due, and hereby extended to our friends in the House of Representatives, and that we shall at all times be glad and ready to make our gratitude manifest in a substantial manner."

Now that the site for the new government printing office has been located by the committee in charge, it is to be hoped that its erection will soon be commenced. The new building will be situated within a stone's throw of the present dilapidated and unsafe structure. Public Printer Palmer, one of the committee, is very much pleased with the new site, and states that with proper management the new building can be ready for occupancy in less than a year and a half from the time the ground is first broken. The structure will be a massive one to say the least.

Messrs. King Marx and Dudley Flemming are down-town prints who a short time ago received appointments, and are located in the third division of the government printing office.

The Messrs. Du Bois, brother editors and proprietors of that spicy little journal, the *Inventive Age*, have just returned from their summer outing.

The many friends of E. H. Ryan are glad to see him once more at the "case." Mr. Ryan was appointed a compositor

on the *Record*, and shortly after the *Record* had started he was stricken with a serious attack of typhoid fever, from which it was for a long time feared he would not recover.

Mr. J. H. Schoepf makes a very efficient and obliging deputy chairman in the *Record* room.

There were quite a number of workmen on the *Record* this session who deserve more than passing praise for their faithful attendance to their duties, and among this number we might mention the names of C. M. Cyphers, bankman; Samuel Robinson, messenger (who has not missed a night during the whole session); Steven Caldwell, dupe-cutter; also copy-holders E. E. Helm, C. A. Hughes, E. B. Chambers, B. J. Shannon and J. H. Mowbray.

Mr. John Sturgis, a subscriber to THE INLAND PRINTER, seems to be very well pleased with his transfer from the *Record* to the specification room; likewise John McGinnis.

There are few people employed in the *Record* room more familiar with the peculiar and various styles of that journal than Proofreader A. F. Bloomer. Contrary to the general estimate of these much-abused individuals, he is always ready to impart that knowledge to an unfortunate compositor.

Subbing, down town, is said to be quite good, on the *Star* and *Post* exceptionally so. The latter expects soon to add two more pages to its make-up, and consequently a few situations will be given out.

Book and job work is also picking up, and soon it is hoped there will be but few idle printers in the streets. EM DASH.

#### FROM LOUISVILLE.

To the Editor: LOUISVILLE, Ky., October 6, 1890.

I had the pleasure of sharing the hospitality of the city of Middlesborough, Kentucky, with the Kentucky Press Association several weeks ago and the two days spent there were most pleasant ones. A little more than a year ago less than fifty souls comprised the population of this town; today you find over six thousand of the busiest people to be found anywhere, and before another year passes by they will have a population of not less than fifteen thousand. You may ask for the reason for this magic growth. It is simply because they have, in the first place, the very best natural resources to be found anywhere. Coal and iron ore are there in an abundance. Then they have that greatest of all necessities—money—as well as brains to use it. The mountains of eastern Kentucky are veritable bonanzas in coal and iron, but it was left for our English cousins to come here and risk their money in bringing these great commodities to the surface. The city of Middlesborough has been brought to its present elevated position through English capital and English ingenuity, and no one can conceive what nerve and money can do unless they see what has been done in the past twelve months in what was then a wilderness and is now a thriving city. The iron and steel industry is, of course, given precedence over everything else, but it is not out of place to say that they have in operation there the largest tannery in the world. A belt railway twenty miles in length encircles the town, a tunnel that cost not less than three million dollars, the removal of two pretty good-sized mountains to make room for business houses, the building of three \$50,000 hotels, and the putting in of a steam dummy line, electric car line and electric lights, are a few of the many things that have been done for this "marvelous city." There are two newspapers there, the *News* and the *Democrat*. The former is owned by Messrs. Arnold & Dains and the latter by Mr. W. H. Polk. The *News* has a very complete modern office, with steam presses, and does some extremely creditable work, the composition being of a character that would do credit to a metropolitan office; the presswork, though, might be improved. Mr. Thomas H. Arnold, one of the proprietors of this paper, was the chairman of the committee of arrangements, and he demonstrated that he was far from being a novice in the entertainment line, for every one of the "press gang" came away singing praises of "Tom" Arnold. The scarcity of buildings caused Mr. Polk to locate his "print shop" in a tent, and it was visited by all of the boys, through

courtesy to its owner as well as for the novelty of the thing, not to say anything about the jug back behind the curtain.

The citizens of Cumberland Gap, Tennessee, came over the mountain for us and we were their guests for a few hours, during which time they took us through "King Solomon's Cave," stopping long enough therein to satisfy the wants of the inner man, after which a trip to the "Pinnacle," from which point a most magnificent view is to be had of the surrounding country, and within a few hundred feet of which is to be erected a \$150,000 monument, typical of the re-union of the North and South. General R. A. Alger, of Michigan, is president of the monument association, and was among the visitors at Middlesborough at the time we were there. Already \$50,000 has been subscribed to the monument fund, and ere long there will be something of real historic interest to be seen at this point. The presentation of a silver service and a handsome gold-mounted umbrella by the "gang" to Mr. Arnold, were among the pleasant affairs of the trip. Jovial "Bob" Morningstar, of the *Bowling Green Democrat*, with his ever ready wit, kept everyone in a continual good humor.

The Guide Printing Company has secured a long lease on a large building adjoining Macauley's Theater, and Mr. Thomson, the manager of the company, is converting the erstwhile residence into a very convenient and complete building adapted to the needs of a publishing house. It will be ready for occupancy in a month or six weeks.

Mr. Benjamin P. Branham has leased the office of the Eugene Bell Letter Press and will continue at the old stand, No. 338 West Main street. Mr. Branham has been running the office for Mr. Bell for several months, Mr. Bell's duties as deputy collector taking up most of his time, and as he is well known here there is no doubt but that he will make a success of his venture.

The *Hardin Independent*, of Elizabethtown, Kentucky, has not been sold out by the sheriff as was reported, but is paying its just debts and going right along under the successful management of Messrs. Stoval & Duncan, who have been running it for some time.

Mr. William Strubing, formerly assistant pressman on the Cincinnati *Commercial-Gazette*, met with a very serious accident several weeks since while employed on the large Hoe web press of the *Courier-Journal*. By some means or other his right hand was caught between a composition roller and one of the plates and all of the flesh was torn from the palm of his hand, and it is questionable whether he will ever have the use of it again. He was taken to the Sts. Mary and Elizabeth Hospital and given every possible attention.

The Henderson *Labor Journal*, published by Messrs. Wein & Collins, is a new candidate for public favor in journalistic circles at Henderson, Kentucky.

Mr. John A. Bohn, pressman at G. G. Fetter's, has been very ill for the past month. He is far from a well man now.

*Kernells*, a weekly illustrated journal, has changed hands, and is now the property of Mr. Robert J. Tilford, of "Belle of Nelson" fame.

The Chattanooga *News* put in a Scott web press several weeks ago, and Mr. Ochs and Mr. Overend, of the Chattanooga *Times*, go East this week to select a web press for their paper.

The G. G. Fetter Company are putting in a 36 by 54 Potter two-revolution press today, the result of a sojourn here for a few days of Mr. Harry Hartt, the western agent for the Potter Company. While here Mr. Hartt also disposed of two Potter web presses to the *Courier-Journal* Company.

Mr. H. A. Kunnecke is doing a good business in job printing at Fifth and Jefferson streets. He put in several new job presses a week or two ago.

Our annual trade celebration, under the auspices of the Satellites of Mercury, was held last Thursday night and was, as predicted, a greater success than ever. The subject represented was taken from the well-known modern work "Ben Hur," by General Lew Wallace. The city was crowded with strangers and everything passed off nicely. The colored souvenir, which was intended to convey a correct idea of the floats, was a miserable

failure, and Mr. Fetter, who by the way was not in the least responsible for its mechanical appearance, has had not a few explanations to make.

The election of Mr. C. W. Miller to the presidency of the International Printing Pressmen's Union was an honor worthily bestowed, and here's hoping that he and Secretary-Treasurer Hawkins will succeed in keeping the good ship in the middle of the stream until every pressman in the country is marching under its banner.

Business in the printing line is not as good as the fall season should make it, although all of the printers I have spoken to speak hopefully for the future.

C. F. T.

#### FROM KANSAS CITY.

To the Editor: KANSAS CITY, MO., October 10, 1890.

Several changes of more or less importance have taken place in the printing circles in this city within the past month. Business is very good at present; some of the offices have about all they can do—still the rush, the overtime work of a few years ago is lacking. The bookbinderies have all they can do.

The Interstate Printing Company is having a good run of work. This company has some of the best workmen in the West, and a trial of their work is all that will be necessary to convince the most skeptical that Kansas City can turn out work in no respect inferior to that of eastern cities.

H. S. Millett, late of the Interstate Company, has embarked in a new line of publishing—having taken an interest in the *Globe* he will endeavor to spur it on to greater success. He is connected with the business part of the office.

Augustine Gallagher, who for the past three years has been staff correspondent of the *Journal*, has accepted a position on the *Times*.

The *Star* is about to issue a Sunday edition. The remarkable success of the *Evening Star* has induced the *Times* to issue an evening edition, and the *Star*, not to be outdone, will put a Sunday morning paper in the field. The new deal of the *Times* is this: A few days ago the *Evening News*, which for the past several years has had a most wonderful and at times woeful existence, finally capped the climax by being sold to the *Times* under the hammer for \$1,000. The *Times* has added several thousands of dollars worth of new material to this outfit, and last Thursday, October 9, issued the initial number of the *Evening Times*. It is a very neat looking paper, but is in appearance the exact counterpart of the *Morning Times*. By this act about thirty more union printers will be given cases, several more people put on the editorial and reportorial forces and the newsboys will have a more formidable rival to the *Star* than the old *News* ever was. The venture has been a most expensive one and the friends of the *Times* hope it will be a profitable one.

Dan C. O'Regan, one of the best proofreaders Kansas City ever saw, is reading proof on the *Evening Times*.

On September 30 and October 1, the Press Club, of Kansas City, Kansas, was given a benefit. The "Doctor of Alcantara" was performed at Dunning's Opera House. The affair was quite successful in every particular.

The Western Authors' and Artists' Club held its fifth semi-annual convention at the Midland Hotel, in this city, on Wednesday, October 8. The programme was an interesting one. The following officers were elected for the ensuing year: President, Joseph A. Graham, editor *Kansas City Times*; vice-presidents, Al M. Hendee, *Kansas City*; Miss Mary Abarr, of the *Memphis (Tenn.) Democrat*; Mrs. Ellen P. Allerton, *Padonia, Kansas*; C. H. Robinson, special artist *St. Louis Post-Dispatch*; secretary, Mrs. Bell Ball, *Kansas City*, *Kansas* editor of *Kansas City (Mo.) Star*; treasurer, Miss Cornelia Hickman, *Kansas City*. Letters of regret were received from Governor Francis of Missouri, Governor Humphrey of Kansas, Editor Gilder of the *Century*, the editor of the *Literary World*, Boston, Senator Ingalls, Octave Thanet and others. The meetings will hereafter be held annually the first part of May.

ARUNDEL.

### THE WORK OF AN INTELLIGENT COMPOSITOR.

To the Editor: MINNEAPOLIS, Minn., September 21, 1890.

The clever country printer can give his city brother cards and spades and beat him out; but the occasional performances of an ambitious greeny are fearful and wonderful. Regulars, as a rule, are cheerful in giving aid and instructions to those unversed in the ways of a large shop—unless the latter are knaves and smiths as well as beef-witted and voracious. The man who evolved the inclosed from copy not, perhaps, as plain as that of a business college penman, spent the major part of a day resetting and correcting his proof. The experience satisfied him, for he didn't "paste his string" nor "show up" the next morning. Let enterprising country printers come to the city—the openings for them are good, if they have pluck, industry, frugality, good nature, and the will to resist temptation to evil. But, for heaven's sake, learn to set type before you come! There is no excuse for dirty proof, if the copy is decent. A man who will "dump" a "take" like the following has no call to the city.

Turnips, cabbages, beets "pussy mellovs" etc. are similarly treated till ulustrature tubs are reached. As those of a curfeuter or blacksmith it processes such as lumbering and miling with these products. Thus in the lathe are seen neat executed outlines of plow and team, seeder, reaper, steam thrasher, of an elevator, etc. Culminating in a well sett table. To shun our language is taught note one of the flower studies. There is a pressed specimen of a paused root, leaves and blossom, a brief decenfbue, a letter about it, a little stung on it and a poem selected or original. These accompany each of the hundreds of exhibits. Going to the high school side are seen drawing from carts and still life finely shaded. Then the introduction of water colors. A class in training for teachers well executed landscapes and other pictures. In clay, there are modeled a variety jet-jeels from a grobe to a bust, a fine shining king of a table freely set with all the dishes and catables in natural shape and color made from clay.

This is how it looked after the printer had spent an hour or so correcting it—and I must say he did a good job:

Turnips, cabbages, beets "pussy willows" etc., are similarly treated till illustrative tools are reached, as those of a carpenter or blacksmith or processes such as lumbering and milling with other products. Thus in the lathe are seen well-executed outlines of plow and team, seeder, reaper, steam thrasher, of an elevator, etc., culminating in a well-set table. To show how language is taught note one of the flower studies. There is a pressed specimen of a pansy root, leaves and blossom, a brief descriptive letter about it, a little story on it, and a poem selected or original. These accompany each of the hundreds of exhibits. Going to the high school side are seen drawings from carts and still life finely shaded. Then the introduction of water colors. A class in training for teachers, well-executed landscapes and other pictures. In clay, there are modeled a variety of subjects from a grape to a bust, a fine showing being of a table fully set with all the dishes and eatables in natural shape and color made from clay.

Yours respectfully, F. W. F.

From Our Special Correspondent.

### OUR NEW ZEALAND LETTER.

To the Editor: WELLINGTON, September 5, 1890.

It has been a month of wars and rumors of wars with us in the industrial world since I last wrote you. Of the first order of mentioning the spread of the great Australian strike to New Zealand is the biggest. The maritime trouble now with us is not the question for me to dilate upon here. I shall take up as much ground as the editor of THE INLAND PRINTER can spare me in the field of our own craft, without touching upon others.

[Here follows a detailed account of the trouble between Messrs. Whitcombe & Tombs, and the Typographical Union and the Maritime Council, which is too long to reproduce here.—ED.]

The members of the Wellington branch of the New Zealand Typographical Association held their half-yearly meeting at the

Trades Hall on Saturday evening, August 23. The chair was occupied by the president (Mr. W. P. M'Girr), and the attendance was large. The branch, according to the report and balance-sheet (which, with slight amendments, were adopted) was in a highly satisfactory condition. The sum of £5 was voted to Mr. J. W. Henrichs, the secretary, for the thoroughly efficient manner in which he had performed his secretarial duties during the half-year, and £2 2s. was also voted to Mr. D. P. Fisher, as a recognition of services rendered to the branch. The following gentlemen were elected for the ensuing year: President, Mr. W. P. M'Girr (re-elected); vice-president, Mr. E. Hankins (re-elected); secretary, Mr. J. W. Henrichs (re-elected); trustees, Messrs. F. A. Vaughan and J. W. Vanderburgh (re-elected); board members, Messrs. G. Purdey (re-elected) and R. E. Vaney; Trades Council delegates, Messrs. W. M'Girr and H. C. Jones; executive council representatives, Messrs. F. C. Millar and H. Mountier. Mr. H. C. Jones was nominated for the office of secretary to the executive council, and Messrs. T. Jones and F. C. Millar were elected to act on the Demonstration Day Committee.

The Federated Trades Council met on Sunday evening, September 1, and decided to ask the Wellington branch of the New Zealand Typographical Society to prevent any of its members from "setting up" the Union Company's advertisements in the daily papers. The matter was considered at a special meeting of the branch in the Exchanges Buildings on Monday evening, Mr. W. P. M'Girr, the president, being in the chair. After a discussion of two hours, the following resolution was carried unanimously: "That in the opinion of this branch it is not desirable that they should interfere with the newspaper proprietors in Wellington in the matter of advertising and printing." There was a very large attendance at this meeting, and some capital speeches were made, the whole tone of which was against the recommendation of the Trades Council, it being argued that the advertising columns and bill-boards were just as open for the display of labor advertisements as for those of capital, and it meant that if compositors were to refuse to set the Union Company's advertisements the staffs of all the papers would have to be called out. It was pointed out that if a strike upon the papers occurred unionists would be the first to cry out for the news of what was going on in other parts, as they felt that this was a source of encouragement. One old member of the branch said that he "had always found that printers were always ready to spill the last drop of their *brother's* blood, but as soon as their own was threatened, well, they hated the sight of blood."

On the Thursday following the above meeting the newspaper proprietors received a letter which reads something like this (I was only permitted a perusal of it):

OFFICE OF THE FEDERATED WHARF LABORERS OF NEW ZEALAND,  
WELLINGTON, September 4, 1890.

DEAR SIR,—I am instructed by the Maritime Council and Trades and Labor Council to request you to withdraw the advertisements of the Union Steam Ship Company and the Labor Party, as a means of bringing the boycott in force.

You are also requested to give fair and impartial reports of labor matters, and to this end to get your information directly from authoritative sources, the leaders of labor.

Yours, faithfully,

ROBERT SEYMOUR, Secretary.

The latter clause refers to all the papers here having inserted false items, which have tended to intimidate unionists.

The proprietors have not taken any action yet, but I expect some trouble will arise out of this letter.

One of the outside boycotts on account of Messrs. Whitcombe & Tombs, occurred on August 22, when the proprietors of the Hawkes Bay *Herald* (Napier) received written notice from Mr. Creagh, the local secretary of the New Zealand Federated Wharf Laborers' Union, announcing the boycott of the *Herald*, on the alleged ground that it had supported Whitcombe & Tombs in their fight with the typographical union. The support here alleged was in the form of a leading article, which I have read, and I must say that the article in question was a fair criticism, and more favorable in its tone to unionism than to Whitcombe & Tombs. The *Herald* in reply to the notice said that it did not mind the

boycott, but it objects most strongly to the reason alleged, as it is a union office, and has on every occasion where the trouble has been referred to condemned Whitcombe & Tombs's attitude. The *Telegraph* (of the same town) is also to be boycotted.

Upon the evening of the day upon which the notices were served upon the two papers, a fully-attended meeting of the Napier Branch, New Zealand Typographical Association, was held, at which motions were passed condemning the action of Mr. Creagh, and asking the Maritime Council whether he had been authorized.

It was also decided that copies of the local papers containing articles in reference to Messrs. Whitcombe & Tombs be forwarded to the Maritime Council. An opinion was expressed that unionists should not burke criticism of their actions by resorting to the boycott, thus making themselves a power for evil instead of for good. Next morning (Sunday) Mr. Creagh convened a meeting of his supporters, to reply to the printers.

About forty out of two hundred members were present. No notice of the meeting or report of its proceedings was furnished to either the *Herald* or *Telegraph*, but, according to what appears to be an authorized account in the *Evening News*, he condemned as very injudicious the action of the Maritime Council in taking up the Whitcombe & Tombs affair. He offered the following explanation of how the Council came to interfere: Mr. D. P. Fisher was secretary in Wellington of the Typographical Association, and represented the wharf laborers on the Maritime Council, and it was recently decided that only a true representative of the wharf laborers should henceforth be chosen, and not an outsider. Mr. D. P. Fisher, seeing that he would lose his seat, made a

last move in the direction of dragging the Maritime Council into the dispute between the printers and Whitcombe & Tombs, he being himself a printer. The meeting approved the action of Mr. Creagh.

Mr. Fisher here referred to is secretary of the executive council, and he is also Mr. Creagh's superior officer, for not only is he president of the latter's own union (wharf laborers), but he is also president of the Maritime Council, which body he was one of the promoters of, and he ranks as one of the foremost unionists of New Zealand. It was the intention of Mr. Creagh and some of his supporters to keep outsiders from representing their body on the council (which outsiders meant Mr. Fisher), but after passing a resolution to that effect it was unanimously withdrawn after these men had met Mr. Fisher in conference, and a special vote of thanks was passed to him for his ability and services.

TOM MILLS.

#### TRANSFER OF COPPERPLATES TO STONE.

In order to transfer a copperplate to stone, proceed as follows:

1. Wet some good paper, similar to that used for working, by means of which damp the India paper slightly but regularly.
2. Clean the plate with essence of turpentine, using for this purpose a short, hard brush in order to reach the groundwork of the engraving. If any black remains, burn some essence on the plate. The heat will soften the black, when it may be wiped off.
3. Ink with very hard transfer black. Heat the plate slowly over a charcoal fire, a petroleum lamp, or a gas-jet, until the black liquefies; wipe with a soft rag while the plate is cooling.
4. When it is cold, finish wiping with some whiting, lamp-black or enamel. The plate should appear as bright as if it were new.

5. Put the plate on the stone, on which place the damp India paper; add some sheets of unsized paper, or some smooth damped paper to improve the pressure; finally give two pulls, turning the plate after the first, in order to avoid defects.

6. Place the plate in the heat to soften the black, which thus becomes detached from the engraving; but do not heat the plate too much or the black will spread, and render the proof heavy.

7. The India paper should not be too damp, or in spite of the two pulls, the black would only take in part, or not at all; and, notwithstanding the second heating, the details would appear irregularly and broken.

8. Place the proofs in the damp paper again; but do not leave them there too long, or the damp will spoil the sizing of the India paper, and on inking the transfer white marks will appear.

9. After the transfer has remained two hours in the gum, ink with some close black,

spread in small quantities on the roller. Do not be alarmed if the drawing does not appear at once; the transfer is none the worse for that. After each series of rollings, dry the stone by means of a fan, and ink again until the transfer appears.

10. Should the transfer be too cloudy, rub lightly with a cloth damped with gum-water. Lastly, regulate the transfer before giving it the final rolling.

11. The preparation may be weak at first—a twentieth part of the acid suffices, and should only remove the dullness. Take a little with a sponge in order that the details be not affected. Rub the strongest parts softly.

12. Gum; leave for ten minutes, then ink well. The stone being quite dry, resin at first with cotton; afterward, pass the palm of the hand over the resin, and finally acidulate well.—*L'Imprimerie*.

J. M. PAGE,

*Corresponding Secretary National Editorial Association, Jerseyville, Illinois.*

## ZINC ETCHING METHODS.

NO. VIII.—FROM THE AMERICAN PRESS.

## PHOTO-LITHOGRAPHY AND PHOTO-ZINCOGRAPHY.

METHOD BY USE OF TRANSFERS FROM POSITIVE PRINTS ON PREPARED PAPERS—DIRECTIONS FOR THE USE OF HUSINK'S PHOTO-LITHOGRAPHIC PAPER—GENERAL VIEW OF THE MANIPULATION.

Dissolve one part of bichromate of potash in sixteen parts of water, and add four parts of ordinary alcohol. The solution has a reddish-yellow color. Add strong ammonia drop by drop, until the color of the solution changes to pale yellow. A slight excess of ammonia does no harm.

The prepared paper is dipped into this bath, prepared side up, in a broad porcelain photo-developing tray (11 by 14 deep is a good form), and after one minute it is lifted out and hung up to dry in the dark, at ordinary temperatures. After drying, the paper is pressed out flat or run through a calendering machine (a double roller photographic enameling or glossing machine will do), and is exposed under a negative from a drawing in line or stipple, from two to three minutes in sunlight and from one-half to one hour in the shade or diffused, cloudy light. The paper is taken out in the dark and is inked in. Fatty transfer ink is rubbed up with turpentine to the consistence of syrup; it is rubbed over the print in equal sweeps with a wad of cotton, and rubbed off so that only a thin coating remains. After a few minutes, during which the turpentine evaporates, the copy is laid into cold water, where it is left for a half hour before it can be developed.

The paper is taken out and laid upon a piece of glass, and a soft, wet, clean sponge is carried over it in circling motion but without any pressure. The ink easily removes from the whites but remains on the lines. Wash the copy off in cold water, dry it gently with blotting paper, and hang it up to dry. Afterward it is dampened by sponging on the back, and transferred to zinc or stone in the ordinary manner.

## THE CHROMATIC BATH—DETAILED PARTICULARS OF MANIPULATION.

The sensitizing bath must contain alcohol as indicated, to prevent the water acting too freely as a solvent upon the upper coating of the paper.

The presence of free ammonia as indicated, prevents decomposition of the bath, keeping it in continual working order. A bath without it would in a short time begin to exert a hardening effect upon the coating of the paper, and render development very difficult.

When there is much dark weather, as for example during the winter months, or when a large amount of rush work is on hand, it is well to use bichromate of ammonia instead of the salt of potash, but under all ordinary circumstances the bichromate of potash does the work equally well, and is two or three hundred per cent cheaper.

The sensitizing of the paper is best done in a large pewter or porcelain tray. For most work an 11 by 14 is large enough, but the rule is to have a tray as large as the largest sheet of paper you will be likely to require, and as the purchase is only once for all and it involves no extra expense otherwise, it may be well to provide a tray equal in size to a whole, or at least a half sheet of paper. It is well to keep the solution in two bottles. The large one is the stock bottle and may contain 8 ounces of potash bichromate, and 128 ounces of water, plus enough strong ammonia to keep the solution a pale yellow, so that when shaken the solution will smell slightly of ammonia. This shows that a small excess of ammonia is present. A large excess of ammonia is to be avoided, as it would soften the coating of the paper too much. If this happened it would cause the paper to adhere too closely to the zinc when transferred, and might result in damage to the transfer in removing it.

The second bottle, which may be smaller, need contain only about enough to fill your bath dish  $1\frac{1}{2}$  times or twice; fill it up with one part alcohol and four parts out of the stock bottle. As

the quantity diminishes add to it from time to time in the same proportions. Keep bottles tightly corked when not in use.

When using pour out your bath dish nearly full, leaving the bottle one-third or one-half full; all the sediment and dust remains behind, thus saving the labor of filtering. When too much dusty sediment accumulates with use, pour off the clean part and wash out the bottle.

Having filled the bath dish, take a sheet (or piece such as you need to use) of the Husink paper (handle it only by the extreme corners, for the prepared surface must at no time ever be touched with the fingers,) and lay it prepared side up upon the surface of the fluid, take by two opposite corners and press down to the bottom, then by the other two corners the same, lift up by two corners and let it settle back, then reverse, and shake the solution from one end of the bath to the other till all parts are thoroughly bathed; the paper can remain in the bath, thoroughly immersed, a half hour, or, if hurried, a little less. It is then cautiously seized by the corners, quickly lifted out in a perpendicular position, held to drain a few moments over the dish and then fastened with pins to a stout twine stretched across the room. If you wish to sensitize a sheet larger than the dish, sensitize one-half duly, then take it by the edges and hold perpendicular while the other half is immersed and sensitizing.

Up to this point the entire work can be done in daylight, because light has little effect upon chrome salts in solution, and the bath is neutralized with ammonia.

But the drying of the paper must be done in the dark, and after it is dry it must be wholly protected from light. The darkness must be absolute.

The temperature of the drying-room must, under no circumstances, run higher than 26° centigrade. A temperature of 30° C. may entirely ruin the paper by softening and blending the under and upper coatings.

In order to ascertain if the paper has become unserviceable by lying too long in a damp place, or by influence of chemical or other injurious exhalations, or by action of light, it is only necessary to take a small sample and rub it in with the usual ink, and lay it in cold water for a few moments. If, after twenty or thirty minutes soaking, the ink all rubs off clean, leaving no specks or smut, the paper is all right for use. As a sheet of sensitized paper usually keeps only about two days in summer, it is well to test any pieces which have been lying on hand longer than this.

When the paper is entirely dry it is well to lay it away in a tin box in a cool place; it can then be kept three or four days.

Putting some carbonate of ammonia in the bottom of the tin box, not in contact with the paper, increases its sensibility.

## THE QUALITY OF PAPER.

An English paper, in regard to the quality of paper, says:

"Many printers and paper-buyers pride themselves on their ability to judge of the quality of paper by merely handling a sample sheet. This method of buying is all very well in its way; it gives an excellent idea of the particular sheet, but not (except to very experienced men) of the ream as a whole with respect to its bulking properties. If the 'cheap' printer were to place a ream of his cheap paper by the side of another ream a trifle higher in price, he would soon, we think, see which was really the cheapest. A farthing less a pound is no doubt a great temptation to buy, especially to the impecunious ones, but if for the additional 6d. or 9d. per ream that he might have to give he gets a ream which—is it apparent to his own eyes—is an inch taller, and better in quality besides, it is sometimes difficult to see where the alleged saving comes in. Just let him think now of the great difference in favor of what, to him, is the dearer paper, not only on account of its undeniably superior color and evenness, but by reason of its great difference as regards bulk. There are plenty of standard makes in the market, both in printings and writings, which have been before the trade for years, and can be thoroughly depended upon for uniformity of quality, a desideratum where repeated orders are concerned, or where a small lot is wanted to complete a job in hand."

Written for THE INLAND PRINTER.

### FIVE MINUTES BEFORE SIX.

BY ENO.

The boys work hard and steady  
All through the weary day,  
And seldom ask for favors  
Or howl for better pay.  
But the boss would surely laugh  
At our many funny tricks,  
If he'd happen in our alley  
Five minutes before six.

One comp is hiding leaders,  
Another's short on quads,  
And a few are jeffing for the treats  
In noiseless, eager squads.  
Still others, quite insidious,  
Are getting extra sticks—  
All are doing something queer  
Five minutes before six.

There's a lightning change of collars  
And a donning, too, of ties;  
There's a shaking up of cases  
And a fearful lot of pi's;  
There's a changing of old shoes  
And many other tricks  
That slyly happen in our row  
Five minutes before six.

But the boss is making money,  
With the largest shop in town;  
For steady work and honest pay  
He has a great renown,  
And I think he'll be a millionaire,  
Or in some such sort o' fix  
If all the men won't change their shoes  
Five minutes before six.

### SPEED IN COMPOSITION.

Mr. William C. Barnes, of New York, gives the following instructions to those who are anxious to acquire speed at the case. Coming as they do from one of the best and swiftest compositors in the world, they are worthy of careful attention. He says: "The following instructions, if persisted in, will certainly increase your speed, perhaps not to 2,000 per hour, for your physical condition may not admit of it—but certainly from 200 to 500 ems per hour. I developed from 1,200 per hour maximum to 2,160 maximum, per hour. Here is the secret, if secret it be: Drop your own motion, whatever it is, and set at a much slower rate of speed than your hand is accustomed to. When you go to a box for a type and fail to get it, come to the stick and pretend to make a deposit, then return to the case after the letter, or some other letter in the same box, and keep this up until you get a type on the pick. In like manner, if you pick up two types, describe the full motion by coming to the stick and making a pretense of dumping a type, then return to the case, lay one down if you can readily, if not drop them both and come again to the stick and return for the type. There is an apparent loss of time in doing this, but the loss is only apparent, not real, and you will be surprised to find that with the slow motion you will accumulate more thousands than with your hitherto quicker motion.

"This is the whole secret, and the philosophy of it is this: When you have the word 'the,' for instance, to set up, your brain sends a dispatch to your hand to go to the *t*, the *h*, and the *e* boxes in turn for a letter. The motion described above is an educating motion. It teaches your hand to move mechanically, without assistance from the brain, and allows your brain to be employed on some other portion of the work—as reading your copy. It is not expected that you will always have to return to the case for a

type. Soon you will not miss many letters, and if you keep practicing this educating motion, you will, in a short time, be able to set three or four lines without missing a letter.

"Do not stand stiffly. Let your body move a little from side to side. Follow your right hand with your stick from side to side of the case, but not above the center of the *h* box, for if you do you will tire muscles not intended for use in setting type. The eye should be in advance of the hand as much as possible—that is, when your eye has located a type and your hand has started for it, look at a type in the next box to be visited. This is only acquired after persistent practice, and is the foundation of the remark, 'The secret of fast typesetting lies in the eye.' When nearing the end of a line, size up how much more will come into the line, and if a couple of extra spaces will be needed, put them in as you go along.

"Don't sit down much. If you are in proper condition to work you should be able to stand up the whole of the first half of a day's work. Don't put one foot up on the cross-bar of the frame, then the other. Don't 'bob.' Don't click your type on the center-piece of the case or on your rule. Don't fumble around in a box for a type. Don't work the type up and down in your stick with your left thumb. Don't wander about the case with a type after you've got it; bring it right to your stick and deposit it.

"Don't do any of these foolish and profitless things; get a type on the pick as nearly as you can, apply yourself industriously to following the rules given in the above, and do not expect to increase your speed in a week. Be patient and persevering, and there is no doubt but you will develop a rapidity and accuracy of motion that will amply repay you for your time, and give a satisfaction that is represented by dollars and cents."

### IMPROVED TELEGRAPHIC MECHANISM.

An inventor in Washington has perfected a mechanical transmitter for telegraph operators. The system of sending by the Morse alphabet of dots and dashes has become so securely established that it holds its own against the various printing telegraphs which have been devised. Moreover the old system has many advantages in economy and working. It works better in wet weather, so that while printing telegraphs are employed to a limited extent between large cities, they have not come into general use. The continuous use of the Morse key, however, produces paralysis. Figures will show that a fast operator working on press dispatches uses the same set of muscles in his wrist 100,000 times in a night. The result (says the *New York World*) is a wreck of that portion of his muscular and nervous system in a few years. "Fly" operators seldom last ten years. The mechanical transmitter saves the operator and still fits into the present system. It has a keyboard like a typewriter. The pressure of a key, as "A," creates by simple mechanism the necessary pulsation of the electric current to cause the Morse character "A" to be sounded by any number of sounders in circuit. No change need be made in the present plant other than the substitution of the transmitter for the old key. The rate of transmission is said to be increased, the wear and tear on the operator decreased and the messages go through in better shape in wet weather than when the old contrivance is used.

### THE WILL AND THE WAY.

It is told by a New York daily paper how a man of sixty-five years, or thereabouts, brainy, honest and poor, went into the office of a down-town printer recently and got estimates on a paper of sixteen pages. The price being satisfactory he deposited \$50 as security—it was borrowed money—and then wrote to several business men in the new towns in the South now booming, or being boomed, saying that he was about to issue a paper in the interest of the new South. The return mail brought him enough advertisements to fill four pages of his paper, and the upshot of the matter was that on the first issue of the sheet he made \$800 profit.

**OVER 600 MADE AND SOLD IN TWO YEARS.**

**THIS IS FROM ONE OF THE BEST PRINTERS IN WESTERN NEW YORK.**

MESSRS. JOHN THOMSON PRESS CO., New York:

35 NORTH ST. PAUL ST., ROCHESTER, N. Y., August 1, 1890.

Dear Sirs,—I have had running in my office during the past year, six of your Colt's Army Presses; and I wish to say to the printing fraternity that they are the very best presses I ever used for all kinds of work, heavy or light.

I have used the old Universal and the "New" Universal, and have thrown them all out for yours. I like your press because it is speedier, more rigid, never slurs, quicker to make ready on, distribution superior to all other platen presses, and easier to feed. I found the old Universal to be too slow for my work, and too easily thrown out of order; and finally, after giving both the old and "New" Universals a fair and unbiased trial I was forced to abandon them and take the Colt's Army Presses.

I wish to say that I have no other platen presses in my office, and would have no other.

Yours truly, (Signed) ERNEST HART.

## AN INTERESTING LETTER.

COLORADO SPRINGS, ITS LOCATION AND ADVANTAGES—A NIGHT TRIP TO PIKE'S PEAK.

COLORADO SPRINGS having become such an interesting spot to the craft throughout the country, and happening at the present time to be sojourning here, I thought that a few notes of the Springs and surrounding attractions might be appreciated by the fraternity, many of whom some day may call it their home.

Colorado Springs was laid out in the year 1871, by a corporation headed by General William Palmer, of New York. They realized the great future of Manitou, with its numerous mineral springs and incomparable scenery, and foresaw that a great city would grow up near these springs, and the present site of Colorado Springs was chosen. From its inception the city was intended to be a city of homes. The sale of liquor is forever debarred by a clause in the deeds of all the property in the city prohibiting its sale for all time and the forfeiture of land and all improvements in case of non-compliance. The aim of the founders of the city has been to secure the location of educational and refining institutions.

Colorado Springs, the capital of El Paso county, is located at the base of the "Rockies," in Central Colorado, almost due west from St. Louis. It is built on a level plateau, 6,000 feet above the sea, and its surroundings are as picturesque as those of any city in the world. To the west old Pike's Peak rises towering to the sky; on the east the plains stretch away 500 miles, like the billows of the sea; to the north is the "Great Divide," or water-shed, that separates the territories of the rivers Arkansas and Platte, and to the south are fertile valleys, dotted with farmhouses, orchards and green meadows of alfalfa. The streets are all 100 feet wide. The avenues are located every fourth block, and are 140 feet wide, while all alleys are 20 feet. The lots are 50 by 190 feet, giving ample room for house and abundant space for lawns and trees. Rows of fine trees are planted on both sides of all streets, and the avenues have three rows, one being placed in the center; they are watered and cared for by the city government. There are numerous fine parks, located so as to be accessible to residents of all parts of the city; they are handsomely kept, and open-air concerts are given in them during the summer months, paid for by our "Silver Kings." The city owns a grand park of 500 acres, in Cheyenne Cañon, containing some of the finest mountain scenery in the world. The delegates to the Denver convention were entertained there.

The water supply is derived from the snow that lies in everlasting quantities upon the sides of Pike's Peak and other mountains, and from the mountain lakes and springs. Lake Moraine, located up in the mountains on the trail to Pike's Peak, is owned by the city, it having been ceded by the United States government. The ground slopes gradually from the mountains and foothills to the city, and the water is carried by its own force to every street and house, no pumping being required. The water is pure melted snow, unmixed with mud or sediment of any kind, and is very wholesome.

The trees, lawns, parks and gardens are watered by irrigation, the water being distributed by a system of canals that extends to every city lot. No charge is made for irrigation water in any part of the city, the perpetual right to its use being deeded with the land.

The fine rapid passenger transit is worthy of special mention, as all points of interest are easily accessible to everyone by the electric motor, which comprises a system of twenty-one miles, built at a cost of \$750,000.

The educational advantages are second to none. The courses obtained in Yale and Harvard can be had here. The State institution for the education of the deaf and blind is located here.

The typographical union is one of the most patriotic in the jurisdiction of the International, and a "typo" without a card might as well hunt snowballs in hades as to seek favors in Colorado Springs. There are about thirty members. Mr. W. W. Frye is

the gentleman who wields the gavel to the satisfaction of all. The ground donated for the Printers' Home, eighty acres, is now estimated to be worth by real estate men *one thousand dollars an acre*. Who says we are not rich?

The fire department is the volunteer style, and the chief is a "festive print," Charles B. Farrin by name, and all business is suspended when the alarm strikes.

There are in the Springs and suburbs, about 16,000 people, and city lots have trebled in value in one year.

All visitors or residents are considered "tenderfeet" until they have climbed to the summit of Pike's Peak, and wishing to be considered "to the manor born," Tommy Lawless, formerly of Poole Bros.; Ed. Baty, a pressman of Topeka, and delegate to Denver, and your humble servant, started Saturday night, August 30, to witness a spectacle of a lifetime, sunrise from the Peak. It was a beautiful moonlight night, and having struck the trail at 8 o'clock, we began our difficult task of climbing over three miles to the summit, involving a journey of about fifteen miles, which history tells us was never accomplished by either Ruxton or General Pike. At 11 o'clock we arrived at what is known as the Half-Way House, a hotel, and the station of the new Pike's Peak railroad to the summit, which, by the way, is as far as the road has run this summer; it has now suspended operations until next year. If they ever get that road to run to the comfort of passengers it will be an engineering miracle. The walking is not bad to the house, but beyond that the grades are terrible. The scenery is grand, and being tired and sleepy, when we looked away below us and witnessed the flashing of the waters of Lake Moraine and parts of the Seven Lakes in the moonlight, we imagined that it was all a dream. When we got above timber line the cold was intense, and not having an overcoat nearer than Chicago, we wished for a "pipe-line" to Johnnie Burke's. We could plainly see the lights of Denver (eighty miles away), Pueblo and all the surrounding towns. At 3 o'clock A. M. we arrived at the summit nearly frozen. There was considerable snow on the west side of the Peak, and some on the east side, but when "Old Sol" got in his work it vanished very quickly. We were admitted to the house at 5 o'clock and a very good breakfast was served at \$1 a head. All water used is from melted snow, and it is difficult to cook anything on account of the light air. Beans are never cooked, and the potatoes served to us appeared to be half cooked, although boiled over three hours. The boilers of the engines on the new Pike's Peak road will have to be reconstructed, not being able to generate enough steam to carry the train above timber line. The walls of the house are four feet thick, with three sets of windows. The building has been used by the United States Signal Service, but owing to expense, trouble, etc., was abolished several years ago. When the sun began to come up, far below us, we imagined we were in two worlds at once, the moon shining brightly on one side and a large ball of fire coming out of the earth on the other, while down below us was the darkest spot that mortal ever witnessed; the sun gradually arose, and the mountains around, which appeared like foothills from the "old giant," put on all the colors of the rainbow, and the trio of "festive prints" stood transfixed and speechless gazing at the wonders of nature. As the language of your humble servant is limited to a certain number of words, all we can add is that sunrise from the Peak is indescribable.

Colorado Springs from the Peak is like a checker-board; its wide shaded streets stretching for miles are truly a beautiful sight. The site of the new home is easily discerned. Good views can be had of Denver, Pueblo and the "snowy range."

After resting about four hours we began the descent, which is a quicker trip, but very difficult; we gazed down the "crater" and our hair stood up like Billy Arlington's fright wig; not caring to explore it we continued downward and passed through a snow-storm, hail and rain storm, and banks of clouds, arriving in Manitou in four hours from our start from the summit, badly used up but tickled with our trip. We are no longer considered "tenderfeet."

There is buried in the union lot at "Evergreen" a well-known Chicago print, Jack Campbell, well known as "Barb Wire." He

left Chicago about the time of the strike for his home in New York, when he became a sufferer from consumption; he went to Colorado and drifted to the Springs in search of health; the union while in session one Sunday, last December, received a telegram from New York Union stating that he was in a hospital at the Springs and to look after him; a messenger was sent to the hospital, who returned with the information that poor Jack was dead two days. The union adjourned and attended his funeral in a body, not one member knowing him. He is laid in a beautiful spot, and his grave is well attended to.

#### A FIREPROOF PAPER.

A new composition for making paper or board fireproof consists of forty per cent of vegetable or animal fiber, or both; fifteen per cent asbestos; ten per cent alum or copperas, or their equivalents, such as salt or tungstate of soda; ten per cent plumbago, lampblack or

#### THE PAPER MILLS OF THE UNITED STATES.

##### NO. IV—THE KEITH PAPER COMPANY.

The Keith Paper Company, a view of whose mill on the Connecticut river, at Turners Falls, Massachusetts, is here presented, was organized in 1871, by the late John Keith, who was president and manager until his death in 1886.

The mill, the main building of which is 278 feet in length, contains ten rag engines and two Fourdrinier machines and has the capacity of five tons daily of animal sized, loft dried writing paper.

One of the chief requisites in the production of paper with clear and uniform color is an abundant supply of pure soft water, free from mineral salts as well as vegetable stain, for washing purposes. There is no kind of business that is so dependent on the quality of water used as paper making.

other suitable coloring material, and twenty-five per cent infusorial earth. To every five hundred pounds of the mixture are added about one hundred pounds of silicate of soda; the composition is thoroughly mixed with water in an ordinary pulp engine, and run through an ordinary paper machine into the form of paper or board. After being dried, one or both surfaces of the paper or board are treated with a coating of silicate of soda. By reducing the percentage of vegetable fiber and adding infusorial earth, the fire-resisting property of the board or paper is materially increased, rendering it particularly well adapted for covering or lining floors, walls or vaults, rooms or apartments generally. It is also useful for a great many other purposes, such as protection of shutters or roofs.

A SUGGESTIVE fact, recently noticed by the *Minneapolis Tribune*: Seven newspaper men are running for state offices on the tickets of the two leading parties in Wisconsin.

In locating this mill this important point was kept in view, as a large natural spring of clear, soft water, free from both vegetable and mineral contamination, could be secured, and the water is conveyed by a twelve-inch pipe to the mill.

In the manufacture of first class writing paper, not only must good stock be used, but it must be very carefully prepared and all the operations conducted with great cleanliness to secure good results. In this respect the Keith mill stands at the head, and has long borne the reputation of being the cleanest mill in the country.

It has been the aim of this company from the start to make only the better grades of paper, and the reputation achieved by the Keith linen ledger, Ravelstone and Westlock brands of flat papers is owing principally to the fact that these papers are made only from pure white rags without wood pulp or clay and that instead of cheapening the product to meet declining prices the quality has been constantly improving.

## UNIFORMITY IN TYPE BODIES.

The following is the report of the committee consisting of Messrs. DeVinne, Woodward and Pugh, appointed at St. Louis session of the Typothetæ to consider the subject of a possible greater uniformity in the bodies of types from different foundries. The accompanying letter was addressed to all the typefounders in the United States.

DEAR SIR,—At the third annual meeting of the United Typothetæ of America held at St. Louis, October 9, 1889, a special committee was appointed to consider the question of a possible greater uniformity in the bodies and in the lining of types made under the point system, with instructions to report at or before the next meeting to be held in Boston in September, 1890.

Master printers are already fairly informed as to the relative sizes of types made under the point system, as shown by the diagrams of Messrs. Marder, Luse & Co., of Chicago, and by other typefounders.

The unitary base of the system as explained by the MacKellar, Smiths & Jordan Company in their *Typographic Advertiser*, Nos. 119 and 120, 1884, is understood by all who have examined the subject.

It is also well known that a majority of American typefounders are making types by the point system; that this system is growing in favor; and that types of the same name from different foundries are more uniform as to body than they have been.

This marked improvement is thankfully acknowledged, but perfect uniformity has not yet been reached. There are differences of body in types of the same name from different foundries which lead us to ask:

1. Is the point system of your foundry established on the basis of 83 picas to 35 centimeters, and of 12 points to this body of pica?

2. Do typefounders who adopt this system use a properly verified common measure?

3. What measures have been taken by the associated typefounders to make accessible, for purpose of testing or verification, the standard meter on which the common measure depends?

4. Is there a defined and observed agreement among the associated typefounders as to the best methods to be employed in the testing of molds, and in the casting and finishing of type, for the purpose of securing uniformity?

5. Considering the large number of justified matrices now in use by different foundries, and of types already cast therefrom from which future sorts will be wanted, as well as the increasing demand for text types and display types that fill the body unequally—some with short, and others with long descenders—is it practicable to attempt a new system which aims to put all faces on one line, or even on two or three established lines?

6. Have you any trustworthy information as to the degree of uniformity reached by different European typefounders, all of whom (those of Great Britain excepted), we are told, cast type by the Didot point system?

7. Why was not this point system adopted by American typefounders? We trust that you will not consider our questions unnecessary or hypercritical. The information asked for is needed by printers to prevent erroneous conclusions and possible erroneous action. Any suggestions or information that you can offer on this subject will be thankfully received.

[Signed by the Committee.]

From the many courteous replies received, and from personal interviews and correspondence with many typefounders (for which the committee here renews its thanks), it appears that most of the typefoundries in the United States are represented in the United States Typefounders' Association and are practically agreed in the maintenance of the point system of type bodies, first introduced to this country in 1878, and afterward modified by general agreement in 1886.

One prominent typefoundry, not a member of the United States Typefounders' Association, declines the point system entirely, and will make bodies on this system only to special order.

The members of the United States Typefounders' Association who have agreed upon the point system are: A. Foreman & Son, San Francisco, Cal.; Allison & Smith, Cincinnati, Ohio; Barnhart Bros. & Spindler, Chicago, Ill.; Benton, Waldo & Co., Milwaukee, Wis.; Boston Typefoundry, 104 Milk street, Boston, Mass.; Central Typefoundry, St. Louis, Mo.; Cincinnati Typefoundry, Cincinnati, Ohio; C. J. Cary & Co., Baltimore, Md.; Collins & McLeester, 705 Jayne street, Philadelphia, Pa.; Curtis & Mitchell, 15 Federal street, Boston, Mass.; Farmer, Little & Co., New York; H. H. Thorp Manufacturing Company, Cleveland, Ohio; Illinois Typefoundry Co., Chicago, Ill.; James Conner's Sons, New York; Jno. G. Mengel & Co., Baltimore, Md.; Jno. T. Reton & Son, Kansas City, Mo.; L. Pelouze & Co., Philadelphia, Pa.; Marder, Luse & Co., Chicago, Ill.; Palmer & Rey, San Francisco, Cal.; Phelps, Dalton & Co., 150 Congress street,

Boston, Mass.; St. Louis Typefoundry, St. Louis, Mo.; the Jno. Ryan Company, Baltimore, Md.; the MacKellar, Smiths & Jordan Company, Philadelphia, Pa.; Union Typefoundry, Chicago, Ill.

The types of the point system that are most in use are those of the newer fashions of ornamental type. The new bodies have not entirely displaced the old. All printers who have large stocks of text type continue to have sorts and additions made to the old bodies. The introduction of the new system before it has fully displaced the old, just now tends to increase existing irregularities.

The first attempt at uniformity by means of points began with the theory that the pica should be one-sixth of the American inch, and that there should be twelve points to this pica. This method of making a basis was not approved of by the founders whose pica was less than one-sixth of an inch, and these founders were in the majority. It was finally decided that the standard pica should be the pica of the MacKellar, Smiths & Jordan Company. It was claimed by the advocates of this standard that this body of pica, made by the oldest foundry in the United States, had already been adopted by many other founders, and was used by more printers than any other body of pica; and that a system of points based on this pica would inflict the least loss on founders and printers who had to change from the old to the new system. These conclusions were accepted reluctantly by those who had made pica of a larger body. They objected to the new standard as capriciously and unscientifically selected, not based on any regular fraction of the foot or meter.

The need of a more definite standard than an accidentally selected pica led to the discovery that 83 picas of the accepted body were equal to 35 centimeters. It was also found that by making a very slight alteration in the height that 35 centimeters would exactly meet 15 heights of type. The old standard of height was eleven-twelfths or  $\frac{11}{12}$  of an inch. The new standard is one-fifteenth of 35 centimeters or  $\frac{9}{16}$  of an inch.

It does not appear that every typefoundry owns or has ready access to an official meter, on which the common measure of 35 centimeters depends. We cannot learn that all founders have procured this common measure. Some of them seem to depend entirely on a smaller measure of centimeters, by which they test their types. It has been claimed that there is no special reason why frequent recourse should be had to an official meter, as the meter is of a fixed and unalterable length, which can be determined by pure mathematical calculation.

The methods agreed upon by the United States Typefounders' Association for the purpose of securing uniformity under the new system seem to be theoretically satisfactory. A properly graduated measuring rod of steel, 35 centimeters or 83 picas in length, made or provided by the MacKellar, Smiths & Jordan Company, is accepted as the common measure. Each pica is divided into twelve points. The distance between the bodies of text types most used is kept in regular graduations of one point; in the smaller sizes of one-half point; in the larger sizes of two or more points. The typefounders who use the same measuring rod, and agree upon the same system, should make types uniform as to body.

Typefounders are agreed as to the best methods of casting, testing and finishing types, but at this point the agreement of the United States Typefounders' Association ends. It does not pretend to have any control over any member in his use of the point system or in his methods of making type. The quality of the metal selected, the degrees of heat employed, the care given to the testing of molds, or to the finishing of the cast type, are matters of individual right.

Your committee have been asked to get information concerning the irregular linings of types of the same body from the same foundry, and to find whether this irregularity is entirely or partially avoidable. We have to report that it is not practical to attempt extended alterations in the lining of the old and approved standard faces of type so that all shall be on one line, or even on two or three lines. The varieties of line already made are too many, and the expense of alteration would never be repaid. The evils of irregular linings are well understood by typefounders,

and in the getting up of new faces will be avoided as much as possible.

Your committee have also been asked why the United States Typefounders' Association did not accept the point system which now prevails in Europe, generally known in France and southern Europe as the Didot system, and in Germany as the Berthold system. The Didot system was intelligently considered, but was rejected for good cause. The Didot point is too large: it makes the distance between bodies too great. The adoption of the Didot point would have compelled the retirement not only of all existing molds and matrices, but would have required the recutting of new punches for too many sizes. The point adopted by the United States Typefounders' Association is .0351

centimeters. This is almost identical with the point devised in 1737 by Fournier le jeune, of Paris, the true inventor of the point system. The point substituted afterward by Ambroise-Firmin Didot is .0376 centimeters. Eleven points of the Didot system are almost as large as twelve points of the American system. French typographers of the highest authority have recorded their regret at the change in size from the Fournier to the Didot point. Sharing this belief we think the United States Typefounders' Association acted wisely in preferring that system which allows of nicer subdivision and does not materially disturb existing sizes.

Whether this new American system is the best that could have been devised; whether the new point should have been a regular fraction of a foot or of a meter; whether the standard measure on which this unitary point is based should

not be more readily accessible to all founders and printers; whether the Bruce system of a geometrical progression of bodies instead of an arithmetical extension of lines, is not more scientifically accurate—all these may be questions of speculative interest, but they are not now of practical import. The American point system is here to stay, and we are to make the best we can of it. That it will be of advantage in bringing the sizes of different founders in closer agreement is apparent. That it will ever be so perfect that types of the same body from different founders can be mixed and used together is not so clear. No perfection in the system can ever make care or skill in the manufacture of secondary importance. Under the new system good typesetting will exact as much

watchfulness as ever. The irregularities that follow from overheated metal, from sprung or untested molds, or from careless rubbing are as possible now as they ever were. "The man is more than the machine," or the system.

Your committee have been asked "to request of the leading typefounders specimens of all sizes of body letter made by them under the point system with the view to the adoption of that measurement and such faces as are used in the production of the largest amount of type." Compliance with this request is impracticable. A comparison of bodies would not lead to any useful result. The discrepancies would be slight and the conclusions derived therefrom might be misleading. A comparison of faces

is still more impracticable because there is no accepted standard of taste. The style approved by one printer would not be accepted by another. Types are made to suit different tastes and different mechanical requirements. The face which is most useful and most durable in a newspaper is often highly objectionable in a book. The face used with advantage in jobbing is not good for many forms of fine printing. There must be a variety of faces. It would be impolitic to attempt to control individual taste in selection.

Your committee have been asked to consider the advantages of a distinct series of roman and italic, to be known as the Typothetæ series, matrices of which should be in every typefoundry. The object desired is to enable any printer to quickly get in any foundry sorts or additions to a font previously bought from another founder in another city. No doubt this arrangement would be of value to printers, but

the difficulties of agreeing upon a common face, and of getting the cooperation of typefounders, are insuperable. The proposition does not meet with favor from the foundries.

The subject of accurate bodies cannot be dismissed without adverting to the wear of the printing house which often makes types from the same foundry and from the same casting irregular. All worn types have a thin film of adhering dust or gummy matter which makes them larger than new types. New sorts always seem smaller in body. The wearing types get from over-heating in one process of stereotyping, and the squeezing they often get from violent screw quoining, necessarily distort their bodies. For these faults the typefounders cannot be held responsible. Printers who

WILLIAM E. PABOR,  
Second Vice-President National Editorial Association, Fruita, Colorado.

wish absolute perfection in typography, whether in accuracy of face or in geometrical solidity of composition, will have to use new types.

Too much should not be expected from the new system. To expect perfect uniformity at all times, from all sizes, in different foundries and under the difficult conditions that control type-founding, is to expect that typefounders can never make mistakes. Instead of censuring founders for their occasional lapses from their own standards, the thanks of all printers are justly due to the United States Typefounders' Association for the degree of uniformity they have already secured, and for the pleasing prospect that the next generation will have types more uniform than they are now.

The explanatory diagram is from the foundry of the MacKellar, Smiths & Jordan Company, and may be accepted as an official representation of the bodies of this system.

AMERICAN POINT BODIES.

WHO CAN BEST BE SPARED ?

Young men, this is the first question your employers ask themselves when business becomes slack and when it is thought necessary to economize in the matter of salaries. "Who can best be spared?" The barnacles, the shirks, the makeshifts, somebody's protégés, somebody's nephews, and especially somebody's good-for-nothing. Young men, please remember that these are not the ones who are called for when responsible positions are to be filled. Would you like to gauge your own future for a position of prominence? Would you like to know the probabilities of your getting such a position? Inquire within! What are you doing to make yourself valuable in the position you now occupy? If you are doing with your might what your hands find to do, the chances are ten to one that you will soon become so valuable in that position that you cannot be spared from it; and then, singular to relate, will be the very time when you will be sought out for promotion to a better place.—*Printing Times and Lithographer.*

WILLIAM E. PABOR,

Second vice-president of the National Editorial Association, whose portrait appears on opposite page, is a resident of Fruita, Colorado, where he publishes and edits the *Fruita Star*. Mr. Pabor is a native of New York, and commenced his literary career by writing verses for *Ballou's Pictorial Drawing Room Companion*, an illustrated magazine, doubtless remembered by a number of our older readers. In 1870 he located in Greeley, Colorado, and has since been a resident of that state. In 1874 he became associate editor of the *Colorado Farmer*, and has been prominent among the newspaper workers of his state and an active member and officer in the Colorado Press Association. He is the author of two works which have been received with much favor, "Fruit Culture" and "Colorado as an Agricultural State." He resides in a beautiful home called the "Mulberries," at Fruita, a town which he assisted in establishing in 1884. He is now engaged in collecting a volume of his poems, which he expects to publish in the near future.

Mr. Pabor has hosts of friends wherever he is known, and his election, which by the by was unanimous, was an honor worthily bestowed.

THE NEW YORK HERALD'S NEW BUILDING.

A rumor, started several weeks ago, that the New York *Herald* would soon move its main publication house far up Broadway, is now recognized as certainty. The site for the new building is the block bounded by Broadway, Sixth avenue, Thirty-fifth and Thirty-sixth streets, where the old armory of the Seventy-first regiment now stands. It is the intention of Mr. Bennett to entirely remodel the edifice, which will contain all the departments of the *Herald*. It is proposed to have the walls of the first floor chiefly of plate glass, and to have located on this floor the printing presses and other mechanical apparatus, so that passers-by may see how a daily paper is printed. It is said that the ground has been leased for a term of thirty years. Work on the building will be commenced very shortly. Messrs. McKim, Mead & White will be the architects.

THE TARIFF.

At last the tariff has been perfected and the duties on pulp, paper, books, etc., are placed as follows:

Printing paper, sized or glued, suitable only for printing books and newspapers, twenty per cent ad valorem.

Pulp and paper—Mechanically ground wood pulp, \$2.50 per ton dry weight; chemical wood pulp, unbleached, \$6 per ton dry weight; bleached, \$7 per ton dry weight.

Sheathing paper, ten per cent ad valorem.

Printing paper, unsized, suitable only for books and newspapers, fifteen per cent ad valorem.

Papers known commercially as surface-coated papers, and manufactures thereof, cardboards, lithographic prints from either stone or zinc, bound or unbound (except illustrations when forming a part of a periodical newspaper, or in printed books accompanying the same), and all articles produced either in whole or part by lithographic process, and photograph, autograph and scrap albums, wholly or partially manufactured, thirty-five per cent ad valorem.

Manufactures of paper—Paper envelopes, twenty-five cents per thousand.

Paper hangings and paper for screens or fire boards, writing paper, drawing paper, filtering paper and letterpress copying paper, albuminized and sensitized papers, and all other papers not specially provided for in this act, twenty-five per cent ad valorem.

Books, including blank books of all kinds, pamphlets and engravings, bound or unbound, photographs, etchings, maps, charts, and all printed matter not specially provided for in this act, twenty-five per cent ad valorem.

Playing cards, 50 cents per pack.

Manufactures of paper, or of which paper is the component material of chief value, not specially provided for in this act, twenty-five per cent ad valorem.—*United States Paper Maker.*

## ANSWERS TO CORRESPONDENTS.

G. H., Berlin, Wisconsin: In your August number in "Answers to Correspondents" you give a recipe for a "good, flexible pad composition," but fail to state quantity of glue required. Please give lacking information.

*Answer.*—We acknowledge the omission. While different makes of glues vary in strength, the average may be accepted at a pound and a half. If this is too much, dilute with water.

J. F., Philadelphia: Please state who was the founder of the Smithsonian Institute at Washington, D. C., the amount of his bequest, and his nationality?

*Answer.*—The Smithsonian Institute was organized by act of congress in 1846, in accordance with the will of James Smithson, an Englishman, who bequeathed the reversion of an estate amounting to \$515,169 to the United States of America, to be devoted to the increase and diffusion of knowledge among men.

A. McD., Alexandria, Ontario: Kindly let me know in your next issue if white ink can be worked to advantage on a black or any dark colored card? I have tried, and you will see by the enclosed sample it has proved a failure. It is \$1.50 white I used. It makes a good size and nothing more. I spoke to the foreman of the *Montreal Gazette*, and it has also been a failure with him.

*Answer.*—White ink *cannot* be used to advantage on black cardboard. The effect desired can be obtained by *two* impressions, however.

C. P., Atlanta, Ga.: What is your remedy for the following? I have great trouble with my 35 by 52 two-revolution Cottrell. Every time I put a heavy cut form on, it seems to grind my tympan and breaks it at the nipper edge. I have tried about all I know to remedy it, but have not succeeded yet; any information will be thankfully received. At the first glance one would think my cylinder was not riding the bearers, but they are perfectly taut.

*Answer.*—It would be difficult, without an examination of the press, to give the exact cause for the defect referred to. For example, it may have been caused by the tympan being out of order, or there being too much packing on the cylinder; or it is possible the form may have been larger than the press is intended to print; and another possible reason is that the cylinders and bearers are not set absolutely true.

J. B., Canterbury, New Zealand: In your answers to correspondents I should be glad if you could tell me a means of making matrices for rubber stamps other than with plaster of paris. I have an apparatus, but have to take casts from the type in plaster of paris, a dirty and unpleasant process, and by no means certain. I understand that a far more expeditious and cleanly method is now practiced by stamp makers. I also wish you to explain the meaning of the words "two revolution" when applied to printing machines. It seems to be a common enough term in America, judging from your advertisements, but so far as I am aware is not applied to English machines. I know a little about machines, and have applied to one or two machinists, but they were unable to enlighten me.

*Answer.*—1. Information in regard thereto has already been forwarded. 2. The same question was answered in September issue of *THE INLAND PRINTER*.

JOB PRINTER, Moncton, N. B.: Will you inform me in next number where I can obtain a work of specimens of general job printing, with practical hints on the different styles of the art—something similar to Harpel's work, published, I think, in 1870, but of a more modern character, of course.

*Answer.*—We do not know of any single work of the description referred to. The *American Printer*, published by MacKellar, Smiths & Jordan, Philadelphia, contains more practical information and hints to the compositor than any work we know of, but it is unaccompanied with specimens of jobwork. The *Practical Printer*, by H. G. Bishop, of Oneonta, New York, contains many valuable suggestions on job composition, as also several excellent examples of first-class jobwork. The *Progressive Printer*, by Samuel Whybrew, Rochester, New York, is also a useful little

work. We would advise our inquirer to purchase all of them, and write to A. V. Haight, Poughkeepsie, New York, for book of specimens; Foster, Roe & Crone, Chicago, for their "Everyday Samples," and last, but not least, to Mr. Ed H. McClure, Buffalo, New York, for the four volumes of the *American Printers' Specimen Exchange*. The cost of this entire list will not exceed \$10, and it will prove to be \$10 richly invested.

G. A. S., Columbia, South Carolina: We are quite at a loss to decide as to which process of fastening pamphlets together, ranging from twelve to one hundred and twenty-five pages, is the most expedient and economical; and, being in doubt, appeal to our printing encyclopedia, *THE INLAND PRINTER*, which we keep. Marder, Luse & Co., of your city, advertise a stapling machine at \$10, claiming to do such work as described above. Do you advise wire staples, or stitching with thread and using a stabbing machine, as the best process? Another question and I am done: Do you think it proper to keep the set of rollers in use on the press when not running, or is it best to remove rollers every night and put away in a box? Heretofore we have always left rollers on press, never taking them off except to wash them, or change for colored inks.

*Answer.*—1. The most economical as well as the best and quickest method of fastening pamphlet work together is by wire, either by flat stitching or through the center. To stitch work of the character you refer to (from twelve to one hundred and twenty-five pages), as it should be done, will require a power machine that will stitch with either round or flat wire. No \$10 machine will accomplish the work. 2. There is little objection to the course you have been pursuing, though the explanations connected therewith are worthy of a special article.

## LEVI SHEPARD.

On the opposite page we present a lifelike portrait of a gentleman who numbers his friends by the hundreds, whose traits of character command esteem, and whom to know is to love—Mr. Levi Shepard, father of Mr. H. O. Shepard, president of the Inland Printer Company. He is a native of Hamilton, Madison county, New York, and was born in 1818. In 1840 he removed to Norwich, Chenango County, and in 1843 was united in marriage to Miss Caroline Olendorf, by whom he had four children—two sons and two daughters. In 1866, following Horace Greeley's advice, he came west, locating in Aurora, Ill., and in 1872 took up his abode in Chicago, where he has resided since that time. Although he has reached the allotted span, he is still a hale and hearty old gentleman—a monument of a well-spent life. In conjunction with his hosts of admirers we trust that his last days may be his best days, and that he may long be spared to his family and a community which he has so long adorned.

## AMERICAN EDITORIAL AMENITIES.

Here is the latest, freshest, fair-to-middling, yet characteristic, specimen of Dana-might: "The *New York Times* now indulges its native leaning with small danger of let or hindrance. In your decrepitude, Jones, there is no longer any fun in whacking your shrivelled and irresponsible old hide. The rousing howl that rewarded chastisement of yore has fallen into the thin whine of impending dissolution, and when you are kicked you only emit disagreeable and offending noises. Decidedly, Jones, there is no more fun of any kind to be got out of you."

## A VALUABLE WORK.

We acknowledge the receipt of a complete collection of Shoppell's "Modern Houses," consisting of nearly six hundred pages, containing fifteen hundred illustrations, many of them in colors, and accompanied with plans and specifications. The work is published by the Coöperative Building Plan Association, architects, 63 Broadway, New York. The price is \$10, and to the party intending to build, it is worth many times this amount.

## JOE HARVEY'S WONDERFUL POWERS.

A PRINTER WHO MEASURES RULES AND LINES WITH HIS EYES ALONE.

A young printer employed by the Blakely Printing Company is astonishing his associates with some marvelous feats. The accuracy with which he takes measurements with his eyes and mind seems really supernatural. In using pica measures—a pica is one-sixth of an inch—he employs no guide to aid him, but adjusts his stick, cuts rules and leads the desired length by measuring the space in his mind. In giving an exhibition of his powers yesterday he took nine pieces of brass rule and cut them to 6, 7, 8, 9, 10, 11, 12, 13, 14 and 15 pica ems respectively, and on measuring the cut rules they were found to be the exact length. He then cut twelve pieces to one length without comparing them. The pieces were gathered and compared and could not have been shaved nearer one length. He tells longer measures with equal accuracy. A piece of wood was handed him and he was asked the length of it. "Two feet five and three-eighths inches," was the quick and absolutely accurate reply. He was also asked if a certain block was square. "One of its angles lacks a little of it," he answered. The angle referred to was found to be slightly acute. Another curious freak of this printer is that he never carries a watch, but is a positive regulator at telling the hour. One dark afternoon, after having not seen a clock all day, one of the men jestingly asked him the time of day. "Seven minutes after three," was the prompt reply, and all the correct watches in the house testified to his accuracy. To more fully test his ability in this direction his room-mate awoke him a few nights ago and put to him the query as to the hour. The reply this time was "twenty minutes after two," which was correct to a minute. The young printer dislikes notoriety and refuses to use his peculiar gift publicly for gain. His name is Joe Harvey. Since a boy he has been able to accomplish remarkable feats of this kind.—*Chicago Herald.*

WE acknowledge the receipt of the report of the proceedings of the Thirty-Eighth Annual Session of the International Typographical Union held in Atlanta, Georgia, June, 1890. It is a carefully compiled document of 224 pages. The presswork is not what it should be by any means, however, and we regret to say so.

## ST. LOUIS NOTES.

The state of trade is very good indeed and there are no press feeders to be had for love or money scarcely at this time, and compositors are not to be found without a good amount of looking around and the expenditure of much argument and talk. The outlook for a good winter's business is quite flattering.

H. Feldbush has removed into his new quarters on Locust street, and is fully settled and thoroughly at home. He has a pleasant and convenient office.

The building occupied by the new weekly paper, *As You Like It*, has within the past few weeks been embellished by the addition of a large and attractive sign upon the front of the building. The

paper seems to be meeting with fairly good support and success.

St. Louis now has a new monthly magazine which is issued and edited by Mrs. Swart under the title of *The Chaperone*. It is fully illustrated, and is issued as a family magazine, and has departments devoted to fiction, art, children, family circle, science, etc., and numbers among its contributors some of the best writers of the day upon the different subjects. But it is really too bad that such bad typography as appears in the initial number should find its way into such a publication, and especially when it is graced with such a beautiful cover. But we look to see these bad features eradicated and to see the magazine a success.

We are pleased to chronicle progress and advancement among our printer friends, and much more so to note that our old friend S. G. Burnham's business has outgrown his old quarters, and he is now located on Third street near Locust.

The delegates from the St. Louis Typothetæ report a very pleasant trip and as being much

gratified with the work accomplished in the convention at Boston, and they are all full of praise for the right royal manner in which they were entertained by the Boston society. The greater number of the delegates went via Montreal and the White Mountains, and they report an exceedingly pleasant trip.

The management of the *Globe-Democrat* evidently do not wish to occupy their new building very soon, but they must intend to remain in it a long time when they do remove, as they are taking great pains to put in a most substantial foundation, and no evidences of haste are to be seen, while there are visible all the signs of thoroughness and stability.

The matter of the official organ of the city for publishing the city transactions is still in a muddled condition and the *Sayings*

LEVI SHEPARD.

continues to do the work. A variation was afforded during the latter end of September by the attachment of the plant of the *Evening Call* to satisfy a claim of a hundred dollars or so and which was settled at once.

Typographical Union No. 8, at its meeting in August, discussed and voted upon the amendments to the constitution, and all of them were approved except the third, fourth, sixteenth, nineteenth and twenty-fifth.

THE PRINCESS.

#### CARTY'S PRINTING PRESS.

Although many improvements have been made in the cylinder press during the past several years, thereby greatly enhancing its value, both as to speed and quality of work, the platen or job press has received but little attention at the hands of inventors, although the platen press is acknowledged to be a very desirable machine in every job office, and would be even more so if it possessed some of the points of excellence of the cylinder press.

Carty's new press attains this end, which can be readily understood by a perusal of the accompanying description.

The following are its special features as claimed by the inventor:

1. That owing to its construction the press can be run much faster than any now built, because it sets low, has no jerky movement, and its parts being all balanced, thus requiring but a small percentage of power to run it. The motion of the platen is a new one and very desirable.
2. New tympan clamps, rendering the bulging of the sheet impossible; in fact it stretches the sheet as it is being clamped.
3. New fingers, the very thing on close margins or where the work may be odd shaped. The fingers are operated by a new method and lay against platen of their own weight when being adjusted.
4. New movement of form rollers, by which they have an even pressure against the form, and not weak in the center and heavy at the upper and lower ends as on other presses.
5. Adjustable roller ways, thereby regulating the pressure of the rollers against the form when changing from heavy to light forms, or vice versa.
6. New fountain by which the ink is thoroughly distributed before it reaches the disk, and before the form rollers receive it, the distribution being as thorough as on any cylinder press.
7. Perfect control of the ink fountain by use of small hand lever under feed table within easy reach, by which entire action of fountain can be controlled by press boy without leaving front of press.
8. Full control of form rollers by means of a second lever under feed table, by which the action of the rollers can be stopped, and ink distributed without rolling the form, or an impression

taken without rollers passing over the type. The suspension of the rollers as above makes it possible for any particle of dust or paper being removed from same without stopping press, an impossibility on any other press.

9. New movement of impression throw-off by which the entire action of fountain, form rollers and impression is suspended, thus preventing the form being rolled when an impression is not being taken, although it is possible by other means to roll the form as often as desired without taking an impression. This is a great convenience as the form is not rolled the second time without an impression being taken, thus preventing the accumulation of ink on the plate and the form being overcharged when constant use of throw-off is required. New supply of paper can be obtained by pressfeeder and printed sheets laid out to dry without stopping press.

10. The form rollers and fingers are out of the way when the form is being lifted into the press—a great convenience in handling heavy forms.

11. The ink disk can be taken off and cleaned without removing or interfering with the fountain.

12. The platen has a dwell at point of feeding, being secured by a simple arrangement, by which motion is imparted to the platen after the sheet is in position, without the slightest jar or jerk.

13. The platen has a square movement against the form when impression is being taken.

14. The impression can be regulated by one motion so that it is not always necessary to change the impression screws in the rear of the press.

It should not be supposed that as so many features are found on the press, it is like a "combination tool," in which some parts are weakened to strengthen others. The press is a solidly built, durable machine, with very few working parts, and would prove a good seller upon introduction. All persons of experience in operating printing presses will at once recognize the importance of the improvements alluded to, and an inspection of the mechanism presented in the engraving will satisfy the intelligent practical operators and constructors on the question of mechanical adaptation.

The patent is No. 401,541, and was granted in April, 1889, and is now offered for sale. The inventor and patentee is Mr. Alton B. Carty, 523 New Jersey avenue, Washington, D. C., who will cheerfully give all further information to inquirers. To the right man, a rare chance to make money is offered.

#### ELECTRICITY IN THE PRINTING OFFICE.

A new use has been found for electricity at the Cook publishing house. In the office of the superintendent ten electric lamps are arranged in separate compartments of a frame or box, somewhat similar in appearance to the annunciators seen in hotel offices. The lamps are concealed from view, apertures in front of the compartments being covered with colored glass, each having its distinguishing color. The lamps are connected by means of electric wires with the automatic counting machines on the ten large printing presses located in an adjoining building. When the presses are in operation, the electric circuit is opened and closed by the working of the counting machines, causing quick flashes of light in the lamps. Thus every sheet of paper printed in the establishment telegraphs its record to the office, where the operation of each machine can be seen and its speed or delays noted.

In this connection it may be interesting to note that the speed of the large perfecting press is so great that it was found necessary to record each two sheets printed instead of single sheets, and even then the flashes of its lamp are almost continuous in appearance, showing that, while the press is not quite so quick as lightning, it is too fast for the eye to follow.

It is believed that this is the first application of electricity to purposes of this kind, and may serve as a valuable hint to managers of large establishments who wish to be enabled to see the operation of their machines while working at their desks.—*Elgin (Ill.) Daily News*.

## COLLOTYPE PRINTING.\*

Ever since the advent of photography much thought and experiment have been bestowed upon the various processes by which the image produced on the sensitive plate could be utilized in producing impressions in the printing press, and at the present time many modes and ways of making printing blocks suitable for working on letterpress machines, and also for transferring the picture taken in the camera to the lithographic stone, are in everyday use.

The demand for finely illustrated books and periodicals has no doubt aided the introduction of many of these photo-mechanical processes, which aim to combine the accuracy of photographic reproduction with the beauty of steel engraving, and an immense development doubtless awaits them in the immediate future. Manifold are the names given to the different means of producing these process pictures, and so we have "Autotype," "Heliotype," "Phototype," "Lichtdruck," "Mezzograph," "Collotype," and a host of others, all differing but little in the general principles that underlie their working.

One of the most workable of these processes is the last named, "Collotype," and the results obtained by it are almost equal to, and more suitable for, illustrative purposes, than sun prints from the original negative; while it allows of copies being struck off at the rate of from three to four hundred an hour, on steam presses very similar in appearance and construction to those used for ordinary lithographic work.

The process is essentially German, and although worked by several firms in this country, the machines used are of foreign make, and a detailed account of their construction and working as in use by Messrs. Waterlow & Sons, Limited, was given in our issue of May 5, 1887.

With the exception of a few scattered papers, there has been no handbook of a thoroughly exhaustive and practical nature on the collotype process, until the issue of Mr. Middleton's translation of Dr. Schnauss' elaborate treatise, which is so full of clear, concise and practical instructions that any intelligent lithographer or printer could scarcely fail to thoroughly grasp the details of the process, and add collotype to his business. Of course steam presses are not a necessity, as the very best work can be produced by hand, and as the preparation of the plates is not a matter of great difficulty, we see no hindrance to the attempt of the work. This is what Dr. Schnauss says:

## PREPARATION OF THE COLLOTYPE PLATE.

"The well polished glass plate must be thoroughly cleaned with alcohol and ammonia, and it should be ascertained that the surface is entirely free from scratches. It is then coated with the substratum, consisting of a dilute solution of silicate of soda and albumen. The following formula is in constant use by many practical workmen of experience, and answers every requirement:

Distilled water.....	8 parts
White of egg, whisked.....	7 "
Silicate of soda (of the consistency of sirup).....	3 "

"This mixture must be well beaten to a froth, or put in a bottle with pieces of broken glass, well shaken, and placed aside to settle for half a day. Then filter through paper, which should be replaced as soon as the pores become choked. To facilitate the operation, the filter paper should, before use, be moistened with distilled water. The surface of the plate should be flooded with water and coated as evenly as possible with the above solution, a small glass rod being made use of to assist the flow. Air bubbles must be removed, and by quickly tilting the plate the superfluous solution runs off; this should not be used to coat other plates without being carefully filtered. If the substratum be thin, it is not necessary to wash the plate after drying, but after standing aside two days to harden, with dusting and warming, they may be

\*COLLOTYPE AND PHOTO-LITHOGRAPHY, practically elaborated by DR. JULIUS SCHNAUSS, member of the IMPERIAL ACADEMY OF NATURALISTS, etc. Translated with the author's sanction and assistance, by EDWIN C. MIDDLETON. Together with an Appendix on Steam Presses, by the Author. London: Liffé & Son, 1889.

coated with the chromated solution of gelatine. If small crystal formations appear on the surface the plate should be well washed and again dried before proceeding further. The following formula for substratum is due to M. Thiel, Sr.; it contains less silicate, and the washing before applying the sensitive coating is never necessary:

Distilled water.....	36 parts.
White of egg.....	20 "
Silicate of soda.....	6.2 "

## THE SENSITISING SOLUTION.

"This is manifestly the most important matter in the collotype process, for on it depends not only the durability of the printing plate, but also the method of procedure in subsequent operations. It may be here intimated that plates prepared by the very best formula cannot be expected to yield good impressions if the whole of the manipulations are not carried out with the greatest care, and it should be noted:

"I. That neither too much nor too little of the chromated gelatine should be allowed to remain upon the plate. It is impossible to lay down a hard and fast rule, and the exact amount must be determined by the experience of the operator. Of equal importance, and naturally connected with this operation, is

"II The even distribution of the solution, the flow of which may be assisted or directed by the aid of a small glass rod and by allowing it to run off more or less at each of the four corners of the plate. Considerable experience has demonstrated that the coating is applied most easily and in the evenest manner by resting the plate, previously warmed to about 45 degrees C., as horizontally as possible on the cork of a heavy bottle, the latter standing in the center of an earthenware dish. A sufficient quantity of the solution, carefully filtered, and heated to 45 or 50 degrees C. is then poured on to the center of the plate and rapidly spread over it with a glass rod, previously well warmed. So soon as the surface of the plate has been entirely covered a further supply of the hot gelatine solution is quickly poured on and partially run off at each corner. A scarcely perceptible inclination should be given to the plate, otherwise the layer will be too thin; it ought to be about the thickness of four or five sheets of Rive paper of eight kilometers per ream. It should be born in mind that the addition of isinglass will necessitate a comparatively thinner layer than when gelatine is used alone."

The author gives alternative methods and minute instructions how to obtain the required grain in the plates, dilates on the quality of the negatives required for portraits, half tone, and other subjects, and dwells upon the importance of the photographer and the printer working, as it were, hand-in-hand with each other in order to produce the best results. The retouching of the negatives and plates and the modes of preserving them are dealt with, as well as the merits of the various brands of plates, films, etc., and methods are given for the reversal of the image, where that is required, and goes on to describe the

## PRINTING IN THE PRESS.

"The etching or damping and rolling up of the collotype plate presents difficulties which are greater even than those met with in the preparation of the plate. These remarks also apply with equal force in photo-lithography, and whoever stops at the preparation of the plates or the photo-lithographic transfer and leaves the subsequent operations to be performed by another, should not be considered either as a collotypist or photo-lithographer. The whole success depends upon a succession of apparent trifles; many errors it is impossible, or at any rate difficult to rectify, and great care should be taken that nothing is overlooked, or from some trivial cause the whole may result in failure.

"Firstly, remove all adherent matter from the back of the plate, as the smallest amount of dried gelatine, particle of grit or other hard matter will suffice to cause the fracture of the strongest glass plate on the first application of pressure.

## "THE ETCHING OR DAMPING SOLUTION

in most common use consists of a stock solution of five parts water, one part liquid ammonia, three parts glycerine and one

tenth part of nitrate of lime. For use add five or six parts of this solution to one hundred parts of water, sufficient of this being used to well cover the plate when placed in a clean dish. Another reliable formula is one liter glycerine, six hundred cc. water, chloride of sodium three grams.

"Plates may be immersed in these solutions for a time extending from ten minutes to five hours, or they may be well flooded with it, wiped off and dried with blotting paper.

"The press having been examined, oiled and put in thorough working order, the next consideration will be

FIXING THE COLLOTYPE PLATE.

which may be performed in several ways. Immersing the plate in the etching fluid precludes the old method of cementing it on with plaster of paris or glue and whiting, but it may be fixed by adhesion to a bed of glass or a well-polished iron plate; or a special and somewhat complicated frame may be procured for securing the thick printing plate by means of adjustable clips secured by screws. Should the printing surface be upon a thin glass, adhesion alone will be found sufficient, a few drops of water causing the printing plate to adhere to the thicker glass plate beneath. This method has the disadvantage that it is most difficult to insure the position of the plate being in keeping with the mask on the frame. Should the mask be placed directly upon the gelatine surface of the plate it will not last many impressions without either tearing or causing damage to the surface through the formation of creases or wrinkles. If the picture has to be trimmed without margin and mounted—either with or without varnish—the masking is altogether unnecessary."

Distributing the ink, rolling up, regulating the scraper, damping the plates and all the minutiae of working the press so as to secure the best results is fully entered into and treated upon, while the sizing, varnishing and burnishing of the finished print form the subject of a very interesting and instructive chapter.

The causes of and remedies for failures, colotype printing in natural colors, and the making of magic prints, all come in for their full share of treatment. A chapter is devoted to photolithography, and there is an appendix on steam presses suitable for colotype and photo-litho work.

A very noticeable and valuable feature of the book is the manner in which the various items are side-headed with bold, clear type, thus rendering any paragraph easy of reference. Both Dr. Schnauss and his translator have done their work excellently, and have presented English printers with the first thoroughly practical work in their language, thereby clearing away the many supposed mysteries of the colotype process, and rendering the art easy of comprehension by all in the profession.—*British and Colonial Printer and Stationer.*

"THE CRUISE OF THE ANGLER."

This is the name of an interesting, illustrated, neatly printed and handsomely bound volume of 103 pages, written by H. Rosevear Winn, of Detroit, descriptive of a three weeks' cruise off Hickory Island, from the press of Winn & Hammond of that city. In composition and presswork it is simply perfect, a striking feature of its typographical appearance being that there is not a single division in the entire work. It is a production of which its author has every reason to be proud, both from a literary and mechanical standpoint.

BIBLICAL units have the following equivalents: A shekel of gold was \$8. A firkin was 7 pints. A talent of gold was \$13,800. A talent of silver was \$538.30. Ezekiel's reed was nearly 11 feet. A cubit was nearly 22 inches. A bin was 1 gallon and 2 pints. A mite was less than a quarter of a glass. A shekel of silver was about 50 cents. A Sabbath day's journey was about an English mile. An ephah, or bath, contained 7 gallons and 5 pints. A day's journey was about 23 1-5 miles. A hand's breadth was equal to 1 inch. A farthing was 7 cents.

PERSONAL.

We have received calls during the month from the following gentlemen: George O. Scott, of George O. Scott & Son, Denver, Colorado; Augustus B. Stovel, the Stovel Company, Winnipeg, Manitoba; Ai Rollin, San Francisco, California; A. S. Prentiss, Norwalk, Ohio; Peter Kinnear, Albany, New York; R. J. Buchanan, *Free Press*, Winnipeg, Manitoba; F. C. Nunemacher, Louisville, Kentucky; Fred. S. Laurence, general manager D. D. Thorp's printing house, Lansing, Michigan; J. Rycken, president Queen City Printing Ink Company, Cincinnati, Ohio; F. S. Chance, of Chance-Matthews Printing Company, Indianapolis; Frank W. Bailey, *Bulletin*, Chillicothe, Illinois; F. W. Roberts, F. W. Roberts Company, Cleveland, Ohio; Hermon Bronson, president Cleveland-Gordon Press Company, Cleveland, Ohio.

THE TOTAL VOTE.

Following is the total vote of the subordinate unions of the International Typographical Union on the propositions submitted by the recent session of that body.

	FOR.	AGAINST.
First proposition.....	6,226	1,018
Second proposition.....	6,209	1,027
Third proposition.....	5,686	1,366
Fourth proposition.....	6,226	787
Fifth proposition.....	6,437	568
Sixth proposition.....	5,742	1,295
Seventh proposition.....	5,809	1,237
Eighth proposition.....	6,750	516
Ninth proposition.....	5,257	1,684
Tenth proposition.....	2,223	5,313
Eleventh proposition.....	5,881	1,319
Twelfth proposition.....	5,860	1,165
Thirteenth proposition.....	5,802	1,319
Fourteenth proposition.....	6,023	896
Fifteenth proposition.....	6,610	561
Sixteenth proposition.....	4,939	2,292
Seventeenth proposition.....	6,320	838
Eighteenth proposition.....	6,138	940
Nineteenth proposition.....	4,873	1,777
Twentieth proposition.....	3,810	3,241
Twenty-first proposition.....	5,853	1,037
Twenty-second proposition.....	6,063	869
Twenty-third proposition.....	6,193	778
Twenty-fourth proposition.....	5,433	2,198
Twenty-fifth proposition.....	3,018	4,595

ENGLISH PAPER MILLS.

It is stated on competent authority that there are now in England, Scotland and Ireland between three hundred and four hundred paper mills. These are located all over the country, in the water-sheds from the hills, in deep, sequestered valleys, beside the flowing rivers, and near the sources of transit or supply of the raw material. About 300,000 workmen are employed, and are dependent on this industry for support. The amount of capital invested is very large, and some of the companies have a capital of \$350,000 to \$450,000. Upon the assumption that there are but three hundred mills, and that they average \$50,000 each in capital, there would be a sum of no less than \$15,000,000 invested in this industry, and these figures are doubtless nearly correct.

STICK TO YOUR RATES.

It is a fact that there are many weekly papers in Delaware and elsewhere that accept advertising contracts at any price. Send them your advertisement and tell them what you will give, and in nine cases out of ten they will accept. They think half rates better than losing the contract. This is a bad way to do. If your advertising space is not worth so much per inch to you, you are working in a way to lose. Make a schedule of rates and stick to them. Don't charge your townsman at an exorbitant rate and give outsiders space for nothing and a year's subscription free. We know of several papers that have been running ads for outsiders very cheap, but as they are the managers, and it pays them to do so, we acquiesce. We have no cheap space for anyone.—*Newark (Del.) Ledger.*

THE "VENDOME" PRESS.

Ornament (in sugar) of the President's table at the Banquet by the Boston Master Printers' Club, to the United Typotheta of America, at Hotel Vendome, September 4, 1890.

#### CHICAGO NOTES.

THE *American Packers' Journal* is the latest venture in trade journalism in this city.

A MEETING of the Board of Trustees of the Childs-Drexel Home for Union Printers will be held in Chicago, Wednesday, November 19.

A. T. HODGE, of the Chicago Paper Company, returned to the city on September 29, from a six weeks' sojourn among the northern lakes.

THE interesting description of Colorado Springs, in the present issue, is from the pen of a well-known typo, Mr. John M. Dollard, formerly of Chicago.

E. J. RYAN and others have incorporated the Universal Copying Company in Chicago to do a general reproduction and lithograph business, with a capital stock of \$50,000.

ONE of the veterans of New York daily journalism says that James W. Scott, publisher of the *Chicago Herald* and *Chicago Post*, is the most popular western newspaper man who visits Manhattan Island.

THE American School Chart Company has been incorporated in Chicago, with a capital stock of \$1,000,000, to do a publishing business. The incorporators are R. W. Wortman, Nellie E. Woods and F. M. Woods.

THE Queen City Printing Ink Company, of Cincinnati, is now represented in this city by Mr. C. W. Battell, a popular gentleman well known to the trade, who will at all times be pleased to promptly supply the wants of the firm's patrons.

THE iron foundations of the *Herald's* new building are nearly all in, and rapid progress is now being made in the erection of the structure. Workmen are also engaged upon the reconstruction of the building which is to be the home of the *Evening Post*.

THE National Printing Ink and Dry Color Company have put in an extensive plant at the corner of Austin avenue and Diller

street, Chicago, where it intends to manufacture all kinds of fine letterpress and lithographic inks. Mr. J. F. Nicholson, formerly of Cincinnati, and a gentleman well and favorably known to the trade, is secretary and treasurer.

THE Calumet Paper Company have rented additional store-room at 263 Franklin street, for their heavier stock of holiday and society goods. The room is 50 by 150 feet, and offers a considerable relief from the overcrowded state in which they were getting.

THE P. Aug. Rosen Company, of Chicago, has recently been incorporated, with a capital stock of \$5,000. The incorporators are: P. Aug. Rosen, Axel E. Pearson and August Anderson. They manufacture printers' and bookbinders' furniture, cabinets, galleys, frames, etc., and are located at 243 and 245 Wells street.

BLOMGREN BROS. & Co., photo-zinc and wood engravers, 175 Monroe street, have issued the third number of their magazine, the *Modern Engraver*, which contains samples of the different kinds of work which they produce. The journal is neatly printed, and shows to good advantage the character of their illustrations. Send to them for a copy of it. Mailed free to any address.

THE German newspaper men of this city have organized, and their association will be known as the German Press Club of Chicago. The following officers have been elected: Theo. Janssen, city editor *Staats Zeitung*, president; Dr. Max. Henius, vice-president; John P. Arnold, recording secretary; Sigmund Kauder, city editor *Abendpost*, corresponding and financial secretary; Fritz Glogaur, publisher *Abendpost*, treasurer; C. Albrecht, E. F. L. Gauss, trustees. The club room is located in Brand's Hall, North Clark and Erie streets.

THE John Thomson Press Company, of New York, have found it necessary to establish a branch office in Chicago, for the sale of the Colt's Armory job printing and embossing presses. These machines seem to be received with such favor by the fraternity that the opening of a branch for the western trade became a necessity. The office and salesrooms are in the new Monon Block, 320 and

326 Dearborn street. They are in charge, as western manager, of Mr. J. O. Spencer, who has been the general traveling agent of the company since its organization. Sample presses will be on hand where printers and others may examine them at any time during business hours.

We acknowledge a pleasant visit from Capt. J. C. Rockwell, proprietor of Forest Glen Park, Lake Geneva, Wisconsin, one of the most beautiful, picturesque and attractive summer resorts to be found within the length and breadth of the country. We speak by the card when we state the captain is an entertaining host, a first-class story teller, and devotes his undivided attention to the comfort and enjoyment of his guests.

MR. J. N. FAITHORN, the well-known chairman of the Western and Northwestern Division of the Western Freight Association, has resigned his position to accept the chairmanship of the Southwestern Railroad and Steamship Association, with headquarters in St. Louis. Mr. Faithorn will leave for his new field of labors November 1, and carries with him the good wishes of every gentleman who has had the pleasure of his acquaintance.

THE following circular, issued by the Chicago Paper Company, 120 and 122 Franklin street, under date of October 7, explains itself:

On last Friday a suit was commenced by a stockholder of the Chicago Paper *Manufacturing* Company (a concern making straw wrapping paper at Pontiac, Illinois), against the officers of that company, and a receiver prayed for. Charges of fraud were also made against one or more of the officers.

Through a most unfortunate mistake the Chicago newspapers, in their account, used our name and printed Chicago Paper Company instead of Chicago Paper *Manufacturing* Company. This company has no connection, directly or indirectly, with the Chicago Paper *Manufacturing* Company, and does not know anyone connected with that concern.

Although the daily papers made correction in subsequent issues, still, as some of our friends may have seen the charges and not the retraction, we take this method of informing them of the unpleasant error which has caused us much annoyance.

THE following communication explains itself, and it will be admitted the compliment contained therein is richly merited:

CHICAGO, October 7, 1890.

*Mr. J. W. Ostrander, Manufacturer of Electrotype and Printing Machinery, 77-79 Jackson street, Chicago:*

DEAR SIR.—How well the contract which we awarded you for moving all of our printing presses and other heavy machinery into our new building on Adams street, has been carried out, it is only necessary to state that of the seventy-one presses (many of them weighing from eight to nineteen tons each), not one of them was in any way injured, nor a piece of machinery of any kind broken; and although it required an average of twenty-three experienced machinists and helpers, and several large trucks, nearly seven weeks to accomplish the task, not a person was injured, and this, too, with very little, if any, interruption to our business. In fact the work throughout was performed in a most thorough and satisfactory manner, which we are thus pleased to acknowledge.

Very truly yours, RAND. McNALLY & Co.  
A. McNALLY.

This firm has recently placed five roll-faced, two-revolution Scott presses in the Chicago Newspaper Union office, and a Scott lithographic press in the Chicago Bank Note Company, 371 Dearborn street.

#### SPECIMENS RECEIVED.

GILBERT G. DAVIS, Worcester, Massachusetts. Neat business card and note head in colors.

DOWELL BROS. & Co., Hicksville, Ohio. A very fairly executed design for cigar boxes, in colors.

McINDOE BROS., Boston, Massachusetts. Handsomely embossed letter head in colors. Worthy of the firm producing it.

SALES BOOK COMPANY, Mechanics Falls, Maine. A bunch of samples of everyday commercial printing, the composition and presswork of which are commendable.

C. L. LAREW, Knoxville, Tennessee. A number of statements, letter and bill heads, some of which are very attractive, while the presswork on all of them is commendable.

BRUNT & Co., San Francisco, California. A sixteen-page ball programme for the Native Sons of the Golden West. The entire presswork on an edition of ten thousand was executed on platen presses in six days. It is handsomely gotten up and fairly printed.

1-6

The scene on the front page, in colors, and handsomely embossed, represents the water-front of San Francisco. The bear, bear flag and star are emblems of the order.

S. & D. A. HUEBSCH, New York. Firm card and four-page business circular, neatly designed, but perfection demands that when rule and corner pieces are used, exactitude should be observed.

THE STANTON PRINTING COMPANY, Grand Rapids, Michigan. A uniquely designed firm card in gloss red, black and purple, and gold bronze, something in the style adopted by Alfred M. Slocum & Co., Philadelphia.

McGILL & WALLACE, Washington, D. C. A sixteen-page circular, showing the most recent faces of type in plain and artistic printing used in their establishment. All the specimens shown are gotten up in the highest style of the art.

MARTIN H. NOVOTNY, Argyle, Minnesota. A large selection of commercial printing, which shows that really good work can be turned out in a small office when a judicious and serviceable selection has been made of the material in use.

LOUIS C. HESSE, St. Louis, Missouri. Business card, in colors and gold. It is well designed, well executed and well proportioned. The coloring perhaps is a little too loud, but taken as a whole, it is a very creditable specimen of printing.

E. JOHNSON, Kansas City, Missouri. A few samples of plain, everyday printing worked on a Chandler & Price Gordon. Though the office is small the specimens sent show that the proprietor knows how to use its resources to the best advantage.

EARHART & RICHARDSON, Cincinnati, Ohio. Some advanced sheets of their book on colored printing, every specimen of which is a gem, and a foretaste of what may be expected when it is completed. We would kindly remind Mr. Earhart, however, that 1891 will soon put in an appearance.

PACIFIC PRESS PUBLISHING COMPANY, Oakland, California. Twenty-page circular, showing samples of work turned out by this establishment, accompanied with eighty-three styles of type, all adapted to small jobwork, which seems to be their specialty. It is a very creditable production.

REFLECTOR PRINTING COMPANY, Norwalk, Ohio. Several specimens of color printing, some containing five colors, which were printed simultaneously on a pony Campbell press, by means of Freer & Co's color attachment. Some of them are very creditable and attractive samples of workmanship.

FREMONT CLIPPER OFFICE, Lander, Wyoming. A few samples executed in a little town in the mountains, 130 miles from the railroad, and where it takes freight fifteen days to arrive from the nearest railroad terminus. On the whole we have no hesitation in saying these are superior to the work done in the average country office.

GEORGE LEWIS & SON, Selkirk, Scotland. A collection of business cards, in colors, which it is a positive delight to examine. We have never received a collection which, for the quality of stock, ink used, taste displayed in composition, presswork or general effect, has excelled the one before us. This is saying a good deal, but every word of praise in connection therewith is deservedly earned.

OIL CITY JOB OFFICE, Pennsylvania. Two exquisite specimens of composition and presswork which are a delight to the lover of fine printing. One a rhyme, making sixteen pages and cover, 10½ by 9, set in long primer light faced gothic, printed on coated paper, with diagonal placed corner ornaments and ribbons, printed on alternate pages in blue, lake and gold, the effect of which is very pleasing. The introductory pages are gems. Also a "Greeting" of twelve pages, similarly printed, containing the list of officers, past, present and charter members of Cornplanter Lodge, No. 757, I. O. O. F., of Oil City.

Also, from Tracey, Gibbs & Co., Madison, Wisconsin; the Bell Printing & Manufacturing Company, Roanoke, Virginia; Mock Bros., Alma, Nebraska; *Sun* job office, Brandon, Manitoba;

Swinburne Printing Company, Minneapolis, all first-class, as usual; Cartan's Steam Press, Union City, Tennessee; job department, Menominee (Mich.) *Range*, firm card, in colors, well proportioned and attractive; Sheridan Lake (Colo.) *Chronicle*, satin badge, very neatly printed; Purcell Bros., Broken Bow, Nebraska; job department, Pueblo (Colo.) *Daily Chieftain*, poster in three colors, striking and attractive; Wilson county *Citizen* print, Fredonia, Kansas, colored poster; business card, Pacific Press Publishing Company, Oakland, California; artistic blotting pads from Alfred M. Slocum & Co., Philadelphia; Payne, Vose & Co., St. Paul, Minnesota; W. H. Wright, Buffalo, New York.

#### OF INTEREST TO THE CRAFT.

THE Childs-Drexel fund now amounts to \$27,453.40.

ON August 30, the secretary-treasurer of the International Typographical Union had a balance on hand of \$21,972.88.

ORGANIZER FREEMAN, of the Third District, has appointed George W. Morgan, of Atlanta, Georgia, deputy organizer for the State of Georgia.

THE contract for furnishing stationery to the State of Virginia was let to the Richmond Paper Company, the Virginia Paper Company, J. W. Randolph and Everett Waddey.

ON September 20 a charter was issued to Memphis (Tenn.) Stereotypers Union, No. 14. The charter members are: J. B. Reed, Thomas Traeger, Al Howe, Robert Stewart, William Coroty, Ed Darrett, Lee Ruble.

ON the 17th of October, Mr. John A. Parshall celebrated the fifty-second anniversary of his entrance into the Delaware (N. Y.) *Gazette* office. And he is still a hale, hearty old gentleman, who works at the case six days in the week.

THE Memphis (Tenn.) *Appeal* celebrated its semi-centennial anniversary on September 11, by moving into its new pressed brick building, at the corner of Main and Jefferson streets. The *Appeal* has now one of the finest offices in the South.

THE Horace Greeley statue at the entrance to the New York *Tribune* office was unveiled on the morning of September 20. The exercises opened with prayer by Bishop Potter, while Chauncey M. Depew, the orator of the day, was introduced by Col. John Hay. The unveiling was by Miss Greeley, the daughter of the great journalist.

THE October issue of the *Typographical Journal* says: "Of the twenty-five propositions submitted for popular vote, all but the tenth and twenty-fifth were adopted—the former contemplating an increase in the salary of the president and the latter the establishment of a mileage relief system. A very light vote of the members is recorded, and nearly one-half of the subordinate unions fail to make returns."

#### NEWSPAPER GOSSIP.

THE Doylestown (Pa.) *Democrat* has added a daily issue.

THE *Press* is a new seven-column folio at Niagara Falls, New York.

F. D. HENRY has started a daily paper, the *World*, at Kittanning, Pennsylvania.

THE Kingston (Pa.) *Times* has been made a chartered company, with \$15,000 capital.

THE Norristown (Pa.) *Register* has abandoned its daily edition and enlarged its weekly to its old size.

THE *Evening Post*, a bright six-column quarto, has recently made its appearance at Los Angeles, California.

PARTIES from Freeport have purchased the Galena (Ill.) *Press*. The name of the paper will be changed to the Galena *Democrat*.

THE Hunterdon county (N. J.) *Democrat* began its fifty-third volume on August 12. R. J. Killgore is the editor and proprietor.

A NEW German monthly, the *Intelligens-Blatt*, has been started in Milwaukee, by Messrs. Schoenherr & Son. It will be devoted

to literature, wit and humor, for the home and fireside, and the aim of the publishers is to make it a welcome visitor in every household.

THE first issue of the Beatrice (Neb.) *Beacon* made its appearance September 27. It is a very neatly gotten up and readable journal.

A NEW paper in the interests of the Farmers' Alliance is soon to be published at Opelika, Alabama. P. Lawrence is to be editor in chief.

THE *Southern Progress* is the name of a new seven-column, eight-page monthly published at Garden City, Franklin county, Mississippi.

THE *National Democrat* is a new paper published at Little Rock, Arkansas. It is owned and edited by colored men of more than ordinary ability.

NEW BEDFORD, Massachusetts, has a new evening daily which has \$35,000 capital. It is edited by a Mr. McCall, late of the New York *Star*.

THE laws of New Jersey are being published in the newspapers of that state, and happy are the publishers of those papers which receive them.

THE Chambersburg (Pa.) *Valley Spirit*, daily and weekly, has been sold by John G. & D. A. Orr to William Kennedy, of the Pottsville (Pa.) *Standard*.

THE Pittsburgh (Pa.) *Herald and Leader* is a new seven-column folio, devoted to the interests of the colored race, with Rev. James Jones as editor in chief and business manager.

THE *Times* is a new paper at Florence, Alabama. It is neat and newsy, with a wholesome tone about it. The editors and proprietors are M. W. Camper and Prof. C. W. Ashcroft.

MR. A. LIEBERNECHT, of the Geneseo (Ill.) *Republic*, has been appointed consul at Tampico by the president. The appointment could not have been bestowed upon a more worthy or acceptable person.

PENNSYLVANIA papers that have suspended recently are the Edinburg *Herald*, Milroy *Herald*, New Cumberland *Local News*, Riegelsville *Home Friend*, Shenandoah *Dispatch* and Uniontown *Advertiser*.

THE Age-Herald Company, of Birmingham, Alabama, have moved into their elegant new three-story building on Second avenue, and now print their paper, the *Age-Herald*, on a \$15,000 perfecting press.

MRS. MILLER, the wife of the governor of North Dakota, was a compositor in the little newspaper office at Dryden, New York, when her husband courted and married her. She is still fond of the art preservative.

DANIEL F. KELLOGG, a native of Chittenango, New York, and only five-and-twenty years of age, is the new city editor of Gotham's best written daily newspaper—that *Sun* which shines for all, at 2 cents a copy.

A NEW weekly is soon to be published in San Francisco by Klein, "the American," after the style of New York *Life*. This publication is to be called the *Cynic*, and the plates for the illustrations are to be executed by the eastern firms who now supply this class of work to the higher class of illustrated journals. There will be sixteen pages in the initial number. Politics will be represented to some extent.

ALL practical printers like a neatly printed newspaper, howbeit all such printers do not send forth such a paper. A prettier weekly newspaper than the Columbia *Herald* cannot be found west of the Mississippi—and few, if any, east of it. It is a model of tasty typography, good presswork and admirable arrangement. The editorial standard is on a line with the mechanical. If it is well printed it is equally as well edited. Columbia is the home of art, science, literature and learning in Missouri. It is worthy of such a paper, and the paper is worthy of such a town.—*Rev. Ben Deering in the St. Louis Times*. To every word of which THE INLAND PRINTER says, amen!

## PAPER TRADE ITEMS.

THE Ohio Paper Box Company (not incorporated), Cleveland, Ohio, has sold out.

A wood pulp and paper mill plant, to cost \$100,000, is to be set up at Ashland, Wisconsin.

THE Borden Stationery Company, of Fairfield, Massachusetts, has completed its new building.

THE new Irwin paper factory at Greensburg, Pennsylvania, was successfully started early in September.

THE Irwin Lyon Paper Company, of Quincy, Illinois, has changed the name to Irwin Paper Company.

AT Conant Rapids, Wisconsin, a paper mill of twenty tons daily capacity is to be erected by George A. Whiting and others.

THE Sawyer Paper Company, of St. Louis, has leased for ten years the new four-story building at Third and Locust streets from Charles Hoyle.

THE Anderson Paper Company has been incorporated at Indianapolis, with a capital stock of \$100,000. Robert Cummings, John C. Blake and Albert Reynolds are the directors.

WHITING BROS., of Neenah, Wisconsin, and others, will build a monster paper mill at Stevens Point, where they already own water power, and hope to have it in operation by March 1.

MINNEAPOLIS, Minnesota, is to have a new industry. The Northwestern Envelope Company intends establishing a factory in that city that will have a capacity of 1,500,000 envelopes a day.

ARRANGEMENTS are said to have been completed at Fort Worth, Texas, for the erection of a large paper mill, which will probably begin with the manufacture of straw paper, a home market being assured for its entire product.

THE Minnesota state contract for stationery has been awarded to the St. Paul Stationery Company. The contract for book paper has been made with Wright, Barrett & Stillwell. The paper contract will amount to about \$8,000 and one for stationery \$2,000.

## PRESS ASSOCIATION NEWS.

THE newspaper men of Creston, Iowa, are taking steps to organize a press club.

A PRELIMINARY organization of the newspaper men of Luzerne and Lackawanna counties, Pennsylvania, was effected on the 9th inst. Mr. Sanders, of the Wilkesbarre *Telephone*, was elected temporary chairman, and Mr. Chamberlain, of the Wilkesbarre *Leader*, temporary secretary.

THE Inland Daily Press Association, composed of the publishers of forty daily newspapers in the smaller cities of Illinois, and including papers in Michigan, Wisconsin, Iowa, Minnesota and Indiana, met at the Sherman House Tuesday afternoon, October 14. Matters relating to press correspondence, special telegrams, advertising agencies, etc., were considered.

AT the recent meeting of the Missouri Press Association, the following officers were elected for the ensuing year: President, J. W. Goodwin, Sedalia; first vice-president, Rev. W. H. Williams, St. Louis; second vice-president, T. D. Fisher, Farmington; third vice-president, Sam Keller, Lebanon; recording secretary, J. W. Jacks, Montgomery; corresponding secretary, Walter Williams, Columbia; treasurer, W. L. Thomas, St. Louis.

THE following officers were chosen by the Northern Indiana Editorial Association in its session at Maxinkuckee, September 8: President, E. A. Jernegan, Mishawaka *Enterprise*; first vice-president, W. A. Beane, Goshen *Democrat*; second vice-president, J. W. Baker, Columbia City *Commercial*; secretary, E. G. Thompson, Ligonier *Leader*; corresponding secretary, Louis McDonald, Plymouth *Democrat*; treasurer, C. O. Musselman, Knox *Ledger*. Executive Committee—Q. A. Hossler, *Daily Times*, Warsaw; J. B. Stoll, *Times*, South Bend; W. K. Sheffer, *News*, Kendallville; Harry Francis, *Appeal*, Michigan City. The next session occurs at South Bend in June, 1891.

## TRADE NEWS.

THE Acme Printing Company, Cleveland, Ohio, has dissolved. FLESS & RIDGE, printers, New York City, have dissolved partnership.

DAVID STEELE, printer, Portland, Oregon, has been succeeded by Sherman Martin.

FISHER & JACKSON, publishers, Santa Monica, California, have dissolved partnership.

THE Kearney Enterprise Company, publisher, Kearney, Nebraska, has sold out.

ROGERS & WEIRSEMA, publishers of the *Recorder*, Albion, Michigan, have sold out.

G. E. DESHARAT & SON, printers, Montreal, Province of Quebec, have dissolved partnership.

MARTIN SHERMAN, printer, Portland, Oregon, has been succeeded by the Himes Printing Company.

WILLIAM BROOKS, bookbinder, and Brooks & Wallace, steam printers, Waco, Texas, have consolidated.

THE Marsh Printing Company has been organized to establish a printing house at Bedford City, Virginia.

THE certificate of incorporation of the Smith Publishing Company, New York, has been filed. Capital, \$15,000.

HANNAH BARDSLEY & SONS, printers, Philadelphia, Pennsylvania, have been succeeded by Hannah Bardsley.

GOLDTREE & CO., of the Pacific Ink Factory, San Francisco, California, have dissolved partnership and sold out.

THE Pastoriza Printing and Lithographing Company have been incorporated at Houston, Texas, with a capital of \$50,000.

THE Baltimore Globe Company, newspaper publisher, Baltimore, Maryland, has been incorporated in New Jersey, with a capital stock of \$100,000.

If you wish to purchase a well equipped and well established printing office in a thriving city in Central Ohio, see advertisement in want column. Address "Art Gothic."

HEBER WELLS has succeeded Vanderburgh, Wells & Co., of 8 Spruce street, New York, dealers in printers' materials, type, presses, etc. Business will be continued at the old stand as heretofore.

D. C. SHEARS, J. S. Peebles, Julius Balke, Jr., and others, of Covington, Kentucky, have incorporated the National Publishing Company, for the purpose of printing, publishing, etc. The capital stock is \$250,000.

THE Everett Waddey Company, of Richmond, Virginia, has been incorporated with Everett Waddey as president and D. M. Hall, secretary, for the purpose of publishing, printing, etc. The capital stock is \$30,000.

It is said that Philadelphia parties will erect wood fiber mills at Lenoir City, Tennessee, to cost \$500,000 and employ six hundred hands. The work is to commence at once, as all details have been arranged, even to freight rates.

F. C. NUNEMACHER, of Louisville, reports business first-class. Since November, 1889, he has added eight railroad companies to his list of patrons, and forwarded them a full supply of tickets, coupons, etc., without being supplied with a line of copy.

THE New Bedford (Mass.) *Journal* was issued October 11. Evening paper; independent stock company of \$35,000, of the principal business men. The job printing office of C. W. Knight, one of the largest concerns, is merged into the company. The manager of the printing and business departments is C. W. Knight; manager of newspaper department, Warren P. Tobey. The outfit was purchased of the Boston Typefoundry throughout.

THE Morgans & Wilcox Manufacturing Company, Middletown, New York, report that the new labor-saving steel furniture which they have just brought out for blank work has met with great success, several tons being sold before it was six weeks in the market. For the purpose it was designed it is claimed that it goes further.

is quicker used and is less expensive than metal furniture or any other material that can be used. It is described in our advertising columns.

M. J. HUGHES, inventor and manufacturer of the Hughes stereotype outfit, 18 Spruce street, New York, has recently added another valuable improvement to his outfit in the combination of the metal furnace and the casting box by the use of hot water. This dispenses entirely with the expensive use of gas, gasoline, coal oil, steam, etc., for the drying of molds or matrices. The plan is one that everyone about to purchase a stereotype outfit should investigate.

#### ITEMS OF INTEREST.

SIR WILLIAM HARDMAN, editor of the *London Post*, died September 13.

The manufacture of paper from native rock-moss is a new industry in Sweden.

A MARKED decrease in the circulation of *Allgemeine Zeitung* is clearly traceable to its virulent anti-Bismarckian editorial policy.

SAFELY returned to his local heath, Mr. Otto Meyer, of the *Utica (N. Y.) Press*, blithely chirruped of the good time he had in Europe during July and August.

It is said in literary circles that Monsieur Paul Blouet, better known as "Max O'Rell," has received over \$3,000 as royalties on the American sales of his books.

THERE has just been issued, at New York, a large paper-cover illustrated edition of "All Sorts and Conditions of Men," which is Walter Besant's most notable story.

CHARLES FISKE, for several years on the reportorial staff of the *Home News*, of New Brunswick, New Jersey, has left that paper to enter upon his studies for the Episcopalian ministry.

AN event of interest in New York as well as in London is the suspension of the daily London edition of the *New York Herald* after an existence of two years. The Sunday issue is continued.

It is claimed by the editorial and business managers of the *Morgen-Journal*, New York's latest German daily, that it has "taken the town." If the town has also taken it, success is a live certainty.

ALEXANDRE CHATRIAN, the well-known French novelist, who wrote in collaboration with Emil Erckmann, as "Erckmann-Chatrian," died September 4, aged sixty-four years. The literary partnership began in 1850.

ON Thursday, September 11, John E. Morey, Sr., formerly one of the owners of the *Union and Advertiser*, died in Rochester, New York, of cancer of the liver. He was seventy years old and a prominent Freemason.

MEXICO'S literary fecundity is really marvelous. A recently published bibliography records no less than 12,000 volumes by 3,000 native Mexican authors. The first book printed on this continent was published in Mexico.

TODAY the human family aggregates nearly one billion five hundred millions. Less than half of them will visit Chicago in 1893, and perhaps not half of these will call at THE INLAND PRINTER office; but they ought to.

SEVEN thousand persons have been employed in getting out Mr. Stanley's new book and more than six hundred tons of paper have already been used in England. The English edition alone required two hundred and forty tons of paper.

BRONSON HOWARD, the distinguished writer of society comedies, will reside this autumn and winter in the south of France. He denies that he has taken any interest, as has been reported, in the management of the Criterion Theater, London.

THOSE vituperative German newspapers which, of late, so shamefully reviled the elder Bismarck have ceased their invectives against him since he threatened to publish a list of the writers who were formerly in his pay, with full particulars respecting the money he gave them. Prince Bismarck has recently described

the journalists of Germany as "cowards without principle or dignity."

THE fact that Harper & Brothers are erecting a building in London for the publication of the English edition of their magazine is accepted as emphatic proof of the growing of an international popularity more or less shared by the better class of American pictorial serials.

WRITING from London to the *Chicago News*, eccentric and versatile Eugene Field says that Andrew Lang's duties as a newspaper man do not in the least clash with the preparation of his better known literary work. Much of his time is spent in Edinburgh. When at desk in the English metropolis, however, he will sit down in all the noise and confusion of the editorial room and reel off a delightful essay, full of learning, of wit, of allusion and of quotation; this, too, without referring to any book from which it may be desirable to take extracts, or to which it may be desirable to turn. In fact, Lang is looked upon by his journalistic associates as a cyclopedia of learning, a fountain of wit and a master of all that is charming in style.

#### BUSINESS OUTLOOK.

Auburn, N. Y.—State of trade, good; prospects, not over-brilliant; composition on evening papers, 16 cents; bookwork, 18 cents; job printers, per week, \$8 to \$12. The *Morning Dispatch*, after several years of ups and downs, including two or three suspensions, is completely dead and will not be resurrected at present. The afternoon papers are jubilant over that fact.

Austin, Tex.—State of trade, good; prospects, very good; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, \$20; job printers, per week, \$20. Work is better than for some time past, with better prospects ahead.

Bay City, Mich.—State of trade, good; prospects, fair; composition on morning papers, 34 cents; evening papers, 32 cents; bookwork, 32 cents; job printers, per week, \$12. Mr. Henry Lutzke, an old and respected member of No. 81, died at his home in this city on the 9th inst., of consumption. His funeral took place under the direction of No. 81.

Birmingham, Ala.—State of trade, good; prospects, bright; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 40 cents; job printers, per week, \$16.50. Scale raised at last meeting from \$15 to \$16.50. No trouble. Organizer Freeman has returned from Americus, Ga., where he organized a union.

Burlington, Iowa.—State of trade, good; prospects, good; composition on morning papers, 30 cents; evening papers, 25 cents; bookwork, \$14; job printers, per week, \$14 and \$15. Business is good at present, with a very few subs in the city.

Charleston, S. C.—State of trade, fair; prospects, fair; composition on morning papers, 37½ cents; bookwork, 35 cents; job printers, per week, \$17. The P. P. F.'s on the *World* recently demanded the discharge of the straight-out non-union foreman, W. L. Daggett, who turned the tables on them and filled the office with country printers.

Cincinnati, Ohio.—State of trade, fair; prospects, not encouraging; composition on morning papers, 45 cents; evening papers, 41 cents; bookwork, 40 cents; job printers, per week, \$18. Work has not been very good here this summer in book and job offices, but subbing on newspapers has been fair.

Columbia, S. C.—State of trade, fair; prospects, not too encouraging; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, \$15 per week, nine hours; job printers, per week, \$18 and \$20. The state work will start between October 15 and November 1, and continue until January 1, 1891. After that, work will resume its normal condition.

Dallas, Texas.—State of trade, poor; prospects, uncertain; composition on morning papers, 42 cents; evening papers, 37 cents; bookwork, 42 cents; job printers, per week, \$18. Business not as good as in the past few months. Job offices running light.

Dayton, Ohio.—State of trade, ordinary; prospects, fair; composition on morning papers, 35 cents; evening papers, 32 cents; job printers, per week, \$15. Town not good for tourists at present.

Fort Wayne, Ind.—State of trade, fair; prospects, fair; composition on morning papers, 35 cents; evening papers, 30 cents; book and job printers, per week, \$13.50. William Falkenburg is down with the rheumatism, and is being cared for at the hospital by No. 78.

Galesburg, Ill.—State of trade, good; prospects, good; composition on evening papers, 25 cents; bookwork, 25 cents; job printers, per week, \$12 to \$15. Work in job line has picked up, and will likely continue good through the winter.

Grand Rapids, Mich.—State of trade, good; prospects, same; composition on morning papers, 35 cents; evening papers, 30 cents; bookwork, per week, \$14; job printers, per week, \$14. The influx of subs during the month has been quite large, and we are now supplied. Our job offices are well supplied with work, and some of them turning out some fine specimens.

**Houston, Tex.**—State of trade, morning papers, good; job offices, indifferent; prospects, fair; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$20 to \$25. In the line of commercial printing, there seems to be considerable doing, but the book departments seem to be running light.

**Jackson, Mich.**—State of trade, very good; prospects, fair; composition on morning papers, 33 cents; evening papers, 30 cents; bookwork, \$13 or 30 cents; job printers, per week, \$13.

**Jacksonville, Fla.**—State of trade, good; prospects for fine run in job offices; composition on morning papers, 33½ cents; evening papers, 30 cents; bookwork, 33½ cents; job printers, per week, \$16 to \$20. The next issue of the *Weekly Standard* is to be a sixteen-page. Understand an eight-page monthly is to be issued in a few weeks.

**Jamestown, N. Y.**—State of trade, fair; prospects, good; composition on morning papers, 25 and 28 cents; evening papers, 22 cents; job printers and week hands, per week, \$12. Jamestown Typographical Union, No. 205, is in a prosperous condition and the membership list is steadily increasing. Most printers here are members of the union. Work is fair, but generally enough printers to supply the demand. Tourists usually find a few days' work, but prices paid are low and it is a good town to steer clear of.

**Keokuk, Ia.**—State of trade, good; prospects, better; composition on morning papers, 30 cents; evening papers, 26 cents; bookwork, 30 cents; job printers, per week, \$12. W. F. Douglas has purchased the Keokuk *Chief*, a weekly newspaper. He formerly worked on the Chicago *Tribune*. A Central Labor Union was organized Friday.

**Little Rock, Ark.**—State of trade, fair; prospects, fair; composition on evening papers, 35 cents; bookwork, per week, \$16 to \$20; job printers, per week, \$16. Union, 37 cents; non-union, 35 cents.

**London, Ont.**—State of trade, fairly good; prospects, uncertain; composition on morning papers, 30 cents; evening papers, 28 cents; bookwork, per week, \$9; job printers, per week, \$9 to \$10. London union has been busy revising by-laws and scale of prices. An advance of two cents has been secured on morning papers, while the evening scale remains as formerly. An increase for book and job work has not yet been secured. The employers of one office have promised to raise the price \$1 per week after January 1, 1891. The other proprietors have not given an answer.

**Los Angeles, Cal.**—State of trade, very dull; prospects, gloomy; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$18 and \$20. The lockout on the *Times* and *Herald* still continues. The union receives no cards at present. We expect to win, but will have a hard fight.

**Louisville, Ky.**—State of trade, very dull; prospects, fair; composition on morning papers, 42½ cents; evening papers, 39½ cents; bookwork, 40 cents; job printers, per week, \$18. Business has not improved since last report. A few subs have been added to the already large number.

**Milwaukee, Wis.**—State of trade, fair; prospects, good; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 35 cents; job printers, per week, \$14 to \$18. A decided improvement over last month is noticeable in job offices. Newswork is no good, subs not being in great demand.

**Minneapolis, Minn.**—State of trade, fair; prospects, fair; composition on morning papers, 42 cents; evening papers, 37 cents; bookwork, 35 cents; job printers, per week, \$16. Enough printers here to supply the demand.

**Mobile, Ala.**—State of trade, dull; prospects, fair; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$16. Travelers had better avoid Mobile for the present.

**Montclair, N. J.**—State of trade, good; prospects, good; composition on morning papers, 36 cents; bookwork, 36 cents; job printers, per week, \$12 to \$20. County and state fairs have made business lively. The removal of the Samuel Crump Label Works will throw a good many first-class men out of employment.

**New Haven, Conn.**—State of trade, improving; prospects, fair; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 35 and 40 cents; job printers, per week, \$15. Business in this city has improved considerably since report of last month, but there is a great plenty here to do it. If the employers who belong to the typothetæ would cease cutting prices it would be a good thing for themselves and their employes. It is a ruinous business, as is often clearly shown in THE INLAND PRINTER.

**Peoria, Ill.**—State of trade, fair; prospects, fair; composition on morning papers, 36 cents; evening papers, 33 cents; bookwork, 38 cents; job printers, per week, \$15 to \$21. Trade has been good for the past several weeks on account of State Fair being held here. Subs doing fairly well.

**Richmond, Va.**—State of trade, dull; prospects, not encouraging; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$16 to \$20. A new evening paper has been started here called the *Democrat*.

**San Antonio, Tex.**—State of trade, fair; prospects, good; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 40 cents; job printers, per week, \$18. Work has been very good for the past three weeks on account of the International Exposition, which is held from September 30 to October 11, after which "the first landing of Germans in the United States" will be celebrated in grand style on October 12.

**San Diego, Cal.**—State of trade, never duller; prospects, worse; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork,

40 cents; job printers, per week, \$18. The job business never was in a worse state than at present, and all hope for anything better from month to month is not realized. Would advise eastern prints to give southern California a wide berth this winter.

**St. Louis, Mo.**—State of trade, fair; prospects, good; composition on morning papers, 43 cents; evening papers, 38 cents; bookwork, 45 cents; job printers, per week, \$18. Business in St. Louis is good at the present. Very few men out of work.

**St. Paul, Minn.**—State of trade, dull; prospects, dull; composition on morning papers, 40 cents; evening, 37 cents; bookwork, 35 to 43 cents; wages of job printers per week, \$16 to \$20. The Executive Committee is engaged in making a new scale for Thorne machines, which will be placed at 9 cents for brevier.

**Springfield, Ill.**—State of trade, dull; prospects, fair; composition on morning papers, 33½ cents; evening papers, 30 cents; bookwork, \$15 per week; job printers, per week, \$15. Work on the new state contracts begins this week, and there are plenty of men in the city to fill the positions.

**Springfield, Mo.**—State of trade, good; prospects, good; composition on morning papers, 28 cents; evening, 25 cents; bookwork, per week, \$14; job printers, per week, \$14. Short of printers. Two morning and two evening papers.

**Springfield, O.**—State of trade, fair; prospects, good; composition on evening papers, 30 cents; job printers, per week, \$13.50. Work in the jobbing line continues good, though newspaper work is a little dull. There is every indication of a brisk season the coming winter.

**Syracuse, N. Y.**—State of trade, good; prospects, good; composition on morning papers, 32 cents; evening papers, 30 cents; bookwork, 30 cents; job printers, per week, \$14.

**Toledo, Ohio.**—State of trade, good; prospects, fair; composition on morning papers, 38 cents; evening papers, 35 cents; bookwork, 38 cents; job printers, per week, \$15. Everything is booming at the present time, and there is a good demand for subs. It is said that some of the Rogers machines will be here this month.

**Topeka, Kan.**—State of trade, good; prospects, fair; composition on morning papers, 33½ cents; evening papers, 28½ cents; bookwork, 40 cents; job printers, per week, \$15. More printers in town than for a year, and all of them working as much as they want.

**Utica, N. Y.**—State of trade, fairly good; prospects, bright; composition on morning papers, 35 cents; evening papers, 31½ cents; bookwork, 31½ cents; job printers, per week, \$12.50. The *Herald* (non-union) will be sold under the auctioneer's hammer, October 22, to the highest bidder. Liabilities nearly \$200,000. Prospects look bright for unionizing the office.

**Vancouver, B. C.**—State of trade, good; prospects, fair; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$21. Papers pretty solid. Vancouver sent two delegates to the Dominion Trades and Labor Congress. The *Telegram* is in its new office, which is one of the best equipped on the Sound.

**Worcester, Mass.**—State of trade, not very brisk; prospects, generally good in winter; composition on morning papers, 40 cents; evening papers, 33½ cents; bookwork, 35 cents; job printers, per week, \$12 to \$15. Business has not started in with the "rush" as should be expected for this season of the year. Everyone is putting in those ten long, weary hours, though quite a number of travelers are in town.

## BUSINESS NOTICES.

UNTIL permanent headquarters are secured all inquiries relating to the Kendall Folder, advertised in the present issue, so far as relates to the western trade, should be addressed care of THE INLAND PRINTER, Chicago.

### A MODEL RAILWAY.

The Burlington route, Chicago, Burlington & Quincy railroad, operates 7,000 miles of road, with termini in Chicago, St. Louis, St. Paul, Omaha, Kansas City and Denver. For speed, safety, comfort, equipment, track and efficient service it has no equal. The Burlington gains new patrons but loses none.

THE BUFFALO PRINTING INK WORKS, of Buffalo, New York, have recently issued their new specimen book of inks, and will gladly furnish copies of it to printers. The work shows many of the colors produced by the house—those most commonly used by the trade—and is beautifully printed. The success attained by this company in the manufacture of inks has been phenomenal, the demand for their productions being constant, and growing each year. Although but six years old the Buffalo Printing Ink Works has a reputation for placing the best goods upon the market that many older ink firms could well be proud of.

THE new price list just issued by the Brown Folding Machine Company, of Erie, Pennsylvania, is a 32-page pamphlet, printed in good style by Ashby & Vincent, of their city. The book contains cuts and descriptions of the various machines manufactured to be folded by the company, and diagrams of imposition for forms intended by machine. Every office intending to put in a folding machine should send for this price list.

#### HOLIDAY CUTS.

The Moss Engraving Company, 535 Pearl street, New York, have a very large selection of new holiday stock cuts for sale, and invite the attention of printers to them. The line includes some of the most novel and seasonable designs, made especially for their trade, and parties looking for engravings of this kind cannot do better than write to this firm. The methods employed by the Moss Company include Moss' new process, mosstype process and zinc etching, all superior substitutes for wood engraving. The company also does electrotyping and printing, and their facilities are such that all work intrusted to their care will receive the most careful and prompt attention. Send stamp for their new general circular "D. D."

#### THE HUBER PRESS.

In this issue we publish four pages of the advertisement of the Huber printing presses. The success of this machine in the West, in view of the very close competition, has been wonderful, and nothing but words of praise are heard of its merits. Strong, well-built, and of truly mechanical construction, its builders have cause to be proud of its record. Messrs. Van Allens & Boughton, the agents of this machine, are gentlemen who stand high in the trade, and are known everywhere as generous, liberal dealers. The western manager of this firm, Mr. H. W. Thornton, is universally popular—a gentleman whose tireless energy is equaled only by his suavity and cordiality.

Printers who contemplate purchasing new presses would do well to investigate this machine, by inquiry at 301 Dearborn street, the western office.

#### SANBORN'S NEWEST CUTTER, "ECLIPSE."

This machine, a correct illustration of which is herewith given, is guaranteed to excel, in all the points requisite in a good machine, all other low-price hand and power cutters in the market. The construction is simple, the power and strength warranted, the fitting and finish first-class. Only small exertion is necessary to

operate by hand, and the fly-wheel is made extra large as an additional advantage. The pulley for power is always ready for the belt when needed. The knife cuts from left to right, has a sliding, draw movement, which is uniform and rapid and can be stopped at any point in the cut. There are gibs in the frames for the adjustment of the knife-bar. Either the usual style of clamp and gauge or the intersecting clamp and gauge is furnished as may be preferred. The back-gauge is split, thus admitting of two sizes being cut at one operation. In the front table is a brass measuring rule divided into eighths of inches. Only special boxing charged for. Further information can be obtained by addressing George H. Sanborn & Son, 69 Beekman street, New York.

#### GRANT'S IMPROVED ENVELOPE MACHINE.

The ingenious and effective envelope machine of Mr. S. A. Grant, of Hartford, Connecticut, an illustration of which is herewith presented, is now perfected in all its details, and is in full operation at his workrooms in that city.

One of its specially valuable points is its compactness. Its base only occupies 19 by 24 inches, and including the space required for the operator, a complete machine may be comfortably quartered in a floor space 4 by 5 feet. This is an important consideration when small quarters must be occupied, since a room 12 by 20 feet would easily accommodate ten machines.

The drying rack is vertical, by which arrangement it not only occupies little more than a square foot of floor space, but has an additional advantage in that it conducts the envelope at once into the warmest and driest air of the apartment, and if necessary, the drying process can be aided, with no inconvenience, by the introduction of a lamp in the center of the rack. Its great merit, however, lies in its simplicity. All the motions are positive, and the blanks can be fed at the rate of two thousand per hour by an intelligent child, without danger of delay or damage. As the blank passes through the single set of rollers which engage it, it is creased, printed if desired, by a very ingenious printing arrangement, and gummed. While another envelope is passing the rollers this one is moved out upon a small bench at the back, where it is folded and at the same moment pushed into the drying rack.

The gumming arrangement is another peculiar feature. Not only is the gum very smoothly and perfectly applied—which means economically—but the gum fountain is divided, so that a cheap, smooth paste may be used for the lower flap, giving even better work at less cost, while the open flap is treated with a high grade gum arabic solution. In this respect, also, Mr. Grant's machine marks a new departure.

The objects aimed at have been simplicity, compactness, direct and positive action, with moderate cost; all these have been attained, and the quality of work which the machine is now producing sufficiently attests the thoroughness with which the idea has been developed. A company has been organized in Springfield, Massachusetts, for the sale of this machine, at 23 Hampden street. It is known as the United States Envelope Machine Company, with Hinsdale Smith as president, S. A. Grant, vice-president, and Enos Smith, treasurer. The factory is at the shops of the National Machine Company, Sheldon street, Hartford, Connecticut.

#### MANY COLORS AT ONE IMPRESSION.

In our "Specimens Received" we notice a circular sent out by the firm of W. E. Freer & Co., Norwalk, Ohio, to advertise their color attachment for cylinder presses. We have not seen the attachment, but if it will do what its manufacturers claim for it, and what the circular shows, it is certainly an important invention. On page 85 is an advertisement of this new color attachment. Write to this firm if you are interested.

N. S. L. S.

A queer combination of letters! For what do they stand?

Well, we'll tell you. They were suggested by some encouraging words spoken to a member of the Buffalo Printing Ink Works, which, since the sad death of Mr. Hurlbutt two months ago, have by hard work and persistent endeavor retained among their patrons and friends the good share of trade heretofore given them, and with the increasing fall business are keeping fully abreast of the times. Their new sample book contains many desirable colors and is sent any printer for the asking. But what has all this to do with the letters above. Have patience, friend. Their "well-wisher" said, after giving some sound advice (and better still, a fair order), "Remember, my boy, *Nothing Succeeds Like Success.*"

#### NEW GASOLINE ENGINE.

In this issue our readers will notice that the Van Duzen Gas and Gasoline Engine Company have made a change in their card. This enterprising company has been in the past year experimenting upon gasoline engines, and now they have a little wonder that does the work of a giant. A 6 by 7 inch engine, weighing only 800 pounds, and taking up about as much room on the floor as a flour barrel, runs 100 feet of shafting and machinery necessary to keep twenty machinists at work. A regular little hustler. This engine consumes six gallons of gasoline daily, at an expense of 60 cents. Write for information and prices that will surprise you, to the Van Duzen Gas and Gasoline Engine Company, Cincinnati, Ohio, who are the patentees.

#### A CORRECTION.

In our August number we published an article relating to the gumming and varnishing business of Messrs. Story & Fox, of Buffalo, New York, in which we stated that "designs from them have always been noted for originality and beauty." This statement, it is believed, would convey a wrong impression to the printing and lithographing trade that they are what is usually called designers. We wish to state that this is not so; they are *finishers*, and their designs are specially for die cutting. Any work in the way of varnishing, gumming, eyeletting, punching, tin stripping, etc., is executed by Story & Fox in the best manner. We cheerfully make the above correction, and trust this will explain the particular branch of the business the firm does.

#### WEBSTER'S INTERNATIONAL DICTIONARY.

Webster's International Dictionary, published by G. & C. Merriam & Co., Springfield, Massachusetts, a magnificent work of 2118 pages, recently placed upon the market, is the legitimate successor of the famous Webster's Unabridged Dictionary, which has been so long recognized as the standard authority on the words and usages of the English language. In introducing it to the public the publishers say: "The great work of Noah Webster, of which the publication has been carried on by our house for more than forty years, has received from time to time a succession of revisions by the most competent scholars, by which it has been kept abreast of the swift growth of the language. In the International Dictionary we offer to the public a new revision, the product of the labor of a large corps of workers during more than ten years. Of the present book it may be said, in a word, that in the thoroughness and completeness of its reconstruction it surpasses even the edition of 1864. We have, at various times, in the intervals of the great revisions, added supplements and appendices, but in a broad view it may be said that three dictionaries have been successively constructed upon the foundation laid by Dr. Webster. The first was the book of 1847, which was little more than the original work of 1828 brought from two volumes into one, pruned of some excrescences, and with moderate additions. The next was the book of 1864, in which the more scientific principles of modern lexicography were applied and a large store of additional matter, partly gleaned from old authorities and partly afforded by the world's advance, was included. Following the several supplements by which that book has been enlarged, we

now present Webster's International Dictionary, which embodies substantially the amplification and enrichment of the language during another generation as it has been noted by a wide and close scrutiny, and registered by scientific methods with scholarly conscientiousness and vast labor."

#### MEGILL'S FLEXIBLE GAUGE PIN.

For some time past printers and pressmen have often wished they had a side gauge that could be used directly under the gripper or between the platen and roller-ways; one that nothing could smash; one that was high enough to feed curly sheets to; one that would help remove the sheets from the platen, and one that could be used when printing plates on patent blocks without breaking. They now have it in the new pin described in this article. The most striking and important feature of this new gauge-pin is its wonderful adaptation as a side gauge, as it can be used directly under the gripper without injuring either, and the elasticity of the spring-arms is guaranteed to last as long as the pin itself.

A

B

Cut A shows the No. 4 pin set for feeding. The gripper, when it descends, will press the spring-arms flat, and thus, being unobstructed, will grasp the sheet. The metal is very thin and yields readily under light pressure, but if there should be any tendency to bear off it can be very easily counteracted by cutting a sheet or two out from under it. The pin will not move if properly secured; a short slit made with knife along in front of the gauge and the edge raised against it, will effectually prevent this, and also avoid any chance of feeding under it. Should the sheet be very small and a narrower gauge desired, one of the arms may be bent so as to lie flat on the tympan, or it may be cut off. The pin is made of extra flexible quality brass, and is capable of being changed in shape, but not to be bent sharp. The attaching parts are embossed to stiffen them.

Cut B shows the same pin acting as a sheet lifter. This feature will enable the feeder to take hold of the sheet between his thumb and forefinger and remove it quickly without smutting.

C

D

Cut C shows the No. 1 pin, which is the same as the No. 4, except that it has lips or projections at the ends of the spring-arms to keep the sheets down. It can be used almost anywhere the No. 4 can. But the No. 3, shown in Cut D, owing to its extreme height of curvature, will not flatten except to rise only half way up again, and is consequently suitable only as a bottom gauge, or, when the gripper does not strike it, as a side gauge. This will be found excellent in feeding sheets that curl and refuse to go down flat, especially where the margin of the sheet is narrow. The furniture, of course, will come in contact with No. 3, but being lower than the type will press it only part way down, in which case it will return to its original height. The dotted outline indicates the degree of descent. The ends of No. 3 are bent, but should be used opposite level furniture.

These pins have many advantages, which can only be discovered when they are put into practical use. They are fully protected by patent. Put up assorted, all sizes, in a box, and sold for 75 cents per dozen. Edward L. Megill is the patentee and manufacturer, 60 Duane street, New York.

**SANBORN'S No. 12 EMBOSSING AND INKING PRESS.**

This is a machine with an improved inking attachment for inking book covers. It has all the advantages of the embosser, and will either ink, emboss, gold stamp or blind stamp. The bed is provided with adjustable gauges, and particularly suited to color work. The inking attachment is considered by good binders the most serviceable and satisfactory, in every way, of any heretofore introduced. Its action is rapid, yet thoroughly effective, and perfect distribution is always obtained. It has fewer parts than any other similar attachment and not being complicated, is not easily gotten out of order. The inker is

Among others, the following well-known firms have it in use: W. J. Wilson & Co., Boston; H. M. Plimpton & Co., Boston; Ephraim Adams, Boston; A. J. Cox & Co. (two), Chicago; W. B. Conkey, Chicago; Illinois Printing & Binding Co., Chicago; Donohue & Henneberry, Chicago; Horace O'Donoghue, Chicago; Lamonte, O'Donnell & Co., Chicago; Ohio Valley Printing & Manufacturing Co., Cincinnati; Robert Clark & Co., Cincinnati; Lauer & Mattill, Cleveland; William Schake Bindery, Cleveland; Forest City Bookbindery, Cleveland; Barr & Dinwiddie Printing & Binding Co., Greenville, New Jersey; Plimpton Manufacturing Co., Hartford, Connecticut; National Blank Book Co., Holyoke, Massachusetts; Harry C. Travis, Minneapolis;

NO. 13 EMBOSSING PRESS.

operated by a separate cam, and started or stopped at will by means of a special foot-treadle in front of press. But a few moments are necessary to cool the steam head for inking. The construction of the machine throughout is such that an accident is next to an impossibility. Special care is paid to the entire fitting of all the parts of the press, so that true register and positive accuracy of the work is assured.

Particular attention is called to the accessibility of the working parts of this press. The principal parts are open to instant inspection, an important point easily understood.

This machine will do the heaviest kind of book embossing and inking.

P. F. Collier (two), New York; J. J. Little & Co., New York; T. J. Cagney Bindery Co., New York; J. G. Shaw Blank Book Co., New York; Henry Altemus, Philadelphia; Hubbard Bros., Philadelphia; J. W. Paul & Co., Philadelphia; A. J. Holman & Co., Philadelphia; Oldach & Mergenthaler, Philadelphia; Miller Bible & Publishing House (Limited), Philadelphia; Historical Publishing Co., Philadelphia; H. L. Beldin, Springfield, Massachusetts; Bechtold & Co., St. Louis; C. B. Woodward & Co., St. Louis; Government Printing Office, Washington.

**No. 13 EMBOSSING PRESS.**

This is a new machine, a correct illustration of which is herewith presented, capable of sustaining the greatest pressure

possible. It is used for embossing and gilding large surfaces on cardboard or any thin, solid substance, and is the most massive, strong and powerful machine ever introduced. It has two large and heavy fly-wheels, two gun-iron toggles, double gear pinions of gun-metal and is in every way fully equal to all modern requirements.

Among others using them are Rand, McNally & Co., Chicago, A. J. Cox & Co., bookbinders, Chicago, the Forbes Lithographing Company, Boston, and the Methodist Book Concern, Cincinnati.

Both are manufactured by the well known firm of George H. Sanborn & Sons, 69 Beekman street, New York.

**DICKINSON TYPEFOUNDRY SPECIMENS.**

In another part of this issue we print two pages from the above foundry, which show the popular Quaint and Quaint Open, the Algonquin and Algonquin Ornamented, the Skjald series and the Grady series, all of which have had a large sale and proved to be especially useful faces. The Quaint and Quaint Open, and the Algonquin and Algonquin Ornamented, work well together in colors, the register being perfect, and enable the printer to secure a pretty effect in many jobs. The Skjald is simply the Typotheta with a lower case, and offices having the latter letter need order only the caps of Skjald, as the fonts line perfectly. The Grady commends itself where a plain, readable condensed letter is required, having enough ornamentation to permit of its being used in fancy jobwork.

**A PARTNER WANTED**—A first-class practical printer to take half interest in an office showing about \$10,000 business last year. Rent \$40 a month. Central location in Denver, Colorado. Has three job presses, paper cutter, 800 pounds body type, over 100 fonts job type, etc., all on point system. No incumbance; present debts and accounts to be settled by present owner. It is a splendid opening for a steady, active man who understands his business. \$1,500 will take it. Address "H," care Marder, Luse & Co., Chicago, Illinois.

**EVERY YOUNG PRINTER** should have a copy of "THE PRACTICAL PRINTER," 200 pages. Price, \$1. By H. G. Bishop. Also "DIAGRAMS OF IMPOSITION," and "THE PRINTER'S READY RECKONER." Price, 50 cents each. To be obtained of H. G. Bishop, Box 1061, Oneonta, N. Y., or through Farmer, Little & Co., New York and Chicago. These are the handiest and most useful works ever published for printers. Indorsed by everyone who has seen them.

**FOR SALE**—Job printing office; one of the best equipped, medium sized job offices in a city of one hundred thousand inhabitants in Ohio. Established trade. Ill health cause for selling. Address "ART GOTHIC," care INLAND PRINTER, Chicago.

**FOR SALE**—On easy terms with security, a successful and well-established job printing and newspaper plant, the leading Sunday paper of the city, and a weekly edition having an old-established country circulation. Presses, machinery, and material in first-class condition. Newspaper dress almost new. Circulation 4,000. Population of city 45,000. Reasons for sale, business engagements in the West. Address BRADY & WOODS, Erie, Pennsylvania.

**FOR SALE**—Printing office, containing 4-horse power engine and boiler; 10 by 15 Golding jobber; paper cutter, and full assortment of job and body type. Terms reasonable. Address MRS. F. M. McLEAN, Rutland, Vermont.

**OF COURSE!**—We can give them away, but we have only a few more of the complete unbound sets of "American Printers' Specimen Exchange" (4 volumes) at \$3.75. The balance, 10 volumes, we are going to bind and hold at \$10 each, and they are worth twice as much. ED. H. McCLURE, Buffalo, N. Y.

**SPECIMENS CHEAP**—Full unbound set (4 volumes) of the "American Printers' Specimen Exchange," at \$3.75 by express; or one sample volume (no choice allowed) at 60 cents, postpaid, and the balance of the set at \$1.10 per volume, postpaid. Will then bind one or all the volumes at \$2. ED. H. McCLURE, Buffalo, New York.

**WANTED**—A partner. An A1 man with small capital. An excellent opportunity. Address "KENT THE PRINTER," Utica, New York.

**WANTED**—Every printer and pressman to know the "Practical Printer" is the best and cheapest work on printing, in all its branches, now on the market. Price 25 cents, postpaid. J. W. ALEXANDER & CO., 17 Griswold street, Cleveland, Ohio.

**PRESSMEN!**

**EUREKA OVERLAY KNIVES.**

The undersigned have succeeded in producing a knife for cutting overlays, etc., which will give satisfaction. Will outlast twenty erasers, and is sold by mail at less than the price of one. Send address and 25 cents to GEO. FERGUSON & CO., 860 Sixth avenue, New York City.

**THE NEW SIDE-GAUGE.**  
FOR ALL JOB PRESSES.

**F**IRST ever invented for the purpose, and offered to the trade at so low a price as to make it look as though it was a sham. But it will do wonders, and when we think how often we have wanted a side-gauge that we could use without dispensing with the gripper, we are surprised that it was not thought of before; and then to be presented in such a simple form, and in a single piece of metal! It can be crowded right between the gripper and the tympan without smashing, losing its elasticity, or bearing off the gripper. Don't you believe it? You will as soon as you try them. You will also find in them many more uses too numerous to mention in an advertisement; and all for the small sum of

75c. per Dozen, assorted shapes. 25c. per set of three.

SOLD BY ALL DEALERS AND BY THE INVENTOR AND MANUFACTURER,

**E. L. MEGILL, 60 Duane Street, NEW YORK.**

ASK FOR THE FLEXIBLE GAUGE PINS.

*The Original and Only Patented Ink Reducer in the World!*

Warranted to instantly reduce all kinds of Printing Inks, no matter what color, or how old or stiff, to any consistency required, without in the least affecting their color and make them work clear, free and easy on any kind of press or stock the hottest day in summer when rollers are soft and sticky, or the coldest day in winter without fire or washing rollers. INKOLEUM makes all inks mixed with it dry quick and glossy on paper without off-setting—but never dries on rollers—and prevents paper from pulling or sticking to form. As a reducer for tint printing INKOLEUM works miracles, as the most delicate shades and tints can be produced with ink mixed to the thinness of cream, causing it to cover perfectly without clogging the finest lines, and as it is never gummy like varnish, it dries instantly, enabling one or more tints or colors to follow at once without off-set. Inks of any color or kind left on rollers over night will work or wash up readily in the morning, by simply applying a few drops of INKOLEUM with your finger. A trial will convince any pressman. **Beware of Infringements.** Accept no imitation said to be just as good as INKOLEUM. **Price only 50 Cents.** For sale everywhere. For bruises or burns apply INKOLEUM freely and relief is instantaneous. Put up only by

CHICAGO OFFICE:

No. 292 Dearborn Street.

D. H. CHAMPLIN, Western Manager.

**T**HE ROUTING MACHINE we make is particularly adapted to photo-engravers' use. Not that its peculiarities unfit it for the requirements of electrotypers and wood or brass engravers. On the contrary, it runs so easily at a high speed that it will cut zinc or brass more readily than an ordinary machine will rout soft type metal, and consequently cuts metal more easily yet. If you wish circulars, or information regarding any tools and materials used in electrotyping, stereotyping or photo-engraving, let us hear from you.

CARL SCHRAUBSTADTER, Jr.,

303-305 NORTH THIRD STREET,

ST. LOUIS, MO.

## ECKERSON JOB PRESSES.

THIS IS OUR DOUBLE PRESS, FOR PRINTING IN TWO COLORS OR ON TWO SIDES AT ONE OPERATION.

*Entirely Automatic.*

*Prints from the Roll.*

*Easily Understood.*

*No Feeders Needed.*

*Accurate Impression.*

*Solidly Constructed.*

*Rolls Form Perfectly.*

*Prints in Two Colors.*

*Cuts, Counts and Stacks.*

*Prints on Two Sides*

*Nothing Can Beat It.*

STYLE No. 1.—Four sizes, 8 x 12, 11 x 15, 13 x 19, 19 x 26. For printing one side only.

STYLE No. 2.—Three sizes, 11 x 15, 13 x 19, 19 x 26. For printing at one operation on two sides or in two colors.

We build other sizes to order.

These Presses run from **3,000 to 6,000** impressions per hour.

All the bearing parts are made of Steel or best Wrought-Iron.

NEW YORK OFFICE: 30 BEEKMAN STREET.  
WORKS: COHOES, N. Y.

181-187 MONROE STREET, CHICAGO.

THEY CAN DO IT IN A STYLE THAT WILL PLEASE YOU.

THE INLAND PRINTER is a specimen of their work.

# LOOKING FORWARD.

## A GLANCE AT WHAT VOLUME VIII OF THE INLAND PRINTER IS TO BE.

THIS TIME we beg to announce our plans for the next volume. Beginning with the October, 1890, issue, THE INLAND PRINTER starts its eighth volume. Ever since the first number of this magazine was issued, it has been the aim of its publishers to improve it and make it *the best* publication of its kind extant. That this endeavor has been carried out successfully one glance at the September, 1890, issue, or a bound copy of Volume VII will prove. Volume VIII will be in many respects superior to those of previous years. The colored inserts, and all special features that have made THE INLAND PRINTER so popular, will be continued, and many new features added to make it still more attractive and welcome in offices in every part of the world. A series of articles on Shorthand, written expressly for THE INLAND PRINTER, will be begun in an early issue, and continued from month to month. The method of shorthand described in these articles is new, and has never before been made public. This feature alone will be worth the subscription price. Instruction in engraving, stereotyping, etc., as well as practical lessons in all that pertains to the printer's art, will be given space in its pages. Its editorials, contributed articles, correspondence, specimens of typography, answers to correspondents, engravings, trade news, etc., will, as heretofore, receive especial attention, and be found instructive and entertaining.

We have hundreds of testimonials from subscribers in all parts of the country, testifying as to the esteem in which they hold THE INLAND PRINTER. We select a few from those recently received, to show the tone of expressions daily reaching this office. It is not possible to publish all, but those on this page echo the sentiments of many others.

Do not fail to renew your subscription if it has expired. Canvass your office or city and organize a club. Let others know of the benefits to be derived from the careful reading of THE INLAND PRINTER.

**\$2.00 A YEAR.**  
**\$1.00 FOR SIX MONTHS.**  
**20 CENTS FOR A SINGLE COPY.**  
**\$1.50 PER YEAR IN CLUBS OF SIX OR MORE.**

Write at once for any further information, or send on your subscription or club list to

**THE INLAND PRINTER CO.**  
**183 MONROE ST., CHICAGO.**

### READ WHAT THEY SAY.

- Cannot do without it.—*R. S. Giles, Elizabethtown, Ky.*
- Cannot get along without it.—*A. M. Grindell, Mirror Office, Manchester, N. H.*
- Your magazine is looked for eagerly and appreciated highly.—*John D. Conway, Printer, Lawrence, Mass.*
- Keep THE PRINTER coming my way.—*S. G. Williams, Editor Journal, Rutland, N. Dak.*
- I am highly pleased with THE INLAND PRINTER, and wish you continued success.—*J. F. Hughes, Linden, Wis.*
- Inclosed find my subscription. I know a good thing when I see it.—*Edmund A. Darling, Pawtucket, R. I.*
- THE INLAND is my favorite journal, and I read each one from cover to cover.—*Jno. W. Michael, 817 N. Capital St., Washington, D. C.*
- THE INLAND PRINTER is a regular visitor that we look for eagerly every month. It should be in the hands of all printers.—*Edwin F. Gibbs, Madison, Wis.*
- We could not live without THE INLAND PRINTER here on the Columbia river.—*Geo. M. Cornwall, Gazette Publishing Co., Cathlamet, Wash.*
- I value your interesting journal highly, and could not afford to have it discontinued. I inclose my renewal.—*A. W. C. Finbold, Grand Valley, Ont.*
- Inclosed find \$2.00 which kindly place to my credit on INLAND PRINTER—the best printers' journal published.—*H. E. Tuttle, Sawyer & Woodard, Osage, Iowa.*
- I am very much pleased with your most excellent journal, and have but one complaint to make, and that is, it comes but once a month.—*Fred. C. Davis, Austin, Tex.*
- You need not fear; I desire THE INLAND as much as you may wish to send it. I inclose my subscription. My best wishes for your continued success.—*Z. H. Denison, the Job Printer, Marshall, Mich.*
- I have been trying for two years past to live without THE INLAND PRINTER. If you will put my name on your list I won't do it any more. Inclosed find \$2.00 for year's subscription.—*Jas. Aiken, Pub. Gazette, Redwood Falls, Minn.*
- Inclosed find \$2.00, for which please continue my name on your subscription books for another year. I consider it invaluable to any printer who has any appreciation of the art. I might fill this page with compliments, but I consider the renewal of a subscription the best manifestation of appreciation.—*Wm. Ferguson, Sec'y New York Typographical Union, No. 6, New York.*
- I have subscribed to a great many trade journals in my time, but for originality and usefulness of articles, style of advertisements, presswork, and in fact general get up, have found none to approach THE INLAND PRINTER. The specimens of process work are delightful, and the intricate specimens of rule-work, inserted from time to time, regular eye-openers.—*John Bambridge, Temuka Leader Office, Canterbury, New Zealand.*

## THE BRITISH PRESS.

BY JOHN W. POSTGATE.

TO an American the British newspaper is by no means attractive. Its columns are wide and heavy, the make-up is clumsy and inartistic, the news department lacks variety, and the editorial page is often somber and dull. With the exception of the political and sporting, there is an absence of snap and vigor in all its departments. At times there is an agreeable dash of spice in the sporting columns, and during hot campaigns the political writers frequently indulge in pungent satire and biting invective. But, as a general rule, the British newspaper is insufferably dull and stupid—that is, to Americans abroad. We must give the English editor credit for knowing what he is about. If he makes a tiresome journal he is undoubtedly giving his readers what they require. John Bull is not an imaginative man; he has a greedy appetite for facts, especially such facts as tend to promote material results, and his newspaper must cater to his temperament in this regard. He wants no fanciful writing; he likes a certain degree of style in the editorial page; but reports of meetings, records of criminal affairs, reviews of trade and commerce must be presented to him in the driest, most matter-of-fact manner. Any attempt at embellishment by the reporter would arouse his ire and spoil his mental digestion for a month.

The vast ramifications of British interests play no small part in the management of an English newspaper. The editor must be thoroughly conversant with foreign affairs. He must be continually on the lookout for political changes on the European continent; he has to keep a watchful eye on the tactics of eastern potentates and run abreast of colonization movements in all parts of the world. His readers are deeply interested in the internal economy of every state and nation. British capital is invested everywhere, and is continually seeking new fields of employment; consequently, the editor has to keep his finger on the commercial and political pulse of the globe, and print such information as will benefit as well as interest his patrons. It is owing to

this fact that so much space is given to foreign correspondence, which is often stupid reading for Americans, but is relished keenly by the British investor and speculator.

The Englishman has his own ideas of what constitutes news. Everything must “happen” to be of interest to him. Anticipation, the life of American newspapers, is almost an unknown quantity in British journalism. “Beat” and “scoop” are unintelligible terms to the editor, who will leave out the details of a great fire or the particulars of a thrilling shipwreck in order to find room for a full report of a speech on the Irish land question. In London local news is almost completely ignored by the great dailies. During the session of parliament reports of debates have precedence of all other news. The *Times* frequently publishes three and four pages of the proceedings of the two houses, and the affairs of the great metropolis (whose population almost equals that of Canada) are condensed into a few paragraphs about accidents, fires and police court topics. It is this indifference to purely local news which disgusts the American reader of the British press. Local news is the very life blood of American journals. The many shifting scenes of life furnish a feast for all classes of readers; but in London, where sensations develop daily, where the ebb and flow of humanity reveals the most startling contrasts, the newspapers close their columns to affairs of pressing interest in order to discuss dull matters of international concern. As stated above, this is a feature demanded by John Bull the trader and speculator, but I am afraid it possesses no attraction for the ordinary reader, who is as curious as to the passing events in his neighborhood as is his counterpart on this side of the water. The London edition of the *New York Herald* started with the intention of remedying this great defect in British journalism. But Mr. Bennett's experiment failed. He did not grasp the situation thoroughly, and he could not overcome the prejudice against American journalists which seems to pervade all classes of British society. He dropped occasionally into English ways and habits; it was difficult to determine at times whether his paper was English or American.

The British public look askance at enterprises of so dubious a character; they refused to subscribe, and Mr. Bennett, after dropping half a million dollars, suspended publication in disgust.

Editing in England is by no means the fine art it has become in the United States. Very little attention is paid to details. The managing editor contents himself with giving out topics for leaders and sending instructions to his foreign correspondents. Everything else is left to one or two sub-editors, who, as a rule, have little conception of what constitutes real "news," and are largely responsible for the uninteresting style of British journals. The "copy reader" is unknown to the profession in England. On important papers like the London *Standard* and the Manchester *Guardian*, the sub-editors merely glance over manuscript with a view to its general suitability. Corrections are rarely made, and ordinary errors of grammar and punctuation are left to the watchful eyes of the compositor and proof-reader. Indeed, these gentlemen are practically the editors of the great dailies. The leader writers and sub-editors may be men of great literary ability, but they have no taste for the technicalities of their profession. The foreman printer is responsible for the make-up, and ought properly to be called the night editor; the compositor is held accountable for obvious "outs" and grammatical slips in copy, and the proofreader exercises a careful supervision over all. As a result of this system, the English compositor acquires considerable editorial training. He weighs and criticises his "takes," and frequently makes suggestions to the foreman printer with a view to improving the phraseology; he becomes conversant with all subjects of public importance, and is often more capable of guiding the destinies of a great newspaper than the university man at its head.

The English compositor is "intelligent" in the legitimate sense of the word. He untangles the worst kind of copy; he straightens out contortions of orthography and grammar, and he sets up tables from running matter without grumbling about the incompetency of the sub-editors. I remember several instances where articles which could not be deciphered in the rooms below, were sent to the composing room and put in type so as to enable the editors to judge of their quality. Some years ago I took Mr. George Baker, of the state's attorney's office, to a printers' club house in London. Mr. Baker did not know the company he was in, and was deeply interested in the discussion of a public topic. "Who are those gentlemen?" he asked, on leaving. "They are compositors on the London dailies," I replied. "Compositors!" he exclaimed; "why, I thought they were members of parliament." This compliment will be more highly appreciated when I state that Mr. Baker formerly held a prominent position on the Chicago press.

The English reporter, owing to the depressing influence of his environment, speedily degenerates into a mere machine. He must be a shorthand writer, as

longhand work of every kind is frowned upon by the managers of the great journals. He is compelled to use stereotyped phrases in his work, which add to the insufferable dullness of the newspapers. Anything like description in the report of a political gathering is strictly tabooed. The meeting opens in a prescribed way, the speakers are introduced in time-honored fashion, and "the meeting then terminated" invariably winds up the account. The "special commissioner," whose work corresponds to that of our reporters, is allowed more latitude. He can occasionally indulge his fancy, and get out of the beaten track of monotony. Archibald Forbes, the famous war correspondent, belonged to this class, but few special commissioners are fortunate enough to make a reputation outside the newspaper offices. English journalism is anonymous in the highest degree. Scarce a dozen newspaper men are known beyond the purlieu of Fleet street. I question whether a score of persons outside the profession know the name of the editor of the London *Times*. This may or may not be a good system. One of its results, however, is to maintain respect for the press. The mysterious "we" is more potent when the identity of the writer is unknown, and what the English journalist loses in personal reputation, the newspaper he serves gains in influence and power.

Press work in England is, on the whole, better compensated than similar work in the United States. Managing editors are paid from \$5,000 to \$15,000 a year; editorial writers run from \$5,000 to \$10,000, while special commissioners receive from \$2,500 to \$10,000. Forbes was paid the latter sum by the London *Daily News*, which also made him a present of \$10,000 after his magnificent work during the Russo-Turkish war. Ordinary reporters earn from \$10 to \$50 per week, according to ability and experience.

Written for THE INLAND PRINTER.

**BORES.**

NOT A LIVE-STOCK TREATISE.

BY HERBERT L. BAKER.

**K**ILL off the bore! That fellow who thinks he owns the office because he brings in an occasional job. He appropriates desk room, helps himself to stationery, borrows stamps, loafs about the composing room bothering the busy workmen; he sits on one chair and puts his feet on another while weary customers stand; he leans over the counter and lends attentive ear to the bargaining of printer and customer, then makes funny (?) remarks before the customer gets out of hearing; while his book is in hand, he interferes with the routine of the whole office by his cranky ignorance and imagined knowledge of the business. He insists on "long pica" body type, with "small beever" headings; he kicks because time is charged for making changes; he objects to giving sheets time enough to dry before printing the second side; he makes life a dreary waste to everybody in the place while his work is in, displacing much more profitable business. He finally insists on deductions from the

bill on account of all sorts of trivial things; and adds the finishing touch to the whole by assuming a most offensively patronizing air, as if his patronage alone stood between the printer and failure.

Kill off the bore! That customer who "used to work at the business myself, you know." He wastes the compositor's time by taking his stick and setting a few letters wrong side up, to show he has not forgotten how to manipulate the types; he presumes to criticise the work of the office and point out its defects, the alleged defects usually being the printer's special pride in "new wrinkles." He kicks on composition, presswork and binding of his job, when, in fact, he has no knowledge of what he is talking about.

Kill off the bore! That fellow who takes every opportunity to tell a smutty story, and expects one to listen politely to his nasty filth, and laugh when he does. He mistakes smut for wit, and protrudes his vile tongue on all within hearing, twisting the most innocent remarks of others into the semblance of smutty meaning.

Kill off the bore! That pressman or foreman who accepts a "rake off" from ink agents or machinery salesmen. He knows it comes out of his employer every time in some shape, and is a bore to both agent and employer. How much better and more honorable the sneak thief is than he, remains for the reader to decide. The sneak thief at least lacks the nerve to accept a man's money in one hand and steal from him with the other.

Kill off the bore! That loafing, shiftless workman, too lazy to hold a situation long himself, who spends his spare time visiting his more diligent friends and bothering them with his ceaseless gabble. At the same time, kill off the chap whose tongue is hung in the middle, so that his everlasting chatter never lets up. Let's "have a little peace, even if we have to fight for it."

Kill off the bore! That middleman who bamboozles the printer into giving him special rates, then underbids the printer on the orders of his best customers. He always hangs for special prices, and by a systematic course of artistic lying makes more money out of a job than the printer who does it. The middleman is only a sap-sucker, a parasite, a cockroach, a leech on the business anyhow, who can largely be suppressed by a little vigorous effort on the part of the printer. Let the middleman pay a fair price, then if he can get customers to pay him a figure to leave him a profit, no one can object, since no one but the customer suffers, and he deserves to suffer for his foolishness in giving orders to parties who farm out the work.

Kill off the bore! That woman who asks to have show printing done for nothing because "it is for our church, you know," then has the colossal nerve to urge the printer to buy tickets for cash. Also, the theater manager who jews down the price of printing all through the season, then expects a free lot for his benefit performance in the spring.

Kill off the bore! That secretary of a political club who, because he turned over a few jobs during the

campaign, expects to have his own printing done for nothing the balance of his life.

There are many other bores who ought to meet the same fate, but with these mentioned out of the way forever a gloriously roseate dawn of brighter days would steal upon the printer's vexed and wearied soul, and there would be some fun in doing business even if all his profits did have to go into new type and material.

Written for THE INLAND PRINTER.

#### THE HINDOO PRINTER—AN EXTRAORDINARY DISCIPLE OF THE ART PRESERVATIVE.

BY MALCOLM MCPHERSON.

WHILE Johann Faust, Gutenberg and Caxton may by some bare possibility have dreamed of the marvelous growth and improvement of the art preservative as we see it at the present day, it is safe to say that not even in their wildest flights of imagination did they ever outline such an extraordinary being as a Hindoo printer. When printing was first invented and books were produced from the coarse wooden blocks, the superstitious multitude suspected that Faust and Gutenberg were in league with the evil one, a relic of which superstition survives to us in the name which is generally applied to the boy in the printing office who has to do the arduous work of the "devil." Had these celebrated fathers of the art happened to hire a stray Hindoo as their assistant, the populace would have had no doubt whatever that they were hand in glove with Sathanos, and that bronzed Oriental would have run a pretty fair chance of being burned at the public market place for practicing wicked and unlawful arts.

Imagine a slightly-built, dark-skinned gentleman standing up at the case wearing nothing on earth but a little silk cap, turned up slippers, and a dhotee, little better than a breech-clout, around his middle, and you have a fair idea of the outward appearance of a Hindoo printer at work, or what he pleases to call work. The sweat streams in rills down the channels of his back, globes of perspiration stand a moment on his forehead and then break and tumble over his nose and thence into the space box. Take a hundred of these Hindoos working in one room under such conditions, and you may possibly realize what kind of an ancient and fish-like smell would overwhelm your nostrils if you happened to enter that composing room. Cologne, before the invention of the scented water which bears its name, had—so Coleridge affirms—over seventy distinct and well-defined stench, but I am certain that not one of them resembled the unique, the indescribable, odor which floats around like a cloud in a printing office occupied by Hindoos when the thermometer is indicating anything between ninety and a hundred degrees in the shade. Bad as that stench is, however, it is nothing to what it becomes when the time for the noonday meal arrives. The odors of dried fish, garlic, asafoetida, and fifty different kinds of curry mingle with the original stench and give it a sort of flavor, as it were. When the foreman gives the word each man drops his

stick, squats on his heels on the floor, opens his parcel of cooked rice, and then proceeds with his right hand to cram his curry, his rice, his chutney and his dried fish down his throat. After this they chatter for half an hour—and a fearful babel it is—until the bheestie arrives with his mussuck full of water. A bheestie is a water carrier, and his mussuck is a goat skin, sewn up somewhat in the shape of the bellows of a pair of Scotch bagpipes. The almost naked Aquarius passes around the different frames and pours water into the right hand of each man, who laps it up like a dog. Observe the use of the right hand only. For certain reasons the left is never used at meals by a Hindoo of good caste. After the water has been passed around, work is resumed, but the constant chatter goes on all the afternoon and until the paper goes to press shortly after two o'clock in the morning. The foreman, a big paunchy Parsee, named Sorabjee, Rustanjee, Jamsetjee or some "jee," has a thin, squeaky voice and makes more noise than anybody else, as he keeps yelling out his orders, more to show his authority than anything else. To his European superiors he is cringing and obsequious; to his inferiors he is a tyrant first, last and all the time.

With his long, skinny fingers, and a nervous temperament, the Hindoo should be a fast compositor; and he is so in offices where he gets his own language to compose; but in the large European establishments he is exasperatingly slow, simply because English manuscript is Greek to him, and he goes on setting type like an automaton, knowing nothing whatever about the matter on his case, and caring less. The result of this state of affairs is, of course, from nine to a dozen different proofreadings of the same matter. In any large printing office in India proof correcting forms the heaviest item of expense. Notwithstanding so many proofreadings, the most exasperating blunders creep daily into publication, and when an editor receives his morning paper at his bungalow, he opens it with trepidation, and only lays it down with a sigh of relief when he finds nothing that is absolutely scandalous or objectionable. The blunder of a Hindoo proof corrector once got a friend of mine into serious trouble. He was editing the *Times of India*, which is an English newspaper, the policy of which is to support the natives against the government in every case of difference between the two. On the occasion of the Prince of Wales' visit to India, Sir Salar Jung, the Nizam's prime minister in the territory of Hyderabad, and a remarkably able and haughty Mahomedan, expressed his intention to be present at the reception of the prince in Bombay. Here was the *Times of India's* chance. So prominent a native as Sir Salar Jung must be lauded to the skies, even to the innermost heaven occupied by the Hindoo celestials. Accordingly, my friend sat down and penned a gushing pæan in honor of the distinguished visitor. He assured the "princely minister" an enthusiastic welcome from the million inhabitants of Bombay, and made a great many other well-meant but extravagant assurances. Imagine his disgust, his horror, when he

opened his paper next morning and found that wherever he had meant to speak of the "princely minister," his proofreaders or printers had made him speak of the "princely monster." He at once wrote a letter of explanation and abject apology to Sir Salar Jung, but the distinguished Hydrabadian was mad, and it was only by the intervention of high government officials that the *Times of India* was not sued for \$25,000 damages, and the editor seized and thrown into jail for criminal libel.

I used to keep a scrapbook of some of the extraordinary blunders that appeared in print while I was in India. They were of a kind which it is beyond the power of any American to conceive. The inversions of language, the attempts to use English idioms in their proper sense, the prevalent ignorance of English social habits, produced the most ludicrous effects, and jokes that would make the fortune of any comic paper in the world. I have unfortunately lost that scrapbook, but I remember the funny attempt of one learned Hindoo to render into the vernacular the well-known nursery rhyme about little Jack Horner, who sat in the corner, eating his Christmas pie, and who put in his thumb, and pulled out a plum, saying, O what a good boy am I! Here is the Baboo's version. I think it is unique:

"Chota Jack Horner bita mi corner,  
Khaty ko Christmas pie.  
Ooska ungli me dalla, ek kismee nekalla,  
Aur bolta, Bohut atch a chokra hum hi!"

The Hindoo printer is a constant source of dread to the conscientious editor, but as he could not possibly be supplanted by white labor, he must be regarded as a necessary evil.

WRITTEN FOR THE INLAND PRINTER.

OH, YES!

BY F. W. THOMAS.

WOMEN will some day be printers. They have a natural love of mechanics, machinery and tools, and such a keen perception into the workings of all such things. How can they help but become printers? I tell you that a woman is the ideal mechanic. Is she not widely noted for her ability to drive a nail straight? Did ever anyone hear of a woman who could not take her sewing machine to pieces and put it together again O. K.? Certainly not. Such things are in a woman's sphere. Her appreciation of mechanical devices is so great that she understands them at a glance. A man's ingenuity is nowhere. She is bound to lead the world in these things. Do you doubt it?

Fellow printers, here is proof. Several evenings ago I spent a full quarter of an hour explaining to a fair feminine creature the wonders of *brass rule* bending. For some time I wore the proud air of a man who has done something, and done it well. I prided myself on my descriptive powers. I fancied I had left no shade of doubt or perplexity in her mind as to the character and appearance of *brass rule*. Imagine my horror when in less than half an hour she pointed out some embroidery patterns in a fashion catalogue and asked me if that was not some of "that work done with *gold wire*."

## STEREOTYPING.

NO. XII.—BY CARL SCHRAUBSTADTER, JR.

**M**OST important is the selection of the casting box. It is on this instrument that the accuracy of the work depends. Both top and bottom should be perfectly flat. This is of more importance than that they be absolutely smooth. If the box is too large, it will require an unnecessary amount of strength and waste of time in heating it. If the top is too high when tilted up, the ladle will have to be lifted unnecessarily high. If too low, the stereotyper will have to stoop in placing

his matrix and removing the casts. If the box is too light, it will not remain true; if too heavy, it is clumsy to handle and takes too long to heat. It has been found that comparatively thin plates, suitably ribbed, make the best boxes. In the small boxes, where the pressure is applied in the center, the ribs are usually made to radiate from the point of the screw's contact, as in the first figures. In the larger boxes, which are clamped in the corners, the ribs are either longitudinal, as in Fig. 4, or, preferably, there are two sets, one at right angles to

FIG. 1.

the other. Boxes were first made of two plates, the inside surfaces of which were flattened. After the matrix had been laid on the lower plate, the bearers, in three pieces, were placed on its edges and secured by clamps on the corners. The open edge was then tilted up and the metal poured into it. The first improvement consisted in running up arms on the sides of the lower plate, and connecting them with a swinging cross brace, in center of which a screw was placed. By turning this the plates were clamped together. At the same time ribs were added, strengthening the box without making it too heavy. Such boxes are still in use to a moderate extent, Fig. 1 being copied from a European manufacturer's circular. This box, though it answered every purpose, required too

much time, and to afford greater ease in handling, short shafts were added on each side of the bottom box, resting in the trunnions of a suitable stand. Such a box naturally falls into an upright or casting position, as

FIG. 2.

shown in Fig. 2, also a copy of a European cut. When the box is to be opened to remove the cast, it is swung into a horizontal position, and the catch shown on the extreme right hand of the cut engages in the bottom half of the box, preventing further movement. The screw is then loosened, the cross arm thrown back, and the cover lifted. Were no provision made against it, the cover would fall back until its top reached the floor.

To avoid this, the projecting arm is attached to the bottom of the lower half, and the top rests against this. Another form of this apparatus is shown in Fig. 3. Instead of the arm in Fig. 2 it is provided with a balanced hook, part of which may be seen immediately

FIG. 3.

beneath the box. This engages in a cross bar and prevents the box from assuming a vertical position. To keep the top from going back too far, projections are made on the upper halves of the hinges. This, or a similar box, is generally used for small work in this country. For larger work the style shown in Fig. 4 is usually employed. This box also swings in trunnions, A being held in a horizontal position by the uprights B and D. When the box is to be opened the clamps are loosened and the cover raised, the bar E, attached to the stand,

FIG. 4.

preventing it from falling back too far. To bring it into a vertical position for casting, it is only necessary to lift the lever, C, and swing back the arm, B, when the box will fall into an upright position. Instead of having the plates separate, as shown in the first illustration, they are generally hinged at the bottom, as in the other cuts. If but one thickness of plate is to be cast, the hinges are of the usual form, but if various weights of plates are to be cast, or if the box is to be used as a drying press, the hinges are slotted vertically to allow the plates to come down parallel at any thickness.

### THE PRINTING TRADE AS AN EDUCATOR.

BY SAM. G. SLOANE.

IS the printing trade a real educator? By this question I mean, do its followers gain any real education from it, independent of all other sources and efforts. That it offers some opportunity for gaining knowledge not afforded by other trades is self-apparent. But are the members of the printing trade—the working printers, both news and job—as a class, better educated as a direct result of their trade than the members of many, if not all, other trades? That they are popularly supposed to be, I know, but, judging by knowledge gained from more than twenty years among them, I do not fear to take issue with this popular notion that printers are better informed on account of their trades than other tradesmen. I will not claim that they are not as well informed as other tradesmen, and I will even admit that they appear to be what is popularly claimed for them. I am of the belief that this reputation of superiority is gained partly from supposed opportunity to acquire knowledge afforded by the trade, and partly because the printer gains the knowledge acquired from his trade in advance of other tradesmen. I say “supposed opportunity” purposely, for I know from personal experience that the trade does not afford the educational advantages popularly attributed to it both by its members and those outside of it. Those outside jump at the conclusion that because one’s work is with books and papers, that, as a consequence, he must know all about them. They do not know that the printer in his work rarely sees all of a book or paper, or any of their articles entire, and, although engaged in the making of books and papers, he does not, by his work, gain full knowledge of their contents. Besides, it is but a meager percentage of the many books and papers made by the printers’ hands that are real educators, and of course the number of printers employed upon them is small in comparison with the total number engaged in the trade. “Of making many books there is no end,” but, alas! how few of them are real educators even to those who read them entire, which the printer engaged in making them cannot do except as other people do. While his work is that of putting knowledge into shape for the world, the printer to possess that knowledge must acquire it in the same manner others do; he must seek and acquire it for its own sake. Of course he cannot help gaining some knowledge of the subject matter of the books and papers upon which he is engaged by his work, and herein lies what ought to be a real advantage of the printing trade over others as an educator. In it one is afforded opportunity to gain an insight into what there is to be learned in the realm of books and papers; it points out many things that ought to be learned; it shows one the road to knowledge, but does not afford that knowledge. Like a guideboard, it points the way but does not take one there. But, in the light of the facts, I am compelled to say these printers are not made as much of by a great majority of the workers in the printing trade as they

should be. At best the knowledge gained by the printer from his trade is but fragmentary and disconnected, and of slight availability; it can hardly be said to come under the head of education. I am sometimes inclined to the opinion that such fragmentary knowledge is really detrimental rather than beneficial, and this opinion can be sustained by several reasons. It tends to put one in the habit of being satisfied with superficial knowledge, rather than delve deep and get the bottom facts of the subjects of which partial knowledge is gained. I think the printer’s trade is one well calculated to give him a little and fragmentary knowledge of many things; but that it will give him full knowledge of any subject, study or science, I do not think can be claimed and the claim sustained. This superficial, disjointed information is not education, and is to many detrimental rather than beneficial. To be sure it is a taste; and to many, a taste that comes without effort is sufficient. Especially is this true when special effort is necessary to acquire more. And, furthermore, to make the effort required to gain more information on a subject of which some knowledge has been gained in his work, seems to the printer much like continuing his work after working hours are ended. That his work is so much with his brain is often given by the printer as an excuse for not indulging in much that is of a mental character outside of working hours.

Another reason why the printer’s trade is not the educator it is popularly thought to be is, that while much of his work is of a mental character it becomes mechanical in a very great degree—so much so that practically no knowledge is retained of a piece of work after it has passed through his hands. I think any old printer will attest to the correctness of this statement. The printer finds after he has worked on a subject that to know it he must give it study as though he had never seen it.

While I believe the printer is as great, and may be a greater, reader of newspapers and like literature, I am not ready to make the claim that he is superior as a student of solid, substantial literature to workers in other trades. That he should be, I will admit; that he is, I cannot. From my acquaintance and observation among them I do not feel warranted in saying that the percentage of printers who own a library, or even the nucleus of one, of good books, is any larger than in other trades. Too many of them are apparently content to rest upon the reputation of being superior to other tradesmen in point of learning. The inclination to be satisfied with the reputation for possessing a thing, even though the thing is not possessed, is not absent in the printer any more than others of the great human race; for this reason he rests upon laurels popularly attributed to him, but which he does not have. It is a homely old saying “that so long as a man thinks he knows it all, he does not learn anything.” So long as the printer is satisfied with the mere reputation for knowledge, he does not seek very assiduously to acquire it. This is the point I wish to make, that the printer’s trade is not, but is popularly supposed to be, an educator within itself; therefore, the printer is, other things being

equal, accorded the possession of knowledge superior to other tradesmen. The detriment to the printer follows from being satisfied with this erroneously attributed superiority, and, therefore, failing to acquire the knowledge that would give him the real superiority.

It has not been my aim in this article to detract from the real intelligence and learning of the printer, nor do I think I have done so. My aim has been to show that the knowledge afforded by his trade is at best fragmentary and superficial, and cannot be denominated an education. I would urge him to take up some course of reading or study outside and independent of his work, and pursue it assiduously until he becomes as thorough and proficient in it as possible. Such knowledge will prove both beneficial and a pleasure, and the laurels it brings will be real and fairly won.

### AUTOBIOGRAPHY OF A JOB PRESS.

NO. II.—BY F. J. HURLBUT.

THE incidents in my life are very like the record of a human life, in that they portray a series of errors and misfortunes that inevitably tend to shorten the narrator's existence, but they differ greatly in the respect that the human being and I sustain opposite relations to natural law. He is both its servant and its master, while I am simply its slave, without his inherent possibility of altering my relation thereto.

This observation is not so much of digression from my narrative as you might at first conclude, for I have discovered that I am a sort of object lesson to a great variety of students whose varying degrees of aptitude and intelligence are exhibited to no better advantage than when they assume the management of a printing press. Some of them, apparently, think I am an inspired creature, having brains, which they have not, and treat me as though I ought to perform the same feats under all circumstances and conditions, without the assistance of that indefinable quality which our Yankee forefathers called "gumption," and which is occasionally described as common sense.

You will remember that I said my purchaser assured the dealer of whom he purchased me that he knew all about my construction and my adaptabilities. Well, that must have been a joke, for he knew no more about me than a good methodist deacon knows of the tempting but elusive jack-pot. He put me in charge of a small boy whose value consisted of the facts that he would work for small pay and could feed rapidly, so rapidly, indeed, that it mattered little to him whether one or six sheets went in at once, and he had a wonderful faculty of hiding the spoiled sheets and disposing of them during occasional trips to a convenient closet.

I never shall forget how emphatically the master impressed upon that boy the necessity for feeding up to gauge, keeping the wheel turning, watching his color, etc., *but not a word about oil*. Being quite new, and but partially oiled, it was not long before my bearings were like the lips of a desert traveler, and before the

day was passed the belt on my driving pulley slipped whenever the boy gave me steam. This attracted attention, and the boy was told that I *might* require oiling, so he oiled me at every point except the crank shaft, where I needed it most. This eased my action a little, but nature was bound to assert itself at that crank shaft, and presently I came to a full stop, the belt screeched and tugged, but to no purpose. The journal was cut.

There was a regular inquest held over me then, and I was thoroughly oiled on all my bearings, including the seat of trouble, but it was too late; several strong fellows tried to start my fly-wheel, but no one could discover the cause of the difficulty. Finally the dealer was called upon to "send a man over to fix that press. It won't run." The machinist who responded removed the crank-shaft at once and showed it to the printer, who merely remarked, "Well, that press was well oiled, and if it had been fitted properly the cutting would not have occurred." He had learned a lesson, though he had not the courage to admit it.

My next misfortune was caused by a loose gripper. The boy was using only one gripper and simply shoved the other out of the way, but did not secure it tightly, and the jar of the press moved it gradually toward the outer edge of the bed. The boy was feeding merrily, nearer and nearer crept that horrible gripper, and I fairly trembled as I anticipated the disaster which must follow when it arrived at a point where it would be caught between the platen and the bearer of the bed, but there was neither intelligence nor kindly hand to avert my doom, and—crash! my pinion was stripped from the shaft and broken into several pieces.

Now, my friend, what do you suppose occurred? Why, the boy was discharged for his carelessness and the printer got a new pinion and paid for it without a murmur? Not so. He was assured that the press was running as usual, when it suddenly broke down without cause or warning. And this was the story he told the dealer, who, poor man, finally compromised by furnishing a new pinion at half price. The fact was that no one had the sense to get at the cause of the disaster, and not one of them will ever know what it was, but the relations between my owner and my builder are strained, and always will be. Neither of them dares refer to the breakage.

Since then I have seen my companions broken down repeatedly in various places under similarly mysterious circumstances, but in very few cases has the blame been placed where it belonged, namely, to the carelessness or stupidity of the operator. It is always the same old chestnut. "I don't know how it happened. The press was running all right when it suddenly broke down without cause or warning."

One warm day in April, when the atmosphere was damp as well as hot, the boy in charge of me reported to the printer that I was slurring, and he could not stop it. The printer examined a sheet of the job, thought as the boy did, of course, and notified the dealer that the

press slurred. The fact was that the rollers were made for winter use, the warm, damp day had softened them, the job in hand had a great deal of rule work in it, the rules were cutting the rollers, and the composition was mixing with the ink, which made the job work very dirty. That was all, but the machinist who came to examine me could not discover the difficulty. It was not in his line. He was sure that I did not slur, but he could not make the printer believe it, and to this day my owner insists that I "sometimes slur." It happened that the roller maker came in at that time, on his usual rounds, and suggested to the printer that it was time to order new rollers, pointing to the condition of mine as evidence. The job was put on another machine, new rollers were ordered for me, and thus ended another experience which should have been a valuable lesson for my owner, but of which he either would not or could not avail himself.

One disaster that befell me will never be erased from my memory. It arose from my owner's overestimate of my endurance. He put on a run of fifty thousand large labels, duplicated so that the form filled the chase. I had a good fountain, so the color was all right, but he used pretty hard packing, and there was considerable soiled surface in each label, and this multiplied gave me a terrible load. There was not sufficient strain to cause a breakage at any one impression, but each impression strained every part of me to its fullest tension. Now, if a practical man had watched my labors he would have seen that my large gear wheel bent outward at every impression by the pull from the side arm, that was just like taking a piece of wire and bending it backward and forward with your fingers, and, this bending process occurring always at the same place in the wheel, a weakening was sure to result. On the second day of this run the feeder began to notice that there was trouble brewing. The impression grew lighter, and he forced my platen forward, and finally he called for help, when an examination revealed a long crack in my large gear wheel, which opened wider with every impression. *I was carrying too heavy a burden.* I was being worked to my full capacity under circumstances that left me no chance to save myself. This is a common error with printers, and affords proof of what I have all along claimed, namely, that the job press is the drudge of the printing office; is subjected to greater burdens in proportion to its natural capacity than any other machine.

Did you ever think to compare, by actual figures, the difference between what is expected of a cylinder press and the tasks that are set for the bed and platen machine? Well, let me give you a pointer. You know the old proposition that two elements are required for printing, and that these are "ink" and "squeeze." You know, further, that you can, to a certain extent, substitute one of these elements for the other, only in a slight degree, however. The "squeeze" is the actual labor of the machine. Your ponderous two-revolution, with a printing surface fifty inches long, has less squeezing to do than a little 8-by-12 jobber, providing that both

have full forms to work. It is a simple calculation. When the cylinder is printing, its contact with the form is 50 by  $\frac{1}{8}$  inches, equaling  $3\frac{1}{8}$  square inches of printing contact. The job press must print 8 by 12, equaling 96 inches. Besides this, the jobber does its work in a manner that gives it no leverage. It must go over a given center under the severest strain, while the cylinder rolls over its form.

Probably you never thought, before now, that the lofty cylinder press that costs so much, and is so greatly admired, is not doing a tenth of the actual work performed by its little neighbor who trundles along in its humble, unpretentious manner; that is, it does not expend as much force in actual printing. It is a great, unwieldy bulk, and four-fifths of its force is spent, not in printing, but in propelling its bed. You may think there is a little jealousy at the bottom of this idea, but, whether there is or not, it is readily susceptible of proof.

I find there is not time to give you anything like an account of my experiences in a single chapter, as I cannot resist the temptation to linger over some of the lessons learned by the wayside. I am now in a condition that may be considered *passé*. The zenith of my life is past, and I know that it might have been prolonged almost indefinitely if I had been operated with due care and intelligence, which two qualities are admirable substitutes for skill.

If you should ever desire to hear more about my tribulations, call on me, and I will recount them as they occur to me. I will leave you to digest what I have already said, with the added statement that the job press is the pack mule of the printing office. It is given less consideration than any other machine. It is put into the hands of incompetents, and expected to respond with unvarying uniformity to the touch of all kinds of talent, or people without talent.

#### PRINTERS AS GOSSIPERS.

BY M. STANISLAUS MURPHY.

"Oh, yes, they will gossip, must gossip, I trow.  
Some people about each other you know."

WHEN the present generation of gossipers shall have ceased to exist; when their "forms" are locked up in the "chase" of everlasting sleep and their gossipy tongues are forever stilled; when they are no longer able to transmit their messages of disturbance from one to another, their places will be filled by new recruits, and the misfortunes, real and imaginary, of fellow mortals will be heralded forth in the same telephonic manner in which gossip is exchanged at the present time. From time immemorial it has been ever thus, and will continue until the world ceases to be.

But it is particularly in reference to printers as gossipers that I wish to speak at the present. They are everywhere recognized (and by printers themselves) as the peers of gossipers, or back-cappers, which is a more recent title, but having the same meaning as the

primitive word. And from a knowledge of certain facts gleaned by close observation, I am convinced that the assumption in this regard is well based, and that a large number of the gossipers of the present time are really found among members of the art preservative. Gossip is not strictly confined, as is generally supposed, to members of the female sex. This is an erroneous impression, and an injustice to womankind. Admitting freely that no opportunities are lost in this regard by the opposite sex, yet I am led to believe that no small amount of gossip is indulged in by our own sex, and a considerable portion of it is maliciously carried forward by knights of the stick and rule. In substantiation of my statement we have only to look about us and study the methods pursued by these human telephones, and there will be but one conclusion arrived at—that as tale-bearers a large percentage of the printers of today are entitled to seats in the front row.

If you are in possession of anything important concerning yourself or somebody else which you don't wish to become generally known, beware of these printorial trouble-breeders, for if you should accidentally disclose your secret to one of them in the morning, before night you will regret that you hadn't remained silent, for by that time it will be the common property of every printer in town. It seems inconsistent that a body of men banded together for mutual protection should take delight in publishing to the world the misfortunes of their brethren; but unhappily such is the case in regard to some of the printers of today. If one of their number is unfortunate enough to fall from grace, instead of endeavoring to shield his weakness from the knowledge and criticism of others, the typographical gossipier will travel as fast as possible in order to acquaint as many as he readily can of his fellow-craftsman's misfortune.

Much of the gossip emanating from printers is prompted by the demon known as the green-eyed monster, whose evil influence is forever creating discord and causing dissensions to exist where the relations of one to another should never be aught than friendly. It is a destructive rock upon which the barque of friendship has many times been wrecked. It has transformed friends into enemies, and created life animosities. If a fellow-craftsman is succeeding beyond his expectations in any undertaking the malicious gossipier allows this demon to become aroused within him, and any indiscretion, however slight, on the part of the successful one, is eagerly grasped by the envious tale-bearer and magnified as much as possible, and then peddled out to the craft gloatingly and with evil intentions, but usually such stories carry with them their own condemnation.

As members of the art preservative, if we must gossip let it be of the good deeds rather than the misfortunes and indiscretions of our fellow-craftsmen. Let us be charitably disposed toward one another, and if one of us is unfortunate enough to fall by the wayside let the remaining ones, as far as is consistent with their manhood, endeavor to shield the erring one's misfortune from the knowledge of the outside world.

Written for THE INLAND PRINTER.

### LONG SERVICE AT THE CASES.

BY GEORGE WASHINGTON JOHNSTON.

SOMETHING like six years ago an article appeared in the New York *Sun* from a correspondent at Erie, Pennsylvania, calling attention to one Michael J. Quinn, known among the printers of that city as "Father Quinn," who, it was thought, had cashed in a longer string than any man then living and working regularly at the cases. The article states that "Father Quinn was apprenticed to a printer in the city of Waterford, Ireland, in 1830, and, after serving his apprenticeship, got cases on the London *Times*, and "stuck" a large portion of the type from which the notice of Queen Victoria's marriage was printed. He soon after came to America, and for seven years held cases on the New York *Evening Post*, then for twenty years held cases on the Erie *Dispatch*, and in 1884 was still holding cases on the Erie *Daily Herald*. Mr. Quinn was then a little over sixty-nine years old, and claimed to have averaged about 7,500 ems per each working day of his life at case, which, during fifty-four years, would amount to about 119,340,000 ems of matter, which figures may be the better comprehended, perhaps, if it be estimated that in setting that enormous amount it must have been necessary for him to have handled, counting in distribution, about 716,020,000 separate pieces of metal.

Since that article appeared it has been my good fortune to stumble over four other printers who can beat that record in some of its most important features.

In Lancaster, Pennsylvania, lives John H. Pearsol, who claims to have been apprenticed to a printer in the summer of 1826. He was then seven years of age, and for a while acted more in the capacity of errand boy for Hugh Maxwell, the then publisher of the Lancaster *Gazette*, than as a printer. But that he must have been more than usually diligent in learning is evidenced by the fact that before he was fourteen years of age he had earned the reputation of being one of the swiftest compositors in the United States. In speaking of his apprenticeship, he says he had to be placed on a chair to get high enough to see the boxes, his instructor frequently taking him by the back of the head and bumping his cranium on the case to make him remember a box containing a letter, the situation of which he had forgotten. He facetiously adds that having had the trade bumped into him, he thinks it stuck by him better than as if he had bumped into it. At the age of eight, with all his errands and "dirty devil work," he had won the proud distinction of outstripping the best compositor in the office. Mr. Pearsol will be seventy-three, if living, the 12th of next January (1891). In 1856, he associated with himself Mr. J. M. W. Geist, and together they started the *Daily Express*, now the oldest daily in Lancaster county. The paper has always been a staunch temperance organ, reflecting the opinions and principles of its proprietors, largely for a cause which dated back to Mr. Pearsol's third year of age, when he was deprived of his mother by the pistol of a drunken ruffian, from

whom she tried to shield his (the ruffian's) family. Mr. Pearsol says he is just as much of a compositor, and labors at his cases, to-day as he was in the summer of 1826, which is sixty-four years ago.

In Milwaukee, Wisconsin, there has been for the past eight years, as compositor on the *United States Miller*, Mr. Elijah Rawson, who commenced working at the business in 1828, in the office of the Windsor (Vt.) *Chronicle*, and remembers distinctly having set some of the type from which President Jackson's first inaugural address was printed.

In 1831 he went to Boston where he finished his apprenticeship in 1833, and spent the next summer in Brooklyn, Connecticut, working in the office of a paper of which William H. Burleigh, who that summer became brother-in-law to William Lloyd Garrison, was editor and compositor. From this time on Mr. Rawson led a roaming life, never stopping any great length of time in any place until about 1852, when he settled down at Burlington, Vermont, and lived there almost continuously until 1882, and acted in the capacity of foreman and local editor most of that time. He left Vermont in 1882, and took up his residence at the place first above mentioned. As a compositor it has been a part of his good fortune to have worked from the manuscripts of such authors as Rev. Hosea Ballou, of Boston; Grant Thorburn, Epes Sargent, Edgar A. Poe, W. H. Herbert (better known as Frank Forrester), Governor Slade, Charles G. Eastman, John G. Saxe, Bishop Hopkins, Prof. Zadock Thompson and A. A. Earle.

Mr. Rawson left a senior in the business, who was holding cases on the Vermont *Chronicle*, named Charles Severance, but whether he is still living and at work I have been unable to ascertain.

Mr. Rawson, beside his work at the cases, has written much for newspapers and magazines against intemperance, immorality and infidelity, and very recently published a work entitled "Rawson on Intoxication," in which he draws a number of moral teachings from various examples presented in the Bible not strictly referring to the drink habit.

Mr. Rawson is now seventy-seven years of age, and, though never having possessed a strong constitution, seldom misses a day at his cases.

Another long-time servant of the "art preservative" lives in Port Austin, Huron county, Michigan, William T. Clark, Sr., by name.

Mr. Clark apprenticed himself to a printer at Mercer, Pennsylvania, in 1826, in the seventeenth year of his age. He was to have served this printer three years, but the fortunes of trade placed the proprietor among the failures at the end of a year, so a few days later Mr. Clark, with a pack on his back, wended his way on foot to Pittsburgh, some sixty miles distant, and there, after many discouragements, got a position at \$6 per month with board, and he says he saved money out of that. Early in 1828 he got a position with Simon Cameron, who was then state printer at Harrisburg, and received \$7 per week, boarding with Mr. Cameron at \$2.50 per week.

Soon after he found himself in Philadelphia, where for five years he held cases on a new daily that was just starting up. Here he averaged about 7,000 ems per day, including night-work once or twice each week, and received 22½ cents per 1,000. With the savings of this period he returned to Mercer in 1833 and purchased a newspaper office with the magnificent patronage of 450 subscribers. In 1844 he left the old Whig party, of which his paper had been the organ, and joined the Libertys, supporting James G. Birney for the presidency, soon after becoming acquainted with William H. Burleigh, spoken of above, who was then editor of the *Christian Witness*, at Pittsburgh, a strong organ of the Libertys in that section.

In 1861 Mr. Clark was appointed by Secretary Chase as internal revenue collector for the twentieth Pennsylvania district, and he opened headquarters at Meadville, where he also bought out a newspaper plant. In 1867 he moved to Erie, Michigan, to supervise the business of his son, but the business soon proved a failure and he and his son re-entered the newspaper business at Port Austin, where he has resided since 1872. Repeating the action of his earlier years Mr. Clark has left the Republican party to aid what appears to him to be the coming party—the Prohibition, and is now running his paper in its interests.

Mr. Clark is eighty-one years old, and, as he expresses it, "am still able to do a very good day's work at the cases and desk, and am feeling all the better for having it to do." He is blessed with excellent health and may continue for years still to come. He says he remembers Father Quinn, of Erie, well, and recalls Mr. Quinn's sending once to Johnson & Smith, of Philadelphia, for a composing stick, stating that he had used his present stick over thirty years, requesting that a bill be sent with it. Mr. Clark says they forwarded him a very finely finished stick, stating that one who had worked for thirty years with one stick was well deserving of another, gratis.

A case was mentioned in the papers not long since of William Eaton, who was said to be in his eighty-fourth year, and had been setting type constantly for nearly seventy years, and was at work on the Danville (Vt.) *North Star*. The article stated that Mr. Eaton was in excellent health and had lost but few days in all that long service at the cases. I have been unable as yet to verify this report. However this last may be, I believe the facts concerning the four mentioned above form a quarto of more than usual interest to that ubiquitous race, the printers.

BILL NYE humorously makes this announcement: "I have a neat little printing press, which I secured by getting a new subscriber and 35 cents for a paper which desired to extend its circulation so that it could do a great deal more good than it had ever been able to do before. It is a good little press, but is really better, I find, for a cider press than for printing. It is too earnest and too desirous of making a deep impression, I think. It would be a good machine to prepare reading matter for the blind, because it can be read better on the back than on the front, and better by touch than by sight."

ESTABLISHED 1844.

SAMPLES.

**KEITH LEDGER PAPERS** are well made, strong, hard sized, rule nicely, write easily, erase and rewrite without difficulty, and have been given the preference by good judges in competitive tests with all other leading brands of Ledger paper.

**RAVELSTONE** Flats are made in Laid and Wove, White and Perfection Tints, and are used by Lithographers, Stationers and Printers for first-class Commercial Stationery for Banks, Insurance Offices and Business Houses generally. These papers are also put up ruled and folded, in the usual sizes.

**WESTLOCK** Flats are well known and highly prized for their good color, cleanness, freedom from imperfections and all adulterants, strength, hard sizing, and are used for all kinds of commercial work, being especially preferred by makers of Blank Books, because they are thicker for the weight than other papers. These papers are put up folded, and in Note, Letter and Bill Heads, etc.

The above Papers are offered to the Trade through Agents located in the principal centers of distribution throughout the Country.

### INTERNATIONAL COPYRIGHT.

ONE of the most interesting and instructive features connected with the recent session of the United Typothetæ was the discussion on the question of international copyright, and the views advanced respectively by Messrs. Ennis of St. Louis and De Vinne of New York, which showed that both these gentlemen, though looking at the subject through different glasses, had given it due deliberation, and were thoroughly conversant with the pro and con sides of the question. Although their remarks were published in extenso in the September issue, we believe a brief review of the same will not be unacceptable to our readers.

The pith of the objection urged by Mr. Ennis against the so-called Chace bill was, the typesetting clause upon which such stress is laid was simply a sop to the printers to secure their aid in pushing the bill through congress, while half a dozen callings have as much interest as the printer in the bearings of the bill. As it covers everything from a chromo to a primer, including engravings, paintings, wood cuts, maps, and dramatic and musical compositions, it would involve our lithographers and printers in endless litigation, and make it possible for suits to be brought if a cut, vignette, flourish or design is used though it may have been copyrighted in Belgium, France or England. Further, that the enactment of the bill would operate as a tax on knowledge, increase the cost of books, retard the development of art and science, and give a monopoly to a few citizens at the expense of the many. In short, that the real objects of the bill are to make it possible for a coterie of rich publishers to control the book-making industry, stamp out all small rivals, and make the price of books what they please. Economic questions should have practical, not theoretical solutions, and that before such an important measure becomes a law, its merits or demerits should be thoroughly discussed and understood.

These views were vigorously combated by Mr. De Vinne, who denied that the passage of the bill referred to would either make books higher in price or prevent the diffusion of knowledge. The price of each new book is determined largely by its cost, and the competition which determines the printers' prices also determines the publishers' prices. The ultimate tendency of copyright, domestic or international, will be to make books cheaper, because it will favor the printing of two or more editions of every popular book to suit the purse of every class of buyers. Domestic copyright has not made popular books dear in Germany and France, where good books are as cheap as they are in the United States.

Again, the best books are beyond the operation of all copyright laws. Even after the passage of the proposed law any printer "can reprint all the poetry in the world, from Job and Homer to Byron and Browning; all the masterpieces of fiction, science or philosophy; all the text books of age and authority," while it is a fact which admits of no denial that nearly all entertainment and knowledge to be had comes not from new but from old

books, over which no form of copyright can ever have control. The literary inheritance of the world will not be diminished in the slightest because international copyright can have no effect on books that have been written and printed, as it deals only with those that are yet to be written.

The claim that international copyright will make a *monopoly* of publishing, was also denied. That foreign authors will, in all probability, prefer to deal with old established houses was admitted, but a country like our own, that has so many thousands of printing offices, will not eventually be dependent on any firm, trust or combination for its books. They will continue to be printed and sold by those who can do the work most efficiently, and to the foreign author it will be of no consequence in what city the publisher does his business.

As stated, the discussion of this important question from different standpoints cannot fail to have a beneficial effect, and will go a great way to instruct and enlighten those who heretofore have given the subject little, if any consideration.

#### THE PRINTERS' HOME.

THE October issue of THE INLAND PRINTER contained the announcement that a meeting of the trustees of the Childs-Drexel Home for Union Printers, proposed to be erected at Colorado Springs, would be held in the city of Chicago on Wednesday, November 19, at which time designs and specifications for such a structure would be examined, and in all probability determined on—said building to be erected at a cost of between \$35,000 and \$40,000. As a certain discretionary power is vested in these representatives, and as the action taken at the forthcoming meeting will no doubt assume a definite shape, it may not be out of place at this time to present a few suggestions in connection therewith.

If the statement made by Captain De Coursey, president of the Board of Trade of Colorado Springs, is correct—and we have no reason to doubt it—the eighty acres presented to the International Typographical Union will have a market value in 1892 of \$200,000. And be it remembered this is no haphazard estimate. The site is universally acknowledged to be the most valuable and desirable in the locality of that beautiful city, which is recognized as the sanitarium of the country, and, taking into consideration the increase in value in far less favored situations and the character and cost of the structures erected and about to be erected thereon, *subsequent* to its acceptance, and the avidity with which property in its immediate vicinity is being purchased and improved, the claim seems fully warranted.

Under these circumstances we trust the board of trustees will look at the question in all its bearings before arriving at a decision. While it is true that under the condition of the gift the erection of a \$20,000 structure would comply with the terms of the bond, it is also well to remember they are acting and building for the future, and that there is a vast difference between an

extravagant and cheese-paring policy. Though they may not feel warranted in committing the International Typographical Union to an expenditure which is unwarranted or which is likely to involve it in trouble, it is certainly within their province to contract for a building within their present means, which, however, may be extended from time to time as funds and circumstances warrant, without destroying its symmetry, and which, when completed, will be an honor to the craft and the city in which it is located.

We have insisted from the inception of the enterprise, in considering it from a broad gauge point of view, that enough of employing printers can be found who will not only liberally contribute to the erection of such a home, but also to its endowment and annual support as to place its success beyond a peradventure, if the proper steps are taken. A craft pride to maintain its control and management in the proper channels is commendable, and one to which no exception can legitimately be taken, yet the fact that employers had a voice in the directorate would be a source of strength both from a pecuniary and business standpoint. Let us trust that the gentlemen who have charge of the enterprise will prove equal to the emergency.

#### THE ESTIENNE SCHOOL.

NOW that the subject of technical education is awakening such an interest in the United States, the following account of the scope and objects of this well-known French training school will no doubt prove of special interest to the majority of our readers. The Estienne Technical School was established in Paris, November, 1889, by the municipal council of that city, for the purpose of furnishing gratuitous instructions to pupils in all branches relating to the industry and art of printing. In 1883 M. Magnuski, the present director, conceived the idea of founding such an institution, and was delegated by the municipal council of Paris to visit the various technical schools of Europe for the purpose of inspecting their methods of instruction. During this tour he secured a superb collection of books published by the Estiennes, a celebrated family of French printers.

At the opening of this school, November 15, 1889, one hundred and forty-seven pupils presented themselves for examination, of which one hundred were received. These were divided into two classes of fifty each, and for the first year were given an elementary course of instruction in typography, lithography, photography and binding. By this method the instructors at the close of the year are better enabled to determine for which particular branch of the industry each individual is best adapted; and at the same time gives to each a general knowledge of the technique of the various branches, which is not undesirable to the specialist in any one line.

As an illustration, M. Victor Breton, professor of typographical composition, found but forty out of the one hundred whom he considered apt in this department,

and of these only eight or ten would be chosen to pursue the professional course. The remainder would be selected for other branches, or, failing in all, yet may have discovered from the year's training and experiment for what other vocation in life they are best fitted by nature. Thirty branches are included in the course, among which are, in the department of typography—composition, printing, stereotyping, electrotyping, casting; in lithography—crayon, pen, engraving on stone, lithographic printing; in engraving—graving upon wood and copper, etching and relief, copper-plate impression; in binding—stitching, gilding, ruling, papeterie, boarding, marbling, etc.

In order to render more immediate service to the industry, an evening school was added in December, 1889, for the benefit of printers and apprentices throughout the city. The attendance at the evening course numbered from ninety to one hundred, the hours being from eight to ten o'clock.

The success which has attended the first year of this work has exceeded the expectation of the instructors, the president, M. Cousset, and the municipal council. During the summer ten of the most promising pupils, accompanied by three of their teachers, have visited the technical schools of France and adjoining countries, the expense of the tour being borne by the institution.

The library and museum have received generous donations from printers, publishers and other friends of the school. The pupils, in addition to the tuition, are also given breakfast and lunch. No pupil under thirteen years of age can enter the institution. The requirements for admission are a certificate of birth, vaccination and a certain proficiency in studies, which are supplemented by an examination by the faculty. After completing the course the graduates may, after one year of military service (in time of peace), receive permission to leave their native land, if the object be the pursuit of their profession in foreign countries.

It is the hope of the instructors to accomplish better results in following years, as during the experimental year they experienced some difficulty in passing from individual to collective teaching, and, moreover, they were obliged to proceed without the aid of experience, which furnishes not an inconsiderable aid to higher achievement.

#### TAKE A DOSE OF YOUR OWN MEDICINE.

THIS is a very common expression, and THE INLAND PRINTER, acting on the suggestion, has recently put it in practice by advertising itself in its own columns, and the result has been of the most gratifying character and practically demonstrated its value as an *advertising* medium. Numerous clubs and subscriptions have since been the product of each mail—some of them reaching the hundreds. Advertisers, what it has done for itself it can do for you. A word to the wise is sufficient.

THE article in the present issue under the caption of "Long Service at the Case" will be found well worthy of careful perusal.

THE Imperial State Printing Office, Vienna, Austria, will give a calendar exhibit the latter part of December, 1890, and extends an invitation to all printing and lithographic firms in the United States, which make a specialty of this class of work, to forward specimens of the same to the *Staats-Druckerei*, Vienna.

THE memorial stones of the new buildings of the Printers' Almshouses, at London, England, were laid on September 22, by the Baroness Burdett-Coutts and Mrs. W. H. Collingridge. The baroness is a liberal contributor to the charity, which is for the benefit of worn-out printers.

#### PRACTICAL TALKS ON PRESSWORK.

NO. VIII.—BY A PRESSMAN.

IN the October issue of THE INLAND PRINTER, C. P., Atlanta, Georgia, writes that whenever he puts on a heavy form on his two-revolution press the tympan seems to be subjected to a grinding process and breaks at the gripper edge. I should think, from the effect produced, that it is caused by wear in the journals of the cylinder shaft. While the cylinder is apparently riding snug on the bearers, really when it strikes the form it is lifted clear of them; this necessitates the carrying of more packing than should be used. It will readily be seen that every sheet that is placed on a tympan means an increase in the size of the circle described by the impression surface, and when that is greater than what will travel in exact unison with the surface of the form, grinding is sure to be the result.

Let him set his bearers eleven-twelfths of an inch high and a thickness of a thick sheet of paper over, and, getting the impression side of the cylinder down, let the cylinder down on the bearers fairly tight. Then test the journals by placing a lever in position under the cylinder at one end, and, getting sufficient force on it, endeavor to pry it up. If it responds to this, note how much space shows between the bearers and lower it down until it will not lift. Do the same on the opposite side of the press, repack the cylinder, and I think the trouble will have disappeared.

\* \* \*

In a recent circular issued by a press manufacturer, the statement is made that owing to the fact of there being four tracks under the bed of their press, overlaying was unnecessary.

It seems strange that reputable business men should stoop so low as to deliberately make an assertion of this kind. They, as well as every pressman, know that there is no truth in it; that every form that goes on a cylinder press requires making ready if presentable printing is to be done. It may be that in calling attention to this I am filling a Don Quixote role—running a tilt against a windmill, as it were—but it is only as pressmen have the courage to speak out on this and kindred subjects that it will be possible for employers to purchase intelligently. Of course there are pressmen whose opinions

on presses, inks, etc., are almost, if not quite, worthless, yet when an employer secures a pressman who is intelligent enough to know his business and honest enough to regard his employer's interest, he should be consulted and his advice given proper consideration when purchases become necessary.

\* \* \*

Why will press manufacturers persist in placing distributing rollers at an acute angle? There are certainly better ways. Set in this manner, one portion of the roller receives the motion from the ink table before the rest, with the result that one end of each roller almost invariably has the face ground off it. It would seem that were the distributing rollers set at right angles with the frame of the press and provided with a vibrating attachment, either on the rollers themselves or on the riders, fully as good distribution could be obtained, the roller-maker would not be blamed for what is not his fault, and the pressman, being enabled to avoid the accumulation of dirt on the ink table, from the wear of the rollers, would be happy. Is not this a desirable result, messieurs the manufacturers?

\* \* \*

While manufacturers have been giving the greatest attention to the perfection of newspaper presses, they have, to a great extent, overlooked the necessity of increasing the speed of the book press. The time is coming, nay it is almost here, when a great part of the book printing will be done on web perfecting presses.

One of the main obstacles to the immediate use of such presses is the fact that the plates now in the possession of the publishers are flat. Either all such plates would have to be reproduced in a curved form, or some apparatus for curving the flat plates would need to be perfected. Of course, for short editions the labor of making ready on a web press would be too costly, but there are a large number of books published every year with an edition sufficiently large to justify the outlay. Indeed, the run might be lengthened in many cases by running a number of books together. This method, if properly developed, might result in doubling or quadrupling the number of impressions between each make-ready.

To the objection that may be urged that presswork of good quality will not be produced on web presses, it might be replied that such work *is* now produced. The text forms of the *Century* magazine are all printed on a web perfecting press, which turns out very good work and at an average speed of about twenty-five thousand perfected copies of a sixty-four page form daily. Of course, it requires a very skillful pressman to operate those presses on fine work, but when the demand for such men is made, no doubt they will be forthcoming. It will be well for all of us who are engaged in book-producing, both publishers, employing printers and pressmen, to keep our eyes open to the fact that we are living in a transition period, and that the methods which we look on today as being almost perfect, will appear to our successors, nay even to ourselves, some years hence

as being but very crude attempts to develop a science which is destined to revolutionize all other sciences.

Some of the web presses now built for bookwork involve the printing from stereotype plates of nearly the general appearance and quality of those of the ordinary daily newspaper. Such efforts are no better than wasted, as it has been demonstrated pretty conclusively that electrotype plates are far superior for good work, beside being cheaper in the end, on account of being more lasting. It were better, then, for manufacturers to direct their efforts along the line that has been proven to be that of evolution. It will save them much labor and loss.

The same rules that apply to packing the ordinary cylinder press for bookwork would necessarily apply to the web press employed on bookwork. Perfectly equal adjustment of the packing on both impression cylinders would be required in order to insure absolute register, as the least increase in the circumference of either would entail a greater speed of the web in traveling through the impression. The making ready, also, would be the same.

In order to use a more appropriate ink than can at present be safely used, a better distribution than any yet devised will have to be introduced; it must be equal to the breaking up of a stiff ink while traveling at a high rate of speed.

Another necessity for such work is a good method for avoiding offset. To succeed in this, I am convinced that the press builder and the ink maker must combine their efforts and work in unison with one another. When all—publisher, employer, artist, compositor, electro-typer, pressman, press, ink, roller and paper makers—combine their efforts, we will succeed in producing the best of work; but, I fear, not until then.

Written for THE INLAND PRINTER.

#### COMPENSATION FOR DISTRIBUTION.

BY DUNCAN F. YOUNG.

JUST why distribution is not separate from composition is not comprehensible to the thinking printer; but that it is a part of the piece-worker's day's work is an unfortunate circumstance. When and how this condition came to exist is not recorded, but that it was the result of false conceptions and erroneous ideas is very evident, for the feeling toward separating the two is gradually growing more widespread, and the effort only is required to make their distinguishment an accomplished fact.

Today, when printers good and true are walking the streets idle and others are working ten, twelve, and even fourteen hours a day, this change is plainly needed. This change is needed, not alone because there is an overplus of printers, but because we have printers in our unions of other nations—first-class printers in their own language, but probably incompetent in ours—who are thrown on English papers because they can secure no positions on papers of their own tongue, those possibly having gone out of existence, or the printers having been discharged on one or two of the numerous reasons

for discharge we know so well foremen avail themselves of; because we have printers grown old in the service, mayhap "too slow" to be suitable at "closing-up time" (each of the above being able to perform satisfactory work in that capacity); and further, because it would be but an act of justice, reducing the hours of work and tending to equalize employment.

Look at the morning paper printer. Alas, what a life! Between eleven and twelve o'clock in the morning he goes to the office, distributes three or four hours, returns home to dinner and goes back to the office between six and seven in the evening, finishing his work between half-past two and four in the morning. Is not he a subject of commiseration? What time has he to rest? What time has he to enjoy the advantages of society? A life of sameness, a perfect drudge is he. Then the printer on the evening paper: seven consecutive hours of composition, followed by three hours' distribution. "Ten hours in a printing office!" What a volume could be written on "Ten Hours in a Printing Office."

If composition and distribution are done immediately following each other, the work is entirely too great for one to follow continuously and maintain his health; and if the work is divided, as it is on morning papers, a man's life is given up wholly to work. Under such circumstances, what is left to encourage him to thrive and assist his fellow-men? What is left to urge the progress of a magnitudinous civilized world?

By separating composition and distribution printers will attain nothing but what carpenters, blacksmiths and painters already possess — the right to secure compensation for all work performed. I have heard an argument against this separation in a parallel with carpenters. An analysis of this, I opine, will disrupt this argument instanter: The tree is in the forest, the metal in the mine; the sawyer makes the lumber, the foundryman the type; the carpenter saws up his plank or scantling, the compositor sets his line; the carpenter nails on his weather-boarding, the compositor corrects his proof; and while the carpenter's work ends here the compositor, at present, has to distribute as much as he sets up. Through this line of reasoning we see that not even carpenters, whose work is perhaps the most diversified, perform the gratuitous work that printers do.

Conditions and circumstances, as well as justice, show us the demands of this change, and while it may be claimed by some that this would reduce the price of composition, that can be granted; but it must be remembered that the numberless successes of organized labor have demonstrated that wages regulate themselves, and even though this change did affect wages by reducing the amount of money received by regular case holders, it should not be forgotten that the small amount they lose is obtained by those now idle, who need it inexpressibly more than they do; and who can better withstand a minute financial denial than those customarily receiving a complement of money for household demands?

#### NOTES ON WOOD ENGRAVING.

NO. LXIII.—BY S. W. FALLIS.

IN the year 1829 John Andrews, an engraver on copper, a pupil of Bowen, joined the firm of Carter, Andrews & Co., then in business at Lancaster, Massachusetts, as printers and binders, and thus began an establishment for engraving and general bookwork. "Peter Parley" was then having an extensive circulation, the books all being more or less embellished with cuts. Hall went to work in this house, and Atherton, Mallory and Minot were taken as pupils, William Croome filling the position of designer; other draftsmen and engravers such as Nutting, O'Brien and Worcester were also employed. As many as fourteen engravers on wood and copper were at one time engaged, making a total of seventy hands in the employ of the firm in the various branches of the establishment, such as type-founders, stereotypers, printers, bookbinders, etc., until the establishment failed during a financial panic in 1833.

In 1834 Bowen, Hartwell & Crossman formed the "American Engraving and Printing Company," and afterward altered their title and obtained articles of incorporation as a joint stock company, under the name of the "Boston Bewick Company." Mallory, Croome and others joined them; they published the *American Magazine*, similar in character to the London *Penny Magazine*, of which two editions were at this time republished in America, one in New York from imported plates, and one in Boston from re-engraved cuts, by B. F. & J. J. Greenough.

The two volumes of the *American Magazine* contain about five hundred illustrations, all of which are coarsely executed. In 1836 the establishment was burned down and the company failed. This caused a general dispersion of the engravers, with new combinations and arrangements, and some moving elsewhere, while others abandoned the art entirely.

In 1829 Abraham J. Mason, a versatile engraver of London, came to New York, introduced by Lord Brougham to scientific and professional Americans. His work, though lacking the power of his master, Branston, was refined and attractive.

In 1830 the National Academy of Design paid him the compliment of electing him an associate, and afterward appointed him their professor of wood engraving, which, however, was not of very much importance. His delivery of a course of lectures on the art drew very meager audiences, although the subject was new and novel, there being at this time but six or seven engravers in New York. Mason, in his endeavors to establish a business of engraving, found so little employment, even with the assistance of bookstores and friends, he was unable to command sufficient income, and after a struggle in the art for ten years he returned to England in the spring of 1839.

The position accorded to Mason in the academy had a tendency to increase the interest in the art, yet

still the work offered was insufficient for even the few engaged in the art, and what was done was not of a very artistic nature.

T. W. Strong, the publisher, who began life as an engraver, tells some anecdotes showing the condition of the art at this early period.

On one occasion (he says) a man came all the way from St. Louis and stayed at the Astor House until his work (a show card or label for a new medicine) could be engraved, so he could take it home with him. Another man, having the drawing on the wood sent him for criticism and approval, inked it and ran it through the press, and was dumfounded to see the result, "a solid black print." And many other facts equally ridiculous were frequently met with by the early American engravers.

So limited was the demand for wood engraving down to 1839, that late in 1838, and on Mason's return to England, Dr. Anderson, Mr. Lansing and his son, Mr. Adams, B. F. Childs and R. N. White (who was also a good draftsman) were the only engravers in New York, with Bowen and his pupil Hartwell, in Boston, and Gilbert, in Philadelphia. The elder Lansing and Morgan were at this time withdrawing from the business. The younger Lansing then engraved only the large, coarse theater bills, using mahogany for this purpose. Joseph W. Morse, at that time with Strong, was the first who engraved these posters or large bills on pine with an open graver, about 1840, and Strong first produced them from designs by George Thomas, in combinations of colors. With the lapse of fifty years the crude poster engraving on pine has advanced hand in hand with the finer branches of the art, until the present era of poster engraving takes a high rank in artistic engraving, which the bill boards of all our great cities bear witness with their fine display of theatrical, circus and menagerie posters, printed in all the hues of the rainbow, and varying from one to fifty sheets (28 by 42) in size, engraved from drawings made by the most skillful draftsmen of the day, and engraved by engravers of keen comprehensibilities and refined artistic and mechanical skill.

*(To be continued.)*

Written for THE INLAND PRINTER.

#### THE FUTURE APPEARANCE OF PRINTED ENGLISH.

BY J. E. FOREMAN.

**L**ANGUAGE, like all other things that are the servants of man, is continually changing. Old forms and expressions, like dead organisms, are disappearing, to be supplanted by new words or phrases suggested by the changed conditions of life, of business, of habits, or of amusements. Even from the hot-beds of crime and dissipation come words and phrases, doubtful in meaning as well as in morals; at first to be used only in the presence of men, but, gradually becoming accustomed to the usages of good society, they "assume a virtue if they have it not," and are soon a part of the spoken language of the day. Ere long they creep into the

current literature with quotation marks as an apology for their presence there. Some pass out of use again as mysteriously as they came, having lived, like the moth, but an ephemeral existence. Others remain to grace our language and our literature by a life of usefulness, doing honor to their humble birth and to the ones who first breathed into them the breath of life. Thus changes are wrought in the structure of a language, but that does not materially affect the appearance of printed English to the eye.

Another change, however, is going on that does affect that appearance, and which will probably in the future bring about greater changes than have been made for many years. Old forms will give way to the demands for convenience, and anything that will add to the profits of the employer, and the efficiency and rapidity of the workman, will soon find favor in the eyes of the master printers.

This change will consist in reducing the number of different widths of bodies and the casting of all, or nearly all, of the letters of the English alphabet upon the same size of body.

A step in this direction may be seen in what is called self-spacing type. "In a complete font of the old kind of body type there are about one hundred and ninety widths of bodies." In the new self-spacing type there are but eight. One of these is but a space, another a two em dash, leader or fist, thus leaving but six sizes of bodies for the alphabet in upper and lower case and italic. Now, cannot we easily imagine this number reduced by but few alterations to one or two sizes.

A font of typewriter, being cast upon but one size of body, is thus quite convenient, although by no means presenting a neat appearance. To cast all of the roman letters upon a single size of body, and still produce a neatly and attractively printed page, would require an alteration in some of the letters, reducing the widths of the letters *m*, *W*, etc., and increasing the widths of the *i*, *l*, *t*, etc.

When typesetting machines are a perfect success, as they soon will be, and when the book and news compositors are known only in history and tradition, the advantages of thus reducing the number of bodies of different widths to a few or a single standard will present themselves to practical printers. The cost of composition, which is at present a menace to the master printer's bank account, will be reduced enormously, and, even if the length of the full alphabet should be increased, when we take into consideration the simplicity and rapidity of proof corrections and alterations, must we not admit that the scheme is feasible and practicable?

One change or improvement brings about another, and the successive steps of progress make possible or require other changes to meet the altered conditions. Thus may the appearance of the printed page of the English language be changed; and, when we become accustomed to it, 'twill look as well as now.

By MOSS ENGRAVING COMPANY, 535 Pearl Street, New York.

READING BEFORE ANSWERING.

## NEW FIXTURES FOR THE COMPOSING ROOM.

BY THEO. L. DE VINNE.

A NEW STAND.

THIS form of stand is the result of attempts to overcome certain difficulties encountered in trying to compose the Century "Dictionary." For this work the compositor was required to have before him or readily accessible: Brevier, upper and lower, 2 cases; brevier italic, 1 cap case; accents for brevier, 1 cap case; brevier antique, for side-heads, 1 job case; nonpareil, upper and lower, 2 cases; nonpareil italic, 1 cap case; accents, etc., for nonpareil, 1 cap case; nonpareil antique for sub-heads, 1 job case. The copy called for changes of cases so often that it was not practicable to have one or even a dozen common cases of antique or italic. Compositors working from common cases would interfere with each other; they would have to impatiently wait their turns; there would be just complaint at probable bad distribution, for which no one could be held responsible. It was decided that every compositor should have his own set of separate cases. Greek and Hebrew, rarely used, were to be the only cases in common. This decision made a new difficulty. Ten exposed cases would fill two sides of an alley. The space occupied by a double alley would take a great deal of room. Each compositor would want about sixty-seven square feet of floor space; twenty-five compositors, stone-men and makers-up, the galleys and chase rack, and proof presses and other equipments for the work, would be really huddled in a room of 2500 square feet. Many compositors would have to work in dim light, for not every one could have a separate window. Widely separated, they could not support or aid each other and the maker-up, as might be done if they were closer together. This would not do. The space was too valuable; the compositors would lose too much time by constant walking up and down an alley; they could not be readily directed by the foreman.

DIAGRAM 1.

A new form of composing stand, which permits the compositor to have ready access to more than eight hundred boxes. This diagram shows the cases in racks, out of use, with swinging side frame put back.

DIAGRAMS 1 AND 2, A and B, Cases for extra sorts; C, Nonpareil accents; D, Nonpareil antique; E, Brevier antique; F, Nonpareil roman upper; G, Nonpareil roman lower; H, Nonpareil italic; K and L, Brevier roman, upper and lower; M, Brevier accents; I, Brevier italic; N, Drawer, containing galley; O and P, Angled support for cases; R and S, Swinging frame with racks; T and U, Iron rods that hold the swinging side frame.

To put these ten cases, four on the top of a double stand and six in the rack below, would contract the space seriously, but this plan would increase and not lighten the work of the compositor. He would have to change his position with every

change in the style of type; he would frequently have to take down and put up cases.

Could not this be avoided? Could not more boxes be brought within easy reach of the compositor's arm? Could not words in italic or side-heads be set without taking down and putting up cases, or making a complete change of position?

The first step was to select the "rooker" case, 14 by 28 inches, smaller than the regular case, but large enough for a day's work on the sizes of brevier and nonpareil. The next was to

DIAGRAM 2.

This diagram shows the swinging side frames drawn out and locked, the under cases made accessible to the compositor, and the position of the galley under the frame.

put two more rooker cases at right angles on either side, tilted upward as shown in the diagrams. The compositor, who stands before the case in the usual position, can readily reach all the boxes of the four cases, except those in the extreme outermost corners. A long-armed compositor can reach all without even swaying his body. This arrangement provides for the brevier upper and lower in the usual position (K and L in the diagram), with the accents to the extreme left (M) and the italic to the extreme right (I).

The framework of the stand below the extreme right and left was utilized by constructing racks with cleats so that the cases least used could be put in sidewise, and yet be kept within easy reach. A swinging side frame, firmly hinged, was then attached on either side, with cleats parallel to those in the stand. This side frame is kept firmly in position by the swinging iron bar T. When this bar is locked, the cases in either side can be drawn out at full length, exposing every box to view and touch. The compositor is in the center of three sides of a small square, and can pick out any type he wants from about eight hundred boxes, without leaving his frame, and for most of them without change of position. When the lower cases in the side racks are not needed, the swinging side frame can be put back as shown in diagram 1. To prevent the cluttering up of stands, and to save needless travel, the galley is put on an inclined plane in a drawer under the roman case. When the compositor wishes to empty his stick, he pulls out the drawer, empties his stick, and then shoves in the drawer. It is entirely out of the way, and not as liable to accident as in the old position on an exposed stand.

Two of the job cases have been arranged for capitals to the left, and two, with capitals to the right. This is to keep the most used division of lower case nearest to reach on right and left hand sides.

The roman cases have all the spaces and en-quadrats directly under the compositor's hand. This arrangement is made by putting the en-quadrat next to the three-to-em space box on the other side of the broad bar; and by putting the four and five-to-em space and hair-space next to the three-to-em space box. Not many other boxes have to be disturbed to so place these spaces. This arrangement saves time in spacing; it is an aid to better work and

is much approved by all compositors. The cost of these stands and cases is not much more than those of the old form. That they are much more economical in saving space and in giving greater ease in the management of work will be admitted by every one who sees them. Thirty compositors work in better light, more pleasantly and profitably to themselves, and more efficiently for the office in a space of 1000 square feet than they could do in 2500 square feet from cases laid out on the old plan.

This form of stand, which is not covered by any patent, is fully recommended to any printer who has work, like dictionaries or catalogues, which requires the frequent use of many styles of type.

A NEW CASE FOR QUADRATS AND SPACES.

Every printer who has many fonts of small display type in cabinet cases is annoyed by their lack of proper boxes for spaces and quadrats. The usual practice is to put spaces and quadrats in the two right hand corner boxes. It is not a good method. Too much time is lost in fumbling over the mixed spaces if there are any in case; the work of spacing is done in an inconvenient position. But the spaces wanted are too often absent, and drawer after drawer has to be pulled out before they are found. Many foremen refuse to allow the distribution of spaces and quadrats in cabinet cases. They require them to be put in the regular cases of text types, where they can be assorted properly. This is better practice, but it has this serious disadvantage: it compels the compositor who is hunting spaces from alley to alley to stop another workman at case while he is spacing out his line.

To prevent this I had made a little case which holds nothing but spaces and quadrats of the sizes that are most used. It can be

DIAGRAM 3.

readily put on the top of any broad cabinet case or can be made longer or shorter to hold more or less sizes of quadrats.

This case has twelve large divisions each of which contains quadrats and spaces for each size, from pearl to great primer, 5-point to 18-point. Each division is again subdivided into six boxes, thus providing a proper box for the two-em, one-em and en-quadrat, and the three-to-em, four-to-em, and thinner spaces. All are exposed, accessible, and at convenient height to the compositor, who can space or distribute without interfering with his mates. It prevents no small waste of time, and keeps these constantly needed sorts in the place where they are the most needed.

The boxes are big enough for larger sizes, but I prefer to keep quotations in still larger boxes at the sides of cases and stones.

A LEAD RACK.

This rack has been used, and is approved of, by several printers; but it is not, I believe, kept on sale by any printers' furnishing house. It deserves more publicity.

It is an oblong framework of pine, 26 inches wide, 48 inches long, 62 inches high, placed in the center of a room so as to be accessible on all sides. Made to hold a great weight in a small compass, it calls for a broad base and some unused space in the interior. As a further protection against toppling or bulging, the center is strengthened by a broad middle band. It is made to hold all needed sizes of leads, from 10 to 60 picas; smaller lengths are graduated by half picas or nonpareils, the larger sizes by full picas. Each size is kept apart in a tall compartment, which will take the width of one lead only. Each compartment has its depth made exactly the length of the lead it is intended for, as will be more plainly seen in the next illustration. All lengths of leads are flush or even with the face of the rack.

The compositor who seeks any size finds its length shown at a glance by a strip of lead, of right length, which is tacked on the side of each compartment.

If too long a lead is put in one of these compartments, it will stick out and show it is out of place; if too short a lead is put in, it will topple and spill the longer leads put above it.

DIAGRAM 4.—LEAD RACK.

A sectional view, showing the provision made for one hundred different sizes of leads from 10 to 60 picas long.

In this rack the compartments are made for same length of leads below and above the cross-band, but they could be used for two thicknesses, like six-to-pica and four-to-pica.

A NEW FURNITURE CABINET.

In the ordinary book about one-half of the sheet printed on is devoted to print, and the other half to blanks and to margin. In ordinary jobwork the blanks are often twice and thrice as much as the print. Every printer understands this clearly, yet how few of us act on it. We buy types liberally, and furniture and blanking-out material sparingly. We grudge the cost. Typefounders, acting under general instructions from printers, furnish display fonts without quadrats and spaces. There seems to be a general belief that it is not really necessary to make a liberal provision of blanking-out material.

One reason why furniture is not more liberally bought is the fear that the compositor will waste it if he has an excess. So he will, if he is allowed or required to cut it, or if he is not provided with proper places to keep it in. In many offices all widths and lengths of furniture are thrown pell-mell into the drawer under the

DIAGRAM 5.—LEAD RACK.

stone. Out of this chaos one never finds what is needed. The maker-up has to fudge by piecing unequal lengths and widths, and too often has to use the saw to cut down pieces over-long. The time and the material wasted by fudging for furniture are serious

losses in a composing-room. Bad workmanship is a common consequence. What is worst of all, the maker-up is encouraged in wasteful habits.

But it is of no advantage to buy furniture liberally unless it is cut to graduated lengths, and a proper place is made for every length. To keep everything in its place, it is necessary first to provide a place for everything. Even in a small office this provision must be made on a broad plan. Different lengths and widths should not be mixed, any more than different types should be mixed in a box. Each size should be kept apart, so that it can be selected without mistake, and all sizes should be readily accessible, and not liable to get in confusion. With this object in view, I submit, for the consideration of the typothetæ, a furniture cabinet which has been used in the composing room of the De Vinne Press with marked advantage. The general construction is but partially shown in the illustration. To make it accessible to all who work at the stone, it has been put under the stone.

This form of cabinet contains twenty-eight drawers; twelve on one side (not shown in cut), and sixteen on the other. The drawers are of unequal depth, to suit different lengths of furniture. Every length stands on its narrowest end; if too long a piece is put in,

DIAGRAM 6.

A new form of furniture drawer, containing proper places for fifty-six lengths of furniture, from 12 to 70½ picas, and for six widths of each length. The up-turned drawer shows the divisions of drawer, and the places for each width.

the drawer cannot be shoved in; if too short, its shortness is at once detected. This simple device effectually prevents the mixing of lengths.

Each drawer is divided into two compartments of proximate sizes, like 12 and 13 ems pica, so that the compositor can select either length when the drawer is open. Each compartment contains longitudinal trays for six widths; nonpareil, pica, two-line, four-line, six-line and ten-line. The pulling-out and shoving-in of the drawer does not throw the standing pieces into confusion, even when the compartments are but half full. All pieces of furniture are neatly planed and squared, and have the numbers of their length in picas stamped in their ends.

These drawers contain sixty lengths of furniture: beginning with 12 picas, advancing by one pica up to 60 picas, and from 61½ to 70½ picas. Properly numbered on the outside, the compositor who picks up an odd piece on the stone, knows at once in what drawer it belongs. The graduation of one pica each, from 12 to 60 picas, is found close enough for all purposes. No one has occasion to use a saw, for exact furniture is always at hand, and the pieces can be combined for lengths beyond 70½ picas. They are largely used, not only for jobwork, but as head bolts and gutter-pieces in book forms and for the blanking-out of open forms.

The cost of the stone, with cabinet and drawers, was \$137.00; the cost of filling the drawers full of furniture, accurately cut and properly numbered, was \$87.13; in all \$224.13. The cost may seem large, but we should have spent more than twice this sum in wasted labor and material if the cabinet had not been in the office. Accurately cut and accessible furniture enables us to get more exactness and blanks and margins, and quicker and neater performance in making-up and stone-work. The cabinet saves a great deal of room. I do not think it possible to put more useful

furniture in smaller compass or in a more accessible place. It is not patented. Any one can make it.

As we do not print posters, I have made no provision for lengths beyond 70½ picas. A full assortment from 12 to 36 inches would call for much more space and more material. I would recommend a graduation by an advance of 2 picas up to 24 inches and of 3 picas beyond.

I do not favor any plan of case which has furniture lying flatwise, or which compels it to be shoved in a broad pigeon-hole. This invites disorder. I prefer that all furniture shall stand on its narrow end, and that it be kept in drawers which can be pulled out. In offices that are crowded, where space has to be economized, the unused space below the ordinary case rack could be utilized where it has an exposure on the side or back. But the best place of all for the shorter lengths is under the stone where the material is most needed.

#### JAMES WATT THE INVENTOR OF THE LETTER COPYING PRESS.

In his recent inaugural address before the University of Glasgow, Professor Archibald Barr, after speaking of Watt's steam engine discoveries, says:

Watt's other inventions are too numerous to mention, and most of them—such as the parallel motion, the governor, and the steam engine indicator—are well known to have come from him. But the very multitude of his inventions makes his name to be little associated with some of his most fruitful works. Had he made no other invention, or had he been of a more self-assertive disposition, his name would probably have become known wherever business is conducted, in connection with his invention of the method, still almost universally in use, of copying letters by means of the copying press.

It would seem to be the common fate of all great and novel inventions to raise a storm of opposition from those whom they are most calculated to benefit. Dudley's invention of the process of smelting iron by means of coal instead of charcoal brought him only persecution from the iron masters and the destruction of his works by rioters at their instigation. The steel makers of Sheffield attempted to get the government to prohibit Huntsman from working his great invention—the cast steel process—and nearly succeeded in driving the cutlery trade out of their own hands and out of Sheffield. David Mushet's discovery that the "wild coals" were ironstones of great value excited for years a strong prejudice against him in the minds of the iron masters of Scotland, who have since made not only their own fortunes, but in great measure the Scotland of to-day, through the working of those blackband ores. Neilson's invaluable invention of the hot blast for smelting furnaces was not only ridiculed by the iron masters, but so stoutly resisted that for years he was unable to get it even tried on a practical scale. So again the landed proprietors, who had perhaps most to gain from the opening up of communications through the country, strongly opposed the early railway projects. They supposed that they were to be reduced to beggary by the "infernal railroads," as one landowner called them, declaring that he "would rather meet a highwayman, or see a burglar on his premises, than an engineer!" Many more such instances might be quoted.

We need not, therefore, be surprised to find that Watt's copying process, though brought out practically in its present state of perfection, found little favor at first with many business men; but it is curious now, after the invention has for more than one hundred years been almost indispensable to the class of men who then resented its introduction, to read of the bitterness of the opposition which it met with. The fear that "it would lead to the increase of forgery" ran so high that on one occasion when Smeaton and Boulton (Watt's partner) were sitting in a London coffee house, they heard a gentleman exclaiming against the copying machine, and "wishing the inventor was hanged and the machines all burnt." No one could attempt to estimate the value to the world of this single invention, and still comparatively few people now know to whose labors and knowledge they owe the boon.

## Otto Gas Engine Works,

SCHLEICHER, SCHUMM & CO., PHILADELPHIA.

Branch Office—151 Monroe Street, Chicago.

OVER 28,000 IN USE

Our OTTO GAS ENGINES are fast superseding all other power in printing establishments. They have no boiler, and are clean, safe, economical and reliable.

SIZES: 1, 2, 4, 7, 10, 15, 20, 30, 40, 50 HORSEPOWER.

Guaranteed to consume 25 to 75 Per Cent LESS GAS than **ANY** OTHER GAS ENGINE. DOING THE SAME WORK.

## F. WESEL MANUFACTURING CO.

11 Spruce Street, New York,

SOLE MANUFACTURERS OF

### THE LINCOLN ALL-BRASS GALLEY.

THE MOST DURABLE, CONVENIENT AND USEFUL GALLEY EVER INVENTED.

Lightning Lockup! No Sidesticks! No Quoins! Saves Time, Money and Space.

Patented July 23, 1893.

THE advantages of this galley are apparent to all. There is no trouble, confusion, or loss of time in handling sidesticks and quoins, either to the compositors or stone-hands. The type is always secure and held intact during composition, making up, or in standing matter. When sufficient type is placed upon the galley, close up the side, which is caught by a spring catch at the head of the galley, adjust the clamp tightly against the matter and turn the lever to the left. In correcting, loosen the matter by simply turning the lever to the right. The narrowness of the galley makes it very convenient in correcting, as it gives the free use of all the boxes in the lower case; the saving of space on the stone and bank is also a very important feature in all offices.

Parties ordering Galleys will give the exact measure of their columns.

12-inch News Galleys, all Brass, up to 18 ems.	\$2.00

# PRINTERS' ROLLERS.

OUR ROLLERS ARE USED IN MANY OF THE LEADING HOUSES IN CHICAGO.

WE SHIP TO ALL PARTS OF THE COUNTRY AND PAY EXPRESS ONE WAY OR FREIGHT BOTH WAYS.

Using only the Best Materials and working under the most approved formulas, we Guarantee Satisfaction in all cases.  
WRITE FOR SPECIAL TERMS.

IT IS FOLLY to purchase a stereotyping outfit more expensive than the work warrants. It is worse than folly to do the work of a large establishment with a low-priced outfit. Very often it will not pay to purchase any stereotyping apparatus whatever. If you are in doubt about the matter, send for "A Few Words on Stereotyping," or state your requirements, and we will make you an estimate and give such particulars as will enable you to decide whether you require an outfit, and if so, what size. We also make all machinery and supplies for electrotyping and photo-engraving.

While our columns are always open for the discussion of any relevant subjects, we do not necessarily indorse the opinions of contributors. Anonymous letters will not be noticed; therefore our correspondents will please give names—not for publication, if they desire to remain incog., but as a guarantee of good faith.

#### A WORD WITH CORRESPONDENTS.

We hope our valued corps of correspondents will not take offense when we ask them to **BOIL DOWN** their effusions in future as much as possible. We are very glad to hear from every section of the country, but our correspondence feature has assumed such proportions that it is impossible to publish all that is sent us. Friends, be brief and to the point, and **THE INLAND PRINTER** readers will think all the more of your contributions for their being so.

#### THE UNIVERSAL IS NOT THE COLT'S ARMORY PRESS.

To the Editor :

CHICAGO, November 4, 1890.

I frequently see reference to the Universal press made by your correspondents, who invariably speak of it as a good, but a slow press, conveying the impression that it is not adapted to any other than special lines of work in consequence. What they say about the Universal press I do not controvert, but such references are somewhat misleading because the new Colt's Armory press is often spoken of as a Universal, although an entirely different machine. Many printers draw the idea, from reading such references, that the Colt's Armory press is about the same as the Universal. I have often had to correct this impression by showing the difference between the two presses. What I wish particularly to call the attention of printers to is, that the Universal is a separate and distinct press from the Colt's Armory, and ought not in any degree whatever to be confounded with it in the matter of speed. The Colt's Armory press is not subject to any of the faults charged against the Universal, although built by the same company that formerly built the Universal, and it ought not to be classed as a slow press, because in its recently improved shape it is just as fast as any of them.

Yours truly, J. O. SPENCER.

#### FROM PHILADELPHIA.

To the Editor :

PHILADELPHIA, Pa., November 2, 1890.

Business in printerdom seems to be fairly good. At this season of the year seed catalogues and annuals of various kinds, piled upon the regular run of work, conspire to create a demand for more presses and pressmen. Messrs. Dando & Co. will add two Campbells; Rodgers Company will add two Cottrells, I believe; Fell & Co. a Potter. The Keystone has added a Cottrell, and several other places, whose names I have forgotten, have or will shortly add one or two presses each, of various makes. In several instances the addition of cylinder presses means the "firing out" of Adams' presses. The *Evening Item*, claiming a circulation of 170,000 copies per day, has ordered four of R. Hoe & Co's perfecting presses. I hear that the *Inquirer* will shortly place in its establishment seven typesetting machines. The apparent success of these latter machines portends a gloomy outlook for men who can only "stick type." For good, artistic job compositors, though, there will always be a demand, as it is not possible that a machine can be invented to walk around the composing room and pick out "sorts" and twist rules and justify the same in proper shape. However, these things generally adjust themselves. The pressmen had a somewhat similar experience of late years, when the self-feeding perfecting press took the place of the four, six and eight cylinder presses; also the Adams pressmen, as the continued replacing of these presses by the cylinder in book and job work will testify. We notice an increasing demand for enamel or coated paper in the printing of periodicals, etc.

Happy the ink man who makes an ink that won't "peel or set-off" on the same. Happy also the pressman who uses such an ink. Pressmen are anxiously waiting the issuance of their organ, which, in addition to **THE INLAND PRINTER**, ought to be in the hands of every one employed in the pressroom—**THE INLAND PRINTER** to instruct and benefit technically, and the organ of the branch to keep them posted regarding the doings of officers, etc.

C. W. M.

#### FROM ATLANTA.

To the Editor :

ATLANTA, Ga., October 19, 1890.

**THE INLAND PRINTER** has had very little news from Atlanta for some time. It is surprising, indeed, to see so little interest taken in giving the news from Atlanta to its readers. A city like this, with a population of 65,000, and a flourishing typographical union with 142 members in good standing, should never fail to have a letter in your valuable and widely circulated journal.

Atlanta is growing rapidly, and is the principal city in this section of the South.

The International Typographical Union convention, which met here last June, showed the necessity of the organization of labor, and through the full reports of the convention and the prominence of the reports given by that much read evening daily paper, the *Atlanta Journal*, much good has been done. The *Journal* is a comparatively young paper, but is the leading daily in Georgia, and, I might say, the whole South. It is strictly union, as is shown by the following letter, which is clipped from its issue of Friday, June 13, 1890, and which was read at the banquet given to the International Typographical Union convention at the Kimball House :

Mr. James G. Woodward :

ST. SIMON'S ISLAND, Ga., June 11, 1890.

DEAR SIR,—I came here Sunday on account of sickness in my family. Our arrangements were made to start home this evening. A heavy storm has come up. I cannot take my family out and I cannot leave them.

It is a source of very great regret to me that the fact above stated prevents my being with you tomorrow. I am thoroughly convinced that the organization of labor into unions like that which exists among the printers is a great benefit to those connected with them, and at the same time a source of profit to those by whom they are employed.

When myself and associates purchased the *Atlanta Journal* we at once determined that we wished a union office of printers, and, after three years of experience, I take pleasure, as president of the company and its largest stockholder, to bear testimony to benefits which we as proprietors have received from the capacity and reliability of these members of your union.

I would not, as a printer, remain out of the union; I would not, as a proprietor, consent to allow my composing room handled by "rats."

Again regretting that I cannot be with you, with sincere wishes for the growth of your order, I remain yours truly,

HOKE SMITH.

This letter is worthy of thought, and should be the opinion of every newspaper proprietor. The *Journal* recently gave in its columns a full description of the Printers' Home.

Inclosed you will find \$2 for renewal of my subscription to **THE INLAND PRINTER**. I would not be without it for five times the price.

S. M. W.

#### RECIPE FOR A TABBING COMPOUND.

To the Editor :

SALT LAKE CITY, October 30, 1890.

Having seen no communication from this place recently, I take the liberty of writing a letter, which, I trust, will be of some interest to some of your readers at least.

Trade here is fairly good, and a typhothetæ would do much to improve it, for there is too much cut-throat work being done here when there is no occasion for it.

The "amateur" has bobbed up serenely in all his amateurish glee, but, contrary to his usually brilliant instinct, he demands higher prices and (what is more) gets higher prices for his work than the legitimate offices. I inclose a few samples of his work; he is an artist.

I have seen in your columns from time to time recipes for tabbing compounds. Here is one which is flexible, good, and what is more, is almost inexpensive: Strip a couple of worn-out rollers and remelt the composition; add to it one-third of previously dissolved white glue and about 10 cents worth of glycerine;

let it boil until of the consistency of binder's glue, and apply one coat to small work and two coats to such work as letterheads or work which receives rough usage; the composition can be made any color desired by the addition of any aniline dye. The pad I send was made last July, and is as flexible now as two hours after it was applied.

It will cost about 50 cents to make six to ten pounds of a composition that if put on the market would readily fetch 40 cents a pound.

Would you kindly inform me through your columns if the new composing stick described by Mr. George F. Turner in the March issue is on the market yet; also the price of same. E.L.M.

#### FROM DETROIT.

*To the Editor:* DETROIT, Mich., November 8, 1890.

Death has again invaded the ranks of No. 18 and called three members to their final rest. On November 2 H. Joseph Machris, one of its oldest and most respected members, died after an illness of only twenty-nine days. Mr. Machris was for many years foreman of the job department of the Free Press Printing Company. He was born in Detroit in 1842. In 1857 he entered the job department as an apprentice, and with the exception of a few years he was in charge of the details of the job department. Mr. Machris was thoroughly modest and unassuming and universally esteemed by all who had the pleasure of his acquaintance. He was thoroughly posted in every detail of the business, and was classed as one of the best in the city in the printing trade. Integrity, devotion and faithfulness were eminently characteristic of the man, and his memory will be long cherished by his many friends and co-workers in the craft. He leaves a wife and family. His age was forty-eight years and six months. His funeral was largely attended, the entire force in the job, book and press departments accompanying the remains to their last resting place. His co-workers, as a mark of esteem, had one of the finest floral emblems ever seen made in the shape of a pillow, arch and cross, with the initials "H. J. M." in the center.

Ernest J. Petreguinn, aged twenty-eight years, employed by the W. Graham Printing Company, died on November 1.

Silas Blodgett, for a number of years a frameholder on the *Tribune*, died on November 4, aged fifty-six years.

Members of the craft in this city had a hand in the political campaign just closed, but they were not all successful in their aspirations. A. H. Raynor, of the firm of Raynor & Taylor, ran for alderman, and would have proved a valuable member in Detroit's council, but was defeated. Frank J. C. Ellis ran for the legislature on the republican ticket and was elected. Charles O. Bryce ran on the industrial ticket for the legislature and William E. Thornton for congress. Caleb S. Pitkin was a candidate for congress on the prohibition ticket. Judge J. Logan Chipman, the present member of this district, was elected for a third term. Mr. Chipman's friends among the printing fraternity are numerous, and on several occasions he has proved not only their friend, but the friend of the workmen generally.

The American Federation of Labor which meets in this city December, may rest assured that they will be met with a general good reception. The committee of arrangements is working industriously to make their sojourn in this city an agreeable and pleasant one.

The *Abend Post*, the leading German daily of this city, will soon move into its new building on Miami avenue. It will follow the example set by the English dailies, and will have a fast press and stereotyping process. They will have a handsome and commodious office.

The "Journal Year Book," published by the Detroit Journal Company, presented to the readers of the *Journal*, will surpass any of its predecessors. The illustrations will be by the half-tone process, and its general appearance will be a credit to the art of printing.

There are now in this city 69 publications, of which 9 are dailies, 34 weekly, 2 semi-weekly, 18 monthly, 4 semi-monthly,

1 bi-monthly, 2 quarterly and 1 is annual; in the English language, 50; German, 17; Polish, 2.

Detroit now has about sixty book and job offices, the most of which are classed as union offices.

Frank A. Reed and Charles H. DeMaria, both active members of No. 18, have opened an office as book and commercial printers at 58 Griswold street. Both are ambitious young men and it is hoped that they will succeed.

The *Evening Times*, the latest 1 cent daily in this city, is getting along nicely. Its typographical appearance is neat, and it is set in brevier and nonpareil. It is also getting its share of advertising from Detroit merchants.

Both the *Journal* and *News* have, of late, been issuing double sheets on account of the pressure on their advertising columns.

The *Free Press* has lately added a third press with modern improvements. It will shortly appear in a new dress.

Joseph M. Berg has been appointed foreman in the jobroom of the Free Press Printing Company, to succeed the late H. Joseph Machris.

John E. S. Phelps, formerly proofreader on the *Journal*, is publishing the Niles (Mich.) *Democrat*.

The state of trade has been quite good, but there are also a sufficient number of printers in the city to do all the work.

P. A. L.

#### FROM THE CAPITAL OF ARGENTINA.

*To the Editor:* BUENOS AIRES, October 1, 1890.

In spite of the great slackness here now in the printing business (and in others as well), the great establishment well known as the "Compania Sud Americana de Billites de Banco" — South American Bank Note Company — lately removed its plant of machinery from the calle San Martin to larger and more commodious premises at calle Balcarce and Chile, where some two to three hundred men and boys are employed. This company is about the only one (with exception of Messrs. Kidd & Co., limited) in Buenos Aires where everything to do with the named trade besides engraving, coloring, gilding and all work of art is turned out, which would really surprise the "Yankees" to look at. Bear in mind that such work can only be expected of those two herebefore mentioned houses. The former firm has its escritorio (office) at calle San Martin 136.

Jacobo Peuser, large printer and stationer, has opened a new printing office in calle Defensa, between Industria and Alegria. This same firm will shortly be removing their stationery business from calle San Martin 152, to the same street at the corner of Cangallo (a few doors lower down) into the new premises that have been built for the evening daily newspaper, *El Diario*, which is expected will also shortly move to these new quarters from its present abode at calle Bolivar 172. Mr. Peuser has also a branch at La Plata, capital of the province of Buenos Aires. Messrs. Alemann, Herpig & Riesen have opened an office in San Martin 284, where orders can be received for all kinds of printing work. This will also be the administration office of the *Argentinisches Wochen und Tageblatt*.

Messrs. Russell & Co. have opened a first-class blank-book manufactory at 191 calle 25 de Mayo, filled with machinery of the latest type, where, beside this specialty, printing, bookbinding and engraving is undertaken in all branches.

Printers may read the above enticing notices and think that trade *must* be brisk in the Argentine capital; it appears so, but were they to come here *just now*, they would have it to repent. This is given as a "timely warning" to journeymen or others who might be contemplating a passage across to this side. Remember, there are common printers, pressmen and "devils" in this city at a discount like in any other large town, but good mechanical and technical men can generally "hook on" to a place at a good monthly salary, providing they are steady, without much trouble.

The American newspaper, the Buenos Aires *Herald*, with office in the calle Cuyo 488, turned its fifteenth year of existence

on the 15th of September last. This paper (there are only two) comes second in circulation, while the *Standard*, published by the brothers Mulhall, has been thirty years in existence, but notwithstanding the age and circulation of this paper, which is a great "turncoat" (having many opinions), and a good percentage of "hog-wash" every day in its columns, it is able to charge about just *double* for insertion of advertisements in it that the *Herald* does. Both are sold for 10 cents a copy, or, say 5 cents in your currency.

Santiago Browne, of calle Cuyo 444, has opened new premises for all kinds of printing work which can be done in English or Spanish, being a small establishment, but always with plenty to do; his prices are without competition.

It will not be outside to pass a note upon the scarcity, in this city and the one at the mouth of the river on which this one stands—Montevideo—of trade journals. During some two and a half years in the River Plata I have not come across, or known there to appear, more than *one* really thorough trade organ, but only a few musical and military reviews, with also two or three monthly periodicals on the export and imports of the country, or better called "sheets of figures," that are no more use to the working mechanic or printer than a milliner's journal would be to them.

Oh, by the way! there is that important milliner's paper, appearing under the name of *La Elegancia*; and now what used to be the only trade periodical, *El Poligrafo*, in the interest of Gutenberg's disciples, has ceased to appear since December, 1889.

F. W. N. L.

#### FROM PITTSBURGH.

*To the Editor:* PITTSBURGH, Pa., November 9, 1890.

There is quite a tempest in a teapot blowing in this city at the present writing. It is all about the six-day law and the penalties that were imposed for its violation. The compositors on the *Leader* and the *Press*, which run six evening and a Sunday edition, object to being placed in the same category as the printers on the seven-day morning papers. They claim a man can make more money working six days on a morning paper than he can by working seven days on an afternoon paper that runs a Sunday edition.

There are more than six hundred members in No. 7, but when the penalty was fixed for violation of the six-day law there were only forty-five members present. It is said the meeting had been prolonged for the express purpose of tiring out the opponents of the law.

The great diversity of opinion on the interpretation of the law is another source of trouble. Some hold the opinion that, if a man selects a day to give up his cases, even if it is the first day of the week, and cannot find a sub, he is released from his obligation. Others claim he is bound to give a sub a day's work any time after that, if he can find one. A very strict interpretation of the law is made by a chairman of one of the afternoon papers. He says if a compositor works six days with the intention of giving up his cases on Saturday night, and cannot find a sub on that night, he will be fined.

President Plank, of the International Typographical Union, was called to this city a short time ago to settle some trouble between the proprietors and the foremen in connection with the six-day law. The matter was referred to the district organizer.

The prospective *Sun* was expected to shine on October 15, but thus far has not made its appearance. It is understood that Senator Quay is at the back of this paper, and the result of last Tuesday's election may have something to do with the delay, as it is well known that Senator Quay has had control of the republican party in this state for the past two years. At the gubernatorial convention some months ago he insisted on putting a candidate of his own choosing before the people. As a consequence there was a split in the party, and the democratic candidate was elected governor last Tuesday in the face of an overwhelming natural republican majority. Some people think on this account that the *Sun* will never be issued. However, the presses are in the building

and the force has been engaged, so it would seem that there is no credence to be placed in that rumor, and the paper may be expected to appear about December 1.

In connection with this, it might be remarked that there is a big field for another first-class paper in this city, as we have but the one good paper, the *Dispatch*. The other papers seem to be run for revenue, regardless of what is published in the paper. The *Post* and *Commercial Gazette* are so blindly partisan that the editors do not seem to be able to discern the true side of the news. Not much good, and perhaps a great deal of bad, might be said of the other five papers in the city. MEMO.

#### FROM TORONTO.

*To the Editor:* TORONTO, Ont., November 4, 1890.

During the past month trade has not been as active as could reasonably be expected at this time of the year, many typos having nothing to do; but, as the printing of the city directory will soon give employment to a considerable number, together with the annual rush of work at Warwick & Sons, in consequence of the parliamentary sessions, we expect a better "state of trade" before long, but not enough to warrant an influx of visiting printers. In connection with the parliamentary printing referred to, I hear considerable discussion as to the prospects of the Ontario legislature inaugurating a printing bureau, such as the Dominion government has. I see no valid reason why it should not. There certainly must be a profit from this work to the contractors who now do it, and as the people are the ones who pay this profit, through the government, why not have the printing done by the government, thus saving the contractor's profit to the people? The public school books could, also, be printed in the bureau, and as compulsory education, together with the distribution of free school books to the children, is receiving considerable discussion in our press and among labor bodies, the enlarged editions thus necessitated could be more cheaply published by the bureau than by the present mode. I see the Quebec Trades and Labor Council has requested the Quebec provincial government to adopt the bureau system. The question is certainly worthy of due consideration.

The Hamilton *Spectator* has ceased publishing a morning edition, and that city has now three 1-cent evening papers and no morning paper. The principal cause of such change is the overbearing competition it had with our daily papers.

Mr. Henry Hough, or "Harry," as he is called by those who know him best, who ran the *Cobourg World* for twenty-one years, and who more recently was connected with the management of *Grip*, has taken the place of Mr. Brownscombe in the late firm of Newsome & Brownscombe, lithographers, Wellington street. "Harry" always has a smile for his many friends, and we wish him every success in his new field.

A rather peculiar libel suit is now engaging the attention of our courts. It is brought by one Græme against the *Globe* for \$20,000 for using his name in connection with the *Globe's* supposed "confessions and admissions" of Birchall, the murderer of Benwell, whose hanging will likely take place ere this reaches your readers. The *Globe* claims that the man referred to in their article is not Græme, but another, named Graham.

The libel case of the *Mail vs. the Empire* was again adjourned at the recent sessions. This, also, is of a somewhat peculiar nature. The *Empire* published several articles charging the *Mail* with disloyalty in promulgating schemes, in concert with certain Washington politicians, whereby Canada would be annexed to the United States. The public are evincing considerable interest in the case.

Mr. James Fulton, who had been a member of No. 91 for many years, died on October 18, leaving a wife and family to mourn their loss. He served his time in the old *Globe* office.

In consequence of the meeting of delegates I spoke of last month, an Eight Hour League was formed at their meeting on October 31. The objects of the league are to educate the public to the advantages of a shorter day's work, and to use such other

means as will bring about such a state of affairs, to which end they will depend largely on the dissemination of proper literature. While strongly advocating persistent activity, I hope this body will use all due moderation in their proceedings while advancing this excellent cause. We must remember that there are two sides to this question, and that the arguments that will be brought forward by the other side are not to be pooh-poohed, but must be met in a fair, argumentative manner.

No. 91 has now 509 members on the roll, with only six in arrears, which is a very good record, and throws credit on our financial secretary.

JIM DEE.

#### FROM PHILADELPHIA.

To the Editor: PHILADELPHIA, Pa., November 6, 1890.

Printers have perhaps for years not been as busy as they are at this time, yet there are a few concerns running around in search of a little more work. Just enough to keep them nicely crowded. This activity is general in all branches of printing. Little and big job offices are crowded with work and prices have been quietly advanced; so quietly that customers either don't notice it or don't care. The latter is more likely to be the case. One concern yesterday refused an order for 2,500,000 impressions. Other big concerns tell me they have had to refuse most tempting jobs, that mean long steady runs. One concern, Rodgers', 54 North Sixth street, are this week putting in three new 36 by 54 cylinders, and they tell me they have had enough work offered them within a month to keep fourteen of them going; as it is they and several other big concerns have been running fourteen hours a day and still have customers wanting to know why they don't get their work.

The newspaper people are also doing well. I have forgotten or lost track of how many Hoe presses have gone in this fall. I know the *Item* has just put in two or three, to give an hourly output of 500,000 copies. That little paper has a way of creeping up that is surprising to some of the more dignified ones. If a dastardly murder is committed in the southwest corner of Texas, it has the woodcut of the murderer on a galley five minutes after the details are scissored out of the exchange. Let Edison beat that if he can. The *News* has begun to kick a little and is pulling up. Its kicks are mostly at Quay, our political boss, but it has some occasional good things in it. The *Inquirer* got sued (political libel) and is booming along into a big circulation. The *Record* is keeping all others at its heels, under most excellent management. The *Times* is still prophesying what never happens, under the prophetic leadership of Colonel McClure. Its "annex" is a couple dozen times bigger than the original, and is the finest printing house in the city for equipments, light, etc. The old *Ledger* is voluminous, dignified, methodical and suits its clientele. All of our dailies are making money and make less room for New York dailies than they used to. Their staffs are better, higher salaries are paid, good, energetic fellows are promoted, and a spirit of excellence begins to pervade.

The publishing houses, those concerns that get out big books, cyclopedias, medical, law, theological and other dry books that people buy and poke away in big book cases, are all busy, very busy, and several of them have been putting in new machinery and presses and otherwise enlarging their capacity. The bible houses are busy and the album manufacturers have their hands full. The theological publication houses report a great distribution of that sort of literature, and judging from the calls for printers it must be true.

We do not meet with dullness anywhere, except the few who lag behind in the race. The binderies are calling for more help, the blank-book manufacturers are all working fifty-four hours per week, and the paper mills are not able to stop long enough for repairs. What is the cause of it all, the McKinley Bill? No; nothing of the sort. There is a steady growth in business. One peculiarity is to be noticed in the amount of work that of late has been coming here from New York—just why, no one knows. One of our weeklies gives its jobwork out in one hundred thousand

lots. Its circulation is 700,000. It is a nice plum for pressmen and paper makers. No new papers have been started lately. None dare start. Trade journalism has several creditable representatives, some few of them superb in their getting up and finish, really artistic—for Philadelphia. The basis of this excellence is a heavy advertising patronage from manufacturing interests.

The compositors are holding to their organizations with fidelity, which many workmen might safely emulate. The fact that there is not likely to be any occasion for a strike for the next twelve or twenty-four months does not dull interest in the union or its meetings. They keep the machine in order and ready to use, and hence there is less occasion for its use. The officers are quiet, conservative men who own their own homes and who have been standing in their respective alleys for ten, twenty, perhaps thirty years.

The country newspapers of the state are improving in their make-up and rely less on plate matter. They find more live subjects to talk about and things to tell than they used to. The city engravers and stereotypers are very busy and our one great typefoundry is working full handed.

From the business standpoint we are all doing well, but there is as much need as ever for a little higher standard in journalism, not so much in the writing of so many columns as in the underlying spirit which pervades a paper. The *Ledger's* Saturday editorial article is a model of scholarly completeness and is always on some abstract subject; many especially buy it for this article. People demand something more than the eternal grind of trash and stuff. There is a solemn emptiness about our Sunday papers that suggests they have reached their limit as to size. What now is wanted is a paper about as big as a lady's handkerchief, printed in leaded nonpareil, containing in condensed shape every notable event and occurrence of the previous day without headlines or comment. Such a paper is bound to come.

The newspaper men have no time to be sociable so our club project is not revived. We meet occasionally in our swallow-tail coats at a supper or a dinner, but that is all.

Lively times are ahead this winter. People seem imbued with the feeling that there is an immense amount of work ahead and so there is. The authors and authoresses are turning out a vast mass of stuff—but the intellectual mind calls, and calls loudly for something more than books with which to amuse or kill a passing hour. A better, a higher, a broader and deeper literature, a literature with a soul in it is demanded, and the men and women that are to serve it are coming—even though they are yet in their knickerbockers and short skirts.

M.

#### ARRANGEMENT OF COMPOSING ROOMS.

To the Editor: CINCINNATI, October 28, 1890.

The October number of the *Bookmaker* has an interesting article on "Arrangement of Composing and Press Rooms," submitted by a committee of the National Typothetæ. As the committee reports, the conditions and needs of each office are so varied that little can be done in the way of recommending any one plan, but, referring to the diagram of J. K. Bettis, I would not have the compositors in same room with the presses if it could possibly be avoided, on account of the noise and other reasons.

About the new case for quads and spaces, shown by T. L. De Vinne: When the writer was a boy (before the war) we used to keep spaces around in the job cases, in the two lower right-hand boxes, and finding the disadvantages of the plan, cut out some of the partitions of an old lower case and made a space case of it, arranged much the same as those now made by the foundries. We have now in this office, and have had for twenty years, a space case made of double length and ordinary width, divided off about the same as De Vinne's new case. Think most offices have long since stopped the practice of distributing spaces in the cabinet cap cases.

The stone with furniture drawers underneath, I do not think much of. A man locking up a form at that stone would have to walk around to the drawers on the other side for about one-half

the furniture he would need. Two men working there would interfere one with the other sadly by opening drawers under where the other was standing, and men from other stones would make still further confusion. One person has, practically, but one-quarter of the whole set to select from without disturbing his fellow workmen, or having to *chassé* around to the other side of the stone.

From the cut shown, I cannot see what is to prevent the pieces falling down in opening and closing the drawers. If they do, it is a serious objection.

The pocket for quoins at end of stone is a good thing.

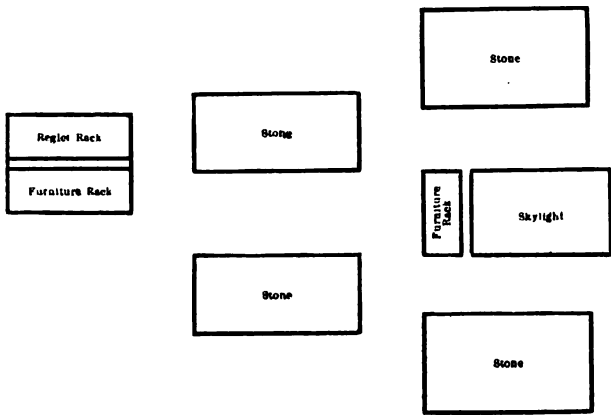

I have made a furniture rack somewhat similar, but larger, to those made by the foundries, about 24 inches wide, 11 inches deep at base, and tapering upward to 2 inches; about 4 feet 6 inches high. It has sixteen shelves, the bottom one holding furniture 10 inches long, and grading smaller by half inches down to 2½. Each shelf has the size stamped on each end, and is high enough to admit four pieces laid one on another. Wide pieces are kept at extreme right, and narrower pieces graded off to the left without any dividing partitions. On extreme left have put in a partition up and down, leaving about 5 inches space for reglets on each shelf. This stands at one end of passageway, between the two stones (see diagram). At the other end have two similar racks, one holding furniture from 11 to 34 inches, graded in inches; the other holding reglets—nonpareil, pica and double pica—similarly graded. These are about 5 feet high.

SMALL FURNITURE RACK.

Mr. De Vinne says, "The graduation of one pica each, from 12 to 60 picas, is found close enough for all purposes." I find that furniture graded by ½ inches (3 picas) is all that is necessary, and so avoid a multiplicity of lengths.

Two men can work at each stone, find everything ready to their hands, and not get in each other's way a particle. Men working

at other stones can procure furniture from same racks with the same facility and with no annoyance to others.

Mr. De Vinne's plan would necessitate a set of drawers under each stone.

My small rack contains sixteen different lengths from 2½ to 10 inches, assorted widths from 3 to 10 picas, all-sufficient for locking up forms for medium-sized job presses. Large stands contain twenty-four different lengths, from 11 to 34 inches.

In making up furniture round a job I aim to use all pieces of a similar length, which can generally be done with the exception of perhaps two or three pieces. This greatly facilitates the distribution of the pieces.

The different widths can be readily kept in comparatively good order without the dividing partitions that are generally put in, and pieces can be quickly selected and taken out far quicker than by opening and closing a drawer.

When I made these racks, I cut all the furniture then in use, and what additional new was needed, to these labor-saving lengths with ordinary saw and miter box, and about once a year since, during dull times, go over the lot cutting off battered ends (where furniture seems to wear the most), reducing pieces ½ inch, and adding new pieces where necessary, making all as good as new.

As to the expense. \$224!! That will buy a good many fonts. My stands cost, perhaps, \$1 each for new lumber, nails and screws, being made mostly from boards taken from outside of bundles of book paper. Made during slack times. Most job offices have a handy man about who can make these. They may not be as pretty as Mr. De Vinne's, but for rapid work, such as is needed in most job offices, there is, in my judgment, no comparison. R. E.

FROM BALTIMORE.

To the Editor: BALTIMORE, Md., November 3, 1890.

The city council of Baltimore last week adopted a majority committee report to pay the Dulany Company \$10,516.20 for printing and posting the registration list. The mayor has not as yet attached his signature, and if the appeal of a number of printing firms requesting that functionary to withhold his indorsement is regarded, the Dulany Company will have to choose one of two things, a lawsuit or the acceptance of a less sum for its work. The printers who have entered protest here laid their grievance before the Taxpayers' Association, which makes the following report: "That the present election law does not require such work to be given out to the lowest responsible bidder, and that in this respect there was no violation of law; yet, notwithstanding this omission, proposals from responsible parties should have been invited, which was not done, or only to a limited extent. That the price allowed for the contract was excessive; that the work could have been done at a saving to the city of several thousand dollars." The printing firms that have entered protest declare publicly that they would have printed the registration list at eight cents per name, a saving to the taxpayers of \$4,000. This job is certainly a profitable one at \$6 per thousand ems. What is to be the outcome of this squabble time only can determine.

The *Evening Globe* is no more, having succumbed to adverse fortune, brought about, as its editor says, by the boycott of Baltimore Typographical Union. An editorial in the last issue states that the publishers of the *Globe* sunk \$20,000 in the venture, and as there seemed to be no hope of extending its circulation or general business interest, it was deemed better to suspend publication than to further continue.

A newspaper syndicate has purchased the plant and is now issuing an evening penny paper from the late *Globe* office. This latest venture is called the *Evening World*. It is a six-column four page sheet, independent in politics, and quite newsy, but lacking as to first-class ability in its editorial columns. It is in affiliation with the typographical union, discarding plates and employing none but union compositors. Much sympathy has been expressed by business men for the publishers of the *Globe*, but sympathy don't go where you withhold patronage, and that is what Baltimore business men who advertise did in this instance, for, while despising the methods of the walking delegate, they hearkened unto his counsel. The *Globe* had a brief and troubled existence of three months. Its editor and co-proprietor, A. A. Hill, of Haverhill, Massachusetts, is a fair editorial writer, and has done some very excellent work for eastern journals as a foreign correspondent. Personally he made many friends in Baltimore, but incurred the enmity of the typographical union by his persistency in the use of plates.

While touching upon a matter of the kind, mention may be made of an incident which transpired a day or two ago. By some chance or other it came to the knowledge of the printers' union last week that a delegate to the Federation of Labor, of this city,

and who is the editor of a monthly publication called the *Painter*, a trade organ, was having his paper printed at a non-union office and that plates were used in the make-up. This information caused much surprise and indignation, as the editor of this sheet is secretary-treasurer of the National Painters' Brotherhood and has been posing for some time as a labor leader. He was loud in his denunciations against the publishers of the *Globe* before the Federation of Labor, and threatened to make the editor of that paper "jump" for some remark made, which was construed by the former as a personal insult.

It would seem that the *Craftsman*, of Washington, has suspended for good, as the small boy would say. I base my remark on information received from that city through a correspondent, who, in commenting upon the demise of that journal, says a new labor paper is to be issued at the capital, and that he hopes it will be well supported, adding that many labor organs have come to an untimely end by reason of "non-support."

The firm of Isaac Friedenwald & Co., printers, lithographers, etc., concluded last week to put their business into the hands of a receiver. William Deutsch, the active manager, was of the firm. There was no financial embarrassment, but trouble grew out of a disagreement between the managers. The receiver gave bond for \$225,000.

The *American* has come out in a new dress. It donned its new suit none too soon.

The press of Washington, Baltimore and Philadelphia was given a delightful trip recently to New York and return. Over three hundred newspaper men and their ladies composed the jolly party, who were the guests of the Baltimore & Ohio Railroad Company. The time made by this train, the "Royal Blue Line," between the national capital and Jersey City beat the record, having made the run in four hours and sixteen minutes, a distance of 228 miles. Your correspondent had the pleasure of participating in the jaunt, one long to be remembered by all who were so fortunate in being of the party.

The Masonic fraternity of Baltimore have been holding a grand fair for the past four weeks, which has been a great success. Gen. Felix Agnus, business manager of the *American*, presented the fair with a valuable horse. Mr. George Abell, of the *Sun*, sent a check for \$500. Visitors at the fair have been voting their sentiments as to the most popular newspaper publisher of this city. The whole affair will wind up Wednesday, and then we will know who has received the most votes. So far, General Agnus is ahead.

The passenger department of the Western Maryland Railroad Company has just issued from the press a handsome book of over a hundred pages, entitled "In Peace or in War." The work is beautifully illustrated, containing two maps, the battlefield of Gettysburg and that portion of Western Maryland through which this road runs, while the letterpress briefly describes scenes and incidents of the greatest battle of modern times, the field of Gettysburg. A. C. Hoen & Co., of this city, are the lithographers and printers who got out the work, which reflects credit upon this firm.

The printing business is fair. Over a dozen union printers "caught on" to cases last week in the office of the *World*, the non-union compositors being requested to step down and out. Of course, the "sub" is still with us; and where, let me ask, is the spot of earth that contains him not? FIDELITIES.

OUR AUSTRALIAN LETTER.

To the Editor: SYDNEY, September 20, 1890.

Under the agency of Messrs. Cowan & Co., and their prominent advertisement in the *Australasian Typographical Journal*, your excellent journal, THE INLAND PRINTER, has caught on to the Australian comp, who is now, from all accounts, a pretty large and growing subscriber. I am informed that several of the prominent chapels in Melbourne and Sydney are in receipt of regular numbers, and I am sure from this sign that your journal will grow, because THE INLAND PRINTER can claim the same qualifications which are often quoted by general advertisers: "Once

used, it cannot be dispensed with." THE INLAND PRINTER may be recommended by another feature, also, that every year its policy and make-up is becoming more cosmopolitan.

It has always struck me as being very peculiar that a country which has such a population of printers as is possessed by the continent of Australia should not possess an organ which would represent that craft. As it is, the *Australasian Typographical Journal* is the only printers' journal on the continent, while *Typo*, a journal published in Wellington, New Zealand, is the only trade journal in the whole of the Australasian colonies. There is a great difference between these two journals. The *Australasian Typographical Journal* is merely a newsletter, published monthly by the Melbourne Typographical Association, and issued free to all its members; and several other Australian societies, by paying a yearly subscription, issue the same journal to their members gratis. The *Journal* contains monthly letters from correspondents in Sydney, Brisbane, Hobart, Perth, Adelaide, Newcastle, the correspondents being chiefly the secretaries of the different societies, and these letters are therefore looked upon as being semi-official. The state of trade is the chief topic, and consequently the paper has a large circulation in the different colonies and is eagerly looked for every month. *Typo*, on the other hand, although it has a fair amount of newsletters, deals principally with the aims and objects of the job printer.

Some years ago, when that defunct high-class journal, the *American Model Printer*, was in circulation, an advanced American printer named Mr. Hart came over to Sydney from the United States, showed the *Model* round as a specimen of the work he could do, and so interested some enthusiastic art printers that they decided to give him a show, and eventually the *Colonial Printers' Art Journal* was issued to the Australian comp as a thing of beauty which was to be a joy forever. It had a very short run, but certainly I have seen it in the book case of printers who, looking at it as a colonial production, think their copies of the *Colonial Printers' Art Journal* their joy forever.

That the Australian colonies can lay claim to a large population of printers, the following list of its typographical associations will prove:

ASSOCIATIONS.	COLONY.
Ballarat Typographical Association.....	Victoria.
Barrier Ranges Typographical Association.....	
Melbourne Typographical Association.....	
Sydney Typographical Association.....	New South Wales.
Northern Branch.....	
Goulburn Branch.....	
Bathurst Branch.....	Queensland.
Brisbane Typographical Association.....	
Maryborough Branch.....	
Bundaberg Branch.....	
Rockhampton Branch.....	
Townsville Branch.....	
Charters Towers Branch.....	South Australia.
Toowoomba Branch.....	
Sandhurst Typographical Association.....	Tasmania.
Adelaide Typographical Association.....	
Northern Tasmanian Typographical Association.....	
Tasmanian Typographical Association.....	

Nearly the whole of these bodies with New Zealand are affiliated with the Australasian Typographical Union, which has a council sitting for the present in Melbourne.

It may not be generally known that in New South Wales and Queensland newspapers pass through the post to every part of the globe, free of charge, while in all the other colonies the postage is 1 cent per paper (no matter what size it may be) for inland and 2 cents each for those going outside the colony. The consequence of this cheap postage in New South Wales is that Victorian and other publishers get their publications printed in Sydney, so as to evade heavy postage. There has been considerable agitation going on for some time past to get an impost put upon newspapers and publications, but hitherto without success. Nevertheless, the agitation gains ground and becomes stronger every year. To counteract this, an association has been formed among the country newspaper proprietors. The convener of the first meeting said

that he had been led to take this step by the representations made to him by the proprietors of several papers. They considered this proposed tax would be very unjust on the country press, which was at present performing important work in the way of educating the people. Mr. O'Connor considered this was going to bring revenue into the country, but upon his own figures there would be a loss of £40,000 a year.

The conference extended over several days, and resulted in the passage of the following resolutions :

That a provisional committee be appointed to formulate by-laws for the Provincial Newspaper Association; that Mr. Davies be the secretary; and that Messrs. Kellaway, Torpy and Oram be empowered to convene a meeting of country newspaper proprietors as soon as their duties shall be completed.

That this meeting disapproves of the proposed imposition of a postal rate on newspapers, as it believes their publication is in the educational interests of the colony, and that they should, as hitherto, be carried free through the postoffice.

These resolutions were embodied in a petition, and Messrs. Garland and Torpy, members of parliament, were invited to present the petition to parliament.

It was decided that the subscription to the new association should be one guinea per year to start with, and during the discussion which took place it was suggested that a committee should be appointed to watch the interests of country journals in Sydney, with the view of remedying the grievances existing with regard to the securing of government and other advertisements, and if possible to wipe out the present unsatisfactory system carried on by advertising agents.

The death of Mrs. Henry Heron (better known in Australian literary circles by her *nom de plume* "Australis") took place in Sydney last month. Mrs. Heron was ill only a few days, the immediate cause of death being inflammation of the lungs. She was the daughter of Sir William Manning, and from an early age exhibited exceptional capacity in both prose and verse. She contributed at intervals for many years to every newspaper or periodical of importance in the colony. Her life, says the *Sydney Daily Telegraph*, was characterized by unselfish devotion to the interest of the suffering and necessitous, and in all her writings and actions she was animated by a high purpose that won for her the loving esteem of all with whom she came in contact.

For some years there was employed in the government printing office (lithographic department) at Wellington, New Zealand, a lithographer who was very fond of experimenting in photo-lithography. The government printer saw no value in experiments, so he discharged Mr. Phillips as being a waster of good material. The department was afterward taken out of the government printer's hands, and placed in the hands of a practical lithographer, with instructions to pursue investigations and experiments. Mr. Phillips came over to Sydney, and finding means of prosecuting his experiments, he was at last successful in bringing out his invention in photo-lithography. A company was formed to work the process, called the Phillips-Stephan process, with a capital of \$500,000. After the latest machinery had been obtained, an illustrated weekly paper was started, but as the process was very expensive this venture was soon dropped. The company carried on general business for some time, but it is now being wound up.

During the centennial year of the colony of New South Wales, it was considered that it would be a fitting time to commence a history of New South Wales. Accordingly the government advertised for an editor, and Mr. G. B. Barton was chosen, he undertaking to write the history up in thirteen volumes, of seven hundred pages each. The historical documents from which the "copy" was to be written was to be supplied by the government. There has been one volume issued, which was favorably reviewed by a number of English and colonial newspapers. Some friction has now occurred, and the work has stopped. The matter has been brought under notice of parliament, when, in reply to a series of questions asked by Mr. O'Sullivan in the legislative assembly last night as to an arrangement entered into between the government and Mr. G. B. Barton for the latter gentleman to write a history of New South Wales, Mr. McMillan said that after the production

of the first volume of the history an arrangement was entered into with Mr. Barton to continue the work on reduced terms of payment, one volume to be produced in each successive six months at a cost of \$3,000 per volume. A portion only of the second volume was produced within the time and the agreement was terminated. A canvasser had been engaged to take orders in advance for the work and 2038 subscribers had ordered copies, in consideration of which orders a sum of \$8,275 had been paid to the canvasser. Commission paid to the canvasser for work and labor done could not be recovered, nor did the government contemplate any such proceeding. No arrangements had yet been made for continuing the history.

At a recent meeting of the Sydney Typographical Association the following important motions were adopted :

That the secretary be instructed to issue a circular informing journeymen compositors in the colony of New South Wales that unless they become members of the New South Wales Typographical Association before March 31, 1891, a penalty will be imposed upon them in lieu of the ordinary entrance fee of five shillings, and this course be also adopted in the case of apprentices who neglect to join the association within three months after the completion of their indentures.

That, after issuing of such circular, a missionary delegate and organizer be appointed to canvass the country districts and avail himself of the cooperation of the Shearers' and other unions which has been so freely and frequently offered.

The following resolution was ordered to be sent to the council of the Australasian Typographical Union, which governs the whole of the colonies :

We, the members of the New South Wales Typographical Association, earnestly urge upon the union their immediate attention to the following grave matters, namely, the necessity of an Australasian scale of charges; the apprentice question; female labor; reciprocity in mortality and unemployed allowance, and legislation in the country districts. ASMODEUS.

#### FROM BOSTON.

To the Editor :

BOSTON, Mass., November 8, 1890.

In my October letter I predicted a busy season for Boston printers, and correctly, it seems, for nearly every office is now filled to overflowing with work, and many are increasing their plants in order to meet the demands of their customers. Messrs. J. S. Cushing & Co. find their exceptionally equipped book office fully taxed, and Messrs. Berwick & Smith, whose pressroom is in the same building, are equally as busy. The Boston Job Print, on Alden street, has just added two new Golding presses, and other extensive improvements are either accomplished or contemplated. Messrs. Robinson & Stephenson, on Fort Hill square, have taken another floor of the building which they occupy, making three in all, and a new Cottrell four-roller press is one of their recent accessions. Messrs. L. Barta & Co's large force of employes are as busy as bees. Messrs. A. L. Philpott & Co., who were mentioned several months ago as having started an office on Court street, quickly outgrew their quarters there and now have a floor at 54 Pearl street, L. Barta & Co's old stand. And so I might go on almost indefinitely. Everybody is busy—and that would imply happiness, unless there is a disturbing specter scared up by indigestion or the republican reverses in the recent elections. The foundries and dealers report brisk trade, which indicates a lively condition of things among printers who look to the Hub for their supplies.

There has been a change in the Star Printing Company of Lynn, Mr. Whitworth retiring, and Mr. Crowell taking entire charge of the business.

About a month ago the Boston papers gave a portrait of a young Lowell printer who had disappeared suddenly. He owned a small office and did a fair business. After a long search it was found that he had taken service with Uncle Sam in his navy. Possibly he saw in this course a shorter road to opulence than in competition with that class of printers who print paper bags at 15 cents per thousand, and do other work at proportionate prices.

Apropos of low prices, I would like to enlist the influence of every writer for printers' trade publications in crying down the too prevalent and pernicious practice of doing work at or below the

cost of production. It is not the amateur alone who is responsible for this evil. Last summer I was shown a pamphlet of twenty-eight pages, about one-third of which were tables. There was a cover, and four hundred copies were printed, all for \$27. It was not the work of a novice, either. "Figger" up the profit in this, please, and then estimate the business capacity of a man who would make such a price. The trouble is that some printers fail to give proper attention to the cost of production. If they would take trade papers and read and *digest* what good writers are continually saying upon this subject, they would see the absolute folly of slipshod methods and change their balances from the loss to the profit side.

The Boston Job Pressmen's Union is preparing for a ball to be held early in the coming winter. An able committee of arrangements are working hard to make the affair a success.

Twelve dollars per week is what the Boston cylinder press-feeders think they should be paid, and what those employed in several offices have struck for.

R. F. Raymond, president, E. C. Milliken, treasurer, C. W. Knight, manager of the advertising and printing department, and W. P. Tobey, manager of newspaper department, are the officers of the New Bedford (Mass.) Journal Publishing Company, recently organized. Mr. Alexander MacCall is editor of the company's paper, the *Evening Journal*.

The firm of Goodwin & Drisko, this city, has dissolved, and the announcement is made by postal card in this unique way :

IT WAS GOODWIN & DRISKO,  
RAILROAD PRINTERS.  
IT IS E. I. DRISKO,  
Printer and Book Maker,  
73 FEDERAL STREET, BOSTON.

Referring to the printing of the official ballots for the state election this year by the Wright & Potter Printing Company, the Boston *Journal* said :

The work has required 13½ tons of paper and 1,520 electroplates, then a separate set of plates each for the head of the ticket, the state officers, the congressional, councilor, county, senatorial and representative districts, district attorney in one district, register of probate in one county, two constitutional amendments and special questions to be voted on in Malden and Newton. There were printed about 1,200,000 ballots, 22,500 lists of candidates and specimen ballots and 92,764 other pieces, including cards of instruction, seals, certificates of nomination, nomination papers, labels, express receipts, clerks' receipts, folio books, wrappers, extracts from the statutes, etc., making a total in round numbers of 1,315,000 pieces. This was accomplished on thirteen presses, and 153 combinations were made for the ballots. In the work at the printer's, especial mention for faithfulness and accuracy is due to Charles H. Sweeney, general foreman; George Allen, foreman of the pressroom; Miss E. E. Baker, in charge of the folding department, and O. F. Conihe and Louis Gosselin.

Alphonso Ross, for nearly thirty years financial editor of the Boston *Advertiser*, died at his home in this city on the night of November 6. G.

**TO FACILITATE CORRECTING.**

How often it is noticed that a "comp" in overrunning matter drops his lines all over the frame; in the boxes, in a "stick," and even up the side of his matter if correcting on the galley. The *Effective Advertiser* claims that this could be easily overcome at a slight cost by making in wood something similar to the following.

It is in the little things where the time is lost, therefore it should be apparent to every master printer that such a contrivance as this, which we will call the "Effective Corrector," would effect a vast saving of time, especially in book houses, where of necessity all corrections are made on the galley.

Written for THE INLAND PRINTER.

**EMINENT LIVING PRINTERS.**

BY JOHN BASSETT, EDITOR OF THE "EFFECTIVE ADVERTISER," LONDON.

NO. IX.—MR. HENRY JAMES TUCKER.

**T**HOUGH now a naturalized Frenchman, Mr. Tucker is an Englishman by birth, having been born at Alderminster, near Stratford-on-Avon, June 2, 1840. His school days were divided between a village school, at Preston-on-Stour, and the private school of Mr. Warrilow, Stratford-on-Avon. In 1853, Mr. Tucker's father took a farm in the parish of Sawbridgeworth (Herts), and it was the senior's intention to make Henry a farmer,

but he soon rebelled, and started as a pupil teacher in the school of the Rev. Mr. Jones, at Spalding, Lincolnshire, where he remained but a short time. Soon after this Mr. Tucker went to Birmingham and stayed with an uncle, who made up his mind to make a jeweler of him, but having accidentally met Mr. Samuel Russel, a well-known Birmingham printer, he was prevailed on to become an apprentice, from March, 1857. At the end of a year Mr. Russel became bankrupt. Mr. Tucker then entered the office of Mr. Hall, another Birmingham printer. Here he had the mortification of being put to a demy Hopkinson and Cope press, at which he worked constantly until November, 1860.

Mr. Tucker now conceived the idea of going to France, and on January 29, 1861, he started, arriving at Boulogne-sur-Mer on February 1, and Paris the following morning, not knowing a word of French! After fruitless endeavors to obtain employment, and reduced to his last sou, as Mr. Tucker told me during a visit to Paris a short time ago, he managed to get a casual "grass" on *Galignani's Messenger*.

The following August homesickness took hold of him, and consequently he returned to Birmingham, but stayed only a few months, for Paris had again gained the ascendant, so he returned and soon became a full hand on *Galignani's Messenger*. Mr. Tucker was, however, persuaded to return to England a second

time, being offered a situation in a printing office at Rugby; from there to Birmingham was the next step, where Mr. Tucker assisted on the first number published of the *Daily Gazette*. Astonishing to relate, he could not make up his mind to remain in England, so for the third time *Galvani's Messenger* received him in its fold. A dispute occurred, and Mr. Tucker suddenly left. A few days afterward an advertisement appeared in *Galvani's*, thus worded: "Wanted, an English Compositor." "I had hardly read the last word when," as humorously put by Mr. Tucker, "I fled to the 'place.' Was accepted. 'Come next Monday,' said the printer. Of course I was there." Here he commenced one of the first weekly journals (printed in English) in Paris, entitled the *News of the Week for Americans*. It was started in January, 1867 (the year of the Universal exhibition). This publication induced him to think there was room for something better, so he suggested to the proprietors that an English-American weekly paper, neatly printed, in English type, would certainly be better than the poor thing eking out such a miserable existence. The ultimate result was the foundation of the *Continental Gazette*. To make this journal a success he insisted on having English type. The proprietors agreed, and accordingly an order was dispatched to Messrs. Caslon, London, who forwarded the whole outfit in December, 1867. Mr. Tucker says he little thought then what that order would lead to. It was the forerunner of many which have told their tale on typefounding in France.

The first number of the *Continental Gazette* appeared on January 1, 1868, and was looked upon as the best printed journal that had ever appeared in Paris. The following March, Mr. Joseph Kremer brought out a small four-page paper, entitled the *American Register*; it was a success, but badly printed. Mr. Kremer went to Mr. Tucker and wanted to know how he got out such an excellent paper. "Easily done," was the reply, "buy English type; I will take the order." And the order was taken, the *Register* then came out in a new "dress," soon becoming a rival to the *Continental Gazette*. I may here state that the *American Register* is still the most important weekly journal published in the English language in Paris, and still retains its English "dress," while the *Continental Gazette* is defunct.

Mr. Tucker now thought seriously of printing after the fashion of English printers, but there was a serious difficulty in the way. Eighty odd printers were authorized to exercise their profession in the Department of the Seine, and the emperor himself, without the aid of his *Corps législatif*, could not make one more. Only one thing to do: print under somebody else's name. However inconvenient that was, Mr. Tucker attempted it, and started a small office in the rue des Jeûneurs, under the borrowed name of Kugelmann, a legally authorized printer. This was at the end of 1868.

In the beginning of 1869 he started an English paper, the *British and American News* (which later on was changed to the *European News*, a journal still existing in Paris). One peculiar feature about the first number of that paper is this: it was printed in London at an office in Fleet street, and, having announced its appearance for a certain day, Mr. Tucker took the mail train from Paris to London, bringing back in the evening some sixty copies. These were distributed among the kiosks on the boulevards at once, the remainder following by slow train. The venture was a success, being continued as a half sheet printed in London, the other half in Paris. Afterwards stereotyped columns were sent over, and so it goes on to this day.

The new printing office went on increasing, when Mr. Caslon, finding he had a good customer, suggested to Mr. Tucker that he was the best person to push forward his type on the continent. Mr. Tucker thereupon turned over the printing office to his partners and took up the sale of the Caslon type. A small stock was sent over at once: he fitted up the offices and warehouse at 35 rue Jacob, when almost immediately that terrible strife between the French and Germans broke out. As to this, I will let Mr. Tucker speak in his own words: "I have always thought, and I think I am right, that you owe a duty to those who help you. Now, I had become established as a business man in Paris, and was called

upon in that position to serve in the Garde Nationale. The war broke out, and, as a foreigner, I was at liberty to leave; but no, I did nothing of the kind. I said to the captain of my company, I have served here, have been treated as a citizen, and will act as one while in the country I have adopted as my future home. The result was I became corporal in the Garde Nationale, and was accorded full letters of naturalization as a French subject. I passed the siege of Paris under arms, and was in London during the commune."

The siege of Paris brought about one important improvement for printers—the liberty of printing. As before mentioned, eighty odd printers did all the work for Paris, and the rest of the Department of the Seine. But the Gouvernement de la Défense Nationale in 1870 put a stop to this state of affairs by declaring the printing profession free to all men who wished to exercise it.

The war finished, the commune extinguished, printing offices started up like mushrooms. From 1872, when people had to some extent forgotten the consternation caused by the terrible war, an extraordinary development in the printing trade took place, and Mr. Tucker found himself unable to execute the many orders daily received. It was a fine time for the typefounders, and Mr. Tucker says he could mention those who made a small fortune through this sudden change.

About this period Mr. Henry William Caslon, the fifth and last of his race, so lost his health that he retired from all active part in the foundry, and the French department was transferred absolutely to Mr. Tucker in the early part of 1873, when he became proprietor of the French and continental business.

It then occurred to him to start a monthly circular, the first number of which appeared on May 1, 1873, entitled *Typologie-Tucker*. At that time Mr. Tucker had no other idea than making the monthly publication an advertisement for his wares! He had published but two or three numbers, however, when he received a visit from Mr. Madden, a gentleman who had devoted many years to the study and elucidation of the ever-important question of the invention of printing. With his aid a series of articles was commenced on the origin of printing. Later on, the late Mr. Blades gave his permission to the translating of his interesting work, "The Enemies of Books," which appeared in the *Typologie* some years ago. Mr. Tucker's old friend, Charles Wyman, gave him permission also to translate and publish his "Grammar of Lithography," which appeared in the columns of the *Typologie* from January, 1880, to December, 1883. Mr. Tucker resolved now to publish a dictionary of technical terms used in printing offices, so he collected all the documents that fell in his way, and on January 1, 1884, appeared the first installment of the "Dictionnaire Typo-Lithographique" from his pen.

Returning to Mr. Tucker's business career, I may state that, by an agreement, insuring to Mr. Tucker a certain interest for life, the French and continental trade he had both created and carried on for twenty years was ceded to Messrs. Caslon & Co. at the end of September, 1887. Mr. Tucker has now retired from active business, his time being entirely occupied with the publication of the *Typologie*.

The Paris branch of the Caslon foundry is still one of the principal firms in France, and there is no French house that can surpass it in the quality and beauty of its type.

The introduction of English-made type into France has had the effect of waking up the French foundry, who today are almost equal to the English in their manufacture. It must be understood that this allusion is to their manufacture only, as their punch cutters have always been superior for taste in design in the execution of fancy type.

Before Mr. Tucker entered the continental market with Messrs. Caslon's type, the French foundry were in the habit of cutting off the bottom of their letters to make them the proper height to paper. This wretched system is now almost completely abandoned. The machine principally used in French foundries is that invented by Johnson, of London, but it has been greatly modified and improved by Messrs. Foucher Brothers.

## THE TYPEFOUNDRIES OF THE UNITED STATES.

NO. II.—MARDER, LUSE &amp; CO.

The wonderful growth and progress of Chicago in all that constitutes material prosperity is nowhere better illustrated than in the lines tributary to the needs of the printing fraternity. While our wholesale merchants have gone on and erected and filled their trade palaces with the fabrics of every nation and every clime, giving to the city a name known of all men, the manufacturers of articles for printing office use, though having a constituency smaller in numbers, have covered as wide a territory as that of the merchant princes. Beginning in a comparatively small way, their facilities have grown with their trade until Chicago today is one of the best printers' supply points in the United States; that is to say, the printer can find here, ready for immediate delivery, or have made to order on short notice, anything needed in his business, from a gauge pin to a perfecting press, from a pack of visiting cards to a thousand carloads of paper, from a font of fullface to a hundred thousand dollar outfit.

The pioneer house in the manufacture of printers' goods in this city, and still the most extensive, is the Chicago Type Foundry, at Nos. 139 and 141 Monroe street. This now immense concern was established as a branch of an eastern foundry some thirty-five years ago, in a small building on Washington street, between Clark and Dearborn streets. At first nothing but body types, leads, etc., were cast, everything else being supplied from houses in other cities. In a few years, however, the infant giant cut loose from the apron-strings of its original projectors, since which time its progress has been onward and upward. Through all the changes of ownership it has retained the original name of the Chicago Type Foundry; but since January 1, 1869, it has been under the control of its present proprietors, Marder, Luse & Co. When these gentlemen assumed the ownership of the Chicago Type Foundry they recognized the possibilities of the future, and bent every energy to secure to themselves and to Chicago the harvest that was in sight. Larger quarters were obtained, new and improved machinery and methods were utilized, and men and brains of the first order were employed. Busy hands and bright minds contributed to the building up of a business which has had a growth almost unparalleled in the history of enterprises of the kind; and the Chicago Type Foundry today stands as one of the most extensive and strongest houses in its line in the country, and there are few in other countries equal to it.

In one thing the house of Marder, Luse & Co. has worked an entire revolution in the printing trade. We refer to the making of uniform type-bodies. The craft will well remember the curious and provoking jumble—we can call it nothing else—of a few years ago. Then each foundry was a law to itself, and the types from no two foundries could be made to justify with each other. If a printer wished to use two sizes of types in the same line he was compelled to employ cardboard or paper to effect his purpose, while the disastrous effects resulting from the mixing of fonts were felt of all men who were so unfortunate as to have procured their material from two different concerns. The variations in brevier, for instance, were in some cases as much as a twelve-to-pica lead one way or the other, so that the printer who purchased his body letter from one founder could not make the quads and spaces justify with the job letter of another, and for the latter special quads and spaces had to be bought, thus entailing a heavy additional expense without fully curing the evil.

Occasionally a wail would go up from the craft over this untoward state of affairs, and the founders would be petitioned to agree upon a common scale of measurement that should give relief. Those who made any reply to the plaint declined to make the change desired, averring that it would entail so great expense upon them as to amount, in some cases, to actual confiscation; then they complacently settled back into the old rut, satisfied that they had fully answered the demands made upon them. Not so, however, with the Chicago Type Foundry. Even before the great fire of 1871 the proprietors became satisfied that the desired

change could be made, and that it would be an immense boon to the craft. They set about to devise a scheme that should be mathematically correct, so that all the sizes of type could be made to justify with each other by the use of regular thicknesses of leads, and without resort to cardboard and paper, which involved the waste of immense amounts of time. The result was the introduction of the "American System of Interchangeable Type-Bodies," now adopted by nearly every foundry in the country under the name of the "Point" system. In this system the "American"—one-twelfth of a pica—was taken as the unit of measurement. All the sizes of type above agate were then cast upon multiples of this unit. Thus nonpareil was made six times the size of an American; minion seven times, and so on up to pica, when the increase became two points in each case up to double pica, which was made twenty-four times the size of American, or equal to twelve six-to-pica leads. The entire system is best illustrated by the diagram given on page 73 of the current volume of THE INLAND PRINTER (October, 1890). This can be shown by the following table. The sizes are based upon the metric system, which must, sooner or later, be the standard of measurement in this country:

SIZE.	No. POINTS.	SIZE.	No. POINTS.
American .....	1	Pica .....	12
German .....	1½	English .....	14
Saxon .....	2	Columbian .....	16
Norse .....	2½	Great Primer .....	18
Brilliant .....	3	Paragon .....	20
Ruby .....	3½	Double Small Pica .....	22
Excelsior .....	4	Double Pica .....	24
Diamond .....	4½	Double English .....	28
Pearl .....	5	Double Columbian .....	32
Agate .....	5½	Double Great Primer .....	36
Nonpareil .....	6	Double Paragon .....	40
Minion .....	7	Canon .....	44
Brevier .....	8	Four-line Pica .....	48
Bourgeois .....	9	Five-line Pica .....	60
Long Primer .....	10	Six-line Pica .....	72
Small Pica .....	11	Eight-line Pica .....	96

The use of these bodies together is as easily learned as the multiplication table. Thus a long primer (10) and a brevier (8) justify with a great primer (18) or two-line bourgeois; a brevier (8) and a nonpareil (6) with an english (14) or a two-line minion (how handy this in advertisements beginning with a raised line, as is the fashion on many papers); one six-to-pica (2) lead and a long primer (10) make one pica (12); two pearl (5) make one long primer (10); three nonpareil (6) bodies make one great primer (18); four minion (7) bodies make one double english (28); five brevier (8) bodies make one double paragon (40), and so on through the entire list of type bodies. In other words, the differences between the various sizes are calculated to a mathematical nicety and are made uniform through the whole series. The same system of points is applied to leads, rules, etc., a twelve-to-pica lead being one point, an eight-to-pica one and a half points, and a six-to-pica two points.

The introduction of the interchangeable system by Marder, Luse & Co. created a genuine sensation. A few printers, thinking only of their stocks then on hand, were inclined to condemn it, but the great majority of the craft, recognizing its benefits and utility, hailed it as one of the needed reforms of the day and acted accordingly. Some typefounders, however, evidently blind to the demand of the times, held on to an obsolete idea, and condemned the proposed reform in accordance therewith; yet such has been the current of events that even its then most persistent opponents now advertise to furnish types upon the "point" system when desired.

The interchangeable system now finds universal favor among progressive printers. It has had a thorough trial extending over several years, and he would be a rash man who would even suggest a return to the old order of things. Of course, those who have large stocks of material made after the old haphazard style do not and cannot expect to receive the full benefit of the new plan, but even they are better off than they were under the old system, and the advantages of the interchangeable system will become

more and more patent to them when they are compelled to replace the old material with that made upon the modern plan.

The struggle to introduce the new system was a more difficult one than would now be imagined. Opposed to it were large aggregations of capital and the natural selfishness of competitors in business, especially of those unwilling to make a present sacrifice for the sake of securing a future good. Marder, Luse & Co. were compelled to make this sacrifice in common with every other foundry adopting the system, but they were wise enough and brave enough to enter upon the work and push it to a successful issue. Their labors have secured the coöperation even of their competitors and the unqualified indorsement of the craft throughout the English-speaking world. The United Typothetæ of America, at its session in September last, gave its hearty approval of the interchangeable system and acknowledged its many merits, and that body of representative printers has been and is making the effort to induce all the founders in the country to conform to it. In this effort they have been nearly successful, and with but two or three exceptions all the manufacturers will hereafter supply types made upon what is now known as the "point system," which Marder, Luse & Co. instituted some fifteen years ago. As has been said before, this house has effected a revolution in the trade—a peaceful revolution, and one that is of almost incalculable value to the craft.

Written for THE INLAND PRINTER.

### REMINISCENCES.

BY JAMES BARNET.

THE CHICAGO "CHRONOTYPE."

A GENTLEMAN from the Pacific slope arrived in Chicago in that fateful year of panic, 1857, with notions of newspaper work far ahead of any that had been expressed in the Garden City. His plan of publishing a first-class weekly journal found favor with all those he came in contact with, and his family connections, second to none, wealthy and above reproach, would give it a character and stability that few newspaper men could boast of. Paid writers of acknowledged merit would have their essays in its columns, one of them being the well-known Professor Mathews, of scholastic attainments. Great expectations were formed beforehand of the effect of seeing this gentleman's manuscript in print. The name of the paper even would be one that was sure to cause inquiry and insure its sale, while the printing with good type from the Philadelphia and Boston foundries and white paper would be such that all people of taste, who disliked the ball game, Sunday racing and theater going, with chicken and dog fighting, would eagerly subscribe for the *Chronotype*. The editor being thus fortified he mounted his winged fancy, but, alas! not being a practical printer, he never reached the goal that shines so bright with the roseate hues of experienced art.

To put the effort into practical execution a suitable printing office with its material was bargained for, when I was recommended and sought after to take charge of the jobwork, which would, of course, soon be on hand through the irresistible exertions of Jake Harker, who had been in the *Evening Journal* employ. He was a little, active fellow, and seemed just the man in the right place to do anything and promise everything. Four months had passed pleasantly in their course when signs of the shortness of cash were projecting themselves on Saturday night as the pay envelopes found their way to the pockets of the employés. Jake began to spend more of his time out of the office than seemed necessary, and I was called upon to officiate in his absence. This gave me an insight of the charges made for job work, and I would scarcely believe my eyes to find that canvassed jobbing was being done that would not pay a profit. I knew then that it was a mere question of time when the *Chronotype* would cease to exist.

A typo, who felt that he had a financial interest in the concern, had conceived a dislike for Jake, and possibly words had passed between them. One day they met on the stairs leading to the

printing office, and it was found that the space between the wall and the railing was not wide enough to allow one another to pass. Here was a difficulty that was not contemplated when one went down and the other began to climb. Neither would give way. The Gordian knot had to be cut, and the little Englishman let out with his right hand on the facial muscles of his opponent. This was the first blood for Jake, with which he was contented, and the battle of the stairs was at an end. Loud talk of police and prison resounded through the air, but nothing came of it. Between these two the editor was in a quandary, and on being told that I did not believe in attending to another's business beside my own, especially as there seemed no reason for the exigency, he quietly said, "Do the best you can."

No steam or cylinder press being in the establishment, the forms of the *Chronotype* had to be sent out. An effort to save a few dollars in this direction resulted in printing the pages on Seth Paine's press across the river, in Gates' machine shop, Canal street. This press rattled and jarred more like an ancient family mangle than a decent, well-behaved article of the Taylor pattern. In fact, if a full head of steam had been applied, the original and novel bumper would have shattered the walls of the building as completely as did the battering rams at the siege of Jerusalem so many years ago. It was terrorizing to hear the slap of the bed upon the supple board that sent it back to its place.

A parting time was at hand, when the editor arranged with Jake and I about the balance due for wages. Fifty dollars was my portion, the half of which was never paid, owing to the acceptors of the duebill failing in business. Harker then vanished from my sight on leaving the *Chronotype* office as did the Bottle Imp when he went down below with the trap door on the stage of the theater, and I did not see him again. Six months finished the experiment of issuing a first-class weekly newspaper. "It went up like a rocket, but came down like a stick."

The fame of the editor of the *Chronotype* was afterward inclosed in some volumes of his experience in Paraguay while looking after the dignity of the United States, as Lopez and his enemies were settling their quarrel with the sword.

### THE TERM OF LITERARY COPYRIGHT.

Under the existing law of the United States, copyright is granted for twenty-eight years, with the right of extension for fourteen more; in all, forty-two years. The term of copyright in other countries is as follows:

- Mexico, Guatemala, and Venezuela, in perpetuity.
- Colombia, author's life and eighty years after.
- Spain, author's life and eighty years after.
- Belgium, author's life and fifty years after.
- Ecuador, author's life and fifty years after.
- Norway, author's life and fifty years after.
- Peru, author's life and fifty years after.
- Russia, author's life and fifty years after.
- Tunis, author's life and fifty years after.
- Italy, author's life and forty years after; the full term to be eighty years in any event.
- France, author's life and thirty years after.
- Germany, author's life and thirty years after.
- Austria, author's life and thirty years after.
- Switzerland, author's life and thirty years after.
- Hayti, author's life, widow's life, children's lives, and twenty years after the close of the latest period.
- Brazil, author's life and ten years after.
- Sweden, author's life and ten years after.
- Roumania, author's life and ten years after.
- Great Britain, author's life and seven years after his decease; to be forty-two years in any event.
- Bolivia, full term author's life.
- Denmark and Holland, fifty years.
- Japan, author's life and five years after.
- South Africa, author's life; fifty years in any event.

AGATE NO. 22—OR ON 5 POINT.

THE RELATION of guardian and ward, or in other words of tutor and pupil, which covers so many titles of the Institutes and Pandects, is of a very simple and uniform nature; the person and property of an orphan must always be trusted to the custody of some discreet friend. If the deceased father had not signified his choice, the agnats or paternal kindred of the nearest degree were compelled to act as the natural guardians; yet the Athenians were apprehensive of exposing the infant to the power of those most interested in his death, but an axiom of Roman jurisprudence has pronounced that the charge of tutelage should attend the emolument of succession; if the choice of the father and the line of consanguinity afforded no efficient protector, that failure was supplied by the nomination of the mayor of the city or by the president of the province; but the person so named to this public office might be legally excused by insanity or blindness, by ignorance or inability, by previous enmity or adverse interest, by the number of children or guardianships with which already he was burdened, and by the immunities which were granted to the useful labors of a magistrate, lawyer, physician or professor. Till the infant could speak and think he was represented by a tutor, whose authority was finally determined by the age of puberty; and without his consent no act of the pupil could

bind himself to his own prejudice, although it might bind others for his personal benefit. It is needless to observe that the tutor often gave security, and always rendered an account, and that the want of diligence and integrity exposed him to a civil and almost criminal action for the violation of this sacred trust; the age of puberty had been rashly fixed by the civilians at fourteen, but since the faculties of the mind ripen more slowly than those of the body, a curator was interposed to guard the fortunes of the Roman youth from his own inexperience and headstrong passions, for such a curator had been first instituted by the mayor to save a family from the blind havoc of a prodigal or a madman, and the minor was compelled by the laws to solicit the same protection, to give validity to his acts till he accomplished the full period of twenty-five years. Women were condemned to the perpetual tutelage of parents, husbands or guardians, a sex created to please and obey was never supposed to have attained the age of reason and experience; such at least was the stern and haughty spirit of the old law which had become so insensibly modified before the time of Justinian. The original right of property can only be justified by the accident or merit of prior occupancy. On this foundation it is wisely established by the philosophy of

FINANCIAL AND COMMERCIAL.

Metropolitan Elevated 1sts rose ¼ per cent. to 109½, and returned to 109¼. Richmond & Danville debentures dropped ¾ per cent. to 59¼, and rallied to 61¼. GREAT LIBRARIES make a few intelligent men and women; newspapers lift nations into the sunlight. Better have fifty millions of people only tolerably intelligent than a thousand Solons. The impression is abroad that newspaper knowledge must necessarily be ephemeral because periodicals are soon thrown aside, and that not more than one person out of ten thousand ever keeps a file of the periodicals for future reference. But so far from being ephemeral newspaper knowledge makes up the structure of the world's heart and brain, and decides the destinies of nations.

AN ADVERTISEMENT in a widely circulated newspaper is the best of all possible salesmen—one who never sleeps and is never weary, who goes after business early and late, who accosts the merchant in his store, the lawyer in his office, the student in his study, and the clerk and cashier at his desk; who can be in a thousand places at once,

### DOUBLE "POLHEMUS" CABINET.

The Double Cabinet has 18 full-sized italle cases, 20 two-third job cases, and 2 pair news cases on top; Cherry finish, . . . . . \$75.00  
(Solid Cherry or Walnut, 20 per cent extra.)

**WE MAKE THE FOLLOWING CLAIMS FOR THE "POLHEMUS."**

- 1st.—When the compositor empties his stick, the lower case is slid forward out of the way, exposing the galley, which saves time.
- 2d.—When correcting, the galley is not laid on the case, covering half the boxes, but every box is convenient of access—this also *saves time*.
- 3d.—The lower case may be shaken up without lifting it from the stand—saves *more* time.
- 4th.—The lower case extends six inches beyond the stand, so that the compositor may work easily without rubbing his knees against the stand, and may be seated if necessary.
- 5th.—The compositor, standing at one side of the cabinet, and the cases being drawn out on the *opposite* side, he is never disturbed by others using the cases in the cabinet—saves *lots* of time.
- 6th.—The galley rest on top, in addition to case rests, affords as much room as *two* ordinary cabinets.
- 7th.—The Galley Cabinet between the rows of cases affords as much room as a regular Galley Cabinet costing not less than \$8.00.

**OVER 600 MADE AND SOLD IN TWO YEARS.**

**THIS IS FROM ONE OF THE BEST PRINTERS IN WESTERN NEW YORK.**

35 NORTH ST. PAUL ST., ROCHESTER, N. Y., August 1, 1890.

MESSRS. JOHN THOMSON PRESS CO., New York:

Dear Sirs,—I have had running in my office during the past year, six of your Colt's Armory Presses; and I wish to say to the printing fraternity that they are the very best presses I ever used for all kinds of work, heavy or light.

I have used the old Universal and the "New" Universal, and have thrown them all out for yours. I like your press because it is speedier, more rigid, never slurs, quicker to make ready on, distribution superior to all other platen presses, and easier to feed. I found the old Universal to be too slow for my work, and too easily thrown out of order; and finally, after giving both the old and "New" Universals a fair and unbiased trial I was forced to abandon them and take the Colt's Armory Presses.

I wish to say that I have no other platen presses in my office, and would have no other.

Yours truly, (Signed) ERNEST HART.

ILLUSTRATED CATALOGUE MAILED UPON APPLICATION.

**L. S. STEEL FURNITURE**

Goes many times further for **BLANK WORK** than metal furniture.

Is used much quicker and lasts forever. Several tons sold before it was six weeks old, among orders being Government Printing Office, 500 lbs.; Louisville Courier-Journal Job Printing Co., 200 lbs.; Guggenheimer, Weil & Co., Baltimore, 200 lbs.

It can be used with our Skeleton Steel Furniture in larger sizes, made in same style for big blank work. Highly appreciated wherever used.

40 CTS. PER LB.

Font sent on trial if desired.

**TESTIMONIALS.**

ROME, N. Y., October 15, 1890. We enclose herewith draft to pay the amount of our bill for Steel Furniture, which we have found very accurate, extremely useful and entirely satisfactory. You must not expect, very soon, to sell us any more of this Furniture, because it does not act as if it would ever wear out. It is well worth all you ask for it. We charge you nothing for this opinion.  
 Yours very truly, **BEERS & KESSINGER.**

PHILADELPHIA, October 25, 1890. GENTLEMEN,—We have used your Steel Furniture to great advantage, and take this opportunity to thank you for offering the trade an article that is very useful, and easily put together for blank work, etc.

# New No. 2 Lever Movement Wire Stitcher.

E. P. DONNELL MFG. CO.

Manufacturers of all kinds of Bookbinders' Machinery,

327 & 329 DEARBORN STREET, CHICAGO, ILL.

This Wire Stitcher has all **Lever** movements; has no cams or shafts, and it is well known that a lever movement is **positive**.

It is so **simple** that any boy or girl can understand its whole movement at a first glance.

It has my new **Patent Clincher** which has only one part.

No adjustment of working parts required.

Has my quick adjustable **Flat and Saddle Table**.

Steam power, and can be run as fast as any operator can feed it, and at the price will **take the place of all the cheap stitchers heretofore offered.**

All parts interchangeable.

Will stitch from one sheet to one-half inch in thickness.

No parts to take off or put on to change from light to heavy stitching.

It forms, drives and clinches a staple from a continuous round or flat wire wound on spools and no change necessary, except to change the spool.

**Price, complete, \$300.**

# THE LINOTYPE

TO PRINTERS AND PUBLISHERS.

All known Linotype Machines, and the product therefrom, are covered by Letters Patent Nos. 362,987, 313,224, 317,828, 345,525 and other patents controlled by the undersigned company.

The public is cautioned that the use of any machine which casts, as a substitute for movable type, linotypes or type bars, each bearing the characters to print an entire line, unless purchased from this company, will render the user liable to a suit for infringement.

The Linotype Machine, made by this company under its patents, is now for lease or sale; is capable of an average speed of 8,000 ems per hour, and the print from its product is superior to that from movable type. Any size of type from agate to pica can be produced upon the same machine. We earnestly invite your investigation.

For full information address, or visit personally.

**INKOLEUM**  
A COLORLESS REDUCER  
For Printing Inks.  
THE  
Printers' Wonder  
Patent Dec. 6, 1893  
Patent Sept. 12, 1894  
Patent Nov. 21, 1894  
Patent Feb. 27, 1895

*The Original and Only  
Patented Ink Reducer in  
the World!*

Warranted to instantly reduce all kinds of Printing Inks, no matter what color, or how old or stiff, to any consistency required, without in the least affecting their color and make them work clear, free and easy on any kind of press or stock the hottest day in summer when rollers are soft and sticky, or the coldest day in winter without fire or washing rollers. INKOLEUM makes all inks mixed with it dry quick and glossy on paper without off-setting—but never dries on rollers—and prevents paper from pulling or sticking to form. As a reducer for tint printing INKOLEUM works miracles, as the most delicate shades and tints can be produced with ink mixed to the thinness of cream, causing it to cover perfectly without clogging the finest lines, and as it is never gummy like varnish, it dries instantly, enabling one or more tints or colors to follow at once without off-set. Inks of any color or kind left on rollers over night will work or wash up readily in the morning, by simply applying a few drops of INKOLEUM with your finger. A trial will convince any pressman. *Beware of Infringements.* Accept no imitation said to be just as good as INKOLEUM. **Price only 50 Cents.** For sale everywhere. For bruises or burns apply INKOLEUM freely and relief is instantaneous. Put up only by

### PRINTERS AND AUTHORS.

BY JOHN REDFORD LENO.

**A**UTHORS have often "made copy" of the stupidity of compositors, verifying the old saying that "it is much easier to discover others' faults than your own." I have no intention of endeavoring to prove that all compositors are intelligent. I know from experience they are a mixed lot, some wise and some otherwise. This, however, may be as fairly said of authors as of compositors. The former also vary with regard to their intelligence, and their acts, if scrutinized, will be found to be equally stupid or unreasonable as those of the latter.

That compositors misinterpret their copy is beyond all doubt. It would, indeed, be strange if they did not. Their business is to read and set copy, not to interpret enigmas. On the other hand it may be said to be the author's business to write his copy in calligraphy that can be easily read, not in hieroglyphics that are incomprehensible to ordinary mortals, nor in cryptography of which the writer alone has the key.

As an old English compositor I have over and over again had good reason for cursing authors. My wage has been dependent on the number of letters properly placed, and from the slovenly written copy given to me, I have over and over again been robbed of my fair earnings, and this by men who should have known better and acted differently.

On my first arrival in London I got employment at Norman's, a well-known firm then trading in Maiden Lane, Covent Garden. The first copy handed me was the writing of Lord Brougham. I confess I was nonplused. I did my uttermost to comprehend it, but all in vain. In my difficulty I sought assistance from others, but to little purpose, till I came across a compositor who had a considerable amount of experience in solving it. The work, I remember, was on "labor and capital," and a considerable portion thereof was devoted to the sin and evil of labor combinations. In after years its contents were made to form a considerable part of his well-known work on this important subject.

I well remember asking myself if this was his mode of treating labor, and whether he had any right to play the part of a sloven at my expense? When Saturday (pay day) came, I risked my position by inquiring if the firm could grant me a trifle more than the ordinary pay for the undue amount of trouble and loss of time to which I had been put? I got, as I expected, a laugh in reply, although the foreman admitted that it was exceedingly difficult to comprehend, and admitted that the "reader" in many cases failed to interpret it properly. I came to the conclusion then, and I hold it now, that I had been robbed.

My next employment was with the Working Printers, in Red Lion Square, a position in which the copy of many remarkable men passed through my hands. That of the Rev. Charles Kingsley, afterward Canon Kingsley, was, I found, fairly good; but he had a friend who is the present Registrar General of England, whose copy gave great trouble to those new to it. Much of its peculiarity was due to the mode in which he marked his *i*'s. These were crossed rather than dotted, and until this habit was fully realized, there was always the difficulty of distinguishing the *i*'s from *l*'s.

Macaulay's handwriting was, if possible, worse than either, and it is of him that the story is told that he could never read what he had written.

I have little doubt, Mr. Editor, but that American authors are just as careless, or slovenly, and that American compositors have, at least occasionally, equally good grounds for grumbling, and, moreover, that they do grumble. If they do not, they have the right to do so.

The public (English or American) deal equally unfair to printers. In their reading they discover one or more errors. "Oh! it is a printer's error, I suppose," is the usual remark that follows. This is possibly true enough, but this does not warrant them in invariably casting the blame on the printer. As a master printer, I remember having a job returned because I preferred to

print it as it should have been printed rather than as it was written.

I have been told, whether truthfully or not, that Dickens never attempted to punctuate his own works. I cannot vouch for the truth of this, but I can assert that no matter where they were printed, they invariably passed through the hands of his friend Pardon, an old reader, well known and equally well respected. In this I think he acted rightly. Pardon was the best reader I ever had the good fortune to fall across, and, like the best of them, commenced life as a compositor. The advantage derived by Dickens from the plan he adopted consisted in his obtaining the services of a man who was alive to his style of composition. As for his calligraphy, that was fairly readable, though he would have done well occasionally to have rewritten the interlined passages. Like many another author, he was too prone to escape the trouble thereof, and was apt too readily to conclude that the typesetter would experience little or no difficulty.

Lying before me is a letter I received from Victor Hugo. It is both plain and solid, and no sensible compositor would dream of finding fault with its writer. It may be said that most of the down strokes are too thick, more especially when of abnormal length, and that this peculiarity distracts the eye of the reader. Momentarily it may do so.

Contrary to general belief, it will be found, on comparison being made, that poets write plainer than writers who devote themselves to prose. I had often noticed proofs of this fact, but believing that I might have been mistaken in my general conclusion, I determined I would go into the matter more fully. The result was that I had no reason to change my opinion. Lord Tennyson writes plainly and so does William Morris. Of the former's writing I have a *fac simile*, of which the following is a copy:

Sep 19/90

Lord Tennyson says to  
inform Mr. W. E. Adams  
that he will be happy to  
place his name on the list  
of honorary officers of the  
Gutter and Society.

This can neither be said to be written hurriedly nor slovenly. The *i*'s are all dotted and the *l*'s crossed. It is true that the loops of a few letters are missing; but the words in which they appear are to be read without the aid of the context. No compositor would dream of uttering a word of complaint against the writer, or feel the least difficulty in accomplishing his work without loss of time.

Trivial as this matter may appear, it is often a serious one for the poor compositor. It may be admitted that the system of slovenly writing puts money into the pocket of the writer, but, just

as assuredly, it is taken out of that of the compositor. And yet, it may be admitted that the writer has no intention of practicing robbery or wronging any mortal. It may, in cases, be admitted that the writer has done his best; but, even if he has, the typesetter is none the better off. In cases where illegible writing results from pure incapacity, a copyist should be employed. At any rate, it is the bounden duty of an author to put plainly written copy into the hands of the printer, and, if he fail to do so, then, as a matter of common justice, he should be called upon to pay, and this he should do with the same readiness that he pays other debts due.

The compositor is seldom indebted to the author; but that much can not be said of authors generally. Not only do compositors get blamed for errors to which they have not contributed, but the amendments that are often due to them are either passed unrecognized or are wrongly credited to the writer. In the rapidity of writing no doubt a blunder is easily committed; but that much can be safely said in favor of the man whose duty it is to compose type. In many instances these can be traced to mechanism rather than to art—to accident rather than want of knowledge, or want of care, and not unoften to a want of proper instruction. To blame a compositor for errors that have escaped the author and the reader's eye, is to blame the bricklayer rather than the architect or surveyor. It is not generally understood by the reading public that it is the reader who should be held responsible for errors. Those who know the routine of a printing office are fully acquainted with the fact that it is nearly impossible for a compositor to produce a form perfect, till his work has been revised thoroughly. Indeed, were it otherwise, there would be far less readers employed.

It is by no means uncommon to engage compositors to compose matter of which they do not profess to be able to interpret a single word, and place signs of the meaning of which they have no comprehension. For doing these things they, as a rule, get compensation for the extra trouble they entail. Why, then, should they fail to get compensation for the losses entailed by copy that is not understandable? I fail—and I am sure that other fair-minded persons must—to see the distinction.

I have no desire to fish for compliments to the class to which I am proud to belong, for I know full well that I should receive scant thanks from my younger confrères; but it has struck me that there are no few well-known authors, whom I might name, who could gracefully defend compositors from the unjust attacks that are occasionally leveled at them. Indeed, I have often been struck by the fact that, in despite of a series of years of continuous, or nearly continuous reading, I have never fallen across an author who had a good word to say for the English typesetter. It may be altogether different in your country, Mr. Editor. Ingratitude may not be quite so common among men of the class to which I am alluding. I am simply confining myself to what I know and can sincerely maintain. Of course, it is quite possible that instances may be found that I have missed; but even if this be done, it will fail to prove me wrong in my general contentions.

Written for THE INLAND PRINTER.

### THE "DUTCHMAN."

BY FRANK NEWMAN.

"I say, Jimmy, what's the matter with that form?"

"'Twon't lift."

"Well, whose fault is it? Didn't you set that job?"

"No; not all of it, at least; it's only a line or two that won't lift."

"Drive in a 'dutchman,' then, and let her go."

By way of explanation, let me say that Jimmy was the senior apprentice in a certain office, and the other the head jobber. The troublesome form was a common dodger, 8 by 12, and the lines that did not respond to the affectionate, but somewhat tight squeeze of the quoins had been set by the "devil."

The "devil," as we all know, is, as a rule, a rather careless, happy-go-lucky, but nevertheless very handy sort of a fellow; but

his work needs to be improved upon by those knowing better the value of good work.

And thus it was that his work *was* improved (the job being a cheap one and in a hurry, as well) through the medium of the "dutchman."

Who does not know a "dutchman"? It (not *he*) is a great institution. It is of dagger-like shape, whittled down from a pica or nonpareil reglet, and driven in where deficient spacing causes a line to drop when a form has otherwise been properly locked up; and the beauty of it lies in the fact that it can be manufactured to accommodate, to fill a vacuum of from a four-em space of nonpareil to that of a three-em space of great primer, or more, as necessity requires.

But, seriously speaking, *should* it be used at all? I will not lay claim to be printer enough—although I have been in the business for upward of eighteen years and have worked on almost anything connected with the trade—to judge upon its merits myself, and shall leave this point to others who have been identified with the mysteries of our art for a longer period than I have been; but will content myself in saying, in some cases it is necessary, while in others it is not. Let some more experienced follower of Gutenberg prolong this discussion, for every day there is something to learn in our trade.

If all typos and apprentices would use proper care and take the necessary time to space out their lines and justify their cuts, then a "dutchman" would be uncalled for. But is this the case? No. We find among the average number of compositors very few who take pride enough in their work to do it in such a manner that when it leaves their hands and goes to the make-up and is, or, rather, should be ready for imposition and lock-up, it is fit to be sent to press without the use of that great institution, the "dutchman." This is especially the case where piece hands are employed, who usually seem only to care about the number of thousands set up, but are troubled little as to the quality of their work—'tis the *quantity* with them, as a rule.

Let compositors who read this ponder over these few lines. The cause that compels me to express my thoughts will appear in another article.

### THE LARGEST PRINTING MACHINE.

The largest printing machine in the world, it is claimed, is the multiple-color printing apparatus now employed in the Edinburgh Linoleum Works. This wonderful device has two drums, each nearly twenty-seven feet in diameter, placed side by side, with a short interval between them, and each capable of being driven independently, and each drum is of sufficient size to carry a piece of linoleum two yards wide, with a gap between the ends of the pieces when fixed upon the periphery of the drum. Parallel with the axis of the drums is a heavy bed like that of a planing machine, and on this traverses a table, carrying the framing on which the printing rollers are mounted, there being one roller for each color in the pattern. The rollers are one foot six inches wide, and print, therefore, but one-fourth of the width of the piece of linoleum at each revolution of the drums, each roller being adjusted at such a distance below that next above it that the color it applies falls properly into its place in the pattern printed by the first roller. When a strip one foot six inches wide has been printed in this way the full length of a piece of linoleum, the drum is stopped automatically with the gap between the ends of the piece opposite the printing rollers; the frame carrying the latter is then shifted one foot six inches laterally, the drum again started, and a second one foot and six inches width printed, and a third and fourth similar operation completes the printing over the two yards width. Each drum is driven by an independent high-speed engine.—*Manufacturers' Gazette*.

An adhesive mucilage for labels, suitable for bottles or glass, may be prepared by soaking glue in strong vinegar; then heat to boiling and add flour. This is very adhesive and does not decompose when kept in wide-mouthed bottles.

## THE PAPER MILLS OF THE UNITED STATES.

NO. V.—THE BEEBE &amp; HOLBROOK COMPANY.

The Beebe & Holbrook Company, Holyoke, Massachusetts, has probably the most perfectly reconstructed old mill in the country. While a new mill might have been given a different form with plenty of land to stand upon, this mill shows the most convenient utilization of the land at command, and, under the circumstances of a mill reconstructed and added to, it has reached the very acme of excellent arrangement.

The raw stuff and bleaching materials are under the tower at the right. The rag bales are first taken to the fourth story of the main building to the duster room, over the rag room. Three Star dusters are used, each capable of carrying from one to two bales of rags. After being thoroughly dusted, the stock is emptied below into the rag room. This room is 130 by 50 feet, and is a

The loft is no doubt the largest continuous loft in the country, 275 feet long by 50 feet wide, and two stories high. From the loft the paper is brought down on an elevator to the finishing room. This room is also a model of convenience and airiness, it being 50 feet wide by 146 feet in length, with no obstruction to light on either side. It contains ten stacks of calenders, all fitted with Harlow's patent feeders. There is not a post in the room, the entire building being substantially trussed.

All the other departments in the mill, including size rooms, repair shops, etc., have been constructed with an eye to the most perfect utility, as well as economy; in fact, the Beebe & Holbrook Company's mill ranks among the best in convenience of arrangement and cleanliness in all its departments.

The company is one of the oldest in the city, having commenced operations in 1871. The mill is run entirely on the higher grades of loft-dried papers, and has made for itself an enviable reputation for turning out papers of high quality. Its Keene

model rag room in all respects, being well lighted and ventilated. The rags are thoroughly looked over, and after passing through the cutters are put into the bleach boilers and boiled under steam pressure. The rags are then emptied from the boilers and wheeled to the same floor in the engine room adjoining, in which there are four fifteen hundred pound washers.

The mill is supplied with a large number of drainers, which are of vital importance in the manufacture of the finer grades of paper. There are seven beating engines of nine hundred pounds capacity, manufactured by E. D. Jones, Pittsfield, Massachusetts. The mill is equipped with two paper machines, made by Rice, Barton & Fales, Worcester, one 78 and the other 84 inches wide. These machines are fitted with all modern improvements, such as cone pulleys, etc., and each is run by a thirty-five horse-power steam engine. The two machines occupy the same room, which is wide, light and thoroughly ventilated by exhaust fans.

In the construction of this mill the paper does not travel over the same ground twice. From the entrance of the rags into the mill to the exit of the paper is one unbroken line of travel.

Mills superfine flat papers and Chesterfield fine papers, as well as the genuine flax linen, have no superior in the market.

The water used in washing the rags comes from a spring that gives an unfailing supply of the purest water. Its capacity is estimated at not less than one thousand gallons per minute. The output of the company is about eight tons of paper per day.

The present officers of the company are G. B. Holbrook, president, and A. W. Esleek, treasurer.

THE word "chapel" has a highly romantic origin. It is associated with the story of St. Martin sharing his cloak with a beggar. "Cloak," in late Latin, is *cappella*, a little cloak, or cape, from *cappa*, cloak, cape, cope. The Frankish kings preserved St. Martin's cloak as a sacred relic. They had it carried before them into battles, and used it to give sanctity to oaths. It was preserved in a sanctuary, under the care of special ministers called *cappellani*, or chaplains, and from the ministers the name came to be attached to the building, in old Norse French *capete*, Provençal *cappella*, Italian *cappella*, and so to any private sanctuary.—*Exchange*.

REPRODUCTION OF OLD BOOKS OR ENGRAVINGS.\*

THE process is called anastaltique, and permits the reproduction of old books or engravings without recourse to compositor or engraver.

M. Reinecke, of Berlin, at a meeting of the Typographical Circle, has described the process, also adding the perfection to which he has brought this curious operation. Following are the essential points.

Each original is first submitted to an examination for the purpose of ascertaining the materials of which the paper is composed. This examination requires much prudence and care, particularly when the impressions are imperfect and when minute verifications are demanded to be assured that the ink is sufficiently thick to adhere to the lithographic stone. This process is rendered more difficult when the original must be preserved. Each kind of paper requires a particular chemical bath. Certain papers, made from a paste of poor rags, or containing fatty substances, are reproduced upon this stone like an autograph traced by a hand in perspiration; an imperceptible finger-mark on the original leaves a spot on the stone.

M. Reinecke has succeeded in overcoming these obstacles to such an extent that any ancient work may be freed from spots of ink and grease, thus recovering its original freshness, and if desired, the appearance of age may be obtained again by a light tinting with coffee-grounds.

If a book is to be reproduced it must be taken apart leaf by leaf. After passing the leaves through a chemical bath, the pages are placed upon a lithographic stone, smoothed, wiped, without cracks or scratches. The pages are spaced as in the original impression, with the same margins for cutting. It is given a moderate impression which is treated in the usual manner. One original suffices for the two sides, obverse and reverse.

The ink of the original plays a very important part in the reproduction; autographic and lithographic works are easiest. Formerly very strong inks were employed, which render the process comparatively easy unless the ink, by reason of its age, has contracted a brownish color because of the poor quality of oil with which it is mixed. This increases the difficulty as well as unevenness, breaking of fine lines, sticking, etc. In such cases a retouching of the stone becomes necessary. As an example of the success attained, in spite of all these difficulties, may be cited the "Concile Général," an old work, reproduced for the book shop of Victor Palmé, at Paris, comprising thirty-two folio volumes of one hundred and fifty pages each, of which eight hundred copies were made. A good workman is able to make many thousand impressions without causing the reproduction to become altered.

The originals of copperplate are difficult to reproduce, as the ink employed contains little of thick or fatty substance. The paper must be freed from starch and glazing by chemicals. When removed from the bath it must be placed upon soft paper to dry in a measure. A certain amount of moisture must be retained to work well. Each impression from copperplate is itself capable of reproduction if necessary, by reason of the amount to be worked off, the price being raised, or alteration of characters. The reproductions may be made in all forms, but the largest yet attempted are seventy-five centimeters by one meter.

Here are some of the advantages of this process: The stock of a work high-priced may become exhausted, and a supply may be obtained at a low figure by means of the anastaltique impression. A library desires a certain number of copies of a rare work; nothing so easy as this method of obtaining them. Should an old and valuable work present some damaged pages, it is easy to restore them in this way.

The expense for works not offering unusual difficulties will not exceed ten francs a sheet aside from the paper if one hundred copies are made.

\*Translated from *L'Imprimerie* for THE INLAND PRINTER by Miss Ella Garoutte.

ADVERTISING DEVICES.

Last year we showed some clever optical illusions from the *Paper and Printing Trades Journal*, which have been in great request for advertising purposes. We are now in a position to show two more of these diagrams. The first is contributed by the editor of *Typo*, and is thus introduced by Mr. Tuer in the *Journal*: "Guess, by eye-measurement only, which is the longest and which is the shortest of the three lines marked AA, BB, and CC. When

you have done guessing, measure them and see how awfully you are out!" The next is

"Look at the cut, and without measuring say which is the greater distance — across the top of the hat, or from top to bottom. Then put your own hat on the table about a yard in front of you, and carefully reconsider the problem. When you have absolutely made up your mind, take a foot-rule and measure your hat both ways. You will be very clever indeed if you guess correctly: nineteen out of twenty persons go wrong!"

The accompanying silhouette — "the disreputable-looking comp. alive with humorous energy," is the work of a clever and versatile Scottish printer, Mr. John Fairley, manager of the *Leith Burghs Pilot*, by whose kind permission it is reproduced. Few would guess the process by which the silhouette is produced — by means of the fret-saw, in the use of which Mr. Fairley has attained extraordinary skill. It is no less remarkable for artistic expression than for mechanical dexterity. — *Typo*.

## ZINC ETCHING METHODS.

NO. IX.—FROM THE AMERICAN PRESS.

PHOTO-LITHOGRAPHY AND PHOTO-ZINCOGRAPHY.

EXPOSURE (COPYING OR PRINTING).

The negatives for this use must show the lines or dots of the drawing as *perfectly clear and transparent glass*, and the white paper as a *completely opaque* and dead black, or blackish gray coating on the glass. These words are intended in a literal and direct sense, not relatively or comparatively. Any negative which only partly complies with the requirements will give only partial results.

Notice if the temperature of the darkroom and the copying room (or out doors) are the same or notably different. For if it is cold and moist outside, the lining of the copying frame will partake of it, and if dry paper is put in it will cool off and gather moisture, and wrinkle even under pressure, and spoil the work. The least wrinkling causes serious trouble. So it is a good plan to lay the piece of paper between many folds of paper, which has been kept in the copying room, and let it lie for an hour (secure from any ray of light). Pass it between the rolls of the glossing press to smooth the right side before putting it in the copying frame.

Put the negative in the frame, film side up, upon it lay the sensitive paper, the face next to the negative film, over this a piece of thin rubber cloth, such as photographers use for focusing cloths, etc. (this is to keep any latent moisture contained in the lining of the back board from affecting the paper). The frame should be capable of shutting down with more pressure than is usually applied in copying frames. If copying out doors, the temperature must not run lower than 70° centigrade. In a lower temperature, or frosty weather, the ink will not adhere to the lines at all.

The glossing or calendering of the surface should be attended to with great care, and a large "double roller" machine, such as is used by the best photographers for glossing photos after mounting, should be used, but without the use of any heating apparatus such as they employ. The smoother the surface the sharper the print, the finer the lines, and the more open the shadows. But the glossing must not be overdone to such an extent as to give the paper a translucent appearance even in part, for then the chromic salt is chemically acted on by the great pressure in like manner as by light, and is decomposed, acts on the gelatine of the film, and causes smutty spots to appear on the print when developed. Even if the print develop well, this overglazed paper does not work well, for it will not adhere to the zinc in transferring.

The length of the exposition depends upon strength of the light and upon quality of the negative. In strongest summer sunlight it requires one minute or less; in sunlight weakened by haziness or faint cloud wreaths, or smoky city air, three to six minutes will do, in winter ten minutes. In cloudy weather or diffused light in shade, at least fifteen minutes; in decidedly bad light, one to three hours; in winter exposures under a skylight, a longer exposure may be necessary.

It is a great convenience to use, in copying, a Vogel's photometer fitted with a strip of the same paper. Ordinarily the copying is kept up until the figure 8 is faintly visible. Foggy negatives may require twice as long.

The copying frame should never be opened to see how far the print has proceeded, because the sensitive paper instantly gathers a trifle of moisture from the air in the portion exposed, expands accordingly, and when returned to place does not register exactly, which causes a part of the lines and dots to print wider than proper, and may even cause the blurring of close portions of the work. Hence a photometer is a necessity. Vogel's photometer is noted in every hand-book on photography.

Printing frames and all other materials can be secured from Fuchs & Lang, of New York City. Several frames should be kept on hand.

Care should be taken by the photographer that only perfectly level glass free from curvatures (most ordinary glass is of uneven thickness and bent), bubbles, spots, flaws or blisters, be used for

negatives. The glass *must be flat*, so that the paper can be pressed into actual contact with it.

No grain of sand or dust or other object must be permitted to lie between the negative and paper.

Upon a perfectly exposed print every line and dot, even to the finest, will be visible, even if only faintly so.

Never leave a print undeveloped until the next day, for the action of the light continues in the dark and widens the lines.

Every print must be at once rubbed in with transfer ink. It can be put into water and left there without injury until the next day, when the further development can be proceeded with.

## INKING IN THE PRINTS.

It is best to use the fatty transfer ink prepared in solution in turpentine by Professor Husnik, which can be bought from the dealers in his paper, but it is well to know how to prepare the same, namely, take 8 parts of ordinary litho transfer ink, 1 part *pure yellow* beeswax (beware of adulterated wax), melt them together with much stirring and avoid burning; take off the fire and grind or stir in enough rectified spirits of turpentine to bring all to the thickness of molasses or heavy syrup. Cork well in a bottle. But it must be remembered that every such dissolved ink preparation alters with time, and as the wax may not be wholly in solution it will have a tendency to go to the bottom; hence it is well to stir up the bottle every time it is used, very thoroughly. If one always uses from off the surface of the ink, finally only the waxy portion remains at the bottom, and the ink is then so hard that it will not transfer well to either stone or zinc.

In such a case melt up the rest of the ink and rub in 5 to 10 drops of olive oil. It will then work all right until used up.

It is necessary to use an ink as hard as possible (hardened with wax), for the harder the ink the sharper the transfer.

An ink that is too soft spreads out in transferring, and gives thick, black strokes and lines, and solid shadows. If there is too little fat it will not transfer at all and remains upon the copy.

Stone requires a much more fatty ink than zinc. Even if it colors the stone with an apparent transfer, if the ink does not contain enough of the greasy element it will not enter into the stone, and the transfer would not stand etching up, but would rub off. Hence it is necessary to make the transfer to stone with a more fatty ink, adding, if needful, a small amount of olive oil or mutton tallow.

With zinc, the affair is quite different; the ink is not absorbed into the metal, but rests on the surface. It is enough that a coating of waxy or resinous nature be applied to the surface to resist acid.

## APPLICATION OF THE INK.

Lay the print upon a glass or metal, take a few drops of the ink out of the bottle with a brush and dab upon the print, and with a small ball of cotton batting rub the ink in equal strokes in all directions, so as to distribute it in an equally thin and uniform coating over all the surface. The ink should only show as a deep gray coating, not black all over the print. The print is then allowed to lie for five minutes, so that the turpentine can evaporate.

At the end of this time it is immersed in a tray of water. In a half an hour it can be taken out and developed, or, if desired, it can be left to lie there for one or several days.

The inking in of a piece of paper dried upon a glass plate for fine work, is different, and follows in another section.

THE editors of the leading newspapers in London receive the following salaries: Mr. Delane, of the *Times*, receives \$20,000; and the present editor, Mr. Buckle, receives \$25,000; the editor of the *Standard* is paid \$15,000; Mr. Pollock, of the *Saturday Review*, \$10,000; Mr. Hutton, of the *Spectator*, \$10,000; Edward Lawson, proprietor of the *Telegraph*, receives no salary, but two assistants are paid \$17,500; Mr. Burnand, of *Punch*, \$15,000; the editor of the *Daily News*, \$20,000; Mr. Frederick Greenwood, "The Casual Pauper," of the *St. James Gazette*, is paid \$9,000.

## PHOTOGRAPHY IN NATURAL COLORS.

Veresz's photographs in natural colors are still the daily talk. In regard to their durability I have given already my opinion; but one question seems to me still more important, that is, the resemblance of the colors to nature. Having been previously without the originals, I was not enabled to give a decision. In the meantime I have obtained from the inventor, Veresz, a new photographic picture, with the original, and I am now in position to give a positive criticism about the natural resemblance of the colors. This refers only to the picture on paper, which is at present before me. The original is one of those transparent window pictures in bright colors brought into the market by Grimme and Hembel, in Leipsic, as a substitute for glass painting. It represents a Cupid with yellowish-brown hair and wings, and a small blue scarf around the waist, whose ends wave in the wind. He carries an arrow piercing two hearts of ruby color; between the knees he holds a quiver with yellow ornamented opening, and in his left hand the upper part of a large brown cross-bow, with blue and yellow mountings, the lower part of which rests, with the figure, upon an idealistic thistle blossom of red leaves. The stem is of the same color, and the plant shows fresh green leaves. The picture has a pale-blue background, and red, green and yellow ornamentation around the border in very pronounced colors. This border ornamentation affords an excellent means of comparison with the print. The latter, contrasted with the bright original, shows a greenish-gray, partly dark, ground. At first look one recognizes readily that of all the colors only the

red of the original has been distinctly reproduced. But it is not true to nature; it has a copper-red color and differs decidedly from the vermilion and carmine red of the original. Besides this copper red only the blue of the scarf and the mountings of the cross-bow and quiver comes out as a very pale light blue, with no natural resemblance. The black lines of the border decoration appear alongside of this as a violet black. These are the tones which, to some extent, have a similarity of color, but with the other colors it is not so favorable. The yellow squares and green trapezoids of the border decoration appear neither yellow nor green, but have a grayish-red tone. The blue fields are not blue, but greenish gray, like the ground. It is most singular that several parts are reproduced in red

which actually are not red, but brown yellow, as, for instance, the hair, the wings, the cross-bow, the thistle, etc. The green leaves in the print show no fresh color, and the red leaves of the blossom and the body of the Cupid show only a pale flesh color. It is also remarkable that the thin lines of the shadows (black in the original) appear red in the print, even in those parts not colored red, while the broad black lines, as remarked above, are black.

The resemblance of the new photographic pictures to natural colors is therefore not very close. Only two colors can be recognized distinctly in the copy, of which the red is the best; in a less degree the blue, which is weaker, as far as the picture is concerned. The blue in the ornamentation around the border, and

all other colors, either have not been reproduced at all or are entirely unlike the original. It is possible that these discrepancies did not appear so prominently in the previously described glass pictures, whose colors were decidedly more lively; I have no suitable object at present with which to make a decisive comparison. If I compare the sample before me with the pictures I have seen in 1867 of Niepce de St. Victor, Becquerel and Dr. Zenker, I must confess that those much older productions were richer in color, although the tones deviated likewise considerably from the natural ones. An essential progress, therefore, I cannot recognize in the present pictures. But, after all, it is good to revive the problem, and thus animate to further experiments. If other scientists, like Dr. Eder, Eugen von Gothard, etc., express themselves more favorably about Veresz's photographic pictures, the reason may be that they

JOHN A. PARSHALL, DELHI, N. Y.

have not seen the older productions, which I have.—*Dr. Vogel, in the Bulletin.*

## PRINTERS AND WHAT THEY DO.

The matrices in which are cast the stereotype plates used in newspaper offices form one of the most important features of the successful and rapid operation which is necessary in that work, and they are prepared in a very simple manner. Make a jelly paste of flour, starch and whiting. Dampen a sheet of soft blotting paper, cover its surface with the paste, lay thereon a sheet of fine tissue paper, cover the surface with paste, and so on until four to six sheets of the tissue paper have been laid on. The combined sheet thus made is then placed, tissue face down, upon the form of types.

which are previously dusted with whiting, and with a brush driven down upon the types and thereon allowed to dry. The operation of drying is facilitated by having the types warmed by placing them upon a steam-heated table. A blanket is placed over the paper during the drying operation.

Many compositors have wondered why the capital letters J and U are placed in the bottom of the "cap case" and not in regular order with the rest of the letters. The reason of this is that the letters J and U were not invented when type and cases were first made, and when they were first cast they were put at the bottom of the case, so as not to disturb the established order of the other letters, and there they remain to this day.

A method of printing to imitate type-writing has been produced, which accomplishes the result by means of a layer of silk placed upon the face of the type and screwed between the lines under the leads and clamped at the ends to the chase. This gives a shading to the circular, the rollers depositing so small a portion of ink upon the silk over the spaces between the type as to have no appreciable effect upon the printed sheet.

Noble works ought not to be printed in mean and worthless forms, and cheapness ought to be limited by an instinctive sense and law of fitness. The binding of a book is the dress with which it walks out into the world. The paper, type and ink are the body in which its soul is domiciled. And these three—soul, body and habiliment—are a triad which ought to be adjusted to one another by the laws of harmony and good sense.—*Gladstone.*

#### ELECTRICITY IN THE PRINTING OFFICE.

A new use for electricity has been found at the Cook publishing house. In the office of the superintendent ten electric lamps are arranged in separate compartments of a frame or box, somewhat similar in appearance to the annunciators seen in hotel offices. The lamps are concealed from view, apertures in front of the compartments being covered with colored glass, each having its distinguishing color. The lamps are connected by means of electric wires with the automatic counting machines on the ten large printing presses located in an adjoining building. When the presses are in operation, the electric circuit is opened and closed by the working of the counting machines, causing quick flashes of light in the lamps. Thus every sheet of paper printed in the establishment telegraphs its record to the office, where the operation of each machine can be seen and its speed or delays noted.

In this connection it may be interesting to note that the speed of the large perfecting press is so great that it was found necessary to record each two sheets printed instead of single sheets, and even then the flashes of its lamp are almost continuous in appearance, showing that while the press is not quite as quick as lightning, it is too fast for the eye to follow.

It is believed that this is the first application of electricity to purposes of this kind, and may serve as a valuable hint to managers of large establishments who wish to be enabled to see the operation of their machinery while working at their desks.—*Elgin (Ill.) Daily News.*

#### LEGAL DECISION.

##### LIBELOUS PUBLICATION CONCERNING SUIT.

The publication in a newspaper that a suit for breach of promise to marry was to be brought against a person, is libelous in itself without proof of special damage, and, as bearing on the point of the general damage of such a statement to plaintiff, he may show the nature of his business and the fact that he was a married man at the time of the publication. The fact that the newspaper correspondent acted in good faith in sending the item, and that he was actually informed that an action for breach of promise had been brought against a person of same name as plaintiff, will not mitigate the damages, where the newspaper published the item without inquiry and without actual knowledge on the question. *Morey vs. Morning Journal Association*, Court of Appeals of New York, 25 N. E. Rep. 161

#### MR. JOHN A. PARSHALL.

On page 170 we present a correct portrait of a veteran printer, Mr. John A. Parshall, who, on October 17, 1890, celebrated the fifty-second anniversary of his entering the employ of the Delhi (N. Y.) *Gazette*, a record which, for continuous service in the same establishment, we believe few, if any living printers can surpass. In February, 1835, he entered the office of the *Otsego Republican*, at Cooperstown, New York, as an apprentice, where he remained till September, 1838, when he removed to the village of Delhi the following month, and has been continuously employed in the *Gazette* office, and, in fact, the same building since that time, and has set type at the same window for nearly fifty years. In February, 1839, he set up three marriage notices in the *Gazette*, and in February, 1889, he put in type notices of the golden weddings of the same parties, in the same office. Mr. Parshall is still a hale, hearty old gentleman, although in his seventy-third year. THE INLAND PRINTER congratulates him on his record, and trusts he may be spared for many years to come.

#### ANSWERS TO CORRESPONDENTS.

J. D., Cincinnati, Ohio: Please give the ingredients of a paste for postage stamps.

*Answer.*—The paste used for United States stamps is made of dextrine, 2 parts; acetic acid, 1 part; water, 5 parts; alcohol, 1 part.

A. R. A., Batavia, New York: Please inform me in the next number of your magazine if you think that any of the various typesetting machines now on the market will ever reach such a state of perfection as to succeed the compositor on fine bookwork.

*Answer.*—Eventually, *yes.*

SUBSCRIBER, Chicago: Please explain in the columns of THE INLAND PRINTER which is the correct pronunciation of the word "Italics" (i-tal'-ics or it-al'-ics). Also what is the best way to treat a new roller before putting it on the press the first time?

*Answer.*—1. I-tal'-ics. 2. No special treatment is required.

P. F., Scranton, Pennsylvania: I saw in the March issue of THE INLAND PRINTER a cut and description of a new composing stick, styled the "Duplex," the invention of George F. Turner of Chicago. Please give his address if the stick is now on the market.

*Answer.*—The September issue contained a cut and description of an improvement on the "Duplex" referred to, by the same party. Mr. Turner's address is 208 Twenty-fourth place, Chicago.

J. L. R., Toronto: I have a large number of very small labels or stickers to print—about thirty on a sheet. They have all to be gummed ready to stick. I want to know the best way to do them, whether to print them on ready gummed paper, or print them first and then gum the backs of them after.

*Answer.*—Print them first and gum them after.

J. D., Toronto, Ontario: Which do you consider correct, "An unique appearance," or "A unique appearance," and what rule is there governing such cases?

*Answer.*—"A unique appearance" is correct. Rule: *a* should be used when the next word after it begins with a consonant sound; *an* should be used when the word after it begins with a vowel sound. That is, *an* should be used before *a, e, i, o, u* not equivalent to *ya, y* equivalent to *i*, silent *h*, and *h* faintly sounded when the next syllable after its own has the chief accent; in all other cases *a* should be used. Initial *u* long, *eu, w, o* in *one*, and *y* articulated with a vowel after it, represent consonant sounds.

J. D., Cleveland, Ohio: Will you please inform me in your next issue what is the cost of "The American Printer," "The Practical Printer," "The Progressive Printer" and the "American Printers' Specimen Exchange," and also of whom they can be purchased.

*Answer.*—1. The "American Printer" can be obtained by sending \$2.25 to the office of THE INLAND PRINTER. 2. "The Practical Printer," by sending \$1 to H. G. Bishop, Oneonta, New York; "The Progressive Printer," published by Samuel

Whybrew, Rochester, New York, cost 50 cents; and the four volumes of the "American Printers' Specimen Exchange" can be obtained by sending \$3.75 to Mr. Edward H. McClure, Printer, Buffalo, New York.

**ST. LOUIS NOTES.**

I am pleased to note that the state of the printing trade in St. Louis still remains very good, and the prospects also remain bright, but the offices seem to be able to handle all the work, and we hear of no new ones contemplated or proposed.

Our city election which has just taken place was a boon to the printers, as the new Australian system of voting seems to impress all candidates that they must be very profuse in the providing of pocket cards announcing their candidacy, poster cards to tack in prominent places, dodgers, and in many other ways aimed to secure the attention of voters. Never before has there been such a demand for these cards, and "ye printer man" smiled thereat.

The representative journal of the local typographical union, the *Printer's Journal*, has succumbed to circumstances and will appear no more. We did not learn the particulars. We are sorry to chronicle this, as it seems that so large a union should support an official organ.

Mr. Charles A. Gitchell, business manager of the *Star-Sayings*, made a race for election to the city House of Delegates, but the typographical union, and more particularly Typographia No. 8, made such a strong fight against him that he was badly defeated. The cause of the opposition was the fact that Mr. Gitchell's paper will not employ union labor in any of the various departments.

Two of our newspapers have lately had libel suits entered against them. The *Post-Dispatch* is made defendant in one for \$20,000, and the *Irish-American* had a suit for \$10,000 filed against it and afterward took notice of the filing in its editorial columns and made light of it and referred to the proceedings as a bluff, and were rewarded therefor by another suit from the same party for \$30,000 additional in consequence of the editorial.

The St. Louis *Republic* and the St. Louis *Post-Dispatch* have each ordered Thorn typesetting machines to be put in as soon as the manufacturers can do so. We also hear it rumored that some of our larger book offices will put one or more machines each on trial in their offices.

Our three leading daily papers each expect to soon appear in a new dress.

As the new building of the *Globe-Democrat* nears completion, we can imagine Mr. Witter, foreman of the composing room, cudgeling his brain to plan the new quarters for his department in order to make the most convenient and pleasant of any in the country, as he vows he will make it. Mr. Kirten, superintendent of the pressroom, is also spending much time looking after the arrangement of the pressroom in the basement.

Mr. George Knisely, an old and well-known compositor, now holding cases upon the *Globe-Democrat*, has rented an office and devotes his spare time in the afternoons to dealing in real estate. He seems to be meeting with good success, but does not contemplate deserting printing for a few months at least.

The strike of the German compositors against the three German dailies is still on, with no prospects of a settlement, but the papers appear regularly, and the men have mostly found employment elsewhere.

A large building will soon be erected at the corner of Third and Locust streets, where the building containing so many printers was burned out last spring. The new building when completed will be occupied in part and perhaps entirely by the F. O. Sawyer Paper Company.

A few weeks since the Compton & Sons Lithograph Company was damaged slightly by a fire in one of its departments. Damage was mostly by water to paper stock.

Woodward & Tiernan Printing Company will soon occupy the newly erected annex to its building.

THE PRINCESS.

**"IN THE TWILIGHT."**

BY YE INDEPENDENT SUB.

As long as Sol pours down his rays  
I hide myself from sight,  
And only bloom when his light has faded,  
To "catch on in the twilight."

What if the "regs" don't like my style,  
And say it's far from right,  
That's naught to me, my chance is good  
To "catch on in the twilight."

But if chance fails, and I'm shut out  
From work night after night,  
I'll look me out some friendly "freight,"  
And "catch on in the twilight."

**TO PRINT CONSECUTIVE NUMBERS.**

Where a printer has an order for a lot of consecutive number cards--say from one to one hundred--and only two figures of a kind from 1 to 0 to do it with, it is well to know the simplest way of going at the job to make it pay. Set up your twenty figures as shown in double column A.

A.	B.	C.	D.
1 1	2 1	1 1 1	1 1 1
2 2	3 2	2 2 2	2 2 2
3 3	4 3	3 3 3	3 3 3
4 4	5 4	4 4 4	4 4 4
5 5	6 5	5 5 5	5 5 5
6 6	7 6	1 6 6	6 6 6
7 7	8 7	2 7 7	7 7 7
8 8	9 8	3 8 8	8 8 8
9 9	0 9	4 9 9	9 9 9
0 0	1 0	5 0 0	0 0 0

Run a lead up the space indicated by the dotted rule, and, if the figures are uneven, justify each separate figure to fit the space it occupies. If the order calls for ten of each, print ten copies from the form as it stands. Then take out the figure 1 from the top of the first column and place it at the bottom, as shown in column B; print ten more. Continue until ten forms are printed. Then take out the first column entirely, and print the unit column only. This gives you the completed job, excepting of 100. To print to 500, using three figures, make form similar to column C above, requiring 50 changes; and to print 1000, like column D, with 101 changes. Proceed in the same manner as above described.—*Printers' Gazette*.

**THE COMPASS IN THE WATCH.**

A correspondent of the London *Truth* sends the following: "A few days ago I was standing by an American gentleman, when I expressed a wish to know which point was the north. He at once pulled out his watch, looked at it and pointed to the north. I asked him whether he had a compass attached to his watch. 'All watches,' he replied, 'are compasses.' Then he explained to me how this was. Point the hour hand to the sun, and the south is exactly half way between the hour and the figure XII, on the watch. For instance, suppose that it is 4 o'clock. Point the hand indicating 4 to the sun and II on the watch is exactly south. Suppose that it is 8 o'clock, point the hand indicating 8 to the sun, and the figure X on the watch is due south. My American friend was quite surprised that I did not know this. Thinking that very possibly I was ignorant of a thing that every one else knew, and happening to meet Mr. Stanley, I asked that eminent traveler whether he was aware of this simple mode of discovering the points of the compass. He said that he had never heard of it. I presume, therefore, that the world is in the same state of ignorance. Amalfi is proud of having been the home of the inventor of the compass. I do not know what town boasts of my American friend as a citizen."

Reproduced in half-tone from photograph, by BLOMGREN BROTHERS, 175 Monroe street, Chicago.

## TYPESETTING CONTEST.

One of the most remarkable typesetting contests that ever occurred in this country was held in the composing room of THE INLAND PRINTER on Sunday, November 9, Peter Thienes, of the Chicago *Mail*, and Leo Monheimer, of the Chicago *Herald*, being the contestants. Great interest was taken in the affair, as the

PETER THIENES.

men were so evenly matched, each having a large number of friends ready and willing to stake their "pile" on the contestant they believed would surely win. The ladies, too, took great interest in the affair and were not afraid to back their choice.

The following are the terms under which the match was contested:

CHICAGO, Ill., October 20, 1890.

We hereby agree to set nonpareil type, beginning at 12 o'clock, November 9, 1890, unless sickness prevents either contestant being able to work on that day, in two stretches of two hours each, the first to begin at 12 o'clock and continue until 2 o'clock, and after an hour's rest to resume work at 3 o'clock and continue until 5 o'clock, for \$200 a side, a forfeit being deposited with the sporting editor of the *Inter Ocean*, who is to be the final stakeholder. Each contestant is to appoint a manager, the two to appoint a third party to act as referee. Each contestant has the privilege of selecting spaces such as he wishes to use. Should either contestant have an "out" during composition it is not to be measured after being corrected. The national typesetting rules are to govern the contest in regard to spacing, justification and correcting. The type to be used is to be decided upon at least ten days before the day of holding the contest. The final deposit is to be made on the Tuesday preceding the day of the contest.

LEO MONHEIMER, Chicago *Herald*.  
PETER THIENES, Chicago *Mail*.

This is the second match the same men have been engaged in during the last two years, Monheimer winning on the former occasion. Thienes, however, was not satisfied, and issued the challenge, which Monheimer at once accepted, and chose nonpareil as the type to be used.

William Lumsden looked after the interests of Monheimer, while Gus Bilger anxiously waited upon Thienes. O. G. Wood, of THE INLAND PRINTER office was chosen referee, and was called upon to give some very close and exact decisions. Harry Flinn and Adolph Scholl acted as proofreaders.

The copy given to each compositor was identical, and was taken from THE INLAND PRINTER, the subject being a lecture by A. C. Cameron on the labor problem, delivered in June, 1888.

Time was called at 12 o'clock, and both men commenced steady and at a good gait and kept it up for two hours, when they rested for one hour. At the end of the first stretch Monheimer had set 3,666 ems and Thienes 3,598 ems gross. At 3 o'clock time was called again, and both contestants started out to do better than they had in the first half. The task was completed at 5 o'clock, with the following result: Monheimer had a string of 7,359 ems, Thienes having 7,305 ems, a difference of only 54 ems in four hours' composition. Monheimer was 23 $\frac{1}{4}$  minutes in

correcting his two proofs, Thienes only taking 18 $\frac{3}{4}$  minutes to complete his task, 25 ems being deducted for each minute occupied in correcting proofs. This left the match in the following close order: Monheimer, 6,783 ems; Thienes, 6,837.

Both parties now commenced to look for the slightest error or bad spacing, and the referee was called upon to carefully examine the matter set by the contestants. In going over the galleys the referee discovered that Monheimer's stick had been unfortunately set a three-em space too narrow, "quads" being used instead of the letter "m," which is correct when turned sideways; Monheimer's stick, therefore, only contained 27 $\frac{2}{3}$  ems, instead of 28 ems of the type used. Thereupon the referee awarded the match to Thienes by 142 ems, his stick containing the full 28 ems. It may be well to state that Mr. Monheimer was not aware of the mistake and accepted his defeat gracefully, the utmost good feeling existing, and thus ended one of the most remarkable typesetting matches ever known.

The following is a short history of the two men with some of their performances at the case:

Peter Thienes was born in Edinburg, Indiana, and is thirty-three years old, and is known throughout the trade as an exceedingly fast and accurate workman. The only public contest in which he participated was that of Philadelphia, when he set in thirty-three hours 60,323 ems, and lost but thirty-two minutes in correcting the entire amount. His best gross score was 2,912 ems in one hour and a half; his best net score was 2,843 $\frac{1}{2}$  ems in one hour and a half. The most remarkable run he has ever made was in this same contest, when he set 2,734 ems in one hour and a half, with only one turned letter. In this tournament he won the local championship and an elegant gold medal. He also was presented with an engraved silver stick by the employes of the Philadelphia *Times* in reward for his splendid work in the Philadelphia tournament.

Mr. Thienes carries his honors meekly, and is an unpretentious gentleman, his friends being legion.

Leo Monheimer is a native of Lancaster, Missouri, is twenty-four years old, and has been in Chicago several years. He has

LEO MONHEIMER.

never worked east of Cincinnati. In private he has frequently set over 2,000 ems per hour. The only public record that he holds was made in the Chicago tournament, when in one hour and a half he set 2,600 ems gross and 2,522 ems net, and made a total set, in twenty-one hours of 35,165 ems gross and 33,346 $\frac{1}{2}$  ems net. He is called one of the fastest typos in the United States, and his recent performance was one which justifies his reputation.

**NONE OF OUR BUSINESS.**

[A little girl was heard to finish her evening prayer with these words :  
 " And I saw a poor little girl on the street today, cold and barefooted ; but  
 its none of our business, is it God ? ]

" None of our business ! " wandering and sinful,  
 All through the streets of the city they go,  
 Hungry and homeless in the wild weather—  
 " None of our business ! " Dare we say so ?

" None of our business ! " Children's wan faces,  
 Haggard and old with their suffering and sin ;  
 Hold fast your darlings on tender, warm bosoms ;  
 Sorrow without, but the home-light within.

What does it matter that some other woman—  
 Some common mother—in bitter despair,  
 Wails in a garret, or sits in a cellar,  
 Too broken-hearted for weeping or prayer ?

" None of our business ! " Sinful and fallen,  
 How they may jostle us close on the street !  
 Hold back your garment ! Scorn ? They are used to it ;  
 Pass on the other side, lest you should meet.

" None of our business ! " On, then, the music ;  
 On with the feasting, though hearts break forlorn ;  
 Somebody's hungry, somebody's freezing,  
 Somebody's soul will be lost ere the morn.

Somebody's dying (on with the dancing !)  
 One for earth's pottage is selling his soul ;  
 One for a bauble has bartered his birthright,  
 Selling his all for a pitiful dole.

Ah ! but One goeth abroad on the mountains,  
 Over lone deserts with burning deep sands !  
 Seeking the lost ones (it is His business !)  
 Bruised though His feet are, and torn though His hands.

Thorn-crowned His head and His soul sorrow stricken,  
 (Saving men's souls at such infinite cost),  
 Broken His heart for the grief of the nations !  
 It is His business saving the lost !

—*London Christian Commonwealth.*

**THE BENEFIT OF NEWSPAPER TRAINING.**

I believe I have done everything which an editor or publisher ever has to do, from directing wrappers up to writing the biography of a president within an hour after his death. This means, if the training be continued through many years of life, and if one be under a good chief, that one gains, of necessity, the ready use, at least, of his own language. We newspaper men may write English very ill, but we write it easily and quickly. So that to us, who have been in this business, there is something amazing to hear a clergyman say that he occupied a week in composing a sermon, which was, at the outside, thirty-five hundred words in length. One can understand absolute inability to do it at all ; but no newspaper man understands how a man, who can do it, can spend thirty-six hours in doing it. If you have to send " copy " upstairs, hour after hour, with the boy taking slips from you, one by one, as they are written, and you know that you are never to see what you write until you read it the next day in the paper, your copy will be punctuated carefully, written carefully, and will be easily read. That is one thing. Another thing goes with it. You will form the habit of determining what you mean to say before you say it, how far you want to go, and where you want to stop. And this will bring you to a valuable habit of life—to stand by what has been decided. Napoleon gave the same advice when he said, " If you set out to take Vienna, take Vienna. " For these reasons, I am apt to recommend young men to write for the press early in life, being well aware that the habit of doing this has been of use to me.—*Edward Everett Hale, in the New York Forum.*

**HOW TO CLEAN RUBBER BLANKETS.**

The use of turpentine in removing grease and color from rubber blankets is increasing to such an extent that we desire to make a few suggestions as to its use and effect.

The quantity used should be as small as possible, and great care taken that it is thoroughly dried before the blanket is used in printing. Otherwise, as turpentine softens the rubber face, the blanket will be injured by the pressure of the cylinder, causing wrinkles to appear on the face.

It is preferable to clean the blanket after work at night, thereby giving ample time for the turpentine to dry out, rather than in the daytime, when the press is in use.

We strongly recommend the use of ammonia as a substitute for turpentine. It will do the work quicker, and generally fully as effectively, and with less chance of damage to the blanket. The ammonia should be diluted to about six to nine degrees strength (18 degrees can be easily obtained and diluted with one or two parts water), and, after using it, the blanket should be dusted with powdered chalk or magnesia. Ammonia will dry out very quickly (in much less time than turpentine), and when dried out leaves the blanket perfect and ready for use.

**STANDARD MEASURES FOR JOBWORK.**

Every well conducted printing office should have posted up in the composing room a table giving standard measures to which sticks should be set for all ordinary jobwork. This will prevent waste of material caused by cutting irregular measures. The following table, which we reprint from the *National Publisher and Printer*, will be found useful. It can be extended as desired to meet individual requirements.

To realize the full value of this table, an office should be equipped with type on the point system, job sticks setting automatically to any measure, and galleys graduated to ems down the side. A compositor receiving, for instance, a circular to set up to packet note size, would glance at this table, and noting that the width of the matter for that size paper is twenty-six ems, set his stick and get his leads and slugs to that measure. He also notes how far down the galley the forty-five ems of length reaches, and is ready to go ahead. This takes much less time than hunting up a sheet of paper and folding it, with the chance of getting the margin wrong after all.

The following are the sizes in ems that matter should be set for the jobs named. The margin left is medium, or about right for the average job. It can be crowded a little if matter is very close, or made a little more if matter is light :

	EMS WIDTH.	LENGTH.
Small business card (4¼ by 2¾ inches).....	21	12
Large " " (5¾ by 3¼ inches).....	27	14
Postal card.....	27	15
Ordinary note circular.....	24	42
Packet " ".....	26	45
Ordinary letter ".....	40	52
Quarter cap circular or blank.....	20	35

No. 5 tag.....	23	12

—*American Art Printer.*

We acknowledge receipt of specimen book of wood type, manufactured by the American Wood Type Company, South Windham, Connecticut, which contains a very complete list of the various letters and borders made by the company. The prices of wood type have recently been reduced, and parties about to purchase material of this description would do well to write to this firm.

## THE CHILDS-DREXEL HOME FOR UNION PRINTERS.

MEETING OF THE TRUSTEES — A FIFTY THOUSAND DOLLAR  
STRUCTURE TO BE ERECTED.

Pursuant to notice given, a meeting of the Board of Managers of the Childs-Drexel Home for Union Printers was held in the city of Chicago, November 18, for the purpose of deciding on the plans and specifications for the erection of the same, as also its cost. The members present were: August Donath, J. D. Vaughan, James J. Dailey, Edward T. Plank, Amos J. Cummings, Frank S. Pelton, William Aimison, James G. Woodward, George A. Morgan, W. H. Parr and W. S. McClevey.

After the board had ratified its action at Atlanta, prior to its incorporation, in the selection of officers, a formality required by law, an informal discussion as to the amount to be expended in the erection of the building was had, and certain resolutions adopted by Colorado Springs Typographical Union, No. 82, were read, petitioning that the building to be erected should cost not less than \$75,000. The resolutions were ordered placed on file.

The Inland Printer Company's invitation to a banquet, and invitation of Chicago Typographical Union, No. 16, to a carriage drive and to the theater, were accepted.

After a lengthy discussion upon the matter of what the cost of the building should be, the board adjourned to meet at 11 P.M.

Upon reassembling the discussion was resumed, whereupon Mr. Morgan moved that the maximum sum to be expended for the building be \$50,000. The motion was carried, Messrs. Donath, Morgan, Cummings, Dailey, Vaughan and Woodward voting in the affirmative, and Messrs. Plank, Aimison, Parr, Pelton and McClevey voting in the negative.

Mr. Morgan then moved that a committee of three be appointed, the president of the board to be chairman, to let the contract for the building, decide upon the site, let the contracts for grading and for water (for three years, at \$100 per year; the first year to be paid for), and that the committee be authorized to expend \$200 for grading; provided, that the president may appoint a substitute in case he is unable to serve.

The motion was carried, as was also a motion by Mr. Pelton providing that the committee be known as the Building Committee.

Adjourned till 9:30 A.M., Wednesday, November 19.

At the hour named the board met, whereupon the president named as his associates on the Building Committee, Messrs. Vaughan and Morgan; and as a substitute, Mr. McClevey.

Mr. Morgan introduced the following:

*Resolved*, That the secretary be instructed to publish the proceedings of this meeting in the next edition of the *Typographical Journal*.

Adopted.

By Mr. Morgan:

*Resolved*, That the members present at the meeting of the Board of Trustees of the Childs-Drexel Home for Union Printers, held in the city of Chicago, on Thursday, November 18, 1890, hereby express their thanks to Mr. Albert H. Brown and the other officers and members of Chicago Typographical Union for their kindness and courtesy extended to this board during its meeting in this city; and also to the Inland Printer Company and A. C. Cameron for their generous hospitality.

Adopted.

At this juncture, Mr. Lambert, who had been detained en route, arrived, and after the action of the board had been recited, he expressed himself as in accord therewith.

Adjourned.

Mr. B. McCLURE, of Valparaiso, Indiana, called on us recently with samples of reglet that he had had cut from cocobola wood. This wood does not absorb moisture, and a piece of it put in water will immediately sink. Whether there is any advantage in its use has yet to be decided. The wood from which his reglets were made cost \$1.05; the cutting \$1.50, and the express charges 45 cents, a total of \$3.50 for eight pieces of each size from thirteen ems to forty ems pica. The cutting was done by the Hamilton Manufacturing Company of Two Rivers, Wisconsin.

## THE TRUSTEES BANQUETED.

On Wednesday evening, November 19, a banquet was tendered the trustees of the Childs-Drexel Home for Union Printers at the Café Vendome, by H. O. Shepard, president of the Inland Printer Company, A. C. Cameron occupying the chair. The following was the menu presented:

Blue Points.	
Green Turtle Soup.	<i>Sherry.</i>
Whitefish à la Point Shirley.	
Parisienne Potatoes.	<i>Haute Sauterne.</i>
Pâtés à la Romaine.	<i>Claret.</i>
Filet de Bœuf à la Bordelaise.	
Choux-fleurs au Gratin.	<i>Pommard.</i>
Roast Quail, Oyster Dressing.	
Lettuce Salad.	<i>Pommery Sec.</i>
Fromage de Brie.	<i>Café.</i>

After ample justice had been done the good things provided, the following toasts were presented: "The Childs-Drexel Home for Union Printers," responded to by August Donath, president of the board; "The International Typographical Union," by E. T. Plank, president of the International; "The Press," by the Hon. Amos J. Cummings; THE INLAND PRINTER, by J. D. Vaughan; "An Undivided Country," by William Aimison. Remarks were also made by Messrs. Shepard, Brown, Carroll, Lambert, Woodward and Crawford. The occasion was a thoroughly enjoyable one, a love feast in fact, the best of feeling prevailing. Those present were:

August Donath, Edward T. Plank, Hon. Amos Cummings, James B. Dailey, J. D. Vaughan, William Aimison, James G. Woodward, George W. Morgan, William Lambert, W. H. Parr, W. S. McClevey, Frank S. Pelton, H. O. Shepard, A. C. Cameron, A. H. McLaughlin, Samuel R. Carter, Albert Brown, William Kennedy, M. J. Carroll, Mark L. Crawford, James Peck, George Day, P. J. Weldon, J. R. Jessup and Charles Boudreau.

## CHICAGO NOTES.

THE Columbia Lithographing Company, of Chicago, has confessed judgment for \$30,000. Liabilities, \$40,000; assets about \$25,000.

MR. ALBERT AUER, foreman of the pressroom in the government printing office, Washington, has been paying a visit to his old home and friends, all of whom were glad to see him.

ON or about January 1, 1891, Mr. George H. Taylor will remove into his new and more extensive quarters on Monroe street, the site of which is a little west of his present location.

THE American School Chart Company has been incorporated in Chicago, with a capital stock of \$1,000,000, to do a publishing business. The incorporators are R. W. Wortman, Nellie E. Woods and F. M. Woods.

THE firm of Rand, McNally & Co. recently presented to J. W. Ostrander a magnificent gold watch, which contains the following inscription: "Presented to J. W. Ostrander by Rand, McNally & Co. as appreciation of his services in moving their machinery, October, 1890."

H. H. LATHAM, 304-306 Dearborn street, reports state of trade as excellent. His shipments at the present time exceed by \$70,000 those of the same date of 1889. The demand for his "Rival Power" paper cutter is exceedingly encouraging. Orders for it have recently been received from Omaha, Minneapolis, Denver and Cleveland.

At a recent meeting of the Chicago Daily Newspaper Association, held Thursday, October 23, the following resolution was unanimously adopted, and the secretary instructed to send a copy thereof to advertising agents:

All advertising matter that may have the appearance of reading matter and is ordered to be inserted in any newspaper in this association at display rates, shall be indented one pica em on each side of the column.

The samples of New Year's cards for the season of 1891, offered by the J. W. Butler Paper Company, 183-187 Monroe street, must be seen to be appreciated, and are far ahead, in design and execution, of any which it has heretofore offered to the trade. Its

specimens of programme folders, invitation cabinets, advertising cards, etc., are bewildering in variety, and embrace almost every imaginable design and quality. The trade at large would do well to keep these facts in mind.

ON November 1 Mr. Andrew H. McLaughlin, a gentleman well and favorably known to the printing trade in this city, assumed the management of the Chicago branch of the Charles Eneu Johnson & Co's Printing Ink Works in place of Colonel Rundlet, who is about to take up his residence in New York. While we are sorry to lose the colonel, who has so ably represented the firm in Chicago for thirteen years, we are pleased that his mantle has fallen upon so worthy a successor. We congratulate the company on their selection.

ON Tuesday afternoon, November 18, the trustees of the Childs-Drexel Home for Union Printers enjoyed a carriage drive through Jackson Park, the site of the Columbian Fair, tendered by Chicago Typographical Union. They were accompanied by several members of the local organization, the entire party being under the guidance of President Brown, who did all in his power to entertain the guests. The drive occupied about three hours, and all the gentlemen participating therein expressed themselves as highly pleased with the situation.

PROFESSOR MARSHALL D. EWELL, of the Northwestern University, has just completed what is probably the largest dividing engine in the world. The whole machine is 17 by 8 feet and weighs about 1600 lbs. The available length of the screw is 48 inches, and the ruling carriage has a clear motion of 50 inches. The machine is *entirely automatic*, and is driven by a Tuerck water motor. In ruling diagonal plates the length of the stroke is regulated *automatically* from the shortest to the longest stroke and the reverse. Every detail of the machine has received the most careful attention and embodies the result of years of experience in fine ruling. Lines can be ruled by the automatic action of the screw from 50 to 4000 per inch, and uniformity of spacing is guaranteed. The machine will be used principally for the production of screen-plates for half-tone work, though line standards of length can also be made on the same machine.

#### PAPER TRADE ITEMS.

MEGARGEE & DE CENE, paper dealers, Philadelphia, have dissolved partnership.

A NEW mill is being built, at Bellows Falls, Vermont, by the Fall Mountain Paper Company.

THE Sugar River Paper Mill at Claremont, New Hampshire, is filling a large order from Australia.

THE Kearney paper mill at Lincoln, Nebraska, is about to start up, and will employ twenty-five hands.

THE Lake Erie Fiber Company has been organized at Cleveland, Ohio, with a capital stock of \$100,000.

THE Crescent Paper Company, with a capital stock of \$100,000, has been incorporated at Fort Wayne, Indiana.

A PAPER mill, to cost \$50,000, is under construction at Oak Cliff, Texas. It will manufacture strawboard and wrapping.

THE Morrison & Cass Paper Company of Tyrone, Pennsylvania, has been incorporated with a capital of \$500,000.

THE Three Rivers Paper Company, of Kalamazoo, Michigan, turned out 76,000 pounds of paper for the week ending October 30.

THE paper mill at Beatrice, Nebraska, is unable to meet its orders with the present plant, and additions are under consideration.

PAPER and pulp making stands thirteenth among the sixty-three industries of Wisconsin, and new plants to the value of \$243,775 were erected last year.

THE Hudson River (N. Y.) Pulp & Paper Company recently held a meeting and made an increase in the capital stock from \$120,000 to \$1,700,000. Of the increased amount \$500,000 is preferred, which remains unissued; \$960,000 was issued for property

required in the extension of their business, and \$240,000 for a cash balance.

THE Karfiol Lace Paper Company, of New York, has filed articles of incorporation. It will manufacture lace and shelf paper. Its capital is \$20,000.

FRANK GODFREY has purchased the plant of the Aldine Printing Company, at Detroit, and will add the manufacture of envelopes and paper novelties.

THE Hampden Envelope Company, of Holyoke, Massachusetts, will move to Dayton, Ohio. The company goes west in order to better accommodate their western trade.

L. E. HOWE, secretary and treasurer of the Erie (Pa.) Paper Company, will remove to Joplin, Missouri, where he will enter into the wholesale paper and stationery business.

FRANK O. and Bernard B. Megargee, lately with I. N. Megargee & Co., Philadelphia, will engage in the paper business at Scranton, Pennsylvania, under the style of Megargee Brothers.

THE Hudson River Pulp & Paper Company, New York, has increased its capital stock from \$120,000 to \$1,700,000, of which amount \$500,000 is preferred and held in reserve.

ACCORDING to a recent report of the British consul at Bilboa, schemes for the erection of paper and chemical manufactories in the Spanish province of Biscay are in course of development.

THE Toronto *Globe* informs its readers that there are about 1,300 paper mills on the continent, and of these 300 were built last year. The daily product of pulp and paper is put at 7,500 tons.

THE construction of the new building of the Connecticut River Paper Company, at Holyoke, Massachusetts, is going forward rapidly. It is to be 60 by 100 feet, five stories high, and gives 33,000 feet floor space.

THE Whiting Paper Company are to make the paper for the new styles of postal cards known as "ladies' cards." These cards, smaller than the ordinary ones, will be of a pearl gray or some similar tint.

BASIC CITY, Virginia, expects to have a mill for the production of all grades of paper and articles of paper merchandise. A company, with \$50,000 capital stock, and S. Longley, of Cincinnati, as president, has been organized.

AT Holyoke, Massachusetts, November 1, the George R. Dickinson Paper Mill was damaged by fire to the extent of \$30,000 or \$40,000. The fire started in the bleach room, and that and the rag room were gutted. The fire is supposed to have been caused by spontaneous combustion.

THE capital stock of the Crescent Paper & Pulp Company, of Hartford City, Indiana, has been increased from \$30,000 to \$100,000, the new portion being taken by Fort Wayne capitalists, who will control the management. Colonel Zollinger will continue as the president and business manager of the company.

AT Harrisburg, on the 9th of October, a charter was granted the Morrison & Cass Paper Company, of Tyrone, Blair county, Pennsylvania, with a capital of \$500,000. The following are the directors: John S. Morrison, Richard Beaster, Tyrone; Joseph K. Cass, Oliver Etnier, Pittsburgh; Samuel Irvin, Allegheny City.

THE following circular explains itself:

OFFICE OF CROCKER MANUFACTURING COMPANY, }  
Holyoke, Massachusetts. }

We are pleased to announce to the trade that we have added to our plant the adjoining mill, lately owned by the Dickinson & Clark Paper Company, so that hereafter in addition to our lines of Colored Mediums, Glazed Hardware, and Specialties, we shall manufacture a superior quality of BOOK, FLATS and RULED WRITINGS.

Our purchase including the good will of the Dickinson & Clark Paper Company, their unfilled orders will be executed by us without interruption, and we trust that we may be favored with your future business in these lines.

CROCKER MANUFACTURING COMPANY.

Having sold our mill, together with the good will of our business, to the Crocker Manufacturing Company as above, it gives us pleasure, while thanking the trade for the generous patronage which we have enjoyed, to express the hope that our customers will turn over to the new owners the business with which they have heretofore favored us.

DICKINSON & CLARK PAPER COMPANY.

## PERSONAL.

We acknowledge friendly visits from the following named gentlemen during the past month: N. E. Parker, editor *United Opinion*, Bradford, Vt.; M. L. Allison, Mifflintown, Pa.; W. A. Jefferson, West Bromwich, England; W. R. Guilo, Minneapolis, Minn.; T. J. Walker, Lisbon, N. H.; John E. Mangan, J. E. Mangan Printing Company, St. Louis, Mo.; W. B. Becktold, of Becktold & Co., St. Louis, Mo.; Frank L. Montague, of Montague & Fuller, 41 Beekman street, New York; H. W. Rokker, Springfield, Ill.; Frank C. Tolan, Fort Wayne, Ind.; James M. Culver, Denver, Colo.; J. A. Isaacs, printers', bookbinders' and electrotypers' machinery, New York; J. C. Von Arx, vice-president New York Engraving and Printing Company, New York; A. W. Turner, *Leader*, Earlville, Ill.; J. N. Onstott, *Democrat*, Petersburg, Ill.; L. Wessel, Jr., *Capital City Courier*, Lincoln, Neb.; R. J. Story, Story & Fox, Buffalo, N. Y.

## OBITUARY.

At a special meeting, held November 6, of Salt Lake Pressmen's and Stereotypers' Union, No. 41, the following resolutions were adopted:

WHEREAS, It has been the will of Divine Providence to call from us in his early and useful manhood our late worthy and esteemed fellow-craftsman, Oswald H. Patchel; and

WHEREAS, In his death the Salt Lake Pressmen's and Stereotypers' Union No. 41, has lost a steadfast friend, its principles a staunch supporter, the community a widely known and honored young man, and the home of his parents a lovable son and brother; therefore be it

*Resolved*, That as a mark of respect and esteem to the memory of our late brother, the charter of this union be draped in mourning for thirty days;

*Resolved*, That we extend to the father and mother, brothers and sisters, our heartfelt sympathy in this, their time of grief, and in which we are joined by a host of sorrowing friends in the community;

*Resolved*, That a copy of these resolutions be sent to the parents of our late brother, to the *Typographical Journal* and THE INLAND PRINTER, and that they be spread upon the minutes of the proceedings of this union.

WILLIAM JACK, President.  
CHARLES W. YOUNG, Secretary.

## TRADE NEWS.

THE Times Printing Company, Owosso, Michigan, has sold out.

THE Huber Press Company are doing a large business in the West.

THE firm of Morgan, Bancroft & Henderson, printers, Sioux City, has been dissolved.

MESSRS. HOLT & CRAVENS have started a well stocked job office in Colorado Springs.

THE Journal Publishing Company, Helena, Montana, has increased its capital stock to \$250,000.

J. H. PARRY & Co., printers, Salt Lake City, Utah, have been succeeded by the Magazine Printing Company.

THE Echo Publishing Company has been incorporated at Houston, Texas, with a capital stock of \$10,000.

W. M. KIMMEL & Co., book and job printers, have recently commenced business at 1114 Howard street, Omaha, Nebraska.

THE Democrat Printing Company, Madison, Wisconsin, has purchased property and will build a large and handsome office on the corner of Doty and Carroll streets.

MR. T. W. ELLIOTT, late of the *Free Press* engraving department, London, Ontario, is now at the *atelier* of Mr. W. Kurz, photographer and photo-engraver, New York City.

REPORTS of the state of trade throughout the West are encouraging. Prospects for a prosperous winter have not been so flattering for a long time, says the *Ink Hustler*, of Denver.

THE Plowman Publishing Company of Moline, Illinois, writes, under date of November 1: Our business for 1890 will show a gain of about sixty per cent over that of 1889. Our press record for October, on three cylinders and one jobber, shows 613,180

impressions, a large part of the work being run double—in fact, nearly or quite half of it. Our business is growing almost out of our hands, and extends from Maine to California, and from Dakota to Texas.

THE American Detector Company, of New York, has been incorporated to publish the *American Detector* and other publications. Capital, \$100,000; trustees, William C. Rhelan, Samuel E. Jones and William F. Jones.

THE Utica (N. Y.) *Herald* was sold on October 22 to John A. Goodale. A new company with a capital of \$85,000 has been incorporated to continue the publication of the paper. The indebtedness of the old concern is said to amount to \$130,000.

THE Campbell Printing Press & Manufacturing Company, 160 William street, New York, has accepted the selling agency for the Stonemetz Printers' Machinery Company, and all business hereafter connected therewith will be transacted by and through the former named company.

AT the recent meeting of the creditors of Bufford's Sons' Lithographic Company, of Boston, it was stated by the committee that the effort to form a stock company, with a capital of \$100,000, had been unsuccessful. It was voted to direct the trustees to sell the property as a whole to the highest bidder.

## ITEMS OF INTEREST.

TO COLOR white pasteboard the color of leather, soak in solution of copperas and then in ammonia.

NEWSPAPERS in the island of Ceylon ought to be spicy, but they are most frequently the reverse.

WHAT'S in a name, O shade of Stratford, when Edgar Allan Poe (in 1890) is captain of an American college football team?

CAPTAIN L. W. CUTLER, editor of the *Denver Field and Farm*, and at one time an associate of Horace Greeley, died Saturday, October 18.

A NEW stenographic machine in use by the Italian parliament is capable of recording 250 words a minute and can be manipulated by a blind person.

TO PRINT red on black paper, try printing once with varnish and twice with red if an intense color is desired. So states the Berlin Typographical Society.

ON Saturday, October 11, and the following day, prominent visiting printer-editors were plentiful all along the line of New Jersey's section of the Baltimore & Ohio railroad.

JOHN BOYLE O'REILLY'S first editorial contribution to the *Boston Pilot* was a eulogy of Charles Dickens, written shortly after the great novelist's death in the summer of 1870.

IN his most recent speech, Hon. Mr. Gladstone rattled off a single sentence containing two hundred and fourteen words, and these required twenty-four lines of type in the *London News*.

YEARS before the Indianapolis venture of Rev. Elijah P. Brown there was a *Ramshorn* newspaper in New York City, owned and edited by Willis A. Hodges, a negro abolitionist, who has recently died.

DR. EDWARD BEDLOE, who is United States consul at Amoy, has for his efficient side-partner Mr. William E. S. Fales, one of the best informed newspaper men, popular in New York and thereabouts.

BOOKS printed in Japanese begin where ours end, the word *finis* coming where we put the title page; the foot notes are printed at the top of the page, and the reader puts in his marker at the bottom.

THE best thing to clean rollers used for printing copying inks is said to be spirits of wine. It takes the ink off immediately, does not injure the rollers (as water does), and, as it vaporizes almost instantly, the rollers may be used at once.

IN the world-renowned British Museum there is a collection of the old Greek advertisements printed on leaden plates. The Egyptians were great advertisers. Papyrus leaves more than

three thousand years old have been found at Thebes describing runaway slaves and offering a reward for their capture, and at Pompeii ancient advertisements have been deciphered on the walls.

THE man who helps to lift somebody else's burden gets a stronger arm by doing it; but the man who, without help, lifts seven bound volumes of THE INLAND PRINTER has "a load on," even if he is more sober than the proverbial judge.

SEÑOR JOSE F. GODOY, editor of *La Republica*, formerly of San Francisco, has been appointed by President Diaz to represent him at the San Antonio (Tex.) International Exposition. He is an orator and speaks American like a Chicago advertising agent.

IT is proposed to honor the memory of John Boyle O'Reilly by setting apart an alcove in the new public library building in Boston, to contain as complete a collection as possible of Celtic works. This specialty was often advocated by the poet editor during his life.

THE erratic (and erotic) Tolstoi thinks it would be a good thing if every author would pigeon-hole his manuscripts (and publish nothing) during his life. "Then," says he, "there would be less printed paper in the world, and people would find time for reading what was really good."

MOSES HYMAN is the name of a young and capable artist who has made rapid progress in newspaper portraiture, his recent work on the New York *Sun* and New York *Herald* showing an aptitude for free-hand drawing and keen appreciation of individual facial characteristics. Mr. Hyman's instructor was the celebrated "V. G."

THE first patent issued in the United States was to Samuel Hopkins, on the 31st of July, 1790, for "making pot and pearl ashes." Only three patents were issued during that year. Now the average weekly issue is about 450, the aggregate number during 1889 being 23,360, while the complete issue to the close of the present year will have reached nearly 450,000.

THE following specimen of English as it is written by foreigners, says the *Ink Fiend*, is taken from a lot of testimonials in the advertising pages of *Graphische Kunst*, of Leipsic:

It is with real pleasure for me that I am able to tell with sincere persuasion that your machine is most praiseworthy; its self-counter works quite eminently.

H. HOHMANN.

DARMSTADT, 21th March.

AN English magazine during the American Revolution published an estimate of the future population of the North American colonies. Placing the population then at 2,000,000, and assuming that it would double every twenty-five years, it estimated that in the year 1890 the number would have increased to 64,000,000. This is about what we are said, in round numbers, to be likely to show.

IN order to make paper impervious to water it is suggested by D. McDonald and W. T. Tassie, of Canada, that the paper or other material be first soaked in oil, and then passed between wringing rollers, which press out the superfluous oil. The material is then dried and afterward completely covered with a layer of ink or similar material, which is distributed evenly over the surface with or without pressure.

A FRENCH contemporary says that to give cloth a proper sizing for good impressions in lithography, typography or photography, it should first be soaked in boiling water alkalized with a little potash; after drying, pass it through a confined bath containing 2 parts of chlorhydrate of ammonia and 3 parts of dry albumen to 250 parts of water. After having been dried in the open air, the stuff should be sufficiently calendared.

PAPER matrices for making stereotype plates from type forms, used in newspaper offices, are prepared as follows: Make a jelly paste of flour, starch and whiting. Dampen a sheet of soft blotting paper, cover its surface with the paste, lay thereon a sheet of fine tissue paper, cover the surface with paste, and so on till four or six sheets of the tissue paper have been laid on. The combined

sheet thus made is then placed, tissue face down, upon the form of types, which are previously dusted with whiting, and with a brush driven down upon the types and thereon allowed to dry. The operation of drying is facilitated by having the types warmed by placing them upon a steam heated table. A blanket is placed over the paper during the drying operation.

WHEN electrotypes are out of use and require to be stored, they should be kept in a dry place, and the surface of the plates should be oiled in order to prevent verdigris. When they become clogged with hard, dry ink, which the brush and benzine fail to remove, they may be cleaned and made equal to new in a few minutes by covering their surface with a little creosote, and afterward brushing the surface with benzine.

IN a late issue of *All The Year Round* mention is made of a Parisian evening paper which, printing the prospectus of a new mining company, described it in the most glowing terms. But the whole effect was destroyed by the sentence, "Cette mine est certainement la plus riche du monde en filons." The last word should, of course, have been "filons" (veins). As it stood, however, the passage read, "This mine is certainly the richest in the world in swindlers."

IN this year of surprises and advanced tariff (1890) the closing prices at the Liverpool Cotton Exchange are each day reported at the cotton markets along the Mississippi river valley in time for the opening of the cotton exchanges at these points in the morning of the same day, the difference in time being nearly six hours, and the distance one-fifth of the circuit of the globe; to transmit intelligence through which distance in 1837 would have occupied more than an entire month.

THE proper ink for writing on zinc is nitro-muriate of platinum, which produces a jet-black indelible stain. Procure an ounce stoppered phial, into which put half an ounce of nitro-muriatic acid, composed of two parts of muriatic to one of nitric acid; then procure a small piece of platinum, such as the whole touch-hole of a gun, which must be put in the acid and the stopper left out; set the phial in the sun, or upon hot sand, until the acid has assumed a deep brown tint. A few drops of this should now be added to a little water and tried with a quill pen, adding drop by drop until a sufficient blackness has been obtained. The writing must be well washed in water as soon as it has blackened, and then it should be wiped dry and varnished. Or, dissolve in half a pint of common writing ink two pieces of sulphate of copper the size of a hazel-nut, and write on the zinc with a quill pen.

#### A NEW INK.

Another useful invention has been perfected for utilizing bitumen for printers' use. It is claimed by the discoverers that a natural semi-fluid bitumen or maltha, in varying degrees of density, exists in large quantities, and that much of it is adapted for use as a printing ink, for letterpress or lithography, with very little manipulation. It is elastic and tough, is indelible, and in drying quality is superior to most inks manufactured. It distributes perfectly, and is incomparable for the finest and most delicate cut work. In its natural state it prints a rich dark gold color, but can be worked into almost any color desired by being ground with appropriate pigments. It can be thickened by boiling, or made thinner by the addition of linseed oil or a more fluid bitumen. If it realizes what is claimed for it, it will be a valuable aid to the printer.—*Modern Engraver*.

THE Glens Falls Paper Mill Company, Glens Falls, New York; the Glens Falls Pulp Company and the Ticonderoga Pulp & Paper Company, Ticonderoga, New York, have bought 537 square miles, or 343,680 acres, of timber lands in Canada, near Three Rivers, close by the lot of 150,000 acres recently purchased by a Glens Falls syndicate. The new purchase is covered with spruce and pine, and it is estimated that 300,000 market logs can be cut from it annually for fifty years.

SPECIMEN FOR COMPETITION.

Designed and executed by GEO. A. DEWOLFE, with Rockwell & Churchill, 39 and 41 Arch street, Boston, Massachusetts.

SPECIMEN FOR COMPETITION.

Key plate for color design. T. B. WILLIAMS, compositor, engraver and designer.

## PRESS ASSOCIATION NEWS.

THE editors of Iowa are arranging to take an excursion to Mexico.

THE Editorial Association of the Lehigh Valley, Pennsylvania, held an adjourned meeting at Bethlehem, October 13. The next meeting of the association will be held at Hazleton on December 9.

THE first "ladies' night" of this season at the New York Press Club was Wednesday evening, October 15. It was a notable gathering of wives, sisters, daughters, sweethearts and brusquer guests.

MR. JAMES E. HEGG, editor of the Lake Geneva (Wis.) *Herald*, was presented with an elegant gold watch, the gift of those who participated in the recent excursion of the Wisconsin State Press Association to Superior, under his management.

CONNECTICUT journalists, consisting of B. W. Maples, editor of the *Norwalk Hour*; J. A. Bolles, of the *New Milford Gazette*, and T. S. Pratt, of the *Rockville Journal*, met recently at the house of H. B. Hale, of the *Gazette*, as a committee of the Weekly Press Association. They prepared a report on the rules of advertising and other matters of interest to the association.

## SPECIMENS RECEIVED.

IN our reviews of specimens received in the October issue, we inadvertently omitted to give credit to Mr. Walter M. Moorehouse, of the Oil City *Derrick* jobroom, Oil City, Pennsylvania, for samples therein mentioned.

FROM A. J. Daniels, Chicago, business card in colors; F. W. Thomas, Toledo, Ohio, combined calendar and blotter; W. D. Page, Fort Wayne, Indiana, illustrated catalogue; Alfred M. Slocum, Philadelphia, several specimens colored printing; Edward F. Bigelow, Portland, Connecticut, package of samples of everyday work; W. H. Wright, Buffalo, New York, several specimens of commercial printing, all of which are creditably executed; the *Colonist* job office, Victoria, British Columbia, book of specimens of colored label work, equal to anything of a similar character printed in the United States; the Bell Printing and Manufacturing Company, Roanoke, Virginia; Finley & Hawley, Santa Rosa, California, four-page circular in colors; Flagg & Walker, San Bernardino, California, firm card in colors and bronze; Edwin L. Kappelman, Evanston, Illinois, several very neatly designed and executed specimens of commercial printing; A. T. Bliss & Co., Boston, embossed business card in gold and colors, unique and effective; J. W. Shepherd, Brockport, New York, business card in green and gold; C. L. Larew, Knoxville, Tennessee, package of business cards; McCulloch & Whitcomb, Albert Lea, Minnesota, a number of cards, letter and bill heads, all of which are neat and clean and worthy of special mention; C. B. Wells & Co., Springfield, Massachusetts, a large number of specimens of general commercial work, all of which are a pleasure to examine, and what is better, we are glad to learn good work and good prices go together with this house; Thad. B. Mead, New York; Shurley & Kessler, St. Joseph, Missouri, a selection of specimens which would do credit to any office, the firm card being especially attractive; Guide Printing and Publishing Company, Louisville, Kentucky; F. A. Manger, Omaha, Nebraska; F. J. Webb, Hudson, New York; Franklin Repository Steam Power Print, Chambersburg, Pennsylvania, poster in red and blue, a credit to Chambersburg.

## NEWSPAPER GOSSIP.

SIoux county, Iowa, has sixteen newspapers.

NEWSPAPER men of Brockton, Massachusetts, have formed a press club.

THE Springfield (Mo.) *Daily Democrat* is a new aspirant for public favor.

S. A. MATTHEWS will soon begin publishing a paper at Knoxville, Georgia.

A MONTHLY paper, quarto in form, is soon to be issued at Bowdoin, Maine.

THE *Democrat* is a new penny paper at Richmond and Manchester, Virginia.

THE Brockton (Mass.) *Sun* is a new paper published in that enterprising city.

COLORED men are about to start a daily organ of their race at Savannah, Georgia.

THE *Republican* is a new seven-column folio, issued daily at Carlisle, Pennsylvania.

WEIXEL & THOMAS are the new proprietors of the Pittsburgh (Pa.) *Herald and Leader*.

THE Roanoke (Va.) *Daily Times* appears in a new dress of type and in the eight-page form.

THE Westerly (R. I.) *Journal* has been consolidated with the daily *Tribune* of the same place.

THE size of the daily issue of the *Post-Express* (Rochester, N. Y.) has been enlarged eight columns.

THE *Unionist* is the name of a weekly journal which has recently made its appearance in Memphis, Tennessee. It is devoted to the interests of the united trades and united farmers.

THE Press Printing Company has been incorporated at Chattanooga, Tennessee, to publish an evening paper.

THE Press Publishing Company has been organized at Grand Rapids, Michigan, for the publication of a penny paper.

MARBLEHEAD, Massachusetts, boasts of a recent addition to journalism in the shape of a new daily called the *Enterprise*.

MR. W. D. CARR, of Knob Noster, Mo., has purchased the Colorado Springs *Saturday Mail*, and will make it a daily publication.

THIRTY-EIGHT newspapers (morning and afternoon prints) are published in New York City. This enumeration includes five languages.

THE newly-elected president of the Oregon Press Association is Mr. L. Samuels, publisher of *West Shore*, a prosperous illustrated satirical weekly.

THE *Demorest Times* is the name of a neatly printed, ably edited seven-column weekly which has recently made its appearance in Demorest, Georgia.

THE New Orleans *Republican* is the name of a new six-column four-page paper published in New Orleans, Louisiana. A. R. Burkdale is editor and manager.

KEENE, New Hampshire, has a new daily paper, the *Keene Evening Sentinel*, the first issue of which was on October 20. It is a bright, newsy sheet, and deserves popularity.

MR. JOHN C. KLEIN, recently somewhat notorious as a Samoan correspondent, is editing and publishing a weekly journal in San Francisco, which he calls the *Cynic*. It is illustrated in good style.

THE *American Paper Trade and Wood Pulp News* is the name of a new weekly periodical, published in New York, by Andrew Geyer, 63 Duane street, devoted as its name implies to the interests of the paper trade.

THE first copy of the *Chinese Monthly News*, published in Boston, has made its appearance. The paper announces that Wong Chin Foo is the editor, and F. Y. Moy the manager. It is printed in Chinese.

MR. C. D. BRIGHAM, of Pittsburgh, has been chosen editor of the new local morning paper just begun under the winning title of *The Sun*. Its price is 2 cents; its politics, republican; its capital, syndicated.

EX-SPEAKER W. F. CALHOUN has purchased a half interest in the Decatur (Ill.) *Daily Republican*, which has been conducted, since 1867 by J. R. Mosser and B. K. Hamsher. Dr. Calhoun bought Mr. Mosser's interest, and will become the political editor. Mr. Mosser is not in good health.

THE *Weekly Martin Bolt*, of Marlin, Texas, issued a special edition October 23, consisting of sixteen pages, containing sixty-

four columns. It was profusely illustrated by portraits and biographical sketches of the representative men of that locality, as also of its public buildings and private residences.

THE Champaign (Ill.) *Gazette* has been sold to a company of Champaign people, who do not make their names public. The only agreement required of the purchasers is that the paper shall continue republican in politics. The paper is an old established one, and is one of the most influential in Central Illinois.

OF INTEREST TO THE CRAFT.

THE Boston *Globe* now runs 115 frames.

COL. WILL LAMBERT, delegate from Houston Union to the Denver convention, is now city editor of the *Houston Daily Post*.

THE Toronto Typographical Union has adopted an optional scale for morning newspaper composition, providing in lieu of advertisements 33 1/3 cents per 1,000 ems. The regular scale is 30 cents.

A BENEFIT ball was lately given to F. P. Beslin, the blind editor of Colorado. The proceeds are to be used in sending him East to undergo an operation on his eyes, by which he hopes to have his sight restored.

THE difficulty in the office of the Nashville (Tenn.) *Evening Herald* between the proprietors and the typographical union has been amicably settled, and in the future none but union compositors will be employed.

THE New York *World*, which has been much cramped for room of late, began early last month to use the pressroom in its new "Pulitzer Building," and will in a short time be able to occupy its new home with all departments of the paper.

DURING the month of October, 1890, the following charters to local unions were granted: Americus, Georgia, No. 267; Dallas, Texas (pressmen), No. 46; Greensburg, Pennsylvania, No. 268; Newcastle, Pennsylvania; St. Paul and Minneapolis, Minnesota (stereotypers), No. 16; South Omaha, Nebraska, No. 269.

THE following crusher from Scranton, Pennsylvania, under date of October 20, explains itself: "I have your postal card with reference to the expiration of subscription, and in reply beg to say that I do not wish to renew. I am only one of the many despised amateurs, and have a small office simply for my own work and recreation."

THE following gentlemen have been appointed deputy organizers for the states in which they reside: N. J. Quail, *Miner* office, Butte, Montana; Marsene Johnson, Box 113, Fort Worth, Texas; William T. Miller, 48 Thirteenth street, Wheeling, West Virginia; M. Monahan, San Francisco; V. E. Fortson, Los Angeles, California; C. H. Humphrey, *News* office, Portland, Oregon; William B. Higgins, Box 131, Louisville, Kentucky.

THE following is the statement of the secretary-treasurer of the International Typographical Union for the month ending October 31, 1890:

Balance on hand as per statement of September 30, 1890.....	\$21,972.88
Receipts to date.....	3,442.38
	\$25,415.26
Disbursements.....	3,225.78
Balance on hand.....	\$22,189.48

THE following resolutions were adopted at a recent meeting of Colorado Springs Typographical Union:

WHEREAS, As a feeling prevails in certain quarters of the country as regards the amount of money to be expended for the proposed Childs-Drexel Home for Union Printers, and as the citizens of Colorado Springs have donated to our use for the purpose eighty acres of their choicest land, it is but proper that the printing fraternity build a structure which will be in keeping with the surroundings for years to come; therefore, be it

Resolved, That it is the earnest wish and desire of the Colorado Springs Typographical Union, No. 82, in meeting assembled, that the building to be constructed shall be one that we can all be proud of, and that the structure when completed shall with all improvements cost not less than \$75,000; and further be it

Resolved, That a copy of these resolutions shall be forwarded to the trustees in meeting assembled, at Chicago, November 19.

BUSINESS OUTLOOK.

Auburn, N. Y.—State of trade, middling; prospects, fair; composition on evening papers (female), 16 cents; bookwork (female), 16 and 18 cents; job printers, per week, \$8 to \$12. Smith Murphy, editor of the *Genoa* (N. Y.) *Herald*, is soon to commence the publication of a penny evening paper here. The *Morning Dispatch* still slumbers. Rumors of a new job office soon.

Austin, Tex.—State of trade, good; prospects, bright; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, \$20; job printers, per week, \$20 and nine hours. Printing is on the improve. Work in state printing office has begun, and quite a lot of printers are reaching the city. Work has begun on the dam across the Colorado river, and it is to be completed in two years from the first of this month. It will give employment to five or six hundred men.

Baltimore, Md.—State of trade, good; prospects, first-class; composition on morning papers, 45 cents; evening papers, 40 cents; bookwork, 45 cents; job printers, per week, \$16 to \$20. A non-union paper employing thirteen men has been compelled to cease publication, caused by the vigorous boycott of the union, and a new paper has been started employing fifteen union men.

Bay City, Mich.—State of trade, good; prospects, good; composition on morning papers, 34 cents; evening papers, 32 cents; bookwork, 32 cents; job printers, per week, \$12. The Times Publishing Company has ordered three Rogers' typesetting machines, to be put in shortly, but with what success remains to be seen.

Boston, Mass.—State of trade, dull; prospects, fair; composition on morning papers, 45 cents; evening papers, 38 cents; bookwork, 40 cents; job printers, per week, \$15. An attempt to make a new scale failed. Proposition will come up at next meeting to increase rate of weekly wages for book and job hands to \$17.

Burlington, Iowa.—State of trade, good; prospects, good; composition on morning paper, 30 cents; evening papers, 25 cents; bookwork, \$14; job printers, per week, \$14 and \$15. The sheriff closed the printery of Harry Johnson, and it will be sold about December 1. The Burdette Company has notices posted that it will be sold the 19th inst., while Wohlwend Bros.' business has increased so rapidly they are looking for a larger building.

Charleston, S. C.—State of trade, fair; prospects, fair; composition on morning papers, 37 1/2 cents; bookwork, 35 cents; job printers, per week, \$17. J. H. E. Stilling, book and job printer and stationer, has made an assignment for the benefit of his creditors.

Cincinnati, Ohio.—State of trade, dull; prospects, not encouraging; composition on morning papers, 45 cents; evening papers, 41 cents; bookwork, 40 cents; job printers, per week, \$18. Work is very dull here at present. There is absolutely nothing to do in book and job offices. Newspaper work fair.

Concord, N. H.—State of trade, fair; prospects, doubtful; composition on evening papers, 20 cents; bookwork, 25 cents; job printers, per week, \$10 to \$12. "Tom" Sawyer and M. J. Sullivan, of the government office at Washington, came home to vote. "Tom" has fatted up on proofreading, and the boys hardly knew him. The *Monitor's* new four-story building is nearly finished.

Dallas, Texas.—State of trade, dull; prospects, uncertain; composition on morning papers, 42 cents; evening papers, 37 cents; bookwork, 42 cents; job printers, per week, \$18. Job business very dull. Newspaper work fair.

Dayton, Ohio.—State of trade, fair; prospects, seem encouraging; composition on morning papers, 35 cents; evening papers, 32 cents; book and job printers, per week, \$15. The *Evening Herald* has moved into its new quarters, southwest corner Second and Jefferson streets, and has put in a new perfecting press, and the paper appears in a new dress.

Detroit, Mich.—State of trade, good; prospects, fair; composition on morning papers, 38 cents; evening papers, 36 cents; bookwork, 35 cents; job printers, per week, \$14. There are plenty of printers in town.

Fort Smith, Ark.—State of trade, good; prospects, fair; composition on morning papers, 30 cents; evening papers, 25 cents; jobwork, per week, \$15. Work has been given out pretty freely lately and printers have been in demand.

Galesburg, Ill.—State of trade, fair; prospects, fair; composition on evening papers, 25 cents; bookwork, 25 cents; job printers, per week, \$12 to \$15.

Grand Rapids, Mich.—State of trade, fair; prospects, same; composition on morning papers, 35 cents; evening papers, 30 cents; bookwork, per week, \$14; job printers, per week, \$14. Nothing seems to disturb the even tenor of our ways. Both news and job departments have plenty of work as usual. No. 39 will send a printer to the state legislature in the person of Al. S. White. About the right number of printers in town.

Houston, Texas.—State of trade, fair; prospects, fair; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, 40 cents; job and book printers, per week, \$20. Morning newspaper work is splendid, but book and job offices are doing little. Houston union now has a membership of sixty, and with rebate dues in force, the attendance is very encouraging.

Indianapolis, Ind.—State of trade, fair; prospects, good; composition on morning papers, 38 cents; evening papers, 36 cents; bookwork, 40 cents; job printers, per week, \$16.50. Book and job work have dropped off since the first of the month, owing to some extent to the closing up of

election work, and a number of day men have been laid off temporarily. George M. Cobb, a member of this union for several years, died Tuesday and was buried today.

**Jackson, Mich.**—State of trade, very good; prospects, good; composition on morning papers, 33 cents; evening papers, 30 cents; bookwork, 30 cents or \$13; job printers, per week, \$13. C. F. Messmore, secretary of No. 99, is making a hard canvass for member of the legislature from this district. No. 99 initiated two new members today.

**Jacksonville, Fla.**—State of trade, good; prospects, good; composition on morning papers, 33½ cents; evening papers, 30 cents; bookwork, 33½ cents; job printers, per week, \$16 to \$20. Nothing of interest, save that which has already been reported. The *Standard* is issuing an eight-page daily.

**Kansas City, Mo.**—State of trade, good; prospects, good; composition on morning papers, 40 cents; evening, 35 cents; bookwork, 37½ cents; job printers, per week, \$17. Business in all branches, good. Increase in membership last month, 40. The *Times* evening paper a howling success both for publisher and printer.

**Keokuk, Iowa.**—State of trade, good; prospects, good; composition on morning papers, 30 cents; evening papers, 26 cents; bookwork, 30 cents; job printers, per week, \$12. Central Labor Union gave a dance Thursday. It was a success both socially and financially.

**Lexington, Ky.**—State of trade, very fair; prospects, good; composition on morning papers, 33½ cents; evening papers, 30 cents; bookwork, 33½ cents; job printers, per week, \$15. The applications of C. R. Russell, J. J. Haddox, George Mitchell and Miss Nora Miller have been presented to this union, No. 189.

**Logansport, Ind.**—State of trade, moderate; prospects, not flattering; composition on morning papers, 28 cents; evening, 23 cents; job printers, per week, \$12. The trade here at present is rather dull, but may pick up. They took off three cases on the *Journal* since the election. We have enough "subs" at present to answer all purposes.

**London, Ont.**—State of trade, none too good; prospects, fair; composition on morning papers, 30 cents; evening papers, 28 cents; bookwork, per week, \$9; job printers, per week, \$9 to \$10. The *Free Press* now runs two staffs—one night and one day. The boys seem to like the new order of things very well. The job printers have been none too busy lately, but trade is soon expected to revive.

**Los Angeles, Cal.**—State of trade, dull; prospects, gloomy; composition on morning papers, 50 cents; evening, 45 cents; bookwork, 45 cents; job printers, per week, \$18 and \$20. Would advise printers to keep away from this coast. The *Times* still employs fraternity men. The *Herald* surrendered on October 14.

**Macon, Ga.**—State of trade, excellent; prospects, good; composition on morning papers, 33½ cents; evening papers, \$15 per week; bookwork, 35 cents; job printers, per week, \$12 to \$20. Work has been unprecedentedly good for the past year. There was hardly any let up during the summer, and now every office has all it can do. No idle men. The scale on the *News* was advanced from \$13 to \$15 per week recently.

**Milwaukee, Wis.**—State of trade, not very good; prospects, pretty good; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 35 cents; job printers, per week, \$14 to \$18. The *Daily Journal* has a new foreman, Joe Camey, vice J. Strong resigned. The *Sentinel* is to put on a complete new dress of minion, December 1.

**Mobile, Ala.**—State of trade, fair; prospects, fair; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$16.

**New Haven, Conn.**—State of trade, fair; prospects, brighter; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 35 and 40 cents; job printers, per week, \$15. There has been a slight improvement since last report, but there is a great plenty of compositors here to do the work. The local typotheta is having a fine time in this city in cutting prices. Week after week I hear the same story. It would be all right if they only hurt themselves, but others will suffer for their cut-throat actions.

**New Orleans, La.**—State of trade, good in all branches; composition on morning papers 45 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$18. There has been an unusual number of printers traveling during this season, and all have found employment.

**Omaha, Neb.**—State of trade, very good; prospects, good; composition on morning papers, 40 cents; evening, 37 cents; bookwork, \$16 per week; job printers, per week, \$18.

**Peoria, Ill.**—State of trade, only fair; prospects, fair; composition on morning papers, 36 cents; evening, 33 cents; bookwork, 38 cents; job printers, per week, \$15, \$18, \$21. Trade has not been as brisk since last report. It promises to be better if all things work as they have promised.

**San Antonio, Tex.**—State of trade, dull; prospects, fair; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 40 cents; job printers, per week, \$20. The scale for job printers has been raised from \$18 to \$20 per week, and the scale of prices has been revised and several changes made. Typographical Union, No. 172, had election of officers at last meeting.

**San Diego, Cal.**—State of trade, dull; prospects, duller; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 40 cents;

job printers, per week, \$18. No improvement in trade, though we hope to make something out of the county election by having all the officers elected give their work to union offices.

**San Francisco, Cal.**—State of trade, fair; prospects, not good; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 40 cents; job printers, per week, \$18 to \$21. Trade is brisk at present, owing to election. There will be a decided lull after election. There are plenty of men here.

**Springfield, Ill.**—State of trade, fair; prospects, the same; composition on morning papers, 33½ cents; composition on evening papers, 30 cents; book and job printers, per week, \$15. The *Register* job room and H. W. Rokker's office are running good forces of men, but business in the other offices is nothing to boast of. There are plenty of "prints" in the city.

**Springfield, O.**—State of trade, fair; prospects, the same; composition on evening papers, 30 cents; job printers, per week, \$15. There does not seem to be much improvement in newspaper work, and subs are not being overworked. Jobwork is quite good. No. 117 has increased the wages of time hands to \$15 per week. The advance was granted without any trouble.

**Springfield, Mass.**—State of trade, fair; prospects, good; composition on morning papers, 40 cents; evening papers, 28 and 30 cents; bookwork, 32 cents; job printers, per week, \$12 to \$16. F. K. Williams & Co. and S. G. Otis & Co. are to combine, increase their capital to \$10,000 and establish a large printing plant in Wight's block, opposite the new government building.

**St. John, N. B.**—State of trade, good; prospects, fair; composition on morning papers, 30 cents; evening, per week, \$10; job printers, per week, \$10.

**St. Louis, Mo.**—State of trade, average good; prospects, fair; composition on morning papers, 43 cents; evening papers, 38 cents; bookwork, 45 cents; job printers, per week, \$18. Printers have been all employed this week upon the registration. No idle hands at present.

**St. Paul, Minn.**—State of trade, poor; prospects, poor; composition on morning papers, 42 cents; evening, 37 cents; bookwork, 35 to 43 cents; wages of job printers per week, \$16 to \$20. Scale on Thorne typesetting machines, 19 cents for brevier, 22 cents for minion.

**Syracuse, N. Y.**—State of trade, good; prospects, fair; composition on morning papers, 32 cents; evening papers, 30 cents; bookwork, 30 cents; job printers, per week, \$14. Rumors of typesetting machines are thicker than fleas on a cur dog. The latest is that several book offices are sending for them.

**Toledo, Ohio.**—State of trade, good; prospects, very fair; composition on morning papers, 38 cents; evening papers, 35 cents; bookwork, 38 cents; job printers, per week, \$15. This is the first year in the history of this union that traveling printers have been so scarce, and consequently work is good.

**Topeka, Kan.**—State of trade, dull; prospects, good; composition on morning papers, 33½ cents; evening papers, 28½ cents; bookwork, 40 cents; job printers, per week, \$15. Work will probably pick up by last of month. Duller now than at same time last year.

**Toronto, Ont.**—State of trade, fair; prospects, no better; composition on morning papers, 30 cents, with an optional scale of 33½ cents, the office setting the "ads"; evening and weekly papers, 28 cents; bookwork, 33½ cents; job printers, per week, \$11. The *Globe* has accepted the optional scale, and is now working under it. It is expected the *Empire* will also take it up very shortly—the *World*, of course, made it their chief ground for coming into the fold again. The financial secretary reports that we now have 509 members on the roll, with 506 in good standing. This is the first time that we have had over 500.

**Utica, N. Y.**—State of trade, unchanged; prospects, fair; composition on morning papers, 35 cents; evening papers, 31½ cents; bookwork, 31½ cents; job printers, per week, \$12.50. The six-day law has created quite a flutter in union circles here, and there is much discussion being indulged in for and against it. Notwithstanding this fact, however, the law is being respected and lived up to.

**Vancouver, B. C.**—State of trade, fair; prospects, fair; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$21. Mr. George Bartley, an old and trusted friend of No. 226, has left here to seek greener fields down the Sound. THE INLAND PRINTER is anxiously looked for every month. Say, that illustrated work is pretty "slick."

**Wheeling, W. Va.**—State of trade, good; prospects, fair; composition on morning papers, 35 cents; evening papers, 30 cents; bookwork, 40 cents; job printers, per week, \$15. The *Evening News*, the new daily, is booming things; claims to have the largest circulation of any paper in the city. It is about six weeks old. The third annual ball of Typographical Union, No. 79, was a success in every way.

**Wichita, Kan.**—State of trade, fair; prospects, fair; composition on morning papers, 35 cents; evening papers, 30 cents; job printers, per week, \$15. There is generally plenty of men for the work.

**Worcester, Mass.**—State of trade, not very brisk; prospects, awfully uncertain; composition on morning papers, 40 cents; evening papers, 33½ cents; bookwork, 35 cents; job printers, per week, \$10 to \$15. Business at this season of the year is possibly quieter than it has been for a long time. This city is generally conceded a good winter town. One office at present is only working eight hours per day, and some of its help is out.

## BUSINESS NOTICES.

Mr. H. G. BISHOP has issued a second edition of his "Printers' Job Order Book and Record of Cost." We advise every job printer to begin the new year by using this book. It is printed and ruled so as to afford a simple plan of recording the cost of every job done, there being a separate column for each item of expense. Printers who have seen this book speak of it in the highest terms. There is space for 3,000 jobs; the size of leaf is 11 by 17, and the price is only \$3.00, which is about half what a single book could be made for. To be obtained of H. G. Bishop, Oneonta, New York.

### BRASS TYPE.

The Central Typefoundry, of St. Louis, is the only concern in America casting brass type for binders' use. Send for a copy of their specimen book of brass type.

### TIME-TABLE FIGURES.

Railroad printers are under lasting obligation to the Central Typefoundry for getting up a series of special figures for time-table work. *Send for their book.*

### PERFECT BOOK TYPE.

The Central Typefoundry is shortly to offer a series of perfectly cut book type in all sizes, pearl to pica. It will no doubt be the standard series, recognized and adopted by the Typothetæ of America.

### RONALDSON SERIES.

MacKellar, Smiths & Jordan have sold to the Central Typefoundry matrices for casting the celebrated Ronaldson series of old-style, so that western printers can now be supplied with it. Cast with copper alloy metal, the most durable in the world.

### NEW SPECIMEN BOOK.

The Central Typefoundry is desirous of placing a copy of its specimen book in every printing office, and as it shows all the faces made by the Central and Boston Typefoundries, both being celebrated for the beauty and originality of their designs, every printer should have one. Send your address to Central Typefoundry, St. Louis, Missouri.

### MORE NEW TYPE.

The Central Typefoundry, which has for several years led all its competitors in producing new faces, has just completed a series named "Jefferson," midway in width between "Lafayette" and "Washington" and of the same style—also a series named "De Vinne," a bold-face old-style. Each series is made from 48 to 6 point. Send for their new book.

### THE AMERICAN PRESSMAN.

This is the name of a monthly sixteen page journal devoted to the interests of pressmen, which has recently made its appearance. It is published by Mr. T. J. Hawkins, 535 East Eighty-second street, New York, under the auspices of the International Printing Pressmen's Union of North America. Price 25 cents per annum. We wish it abundant success.

### ANDERSON & CO'S LITHOGRAPHED CALENDARS.

We acknowledge the receipt of a series of lithographed calendars for 1891, from the well-known firm of W. J. Anderson & Co., 71 and 73 Spring street, New York. They embrace all sizes, devices and styles, suitable for the office, workshop, or counting house—all of them attractive and many of them being productions of the highest style of the art. Full set of samples of same will be sent by express on receipt of \$2.50, which amount will be allowed on orders of \$100 or over.

### RAPHAEL TUCK & SONS.

The Christmas and New Year's cards and novelties issued by this well-known art publishing house are gems of the first water. In extent, variety, beauty, originality, design and execution they far surpass all previous efforts even by this world-celebrated firm. The impress of the thorough artist is stamped upon every one of them. That they will have a large sale—and deservedly so—is an assured fact.

### COSACK & CO., BUFFALO.

The calendars for 1891 issued by the well-known firm of Cosack & Co., lithographers and publishers, Buffalo, New York, are worthy of more than special mention, a large number of them being truly artistic productions. They are adapted to all wants and tastes, and embrace every variety, from that required by the man of business to those which are worthy to embellish a lady's boudoir. Their stock of fancy cards and advertising specialties is also more extensive and attractive than ever, and we have much pleasure in calling the attention of the trade to these facts, as no intending purchaser can fail to be satisfied both in styles and prices.

### FACTS WORTH KNOWING.

It is well for the trade to be acquainted with the fact that the firm of Story & Fox, Buffalo, New York, show card and label finishing and general furnishers to the lithographic and printing trade, intend shortly placing on the market a drop memoranda, as also a book-form calendar, which will furnish an invaluable and constant reminder of dates, obligations, etc. A special feature connected with the production of these calendars is that the firm simply furnishes the plan (which is patented), and permits, without cost, parties using it the privilege of doing so, and printing the same, the firm only claiming the right to cut and make up the stock into calendar shape. This firm likewise makes a specialty of gummed seals for lawyers and notaries public, and also manufactures a flexible liquid composition of tablet glue, which retains its power in any climate, which requires no heating, as it always retains its liquid form, and has received the universal indorsement of every bookbinder, printer and lithographer that has used it. It is gratifying to know that their western business is increasing to such an extent that it contemplates, at an early day, opening a branch establishment in this city.

### BLOMGREN & LINDHOLM.

On page 133 of this issue will be found an advertisement of this new firm, which has recently opened for business at 359 to 361 Dearborn street, Chicago. Mr. Blomgren, the senior partner, was formerly with Blomgren Bros. & Co., and Mr. Lindholm has been in the photo-enlarging business in Chicago many years, at present being connected also with the Consolidated Copying Company. Both gentlemen being practical workmen, and having secured the best help possible, and the most improved machinery, it goes without saying that all work turned out will be of the best character. This firm, besides producing typographic plates by photo-mechanical means, does fine wood engraving. Their process engraving is not confined to reproductions by zinc-etching alone, but also comprises gelatine relief plates for reproducing pen and ink drawings, fine wood cuts and steel engravings. They also reproduce direct from photographs or wash drawings by the half-tone or tint process. In addition to the high grade machinery in the finishing department, which includes a circular saw and a router made by John Royle & Sons, Paterson, New Jersey, they have instruments for photographing of the latest and most improved style, and Mr. Blomgren's own patented appliance for timing exposures, the latter one of the most important inventions of the day. By the use of electric light for photographing and for process work they are able to fill all orders promptly, as they do not depend upon sunshine. Every department is under the personal inspection of the members of the firm, and every order receives the most careful attention. Write to them for estimates, or call on them.

## PRANG'S HOLIDAY PUBLICATIONS.

The Christmas and New Year's novelties for 1890-91 of the well-known art publishing company of Louis Prang & Co., Boston, Massachusetts, are more than usually attractive. This is especially true of their fine-art books and booklets, all of which are gotten up in superb style, and make beautiful and appropriate holiday presents. Among the former may be mentioned "The Wings of the Seasons," by Frank T. Robinson, containing charming illustrations in colors and monochrome by Louis K. Harlow, with choice cover in design, a perfect gem; "The Spirit of the Pine," a Christmas masque, by Esther B. Tiffany, illustrated in monochrome by William S. Tiffany; "The Story of a Dory," told in verse by Edward Everett Hale and salted down picturesquely by F. Schuyler Matthews, profusely illustrated in colors and line drawings—shape of a dory, with realistic mast and anchor, unique and attractive; "My Lighthouse," and other poems, by Celia Thaxter, illustrated in colors by the author, with exquisite emblematic cover in design in colors. Among the art pictures may be mentioned "Playing School," an outdoor scene, representing children playing school, by Ida Waugh; "The Prize Baby's Walking Match," by the same artist, etc. In cards the designs are novel and chaste, and splendidly executed. In fact these productions are suited to all tastes and pocketbooks, and the purchaser must be difficult indeed to please who cannot find among the many attractions something to suit his fancy.

**AT YOUR OWN PRICE**—Country newspaper and job office. Eight-column folio paper, one Taylor hand or power cylinder press, one 7 by 11 job press, 300 pounds body type, bourgeois and nonpareil, forty-five fonts job type, paper cutter, lead cutter, stapling machine, etc. Will inventory \$1,500. Want to accept position in milling establishment. Address "EXPRESS," care INLAND PRINTER.

**COMPOSITORS**—Send 10 cents for patented copy holder. Agents wanted. GEO. W. BANTA, 792 Chapel street, New Haven, Conn.

**EVERY YOUNG PRINTER** should have a copy of Bishop's "PRACTICAL PRINTER," 200 pages. Price, \$1. Also by the same author, "DIAGRAMS OF IMPOSITION" and "THE PRINTER'S READY RECKONER." Price, 50 cents each. To be obtained of H. G. Bishop, Box 1061, Oneonta, N. Y., or through Farmer, Little & Co., New York and Chicago. These are the handiest and most useful works ever published for printers. Indorsed by everyone who has seen them.

**FOR SALE**—A complete dress of minion. A bargain. Good face and practically as good as new type. Apply at once, "EVENING TRIBUNE," Evansville, Indiana.

**FOR SALE**—Job printing office; medium size; well equipped; doing good business. Or will sell half interest to an expert job printer. Address T. L. M. HUBBARD, care INLAND PRINTER.

**FOR SALE**—Newspaper and job office in New York state. Established over ten years. County paper with large circulation and good advertising patronage. Job department fully equipped with late styles new type. New Whitlock book and news press, with all attachments. A great bargain to the right parties. Address "Z. U. Y.," care INLAND PRINTER.

**JOB COMPOSITOR**—An experienced, steady man who thoroughly understands his business, and is a tasty, rapid workman. Permanent position and good wages to the right man. Undoubted references with samples of work required. Do not write unless you can meet these requirements. MORRILL BROS., Fulton, New York.

**OF COURSE!**—We can give them away, but we have only a few more of the complete unbound sets of "American Printers' Specimen Exchange" (4 volumes) at \$3.75. The balance, 10 volumes, we are going to bind and hold at \$10 each, and they are worth twice as much. ED. H. McCLURE, Buffalo, New York.

**PARTNER WANTED**—Man with \$2,500 or \$3,000 cash, can get half interest in first-class shop in city of 150,000, that did \$15,000 business last year at good profit. Either practical man or hustler will do. Reason for selling, too much work for one man, as he has other business to attend to. Address, stating correct name and age, with references, "O. K.," care INLAND PRINTER.

**SITUATION WANTED**—By a pressman of many years' experience on colored and general work; has worked on all classes of German, French, English, Belgian and American presses; has also had several years' experience on power plate printing machines; has had charge of office with thirty-five machines; has also traveled for ink and color manufacturing house in South America, Europe, and the western territory of the United States; is willing to go anywhere; speaks English, German and Spanish. Manufacturers or employing printers wishing such a man can hear more by addressing "HUSTLER," care INLAND PRINTER.

**SPECIMENS CHEAP**—Full unbound set (4 volumes) of the *American Printers' Specimen Exchange*, at \$3.75 by express; or one sample volume (no choice allowed) at 60 cents, postpaid, and the balance of the set at \$1.10 per volume, postpaid. Will then bind one or all the volumes at \$2. ED. H. McCLURE, Buffalo, New York.

**WANTED**—A competent all-around bookbinder to take charge of bindery located in Ohio oil region. Address "BOOKBINDER No. 1," care of INLAND PRINTER.

**WANTED**—Every printer and pressman to know the "Practical Printer" is the best and cheapest work on printing, in all its branches, now on the market. Price 25 cents, postpaid. J. W. ALEXANDER & CO., 17 Griswold street, Cleveland, Ohio.

MANUFACTURED UNDER PATENTS 237,825 AND 240,099.

## THE CUSSONS CALENDAR PAD

REQUIRES NEITHER EYELET NOR WIRE STITCH,

But simply has to be glued or pasted to the calendar card. Small sizes ready gummed and as easily attached as postage stamps. Manufactured by special machinery, and cost no more than the common kind. Twelve sizes now ready.

CUSSONS, MAY & CO., Glen Allen, Va.

## PRESSMEN!

## THE NEW SIDE-GAUGE.

FOR ALL JOB PRESSES.

FIRST ever invented for the purpose, and offered to the trade at so low a price as to make it look as though it was a sham. But it will do wonders, and when we think how often we have wanted a side-gauge that we could use without dispensing with the gripper, we are surprised that it was not thought of before; and then to be presented in such a simple form, and in a single piece of metal! It can be crowded right between the gripper and the tympan without smashing, losing its elasticity, or bearing off the gripper. Don't you believe it? You will as soon as you try them. You will also find in them many more uses too numerous to mention in an advertisement; and all for the small sum of

75c. per Dozen, assorted shapes. 25c. per set of three.

SOLD BY ALL DEALERS AND BY THE INVENTOR AND MANUFACTURER,

E. L. MEGILL, 60 Duane Street, NEW YORK.

# THE HUBER TWO-REVOLUTION PRESS

**DOUBLE ROLLING + SINGLE END + SIX TRACKS + AIR SPRINGS  
FRONT OR BACK DELIVERY.**

The Impression is taken over a six-track bed, which is supported every ten or twelve inches across the press. We guarantee the impression sharp and rigid, and the bed and cylinder are warranted not to spring or give way in the least degree.

The Impression can be tripped at the moment grippers close or before.

The Register is absolutely perfect at all speeds of the press, the bed and cylinder being locked in full gear twelve inches before the contact of bearers takes place, and remaining in gear for several inches after the head line has passed.

The Distribution is uniform from head to tail of sheet. This is accomplished by charging the form with fresh ink both ways from one fountain.

The Air Springs are applied vertically; the piston-head does not come out of the cylinder; no packing ever required; the pressure can be regulated while press is in motion at all speeds.

The simplicity, accuracy and durability of the bed movement is unequalled by any other machine. The double rack teeth are made of steel, with the best rolling curve known to mechanics. From two to three teeth always in contact, thus obviating lost motion.

The sheet is delivered in front, clean side to the fly, without the printed side coming in contact with anything. Fly motion positive, no strap, no slamming. The motion is the same in delivering sheet and returning for next sheet.

The Fly can be disconnected at a moment's notice.

This press is designed for the finest quality of cut and color work; can be used to charge the form both ways with fresh ink, or as a single end press, four or two rollers.

No complicated movements to get out of order.

**SIZES:**

No. 1.	4	Rollers, covering entire form.	Bed, 44	x 60	inches inside bearers.	Matter, 40½	x 56	inches.

# LOOKING FORWARD.

## A GLANCE AT WHAT VOLUME VIII OF THE INLAND PRINTER IS TO BE.

THIS TIME we beg to announce our plans for the next volume. Beginning with the October, 1890, issue, THE INLAND PRINTER starts its eighth volume. Ever since the first number of this magazine was issued, it has been the aim of its publishers to improve it and make it *the best* publication of its kind extant. That this endeavor has been carried out successfully one glance at the September, 1890, issue, or a bound copy of Volume VII will prove. Volume VIII will be in many respects superior to those of previous years. The colored inserts, and all special features

that have made THE INLAND PRINTER so popular, will be continued, and many new features added to make it still more attractive and welcome in offices in every part of the world. A series of articles on Shorthand, written expressly for THE INLAND PRINTER, will be begun in an early issue, and continued from month to month. The method of shorthand described in these articles is new, and has never before been made public. This feature alone will be worth the subscription price. Instruction in engraving, stereotyping, etc., as well as practical lessons in all that pertains to the printer's art, will be given space in its pages. Its editorials, contributed articles, correspondence, specimens of typography, answers to correspondents, engravings, trade news, etc., will, as heretofore, receive especial attention, and be found instructive and entertaining.

We have hundreds of testimonials from subscribers in all parts of the country, testifying as to the esteem in which they hold THE INLAND PRINTER. We select a few from those recently received, to show the tone of expressions daily reaching this office. It is not possible to publish all, but those on this page echo the sentiments of many others.

Do not fail to renew your subscription if it has expired. Canvass your office or city and organize a club. Let others know of the benefits to be derived from the careful reading of THE INLAND PRINTER.

**\$2.00 A YEAR.**  
**\$1.00 FOR SIX MONTHS.**  
**20 CENTS FOR A SINGLE COPY.**  
**\$1.50 PER YEAR IN CLUBS OF SIX OR MORE.**

Write at once for any further information, or send on your subscription or club list to

**THE INLAND PRINTER CO.**  
**183 MONROE ST., CHICAGO.**

### READ WHAT THEY SAY.

Cannot do without it.—*R. S. Giles, Elizabethtown, Ky.*

Cannot get along without it.—*A. M. Grindell, Mirror Office, Manchester, N. H.*

Your magazine is looked for eagerly and appreciated highly.—*John D. Conway, Printer, Lawrence, Mass.*

Keep THE PRINTER coming my way.—*S. G. Williams, Editor Journal, Rutland, N. Dak.*

I am highly pleased with THE INLAND PRINTER, and wish you continued success.—*J. F. Hughes, Linden, Wis.*

Inclosed find my subscription. I know a good thing when I see it.—*Edmund A. Darling, Foxwicket, K. I.*

THE INLAND is my favorite journal, and I read each one from cover to cover.—*Jno. W. Michael, 817 N. Capital St., Washington, D. C.*

THE INLAND PRINTER is a regular visitor that we look for eagerly every month. It should be in the hands of all printers.—*Edwin F. Gibbs, Madison, Wis.*

We could not live without THE INLAND PRINTER here on the Columbia river.—*Geo. M. Cornwall, Gazette Publishing Co., Cathlamet, Wash.*

I value your interesting journal highly, and could not afford to have it discontinued. I inclose my renewal.—*A. W. C. Finbold, Grand Valley, Ont.*

Inclosed find \$2.00 which kindly place to my credit on INLAND PRINTER—the best printers' journal published.—*H. E. Tuttle, Sawyer & Woodard, Osage, Iowa.*

I am very much pleased with your most excellent journal, and have but one complaint to make, and that is, it comes but once a month.—*Fred. C. Davis, Austin, Tex.*

You need not fear; I desire THE INLAND as much as you may wish to send it. I inclose my subscription. My best wishes for your continued success.—*Z. H. Denison, the Job Printer, Marshall, Mich.*

I have been trying for two years past to live without THE INLAND PRINTER. If you will put my name on your list I won't do it any more. Inclosed find \$2.00 for year's subscription.—*Jas. Aiken, Pub. Gazette, Redwood Falls, Minn.*

Inclosed find \$2.00, for which please continue my name on your subscription books for another year. I consider it invaluable to any printer who has any appreciation of the art. I might fill this page with compliments, but I consider the renewal of a subscription the best manifestation of appreciation.—*Wm. Ferguson, Sec'y New York Typographical Union, No. 6, New York.*

I have subscribed to a great many trade journals in my time, but for originality and usefulness of articles, style of advertisements, presswork, and in fact general get up, have found none to approach THE INLAND PRINTER. The specimens of process work are delightful, and the intricate specimens of rule-work, inserted from time to time, regular eye-openers.—*John Bambridge, Temuka Leader Office, Canterbury, New Zealand.*

**Class Q R.**—THE SCOTT FLAT BED PERFECTING PRESS, with roll and table feed two roller, rack and screw distribution. Works sheets of various sizes in length and width.

**Class R R.**—THE SCOTT FLAT BED PERFECTING PRESS, with roll and table feed, four roller; table, rack and screw distribution. Works sheets of various sizes from roll.

## THE ART OF SPECIAL WAR CORRESPONDENCE.

A MAN MUST BE CAPABLE OF STEALING AT LEAST A HORSE AT ANY STAGE OF THE GAME.

BY MALCOLM MC PHERSON.

IN his green and callow days as a newspaper man the writer once asked a celebrated war correspondent of a London journal what were the essential attributes of a successful military historian. He had a peculiar drawl, more affected than natural, I should say, and as he tugged at the end of the right-hand side of his long blonde mustache, he replied that while there might be a great deal in fortuitous opportunity, he thought there was a good deal more in the capacity of being able to steal a horse at a critical moment.

The writer regarded this advice more as a joke than anything else, but experience very soon afterward happened to show him that there was a good deal in it. During the visit of the Prince of Wales to India in 1876, his royal highness was entertained magnificently by the Maharajah of Cashmere. Shrinuggur is the summer capital of that famous region—famous chiefly through the imaginative genius of Tom Moore, who never saw the country in his life, but had read a library of books about it, and therefore produced his "Lalla Rookh"—and Jummoo, proudly perched upon the side of the Pir Pinjal spur of the Himalaya mountains, is considered the winter capital, because it is situated considerably south of the vale of Cashmere, where, in his mind's eye, Tom Moore saw the dear gazelle that gladdened him with its dark, black eye before, perchance, it chose to die.

A grand ball was organized by the Maharajah. It was to be held in the palace which, like an eagle's eyrie, hangs over the Jummoo river, flowing darkly and swiftly fifteen hundred feet below. The night fixed for the event happened to be rainy and tempestuous, and the prince's camp was at least five miles from the place of rendezvous. Therefore, while some of the suite might prefer to be carried in palkees and take the risk of being drowned in some of the numerous freshets which flow into the Jhelum, the swiftest of the four great rivers of

the Punjab, the majority covered themselves with oil-cloth and rode on horseback. It is unnecessary to describe the ball, with its array of beautiful, fair European women as active participants, and hundreds of languishing but voluptuous, gold-laden Cashmere odalisques as spectators, nor would it be essentially parallel to the subject objectively in hand to attempt any description of the costly and interesting display of presents which the Maharajah had laid out in one of the most picturesque niches of his hyperborean abode among the solemn mountains of the eternities.

Yes, there was one prospective present which is worth mentioning for the benefit of the readers of THE INLAND PRINTER. I am not aware that it has been much dwelt upon hitherto by any of the correspondents who accompanied his royal highness, the prince, on that celebrated visit to Cashmere. It was a large fabric of wool work, delineating every river, city and mountain in the country, and had been the three years' handiwork of several of the most expert artisans of the country. As a shawl it was barbaric and unique, but of almost priceless value, being constructed of the finest hair of the celebrated Cashmere goat or sheep. Somewhere beyond "the wee short 'oor ayont the twal" I was admiring this wonderful piece of tapestry—for it seemed to me that it would eventually take its place among the future Bayeux tapestry of the Orient—when my servant came into the room, salaamed, and informed me that the company were now separating for home. The rain was pouring down in torrents, and far below the mountain river could be heard hissing, roaring and humming, as it plunged onward to join the Jhelum, the Indus, the Arabian gulf and the Indian ocean. I called for my horse, and the syce scurried away into the sleet and darkness to find it. The shrill pipings and tomtoming of the native musicians in the bazaar could be heard in the distance, while opposite the Maharajah's palace there was all the hurry and scurrying of the departing guests.

"Sahib, tumarro ghora nahin-hi," exclaimed my syce as he returned after an interval of fifteen minutes. He could find my horse nowhere, and all the information

he could impart was that a gentleman with a very long mustache had been seen riding off on my old gray "tat," and swearing indignantly at the poor native who was protesting that the animal belonged to me and not to him.

As there was not a horse nor a palkee to be had for miles around, and the Maharajah's palace was considered to be sacred and unpolluted by Europeans, I had no alternative but to hoof it back to the prince's camp. It was a terrible experience. With tempestuous rain overhead and groping my way through difficult torrents, I at last reached my tent about daylight with as sorry looking a dress suit as ever a tailor gazed upon.

By the description given to me, I knew who had stolen my horse. He was the famous correspondent of a London newspaper.

"My dear boy," he said, when I tackled him upon the subject at mess, "didn't I give you advice about the best way to become a successful war correspondent. If I am not mistaken it was to steal a horse at the *crux momentum*, or the crucial moment, if I may so express it in better English than Latin. Well, somebody had stolen my horse, and so I appropriated yours. It may look shabby, but I was in hopes that you would be able to steal some other fellow's. Here's luck."

That same correspondent afterward won additional fame in South Africa by his ability to steal a horse at the critical moment. "All's fair in love and war" seems to be the motto of the successful modern special war correspondent.

### THE PRINTER AND THE MACHINE.

BY THE WALKING DELEGATE.

IT is a sorry commentary on the social state of man that a true and correct line of reasoning, as well as the light of experience, should bring him to the absolute conclusion that a machine, calculated and designed to make a certain kind of work easier and quicker to perform, is, in however so small a degree, detrimental to the interests of him or her who erstwhile performed this work with the hand. The setter of type, whose position as a craftsman was thought but a few years ago to be impregnable for all time to come, as it had been since the days of Gutenberg and Faust, finds himself confronted with a machine which today threatens and menaces the source of his daily bread—a machine, good people, to invent which, Horace Greeley has said, would be to invent a human being!

Now and then one yet finds a poor fellow who hopes against fate, and tries as best he can to convince his unbelieving self that the machine will be a source of great good—a regular godsend, in its way. Why, the cost of composition will become so cheap that there will be an immense amount more of printing done; will have a printing office on every corner of a block; every lawyer will have a little printing office attachment to print his briefs in; newspapers will double in size; books will be printed ten to one, and so on, and so on.

Others, again, who underrate and undervalue the human intellect, place a stray chip of hope on the failure of the machine, and as sure as fate they bet to lose.

It takes no giant mind to grasp the folly of the one and the hopelessness of the other of these two theories: (1) That the machine will be beneficial, and (2) that it will be a failure.

The first of these two theories is set forth in the tiresome and silly twaddle of a member of the New York union. He says: "Of course, some members of the union are a little skeptical as to the benefit these machines will be to the followers of the craft, but the whole history of labor-saving machinery teaches us that nothing has yet been invented that will lessen the need of good workmen." He is the first one that has yet been heard from that is not skeptical at all; and I have heard of but a very few beside him whose skepticism was not of the most pronounced type. The "whole history of labor-saving machinery" is something he knows nothing of, or perhaps he would not father a statement so untrue and false. If there was on record a solitary case, perhaps it wouldn't have been very troublesome for him to cite it. On the other hand, I can point him to the harvest field, the planing mill, the woolen mill, the shoe factory, the twine factory, the shirt and overall sweat-box, or whatever other place his fancy may dictate where machinery is chiefly employed, and show him that the machines are operated, not by the heads of families, at shorter hours and greater pay, but by old women, young girls and boys in their teens, at longer hours and less pay by half than when these different kinds of work were performed by the human hand. And when he says that "nothing has yet been invented that has lessened the need of good workmen," he seems to revel in a sort of ghoulish glee that something has been invented to help along Darwin's law of the survival of the fittest. There are those among my fellowmen who are, for physical or mental reasons, incapacitated for being at the "head of the class," and, of course, these fellows have no business on earth, and we must needs have a typesetting machine to rob them of their already scanty proportion to eat and drink, that they may the sooner go to the realm of the dear departed, where, as angels, they need no clothes, and, as simply souls, they have no use for food. Again, he says: "When typesetting machines have been introduced into every office in the country, it will lessen the cost of composition to such an extent that papers which now contain eight pages will have twelve, and four-page papers will be increased to eight." You bet—in your eye. The late Congressman Burns, of Missouri (if my memory does not mislead me, it was he), predicted in his paper some time before his death that the era of twenty-page dailies would in the near future come to a close, citing therefor the best of reasons. The four-page penny paper is growing in popularity too fast to assure a long lease of life to the unwieldy daily of two dozen pages. But, even count the dead congressman's prediction as a false one, and figure for yourselves. It

is safe to say every machine, if it is of any value at all, will throw out of employment one printer; that is certainly moderate. Then, to provide employment for every man thrown out, it is necessary to have again as many newspapers, again as many magazines and periodicals, again as many books, and again as much of everything else set in straight type. Suppose such a colossal increase in the production of printed matter, with no decrease in the wages of the operator below those of the printer, and adding to the expenses of the proprietor the cost or rent of the machine, and then tell us who derives any benefit from the machine! Every particle of pecuniary benefit that this machine is to produce is for the employer, and must come out of *our* respective pockets, or there would be no object in putting the machine in operation. But the supposition is preposterous. Even an increase in the size of the present newspaper from eight to twelve pages is an unreasonable probability, and, besides, it would prove of no benefit whatever, for the simple reason that these immense editions would so encroach upon the territories of the weeklies devoted to special objects as to make engagement in the publication of them exceedingly unprofitable, and rapidly drive them out of existence. As a single instance, the *Chicago Times* devotes every Sunday a whole page to union labor affairs, and thereby does what it can to ruin the business of the labor papers, and throw out of employment the men and women unfortunate enough to have to make a living on them. And the plates! What will they cost? One column of brevier plate matter costs now about twenty cents. The machine would reduce the price of them to ten cents. A page of seven columns full of plates at a total outlay of seventy cents. Now, then, these plates may certainly be classed among the great inventions in the printing trade, but who ever had the folly to attempt to argue that the plates were beneficial to the craft? But, according to this fellow from New York, and his "history of labor-saving machinery," the printer's time of plenty and joy and bliss is near at hand. Fudge!

The second theory (and a desperate theory it is), that the machine will, after all, prove a failure, has for it no good reason. It seems never to have been discovered, but it is a fact, nevertheless, that copy can be prepared correctly before the printer takes hold of it, as well as after the printer is through with it. The proofreading on machine matter will be largely done in the copy. Paragraphs may be made to occur more frequently, and callow reporters who cause the resetting of a whole paragraph on a "ring" will become more scarce when the cost of resetting comes out of their wages. So all the silly talk about failure will cease.

And, in the contemplation of these facts, is it not a sorry commentary on the social state which makes absolutely detrimental that which was designed to be of great good?

But it is not the purpose of my writing to oppose in any way the advent of the typesetting machine. I am

not agitating a disposal of the inventor and his machine in the river, or the organization of a walk-out in every office where the machine is put into operation. Typesetting by machine, it is now beyond all doubt, is one of the inevitable things. It will be as much a milestone in the progress of the world as was the invention of printing itself. It is but a faint indication of the goal to which the human race aspires. But it *is* my purpose to do what little I can that you and I shall have our fair proportion of whatever benefit this machine affords. I desire that my fellow craftsmen shall awake to the necessity of being up and doing. It will not do for us to drown the ominous click of the machine with the snore of apathy.

The machine shall not rob me and mine of food and clothing; it shall not steal from me honorable employment; it shall not drive wives to the sewing needle; it shall not shove boys into the penitentiary; it shall not force budding womanhood upon the street to gain a livelihood in shame; it shall not be a machine to make the rich richer and the poor poorer; it shall not throw into idleness and want my fellowman, because idleness and want is the mother of bad citizens, and a most prolific mother she is, indeed. I wish this machine to be regarded in the nature of a "fat take," and what I am after particularly is a square deal all around. "What is sauce for the goose is sauce for the gander."

The printer's trade is not one conducive to good health, and if, with a machine, it is possible to accomplish again as much work as with the hand, we may derive our benefit from its use in the shape of shorter hours and consequent better health, without throwing men into forced idleness by the dozen and score. Making a fair allowance for the increase in the production of printed matter, perhaps two hours knocked off the present work day of ten hours would even the thing up.

In opposition to us, however, are the proprietors in whose workshops we are employed. At a recent convention of a number of these proprietors, it was

*Resolved*, That in the opinion of the Typothetæ of America there is nothing in the state of the printing trade of the country at this time which renders it wise to take any action in regard to the reduction of the hours of labor.

Here we have it. When the typothetæ declares that in its opinion there is nothing which urges the necessity for a shorter work day, then it virtually declares that it proposes to "wolf" all the "fat." Of course, I understand that when this resolution was adopted not a word was thought or said about the machine, but understand me this: Were every proprietor of a printing office to put in a machine tomorrow, thereby throwing out of employment half of all the printers in the country, do not doubt that he would hesitate one moment to go to the convention in Cincinnati next October and help to resolve to the same effect.

It may, to be just and fair with the gentlemen who compose the typothetæ, be true that there is nothing in the state of the printing trade to warrant a change of

from ten to eight hours, and, they might have adled, "there never will be"; but there is something in the state of the social condition of he who works, and there is a meaning to the word "justice," which absolutely demand it.

In view of the dire necessity for a shorter work day in the very near future, I feel half inclined to be angry with our International for disposing of the machine question with a force resolution which in effect says, "This machine is a bad thing; but it's bound to come; so stand back, boys, and don't make any fuss about what just can't be helped."

In closing I wish to present three methods which will give us relief from whatever injury the machine may inflict, and these are:

1. Raise a fund of as many millions as required and buy the invention up.

2. Kidnap the inventor and swipe the machine and drop both to the bottom of the deep blue sea.

3. Decrease the hours of labor in proportion to the time saved by the machine.

My preference inclines to the last method by a big majority as the most practicable one of taking the bull by the horns.

Written for THE INLAND PRINTER.

#### AN APPRENTICE.

BY A. H. M.

"What! wouldst thou have a serpent sting thee twice."—*Shakespeare.*

WHEN Torrance came to us as a messenger boy we were in doubt as to whether he would do as much as his mamma said he could. He was not a prepossessing boy. Though that was not his fault. It was the way he was made. Likewise we thought he might be like the proverbial singed cat, better than he looked. He reminded me of a boy I knew once—but that is another story. We set him to work sorting leads and picking "pi"—being an employment that does not call for much mental effort and allows of interruption at frequent intervals. He was a model boy for at least a week, then the novelty of his position began to wear off and he cast about him for variety. As an errand boy he was a phenomenon, returning breathless with his exertion in a space of time that seemed impossible for him to have accomplished the distance in. This pleased us. But, as I have said, this lasted only a short time. He became acquainted with others of his calling and they showed him the errors of his ways. He grew weak about the knees and ankles and took to falling up the stairs, and used a longer time to return when sent out. The compositors frequently complained of ink being smeared on the handle of the roller and the lever of the press, and numerous other deviltries. This was annoying but the culprit could not be discovered. We taxed Torrance with experimenting in this way and he denied the imputation tearfully. The foreman said he was a "corker." I did not know what this meant, but he was doubtless correct, as he said he knew what boys were, and I bowed to his superior experience. The more I

think of boys the less I know. I may seem unjust by this remark, and perhaps the fault lies with me. But to my tale. Torrance (I have forgotten his first name, if I ever knew it)—Torrance sought so eagerly for variety that when he was sent out with a rush proof the compositors would lay bets with each other as to the time he would be back and the pessimists generally won. Things went on from bad to worse until the culmination was the discharge of Torrance. Then his mamma came to see us and begged us to give her boy another chance. As we had hired a substitute for him we were in a dilemma; but upon the solemn asseverations of Torrance that he was more sinned against than sinning and that judgment had been rendered hastily, we weakly allowed him to return as an apprentice. This was rewarding persistence. He was greeted with astonishment by the compositors, and smiled meaningly at their comments. His discipline seemed salutary, however, or else he felt the weight of his advancement—which was won by a fluke—and disliking to stultify ourselves we took pains to make him a success, though somewhat handicapped in this by an eccentricity in his orthography. We argued, however, that he would master this difficulty in a few months, and we were pleased to find ourselves correct, but it cost us money. We thought we could make this up by keeping him at typesetting a little longer than usual, whereupon he complained and wanted more "show" than we were giving him. Well, we give him more and wasted time instructing him, and he demolished material and improved his ideas. He was really valuable to us about the time that Curlicue & Twister opened their job office, and as our line of work ran to the plainer grades he made application to them secretly, as we learned afterward, for a position, and surprised us by a notice that he intended to leave. Our protests were of no avail. We could not give him the practice he thirsted for and he had the argument on his side. He only wished to improve himself. And he left. I feel that we wasted time getting him into shape for another firm to use. I tell this story as one instance—and there may be others. Perhaps someone can give another side of the question.

#### ADVERTISING AS AN INVESTMENT.

BY GEORGE H. SAULTS.

AS an observer of the progress made in the printing and publishing business, the appearance of the advertising columns of the metropolitan papers throughout the country convince me that, in at least one particular, there is room for vast improvement. While the news-gathering, editorial and literary features have been greatly improved within late years, little or no attention has been given to the most remunerative department—the advertising columns. Generally speaking, the same clumsy idea prevails now that existed when newspaper advertising began, and, with few exceptions, the arrangement and character of that department of the daily newspaper has changed but little. Much has been written under the head of "What I Know

About Advertising," but the matter has most always referred to mediums, quantity and system. Little or nothing has been advanced advocating an improvement in appearance, design, character and contents, and, as a consequence, the question of advertising as an investment for a business man, as practiced today, is but little nearer solution than years ago. That advertising is not figured by every merchant as a necessary expenditure of his business is the fault of publishers more than anything else. The clumsy display and unattractive arrangement of the modern advertising page justify any business man in remaining "out of it," and keeps advertising from being the success it could and should be made. The fact that business men indulge in advertising in its present hideousness should at least settle the question of whether advertising could be made to pay or not, and is good argument that it does even now pay to a certain extent.

Before me I have daily papers representing the cities of New York, Chicago, Philadelphia, Boston, San Francisco, Cincinnati, St. Paul and a few minor localities. With the exception of certain papers in Chicago and Philadelphia, the advertisements in these papers, judged from a practical and business standpoint, present a sorry mess. It is not necessary for THE INLAND PRINTER to go to the country, or to the recognized amateur, to procure samples of absurd display and heroic attempts at effect. The daily papers of our big cities will furnish all the examples needed for the "As It Was and As It Should Be" department. The idea of an advertisement having any individuality or character seems never to have dawned upon the average "ad" man. An agricultural implement advertisement and an art dealer's announcement receive the same treatment at his hands. No distinction is made in the kind of type used or the manner of construction. What an absurdity, and what an injury to the value of advertising! There is just as good reason for not setting all "ads" after a stereotyped fashion as there is for not dressing everybody alike. We are all more or less acquainted with the job printer "artist" who will use borders and ornaments without provocation and in all kinds of work. He has no respect for propriety. He is a "fancy" job printer, and he has to do it to "hold his job." When we are forced to gaze upon the result of his labor, our anguish goes out in a groan; but how much worse is his style than that found in the average daily newspaper of today? To my mind, there isn't difference enough to make a credit mark. The creators are both in a rut—and perhaps should both be on a farm.

There are four noticeable reasons for the condition of the advertising columns of the daily press—injudicious advertisers, lack of proper material, incompetent workmen, and lack of business sagacity on the part of the managers and proprietors.

If some one would undertake publishing a book entitled "What I Don't Know About Advertising," and solicit contributions from the average newspaper

advertiser, and each one did himself justice, the publisher would have manuscript enough to print the biggest book extant. It is simply incomprehensible why business men display such poor judgment and lack of common sense in connection with newspaper advertising. By what process of reasoning a person concludes that an advertisement poorly displayed, devoid of character or attractiveness, and packed away among a conglomeration of stud-horse type, is of any value to him, is beyond the grasp of human intellect. And yet, how often do you see this condition? Why, just as often, of course, as you pick up a daily newspaper. True, every advertiser cannot have "top of column, next pure reading matter," but he has the privilege of creating a design and establishing a character to his advertisement, without which, no matter how well written, it is of little or no value. The type and general appearance of the advertisement should be in harmony with the "leader" advertised. When the matter is of a general nature, which should be avoided as much as possible by every advertiser, a positive design and purpose of display should be decided upon and carried out. A featureless advertisement is a worthless advertisement.

The equipment and general arrangement of an "ad" department should be most complete in every particular. Not only because better effects can be obtained, but also of economy. Any one who has witnessed the loss of time caused by a poorly equipped "ad" department can testify to the wisdom of being liberal in supply, perfect in arrangement, and complete in detail. It is false economy not to meet every demand made for material. The time saved will pay for it, to say nothing of the satisfaction given to the advertiser.

As it is the publisher who has space for sale, it is his desire to find purchasers. It is in this respect that the success or failure of his paper and the methods of the business manager hinge, and it does not seem unreasonable to suppose that every effort would be put forth to make the columns of the paper as attractive to the would-be advertiser as possible. Of course the circulation figures will be dilated upon, and argument used to show that the paper circulates largely among the class who buy just what the dealer has for sale. But will any guarantee be offered or mention made, of the appearance of the advertisement when in type? None whatever, except, perhaps, big type will be promised for a certain line. As to whether the remainder of the advertisement appears in a jumbled, unattractive, unreadable mess no thought or care is given by the average solicitor or business manager. Herein lies a great drawback to the success of advertising, and the sooner this fact is recognized the better it will be for all concerned. The competent advertising manager is one who is capable of suggesting design, improving construction and obtaining effect. It is his duty, so far as his efforts can attain that end, to see that every advertisement has some one feature to attract the reader's attention, let that feature be the manner of construction, face of type, style of matter

or location. To bring about an improved condition in the advertising department of the daily paper too much care cannot be exercised in the selection of advertising compositors. Without men of good practical execution, taste, judgment and originality, the best efforts of the advertiser and advertising manager would go for naught. The quantity, not quality, man should find no quarter in the "ad" department. Neither should the man who has no recommendation other than being a pet of some one in authority, an old-timer in the office nor the many other little things that are today so generally recognized by foremen who themselves cannot see that it makes any difference how an advertisement is set, so long as the space is filled. Let us look forward to the day when the advertiser recognizes character and good display, and the advertising manager and foreman insist upon a perfect execution of design, neat, effective display and a harmonious and pleasing whole. With this condition comes an added value to advertising of at least fifty per cent.

Written for THE INLAND PRINTER.

#### RANDOM THOUGHTS ON TRADE AND ADVERTISING.

BY E. P. HARRIS.

THE manufacturer once made everything in one shop, and sold to everybody near him. Now he only makes one or a few things, and must supply more customers, who are widely scattered. The consumer, who once looked to the comparatively local jack-at-all-trades producer to supply all his wants, must now use the products of numerous and remote manufacturers. Thus there is an ever-widening distance between the producer and the consumer.

\* \*

But the producer and consumer should know each other. That is, the consumer should know where to buy of the manufacturer, or be near enough to him to insure the lowest practicable price, and the manufacturer should be able to sell to the consumer, or be near enough to him to secure the highest practicable price. The railroad only allows producer and consumer to drift farther and farther from an acquaintance with each other. Only the printer's ink can bridge the distance, and bring the producer and consumer into relations of intimacy. The locomotive and printing press must go hand in hand.

\* \*

It frequently happens that the middleman can distribute more advantageously than the producer. If so, he practically brings the producer and consumer nearer together than they would be if the producer did his own distributing. Whether the producer or middleman does the distributing depends upon which can do it cheapest, and this upon various considerations, one of the most important being, who can use printer's ink to the best advantage.

\* \*

Printer's ink often enables the producer to dispense with the middleman, and it also, perhaps as often,

enables the middleman to make himself indispensable to both producer and consumer.

\* \*

When the route from the producer to consumer is via middlemen, whose only service is to know the producer and consumer, who are strangers to each other, printer's ink has failed to do its duty, and in consequence the consumer pays too much, or the producer gets too little, or both.

\* \*

While half the revenue of the periodical press of this country comes from advertisers, the art of transportation is far more advanced than the art of advertising.

\* \*

Business success depends more and more upon an intelligent use of advertising as the classification of manufacturers widens the distance between producer and consumer.

\* \*

Three aggressive agencies for selling—the periodical advertisement, the circular and catalogue, and the traveling salesman—are on the increase. Who can tell which is getting the best of it?

\* \*

Each has its function. The periodical advertisement places a brief announcement before a large number at a moderate outlay. It does the pioneer work of sifting out of the multitude those on whom it will pay to bring to bear the more complete story told through the circular or catalogue. The work of the salesman is the last step in the process of selling.

\* \*

As uniform standards of quality are adopted and descriptive terms better defined, prices adhered to, discriminations between buyers discontinued and credits more accurately and promptly reported, the cost of distributing will be greatly reduced by the increased use of printer's ink.

\* \*

Many salesmen flatter themselves that selling consists more in flattery and gush than in imparting desired information to the prospective buyer. It is a mistake. Between the smartly impudent ticket clerk who practically says you are a fool if you do not know, and the nauseating, palavering dry goods clerk or sewing machine agent who never tires of gushing out what you know already or what he does not know himself, there is the well-informed, gentlemanly salesman who frankly gives the pertinent and sought for information which results in sales. As you clear away the rubbish and come to the real work of salesmanship, you also reveal the mission of the silent salesman, printer's ink.

\* \*

The business of printer's ink is to make known those facts and particulars that are of general interest and application, while that of the salesman is to make adjustments and arrange details to suit individual cases.

### A PHILIPPICA.

SOME SUGGESTIONS FOR CONSIDERATION FOR THE WELFARE OF BOTH EMPLOYER AND EMPLOYÉ—PICTURES FROM LIFE—A SPECIMEN OF ORDER AND DISCIPLINE—THE "HUMAN SMOKESTACK"—THE "PRESS SLOB"—THE "BULLY"—FRIENDLY ADVICE.

BY GUSTAV BOEHM.

I HAPPENED to call at the large printing house of Messrs. De Vinne & Co., corner of Lafayette place and Fourth street, New York City, a short time ago, and although I have often heard of the neatness and discipline governing this establishment from ground (or, better, underground) to the top of the building, yet I was overcome by surprise in noting the cleanliness and order prevailing. I have visited a great many printing offices, small, medium and large, and my experience teaches me that it does not require a five-story building or the employment of a few hundred men to keep up order, cleanliness and discipline. I have seen material wasted, inks dried up, dirt accumulating, to make one's heart bleed, and create some sort of a sorry feeling for the poor soul of a proprietor who is thus trifled with by his "regularly paid" but irresponsible employés, who seem to be utterly devoid of every particle of moral feeling, without *any* realization of common decency in respect to time wasted and material spoiled. I have seen this state of affairs in all sizes of offices. Some people do not care a continental whether they earn their wages or not. They seem to be absolutely devoid of every atom of calculative sense, and can evidently not understand why they should do their work more promptly, as long as they work at all. They cannot see the difference between working and *working*, and seem incapable of comprehending that a job for which the proprietor's competitor charges one hour's time, and which actually only takes one hour's time to produce, should be done in *such* time. They declare, if told so, that they are doing the best they can, and are working continually on the job.

Now, let us see how this "continually" appears in reality. They take hold of the copy; they examine it; they criticise it. So far, so good. They decide to set it up. But before so doing, they must strengthen themselves for the labor in view. The boy is called away from his work, and "a pint" is ordered. During the wait for the strengthening draught, a pipe is slowly hauled out. Mind you, this class of workmen can never be seen without a pipe. They claim they can not work without smoking, and declare openly that they do not care a "snap" whether the insurance policy of the proprietor prohibits smoking on the premises or not. This enemy of every well regulated office, the "pipe," is now scraped out, the superfluous ashes are emptied on the edge of the case, so that they are equally divided between the top case, the cases in the rack and the floor. This done, the pipe is slowly stuffed, stuck between the lips, and lighted. How is it lighted? It is the rule of the office that all lamps and lights should

be lighted with the aid of sulphur matches, and that such should be sent for in case there are none in the office. Mr. Irresponsible cares as much for the rules in this special case as in all the others, and invariably uses a big chunk of paper, lights it at the stove or lamp, and with it his dirty, thieving pipe. I say thieving, because it is not much less to steal a man's time in that way than to steal his money out of his pocket. These people are paid to utilize their time in a practical manner, and in these days of close competition, it can not appear small to speak about a waste of time which, as my experience teaches me, consumes fully ten per cent, if not more, of the smoker's working hours, not considering the danger the office is continually in to burn to ashes. I do not think it is fair that these human smoking-stacks should assume the right to endanger thousands of dollars of property simply to cater to their personal whim of smoking from morning to night. No matter how careful the precautions taken, a printing office is no place to indulge in smoking.

This is one of the leeches sucking up the healthy condition of business enterprise in our line. A second and more dangerous one is the disorderly workman, vulgarly called "slob." This species is very often met with in the pressroom. He is worse than acid to the machinery, and more dangerous to the prosperity of the business than the firebug. He is frequently a quick worker, and often has the luck to pass as a good hand. But, oh Lord, only too soon the proprietor finds out at what cost he is running his presses. Inks are only half used up; the other half is scab, which is the natural consequence of leaving the cans continually open. "This is black, or insurance ink; it will not scab," is the answer you get, if you call his attention to the often repeated rule, that inks must be covered as soon as the necessary quantity has been taken from the can for immediate use. He also, as a rule, takes enough ink on the slab to last for several days. He has, apparently, not the slightest desire to save in little things, thereby studying his employer's interests—a duty which ought to be appreciated by every respectable workman. This fellow will not be able to give you a respectable red print, all of them appearing of a brownish hue, a natural consequence of the dust which has settled in the color from being exposed to the open air. He has the habit of knowing everything better than anybody else, and will tell you in a stubborn, insulting manner that ~~HE~~ is running the presses. You may be sure that you never find a wrench, a roller, a socket, or any of his tools in place. It frequently occurs that a number of wastepaper bags must be searched to find his eraser or other tools. He has no system of working; forms coming from the press are slung in some place between or behind the presses, usually unwashed, so that the ink has every chance to dry on the type and fill the outlines and spoil the hairlines. He never oils the presses at certain times of the day, as should be done, but merely squirts oil over the frame, and accidentally places some in the oil-holes, when the poor, dry-running, burning

metal is squeaking of pain and threatening to revenge itself upon the proprietor — alas! the very wrong victim for revenge — by simply going to the d—l.

This cited specimen of a slovenly, irresponsible workman generally belongs to the class that have no appreciation of the value of time. He appears late in the morning four times during the week, but is very careful to hand in his overtime when the week is over. His department is one large field of dirt, disorder and dissatisfaction, and the greatest wonder of all is that he gets as much good work out as he does. For, although complaints about dirty work, short counts, unsatisfactory workmanship are a daily occurrence in an office employing this specimen of pressman, it still happens that some good work — an almost incredible fact — is turned out.

Another dose of bad blood in the constitution of an office is — the bully. This “terror” generally appears in the shape of foreman or something like it. He is in the habit of using vile language, of having absolutely no respect for his superiors, and has continually phrases upon his vulgar lips which disgrace both him and his calling. He has a good time in general and makes himself “feared” and despised by all under him. He forgets frequently that he is to represent the proprietor in the absence of the latter, and if he feels like it, is at the head of a frolicking time in such cases. Instead of seeing that every employé does his duty, he heads the line of idlers and is in every respect a bad example to other men and a danger to the discipline of the office. He is often heard to use the vilest language possible to the proprietor in presence of all the men, and so in an outrageous manner undermines the respect which is due to the proprietor of even the smallest office. He is the sorest spot in the whole office, the greatest danger to the welfare of the concern. He forgets that he is expected to form the bridge from the office to the workshop, between employer and employés, with a natural inclination toward the office, and by his bullying actions gives the plainest testimony that he is absolutely unfit for the position he occupies.

There is nothing more dangerous to the carrying on of business than the undermining of discipline. There may be cases in which the subordinate is apparently in the right, still he cannot judge the motives of the action of his superior, and it is, even in such case, good policy and proper behavior to follow the instructions of the firm. To oppose openly, or to act or speak improperly, is the worst thing a would-be foreman can do and ought to be invariably resented on the part of the firm. It is simply an act of revolt, of which no thinking man will make himself guilty. There are various ways to reach the end; no employer will be deaf to the just requirements of a worthy and valued employé, but every employer will take *ad notam* the bullying behavior of his subaltern, and the time will arrive when such will have to be accounted for. This is generally the time when the workman expect it the least. I could add several other “dangers” to the series mentioned above,

but these are enough for *this* philippica. It remains yet to enlighten the astonished reader about the sanity of the firms who keep such men in their employ. It is hardly credible that it can occur, still there are circumstances which induce to leniency: for example, if a workman has been with the firm for a long time. Few firms find it desirable to turn a man out on the street who has been in their employ for many years, who has entered as a youngster, has grown up with the house and is at the present time a married man, the provider for a family. It is true that the behavior of the workman deserves no better treatment, and that neither time nor age gives him any right to forget the interests of those who are providing him and his family with the means of subsistence; but still we are human and consider. I therefore recommend all such houses to give their men — such men as I have described — a chance to view themselves in the looking-glass of my philippica; and I candidly admit that to give them a chance to change their behavior, to save some one a “good job” and others disappointment and anger, were the main objects in writing this article.

To those who believe I have looked at the matter through smoky glasses, I can give the assurance that I have followed the prescription of the best of our fiction writers: to take the material direct from life. All the specimens described above are neither more nor less than photographic reproductions of people whom I have actually met and studied. It is merely a generalization of special living cases.

It is unnecessary to say that the respectable, self-esteemed workman need not find fault with the author of this paper — it is not he to whom this philippica is addressed, but to him who fills a place which by rights belongs to the decent workman.

Written for THE INLAND PRINTER.

#### BUILDING A BIG BUSINESS.

BY HERBERT L. BAKER.

THAT is what we are all after — a big business — and any information which will assist in reaching this object is sure to be eagerly received. Now, there is one short cut to a rushing business — a great secret, to be sure, and one that cost the writer a deal of money to learn, but in the generosity of his unselfish soul he will divulge. If the reader makes any money out of the secret here published, he will justly be entitled to be hailed as the phenomenon of the nineteenth century; if he loses — well, he will build up a big business, and no mistake.

The elixir of business is credit. The man who wants a rushing trade, wants to keep his presses on a keen jump and employ a big force of workmen, needs only to let it become widely known that he will generously extend credit to the financially indisposed, and a great current of business will set in his direction. There is nothing mean or stingy about this class of trade, either. They seldom object to prices; seldom run all over town for bids; seldom jew the printer down to the

last cent ; scarcely ever select the cheapest stock—only the best is good enough, no matter the price. They usually have an agreeably high appreciation of the work done for them, and often pay the printer—high compliments on his work. As to whether they pay anything else—well, that is foreign to the subject ; just now we are discussing the means of getting a big business. These people are liberal with their orders, perfectly willing to be charged a good, round price, and the last people in the world who would wish to cause the lament of the little Dutch shoemaker, who said, “Ach, Himmel, if I'd a knowed dot veller wouldn't a paid for dem boots, I'd a charged him more.” In fact, in all respects but one they are model customers, and as for that one little habit they have of not paying their bills if they can avoid it, that should not interfere with freely filling their orders—of course not ! They always have excuses that convince and promises that glow.

“Why, really, I can't make any collections before the 10th. Meanwhile, please do this batch of work in your best style, and I will settle it all together.”

“Is it the 10th? Well, I've been too busy to get out and collect what is due me; besides, my work is not all delivered yet. Call the 20th, and I will surely pay then.”

“This *is* the 20th, isn't it? Collections are so slow this month, and I have been disappointed in getting money I had reason to expect. I'm afraid you will have to wait until the 1st.”

“Gracious ! another month gone, and that bill not paid ! My little boy got a flea in his ear the other day, and I had to take him to New York to have it trepanned. Cost a lot of money, and I really cannot spare the amount to pay you. Next month I certainly will fix it all up.”

Second month: “Nope—can't pay—sorry—take care of it soon as I can.”

Third month: “Bill ! what bill? Do I owe you anything? Oh, that work—it was n. g. anyhow. My little boy says it was short—counted one sheet and sized up the rest. Got to have a big allowance, will you take half?”

Fourth month: “Oh, you make me tired coming so often ! Go off and lay down—when I get ready I'll pay, not before.”

Fifth month: “Go to h——!”

Sixth month: Skipped !

But nobody should mind these little idiosyncracies. These people are great jokers, you know, and are really the best-hearted people in the world. Even if they skip, it is only their ungovernable desire for practical joking, and they will return and pay up. Oh, yes—

“When the cow jumps over the moon.”

Their accounts help swell the credit side of your balance sheet, and make the showing better on which you get credit yourself, even if their misfortunes do cause permanent disability or disinclination to pay. “It's an ill wind,” etc.

Now, see, you would have lost all their business if you had required them to pay cash in advance ; that

would have meant only half force, and idle presses part of the time ; you would not have needed that new machine, and could not have made such a proud showing to visiting patrons. And how could a big trade be built up that way? Everybody understands the vital importance of keeping every wheel in motion—the pay for it is an immaterial matter—quite !

To be sure, a day of reckoning will come some time, when the money paid out for labor and stock for these defaulting customers will be sorely needed ; but meanwhile you can work up a rushing business, and that is the great desideratum, of course.

Wife can take in washing to support the family ! What else is a wife for?

WRITTEN FOR THE INLAND PRINTER.

### THE VALUE OF CREDIT.

BY SAMUEL G. SLOANE.

JUDGING by their actions it may be stated that many printers—indeed, too many—do not seem to comprehend the value of credit. They appear not to understand that a good credit is quite as valuable in business as the capital employed therein. In fact, without sufficient capital to meet all requirements of a business, good credit is indispensable, unless the owner of the business is willing that its growth be stopped and matters come to a stand still, if they do not actually retard. A good credit, when needed, is more valuable than anything else except real capital itself, and it can be needed only when the real capital is lacking. A good credit, when possessed by a business man and used, many times proves more profitable and substantial than anything else possibly can. It is “a friend in need,” therefore “is a friend indeed.” It has saved many a sinking business craft and made sure a successful voyage for many a new one.

Many people beside those who are expected to read these lines do not realize to what vast extent credit enters into the business of the world. It is quite safe to say that no business of any magnitude whatever can be carried on successfully without it ; it is positively a necessary part of all business today. Almost any of our great business concerns could get along quite as well, in this age, without a circulating medium of exchange as without credit. In fact, just to the extent that credit is used, to that extent the circulating medium is made unnecessary. When a business man is without credit then money becomes to him an absolute necessity—he can do business to the extent only of the amount of money he is able to command.

Those who have given the subject no thought are not aware that all the business of the world, except that which is transacted on the cash in hand basis, is really done on credit—on the confidence of mankind in each other. We talk about security, guarantees, indemnifying bonds, etc., but all these are only the transferring of the credit. One man requires a bond to secure the faithful performance of a contract by another ; he does

not credit the giver of the bond, but those who go on the bond do, and they do so because they know him to be one of good credit; one who has established a reputation of performing to the letter all his agreements; they know him as a just, honest and truthful man.

Many men entering upon business fail to acquire a good credit, or lose it after it has been acquired, by sheer negligence. They fail to give attention to matters that should have been looked after carefully by them. If they do not fail altogether they are derelict and fail to give them attention at the proper times. A bill of goods is purchased, a small one maybe, on thirty days; the time for payment comes around and is allowed to go by without payment being made or explanation given, not because it could not have been paid or satisfactory explanation made, had a little attention been given to it and slight effort put forth, but simply because the matter was small and not considered worth prompt attention. A note falls due and finds no provision for prompt payment made; a draft is presented for a matured or past due account, and is allowed to go to protest or be returned. These and numerous other matters that should have prompt attention are neglected, and such neglect is directly destructive of a good credit, or prevents the upbuilding of one. A time comes when credit is needed, and the men who have suffered all these slights are appealed to. Well do they remember the past negligence and carelessness of those making the appeals, and either refuse point blank to grant the credit asked, or what is equally effective, make such rigid terms that they cannot be complied with. It often happens that honest men through sheer carelessness thus destroy their credit, and when they come to need it, to their great surprise it may be, find it not available. Then they rail at mankind in general, and the dealers in particular, as hard hearted and ungenerous, not seeming to know that their own actions are alone responsible for the treatment they are accorded.

If young men starting in life and in business could be brought to realize fully the value of a good credit there would be fewer business failures and more honest men in the world. There is something beside satisfying the immediate present needs—there is a future to be looked to and provided for. No man can ever say he is beyond the possibility of the need of a good credit. He may be independent of a good credit today, and entirely dependent upon it tomorrow, therefore it is but the part of wisdom to preserve a good credit at all times. This can be done by never failing in one's engagements, small as well as great. The mere ultimate payment of one's obligations will not establish a good credit; it is full and prompt payment—the prompt and honest fulfillment of all obligations. An established reputation for truthfulness and promptness is the quality which constitutes a good credit. These are traits all may possess; they are denied to no one, but they can be neither purchased, inherited nor forcibly taken from another. Each person must acquire them for himself; to possess them he must win them, and this can be done

only by practicing them constantly. Young man, bear this in mind. Know the value of credit and establish a good one for yourself, and when established guard it jealously; one step aside and the good work of a lifetime is forever destroyed. A good credit is better than the inheritance of houses and lands. Never forget that "a good name is rather to be chosen than great riches." The printers' patron saint, Benjamin Franklin, crowded a volume of philosophy and the whole truth into his motto, "Credit is dead; bad pay killed him." Do not kill your credit.

#### PAPER MAKING IN TONKIN.

Among the native industries carried on in Tonkin, showing considerable ingenuity combined with great patience, is that of paper making. This manufacture is conducted by some villages on the shores of the Grand Lac, about three miles from Hanoi, and in all probability it has been the occupation and support of the lake for some centuries. Certain it is that the processes have been handed down to the villagers from generation to generation. Primitive as are their appliances, the manufacture requires both industry and skill. The village I visited is situated on the south-east corner of the lake, and on one side of it is a shallow canal, which communicates with the citadel moat. Embosomed in trees, chiefly areca palms, the village is picturesque and forms a pleasant little excursion from Hanoi.

The first intimation of the industry by which the inhabitants live is afforded by glimpses of men in the shallow water of the lake, busy washing with great vigor round baskets of some material, which nearer inspection shows to be some sort of pulp. The village itself is hidden away in the recesses of what looks like a tropical forest. Entering a gateway from the road you follow what by courtesy may be termed a path—though there is no attempt made at keeping it up—and soon come to a series of thatched structures, open on all sides. In these a number of women were engaged in the last process of production, so it may be as well, perhaps, to describe what we saw from the commencement, instead of in the order we witnessed it.

The paper is made from the fibrous bark of a tree indigenous to Tonkin, but not growing in the neighborhood of Hanoi. Indeed, we understand it came from some distance. It is first taken to the adjoining canal, where it is soaked for some weeks in the water, which it blackens and fouls. It is then treated with lime in holes hollowed out of the mud above the canal until it is materially softened, though for how long we failed to ascertain. The now pulpy bark is next conveyed into the village, and having been smashed up roughly is placed in a kind of mortar and macerated into a thick pulp. Next it is put into baskets and then undergoes lengthy washing and churning in the lake. By this time it has become a gummy kind of substance, and it is taken to tanks in the open sheds already described, and the women receive it in charge. In their hands it undergoes the final process which converts it into a rough but useful paper.

About four women are stationed to each tank, and each is armed with a kind of rattan frame on two sticks which will shut up or open out. The tank is about half full of pulp in water. The women keep this in constant motion, and with a certain number of motions through it with a rattan frame speedily bring this up, opened out, turn it over on what appears a block of dirty-looking jelly-like stuff, and with a dexterous movement peel it off the frame on the block, which is really a pile of paper, as is apparent enough when it dries. The price of the paper is exceedingly low, like every other native manufacture in Tonkin, but the paper makers seem to be fairly prosperous, and the proportions of the village temple indicate the existence of some spare money. At the entrance there was a life-sized effigy of an elephant, very accurately depicting the noble beast, which is held in great honor in Indo-China.—*Correspondence of the Hong Kong Daily Press.*

### SOCIETY ADDRESS CARDS

Our New Catalog, embracing upward of 400 embossed, illuminated and engraved designs, will be mailed to the trade on receipt of 25 cents, which will be credited on order.

Special embossed designs for any society to order. Printers will find it to their advantage to canvass the societies, as the margin of profit is liberal.

A full line of emblematic Invitations, Programs, &c., always on hand. Complete line of samples mailed for 50 cents, or 10 cents for single society.

### COMMERCIAL EMBOSSING

We are prepared to execute orders for Embossed work in the best style, and will be pleased to submit samples and estimates. Those wishing something novel as well as attractive in stationery should correspond with us.

## THE GOLDING JOBBER.

A few of the special features which have made it popular in every country of the world where modern printing machinery is in demand:

- Automatic Brayer, with a full movement on disk after each impression.
- Ink Fountain, with twelve to twenty inches surface supply at every impression.
- Chromatic Attachment, for printing two to fifteen colors at one time.
- Duplex Distributer, under the bed, equal to double rolling on other presses.
- Adjustable Disk Movement, to suit the speed of the press.
- Roller Changer, causing rollers to present a new surface in upward movement.
- Impression Regulators, which can be set instantly to any form.
- Improved Gripper Movement; safe, and quickly adjusted.
- Positive movements to all main parts, without cams, eccentrics or slides.
- Impression Throw-off, easily and quickly operated in any position.
- Solid Platen Bearings which can never wear out.
- Adjustment for taking up wear on all parts affecting the register.
- Platen balanced in any position, making the press very easy to operate.
- Patent Mechanical Movement, unequalled for rapid feeding and delivery.
- Counting Attachment, registering only when impression is on.
- Steel Shafts, Studs and Draw-Bars, taking the strain of impression.

The Golding Jobber will be sold as low for cash as any press of its class, or on installments. Sent on thirty days' trial to any responsible printer.

IF YOU NEED A NEW PRESS, WRITE TO US FOR TERMS.

If you have an old press which you wish to trade, send us a description, state what you want in exchange, and we will make you an offer.

A TECHNICAL JOURNAL, DEVOTED TO THE ART OF PRINTING.

A. C. CAMERON, EDITOR.

Published Monthly by

THE INLAND PRINTER COMPANY,

183, 185, 187 MONROE STREET, CHICAGO.

H. O. SHEPARD, *Pres.*; C. F. WHITMARSH, *Sec.*; D. L. EVANS, *Treas.*

Address all business correspondence to the Inland Printer Company.

Entered at the Chicago postoffice as second-class matter.

CHICAGO, DECEMBER, 1890.

SUBSCRIPTION RATES.

TWO DOLLARS per annum in advance; one dollar for six months in advance; sample copies, twenty cents each.

FOREIGN.—To countries within the postal union, seventy-five cents per annum additional. To Great Britain and Ireland, postage paid, eleven shillings and fourpence per annum in advance. Make money orders payable to H. O. Shepard, President.

SUBSCRIPTIONS may be sent by express, draft, money order or registered letter. Postage stamps are not desirable, but if necessary to remit them, one-cent stamps are preferred. No foreign postage stamps accepted.

CLUB RATES.—Six or more subscriptions, sent at one time, one dollar and fifty cents per year each. Cash to accompany order.

THE INLAND PRINTER is issued promptly on the twentieth of each month, and will spare no endeavor to furnish valuable news and information to those interested professionally or incidentally in printing, engraving, electrotyping, stereotyping, bookbinding, and in the paper and stationery trades. Persons connected with any of these lines of industry will confer a favor upon the Editor of this Journal by sending him news from their section of the country pertaining to the above trades, particularly individual theories and experiences of practical value.

LOOKING BACKWARD AND FORWARD.

THE century is again in travail. From mysterious silence a new year is about to be born: born amid the blackness of midnight, pitiless storm, numbing cold, and the dreary wailing of wintry winds, and to the bright sunshine that edges the darkest shadow we turn — so fickle is human nature — to welcome the new king before the one whose throne he will usurp is dead and buried. But he goes not down to his final resting place in the cemetery of the past, where so many years have decayed and so many more will, without stealing something — often our nearly all — from us. In the graveyard where will lie buried the dethroned and uncrowned king, will be found treasures beyond all of gold; than all the jewels that make life worth the living, and in a measure compensate for its trials, losses, pains and burdens.

A very thief is ever the old year. In his silent passage he took without so much as by your leave: LOVE, that purified and fluxed the ore and swept away the dross of the soul until it became more worthy of paradise; love, "the holiest thing of earth, love that writes every poem, paints every picture, chisels every statue, makes kings and queens of common clay, and is the perfume of that wondrous flower, the human heart." The little carefully tended grave, the lone one up on the mountain side, the last one in the valley, the one hidden beneath the ever-throbbing bosom of the ocean, all give a single answer, and that is death.

STRENGTH he took from the young as well as the old to sustain him on his journey. Youth he changed into age, and laid upon both the heavy burden of years; bowed the proud head, bent the strong back, made the limbs ache, weakened the muscles and rendered feeble the bones to sustain the pain-quivering flesh.

COURAGE he took with strength; "brought shrinking timidity and robbed the heart of the firm will that made battling a pleasure; made smiles possible when defeat came, and nerved to fresh daring and encounters, and gilded every struggle with the halo of victory.

GOLD he took with an avaricious hand, by fire, flood, the treachery of friends, the changes and uncertainties of business, the thousand ills to which flesh is heir; with a blast of his breath fortunes disappeared, drifted upward in smoke and vanished at the lighting of a match; were whirled away by cyclones, or rotted by pestilence. Midas went to sleep at night, and woke upon the morrow a Lazarus, to beg for bread. Pactolian streams were changed during the dark hours to waves of lead, and feasts, tempting alike to eye and appetite, became bones so fleshless that the dogs in the street would scarcely quarrel over them.

HOPE he took with unsparing fingers, until it truthfully seemed nothing of it was left when the box of Pandora was opened. The brightest became the blackest in the single throb of the heart; that for tomorrow drooped and died before the falling of the dew; that upon which we had most strongly set our hearts was strangled at its birth; that which blossomed the most fairly bore only blasted fruit; that which promised long

life perished in infancy ; that which came wreathed with buds of blessings grew black and hideous with curses.

More than pen can enumerate the old year stole from us during his reign ; but he did not, could not, take all, take any beyond the portals of his eternal tomb. His was only present power, and terminated with his life. So, trooping back to us, will come with the advent of the new king of earth all that he gathered, the garner of the present be full to bursting, and over all fresh blessings and benedictions : Love, strength, courage, gold, hope will all return brighter for the momentary darkness. Tears will be dried, renewed strength be given, courage be restored, gold flow into our coffers, and hope smile defiant of clouds. Fully armed for the strife, the new year will leap into the arena of the ages, and carve his name high upon the eternal rocks of the centuries.

He is coming ; is almost here. Are we ready to receive and go forth with him to the battle fields of life with unhesitating step and unfailing courage ? From the storms of the past, the rainbow of the future, the many-tinted arch of promise shines. As far as human intelligence can determine, the year soon to dawn is brilliant with promise. With the death of the old year will die many causes of disquietude and trouble. Let us pray and hope that the lessons of the past may never be forgotten, and that henceforth the angels of labor, plenty and peace will constitute a new trio of graces for the world.

Business—*our* business promises well ; well for those who labor in its ranks ; well for those who command, and well for the great number of outsiders ; for upon the prosperity of printing rests the future of intellectual light, knowledge, civilization, invention and exploration. This is a hundredfold more so than railroad, cattle, wheat, coal or cotton kings dream of or will ever acknowledge. The press is the power that drives all other wheels, that makes others successful at home and honored abroad. Type, paper and ink are the recording angels—the prophets and profits of business—kick against the fact as other trades, arts and professions may.

The causes for congratulation upon the advent of a new year are many, though the few governing ones can be told upon the fingers of a single hand. The wings of peace are hovering lovingly over our land. Humanity in its broader and purer organization has enlarged the area of brotherhood—unyoked the red dragons from the iron car of war, it is to be hoped, forever. The film of self is clearing away and giving to us more plainly the rights of others. In the good time coming arbitration will pour oil upon the troubled waters of disagreement, and strikes become an error of the past.

Seconding man in his efforts to reach and stand upon a higher plane, nature has smiled bounteously. Fruitful has been the yield of golden-wheated fields ; increased the cattle upon the thousand hills and in the sheltered valleys ; ships bring wealth from every land ; the earth is lavishly giving up its long hoarded wealth ; the finances of the country are satisfactory, and we rejoice. Labor in all its various phases awaits the

earnest seeker, and holds out a liberal recompense. Invention brings to its accomplishment ease, swiftness and cheapness. Never in the history of the world was this as much the case as now ; never could mankind so sit at ease, and by the touch of a little finger start and guide inanimate metal to good results. And never has printing reached so high an excellence, use and beauty ; been so much respected ; so much the director and master of the future.

The year upon which we are about to enter (unless all human calculations are at fault) promises a glorious harvest to the faithful, honest, energetic toiler in the plantation of labor—of printing. The good times foretold by prophet and sung by enthusiastic dreamer are coming, coming !

“ They have passed to fields Elysian,  
Both the singer and the seer,  
But the coming of their vision—  
IT IS HERE ! ”

#### PRINTING EXHIBITS AT THE COLUMBIAN FAIR.

**N**OW that all petty differences which have so long retarded practical operations connected with the advancement of the World's Fair in 1893 have been amicably adjusted ; the respective duties of the national commission and local directorate defined ; the site upon which it will be located selected ; the issue of bonds therefor authorized by the proper authorities, and that indications point to an exhibition worthy of the country in which it will be held and the historical event it celebrates, it is to be hoped that no further delay will be countenanced from any source or under any circumstances. While we do not share the opinion of some enthusiasts that it will surpass the Paris Exposition in *every feature*, we believe that in its display of labor-saving machinery and the mechanic arts it will far outrank any of its predecessors.

Prominent among the exhibits in which it should take a commanding position is that relating to the art preservative of arts and its various branches ; and as ample opportunity is afforded our manufacturers to put their best foot forward, so to speak, and prove what they can do, we trust they will take pride and interest enough in the undertaking to demonstrate that in this branch of industry the United States leads the world, as they certainly can never expect a more favorable opportunity to do so. We must stand on our merits, however, and prove that our claims can be substantiated. Assertion, unless backed by proof, will avail nothing. The jury will be a critical and exacting one, which will not be swayed by patriotic appeals. But, as stated, let America's representatives do their duty, and we are satisfied ; even from this standpoint they need fear no rival.

As an incentive to such action, it should be remembered the markets of the world are the stake for which they are playing. Can they successfully compete in them with their European rivals ? We can conceive of no reason why the printers of South or Central America, Mexico, Canada or Australia should give a preference

to the cumbrous, awkward, old-fashioned, European-made presses over the latest improved, more speedy, better constructed and lighter running printing machines manufactured in the United States, and their relative merits can never be demonstrated to better advantage than when running almost side by side. The difference in cost, so frequently cited, forms a comparatively unimportant factor when the results produced by each are contrasted; and even this discrepancy is likely to be materially reduced when the reciprocity scheme of the Pan-American Congress goes into practical operation, as it doubtless will in the near future.

What is true regarding the superiority of our printing machinery also applies to the productions of our typefoundries. In exactness, design, durability, beauty and utility the faces turned out in the United States are far ahead of those produced in any portion of the world. Nor should this be a matter of surprise. The "let well enough alone" policy and conservatism which handicaps the efforts of the representatives of the Old World is here happily a *rara avis*. While one is humming and hawing and hesitating, and discussing the pros and cons, the other is *acting*, with the result that by the time a conclusion has been arrived at by the first party, the second has finished the task he set out to accomplish.

We have neither time nor space to follow the subject more at length in the present issue, but simply repeat that we trust the paper machines and the paper they produce, the presses, the products of our typefoundries, stereotyping outfits and processes, our bookbinders' machinery, and last, but not least, the typographic specimens presented, will be worthy of the art and the country they represent.

#### REPORT OF THE CHIEF OF THE BUREAU OF ENGRAVING.

THE annual report of Capt. William M. Meredith, chief of the bureau of engraving and printing, recently published, is a document which upon the whole reflects great credit upon that gentleman's individual administration. Among other matters referred to he states that the bureau intended to gradually substitute the use of hand presses for the steam presses, but congress failed to execute a contract with owners of the steam presses. However, by working overtime the bureau was enabled to meet all demands upon it without serious embarrassment to the requirements of the government, every sheet of work actually needed in the public business being furnished. There were completed and delivered during the year 8,702,320 sheets of United States notes, gold and silver certificates, bonds and national bank notes, with a face value of \$227,583,050; 26,610,088 sheets of internal revenue and custom stamps; 1,200,311 sheets of drafts, checks, certificates, etc., besides a large amount of miscellaneous work for the various departments of the government. The amount of work to be executed during the fiscal year of 1891 is nearly fifteen per cent greater than that of 1890,

and nearly eight per cent greater than the amount executed in the year 1889, in which were made the largest deliveries during a period of thirteen years.

All in all Captain Meredith's report goes still further to prove his fitness for the position as chief of one of the most important departments under the government, and that no mistake was made in his appointment.

#### ACTION OF THE TRUSTEES OF THE CHILDS-DREXEL HOME.

IT is almost needless to assure our readers that the action taken by the board of managers of the Childs-Drexel Home for Union Printers, at their meeting in Chicago, November 18 and 19, in deciding to erect a \$50,000 structure on the eighty acres donated at Colorado Springs, meets the unqualified indorsement of THE INLAND PRINTER, the plans being substantially the same as those already presented in its columns. In doing so, we sincerely believe the board has acted wisely and well, and shown an intelligent appreciation of the situation, which, in our judgment, will receive the unqualified indorsement of the craft at large.

It is seldom that such a combination of fortuitous circumstances attend the development of any similar enterprise, namely, the princely gift of eighty acres of land situated in such a beautiful and health-restoring location, coupled with the magnificent donation of the gentlemen whose names are indissolubly linked with the institution, and whose generosity, doubtless, gave it a tangible impetus.

It now remains for the craft to rally as one man in support of the action taken by their authorized representatives; to sink all petty differences, if any have heretofore existed; to promptly pay all assessments levied, and by a long pull, a strong pull, and a pull altogether, make the success of the home assured. The possibility of failure must not for a moment be entertained, and it certainly will not if a broad, enlightened, comprehensive view of the situation prevails. They have but to do their duty in the premises, and we are satisfied they will, and they can soon point with pride to an institution which will not only furnish a refuge to the deserving superannuated printer, but whose permanency is assured by an endowment fund which will practically illustrate the truth of the adage, that God helps those who help themselves.

We expect in the future to keep our readers posted from time to time as to the progress made and the support given to the board of managers.

#### "THE SHORT-HAND GUIDE."

IN the January issue of THE INLAND PRINTER we expect to present the first chapters of a new short-hand guide, by T. G. La Moille, which, when finished, will be a reliable text-book for self instruction and school use. It will be published from month to month until completed, and will be found worth many times the price of subscription.

**PASSAGE OF THE INTERNATIONAL COPYRIGHT BILL.**

THE International Copyright bill, reported last session by Mr. Simonds, of Connecticut, from the committee on patents, in place of the Adams bill, which was defeated in the house, has been passed by that body by a vote of 139 to 95, and will now go to the senate, where assurances have been given of its final passage. It is, in substance, identical with the Adams bill, with the addition of sections providing that the law shall go into effect only in such countries where reciprocal advantages are given to American authors, and that all books copyrighted shall be printed from type set in the United States, or from plates made therefrom.

Written for THE INLAND PRINTER.

**SCREEN PLATES FOR HALF-TONE PHOTO-ENGRAVING.**

NO. I.—BY URANUS HORD, DAYTON, OHIO.

THE manufacture of screen plates, both in this and the old countries, has been limited on account of the great difficulty in preparing the plate with a suitable medium to rule, one that is very thin and at the same time absolutely opaque and easily cut through. The blackened collodion film has been the favorite on account of the simple method of preparing it, but it is so very delicate that it is spoiled before many duplicates can be obtained. In the following method we have a plate embracing all the good points of the former without the objections mentioned. It is a crystal plate glass coated with pure metallic silver, and is prepared in the following manner:

First procure the following articles: a wooden tray one inch larger than the plate to be coated, and two inches deep, and a crystal plate glass thoroughly cleaned in nitric acid, and then with caustic potash, four wide-mouthed bottles, two of which should hold at least twenty ounces, the other two ten or twelve ounces. Label them A, B, C and D. Fit a block of wood in each corner of the tray so that they will come within one-half inch of the top, and large enough to just catch the corners of the plate; then coat the tray with paraffine or beeswax.

Now make up the following solutions:

- A—10 oz. distilled water, 175 grs. nitrate silver.
- B—10 " " " 162 " " ammonia.
- C—10 " " " 1 oz. pure caustic potash.
- D— 5 " " " ½ " " rock candy.

Dissolve and add 50 grains tartaric acid; boil in a flask for ten minutes, and when cold add one ounce of alcohol, and distilled water enough to make ten ounces in all.

Now mix A and B in one bottle, and C and D in another; then pour the mixture of A and B in the silvering tray, quickly pouring C and D into it. This will at once form a brown precipitate. The plate must be immediately suspended in the solution resting on the wooden blocks, and should not be disturbed for at least

two and one-half hours, when it may be taken up, rinsed in pure water and set up to dry. If all has been properly done there will be a pure metallic silver coating on your plate, which should stand at least twenty-four hours to dry thoroughly before attempting to rule it. An ordinary engraving tool will not do for this work: the glass flattens the point and consequently increases the width of the line, and if tempered high enough will scratch the glass. Go to a reliable machinist and have an engraving tool made of muschet steel, grind the point down to the width of line you wish to cut and one-sixteenth inch, resting on the plate, and adjust your machine so that there is no excessive pressure on the engraver, and when you begin to rule the plate do not stop until you have finished, no matter how reliable a machine you have. Whenever you stop, if only for a few minutes, and start again, a false line is the result. One hundred and twenty to one hundred and forty lines per inch is the most suitable for ordinary work. (A practical method for duplicating the screen plate will be given in the January number of this journal.)

**STEREOTYPING.**

NO. XIII.—BY CARL SCHRAUBSTADTER, JR.

AS the inner surfaces of the casting box come in direct contact with the metal, they expand more than the ribs on the outside, which are not only further

FIG. 1.

removed, but cooled by exposure to the air. In consequence of this expansion they will assume a slightly convex surface when first heated. As the heat travels

through this will be partially overcome, still it will always be present to a slight extent. Attempts have been made to form the surfaces so that they will be slightly concave when cold, and heating will make them flat, but as the temperature of the inside and ribs varies, it is impossible to arrive at perfect accuracy. The deviation is so slight as to cause no trouble. This is particularly true where the plates are afterward passed through a shaver. When small surfaces are cast the concavity of the plates can scarcely be detected, but on large casts it is noticeable. For this reason the central clamp shown in the first three figures of our last article should not be used for very large casting boxes. Even where the box is clamped at the corners, the convexity will still be apparent on close investigation, but except in rare instances the amount is so small as to be of no moment.

Loosening and tightening the clamps consumes a considerable amount of time, and various devices have been invented to overcome the difficulty. One of these is shown in the first illustration, engraved from the patent drawing. The box is constructed on the same general plan as that shown in Fig. 4 of last article, and the top half is provided with projecting lugs H. The bottom has two pins, connected with the frame C in such manner that when the box is swung into an upright position, the pins will be forced into the recesses of the lugs H and clamp the box. The second illustration shows a different device to accomplish the same purpose. Instead of the lugs, roller tracks of a suitable angle are fastened to the upper half of the box. On the lower half are sliding bars, the ends of which are provided with small rollers. When the cover of the box is brought down the rollers are immediately before the openings of the roller tracks. Each bar is made of two pieces, and on the connecting link is another roller which runs in the covered track immediately behind the trunnions. When the lever is tripped the box falls into a vertical position, and at the same time the central roller pushes the roller bearing bars forward against the roller tracks, bringing the two surfaces tightly against the bearers. Another improvement is the counter weight in the rear, which, by balancing the cover of the box, makes it much easier to handle.

There are still other forms of casting boxes. One of them has both its upper and lower halves hollow for the circulation of hot water or steam, to heat the box both for casting and drying matrices. The main objection to this is the liability to leakage.

The side bearers having been removed, the edge of the matrix is slipped beneath the edge of the bottom bearer, and the side bearers laid close to the counters. The cover is then let down and screwed tightly, and the box swung into an upright position. The box being in position and heated to a suitable temperature, pour slowly and evenly until the space between the bearers is filled. Hold the lip of the ladle a short distance above the mouth of the box, and move from side to side to prevent burning the tail piece. If the metal is not too

hot, the matrix will stand forty or fifty casts without discoloration, and even one hundred may be taken before it is destroyed.

Some stereotypers stretch a piece of paper or cardboard between the tops of bearers and the top plate. Treated in this manner, the box will not require so many blank casts to heat it. Wait till the metal has solidified at the mouth of the box, tilt it into a horizontal position, and, having removed the bearers, take out the cast. Lay it on a flat slab with matrix uppermost. If the matrix

FIG. 2.

was carefully made it can be removed without difficulty. Should it adhere, tap it on the back with a beating brush till it is sufficiently loosened. If it has been unevenly beaten, or if holes have been torn in it so that the metal adheres so firmly that it cannot be separated, place it in water until the pulp has softened sufficiently to permit its removal with a stiff brush. Of course this will destroy the matrix, but with a little experience in making matrices no difficulty will be met in separating them from the cast. If, as sometimes happens, a small part of the matrix tears while the rest is perfect, it can be remedied in the plate by cutting out and inserting type, or the tissue paper may be removed from a small piece of wet flong and fastened over the defective spot with thick paste. The matrix should then be fitted over the form, which has in the meantime been slightly heated, and the neighborhood of the defective spot gone over with beating brush and planer. The matrix should then be dried on the surface of the hot casting box or steam table. If care is taken, the correction is hardly distinguishable from the rest, but when perfect work is desired it is best to replace the defective matrix with a new one.

### NOTES ON WOOD ENGRAVING.

NO. LXIV.—BY S. W. FALLIS.

PRIOR to 1843, little use was made of wood engraving beyond illustrating some new invention, some improvements in articles for household use or farming utensils, or counterfeiting perfumery and other foreign labels for articles that, with a foreign appearance, would meet with greater sale.

Gradually the practice of having English wood cuts reproduced became quite popular with daring and energetic publishers, reproducing foreign illustrated books at greatly reduced cost and of inferior quality. This practice soon led to the introduction of an occasional original frontispiece, title or a few illustrations. So popular did this practice become, that a book devoid of illustrations of some kind was regarded with considerable misgivings, and publishers were generally compelled to use illustrations which, in very many cases, appeared to be a waste of money. Nevertheless, the taste for illustrated books had gained a foothold, and books with pictures were the most popular. Harper Brothers at this time took the lead. They published a reissue of "English Poets," the cuts being engraved by apprentices, in a very inferior manner, when compared with the originals from the other side. Then came the publication of "Adams' Bible," a worthy example of fine engraving and artistic printing of the finest style possible at that period. It proved a great success, and really fixes the date of progressive wood engraving in America.

The prominent engravers in New York at this time, following Anderson and Adams, were B. F. Childs, E. Bookhout, A. Kinnersley and William Howland (all of whom worked on "Adams' Bible") and J. H. Hall, with his pupil, N. Orr, beside some others of less note. About this period Darley comes into notice with his designs for Washington Irving.

About this period, also, came English immigration in the persons of Alfred Bobbett, John Andrew and Robert Carter (known familiarly as Frank Leslie). This ingress had the effect to stir the native engravers to greater activity.

The American Tract Society now took a new departure, heretofore being confined to the publication of tracts and religious books, a few of which were illustrated with inferior cuts and doubly inferior printing. They now launched out more extensively; bought more and better presses and accessories; obtained artistic management, and aimed at the production of a higher and more artistic class of work. The general character of wood engraving improved, keeping pace with the rapidly increasing demand. A notable improvement took place in the style of work, combining Anderson's best white line (the Bewick school) and Adams' perfection of character, with a care for purity and delicacy of line, a clearness in fac simile and attention to tone, color and smoothness of tints. This general improvement, combined with the improvement

in the quality of printing, placed the Tract Society's publications far in advance of the mass of earlier work, and on a fair level with English engraving and printing of the same period. Some advantage was gained by the study and imitation of English engravings (as English engravings have gained in artistic proficiency during the last few years by copying or imitating the American engravings). Gilbert's drawings, also, did much in producing this result. Some of these drawings engraved by Childs and Whitney were equal, if not superior, to the best English work, Whitney, however, rather taking the lead, he being a designer as well as engraver. In fact, at this time, the engravings published by the Tract Society have a pretty even quality running through them, showing great care on the part of the management in selecting their corps of engravers. On the death of R. Roberts, in 1850, Childs succeeded him in the management of the engraving department, and to his peculiarities and the general imitation of the then prevailing English style, is probably attributable the evenness of tone and quality of the Tract Society's work.

Benjamin F. Childs was born at Cambridgeport, Massachusetts, in 1814; was apprenticed to his brother, and afterward to Alonzo Hartwell, of Boston. He began business in New York in 1838, and was noted for his industrious habits. He was an enthusiastic student of everything pertaining to art, a refined and sensitive nature, and a lover of the beautiful, wherever he found it, for beauty's sake. After a successful and eventful career as engraver, draftsman and manager, he died at the age of forty-four years, in 1863.

### PRACTICAL TALKS ON PRESSWORK.

NO. IX.—BY A PRESSMAN.

THERE are times in the experience of every pressman when, in spite of all the care that can be bestowed in the printing of a job, offset seems bound to ensue. Sometimes it may be that the paper is especially prone to generate electricity—a sure provocative of offset; or it may be that the surface of the paper being very hard, and the matter requiring a considerable quantity of ink to cover it, it is found that the care and labor expended in making ready and printing have gone for naught; that the pressman's evil genius has succeeded in ornamenting the reverse side of the paper with fantastic designs never contemplated in the original make-up.

That we have not yet arrived at an infallible method of avoiding offset goes without saying, else this paper would never have been written; but something is known about it, and as pressmen compare their experiences, and the means they employ to overcome this difficulty, more will be learned. Generally speaking, leaving out of the question the questionable remedy of running with less color than is necessary to do full justice to the work, there are two, or at most three, methods adopted

to avoid this *bete noir*. They are, first, slip-sheeting, which is, when it can be employed, a sure preventive. Second, the flying of the sheets on movable boards, so that, when a reasonable amount is run, the board, paper and all may be removed by the pressman and feeder, and another board substituted therefor. The full boards may then be piled up, one over the other, as high as is required, always taking care, however, that supports are placed at each end of every board high enough to clear the paper on it, so that the succeeding boards will rest on them, and not on the printed paper. This is, in many cases, almost a sure method. Third, the spreading of work on racks or frames, a plan which involves, usually, the handling of the printed paper, and where this is done, it in itself will frequently entail the very evil sought to be avoided.

It will readily be seen that slip-sheeting can only be employed on a small scale, as the labor involved in placing the slip-sheets, as well as the removing of them, would act as a bar, to say nothing of the fact that very few offices could afford to stock their pressrooms with the amount and variety of paper which would be necessary under this plan.

We consequently revert to the second method of flying on boards. With ordinary care on fine work, seven or eight thousand impressions each day will be fair work. Piling five hundred sheets on a board would involve a supply of boards large enough to hold any sheet printed on the press, with room at each end for the supports, of about sixteen to each press. By proper management all boards could be emptied betimes at the commencement of each day's work, to insure that the presses would not be delayed for want of them.

As before stated, piling on racks usually implies the handling of the printed paper, and consequently is not as good a method as either of the above, but it can be improved on. A method I sometimes use is to take the frames that come on bundles of paper, and, removing the center piece, so as to leave but the four sides of an oblong, secure to one side of the frame a strip of wire cloth such as is generally used for division fences in poultry yards, fastening it all around with double-pointed carpet tacks. Four of these frames can be laid on the fly table, one on top of the other, and as each will hold from fifty to one hundred sheets, the attendant can easily keep them removed when filled, and replaced by others. They have this advantage over some other drying frames that I have seen described in THE INLAND PRINTER and other printing trade journals, that they do not require any fixed frame to support them, as they can be piled one on top of the other until the ceiling prevents going higher.

After all, if proper inks are used a great deal of the difficulty would disappear, as I hold that as most printing office managers have not been bred to presswork they practice economies in the wrong places. It is this apparently irremediable desire to get as good results from a fifty-cent ink as from one costing a dollar, that is responsible for this as for some more of the evils of

which pressmen are the inevitable victims. Let us counsel together. There are very few of the printing office managers of today who could not advantageously consult the pressroom before making purchases of the materials the pressmen must use. If, as is generally the case, the pressmen are held to account for faults resulting from the use of incongruous materials, it would argue that they are being unjustly treated. Very few of them, indeed, but would be happy to give their aid in every way possible to the securing of the best results in the finished work.

\* \* \*

Speaking of presswork, I lately came across a copy of an English printing trade journal, *The Paper and Printing Trades Journal*, that was, in this respect, a sight for the gods. The paper was, to judge from the American standpoint, a poor quality of super-calendered stock, the ink poor in quality and color, the make-ready inferior to what would be turned out of a country printing office in these United States, several cuts appearing in its pages being most wretchedly botched, notably a cut of the Thorne typesetting machine on page 12, and a portrait of Gutenberg on page 6. Go to! Thou English "machine-minder," verily there is no conception of art in thee!

The same journal in its answers to correspondents, page 17, says that "The Kidder press \* \* \* is on the rotary principle \* \* \* ." And also on page 14 describes a method for producing curved plates, which it says is used on the *Century* magazine. I have the best of authority for stating that there is no more truth in the latter statement than in the former. What a fund of misinformation our Anglo-Saxon cousins over the water can gather as regards America or things American is evidenced by these two incidents picked at random, and many more which could be cited.

\* \* \*

In conversation, recently, with a well-known press manufacturer, whose well-formed figure is set off by a beard that would have delighted the prophet, the question of steel versus cast-iron shafts for the cylinders of printing presses was discussed. After stating it as his opinion, founded on a long experience, that for the purpose intended the cast-iron shaft was superior to the steel one, he averred that there was a wide-spread idea that cast-iron was used because of its cheapness, while the fact is that a core-casting, and no other kind would answer, could not be produced short of five cents a pound, while the steel could be bought for three. His contention was that the cast-iron shaft would break under an excessive strain, while one of steel or malleable iron would bend; the former would show instantly and steps could be taken to have it replaced, while with a bent shaft the fault could not so readily be discovered. He also claimed that it would stand the test of wear better than either steel or malleable iron. These are points that those purchasing presses would do well to look into.

### CASTE AMONG PRINTERS.

BY DUNCAN F. YOUNG.

WHILE there may be reason for one man to feel that he is better and wiser than another, and consequently select his associates from the class and ranks he sees fit, caste has no place in organized labor. There is not the slightest doubt that among the poorest civilians can be found the superior of many a lordly, courted man, yet the latter stands upon the top round of the ladder, nevertheless. What if there were caste in business circles, and one capitalist refuse to cooperate with another on account of caste. What if the projector of railroads and instigator of trusts wait to secure the capital of respectable, moral people of caste. Those who stand foremost among the class under consideration cannot but acknowledge that it would be ruinous; it would be insane. And why not so in labor? Are not the efforts of your fellow-workmen the capital and support of the business in which you are engaged, the success of which is to your mutual benefit? This is applicable to organizations of different trades as affecting the feeling of one union to another, and this position is maintained by the foremost men in labor circles, except, perhaps, those of the Brotherhood of Locomotive Engineers, as is evidenced by the successful efforts at amalgamation by the leading trades unions of the country. The printers for some time stood on their dignity, and withstood the slaughtering fray supinely and alone, but their failures taught them the error of their way, and they, too, fell into line, and are now in the ranks of amalgamation. No one can say how soon the locomotive engineers may come, asking meekly for assistance, and while that assistance will be strongly opposed by many, it is to be hoped that at last it will be given, for it is difficult enough to decide issues with capital, and disagreements within our ranks must be eliminated to insure our unqualified success.

Now, if this assumption be correct with regard to organizations of a national scope—and it is plausible, at least—how much more correct it must be in connection with the members of a local union of one trade. Of the fact that caste exists among printers there can be no denial. We find that subs generally associate with each other, regulars go together, and foremen are exclusive except among themselves. Why is a regular better than a sub? May not conditions possibly change? Why is a foreman better than the rank and file of the union? Because he receives more wages, and can dress more neatly? Nine men out of every ten who have learned the printer's trade, with a common school education, can fill the position of foreman, and yet those individuals are so exclusive! As a result, there is jealousy, and an increased demand for the position, and deep-seated enmity or determined disruption. Furthermore, the unbounded authority put in the hands of the foreman by the International Union in the employment and discharge of help creates ill-feeling among the members, and makes a *gros tête* of the average foreman. And,

while the International has reposed this monarchical power in the foreman, I venture the assertion that there is not one of those who voted in favor of that measure but would violate it did they own an office and have a friend or relative whom they desired to see provided with a situation.

To insure our future success we must preserve our forces for battles with the real enemy, and to do this we must allow ourselves to acknowledge the fact that caste exists among us, and that we must eradicate it. To accomplish this we will have to remove the cause, this being done by the elimination of sinecures and the equalization, as nearly as possible, of the beneficial results of organization.

### WRINKLING.

BY ALTON B. CARTY.

WRINKLING of sheets while undergoing printing is the cause of much annoyance to the pressman. While no trouble will be experienced for months in the pursuance of his duty, suddenly he will run against a job which will sorely try his patience, and sometimes defeat him in all his endeavors to prevent the unsightly wrinkle. Wrinkles are no good anywhere, not even on our faces, though nature has ordained them to exist there. As there is said to be a cause for every effect, so with the wrinkles. I have not had much experience with wrinkled sheets, but have had enough to ascertain the cause and what will prove a remedy under favorable circumstances. I much admired the excellent article in the October issue of THE INLAND PRINTER upon the subject of wrinkles, although I do not think the writer laid sufficient emphasis upon an even impression as one of the requirements against wrinkling. An even impression is essential and it must be very light. Invariably in picking up a sheet with a wrinkle in it you will find the defect starts from a spot where the impression is somewhat heavier than the surrounding surface, and, like a stone cast into the water, causing wavelets from the point of contact, so will the heavy spot, the difference being that the wrinkles will only follow the line of impression toward the "tail end" of the printed sheet, while in the water a circle will be formed. The nearer the heavy spot is to the head line, the deeper and broader will be the wrinkles at the other end of the sheet. The lighter the quality of stock used, the greater is the tendency to wrinkle. Sometimes turning the form around or working it endwise will lessen the tendency to wrinkle. It is absolutely essential that the sheet to be printed should be free from wrinkles between the grippers and should lay against the cylinder snugly. A gripper or two that may press a little tighter than the rest will cause annoyance before the printed sheet is laid upon the fly table. So, after reading the article in the October issue of THE INLAND PRINTER and taking in all that is here set forth, you will find that the causes leading to wrinkles are an uneven, heavy impression, soft packing on cylinder, uneven pressure of cylinder bands and grippers, raised guide supports or

tongues; while the remedy is the opposite of all the above combined, or the turning of the form. Should such remedies not prove effective the working of a heavier quality of stock will. Sometimes less than five pounds to a ream more weight in the stock will eradicate the evil, although not much attention might be paid the other suggestions above referred to. It is no use trying to rush such jobs. Better take matters calmly and patiently and not get into a flurry, or disaster will be sure to follow. It is no fault of yours that not much profit is made on the job, and your employer should be considerate in the matter. It is a good thing for us all that we occasionally run against a "snag"; it will show us how little we know and eventually be the means of developing dormant talent.

Written for THE INLAND PRINTER.

### SAD CHRISTMAS EXPERIENCE OF A TYPO.

WHY EBENEZER THREW UP GOOD CASES AND TOOK TO "SUBBING."

BY ONE OF THE BOYS.

WHILE printers in jobbing offices or on weekly or monthly publications can generally manage to get off work on the principal holidays of the year, the case is very different with the man who earns his living in a daily newspaper office. The exigencies of the paper he is working on demand inexorably that it must be published, holiday or no holiday, Sunday or week day. At a time, for instance, like Thanksgiving Day, Christmas, or New Year's Day, it is frequently very difficult for a man holding regular cases on a daily paper to be able to put away his stick and rule, get clear for twenty-four hours, and spend at least one day of jollification in the bosom of his family. While "subs" are to be found in plenty at ordinary times of the year, they are not always available during a season of festivity. Being independent, or at least free of the responsibility which is attached to a man holding cases, the "sub" takes his holidays when he pleases, and as a rule he generally does please to do so when there is particular music in the air and promiscuous hospitality is abundant. The "sub" stands in the same relation to the composing room as the freelance paragrapher and special article writer does to the reportorial or editorial department. He is generally a gay and untrammelled bird of freedom, and it is well known that many of them would not hold cases even if the steady "sit" were offered to them. No; they would rather "sub" than be tied down to the responsibility of holding cases. They remind one somewhat of the jolly beggar in the old English ballad, who, so long as he enjoyed the freedom of the king's highway, the sunlight, and good fresh air, went singing along on his way, caring neither for prince nor yeoman. There are serious mischievous temptations attached to this kind of life, but it is a gay one while it lasts, and frequently causes envy in the breast of the weary case-holder who would like to have a good time, but feels that he dare not trust himself to have it.

Ebenezer Powell had held cases for years on the Chicago *Palladium of Liberty*. He was a steady hand, and his foreman reckoned him to be one of the best and safest men on the floor. This was because Ebe was a family man possessed of a morbid sensibility about the duty he owed to his wife and family. Yet he was by no means a selfish curmudgeon, for he would take a social drink with his fellow printers at times, but no amount of persuasion would make him lose his head. The boys sometimes tried to put up a job on him, for they thought it would be fun to see him just a little "off," but Ebenezer would pleasantly say, "No, boys, I've got my string full this morning, my takes are all corrected, and there is nothing more to do but to go home." And home he would go right then and there. Ebenezer took it into his head one Christmas Day that he would

like to spend the holiday with his family. Perhaps this desire was prompted by the fact that he had just finished the perusal of one of Dickens' vivid and touching Christmas carols. Perhaps it was because his wife said to him one evening as he was putting on his overcoat to go to work, "Ebenezer, I really do wish you could spend Christmas with me and the boys and girls. I'm sure it would do us all a heap of good. It would bring us all more together, so to speak." All the way as he rode in the street car until he reached the office of the *Palladium*, the idea grew upon him that he really ought to spend Christmas with his family—"just to bring us all closer together, as it were." When he reached the composing room, he found there was a great demand for "subs," but he was fortunate enough to collar, in a corner, a fellow who went by the name of "Hank." Nobody knew his other name, and he had a very red nose, and hailed from St. Louis, Kansas or Kentucky—probably Kentucky. Ebenezer got Hank to promise faithfully to sub for him on Christmas night, and when Hank asked for the loan of a dollar he gave that coin up with the greatest alacrity. When Ebenezer reached home the next day, he and his wife arranged a nice little programme for the immediately forthcoming Christmas Day. In the forenoon he was to take the youngsters out to Lincoln Park, and treat them to a sight of the animals, especially an interview with the funny bears, who climb the poles so cleverly, and the seals that swim so gracefully in the pond with the grotto in the center. Then in the evening they were all to go to the theater and see a very funny piece that was then on the boards. They were to meet him at the entrance to the *Palladium* at a certain hour, because, of course, Ebenezer, being responsible for a certain "slug," had to see that his substitute had turned up in good shape for work. He had no doubt, however, that everything was all right—for he remembered that he had treated "Hank" with unusual liberality—and he entered the composing room with an alert, confident step. But who was that reeling around in the middle of the floor, yelling like a Sioux, and vainly trying to reach for an old, dilapidated hat which had rolled under the composing stone? Poor Ebenezer stood aghast, when he recognized that it was no other than "Hank," his substitute. He willingly helped to hustle the drunken man out of the office, but it was with a heavy heart that he went downstairs and met his family. He told his wife, as he sadly handed her the tickets for the show, that he would not be able to go with her and the children, because his "sub" had gone back on him and he would have to hold down his own cases or run the risk of losing them altogether.

Well, of course, they were all grievously disappointed, but there was no help for it, and Ebenezer went up stairs to work all night at his frame, while the "old woman" and the boys and girls went to the theater, and could not laugh half as much as they would if "pop" had been with them. All night, as he toiled there, deciphering good, bad, indifferent and execrable "copy"—somehow, it appeared to be all execrable that night—Ebenezer finally came to a mighty determination. Next day everybody in the composing room, the proofroom, and even stereotyping room, was thunderstruck to hear that old Ebenezer had thrown up his cases and announced his intention of taking his chances "subbing." As he was known to be an excellent and trustworthy man, he got all the work he wanted as a "sub," and made just as much money as if he were holding regular cases. For a long time nobody knew the reason Ebenezer had thrown up his cases, but, one day when asked, over a glass of beer, to explain the mystery, he said, with a very considerable tone of determination, "Well, boys, I was once shamefully done out of spending one Christmas night with my own family, and I've made up my mind that I'll spend every Christmas at home after this, and that I won't be swindled again out of a dollar theater ticket and my domestic pleasure by another blamed fool of a drunken 'sub.'"

And Ebenezer Powell has been as good as his word up to this day, for last Christmas night his paternal face could have been seen beaming genially in the parquette of a local theater, while his family, that surrounded him, were fairly screaming over the acrobatic antics of the leading comedian.

Every printer should have one on his shelves. The largest book of its kind in the world. Price, \$3.50. Must be sent by express, charges to be paid by purchaser.

ADDRESS, INLAND PRINTER CO.  
183 MONROE ST., CHICAGO.

# SAMUEL BINGHAM'S SON,

22 & 24 CUSTOM HOUSE PLACE, CHICAGO.

(FOURTH AVENUE.)

ROLLERS SUPERIOR IN  
QUALITY TO THOSE MADE  
BY THE OLD METHODS.

NO PRINTER OR PRESSMAN  
SHOULD BE WITHOUT  
THEM.

MANUFACTURER OF

## IMPROVED ROLLERS

FOR PRINTERS' USE.

The above illustration shows five of the front row of the great cylinders or "Gatling Guns," each containing about twenty molds for cylinder press rollers. The center one is being filled from the bottom with melted composition. The composition is forced by compressed air into a chamber at the base of each cylinder and upward into all the molds at one operation.

### RESULT: ROLLERS THAT ARE SOLID, SMOOTH AND ELASTIC.

This is the third cut of the series of pictures being issued by us with a view of illustrating, by photographic reproductions, the improvements we have invented and introduced for performing the various operations used in the manufacture of printers' rollers. The superiority of *our* methods and *their* products over the old-fashioned and now antiquated means employed by *all* others in the business, is too obvious to sensible people to need extended mention. We leave it to the common sense of the printer and his spirit of self-interest as to which process will produce the best results.

These machines are protected by letters patent, and are used **ONLY** by SAMUEL BINGHAM'S SON, Chicago, and BINGHAM, DALEY & O'HARA, New York.

**SAMUEL BINGHAM'S SON,** 22 and 24 CUSTOM HOUSE PLACE (Fourth Ave.),

E. Marquily, compositor, rue Sauffroy prolongée 3. Paris.

While our columns are always open for the discussion of any relevant subjects, we do not necessarily indorse the opinions of contributors. Anonymous letters will not be noticed; therefore our correspondents will please give names—not for publication, if they desire to remain incog., but as a guarantee of good faith.

#### A WORD WITH CORRESPONDENTS.

We hope our valued corps of correspondents will not take offense when we ask them to **BOIL DOWN** their effusions in future as much as possible. We are very glad to hear from every section of the country, but our correspondence feature has assumed such proportions that it is impossible to publish all that is sent us. Friends, be brief and to the point, and **THE INLAND PRINTER** readers will think all the more of your contributions for their being so.

#### A CORRECTOR CORRECTED.

*To the Editor:* NORTH EASTON, Mass., November 29, 1890.

In the November issue of **THE INLAND PRINTER** you give I-tal'-ics as the correct pronunciation of this word. May I make bold to ask you where you find authority for this? Both Worcester and Webster give It-al'-ics as the only way.

A. A. GILMORE.

[Webster's Dictionary is the authority in the office of **THE INLAND PRINTER**, and in it the pronunciation is given *exactly* as it appeared in our last issue. Our correspondent had better put on his glasses.—EDITOR.]

#### FROM BAY CITY.

*To the Editor:* BAY CITY, Mich., December 8, 1890.

The annual election of officers of Bay City Typographical Union, No. 81, took place on December 7, and resulted as follows: President, E. Cummings; vice-president, M. W. Campbell; recording secretary, Frank Taylor; financial and corresponding secretary, Jason Waterman; treasurer, Fred. Wharton; sergeant-at-arms, J. W. Hand. Executive Committee, E. Cummings, M. W. Campbell, Jason Waterman, T. Wheaton, Fred. Wharton. Work here has been very dull for the past month and the prospects for the immediate future are not very bright. It must be said for the first time in a good many years, this city has been overstocked with printers. The *Post* has suspended, but there is talk of a stock company starting it up again. At the time of suspension it ran only three frames. Mr. William F. O'Brien, after an absence of over a year, has returned home again. Mr. M. H. Garrels, late of Minneapolis, Minnesota, has returned with his family to this city, and is once more at his old post on the *Evening Press*. Mr. Gus. F. Demorest, also of Minneapolis, is foreman of the *Morning Tribune*.

#### TO PREVENT ANGLE ROLLERS CHIPPING.

*To the Editor:* YORK, Pa., December 1, 1890.

In the November **INLAND PRINTER** I noticed an article under the head of "Practical Talks on Presswork" relating to angle rollers, and why manufacturers persist in setting them at an acute angle.

While the writer hits the nail squarely on the head as far as grinding the face off them is concerned, he evidently is not aware that the evil could not be easily remedied by a vibrator attachment. When the bed of a cylinder press is moving back to take the impression, the angle rollers are turning in that direction, and before they have time to stop they are caught by the bed and turned in the direction the bed is *then* moving. The reaction just at this moment is so great that the rollers are chipped or ground off at the ends and in a few thousand impressions are practically ruined and the composition deposited on the bed of the press and

from there carried on the form and into the fountain. The ink manufacturer is blamed for sending dirty ink and the roller manufacturer for bad rollers.

This is certainly a very bad fault in a great many presses, and in order to remedy this evil I set my head to work studying out something to prevent angle rollers from chipping. About four weeks ago I completed my invention, and have had my press running with it on ever since with a new set of rollers, and the result is truly wonderful—rollers as smooth as plate glass.

I have filed my application for a patent, and in the course of a month or two I will be able to offer it to the trade at a *very* small cost, or sell the patent to some reliable press manufacturer to use on his presses.

M. W. F.

#### FROM WISCONSIN.

*To the Editor:* RHINELANDER, December 10, 1890.

Believing that a few lines in reference to the printing trade in our promising young city will prove of interest to your readers, I send the following. Rhinelander is a town of about 4,500 inhabitants, and is increasing rapidly in population. Its chief industry is lumbering, there being twelve saw mills located in its midst, besides planing mills and sash, door and blind factories. There are three weekly newspapers published here, namely, the *New North*, *Oneida Herald* and the *Vindicator*. The *New North* is the principal paper of the place, it having been established some eight years ago by C. F. Barnes, who conducted it for two years, and then sold out to G. W. Bishop, under whose management it still is. In politics it is republican.

The *Oneida Herald*, the democratic paper of the county, was moved here five years ago from Merrill, where it appeared for a year as the *West Merrill Herald*. D. S. Johnson is its editor and proprietor.

The *Vindicator*, an independent paper, was brought here from Eagle River three months ago by Sam Shaw, of the *Crandon Republican*. It is making a hard fight for a livelihood, but whether it will meet with success or not I am unable to say.

All the offices enjoy a good advertising and job patronage, and the bosses all seem happy.

The population of the city will doubtless double during the next five years.

ARGUS.

#### THE ENTERPRISE TYPOGRAPHICAL INSTITUTE.

*To the Editor:* BROCKTON, Mass., December 9, 1890.

The Enterprise Typographical Institute is a body of printers who have formed an association in this city, and have quarters at 60 Main street. Its objects are to have a place where members of the craft may meet and discuss matters pertaining to the trade, and includes in its membership publishers, editors, reporters, compositors, pressmen and all who are connected with the trade. Here may be found a library of two hundred volumes, besides **THE INLAND PRINTER** and other leading trade papers. A benefit society is connected with the institute which pays to its members, in case of sickness or disability, \$10 a week, each member paying his proportional part.

As long as the Enterprise Typographical Institute exists you may count on one subscription, at least, from Brockton.

The trade is flourishing at this time, with a good outlook for the future.

H. E.

#### FROM ST. JOSEPH.

*To the Editor:* ST. JOSEPH, Mo., November 29, 1890.

Business during the month has not been on the rush by any means, but the various job offices have been running with their regular forces.

The Posegate Printing & Lithographing Company, so it is again said, is preparing for the change which it contemplates undertaking, namely, the purchase of a new outfit. Mr. Samuel Ostrander, for twenty years connected with this institution (until lately the Steam Printing Company), and for the past twelve years foreman in the pressroom, has resigned. It is not known, as yet,

what disposition Alderman Ostrander will make of his mechanical abilities. Mr. Jeff Gabbart succeeds him.

William Campbell, one of our local job artists, has accepted a situation at Shirley & Kessler's.

The *Herald* will come out in brand-new dress Monday morning, and the *Gazette* will follow during the week. Both papers will move to new quarters opposite the custom house; in fact the new offices are there now. They occupy a building built especially for them. The *Herald's* composing and local rooms are on the second floor, and the *Gazette's* rooms on the third. The counting rooms and managers' offices are on the first floor. Both papers will use the same press, a new Potter perfecting machine, with Goalman Stuart as chief pressman. The boys are much pleased at the change, for the type in use on the *Herald* is completely worn out.

The *News* was compelled to hastily transfer its quarters Tuesday. Excavations for the foundation of a new building adjoining on the north rendered the *News* building unsafe, and Manager Shultz, to guard against any accidents to his plant or employes, decided to abandon the building. Temporary quarters were found in the *Ballot* building, whose press they are now using.

Joshua S. Rigdon, well known to printers throughout the West, has quit the case and purchased the *Union Star Comet*. "Rig" has been looking for a snap ever since he and General Grant left Galena, Illinois, and now declares he finds his most sanguine expectations about to become a realization. S. M. W.

#### A WOMAN'S REJOINDER.

To the Editor: HAMILTON, N. Y., December 6, 1890.

In the November issue of THE INLAND PRINTER F. W. Thomas contributes an article, entitled "Oh, Yes!" which undoubtedly met the unqualified approval of not a few. Mr. Thomas made a mistake in favoring THE INLAND PRINTER. He should have sent his communication to some of the editors of our leading dailies, asking for a "top of column and next to reading matter" position, or some place where it would attract the attention of ladies. The editor, in his wisdom, would probably place it under "Fashion Notes," or "Hints on Home Decoration," and imagine that thus it would meet the eyes of "fair feminine creatures," who would be thankful for their deliverance, and the honor of the trade would be saved. To be sure, under present circumstances, he is not subjected to so much criticism, as perhaps only one out of every hundred of THE INLAND PRINTER readers is a woman.

How many average pressfeeders, finding a difficulty about the press, can take it to pieces and put it together again O K? About as many as the average man who comes into the office and requests to look at the engine because "he is so interested in such things." After watching the revolutions silently, and stroking his beard thoughtfully, he will probably burst forth in some such ecstatic exclamations as these: "Well, isn't she a daisy?" "Runs so smoothly and quietly." "Who would think there was so much power in such a little thing?" "How perfectly the wheel turns," etc. The facts are that at that time the engine was needing repairs more than it had in six months and its distressing thumping was palpable to the least in the office, even though she be a woman. Of course, the office would not criticise the man who could thus compliment, and gracefully accepted the position.

We all acknowledge the superiority of man in some things; but how many men, after having the mystery of tating shuttle, crochet needle and mat hook explained, will understand them, even though the descriptive power displayed be equally as good as Mr. Thomas credits himself with? Very few, and why? Because he is not interested in them. Experience has clearly proven that some women do become interested in printing and that they will not only become printers some day, but many are now, and good ones, too. The majority of those who "kick" against women entering the trade are those who, because of their incompetency, are afraid of the extra competition which the increased number of good artists would necessitate. Give the women a chance and they will prove their ability to become good printers. L. Y.

#### A PLACE FOR COMPOSING RULES.

To the Editor: CINCINNATI, Ohio, November 20, 1890.

I send you a description of a little stand for composing rules, which I think many offices could adopt with advantage.

This stand consists of set of shelves, or pigeon holes, ranged one above the other, graded off by picas, from 55 to 8 (or whatever sizes are needed), into which the rules are inserted, according

to their lengths, as shown by scale on side of stand. Openings are made large enough to put finger in to draw out the rule.

Perhaps the best way to make this is to form each shelf separately in shape of a box, made of pasteboard, using a piece of 6-pica wood furniture for a mold or pattern, leaving both ends open. Make first box 55 picas long, next 54, and so on down to 8. When these are dry enough to handle, stack up on each other in regular order, pasting between each box, and ranging all in line at the back carefully, four stacks of twelve each. Put the two stacks side by side that are to go together, and fasten with paste, now close back ends with pasteboard, and place the two sections back to back, making stand complete.

Cover all with colored paper to taste. Print a column of pica figures from 1 to 55 and paste on center of stand, to use as a scale to measure rules by. Paste figures showing length on side of each hole; diagram shows them in the hole, but they should be on side.

It will be better to fasten on a broad base, or load with a piece of metal plate, to prevent it upsetting easily. This style of stand is preferable to one in which the rules stand on end, where, if a short one is accidentally dropped in, the stand must be turned over to get it out. Can be made by bindery hands at no outside expense. R. E.

#### TEACHING APPRENTICES.

To the Editor: MANCHESTER, N. H., November 20, 1890.

You have several times published letters from printers who objected to teaching apprentices. They claim that the journeyman should not be expected to do any teaching—that it should be done by the foreman. How many of these objectors have stopped to think, or have thought without stopping, that they teach themselves while teaching others? The experience of others may differ from mine; but I have had much experience in teaching during the last three years, and I know my business better for it. Some of my pupils were anxious and quick to learn, earnest and conscientious; a few were stupid, many were careless; but if I had failed utterly to teach any of them anything, the effort to teach would still have been helpful to me. I learned my trade under many disadvantages. Some of these I have overcome, while I am yet struggling with others. Conscious of my own defects, I resolved that I would never see anyone go wrong, as I so often did, for want of a little advice or showing; and I have found that this practice has been profitable to me in a selfish way—has enabled me to do better work. Children are fond of asking "why?" and the bright pupil in any business will often ask

"why?" How many printers can give the reason, clearly and distinctly? How often the answer is, "because it's right," or "because I say so." No one really knows a thing until he can teach it, and I am willing to have my knowledge measured by my success as a teacher. I know there are two sides to this question; I know that it takes time to teach; but sometimes the apprentice can do a favor to the journeyman; will he not be more willing to help one who has helped him? A little more wisdom in our selfishness would be better for us all. I heartily approve your efforts to raise the standard and the quality of work; you have helped me much in the past and I hope to learn more from you in the future; you seem always to do your best against shortsighted selfishness wherever you find it, and I am glad of it.

I inclose a sample of what's-its-name. Perhaps it is not bad enough to be displayed among your samples of "How not to do it," but it is sufficiently bad. I asked the artist if he had any briefer boldface condensed references from the Boston typefoundry and he had never heard any of the terms used. When he took his pipe from his mouth he told me a little of his history. Lazy, shiftless, he would have failed at anything.

In another wrapper I send the work of an eight-year-old boy, an imitation of something that appeared in THE INLAND PRINTER some time ago. Done with a lead pencil and ordinary school crayons. I think it is very good.

I hope to hear more from you about technical schools for printers. I hope, in fact, to learn more from you about all branches of the printing business.

E.

#### A NEGLECTED VETERAN.

To the Editor: BOSTON, Mass., November 24, 1890.

William Allen Silloway was born in Orange, Vermont, September 17, 1817, and when he was twelve years old he entered a printing office to learn the trade, he having had the usual common school education of the Green Mountain state up to that age. His master was a thorough Scotch printer of those days, and boys then learned all branches of the business in a thorough manner instead of one branch, as now. After serving six years in that country office, we find the subject of our sketch foreman of an office in New Hampshire, and a few years after he had drifted to Boston, where he was anxious to more thoroughly learn the finer intricacies of the "art preservative," or the "black art" as it was often then called by some clergymen. He was at all times a diligent "disciple of Faust," and always strived to be at the head of all departments of printing. After a few years here we then find him in New York, from whence he went to England and entered the office of Homan & Wier, at Oxford, where he remained five years, setting up the Bible in the original Greek—King James' original edition—one column being the Greek and the other the English translation; hence he is known as the only printer in America that has accomplished such an undertaking. He has also set up the New Testament in French and Spanish, and today he is equally at home in those languages in plain matter or jobbing—being a good job compositor and in designing, etc. While in England he married a daughter of Sir William Blackie, and niece of Sir Richard Houghton, of the British army. After returning to this country he published a weekly newspaper in the State of New York till the war broke out, when he left all and entered the service for the preservation of the Union. He was promoted from time to time till in 1862 he was on the staff of General McClellan as lieutenant-colonel. He was several times wounded, and was at one time a prisoner in old Libby's walls. In 1863 he resigned and the same day was appointed an acting first assistant engineer, temporary service, in the United States navy, where he served till October 28, 1865, serving four years and eight months. Since the close of the war he has been employed at the business in various capacities, and now, though suffering from rheumatism and other bodily infirmities, he is employed in one of our Boston offices where he just manages to earn a bare living for himself and wife, never complaining of his lot so long as he is given employment when able to work; and now, in his seventy-fifth year, he

can go to the case and set up from 6,000 to 7,000 ems in ten hours of first-class book composition, which is a good day's work for any compositor. Infirmities are fast creeping upon him, and he is living at No. 1 Jefferson street, this city, almost forgotten and nearly friendless, striving manfully to fight the battle of life for an existence and keep the wolf from the door. How true is the maxim of St. Aunitaz, "When old age comes on, younger ones take your place—age is kicked out to eke out an existence as best it can, or starve by the wayside." S. W. L.

#### FROM TORONTO.

To the Editor: TORONTO, Ont., December 7, 1890.

The first sleighing of the season here made its appearance last week, and already a slight briskness of trade has invaded several of the job offices, while others are not so busy as they were. There are still many walking around, while others are working overtime. It is a great pity that such should be the case, and some remedy would not only be a blessing for the non-workers, but also a relief to those who are overworked. One way to thus help both parties—in fact the only practical way—would be to increase the scale for overtime to such a rate that the employers would prefer giving the non-workers employment to paying the extra rate for overtime. At present the difference between the rates for time and overtime—four and one half cents per hour—has no deterring influence over the employers. Then, as regards pieceworkers, they receive no extra compensation at all for overtime, and how they have so patiently withstood this injustice so long is something I cannot comprehend. There is a scheme on foot now, I believe, to remedy their condition.

There has been of late considerable murmuring regarding the scale of timeworkers here. True, as compared with other skilled trades, they are inadequately compensated; but I am inclined to the belief that a greater ill than this is the inability of so many to secure regular employment. The remedy is a shorter day's work.

The new labor paper, the *Labor Advocate*, which I spoke of recently, made its appearance last week, and while it has the faults of an initial number, gives promise of making its presence felt in the future. The Grip Publishing Company are the proprietors, and Mr. Phillips Thompson is editor. I think that if the price was a little less it would be more assured of success, both financially and otherwise.

Mr. Harry A. Livingstone, of the *Empire*, was recently married to Miss Madeline E. Wiltshire, daughter of Mr. Henry Wiltshire, of the *Mail*. The groom was presented with a purse by the *Empire* staff before leaving to accept a position on the *Montreal Star*.

No. 91 has lost one of its most earnest workers. Mr. David Hastings, who for some years was municipal reporter for the *News*—and a good one, too—has seen fit to sever such connection to accept a position on the *Hamilton Herald*. Before going he was asked to receive from the hands of several parties donations befitting his popularity. The mayor and aldermen gave him a gold watch, with a very suitable inscription thereon; the other municipal reporters presented him with several articles of silverware; and the *News* staff also showed its appreciation of his genial manner and ability in a tangible way. Mr. Hastings was the most polished orator No. 91 had, and his words always had a convincing effect upon his hearers. He was one of our delegates to the Trades and Labor Council, and here, again, his ability was always recognized.

Mr. F. Diver, electrotyper and stereotyper, has assumed the management of the Central Press Agency.

Mr. Douglas Ford, who is well and not unfavorably known to many job printers, and who was formerly superintendent in the *Mail* jobroom, and who more recently held a similar position in Murray & Co's, is now with R. G. McLean, and his pleasing countenance helps to lighten the burdens of the compositors there.

We have what we call "an optional scale" for the daily papers, which gives the proprietors the option of paying 30 cents per thousand ems, the compositor to get the advertisements, or paying 33½ cents, the office to take the advertisements. The *Globe* and

World staffs are working under the 33 $\frac{1}{3}$  cents rule, and express satisfaction with the arrangement.

Since my last letter the *News* has taken unto itself a new garment—one in which its appearance is much improved. It was made right here in Toronto, by J. T. Johnston, our local typefounder.

Christmas numbers of regularly published periodicals seem to have become very popular. The special Christmas number of *Saturday Night*, our enterprising and successful society paper, is a work worthy of much praise, being printed in the highest style of the art. It was printed in James Murray & Co's pressroom, and shows what can be accomplished with good paper, good ink, good presses, good type and good workmen.

I expect to have something of more than ordinary interest to communicate next month.

JIM DEE.

#### FROM LANSING.

To the Editor : LANSING, Mich., December 8, 1890.

The newspaper business is flourishing in Lansing. Harry B. Stitt, who for several years has been connected with the *Lansing Journal*, and Orrin Stair, a job printer, have started a new weekly paper, which is named the *Saturday Call*. It is a six-column quarto, very neat in appearance, and starts out as an independent (politically) society sheet. The first edition appeared last Saturday. With Messrs. Stitt & Stair at the helm it is safe to say that the *Call* will be a success in every way, and, to use the old, stereotyped expression, will "fill a long-felt want."

The report gained circulation here last week that the *Lansing Staats Zeitung* had "gone up," but Mr. Hansen, the proprietor, came down from Port Huron, settled all matters satisfactorily, and the paper will be published as usual.

E. C. Alchin, ex-proofreader of the *State Republican*, has gone to Bear Lake, Michigan, and will start a paper.

S. N. Chilton, president of No. 72, acted as delegate to the American Federation of Labor, at Detroit, December 8, for the Trades' Council and No. 72, having been elected by both organizations.

Last Friday night a number of the friends of James Innes called at his boarding place and enjoyed a very pleasant time, during which he was presented with a fine smoking set. Saturday night when he went down to the office to get his pay he was told to step into the bookroom as someone wished to see him. On going in he was surprised to find the employes of the shop awaiting to bid him farewell. After a neat little speech by E. V. Chilson, Jim was presented with a purse of \$20 from his fellow employes. 'Tis needless to say that he was greatly surprised. Mr. Innes has been foreman of the *State Republican* for a long time, and during his stay in Lansing has made many warm friends, who will regret his departure. He left for his home in Aberdeen, Scotland, Monday, December 8.

Business is pretty good here at present, and prospects are better for work after January 1, during the legislative session. A number of the boys came here last week and went to work in the state print shop. The weekly scale is \$13; evening papers 28 cents, bookwork 30 cents.

Assistant Adjutant-General William Cook, whose term of office expires January 1, on account of the change of administration, has made application to join No. 72. He is an old-time printer, having worked over thirty years at the case previous to his appointment as assistant adjutant-general.

Candidates are already in the field for the different offices to be filled at the annual election of No. 72. There are also three candidates out for delegate to the International Typographical Union. Evidently they believe in the "early bird," etc.

Lansing has eleven newspapers and seven job offices.

Charles J. Strang, editor of the *Lansing Agriculturalist*, and Miss Harriet Francis, of Olivet College, were married last week.

All efforts to find the villain who "pied" Thompson's (non-union) job office last month, have thus far been in vain, although \$125 reward is offered.

SLUG ONE.

#### FROM CINCINNATI.

To the Editor : CINCINNATI, Ohio, December 1, 1890.

Among the establishments recently incorporated under the laws of Ohio is the National Publishing Company, of this city, with a capital stock of \$100,000. The idea of the new company is to publish the *Daily Hotel Journal*, and do a general printing and engraving business. There is not a single printer, nor any one connected with the printing business in any manner, among the incorporators, as follows: Julius Balke, of the Brunswick-Balke-Collender Company; John Frey, proprietor of the Dennison Hotel; Thomas W. Zimmerman, of the Burnet House; D. C. Shears, of the Hotel Emery, and Joseph S. Peebles, of the Joseph R. Peebles' Sons Company, grocers. The stock company was got up by S. P. V. Arnold, who formerly published the *Daily Hotel Journal* here. Last week every employing printer in the city received a circular from this new company, soliciting their patronage for all kinds of photo, zinc etching, wood engraving and all sorts of process work, and, as an item showing how cheap the new concern will do all kinds of work, offers to print "ten thousand noteheds for ten dollars, the same class of work costing \$2.25 per thousand from other printers." Surely, the printers of this city should rise up en masse and take their orders to this company of hotel-proprietor-printers. A pertinent inquiry comes to my mind now: which of these hotels will be the headquarters and banquet hall of the National Typothetæ when it meets here next fall? The above office, needless to say, is not a union office.

The firm of Zinsle & Co., which recently went into the hands of a receiver, has made arrangements with their creditors whereby they are enabled to continue business with the receivership lifted. Of their old indebtedness, they are to pay 12 $\frac{1}{2}$  per cent every three months, the whole to be paid up inside of two years.

Pat Tracey, formerly foreman of the Elm Street Printing Company, who lost a leg several years ago and was unable to secure employment as a pressman, about a year ago started a pressroom for doing presswork exclusively. He put in only one press at the time as an experiment, and has since added two more, and has now about all the work he can do for the three.

It is rumored that there will be a dissolution of partnership in one of our large offices about the first of the year, a large publishing company buying the retiring partners' interest.

The union here believes in printers' ink, as its bills for printing during October amounted to over one hundred dollars.

G. J. Pluckebaum, late foreman for the Sixth Street Printing Company, has resigned his position in that office and gone into the grocery business, in the West End.

George W. Bateman has had another disagreement with Earhart & Richardson, and is no longer editor of the *Superior Printer*. By the way, the great book on colors, which was to be issued by the latter gentlemen on the first of September, has as yet failed to make its appearance. Hurry up, E. & R., or we will all be dead before your work comes out.

Charles A. Kennedy, lately foreman of the bindery of the Ohio Valley Press, has started a ruling and binding establishment at 160 Main street. Charley is a good workman, and we hope will succeed in his new venture.

John R. McLean, of the *Enquirer*, has been putting up a building adjoining the present composing room of that paper, which will be finished this week. The new building is joined to the old, and will contain additions to the pressroom, mailing room and composing room. A concrete floor will divide the pressroom and the mailing room immediately above, thereby preventing fire going above the pressroom. It is said that fifteen extra cases will be put on as soon as everything in the new structure is finished.

It is not often that proprietors of printing offices are caught at disreputable tricks, or attempting to take advantage of their customers' work, but I heard of a case this week that simply "knocks the persimmons." A certain wood engraver took a number of cuts to an office here, and ordered a number of specimen sheets printed, which he intended to send out to business

men as an advertisement of his business. After waiting about ten days for some tidings of the work, he went to the office, and, asking for the proprietor, was told by one of the office hands that that gentleman was out, but to go upstairs and see the foreman about his work. The foreman was busy, and told the gentleman to sit down at his desk for a few minutes and he would be at leisure. He did so, and you can imagine his surprise when he saw on the desk a sheet containing every one of his cuts, with the advertisement of "Blank & Co., Designers, Art Printers and Engravers," over them. Every imprint of the original engraver had been cut out, so as to lead the people to believe that the cuts were specimens of the printers' work. The air was blue in that composing room for awhile. The engraver demanded his cuts, and got them, and he then compelled the firm to cut up, in his presence, every sheet they had printed—some fifteen hundred. They had evidently intended to send out some specimen sheets themselves, and no doubt thought this would be a good way to obtain some fine cuts without going to the trouble of engraving them. Further comment is unnecessary. SCRIBE.

From Our Special Correspondent.

#### OUR NEW ZEALAND LETTER.

To the Editor:

WELLINGTON, October 29, 1890.

Work throughout our colony during the past month has been fairly brisk owing to the would-be members of our new parliament being on the stump, preparing for the general elections which take place some time in November. The great feature about the coming elections is the large number of labor candidates, nearly every constituency putting forward its workingman's candidate, but our ranks are so disorganized that I am afraid very few of these specialists will be found at the head of the poll.

Shortly after 2 A.M. on Wednesday, the 8th inst., a fire broke out in the old government printing office, resulting in its total destruction, with its contents. The government estimates the loss at £20,000.

No clue has been discovered to the origin of the fire, the jury at the inquest returning an open verdict. The southern wing of the building was occupied by the survey department, which loses a quantity of valuable lithographic and photographic plant, etc. The chief lithographer informs me that in stones alone they have lost 600 in number, or a total weight of fifty-two tons, which at a cost of 3d. (6 cents) per pound brings up a good sum. The stones were so split by the fire that they are now doing duty as road metal. The customs department lost some instruments, and had a number of registers either charred or utterly destroyed. Among the stock kept in the building by the government printer were over a thousand copies each of Mr. White's "Maori History of New Zealand" and Sir George Grey's "Polynesian Mythology," reports of the early parliamentary debates, some forty cases of printing paper and other material. The loss to this department is estimated at nearly £4,000. The treasury lost a great number of volumes of vouchers.

The first public observance of the eight-hour system took place in this colony on Tuesday last, the 28th inst., when high day and holiday was held under the title of "Demonstration." This day has been set apart by the government every year in commemoration of the eight-hour system, and on Tuesday, the day of its inauguration, the carnival was to a large extent spoiled through the action of the Employer's Association, which refused to recognize the day by closing, as retaliation toward labor on account of the strike. Nevertheless, the show in all the centers exceeded expectation, and next year's show is being looked forward to with great satisfaction, for it is hoped there will not then be any cause for a split between the two parties. In Wellington special interest was attached to the day, owing to the claim that eight hours as a day's work was first practiced in this city, and a presentation before a large crowd was made to the man who instituted the rule, Mr. Samuel Duncan Parnell, who is a resident of Wellington. TOM L. MILLS.

#### VERMONT NOTES.

To the Editor:

SPRINGFIELD, Vt., December 10, 1890.

The *Household*, the oldest as well as one of the best home magazines in the country, has been sold by George E. Crowell, of Brattleboro, to Pettingill and Hartshorn, of Boston, and it will be moved there as soon as the arrangements can be effected. Mr. Pettingill is the well-known advertising agent, and Mr. Hartshorn is a son-in-law of Daniel Ford, owner of the *Youth's Companion*. The *Household* was founded in 1868 by Mr. Crowell and Daniel L. Miliken, now a representative in the Massachusetts legislature from Malden. For a few months they conducted the business jointly, when Miliken sold his share to Crowell for 33,333 yearly subscriptions, which Crowell was to procure. For years he struggled to do it before his business was fairly on a paying basis. Finally, after five years of battling, he accomplished his purpose and achieved success. Since then the growth of the magazine has been steady, though not partaking in any degree of the boom nature. Its monthly circulation is now 80,000 copies, which go to every civilized country in the world. Mr. Crowell has done much for Brattleboro, and only retires from business because forced to do so by ill health. The removal of the business will be a serious loss to Brattleboro industries.

The *Teachers' Journal*, of Springfield, is one of the youngest as well as one of the most promising journalistic enterprises in the state. The first number was issued last April, and it now has a circulation of wide extent, going into nearly every town in its own state and being scattered in many states of the West. Changes are contemplated which will place it in the front rank of educational publications of New England. It is the only paper of its class in Vermont, and has met with a cordial reception from teachers everywhere.

The *Rutland Herald* has recently put in a new Cox web duplex perfecting press, which has the capacity of turning off its entire daily edition in an hour or two. It is much the best equipped paper in the state and has bounded forward with remarkable strides since its new management took hold a year or two ago. It was formerly edited by Col. Albert Clark, the present secretary of the Home Market Club, of Boston. Though one of the best newspaper men in New England, he did not make one-half so good a paper as the present editor, Robert A. Perkins, is building up. The *Herald* has been engaged in telling the state some truth about certain measures of reform which are deemed necessary by the best thought of the times. It has made some enemies by its work and hosts of friends.

The *Rutland Evening Telegram* is now issued from the *Herald* office, presumably with the intention of keeping any young man out who might think the famous Marble City a good place to win fame and fortune in the publication of an evening paper.

Among the publishers of the state, none have achieved a more pronounced success than F. W. Stiles, of Springfield, editor and proprietor of the *Reporter*, and one of the best equipped job offices in Vermont for general country work. In 1870 he began business with a Novelty press and one font of type. Now he owns all this and is manager and part owner of the *New England City (Ga.) Record*. He employs five compositors all the time besides himself, and some of the time more than that. This, in a town of less than 3,000 inhabitants, is a large business. As a local newspaper the *Reporter* is hard to equal. All his success has been carved out by his own unaided exertions, and is well merited.

W. S. S. Buck has started a monthly paper at West Randolph which is to be known as the *Young American*, which will contain high-class matter similar to that in the *Youth's Companion*.

There is soon to be a change in the management of the *Burlington Free Press*. Joseph Auld, the present business manager, will retire and assume the management of the Rapid Printing Company, of New York. Mr. Howe, of Boston, a brother-in-law of Mr. Auld, takes his place in the *Free Press* office.

The *Londonderry Sifter* recently celebrated its seventh birthday by coming out with all-at-home print. The *Sifter* has seen some hard times, and because of its outspoken fearlessness several

attempts have been made to suppress it and the editor has twice been arrested and jailed for libel. The people, however, have always promptly rallied to his support, and now the *Sifter* is a voice in state affairs which has more influence than its enemies are willing to acknowledge. The professional politicians are opposed to it but the masses like it and believe in it.

The Bellows Falls *Times* has recently been sold to A. W. Emerson and David Plummer, of Lakewood, New Jersey. Mr. Emerson, a former employé of the office, is to be editor, and Mr. Plummer is only silent partner, presumably furnishing the necessary capital. Mr. Allis, the seller, is well-known in newspaper circles in this state, having been in the profession here for about fifteen years in different places. Having made his pile, he retires to make room for some one else to get rich.

The job printing business of the state was never better than now. More and more each year the people, as a whole, are having printing done. More and more the business man, the professional man, even the farmer, is learning the value of printers' ink as an advertising medium and as a means of making his business known. Nearly every one has business noteheads and envelopes now, and if the government would go out of the business the printer would fare sumptuously on the proceeds of these alone in some parts of our state. Sooner or later the artistic methods of printing will be better understood among even our second rate men, and competition will make the work so much cheaper that there will be a much larger demand. Then will the printer reap a harvest. It is largely in the hands of the trade whether the work is done soon or late. If all would do as well as they could, people would be better satisfied and have more work done. Too much slovenly work ruins any business, but none so much as the printers' trade.

B. H. ALLBEE.

#### FROM SAN FRANCISCO.

*To the Editor:* SAN FRANCISCO, Cal., December 4, 1890.

During the past month and for several weeks preceding business of all kinds has been very active. This state of affairs can be accounted for, to a large degree, by the increase of the amount of money in circulation, resulting from the enormous additional fruit shipments to the East this year. For the first ten months of 1890 these shipments figured up 202,744,440 pounds, an increase of over 70,000,000 pounds during the same period in 1889.

The printing trade has reaped the profits of the good season, and the year's business will average up more than that for some time past. Two things especially contributed to the increase in trade—the celebration of the Native Sons of the Golden West and the recent election. The new division of the election districts into precincts, increasing the number about one-half, required the printing of additional precinct registers, and \$18,000 was received for this work, of which all the leading printing houses received a share. The firm which secured the contract divided the presswork among the different establishments in proportion to their size, the great amount of work and the shortness in the amount of time allowed for its accomplishment making it impossible for any one person or firm to perform it and rendering its division a necessity. There being practically no competition, the prices received for the work are accordingly good.

The report of the appraisers of the estate of the late John D. Yost, president of the Typothetæ of San Francisco at the time of his death, was lately filed in the probate court, placing its value at \$196,200. The principal items included in the inventory are an undivided one-third interest in the assets and business of H. S. Crocker & Co., in this city, appraised at \$125,000; a one-fourth interest in the business of the same firm at Sacramento, appraised at \$25,000, and the balance in real estate and stock in various corporations.

At the last meeting of the San Francisco Typographical Union, held November 30, ten new members and four apprentices were elected. Thirteen new applications for membership were received and placed on file, to be balloted on at the next regular meeting. A committee of two was appointed to revise the constitution and

by-laws of the union. Action was taken in regard to passing rules for the measurement of type below the standard by instructing the executive committee to draw up a plan to equalize its measurement.

The constitution of the "Printers', Pressmen's, Bookbinders' and Electrotypers' Alliance" was indorsed by the typographical union. This corporation has now been sanctioned by all the unions and will elect permanent officers at the meeting called for December 3. The temporary officers are: Chairman, Mr. Marsden, a bookbinder, and secretary, J. J. McDaid, the secretary of the typographical union, both of which appointments will no doubt be made permanent.

A recent decision in reference to boycotting will probably prove of interest to printers. In the case of Messrs. McClatcheys, proprietors of the Sacramento *Bee* vs. the Federated Trades and the Typographical Union, a decision was rendered November 19 which held that boycotting was against the law, and granted the plaintiffs' motion for a temporary injunction to restrain the defendants from boycotting the paper to its injury. The suit was for a perpetual injunction. The judge only decided the law in the case, the defendants having admitted the statements of the plaintiffs' attorneys for the purpose of getting the matter decided. The facts of the case will now be presented so that it may be determined whether the plaintiffs are entitled to a permanent injunction. The printers are determined to appeal to the Supreme Court, if the case be decided against them. The case involves the legality of the boycott, and as it is the first case of the kind brought to an issue on this coast, the decision was looked forward to with general interest. In the decision, Judge Armstrong states that "the defendants claim the right to speak, write or print what they will under the state constitution, but the same section says that they are responsible for the abuse of that right. The defendants are insolvent and cannot pay damages. If they cannot be restrained, the plaintiffs are not guaranteed the right of acquiring, possessing and protecting their property guaranteed by the constitution. If plaintiffs have no redress, then there is no security for property and rights."

The Typothetæ of San Francisco are making preparations for their annual banquet, which is to take place on January 17. The next regular meeting of this body will be held on Wednesday evening, December 10.

There is a demand in this section for good cylinder pressmen. Compositors are abundant; in fact, there are too many around, and good ones at that.

Walter N. Brunt, of Brunt & Co., makes this complaint. He has recently put in one of the largest size Cottrell cylinder presses and had great difficulty in securing a good pressman. This firm are doing a rushing business, devoting their chief attention to fine programmes, invitations, menus and engraving and copperplate work.

C. A. Murdock & Co. are executing some excellent work on calendars and catalogues. During the past month four finely printed books have been turned out by this firm. The artistic work on these publications places them in the front rank of fine printing. "Borrowings," bound in half cloth and fancy paper, is the most artistic, and an edition of 3,000 was exhausted in a very short time. Another edition is now in press. "Rose Ashes," a volume of California poems, by Carrie Stevens Walter; "Life in California," a reprint of a scarce and valuable book relating to early times in this state, by Alfred Robinson, and "The Romance of Swedenborg's Life," by Anna Cronjhelm Wallberg, are all deserving of much favorable comment.

An artistic publication that is attracting much favorable notice both here and in the East is "Yosemite," illustrated in colors, published by H. S. Crocker & Co., of this city. The work consists of thirteen colored lithographic views of the Yosemite Valley and makes a large size parlor book, being 12 by 16 inches, and issued in three bindings—full morocco, wine color, half undressed kid, brown or light color, and full cloth, with fancy paper finish. The firm claim to have had this work in course of publication for the past two years, and have expended a large amount in payment of services to water and oil landscape artists, from whose sketches

the views are taken. Each subject is prefaced by a sheet of French tissue, with the title of the picture and a descriptive poem. Each picture is followed by a page of reading matter, with an initial letter and tailpiece, thus adding twenty-six more views to the work. There are seventeen colors to each plate, making 221 lithographic stones to the thirteen plates. An edition of 2,000 was printed, after which the stones were destroyed, the firm not being able to afford the great expense attached to keeping the same in case of needing them for the printing of another edition.

E. P.

#### FROM WASHINGTON.

To the Editor : WASHINGTON, D. C., December 4, 1890.

We do not feel like offering any apology for not appearing in print in your last number of THE INLAND PRINTER, but will promise your readers that such a mishap will not be repeated, if it is in our power to prevent it.

#### GOVERNMENT PRINTING OFFICE NOTES.

If our memory serves us properly, we mentioned in our October letter a few facts regarding the adjournment of the Fifty-first congress. Now, we feel as though we were compelled to speak briefly of the convention of congress, which took place on Monday last. This event was the cause of another excitement in the *Congressional Record* rooms at the government printing office. Orders were given on the preceding Saturday for each compositor to have all unnecessary "pi" and other "trash" cleaned up before Monday night. This resulted in a general cleaning up from one end of this room to the other. Thus far very few new faces are observed on the *Record*, most all of the old hands being retained. The bills are yet quite small, but good money is looked for ere long. The "boys" anticipate a "hard session," and from the fact that congress will adjourn on March 4, and that a tremendous amount of business is expected to be transacted during that time, we believe their anticipations are about true. During the vacation of congress the *Record* force have been engaged at day work, and it will prove a great change to them, for a time, to settle down to hard nightwork.

Foreman Aven Pearson and Assistant Foreman William Hickman still hold the reins in the *Record* room, and anticipate a hard struggle until March 4.

Messrs. Ed Burch, Joe Coston, Lincoln Kent and O. Wilson, who were recently temporarily transferred to the specification room, have returned to their old love, and will hold their "cases" on the *Record*.

Messrs. William Lewis and R. Wallace, of the document room, seem pretty well satisfied with their new appointments.

Thanksgiving Day was observed in this city by the craft in general; the doors of the government printing office were closed, and most down town offices also ceased operations. The day was a delightful one, and printers enjoyed themselves at theatrical matinées, football games, and otherwise having a good time. They resumed work on the following day, with pleasant anticipations of Christmas and New Year's holidays, which are close at hand. If it were not for these few holidays, they would be compelled to work a large number of employés at the government printing office, whose presence are invariably required during working hours. Hurry along "dear old Kris."

On Thursday night of last week an informal supper was given under the auspices of a committee of Printing Pressmen's Union, No. 1, subordinate to the International Printing Pressmen's Union of North America, as a compliment to the committee of the union. Nearly every member of the union was in attendance. The supper was a very enjoyable event, and the union man was very abundantly provided for. Toasts were answered by quite a number of the members.

The employés of the government printing office have been making lots of holiday money recently, by means of working until nine o'clock at night. At present that office has a large quantity of "rush" work on hand and was compelled to extend its working hours for a time in order to execute standing contracts. It seems

pretty hard for those employés who go to work at eight o'clock to be compelled to remain at their labors until nine o'clock, with but little or no intermission. Especially is this barbarous to the ladies of the office, who are obliged to remain just the same as their sterner fellow-workmen. Both the treasury and state, war and navy branches of the government printing office are doing night work also. It is rumored that the present state of affairs will continue for some time yet, but it is to be hoped that the new government printing office will be able to do away with this annoyance, and secure sufficient employés to be able to perform the work by the light of day.

Notwithstanding strong opposition, Chairman Joseph Cross was reëlected to that position on the *Record* Monday night, and we can safely say that "Joe" is the right man in the right place. We congratulate him on his popularity.

#### DOWN TOWN NOTES.

The *Sunday Herald* still continues its usual boom, and today that paper is more valuable than it has been in years past. Messrs. Hennessey and Soule are both thorough business men, and as proprietors of the *Herald* are bound to place before our citizens the most readable *Sunday* issue here.

The *Morning Post*, with its many additional attractions (mechanical and otherwise), has the lead in newspaperdom here, being the only morning paper published in the city of Washington. Its *Sunday* edition is always brimful of news, both literary and otherwise, and its circulation is daily increasing. This paper gives out more work to the compositor than any other city paper. At present the sublist is away up into the thirties.

The *Evening Star*, which claims to be the best advertising medium in the city, takes the lead in our evening papers, its only opponent, however, being the *Washington Critic*, which seems to be struggling along in the "same old rut" as of years gone by.

Since the *Sunday Gazette* has changed hands, and also been recognized by No. 101, we feel somewhat interested in its success. The last *Sunday's* edition indicated future prosperity, as its columns were full of good, paying "ads," and lots of spicy reading matter.

Little or nothing is seen or heard of the *Sunday Hatchet* or *Chronicle* any more. The proprietors of both journals failed about a year ago to comply with the easy demands of No. 101, and consequently have since been ignored by that organization. The editor of the latter, we learn, has been on the sick list for a number of weeks, and in an editorial in last *Sunday's* number he gracefully apologizes to his "intelligent" readers for the little attention he has lately given them by way of news, etc. We believe if this journal could by any means be placed into the hands of a moneyed syndicate, it would yet resume its former standing as the "leading newspaper of Washington." Its origin was the result of the hard labor of the late Col. John W. Forney, at the suggestion of our martyred President Lincoln.

Book and job printing is beginning to boom. Legal work at Judd & Detwiler's was the result of calling back a number of old prints to that establishment. Gibson Bros. are also pretty well supplied with work, and have their office well filled with compositors.

Byron Adams has moved his popular book and job office to a more central portion of the city, and is now prepared to do work in his line that will compare creditably with any done elsewhere in this or larger cities. Mr. Adams has a grand display of his ability as an artist in his large show windows in front of his establishment.

The old, dilapidated structure owned by the late William Moore has been lately replaced with a large pressed-brick business house, and his book and job printing office is being carried on in a more modern style. The deceased was a warm friend of the craft, and when it was in his power to assist them in any way he took great pleasure in so doing.

Messrs. DuBois, proprietors of the *Inventive Age*, still continue to make that bi-weekly journal spicy and interesting. They anticipate moving their office to more commodious apartments

soon, after which there will be some marked improvements in the paper's general make-up.

We are pleased to learn that Al. Thompson, chairman of the *National Tribune* office, has so far recuperated as to be able to resume his labors at that office.

EM DASH.

#### FROM BALTIMORE.

To the Editor : BALTIMORE, Md., December 4, 1890.

Just to what extent THE INLAND PRINTER circulates in this vicinity your correspondent may not determine, but if one might judge from the fact that it is seen about everywhere here in the offices of the typefounders and well-regulated printing establishments, we should say that it is a regular monthly visitor to quite a large number of our citizens who engage in the "art preservative" and kindred vocations.

The business disagreement between Isaac Friedenwald and William Deutsch, printers, lithographers and engravers, has been settled, Mr. Deutsch starting business on his own account, while Mr. Friedenwald remains at the old stand on Paca street.

The new afternoon paper, the *World*, seems to be improving as a chronicler of local news. It is sold for a penny, and bids fair, I think, to become a formidable rival of the *Evening News*, a 2-cent sheet that has enjoyed a monopoly of afternoon journalism here for some years past.

Mr. A. A. Hill, failing to establish the *Globe* in this city, has left Baltimore, in quest of pastures new, perhaps. Should he not strike fields more green than he found in this locality, his hard luck ought to be a fit subject for commiseration. In this connection, I will relate an incident that has not heretofore been made public and is known to but few. After the *World* people had bought the *Globe* plant, they got out one edition in the form and name of the latter, and printed therein an editorial purporting to be a sort of valedictory from the late editor. In this supposed utterance of Mr. Hill that gentleman was made to say as follows: "After a brief, but somewhat troubled and exciting career, the *Globe* has decided to withdraw from the field of Baltimore journalism. During its life its proprietors endeavored to give to the public a readable paper, but its trouble with the union printers made it almost impossible to progress. Some \$20,000 were lost in the few months of the *Globe's* life, and there seemed no hope of extending its circulation or general business interest beyond a confined territory."

The above was given to the public in the (supposed) last issue of the *Globe* as coming from its editor; but Mr. Hill never wrote nor sanctioned one line of it. This will be news to most of your readers in this section. It is reliable. It may be further written down that Editor Hill lost but about \$2,000 in his ill-starred newspaper venture, not \$20,000, as falsely stated.

But Baltimore Typographical Union made the most of this fake editorial by having it inserted in all the dailies as a sort of advertisement of its victory over the publishers of the *Globe*. To this was supplemented a card in which the union extended its heartfelt thanks to the public generally for favors shown during the fight, and to organized labor its gratitude for its coöperation.

One evening last week, in honor of the victory over the *Globe*, a supper was given by the boycott committee of the union at the old Rose House, on Gay street. A number of invitations were extended to parties of other cities, but of these only Mr. George Ramsey, of Washington, editor of the late *Craftsman*, was present. James J. Dailey, of Philadelphia, Charles E. Hay and August Donath, of Washington, sent regrets.

Gen. Felix Agnus, business manager of the *American*, who presented a fine saddle horse to the Masonic fair, received the largest number of the votes cast by visitors to the fair as to a question to determine, "Who is the most popular newspaper man in Baltimore?"

One after another of the leading daily journals of the country has broken away from a once strict rule of allowing no advertisement to appear in their columns with even so much as one line of job type. The *Herald*, of New York, sometime since succumbed

to the pressure of the display advertiser; and now the staid *Ledger*, of Philadelphia, has given way in the same direction. Today, the Baltimore *Sun* alone claims the proud distinction of being the only paper in the country that adheres strictly to a rule established over fifty years ago, of allowing nothing over a two-line display in its advertising columns.

I have always fancied that the best standard of judging the largest circulation out of a number of daily papers in a given locality, was the greatest extent of the "want" and "for sale" columns. This may be a safe criterion where such ads are paid for at regular rates, but not otherwise, as is the case with the *Evening World*, of this city. This journal prints every day somewhere about five columns of such advertisements free of charge. This gratuitous mode of giving something for nothing is done in order to attract the masses and thereby gradually build up a large circulation. This is regarded by some as of doubtful utility.

Mr. James W. Cherry, a compositor on the *Sun* for the last twenty years, died here a few days ago in his sixty-third year. He came to this city from Romney, West Virginia.

President Boyle, of the Baltimore Typothetæ, takes a warm interest in the new organization, and hints at getting up a banquet in the near future in order to draw together the entire corps of master printers of this city. There is nothing like a good "set out" to bring about good fellowship among the craft and a fair exchange of sentiment. Good luck to the banquet, Mr. Boyle!

A familiar cry to our citizens in all sections of the city on Saturdays is that made by hundreds of newsboys offering for sale a weekly sheet known hereabouts as the *Pall Mall Gazette*. The "Scavenger" would be a more appropriate name for this sheet, for its columns reek with the filth of the slums, of the divorce courts and of nastiness generally. It has enjoyed a most prosperous existence for four years; that is to say, its publisher, who keeps his name off his paper, has made considerable money out of its sales. Advertisers, of course, have no use for it. It may sound strange to some to say that its circulation is almost as large as all the rest of the secular weeklies put together, and yet such is the deplorable fact. To the credit, however, of the more self-respecting newsdealers, it may be stated that such as these have refused of late to handle the unclean thing.

Book and job work is now quite brisk, the near approach of the holidays giving an impetus to this branch of trade.

There is little of note stirring that might be said to be of interest to the craft.

Wishing all connected with THE INLAND PRINTER a merry Christmas, a happy New Year and many returns, I remain

FIDELITIES.

#### OUR AUSTRALIAN LETTER.

To the Editor : SYDNEY, October 21, 1890.

The most exciting incident connected with our trade during the past month has been one caused by the fire demon.

On October 2, about 2 A. M., a fire broke out on the premises occupied by the firm of Gibbs, Shallard & Co., printers, etc. (publishers of the *Australian Journal*—monthly—and the *Guide to Sydney and Suburbs*), Pitt street, Sydney. In a little over two hours the flames had extended over an enormous area, and the largest fire that has ever occurred in Australia was burning with a fury appalling to the onlookers. The forenoon had well advanced before the firemen felt that they had the flames under control; but from the time of its breaking out, the efforts of the men could only be devoted to preventing its spreading, with such rapidity did the fire extend. The area desolated extended over 11,000 square yards, or about 2¼ acres. The damage is estimated to amount to £1,000,000. No clue has at present been discovered regarding the origin of the fire. The utmost care appears to have been exercised at Gibbs, Shallard & Co's warehouse since the previous fire, and no one connected with the establishment can offer the slightest opinion as to the cause of the outbreak. The firemen, under Superintendent Bear, worked well. In addition to the metropolitan brigade all the suburban volunteer fire companies were represented. Seven men were injured, and were

visited by the governor at the hospital. Their injuries were fortunately not of a serious character. The water supply, as usual, was unequal to the contest; had there been any wind, it is impossible to conceive where the fire would have stopped. For several days after the disaster it was necessary to play a hose upon the smoldering ruins.

Gibbs, Shallard & Co. are unfortunate in the matter of fires. No less than six have occurred on their premises since 1874, the most serious being that of last year, when damage was done to the amount of £8,000. There is some similarity between the latter and this week's disastrous outbreak. Both began near the same spot.

The firm estimates its loss at £22,000, and has insurance covering £12,750.

At a meeting of the New South Wales Typographical Association, held in the rooms, Royal Arcade, Saturday evening, October 11, the following resolution was unanimously passed:

That the board of management, on behalf of the members of the New South Wales Typographical Association, hereby express their deep sympathy with Mr. J. B. Gibbs in his great misfortune through the destruction of his premises and plant by fire on the morning of October 2, 1890; and while expressing their sincere regret, hope that the vitality which has hitherto characterized him will again place him in that position which he has so ably and honorably filled as one of the foremost master printers of Australia.

A similar motion was also carried condoling with the members of the craft who had lost their situations through the same calamity and complimenting them on their consistent adherence to the union.

#### THE STATE OF TRADE.

All over our continent there has been a certain amount of slackness, every society recording men walking about, but the general state of the trade has been swallowed up in the absorbing interest attached to what is now called "The Great Strike." In the support of these strikers the typos have proved themselves the leaders both morally and financially. There has been a movement lately in both the Sydney and Melbourne societies to absorb into society ranks all the offices which do not as yet own allegiance. The Melbourne society is at present purging its list of "fair" and "unfair" offices, whilst the Sydney society has appointed a strong committee to go the rounds of the offices, and from all accounts they are meeting with such success that it is expected that when they bring up their report the possibility will be shown of unionizing every printing office in our city. So mote it be! The idea of calling out compositors, which I alluded to in my last, spread to the different centers, but it has been withdrawn, it being generally admitted that no good can be done to the cause of labor, or any assistance rendered to the strike by our coming out. This period of the year is looked upon in Victoria as a busy one, but trade is reported to be at a standstill.

#### VICTORIAN MASTER PRINTERS' ASSOCIATION.

One of the most flourishing employers' associations in our colonies is the Victorian Master Printers' Association, which is a body which has worked very harmoniously with the Melbourne Typographical Association. This association held their annual meeting in Melbourne at the end of last month, Mr. S. V. Winter being in the chair. In the report mention was made of the good feeling existing between employer and employé, and then it goes on to enlarge upon lessons derivable from the strike, reference being made to the board of conciliation which the Melbourne chamber of commerce proposes to put up, upon which all trades are to sit, and discuss grievances from every branch of industry, and thereby, in the multitude of counsel, it is hoped that strikes will become a thing of the past. "With reference to the agitation at present going on between the employés and their employers," says the report, "we confidently hope that a better basis may be established at the close of the struggle, whereby differences arising in any individual trade may be settled without the entire community being convulsed as at present. Akin to this subject, our association was asked during the year to state whether we would sign the rules of the board of conciliation. To answer that question, it was necessary that we should know whether the Melbourne Typographical Society, representing the employés, was prepared to

sign and adopt them. Your honorable secretary wrote the secretary of that body asking whether they had signed, or intended to sign the rules of the board of conciliation, and received a reply stating that they had not signed and had no intention of doing so. There was, therefore, no alternative but for our association to decline to sign until the Melbourne Typographical Society were prepared to do likewise. It is a matter for regret that this step is not seen by that body to be advisable, as it undoubtedly would be in the interest of both employer and employed that some such settled basis of reference should be available, and your committee hope that ere long this will be the recognized and established court of appeal."

Upon a proposition to discuss the position of the trade (which is interpreted by some to mean a reduction of wages) the association resolved that the time was not yet ripe to reconsider the working conditions of the trade. Some of these masters hold the opinion that the newly established employers' union will be of great assistance should it become necessary to enforce a reduction.

The election of officers resulted as follows: President, Mr. Alexander McKinley; vice-president, Mr. Chas. Edgerton (retiring secretary); secretary, Mr. A. Stillwell; treasurer, Mr. Andrew Jack (re-elected); committee, Messrs. Walker, Asher, Püttmann, Troedel, and H. Franks. Votes of thanks were passed to the retiring officers, the health and prosperity of the new president drunk, the annual dinner fixed for October 30, and the meeting terminated.

AMICUS.

#### FROM PITTSBURGH.

To the Editor:

PITTSBURGH, Pa., December 9, 1890.

Nothing of great importance has transpired in typographical circles this month. The new building of the *Dispatch* is progressing rapidly, and will no doubt be occupied within a very short time.

The *Sun*, which I have spoken of in my letters for some months, has not yet risen above the horizon of the newspaper business. I have been informed by a future editorial writer on this paper that he has no information as to when the paper will issue its first edition. Strange it is that a building has been remodeled, and still the paper does not materialize. A "Constant Reader" of one of the papers asked when the *Sun* will be issued, and is answered that it is doubtful whether the *Sun* will ever be issued. And that has got to be the general opinion.

Anything in connection with books will probably interest your readers, and that is why I narrate the following proposition. Some weeks ago Mr. Henry Phipps, one of Allegheny's prominent citizens and one who has conferred many benefits on the city, offered to present the Carnegie library with one thousand books and also pay the expense of keeping the library open on Sundays. The books were accepted by the council, but owing to an objection made by certain ministers, the acceptance of the second offer was held over. It is more than likely that this offer will be accepted, as the running of the library costs considerable money.

MEMO.

#### NOTES FROM DETROIT.

To the Editor:

DETROIT, Mich., December 9, 1890.

On Thanksgiving eve, about midnight, fire was discovered in the pressroom of the *Evening Sun*. Before it was brought under control quite a little damage was done to the press and room. The composing room was not damaged. The loss is estimated at over \$10,000. The building has of late become too small and the paper will soon occupy quarters further down town.

The Peninsular Printing Company has added a four-roller combination two-revolution Campbell press to their pressroom.

The Nelson Printing Company, which has been located on Jefferson and Woodward avenues, has been bought by Messrs. Winn & Hammond.

The *Abend Post*, the leading German daily, has moved to its handsome new building on Miami avenue. The paper has been changed to eight pages and is in an entire new dress. It is printed

on a web perfecting press. The composing room is said to be one of the best lighted and furnished rooms in the city.

The William Graham Printing Company, which has for several years been located on Bates street, has been compelled to seek larger quarters for their growing business. They have moved opposite their old place, where they have doubled their room.

A movement is on foot looking to the celebration of Benjamin Franklin's birthday next month by the union printers of this city. Up to the present time there are quite a number who favor such a celebration. A banquet has been suggested, and if celebrated at all that would be the most feasible.

The American Federation of Labor is at present in session in this city. They were welcomed to the state by Governor Luce in a happy speech, and to the city by Acting Mayor Griggs. A banquet will be tendered the delegates on Wednesday evening. For Thursday a large mass meeting has been arranged.

P. A. L.

#### ST. LOUIS NOTES.

The state of the printing business is not very good nor are the prospects very flattering just at this time. Many of the offices have been working short handed or short time. It is likely now that until the holidays there may be busy times. Owing to the great amount of work which was done just preceding election, the present dull time is more keenly felt.

The great talk among the members of Typographical Union No. 8 during the past week has been the victory the union gained in bringing the office of the *Star-Sayings* under their control, thus striking a very hard blow at the "fraternity." This now gives the union control of all the daily papers in the city, and the members are greatly elated over the result, as it has been gained only after a very long and hard struggle. At the last meeting a large majority of the force was initiated in a body, while the applications of many were laid over for consideration, and it is quite probable that some of them will be rejected.

Among the changes in location may be noted the removal of the firm of Claus & Barclay to the third floor of the Fagin building, opposite the postoffice, on Olive street, where they have a nice large office and well fitted up. This firm, although in the business only a few months, are enjoying a fine trade and are now contemplating adding a great deal of new type and additional presses to their plant.

The Buxton & Skinner Stationery Company has opened up a complete line of stationery and blank books in the Fagin building upon the first floor and they have a splendid location for obtaining local trade. It is becoming the custom of our larger printing and stationery houses to open branch houses upon the streets where is the most travel, and have their producing offices in other districts of the city where rent is not so high and where room is easier to obtain.

We hear it rumored that one of our printing offices will put in a complete photo-engraving plant about the beginning of the year. There seems to be a good opening for such an enterprise in this city.

The matter of publishing of the official printing of the city was finally settled by the courts a few weeks ago. The award was again made to the *Evening Call*, after the *Star-Sayings* had sworn out an injunction in which it was alleged that the *Call* did not possess the necessary amount of subscribers or circulation. The injunction being overruled and the bond being approved, the *Call* entered upon its contract.

Mr. Robert P. Studley, head of the well-known printing firm of R. P. Studley & Co., died on November 10, at his home at Webster Groves, Missouri, a suburb of this city. He was a prominent member of the St. Louis Typothetæ, and a delegation from that body attended the funeral upon the 12th, and accompanied the body to this city and then to Bellefontaine cemetery, where it was laid to rest. Mr. Studley was one of the oldest employing printers in the West, and the first steam lithograph press in the city was set up and run in his office. He was always upright and honest in his dealings and his loss is keenly felt in the

community. He had been in ill health for the past year and was sixty-four years of age at the time of his death.

We hear it from good authority that the son of one of our prominent typesetters is soon to take to himself a better half. No names are yet to be mentioned. In advance, however, we wish them happiness.

Our townsman, Mr. Richard Ennis, is not neglecting an opportunity to say something in favor of an international copyright bill, which he desires to see passed this coming session of congress. We hope such a bill will be passed.

Looking to the securing of a portion of the Mexican trade we notice that the Associated Furniture Manufacturers of this city have a large illustrated catalogue in press. In this line there has recently been formed a St. Louis Spanish Club, having two classes of members, those who are learning the Spanish language and merchants and dealers who thus secure the services of native Mexicans to translate letters and give advice upon matters pertaining to that country. There are also two monthly journals published in this city for the purpose of bringing the merchants of the two countries into closer business relations.

THE PRINCESS.

#### CHAPEL AND CHAPLAINS.

During the last century and at the commencement of this, the employés of each printing office, compositors and pressmen, formed among themselves in the office a little society, having its customs, rules and privileges, to which they gave the name of *chappelle*; the members were naturally called *chapelains*.

The chapel, notwithstanding its name, had nothing of a religious character; neither did it resemble the present societies for mutual aid and protection, as there was no occasion for such associations in that happy time, when copy was abundant and printers were wanting. It was simply a provisional society—gastronomic, organized with a view of providing funds for the festal observance of St. John's and St. Martin's day.

The only requirements for admission were the payment of a small sum on entering the office, not to exceed thirty sous, and about nine livres of the first wages received.

Independently of these two taxes which were obligatory upon all, the regulations specified other laws which admitted of observance, evasion or amendment.

The apprentice who began or finished his term, the confrère who married, the members who quarreled or joked too roughly, the one who forgot to put out his candle when he quitted the office at the close of the day, or even absented himself for a few moments, the one who played tricks, all were obliged to pay a fine, and a refusal involved the forfeiture of further rights.

The chaplains had another source of revenue in the raids which they made on the authors and patrons, as well as the manufacturers of paper, ink and other supplies. The publisher also donated to them three copies each of all works printed by them and known as *copies de chapelle*. By this they still further increased their treasury.

On St. John's and St. Martin's day a division of the funds was made among the members and the following day they commenced the fête, which was usually prolonged several days, leaving the forms empty and the presses silent. The employer or *bourgeois*, as he was then called, might storm or weep—nothing would avail; the chaplains were joyous and happy in the present, confident in the future, their only care—to amuse themselves in the best manner and for the longest time possible—*L'Intermédiaire des Imprimeurs*.

A FRENCH machine-builder is making paper pulleys for power transmission, based on the principle of the paper car-wheel. The pulleys have metal hubs and arms on which the soft paper mass is mounted and has been compressed. After drying, the paper pulley is heated in a bath of linseed-oil and resin to give it greater resistance against the influence of moisture. The pulleys are said to be very light and of low price, and to have given excellent results in practice.

THE COLUMBUS MONUMENT AT GENOA, ITALY.

## A "TIP" TO CHAPELS.

SOME SUGGESTIONS AS REGARDS OUR FUTURE CRAFTSMEN.

BY JOHN M. DOLLARD.

THE mechanical part of the printing industry in the United States, as near as can be estimated, consists of one hundred thousand employés, who are scattered at the printing and kindred trades, namely: compositors and job printers, pressmen, feeders, bookbinders, folders, electrotypers, stereotypers, engravers, etc.

The International Typographical Union embraces in its membership thirty thousand practical journeymen of that number, each member having served an apprenticeship of at least four years. The Typothetæ Union of employés (organized by the employers for the purpose of superseding the International Typographical Union), the employés of the country towns where no attempt at organization has as yet been made, with the thousands of boys and girls employed in large cities, make up the balance of the one hundred thousand.

The foremost question before the printing fraternity today is that of apprenticeship, and in the councils of the International Typographical Union it receives more consideration than any other subject, although, at the present writing, no satisfactory legislation has been agreed upon; even the mighty Typothetæ have taken recess from their "filberts and wine" long enough to agree that legislation is necessary in regard to the future "American printer."

There is no doubt in the minds of all practical managers of printing offices, foremen especially, and it has been demonstrated in all paying metropolitan offices throughout the country, that a man bearing a card of the International Typographical Union is, in almost every case, the most profitable man to employ. This passport is supposed to be a letter of recommendation from people who are responsible, stipulating that the bearer has all the practical qualifications of an experienced journeyman; has served a legitimate apprenticeship as such, and not only is supposed to possess all these merits, but be of good moral character as well.

Every well regulated office has, or should have, a "chapel," or organization of employés, with stringent rules, designed for the best interests of the employer as well as the employé. An office regulated under proper chapel rules means a large saving of material and time to the office, as well as the education of the men to systematic method and discipline, which means swift production. All chapels are open to employers for conference when desired, and nothing is more brotherly or religious than a meeting of the chapel when the "Silent Messenger" calls a member of the office (be he employer or employé), and to hear the eulogistic remembrances delivered by the associates of the departed. While our chapels are an aggregation of good points when properly regulated, they are, in the opinion of the writer, derelict in the matter that should be considered one of the cornerstones, in fact the keystone of our organization—that is the proper training of our future craftsmen, our apprentices. Our organization is the most progressive in existence among wage workers, as the building of the future home for disabled printers, and other leading legislation will testify; and the membership is becoming so great, that to keep the International organization card what it has been considered in the past, "the synonym of perfection," steps must be taken in regard to our apprentices.

The International Typographical Union stipulates that to turn out efficient workmen the number of apprentices must be limited, as it would be impossible to fill an office with boys and turn out journeymen of ability, so they are regulated fractionally, according to the number of "jours" employed. In the opinion of the writer, if we stipulate the number we should be held responsible for their efficiency. The chapel should have rules, and some constitutions stipulate that "the journeyman shall consider himself the tutor of the apprentice, and advance all the suggestions that he can see are necessary for the education of the apprentice."

A bad point in all offices, in regard to apprentices, is the keeping of the pupil, by the foreman, at some one thing that he has become proficient in, to the utter neglect of all other branches. If he has become valuable at one branch, he will become more so if given a chance at all, and that is one point that chapels should have strict rules upon.

The pressmen have a rule, and they are to be congratulated upon it, "that before an apprentice shall be admitted to membership he shall earn the prevailing scale at least three months, and as a result the members are sought after, being acknowledged "artists" in their line.

An apprentice starting out should be considered the pupil of the chapel, and should be followed up and kept in such a path by the foreman and "jours" that method and system should never slip his memory; and, after being instructed in all the degrees of apprenticeship, he neared the time to take the obligation of our organization, he should hold it in his memory as one of the events of his life, to step out in the world a practical man and an active member of the International Typographical Union.

The average boy, unless kept under submission, is sure to get careless, and what ambition he started out with will soon be lost. He will fall into "ruts" that will stick to him as a journeyman, and the product will be a mere machine without a spark of originality.

How many printers we meet today who, while good in a great many respects have not mastered the most simple rudiments, and as a consequence have "been queered" the first job they started on. Who is responsible for the printer who has not learned the proper manner to locate a form in the chase, adjust quoins and furniture, and the thousand simple preliminaries that the one year's apprentice should understand? The chapel he graduate from, of course.

The writer, while not believing in an indentured system of apprenticeship, advocates that some arrangement should be had by the parents of the pupil and the foreman, as well as the "father of the chapel"; the parents at home to see that he devotes some of his leisure time to study of works that deal with his future profession, and to keep in his memory that he is a pupil in a school where his graduation with honors means for him an honest and independent livelihood, and to be sought after for his accomplishments. An indentured system of apprenticeship, in our opinion, would be "looking backward," and not in keeping with our American rush and progression. A prominent printer of Chicago, now a proprietor, used to picture to the writer the beauty of the seven years indenture system, and explain how thoroughly he learned his trade, as he had been kept handling leads and slugs for two straight years! The apprentice of today with two years' experience does the work that was given to the "artist" of the office ten years ago—that is if properly influenced and trained.

The following is a case that came under the writer's observation in Chicago. A bright lad secured employment in one of the largest offices to learn the business. He was put at the menial occupations that fall to the lot of the beginner. He was just out of school and ambitious to master the "art preservative." He swept out, put leads and slugs away, kept the stones clear of débris, and for three months gave the best of satisfaction. His salary was increased, and in a short time he learned the "case," and could set a fair proof for a boy, and was considered what is known in base-ball circles as a "phenom." His parents were delighted, as he earned a good salary for his age and experience, and allowed him more privileges than were proper. He fell into bad company, got running nightly to dances, shows, etc., paid no attention to elevating his mind, and on the strength of his former success in the office he got the "big head." He imagined he was an expert in every sense, and demanded an increase in salary which was refused; he quit, secured positions in various offices, and at the end of three years applied for membership, members knowing him to be incompetent signing his application. He was admitted, and started out to secure work; he caught on, but was soon found to be incompetent by the various foremen, and secured work only in cases of rushes in business. He had in the meantime

got married and had a family dependent on him. Failure to secure a steady "sit" gave him all manner of imaginings of rings in the union "doing him up," and he soon "fell from grace" and "ratted." He has at present a steady job at ten dollars a week in a typothetæ office, surrounded by a class of men that are even inferior, as printers, to himself, and his prospects of ever mastering the trade are indeed slim.

If the chapel and the boy's parents had looked after him, insisted on him regarding his position as that of a pupil, spending part of his leisure time in study, the same as any other professional student, how different the result would be. His ambition would grow, and the result would be that he would be a credit to the organization and himself, and, instead of earning an apprentice's salary, he would be the recipient of a comfortable income, and appreciated by an organization that can point with pride to scores of members that have made enviable reputations as editors, statesmen, politicians, business men, and, in fact, in every profession and walk of life.

The writer does not wish to intrude upon your space, but ideas should be advanced before the next meeting of the International

#### THE POTTER FLAT-BED PERFECTING PRESS.

For some time past, says the *Paper World*, Messrs. Potter & Co. have been engaged in the perfection of a new press which they are now ready to offer patrons—the Potter Flat-bed Perfecting Press, the qualities and advantages of which will be gathered from the accompanying illustration, and the following specification of its peculiarities: In general the mechanical movements of this press are the same as those which have made the Potter two-revolution press such a decided success. The driving mechanism, the patent screw motion for controlling the perpendicular motion of the cylinder and regulating the impression are identical with those of the other press. Some of the special points of the press are worthy of specific description.

The first of these is the feeding and cutting device for roll feed. As will be seen in the engraving, the paper is taken from a roll at the end of the press and led into forwarding rollers, which in turn carry it between the cutting cylinders, thence through another pair of rollers, which have the now severed sheet under full control until it is seized by the grippers of the feeding cylinder. The

Typographical Union. Steps should be taken by all subordinate unions in regard to this momentous question. It is the pinnacle upon which our organization stands. Delegates should go to the next council with fixed ideas as regards the apprenticeship question. We are the senior organization, and as a result are followed by all. Ideas can be advanced and soon perfected by the International Typographical Union. A system of working cards should be issued to all apprentices; a lecture bureau should be elected by all unions, whose duty it should be to instruct the rising "typo" in the way he should go; in fact all members of our organization should give this question thought, and after the next meeting of the International Typographical Union our apprenticeship system should be invincible.

#### AN EXPENSIVE INTERROGATION MARK.

A well known Australian writer—a very bad penman—in mentioning the name of a certain lady in an article, said she was "renowned for her graciousness and charity." For "charity" the compositor read "chastity." The author, on seeing a proof, recognized at once that there was an error; but, unable to remember the word he had used in place of "chastity," marked the proof with what is called a "query"—?—to refer the printer to his manuscript. When the article appeared, the writer—who had intended to pay a pretty compliment to the lady—was surprised to read that she was "renowned for her graciousness and chastity (?)." Verdict for plaintiff, £2,500 sterling, with costs.

MEXICO'S literary fecundity is really marvelous. A recently published bibliography records no less than 12,000 volumes by 3,000 native Mexican authors. The first book printed on this continent was published in Mexico.

cutting and feeding mechanism is fully covered by patents and is the only one by which sheets of various sizes can be cut and carried positively to the grippers without trusting to the uncertainty of a tape feed. This not only does away with the annoying tapes, but the cost of two feeders for each press can also be saved, as the machine feeds itself better and more certainly than it is possible for hand feeding to be done, saving, also, the loss of time and stock, which in most offices forms a considerable item. The change to a different sized sheet is easily and quickly made, all gears being plainly marked to correspond with a graduated scale on the frame. By this means, in connection with an adjustable carriage, and an index finger in connection with the cutting mechanism, the relative position of the cutting cylinder to the feeding cylinder, as affected by the varying sizes of the sheets, is easily determined and exactly adjusted.

Absolutely accurate register is insured. The registering segments on the cylinders not only engage with the usual racks on the type bed, but with each other at each revolution. There is also employed a recently patented device by which the cylinders are driven at all times in full gear, despite their rise and fall; in combination with which the patent cut-bed driving rack renders an imperfect register out of the question. The distribution is that of a four-roll two-revolution press, with rack, screw, table and cylindrical distribution, and is thus adequate for the best class of work.

The press is provided with a patented method of preventing offset, which is at the same time simple and exceedingly effective, dispensing with the offset sheet or movable tympan, and all complications connected with its operation. An adjustable fountain with a carrying roll supplies a mixture to the surface of the second printing cylinder, while a felt roller removes any

surplus which may have been put on, before the sheet reaches the cylinder.

It will be seen that the press is easy of access, convenient in use, certain in all its operations; while, with the established and enviable reputation of the builders, it is not necessary to say that it is thoroughly well made—in fact, no pains having been spared to make a printing machine which in its field should be profitable to the purchaser and creditable to the maker. It is put out in two sizes, the smaller of which has a bed 36 by 52 inches, taking a form up to 31 by 48, and cutting sheets from 26 to 36 inches. The larger has a bed 42 by 60, receiving a form 37 by 56, and cutting sheets from 28 to 40 inches.

We have thus presented the salient features of this invention, which, as being a positive step forward for an important class of printing machinery, will be received with interest by all who are concerned in the progress that is being made in the mechanical department of the greatest of all modern arts. Mr. Potter has been in the field where he is so valued a worker longer than any other man now in the business of press building, but it will be seen that with his able colaborers he does not propose to lag behind in the development of perfected printing machinery.

**SIZES OF BOOKS.**

The associated librarians of Great Britain in convention assembled, realizing that the familiar terms folio, quarto, octavo, duodecimo, etc., have ceased to possess any specific meaning, agreed to define the sizes of books as follows:

Size.	Abbreviations.	Size in inches.
Large folio.....	La. fol.....	Over 18
Folio.....	Fol.....	Below 18
Small folio.....	Sm. fol.....	Below 13
Large quarto.....	Large 4to.....	Below 15
Quarto.....	4to.....	Below 11
Small quarto.....	Sm. 4to.....	Below 8
Large octavo.....	La. 8vo.....	Below 11
Octavo.....	8vo.....	Below 9
Small octavo.....	Sm. 8vo.....	Below 8
Duodecimo.....	12mo.....	Below 8
Decimo octavo.....	18mo.....	Is 6
Minimo.....	Mo.....	Below 6

According to this scale, the size of the sheet and the number of times it is folded no longer determine the size of books. The foot-rule or yard-stick settles it. The height, and in the case of quartos the width, of the cover is measured, and according to the number of inches recorded the book receives its designation. This is by far the preferable way. Formerly nearly every paper-maker had his own standard sizes of sheets. The result was endless confusion in the nomenclature of sizes. Under this rule he can persist in them without confounding the bibliographer.—*Exchange.*

**YOUNG MAN! THIS IS FOR YOU.**

1. *Save a part of your weekly earnings, even if it be no more than a quarter dollar, and put your savings monthly in a savings bank.*
2. *Buy nothing until you can pay for it, and buy nothing that you do not need.*

A young man who has grit enough to follow these rules will have taken the first step upward to success in business. He may be compelled to wear a coat a year longer, even if it be unfashionable; he may have to live in a smaller house than some of his young acquaintances; his wife may not sparkle with diamonds nor be resplendent in silk or satin, just yet; his children may not be dressed as dolls or popinjays; his table may be plain but wholesome, and the whizz of the beer or champagne cork may never be heard in his dwelling; he may have to get along without the earliest fruit or vegetables; he may have to abjure the clubroom, the theater and the gambling hell, and to reverence the sabbath day and read and follow the precepts of the Bible instead; but he will be the better off in every way for this self-discipline. Yes, he may do all these without detriment to his manhood, or health, or character. True, empty-headed folk may sneer at him and

affect to pity him; but he will find that he has grown strong-hearted and brave enough to stand the laugh of the foolish. He has become an independent man. He never owes anybody, and so he is no man's slave. He has become master of himself, and a master of himself will become a leader among men, and prosperity will crown his every enterprise.

Young man! life's discipline and life's success come from hard work and early self-denial; and hard earned success is all the sweeter at the time when old years climb upon your shoulder and you need propping up.—*Typographic Advertiser.*

**A VALUABLE INVENTION.**

We herewith present an illustration of a new mechanical device for instantaneously locking the chase to the bed of a cylinder press, and which dispenses entirely with the use of wooden furniture, reglet, quoins, mallet and shooting-stick on the bed of the press.

Practical pressmen will see at a glance that this is a time and labor saving invention, and a great improvement over the old method which has been in vogue ever since presses were first made. Mr. I. A. Isaacs, of New York City, the inventor, has long been identified with the Hempel patent quoin, having introduced it throughout the length and breadth of the country, the adoption of which marked an era in the history of printing; and unless we are much mistaken we believe the valuable device referred to will shortly be recognized as an equally valuable invention.

**LITHOGRAPHY ON METAL.**

Printing on metal, compared with printing on paper, does not present any radical or exceptional differences; but the knowledge of the workman has much influence on its success. The black must be of the finest quality and brazed with firm varnish. The roller must be handled with a free, but vigorous grasp. Plates may be either of sheet-iron or zinc, deoxidized or polished previous to use, or tinned sheet-iron may be employed. Printing is performed directly on a hand-press. The prepared plates are dried in the open air, in an oven or over a stove. They are then varnished to improve the white portions. To the varnish may be added, according to taste, a light tint of color, when the plates are again dried.

If the thickness of the plate is the same as, or but little more than, paper, printing is done in a similar manner to that for the latter; but if the plates are so thick that direct printing cannot be attempted, recourse must be had to transfer; that is, the proof coming from the stone is re-conveyed on the plate. Thick plates generally receive a colored ground, upon which the transfer whether black or colored, is applied. A coat of varnish is added after drying the plates.

For several years past printing has been largely performed on machines so constructed that the impression is first made on a cylinder covered with caoutchouc cloth, and afterward directly on the metallic plate. The caoutchouc has the advantage of producing the design on the plates in a very distinct manner. Chromos are printed on thick plates by transfers which are marked very exactly. For thin plates the work follows the same mode as printing chromos on paper.

6 POINT WEST OLD STYLE. (Nonpareil)

PRINTING is the art of producing impressions, from characters or figures, on paper or any other substance. There are several distinct branches of this important art—as the printing of books with movable types, the printing of engraved copper and steel plates, and the taking of impressions from stone, called lithographing. We have now to describe the printing of books or sheets with movable types, generally called letter-press printing, and which may undoubtedly be esteemed the greatest of all human inventions. The art of printing is of comparatively modern origin, only four hundred years having elapsed since the first book was issued from the press; yet we have proofs that the principles upon which it was ultimately developed existed among the ancient Assyrian nations. Entire and undecayed bricks of the famed city and tower of Babylon have been found stamped with various symbolic figures and hieroglyphic characters. In this, however, as in any similar relic of antiquity, the object which stamped the figures was in one block or piece, and could therefore be employed only for one distinct subject. This, though a kind of printing, was totally useless for the propagation of literature, on account both of its expensiveness and tediousness. The Chinese are the only existing people who still pursue this rude mode of printing by stamping paper with blocks of wood. The work which they intend to have printed is, in the first place, carefully written upon sheets of thin transparent paper; each of these sheets is glued, with the face downwards, upon a tablet of hard wood,

# THE HUBER SHEET PERFECTING PRESS

•• Double Rolling each Form • Six Tracks • Air Springs • Back Delivery. ••

The Impression is taken over a six-track bed, which is supported every ten to twelve inches across the press. We guarantee the impression sharp and rigid, and the bed and cylinder are warranted not to spring or give way in the least degree.

The Impression can be tripped at the moment grippers close or before.

The Register is perfect at all speeds of the press.

The Distribution is uniform from head to tail of sheet; each form is charged with fresh ink both ways.

The Air Springs are applied vertically, the piston-head does not come out of the cylinder, no packing ever required; the pressure can be regulated while press is in motion at all speeds.

The simplicity, accuracy and durability of the bed movement is unequalled by any other machine. The double rack teeth are made of steel, with the best rolling curve known to mechanics. From two to three teeth always in contact, thus obviating lost motion.

The sheets are delivered in the back by positive motion.

The Fly can be disconnected at a moment's notice.

No complicated movements to get out of order.

This press is especially designed for the use of book printers and publishers of weekly and monthly papers, pamphlet and almanac work.

It is constructed upon the two-revolution principle and has four rollers for each form; aside from it having two impression cylinders, it is substantially the duplicate in construction of our Two-Revolution Book Press.

The sheet is fed in the usual manner from the feed board on to the first impression cylinder, and passing between the bed receives an impression from the first form; it is then taken by the grippers of the second cylinder, and around between the bed again, where it receives an impression from the second form, thus printing both sides at one feeding.

Any off-set deposited from the first printed side, on the second cylinder, is at once removed by our Patented Off-set Device, and ordinary work can be run from ten to twenty hours without change of tympan sheet.

Either or both cylinders can be tripped at the will of the feeder, before or at the time grippers close, and at all speeds.

The speed in sheets per hour is practically the same as single presses of same size, and, as it prints both sides of the sheet in perfect register, the result is equivalent to the product of two presses.

We believe that printers and publishers will appreciate this press to its full value, filling as it does a long felt want, of a press capable of large or small sheets, and after one operation delivering it upon the fly-board finished.

SIZES:—	NO.	ROLLERS.	BED SIZES.	MATTER.	SPEED.	We furnish with press, counter-shaft, hangers, cone pulleys, driving pulleys, two sets of roller stocks, wrenches, boxing and shipping, at Taunton, Mass.

**OVER 600 MADE AND SOLD IN TWO YEARS.**

**THIS IS FROM ONE OF THE BEST PRINTERS IN WESTERN NEW YORK.**

35 NORTH ST. PAUL ST., ROCHESTER, N. Y., August 1, 1890.

MESSRS. JOHN THOMSON PRESS CO., New York:

Dear Sirs,—I have had running in my office during the past year, six of your Colt's Armory Presses; and I wish to say to the printing fraternity that they are the very best presses I ever used for all kinds of work, heavy or light.

I have used the old Universal and the "New" Universal, and have thrown them all out for yours. I like your press because it is speedier, more rigid, never slurs, quicker to make ready on, distribution superior to all other platen presses, and easier to feed. I found the old Universal to be too slow for my work, and too easily thrown out of order; and finally, after giving both the old and "New" Universals a fair and unbiased trial I was forced to abandon them and take the Colt's Armory Presses.

I wish to say that I have no other platen presses in my office, and would have no other.

Yours truly, (Signed) ERNEST HART.

Written for THE INLAND PRINTER.

EMINENT LIVING PRINTERS.

BY JOHN BASSETT, EDITOR AND PROPRIETOR OF THE "PRINTING WORLD," LONDON.

NO. XI.—CHARLES THOMAS JACOBI.

A FAMILIAR name in the history of printing is that of the Chiswick Press. Its work has a distinctive character about it that at once calls forth our praise for the way in which the present manager perpetuates the old traditions of this famous house for good printing.

Chancery Lane is a well-known spot to thousands of Americans who have visited London, for it would be almost an impossibility

for a stranger to visit the city without, at some time or other, traversing its length. Singular to relate, there is but one Chancery Lane in London, though why this should have escaped duplicating more than any other of our principal thoroughfares, is rather a hard nut to crack. Look's Court is situated about a half minute's walk from the center of Chancery Lane, and here will be found the home of the Chiswick Press. The general manager is C. T. Jacobi, who entered the house when only twelve and one half years of age. Like many more successful men, Mr. Jacobi commenced his career as a "printer's devil," and has passed through all the successive stages to the top rung of the ladder. Only those who have had a similar experience can tell of the difficulties to be overcome to reach that goal for which many strive but few attain. In London there prevails an almost general disregard of the fundamental principles necessary to the production of fine work. Many are the composing rooms wherein the men are forever grumbling with the condition of things around them. Is it feasible for a man to put his whole thought in the work before him while he is continually brought face to face with every-day evils, such as the clicker hinting that it was time the job was done, or a good line spoiled because the "sorts" ran short, or what is worse than all, taking a man off a job in order to finish another which may be wanted before? These may seem very minor items, but nevertheless it is just such petty annoyances that are responsible for a considerable portion of the execrable work daily to be seen. Mr. Jacobi is one of the few exceptions who take an interest in the men under their charge. As an example of what Mr. Jacobi does for his men it may be stated that he introduced a scheme of a week's holiday (and wages paid) to all

employés who had been with the firm three years. What a priceless boon this must be to the men who have wives and children depending on them, and to whom a week's holiday is as beneficial as an oasis to the weary traveler in the desert. The institution of the week's holiday in the year ought to be made an essential point with all printing associations. It would be the means of preserving many a bright life from an early grave.

Mr. Jacobi's handiwork may be seen in most of the work issued from the Chiswick Press, of which the leading literary journal of the world says: "The Chiswick Press has long held a recognized position in this country, and the reputation abroad of its many fine productions has largely contributed to the high standard of English printing during the last three-quarters of a century. Its books are as marked and distinct, perhaps, as those from the famous presses of the Alduses, the Stephenses, the Plantins and the Elzevirs, or, in more recent times, of the presses of Baskerville in England, of Didot in France, of Ibarra in Spain, of Franklin in America, or of Bodoni in Italy."

Mr. Gladstone says, speaking of work executed in the time of the late Charles Whittingham, "I really think the pages of their prayer book constitute a perfect picture, reminding one of those early printed books which are still marvelous examples of printing."

From the foregoing it must be admitted that Mr. Jacobi has had a great reputation to keep up and a task which many a man would have found himself incapable of fulfilling, but perseverance, in addition to a natural ability for this class of work, has enabled him to more than sustain the prestige of former days. A notable work was recently finished at the Chiswick Press, namely, "The Masters of Wood Engraving," by W. J. Linton, who is, without doubt, the greatest authority on the art of wood engraving.

Mr. Jacobi is a constant writer on matters relating to printing and is also the author of three works pertaining to the craft. The first was "The Printer's Handbook of Trade Recipes," and appeared in 1887. As the title indicates, a book of this description is very useful. In 1888 "The Printer's Vocabulary of Technical Terms, Phrases, Etc." was published, and for a technical work has had a very large sale. Mr. Jacobi's principal work, however, is "Printing," which was issued in August this year. It is one of the best of our modern works. The subjects are treated in a practical and concise manner. The following is a table taken from the book, which will prove very handy for approximate purposes and as a gauge for ordinary bookwork. It gives the length and width of pages with the number of ens in each respective page:

Length.	Width.	Size.	Pica.	Small Pica.	Long Primer.	Bourgeois.	Brevier.	Minion.	Nonpareil.
PICAS.	PICAS.	F. CAP.	ENS.	ENS.	ENS.	ENS.	ENS.	ENS.	ENS.

Mr. Jacobi's convictions are somewhat strong on the points of really good bookwork—pure black and white; he thinks too much stress is laid on jobbing work, though the taste of jobbing printers

has materially improved in the last ten years. With British type, inks and paper, the British printer will produce really good bookwork, that would put all foreign work into insignificance in the comparison. Though this may be dangerous ground, I strongly hold with Mr. Jacobi that Americans cannot compete with the British in bookwork; but the less said about periodicals, etc., the better, for we are lamentably behind in every respect. Our best productions seem amateurish after handling the well-finished article from the States. Within the last two years the demand for good literature has enormously increased; it is to be hoped, therefore, that the popular taste will be equally as strong in its support of fine printing.

#### TYPE AND TYPE MAKING.

Given: steel, lead, antimony, tin, copper, a fertile imagination, willing hands, and the necessary utensils.

Required: a means of communicating the will of the people.

We will take the metals after they have been smelted or refined, and attempt to trace them on their journey until a combination of several of them forms a little messenger of thought.

The steel provides two elements for the manufactures of type, for from that indispensable metal are made the mold and the punch—the mold being a combination of perfect pieces of rectangular shapes so placed together as to form five of the six sides of a letter. The punch is a little bit of steel upon which has been engraved with unerring accuracy, and by hands well skilled and trained, a letter that shall have for an exact duplicate the cast type. This punch is driven, by machinery, into a flat piece of polished copper, which is then carefully fitted with the proper side and head bearings.

Now we have the mold of steel and the matrix of copper, and can leave them for a while and watch the combination of the metals forming "type metal." No chemist can successfully analyze that compound, on account of the affinity the metals have for each other, for the loss of an atom would surely change the texture of the metal. No, we are not to tell you of the exact proportions of the elements that are used in the composition, for that is a secret that the typefounder never divulges. He may tell you that his type contains more copper than any other, but how are you to ascertain what he says is true if a chemist cannot tell? Let us take for granted that he tells you the unvarnished truth. Does that for an instant enhance the value of his type? Does copper, a comparatively soft metal, harden or toughen antimony or tin, both harder and tougher than copper?

Only by a proper combination of the four metals—lead, tin, antimony and copper—can a perfect type metal be made. Of course, type will wear out. Nature never intended that man should make anything that would not wear out.

Well, while we have been talking, the metal has been mixed and poured into the large pans for cooling.

Now we have a mold, a matrix, and a compound—type metal. The metal is put into a furnace attached to a casting machine, one of our necessary utensils, the mold is attached to the mold-block on the machine, and the matrix is placed in the mold. When the metal is heated to the proper temperature the operation of casting is commenced. Were the metal too cool, it would not run properly, and the face of the letter would be uneven. Were it too hot, the antimony, that hardening and toughening metal, would rise to the top and pass off in the form of vapor.

The handle is turned, the pump in the machine injects the molten metal into the mold and against the matrix, and the letter is cast. Again the handle is turned, and another letter springs forth; this operation is continued until the requisite number of pounds of a letter are cast, then another matrix takes the place of our old friend. The "jets," similar to the projection on an unfinished bullet, are broken off the letters by nimble-fingered lads, and the letters set on long sticks by flaxen-haired lassies, after their older sisters have finished the operation of rubbing two of the sides of our erstwhile acquaintances. By the use of a simple little contrivance, patented and made by our employés, the jets are

broken during the process of casting, the letters going into a receptacle in front of the machine and the jets falling into another at the back.

On to the dresser, who makes a groove where the jet was, and leaves the type a pair of becoming feet upon which to stand. He also dresses the two sides, hitherto untouched, by a light movement of a special file or scraper.

Out of the six surfaces, five have been carefully finished, and the sixth side or face of the letter is scanned through a magnifying glass and all imperfect letters thrown aside to be recast. The "height to paper" and the exactness of the body are points carefully examined during the operations of casting and dressing.

This completes the operation, and the type is sent to the dividing room where the proper wrapper and label are placed upon the type for the stockroom.—*Chicago Specimen.*

#### TECHNICAL NOTE.

The *Papeterie* announces a new lubricator in which caoutchouc is associated with the oil in small quantities. Following is the note on the subject, published by the journal: The lubricating substances in use have the serious inconvenience of not holding to the smooth surfaces, thus rendering it necessary to be frequently renewed. The addition of caoutchouc increases the quality of the lubricator by rendering it heavier and is directly soluble in the oils, mineral or otherwise. It requires only a few grams. This mode of preparation prevents resinification of the oil by heat.—*Gutenberg Journal.*

#### NUMBERS.\*

THE effect of figures not being good in ordinary works, except those of a statistical character, numbers indicating age, time, etc., should be expressed in letters, but dates require the use of figures.

For the hours, it is well to distinguish between two cases: if duration of time is referred to, it is written in letters; but the moment of time, the hour by the clock, is expressed in figures because of its resemblance to a date.

In certain works, as histories, wherein is cited, for example, the numbers of soldiers composing an army, or in geographies giving the population of countries, etc., figures are employed for the sake of clearness and more easily catching the eye in establishing comparisons. Exception should be made of numbers commencing a paragraph or following a period, especially if the period is preceded by figures or if they follow in the same phrase.

We should likewise use letters for the number of pages, articles, paragraphs, verses and other subdivisions unless one is citing corresponding numbers of a work.

Large Roman numerals are chosen for acts, volumes, books, numeral adjectives following the names of monarchs or princes, the corps of armies, wards of cities and Egyptian dynasties; also the plates of engravings, while the figures of engravings are designated by Arabic figures.

Scenes, chapters and centuries take small Roman numerals.

Words indicating units of measure, weight, length, etc., are written in full when they are preceded by whole numbers. In the case of fractions, the whole number is followed by an abbreviation of the unit of measure which is followed by the decimal.

The majority of scientific works employ a comma for separating decimals and a period for the thousands, an example we should advise to be more generally followed. Numbers represented by four figures require no point, as the eye finds no difficulty in reading such numbers.

Degrees of temperature may be noted by the symbol for degree or the word in full. Geographical degrees follow the same rule unless there are fractions which change the unit of subdivision into minutes and seconds.

Percentage, when relating to finance, is best expressed by the symbol, but in a current text having relation to a simple proportion, it should be written in letters.

\* Translated from *L'Intermédiaire des Imprimeurs* by Miss Ella Garoutte for THE INLAND PRINTER.

### THE PAPER MILLS OF THE UNITED STATES.

NO. VI.—THE HURLBUT PAPER MANUFACTURING COMPANY.

The grand old Berkshire hills of Massachusetts are the seat of an enormous paper making industry. The region seems to be especially adapted for the production of paper. Water of a pure quality, so essential to the successful manufacture of a fine quality of paper, is found here in abundance; the air that circulates among the hills is favorable for drying processes; and the streams furnish power for the running of mills—though steam is also extensively used. Thus for many years the paper industry has found lodgment and flourished there; and the mills in the Berkshire hills have won the name of producing the finest paper made in the country.

Very prominent among these mills, and justly celebrated for the excellence of its products is the great factory of the Hurlbut Paper Manufacturing Company, at South Lee, on the Housatonic river. The officers of the company at the present time are: T. O. Hurlbut, president; H. C. Hurlbut, vice-president, and A. W. Eaton, treasurer. The last named gentleman is also secretary of the East Hartford Manufacturing Company, whose paper mills are located at Burnside, Connecticut. The Hurlbut Company is a pioneer in the paper business. The original mill was erected in 1822 by Owen & Hurlbut, and after the dissolution of that firm, in 1840, it was entirely owned by the Hurlbuts until 1888, when the present company was organized and soon afterward incorporated with a cash capital of \$150,000. The principal building is a fine three and five story brick structure that covers more than three-fourths of an acre of ground, heated by steam and provided with automatic sprinklers as a precaution against fire. The machinery equipment embraces, besides all other requisites, eight 500-pound and four 700-pound rag engines, one 80-inch and one 66-inch Fourdrinier paper machines, the whole driven by four turbine wheels, aggregating 400 horse power, and a 150-horse power steam engine. One hundred and seventy-five hands are employed, and the output averages seven tons of paper per day.

The mill runs on classes of paper designed for business and society uses, such as wedding, bond, ledger, linen and extra superfine writing papers. These papers are among its regular lines, and it is admitted throughout the paper trade that they are second to none that are made in quality, texture, color and finish. In addition to these lines, however, the Hurlbut company turns out large quantities of ruled goods, such as French linen papers, Oriental parchment, Queen Anne and Fernside linens. These styles of paper are put up in handsome boxes, with envelopes to match, and have a widely extended popularity. The paper is also made up into tablets. This department is a comparatively new one in connection with the company's business, but, notwithstanding that fact, there is no other paper company in the United States that puts up so great a variety of this class of goods.

One great element in the success of the firm is doubtless the fact that its affairs are in the hands of gentlemen who are not only enterprising business men, in the ordinary sense of the term, but who have also had large experience in the paper manufacturing business and are thoroughly familiar with its minutest details.

They are also men who may be depended on to keep fully abreast with both the demands and opportunities of the times. The large mill is thoroughly equipped with the best and most improved machinery, and is conveniently arranged and systematically conducted. It is, too, kept scrupulously neat and clean, and in every respect is a model paper factory. It is the only manufacturing concern at South Lee and in it the people of the village take great pride and interest. There are many charming and romantic spots in the Berkshire hills, and in one of the most charming and romantic of them all the mill is located. Possibly the inspiration gained from such beautiful surroundings has had something to do toward enabling the company to bring out goods of such superior excellence as those herein mentioned.

### POLITICAL HONOR TO A UNION PRINTER.

The Los Angeles Typographical Union (No. 174) feels considerably elated, by the recent election to the state assembly in the Seventy-sixth district of Capt. F. N. Marion, by the handsome majority of 1,352 votes.

Captain Marion, who served throughout the entire war with distinction in the 14th Ohio, has subsequently held situations of responsibility upon the *Atlanta Journal*, the *Toledo Blade* and *Toledo Commercial*.

Removing to California some three or four years ago, for the health of his family, Captain Marion has, from his arrival, been the highly valued foreman of the *Evening Express*, in which position he has won the esteem and reliance of the proprietors of that journal to a marked degree.

### FLUOROGRAPHY.

Fluorography is a process of transferring lithographic or phototypic prints to glass by means of fluorated inks, which, in contact with sulphuric acid, disengages hydro-fluoric acid, which eats into the glass. The phototype is inked with the following compound:

Soap.....	50 grams.
Glycerine.....	200 "
Tallow.....	50 "
Water.....	100 "
Borax.....	25 "
Fluorspar.....	50 "
Lampblack.....	15 "

Negatives are taken and transferred to the glass. The latter is surrounded with a border of wax and covered with sulphuric acid of a density of 64 or 65 degrees Baume. After fifteen or twenty minutes the acid is poured off and the glass washed with water and cleaned with a solution of potassa, then washed with water again and dried with a cloth. According to the *Revue de Chimie Industrielle et Agricole*, this is the process that gives the best results.

ALL are aware of the rivalry existing between Mayence, Strasbourg and other cities claiming the honor of inventing the printing press. According to M. Requin, another name must be added to the list, the city of Avignon, whose claim would appear to be well founded. In the register of notaries of Avignon, for the year 1444, M. Requin has found contracts relative to projects for the manufacture of printing utensils—presses, forms and movable type cast in metal. Some attempts were also made at Avignon to put the press into practical use before the date of the oldest specimen of Gutenberg's art. Still it is true that there is no proof that these attempts at Avignon ended in any practical results.—*Gutenberg's Journal*.

## ZINC ETCHING METHODS.

NO. X.—FROM THE AMERICAN PRESS.

PHOTO-LITHOGRAPHY AND PHOTO-ZINCOGRAPHY.

DEVELOPMENT OF THE PRINTS.

The development depends upon the correct exposition of the print.

When the print has laid for half an hour *entirely immersed* in water (no air bubbles underneath), a slight rubbing of the surface should be sufficient to remove all the ink from the whites in the picture, the lines retaining a complete coating.

Put something under one end of the developing tray so as to raise one end a little higher than the other, pull the print out of the water upon this higher portion of the bottom, take a soft sponge and rub over all parts of the print in a circular, grinding motion, with only just enough pressure to remove the surplus ink from the whites, and until all tint and speckiness is removed alike from the open parts and the minute whites in the shadows.

If the print is overexposed the deep shading will remain closed up to solid blacks, the lines all appear too wide, and if the negative was weak or thin, the general ground will remain coated with ink all over.

If the paper has been sensitized for three or four days, or if it has been exposed to light after drying, it will hold the ink all over and cannot be developed.

If the print was underexposed, the ink rubs off easily from the whites, but the faint lines and dots of the subject all go as well.

Only a correctly timed print can be developed faultlessly, but the limits are pretty wide apart, and especially with good negatives, which can be considerably overtimed without injury to the lines. Different makes of paper makes a difference in ease of development. A soft coating or a thick one on the paper requires longer printing, while a harder coating or a thin one need a shorter exposure.

(N. B.—Water which contains much *iron*, cannot be used for making or developing photograms. Always use *cold* water, winter and summer, as warm water not only makes the coating too soft, but also causes the ink to smear.)

When thoroughly developed the print is rinsed off well to remove all specks of adherent ink, and laid upon a sheet of clean blotting paper. When all the prints are laid out upon the

blotting paper, cover them with another sheet of the same, first slightly dampened to prevent any dry particles of paper fiber from adhering to the ink on the lines. The blotting sheet can be gently pressed down with the hand all over, to insure taking up all the water. The prints can now be hung up near a stove or other artificial warmth to dry. In warm weather, the every-day natural temperature will suffice.

If the transfers must be laid down at once, and there is no time to wait for drying them, bathe them from two to three minutes in a solution of chrome alum one part, in water fifty parts. This bath will harden the surface somewhat, so that it does not so easily adhere to the zinc or mash out in transferring. The coating must not be too hard, for then it will not adhere to the zinc at all, and

the transfer will probably be doubled. It is better to let the prints dry *entirely*, then simply hang them up at the window for half an hour (or, if a dark day, longer), whereby the coating is hardened just enough. If there is no daylight to be had, the alum solution must be used, and then after duly drying with blotting paper the transfer is proceeded with. The prints when dried will keep about two days; later, the ink dries and cannot be transferred.

If it is desired to keep the prints ready for transferring for a longer time, it is necessary to lay them in water, or to adapt the ink to the requirement of the case.

To a bottle of the ink add six to ten drops of olive oil, and grind in well; then use this ink for copies which are to be kept some days or sent off by mail. In the latter case, after development, lay upon each wet print a leaf of tissue paper and roll them all up and mail in a paste-board tube.

If the photogram is to be laid down upon stone, no lighting or

tanning with chrome alum is necessary, for then it is necessary for the print to adhere all that it can.

Otherwise the transfer upon stone and zinc is just alike, and can be made in each case upon a litho hand press, or it can be done for zinc upon a roller press, such as heretofore described.

The prints are, if dry, laid face down upon a sheet of clean paper and sponged upon the back until soft and leathery to the feel and slightly sticky on the surface in the whites. They can be left in the damping book a while if needful. And if there are several they can be "stuck up" in the manner described for ink transfers or autographs. The transferring is then the same, with the difference that usually the prints require a little less pressure than autographic drawings. Run through with light pressure, then

HON. AMOS J. CUMMINGS, M. C.

*One of the Trustees of the Childs-Drexel Printers' Home.*

again with more, repeat, take off covers and sponge, run through with more pressure, sponge and run through twice or three times with increasing pressure, off covers and sponge till print can be peeled off from zinc.

FOR EXTRA FINE AND CLOSE WORK.

Take a large and perfectly level and smooth plate glass (should be larger than the piece of paper to be sensitized), and rub it over with vaseline; then, with a piece of *Joseph paper* or Berthold's paper, rub it all or nearly all off, leaving only the least perceptible trace.

Sensitize the paper as usual; slip the plate glass, with the vaseline side uppermost, into the bottom of the tray; turn the paper, surface side down, in the fluid, avoiding all air bubbles between glass and paper. Now take the glass by opposite corners and lift it carefully out, with the paper upon it, and stand the plate up to drain for a few moments; then lay two or three thicknesses of blotting paper upon the top of the plate and paper; over these a sheet of smooth paper or a thin card, and take a squillgee and squillgee it down thoroughly in all directions. The paper adheres to the glass and can be put away to dry in a cool place for six to ten hours. It comes off with a surface corresponding to the high polish of the glass, which guarantees lying close to the negative, and gives results in no way inferior to those fine, beautiful subjects made by the asphalt process.

The inking in of the prints is with the same ink as usual, but is done with a little velvet roller, because the wad of cotton would leave too little ink upon the smooth surface of the paper. Lay the copy upon a zinc or glass plate, several sizes larger, and put on a few drops of ink. Let another person, if necessary, hold the two corners of the print down while you roll the ink to an equal, dark gray coating.

The development and transfer follow, as already described.

SPECIMENS RECEIVED.

MORSE & DOWNS, Lynn, Massachusetts. Attractive counting-room calendar.

MCCULLOCH & WHITCOMB, Albert Lea, Minnesota. Several creditable specimens of color work.

J. A. CUMMINGS PRINTING COMPANY, Boston. Attractive and neatly printed office calendar for 1891.

MORRIS & GRAHAM, Kansas City, Missouri. Neat eight-page circular on "The State of Kansas, and Her Natural Resources."

THE CASE, Lockwood & Brainard Company, Hartford, Connecticut. Two or three unique and attractive specimens of invitations.

JENO LEECH, Mansfield, Ohio. Package of every-day jobwork. While there is nothing of a very striking character connected with it, it can safely be classed under the title of first-class, both in regard to composition and presswork.

H. E. JOHNS, with the Oil City (Pa.) *Blizzard* office. A number of meritorious specimens of note, letter and bill heads, folders, checks, business cards, etc., all clean, fresh and attractive, the presswork of which cannot be too highly commended.

RAYNOR & TAYLOR, Detroit, Michigan. "Historical Sketch and Souvenir of Detroit Light Guard Battalion," consisting of sixty-four pages and cover. It is printed on coated paper, and in inks of many colors. The advertisements are attractive, and the presswork is all that could be desired.

W. E. W. FELT, Worcester, Massachusetts. Programme of second annual ball of Worcester Typographical Union. This souvenir is one of the most attractive which has come into our hands for some time, and is a work of art of which the firm producing it has every reason to feel proud.

G. C. MCKAY, with Kingsley & Barnes, Los Angeles. A large assortment of first-class commercial work, a goodly proportion of which is in colors. We consider, as an artistic printer, Mr. McKay has no superior and very, very few equals in the United States.

In design, execution, blending of colors and general effect his work is simply perfection. Many of the specimens now before us are worthy of all the praise that can be given, because they deserve it.

PERSONAL.

We acknowledge calls from the following gentlemen during the past month: George A. Holm, Mansfield, Ohio; G. C. McKay, Los Angeles, Cal.; William B. MacKellar, MacKellar, Smiths & Jordan, Philadelphia; Alexander J. Mullen, Minneapolis, Minn.; Louis Theyson, representing Frederick H. Levey & Co., New York; H. Bronson, president Cleveland Gordon Press Company, Cleveland, Ohio; F. B. Wiborg, of Ault & Wiborg, Cincinnati, Ohio; Edgar H. Cottrell, New York; George D. R. Hubbard, with the MacKellar, Smiths & Jordan Company, Philadelphia.

PRESS ASSOCIATION NEWS.

THE annual meeting of the Illinois Press Association will be held in the city of Joliet, February 2, 3 and 4, 1891. The indications point to a good attendance. Mr. W. Stevens, president of the National Editorial Association, has been invited to deliver the annual address.

THE Kansas Woman's Press Association was organized lately at Topeka, with the following list of officers: President, Mrs. Emma B. Aldrich, of Cawker City, associate editor of the *Cawker Record*; vice president, Mrs. Mary A. Humphrey, of Junction City, author of "The Squatter Sovereign"; secretary, Mrs. Annie L. Diggs, of Lawrence, one of the editors of the *Topeka Advocate*; treasurer, Mrs. Augustus Wilson, of Wilsonton, editor of the *Wilsonton Journal*.

ANSWERS TO CORRESPONDENTS.

A. L. C., Quincy, Illinois: Will you inform me where I can purchase a work treating on zinc etching, half-tone plates, photo engraving, etc.?

*Answer.*—Write to Edward L. Wilson, 853 Broadway, New York, for a copy of W. T. Wilkinson's work on photo-engraving, etching and lithography. The price is \$2.50.

E. W. D., Brooklyn, N. Y.: Do you know of any book or publication of any kind which contains designs for monograms? If so, where can it be obtained, and what is its cost?

*Answer.*—We believe L. Prang & Co., art publishers, Boston, publish a work of the character referred to. We would advise our correspondent, however, to secure the catalogue of a wholesale jewelry house, such as Tiffany's, of New York, which probably contains as many designs of monograms as can be found elsewhere.

A. E. D., Portland, Oregon: Will you kindly print the sizes now recognized as "the proper thing" in calling cards? The sizes, I mean.

*Answer.*—"The proper thing" is just what the caprice of the customer wants. There is no absolute rule. From a dozen specimens now before us, no two are alike in size or shape—varying from 4 by 2½ inches to 3¼ by 1½ inches. The ladies' cards are as a rule, however, longer and deeper than the gentlemen's. You pay your money and you take your choice.

BEN, Toronto, Ontario: Please explain how I should proceed to make a margin on a sixteen-page form of which the sizes of the pages vary considerably.

*Answer.*—The question asked is rather indefinite. In all forms of sixteens, as in others, there must be a *standard* measure, depth and width, for *the* page. The several pages are or should be made up on the galley previous to being placed on the stone, according to such standard. If one of the pages, for example, contains but a card, the page containing it should be justified and centered according to the standard. On the other hand, if a cut or series of cuts in a catalogue exceeds the width of the page, the *margin* in the form must be reduced proportionately to center them as far as practicable.

## AN AUTOMATIC FEEDING MACHINE.

Improvements in printers' and bookbinders' machinery are being invented so rapidly, and so many new machines are being put upon the market to do the work which was formerly done by hand, that it is difficult to even keep track of them, much less investigate fully all their advantages. The automatic self-feeding machine shown in the accompanying illustration is a new invention which is certainly deserving of notice. It is attached to a rapid drop-roller Chambers folding machine in this case, but is also adapted for ruling machines and printing presses. The combination shown in the cut is capable of turning out 35,000 complete papers in one day. Folder and feeder combined, to fold bookwork, will turn out 70,000 single sixteen or thirty-two page signatures in one day, with one person in attendance. The great advantage of this over hand-feeding is readily perceived, the saving being enormous, as the capacity has never been approached

by hand-feeding, as above figures show. Besides the advantage of speed in the use of this machine, its accuracy and regularity in feeding are points greatly in its favor. For ruling machines it can be regulated to feed faster or slower, as required on the class of work being done; and for printing presses and folding machines it is also capable of different manipulation to suit special requirements. To watch one in motion, one would almost believe the machine was endowed with life and had a mind, so carefully, easily and speedily does it feed the sheets. Montague & Fuller, 28 Reade street, New York, and 345 Dearborn street and 82 Third avenue, Chicago, can furnish these machines, and parties interested would do well to correspond with them.

THE *Review Industrielle* announces a successor to straw in the fabrication of paper in the husks which envelope grains of cereal. An old superior officer in the French marine infantry, who served in the war of 1870 as auxiliary general, has been studying the matter for some years.

## WASTE IN MIXING COLORS.

Not long ago we were passing through a pressroom, and had our attention drawn to a young man who was mixing colors on a slab, with the object of producing a special tone for tint work. He had a troubled air, and his movements were of a kind so clearly indicative of disturbance, that we stopped and watched his proceedings. It was not long before we got the key to the situation. He had begun at the wrong end of his job, by putting in his dark color, and by far too much at that, before he knew where he was going to come out. The result was that he kept on adding white, in a vain effort to work down to the light tone required, and by degrees he had his slab covered with five times as much ink as his job could possibly require. It was at this point that his manner and movements caught our eye, and to save him further anxiety and his employer greater loss, we went over to him and offered a suggestion which he gladly accepted. We took another slab and

transferred to it only about a tenth of the ink he had already mixed, and adding white, with just a trifle of bronze blue, some fine yellow and a bit of rose lake, we soon got what he was after, as was proved by comparison with his specimen sheet or copy.

The grand trouble was that he had started off with a nugget of black—the great killer of all transparency in tones—and, hoping with this foundation to get the proper darkener for his tint, and at the same time be able to bring out the richness of the other colors he had mixed in with the white and black. He was sorely disappointed, and in his despair he lost his head, and was slapping in his white in almost reckless fashion when his actions attracted us.

Fortunately for him, his original sample or copy had been mixed with a touch of black, and, therefore, did not exhibit that rich luminous, transparent appearance it would have shown had a deep blue been used as a darkener. This fact we had instantly detected as we glanced over his original, and for that reason consented to use a tenth part of his own mixture. Had the copy shown a pure, transparent tone, we would have been compelled to begin

anew from the foundation, using no black whatever, as that always renders a tint opaque and non-luminous.

This young pressman's mishap is a more common one than might be supposed, and a greater cause of waste of ink than anything else, in pressrooms where much color is used. Discretion is called for at every point, and where it is lacking all other qualities are almost useless. Certain it is that the one who has it not cannot be trusted to go alone. Nowhere else is more needed the injunction of Davy Crockett, "Be sure you're right, then go ahead!"

Let these points be kept in mind when mixing colors:

1. Black, in whatever proportion, will kill the transparency of any color with which it is associated. It will also destroy the luminosity of other colors in proportion to the quantity of it used.

2. If you desire to darken a tint and retain the luminous character of the other colors used, put in a little dark blue of fine quality, and, depending upon the main color you are working with, use a little pure rose lake or other fine red of the aniline class, and a true yellow.

3. If you are using a very delicate tint, and merely wish to slightly deepen your tone, you can do it with a little red, or chrome yellow. Very little practice will show what proportions will give the best results.

Begin with these in small quantities, working up to the deeper shade required. It is easy to add a deeper tone; but it made too dark and non-luminous at the start, no after-working will save the wasted material.

Before leaving this subject, let us advise the young and inexperienced pressman to buy a quarter of a pound or more of the three primary colors, red, blue and yellow, of fine quality, with a pound of white and some varnish; take these home and experiment with very small quantities. He will be surprised at the results he can thus obtain. Such experience is priceless.—*The American Art Printer*.

#### TRADE NEWS.

THE Courier Printing Company, Duluth, Minnesota, has been dissolved.

W. D. EAGLE & BRO., printers, Indianapolis, have dissolved partnership.

BURDICK & TAYLOR, printers, Albany, New York, have dissolved partnership.

ALEXANDER & HANCOCK, printers, Duluth, Minneapolis, have dissolved partnership.

KUSSMAUL & SHEPARDSON, publishers, Greenville, Ohio, have dissolved partnership.

SUTHERLAND & BURNETT, publishers, Portland, Oregon, have dissolved partnership.

HUELSTER & SHELPS, printers, St. Paul, have been succeeded by Goodson, Shelp & Co.

W. D. JONES, printer, Utica, New York, has been succeeded by W. D. Jones & Son.

KERR & BIRD, printers, Philadelphia, have been succeeded by the Bird Printing Company.

THE Nelson Printing and Engraving Company (not incorporated), Detroit, Michigan, has sold out.

HARDING & EGGLESTON, printers and paper dealers, Jonesville, Michigan, have dissolved partnership.

THE Echo Publishing Company has been incorporated at Houston, Texas, with a capital stock of \$10,000.

SEEMAN & PETERS, printers and publishers of the *Evening News*, Saginaw, Michigan, have sold out the *News*.

THE Thomas & Wylie Lithographing Company, of New York, has been incorporated to carry on a general lithographing business; capital, \$150,000, and trustees, Henry A. Thomas, George A. Wylie, Daniel D. Wylie, John B. McGeorge and William E. Laimbeer.

THE Utica (N. Y.) *Morning Herald* newspaper job printing and bookbinding establishment has been sold at receiver's sale to the highest bidder.

AT Concord, New Hampshire, a commodious and handsome new building is nearly ready for the occupancy of the Republican Press Association's printing plant and offices.

MESSRS. BARNHART BROS. & SPINDLER, Chicago, have recently placed Babcock "Dispatch" presses in Hamilton, Ohio, Elkhart, Indiana, Topeka, Kansas, and Duluth, Minnesota.

C. H. KEELER, formerly publisher of the *Owega (N. Y.) Record*, late of Wellington, Kansas, has opened a first-class job printing office at Dixon, Illinois, with good prospects.

TWENTY million dollars is said to be at the command of an English syndicate which wants to gobble up all the American type-foundries. That's about a million apiece. Whew!

THE Tribune Job Printing Company, Minneapolis, are adding a two-revolution Potter to their pressroom facilities. It is an elegant machine, equal to any kind or quality of work.

T. E. POWELL and G. W. Albrecht have incorporated the Powell Printing Company, at Middleburgh, Kentucky, for the purpose of publishing, printing, etc. The capital stock is \$25,000.

MR. E. D. BAKER has resigned the position of manager of the Boston branch of the Campbell Press Company, being succeeded by Mr. Jameson, who formerly represented the company at St. Louis.

THE office of the Anderson (Ind.) *Daily Bulletin* was destroyed by fire on Sunday morning, December 7. More than \$8,000 worth of type and presses, \$2,000 worth of stock and completed jobwork were destroyed.

THE Thompson Company has filed articles of incorporation at Covington, Kentucky, with a capital stock of \$50,000, for the purpose of publishing school books. Caius C. Bragg, Charles H. Thompson and others are the incorporators.

THE St. Joseph Steam Printing Company, St. Joseph, Missouri, has been absorbed by the Posegate Printing and Lithographing Company. Its capital stock is \$50,000. Frank Posegate is president, J. W. Johnson, secretary and treasurer.

THE Caxton Press Company, of New York City, has been incorporated to carry on the printing business in all its branches. Capital, \$60,000, and trustees, Henry Tompkins, Peter W. McIndoe, Walter J. McIndoe, Arthur L. Root and Frank Durrie.

ON November 1, the Campbell Printing Press and Manufacturing Company, of New York, completed arrangements with the Stonemetz Printers' Machinery Company by which the former became the exclusive selling agents for their presses and folders. They have retained the services of Mr. Walter G. Bennett, a gentleman long and favorably identified with the Stonemetz Company, who will give his personal attention to this department.

THE Jaenecke-Ullman Printing Ink Company has secured property in Newark, New Jersey, and begun the erection of its factory, which it expects to have in running order by July 1, 1891. This firm succeeds Sigmund Ullman, of 536 and 538 Pearl street, New York, so long and favorably known as importer of German printing inks made by Jaenecke Bros. and F. Schneeman, Hanover, and French and German bronze powders. The company will manufacture dry colors, varnishes, linseed oil and inks, and proposes to maintain the high reputation already attained by the old firms. The imported goods will also be handled as before. With a large capital at its command, and with the knowledge its members have of the ink and color business, this new company will no doubt make a big success of the new venture.

WE acknowledge the receipt of a beautiful brass paperweight from John Royle & Sons, Paterson New Jersey, bearing a fac simile of the autograph of the editor of THE INLAND PRINTER. It is a work of art, and we return our sincere thanks for the royal gift.

WHAT COLOR OR COLORS SHALL I USE ON THIS PAPER?

## ILLINOIS PAPER COMPANY,

OUR SPECIALTIES:

BOOK, COVER, ROPE, DOCUMENT AND NO. 1 MANILA PAPERS.

181 MONROE ST., CHICAGO, ILL., U. S. A.

## CHICAGO NOTES.

MR. E. O. HICKOK, for many years with W. C. Gage & Son, of Battle Creek, Michigan, called on us recently. He was on his way to Oronoco, Minnesota, where he expects to locate.

THE Chicago Law Book Company has been incorporated at Chicago, with a capital stock of \$50,000, to publish law books. Incorporators, W. B. Kelley, J. H. Clement and W. V. Myers.

MR. CHARLES FRINK has left the pressroom of Rand, McNally & Co., where he has been for years, and taken the foremanship of the same department with the Corbitt-Skidmore Company, in the Caxton building.

SHNIEDEWEND & LEE COMPANY, 303 Dearborn street, have accepted the agency for the sale of Richards' celebrated wood engravers' ruling machine. Mr. Richards is giving daily working exhibitions of the same.

MR. THOMAS WING, architect, has prepared plans for remodeling the Rand-McNally building on Monroe street, near La Salle. New halls will be put in, likewise stairways, marble wainscoting and elevator. It will be fitted up especially for printers, book-binders, etc. The cost of alteration will be about \$20,000.

IN the proofroom of THE INLAND PRINTER is a sample of the first paper ever manufactured. Instead of being packed in sheets or rolled on a cylinder, it is wound about a stick of some hard wood in an oblong ball, very much like a ball of yarn. It is older than the papyrus of Egypt and was never used even for manuscript writing, but was the principal material in the construction of the houses of the paper makers. It is an enormous nest, once the home of a colony of paper-hornets.

AS WILL be seen by announcement in our advertising pages, the MacKellar, Smiths & Jordan Company, typefounders, Philadelphia, will, at the beginning of the coming year, open a branch house, under its own supervision, in the new Caxton building, Nos. 328-330 Dearborn street, Chicago. Practical assistants will be in charge, and a well selected stock of faces constantly kept on hand. All orders will be promptly filled, and due notice of the exact date of opening sent to every western printing house.

COL. T. P. RUNDLETT, for many years past the popular Chicago representative of Charles Eneu Johnson & Co., manufacturers of letterpress and lithographic printing inks and varnishes, is about to remove to New York, to become their representative in the great metropolis. The good wishes of the colonel's many friends go with him—and who is not his friend that knows him? Prosperity to you, colonel, and may the same measure of success which has attended your efforts in Chicago follow you in your new field of labor.

AT a meeting of the Old-Time Printers' Association, held at the office of THE INLAND PRINTER on Sunday afternoon, December 14, it was determined to hold a banquet, under the auspices of the association, at Kinsley's, on the evening of January 17, the anniversary of Franklin's birthday. A. C. Cameron, J. S. Thompson and J. C. Snow were appointed a committee on programme, with the request to report at a meeting to be held on Sunday, January 3. From present indications the event will be a thoroughly enjoyable one, and it is to be hoped that every member of the society will make it a point to be present.

## PAPER TRADE ITEMS.

A PAPER mill is to be built at Rapid City, Pennsylvania.

A MILL for the manufacture of print papers is projected at Livermore Falls, Maine.

ARDEN & BROWNE, paper manufacturers' agents, New York, have dissolved partnership.

THE consul at St. Croix, West Indies, thinks there is a market there for American papers.

THE Godfrey & Clark Paper Company, of Pittsburgh, Pennsylvania, has been incorporated, with a capital of \$350,000, succeeding the firm of Godfrey & Clark, paper manufacturers. The

directors of the company are Edward B. Godfrey, Charles L. Clark and Edward C. Godfrey.

THE Sugar River Paper Mill at Claremont, New Hampshire, is filling a large order from Australia.

THE Crescent Paper Company, Fort Wayne, Indiana, has been incorporated with a capital of \$100,000.

THE Peoria Strawboard Company, of Peoria, Illinois, has been incorporated with a capital of \$100,000.

THE North Jersey Paper Company has been incorporated under the laws of New Jersey, with a capital of \$200,000.

THE Morrison & Cass Paper Company, of Tyrone, Pennsylvania, has been incorporated with a capital stock of \$500,000.

A PAPER mill to cost \$270,000 is to be built at Fort Worth, Texas. Dr. Buck, of Illinois, and others are said to be interested.

THE St. Clair Paper Company, Detroit, Michigan, is running exclusively on colored wrapping papers for express use, and finds a ready sale for its product.

A COMPANY to be known as the Eureka Paper Company has been organized at Fulton, New York, with a capital of \$30,000. It will engage in the manufacture of paper.

THE Hampden Envelope Company, which recently removed to Dayton, Ohio, from Holyoke, Massachusetts, has resolved to make its daily production 600,000 envelopes instead of 300,000, as at present.

THE Shattuck & Babcock Company, of De Pere, Wisconsin, has been incorporated to manufacture paper. The capital stock is \$500,000, and the incorporators are J. A. Kimberly, C. B. Clark and F. C. Shattuck.

THE Ohio Paper Bag Company, Middletown, Ohio, manufacturers of square double bottom paper bags, is using about 30,000 pounds of paper and producing from two to two and a quarter millions of bags from the same, daily.

THE increase in the daily producing capacity of the paper, wood pulp and fiber mills of the country last year was 1,372,100 pounds, or a little more than eleven per cent. The percentage of gain since 1881 has been over 156 per cent.

HON. BYRON WESTON has recently been inspecting the possibilities for a paper mill at Spokane Falls, Washington, in connection with J. H. Bishop, of Minneapolis, and if the enterprise promises favorably a mill will be located there in the near future.

THE Holyoke, Massachusetts, paper manufacturers report the outlook for the winter to be very promising and the demand for paper steadily increasing. All the mills are running to their fullest capacity, and the product is covered by orders for some time to come.

THE Michigan Paper Company, at Plainwell, Michigan, is so crowded with orders for its book and print papers that it has been compelled for several months to refuse orders. Consequently it has determined to increase its facilities. It will erect another building and purchase another machine, with the necessary engines, etc.

THE wood of Newfoundland has been experimented on for the manufacture of pulp by a British company, and favorably reported on. A location for pulp works has been selected in the island, about one hundred miles west from St. John's on one of the southern bays, where the timber is suitable and inexhaustible. It is said that neither pyrites nor sulphur in any form will be made use of in the process, which has been fully tested in Austria.—*Paper Making.*

KIMBERLY & CLARK COMPANY, of Appleton, Wisconsin, have purchased the water power at DePere, Wisconsin, for \$100,000. The power is estimated at about 2,000 horses. A considerable tract of land contiguous to the river and power goes with the purchase. The company will erect there next season a two-machine loft-dried mill, to make the finest writing papers. The capacity will be about eight tons daily. A new company will be formed with a capital of about \$500,000, to operate the plant, to be called the Shattuck & Babcock Company.

LILLIAN RUSSELL.

Specimen of half-tone plate by BLOMGREN BROS. & Co., 175 Monroe street, Chicago, made direct from a photograph by Falk, New York.

## NEWSPAPER GOSSIP.

F. W. BAIL, of the Grand Rapids (Mich.) *Democrat*, has sold out.

THE Coal Creek (Tenn.) *Times* has put in a new press, and enlarged to eight pages.

THE Saginaw (Mich.) *Journal* has been increased to an eight-page paper, and looks well.

THE Wilmington (Del.) *Sunday Star* has changed its size from a four to an eight page paper.

THE office of the Portsmouth (Ohio) *Times* has been removed to its new building on Second street, south side.

THE publishers of the New Haven (Conn.) *Union* have begun the publication of a morning edition similar to the afternoon paper.

EDITOR SCOTT, of the Bloomington (Ill.) *Bulletin*, got caught in the swim and landed a winner of a seat in congress from his district.

THE Boston *Pilot* has been purchased by Patrick Donohue, editor of *Donohue's Magazine*, who owned the property a number of years ago.

THE *Young American*, a large, first-class illustrated monthly paper for boys and girls and the family, made its first appearance on December 1, at West Randolph, Vermont.

THE *Dominion Illustrated*, Montreal, will get out a Christmas number this year by the Sabiston Lithographing & Publishing Company, the recent purchasers of the above publication.

THE Texas *Tribune*, published at Houston, San Antonio and Dallas, edited by Mr. John H. Copeland, has recently donned a new dress, and is now one of the handsomest journals which reach our desk.

THE executive committee of the Illinois Farmers' Alliance and Industrial Union met recently and resolved to establish a daily paper at Springfield to be the official mouthpiece of the Farmers' Alliance.

THE *Arkansas Traveler* has been purchased by the Review Printing Company for \$3,150, and the *American Commercial Traveler*, organ of the National Traveling Men's Association, will be merged into it. Opie P. Read will continue as editor and P. D. Benham as business manager.

EX-SPEAKER W. F. CALHOUN has purchased a half interest in the Decatur *Daily Republican*, which has been conducted since 1867 by J. R. Mosser and B. K. Hamsher. Dr. Calhoun bought Mr. Mosser's interest and will become political editor. Mr. Mosser is not in good health, but hopes a relief from business cares will prove beneficial.

W. F. BECK, proprietor of the *Constitution*, Weatherford, Texas, has purchased the *Southern Horticultural Journal* and moved the plant from Weatherford to Dallas. All the former writers and editors will be retained and additional ones employed, with the intention of improving the paper, if it can be improved, which is doubtful, as it has long been recognized as the leading horticultural paper in the South.

WE regret to state that the office of the Chillicothe (Ill.) *Bulletin*, owned by Mr. Frank W. Bailey, was recently destroyed by the destructive fire which recently visited that town. With true western courage, however, Mr. Bailey is up and doing, and the *Bulletin* has made its re-appearance somewhat reduced in size (for the time being), but bright and racy as ever, and in a short time will assume its usual proportions.

THE Boston Photogravure Company, 56 Boylston street, Boston, announce that in January, 1891, the first number of the *Engraver and Printer* will be issued. It is to be a monthly magazine devoted to progress in illustration and printing, printed in the highest style of the art, and edited by Henry Lewis Johnson. The publishers' announcement, giving full particulars of the proposed work, will be sent free to any address. The subscription price is to be \$2 per year.

## OF INTEREST TO THE CRAFT.

THE *Union Printer*, of New York, has again changed hands.

THE pressfeeders of Boston have received an advance in their wages from ten to fifteen per cent.

THE "COLOR PRINTER" will doubtless be ready for delivery before the January issue of THE INLAND PRINTER.

THE California state printing office, it is rumored, will be presided over, during Governor Markham's term, by A. Johnson, of Sacramento.

THE Springfield (Ohio) Typographical Union, No. 117, has amended its scale of prices, fixing the pay of time hands at \$15 per week of fifty-nine hours.

MR. GEORGE DESBARATS, former publisher of the *Dominion Illustrated*, is now running a first-class book and job office in the Perreault building, St. James street, Montreal.

BRUCE WALLACE, editor of *Brotherhood*, said to be the organ of the Typographical Union of Great Britain, has made arrangements to give a series of lectures in this country on "Labor Rights."

WILLIAM L. BENNINGTON, of Detroit, Michigan, who has been making his home on the Pacific coast for the past two years, will sail December 3 for Guatemala, Central America, where a good position awaits him.

THE scale for Thorne machines, of which the West Publishing Company has nine, has been fixed by St. Paul Typographical Union, No. 90, for the next six months at 19 cents for brevier and 22 cents for minion.

FRANK BESLIN, the blind editor, who at one time conducted a paper at Cherokee, and who is now engaged in newspaper work at Salt Lake City, is soon to have a remarkable operation performed on his eyes. This operation will be the transplanting of rabbit's eyes and connecting them with the optic nerves. There are several instances on record where the operation has proved successful.

MR. EVERETT GLACKIN, a well-known and honored member of Typographical Union No. 6, died at his residence, 1254 Herkimer street, Brooklyn, New York, on Sunday, December 7, aged thirty-seven years. His funeral was largely attended, and a eulogy was delivered over his remains by the Rev. Dr. McGlynn, who referred in a feeling manner to the manly characteristics and many virtues of the deceased.

TICKETS have been issued for the first grand ball of Boston Job Printing Pressmen's Union, No. 1, to be held in Odd Fellows hall on Thursday evening, January 8. Wright's Boston Brigade band will furnish music, and an enjoyable occasion is assured. This will probably be the only pressmen's ball of the season, as the Adams and cylinder pressmen have given way this year to their fellow-workers on job presses.

A PARTY connected with the Montreal *Herald*, in sending us a recent copy of that sheet, asks us what we think of its mechanical execution, and points to it as an evidence that it is independent of the members of the typographical union. To be frank, we think it is one of the most abominable specimens of typography it has ever been our lot to examine, and that the botches employed thereon have yet to learn their A, B, C's in a printing office. No charge.

HERE is what the *Metropolis* says of the new composing room of the New York *World*: "There are two elevators, way down on the Frankfort street front, and these run, laden with compositors, straight up, without stop, to the thirteenth floor, which is set apart entirely for the typesetters. Two hundred and thirty cases in all are here provided, and here both morning and afternoon editions are set up. This apartment is eighteen feet high. In one narrow gallery sit a dozen operators, each ticking a telegraph instrument which is connected with the Western Union building, and so open to the entire world of wire. Another gallery has the proofreaders—a lynx-eyed army of thirty. Every kink and knick-knack of the art can be found in that composing room, and with

eighty columns of "want" ads to set and arrange after "time" is called, and a twelve-page paper of news to get up afterward, matters must needs move with genuine lightning celerity. In one corner of the room the matrices are made from the forms and the light paper casts are dropped to the lead foundry below, instead of the heavy, fragile forms crawling slowly down and up, as heretofore."

THE following interesting queries and answers were recently printed in the Boston *Daily Globe*:

1. What is considered a fair day's work for a compositor, and a day of how many hours?
2. What is about the average pay, and how is it rated?
3. Is there a greater number of male or female compositors?
  1. In a book office, 6,000 ems solid matter, completed—i. e., set, corrected and distributed—is considered a fair day's work in a day of ten hours. Of course there are many who can do more, but there are a great many more who cannot do as much.
  2. From \$15 to \$18 per week of fifty-nine hours. Most of the printers in book offices, however, work by the piece at 40 cents per thousand.
  3. There are about four males to one female at work at the printing business in Boston.

#### ITEMS OF INTEREST.

BLACKENING the nose and cheeks under the eyes has been found an effectual preventive of snow blindness, or the injurious effect of the glare from illuminated snow upon eyes unaccustomed to it.

THE *Scientific Press* calls attention to a paper tough as wood and being made by mixing chloride of zinc with the pulp in the course of manufacture. It has been found that the greater the degree of concentration of the zinc solution the greater will be the toughness of the paper. It can be used for making gas pipes, boxes, combs, for roofing, and even, it is added, for making boats.

A PITTSFIELD, Illinois, inventor is reported to have invented a new form of folding type-case stand. This stand is formed of hinged side-bars and cross-bars combined with a skeleton frame adapted to be detachably held upon the cross-bars and flexed laterally, to produce a simple and light folding stand which may be readily opened and compactly closed, and when in use will hold the type-cases in convenient position for a standing or sitting compositor.

THE twelve square boxes directly in front of the compositor, containing the letters a, c, d, i, m, etc., will hold about two pounds each. The boxes half the size of the "a" box will hold fifteen ounces each, containing the letters f, b, g, l, p, etc. The small square boxes containing the letters k, j, q, etc., will hold six ounces each, the "e" box three pounds and the cap case five ounces to the box. The best way to order sorts for display type is to do so by "irons." A typefounder's "iron" is about twenty pica ems long.—*Pacific Printer*.

#### BUSINESS OUTLOOK.

**Austin, Texas.**—State of trade, good; prospects, bright; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, \$20; job printers, per week, \$20. The state work has opened up, and quite a number of extra men have been put to work.

**Baltimore, Md.**—State of trade, good; prospects, pleasant; composition on morning papers, 45 cents; evening papers, 40 cents; bookwork, 45 cents; job printers, per week, \$16 to \$20. The *Evening Globe* has ceased to exist on account of conducting a non-union office. A new paper (the *World*) has started, with prospects of success, employing fifteen union printers.

**Bay City, Mich.**—State of trade, dull; prospects, dull; composition on morning papers, 34 cents; evening papers, 32 cents; bookwork, 32 cents; job printers, per week, \$12.

**Boston, Mass.**—State of trade, fair; prospects, brighter; composition on morning papers, 30 cents; evening papers, 38 cents; bookwork, 40 cents; job printers, per week, \$15. Grand ball occurs January 28. Proceeds to be devoted to entertainment of visiting delegates, June next.

**Burlington, Iowa.**—State of trade, fair; prospects, fair; composition on morning paper, 30 cents; evening papers, 25 cents; bookwork, \$14; job printers, per week, \$14 and \$15. The late financial secretary's report was the first since the union was chartered that was reported in full and paid up to date. No. 75 elected new officers at its last meeting.

**Charleston, S. C.**—State of trade, fair; prospects, fair; composition on morning papers, 37½ cents; bookwork, 35 cents; job printers, per week, \$17.

Bookwork has been brisk during past month. The *News and Courier* issues a twelve-page paper during session of legislature. The *World* (non-union) publishes advertisements at half-price as an inducement to people to advertise with them.

**Cincinnati, Ohio.**—State of trade, dull; prospects, discouraging; composition on morning papers, 45 cents; evening papers, 41 cents; bookwork, 40 cents; job printers, per week, \$18. Business is at a standstill here in book and job offices. There are quite a number of idle printers. Would advise tourists to steer clear, as there is nothing in sight.

**Concord, N. H.**—State of trade, fair; prospects, uncertain; composition on evening papers, 20 cents; bookwork, 25 cents; job printers, per week, \$10 to \$12. Legislature elects a state printer in January, and it was supposed the *Monitor* office would get the job, as it has been in Manchester for six years, but recent actions of Senator Chandler have so hurt his popularity that he has no chance for the state work. It amounts to about \$20,000 per year.

**Dayton, Ohio.**—State of trade, very fair; prospects, good; composition on morning papers, 35 cents; evening papers, 32 cents; book and job printers, per week, \$15. All the job offices have had plenty to do, and winter prospects are flattering. The *Dayton World*, a new Sunday paper, made its first appearance on November 30. E. W. Hanley is the proprietor.

**Denver, Colo.**—State of trade, fair; prospects, good; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$20, fifty-three hours. Banks Hall, for years foreman of the *Republican* job office pressroom, has opened a pressroom on his own account.

**Detroit, Mich.**—State of trade, fair; prospects, good; composition on morning papers, 38 cents; evening papers, 36 cents; bookwork, 35 cents; job printers, per week, \$14.

**Ft. Wayne, Ind.**—State of trade, fair; prospects, encouraging; composition on morning papers, 35 cents; evening papers, 30 cents; bookwork, per week, \$13.50; job printers, per week, \$13.50. F. C. Tolan, formerly of the *News* jobroom, has gone on the road for the Ft. Wayne Newspaper Union, and is doing well.

**Galesburg, Ill.**—State of trade, fair; prospects, fair; composition on evening papers, 25 cents; bookwork, 25 cents; job printers, per week, \$12 to \$15. Jobwork rather quiet and newspaper work fairly good.

**Grand Rapids, Mich.**—State of trade, good; prospects, good; composition on morning papers, 35 cents; evening papers, 30 cents; bookwork, per week, \$14; job printers, per week, \$14. F. W. Ball has sold the *Democrat* to Hon. T. M. Weston, late chairman Democratic State Central Committee, and will take possession January 12, 1891. Mr. Weston will improve the plant greatly, will put in a perfecting press, take full telegraphic reports, add more cases, and in every way make it a first-class metropolitan sheet with all modern improvements.

**Hartford, Conn.**—State of trade, fair; prospects, good; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 35 cents; job printers, per week, \$15. Work is fair here just now, and the prospects are that when the state work begins, which will be in a few days, there will be work for all.

**Houston, Texas.**—State of trade, poor; prospects, fair; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$20. There are twenty-five "subs" and eighteen "regs" on the *Post*, the only daily giving out work. Tourists would do well to stay away for a while. Daylight work is worse, and prospects "worse."

**Indianapolis, Ind.**—State of trade, good; prospects, good; composition on morning papers, 38 cents; evening papers, 30 cents; bookwork, 40 cents; job printers, per week, \$16.50. Notwithstanding rumors of typesetting machines, work in all branches of trade is good, two daily papers having increased their force, one, the *Sentinel*, having made a partial change of ownership, and announcing a change from a 4-page to an 8-page paper. Bookwork has also picked up since last report, all regular men going on and some transients also.

**Jackson, Mich.**—State of trade, very good; prospects, good; composition on morning papers, 33 cents; evening papers, 30 cents; bookwork, 30 cents or \$13; job printers, per week, \$13. While work has been good, there has been no lack of men. The *Morning Patriot* was sold November 15 to a stock company, with W. H. Turner as manager and E. W. Barber as editor.

**Jacksonville, Fla.**—State of trade, good; prospects, good; composition on morning papers, 33½ cents; evening papers, 30 cents; bookwork, 33½ cents; job printers, per week, \$16 to \$20. Another new paper to be issued monthly, called the *Paradise*, in the interest of Florida. If favorably received, will be made a weekly. All union printers in town are working.

**Kansas City, Mo.**—State of trade, fair; prospects, fair; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 37½ cents; job printers, per week, \$17. Town rather crowded. The *Sunday Sun*, weekly, employing nine men, was unionized last week. Rumor says that the *Journal* has been sold to Louis Hammerslough, president of the Globe Newspaper Company. If so, it will become a union office. J. B. Merrigan has been succeeded as foreman of the *Globe* by W. J. Winfield. "Barney" has gone to Chicago.

**Keokuk, Iowa.**—State of trade, good; prospects, good; composition on morning papers, 30 cents; evening papers, 26 cents; bookwork, 30 cents; job printers, per week, \$12. Printers are in demand here, there being more work than can be turned out. It will last until about January 1.

**Logansport, Ind.**—State of trade, moderate; prospects, not very encouraging; composition on morning papers, 28 cents; evening papers, 23 cents; bookwork, \$12; job printers, per week, \$12. The work is not very good here at present, except in our job offices. How long it will last no one knows, as this is holiday season. There are plenty here to do the work. O. M. Hand our recording secretary, resigned, and has moved to Chicago.

**London, Ont.**—State of trade, fair; prospects, fair; composition on morning papers, 30 cents; evening papers, 28 cents; bookwork, per week, \$9; job printers, per week, \$9 to \$10. Mr. Josiah Blackburn, managing director of the *Free Press*, who had been ailing for a long time, died at Hot Springs, Arkansas, last month. The remains were brought here for interment. Mr. Malc. Bremner is in charge of the above paper for the time being.

**Macon, Ga.**—State of trade, good; prospects, good; composition on morning papers, 33½ cents; evening papers, \$15 per week; bookwork, 35 cents; job printers, per week, \$13 to \$20. The *Atlanta Constitution* has secured the contract for printing the *Christian Advocate*, work formerly done by J. W. Burke & Co., of this city. The present foreman will probably go with it. Three other sits are vacant by the removal.

**Milwaukee, Wis.**—State of trade, fair; prospects, good; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 35 cents; job printers, per week, \$14 to \$18. *Sentinel*, last Thursday, put on a new dress of agate, nonpareil, minion and brevier, self-spacing; also added three cases.

**Mobile, Ala.**—State of trade, good; prospects, encouraging; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$16.

**New Haven, Conn.**—State of trade, fair; prospects, good after the holidays; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 35 and 40 cents; job printers, per week, \$15. Since my last report the *Evening Union* has started a morning edition and the *Morning News* an evening edition, thus giving permanent employment to eight of our casually employed members. It is hoped both enterprises will be successful. It makes prospects brighter in this city.

**Peoria, Ill.**—State of trade, moderate; prospects, fair; composition on morning papers, 36 cents; evening papers, 33 cents; bookwork, 38 cents; job printers, per week, \$15, \$18, \$20. Work has only been fair the past month, with a sufficient number of men to do the work.

**Philadelphia, Pa.**—State of trade, dull; prospects, not encouraging; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$16. Reports from forty-two offices show: Six, brisk; thirteen, medium; six, as usual; ten, fair; and seven dull. *Press* and *Item* are non-union tariff sheets.

**Richmond, Va.**—State of trade, fair; prospects, fair; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$16 to \$20. "Tourists" need not come this way.

**Rome, N. Y.**—State of trade, medium; prospects, good; composition on evening papers, 25 cents; bookwork, 25 cents; job printers, per week, \$9 to \$12. The long looked for republican daily paper will probably never materialize, as it has been talked of for over three years, and nothing has yet come of it.

**San Antonio, Texas.**—State of trade, dull; prospects, fair; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 40 cents; job printers, per week, \$20. H. N. Potter, a consumptive printer who arrived here with a Memphis (Tenn.) card, died on November 26, and was interred by San Antonio Union.

**San Diego, Cal.**—State of trade, dull; prospects, duller; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 40 cents; job printers, per week, \$18. There is some prospect of a change in the management of some of the newspaper offices, thereby advancing the cause of the International Typographical Union.

**Springfield, Ill.**—State of trade, unchanged; prospects, fair; composition on morning papers, 33½ cents; evening papers, 30 cents; book and job printers, per week, \$15. Nothing to report further than that everybody seems to be getting enough work to satisfy present needs. Number of members end of last month larger than usual.

**Springfield, Ohio.**—State of trade, good; prospects, fair; composition on evening papers, 30 cents; job printers, per week, \$15. Business is good, but plenty of printers to fill all demands. Job offices are having plenty to do. The *Leader* is the name of a new morning daily; it is a mammoth affair—three-column folio.

**St. John, N. B.**—State of trade, good; prospects, good; composition on morning papers, 30 cents; evening papers, per week, \$10; job printers, per week, \$10. It is understood the *Daily Telegraph*, of this city, has been purchased by C. W. Weldon, M. P. for St. John, for about \$35,000. The *Daily Sun* has increased its size from four to eight pages, which will be continued till January 1.

**St. Louis, Mo.**—State of trade, dull; prospects, not encouraging; composition on morning papers, 43 cents; evening papers, 38 cents; bookwork, 45 cents; job printers, per week, \$18. During the month of November there was a manifest collapse in the printing trade here, added to which there has been a large number of arrivals in the city; so that, taken altogether, the outlook is not encouraging.

**St. Paul, Minn.**—State of trade, extremely dull; prospects, poor until after January 1; composition on morning papers, 42 cents; evening papers,

37 cents; bookwork, 35 to 43 cents; job printers, per week, \$16 to \$20. Scale on Thorne typesetting machines, 19 cents for brevier, 22 cents for minion.

**Syracuse, N. Y.**—State of trade, fair; prospects, good; composition on morning papers, 32 cents; evening papers, 30 cents; bookwork, 30 cents; job printers, per week, \$14. Annual election of officers took place December 7, resulting as follows: James M. Lynch, president; J. C. Cooley, vice-president; Fred A. Ward, financial and corresponding secretary; John A. Davis, recording secretary; George T. Lay, treasurer; Thomas Joslin, sergeant-at-arms.

**Topeka, Kan.**—State of trade, good; prospects, fair; composition on morning papers, 33½ cents; evening papers, 28½ cents; bookwork, 40 cents; job printers, per week, \$15. Legislature meets next month. Business likely to boom then.

**Utica, N. Y.**—State of trade, excellent; prospects, cheering; composition on morning papers, 35 cents; evening papers, 31½ cents; bookwork, 31½ cents; job printers, per week, \$12.50. Work in the city for the past month or two has been flourishing, business in the job offices being exceptionally good. Idle printers have been a scarcity of late in Utica, which has imparted an air of cheerfulness to members of the craft, in view of the approaching holidays.

**Vancouver, B. C.**—State of trade, fair; prospects, fair; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$21. Vancouver lost one of its oldest members recently, Mr. E. W. Evans, of inflammation of the bowels. No. 226 showed its respects by turning out to a man.

**Wheeling, W. Va.**—State of trade, fair; prospects, not very bright; composition on morning papers, 35 cents; evening papers, 30 cents; bookwork, 40 cents; job printers, per week, \$15. State of trade is fair with plenty of printers for all demands.

**Wichita, Kan.**—State of trade, fair; prospects, fair to good; composition on morning papers, 35 cents; evening papers, 30 cents; job printers, per week, \$15. The *Evening Journal* has suspended. Two new weeklies in November. Town full of printers at present.

**Worcester, Mass.**—State of trade, quiet; prospects, uncertain; composition on morning papers, 40 cents; evening papers, 33½ cents; bookwork, 35 cents; job printers, per week, \$10 to \$15. Annual election of officers, December 7, resulted as follows: President, George Van Wagoner; vice-president, Frank E. Brown; recording and corresponding secretary, John F. Duggan; financial secretary, William F. Langill; treasurer, Aaron M. Gould; sergeant-at-arms, P. J. Jennings; trustees, Henry B. Berry, Frank E. Brown, John F. Duggan. Annual assembly of 165 held Tuesday evening, December 9; success both socially and financially.

## BUSINESS NOTICES.

F. W. THOMAS, of 241 Superior street, Toledo, Ohio, has sent us one of his pamphlets, entitled "Twists," which shows what can be done with brass rule in an ordinary printing office, in a practical way, and with a simple tool. The book is neatly printed, and the designs and instructions such that any one desiring to acquire the art of "twisting" can gain many points with very little study. Send for a copy. Price 50 cents.

SOME months since Messrs. Julius Heinemann & Co., of 52 Madison street, placed one of their new iron stands in the office of the Henry O. Shepard Company, 183 Monroe street. This frame is one of the strongest and best yet made, its rigidity, lightness and strength commending it on sight. As showing the favor with which this frame is looked upon it is only necessary to say that Messrs. Rand, McNally & Co. have discarded all their wooden frames and bought an entire outfit of the Heinemann stands for their new building. The stands are adjustable so that the cases can be drawn out from either the front or back as desired.

## REMOVAL—MONTAGUE & FULLER

Montague & Fuller have removed their New York office, stock of machinery, parts and supplies, and shop, from their old quarters on William and Beekman streets to 28 Reade street, between Broadway and Elm street. At their new place they have a much larger store, and, with the basement, etc., get about three times the amount of room they had at the old location. The move was made necessary by the largely increasing business of the firm, which could not be handled to advantage at the old stand. The present location is much more convenient to find, particularly for city trade, and with the increased facilities the firm can serve their customers more satisfactorily than heretofore. Read the list of machinery handled by them, on page 263.

## REGARDING A SCHEME.

Under the above caption, a recent number of *Latham's Red Book* publishes an interesting account of the steady rise and phenomenal success of the now well-known house of Geo. H. Benedict & Co., map and wood engravers and electrotypers,

Chicago, a cut of whose building we present to our readers herewith. If space permitted we should be glad to give the article entire, but owing to the unusual amount of matter crowding our columns this month we cannot do so. The story is told in a way that cannot fail to interest one, and when started on it the reader continues to the end. The "scheme" of the house, from the time it started up to the present time, of doing exactly what it advertised and agreed to do, has worked so well that their establishment has grown to such an extent that the building shown in the illustration is necessary to carry on their immense business. When it is considered that but a few years ago the firm started in one room, and now occupy this substantial structure, it will be acknowledged that there must be merit somewhere. Orders for map engraving by the wax process, photo zinc etching, and electrotyping can be handled in a manner that few houses can equal. The electrotype plant, recently added, enables the firm to look after work more closely than when they had to depend on outsiders to do this portion of the business, and to get it out when promised. On page 256 of this number is shown a specimen page of the work of Geo. H. Benedict & Co. Out-of-town customers as well as those in the city are invited to send in their orders. They will be well looked after.

## BOSTON PHOTOGRAVURE COMPANY.

We acknowledge receipt of a catalogue of illustrations, ornamental designs and initials, recently issued by the Boston Photogravure Company, 56 Boylston street, Boston, Massachusetts, which contains samples of the work produced by this firm. The designs are original in character, the execution the best, and the assortment one from which many useful cuts can be selected. Every printer who wishes to embellish his work with tasty cuts and ornaments, should not fail to secure a copy of this catalogue and make his selection. The making of half-tone, relief plate and mezzotype engraving, on both zinc and copper, is not the only work done by the company. As the name indicates, the firm produces some of the finest photogravures ever turned out, and makes a specialty of gelatine and fine cut printing. The latest efforts of the Boston Photogravure Company have been in what is called the French color process, used with such success by several French illustrated periodicals, as *Figaro* and *Paris Illustré*. That America is not far behind European countries in this process is clearly shown by an examination of some of the recent designs of French color work produced by the Boston company. In fineness of gradation of tints, in softness, in perfection of register, plates

printed by this process excel any we have ever seen. THE INLAND PRINTER will show several colored inserts by this new process, and also some plates in mezzotype and half-tone, which will be looked forward to with much interest by its many readers in all parts of the world.

## WHITE'S MULTI-COLOR CHART.

This is the appropriate name of a work just issued by Mr. James White, of the Illinois Paper Company of Chicago, a specimen page of which is presented in the present issue of THE INLAND PRINTER. So far as we know, nothing of the kind has heretofore been available to the trade, though the want of the information imparted therein has long been acknowledged; and we are sure that when its value is duly appreciated no progressive printer will fail to secure a copy. In this connection we cannot do better than publish the following explanatory remarks, as given by its publisher:

"The frequency with which printers are obliged to experiment on the press for the purpose of showing customers the appropriate color or colors of ink for a given shade of paper, or *vice versa*, prompted the production of this work.

"Care has been taken to avoid in it the use of colors not easily obtained, the end desired being to establish a permanent guide for daily use in even the smallest office.

"The colors as shown on the white, or No. 1 specimen, are exactly the same as used throughout on all, the only difference being that the quantity of ink is necessarily regulated to suit the various surfaces of paper.

"On the next leaf will be found a list of the colors, the order in which printed, the different combinations, the manufacturer's name and the cost of each color.

"The stars are so arranged that by selecting any one of them, and covering the balance of the printing, the effect produced by such single color can be seen."

The colors used are as follows: Red, brown, green, blue and black, which show on each specimen thirty-two distinctive effects; and as the work contains seventy-three leaves of different colored papers, our readers can form an approximate estimate of the almost exhaustless results produced. The cost of the work is \$1, but it is cheap at ten times the amount. We advise every printer to send for a copy to the Illinois Paper Company, 181 Monroe street, Chicago.

## GEMS OF ART.

A. Zeese & Co., 341-351 Dearborn street, always in the van, are now making a specialty of fine engraved plates for use on the ordinary printing press, which they claim enable printers to compete with lithographers, the result of which, when properly printed, so closely resembles work from stone, that the difference is hardly discernible. The reader can judge for himself of the merits of the claim by referring to the beautiful specimens of this work shown on page 281. These plates are called lithogravures, which title we think is correctly bestowed.

## ANOTHER STEP IN ADVANCE.

The cut on page 232 illustrates another progressive step in the manufacture of printers' rollers, by Mr. M. F. Bingham, of this city, and must commend itself to the common sense and approbation of every progressive printer. As the old hand press was superseded by the introduction of improved printing machinery, so old, imperfect methods of roller making must give way to the magnificent and progressive inventions of the Bingham family. The attainment of their ends, however, has not been accomplished without worry and expense, some idea of which may be realized when we state that all the machinery for the construction of these machines had to be specially made in the first place, and then made over several times, before the desired results were accomplished, and the cylinders themselves rebuilt thrice before the defects

discovered were remedied. As Mr. Bingham puts it, "It seemed that some obstructive demon was continually dropping obstacles in my path. One difficulty would no sooner be surmounted than another would be encountered. It made the cold sweat stand out on my forehead, and my heart sunk within me, when I was compelled to pay check after check for labor and material, and see them all go into the scrap heap. But I knew I was right, and that time would vindicate my ideas. I have triumphed, although at the expense of nerve and a depleted pocket-book. For two years I was on the rack, and don't want any more of it. In fact, the machinists' bills alone would have proved a competency, if well invested." Too much credit cannot be awarded him for his persistency and pluck in sticking to the work till accomplished, and his reward should be a substantial recognition by printers who appreciate a good thing when they see it.

#### ONE OF BOSTON'S ENTERPRISING HOUSES.

The accompanying cut shows the building occupied by H. C. Hansen, 26 Hawley street, Boston, Massachusetts, whose push and enterprise are worthy of more than passing mention.

Soon after the great fire in Boston, in 1872, when all the foundries in that city were nearly destroyed, Mr. Hansen decided that to meet the demand for type and printing material in New England, a new foundry, with improved facilities, was a necessity. He accordingly established the foundry which today is in such successful operation, and which we take pleasure in calling the attention of the trade to at this time. All the tools, molds, matrices, and other appliances, used by this foundry, and nearly all its machinery, with many improvements and inventions of his own, have been made upon the premises by the most expert mechanics. Mr. Hansen manufactures brass rules, circles, ovals, dashes, quads, spaces, leads, slugs,

metal furniture, quotations, pin-hole perforating machines, and other articles used by the printing trade, all of which he can supply promptly. The *Typographic Supplement*, recently issued, shows some very useful faces of type made by this house, and other material for sale. Every printer should have a copy. Send for it, and for the specimen book of 1889. Notice Mr. Hansen's full page advertisement on page 257.

#### NEW COMPANY FOR COLOR PRINTING.

Subscription books are now open for subscribers to the capital stock of the proposed Photo Color Printing and Engraving Company, limited, 10 Little Hull street, Brooklyn, New York, a company which has recently issued a prospectus setting forth what it proposes to do. Mr. C. F. Rockstroh, one of the incorporators, has several inventions and processes by which blended color work can be produced easily, rapidly and successfully at one-tenth the cost of the lithographer's method. Among other things, their circular says: "By the old or lithographic process, each color is printed by the press at one time, and singly, when the paper is taken from the press and allowed to dry before another and different color can be printed, and by such a method no satisfactory artistic blending of different colors has ever been accomplished without great labor, expense and care. By the Rockstroh inventions and processes used by the Photo Color Printing and Engraving Company, limited, the printing process will do the finest lithographic work in almost any number of colors harmoniously variegated, and this by one single impression. The printing press with the Rockstroh improvements requires no feeding process of sheets of paper,

but a continuous, endless roll of paper is run through the press on a smooth and even tension, striking the proper forms and receiving the desired colors to a mathematical certainty — what printers call register — at the same time automatically doing the bronzing of print, and delivering the job at the end of the press cut to the measured size. Two-color work was never before done on the two sides of the paper by *one impression* at the same time, as the newspaper press does its work. The Rockstroh improvements accomplish this work easily and neatly, saving a large percentage by the abundance of work in short time."

If the company can do what is claimed in its prospectus the invention is certainly one of great importance, and further developments by it will be looked forward to with a great deal of interest. Parties interested can obtain fuller information by addressing the company as above.

**A PRESSMAN WANTS A SITUATION.** Any kind of press. Has had charge of pressroom of large job office for over twelve years and manager of same office for over four years. Served his time in the job-room, but is a little rusty there. Permanent position. State wages. City preferred. Address "R," care INLAND PRINTER.

**COMPOSITORS**—Send 10 cents for patented copy holder. Agents wanted. GEO. W. BANTA, 792 Chapel street, New Haven, Conn.

**EVERY YOUNG PRINTER** should have a copy of Bishop's "PRACTICAL PRINTER," 200 pages. Price, \$1. Also by the same author, "DIAGRAMS OF IMPOSITION" and "THE PRINTER'S READY RECKONER." Price, 50 cents each. To be obtained of H. G. Bishop, Box 1061, Oneonta, N. Y., or through Farmer, Little & Co., New York and Chicago. These are the handiest and most useful works ever published for printers. Indorsed by everyone who has seen them.

**FOR SALE**—Splendid job printing office and bindery in a large and thriving southern city. Thoroughly equipped for any class of work. Terms reasonable, and a bargain for anyone desiring a well established business in a mild and healthful climate. Write for full particulars. Address "A. B. & C.," care INLAND PRINTER.

**OF COURSE!**—We can give them away, but we have only a few more of the complete unbound sets of "American Printers' Specimen Exchange" (4 volumes) at \$3.75. The balance, 10 volumes, we are going to bind and hold at \$10 each, and they are worth twice as much. ED. H. McCLURE, Buffalo, New York.

**SITUATION WANTED**—By a pressman of many years' experience on colored and general work; has worked on all classes of German, French, English, Belgian and American presses; has also had several years' experience on power plate printing machines; has had charge of office with thirty-five machines; has also traveled for ink and color manufacturing house in South America, Europe, and the western territory of the United States; is willing to go anywhere; speaks English, German and Spanish. Manufacturers or employing printers wishing such a man can hear more by addressing "HUSTLER," care INLAND PRINTER.

**SPECIMENS CHEAP**—Full unbound set (4 volumes) of the *American Printers' Specimen Exchange*, at \$3.75 by express; or one sample volume (no choice allowed) at 60 cents, postpaid, and the balance of the set at \$1.10 per volume, postpaid. Will then bind one or all the volumes at \$2. ED. H. McCLURE, Buffalo, New York.

**USEFUL Wrinkles** and labor-saving methods in pamphlet stitching and covering, and binding of checks, receipts and other light work. 50 cents. Address J. FEUDNER, Rushville, Indiana.

**WANTED**—A second-hand lever paper cutter, 25 to 30 inch, in good order. Address A. FRESHL, 149 Kansas street, Oshkosh, Wis.

**WANTED**—Photographer for relief line etching. Only those who can furnish 11 references answered. Address BAKER & RANDOLPH, Indianapolis, Indiana.

**\$10,000.00 NET PROFIT** in last three years has been made by this office. Books open for inspection. \$1,500.00, half cash, buys the plant, good will and a fine 10-room house in county seat town. For particulars address Drawer 15, Lakota, North Dakota.

#### COUNTING MACHINES.

Send for Circular and Prices to

W. N. DURANT,  
Milwaukee, Wis.

MANUFACTURED UNDER PATENTS 237,825 AND 240,099.

#### THE CUSSONS CALENDAR PAD

REQUIRES NEITHER EYELET NOR WIRE STITCH,

But simply has to be glued or pasted to the calendar card. Small sizes ready gummed and as easily attached as postage stamps. Manufactured by special machinery, and cost no more than the common kind. Twelve sizes now ready.

## WHAT IS SAID OF STEEL FURNITURE.

BALTIMORE, MD., December 1, 1890.

MORGANS & WILCOX MFG. Co., Middletown, N. Y.:

Gentlemen.—The larger sizes of your Steel Furniture work in so well we are anxious to have the order completed, and would ask you to hurry forward the small sizes. Yours, etc.,

GUGGENHEIMER, WEIL & CO.

The Lightning Ink Reducer and Dryer. Awarded Diploma, Paris, 1889, in London, 1887, for Unexcelled Excellence.

Inkoleum is the only article in the world that gives pressmen complete control over printing and lithograph inks, rollers and stock in any weather and climate. It refines inks of

any color or shade and makes them dry quick and glossy, enabling rushed work to be delivered immediately from press without offsetting. Inkoleum never dries on rollers, but preserves their suction, life and elasticity. On starting press in morning or whenever rollers are too sticky or ink dry on them, or the ink pulls the paper, a drop or two of Inkoleum put on the rollers with your finger immediately softens the ink and makes them do the finest work, a saving of five times its cost every hour in the day.

Beware of Infringements! Order Inkoleum and accept no worthless piratical imitation, said to be just as good. Price, only 50 cents. For sale by every typefoundry in the world. Read circulars printed in five languages. Put up only by

ELECTRINE MANUFACTURING CO.

GEO. M. STANCHFIELD, Patentee.

St. Paul, U. S. A.

## THE NEW SIDE-GAUGE.

FOR ALL JOB PRESSES.

FIRST ever invented for the purpose, and offered to the trade at so low a price as to make it look as though it was a sham. But it will do wonders, and when we think how often we have wanted a side-gauge that we could use without dispensing with the gripper, we are surprised that it was not thought of before; and then

to be presented in such a simple form, and in a single piece of metal! It can be crowded right between the gripper and the tympan without smashing, losing its elasticity, or bearing off the gripper. Don't you believe it? You will as soon as you try them. You will also find in them many more uses too numerous to mention in an advertisement; and all for the small sum of

75c. per Dozen, assorted shapes. 25c. per set of three.

SOLD BY ALL DEALERS AND BY THE INVENTOR AND MANUFACTURER,

E. L. MEGILL, 60 Duane Street, NEW YORK.

 PATENT  
**New No. 2 Lever Movement Wire Stitcher.**

**E. P. DONNELL MFG. CO.**

Manufacturers of all kinds of Bookbinders' Machinery,

327 & 329 DEARBORN STREET, CHICAGO, ILL.

This Wire Stitcher has all Lever movements; has no cams or shafts, and it is well known  
 that a lever movement is positive.

It is so simple that any boy or girl can understand its whole movement at a first glance.

It has my new Patent Clincher which has only one part.

No adjustment of working parts required.

Has my quick adjustable Flat and Saddle Table.

Steam power, and can be run as fast as any operator can feed it, and at the price will take  
 the place of all the cheap stitchers heretofore offered.

All parts interchangeable.

Will stitch from one sheet to one-half inch in thickness.

No parts to take off or put on to change from light to heavy stitching.

It forms, drives and clinches a staple from a continuous round or flat wire wound on spools,  
 and no change necessary, except to change the spool.

## PRACTICAL TALKS ON PRESSWORK.

NO. X.—BY A PRESSMAN.

A CORRESPONDENT dating from York, Pennsylvania, in the December issue of THE INLAND PRINTER, in referring to an assertion made in one of these papers, that a vibratory attachment to distributing rollers set at right angles to the motion of the bed of a cylinder press, would do away, to a great extent, with the grinding of the face of the rollers, says: "The evil could not be easily remedied by a vibratory attachment. When the bed of a cylinder press is moving back to take the impression, the angle rollers are turning in that direction, and before they have time to stop they are caught by the bed and turned in the direction the bed is then moving." \* \* \*

It is evident that your correspondent is not familiar with the use of the iron riders to be used on top of the angle rollers, which are furnished with all the leading presses of the day. By their use the motion of the angle rollers ceases the instant they lose contact with the distributing plate, except when they are very old and hard.

If the cause of the chipping or grinding referred to comes from the uneven distribution of the driving force, i. e., the contact between the roller and plate occurring at one end of the roller before the other, then I think that my former proposition, to place the rollers at right angles with a vibratory attachment, would be the best remedy. If, on the other hand, it is the transmitting of motion to the rollers by the plate that causes the trouble, it could be done away with by furnishing positive motion to the rollers so that they would be in motion in the proper direction when the plate strikes them. No doubt this latter is the process our friend is going to patent. If he succeeds in removing this obstacle to good work he will have deserved well of his fellow pressmen. But let him not build too great hopes on pecuniary success from his invention.

\* \*

How to produce the best results from a limited grade of supplies, such as ink, etc., under adverse circumstances, is one of the problems which is continually

confronting pressmen. Not the happy-go-lucky kind, but the thoughtful, conscientious, and possibly artistic pressmen, on whom the future of our craft so largely depends. Suppose such a man is given a job containing a quantity of illustrations on good paper, and an inferior ink. Of course he will not succeed, not through any fault of his, but through the want of knowledge on the part of the responsible party. Equally, of course, he will be blamed for the failure, for the mediocrity that could expect the best results from inferior materials is incapable of making allowances for the victim of its shortcomings.

A very frequent cause for ill-success in fine printing, especially at this time of the year, is the great variation in temperature, against which most pressrooms are very ill provided. There is probably no other craft that is so dependent on the preservation of an even temperature as presswork. The contraction and expansion of metals, the chemical action of heat and cold on ink, the greater tendency in cold weather to the generation of electricity in paper, all tend in greater or lesser degree to make the life of a pressman anything but a happy one. Why is it that employing printers, who in other matters are in nowise deficient in business tact, do not appreciate the loss, from a money point of view, in neglecting the proper and even heating of pressrooms? There is profit for them in heeding this suggestion.

\* \*

In conversation with some ink manufacturers lately, the question of blackmail levied on them by foremen of pressrooms or others in a position to influence trade was brought up. Foreman after foreman was mentioned who was understood to be for sale, until one would almost imagine that the taking charge of a pressroom and retaining honest principles were altogether incompatible. I had known, in a general way, that this evil had attained alarming dimensions, but never for a moment suspected it to be so colossal as these gentlemen reported it. On inquiring why they did not combine for the purpose of overcoming this thieving tendency, I was given to understand that any manufacturer known to take any steps toward honest dealing

would lose his trade. Besides, one of them admitted it was the employer who paid all in the end. When the percentage of blackmail rose to a certain pitch, sufficient to interfere with their legitimate profits, the quality of the goods had to suffer. Of course the foreman, being in their power, would have to do the best he could to make his employer think that everything was lovely; that the fault lay somewhere else than with the goods with which *backsheesh* was given.

Indeed, I have been informed, on good authority, that this very question was seriously discussed by the members of the National Typothetæ during their late convention at Boston, and that one of them, who had formerly been a pressroom foreman, was loudly denouncing the practice, until he was "called down" by a manufacturer present, who reminded him of his own shortcomings before he became an employer.

In alluding to this matter, apart from my desire to see honesty the rule in printing offices, I am actuated by a wish to so change conditions that the pressmen should profit legitimately by the increased profits to the employer by the abolition of this system. The relations between employers and foremen may safely be left to the business sagacity of the former to settle.

Written for THE INLAND PRINTER.

#### A FOREMAN AND APPRENTICE.

BY A. H. M.

SUCCESSFUL professional or business men when in a reminiscent mood delight to dwell more particularly on the periods of adversity in their career forming a more striking and telling contrast to the possibly brilliant present of their lives. This is not to be wondered at, and each hearer listens eagerly to the tale of difficulties surmounted and how success was won, in the hope that he may gain a little from the experience of the narrator. The garrulous old compositor, too, delights to tell his exploits, and the older he grows it seems the earlier scenes of his life are more in his thoughts, and the little concourse of apprentices and "devils" who listen to his yarns never weary of the old fellow, for he gives them many helpful hints. Our old friend, a type of a class fast disappearing, although getting a little infirm, has brightened up wonderfully the last few months, seeming to shake off a sort of wistful despondency that made his companions regard him with a vague pity. His wife is dead, and his one child, a daughter, is married, but with means so narrow that any slight expense is felt to be a burden. Idleness he can neither afford nor endure, and though a good workman still, he feels that the day of his farewell to the case is not far distant. The cause of his increase of spirits I discerned when I saw him perusing the hopeful news of the Printer's Home in the columns of THE INLAND PRINTER, and when I spoke to him the wish of his heart was disclosed by his glistening eyes and the flush on his withered cheek.

In jest I asked him how it was that he did not draw his bank balance and retire to ease and comfort. "Ah!

boy," said he, "When a man's savings are drained by sickness and death, and the broken bank sweeps away the last of what was painfully scraped together for old age, it is too late a day for hope and reliance in one's own exertions. When the Home is built I shall then have a retreat that will be congenial to me—not shut off from the boys so soon as I quit the case.

"I have been a good many years at the trade now—made big bills as a compositor, have been foreman and proprietor, and have had success in all. The money I made is gone now, though, and through no fault of mine. If I had not been a good all-round workman I don't know how I should have got along. I was naturally careless as a boy, and the foreman was so severe that I thought he had a personal dislike to me, but I can see that man's motives in a clearer light now and know that he was but doing his duty by me, ungrateful and tiresome as I was. We had no magazines such as THE INLAND PRINTER, in those days, to encourage us, teach us, or rouse our dormant ambition, and the foreman's fulminations against us were listened to indifferently as something of too frequent occurrence to require attention.

"There were three apprentices in the office, including myself, and there was one "devil." One day the foreman came into the alley where the four of us were sitting at luncheon and in a peremptory way told us he wanted us to call at his house in the evening. Well, we went to his house that night, and many nights after, and he had a blackboard and a piece of chalk and he made the paths of knowledge smooth to us. He told us he had noticed our little peculiarities in typesetting; that we imitated all the faults of the journeyman whom we happened to be working near, and told us the folly of doing so—that we must learn to do our own thinking, and explained to us the harmony of type faces, the imposition of forms, and all the information he could impart in that way, till we at last appreciated him and what he was doing for us. We all felt a new interest in the trade after about a month spent in this way—and the foreman ceased to be a man upon whom we delighted to impose. I don't suppose foremen nowadays in the big city offices could do as our foreman did, but I think if they combined (the offices, I mean) much could be done to better the present method of instructing apprentices."

As the old compositor finished his explanation, the reflections it gave rise to impelled me to ask him what definite plan he would lay down for improving the instruction of apprentices in the large cities. This seemed to be a subject near his heart, for he said that the amount of instruction he had received from the short term of "schooling" his foreman had given him in the technique of the trade had roused his ambition and placed before him in a strong and sharply-defined light the need of study and close application if he intended to become a competent printer. "I claim," he said, "that if a list of apprentices be prepared by the chairman of the chapels of the various offices in town and a strong effort made to induce them to meet

at some appointed place to hear lectures on the handicraft, a competent printer with a piece of chalk and a blackboard could give them instruction that would be valuable to themselves and their employers. Then, too, a typesetting machine could be easily rented, I think, for so good a cause, and the journeymen make use of this means to meet the coming change from hand-composing to machine typesetting. "The time is ripe, now," said he, "and any further delay is not only needless but dangerous, for the manner of instruction at present removes the apprentice from the guidance of the foreman and hands him over to the control of a man engaged on blankwork, tariffs, or some other specialty, and he, consequently, is but poorly instructed, and as such as he become journeymen and are taken into the union, the scale of merit is lowered and the union card a pledge of competency no longer."

Written for THE INLAND PRINTER.

### CANCELED WITH HIS LIFE.

A SPECIAL WAR CORRESPONDENT RECALLS A SINGULAR INSTANCE OF FATALITY.

BY MALCOLM MCPHERSON.

IT all happened in that old-fashioned London inn, the "Cheshire Cheese," which affected the style of a hundred years ago, when Fleet street reflected the glass of fashion and the mold of form. Old-fashioned pictures, chiefly sporting scenes and replicas—and in some cases originals—of Hogarth's famous satirical drawings hang upon the walls, the floor is sanded, the tables are plain, substantial oak, the foaming beakers of ale are served out in old-fashioned pewter mugs, and the steaks, chops and Welsh rabbits provided by the old white-capped cook are not excelled by any other *cuisine* in the city. Notwithstanding its homely character, the inn—for it is still an inn, such as Falstaff would delight to take his ease in, and the proprietor would have spasms if it were called a restaurant—is frequented by the most notable characters in London. Artists, lawyers, editors, special correspondents, and even judges, whose grave appearance on the bench strikes silence into the multitude who cannot disassociate a powdered wig from the mysterious, awe-compelling force of Rhadamanthus, meet there and exchange opinions about general affairs the world over. When the beefsteak pudding, for which the inn is famous, is opened, hot, steaming and marvelously fragrant, on Saturday afternoon in the center of the front room, the flow of wit begins, and the glow of soul and intellect irradiates the place from wall to wall. It used to be no uncommon circumstance to see George Augustus Sala, with bulbous Bardolphian nose, but withal full of magnetic geniality and enthusiasm, debating with Sergeant Ballantine about the frailties of modern society as compared with the brilliant days when Pericles and Aspasia illuminated the moral and mental atmosphere of Athens; John Augustus O'Shea describing to Baron Huddleston the difference between playing the clown in a Parisian *theatre des varieties* and

the passion play of Oberammergau (which, by the way, John Augustus claims to have discovered to the eyes of Europe); or Archibald Forbes narrating his marvelous adventures in the Franco-German war, and the accident by which he came to be the first news-carrier of the fall of Metz.

One afternoon a group of newspaper men were sitting in a corner of the room exchanging experiences, when someone, curiously enough, asked the general question, whether any of them had met with any remarkable cases of fatalism—"kismet," he called it, because he had traveled in the east—on the battlefield. I happened to remember one singular case in point, and as it was really a curious example of the meeting of fortuitous circumstances, perhaps it will interest the readers of THE INLAND PRINTER if I repeat the substance of the story as I told it then, although, for certain reasons, I cannot mention the name of the principal character in the fatal tragedy, but we will call him Lieutenant X.

Lieutenant X. was the son of an English clergyman, and had recently graduated from Oxford University and Sandhurst Military College. He was a brilliant young fellow, full of fun, proficient in outdoor sports, billiards, and fond (too particularly fond) of cards. When he went to India he was attached to the Poona Horse, one of the most celebrated native cavalry regiments in the Bombay Presidency. In a short time he was appointed adjutant of the regiment. This carried him a good deal into society, which, with the fact that he was considered an excellent gentleman rider and therefore in great demand at sporting meetings, led him into expenses which were by no means commensurate with his regimental pay. Consequently, while his intentions were entirely honest, he could not always fulfill his pecuniary obligations, and fell into the hands of the Marwarees or native bill discounters—the natural-born Shylocks of Hindoostan.

One night in 1878, when the trouble between the government of India and Shere Ali, the Ameer of Afghanistan, was spreading broad, dark and threatening across the political horizon, I happened to meet the lieutenant at a bachelor dinner party. In India, "bachelor dinner" invariably means cards. It may be whist, or loo, or vingt-et-un, but at all events it is cards for stakes. On this occasion the post-prandial game proposed was poker, which had just been introduced to that part of the world by a Southerner, who went by the name of Dr. Doolittle. Clement—that was the Christian name of Lieutenant X.—had been making pretty free with the wine, and after calling for several "pegs"—*Anglice*, brandies and soda—he entered the game feeling decidedly "jolly." At first he won, but with each "peg" he nailed into his coffin he became more and more reckless, and his "chits" or "I. O. U.'s" kept flying freely around the table. Curiously, although I was no player, most of these fluttered into my hand. At about three o'clock in the morning Clement called in his "I. O. U.'s." He knew that he had played beyond his limit and wished to call a halt before his honor was

seriously involved—for a card debt out in aristocratic India is considered a debt of honor, to neglect the payment of which invokes social ostracism. When he saw the chits which I held against him he pressed his hand to his fevered brow, and finally tore them up and wrote a single "I. O. U." for the total amount—£70, or about \$350. As he gave it to me on the veranda, where the other guests were sitting smoking their cheroots and sipping brandy and soda, he said to me quietly: "Mac, I'm in deep with the Marwarees already, and I cannot very well draw upon the old gentleman at home for any more funds this quarter. If I pay you I'll have to sell my charger and resign the service, depending upon what I can raise on my commission. Now, I'm in a devil of a hole, old man, as you can see, and"—

"Clement," I said, "don't say another word. Here is your I. O. U., and when you get fixed in funds again you may pay me at any time. Don't let this little thing worry you at all."

At first he protested that he would not take back the paper, and talked about his honor as an officer and a gentleman. I insisted, however, and finally he consented to take back his I. O. U. on condition that he would liquidate the debt within six months from date. As he took out his pocketbook, I noticed that he placed the returned "I. O. U." carefully between a photograph of his father and mother and another of a remarkably pretty young lady—his cousin, he remarked, "the sweetest girl in the world, God bless her." Then he added, as we were parting, "That I. O. U. I have placed next my heart, and it shall only be canceled with my life, old man."

The next time I met Lieutenant X. was on the train, when I was proceeding to Simla, the viceroy's summer headquarters in the Himalayas, to get my passport for the front from the military authorities. At a small station on the road the train was stopped in order to put an officer's charger on board. When all was ready to start, who should stumble into my compartment but Clement. "Hello, old fellow," he shouted, "where are you bound for? For the front? Well, by Jove, I'm in luck." "So am I." "I don't know yet what column I shall be attached to, but I rather think it will be the Kandahar division." For two nights and the better part of three days we were in the train together, and as we were joined by several other officers who were ordered to report for duty at the front, we had a right merry time, singing, joking and laughing as if no shadow of death hovered across our path. I left the company at Umballa, where I had to take the pony dak or government mail for Simla.

Months elapsed. Severe fighting had taken place all throughout Afghanistan. At length reports, at first dim, but finally cruelly authentic, reached headquarters that a British division, under General Burrows, had been surprised and annihilated on the banks of the Maiwan river, fifty miles from Kandahar, by the forces of Ayoub Khan, the youngest son of Shere Ali. A British force

brought in the dead officers. The private soldiers were buried where they fell. Among the dead officers who were identified in Kandahar was Lieutenant X. The bullet that pierced his breast had passed through a pocketbook, two photographs and an I. O. U. I looked at the bloodstained relics sorrowfully, and, recalling Clement's exact words on the night we parted in Bombay after our bachelor party, I muttered, "Clement, your debt is canceled—canceled with your life."

#### RECIPROCITY IN THE PRINTING OFFICE.

BY EQUITY.

AS inventions of labor-saving machines multiply, and methods for conducting business are simplified and perfected, the relations of employé and employer become complicated and more and more a subject of interest to the craft. Any discussion that tends to elucidate the problem or make any more clear the duties of the one to the other should be well received.

It is becoming more difficult each year for the careless, the indifferent and the incompetent to get and retain employment in respectable printing offices, and as a natural consequence greater effort is now made by printers to become thorough in their knowledge of the trade and reliable in the performance of their work. The indifference once so noticeable in the printing office among printers as to whether their work was done in good style and correctly, has generally given way to a desire to excel and to gain a reputation for skill and accuracy among their fellow workmen. This is as it should be, and is greatly to the advantage of "master" printers.

But there is danger that the workman, in endeavoring to perfect himself in a knowledge of his trade and render his services more valuable to his employer, has unwittingly dealt a blow at his individual interests. And right here is where the reciprocity that should exist between the parties fails to reciprocate. Under the old, slipshod, don't-care way of doing work the employer took all the risk. If a job was spoiled or work went wrong, through either accident, carelessness or stupidity of employé, the office assumed the loss as one of the exigencies of business, and it was charged to profit and loss. In later days, however, when printers are doing better and more conscientious work than ever before, and, aided by the devices and appliances of the inventor and typefounder, are rapidly demonstrating the right of the trade to be classed as an art, we find some employers endeavoring to shift all responsibility for accuracy of work to the shoulders of their workmen. Not content to profit by the better service now rendered, absolute guarantees are, by some, demanded and exacted.

This innovation should be met and promptly considered by printers, proofreaders and pressmen. If an employé prove to be habitually careless or incompetent, he should be discharged as matter of course. But the most expert, as well as the most careful, workman will occasionally make a blunder which will escape detection

and, perhaps, entail a money loss more or less serious to the house. It is unjust to say that this loss should be borne by one who does not participate in the profits of the business. It is the duty, undeniably, of the employé to take all due care to prevent accidents, and to avoid errors; but, having rendered faithful service and earned the agreed per diem, his responsibility should end, and when accidents happen or errors occur, as from time to time they will, let the damage be assumed by the proprietor as an incident of the business, and charged to profit and loss.

### SCREEN PLATES FOR HALF-TONE PHOTO-ENGRAVING.

NO. II.—BY URANUS HORD, DAYTON, OHIO.

#### HOW TO DUPLICATE THEM.

IN the December issue of THE INLAND PRINTER we gave a practical process for making a screen plate; and as the originals cannot be used for making the half-tone negatives, it is necessary to duplicate them, and agreeable to promise we herewith give the process.

Readers will no doubt understand that a perfect copy is one in which the lines are opaque from edge to edge, and not blunted from the center out, as such plates can give only poor results at the best. Either dry collodion or gelatine plates can be used, but the former are far superior. To prepare a dry collodion plate, coat the plate with collodion and immerse in the silver bath the same as for wet plate negatives. Drain well and wipe back of plate, and immerse in distilled water until all greasiness disappears; then rinse well under tap and immerse in iodide solution (iodide potassium 2 scruples, water 40 ounces) for two or three minutes. Take out and rinse under tap, and then rinse again with distilled water; let drain and it is ready for the preservative.

#### PRESERVATIVE.

Take one ounce ground coffee and pour over it ten ounces boiling water; let steep thirty minutes, then cool and filter. Next add about one-fourth of the white of one egg to clear it, and bring it to a boil quickly; let cool; add one-half ounce pure sugar, dissolve and again filter, and it is ready for use. The plate should be flowed twice with the above solution, allowing the first to run into the sink and the second back into the filter; allow the plate to dry spontaneously, but as soon as dry it should be put into an oven and heated to a high temperature to drive away all moisture.

#### EXPOSURE.

Take an ordinary printing frame, remove the springs and hinge two strips of wood on the back with a latch or hook to fasten the loose ends. After placing the original screen in frame with sensitive plate, replace the back, fasten the wooden strips and secure pressure by forcing small wooden wedges between the strips and back of frame (this is important); if the contact is not perfect parts of the plate will be blurred. The frame should be placed in the end of a box at least two inches larger than the plate and about six feet long, with the open end

covered with ground glass and exposed to a northern light if possible. Should a cross-line plate be desired, after making one exposure simply turn the plate so the lines will cross; this will give square transparent dots, and to make what is commonly termed a stipple or dot plate, make an exposure with the cross-line plate, giving at least double the time required in making the single-line exposure, which will cause a closing up of the squares and give a round opaque dot. The exposure in either case can only be learned by experience and will vary from one to five minutes.

#### TO DEVELOP.

Before developing flow with diluted alcohol (alcohol 1 ounce, water 4 ounces), rocking back and forth until it flows in an unbroken wave, and then apply the following developer:

No. 1.		No. 2.	
Water .....	8 oz.	Water.....	8 oz.
Pyro .....	45 grs.	Nitrate silver.....	45 grs.
Citric acid .....	80 grs.	Acetic acid.....	1½ drs.

Take of No. 1 one ounce, of No. 2 six drams; mix together and flow over the plate. Continue developing until the lines are of proper density, then wash well and fix in clean, fresh hypo. Again wash thoroughly and dry.

A plate prepared by the above formula is very susceptible to atmospheric changes and must be protected. Ordinary negative varnish or plain collodion will positively ruin it, the former tinging it with yellow, the latter causing wavy or creepy lines; but a colorless and moisture-proof coating is applied as follows: Immerse the plate in diluted albumen (white of egg 1 ounce, water 15 ounces) for a few minutes. Carefully drain and clean back of plate, then immerse in silver solution to coagulate the albumen (water 1 ounce, silver 40 grains). Fix in weak hypo thoroughly; wash and dry.

Should you desire to use gelatine plates use any of the standard makes of plates (preferably Carbutt's), and develop according to formula given, exposing in the same manner.

The February number will contain an article on making half-tone negatives, with illustration.

### CONCERNING PROOFREADERS.

BY O. S. JENKS.

TO be an efficient proofreader requires talents of a peculiar and distinctive order: a preparation of years, a substantial foundation of general information and wide reading, a quick, discerning eye and mind, and an imperturbable temper. He may or not have "some smattering of Hebrew, Greek, Latin, French, Spanish, Italian and German," which is one of the many requirements laid down by a standard authority, but before all linguistic and literary attainments must be the qualities of firmness and coolness, without which his book-lore will avail him little.

Proofreading has proved destructive to many excellent dispositions. I have known compositors of cheerful

temper who a few months of proofreading rendered surly and unpleasant company. Confined in his "cage" the entire day, with little opportunity for healthful bodily exercise; at work that requires the closest application; subject to a thousand petty annoyances and interruptions, unnecessary questions and unjust criticism; condemned if he "spoils" a job and probably assessed for its cost, while the detection of vital errors for which others are culpable is seldom appreciated or noted, it is no wonder that the average proofreader soon becomes a confirmed pessimist.

He is obliged to affect an air of superior judgment and calm indifference to the importunities and remonstrances of compositors; he becomes of necessity critical of the mistakes of others, and this inclines him to the habit of animadverting on all the evils and shortcomings of society; he becomes a censor of the motives and actions of the great and good, and views all nature through green goggles.

In probably no other trade or profession, fraught with as many cares and responsibilities, is the salary so ridiculously disproportionate to the intelligence and ability required to properly discharge its duties, as in proofreading. Many causes operate to place the proofreader at a disadvantage with those of no greater abilities in other walks of life. He has to compete with young women who have had an experience of two or three years in running down errors, and as for the other essentials of good proofreading—why, the head proofreader will supply them! What is he hired for? Many of these young women work merely to procure "pin-money," and do not intend to make proofreading their life vocation; hence they will accept a salary considerably smaller than is necessary to maintain a man with a family, with the result that the experienced proofreader is compelled to accept low wages or, if he cannot afford to do this, perhaps return to the case.

Proofreaders, as such, have no representation in the typographical union. The trials and suffering incident to strikes and lockouts fall with equal severity on proofreader and compositor, partly because the proofreader's employment depends on that of the compositor, and then the odium of disloyalty to the union would attach to the proofreader should he resume work where a strike was in progress, as it would to the compositor under the same circumstances. It seems a great injustice that the proofreader has no distinct recognition in the union he upholds, in view of the many sacrifices he is compelled to make in behalf of his typesetting brother.

If proofreaders were to meet and reason together, suggestions might be offered looking to the adoption of a definite scale of wages and a clear definition of the requirements and attainments that constitute a person a "proofreader," properly so called; or, at least, more uniformity of "style" and orthography and many other details of their work, wherein their methods are at such variance at present, might be adjusted in such a convention. Whether in the councils of the typographical union or as an independent organization, they would be

a representative type of unionism, and their conclusions would be respected.

This topic has been treated of before in *THE INLAND PRINTER* by one better informed of the needs of proofreaders than myself, but, whether any of the suggestions I have advanced are of any practical value, or should be embodied in legislation by the International Typographical Union, I shall be glad to have seconded the efforts of abler writers in this direction.

Written for *THE INLAND PRINTER*.

**"DE KNOW HOW."**

BY SAMUEL G. SLOANE.

**T**WO colored men, so the story goes, were working for the same employer, one at some menial service and the other at some kind of skilled labor. The one doing the skilled work received about double the pay for his services that the other one did. One day they were together and the menial worker said: "See heah, how does it come dat you gits so much bigger pay dan I does, when your wuk's not half so hard as mine?" The skilled worker replied: "I'll tell you, my frien', it's not for de mount of wuk I does dat I gits bigger pay dan you do; it's for de know how."

It is the principle illustrated in the above, and that alone, which enables some printers in an office to receive greater pay than others in the same establishment. Those receiving greater pay do not receive it for any other reasons than those of pure, cold-blooded business principles; they render greater services, therefore, on pure business principles, receive greater pay. They have more to sell, therefore have a greater income than their less fortunate fellow workmen. They possess "the know how" of more things, and of course can turn that knowledge to account for their own profit. They possess powers above their hands. Mere muscle power does not command a high price, for the supply is so great. Everybody has muscle power at his command. A skilled workman can do the work of his unskilled fellow workman, and he would do it, other things being equal, if the returns were greater than for his skilled work. It is only by keeping the price down that the skilled man, the man of knowledge, is kept from following many of what are known as unskilled pursuits. In short, the unskilled workman has to compete with all workers, both skilled and unskilled, while the man with "the know how" competes only with those of his own grade and above. The man at the top has no competition. The man at the bottom has the whole world to compete with. Sentiment would make all men equal, but the God of nature does not.

That it is as hard for the man of small powers to do his best, as it is for the one of greater powers to exert his full strength, will not be denied; but the altruistic saying "from each according to his ability, and to each according to his wants," will hardly obtain while the human nature implanted in us by the creator is allowed unrestrained play. It sounds very nice in sentiment, but does not, nor cannot have an existence in cold fact

under free play of our inborn human traits. Sentiment and cold fact can never go hand in hand unless the sentiment is made to conform to the fact. He that is swayed by sentiment alone, without reference to fact, will very often—in fact, almost always—find himself floundering in the slough of error. A fact is, because it is; it exists as a part of the immutable whole, and all the sermonizing in the world will not change it. Sentiment is always based on things as it would seem desirable they should be, not as they are, and by it many are swayed from the truth and facts and give themselves over to the indulgence of utopian ideas and dreams. Socialism, communism, anarchism, etc., are but the efforts of honest people to put into tangible shape the utopian schemes of sentimentalists for reaching the ideal state of perfection in society. They entirely ignore the cold fact that perfection of the whole cannot exist while imperfections are created in the component parts thereof. Society cannot reach a state of perfection until man individually becomes perfect.

I have digressed somewhat, but it was intentional. I desired to bring out the idea and truth that in all things stern fact, and not sentiment, is the final controlling element. Let the printer who bewails his condition because it is not as good as that of his fellow workman, perhaps in the same "alley," know that the reason lies wholly within himself, though the fault may be one of birth and not possible for him to alter or correct beyond a certain degree. But many, very many times the fault—for fault it is—can be corrected, if not entirely, in a very great degree, by his own efforts if put forth in the right direction. Let him study first himself and then his better paid fellow workman, and note wherein the difference lies. The difference noted, he will always find that it lies in superior natural endowments or acquired knowledge and skill. If the former, he can scarcely hope to reach him with equal effort, but he may by the right kind of effort approach much nearer to him than without it; if the latter, he can not only reach him, but by greater efforts be able to overtake and pass him in the race. With equal natural endowments it is effort and application that win. The race is not always to the swift, however, as the old fable of the tortoise and the hare illustrates, but it should be; when it is not, the cause can easily be shown to be a failure to use the powers possessed. Because one sees he cannot reach as high as another, is no reason for sitting down supinely and allowing the other to gather all the fruit—there is much on the lower limbs you can reach and make good use of. Use the faculties your creator has given you to the best possible advantage, and you will have little cause to bewail your lot among your fellow men. Bear in mind that knowledge is power, which, rightly used, will always command a price and bring a reward to its possessor. The waste I would deplore more than any other is the waste of faculties by a failure to use them. A waste of faculties means the loss of opportunities, and loss of opportunities means the blighting of a life—the destruction

of all that is good of a man, the highest of all created beings.

I cannot better illustrate the value of knowledge than by giving in conclusion an occurrence as told by a reporter in the Brooklyn (N. Y.) *Standard-Union*. It was headed "Paying for Knowledge," and is as follows:

I paid a bill the other day (said a large manufacturer to me) without a murmur, simply because of the way it was worded. My engineer found his hot-water pump would not work, and after puttering at it for an hour sent for a machinist. He bothered with it half a day and concluded it must come apart. I was much annoyed, for that meant stoppage of my factory for a long time. Before I gave the order to take it to pieces some one suggested that a neighboring engineer be sent for, as he was a sort of genius in the matter of machinery. He came, and after studying the pump awhile, he took a hammer and gave three sharp raps over the valve. "I reckon she'll go now," he quietly said, and on putting on steam "she" did go. The next day I received a bill for \$25.50. The price amazed me, but when I examined the items I drew a check at once. The bill read this way: "Messrs. Blank & Co., Dr. to John Smith. For fixing pump, 50 cents. For knowing how, \$25." Had he charged me \$25.50 for fixing the pump, I should have considered it exorbitant. But 50 cents was reasonable, and I recognized the value of knowledge, so I paid and said nothing.

#### TURNING OVER A NEW LEAF.

BY M. STANISLAUS MURPHY.

NOW that the old year is dead and the new one has been ushered in with all the pomp and ceremony attending such an event, it is to be presumed that many a new leaf has been turned, that good resolutions have been again renewed, and that many a young man has started in with the year 1891 with a determination to remain steadfast and true in regard to upholding his good intentions during the year just begun. At the beginning of each year this leaf-turning craze takes possession of the average man whose ideas have become a trifle warped in relation to matters in which conscience plays a most conspicuous part. And many a man who turns over a new leaf at the close of the old year, before the new one advances very far is ready to turn over another, and the reason is plain. He has undertaken a task which he has not the will-power to perform, and, though his mind is imbued with the best of ideas regarding his good intentions, the strain is too great, and consequently he "turns a rule" on his good resolutions, and they soon become a mass of "pi."

Conspicuous among those who "swear off" from year to year are found a number of the members of our craft, who discover at the commencement of each year that their mode of living during the twelve months just closed has been a little too swift, and they aver that their actions should receive a check. Hence the necessity for turning over a new leaf. But it is the same with printers as it is in regard to others, and perhaps a little more so. For a time matters progress swimmingly, and the reformers are soon recognized as little paragons of perfection. But suddenly there is a cloud burst! In a twinkling their good resolutions are shattered to atoms, and they fall into bad habits once more and practice

them with renewed vigor, and this is periodically kept up, until another year rolls around, when the "rule-turning" process is once again resorted to.

Recognizing our weakness or inability to remain for any length of time as extremists in matters which require the practice of self-denial, the question has arisen in my mind, "would not the inauguration of a movement, with moderation as our watchword, be a good thing for members of the craft?" There are a great many things in connection with our business in which the practice of moderation would work advantageously to the ones interested, and would prove a blessing which could not be obtained so easily in any other way.

The first and most important matter in which moderation would have a most salutary effect, would be restraining ourselves from the too free use of that supposed nerve-restoring libation known as the "ardent," the abuse of which has placed a yoke around the neck of many a bright and promising member of the art preservative, ruining his prospects in life and dragging him along in the swirl of misery and vice, and, finally, terminating his career in dishonor and death. To guard against this evil it is necessary that we should endeavor to imitate the example set by the beast, for, strange as it may seem, animal instinct in this particular is more keen than it is in a great many instances in man. A beast seems to understand when he has got enough, and nothing will tempt him to further indulge. Not so with some men, however, for they don't seem to realize when they have received a full cargo, but will continue indulging and overloading themselves when they don't need the stuff any more than a fan is needed by an inhabitant of the arctic regions. So if it were possible for us to cultivate a system of moderation in this respect, it would not become necessary for members of the craft year by year to undergo the chestnutty performance of turning over a new leaf, and the standard of morality among members of the printing fraternity would be much higher than it is at present in a great many localities.

There are other things in which the practice of moderation would have a tendency to improve our condition and elevate the craft to an enviable position, but it is unnecessary to enumerate them, as they are well known to every member. It is not sufficient to be moderate in one thing and given to excesses in others. Rather let there be an intermediate limit to all our actions where our reputation is concerned, a halting point where we can stop and consider the advisability of continuing in a course which we know must inevitably work out our destruction. Let us endeavor to live as it was predestined that man should, avoiding everything having a tendency to corrupt our natures and destroy our reputation.

The Fort Worth (Texas) Paper Company, organized by J. F. Ellis, H. B. Buck, C. W. Post and others, will erect the contemplated paper mill at that place. The capital stock is \$250,000. The superintendent is from Holyoke, Massachusetts, and recommended by several prominent paper manufacturers of Holyoke as being one of the best posted paper makers there.

Written for THE INLAND PRINTER.

"JUST BEFORE SIX"—ANOTHER VERSION.

BY FRANK NEWMAN.

It is nearly every morning,  
When the office stove needs warming,  
That the "comp" is in a fix ;  
But how different the changes  
When he case and stick arranges  
To quit work — just before six !

It is with the greatest pleasure  
He's assorting all his treasure —  
And his dupes he doesn't mix ;  
For in fat he has been rolling  
All day long, and now he's lolling  
Full of glee — just before six.

But he's heard with great depression  
Our friend Eno's harsh expression,  
That the "comp" is full of tricks ;  
When good work he has been doing,  
All dishonest things eschewing,  
*Up to quitting time — at six.*

He's the jolliest kind of fellow,  
Even if some kicker holler,  
As his type he slowly picks ;  
You can seldom get him rattled,  
And all fun and mirth's unbottled  
When he stops to work — at six.

Often when of sorts he's out of,  
And when speed cannot be thought of,  
He knows a way the block to fix ;  
But he finds a way to do it  
That no soul will have to rue it,  
And he does it *before* six.

Little does he care for "bosses" —  
'Tis his *work* that him indorses,  
And all talk — it goes for "nicks" ;  
Neither does he care for "chinnners" —  
They are losers, never winners —  
Steadily *loafing* up to six.

'Tis of a piecehand I am speaking,  
But to clear him of the sneaking  
Ways that Eno does affix ; —  
He's an honest, whole-souled fellow,  
Never known to howl or bellow,  
Always satisfied at six.

He's no saint — that needs no telling,  
But within him there is dwelling  
Just the stuff that manhood makes ;  
And if some one does abuse him  
Or of wrongs he does accuse him,  
All this in good part he takes.

If there's anything that's hateful —  
But to some it is delightful —  
'Tis of others to speak ill ;  
Always, if you have to say it,  
Cut it short — do not delay it ;  
Speak it well, but with good will.

Now to close, do let me mention  
That it's merely my intention  
To show Eno that the tricks  
Of which two months ago he's spoken,  
Are a very open token,  
That they've put him in a fix.

The foregoing has been written at the request of many who felt greatly wronged at the slurs cast by Eno upon the average compositor in his recent piece of poetry entitled, "Just Before Six." It lacks but one thing — and an essential one at that — *truth*.

SAMPLES.

**KEITH LEDGER PAPERS** are well made, strong, hard sized, rule nicely, write easily, erase and rewrite without difficulty, and have been given the preference by good judges in competitive tests with all other leading brands of Ledger paper.

**RAVELSTONE** Flats are made in Laid and Wove, White and Perfection Tints, and are used by Lithographers, Stationers and Printers for first-class Commercial Stationery for Banks, Insurance Offices and Business Houses generally. These papers are also put up ruled and folded, in the usual sizes.

**WESTLOCK** Flats are well known and highly prized for their good color, cleanness, freedom from imperfections and all adulterants, strength, hard sizing, and are used for all kinds of commercial work, being especially preferred by makers of Blank Books, because they are thicker for the weight than other papers. These papers are put up folded, and in Note, Letter and Bill Heads, etc.

The above Papers are offered to the Trade through Agents located in the principal centers of distribution throughout the Country.

#### THE NEW SIDE-GAUGE. FOR ALL JOB PRESSES.

FIRST ever invented for the purpose, and offered to the trade at so low a price as to make it look as though it was a sham. But it will do wonders, and when we think how often we have wanted a side-gauge that we could use without dispensing with the gripper, we are surprised that it was not thought of before; and then to be presented in such a simple form, and in a single piece of metal! It can be crowded right between the gripper and the tympan without smashing, losing its elasticity, or bearing off the gripper. Don't you believe it? You will as soon as you try them. You will also find in them many more uses too numerous to mention in an advertisement; and all for the small sum of

75c. per Dozen, assorted shapes. 25c. per set of three.

SOLD BY ALL DEALERS AND BY THE INVENTOR AND MANUFACTURER.

E. L. MEGILL, 60 Duane Street, NEW YORK.

# THE HUBER TWO-REVOLUTION SUPER ROYAL "MUSTANG."

**NO SPRINGS + CRANK BED MOVEMENT + BOX FRAME.**

**THE FASTEST RUNNING PRESS OF ITS SIZE BUILT.**

**WE** take great satisfaction in calling the attention of the printing trade to this press, which is our latest production, and which has in its construction the novelty of being a combination of the best points of both the Stop-Cylinder and Two-Revolution style of presses.

The Bed is driven by means of a crank, which gives the smoothest reciprocating motion known to mechanics, and does away with the necessity of springs and the accompanying extra strain and wear, which more especially is liable to occur in a small size press having a large variety of speeds, from their non-adjustment.

The Cylinder is driven in a constant direction and at a speed to correspond exactly to the varying speed of the bed, by means of a perfectly shaped cam-gear. This cam-gear makes two turns to each complete stroke of the bed, and the same gear teeth are in mesh during the printing of every sheet, thus making the register absolutely correct. The cylinder never comes to a full stop when the press is in operation, but keeps moving slowly when the bed is reversing, until the speed of the bed is equal, when it increases in unison with the bed. The sheet is taken by the grippers when the cylinder is moving slowly, another point in favor of perfect register.

There are no complicated cam or stop motions to get out of order, or limit the speed of the press, and we guarantee every machine to print twenty-two hundred sheets per hour, when properly fed, in perfect register and without jar or extra wear.

The cylinder can be tripped at the will of the feeder, and up to the moment when the grippers have taken the sheet.

The bed is supported, under the line of impression, by four large adjustable rollers, journaled in stands, which are fastened to a rigid box stay that cannot spring or give in the least degree.

The side frames are of the box pattern, and every part of the machine is constructed with an eye to great strength and durability.

The sheets are delivered in front of the cylinder, clean side to the fly, which is positive and noiseless in its action.

We unhesitatingly pronounce this press the most simple, complete and serviceable of its size ever introduced, and we invite the closest inspection and comparison.

	BED.	FORM.	NO. ROLLERS	SPEED.	WEIGHT.	
	26 x 35	23 x 32	2	1,000 to 2,200	7,000 pounds.	
	26 x 35	19 x 32	3	1,000 to 2,200	7,000 pounds.

PRESS MADE.

## CONTROLLING ADVANTAGES.

The controlling advantages in the mechanical movements, and to be found only in our **COLT'S PRESSES**, may be enumerated as follows:

The rolling platen motion — frictionless.

The direct slide to the impression, during which time the platen is firmly locked, and must make an absolutely square, perfect impact upon the types.

The chase-latch, operated by a pedal, leaving both hands free to manipulate the chase.

The improved system of ink distribution, surpassing any attempts heretofore made, consisting in a simple arrangement of self-contained gears to reciprocate the main ink cylinder. In this wise cross-line distribution is effected, not only upon the distributor stocks, but directly upon the form inking rollers as well.

Separate journal boxes for the distributor stocks, avoiding wear of the carriage ways.

The carriage action entirely remodeled, with means for stopping the form rollers, at the will of the feeder, upon the ink cylinder.

Impression throw-off and adjustment combined.

New platen motion for feeding; an entirely original system. By this arrangement the platen is constantly moving; but during the time corresponding to the old stop or "dwell" the movement is very slow. This has uniformly been declared the most desirable motion for accurate and rapid feeding that has ever been applied to platen presses.

New belt shifter and automatic adjusting brake combined. A most effective device, by which means a single thrust of the hand shifts the belt to the loose pulley and applies great friction to the fly wheel, making it possible to stop the machine almost instantly.

## "IT IS SIMPLY GREAT."

WILLIAM H. BURTIS, Esq., Artist Printer, of Rochester, N. Y., writes us as follows:

"To say that I am satisfied with my quarto medium does not express it. It is simply great. I have printed 1,000 envelopes in 25 minutes; 5,000 circulars, set up twice, in 1 hour 35 minutes; have started press with fountain at 8 A. M., run until 10.45 P. M., and made 19,000 separate impressions, and with two on sheet, 39,000 impressions. How is that for a day's work? And think that one-eighth of a horse power electric motor drove it!"

## "PRINTED ENTIRELY UPON THE COLT'S ARMORY PRESS."

In regard to Messrs. EARHART & RICHARDSON'S exquisite specimen sheet, which appeared in the December number of *THE INLAND PRINTER*, they write us this:

"Your favor of December 26 to hand this A. M. In reply have to say that the specimen sheet which you refer to was printed entirely upon the Colt's Armory Press, in six colors, single rolling. The presswork was pushed through very rapidly, owing to the fact that we were somewhat late in commencing the printing. You are entirely welcome to refer to this sheet as a specimen of work done on the Colt's Armory Press."

A TECHNICAL JOURNAL, DEVOTED TO THE ART OF PRINTING,  
A. C. CAMERON, EDITOR.

Published Monthly by

THE INLAND PRINTER COMPANY,  
183, 185, 187 MONROE STREET, CHICAGO.

H. O. SHEPARD, *Pres.*; C. F. WHITMARSH, *Sec.*; D. L. EVANS, *Treas.*

Address all business correspondence to the Inland Printer Company.

Entered at the Chicago postoffice as second class matter.

CHICAGO, JANUARY, 1891.

SUBSCRIPTION RATES.

TWO DOLLARS per annum in advance; one dollar for six months in advance; sample copies, twenty cents each.  
FOREIGN.—To countries within the postal union, eighty-five cents per annum additional. To Great Britain and Ireland, postage paid, twelve shillings per annum in advance. Make money orders payable to H. O. Shepard. SUBSCRIPTIONS may be sent by express, draft, money order or registered letter. Postage stamps are not desirable, but if necessary to remit them, one-cent stamps are preferred. No foreign postage stamps accepted.  
CLUB RATES.—Six or more subscriptions, sent at one time, one dollar and fifty cents per year each. Cash to accompany order.

THE INLAND PRINTER is issued promptly on the twentieth of each month, and will spare no endeavor to furnish valuable news and information to those interested professionally or incidentally in printing, engraving, electrotyping, stereotyping, bookbinding, and in the paper and stationery trades. Persons connected with any of these lines of industry will confer a favor upon the Editor of this Journal by sending him news from their section of the country pertaining to the above trades, particularly individual theories and experiences of practical value.

THE INLAND PRINTER publishes its net rates in each issue of the paper. No agent or representative of this Journal is authorized to deviate therefrom or make any discounts. It solicits advertisements from dealers in or manufacturers of any goods used by printers, bookbinders, stationers and similar lines of trade. Its value as an advertising medium is unquestioned. The character of the advertisements now in its columns, and the number of them, tell the whole story. Circulation considered, it is the cheapest trade journal in the United States to advertise in. Advertisements to insure insertion in the current number should reach this office not later than the fifth of the month.

A WORD WITH APPRENTICES.

AS is well known to our readers, this journal, from its first appearance to the present time, has manifested a deep interest in the welfare of the rising generation of printers, and aided, so far as in its power laid, by advice, admonition, encouragement and practical instruction to advance their material welfare and instill into them a laudable and manly ambition to excel. That these efforts have not been in vain is attested by the thousands of kindly expressions received alike from employer and employé from every point of the compass in acknowledgment of the same, and containing the assurance that they have proved of material benefit. As we do not wish our young friends to weary in well doing, and as they have recently entered upon a new year, a few words in this connection to those who have acted upon the advice given, as well as to those who have not—on the principle that it is never too late to mend—may not be out of place.

In the absence of an effective, recognized and properly enforced apprentice system, the future status of a learner must depend in a great measure on his own unaided exertions and resolution. He must realize there is no royal road to learning, and that proficiency is arrived at by consistent and persistent application; that *study* is the passport to success, and discard the mistaken idea too often inculcated, that artistic printers, like poets, are born, not made. It is true that the tastes of boys differ, and that some, by natural bent of inclination, education or special endowments, are more qualified than others for a certain occupation—which fact, in selecting a calling, should never be lost sight of—but where there is a will there is generally a way, and the patient, earnest plodder who strikes the word “failure” from his vocabulary will, nine times of ten, reach the goal, where the boy who presumes on his endowments and cherishes the hallucination that he is an exception to the rule, will fail.

Youth is the seedtime of life. *Tempus fugit nunquam revertitur*—time that is past can never be recalled. The opportunities now afforded cannot be duplicated under similar circumstances. Every hour is precious and should be utilized. The present is the season to make or mar the learner's future. Actions and resolutions must correspond. Hell is paved with good intentions. Whatever he learns he should learn thoroughly, to the smallest detail. Let him remember that no position in life is so undesirable as that of an unqualified, knocked from pillar to post so-called journeyman, thousands of whom would give all they possess to have their once neglected opportunities return.

Our advice then, in brief, to those who desire to excel—to become master printers in the true acceptance of the term—is, be industrious, attentive to business, observant, faithful to your employer's interests; keep your eyes and ears open at the right time; pick up an idea whenever you can; make yourselves agreeable to those with whom you come in contact; learn from those whose opinions are worth knowing; ask in a

proper manner for the information you desire ; mind your own business ; devote your evenings to study ; carefully read THE INLAND PRINTER, and profit by the information contained therein, and the likelihood is that " Give-a-dog-a-bad-name-and-it-will-stick-to-him " will neither be your Indian, English or workroom appellation.

#### PROGRESSIVE JOURNALISM.

THE public are quite familiar with the criticism of the newspaper press of the adverse kind, springing not from those within, but from those without the editorial sphere. Possibly nothing could more strongly or effectively demonstrate the freedom of journalism than its candid, unprejudiced publication of unfavorable criticism of which it is the aggrieved subject. It is not at all astonishing, either, that journalists should be persuaded to give their opinions with regard to the press at the helm of which they labor. This, some of them, who by character, knowledge and service are qualified to speak on the subject, did recently, at a banquet given by the Commercial Club, of Providence, Rhode Island, where the speakers discoursed upon a single theme, " Advance in Modern Journalism."

The president very appropriately presented the subject of discussion by referring to the progress made in the mechanical department of the newspaper world. He referred to the fact that when he was a youth he carried newspapers which were printed at the rate of four hundred an hour, and, in contrasting this with the present output of forty thousand copies an hour (which is much below the actual results achieved), he stated that newspapers had experienced equal or greater progression in their editorial and general literary departments. This, however, must be greatly a matter of individual opinion, as editorial and literary excellence are undetermined quantities, while the power and superiority of mechanical appliances are precisely measurable.

Mr. Eggleston, who is one of the ablest and most experienced American writers, spoke with deep and enthusiastic earnestness of the editor who feels that if he performs his duties in good conscience and with properly directed intelligence, he cannot too greatly magnify his office. Mr. Eggleston declared that the journal of today is the most influential power in America, not in itself alone, but through the power it exerts upon all the great physical, moral, political and social forces in the country. It aids good movements and obstructs injurious ones by publishing news of both. He stated that the chief progress made in journalism is to be noticed in the present common recognition by journalists of the truth that the publication which perverts or distorts the news is guilty of fraud, in that it plunders its patrons of that which they understand they purchase — the true, unadulterated facts of the case. In conclusion, the speaker remarked that only less important than what has been previously stated was the emancipation of present day party journalism, what has ceased in

most principal American cities to be the abject, fawning slave of its party. The orator might have strengthened this declaration by illustrating the editorial independence, the broad public spirit and the integrity of the great journal with which he is connected, the *New York World*, which, though a democratic paper, daily supplies proof in its editorial columns of its courageous and patriotic independence of party dictation. Less than a generation ago, no avowedly political journal could have continued to enjoy the confidence or support of its party if it failed to defend and support its party's representatives and measures, right or wrong. Today, newspapers which are merely the political or personal organs of practiced, scheming and corrupt politicians who assume to be the leaders of parties, are generally without public confidence and support. To that extent, at least, has the modern party newspaper been emancipated, which emancipation has followed in the footsteps of the obsolete, by the independent journals of Chicago, St. Louis, New York, Philadelphia, Baltimore, Boston, and other great cities of the United States. This, combined with the magnificent, superior and rapid machinery and typographical excellence, make the newspapers of America the models and wonder in newspaperdom in the entire world.

#### GETTING READY FOR THE WORLD'S FAIR.

EASTERN press-builders, typefounders, paper-makers and others whose interests are largely identical are, we are pleased to assure our readers, already taking a deep interest in the World's Fair to be held in Chicago in 1893. All the leading type and paper manufacturers will have on exhibition improved and superior productions from their establishments. Printers, engravers, lithographers, and the producers of anything, mechanical or otherwise, connected with the typographic art, engraving or lithography are enthusiastic relative to the great exposition, and will contribute artistic and extensive displays of their goods.

In New York, Boston, Philadelphia and other eastern cities publishers, book publishers, book-binders and kindred people are alike beginning to speculate as to what to exhibit at the fair, and in some instances plans have already been outlined for work to be presented as specimens of their handiwork. So far as the book-publishing industry is particularly concerned, the specimen outputs of American houses will be largely and well represented.

The paper-makers of New England will show everything that it is possible to display, without, of course, revealing the entire secrets of their manufacture. The pulp men will also come to the front, and display a long list of wonderful productions. The New York and Pennsylvania manufacturers, who are among the oldest and most prominent in the United States, promise to present for the edification of visitors magnificent and astonishing products, both in the form of pulp and paper. It is understood that one of America's leading pulp and paper representatives will have a complete

mill on exhibition, showing the whole process of pulp and paper making in its various stages, from the time the wood fiber is transformed into pulp until it passes into beautiful and serviceable white paper. Of course, all this is interesting and important, and will redound to the credit and profit of those directly concerned, as well as show what remarkable progress has been achieved in American paper-making.

#### INTERNATIONAL COPYRIGHT.

THE following circular from Columbia Typographical Union to the several senators shows the status of the copyright bill :

OFFICE OF THE PRESIDENT AND SECRETARY  
OF COLUMBIA TYPOGRAPHICAL UNION, NO. 101,  
WASHINGTON, D. C., December 24, 1890. }

DEAR SIR,—H. R. 10881, an act relating to copyrights, has been read twice in the senate and ordered to lie on the table. It is a measure in which the printing craft of the United States are vitally interested, and one that they hope to see enacted into law during the present session of congress.

Our craftsmen believe in the principle of protecting property rights in the products of a man's brain, and we believe a product in the line of literary science is as much entitled to the protection of our laws as any product in the line of mechanical science, or any other form of property.

But our especial interest in that bill is the typesetting clause. If it becomes a law we are assured absolutely that American printers will do all the mechanical work on every book copyrighted in the United States, whether the author is an Englishman or an American. When you contemplate the fact that the United States is the richest market in the world for English literature, the importance of the typesetting clause to our craft will be realized at once.

The Chace bill and the present bill, which are identical, excepting the reciprocal clauses of the latter, have been unanimously indorsed at three consecutive sessions of the International Typographical Union ; they have been indorsed by every subordinate typographical union in the United States ; by Mr. Gompers, president of the American Federation of Labor, and by Mr. Powderly, grand master workman of the Knights of Labor.

We hope you will interest yourself, particularly in the typesetting clause, and exert your influence to secure consideration for the bill during the present session of congress.

Very respectfully,

JOHN L. KENNEDY, President.

F. H. PADGETT, Secretary.

#### AN EXPLANATION IN ORDER.

WE have frequently referred to and condemned the inexplicable discrepancies in estimates rendered for the same job by competing firms, but the following revelations clipped from an exchange cap the climax :

Proposals for printing the *Postal Guide* for the balance of the present fiscal year were recently opened at the Postoffice Department in Washington. The names of the bidders and their bids are as follows : Dando Printing and Publishing Company, of Philadelphia, \$21,300 ; D. C. McMillan, of New York, \$16,100 ; R. R. Donnelley, Sons & Co., of Chicago, \$15,650 ; Bordix Publishing Company, of Washington (the present contractors), \$10,450 ; Saddler Publishing Company, Baltimore, \$8,170. The latter is the lowest bidder, and will probably receive the contract.

We think the table of figures showing the *modus operandi* adopted by the above-named firms in arriving at their conclusions would prove interesting reading matter to the trade. The discrepancy between \$21,300 and

\$8,170 is so startling—a difference of sixty-two per cent.—that it seems passing strange so-called reliable and reputable firms, which are supposed to do business on business principles, would present such a *series* of estimates. After making all due allowance for standing matter, and the advantage possessed by the present contractors, can any sane man admit the same an equivalent to fifty per cent? Here is certainly a field for the Typothetæ to exert its influence in—to secure the primary object for which it was ostensibly organized—the *protection of the trade against ruinous competition*.

An explanation of the muddle is certainly not afforded by comparison of the prices paid for composition in the several cities mentioned, which gives the following results: Baltimore, 45 cents per thousand ems; New York, 40 cents; Washington, 40 cents; Chicago, 35 cents; Philadelphia, 40 cents. Yet we have the anomaly presented that an establishment in the city in which the highest rate for book composition is paid, puts in an estimate which is less by \$13,130 than that presented by its New York competitor, and \$2,280 less than an establishment in which the entire work is supposed to be already in type.

Verily explanations are in order, as there is evidently something rotten in Denmark—*very, very rotten*—and the sooner it is exposed the better for the trade.

MR. GEORGE W. CHILDS, the ever popular and kindly publisher of the Philadelphia *Ledger*, with his usual liberality, distributed over \$20,000 in Christmas gifts to his army of employés. Is it any wonder that his name is a household word, and deservedly so, among the printers of the United States?

OWING to the non-completion in time of all the characters required for the "Short Hand Guide," the first installment of which was promised to appear in the January issue, we have been reluctantly compelled to postpone its appearance till the February number.

#### DANGERS OF THE TRADE.

BY ALTON B. CARTY.

FOR some time past the cry has been raised that amateurs were ruining the printing industry in the larger cities, a cry not entirely uncalled for. But in my opinion the cause of at least half the trouble in the printing fraternity is brought about by the army of "incompetents" at the cases, in the jobrooms, press-rooms, etc.

The fighting of the amateur reminds me of the story of the parson and the howling dog. The parson was very much annoyed by his neighbor's dog at night ; so one bleak night in December he got up out of bed and determined to get rid of that dog. In his haste to get into the yard he forgot to properly clothe himself, and he suffered much from the cold. His wife, on looking out of the window, saw her husband standing ankle-deep in the snow holding the dog. Upon being asked what he was doing, he replied that he was trying to freeze the

brute to death — a very questionable way of getting rid of the nuisance, and a very severe one on the parson. And yet is not such the case when printers endeavor to “freeze out” the amateur by cutting prices to his standard? He, the amateur, like the dog, is just in his element, and if you want to get rid of him you will be compelled to resort to some other method.

And just here allow me one word about amateurs. Legitimate printers do themselves great harm by paying the slightest attention to them. Let them alone; they can't last very long, and their death will be a victory to the printers. I have known offices to foster and aid the amateur by selling to him ten cents worth of ink, or a hundred or so cards, some leads, quads, etc. It would have been no more indiscreet for the parson to have daily thrown bits of meat to the dog in his neighbor's yard, to prolong his life, at the same time wishing to starve the brute. In a certain town not far from here the amateur has been a blessing by showing merchants they could not expect good work to be done for nothing, or at the prices the amateurs charged; and in a very short time there were no amateurs. Like Othello, their occupation was gone.

In my opinion the incompetent printer is the vilest kind of an amateur, and he seems to have come to stay. It might seem paradoxical, but the best job printer in that town is an amateur, in the general accepted sense of the term, being an individual who learned his trade outside of a regular office. And the greatest botch they have is an individual who prides himself on his “trade larnin.” The “incompetent,” by working for lower wages, crowds out better men, the employers accepting them with the hope that they will soon perfect themselves in the intricacies of the trade.

There are two daily papers in the town, the compositors on one being paid by the inch of matter set (long primer), at the rate of 17 cents a thousand, while on the other, set in bourgeois, the compositors are paid \$5 and \$6 per week. Recently, on the last named paper, the compositors received 20 cents a thousand for their work, and by close application to the case managed to make as high (?) as \$7.50 a week. This was thought exorbitant, and the wages were promptly lowered, as there were several boys in the city who were willing to work for \$5 a week, and they were promptly put to work. Yet there are some good printers here, but their wages are regulated solely by the incompetents, as they fix the standard.

Now it is a poor philosopher who, finding the cause and effect of any factor, is unable to offer a remedy. It is needless to say I am a poor philosopher. I see no remedy for the evil, especially in the smaller towns, unless the desperate methods of a boycott are resorted to, and printers generally refuse to aid in the slightest possible manner toward advancing such incompetents in the knowledge of the trade unless they change their habits of lowering wages. It is said the best way to fight the devil is with fire, and to fight the incompetent requires some such desperate weapon.

#### HOW TO RUN A NEWSPAPER.

BY FRANK J. COHEN, ATLANTA.

DEAR JOHN,—So you have determined to engage in the newspaper business, and request me to give you a few “tips” about how to run the prospective bantling. Of course, I feel gratified by this mark of confidence, and shall dish out the best advice I have, hoping that you will make a great success of the venture, and when I get foot-sore, weary and busted, you will see that I get the “ad. case,” with plenty of “phat takes.”

Now, John, the first step toward the successful conduct of a daily paper is to call on your banker, ask for your “balance,” make a clean breast of your awful intentions, and make him compromise himself into stating that he will “back” you.

Having performed one of the two duties required of you, the next important thing to do is to select a competent, experienced and trustworthy business manager, and then keep your mouth shut. Money is a very important adjunct to every business, but in modern journalism it is a necessity. In commercial life a very poor business man with plenty of capital can make a success, but in journalism a small capital coupled with a good business manager will succeed, while the big capital and poor business manager will ultimately meet with disaster.

No doubt you will ask what qualities go to make up a good business manager for a paper. He must first be genial and sober, with the nerve of a gambler, the sagacity of a fox, the bravery of a lion, and the heart of a woman — he must know how to spend money like a prince, and to hoard money like a miser. Having found such a jewel, give him complete and absolute control of the business end of the paper. You go up to the editorial rooms and write yourself into glory, while he looks after the financial interests of yourself and family. Remember, John, the business manager is the most important article of furniture around a printing office. He is the counterpart of the big engine down stairs, that furnishes the motive power that makes the “wheels go round,” with the comparison in favor of the business manager, who furnishes the propelling power to the engine.

You will see from the foregoing that I think the success or failure of a newspaper rest with the business manager. He should possess a practical knowledge of the printing business, know what is justice to the workmen and what should be expected of them.

Now, having secured your business manager I would say a few words to him on a few important points, as he may have received his education on either a country weekly or a metropolitan daily, and your town of fifteen or twenty thousand inhabitants requires a different kind of printing plant to either of them. He neither wants the extreme folly on the one side of a perfecting press, or on the other of a Washington muscle tester. A fast, well-built machine capable of printing 2,000 to 2,500 an hour is what is needed, and buy only the best of

machinery, type and every worthy labor-saving device or convenience attainable.

Having secured your newspaper plant buy a first-class job outfit complete in every particular and replete with the newest, most popular and "catchy" faces, and push the job printing department for all there is in it. Properly managed the job office will sustain the newspaper until it shall have gained age and consequent patronage to sustain itself. Now, I know that many will take issue with me on the advisability of the job printing business being made an adjunct to the publishing of a daily newspaper. But I shan't stop to theorize with the theorists; "I have been there," and what ability I possess for giving advice has been acquired by the expenditure of nearly a quarter of a century of work and many thousands of dollars—which I inherited.

Now, as to the policy of the paper, circumstances alter cases; if you wish financial success, consult the business manager before committing the paper to any particular man, means or measure; but if you have plenty of money, discharge your business manager and strive for glory only, which you may safely count on, either in fact or fancy. But employ intelligent men as reporters; don't scrape "Five Points" for slang-slingers and sports, but employ men of intellect, with plenty of hustling ability—men who will seek the news, get the news and present the news in good, clean-cut English, without elaborate trimmings or exasperating padding. I do think, John, that of all the disreputable and disgusting modern customs in journalism, that of making a two-column article of a two-"stick" item is the most detestable, while the short-sentenced, numerous-paragraphed, jerky style of some writers is absolutely revolting, if not actually vulgar.

See that your journal presents the news, and all of the news, in a concise, readable manner, so that the child and the sage can alike read and understand what is printed. Allow no sailing under false colors; let news items only appear in the news columns, and insist on advertisements appearing in the space allotted for such announcements. Your subscribers have rights which should be protected, while the legitimate regular advertiser, who pays you several hundred dollars a year for a display advertisement, should not be placed at a disadvantage as compared with the spasmodic patron who pays \$10 for double-ledged great primer bold face in the midst of reading or news matter.

Don't neglect the "personal mention" department. Every man likes to see his name pleasantly presented in print, and the denizens of this mundane sphere are prompted largely by the spirit of "you tickle me and I'll tickle you" idea. The properly worded "personal mention" column is worth two good advertising solicitors every time, and in any town.

Foreign advertisers should pay the same rates as the home patron. Have one price and stick to it. Don't allow the newspaper shark to have "top of column, next to reading matter" for one-fourth the money charged your home friends, who, having your interests and the

welfare of your paper at heart, will give you their patronage without questioning your integrity, and without offering you less than your regular schedule prices. Do all you can to build up your town, and insist on your town meeting you on reciprocal grounds.

In conclusion, John, I advise that you do not run an advertising sheet under the banner of a newspaper, nor yet a newspaper without advertisements. In my next I will elaborate on the outlines here presented for your consideration.

I wish you a happy New Year, and great prosperity in your new venture.

#### STEREOTYPING.

NO. XIV.—BY CARL SCHRAUBSTADTER, JR.

WHEN the cast has cooled, the tail-piece should be sawn off. This can best be done on a circular saw operated by foot or steam power. There are several patterns on the market, descriptions of which would be superfluous. The saw blade should be selected with great care. It should be perfectly true and have about six teeth to the inch. The front of the tooth should be in line with the radius of the saw, otherwise it will not have enough clearance and will fill up with metal. Six point ( $\frac{1}{2}$  inch) is not too thick. A blade strongly hollow-ground is preferable, but if a hollow-ground saw is not to be obtained, an ordinary flat one may be slightly set to give clearance. Setting requires experience, and such a saw is not as easily kept in order as one which is merely hollow-ground. In sharpening use a three-square Stubbs or Nicholson file, not a saw file which has round edges. The saw may be clamped between two boards, but many prefer to sharpen it while it is in the saw frame. When the edge of the saw is worn unevenly it should be trued by raising the table until only the extreme edge of the saw projects. While it is revolving a piece of oilstone or grindstone should be held over it until the edge is ground true. It should then be resharpened. The speed will depend upon the diameter of the saw. The gauges are seldom used by the operator, the eye being sufficient guide. In the absence of a circular saw a miter box and back saw may be utilized, but it is slower and requires more exertion.

Before mounting, the face of the plate should be tested for straightness. Taking a piece of brass column rule about a nonpareil thick and about a foot long, and holding up the plate between himself and the light, the finisher can readily detect any shortcomings in this respect. By laying the plate face down on a finisher's block (a piece of straight and polished iron) the low place may be brought up by laying a quoin on it and tapping with a light riveting hammer. If the plate has too much spring, placing a strip of cardboard beneath one edge of it will give the blows more effect. Where the plates are to be nailed to wooden blocks a slight deviation will make no difference, as the nails or screws will bring it down to the surface of the wood. If no finishing plate is obtainable, any flat surface, such as an

old press bed or imposing stone, can be made to answer by laying a piece of press board upon it.

It occasionally happens that besides the curves, a "sink" or depression of greater or less extent will be found in an otherwise perfect plate. If the matrix shows no defects it may be caused by some foreign substance on the bed of the casting box. A sink can readily be detected, but the reason why the cast is defective is often more obscure. It is usually caused by using metal which is originally of poor quality, spoiled by repeated heating or too hard for the kind of work being cast. Adding a liberal proportion of new metal or a small quantity of tin, or even softening it with lead, will usually overcome the difficulty. Where the metal contains arsenicum, or holds the oxide of this metal in suspension, it should be refined as directed in a previous article. In casting small plates little trouble will be experienced, even if the metal is poor and the heat irregular, but large surfaces, being more difficult to heat throughout, often sink at the center. To obviate this the matrix may be laid above the bearers, with its back resting against the top of the box. The sink will then form on the back of the plate, leaving the face flat. If the box is heated before casting, by taking blank casts or by the mold dryer, so as to be very nearly the heat of molten metal, the matrix and gauges also heated to an even temperature, and if the metal is heated to no higher degree than is necessary to make it flow, putting in the matrix upside down will seldom be found necessary.

Where circumstances will not permit the recasting of a plate which contains a sink, the finisher holds the

FIG. 1.

plate in his left hand, takes a pair of finisher's calipers or markers (Fig. 1) in his right hand, passes the upper point around the outline of the sunken spot so as to barely clear the plate, meanwhile pressing the lower point against the back so as to locate the size and shape of the sink.

FIG. 2.

Then laying the plate face downward on the finisher's block he taps the spot with a light hammer and a smasher, or a paralyzer punch (Fig. 2), frequently turning the plate and trying the surface with a straight edge. Considerable skill is required to bring up all portions of the sink evenly without bruising the face of some letters or bringing them up too high. If carefully done the face of the plate will be a plane surface and the depression will be on the back. If large, the depression may be filled by pasting in a piece of paper or cardboard. Instead of a straight edge, many finishers prefer to use a piece of flat, hard rubber, attached to a piece of wood. By rubbing it over the surface the high parts are polished while the low places are left dull, and can readily be located for tapping up.

### EARLY PRINTING.

BY F. S. BURRELL.

TO an observing and thoughtful printer, the examination of an early printed book cannot fail to excite a feeling of curiosity as to how, with the very meager supply of material at his command, the early printer was enabled to accomplish any printing-office printing whatever, to say nothing of being able to so manage his rudimentary concern as to turn out some very creditable work. In order to obtain a realization of the difficulties under which the early printer pursued his calling, let it be supposed, for a moment, that any one of our most successful modern printers was to find his well appointed office suddenly reduced to no more and no better material than, we will say, Peter Schöffer's office was supplied with. Would he conclude that fine printing was a failure, or would he proceed to the execution of typographical gems that should challenge the admiration of the world of letters for more than four hundred years to come? Yet that was precisely the course taken by Peter Schöffer, and had he produced nothing beyond his first effort, the Psalter of 1457\*, his fame, if not his fortune, † would have been assured.

It may be asked what sort of an office did Peter Schöffer possess? According to all accounts which have come down to us, he certainly had not a very extensive plant, and were the question asked of our supposititious modern printer, he would most likely reply that he had none at all. Three fonts of home-made letter, ‡ made, it should be remembered, in the face of difficulties of which we can have but a faint conception, unless we call to mind the fact that making this letter was an attempt to make that which had never been made before anywhere.

There were, of course, cases of some kind to receive these three fonts, and stands to place them on; but it is now extremely difficult, if not wholly impossible, to determine what they were like or how they were made. The earliest representation which we have presents the case with boxes all the same size. Cases may at first have been made that way, it is true; but as that appears to be the regulation pattern adopted by engravers of the present day, it would seem not entirely reliable. The case at this period must needs, however, have been at least twice as roomy as the modern article, because of the very numerous ligatures, contractions, and signs for contractions, § which the early printer inherited, so to speak, from his predecessors the scribes.

\* The first printed book with a date and name of printer and place where printed.

† It is believed the Psalter was a financial success, the first edition being exhausted and a second printed within two years, and several other editions issued before the death of Schöffer, which occurred about 1503.

‡ During the next ten years Schöffer acquired three other fonts well graded as to sizes, which seems to have inspired one of his biographers with the idea that he was fully equipped for the execution of all kinds of work.

§ Amounting, according to some authors, to three, and according to others to an average of four variations for each letter; which alone would involve quite a percentage of increase in the labor of composition, and still more in that of distribution.

and either considered their use as incumbent, or followed them without reflection, or perhaps feared to disturb the prejudices of readers by thrusting upon them new and unaccustomed methods.

The three fonts of letter, the cases and the frames which held them, constituted about all there was of Peter Schöffer's composing room. There were, according to historians, no sticks, no rules, no galleys, no chases, not a vestige of the thousand and one conveniences to which our successful printer has all his typographical life been accustomed. The compositor was furnished with a wooden frame not quite type high and having a bottom like a shallow box, and about the size of the required page. The letters as wanted were taken from the case and transferred direct to this box, or coffin as some authors have it, and when the line was filled out so far that another word or syllable would not come in it was blanked out and justified *in situ*.<sup>\*</sup> Slow and clumsy as it certainly was, this method prevailed according to bibliographers until about 1467 on the continent and until 1480 in England.

The conclusion that type was set in this rudimentary manner for so many years has been arrived at, it is claimed, from the fact that about the time mentioned printed lines which had previously been blanked out where an additional word could not be got in, were spaced out to an even length, and that this circumstance was the direct and immediate result of introducing the composing rule, a conclusion in which I do not concur, for reasons which will appear later on. That those early printers were scantily supplied with sorts, notwithstanding they had only to make them, is abundantly shown. Spaces seem to have been about all of one size, and in some cases were left out altogether, and in others their place was occupied by the period. It is quite possible that the lack of a sufficient variety of spaces may have contributed toward preventing the even spacing out of lines. Useless caps were cut down and made to do duty as em quads, which is shown by such quads working up at press, thus at once revealing their own existence and one of the makeshifts to which the early printer was constrained to resort.

Points were in many cases simply an oblique line cast on an en body, and a full-point, supplemented in some offices by the semicolon, and all three were used without much regard for the fitness of things, as we understand them. In one case I remember seeing them disposed in blank lines, or what would otherwise have been blank lines, reminding one of some modern vagaries in that direction. Leads there were none, everything being closed up as solid as possible. In a work where there were no blank lines except at the end of a chapter, the heading of the next chapter was inserted in the blank even when it had to be abbreviated, and the new chapter commenced in the next line. The first work leded throughout, of which I have seen any account, was a *Cicero*, printed by Peter Schöffer in

<sup>\*</sup> This way of doing work, it is gravely asserted, possessed one great advantage, namely, nothing would drop out when the page was lifted.

1465,<sup>\*</sup> and as the space between the lines of this work are said to be considerable, it was more likely to have been slugs or reglets than leads. In reprinting the first signature of Gutenberg's forty-two line Bible, Schöffer reduced the forty-two lines to forty in the first nine pages, and in order that the forty line page should be the same length as the forty-two line page, it became necessary to lead the matter, or resort to some equivalent process. Forty lines would require thirty-nine leads, and even if he had been provided with leads of only one point in thickness, thirty-nine leads would still make his page too long. But as he had no leads he doubtless employed slips of parchment or paper for the purpose.

As regards the pressroom, there seems to be absolutely nothing definite concerning the press or its adjuncts. There were in the arts many machines in use by which pressure might be obtained, some one of which was, no doubt, modified to meet the requirements of the new art, but which one, or how modified, or to what extent seems completely in the dark. The ink, like the press and type, and all else save the paper and parchment, was home-made, and, it may be added, well made, retaining, in most cases, until the present day, a richness and brilliancy of color which is truly remarkable. It was supplied to the form by doppers or balls. The first representation of these implements shows that they were evidently constructed by laying a piece of leather or skin on a flat surface, placing a supply of wool or similar substance in the center, and gathering the corners and surplus material together and winding the same with twine to form a handle.<sup>†</sup> The ink was distributed by beating one ball upon another, or upon a slab, or both in combination.

To return to our rule. The belief that the uneven ending of lines in early printed books was due to the absence of a rule under them, appears to have been adopted by savants generally, and to all appearances accepted as the true reason by the reading public.<sup>‡</sup> If their conclusion is correct, the forty-two line Bible of Gutenberg with its 1282 double column folio pages, two editions of the Psalter, and between thirty and forty

<sup>\*</sup> This was also the first book in which Greek appears in print. Previous to this period blanks had been left in the page and the Greek written in with the pen.

<sup>†</sup> The efficiency of balls depended more upon the treatment of the skin or pelt with which they were covered than upon any "hemispherical cavity" in a turned handle. If my memory serves, the preparation thereof was a dirty job.

<sup>‡</sup> Mr. William Blades, one of the latest writers on early printing, and who may, therefore, be considered as voicing the opinions of bibliographers on the subject, says: "Placing rough types upon rough types admits of very little shifting or adjustment, and to this fact, I imagine, we must attribute the practice of leaving the lines of an uneven length in early books. Any attempt to push along the words of a line in order to introduce more space between them without some plan of easing the friction would be certain to break up the line altogether, so the lines were left just as they happened to fall, whether full length or short." \* \* \* \* \*

"The probable reason why Colard, Mansion and Caxton did not space their lines to an even length is that at that time they had not begun to use the *setting-rule*. This useful little slip of metal enables each letter as it is picked up by the compositor to be passed along on an even surface to its destination, instead of catching in every unevenness or burr of the previous line. Its absence would entail many obstructions to the spacing-out of lines, and render the plan of leaving all the space at the end, which was actually adopted by Caxton, at once more easy, expeditious and free from accident."  
—*Life and Typography of William Caxton*.

other works by Peter Schöffer, and a host of other works by still other printers were all set up by this most tedious process. During the ten or twelve years between the invention of movable type and the introduction of evenly spaced lines, the art had found its way into nearly every city in Europe, and in one or two of them there were as many as twenty distinct printing offices. If they all issued three or four works per year, as did Peter Schöffer's office, the output of books during this interval of time would amount to an item of considerable magnitude, while the quantity of type set for them would be something enormous.

I cannot believe that such a length of time elapsed, that such an amount of work was done without some one engaged being possessed of sufficient inventive talent to improve on this primitive process and bring the stick — which would be the next natural step — into use long before the practice of spacing lines to a uniform length began. Any way, the coffin system of setting type *was* improved upon, and the stick *was* introduced. Clumsy, mortised out of hardwood and holding but a few lines, it was still a great stride forward, a real improvement. But the march of improvement was not permitted to rest at that point, advanced though it was. As soon as the first stickful had been set, the necessity for some means of emptying out the matter became apparent. If no rule had ever been used before, it had to be provided then. Without it or some good substitute as a support in front of the matter, the first stickful could not be emptied.

Again, the type, once used, was from the very earliest period then distributed, and it is not clear how that could be accomplished with either efficiency or satisfaction, unless the compositor had a rule or some equivalent under the matter he was throwing in. If it so happened that he had never heard of a rule, its substitute would not remain long in the hands of a facile compositor before he would be using a rule for both setting and distributing.

Furthermore, it is quite within the range of possibilities that a rule of some sort had been used in handling the type while it was being made and prepared before it came to the case at all.

It seems entirely out of reason to suppose that men possessing sufficient intelligence to set type should remain content to grope along so many years without a rule, with so pressing an invitation to use one being urged upon them by every line they set; and it is my belief, the savants to the contrary notwithstanding, that it was to some one of the conditions cited, or all of them, more than to any recognized necessity for means of reducing the friction of one line upon another, which furnished the compositor with his rule.

ROLLERS having lost their suction will acquire it again when being washed with water in which some honey and a small quantity of gum arabic has previously been dissolved; but before such washing they must have been perfectly cleaned in the usual way. After the honey-water process, they are to be left drying for some hours, and this "refreshing" will therefore be done best at closing time in the evening.

#### ANCIENT MANUSCRIPTS.\*

OUR classical authors came near being entirely lost to us. Of some nothing has been preserved; of others we possess only fragments, and chance, that blind arbiter of the works of genius, has preserved, in their entirety, some productions of a secondary value. We lost a great number of ancient authors in the conquest of Egypt by the Saracens, which deprived Europe of the use of papyrus. In the absence of papyrus, parchment was employed, which, from year to year, became more scarce and costly. Then the sheets upon which were transcribed classical compositions of Roman literature, were converted into psalters and breviaries; an entire book of Livy half effaced between some verses of the Bible, and the orations of Cicero *de Republica* between the lines of a history of the monastery.

There was a time when a considerable domain was exchanged for a manuscript; when this acquisition was deemed of sufficient importance to be registered in the public acts. All powerful and absolute as was Louis XI, he was not able to borrow the manuscript of Arob Rasis, for the purpose of making a copy, without depositing 100 crowns of gold with the library of the Faculté de Paris, and for the completion of this sum the secretary of the treasury sold a part of the silver plate. For the loan of a volume in 1471, a baron offered a security of 10 marks of silver, which was considered insufficient. Previously, a countess of Anjou had given, for a book of Homélius, two hundred sheep and a supply of barley and wheat. At this period manuscripts were an object of considerable commerce, the users receiving them in pledge as a precious commodity. A student of Paris, reduced to the last extremity, regained his fortune by borrowing money on a book of jurisprudence, and a grammarian, ruined by fire, rebuilt his house by the sale of two volumes of Cicero.

Upon the restoration of letters, the *savants* searched with ardor for these treasures of the past. The passion entailed long journeys, and in the pursuit many fortunes were sacrificed. The acquisition of a province afforded no greater source of congratulation than the finding of an unknown manuscript. "Oh, marvelous fortune!" wrote Aritino to Poggio, upon learning that Poggio had discovered a copy of Quintilian. "I pray you to send me this manuscript at the earliest moment, lest I should die without beholding it."

But in this fever of enthusiasm the *demi-savants* were sometimes the victims of their ardor: knaves sold to them false volumes at an exorbitant price. On the other hand, the truly learned were tormented by the demon of jealousy when they learned that one of their number was the fortunate possessor of a particularly choice work; for, then, the honor of possessing a volume of Cicero almost equaled the honor of having composed it.

The greater part of these manuscripts were found, not upon the shelves of libraries, but in the most obscure recesses of monasteries, covered with dust, and were not delivered to the searchers with much emphasis concerning their true value, for very erroneous notions concerning the ancient authors were held at that time. The learned men of this epoch placed a certain Valerius in the front rank of Latin prose writers; ranging Plato and Quintilian among the poets, and believing Ennius and Statius were contemporaries. The best copy of Tacitus was found in a monastery of Westphalia. The emperor Tacitus caused to be deposited in all the libraries of his empire copies of the work of his illustrious ancestor, and ordered ten new copies to be made each year; but even this precaution was unavailing, and all the libraries of the Roman empire seem to have been wholly destroyed. Some manuscripts have perished after being saved from the abyss. Raymond Lorenzo, a legist of the pontifical court, possessed two books of Cicero upon Glory, which he offered to Petrarch. The poet lent them to a learned old man who had been his preceptor. The latter, in a moment of need, pawned them to a usurer, and, dying just then, the books were again seen which Petrarch had not been permitted to read, but of which he spoke with great enthusiasm.

“THE WRITING LESSON.”

### THE TRUE DIGNITY AND VALUE OF EXCELLENCE IN LABOR.\*

BY THE RIGHT HON. W. E. GLADSTONE, M. P.

WE are at present engaged in the education — the technical education — of the artisan classes. I rejoice in that. Technical education means — taken in a broad and comprehensive sense technical education means — the exaltation of manual labor, the bringing of manual labor — speaking generally, I mean — up to the highest excellence of which it is susceptible. I wish heartily well to that movement. But, in order that the movement should succeed, it is not enough that the government should propose, and the house of commons should accept, the devotion of public money for the purpose. Public money may do something, but public money cannot do everything. It is very easy to waste it, thereby pouring out our bounty on a barren soil. What is requisite is that the public — the nation at large — should obtain a true conception of the subject; and that true conception is this — that every man who is engaged in manual production should study, not merely to get his living out of that manual production — no doubt that is a vital and essential purpose, which it is alike his duty and interest to pursue — but he ought to raise every description of manual production to the highest excellence of which it is capable.

There is a story told of Dr. Johnson which is a little applicable to this case. Somebody said to him once, "Dr. Johnson, how did you acquire this extraordinary faculty of excellence in conversation that you have?" And Dr. Johnson, I believe, replied, "I am not aware of any method by which I acquired any excellence of that kind, if I possess it, except that when I have anything to say I have always tried to say it in the very best manner that I could." There is the true principle of technical education; there is the principle that will live and will glorify labor; there is the principle that will raise the working men of this country in the best sense and in the best manner, namely, by means of a power of energy springing up within themselves and devoted by themselves to the improvement of their condition by the improvement of their work.

It is sometimes said that there is a great deal of scamping of work in this country, and that it used not to be so in olden time. I have very grave doubts if it was not as bad then as it is now; but still there is some scamping of work; and no doubt if we do not mean to be flatterers of the English laborer by telling him what he wants rather than what is useful, we ought to say, and make it to be understood, there is such a thing as scamping of work; and perhaps there is as much excuse for it in the case of a man living by his daily wages as there is in the higher ranks of life, where there is also a great deal of scamping of work. But it is bad altogether; and we are speaking now of the working man, and it is bad in his case. It is bad, first, because it is a fraud on his employer, and secondly because it is a fraud on himself. Depend upon it, in the long run the interest of the working man is to do his work in the best manner; not to do it so that it shall pass the inspection of the employer — possibly a cursory and hasty inspection — but so that it shall be done as well as the nature of the case permits it to be done.

The gifts of the people of this country are abundant. The Almighty has not been penurious to them in giving them great facilities and great powers, which it is their business to develop; but I wish and hope — I will not say to see — but what I wish and hope and prepare for, so far as depends on me, is that there may be, along with the growth of our commerce and of our capital, and with the growth in bulk and mass and extent of the labor of the people of the country — that there may be a constant upward effort in the character and nature of the labor itself, and that the effort may be rooted, you may say, in an enlightened sense of interest. Yes, I do not exclude that; it must be a great and legitimate power with the fathers of families in this country, and especially with the laboring classes, that they shall begin more and more

\*From an address delivered to the workmen at the Dee Chain and Anchor Works, Saltney, on the 12th September, 1890.

to understand that there is such a thing as excellence which is valuable in itself; that a thing may be done with the slovenly habit of mind that trusts to get it done in the quickest and most superficial manner, or it may be done upon the exactly opposite principle of endeavoring to give dignity to the labor, even of the human hand, and to develop the power that it possesses, under the guidance of the human mind, for introducing both beauty and utility, each of them in the highest degree, and the one wedded to the other, to all the instruments and implements of human convenience and comfort in all the different stages of industry and for all the different purposes of life.

### LITHOGRAPHY.

Everyone knows that if a surface is covered with an oily or greasy substance and a little water is poured over it the water will roll into little balls, as quicksilver does when turned out on a table or paper. If the surface is greased in part or in spots, instead of entirely, water will wet only those spots where no grease has been applied. Take, as the object for experiment, a lithographic stone — a fine quality of limestone, grained or polished, as the case may demand. Instead of applying grease in spots write or draw with a greasy lithographic crayon, composed principally of tallow and lampblack. Then pour over the stone a solution of gum arabic and nitric acid, not, as many suppose, to raise the drawing into relief, but simply to intensify the antipathy of the grease and water. After drying, the surface is wet with water and a little turpentine, and the substance of the drawing washed carefully off, leaving the stone looking almost as clean as before the drawing was made. But although the body of the crayon has been washed away, the grease has left its spot and still holds to its dislike for water; and a printer's roller charged with lithographic printing ink, passed over the stone while damp, brings back the lost drawing to its original beauty. A sheet of paper is now laid over the stone and subjected to a strong pressure in the printing press; then it is carefully lifted off, bringing with it a reversed *fac simile*. A colored lithograph or "chromo" is made in precisely the same way as the drawing described, sometimes as many as twenty different colors being used before a picture is completed. For the sake of simplicity, let us follow the process of reproducing in five colors a design of mosaics, as the colors in this are distinctly separate. A tracing of the design is made, transferred to the stone and carefully gone over with lithographic drawing ink — a fluid made from the same ingredients as the crayon. Five more impressions of this tracing are made, and while the ink is still fresh a dry powder, which adheres, is dusted over them. Each impression is then laid face down on a fresh stone, subjected to the pressure of the press, and, when lifted off, leaves the outline of the original tracing in powder only. The parts of the design that are yellow are drawn in the corresponding parts of the tracing on one of these stones; the parts that are red on another; black, blue and gray on the others. They then go through with the process of gum and acid, as already explained, and the stone that is prepared for the yellow is inked in with yellow printing ink; the one for red in red ink and so on. The yellow is then printed on clean sheets of paper, the other colors following in their turn on the same sheets until a complete reproduction of the design is the result. It can be readily seen that if a little of one color is lapped over another its tone will be changed, and so a never ending variety of delicate tints may be obtained.—*Art Amateur*.

WHEN printing with black ink on a tinted ground, or on colored paper, it is necessary to observe that the black changes color in many instances, or loses its intensity. Printed on a blue ground, its strength and power are lost; on red, it appears dark green; on orange, it takes a slightly blue hue; on yellow, it turns to violet; on violet, it has a green-yellow shade; and on green, it appears as a reddish gray. Printers should take heed of these peculiarities of black, or they may find their work worthless when done.—*British Printer*.

**St. Louis Typefoundry**, Third and Vine streets, St. Louis, Missouri.  
**Toronto Typefoundry**, J. T. Johnston, 80-82 Wellington street west, Toronto, Canada.  
**Weese, F., Mfg. Co.**, 11 Spruce street, New York.

## PAPER DEALERS—COMMISSION.

**Taylor, Geo. H., & Co.**, 184 and 186 Monroe street. News, colored, book, covers, manila, etc., and specialties.

## PAPER DEALERS AND MAKERS.

**Butler (J. W.) Paper Co.**, 183 to 187 Monroe street, Chicago.  
**Calumet Paper Co.**, 262 to 268 Fifth ave., Chicago. Headquarters for Whiting Paper Co's manufactures.  
**Chicago Paper Co.**, 120-122 Franklin St., Chicago.  
**Elliot, A. G., & Co.**, 30, 32 and 34 South Sixth St., Philadelphia. Paper of every description.  
**Elliott, F. P., & Co.**, 208 and 210 Randolph street, Chicago.  
**Illinois Paper Co.**, 181 Monroe street, Chicago. Book, cover, manila, rope manila papers, etc.  
**St. Louis Typefoundry**, Third and Vine streets, St. Louis, Mo.

## PHOTO-ENGRAVING.

**Blomgren Bros. & Co.**, 175 Monroe street, Chicago. Electrotypers, photo and wood engravers.  
**Crosscup & West Engraving Co.**, The, 907 Filbert street, Philadelphia. Engraving of a high order.  
**Display Advt. Co.**, 26 Church street, New York. Unique and artistically designed cuts.  
**Electro-Light Engraving Co.**, 157 and 159 William street, New York. The pioneer zinc-etching company in America. Line and half-tone engraving of the highest character and in shortest possible time. Correspondence solicited.  
**Moss Engraving Co.**, 535 Pearl street, New York. Most complete engraving establishment in the world. Fine presswork a specialty.  
**Ringler, F. A., & Co.**, photo electrotypers, 21-23 Barclay street to 26-28 Park Place, New York.  
**Sanders Engraving Co.**, 400 and 402 N. Third street, St. Louis, Mo. Photo-engravers for all printing purposes.  
**Zeese, A., & Co.**, electrotypers, photo-zinc etchers, and map and relief-line engravers, Franklin Building, 341 to 351 Dearborn street, Chicago.

## PHOTO-ENGRAVERS' AND ELECTROTYPERS' MACHINERY.

**Royle, John, & Sons**, Essex and Straight streets, Paterson, N. J. Routing machines, routing cutters, saw tables, shoot planes, etc.

THE INLAND PRINTER BUSINESS DIRECTORY—Continued.

PRESS MANUFACTURERS.

Bullock Printing Press Co., 50 Illinois street, Chicago. W. H. Kerkhoff, manager.

PRINTERS' MATERIALS.

Golding & Co., Boston, Mass. Largest assortment type, tools, presses, etc., in United States. Everything required by printers.

Hamilton Mfg. Co., Two Rivers, Wis. Mfrs. of cases, stands, cabinets, and all printers' wood goods. Branch house, 259 Dearborn St., Chicago.

Metz, John, 112 and 116 Fulton St., New York. Specialty, brass rule, leads, furniture and printing presses.

Morgans & Wilcox Mfg. Co., Middletown, N. Y. Printers' woodwork of all kinds—cabinets, cases, wood type, etc. Dealers in metal type, inks, etc. Gen'l agents Eckerson web press.

Rosen, P. Aug. Co. (incorporated), 243 and 245 Wells street, Chicago. Mfrs. of cabinets, cases, galleys, etc. Also bookbinders' press boards.

Rowell, Robert, Third avenue and Market street, Louisville, Ky. Outfits furnished complete.

Shniedewend & Lee Co., 303 and 305 Dearborn street, Chicago. We furnish every article required in a printing office.

Simons, S., & Co., 13-19 N. Elizabeth street, Chicago. Make cabinets, cases, galleys, and everything of wood used in a printing office. Make engravers' wood.

St. Louis Typefoundry, Third and Vine streets, St. Louis, Mo.

Toronto Typefoundry, J. T. Johnston, 80-82 Wellington street west, Toronto, Canada.

Wells, Heber, 8 Spruce street, near Nassau, Cottrell Building, New York.

Wesel, F., Mfg. Co., 11 Spruce street, New York. Manufacturers of patent stereotype blocks, patent composing sticks, brass and steel rule, galleys, etc.

PRINTERS' ROLLERS AND ROLLER COMPOSITION.

Andrew van Bibber & Co., Sixth and Vine streets, Cincinnati, Ohio.

Bendernagle & Co., 521 Minor street, Philadelphia, Pa. Also tablet gum.

Bingham, Daley & O'Hara, 49-51 Rose street, New York.

Bingham & Runge, 74 Frankfort street, Cleveland, Ohio. Printers' rollers and composition.

Bingham's Son, Samuel, 22 and 24 Fourth avenue, Chicago. The *Standard* and the *Durable*.

Buffington & Garbrock, 202 Race street, Cincinnati, Ohio. Price list and terms on application.

Godfrey & Co., printers' rollers, 325 Walnut street, Philadelphia, Pa.

PRINTERS' ROLLERS AND ROLLER COMPOSITION.

Reilly, D. J. & Co., 324 and 326 Pearl street, New York.

Wahl, F., & Co., printers' rollers and printing inks, 59 Oneida street, Milwaukee, Wis.

PRINTERS' TOOLS.

Golding & Co., 177 to 199 Fort Hill Square, and 19 to 27 Purchase street, Boston, Mass. Largest manufactory of printers' tools in the world.

PRINTERS' WAREHOUSES.

Graham, L., & Son, 99-103 Gravier street, New Orleans, La. Southern Printers' Warehouse.

Tatum & Bowen, San Francisco, Cal., and Portland, Oregon, sole Pacific agents for R. Hoe & Co., and the MacKellar, Smiths & Jordan Co.

Toronto Typefoundry, J. T. Johnston, 80-82 Wellington street west, Toronto, Canada.

SEALS, NUMBERING MACHINES, DATING STAMPS, CHECK PROTECTORS, ETC.

Flehart, J. H., & Co., rubber and steel stamps, seals, stencils, badges, checks, etc., Cleveland, Ohio.

SECOND-HAND MACHINERY.

Ewing Brothers & Co. Works, 2 Woodlawn ave., Chelsea, Mass. Boston office, 101 Milk street.

Marder, Luse & Co., 139-141 Monroe St., Chicago. Presses, Cutters, Engines, etc. Send for list.

Toronto Typefoundry, J. T. Johnston, 80-82 Wellington street west, Toronto, Canada.

STEREOTYPE OUTFIT.

M. J. Hughes, 18 Spruce street, New York. Inventor and manufacturer of conical screw quoins.

TYPEFOUNDERS.

Barnhart Bros. & Spindler, 113 to 115 Fifth avenue, Chicago. Superior copper-mixed type on the point system. All kinds of printing materials.

Collins & McLeester Typefoundry, The, 705 Jayne street, Philadelphia. Alex. McLeester, proprietor; Eugene H. Munday, business manager.

Connors' Sons, James, Centre, Reed and Duane streets, New York.

Dominion Typefoundry Co., 780 Craig street Montreal, Canada. R. G. Starke, president; P. A. Crossby, manager. Typefounders to the government of Canada. Sole agents for MacKellar, Smiths & Jordan Co.

Farmer, Little & Co., 63 and 65 Beekman street, New York; 154 Monroe street, Chicago.

Graham, John, typefounder, 451 Belden avenue, Chicago. Send for specimen sheet.

TYPEFOUNDERS.

Great Western Typefoundry, S. A. Pierce, manager, 324 West Sixth street, Kansas City, Mo.

Illinois Typefounding Co., 200 to 204 South Clark street, Chicago.

Lindsay (A. W.) Typefoundry (formerly R. & J. & A. W. Lindsay, of 75 Fulton street), now 76 Park Place, New York.

MacKellar, Smiths & Jordan Co., 606 Sansom street, Philadelphia, Pa.

Marder, Luse & Co., Chicago Typefoundry, 139-141 Monroe St. Also Minneapolis, Minn.

Minnesota Typefoundry Co., F. S. Verbeck, manager, 72 to 76 East Fifth street, St. Paul, Minn.

Newton Copper Type Co., 14 Frankfort St., New York. We copperface type only. Send for trade statements.

Palmer & Rey (incorporated), Typefoundry and Head Office, San Francisco; Branches, Los Angeles, Cal., Portland, Ore., and Galveston, Texas. A large and complete stock of types, presses and printers' material kept at each of our branch houses. Our stock in San Francisco is the largest and most complete in the U. S. Goods sold at Eastern prices and terms.

Shniedewend & Lee Co., 303 and 305 Dearborn street, Chicago. Special western and north-western agents for MacKellar, Smiths & Jordan Co., Philadelphia.

St. Louis Typefoundry, Third and Vine streets, St. Louis, Mo.

Toronto Typefoundry. Point system. 80-82 Wellington street west, Toronto, Canada. Exclusive agency Marder, Luse & Co.; general agency all United States Typefounders. Everything required in the printing office.

TYPEWRITERS.

American Writing Machine Company, Hartford, Conn. Caligraph writing machine.

Wyckoff, Seamans & Benedict, 196 La Salle St., Chicago. Remington Standard Typewriter.

WEB PERFECTING PRESSES.

Shniedewend & Lee Co., 303 and 305 Dearborn street, Chicago, manufacturers of 4 and 8-page and 4-page web perfecting printing presses.

WOOD TYPE.

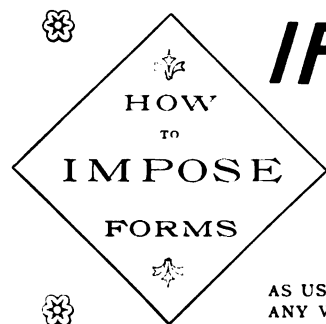

American Wood Type Co., South Windham, Conn. Send for catalogue.

Hamilton Mfg. Co., Two Rivers, Wis. Manufacturers of holly and end wood type, borders, etc. Branch house, 259 Dearborn St., Chicago.

Morgans & Wilcox Mfg. Co., Middletown, N. Y. Wood type unexcelled for finish. Send for reduced price list and sheets of new faces.

Page (Wm. H.) Wood Type Co., The, Norwich, Conn. Send for new price list.

Wells, Heber, 8 Spruce street, near Nassau, Cottrell Building, New York.

While our columns are always open for the discussion of any relevant subjects, we do not necessarily indorse the opinions of contributors. Anonymous letters will not be noticed; therefore our correspondents will please give names — not for publication, if they desire to remain incog., but as a guarantee of good faith.

#### A WORD WITH CORRESPONDENTS.

We hope our valued corps of correspondents will not take offense when we ask them to **BOIL DOWN** their effusions in future as much as possible. We are very glad to hear from every section of the country, but our correspondence feature has assumed such proportions that it is impossible to publish all that is sent us. Friends, be brief and to the point, and **THE INLAND PRINTER** readers will think all the more of your contributions for their being so.

#### A REMEDY FOR WRINKLING.

*To the Editor:* SAN FRANCISCO, Cal., December 28, 1890.

In a recent issue of **THE INLAND PRINTER** a pressman wrote on a subject which has given me, and I presume others, considerable trouble; that is the wrinkling or buckling of paper which is being printed on a cylinder press.

One remedy I have tried, which has given me a great deal of satisfaction, is to have the bands in front of the cylinder lengthened by the addition of very flexible steel so that the bands will hold the sheet almost up to the point of impression.

Applying one or more of these bands on the spot where the wrinkle occurs will cause the paper to print smooth, in almost every case.

CHARLES MANGEOT.

#### A SUGGESTION.

*To the Editor:* PHILADELPHIA, Pa., December 29, 1890.

Who has not had some difficulty in distinguishing between the small caps v, s and w, and the lower case, especially of old style type? It is surprising that enterprising typesetters have not given a distinguishing mark to these letters. I have seen type that was cast in France in which the small-cap letters mentioned were nicked with a small nick near the top. This is an easy matter on the French type, for the regular nicks are on the reverse side, and instead of being set nick up it is set nick down, and the line in the stick presents a clean, even surface, unbroken save by the nicks of spaces; should a small-cap letter get in it is easily distinguished. While it may not be easy to nick American type in this way, owing to the fact that some type is cast with an extra nick near the top, still it is possible to designate these letters by a . , — or x on the shoulder. Should you think the suggestion worthy of a place in your journal, I trust it may accrue to the interest of the craft, and be a help toward cleaner cases and cleaner proofs.

F. S. H.

#### FROM MONTREAL.

*To the Editor:* MONTREAL, P. Q., January 6, 1891.

On New Year's eve one of our large printing offices was completely destroyed by fire. It was C. O. Beauchemin & Fils publishing house, St. Gabriel street, where they published any number of books and did a large amount of jobwork. A large bindery also belonged to the plant. What was not burned was smashed to pieces when the floors gave away. They estimate their loss on building, machinery, type and stock at about \$45,000, insurance about \$25,000. It is not known if they will rebuild or not. About seventy-five hands were employed in the different branches.

It is rumored that an evening daily will be published by the *Herald* in a few days. As the *Herald* has been declining in public favor for a long time it may cease altogether after the

evening edition comes out a few times, which will be composed of the boiler plate used in the morning edition. For using boiler plate, having poorly set matter (what there is of it) and poor make-up it leads all others and no mistake. There are none but "P. P. F.'s" employed on the sheet or in the jobroom. About ten members of No. 176, International Typographical Union, who violated their obligation can be found there clothed in their new garment. Fair men will please bear in mind that none but "fraternity" representatives will be employed on the new paper.

The *True Witness*, the only Catholic paper in the English language in Montreal, has donned a new dress, and is now printed on calendered paper. It makes a big improvement.

No. 176 is in good condition, both as regards membership and finance, though not as well filled as before the lockout on the *Herald*. The members arrested for conspiracy have not yet had their trial.

Printing Pressmen's Union No. 52 is getting along well. It meets in Henry Owen's pressroom the first Friday in the month. Quite an appropriate place to meet in, as the members all feel at home there.

Business is fair to middling in job offices. Dailies are overrun with subs. Outlook dubious.

J. P. M.

#### FROM TACOMA.

*To the Editor:* TACOMA, Wash., December 24, 1890.

A prosperous, steady growth seems to characterize the printing and allied industries here. Newspaper and job offices alike show this in the constant improvements being made. As is usual at this time of the year, the amount of work turned out by the job offices is increased by the press of holiday business, while both our morning papers, the *Globe* and *Ledger*, are extra busy preparing their elaborate New Year's editions. These promise to surpass all former efforts in this line.

Of course under these conditions a few extras are given work, but thus far the supply of men has kept pace with the growth of business, and both newspaper and job offices have had no trouble to procure all help needed.

There is a good opening here for some enterprising firm to put in a lithographic plant. There is not an establishment of this kind in the state, while the nearest first-class one is at San Francisco, nearly a thousand miles away. Certainly the field is large enough to support a business of this kind, and your correspondent believes that the present and prospective demand for lithographic work would make such an institution a paying investment.

At the December meeting of Tacoma Typographical Union, No. 170, Mr. George W. Alexander was elected president by acclamation, this making his sixth term as presiding officer of that body. The fact of his having been called to the chair again after having served for five consecutive terms, speaks much in his praise as an executive, and of the hearty approval of the union of his acts as president. No. 170 has taken the initiative in forming a district union, by sending petitions to all unions in the states of California, Oregon and Washington and British Columbia, for signers, asking that a convention of delegates meet at Tacoma to perfect the organization of such a union. What will be done in the matter remains yet to be seen, although unions heard from favor the idea and unite with us in urging the necessity and usefulness of such a body. Should the organization be effected, some thirty-four unions will be represented by about fifty delegates.

J.

#### FROM PITTSBURGH.

*To the Editor:* PITTSBURGH, Pa., January 5, 1891.

As might be expected immediately after New Year's, a considerable number of individuals have announced themselves as candidates for office. Delegate is the position most sought after in this city. For this office it is more than likely that there will be two newspaper men and one job printer to represent the union in Boston next June. While there is considerable prejudice against the jobbers being represented in the number of delegates of what

is principally a newspaper union, however, since not many years ago the jobbers disbanded their union to come into No. 7, it is thought they will have a representative on the Pittsburgh delegation this year, especially since a man who is very popular among the members of the trade in this city has been put up for the office. This man is Oscar E. Adams, one of the best known job printers in the city. From what I can see and hear Mr. Adams will certainly be elected, probably receiving the second highest number of votes cast. George O'Neil, of the *Dispatch*, will have an easy road to go to the office of delegate and will lead in the number of votes cast for that office. There is some uncertainty as to who will be the third man on the Pittsburgh delegation. John Miller, of the *Leader*, should he run, will doubtless be elected, but there is some uncertainty as to his becoming a candidate.

There is only one man in the field thus far for the office of president, G. H. Driver, of the *Leader*. From the lookout at present he will not command enough votes to even make a hard fight. If he becomes a candidate for reelection, T. J. Dicus, of the *Times*, will doubtless receive the office. So far as I know no other candidates have announced themselves.

In this age of electricity it seems somewhat strange to say that one of our morning dailies was recently set up by the old-fashioned candle. The building was supplied with nothing but incandescent lights, and a fire disturbed the circuit. The result was the building was in total darkness in an instant, and many were the exclamations of anger. Then one of the men fished out the end of a candle and shed a faint light over a small portion of the room. Then a box of candles was secured, and in a short time everyone was working, but let it be said, neither smoothly nor satisfactorily.

Queer, isn't it, that a city with a population of more than one hundred thousand cannot support a daily paper. This is the case in Allegheny, across the river from Pittsburgh. Within the past month the *Allegheny Daily News* was born and died. Perhaps it was the fault of the journal, as it was a very poorly gotten-up affair all around.

In a couple of weeks the press clubs of all the world will be gathered here in international convention. The local club is making big preparations for the event.

MEMO.

#### FROM LANSING.

To the Editor:

LANSING, Mich., January 8, 1891.

As the time for the annual election of officers of No. 72 is near at hand, there is considerable anxiety among the several candidates. Rumor has it that a slate has already been made up and that an effort will be put forth to elect every one on it, but as some of the other members of the union have something to say in regard to this matter, the scheme is liable to fall through.

Miss Fay Hendryx, an old-time proofreader and compositor of the *State Republican*, who has been in Detroit for the past year, has returned to Lansing, and is reading proof in the state printing office.

The employés of the *Republican* bookroom presented their genial foreman, T. C. Mabbott, with a fine package of smoking tobacco, Christmas, as a token of their kind and friendly feeling.

A new Cottrell press has been added to the state printing office pressroom, with which to facilitate the state printing.

Frank E. Van Black, of Detroit, spent the holidays in Lansing.

Assistant Adjutant General W. W. Cook was admitted to membership of No. 72 at the last meeting.

Frank E. Briggs, chief clerk of the secretary of state's office, has applied for membership to No. 72, the result of a democratic administration.

THE INLAND PRINTER is rapidly getting to the front here, and the subscribers are coming in every day. The boys were well pleased with the last number, and a good long list is promised for the January issue.

Work is pretty good here at present; all the boys have plenty to do. No extras in town. Newspaper subbing is poor.

"Sid." Dolan has returned to Lansing, and proposes to stay during the legislative session.

SLUG ONE.

#### OF INTEREST TO PRESSMEN.

To the Editor:

PHILADELPHIA, Pa., December 24, 1890.

In answer to a recent query in THE INLAND PRINTER "why will press manufacturers persist in placing distributing rollers at an acute angle?" I would say, that if set at right angles, with a worm and fork on end of each roller, they would have to be kept in motion by the reverse motion of the bed, or there would be an extra amount of friction in starting them.

Gamble's Patent Friction Starter for angle rollers, as herewith illustrated, will save the rollers. There are three of these in use on three Potter two-revolution presses, and on one Campbell press at the office of William F. Fell, in this city, on which rollers last over twice as long as rollers used on presses which do not have them, and doubting Thomases can be convinced of this fact by examination and inquiry. This invention has been introduced in Canada, on Potter presses, by Mr. McElroy.

G. J.

#### TYPOGRAPHICAL TRADE TRANSACTIONS.

To the Editor:

PHILADELPHIA, Pa., January 7, 1891.

The printing industry and the associated interests in Philadelphia, Pennsylvania, Delaware and Maryland show much activity with the opening of 1891. A tour among the leading job printing and book publishing houses warrants the statement that business is much better than at the corresponding period last year. Many of the large publishing concerns have more orders on hand now than for several years past.

The typefounders, printers' supply people, paper makers and manufacturing stationers are quite busy. The newspapers have been doing an enormous trade in holiday advertising, but the harvest is about over.

Eastern press and paper makers are using great exertions to capture South American trade. Within a recent period the representatives of several well and favorably known concerns, extensively engaged in machinery and paper manufacturing, sailed from Philadelphia for South American ports. It is understood that before their departure arrangements had been partially completed for the sale, by the firms they represent, of printing and paper making machines, but some hitch in the negotiations occurred. The agents were accordingly dispatched to South America to fix up matters. It has also been ascertained that New York and New England parties have also started to South America with a view of selling printing, lithographing and bookbinding machinery. The authorized agent of the Brazilian government is now on his way to the United States, where he intends to purchase presses and printing material.

New Jersey's leading republican morning newspaper, the *Trenton Gazette*, came out in new shape, and with a handsome suit of type and beautiful heading, on New Year's day.

John H. Cook, who sold the *Central New Jersey Herald* several months ago, has gone into the job printing and bookbinding business, on Elizabeth avenue, Elizabeth, New Jersey. Ira Hall, who formerly edited the *Herald*, is associated with Mr. Cook. The establishment is one of the best equipped in Central New Jersey.

J. Miller Thomas, an extensive job printer, and publisher of the *Peninsular Methodist*, gave a dinner to his employés and some friends, at Wilmington, Delaware, on Tuesday, December 30.

The *menu* was excellent, and at the conclusion of the repast, speeches were made by Presiding Elder Muncy, the Revs. L. E. Barrett, W. E. Tomkinson, W. E. Avery, D. H. Corkran and J. E. Franklin and Messrs. Charles L. Story, R. T. Stewart, J. L. Wolf and J. R. Evans. The event, which was a pleasant and interesting one, will be cherished in the memories of the participants.

The handsome new building erected for the use of the *First Ward News* is now occupied by that paper. The establishment is located at the southeast corner of Seventh and Moore streets, this city. The composing and press rooms are splendidly equipped with all modern appliances for the production of a first-class paper. The proprietor, George A. Skipper, has scored a phenomenal success, and has one of the best paying newspaper properties in Philadelphia.

Increasing business compelled the construction of a seven-story annex to the *Ledger* building. The new structure is located on Sansom street, immediately opposite to the Johnson Typefoundry (MacKellar, Smiths & Jordan). It will be devoted to the job printing and pressroom departments of the *Ledger*. ARGUS.

#### NOTES FROM DETROIT.

To the Editor: DETROIT, Mich., January 7, 1891.

A Rogers typesetting machine has been placed on exhibition in this city, and the same is being visited daily by a large number of Detroit printers. The *Tribune* of last Sunday published several columns of reading matter set up by the machine.

The "Journal Year-Book," which contains much useful information, has been issued by the *Journal* and reflects credit on the publisher. Its typographical appearance is neat. The Peninsular Printing Company did the printing and binding.

On January 19, Detroit Typographical Union will celebrate Franklin's birthday by giving a banquet. Handsome invitations have been issued.

Lyman A. Brant, a well-known printer, has been elected clerk of the Michigan house of representatives. Mr. Brant several years ago was a member of the lower house of the legislature.

Joseph F. Lochead, for a number of years a compositor in the *Free Press* composing room, died last week after a long illness.

On January 7 John O'Connor, for over thirty years pressman of the *Free Press*, died after a three weeks' illness.

At the February meeting of No. 18 the delegates and officers for the ensuing year will be nominated, and several members have announced themselves as willing to attend the Boston convention next June.

Joseph A. Labadie, who has been foreman on the *Evening Sun* for some time, has resigned and will devote his time to literary work. P. A. L.

#### VERMONT MATTERS.

To the Editor: BELLOWS FALLS, January 2, 1891.

The old, reliable Bellows Falls *Times* has again changed hands. E. G. Allis has sold out and gone to Connecticut. The new firm is A. W. Emerson & Co., with A. W. Emerson as editor and manager, and B. H. Allbee as assistant. The office is turning out large quantities of work, now employing eleven hands all the time and more a portion of the time. The job office is one of the best equipped in the state, and under the foremanship of Andrew M. Darling can produce some excellent jobs.

Editor Humphrey, of the *Poultney Journal*, deserves all the credit for getting the price for publishing the state laws in the newspapers raised to something near a decent figure.

L. O. Greene, editor and proprietor of the *Woodstock Standard*, has been appointed state inspector of finance, an office he has already held for several years.

Joseph Auld, for the past ten years business manager of the Free Press Association at Burlington, has resigned and assumed the management of the Rapid Printing Company in New York. Mr. Auld has been prominently identified with the *Free Press*'

prosperity and will be greatly missed. He is succeeded by Willard B. Howe, formerly of Lowell, Massachusetts.

Stereotyping outfits have been put into the job departments of the Burlington *Free Press* office, Frank E. Housh & Co., of Brattleboro, and the Springfield *Reporter*.

The *Household* is entirely removed to Boston and the January number will be issued from that office. The old manager and editor have gone with it.

Frank E. Housh & Co., of Brattleboro, put 200,000 health calendars on the market in 1890. It required forty-five tons of paper and was one of the largest editions ever published. The edition for 1891 will be still larger.

The various weekly papers of the state actually outdid themselves issuing holiday specials. Several issued enlarged editions with illuminated covers and some only added to the number of the pages of the regular issue. Pressure of advertising was the principal cause of enlargement.

Bert L. Taylor, formerly of the Barre Town *News* and *Argus* and *Patriot*, has gone to Manchester, New Hampshire, to assume an editorial position on the *Telegram* of that city.

The *Protectionist* is the title of a new eight-page paper at White River Junction edited by ex-County Supervisor J. H. Dunbar.

Arthur F. Stone, editor of the St. Johnsbury *Caledonian*, and secretary of the Vermont Press Association, is in quite poor health.

The Northfield *News* has changed ownership. Rev. Elbridge Gerry has sold out his interest to his former partner, L. B. Johnson, and retired from the editorial chair, which he has filled ably for several years.

Edwin A. Start, late assistant editor of the St. Johnsbury *Caledonian*, and a magazine writer of note, has gone to Boston to make a permanent stop.

The form of the *Teacher's Journal* has been changed to that of a twenty-page magazine and it is now better than ever.

B. H. ALLBEE.

#### TORONTO NOTES.

To the Editor: TORONTO, Ont., January 7, 1891.

Business has been very brisk during the last few weeks, and the boys are happier in consequence, that is those who are not in steady positions. Nightwork has been the order of the day, if I may use such a phrase. Advertising for compositors has been quite common, and, strangely enough, the advertisements have frequently appeared in the *Telegram*, although it is non-union and scarcely ever looked at by union men.

For some weeks No. 91 has been preparing a new scale for the book and job offices, and the employers now have it in their hands for consideration and approval. We are asking for \$12 for fifty-four hours; also an increase of a few cents per 1,000 ems on books and weekly newspapers. Little opposition to our requests is expected, except, perhaps, in one or two large offices where newspapers form a prominent part of the work; although it is on this class of work that the increase asked for is most reasonable and should be most willingly granted. In consequence of this state of affairs it would be well for traveling compositors to steer clear of Toronto.

The *Empire* staff held its anniversary dinner recently, and was honored by the presence of the mayor, who, being an ex-compositor, felt perfectly at home with the boys.

The sporting editor of the *World*, Mr. A. N. Garrett, has been convinced of the folly of living single through this life, and has taken Miss E. Peacock to share his triumphs and failures. Congratulations.

Still another of No. 91's able members has gone. Mr. Joseph T. Gilmour, who held cases on the *Globe* for a number of years, has gone to Seattle, Washington, to take up his abode there. Mr. Gilmour was a very efficient executive member of the union, and, while somewhat retiring in his manner (like his brother Jimmy), had many friends among the members who were sorry to hear of his departure, and who made presentations to

him and his wife befitting the occasion. He was once president of No. 91, and was our delegate to the international meeting at Denver.

Edmund E. Sheppard, of *Saturday Night*, has gone to Mexico on a pleasure trip. Safe return, "Don."

The newsboys of Toronto have a dear friend in Mr. T. G. Wilson, manager of the Grip Publishing Company. No matter what his reputation as an employer may be, he certainly has endeared himself to the "newsies." His latest scheme in their behalf is an institution where they will be instructed and amused in a proper way. Many well-known business men and charitable women are assisting Mr. Wilson with this commendable project, and I am sure its usefulness and success are assured.

Some of our small offices are increasing their business very quickly. Timms & Co. have just received a new Potter press.

Since writing the above, Mayor Clarke has been reelected to occupy the mayor's chair for another year, which is his fourth consecutive term. Although he has not all the qualities that make a first-class mayor, his popularity always insures his election. I believe he will be called upon to prove that he is not financially interested in the city printing contract before many weeks, and in case of his inability to do so will be unseated. I wonder if "Ned," as he is known to many, ever thought when he was learning the whereabouts of the "a," "b" and "c" boxes of his case in the *Globe* office, that he would so soon occupy such prominence in this city of 200,000 people. How frequently the men of types become great types of men.

Almost every compositor and pressman—in fact, everyone allied to the printing business—in Toronto has his eye on February 21, as that is the date of the banquet of Typographical Union No. 91, to be held at Harry Webb's (Toronto's Delmonico) dining parlors. The members are very enthusiastic over this, and as we never do anything in this line by halves, a big time is assured.

Right on the heels of the banquet will come the election of officers. Considering our size there has always been a great dearth of excitement over this event, but a change in this respect is expected this time, as, already, names are mentioned for the presidency and other enviable positions. Were it not that President Prescott has had two terms, I would advocate his reelection, and while I know of no one who could so efficiently fill that position as he, I think, perhaps, George Dower would be the proper man.

JIM DEE.

**A NEW SYSTEM OF LABELING TYPE CASES.**

To the Editor: KANSAS CITY, MO., December 24, 1890.

I herewith send as a contribution of mine to "the art preservative," a sample sheet and outline of my system of labeling type cases and indexing fonts, showing comparative widths of alphabets, in addition to showing size and style of font and location of type. The accompanying sheet of labels may be used for

<b>W. 102</b>	<b>24 Point Gothic.</b>	<b>No. 21</b>
<b>ABCDEFGHIJKLMNQRST</b>		
<b>W. 78</b>	<b>20 Point Gothic.—Caps</b>	<b>No. 22</b>
<b>ABCDEFGHIJKLMNQRSTUVWXYZ&amp;</b>		
<b>W. 58</b>	<b>20 Pt Goth., Sm Caps</b>	<b>No. 23</b>
<b>ABCDEFGHIJKLMNQRSTUVWXYZ</b>		
<b>W. 64</b>	<b>Two Line Brev Goth</b>	<b>No. 24</b>
<b>ABCDEFGHIJKLMNQRSTUVWXYZ</b>		
	<b>Twelve Pt. Gothic, Light</b>	<b>No. 41</b>
<b>W. 32</b>	<b>ABCDEFGHIJKLMNQRSTUVWXYZ</b>	<b>W. 22</b>
	<b>ABCDEFGHIJKLMNQRSTUVWXYZ</b>	

posting in the composing room for reference. It shows the number of fonts of a series in the office and the location of each size of the series. (Stands should be numbered systematically and cases to correspond.)

This "comparative width" system of designating type deserves to be adopted as generally as the point system of designating

depths of type bodies. The unit of width in my system is the nonpareil, which has proved to be the most suitable. Widths of faces are almost synonymous with width of bodies, so that in using my system the compositor can tell at a glance (at the labels) the relative proportions of any fonts he may desire to use.

Fonts, stands and cases should have corresponding numbers, so that location of font can be ascertained instantly, or misplaced case returned to its proper position, even by the most obtuse.

Stands should be numbered for cases in block system, that is each tier should begin with a multiple of 20 (see cut).

The first tier includes cases numbered from 1 upward; second tier (or stand) cases numbered from 21 upward; third tier cases numbered from 41 upward; fourth tier from 61 upward.

If those desiring to adopt this system need further information regarding it I will cheerfully respond. R. E. HOWARD.

**FROM OMAHA.**

To the Editor: OMAHA, Neb., December 24, 1890.

The holiday rush of work is on. It was a little long in coming, but when it did arrive it made us catch our breath. Eight days in one week is what Dad Turner of the Rees Printing Company's chapel reports. The members of the craft, like the ancient Gauls, are wearing their beards thick and long. It is a case of necessity. They have no time to shave. The printer's Christmas will no doubt be a merry one, since his family will better enjoy the holiday season, as a result of his toil.

On November 1, the Festner estate sold the F. C. Festner job printing and bookbinding establishment to the Festner Printing Company. Julius T. Festner, son of the late proprietor, is at the head of the new firm. The second partner is August Droste, a practical bookbinder. George B. Tschuck, the third partner, is the secretary and treasurer of the Bee Publishing Company. The new company announce that they give employment to fifty-six persons and keep as many as ten presses moving.

A newspaper war is among the luxuries the reading public is just now enjoying, the *Bee* having reduced its price from fifteen to ten cents a week, either morning or evening editions, including the Sunday paper. The war, however, seems to be all on one side, since the enemy simply "saws wood" and says nothing.

The *Excelsior* has changed its day of publication from Saturday to Sunday, and is somewhat livelier in tone than formerly. Clement Chase is now the sole proprietor and editor. "Clementina," as Fred Nye, of *Topics*, once called him, knows a thing or two about running a paying newspaper, if he is young.

One of the dailies recently reported that the defunct *Republican* was to be revived. The proprietor having made a real estate speculation to his profit gave some color to the rumor. Notwithstanding this announcement, the material was recently sold to a Salt Lake City concern. It was for a time thought that the *Republican* would be revived as an exclusively first-class Sunday paper.

Among the new monthly papers is the *Public School Journal*, of thirty-two pages, by Harris & Haynes. It is in the interests of the local schools. The junior partner is the son of the managing editor of the *Bee*.

Now prepare to smile, ye printers who have been striving to elevate the craft and make a decent living by turning out decent work. Fourteen pages of nonpareil tabular work, the pages 26 by

40 ems pica, were recently taken by a "firm" in this city, and the whole "executed" for \$7. Three to four times that sum would scarcely have paid the composition. The work was done in such shape that the compiler will, no doubt, forever eschew cheap printing.

*United Labor* is the name of a new publication by Hartley & Co., printers, in the interests of workingmen in general.

Since our last report W. M. Kimmel & Co. have opened up a job office. Mr. Kimmel was formerly in charge of the *Excelsior* office, and was succeeded there by Charles Allen.

The members of the city press mourn the death of J. B. J. Ryan, a reporter on the *World-Herald*.

John Green has succeeded to the foremanship of the American Press Association composing room vice Chandler, who now devotes his time to the welfare of his Twelfth-street job office.

A "labor palace" will, no doubt, be built in this city at no distant day. The projectors are, of course, the labor unions, and should the work be undertaken, the members of the typographical fraternity will not be among the least active in the work. B.

#### FROM OREGON.

To the Editor :

PORTLAND, December 30, 1890.

Printing in this burg has been very slow of late, the job offices having about just enough to keep moving. The newspapers seem to be reaping the harvest, as they are full of "ads," in fact, running over, causing them to enlarge.

The *A. O. U. W. Reporter*, a monthly paper printed in the interest of that order, has been enlarged, and after two issues finds that it will have to enlarge again, as its publishers had to hang "ads" on the outside of the chases this issue. This paper had a rival, a short time back, in the *Gavel*, a sheet started by an inexperienced, thought-there-were-millions-in-it novice, who distributed them gratis, so as to gain the field; but luckily for the readers, there were but five issues struck off when it was ruled out of the mails, it is claimed, by official red tape. Below is a very fitting death notice :

#### DIED :

In this city, after a brief existence,

#### "THE GAVEL,"

Recently instituted and published under contract for the Grand Lodge as the

#### "OFFICIAL ORGAN,"

Choked to death by Government Red Tape, superinduced by an overdose of "Pap," administered by the "Ring Moguls" of the late Grand Lodge.

#### THE CORPSE

Is now on ice, awaiting the arrival of friends for Interment. Following are the

#### PALLBEARERS :

DIXIE H. ROSS (by special request), E. H. STOLTE, H. D. RAMSDALL, "PAP" MYERS, T. C. VAN EPPS and "GRANDPA" DAY.

#### CHIEF MOURNERS.

GRAND MASTER DALY, GRAND RECORDER CLARK and GRAND MEDICAL DIRECTOR BROWNE.

The interment will take place in the Grand Recorder's office. No flowers. No regrets.

*Ex Nihilo Nihil Fit.*

The *Sunday Mercury*, weekly, has enlarged and is now running a supplement sheet. This office has the most cosy composing room in the city. Lately it was deprived of one of its large rooms, to make way for another paper which concluded to locate there. Bob, the genial foreman, says they are rather crowded, but if the office boy will keep it swept, and not let the dirt accumulate, they will be able to get around. The building is set on piling driven in the river, and contains no less than eight papers and one

job office. Half of the building is occupied by these eight papers, while the other half is occupied by the Pacific Printing Company. When the presses are started up the building sways to and fro like a ship at sea.

The Pacific Printing Company has had its building enlarged somewhat, to make room for their new Cottrell press and other new material.

The firm of McDonald & Botsford has dissolved partnership, Mr. McDonald continuing the business at the old stand, while Mr. Botsford goes to the Sound country.

The *West Shore* is building a fine two-story structure at the corner of Columbia and Water streets.

W. W. Copeland has bought the balance of the material of the *News* and has started a job office at Third and Alder streets.

The brewers of this city are quite jubilant, as they have just won a suit brought against them for boycotting Weinhard's beer. There is still one more suit pending trial for libel. There are 40,000 circulars in the office of the chief of police that were seized, together with two or three men who were distributing them. The judge decided that the people have a right to boycott in Oregon.

The union men are still restrained from working in the office of F. W. Baltes & Co. This is the only firm here that fails to recognize the union.

I received bound volume No. VI all O. K., and would say that it is a fine piece of work, and that I am well pleased with it. It is something that every progressive printer ought to subscribe for, especially the job hand. Every one of the twelve subscribers I sent you appreciate the value of THE INLAND PRINTER and wondered how it was they had not subscribed for it before.

M. H. S.

From our Special Correspondent.

#### OUR NEW ZEALAND LETTER.

To the Editor :

WELLINGTON, November 28, 1890.

Trade throughout our colony has been very brisk during the past month, both in the newspaper and job printing lines, mainly caused by the approach of the general elections, which are to be held in every electorate on December 5. Great interest is being taken in the political campaign, no doubt owing to the testing of the power of the labor party, which is putting forth candidates in all prominent electorates. For my own part, I think they have overstepped the mark, for whereas the "other side" has only put forward one or two candidates, the labor party has drenched the election with more nominations than members required. The present election marks a new era in our mode. The electorates have all been turned upside down, our old system of "area" electorates having to give way to "population" electorates, the change being particularly noticeable in the cities, for whereas in the last elections these places had only one candidate, this time they have three each, the old "suburbs" seats being merged into the city. In Wellington the candidates may be thus classed: Mr. Bell (eldest son of our agent general in London, and a lawyer) declares himself a supporter of the present ministry, of which Sir Harry Atkinson is premier; Mr. Duthie says he will support the opposition, and he is a merchant, who is not considered favorable to unionism — these two candidates are called conservatives; Mr. George Fisher (a printer) is an old member, and a late member of the ministry, but now in opposition, and gets a good labor support; Mr. Jellicoe (a lawyer) is a young man with plenty of assurance, and runs with the Roman Catholic support; Mr. T. K. MacDonald (an auctioneer) announces himself a liberal; Mr. W. McLean was president of the Knights of Labor, and is running as an ardent supporter of single tax, and is helped by the Knights of Labor; and Mr. Fraser is a liberal, an ex-member, and goes for prohibition — the three latter gentlemen are called the "three labor candidates," having been chosen by certain delegates called the parliamentary committee.

Because all the labor unions of the city were not represented upon the committee which chose Messrs. MacDonald, McLean and Fraser, and as the latter two are not acceptable to many, the

ticket is disclaimed. Consequently, with such elements at work, the conservatives are almost sure to be returned, and the labor party will find that they will first have to seek unanimity in their ranks, after which they may secure representation in the house of representatives. This statement pretty well covers the condition of affairs in Auckland, Christchurch and Dunedin.

The great strike, of which I have given you items from time to time during its progress, has at last collapsed, to the acknowledged defeat of the strikers, although I am of opinion that the defeat will do a world of good to the growth and management of unionism in our colonies. The different unions concerned have ordered their members to go back to work (if they can get it) unconditionally, and the great feature of discussion in union ranks is reorganization. A prominent feature of the late trouble is the growth of employers' unions, and at the present time these unions are largely controlling the elections, the members even going so far as to take round their establishments lists bearing the names of the candidates chosen by the union, and asking their workers to sign the promise to support such candidates. Another feature has been the establishing of "Free Laborers' Unions," supported by the employers' unions both financially and morally.

Mr. D. P. Fisher, secretary of the Executive Council, New Zealand Typographical Society, has resigned his position, and disclaims all connection with Wellington printers. This step has been taken owing to the badgering tactics of a certain section of the Wellington branch, who have taken every opportunity during the course of the strike to malign Mr. Fisher, and the matter culminated at a meeting of the branch the other day when the meeting, which was a very stormy one, repudiated their pledge to assist the strikers by levy and censured Mr. Fisher in his position as president of the Maritime Council. Our late secretary has been for the past twelve years (during which period he has held the office) one of the most prominent unionists in our colony, holding at various times such offices as president of Maritime Council (the largest labor body in New Zealand), president Trades Council, and Wharf Lumpers, and is now permanent secretary of Wellington Trades and Labor Council; and during the sitting of the late Government Labor Conference, Mr. Fisher was appointed chairman. It was only in my last letter that I notified you that Mr. Fisher had been re-elected secretary of our Executive Council. The resignation having been certified to our branches, Mr. H. Jones was nominated by the Wellington branch for the vacancy, and Mr. T. L. Mills was nominated by the Otago and Hawkes Bay branches. Mr. Jones has now retired, and consequently the office has fallen to your correspondent. TOM L. MILLS.

#### FROM A PRACTICAL PRESSMAN.

*To the Editor:* WASHINGTON, D. C., December 29, 1890.

During a recent debate in the United States senate, upon a proposition to make up a deficiency in the appropriation for the government printing in the government printing office, claimed to be the largest, best equipped and most efficient printing establishment in the world, the members of that body, in order to make its constituents believe they are economical in the matter of appropriations, went into a lively discussion as to the cost of various publications emanating from its presses. It may be truthfully stated that none of its publications bring greater results to the people at large than the books and pamphlets of the interior department, and more especially the ones containing the geological surveys and the reports of the Smithsonian Institution. While the government consents to print its scientific and technical publications, they are the standard authorities in the matters of geology, botany and kindred sciences, and the pirates of the school-book fraternity never feel they are wronging anybody when they steal information from their pages and fail to give due credit. The numerous illustrations contained in the various publications of these different bureaus of the government will compare favorably with any similar publications issued by any of the standard publishing houses in the United States, for which this great government, however, fails to pay an adequate compensation to its employes. The

authorities of this office claim to be handicapped by a law of congress, which the various unions of this city have been trying to have removed or modified since the year 1877. But anything for the benefit of the workingman these solons cannot find time to consider. Now if they intended to do justice to these worthy employes, it would only take a few minutes to consider the justice of their appeal and remove this most unjust discrimination.

The government printing office is away off in being able to procure sufficient ground on which to erect a suitable building of sufficient capacity to accommodate its ever increasing volume of business. The office, in consequence of its cramped condition, has to be kept open and running twenty-two hours out of the twenty-four. The orders for work instead of decreasing are ever on the increase, as the country expands.

The press manufacturer is ever catering to the employing printer to enable him to produce greater results, and are ever increasing and adding to the press an unnecessary quantity of iron, instead of simplifying its complicated intricacies. Any press builder who instead of increasing will decrease these complications, will receive merited praise from every well-informed pressman. Manufacturers should build their machines nearer the ground; there is no necessity of placing them so near the sky. Give more attention to the fountain and a little less to the bed; also give more attention to the knife of the fountain; grind it finer, as the thinner the knife the easier is the fountain to manipulate; do away with so many unnecessary screws, half the number will do; they seem to do more harm than good to the knife. Add to the press, instead of all this unnecessary iron, an air spring, something similar to what is used on locomotive engines, to bring the machinery to a full stop; it will save considerable spoilage; and please have it under the control of the feeder at all times. Have your distribution on a straight line instead of an angle, and then and only then will the pressman get rid of so much foreign substance so often seen on the distributing plate of printing presses, and at the same time it will save considerable expense to the roller account of the office.

The printing business in this part of the United States is flourishing. There have been more cylinder presses, of the Potter and Scott pattern, put up in the various printing offices of this city the past year than were ever known in the memory of the oldest inhabitant engaged in the printing industry, which speaks well for those firms who have been so fortunate in putting on the market their style or pattern of printing machinery. The foregoing notice is given gratis, not having the personal acquaintance of either of the foregoing firms, but I know of them through the columns of THE INLAND PRINTER.

In reading the December number of this journal, I perceive that your correspondent "EM-DASH" gives a complimentary notice of the pressmen's supper held on Thanksgiving Eve, by International Printing Pressmen's Union, No. 1. I can vouch for all it implies, having been present at the same. It was a most enjoyable affair, and I hope they will not forget to repeat it for the benefit of their friends and not make it so exclusive.

I would be as much pleased as your correspondent to see the government printing office run on the eight-hour principle, but it is a thing that never can come to pass. Congress and the departments must have their work printed. The authorities of the government printing office never can tell when the services of the employes will be most needed, and on that account they require the hands to be always ready day or night to meet the demands of the government.

Mr. M. W. Louis, the able and efficient assistant foreman of the government printing office pressroom, is spending the Christmas holidays with friends in New York, where he is well and favorably known. He has the faculty of making friends wherever he goes, and what Mr. Louis does not know about first-class presswork is not worth knowing, he having been employed in some of the largest and best printing offices of the East.

The various international unions should avail themselves especially of the printing industry, and show the world what its

membership is capable of doing by the way of first-class printing, at the World's Fair of 1893. No time should be lost in formulating a plan, whereby there can be no clashing of interests, and each in its own way make the whole exhibit such a success as the Fair deserves.

A PRESSMAN.

#### CABINETS VS. STANDS.

To the Editor: CINCINNATI, Ohio, January 1, 1891.

One want of a job composing room is a double stand with inclosed sides and back, made with iron slides, instead of wooden ones, in which ordinary standard size cases will fit close together, handles being attached to pull them out with, making all cases interchangeable in their own and with those in other stands. Very little dust would find its way into these.

The "City Stand," made by Wesel, of New York, comes very near to this, and if iron slides were substituted for the wood, bringing cases close together, giving room for additional cases, they would be much more useful.

These stands cost \$8. Iron slides would probably cost no more to manufacture than the wood, and be much easier to apply. Say \$2 for inclosing with thin boards the sides and back (which could be done by the "handy man"); forty cases, assorted to suit, job, triple, cap or lower case, at 90 cents each, \$36; and \$4 for handles and extras, gives a serviceable double stand for \$50, every bit as good as a cabinet for which not less than \$75 is asked by the manufacturers.

*Advantages*—The facility with which the cases can be shifted around. What job office is there which has been in operation five or ten years but what has had occasion to change the cases about, more or less, to make room for new styles, discard old fonts, or to place those in more general use in a more advantageous position? One series of a certain number of sizes is worn somewhat, or is out of style, and is replaced by a more modern face of perhaps a greater or less number of sizes; the old letter you would like to move to some less prominent location, to make room for the new and more-to-be-used face, and must of necessity set out and re-case, and then not have space for your new series. Or you buy a series of lining gothics, with five different faces of nonpareil, besides the 8, 10 and 12 point; for these you would prefer triple or quadruple cases. The cabinet where you wish to put it has nothing but job or cap cases, in which these little fonts would be lost, to say nothing about the space wasted.

If you had an ordinary double stand you could shift the cases around, buying new ones if you did not wish to dump the old ones, and put each series just where you wanted it, and not be hampered with cases not fitting, setting out fonts, etc.

In starting a new office, you should get say half a dozen of these stands, ordering cases as they are needed. Many fonts you can hardly tell what cases will be most suitable for until you open the papers.

In adding to an office, if you have bought a series or two, and need a stand or cabinet to put them into; if you buy a cabinet, even if it contains cases suitable for the type in hand, it may have none suitable for the next you may happen to buy. But if you order a stand and half a dozen cases, exactly what you need for type you wish to case, your immediate outlay is only a quarter as much, and when you invest in another series you can again procure cases to suit, and not discommode yourself. All cases by this plan would be interchangeable.

When a cabinet is fifteen or twenty years old, the slides wear down, letting cases ride on each other, breaking off the veneer from front of cases, and are difficult of repair. The iron slides would be everlasting, and, finished off smoothly, would not wear the cases.

An office with type classified and arranged according to the plan of James K. Bettis, of Little Rock, Arkansas, would no doubt be excellent, but with the variety of cabinets and cases to be found in most job offices it would be a formidable job to re-arrange it— with these stands and uniform size cases it would be comparatively easy.

R. E.

#### FROM SAN FRANCISCO.

To the Editor: SAN FRANCISCO, Cal., January 3, 1891.

The printing trade in this city during the holidays, and for a period of about two weeks preceding, has been quiet. This can be accounted for in various ways, the principal cause being the lack of advertising done by merchants and storekeepers through the medium of printed matter. It has been much more noticeable this year than heretofore that the extensive advertisers have confined themselves to the newspapers. Another reason for the slackness of trade is the natural reaction following the excessive busy period during the recent election. The legislature convenes on the 7th, and during the session a large number of printers will be employed in the state printing office, the greater portion going to Sacramento from this city. This will deplete the number of compositors to a considerable extent, but there are always an abundance on hand to fill vacated places, and the printers will not suffer on this account.

There has been quite a fight among some of the local newspapers in reference to the municipal printing contract recently awarded to the *Daily Report* by the Board of Supervisors of San Francisco. The retiring board is democratic by a good majority and the politics of the *Report* are likewise democratic. The *Journal of Commerce* claims that, notwithstanding the fact that it and several other papers put in bids at a much lower rate, the contract was awarded the *Report*, it being the only democratic paper bidding. The *Call* and the *Bulletin* are said to be in the field and endeavoring to prevent the carrying out of the contract. In all probability the measure will go over until the newly elected supervisors (all republican) will take their seats. Notwithstanding the fact that the mayor vetoed the measure, it was passed over his veto. Injunctions have been refused by two superior court judges, but the *Journal of Commerce* is making a hard fight, and the outcome is extremely problematical.

The next meeting of the San Francisco Typothetæ will be January 7. At this meeting the Typothetæ will be called upon by the Typographical Union to explain why its members have not enforced in their respective establishments the rules recently agreed to by the conference committees of each organization. These rules refer to the number of apprentices to be employed in each office; also, respecting measurement of type and the employment of non-union men. The typographical union claims that the employing printers have not lived up to their part of the agreement.

The last meeting of the San Francisco Typographical Union was held December 28. About twenty new members were initiated and as many more applications for membership were received and placed on file, to be balloted upon at the next meeting. Several new amendments in reference to the election of committees, their tenure of office and the extent of the power of same, were adopted. No action was taken in regard to formulating a plan whereby the measurement of composition could be equalized. The Executive Committee was instructed at the November meeting to draw up such a plan, but it has been unable, as yet, to report much favorable progress.

The annual banquet of the Typothetæ of San Francisco will take place at the Maison Riche on the 17th of this month. Extensive preparations are being made to insure the success of the meeting, and it is expected that the attendance will be larger than that of any preceding year. The decorations will be elaborate. Something very unique in the matter of a menu is promised.

"Langley's San Francisco Directory" will be issued this year about a month sooner than in former years. The very clear and dry weather has facilitated the canvas in a marked degree, there being no rains to interfere and prevent the canvassers from performing their duties. As a consequence, the compilers are already at work and copy will go to the large force of compositors about the middle of February.

C. A. Murdock & Co. always keep on hand the latest styles of type, the large demands for fine and artistic printing requiring this great expenditure. The firm has recently received from the

East a new forty-case cabinet, which will much increase its room for the additions of new fonts of type.

Brunt & Co. issued several fine designs of embossed New Year cards this year and report good sales of the same. Their embossing department is doing a large business, they not only doing all their own work but also the greater part of that for the printers in this city. This firm received the highest award—a silver medal—at the recent exposition at Mechanics' Fair for fine printing, and also received a diploma for silk badges. On Christmas all the employes were presented with a \$4 I. X L. Wostenholm knife in recognition of their efficient services during the year. As there are about twenty-five hands this amounted to something and was appreciated fully by the recipients.

E. P.

#### FROM BOSTON.

*To the Editor:* BOSTON, Mass., January 3, 1891.

The Franklin Typographical Society held its annual meeting in the society's hall on Chandler street, this evening, and elected the following officers for the ensuing year: President, N. H. Stevenson; vice-president, G. C. Hardy; secretary, C. W. Brown; collector, M. C. Upham; treasurer, Hugh O'Brien; librarian, W. de Los Winson; assistant librarians, C. E. Bramhall, A. L. Hill; trustees, W. H. Cundy, C. W. Holden.

A special committee reported in favor of celebrating the birthday of Benjamin Franklin on its anniversary January 17, 1892, and that the several press and printing organizations be invited to take part in the observance.

The treasurer, ex-Mayor Hugh O'Brien, in his report stated the total receipts for the year to have been \$5,550.58, and the disbursements \$5,550.50, of which latter \$2,420 was paid as sick benefits. An increase in the standing fund from \$7,190 in 1886 to \$14,462.65 at the present time, was among the interesting comparisons of the treasurer's report. The trustees reported an investment of \$24,000 in real estate, on which there is a mortgage of only \$10,000, and \$15,507.73 cash on hand and in savings banks.

Of the secretary's report the following is an abstract: There was a net gain in membership for the year of 23, making the total 408 at the beginning of 1891. This number includes 57 honorary, 3 free and 348 active members. Among the names of members who died during the year appears that of Benjamin P. Shillaber (Mrs. Partington). Mrs. Mary T. Rogers, widow of the late John K. Rogers, is the first woman ever admitted to membership, she having been enrolled in the honorary list during the year.

The Franklin Typographical Society is a most commendable institution and should have the fullest support of both those who might desire to enter into active membership and of such as do not need the benefits which it is the purpose of the society to bestow, but are willing to contribute toward the fund for the relief of sick and distressed printers. A sick benefit of \$4 per week is paid during entire disability, free beds are maintained for members at the Massachusetts and Homeopathic hospitals, and the society has a beautiful lot at Mount Hope cemetery which will always be well cared for. Any desired information regarding the society can be obtained by addressing the secretary at 21 Chandler street.

Mr. Edward D. Baker, for over three years agent for the Campbell Press Company in the New England states and the Canadian provinces, has severed his connection with that company and taken charge of the Boston office of Messrs. C. B. Cottrell & Sons. During Mr. Baker's engagement with the former company he has become known to the printing trade throughout this section, and has made many friends, who will be glad to know that he has made an advantageous change. He has the record of selling nearly two hundred Campbell presses in New England during the past three years, which has probably never been beaten.

The Adams and Cylinder and Job Pressmen's Union are endeavoring to ascertain what disposition T. F. Mahoney has made of funds collected for advertisements which appeared in the souvenir of the pressmen's convention held in this city last

summer. It is alleged that there has been a misappropriation of a portion of this money, and the members of the societies have had Mahoney arrested on the charge of embezzlement of \$1,300. Mahoney claims that he is the victim of an attempt to blackmail, and promises to make an explanation which will prove his innocence. This he will have an opportunity for doing Monday next in the Superior Court.

Boston Typographical Union, No. 13, will give its annual ball in Music Hall, on the evening of January 28.

The Boston Job Printing Pressmen's Union, No. 1, recently sent out a circular, of which the following is a copy, the names of firms mentioned being omitted:

#### NOTICE.

45 Eliot street, Boston, Mass.

*To the Employing Printers, Labor Unions, and Societies in General, greeting:*

As numerous so-called printers, with the "boy system" largely developed, are in this city competing with regular offices who employ skilled labor and pay good prices, the Boston Printing Pressmen's Union, No. 1, believing some action is necessary in regard to these "amateur printers," at a recent meeting unanimously voted to issue a circular to that effect, as follows:

Therefore be it resolved:

WHEREAS, A number of amateur printers have established offices in different parts of this city on a "cheap basis," employing unskilled labor at a rate of 50 cents to \$1.50 per day, and

WHEREAS, Old and reliable firms, paying more than double the above-named wages, employing first-class workmen and doing first-class work, are obliged to compete with the said second-class offices; therefore, be it

*Resolved,* That we, the Boston Job Printing Pressmen's Union, No. 1, will not buy tickets for any ball, party or other entertainment, or patronize any place of business, when the printing for said entertainments or place of business is done at the offices named below.

And we earnestly request the cooperation of all fair-minded persons by indorsing the above and assisting us by refusing to patronize entertainments, balls, etc., and places of business whose printing is done at the following places:

And others whom the Committee have not time to investigate, as they wish to distribute these circulars before the close of the season.

P. P. TAYNE.

ROBT. P. BARNES.

HENRY HICKEY.

Committee for the B. J. P. U., No. 1.

The circular has stirred up a hornet's nest, and one of the printers referred to has brought civil suit against Messrs Tayne, Barnes and Hickey, comprising the committee, to recover \$900 damages. The case comes up by continuance in the municipal civil court on Friday next.

G.

#### PRINTING'S PROSPEROUS POSITION PREDICTED.

*To the Editor:*

NEW YORK, January 5, 1891.

The advent of the new year finds the printing and publishing interests of New York, New Jersey, Connecticut and adjacent states in a rather depressed, but not, as has been stated, stagnated state. There is always a lull in all branches of the printing and publishing industries immediately after the holidays, which is consequent upon the almost general recumbency of the commercial, mercantile and industrial interests, and a belief prevails in well-informed circles that there will be an improvement within a short time, as it is expected the spring business will start in early and be an excellent and reasonably profitable one.

The representatives of old-established and extensive New England houses, who have recently been here, declare that the outlook for a good volume of trade is bright and encouraging. The manufacturing stationers are doing well.

Machinery makers are unusually busy. Press builders are crowded with orders. The demand for all kinds of small cylinder and job presses is very great, all the manufacturers having orders on hand that will require months to fill. Printers' supply houses are run down with calls for good second-hand machines and all goods they handle. Typefounders are transacting a fine business.

The call for typesetting machines has grown to a large extent. The composing appliances cost too much just now for the ordinary newspaper proprietor and book producer, and inventors are cudgeling their brains to produce a machine that can be sold for a moderate figure, but printers say that such a thing cannot be done

for a long time to come. There are a number of typesetting machines in the market here, but the prices run pretty high. Much newspaper and book contract work is now performed upon these composing machines, which, at present, are controlled by wealthy syndicates.

At the Grolier Club, recently, there was opened an exhibition of recent bookbindings, executed between 1860 and 1890, and displaying some of the highest achievements of the greatest and most talented modern binders. There were two hundred and seventy-three specimens noted in the catalogue, each of which, of course, was artistic and unique. Among the binders represented were Amand, Allo, Bedford, Bosquet, Bradstreet, Cuzin, Cape, Canape-Belz, Chambole-Durer, Codden-Sanderson, David, De Courmen, De Samblaux, Domont, Duer, Gruel, Grosvenor, Hardy, Joly, Kraft, Kauffman-Pelit, Lortic, Lemieux, William Matthews, Alfred Matthews, Marius-Michel, Mennier, Motte, Maginn, Niedree, Pierson, Petit, Quinet, Riviere, Ramage, Ruban, R. W. Smith, Stikeman, Trautz-Bauzonnet, Thibaron-Joly and Zehnsdorf. Many of the exquisitely bound books were of high rarity and value apart from their bindings. The catalogue would serve almost as a text book on binding. It contains a most interesting essay on the art by William Matthews, a dictionary of styles, and an appendix, giving a complete list of the bindings of Trautz-Bauzonnet, who is regarded as one of the great masters of modern binding. The walls of the art gallery were hung with engravings from the bindings of Aldus, Maioli, Grolier, Roger Payne and others. The exhibition will be open until January 12.

New York Typographical Union, No. 6, is preparing for the annual ball of the organization. From the arrangements already completed it is fair to say that the event will be a splendid and brilliant one.

When the uptown building of the New York *Herald* is completed, it is understood that several other leading newspapers will also move to the same locality. It is likewise hinted that some book and job printers are contemplating a similar move.

The typographical and labor unions are preparing to make a bitter fight against the continued prison contract printing system. An enormous petition, containing thousands of names, will be carried to the state legislature by a delegation of organized labor people.

Lincoln A. Kelley, a bright young reporter attached to the staff of the *Evening Telegram*, has passed away to the great beyond. He was a graduate of St. John's College, Fordham, and originally studied medicine, but drifted into journalism. About a year ago Mr. Kelley became editor of the Bridgeport (Conn.) *Herald*, but he resigned to return to the *Telegram*.

A handsome and ably edited new paper, the *Evening Call*, has appeared.

A change in the management of the *Staats-Zeitung* has been made. On January 1, Herman Ridder acquired a large interest in the association and assumed charge of the business department of the paper. Of the capital stock of \$4,000,000, Oswald Otten-dorfer relinquished a considerable portion to Mr. Ridder, but the former is to be nominally the directing head for some time yet. Mr. Ridder is the proprietor of the *Catholic News* and the *Katholische Volksblatt*, and has been a successful publisher.

A dinner in honor of Elbert Rappleye, the canoeist of the *Mail and Express*, who recently completed a voyage of 6,280 miles in his canoe from New York to Astoria, was given in the *Mail and Express* office. Among those present were Rev. Dr. Henry M. Field, Rev. Dr. J. M. Buckley, N. P. St. John and Col. E. F. Shepard.

The Robert Hoe Press and Manufacturing Company is doing an enormous business. The head of the concern, Robert Hoe, who has been in Europe for three months, has just returned home. While in England Mr. Hoe superintended the making of extensive improvements in the London establishment of his company. New buildings were added, covering an entire block, and making the works one of the largest and finest machine shops in London. These improvements were rendered necessary to meet the heavy

contracts for new perfecting presses for London journals. Several of the prominent London dailies are preparing to Americanize their forms. As soon as the new presses are made and erected the *Standard*, *Chronicle*, *Telegraph* and other papers will be issued in a new and improved form, and with multiple pages. Mr. Hoe stated that this would make the third time within thirty years that the machines of his company have revolutionized the methods of printing newspapers in England, and, in fact, in the world.

PRINTER-JOURNALIST.

#### FROM WASHINGTON.

To the Editor : WASHINGTON, D. C., January 4, 1891.

With the new year yet in its infancy we offer THE INLAND PRINTER greetings. It seems but yesterday that we began the year 1890, and we now find we have ushered upon us the year 1891. A year now (with us) seems most as short as a month did in the days of our apprenticeship. The last number of THE INLAND PRINTER eclipsed any of its predecessors in the way of artistic displays, and it was highly spoken of by many of its readers here. Its extensive correspondence in most of the leading cities make it especially a desirable journal to the craft, outside of its attractive appearance mechanically and otherwise. In the above we echo the sentiment of its numerous readers here, and lastly, bespeak for it unbounded prosperity in the year just born.

Since our last letter we have enjoyed two more holidays, and as usual the government printing office and most down-town offices suspended labors for the Christmas and New Year's rest, the prints taking advantage of the vacation in many and various ways.

Congress, unlike last year, did not take the usual two-weeks holiday, but instead simply adjourned for two or three days at a time, until the entire vacation was consumed, in consequence of which the night-bill force and *Congressional Record* prints at the government printing office were kept during the entire time on nightwork, with small editions of the *Record*. Good "time" copy was given the *Record* men, and they therefore had little cause for complaint. But the "tug of war" has now dawned upon them, and unless something unforeseen presents itself, these prints will be kept busy as bees until March 4 next, when congress will have by law closed its doors. Long sessions will have to be resorted to in order to dispose of the immense amount of business to be transacted.

At present there is a great deal of anxiety manifested regarding the passing of the urgency deficiency bill at the capital. The appropriation made by congress at its last session to pay the night force their usual 20 per cent fell short to the extent of some \$14,000, and this amount cannot possibly be paid these laborers until the above bill shall have been passed by both houses, hence the anxiety. It is hoped and sincerely believed, however, that this will be the first matter that will occupy congress in a day or so.

In the sudden demise of J. Q. Dutrow, the craft has lost a valued and esteemed member. Mr. Dutrow was a compositor on the *Congressional Record* until a few weeks ago, when he resigned and located in New York City. A few days there, he contracted a sickness having symptoms of pneumonia, and after being confined to his bed but a few days death ended his sufferings. His remains were conveyed to the home of his parents in this city. The scene, on the arrival of the remains here, by his beloved parents was truly heartrending to say the least. The funeral ceremonies took place here on Monday last, a number of *Record* hands acting as pallbearers. Besides his devoted parents, Mr. Dutrow leaves a widow and one child to mourn his loss, to whom the craft in general extend their keenest sympathies.

Chairman Cross and dupe-cutter Steve Caldwell, of the *Record*, were reelected to their respective offices one night last week. In this connection we might mention that the life of a chairman of a printing office in these advanced days is not by any means a desirable one. We had occasion to call at one of the largest offices in this city a few nights ago, and in looking around we observed the chairman of the office darting around here and there

with a half dozen proof-slips in his hand; first in the proofroom, thence to the foreman's desk, and lastly he returned to the much abused compositor with the welcome intelligence that he had secured a "ring" for him, and in the same breath warned said compositor to avoid a repetition of such errors. An interview with one of the leading men in the office revealed the fact that this routine was gone through every night. He also stated that, from observation, he had learned that many of the complaints on the part of the compositor were of a very trivial nature, and that oftentimes the errors could be corrected in half the time consumed in hunting for the chairman, and running him down merely for the purpose of securing a "ring" on an additional comma or semicolon, as the case might be. In our opinion it would be a great deal wiser if the compositor would pause and consider the trouble, and time expended in this matter, and wait until something more serious would occur. It would be both beneficial to himself, as well as the much annoyed chairman. We do not make these suggestions to shield the proofreader, for we think that this "brainless" individual quite liberally take advantage of his privileges, and many of them do not have the slightest regard for a compositor's feelings. This applies more forcibly to that class of proofreaders who are not practical printers, and merely learned the art of marking a proof from the last pages of "Webster." In the office above referred to we could mention the names of at least two who are among this class. We therefore emphatically coincide with typographical unions, that all proofreaders must be practical printers. We have also lived a sufficient length of time to know that the life of a proofreader is little more desirable than that of a chairman, and that they are likewise annoyed and harassed to the fullest extent by the compositor (?) who is less competent to set type than to do the "chores on a farm." He should, however, avoid as best he can to give vent to his spleen on the margin of a proof. All in all, the chairman, proofreader, and lastly the compositor, all have their quota of trials and tribulations.

Charles Otis, subscriber to THE INLAND PRINTER, and a very popular proofreader on the *Congressional Record*, government printing office, and H. E. Springer, compositor, are candidates for delegate to the International Typographical Convention. Both these gentlemen would very creditably represent our people at the convention, and we urge the craft of the city to rally to their support.

Business down town is in a fair state, and most all of the leading book and job offices have a full force of hands employed.

The Evening Star Company presented to each patron of its paper a very neat little New Year's souvenir on the first day of the year. It comprises a calendar for 1891 and a few short poetical selections appropriate to the new year. The *Star*, since it donned its new suit of clothes and changed its make-up materially, is now the most handsome paper, mechanically, in the city, and to say that it is doing a land-office trade is but touching the truth.

EM DASH.

#### FROM BALTIMORE.

To the Editor: BALTIMORE, Md., January 5, 1891.

For some time past the press of this city has been clamoring for rapid transit, and this demand for better conditions in street railway travel is now about to be complied with by the car companies. How often it is that the press proves to be both fulcrum and lever in removing dead weights that impede the progress of a community.

The crowd of idlers that gather round the *Sun's* bulletin board to sponge the news met with a set-back on Saturday. In passing this office on that day I noticed that the board contained no copy of that paper, while just beneath it there fluttered in the winter wind a large bow of black crape. Just beyond this a type-written bulletin informed the passerby that Walter R. Abell, youngest son of the late A. S. Abell, founder of the *Sun*, had died suddenly Saturday morning of heart failure. The deceased inherited an interest in the *Sun* from his father, and edited the agricultural

department in the weekly edition of the paper. He was a man of fine education and a graceful writer. A wife and three children survive him.

Mr. James Young, Jr., son of the proprietor and publisher of the *Baltimore Weekly Telegram*, essayed the part of Hamlet one night last week at Ford's Grand Opera House. His rendition of the role of the melancholy Dane was quite creditable. This young Thespian, who has a printer for a sire, is only nineteen years old, and is now engaged in his father's office. By the way, Mr. Young, Sr., has leased out the book and job department of his establishment, devoting his whole attention to the *Telegram*.

This is the time of year when calendars and almanacs ripen. The *Sun* gets out by far the best almanac of any concern in the state. The composition for the forthcoming one of 1891 is all up, and the 15th of the present month will see a copy in the hands of every subscriber; and a person must be a subscriber if he would secure one of these invaluable annuals. The most desirable calendar, and the one most sought after, is that issued by Guggenheimer, Weil & Co., lithographers, printers and engravers. Thomas & Evens, commercial printers, at Second and Frederick streets, have just got out a very handsome and most striking affair of the kind. A. Hoen & Co., the *American*, and the *Notes*, have all done themselves credit in the calendar way this year.

On Saturday last Messrs. Purdy, Crupit and Speed, managers of the *World*, were taken by surprise in the editorial room by being penned all round by the compositors on the paper and the reportorial staff. To be more explicit, the managers of the *World* were each presented by their employés with a fine gold pen and holder. The surprise turned out to be an agreeable one, for the managerial heads of the paper thought there was a strike on hand when the long file of gift-bearers entered the editorial presence. Mr. Wittier, a compositor, made the presentation speech, but I am told that he trembled like an aspen leaf in a high wind while reading his little effort, which, perhaps, may have been his maiden one.

About two weeks ago the *American* issued as a supplement to the paper a handsome lithograph in the way of a map of Maryland. Thirty sketches and vignettes are grouped about the map, indicating the industrial, agricultural and commercial importance of the state. This supplement was originated in Baltimore and is a credit to all concerned in its make-up, but some think that the extract of a speech made by Gen. Felix Agnus in New York should not have been printed on the margin of the map, nor on any part of it. The extract mentioned, it is true, relates to the many resources of Maryland, but the name of the quasi publisher and manager of the *American* is attached thereto, which seems to smack too much of the "Ego," the "great I am," for the general is not sole proprietor and publisher of the *American*.

"Printers needed in Washington. Job offices are now short-handed, but look out for your cards." The above quoted lines I noticed in a Baltimore weekly paper about two weeks ago. As I happened to go over to the capitol the day following, I learned upon inquiry that there was no demand whatever for compositors at Washington; that both book and job work were very dull. Paragraphs similar in import to the one reproduced here are often misleading, and printers should be cautious in seeking pastures new upon such information alone.

Comparisons may be odious, but the printing establishments in Washington make a far better display in the way of signs on the front of their buildings than do the master printers of Baltimore. A spirit of cheapness seems to prevail here with many men in business when it comes to an outlay in such direction. I hold that a good, an expensive sign if you will, is a first-class standing advertisement, and that it pays.

There has been a rumor going round in this section that the typefoundries all over the country were about to be gathered in by a syndicate, but little credit is given to the story here.

Baltimore Typographical Union is reported to be in very good shape, claiming as high as 400 members, a number far above that of any preceding year of its existence. All the daily papers are

union, and most of the weeklies are of the same complexion, but there are some large book and job offices outside the pale of this organization.

The *Evening News* did not get out an issue either on Christmas day or New Year's, giving all its employes a two-days' holiday. The *Evening World* exhibited the reverse of this, but had the following to say in the connection: "The *World* issued a paper on Thursday. \* \* \* It contained just such matter as the average mortal wants to sit down and read on a day like Christmas. The *World* does not care to cut its subscribers out of a paper on a holiday, a day when all the world reads, for the sake of saving a few dollars." According to the above logic there can be no profit in running the *World*, if there be a saving of dollars in shutting down. This may be testifying to too much in one's own behalf.

The Christmas number of *Baltimore Life* was a very attractive issue.

The publishing and printing firm of John Murphy & Co. has been dissolved by the retirement of Isaac Kilner. The business will be continued under the same firm name by the remaining partners, Frank K. Murphy, Denis Noble and Charles A. Murphy.

The contract for furnishing the city stationery and doing the printing necessary for the year has been awarded to the J. W. C. Dulany Company, whose bid was \$6,234.85. D. W. Glass & Co's bid to furnish the articles and do the printing two per cent less than the lowest bidder, was not considered.

Quite a large number of candidates are looming up for the annual typographical convention, among whom I may mention Frank W. Watson, of the *Morning Herald*; Thomas Moran, of the *News*, and Leander Raiber, of the *Sun*.

Some twenty compositors will start in tomorrow on the new city directory. The firm of Nicholas & Killam is to do the work. They did the job last year.

Since the holiday season, work in the book and job, as well as in the newspaper offices has fallen off to some extent. Baltimore just now is making a worthy effort to boom itself, and is, I think, going to succeed.

FIDELITIES.

#### FROM BRITISH COLUMBIA.

To the Editor: NEW WESTMINSTER, January 5, 1891.

It is some time since I have written you, but the absence of my copy of your valuable publication has reminded me that it is at least a duty I owe to myself to drop you a monthly note. At yesterday's meeting of Typographical Union No. 235 the following officers were elected for 1891: President, B. E. Nye; vice-president, B. James; secretary-treasurer, Charles C. Stewart; sergeant-at-arms, P. R. Peele; executive committee, C. S. Campbell, G. A. Caldwell and W. E. Boynton; delegates to Trades and Labor Council, C. C. Stewart, B. E. Nye and C. S. Campbell.

*Truth*, the morning paper here, has changed hands, and is now published as the *Morning Ledger*, by Baillie & Co. It has started out under favorable auspices, with an entire new plant and one more frame than *Truth* employed. A new job office is also to be put in at once.

The *Columbian* has also enterprise in its management. Last month it added another frame and increased the size of the paper to a mammoth nine-column sheet. It is a compliment to our town to say that it can now be fairly judged by the papers that are daily published in it.

There is no room for "unfair" men here, our union having effectually closed up all holes large enough to permit the habitation of these individuals. We present a solid front and are flourishing, although but a little over a year organized. C. C. S.

TO MAKE GOOD TRACING PAPER—Mix well together 75 parts of olive oil and 25 parts of benzine. With a brush put it on best tissue paper and hang it up for about thirty-six hours. This is a very transparent tracing paper; until the benzine has evaporated it is also extremely inflammable.

#### ENGRAVING ON STEEL.

Here is another thing which many people do not know. There are hundreds of national banks in the United States, each of which issues bills bearing its name. An assortment of these bills will show frequent repetitions of the portraits of Lincoln, Grant, Stanton and other prominent Americans. Take another bill and carefully compare the two impressions of the same head. Do you notice any difference? See that you have a strong light—daylight is best. Compare all the little dots and lines. Yes, they are identical. Well, the engraving of one of these portraits is a very expensive affair, and no matter how skillful the engraver he could not make a second plate which would be identical with the first.

This is the way in which the several heads happen to be exact counterparts: Many years ago Jacob Perkins discovered a way of softening steel that it could be cut as easily as copper. After the work was done upon a soft steel plate he hardened it. Up to this time copper only had been used for engraving purposes so far as illustrative work was concerned.

After one of the fine heads (employing this method) is engraved upon the soft steel the plate is hardened to its utmost capacity. It is then put on the bed of a powerful transfer press, and over it is placed a roll of soft steel which is passed backward and forward under a pressure of twenty tons. This forces the soft steel into the lines of the hardened plate, and the result is a reverse in high relief on the roll of the engraved portrait where the lines were cut into the metal. The roll is hardened and the portrait is then capable of being transferred—that is rolled into numberless soft steel plates.

So, you see, the exact similarity is easily accounted for, since it is obtained mechanically. The same means are resorted to with regard to the ornamental lathe work and other geometric figures.—*Youth's Companion*.

#### HOW HE DOES IT.

It is surprising how much may be accomplished by system, and by the introduction of routine into our daily work.

Speaking the other day of a large employer of labor, with several large jobs on hand, we mildly commiserated with him—specially in view of the ardent condition of the weather.

"I have no time to think of the exact height of the mercury in the tube," he laughed, "at least, not until I am homeward bound. As to the calls of business I never find them excessive."

"How do you manage?" we inquired.

"Well, first, I insist upon having reliable competent men about me: men who know and do not fear to act upon their responsibility in case of emergency. The man who cannot, or will not, move without wanting instructions at every turn is not the man for me. I am not a schoolmaster, but an employer of skilled labor. (With an emphasis on the word *skilled*.)

"I arrive early at the office, and take a general look around to see that everything is in working order. I then attend to the correspondence, give instructions for estimates, etc., and receive the reports of my superintendents. If anything fresh turns up I see to it at once. About 10 A.M. I am ready for a tour of inspection, and another is due to the outlying jobs in the afternoon. By 4 I am usually back at the office again, to check over the estimates, dictate letters, etc., and to arrange for the next day's operations. By 5 P.M. I am through; that is to say, I know what the day has accomplished, and have arranged for the next day's work. With system, a man can run fifty jobs as easily as one. But, of course, as I said, he must have competent assistants—men who take a pride in their work. A good assistant should not be interfered with; indeed he will not submit to it. Further, I never worry about trifles. Sometimes a loss is incurred, a contract goes astray, or a blunder is perpetrated; but these are all in the way of business. So long as the net results show a balance, more or less handsome, on the right side, I am satisfied. I find that the more work I have the more I can get away with."

The speaker sat back in his chair, and we rose from ours.—*Master Steam-Fitter*.

Written for THE INLAND PRINTER.

### EMINENT LIVING PRINTERS.

BY JOHN BASSKETT, EDITOR AND PROPRIETOR OF THE "PRINTING WORLD," LONDON.

NO. XII. — JOHN FARLOW WILSON.

AMONG the great printing establishments of the world must be reckoned that of Cassell's, in La Belle Sauvage Yard, London. The printing manager, Mr. Wilson, is one of the best authorities on practical printing in the United Kingdom, and his experiences, as the following interview will show, are altogether unique. Like most prominent men, Mr. Wilson was very hard to "draw," and in reply to my question for a few particulars concerning his career, said:

"Well, I scarcely think that anything I can say will be worth recording. The life of one London printer is very like that of another, and the term monotonous drudgery will not inaptly describe it. To achieve any measure of success, however, a man must, I think, possess a love for his calling, and this relieves the monotony and lightens the drudgery."

"Excuse me, Mr. Wilson, but were you born in London?"

"Yes; not only a native of London, but of that part of journalistic and theatrical Bohemia which is bounded on the west by Covent Garden, on the north by Bow street, on the south by the Strand, and on the east by classic Drury Lane. My father was a bookseller, and not only a seller of books, but a lover of books, and one of the earliest lessons he taught me was the respect due to books. To thumb-mark a margin, to turn down a leaf, or to ill-treat a volume in any way, was to his mind a crime, and the feeling he imbued me with lasts to this day. There were no cheap reprint series in those days, and books were not then, as they seem to be now, sold by the pound."

Mr. Wilson does not know what particular influence led him to the printing office, but he says: "When I had chosen to become a printer—or, more properly, a compositor—a school-fellow suggested that before I signed my indentures I should go to his father's office and see a machine which was to supersede the compositor. I went, and saw "matter" being composed by two girls at Young & Delcamboe's composing machine. I expressed my anxiety to my intended master, and he advised me to ascertain how much work the two girls and a man could perform at the machine in a given time. This I did, and it was demonstrated to my satisfaction that I could do one-third of the amount without the machine, and, therefore, signed indentures. That is more

than forty-eight years ago, yet mechanical composition is adopted but to a very limited extent. It is not generally known that the shape of the *Family Herald* was originally that of a small newspaper broadsheet, the type for which was set up by this very machine. The words intended to be in italic were 'hair spaced,' because the capacity of the machine did not include italic letter. Twenty-two numbers appeared in this form, after which it was changed to its present size."

"Can you tell me anything of your early life in the printing office?"

"During my apprenticeship," answered Mr. Wilson, "I became acquainted in a very humble way with many men who were fairly representative of the Bohemian journalism of the time. Printing

offices were not then extensive establishments, divided into departments and furnished with rooms for editors. The editors and contributors would bring their copy into the composing room, and often chat with the men. The office where my servitude was performed consisted of a second-floor flat up a yard in Drury Lane, yet to this modest place came Douglas Jerrold, Albert Smith, E. L. Blanchard, Thomas Littleton Holt, Frederick Guest Tomlins, James Grant, of the *Morning Advertiser*, G. W. M. Reynolds, George Augustus Sala and others, whose names are unknown to the present generation. Holt was the editor of a penny weekly paper, entitled *Chat*, a kind of *Tit Bits*, the proprietor of which was a Mr. Marriott, who eventually went to America and started what became a prosperous paper, the *San Francisco News Letter*. Holt's copy was about the most slovenly calligraphy we had to decipher.

One day, among quite a batch of the editor's scrawls appeared a bit of manuscript that for legibility and beauty of style exceeded anything that we had ever seen. It was a rhymed effusion and commenced, 'The Manager Julien sat in his chair.' The author came to read his proof, and that was the first time I had the pleasure of seeing Mr. Sala. He does not know me personally, but he will no doubt remember the circumstance, although it must have been one of his earliest contributions to the press."

The youth of today can scarcely realize what kind of life the apprentice of forty years ago used to lead. There was no Saturday half-holiday nor was there any limit to the number of hours he might be called upon to work. "Men who are with me now," continued Mr. Wilson, "well remember that we as lads would on a particular day in every week commence our labors at eight o'clock in the morning; work right through the day and night, till three or four o'clock the next morning; then obtain some

refreshment at a night coffee house, walk to the nearest park in order to get a breath of fresh air, and return by seven or eight o'clock to do another long day's work. We had signed indentures by which we undertook 'not to absent ourselves from our master's service day or night unlawfully'; and this we accepted as his authority for making us work as long as we were able." Mr. Wilson is a strong believer in strict training, and though his own was unusually severe, he is of the opinion that it neither did him nor his fellow apprentices any harm.

"About what period does your connection with Messrs. Cassell date from?"

"Shortly after the termination of my apprenticeship," was the reply, "I was offered a situation upon the *Standard of Freedom*, a weekly liberal newspaper started by John Cassell, whose office was in the Strand, nearly opposite Somerset House. I had had, however, a previous introduction to Mr. Cassell." Mr. Wilson remained with Mr. Cassell until his removal to more commodious premises in LaBelle Sauvage Yard in 1851, after which he worked in several offices, and finally accepted the position of printer of the *Field* newspaper, under his first employer. While here Mr. Wilson prepared an estimate of a new two-penny daily paper for Capt. Addesley Sleigh. There was, however, one condition, namely a deposit of £50, which should be forfeited in case of sudden stoppage. Nothing more was heard of the matter for some time, when it leaked out that Mr. David Aird, a printer in Exeter Street, Strand, had agreed to produce it without a deposit, and thus commenced the *Daily Telegraph*.

During this period Mr. Cassell had entered into business relations with Messrs. Petter & Galpin, whose office then adjoined the *Times* premises in Playhouse Yard. Their overseer invited Mr. Wilson to join the staff, which he did, and having had the good fortune to obtain their confidence has ever since held a responsible position in the firm.

"To what cause do you attribute such an early elevation to a most important post?"

"That is not an easy question to answer," replied Mr. Wilson. "Of one thing, however, I feel certain: that if a man aspires to rise he must be an enthusiast in his work. Everything he undertakes should be performed as if his reputation and prospects depended upon its successful fulfillment. This applies to printing more, perhaps, than to any other occupation."

"You inaugurated, I believe, a scheme which has had a wonderful influence on your apprentices?"

"Yes; some twenty years ago I introduced a system of rewarding apprentices for good behavior. We have always about sixty youths, each learning some branch of the business. The plan we adopt is to keep a register of their attendance, conduct, industry and proficiency, awarding a certain number of marks for each, and publishing the result annually. If their record is satisfactory, on the termination of their apprenticeship they receive a present of £20 and a certificate of proficiency. This certificate is never given to any but those who have acquired a good knowledge of the trade; its possession is therefore greatly coveted, for it is of more value than a dozen friendly testimonials. In the last five years about £700 have thus been paid to apprentices who have completed their servitude with honors."

"Are there very many of the employés who have become shareholders?"

"Yes; a large number of our people hold shares in the company. I had been a director of several successful building societies, and the happy thought occurred to me to suggest the formation of a 'Share Purchase Society,' to be conducted on similar lines. This was adopted, with the result that more than one thousand shares were subscribed and paid for by weekly contributions of one shilling per share. Two other similar societies were afterwards started, and are now running their course. By this means about twenty-four hundred shares, representing a capital of £21,000 will have been held by employés, most of whom might otherwise have had no interest in the company. These shares are now worth nearly double their nominal value (£9) almost equal to the sum of £40,000."

Mr. Wilson drew out the plans for, and took a heavy share in the management of, the two workmen's exhibitions held at the Agricultural Hall in 1864 and 1866. The first was in fact the pioneer, and naturally became the talk of the town. Two hundred thousand persons visited the exhibition in the three weeks it was open. The exhibition was opened by Earl Russell, and closed by Mr. Gladstone, Lord Shaftesbury distributing the awards. "I cannot help," says Mr. Wilson, "feeling a little proud of this undertaking, my share in the labors of which were very generously acknowledged. The council gave me an illuminated vote of thanks, the Agricultural Hall Company a handsome clock and candelabra, the exhibitors a silver snuff box, and the adjudicators a silver medal. I possess about a dozen more souvenirs, each of which brings to my mind pleasant memories of bygone days."

In reference to two trips to the United States, Mr. Wilson says: "I was much impressed by the smartness of the American printer, and, I might add, the English printer also, when he reaches the other side of the Atlantic. On the first occasion, eight years ago, I went upon business and visited many printers' establishments in New York, Philadelphia and Chicago. One of my pleasantest recollections is of Mr. Theo. L. De Vinne, who very courteously took me over his office, and showed me the method of producing *Scribner's* and *St. Nicholas*."

"You still lead a very busy life, Mr. Wilson?"

"I cannot say that my duties are quite so arduous, but a man who is responsible for the production of fifty magazines and serials per month, besides a paper and a volume every day in the year, has enough to keep his mind employed. I sometimes think that, after being very nearly half a century in harness, 'I could be well content to entertain the lag end of my life with quiet hours.'"

Mr. Wilson was an active member of the council which started "Hospital Saturday," having drawn up the original scheme for its organization, and also wrote the first annual report. He was for some years examiner in typography to the City and Guilds of London Institute for the advancement of technical education, an office which he has recently resigned. His eldest son, who is the author of several technical books, is the manager of the printing department of Messrs. W. H. Smith & Sons.

#### ADVERTISING PAYS.

The results may not be seen immediately, nor in exactly the way expected, but if continued and persisted in it will tell. An article to be sold must be made known. That which is the most persistently and extensively advertised becomes the quickest and most widely known. That which has the most merit receives the most enduring benefit. Advertising is frequently like Longfellow's "Arrow and Song":

I shot an arrow into the air,  
It fell to earth, I knew not where;  
For, so swiftly it flew, the sight  
Could not follow it in its flight.

I breathed a song into the air,  
It fell to earth, I knew not where;  
For who has sight so keen and strong,  
That it can follow the flight of song?

Long, long afterward, in an oak  
I found the arrow, still unbroke;  
And the song, from beginning to end,  
I found again in the heart of a friend.

And so when the proclamation of one's wares is made it falls to earth, one knows not where; but the chances are that the notes will be heard by some one who will heed them, and prove seed to sprout dollars for the advertiser.—*The Journalist*.

The smallest letter on record was recently transmitted through the English mail from Lincoln to Guildford, consisting simply of an ordinary penny postage stamp. A message in shorthand was written on the adhesive side, with the address, while the official mark was stamped on the face. It reached its destination in safety, and was legible when delivered.

## THE PAPER MILLS OF THE UNITED STATES.

NO. VII—PARSONS PAPER COMPANY, HOLYOKE.

Prominent among the paper manufacturers of the country is the Parsons Paper Company, Holyoke, Massachusetts, whose extensive plants are shown in the accompanying illustrations.

Like many other large and successful enterprises of our country, the Parsons Paper Company started in a modest and unpretentious way. The original company was organized in 1853, with a capital

of \$60,000, and its growth and prosperity from that time to the present have been such, that the actual capital now in the business is upwards of three-fourths of a million dollars.

The late Mr. J. C. Parsons was, for many years, at the head of the company, and much of its success may be attributed to his careful and efficient management.

The Parsons Paper Company No. 2 was organized in 1888, with a capital of \$300,000, and the majority of its stock is held by the original corporation. The officers of both companies are: Aaron Bagg, Jr., president; J. S. McElwain, agent; Edward P. Bagg, treasurer; E. C. Weiser, secretary.

The new mill of this company, erected in 1888-9, is undoubtedly the finest specimen of paper mill architecture in this or any country, and everything has been provided to thoroughly equip it throughout for the manufacture of the better grades of paper, of which this company makes a specialty.

The papers manufactured at the new mill are the celebrated Scotch Linen Ledgers, which stand in the front rank of the ledger papers in the market, and first-class bond, bank-note and parchment papers, which are familiar to the trade from Maine to California, as unsurpassed for bonds, deeds, checks, policies and correspondence.

At the No. 1 mill the product is No. 2 Ledgers, No. 2 Bond, Old Hampden Bond, Parsons' extra superfines, extra fines, colored

writings, envelope, white and colored bristol boards, and other brands.

There is probably no mill manufacturing animal sized, loft dried papers, that can furnish such a variety as the Parsons Paper Company, and its goods have an excellent reputation among the trade.

## JOURNALISM CONTRASTED.

Lord Randolph Churchill, discussing the features of the English and American newspapers, says:

"There is a tendency toward the discussion of personality in American journalism of the same class. The American newspaper engages to tell you all about people who have attracted notice. The English papers are given up more to the discussion of political and social questions and the printing of news directly affecting the progress of these discussions. English journalism is far more serious. An English journal would consider it little less than a crime to perpetrate a joke in its columns. In America the whole tendency of journalism is humorous. News matters are presented, as far as possible, in a humorous way, and the illustrations are nearly always intended to be funny and treat the subjects from a burlesque point of view.

"In England this is impossible. With the great body of the people life is more earnest than it is under the more favorable conditions existing in America. There is a constant struggle for bread. The problem of the two men and the one breakfast is never out of sight. In consequence, all public and political questions receive attention and study there that they do not receive here. Men will read long articles treating of these subjects

because they affect directly the life of the time. Here there are no such difficulties presented. Political questions do not come home to the masses. The elections are not freighted with the solemn significance inseparable from the elections in an older country like England, where social conditions are more intricate and complicated."

A NEW OLD STYLE.

BREVIER CAXTON OLD STYLE.  
(ROMAN AND ITALIC.)

AMERICAN SYSTEM OF  
INTERCHANGEABLE TYPE BODIES.

The woman was old and ragged and gray,  
And bent with the chill of the winter's day;  
The street was wet with the recent snow,  
And the woman's feet were aged and slow.

She stood at the crossing and waited long,  
Alone, uncared for amid the throng  
Of human beings who passed her by,  
Nor heeded the glance of her anxious eye.

Down the street with laughter and shout,  
Glad in the freedom of "school let out,"  
Came the boys like a flock of sheep,  
Hailing the snow piled wide and deep.

Past the woman so old and gray  
Hastened the children on their way,  
*Nor offered a helping hand to her,  
So meek, so timid, afraid to stir,*

Lest the carriage wheels or the horses' feet  
Should crowd her down in the slippery street.

At last came one of the merry troop,  
The gayest laddie of all the group;  
He paused beside her and whispered low,  
"I'll help you across if you wish to go."

Her aged hand on his strong young arm  
She placed, and so, without hurt or harm,  
He guides her trembling feet along,  
Proud that his own were firm and strong.

Then back again to his friends he went,  
His young heart happy and well content.  
"She's somebody's mother, boys, you know,  
For all she's aged and poor and slow."

And "somebody's mother" bowed low her head  
In her home that night, and the prayer she said  
*Was, "God be kind to the noble boy  
Who is somebody's son and pride and joy."*

248 . EXTRACT FROM THE RAMBLER.

That wonder is the effect of ignorance has been often observed. The awful stillness of attention, with which the mind is overspread at the first view of an unexpected effect ceases when we have leisure to disentangle complications and investigate causes. Wonder is a pause of reason, a sudden cessation of the mental progress, which lasts only while the understanding is fixed upon some single idea, and is at an end when it recovers force enough to divide the objects into its parts, or mark the intermediate gradations from the first agent to the last consequence.

It is the proper ambition of the heroes in literature to enlarge the boundaries of knowledge by discovering and conquering new regions of the intellectual world. To the success of such undertakings perhaps some degree of fortuitious happiness is necessary, which no man can promise or procure to himself; therefore doubt and irresolution may be forgiven in him that ventures into the unexplored abysses of truth, and attempts to find his way through the fluctuations of uncertainty, and the conflicts of contradiction. But when nothing more is required than to pursue a path already beaten, and to trample obstacles which others have demolished, why should any man so much distrust his own intellect as to imagine himself unequal to the attempt?

It were to be wished that they who devote their lives to study would at once believe nothing too great for their attainment, and consider nothing as too little for their regard— that they would extend their notice alike to science and to life, and unite some knowledge of the present world to their acquaintance with past ages and remote events.

Nothing has so much exposed men of learning to contempt and ridicule as their ignorance of things which are known to all but themselves. Those who

EXTRACT FROM THE RAMBLER.

249

have been taught to consider the institutions of the schools as giving the last perfection to human abilities; are much surprised to see men wrinkled with study, yet wanting to be instructed in the minute circumstances of propriety, or the necessary forms of daily transaction, and soon shake off their reverence for modes of education which they find to produce no ability above the rest of mankind.

"Books," says the learned Bacon, "can never teach the use of books." The student must learn by commerce with mankind to reduce his speculations to practice, and accommodate his knowledge to the purpose of his life.

It is too common for those who have been bred to scholastic professions, and passed much of their time in academies where nothing but learning confers honors, to disregard every other qualification, and to imagine that they shall find mankind ready to pay homage to their knowledge, and to crowd about them for instruction. They therefore step out from their cells into the open world with all the confidence of authority and dignity of importance. They look around about them at once with ignorance and scorn upon a race of beings to whom they are equally unknown and equally contemptible, but whose manners they must imitate, and with whose opinions they must comply, if they desire to pass their time happily among them.

To lessen that disdain with which scholars are inclined to look on the common business of the world, and the unwillingness with which they condescend to learn what is not found in any system of philosophy, it may be necessary to consider that though admiration is excited by abstruse researches and remote discoveries, yet pleasure is not given, nor affection conciliated but by softer accomplishments, and qualities more easily communicable to those about us. He that can only converse upon questions about which only a small part of mankind has knowledge sufficient to make them curious, must lose his days in unsocial silence, and live in the crowd of life without a companion. He that can only be useful on great occasions may die *without exerting his abilities, and stand a helpless speculator of a thousand vexations which fret away happiness,*

Boonesboro, April 26, 1889.

Mr. Ed. Cowles,

My Dear Sir:--I send you herewith writings as requested in your letter of the 19th instant. I do not know how I acquired my style of writing but presume that it is a sort of a combination of different writings that I have seen and it may not contain enough individuality to justify its conversion into type, and it may be similar to some scripts already in use.

I regret that I am compelled for want of time to prepare the copies hurriedly; they are not as smooth as I wish they were but will probably answer your purpose.

Very truly yours

Chas. S. Hazlett.

The Highest Award on Job Presses in competition with all the World.

**The Golding Jobber**

**TWO OPINIONS.**

**A. O. CRAWFORD, JOB PRINTER AND FOLDING BOX MANUFACTURER.**

SOUTH WEYMOUTH, MASS., May 26, 1890.

Messrs. GOLDING & Co., Boston.

Gentlemen,—The No. 9 (15 x 21) JOBBER bought of you last fall gives perfect satisfaction. You will remember that I stipulated that the speed should be at least 1,500 impressions per hour, without jar or jumping, and this has been more than realized. I often run it at 2,000 impressions per hour. There are many little points about the press which make it exceedingly valuable to the pressman, such as the impression adjustment, the chase latch, the grippers, the throw-off, etc., etc., all so very convenient. I consider the press strong enough for any form that can be put onto it.

Respectfully,

A. O. CRAWFORD.

**F. A. MANGER, PRINTER AND STATIONER.**

OMAHA, NEB., May 27, 1890.

Messrs. GOLDING & Co.

Gentlemen,—In regard to speed, strength, ink distribution and convenience in making ready, I consider the GOLDING JOBBER the best in the market. For this reason I ordered two more of them a few weeks ago. They also make less noise than any other machine I have used, and require less floor space.

Truly,

F. A. MANGER.

The Golding Jobber will be sold as low for cash as any press of its class, or on installments. Sent on thirty days' trial to any responsible printer.

**IF YOU NEED A NEW PRESS, WRITE TO US FOR TERMS.**

If you have an old press which you wish to trade, send us a description, state what you want in exchange, and we will make you an offer.

## Otto Gas Engine Works,

SCHLEICHER, SCHUMM & CO., PHILADELPHIA.

Branch Office - 151 Monroe Street, Chicago.

OVER 28,000 IN USE

Our OTTO GAS ENGINES are fast superseding all other power in printing establishments. They have no boiler, and are clean, safe, economical and reliable.

SIZES: 1, 2, 4, 7, 10, 15, 20, 30, 40, 50 HORSEPOWER.

Guaranteed to consume 25 to 75 ANY OTHER GAS ENGINE.  
Per Cent LESS GAS than DOING THE SAME WORK.

## ZINC ETCHING METHODS.

NO. XI.—FROM THE AMERICAN PRESS.

PHOTO-LITHOGRAPHY AND PHOTO-ZINCOGRAPHY.

DIRECT PRINTING UPON ZINC WITH ALBUMEN.

Take the whites of two eggs (not too small), and add 240 grams (cubic centimeters) of distilled water, and two grams of pulverized bichromate of ammonia.

Add enough strong ammonia to change the reddish color of the solution to yellow; stir all into complete solution with a glass rod, and filter.

N. B.—Zinc plates for this use must be *perfectly level*, well polished, and it is well just before using to rub them well with a piece of English willow charcoal (such as is used by copperplate engravers), then rub off well with a half sheet of Joseph paper and a few drops of ammonia.

TO BE DONE IN THE DARKROOM.

Let the stream from the hydrant play upon the plate a moment till well rinsed, let the water run off and pour the plate over with the filtered albumen solution, let a little run off each corner in turn. Pour it over again with the solution, let surplus run back into bottle and stand the plate up on one corner to drain a few moments. Now take it by the upper corner, always keeping the same corner down from which the surplus was poured off, and warm quickly over a lamp or gas flame, *not* letting it get so warm as to pain the hand, holding not horizontal, but inclined toward the drainage corner, so that no drops can run back and make streaks. The plate dries rapidly from the upper corner downward, and looks shiny. When the coating is dead or lusterless, it is because the plate was not warmed enough in drying, or because too much bichromate has been put in, in which case the solution must be corrected.

The plate is put in the zinc printing frame and exposed under a *reversed* negative from a subject in line or stipple work. It is very sensitive and must be protected while handling from all day or white light.

Exposure is from one-half to two minutes of sunlight, five to fifteen minutes of diffused light. Exposed edges of zinc will turn golden yellow.

Take a clean hand roller (either a lithographic or leather covered one), or a gelatine roller in good condition, and coat thinly with litho transfer ink, distributing it well on a plate glass or ink stone (*don't* get too much ink), and roll up the exposed surface of the zinc plate, with some pressure and very thoroughly. Lay the plate in a tray of water, and after a few minutes develop the picture cautiously with a small wad of clean cotton, under water or using plenty of water on the plate. The picture will come up very sharp and clean. If the fine lines and details wash away, the plate was not exposed long enough. If it holds ink all over and won't develop, or if the open part develop and the close work remains solid black, it is because exposure was too long. In either case scour off with charcoal, prepare plate and print again.

When developed, drain off and stand up to dry, or dry the plate by patting with an old linen rag, slightly dampened. Do not wipe the plate nor pat too hard, or you will take off the ink. Let the plate dry. When dry, dust it with asphalt powder, very fine, and warm till the lines look shiny. Do not heat so much as to spread the lines, which will make coarse work. When the plate is cooler dust in again, paint back and edges with lac, and you are ready for first etching.

THE ASPHALTUM PROCESS.

By this method is started the finest zinc etching in the world.

Take a bottle, wide mouthed, well stoppered, holding say two quarts. Pulverize a quantity of true Syrian asphaltum and cover it with twice its weight of rectified turpentine, and during two or three days as often stirred up until it is brought to a syrupy mass or liquid.

Now, an amount of sulphuric ether equal to the bulk of the contents of the bottle is added, little by little, with continual and

long continued stirring. A portion of the asphaltum is precipitated as a doughy mass upon the bottom of the bottle. The portion soluble in ether remains in solution. Let it stand a few hours, and pour off a little sample bottle full of the supernatant liquid and add a little ether to it. If it again throws down a small precipitate, more ether must be added to the whole until there is no further separation of a precipitate. Let it stand a few hours, and pour off all the liquid into a separate bottle to be used for coating zinc plates on the back and edges, when etching. It dries very quickly, and stands acid well.

The pasty mass left in the bottle is covered with fresh ether and stirred up with a stick very often for one or two days, so that the turpentine and any remaining portion of the asphaltum which is soluble in the ether may be taken up. The solution thus formed is bottled up and may be used next time at first, instead of pure ether. The residue of the bottom is extracted in a pasty mass, put in a shallow dish and set in a moderately warm place in or around the stove (in a dark room), and is frequently stirred up and crushed, for several days, till the last trace of ether has evaporated. The mass becomes hard and brittle, and must be completely pulverized to facilitate the escape of the ether. When dry, put in a stoppered bottle and keep in the dark.

To use, put in a bottle 100 parts of this powder, one part Venice turpentine and add a small amount of benzole from coal tar, perfectly free from water; soon all the powder will dissolve, then add enough benzole so that a zinc plate flowed with the solution will present a fine golden brown color.

As a benzole entirely dehydrated (free from water) is hard to procure, and any water in the mixture is dangerous, one must test it for water before the solution is diluted to its fullest extent. Pour some of it over a zinc plate and let it run off. If the solution dries in, equally and smooth all over, the benzole is free from water; if the coating runs all into drops and streaks, and unequally, it contains water.

This fault is cured by the addition of chloroform, which must be chemically pure, and not adulterated with alcohol; add chloroform until an even, smooth and glassily uniform surface results from flowing the zinc and pouring off.

Let the solution settle and filter twice, then decant into a bottle which was previously washed out with benzole.

The coating of the duly polished zinc plates is accomplished for small sizes by pouring on and off with the same manipulation as for collodion on glass. For large plates it is necessary to use a whirling board or table, on which the plate is laid, and the distribution of the solution is effected by the centrifugal force of the rotation.

The plate is allowed to dry a little, then slightly warmed to expel the last trace of benzole. Expose under a good negative ten minutes in sunshine, or one to two hours in diffused light, in a regular zinc printing frame.

Develop in a tin, pewter or porcelain tray, just large enough to take the plate.

Pour the plate over with ordinary turpentine, and rock the dish rapidly to float off the dissolved asphaltum from the lights. The picture develops rapidly, and as the film is very thin, it holds well to the plate without being washed off.

When all the details are out, take out of dish, pour over with benzine to drive off the turpentine, and quickly follow with a strong stream of water from the hydrant to expel both benzine and turpentine.

Dry the plate in a perpendicular position, and just before etching it is heated to make the work stand better by toughening the asphalt.

The back and edges are coated and the first etching gone on with as usual.

WE acknowledge the receipt of an invitation to attend a Christmas luncheon, given by Typographical Union, No. 234, of Sheffield, Alabama, by Col. Thomas L. Cannon, editor and manager of the *Enterprise*, of that city, on Saturday evening, December 27, 1890. Thanks.

## THE DETROIT JOURNAL.

Among the numerous publications issued in Detroit the *Detroit Journal* ranks as one of the foremost. It was established September 1, 1883, and came at last into strong hands under the control of William H. Brearley, the present proprietor, who was

W. H. BREARLEY.

for a number of years connected with the *Evening News*, a gentleman able to appreciate its possibilities and to develop these by an enterprise and foresight that is seldom equaled. Its Associated and United Press dispatches, its large and able editorial staffs and numerous special correspondents brought it in the very front ranks of the influential and reliable papers of the country. It is a clean, bright and newsy paper and also performs the best mission of a newspaper by leading in many public undertakings, and thereby conferring a lasting benefit and justly

winning the confidence and gratitude of the people and enduring fame for the paper.

The *Detroit Journal* occupies the buildings Nos. 40-42 West Congress street. On entering and turning to the left is found the spacious private office of William H. Brearley. To the right is the counting room and general business office. On ascending up-stairs are the rooms of the knights of the quill—the gentlemen who do the writing and the thinking. C. F. Leidy is managing editor; Edward G. Holden, editorial writer; Miss S. G. Wagstaffe, telegraph editor; F. H. Wakefield, state editor; Anesty Burrows, city editor; John Barr, commercial editor; reporters—Howard M. Holmes, John C. McGarry, Edward Kranich, F. B. Beach, Edward Trowbridge, Capt. J. S. Hall and John Martin.

The composing room is one of the best equipped in the city, well supplied with all the necessary material of a first-class paper. This department is presided over by Pearce N. Bland. He is ably assisted by Henry J. Smith as maker-up. The advertising department is looked after by Peter Foreman, who has a well-selected assortment of advertising type.

John E. S. Phelps is proofreader. About twenty compositors are employed on an average. The chapel has for its officers: Thomas Jeffs, chairman, and Joseph H. McDonald, secretary. A photograph of the members of the composing room is herewith presented.

On the floor below is located the stereotype foundry under the charge of George H. Curtis. Two large Potter presses, with the latest improvements, are used for printing the paper, this department being looked after by N. W. Healey, pressman. The circulating department is presided over by Frederick Slocum. The *Journal* enjoys a good circulation, and is regarded as one of the most enterprising papers in the country.

## THE DOLLAR MARK (\$).

Concerning the origin of the dollar mark, the following from an exchange will be of interest to our readers:

1. That it is a combination of U. S., the initials of the United States.
2. That it is a modification of the figure 8, the dollar being formerly called a "piece of eight," and designated by the symbol  $\frac{8}{d}$ .
3. That it is derived from a representation of the "Pillars of Hercules," consisting of two pillars connected with a scroll. The old Spanish coins containing this were called "pillar dollars."
4. That it is a combination of H. S., the mark of the Roman money unit.
5. That it is a combination of P. and S., from the Spanish *peso duro*, signifying hard dollar. In Spanish accounts *peso* is contracted by writing the S over P and placing it after the sum.

## THE NEW MACHINE FOR PRINTING THE "CENTURY" PICTURES.

Encouraged by the success of the web press in magazine presswork, the printers of the *Century* have applied the rotary principle to a new machine for fine illustrations, expressly made for them by Messrs. R. Hoe & Co., and but recently put to work. Sixty-four plates of the *Century*, truly bent to the proper curve, are firmly fastened on one cylinder sixty inches long and about thirty inches in diameter; sixteen inking rollers, supplied with ink from two ink fountains, successively ink these sixty-four plates with a delicacy and yet with a fullness of color never before attained.

The shaft of the impression cylinder and the plate cylinders,  $4\frac{1}{2}$  inches in diameter, do not spring or give under the strongest impression. Although rigid in every part, in the hands of an expert pressman it can be made responsive to the slightest overlay. This machine is fed by four feeders from single sheets in the usual manner and does the work of four stop-cylinders in superior style.

The gain in performance is not as great as the gain in quality of presswork, but quality was considered more than speed. The

DETROIT JOURNAL COMPOSING ROOM DEPARTMENT.

performance of the machine could have been more than doubled by adding to it other cylinders which would print on both sides of the paper, but careful experiment has proved that the finest wood cuts cannot be properly printed with this rapidity. To get the best results the ink on one side of the paper must be dry before it is printed on the other side. — *Century*.

## P. A. CROSSBY.

It would be difficult to find a gentleman to whom the term of "friend" could be more appropriately applied by those who know him than to the subject of our sketch, he being one of those to whom the application of the remark, "a friend in need is a friend indeed," is most fitting. Mr. P. A. Crossby was born in Montreal on February 23, 1843. He was brought up and educated at Beauharnois, until 1855, when, his parents removing to Montreal, he was apprenticed to the late lamented and esteemed publisher, Mr. Rollo Campbell, proprietor of the *Pilot*, whose office was at that time on Place d'Armes. It will be at once apparent that Mr. Crossby is a self-made man; one of those who have done the highest credit, not alone to themselves, but to their order, having demonstrated in his own career the dignity of labor. At the expiration of his apprenticeship, the publication of the *Pilot* having ceased, Mr. Crossby entered into partnership with Mr. Campbell, under the name and style of Campbell & Crossby, for the purpose of keeping a book and newspaper store at Point St. Charles. This venture not proving to be successful, Mr. Crossby obtained a position on the *Transcript*, under Mr. Duncan McDonald, first as a compositor, and afterward as foreman, which latter post he held under Mr. Lovell after the paper had been transferred to him.

In 1865 he assisted in the organization of Montreal Typographical Union, and fought its battles during the great strike of 1866. He was that year elected a delegate by that body to the Albany convention of the International Typographical Union, and at that time was made its first vice-president. The strike above referred to ended in a serious defeat, and he was made a victim. He afterward associated himself with Messrs. S. C. Kyte and William and John Higgins, under the name of Kyte, Crossby & Co., the firm running a printing office for about a year, when he accepted a position on the *Daily News* from his old employer, Mr. John Lovell. He was subsequently engaged on the staff of Lovell's Dominion Directory, and traveled east and west on behalf of that important work. It was during this time that Mr. Lovell conceived the idea of publishing a Gazetteer of British North America, and to Mr. Crossby was intrusted the important duty of editing it. The value of his work is well known, and, nationally and commercially, it has unquestionably been of the greatest benefit.

Mr. Crossby has always interested himself in the well-being of the members of the printing craft, and as a delegate of the Montreal Typographical Union has attended eight sessions of the

International Union, subsequently representing the Union Jacques Cartier, of which he is now an honorary member.

In 1872 he was made assistant manager of the Dominion Type Foundry, of which he subsequently became manager, a post which he still fills with great acceptance to that enterprising and influential concern and its customers. Indeed, his name is among printers a tower of strength.

Mr. Crossby is of mixed French and English parentage, his mother being a French Canadian, still living at the ripe age of 80, and his father an Englishman, who died in 1860. He was married in 1883, and has one daughter in her seventh year. His wife, a charming and accomplished lady, was taken suddenly ill on New Year's day, 1887, and died a few days after, despite the best medical attentions that were attainable. Her death was to him the great trial of his life, and, knowing his affectionate character,

those who best know him realize how heroically he bore the irreparable loss.

He is a member of the Church of England and a liberal supporter of Trinity church, Montreal, in which he has occupied the most prominent positions. As a delegate to the synod he was one of those who voted for the election of the present Bishop Bond.

He is a prominent Freemason and a past master of Zetland lodge, an honorary Deputy Grand Master of the G. L. Indian Territory, as well as a companion of Mount Horeb chapter, having held important offices in the craft. He is also a Past Grand of Mizpah Lodge, No. 3, I. O. O. F., and a member of the Encampment and prominent clubs and institutions in the city of Montreal, and is, in fact, one of the best known business men in that enterprising city.

Mr. Crossby is in the prime of life, is recognized by all who know him as a courteous, honorable gentleman—one who has a legion of friends, who wish him many years of health and prosperity, in which THE INLAND PRINTER fervently joins.

## GOLD LEAF.

Gold-beaters, by hammering, can reduce gold leaves to such minute thinness that 282,000 must be laid upon each other to produce the thickness of an inch. Yet each leaf is so perfect and free from holes that one of them laid on any surface, as in gilding, gives the appearance of solid gold. They are so thin that if formed into a book 1,500 would only occupy the space of a single leaf of book paper. A single volume of a gold-leaf book one inch in thickness would have as many pages as an entire library of 1,500 volumes of common books, even though the volumes averaged 400 pages each.—*Boston Cultivator*.

1891.

Ring out the old — ring in the new ;  
 Ring out the false — ring in the true ;  
 Ring out ye bells in loudest tone  
 To greet the good year ninety-one.

## ST. LOUIS NOTES.

Business is quite brisk with some of the job offices, while with others it is the opposite. However, business in general is very good owing to the trade incident to the new year, when yearly reports, new blanks, blank books, etc., are required. The matter of New Year cards was nearly a dead letter in this city this season. Very few cards were used and they were mostly of an elaborate design and forwarded by mail. The business in New Year cards was very extensive three or four years ago, but it has been falling off extensively during the seasons since, and by next year the printers may expect nothing at all in that line.

The regulation number of new job offices spring up as usual. The latest candidate for favor is our old friend Mr. Adam Worthage, who is well known as a printer in this city, he having conducted an office for a number of years until about two years ago, when he sold out. But it seems the fascinations of the art proved too strong for him and he has again embarked in printing.

Another old-time printer is Mr. George Hackstaff, who has returned to his old love and may be found upon Locust street, near Third.

It gives us pleasure to see these veterans in the business again put on the harness. We know they are aware of what they are doing, which cannot be said of the "press in my mother's kitchen" boy offices which spring up for a time and demoralize prices to a certain extent and then vanish.

The *Post-Dispatch* donned a new dress a couple of weeks ago and presents a very neat and handsome appearance therein. It has put a complete series of French Old Style in its advertising pages, which is quite an agreeable change from the regulation Gothics, Condensed, Aldines, and Clarendons. The *Globe-Democrat* expects to soon don a new dress, probably about the time it will remove to its new building; and the *Republic* will perform the same action soon afterward.

C. E. Meade, a well-known newspaper man, having been connected with editorial management of many papers here, and for a time private secretary to Mayor Noonan, now officiates as deputy coroner.

*As You Like It* recently absorbed the *Irish World* and conducts the business of the two journals under the former name. It is now printed by the J. E. Mangan Printing Company, and Mr. Reedy, the talented editor, is making a very spicy and entertaining weekly out of it.

Mr. St. Clair, a reporter on the *Evening Star-Sayings*, has recently arisen upon the journalistic horizon as a novelist, having written a novel treating of St. Louis and her people and entitled "Charity." The author is a firm believer in the use of printers' ink, for he advertises liberally. Nixon-Jones Printing Company did the mechanical part of the work in their usual fine style.

But this is not the only recent novel emanating from St. Louis authors and authoresses. Mrs. Joseph Specht has published her society novel "Alfrieda," and I hear it has been favorably criticised by Mr. Gladstone.

On January 7 the typesetters, some twenty-six in number, employed at the Central Typefoundry, went out on a strike. This foundry lately put in gas for heating the metal pot of the casting machines, in place of coal, thereby allowing the men to work continuously instead of being required to frequently stop and replenish the fire with coal. This increased the earnings of the men, so the proprietors claimed, and it meant an increase of expense to the firm of about 26 cents per day for each machine for the gas consumed. The men were asked to pay an assessment of 15 cents per day as their share of the increased production. A committee of workmen waited upon the proprietors to remonstrate, and were told they might act upon the proposition of having the

assessment stand at 10 cents per day or go back to the use of coal. While these negotiations were taking place, the foreman of the typesetters was discharged, whereupon all the men walked out. The management claim the foreman was discharged for insubordination and refusal to obey orders and was an agitator of discord. The Central foundry assumes a very independent attitude and claims it has a sufficiently large stock of type to fill all orders for some time to come, and if necessary, it can draw upon its associate foundry, the Boston Typefoundry, for stock. The striking workmen are members of Local Assembly No. 2313, Knights of Labor, and they have prepared a list of grievances and propose to contest the differences.

We observe that Mr. Richard Ennis, the local Chauncey Depew, and proprietor of R. & T. A. Ennis Stationery Company, is to respond to one of the leading toasts at the coming grand banquet of the Knights of Father Matthew, of which order Mr. Ennis is a prominent member.

Mr. Phelan, editor of the *Western Watchman*, an old and influential Catholic organ of this city, was suddenly stricken down with heart disease at the door of his office at about 5 P.M., December 18, and died immediately. He had for many years been editor of the above named weekly and was widely known and respected, having at one time been a member of the state legislature. He leaves a wife and a grown-up family to mourn his sudden demise.

Ben Deering, an ardent temperance advocate, assumed control of the *Evening Call* about the first of the year and thereby hangs a tale. He issued an order that the "phat" upon the paper should go to time compositors and the lean should be done by compositors who were working by the piece. This being against the rules of Typographical Union No. 8 and also being considered unfair, the men, who were all union men, were called out upon the morning of January 8. The paper appears now, being set up by non-union men.

The St. Louis Press Club, a local society of journalists organized about a year ago, has recently been issuing notices of its meetings of which we consider they should be ashamed. They have the appearance of having been the results of the efforts of the worst amateurs and finished off by a planer and mallet artist, and very poor and unevenly trimmed paper is used. The effect may be novel and all that, but I cannot reconcile myself to the idea that a society so closely connected with printing should issue such botches. Their aim would better be toward the other extreme.

THE PRINCESS.

## PRINTERS' WITTICISMS.

"I re-lye on you a great deal for my personal appearance," observed a foundry form as the brush passed over it.

Slug ten—"Enjoy that dinner of Brown's last night?"

Slug two—"Yes; immensely. Had three courses, including 'pi.'"

Sub—"Who's this *billet doux* slung through the copy so often. Keep him up?"

Old joker—"Sure. He's the new pitcher for the Giants."

New comp.—"Say, where can I get a few lower-case 'h's'?"

Facetious comp.—"See that Englishman over there? Go to his frame and look on the floor. He drops all his 'h's.'"

"You seem to fight your way through life remarkably well," said an 8 to a 16 as they lay upon the stone.

"Yes; I always back myself," was the terse reply.

First apprentice—"Say, wad yer do in case er fire? Dese cases ud git full o' watter, hey?"

Second apprentice—"Naw; turn down de top un over de lower, just like shuttin' a seegar box. See?"

Stick (to composing rule)—"Will you kindly enlighten me as to why you have one ear one day and two on others?"

Rule—"With pleasure. To articles possessing no merit—vain, insipid—I deign but one ear; learned dissertations, remarks from *sarants*, etc., I give my undivided attention, which, naturally, requires both ears. See?"

### THE NEW FAST TYPE-PRINTING WEB PERFECTING PRESS.

FOUR THOUSAND PAPERS PERFECTED AND FOLDED PER HOUR FROM FLAT BEDS AND ORDINARY TYPE.

We herewith present to our readers an illustration of the new and greatly improved "Duplex Printing Press," invented by Mr. Joseph L. Cox, and built by the Duplex Printing Press Company, of Battle Creek, Michigan. This press is now in daily operation in the pressroom of the Rutland (Vt.) *Herald*, where for more than three months it has been printing the *Herald*, an eight-column folio sheet, in the morning, and the *Telegram*, a seven-column folio, in the afternoon. The press has not only fully demonstrated its capacity to deliver well-printed perfected papers at the rate of four thousand copies per hour, from ordinary type forms, but that still greater speed and a wonderful flexibility as to style and size of papers are possible to it. The builders of this machine are now completing a press on the same general plan, which will print and fold with equal speed and facility and with no

the development and perfection of these wonderful machines, and the press herewith illustrated is the happy fruition of its labors. In this press the ultimate degree of simplicity has been reached with a corresponding rate of speed, and what has been so long desired by that great part of the newspaper world which is not prepared for the expense and delays incident to stereotyping, but must have more speed than is possible with hand-fed presses, is now provided.

A reference to the cut will reveal the extreme simplicity of the machine. It is almost wholly free from adjustments of all kinds, and there is no complicated or delicate mechanism liable to get out of order. The power is applied from the main driving wheel to the impression without a gear or a belt. Indeed, it is safe to say that of all flat-bed presses this is one of the most simple. Two impression cylinders, located one directly over the other, and journaled into the same cross-heads or carriers, are reciprocated over stationary beds, making two impressions with each alternate movement, or printing *two complete papers* with each revolution of the large driving wheels. As the only reciprocating parts in the press are the cylinders, and as these are driven by a crank motion,

adjustments except the change of the rolls of paper, either four-page, six-page or eight-page papers, all from flat beds and ordinary type, and at a speed of from three thousand five hundred to four thousand five hundred per hour.

It is well known that for several years Mr. Cox, a young man of wonderful inventive genius, has been at work upon the problem of rapid printing from type. His practical experiments were begun when he was a mere boy, and in 1879 his first patent was issued from the United States patent office, where the model of his original machine for printing upon a web from forms on a flat bed, and utilizing, with a single cylinder, both the forward and the return movement of the bed, may be seen.

In December, 1884, the Duplex Printing Press Company was organized for the purpose of developing the inventions of Mr. Cox, and during the following summer perfecting presses were built upon the above model and put in practical operation in the pressrooms of the Grand Rapids *Democrat*, the Burlington (Iowa) *Hawkeye* and other prominent daily papers, where they have been running since. These machines were capable of printing and folding about two thousand papers per hour.

From that date to the present time the Duplex Company has been constantly devoting its energies and large sums of money to

no air buffers or springs of any kind are required. The form rollers are carried with the cylinders, and *pass over the form twice for each impression*. They take ink at each end of the press, yet only two fountains are required.

The folder occupies the space between the main wheels and above the shaft carrying them, and the folded papers are delivered in a packing box directly over the roll of paper at the end of the press. The upper bed is less than three feet from the floor, while the pressman, standing upon the floor, can look down upon the upper surface of the folder.

The machine is a *rotary* one throughout, except that the cylinders are reciprocated, and the paper dwells during the impression *in that part of the web only* which lies horizontal, and that which extends over the left-hand end of the press, as seen in the cut. The web elsewhere is *constantly moving at a uniform rate*. It is fed from the roll by calenders having a constant and uniform motion, and is fed, printed, through a rotary cutter into the folder in the same way. The machine occupies a floor space about 6 by 13 feet. The roll of paper and the folder, it will be observed, require no additional floor space.

It is said that the press has been subjected to the severest tests and has proved itself capable of doing good work under such adverse conditions of variable speeds, poor paper, changing

temperature, etc., as would prove fatal to the operation of most perfecting presses.

The manager of the *Rutland Herald*, in a recent letter to *THE INLAND PRINTER*, expresses not only his great satisfaction with the press, but states that further experience with it confirms, more and more, his first good opinion, and that he considers it "the greatest invention of recent years in the line of printing machinery."

The Duplex Printing Press Company is now completing at Battle Creek, Michigan, a large and modern plant for the construction of these presses, equipped with the best tools and appliances to be obtained. It is expected that these works will be in operation by the first of February.

#### ANSWERS TO CORRESPONDENTS.

M. P. G., Pueblo, Colorado: What would be a reasonable charge for numbering ten thousand tickets in duplicate? Please answer through current issue of *THE INLAND PRINTER*.

*Answer.*—Seven dollars.

P., Rockville, Connecticut: What can be added to stereotype metal to better it after it has been heated several times, when it makes plates honeycombed and does not flow into the matrix perfectly?

*Answer.*—The metal has evidently been overheated and the tin therein burned. To obviate the defect referred to, a little tin and antimony should be added thereto until the proper consistency is obtained.

B. W., Milwaukee: Will you tell how a first-class copying ink to do railroad printing with is made?

*Answer.*—To make copying ink that will last it is necessary that the ingredients used should be ground in the very best mills, which are only to be found in the establishments of the standard ink makers. Its component parts are an aniline coloring, some kind of saccharine matter and glycerine. A certain quality of copying ink can be made by dissolving gum in water, but it is only a makeshift, because as soon as the water evaporates it is rendered comparatively worthless. The best, cheapest and most satisfactory method to obtain it is to order direct from manufacturers whose reputation is established.

G. A. S., Columbia, S. C.: Will you kindly advise me (1) of whom I may purchase a book of reference containing such Latin phrases and legal terms as are commonly used by lawyers in their brief manuscript. (2) Also a book containing all cases with authorities of the supreme courts of the respective states complete to present date.

*Answer.* (1) *Bouvier's Law Dictionary* is as good a work as you can secure, and can be obtained at any first-class book store. (2) We are not prepared to answer your second inquiry, but would advise you to write to any of the following law publishers in this city for the necessary information: G. M. Beckwith, 34 Lakeside Building; T. H. Flood & Co., 149 Monroe street; G. I. Jones, Lakeside Building; E. B. Myers & Co., 147 Monroe street.

THE manner in which celluloid is made is as follows: A huge roll of paper is unwound slowly, and while unwinding is saturated with a mixture of five parts of sulphuric and two parts of nitric acid, which is carefully sprayed upon the paper. The effect of this bath is to change the cellulose in the paper into pyroxyline. The next process is the expelling of the excess of acid in the paper by pressure and its washing with plenty of water. It is then reduced to a pulp and bleached, after which it is strained and then mixed with from twenty to forty per cent of its weight in water. Then follows another mixing and grinding, after which the pulp is spread in thin sheets, which are put under enormous hydraulic pressure and squeezed until it is as dry as tinder. These sheets are then put between heated rollers and come out in quite elastic strips, which are worked up into the various forms in which celluloid is made.

#### PERSONAL.

We acknowledge calls from the following gentlemen during the past month: Frank J. Cohen, Atlanta, Ga.; John Rychen, president Queen City Printing Ink Company, Cincinnati; H. O. Sigmund, with Woodward & Tiernan Printing Company, St. Louis; E. W. Stephens, president National Editorial Association, Columbia, Mo.; J. M. Page, secretary of National Editorial Association, Jerseyville, Ill.; William J. Murphy, representing Campbell Printing Press & Manufacturing Company, New York; J. R. Decker, Columbus, Wis.; G. W. Prouty, of G. W. Prouty & Co., Boston, Mass.; C. Koely, with G. W. Prouty & Co., Chicago.

#### OUR SPECIMEN TYPE PAGES.

We take pleasure in referring to the latest productions of the leading typefoundries of the United States presented in the present issue of *THE INLAND PRINTER*.

"Luray," from the MacKellar, Smiths & Jordan Company, Philadelphia, from 18 to 36-point, or from three-line nonpareil to three-line pica. An attractive, handsome and outlined series, which for a certain class of work, such as bonds, checks, licenses, etc., cannot be surpassed.

"Hazlett Specimen Script," from Barnhart Bros. & Spindler, Chicago, 12 and 18-point. Something out of the beaten path, and yet plain, neat and attractive. We predict for it a large sale.

"New Façade Condensed," from the Boston Typefoundry, from 10 to 72-point, a special feature of the series being that they are *point both ways*. They are especially adapted for cards, programmes, etc.

"Mural," 20, 30, 42 and 48-point, making the series complete from 6 to 48-point. "Cadet" series, 16, 24 and 36-point, the full series being in process of manufacture. "Harvard Italics," from 8 to 24-point. All these are serviceable and popular faces, and manufactured by the Boston Typefoundry.

"Combination Border," from the Keystone Typefoundry, 734 Sansom street, Philadelphia, 6, 12 and 24-point; elegant and attractive; adapted to almost every job where a border can be used to advantage, affording an opportunity for tasty display.

"Crayonette Open," from the Keystone Typefoundry, Philadelphia, 12, 18, 24 and 36-point, complete with figures. This is especially adapted for illuminated work, and as the crayonette fits exactly the crayonette open, the result is very effective when worked in colors.

"Oblique Gothic," 12, 20, 24, 28 and 36-point, from the well-known typefoundry of Farmer, Little & Co., New York. It is symmetrical, attractive and especially adapted to a certain class of commercial work.

"Brevier Caxton Old Style," roman and italic, from Marder, Luse & Co., Chicago. In face it is bold and clear, the italics lining exactly with the roman, a recommendation which will be appreciated by many printing firms in this and other cities.

#### NEW BOOKS.

*BIBLIOTHECA POLYTECHNICA: a Directory of Technical Literature. A Classified Catalogue of all Books, Annuals and Journals published in America, England, France and Germany, including their Relation to Legislation, Hygiene and Daily Life.* Edited by Friz von Szczepanski. First annual issue. Crown 8vo. cloth. New York: The International News Company, 83 and 85 Duane street. 75 cents.

We greet with much pleasure this new international index to the progress of technical science.

It has been compiled with astonishing industry and is a complete book of reference for all publications of a technical nature.

The catch-words are given in three languages—English, French and German—so that readers of every nationality can at once turn to the branch he seeks in the literature of the latest investigations. An exhaustive enumeration of the technical journals in the three great languages of the world is also given.

The work is carefully printed and elegantly got up, and we can confidently recommend it to our readers, assured that they will find that its value greatly exceeds the moderate price they will have to pay for it.

## E. P. DONNELL MANUFACTURING COMPANY,

Manufacturers of all Kinds of Book-Binders Machinery and Tools.

327 & 329 Dearborn St., Chicago, Ill., U. S. A.

## CHICAGO NOTES.

FARMER, LITTLE & Co., typefounders have removed from 154 Monroe street to 109 Quincy street, in the Rand-McNally Building.

On January 1 the *Daily National Hotel Reporter* celebrated its twentieth anniversary by appearing enlarged, improved and in a new dress.

AFTER February 1, Messrs. Geo. H. Taylor & Co., paper dealers, will be located at 207 and 209 Monroe street, about one block west of their present store at 184 Monroe street.

MR. R. B. MARTEN, for years connected with Rand, McNally & Co., of this city, has purchased the interest of Mr. C. A. Knight in the firm of Knight & Leonard, and the firm hereafter will be known by the title of Marten & Leonard.

MR. E. F. SOULE, for the past year with the Campbell Printing Press Manufacturing Company, has taken a position as "outside man" for Barnhart Bros. & Spindler, the typefounders. Mr. Soule's territory includes Indiana and Michigan.

THE Chicago Paper Trade Club has chosen officers for the ensuing year as follows: M. J. Fitch, president; George H. Taylor, first vice president; George E. Bardeen, second vice president; Frank O. Butler, treasurer; Fred Waggoner, secretary.

ON and after January 1, 1891, the business recently conducted under the separate firm names of J. C. Skeen & Co. and Turck & Baker was consolidated under the style of Skeen, Baker & Co. The new firm occupies the sixth floor of the Caxton building, 328 to 334 Dearborn street.

BRADNER SMITH & Co. presented their employés with one hundred Christmas turkeys. This is the thirty-second year of their business existence, and they have never missed presenting all the married men in their employ with a turkey at Christmas since they have been in business.

A. T. HODGE, of the Chicago Paper Company, is about to leave for a short trip into Minnesota, returning by way of the mills in Wisconsin. The company had an increase of about twenty per cent in their business last year, the last six months being exceptionally prosperous.

J. O. SPENCER, the Chicago representative of the John Thomson Press Company, manufacturers of the Colt's Armory printing and embossing presses, New York, left on Monday, January 19, for an extended tour through the southern states in the interests of his firm. He expects to be gone six weeks.

WITH the new year was born a new Italian paper in this city. It is called *L'America*, and is published by a stock company, and will be under the general management of Dr. A. Lagorio, with Dr. G. Rouga as secretary and editor. The paper is independent and is published on the West Side, but the publishers expect to move it to the South Side soon.

MR. FRANK COHEN, of Atlanta, Georgia, recently paid a pleasant visit to the office of THE INLAND PRINTER. While here we were pleased to learn that he succeeded in making successful business arrangements with some of our leading typefoundries as their southern representative. We have no doubt but that the connection will be mutually satisfactory.

THE engagement of Mr. Andre Matteson and Miss Fannie C. Haines is announced. Miss Haines is the daughter of the late Elijah M. Haines, ex-speaker of the Illinois house of representatives. Mr. Matteson is a veteran among Chicago newspaper men, having been one of the editors of the *Chicago Times* in 1854, and in 1860 aided in establishing the *Post*, which lived about five years. He is now editor of the *Legal Adviser*, which was founded by Mr. Haines.

AT the annual election of the Chicago Press Club, held on Thursday, January 8, the following ticket was elected: President, William A. Taylor, the *Herald*; first vice-president, Thomas R. Weddell, *Inter Ocean*; second vice-president, A. T. Packard, Railway News Bureau; third vice-president, Oliver E. Moody, *Morning News*; recording secretary, William M. Glenn, *Tribune*; financial

secretary, Sam T. Clover, the *Herald*; treasurer, Melville E. Stone; directors, Kirk LaShelle, *Evening Post*, John J. Lane, *Mail*, John E. Wilkie, *Tribune*, R. C. Jacobsen, *Hide and Leather*, W. T. C. Hyde, *Times*. There were two tickets in the field, both of which, however, were headed by Mr. Taylor.

WE are pleased to inform the readers of THE INLAND PRINTER that Messrs. Sheldon Collins' Son & Co., New York, manufacturers of printing inks, have selected Mr. C. A. Vaughan, so long treasurer and manager of the Pitkin & Vaughan Company, of this city, as their western agent. Mr. Vaughan has an extensive acquaintance among the western printers, and is recognized by all as a successful business man. We bespeak for him a good share of the business, and congratulate Messrs. Sheldon Collins' Son & Co. on their selection.

WE regret to announce that Mr. Andrew McLaughlin, the esteemed and popular representative in this city, of Charles Eneu Johnson & Company, recently met with a serious and painful accident. While on his way home on Monday evening, January 5, he slipped on an icy sidewalk and fractured his right leg in two places. We are pleased to state, however, that he is doing as well as can be expected under the circumstances. His many friends tender him their heartfelt sympathy and earnestly trust ere long to see him in their midst again.

ON Sunday evening, January 4, the Press Club of Chicago tendered a reception to Mr. Henry M. Stanley and wife, at their rooms, corner of Clark and Madison streets, at which between three and four hundred ladies and gentlemen were in attendance, all of whom had the pleasure of shaking hands with the distinguished guests. Mr. Stanley gave a very interesting statement of his personal career and referred with pride to the very important part the American press had played in connection with the opening of the Dark Continent. His remarks were listened to with rapt attention, and the speaker was cheered to the echo at their conclusion. Altogether the event was an enjoyable one—long to be remembered.

MR. ROBERT FERGUS, SR., one of the oldest printers in Chicago, has, according to the *Herald* of this city, a curious memento of other days. It is a printer's stick which was presented to Mr. Fergus when he was at work at the case in London. It differs from the stick used by printers of the present day in that it is not so deep by nearly one-half, and can be broken so that two measures can be "set" in it at once. It was used in setting type for bookwork. "I brought it to this country with me," said Mr. Fergus, "and one day I missed it. I went around among some of the offices, and one night I found it on the case of a German printer. I told him it was my stick, and he gave it up. I don't say that he took it, for I don't know that he did. You may know why I value it so highly when I tell you it was once the property of Benjamin Franklin."

AT a recent meeting of the Paper Makers' Association of this city, when the question of international copyright was under discussion, Mr. Andrew McNally, who was one of the speakers, cited an amusing incident in his own experience. In 1877 the West was devastated by grasshoppers, and the firm of Rand, McNally & Co. published an exhaustive work on the Rocky Mountain locust and how to destroy it. Simultaneously with the appearance of the work the locust left this country and went to Europe, and the book failed to sell. The next year Mr. McNally went to London, and there he found the locust and his book flourishing side by side. Entering the office of its English publisher Mr. McNally said, "I find you are publishing my book." "Who are you?" asked the publisher. "I am Mr. McNally." "Oh, indeed; then you are publishing three of mine." Mr. McNally saw the point, and left without waiting for further explanations.

IN the death of Mr. J. H. Kehm, which occurred at his home, 486 Larrabee street, Saturday, December 13, 1890, the printing fraternity of Chicago lost one of its brightest lights. Although but twenty-nine years of age at the time of his decease, Mr. Kehm had made a mark in the world of printing and endeared himself to all

with whom he had been thrown in contact. The disease to which he succumbed was typhoid fever, with which he battled for three weeks, ministered to by the best medical help and nursed by his loving wife and parents. Up to the time of his fatal illness he had never known what it was to be sick. Mr. Kehm was born at Aurora, Illinois, in 1861, and at an early age started to learn the printing trade in the office of the Aurora *Volksfreund*, where he remained two years. He afterward served six years in the job rooms of the Aurora *Beacon*, one of the oldest journals on the Fox river. In 1883 he moved with his parents to Chicago, and obtained a position with the firm of Rand, McNally & Co., which he held for about four years, during which time he gained many friends, and proved himself a most careful, energetic and pains-taking workman. He had always desired to be the head of a large printing concern, and in 1888 he started the firm of Kehm, Fietch & Wilson, at 119 Lake street, and at his death was in a fair way to realize his wish, as the company was, and is now, one of the most successful in the city. That he should be taken away in the prime of life, with all the prospects of a successful business career so bright before him, is hard for his friends to realize. Mr. Kehm was an honorary member of Typographical Union No. 16. The remains were taken to Aurora, his old home, for interment.

ONE of the oldest, if not the oldest, printer in Chicago, Charles Boyd Dennett, died December 26 at his home, No. 52 North Ann street. Mr. Dennett was eighty-three years old, and up to a week ago had never known illness. A week ago Friday, while engaged on a charitable errand for two young women, he caught the cold that resulted in his death. Mr. Dennett was born in Portsmouth, New Hampshire, in 1809, and at an early age learned the printing trade in the office of the Portsmouth *Journal*. He worked in Cambridge, Massachusetts, for a little while and then went to Boston, where he became a member of the printing firm of Tuttle, Weeks & Dennett. The late Benjamin P. Shillaber, better known as "Mrs. Partington," was a journeyman in this office. At one time he was engaged in setting up a book on consumption and imagined he had the disease himself. This caused him to quit work and leave for the West. Mr. Dennett married Rebecca Jennings in 1837 and continued in business in Boston some years. Owing to the poor health of his wife, Dennett moved to Columbus, Ohio, where Charles Scott induced him to become foreman of the pressroom in the *Ohio State Journal* office. Three or four years later Mr. Dennett took a similar position on the Cincinnati *Gazette*, giving it up two years later and returning to Boston. Twenty-seven years ago he came to Chicago and went to work for Rand, McNally & Co., as a compositor. He worked for the firm up to a week before his death. His eyesight was remarkable, and he was able to keep up with the younger men in the office. He was a member of the old Franklin Society of Boston, which he joined sixty-five years ago, and was an honorary member of the Chicago Typographical Union. He leaves a widow, one son, two grandsons and one granddaughter.—*Chicago Tribune*, December 28.

#### SPECIMENS RECEIVED.

ROBERTS & SON, Birmingham, Alabama. Lithographed calendar.

F. S. & W. A. WILLIAMS, Bowie, Texas. Neat Christmas greeting to their customers.

H. E. TUTTLE, Osage, Iowa. A number of very neat business cards, letterheads, etc., some of them in colors. The firm letterhead is a very creditable production.

THE Journal Company, Fort Wayne, Indiana. A number of specimens of every-day commercial work, on all of which the composition and presswork are commendable.

THE *Blizzard*, Oil City, Pennsylvania. Several elegant samples of colored work, all of which, it is almost unnecessary to add, maintain the well-earned reputation of this establishment.

COHES STEAM PRESS, Woodsville, New Hampshire. Two elegant specimens of typography, in colors: one a school bond,

with coupons attached, executed by F. W. Bittering; the other a bond, executed by H. T. Freer, in the same office.

CONRAD LUTZ, Burlington, Iowa. Christmas art souvenir of twenty-four pages. It is printed on enameled paper in multi-colored inks. The composition is the work of an artist, and the presswork is first-class.

THE Hyde Park Times Job Office. An exceedingly neatly designed and executed programme for the Young Men's Christian Association Star Course of Entertainments, the tint-block of which was cut from patent leather with a jackknife.

ALSO, from Peoria Printing & Stationery Company, Peoria, Illinois; the Aultman & Taylor Company, Mansfield, Ohio, a large package of general commercial printing, all neat, clean and commendable; Herald Book and Job Printing House, Forreston, Illinois.

#### CALENDARS.

From Spencer & Van Fleet, Philadelphia; A. V. Haight, Poughkeepsie, N. Y.; August Becker, St. Louis, Mo.; E. W. Thomas, Toledo, Ohio; business memorandum calendar, L. Barta & Co., Boston, Mass.; the *Geauga Leader*, Burton, Ohio; the Times Printing House, Clay Centre, Kan.; T. P. Nichols, Lynn, Mass.; T. O. Metcalf & Co., Boston, Mass.; William Bryan & Son, Hudson, N. Y.; the Queen City Printing Ink Company, Cincinnati, executed by the Henderson-Achert-Krebs Lithographic Company; the Bradford (Pa.) *Era*, the Oil City *Derrick*, the Toledo (Ohio) *Commercial*, all designed and executed by Walter M. Moorehouse, of Oil City, Pa.; Ewens & Eberle, Pittsburgh, Pa.; Morse & Downs, Lynn, Mass.; La Monte, O'Donnell & Co., Chicago.

#### NEWSPAPER GOSSIP.

BATTLE CREEK, Michigan, is to have a Sunday society paper.

THE Macomb (Ill.) *Eagle* has been sold to T. J. Dudman for \$3,000.

THE *Daily Journal* has been started at Middletown, Pennsylvania.

THE *Daily Arbor State* has made its appearance at Beatrice, Nebraska.

THE *Tribune*, of Burlington, Iowa, will shortly appear in a new dress.

THE first copy of the Goshen (Ind.) *Daily Herald* was issued January 1, 1891.

THE *Saturday Call* is the name of a new illustrated paper at Lansing, Michigan.

THERE are fifty weekly papers in the State of Washington published on Friday.

LATTIMER C. VAUGHAN, publisher of the *Sentinel*, Orlando, Florida, has sold out.

W. D. BOYCE, proprietor of the *Saturday Blade*, Chicago, has purchased the *Chicago Ledger*.

THE Paris (Texas) *Daily Times*, after an existence of sixteen months, has ceased publication.

THE Thurlow (Penn.) *Semi-Weekly Globe* has been increased from six to a seven column paper.

THE *Evening News* is a neat appearing journal recently established at Paterson, New Jersey.

THE *Hastings Post*, one of the few German papers published in Iowa, has been forced to suspend.

THE latest northern peninsula (Michigan) newspaper rumor is that the *Iron Ore* will be issued as a daily.

NEW YORK boasts of the publication of twenty-seven hundred and six distinct newspapers and periodicals.

THE Carlisle (Pa.) *Republican*, daily and weekly, that was established three months ago, has suspended.

A NEW democratic paper is to be started at Goshen, Indiana, it is reported. It will be a daily and weekly issue.

THE Yorkville (S. C.) *Enquirer* was burned out November 23. Loss, \$25,000. The fire was of incendiary origin.

THE *Kansas Sunflower* is the latest. It is a republican paper, and published in Wichita by J. B. Gibbs, a colored man.

THE Savanna (Ill.) *Journal* is a neatly printed and well edited paper. Its issue of December 18 contained sixteen pages.

THE *Daily Independent*, which has been published at Germantown, Pennsylvania, for six years, ceased publication December 31.

A NEW weekly paper is about to be started at Kahoka, Missouri, by Mr. L. Bonesteel and some of the prominent business men.

THE Bradford *Argus*, published at Towanda, Pennsylvania, by E. Ashmun Parsons, celebrated the new year by donning a new dress.

A NEW paper has been started at Montello, Wisconsin, called the *Marquette County Times*. Messrs. Barry & Sherwood are the proprietors.

MR. THOMAS DILLER, of Macomber & Diller, publishers of the *Standard*, Sterling, Illinois, has recently been appointed postmaster.

MR. SAMUEL W. DURANT, for years editor of the St. Charles (Ill.) *Chronicle*, died at Aurora, January 5. Mr. Durant came to Chicago in 1845.

THE Camden (N. J.) *Morning News* has suspended. The job printing house connected with the newspaper concern will be operated by a company.

THE *Patriot*, of Jackson, Michigan, has been sold to a stock company with \$27,000 capital. Hon. E. W. Barber will be editor and W. H. Turner business manager.

MR. L. ALEXANDER, of Kahoka, Missouri, has sold the *Tribune* to Mr. J. L. Greenlee, who some years ago was the owner and publisher of the Kahoka *Gazette*.

THE Bloomsburg (Pa.) *Columbian* commences the new year by changing from the old-fashioned style to an eight-page, and looks much better for the improvement.

HON. J. M. ATKINSON will edit and a stock company will publish the *Farmer-Light*, an alliance organ to be started at Harlem, Georgia, early in January.

THERE are over six hundred papers published in Nebraska. Thirty-one of them are dailies. There are 321 towns in the state which have one or more newspapers.

A STOCK company, with a paid capital of \$100,000, has been organized in Manchester, New Hampshire, for the purpose of publishing a morning republican paper.

THE Sherman (Texas) *Herald* office material has been sold by the sheriff under a deed of trust to satisfy the City Bank, which bid the material in for \$1,000. It cost about \$3,000.

H. W. SCHAIDT, Thomas Johnson, D. W. Sloan and others, Cumberland, Maryland, have incorporated the Daily News Company to publish a newspaper. The capital stock is \$10,000.

THE Appleton *Volksfreund*, the leading Northern Wisconsin German newspaper, will be printed semi-weekly instead of once a week, without consequent increase in the price of subscription.

R. H. RUGGLES, editor and publisher of the Mendota *Bulletin* for almost a quarter of a century, died at his home in Mendota, Tuesday, January 6, after a lingering illness of nearly two years.

PENNSYLVANIA papers no longer issued are: Chartiers *Union*, Wilmerding *Enterprise*, Hellertown *Visitor*, Hellertown *Recorder*, Renovo *Record*, Minersville *Herald*, and Dyersburg *Evening Herald*.

THE San Antonio (Texas) *Daily Express* had its whole edition stopped in the post office by the San Antonio postmaster. This was the first paper in the state to come under the ban of the new lottery law.

FRANK McINTOSH, late editor of the Trenton (N. J.) *Daily Times*, and Harry A. Donnelly will start a weekly paper some time during the current month, to be called *Town Topics*. The

publication will consist of twenty pages and will be profusely illustrated. A finely equipped printing house will be established at Trenton.

ON January 2, Messrs. Miller, Botsford & Co. sold the Rockford (Ill.) *Daily Register* to Mr. Edgar Bartlett, late of the Kalamazoo (Mich.) *Telegraph*. Possession was given immediately upon consummation of the sale.

THE Lancaster (Pa.) *Examiner* inaugurated a revolution in journalism when T. B. and H. B. Cochran succeeded the late Col. John A. Heistand as proprietor, and now adds to the departure by appearing in eight-page form.

THE Geauga *Leader*, published at Burton, Ohio, has been enlarged to a six-page paper, and now contains forty-two columns of reading matter. It has a large corps of contributors, and is one of the brightest and best printed papers in Northern Ohio.

ON Sunday morning, November 24, the building of the Yorkville (S. C.) *Enquirer* and its entire contents were destroyed by fire. The proprietor, Lewis M. Grist, assures its readers, however, that it will shortly reappear in a new dress.

WE acknowledge the receipt of the "Detroit Journal Year-Book for 1891," consisting of 148 pages and cover. It is replete with information of the most valuable character, is profusely illustrated in connection therewith, is elegantly got up and handsomely printed.

MR. JOHN R. STEWART recently assumed editorial charge of the Champaign (Ill.) *Daily Gazette*. Mr. Stewart was for years on the editorial staff of the *Illinois State Journal*, at Springfield. His ability and prestige will add to the already wide influence of the *Gazette*.

THE *Art Interchange*, New York, heretofore the property of and published by William Whitlock, has been purchased by an incorporated association of capitalists, to be known as the Art Interchange Company, who will continue the business of publishing text-books, colored studies, *fac similes*, and the periodical entitled the *Art Interchange*.

A COPY of the special holiday edition of *The Journalist*, published by Allan Forman, New York, has reached us. It is an extra large number of seventy-six pages, full of wit and wisdom. The many articles with portraits of writers at the beginning and autograph signatures at end are well written and attractively printed. The issue is a credit to its editor.

#### HOLIDAY EDITIONS.

THE *Patriot*, of Carrollton, Illinois, eight pages and cover.

THE Rockford (Ill.) *Gazette*, fourteen pages and cover, illustrated with portraits of its leading citizens and public and manufacturing structures.

THE *Orange Chronicle*, Orange, New Jersey; twelve pages and cover. For a sample of work done in an ordinary country printing office it is worthy of all commendation.

OTTUMWA (Iowa) *Daily Courier*, twenty-four pages and cover, profusely illustrated, containing a two-page bird's-eye view of that enterprising city, also cuts of its prominent public and private buildings and of its leading citizens.

GOGEBIC (Mich.) *Iron Tribune*, eighteen pages and cover, containing views of the celebrated iron mines in the vicinity of Ashland, with interesting description of same; also business houses and scenes in the vicinity of Hurley.

CHRISTMAS POST, Leamington, Ontario, twenty pages and cover, containing portraits of the members of its town council, churches, school houses, streets, etc. This enterprise manifested by the publisher of a journal in a town of 2,500 inhabitants is very commendable.

THE *Breeder's Gazette*, Chicago; one of the most handsome publications which has reached our desk. It is replete with information of a valuable character to stock raisers and farmers. Its mechanical execution is perfect, and the illustrations given therein are alone worth the price of subscription.

## TRADE NEWS.

E. E. KLEIN, printer, Toronto, Ontario, has sold out.

HENRY D. GOODWIN, printer, Milwaukee, Wisconsin, has sold out.

THE firm of Keller & Rendler, printers, La Crosse, Wisconsin, has been dissolved.

SHERWOOD & PAYNE, printers, Edmeston, New York, have dissolved partnership.

THE Nebraska Tribune Company, publisher, Omaha, has disposed of its printing and bookbinding business.

MR. JOEL E. HALL, of the Charter Oak Printing Company, Hartford, Connecticut, is advertising his business.

THE Times Printing Company, Minneapolis, Minnesota, has been succeeded by the Minneapolis Times Company.

A \$20,000 stock company has been organized, it is stated, at Llano, Texas, for the purpose of publishing the Llano *Gazette*.

WEAVER & GILLETTE, publishers of the Iowa *Tribune*, Des Moines, Iowa, have been succeeded by the Iowa Tribune Publishing Company, incorporated.

MR. GAFFNY, who has been connected with the Ocala (Fla.) *Banner*, will shortly open a job office in that town, both his presses and material having been purchased.

THE Lancet Publishing Company has been incorporated at Hot Springs, Arkansas, with J. H. Leslie president, and J. M. Hawell secretary. The capital stock is \$25,000.

JOHN MURPHY & Co., printers and publishers, Baltimore, Maryland, have dissolved partnership, Isaac Kleiner retiring. The remaining partners will continue business under the old style.

ON the 1st of January, 1891, Mr. Edward D. Baker became the New England representative of C. B. Cottrell & Sons, the well-known printing press manufacturers, with headquarters at 174 Fort Hill Square, Boston, Mass.

THE Philadelphia *Item*, in its extensive annex, will soon have running its third Hoe & Co. machine, the "Four Brothers," which promises to beat the "Big Geraldine," a monster perfecting press, and rank as the fastest and best press ever made.

THE eastern office of the *Stationer and Printer* and *Picture and Art Trade* was discontinued on January 1, 1891, at New York City, as Harold S. Geer, occupying said office as eastern representative, will not represent the papers after above date.

THE Rapid Printing Company, an incorporated association, doing business at 220 and 222 William street, New York, operates a number of typesetting machines, which compose about 500,000 ems weekly. Joseph Auld, recently connected with the *Free Press*, Burlington, Vermont, is manager. Besides doing first-class contract work, the company carries on job printing and publishes a daily paper.

MR. C. WOODWARD, 63 Oliver street, Boston, recently forwarded to Messrs. C. Potter & Co., Jr., of New York, an order for the largest size flat-bed perfecting press manufactured by that firm, the same to be delivered in January to the well-known printing establishment of Alfred Mudge & Son, Boston. The illustration of the press will be found on page 249, December issue of THE INLAND PRINTER.

THE trade will be interested in the new presses recently manufactured by Walter Scott & Co., of Plainfield, New Jersey, shown on the last page of this issue. The H. F. is the new gripper front delivery, two-revolution, four-roller machine, which lays the sheets printed side up. The G. N. is the pony two-revolution, two-roller press, specially adapted for stationery and job printing. Both machines are meeting with great favor.

AMONG the progressive printing houses of the East must be classed the educational printing firm of Carl H. Heintzemann, formerly of 50 School street, Boston, Massachusetts, but at present occupying its new and commodious quarters, Nos. 234 and 236 Congress, corner Purchase street, where it has greatly

increased its force of employes and added several new presses of the latest pattern, including two Cottrell cylinders (largest size). Mr. James Cooper, late of the government office at Washington, D. C., the superintendent, is an expert in German, French, Spanish, Norwegian and all foreign languages and has an able assistant in Marshall Rice, who had an experience of twenty years' service with the Rand & Avery Co. Foreign languages are a specialty with this firm, and its jobwork equals the most artistic work executed in any office. The many books now on the market bearing its imprint tell the story of its great and rapid rise to the present height of prosperity, which has been reached only by means of good work done on time promised, "On Time" being its motto.

## PRESS ASSOCIATION NEWS.

THE winter sessions of the Missouri Press Association will be held at Jefferson City, Missouri, February 19 and 20.

THE Illinois Press Association will meet at Joliet, February 3, 4 and 5. A large attendance is expected, and several valuable papers will be read.

THE Connecticut Weekly Press Association has drafted a law, to be presented to the legislature of that state, regulating the manner of giving public notice in cases in which such notice is required by law.

THE nineteenth annual meeting of the Nebraska Press Association will be held at Beatrice, on Thursday and Friday, January 29 and 30, 1891. A number of typefounders, wholesale paper dealers and other houses dealing in printer's supplies have been invited to make exhibits.

THE press clubs of the United States and Canada are invited to send delegates to a convention to be held in Pittsburgh, Pennsylvania, on January 27, 1891. The call is made under a resolution of the Pittsburgh Press Club, and is sent out by President Keenan of that organization.

WE acknowledge the receipt of the proceedings of the twenty-fourth annual meeting of the Missouri Press Association, held at Hannibal, Missouri, August 19, 20, 21 and 22, 1890. They are from the press of the Columbia (Mo.) *Herald*, E. W. Stephens, proprietor, and contain 156 pages. It gives us pleasure to say that the composition, presswork, paper and binding are on a par, and that any printing establishment in the United States should be proud to put its imprint on such a publication.

THE Indiana Democratic Editorial Association held its annual meeting at Indianapolis, January 8, members from all parts of the state being in attendance. The Grubbs libel law was the principal topic of discussion, and the association unanimously adopted a resolution asking that it be repealed. The association adjourned after electing the following officers: President, F. A. Arnold, Greencastle; vice-president, Louis Hallman, Brazil; secretary and treasurer, J. A. Boyd, Muncie.

IN answer to invitations issued by the press of Gardner, Maine, twenty-one of the publishers, editors, correspondents and printers of the Kennebec Valley met on the 9th of December for the purpose of organizing a press association, to include the cities and towns along the river. The new organization is open to all printers, publishers, correspondents and editors in the Kennebec Valley. The meeting was one conspicuous for the unanimity of purpose and utmost cordiality of intercourse manifested by newspaper men present, and in its results was most satisfactory.

THE executive officers of the Wisconsin Press Association have decided to hold the annual winter session in the city of Madison, about February 17 and 18. Joseph Howard, the brilliant and well-known New York correspondent, will deliver the annual address. Other talent, literary and musical, is also being secured, — all of which will insure a taking and profitable session. Less time will be occupied with papers this year than common, and more to formulating needed newspaper legislation and to suggesting feasible business plans of mutual service to the fraternity. The new state administration will arrange to welcome the editors

something on the plan of two years ago. Hon. T. J. Cunningham, secretary of state elect, has kindly offered to take the initiative in this pleasant feature.

A FEW days ago we had the pleasure of a call from Messrs. Stephens and Page, president and secretary of the National Press Association, who for some time past have been busily engaged in making satisfactory arrangements with the various railroad companies for the transportation of the several delegations to the next session of the association at St. Paul. Though negotiations are yet in progress, it gives us pleasure to state that the outlook is that all matters connected therewith will be amicably settled.

#### PAPER TRADE ITEMS.

A PAPER mill is to be built at Barberton, Ohio.

THE new mill of South Gardiner, Maine, made its first pulp December 12, and the next day paper.

THE Judd Paper Company, Holyoke, Massachusetts, has been incorporated, with capital stock of \$24,000.

A NEW paper mill is to be started near Hughesville, Warren County, New Jersey, some time in February.

S. I. SMITH has leased the strawboard mill of J. R. Beardsley, Elkhart, Indiana, and will run it on book and news.

THE Lawrence Paper Company, Lawrence, Kansas, is increasing its plant for the purpose of doubling its product.

THE Kankakee (Ill.) straw wrapping mills turn out six tons a day, giving employment to twenty-eight men and six teams.

THE Buffalo *Evening News* has contracted with the Glen Manufacturing Company for its next year's supply of paper.

THE Merrick Paper Company, at Chatham, New York, has decided not to remove, although such a step was contemplated.

THE Cohanizic Stained Paper Company, of Bridgeton, New Jersey, has been organized. It has purchased the Lucknow Paper Mill at that point.

THE H. North Paper Company, with a capital of \$250,000, has been incorporated to erect a paper mill. Work on the new plant will be begun at once.

THE entire output of the Leo Paper Mill, Waterloo, Iowa, has been contracted for the year by Henry Weiss, paper box manufacturer, Burlington, Iowa.

THE H. K. White Paper Company, of Suffield, Connecticut, has been changed into a joint stock corporation to be known as the American Copying and Printing Company.

THE Cohanizic Stained Paper Company, Bridgeton, N. J., has elected as officers: Charles Snyder, president; William Smith, secretary, and Benjamin Ayers, treasurer.

THERE were twelve failures of paper and pulp manufacturers reported during the past year, aggregating losses of something over \$1,000,000. Among these only two can be reckoned large.

THE first paper mill in Ohio, and the second west of the Alleghanies, was that erected by John Beaver and John Coneter in 1806, on Little Beaver Creek, near Beaver Falls, Pennsylvania. They called it the Ohio Paper Mill.

MICHIGAN ranks fourth in the manufacture of straw and rag wrapping, and has three of the largest sulphite fiber mills in the country, located in Detroit, Port Huron and Alpena, the Alpena mill being the first one built in Michigan.

THE New York *Herald* has placed its contract for its next year's supply of paper with Crocker, Burbank & Co., of Fitchburg, Massachusetts, and the York Haven Paper Company, New York. The contract is about evenly divided, and the price is a fraction under 3¼ cents.

WILLIAM SMITH and Charles Snyder, of Philadelphia, and Benjamin S. Ayers, of Bridgeton, have purchased of I. W. Mulford the entire plant of the Lucknow Paper Mills, at Bridgeton, New Jersey. The syndicate will be incorporated under New Jersey laws, to be known as the Cohanizic Stained Paper Company. The

company will manufacture stained paper exclusively. The mills have not been in operation for two years.

THE firm of W. H. Parsons & Co., paper manufacturers and dealers, New York, has been dissolved by limitation and George F. Hicks has retired. The business will be carried on by a new firm under the old style, and composed of W. H. Parsons, W. H. Parsons, Jr., and M. C. Parsons.

THE L. L. Brown Paper Company, of Adams, Massachusetts, has issued its Ledger Diary for 1891, the paper in which is the standard ledger manufactured by them. The book is convenient for memoranda, and serves to show the excellent quality of the Brown papers. Send to them for a copy.

WE acknowledge the receipt of a sample book from the Owen Paper Company, Housatonic, Massachusetts, containing a very unusual and interesting variety of loft-dried writing papers, including several specimens of very old papers now scarce at the mills, and suitable for anniversary and memorial work, catalogues of antiques and works of art, etc.

#### PRINTERS IN HIGH PLACES.

Of the eight new state officers of Wisconsin that were inaugurated at Madison on January 5, four, the governor, lieutenant-governor, secretary of state and treasurer, are or have been newspaper editors. Two of the four, the governor and secretary of state, are also practical printers.

The governor, George W. Peck, (who does not know Peck and his "Bad Boy?") was born on a farm in Jefferson county, New York, and is fifty years old. When he was but three years old his parents removed to Wisconsin. In his boyhood he worked on his father's farm, and received a very meager education. He learned to set type in Whitewater, Wisconsin. He enlisted in the Fourth Wisconsin Regiment, serving until the close of the great civil war. Then he resumed his newspaper work. After a short term as editorial writer on "Brick" Pomeroy's *Democrat*, he went back to Wisconsin and worked on the La Crosse *Democrat*, also owned by Pomeroy. In 1874 he started the La Crosse *Sun*, removed with it to Milwaukee in 1878, and then changed the title to Peck's *Sun*. Last spring he was elected mayor of Milwaukee by a plurality of 6,500, and at the November state election was chosen governor of Wisconsin by a plurality of 28,320. Retiring Governor Hoard is also a newspaper man, being editor and proprietor of a newspaper at Fort Atkinson.

The lieutenant-governor, Charles Jonas, a native of Bohemia and a resident of Racine, is editor and publisher of *Starve*, an influential Czech paper. He was born October 30, 1840. He emigrated to this country when just twenty years old. In Racine, where he settled, he soon became quite popular, and his political influence with his own countrymen and with the Germans was largely responsible for his repeated election to office, he being a member of the assembly in 1878 and of the state senate in 1882. During the administration of President Cleveland Mr. Jonas was appointed United States consul to Prague. His plurality in November was 34,674 — over 6,000 larger than that of Mr. Peck.

The secretary of state, Thomas Jefferson Cunningham, was born in Brooklyn, New York, in 1850, and is a printer and newspaper writer by trade. When a boy he came to Stoughton, Wisconsin, and learned to set type. He afterwards worked at his trade in Madison, Chippewa Falls and elsewhere. In the latter place he established a democratic weekly in 1876, and in 1888 he started the *Daily Independent* there. He was a member of the legislature in 1887. His plurality was the largest of any candidate — 35,729.

The treasurer, John Hunner, is of German parentage, but was born in Buffalo, New York, in 1843. He settled in Alma in 1861, engaged for a time in trade, then edited a newspaper, and in 1868 was admitted to the bar. In 1871 he removed to Eau Claire, where he has resided ever since. He is engaged in the wholesale grocery business and is quite wealthy. Last spring he was elected mayor of Eau Claire. His plurality for state treasurer was 35,476.

SPECIMEN OF RULE WORK.

By Lewis Rudy, compositor, Intelligencer Jobroom, Lancaster, Pennsylvania.

208 and 210 Randolph Street,

CHICAGO.

SPECIMEN OF JOB COMPOSITION.

C. J. H., Chicago.

Written for THE INLAND PRINTER.

### THE PRINTING PRESS.

BY MRS. J. S. PINNEY.

The Earth had been evolved from space,  
Was quite surrounded by the atmosphere;  
Yea, man had long begun his race,  
And still the gods in conference drew near  
In consultation deep, some precious gift to find  
With which to bless forever all mankind.

Then treasures fell from every hand;  
Minerva of her wisdom taught,  
And grain came through fair Cere's hand:  
Pomona fruit, and Flora flowers brought,  
Adonis gave us youth, Hygeia health,  
While Vesta gave us home, and Vulcan wealth.

And thus they showered gifts to Earth,  
But yet the greatest gift they had not brought  
Until fair Vishnu proved her worth.  
She taught the art preservative of thought;  
And all combined to give us nothing less  
Than man's best earthly friend, the Printing Press.

ST. PAUL, November, 1890.

### THE MAN OF OUR TOWN.

There was a man in our town  
Who would not advertise,  
And so, with me, you'll all agree  
He was not extra wise.  
But when he found his cash decrease,  
With all his might and main  
He set to work to figure up,  
And make an increase plain.

Says he, "My cash must not decrease,  
It paineth me full sore;  
For lo, instead of getting less,  
It should be getting more.  
Experience has taught me this:  
The man who would be wise  
Should advertise by night and day,  
And I will advertise."

And soon this man of our town  
Began to advertise;  
And so, with me, you'll all agree  
That he was very wise;  
And lo! the gold poured swiftly in,  
It overflowed the till;  
Since that time he has advertised—  
Is advertising still.

—*Montreal Witness.*

### THE DEVIL TO PAY.

When Gutenberg, Coster and Faust first began,  
In secret, the great art preservative to plan,  
The ignorant masses, suspecting some evil,  
Traced all of their mysteries right to the devil;  
And thus the assistant who tends to the fires,  
And does such odd jobs as the office requires,  
Who handles the rollers, and washes the same,  
By the name of the devil has gone into fame.

As years crept along till they reached modern times,  
An occasional printer was short in his dimes,  
And once it occurred that an editor found  
At the end of the week he'd not cash to go 'round;

He counted and figured to get it all square,  
The foreman and comps. must each one have his share;  
When he'd got it all fixed, as he thought, in dismay  
He discovered and cried: "There's the devil to pay."

So now 'tis a proverb, grown common in years,  
When worry or care at the office appears;  
When bills can't be met, or when trouble is rife;  
When blood-thirsty men seek the editor's life;  
When subscribers won't "ante," and ads are shy;  
When his "cake is all dough" and his form is all "pi"—  
A proverb that comes in the editor's way,  
And so he exclaims: "There's the devil to pay."

—*Harry J. Shellman, in the Journalist.*

### THE PRINTER'S TOWEL.

When I think of the towel,  
The old-fashioned towel,  
That used to hang up by the printing-house door,  
I think that nobody,  
In these days of shoddy,  
Can hammer out iron to wear as it wore.

The tramp who abused it,  
The devil who used it,  
The comp who got at it when these two were gone,  
The make-up and foreman,  
The editor, poor man,  
Each rubbed some grime off for the heap they put on.

In, over, and under,  
'Twas blacker than thunder;  
'Twas harder than poverty, rougher than sin.  
From the roller suspended,  
It never was bended,  
And it flapped on the wall like a banner of tin.

It grew thicker and rougher,  
And harder and tougher,  
And daily put on a more inkier hue;  
Until, one windy morning,  
Without any warning,  
It fell to the floor and was broken in two.

—*Burdette.*

### THE POOR COMPOSITOR.

HE IS BLAMED FOR ERRORS SUCH AS THESE.

Quite recently (says *All the Year Round*) a leading London daily concluded its obituary notice of the late Baron Dowse as follows: "A great Irishman has passed away. God grant that many as great, and who as wisely shall love their country, may follow him."

Not long ago an American paper gave a curious account of a western millionaire. This concluded by observing that "he arrived from California twenty years ago with only one shirt to his back, and since then he has contrived, by close application to business, to accumulate ten millions."

A Newcastle paper, again, had the following, the composition, no doubt, of the advertiser: "The Gleaner is one of the finest and fastest boats on the Tyne; her accommodation is in every respect good and comfortable, her crew skillful, steady and obliging, being newly painted and decorated for pleasure trips."

The leading paper in Queensland, a few months ago, in reviewing a book, remarked: "There need be demand no longer for Jules Verne's and other blackguards' works of imagination." But the next issue had the correction: "For 'other blackguards' please read 'Rider Haggard's.'"

A financial paper had: "I would ask Lord Salisbury, W. H. Smith, and Balfour, who are always telling lies, that by our agitations," etc. The correction afterward appeared, "Are always telling us."

## OF INTEREST TO THE CRAFT.

THE Birmingham (Conn.) *Evening Transcript* boasts of a Japanese pressman.

THERE are fifty-eight unions in arrears to the International Typographical Union.

A STATUE of Horace Greeley will be unveiled in New York City on Saturday, May 30. It will cost \$16,000.

THE New York *Daily News* is about to lease the old *World* building for the demands of its growing business.

ORGANIZER WILLIAMS, of the fourth district, has appointed John P. Hannegan, of Lafayette, organizer for Indiana.

THE report of the secretary-treasurer of the International Typographical Union shows a balance on hand of \$19,408.50.

FROM present indications there will be no lack of candidates for the position of delegate to the Boston convention in 1891.

WITH the beginning of 1891, Denver Printing Pressmen's Union, No. 40, established a minimum scale of \$21 per week.

THE new United States cruiser San Francisco has been supplied with a printing office and an elegant nickel-finished California Reliable press.

A. J. JOHNSTON, of the printing firm of A. J. Johnston & Co., Sacramento, has been appointed superintendent of state printing for California.

WE acknowledge the receipt of an invitation to the reception and banquet given by Detroit Typographical Union, No. 18, on Monday evening, January 19. Many thanks for same.

THE difficulty heretofore existing between the Times Printing Company and the Typographical Union of Chattanooga, Tennessee, has been amicably settled, and union printers are again holding cases on the *Times*.

WILLIAM A. TAYLOR will represent Detroit Typographical Union, No. 18, at the third annual convention of the Michigan Federation of Labor, which meets at Grand Rapids, Michigan, the first week in February.

MODIFIED plans have been received for the Printers' Home, which will not exceed \$50,000. Bids will be advertised for about February 15, and it is expected ground will be broken for the same about the middle of March.

HON. AMOS CUMMINGS recently occupied two columns of the New York *Sun* in telling how Messrs. Kennedy, Chadwick and Sutton, of the International Typographical Union Legislative Committee, won the fight for the copyright bill.

MR. JOSEPH T. GILMOUR, past president of Toronto Typographical Union, was presented on Christmas afternoon with an elegant gentleman's traveling companion and an address by his many friends, previous to his departure for Seattle, Washington.

WE acknowledge the receipt of a curiosity in the shape of a four-page circular, printed at Loudsville, White county, Georgia, without the aid of a press, *between two boards*. It is on the whole a creditable production, and one from which many printers with presses, who do not know how to use them, could profitably take a lesson.

AMONG the applicants for the position of clerk to the state printing board of Indiana are Messrs. S. R. Hench and Eugene B. Smith, Fort Wayne, and Thomas Greenfield, Greensburg, all of whom are well known in craft circles. The present incumbent is Charles A. Bookwalter, also a union printer, whose name was mentioned at the Atlanta session as a member of the Home board.

AT a regular meeting of New Orleans Typographical Union held on December 14, 1890, the following officers were elected to serve for the ensuing year: President, R. A. Norman; vice-president, W. J. Hammond; recording secretary, Duncan F. Young; corresponding and financial secretary, Isaac T. Hinton; treasurer, Theo. C. Berg; trustee of sinking fund, J. C. Murray; reading clerk, W. F. Klocke; sergeant-at-arms, Thomas Stanmeyer.

## ITEMS OF INTEREST.

A COAT of varnish can be printed over a sheet in the same manner as ink. Use gloss varnish and a block instead of ink and type.

IT is stated on good authority that the net profit of the New York *World* for 1890 will be \$800,000, New York *Herald* \$600,000 and the Boston *Globe* \$250,000.

AN English inventor proposes to print, emboss or otherwise decorate sanitary or toilet paper with advertisements, and prefers to print them with a sanitary ink.

TYPEWRITER copying ink may be made from aniline colors dissolved in alcohol and added to glycerine. Dilute with water and apply to the ribbon. Castor oil may be used instead of glycerine.

STENCIL INK.—Use shellac, 2 oz.; borax, 2 oz.; water, 25 oz.; gum arabic, 2 oz. Color with fine lampblack, to desired consistency. You may use turpentine and lampblack with a little linseed oil, or even glue and water with lampblack.

IT is proposed to sew books in a new way, which is thus described in *Paper and Press*: Tapes are laid across the folded back portions of the signatures. Each signature is perforated in succession from within, outwardly through the folded back portion, and at opposite sides of the tapes. Threads are laid diagonally across the tapes from one signature to the next, and drawn down at opposite edges of the tapes in the form of loops within the folds of the signatures. Sewing threads are passed longitudinally of the signatures through the loops, and all the loops and threads are finally drawn taut. The method is worthy of special treatment and is a decided improvement.

AT the exposition last year several engines were exhibited which were supplied with warm air, which escapes into the chimney along with the gas. The admission of warm air under the grate of the furnace made a sensible reduction in the amount of fuel consumed. It is claimed that under similar conditions the economy is about eight per cent, which is realized without any expense.—*Bulletin de l'Imprimerie*.

THE designs for the cards of invitation to be sent to other powers to take part in the Columbian Exposition are to be in the highest style of the art. A skilled engraver and lithographer have been put in possession of all the rooms on the lower floor of the State Department building at Washington, and the invitations will be run off on a press recently placed in position to be used in printing passports for Americans going abroad. Extra heavy paper bearing a water-mark, an eagle with outstretched wings, with the motto "*E Pluribus Unum*" surrounding it, will be used for the documents, which will contain, besides the formal announcement, the signatures of the president of the United States and the secretary of state.

## BUSINESS OUTLOOK.

**Akron, Ohio.**—State of trade, fair; prospects, good; composition on evening papers, 25 cents; morning paper, 30 cents; job printers, per week, \$14 to \$17. The *Beacon* and *Republican* consolidated January 1; but few, if any, thrown out of employment. Out of sixty printers here, fifty-five are members of No. 182. The Werner Company put in eight new Potter presses last month, making them a total of fifty-two cylinders. Rumors of a new democratic daily soon.

**Auburn, N. Y.**—State of trade, good; prospects, good; composition on evening papers (female), 16 cents; bookwork (female), 18 and 20 cents; job printers, per week, \$8 to \$12. If there is a city in the world of the population of ours (28,000) paying lower wages to printers, we would like to know of it.

**Austin, Texas.**—State of trade, good; prospects, very good; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, \$20; job printers, per week, \$20. The state legislature convenes in this city on the 13th of this month, and about fifteen printers will be required to print the bills and journals of the same.

**Bay City, Mich.**—State of trade, fair; prospects, not very bright; composition on morning papers, 34 cents; evening papers, 32 cents; bookwork, 34 cents; job printers, per week, \$14. Matters in the newspaper line are quite dull at the present time, and prospects are not very bright. No. 81 will issue new constitution and by-laws in a short time.

**Boston, Mass.**—State of trade, improving; prospects, pretty good; composition on morning papers, 45 cents; evening papers, 38 cents; bookwork, 40 cents; job printers, per week, \$15.

**Burlington, Iowa.**—State of trade, dull; prospects, duller; composition on morning paper, 30 cents; evening papers, 25 cents; bookwork, \$14; job printers, per week, \$14 and \$15. Plenty of prints in the city to do all work. Jobwork very dull, and the newspaper holiday rush is over.

**Charleston, S. C.**—State of trade, fair; prospects, encouraging; composition on morning papers, 37½ cents; bookwork, 35 cents; job printers, per week, \$17. Subs are fully equal to demand at present, and will be in excess of it after the first of February.

**Columbia, S. C.**—State of trade, fair; prospects, not encouraging; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, \$15 per week, nine hours; job printers, per week, \$18 and \$20. A happy New Year, and may THE INLAND PRINTER live long and prosper.

**Dayton, Ohio.**—State of trade, falling off since holidays; prospects, fair; composition on morning papers, 35 cents; evening papers, 32 cents; book and job printers, per week, \$15. The volume of business so far this winter has been larger than usual; but little credit has been asked and little given. The usual dullness after the holiday rush is being felt. Prospects for spring trade are good.

**Denver, Colo.**—State of trade, dull; prospects, fair; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$20, fifty-three hours. Some commotion has been caused by a proposed new scale, but at the last meeting it was voted to let the old scale stand. The pressmen have asked for a raise of \$3 per week, and are now out on strike. Many men are walking the streets.

**Galesburg, Ill.**—State of trade, fair; prospects, fair; composition on evening papers, 25 cents; bookwork, 25 cents; job printers, per week, \$12 to \$15. The Brotherhood of Railway Trainmen have their new office fitted up here, and expect to do their own printing. The grand lodge appropriated \$5,000 for the plant.

**Grand Rapids, Mich.**—State of trade, fair; prospects, good; composition on morning papers, 35 cents; evening papers, 30 cents; bookwork, per week, \$14; job printers, per week, \$14. Work in news and job shops good; no idle men in town. Ex-City Clerk John J. Balknap is business manager of the *Democrat* for Hon. I. M. Weston, and Mr. F. W. Ball, late proprietor, is managing editor. Mr. Harvey O. Carr has returned from a pleasant visit with friends in Indiana.

**Hartford, Conn.**—State of trade, good; prospects, fair; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 35 cents; job printers, per week, \$15. Work is not as good as we expected this winter, but hope that it will be better when the legislature can go ahead with its business, if it can ever settle "who is our governor."

**Houston, Texas.**—State of trade, fair; prospects, poor; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$20.

**Indianapolis, Ind.**—State of trade, good; prospects, fair; composition on morning papers, 38 cents; evening papers, 36 cents; bookwork, 40 cents; job printers, per week, \$16.50. Members of No. 1 at present close to 300. No establishments of any note out of the union. Work plenty and likely to continue until spring.

**Jackson, Mich.**—State of trade, good; prospects, very fair; composition on morning papers, 33 cents; evening papers, 30 cents; bookwork, per week, \$13; job printers, per week, \$13. The *Patriot* in the future will not suspend publication on holidays. The Industrial News Company has removed to more commodious quarters on Cortland street.

**Jacksonville, Fla.**—State of trade, fair; prospects, not so good; composition on morning papers, 33½ cents; evening papers, 30 cents; bookwork, 33½ cents; job printers, per week, \$16 to \$20. Two new members taken in at last meeting. Officers for next term are: President, L. P. Ashby; vice-president, Charles Groh; secretary-treasurer, F. H. Blair; sergeant-at-arms, J. K. Nelson.

**Kansas City, Mo.**—State of trade, very dull; prospects, worse; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 37½ cents; job printers, per week, \$17. Town crowded. Large phalanx running on morning and evening papers. Dull in job line. The *Globe*, a 2-cent morning paper, may suspend within ten days. Outlook very discouraging.

**Keokuk, Iowa.**—State of trade, good; prospects, fair; composition on morning papers, 30 cents; evening papers, 26 cents; bookwork, 30 cents; job printers, per week, \$12. Keokuk Typographical Union, No. 68, elected the following officers Sunday, December 28: Joe F. Lutz, president; W. F. Douglass, vice president; Ed. Sanford, recording secretary; Charles Holmes, financial secretary; William Perdue, treasurer; James Roberts, sergeant at arms. The *Gate City's* annual trade review is out, and is a credit to its jobroom. Work has been exceedingly good here all winter, but will likely drop off now, the holidays being over.

**Logansport, Ind.**—State of trade, moderate; prospects, looking little better; composition on morning papers, 28 cents; evening papers, 23 cents; bookwork, \$12; job printers, per week, \$12. Always after holidays work is somewhat dull, but think when spring trade opens there will be plenty of work. The scale of foreman on daily papers was raised to \$15 per week. I put THE INLAND PRINTER into the reading room of the Woman's Christian Association.

**London, Ont.**—State of trade, fair; prospects, fair; composition on morning papers, 30 cents; evening papers, 28 cents; bookwork, per week, \$9; job printers, per week, \$9 to \$10. *Wives and Daughters*, a monthly paper published by the Advertiser Printing Company, gives considerable extra work to the compositors. From present indications this new publication will be a success. It is devoted to the interests of women. Already *Wives and Daughters*, although only a few months old, has a large circulation.

**Louisville, Ky.**—State of trade, fair; prospects, good; composition on morning papers, 42½ cents; evening papers, 39½ cents; bookwork, 40 cents; job printers, per week, \$18. Work has been good for some time, but the town is filling up with tourists.

**Macon, Ga.**—State of trade, jobbing good; prospects, fair; composition on morning papers, 33½ cents; evening papers, \$15 per week; bookwork, 33½ and 35 cents; job printers, per week, \$13 to \$20. Little bookwork doing. Subbing rather dull, as there has been an unusually large number of travelers coming and going for the past month. The town is full of them now.

**Minneapolis, Minn.**—State of trade, fair; prospects, fair; composition on morning papers, 42 cents; evening papers, 37 cents; bookwork, 35 cents; job printers, per week, \$16. Plenty of men to do what there is to do.

**Mobile, Ala.**—State of trade, good; prospects, fair; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$16.

**New Haven, Conn.**—State of trade, very poor at present; prospects, uncertain; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 35 and 40 cents; job printers, per week, \$15. I wish a happy and prosperous New Year to THE INLAND PRINTER and its able corps. The new enterprises started here and mentioned in my last report, namely, *Morning Union* and *Evening News*, have retired to oblivion, thus devastating the hopes of many comps in this city. It is a pity, as they made things lively while they lived. Business is decidedly quiet, and the number of tourists arriving and departing is remarkable at this season of the year.

**New Westminster, B. C.**—State of trade, good; prospects, fair; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$21. All subs in town are getting enough to do and tourists are not too numerous.

**Omaha, Neb.**—State of trade, very fair; prospects, good; composition on morning papers, 40 cents; evening papers, 37 cents; bookwork, per week, \$16; job printers, per week, \$18. Two suspensions have occurred in the last two weeks—the *Republican*, a morning daily, and the *Democrat*, an evening paper.

**Peoria, Ill.**—State of trade, fair; prospects, fair; composition on morning papers, 36 cents; evening papers, 33 cents; bookwork, 38 cents; job printers, per week, \$15, \$18, \$21. Work has been good on account of holidays, and subs were scarce, but there are plenty of men for all demands at present.

**Philadelphia, Pa.**—State of trade, improving; prospects, brighter; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$16. Reports from thirty-seven offices show: Nine, brisk; ten, medium; seven, good; six, as usual; and five dull. An effort was made to increase the scale on morning newspapers to 45 cents, which failed to materialize, not having received the necessary constitutional three-fourths vote. A penalty of \$5 has been imposed for violation of the six-day law of the International Typographical Union.

**Pueblo, Colo.**—State of trade, fair; prospects, dull; composition on morning papers, 45 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$20 and \$21. While work is fair for the time of year, there are plenty of idle printers in town at present and more coming in.

**Richmond, Va.**—State of trade, good; prospects, bright; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$16 to \$20. Work in this city is better at this time than it has been for some time. All of our compositors are at work.

**San Antonio, Texas.**—State of trade, dull; prospects, dull; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 40 cents; job printers, per week, \$20. On December 10 another Memphis printer died on the hands of Typographical Union No. 172, and was buried by said union. He was C. D. Madden, and came to San Antonio on October 23, suffering with consumption.

**San Diego, Cal.**—State of trade, poor; prospects, hopes for improvement; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 40 cents; job printers, per week, \$18. The prospects for the new year are not bright, but we all hope for better times.

**San Jose, Cal.**—State of trade, improved; prospects, good; composition on morning papers, 40 cents; evening papers (scale 35 cents) are all non-union—girls, from nothing to \$6 per week; bookwork, 35 cents and \$15 per week; job printers, per week, \$15. The *Times* has been purchased by new stock company, and is now enlarged, and the force increased to the evident satisfaction of the comps. Job offices report trade fair.

**Springfield, Ill.**—State of trade, good; prospects, fair; composition on morning papers, 33½ cents; evening papers, 30 cents; book and job printers, per week, \$15. A new Farmers' Alliance paper, the *Free Lance*, will begin publication this week. It is to be a weekly. Phillips Brothers have put in two "Hoe" cylinders. They have the bill work for this session.

**Springfield, Mass.**—State of trade, fair; prospects, good; composition on morning papers, 40 cents; evening papers, 28 and 30 cents; bookwork, 32 cents; job printers, per week, \$12 to \$16. The fifth annual ball of the

local typographical union will occur February 6, at Graves' Hall, and is expected to be as great a success as any of its predecessors.

**St. Louis, Mo.**—State of trade, fair; prospects, good; composition on morning papers, 43 cents; evening papers, 38 cents; bookwork, 45 cents; job printers, per week, \$18. Trade not quite so good as last month.

**Toledo, Ohio.**—State of trade, good; prospects, good; composition on morning papers, 38 cents; evening papers, 35 cents; bookwork, 38 cents; job printers, per week, \$15. Subs are scarce. The Bee Company has bought a lot on St. Clair street, and is going to erect a five-story building. The foundation is in course of construction, and the building is expected to be finished by spring. The *Commercial* has received a key-board of the Mergenthaler machine. Both the *Bee* and *Commercial* are going to use them.

**Topeka, Kan.**—State of trade, good; prospects, good; composition on morning papers, 33½ cents; evening papers, 28½ cents; bookwork, 40 cents; job printers, per week, \$15. State work is very brisk, and will be until after the meeting of the legislature.

**Toronto, Ont.**—State of trade, brisk; prospects, the proprietors having been notified of our intention to raise the scale prospects cannot be judged by present appearances; composition on morning papers, 30 cents, with an optional scale of 33½ cents, the office setting the "ads"; evening and weekly papers, 28 cents; bookwork, 33½ cents; job printers, per week, \$11. The union will celebrate its anniversary in the parlors of Harry Webb on Saturday evening, February 21, by an "At Home" and social.

**Utica, N. Y.**—State of trade, booming; prospects, cheering; composition on morning papers, 35 cents; evening papers, 31½ cents; bookwork, 31½ cents; job printers, per week, \$12.50. The closing of 1890 finds the business in Utica more prosperous than at any time during the year. Subs find plenty to do, consequently there is little if any complaint to be heard. The usual number of good resolutions are being made, and if they hold good woe to the poor sub during the year 1891. But there is consolation in the fact that good resolutions have been made before.

**Wheeling, W. Va.**—State of trade, fair; prospects, fair; composition on morning papers, 35 cents; evening papers, 30 cents; bookwork, 40 cents; job printers, per week, \$15. The *Evening News*, the new daily, is booming things. Has a web perfecting press ordered and is now getting room ready for it. Will be the only paper in the city printed on a perfecting press.

**Wichita, Kan.**—State of trade, dull; prospects, uncertain; composition on morning papers, 35 cents; evening papers, 30 cents; book and job printers, per week, \$15. The membership has run down almost half the usual number, yet there is not enough work for those here.

## BUSINESS NOTICES.

 We acknowledge receipt of a box of samples of  type made by the Keystone Typefoundry, of Philadelphia, Pennsylvania, of their nickel alloy type metal, which is claimed to be a most durable material. The samples show the type just as it comes from the casting machines, and also after being finished ready for use. The  Keystone's type is meeting with great favor. See  their specimen pages in this issue.

We desire again to call attention of the trade to the practical value of White's multi-colored charts for printers, publishers, etc., illustrated and referred to in our December issue. We repeat it is worth ten times the amount charged, and no progressive printer can afford to be without a copy, as it shows at a *glance* what colors and combinations are suitable to the paper on which the job is printed. Mailed to any part of the world on receipt of price (\$1, postage prepaid), by the Illinois Paper Company, 181 Monroe street, Chicago.

THE "Hartford" composing-stick rack, a cut of which is shown on page 324, is a most useful article for the composing room. It is 9 by 24 inches in size, arranged to hold twelve sticks, and any size stick, set to any measure, can be placed in it. The sides are of iron, finely japanned and attached to a varnished board. Your office is not complete without one. Write to Dickerman & Sherwood, Hartford, Connecticut, for circular.

On page 358 will be found a reproduction from wood cut by the zinc etching process, made by the progressive young firm the Blomgren & Lindholm Company, 359 and 361 Dearborn street. The company has already made considerable headway, although it has only been in existence a couple of months, and has noted a steady increase in business, which the excellent quality of work they turn out undoubtedly deserves.

## WIRE-STITCHING MACHINES.

The E. P. Donnell Manufacturing Company, 325 and 327 Dearborn street, Chicago, continue to furnish their popular machines to printers and binders in all parts of the country. On page 382 we show three sizes of stitchers, and the length of staples used with each. No. 1 is made for either foot or power, and Nos. 3 and 4 for power only. All use either round or flat wire, and will stitch either flat or saddle. For speed, durability, ease of running and general utility they are equal to any machines manufactured. If about to buy a stitching machine write for circulars and terms. This company also make and keep in stock many other kinds of machines for bookbinders' use. Complete bindery outfits furnished. No matter what you want in this line they can supply you.

## A NEW FOLDING MACHINE.

On page 308 of this issue will be found an illustrated advertisement of the Brown Folding Machine Company, of Erie, Pennsylvania. There is probably no concern in this particular line of business that expends more time and money in producing new features than this company. This is brought about by a desire on their part to meet the requirements of the trade. Since starting in business, nearly ten years ago, they have been making constant improvements, and while some of their new ideas were questioned at the start, they have been found to be practical as well as useful.

The machine above referred to is an eight-page covering machine. Publishers often desire to issue a four-page supplement, using the same as a cover to the inner eight pages, making twelve pages. This is especially the case with many weekly and Sunday papers. The construction of the folder is so arranged that the outer four pages can be pasted upon the inner eight, and all trimmed at the top, as is customary with an ordinary eight-page paper. Of course, if desired, the pasting, or pasting and trimming, can be dispensed with. In cases where the four-page sheet is to be folded on the inside of the outer eight pages, the machine can be built to meet the requirement, but it is necessary to notify manufacturers when this class of work is to be performed, that the machine may be constructed especially for it. As will be observed, two feeders are necessary: one for the main sheet, and the other for the cover. They are made with three and four folds, delivering at either fold, and can be used for plain eight-page folding, pasting and trimming, the same as an ordinary newspaper folder, the covering or inset attachment being an auxiliary that can be brought into use when occasion calls for it. It can also be attached to any drum, single or double cylinder press when demanded.

## A DROP OF INK.

Now that business is bright and active and the outlook very encouraging, a moment of your time, please, before placing the order for printing ink.

A firm which has an enviable reputation for fine colors and good blacks, and which can duplicate at any time, is desirable.

For several years the Buffalo Printing Ink Works have adhered to the trade-mark "Satisfaction Guaranteed," and have established a profitable and growing business on this basis; when needing goods get quotations and their new sample book and convince yourselves of their claim to your patronage.

## THE COLUMBIA CYCLE CALENDAR.

By far the most valuable business calendar for 1891 is the Columbia Cycle Calendar and Stand, issued by the Pope Manufacturing Company, of Boston, Mass. It is in the form of a pad containing 366 leaves, each leaf having on it date, day of week, day of year, and number of days to come, a paragraph pertaining to cycling or some kindred subject. The leaves are fastened only on the end, so that each entire leaf can be exposed. The stand is made of stained wood, brass mounted, with pencil holder and pen rack. Although this is the sixth year of the Calendar, the matter is fresh and new, the larger number of paragraphs having been specially written for this purpose.

## A NEW DICTIONARY.

Funk & Wagnalls, 18 and 20 Astor place, New York, announce they are about to issue a new "Standard Dictionary of the English Language." They claim that in some important points it differs widely from the plans of other dictionaries, as follows: (1) The "locating" of the verifying quotations; that is, the giving in each instance not only the name of the author, but also the name of the book and the number of the page where the quotation can be found; to thus "locate" 50,000 quotations is of itself a herculean task. Please compare our pages in this respect with those of any other single volume dictionary.

(2) The use, in the pronunciation of words, of the Scientific Alphabet, adopted by the American Philological Association.

(3) The placing of the etymology *after* the definition. (4) The placing of the most important current definition *first*, and the obsolescent and obsolete meanings last, that is, the substitution of the order of *usage* for the *historic order* usually followed in dictionaries. (5) In the case of disputed pronunciation the giving of the pronunciations preferred by other dictionaries, as well as the pronunciation which we prefer. (6) The giving of 50,000 vocabulary words more than are to be found in any other single volume dictionary in England or America. (In this connection great care is being taken in the admission of new words; no new word is admitted to a vocabulary place, unless it has been passed upon by the able men in charge of this department, namely, Julius H. Seelye of Amherst College, S. Sheldon of Harvard University, Edward Everett Hale, Charles A. Dana and Howard Crosby.) (7) The indication, by the use of upper and lower case initial letters, as to whether words in the vocabulary are to be written as proper names or common names, etc., etc.

(7) The indication, by the use of upper and lower case initial letters, as to whether words in the vocabulary are to be written as proper names or common names, etc., etc.

## GASOLINE ENGINES.

The gas engine is adapted for stationary use only, and can be used only in cities having gas, therefore the demand has been for a motor of some kind which could be used in the small towns and country. This long-felt want has been secured by the Van Duzen Gas & Gasoline Engine Company, Cincinnati, Ohio. Although they are builders of a gas engine which contains many superior advantages, they did not allow themselves to be satisfied with the gas engine only, but started to experiment on a gasoline engine, as shown in the accompanying cut. This is a very compact and economical engine, the cost of running being about one cent per hour per horse-power, on a basis of 10 cents per gallon for gasoline of 74 test. It is the same as their gas engine in every respect, with the addition of a carburettor which does not take up any extra floor space, as it is attached to the air pipe, and extends not more than six to eight inches from the cylinder off to one side.

The tank supplying the gasoline is usually placed outside the building, the carburettor is connected direct to and is under the complete control of the governor, and only makes the gas as it is called upon by the governor, and all the gas is consumed as it is made. By this simple yet positive arrangement, they completely overcome the possibility of any escapement of the gaseous mixture;

hence there is no smell, danger of fire or an explosion, the gasoline supply being completely shut off.

This engine is used for running printing presses, machine shops, elevators, elevating water for hotels, operating electric-light plants or any other use to which an engine can be put. In a great many instances parties have the gasoline attachment put on when they do not intend running with it continuously, but should anything happen that they cannot get the gas, they can fill the gasoline tank and go right ahead, thereby preventing a delay that is in most cases very costly.

They have just completed the most compact gasoline engine

ever constructed. It is of the upright type, the balance wheels and crankshaft resting on the base, to which the pillar blocks are also cast, making all one casting. The cylinder is supported by four steel standards which also hold the journals for the gear-wheel shaft operating the valves and governor. The speed is 250 revolutions per minute, and it develops 16 horse-power, using only about four buckets of water for a run of ten hours. The amount of gasoline used varies according to the load on the engine. The floor space is reduced one-half that required by other gas or gasoline engines, being 4 feet by 4 feet, and the weight is 2,500 pounds. By comparing the floor space and weight of other engines of the same horse-power, it will plainly be seen that there has been a vast improvement made as regards compactness in this class of engine, which has usually been prominent in the eyes of mechanics as being an excess of iron spread over too much space for the amount of power procured. Write them for catalogue and full information.

**ADVERTISER**, owning cylinder and job presses, cutter, perforator, 150 fonts of job, newspaper and wood type, wishes to join good general printer having some means in opening job office in Montreal. Advertiser owns valuable copyrights and agencies, and has connection there now. Address "GENERAL PRINTER," Box 519, Montreal.

**ALL LIVE PRINTERS** should have Bishop's "PRACTICAL PRINTER." Second Edition, revised. 200 pages, cloth. Price \$1. Also his "DIAGRAMS OF IMPOSITION" and "PRINTERS' READY RECKONER," price 50 cents each; also the "PRINTER'S ORDER BOOK," price \$3.00, and "SPECIMENS OF JOB WORK," price \$2.00. Order of H. G. Bishop, Box 13, Oneonta, New York, Farmer, Little & Co., and all typefounders. The handiest and most useful works ever published for printers. Indorsed by everyone.

**A NEWSPAPER PRESSMAN** desires position on a paper having two or more perfecting presses. Experienced and thoroughly competent to take charge of presses and all other machinery in first-class daily office. Address "W. B.," care INLAND PRINTER.

**BEST CHANCE EVER OFFERED**—An interest in an elegant \$1,000 office in a city of 50,000, with large business, offered to right man without a cent of capital and \$75 per month guaranteed. Man must be strictly first-class, artistic job printer, industrious and reliable. Address "W. C. P.," care INLAND PRINTER.

**COMPOSITORS**—Send 10 cents for patented copy holder. Agents wanted. GEO. W. BANTA, 792 Chapel street, New Haven, Conn.

**FOR SALE**—A rare chance. An old and well established job office, with good reputation for fine work. Best location; good business. W. W. CHEW, 712 Chestnut street, Philadelphia, Pa.

**FOR SALE**—Splendid job printing office and bindery in a large and thriving southern city. Thoroughly equipped for any class of work. Terms reasonable, and a bargain for anyone desiring a well established business in a mild and healthful climate. Write for full particulars. Address "A. B. & C.," care INLAND PRINTER.

**SITUATION WANTED** as foreman of daily newspaper in small city. Twelve years' experience. Good recommendations. Western city preferred. Address "RECORD," care INLAND PRINTER.

**WANTED**—A THOROUGH JOB PRINTER to go South; \$20 per week. Address "P.," care INLAND PRINTER.

**WANTED**—Subscribers to THE INLAND PRINTER; per year, \$2; six months, \$1; single copies, 20 cents; Also, send 10 cents for 16-page circular, "How to Impose Forms," giving complete schemes of imposition.

The Lightning Ink Reducer and Dryer, Awarded Diploma, Paris, 1889, in London, 1887, for Unexcelled Excellence.

Inkoleum is the only article in the world that gives pressmen complete control over printing and lithograph inks, rollers and stock in any weather and climate. It refines inks of

any color or shade and makes them dry quick and glossy, enabling rushed work to be delivered immediately from press without offsetting. Inkoleum never dries on rollers, but preserves their suction, life and elasticity. On starting press in morning or whenever rollers are too sticky or ink dry on them, or the ink pulls the paper, a drop or two of Inkoleum put on the rollers with your finger immediately softens the ink and makes them do the finest work, a saving of five times its cost every hour in the day.

Beware of Infringements! Order Inkoleum and accept no worthless piratical imitation, said to be just as good. Price, only 50 cents. For sale by every typefoundry in the world. Read circulars printed in five languages. Put up only by

The

# COX • DUPLEX • PERFECTING • PRESS

AND FOLDING MACHINE,

MANUFACTURED BY

THE DUPLEX PRINTING PRESS CO.,

BATTLE CREEK, MICH.

MR. T. C. O'HARA, the well-known expert machinist of the *Boston Herald*, under date of September 10, 1890, writes as follows to Mr. H. I. DILLENBACK, manager of the Rutland (Vt.) *Herald*, the purchaser of the first of the above machines :

BOSTON, MASS., September 10, 1890.

At your request I attended the shop test of the new COX DUPLEX WEB PERFECTING PRESS, built for the Rutland *Herald*, and carefully inspected its operation and made a thorough examination of its construction. The press stood partly over a pit and partly on the floor, upon planks, and was not fastened down in any way ; and it was run by a four-inch belt. At the first trial of speed, it ran at the rate of 3,000 complete papers per hour ; at the second, 3,600 ; at the third, 4,560. Its operation during these trials caused no perceptible jar of the machine nor of the floor of the building, nor did it give any indication of strain upon the machine, and it ran with perfect steadiness and smoothness. The principle of the machine, while novel, is entirely practical, and overcomes entirely the obstacles to speed and smooth running always heretofore encountered in the construction of flat-bed printing presses, and in my opinion the invention has solved the great problem in the construction of machines for the use of newspapers of moderate circulation, desiring to print from type at high speed, in a manner destined to revolutionize this branch of printing press manufacture.

The press is now in daily operation in the pressroom of the *Herald*, where it is fully demonstrating its capacity to do all that is claimed for it.

Full information may be obtained by addressing the manufacturers.

## PRACTICAL TALKS ON PRESSWORK.

NO. XI.—BY A PRESSMAN.

NOT alone from patriotic motives — although I confess they have a certain effect — but that I believe it to be the truth, I have always maintained that American pressmen, taken as a whole, were superior, both in artistic taste and mechanical ability, to those of any other portion of the world.

It is very true that in some special features some of the continental countries, Germany and France more especially, press us closely — at times indeed surpassing our very best efforts; but those instances, I hold, are spasmodic, and do not constitute a real wresting of the supremacy in this particular branch from America.

In color printing — the power of arranging in artistic sequence the tones necessary to produce the most pleasing or striking effects — the French *printers* lead the world. Mind, I say *printers*, not *pressmen*, as, from what data I can gain access to, I apprehend that the pressmen of France have very little to do with the manipulation of the colors they print. Here in America, on the contrary, the color pressman is really an adept in color and its effects. Place the two, an American and a French pressman, side by side, each with the press he preferred, furnish them both with the necessary colors, and it is dollars to dimes that the American will have produced the desired effect first and will have also surpassed his competitor in quantity as well as quality. This statement applies, of course, to representative men of both countries.

The point of contact or contest with Germany is more likely to be found in the field of illustrated printing; and from the specimens it has been my fortune to see, coming from "over the Rhine," I believe it behooves us to keep every faculty on the alert, for, truth to say, they do very fine illustrated printing in "der Vaterland." A book of engravings before me at this present writing contains some exquisite work — perspective carefully worked out, color perfect and all unnecessary harshness carefully avoided. Were it not for the paper one would almost think the work was American. In

this we undoubtedly have an advantage over all our European rivals. Their paper makers either cannot or will not produce paper equal in finish and printing surface to that made in this country. This, however, is not, should not, be a reason for resting on our oars and letting the set of the current carry us without exertion on our part. It is undeniable that even in the productions of our best pressmen there is room for improvement, and we should be constantly studying, both the causes of failure and the means to avoid them.

The approaching World's Fair in 1893, at Chicago, will be an excellent opportunity for American pressmen to prove that their skill is not on the wane; that the artistic is entering more and more largely into their work. Without doubt the various organizations of printers — the Typothetæ, the International Typographical Union and the International Printing Pressmen's Union — will take steps to provide for such a display of the printing of the country as has never yet been equaled. Indeed, I note that the last named body, the International Printing Pressmen's Union, have already taken the initiative in the matter by the appointment of a committee to provide for just such a display. It is entirely creditable to them that they, the youngest of the organizations controlling the craft, should be first in the field in such a laudable enterprise. I cannot but believe that the other two will at an early date take steps to cooperate with the pressmen in their effort to still further advance the standing of the printing craft. A united, steady pull, gentlemen, will do wonders, and it remains with each one of you, whether members of the Typothetæ or of the International Typographical Union, to bring your individual efforts to bear to influence your organizations to sink any minor differences you may have, to the end that our country may reap the credit of leading the world in the art preservative.

\* \* \*

The division of labor for which our age is noted has been brought to such a pitch that in the printing office today, for the one journeyman pressman or compositor who can make up the margins of a book form correctly, or impose any but the simplest forms, there

are a dozen who can not do so. This is more especially true of the compositor, as the pressmen have more or less practice in imposition, whereas in the composing room the stone-hand does today what each compositor did for himself twenty, thirty or forty years ago. The result is, of course, that very few of them are competent to fill any responsible position.

Pressmen who are employed in book offices are, of course, proficient in this regard, but those who work in job offices are mostly in the same position as their confrères in the composing room. And it all results, not so much from their being relegated into mere parts of the machinery of the printing office, as in their consenting to be so relegated. If each pressman or compositor who feels that these remarks will apply to him, will devote ten, twenty or thirty minutes a day to the study of those parts of the art he is deficient in, no doubt can exist that he will become a better printer and a more valuable employé than he ever was before. Let each one remember there is no crowding at the top.

Written for THE INLAND PRINTER.

#### DEFENSE OF THE AMATEUR.

BY HERBERT L. BAKER.

SAID an amateur printer, the other day: "All this talk about amateurs is simply selfishness of the meanest sort. The regular printers are mad because we jumped quickly over the fence when they had to go away around through the gate of apprenticeship. I am just as good a printer as any of them, and they know it. All this hue and cry about amateurs is meant simply to scare the bright young fellows into taking the long, tedious road which the dull ones must travel. Because it takes a thick-witted numskull three to five years to learn the trade, is that any reason why a bright boy should waste all that time to arrive at the same result?"

There now, answer that, somebody!

Happening to know something of this particular amateur's history and attainments, he struck me as being an especially bright and shining example of the good results of jumping the trade fence.

Eddy (call him that because it is not his name) was always a bright lad. His parents, watching his development, saw he was no ordinary boy and knew he was destined for great things. Since no other parents ever had the same opinion of their boys, this alone proves Eddy to have been a prodigy. His precocious intellect developed at an early age, and he had been to school not many years before he knew more than books and teachers could tell him. Having his own statement for this, it must be a fact, of course. His restless activity of mind led him to look for other channels in which to expend his overplus energy. It was not long until "Do your own printing" caught his eye in an advertisement. He got hold of circulars which shrewdly explained all about printing; told him how easy it was to do as good work as anybody by just following the few plain, simple instructions sent with each press; explained how much money he could earn after school

and during his spare hours by doing printing for his friends, shrewdly urging that he would be learning a good trade at the same time and building up a business to step right into when through school.

Here was the chance of his lifetime! It was no difficult matter to convince his father, who was a small manufacturer. The father justified the outlay by figuring that his own printing could be done by the son and thus repay the cost of the "outfit." He really wanted to do what was best for the boy and had some doubts about the wisdom of distracting his thoughts from his studies; but these same circulars soon settled such absurd doubts, for did they not explain the wonderful results of the printing press as an educator? Did he not have some vague idea himself of the training in spelling and punctuation printing would give a boy? Are we not all familiar with the magnificent educational results obtained in setting up a beer check, a raffle ticket, a business card, or other product of a 2 by 4 press? What grand arithmetical lessons, where it is necessary to figure how many sheets it will take to make fifty copies if the stock cuts ninety-six to a sheet! What training in business forms and methods when a billhead is set up! What beautiful suggestions of human anatomy when a laundry list is printed! What lessons in agriculture accompany a job of milk tickets!

The lad got his "outfit," or this sketch would never have been written. As was to be expected he soon lost all interest in his school. It was in the nature of things that he must lose interest in one or the other; and of course his precocious practical mind was fully capable of judging to which his attention could most advantageously be given. What was theoretical schooling compared with practical printing? What, indeed!

It was not long until he wanted to leave school, but the father would not listen to such a suggestion. However, "there is more than one way to catch a rabbit," and he was shrewd enough to blunder through his school duties until his teachers could stand it no longer and suspended him. Then he utterly refused to return to school, while his father consoled himself with the idea that as long as the young fellow was at work, he was perhaps as well off—out of mischief, anyhow. Now, however, his father's printing and other jobs that came in were insufficient to keep him busy. Of course he had to go soliciting for more; and if he bought beer to catch a saloon order, and cigars to inveigle a tobacconist's trade, was not that shrewd business policy? Did not that show how quickly he caught the true business idea? A great head for business! Then of course he had to cultivate the acquaintance of the fast young fellows about town—were not most of them holding positions where they had printing to give out?

It need not surprise anyone to know that before long it became more fun to look for orders than to get them. The apprentice is trained into the habit of steady, persistent work every day, but no such slavery galls the unfettered freedom of the amateur. Free to work when he felt like it, this particular amateur felt

like it so seldom that his father strongly remonstrated. Full of ambition to excel at first, the boy soon became disgusted because of the poor results he obtained, and his enthusiasm oozed out into languid disinclination to do anything. His reply to his father's expostulations was that he did not have enough material to accomplish anything, so what was the use to try? None, of course!

Finding another lad with a rich dad who was willing to spend several hundred dollars to set his pampered boy up in business, Eddy offered to go into partnership and put in his experience for a quarter interest. As the rich boy did not know a type from a toadstool, or a rack from a rat hole, he jumped at the offer, and a new printing firm launched out in great style, the following fac simile furnishing abundant proof that Eddy was "as good a printer as any of them":

### Job Printing!

Note Heads, Letter Heads, Envelopes,  
Statements, Etc. Printed On Short Notice

*All Work*

*Promptly Attended To*

**Eddy & Diveson, Props.**  
**Printon Miun.**

The partnership was of short duration, however. Diveson soon learned that if any work was to be done in the office he would have to hire it done or do it himself, as Eddy did "not have to work for no man when he did not feel like it, by——." So he was unceremoniously kicked out by Diveson.

Not being able nor willing to support his son in idleness, Eddy's father insisted that he root for himself. After living on his friends as long as they would loan him, he made the effort to get work in the other printing offices of the city. Strange to say they would not have him around—jealous, you know, because he jumped the fence instead of going the long, tedious way through the gate of apprenticeship. Good a printer as any, oh, yes! a trifle erratic, perhaps, as true genius is likely to be—he puts the spacing at the end of the lines in straight matter, he has a fondness for displaying catch lines, the rules of spelling and punctuation are trifles too small for his notice—these are a few samples of idiosyncracies which prove him to be totally out of the old trade ruts. Unfortunately for our amateur genius, the old fogies still control the regular printing offices and are too jealous of his brilliant conceptions to give him a chance to work them out.

Here is just where Eddy stands today. Diveson gives him work when there is any to do; the rest of the time he loafs about smoking a fragrant pipe, and reading nickel novels. How he manages to live at all is a query, unless his familiarity with some poker sharps and their lady friends "over the Rhine" give a clue.

With no taste for work, no skill or training, of use to nobody, too old and too proud and too confirmed in indolence now to begin to learn the trade he thinks he

has at his finger's ends; with a reputation for indolence, ignorance and looseness, of course a successful, happy and honorable career spreads out before him—his is the sort of training which insures such a career! If a regular printer suggests anything to the contrary, it is only because he is jealous.

Written for THE INLAND PRINTER.

#### THE CHRONIC GRUMBLER.

BY FRANK NEWMAN.

AS Mr. Baker very correctly stated in his article in the November issue of THE INLAND PRINTER, it is true enough that it is highly unpleasant to have a "bore" about an office; but permit me to drive in the nail more firmly, so that it may be fixed more securely and tighten the bonds of fellowship between employer and workman, and speak about the biggest bore in the business—the chronic grumbler, who goes about his business in a shiftless, devil-may-care sort of fashion, and who contrives to make existence miserable not only for himself, but also for his fellow workmen who are trying their level best to do their work in a conscientious and satisfactory manner. The chronic grumbler is a most undesirable object in any office, and it is as easily explained why he is not desirable as it is why he is most undesirable.

To begin with a technical comparison: He is a battered letter—no good—and should be thrown out wherever found; he is always under the conceited impression that nothing is done properly unless it is done in accordance to his views and desires; he labors under the false belief that no one is able to judge the value of his work better than he, forgetting in the meantime that the very office which gives him employment has been in existence—and profitably, too—for quite some time before he made his appearance. He furthermore labors under the insane delusion that, should he leave the office he derives his sustenance from, it would go under, and could not possibly continue prosperous unless his services were retained—for he has never for a moment given thought to the fact that there has never yet been a vacancy—no matter in what calling—but it has finally been filled acceptably by some one.

The above being only a few of the more essential reasons why the chronic grumbler is not a desirable person to have about an office, now allow me to explain in a few words why he is most undesirable.

Let me once more allude to him in a technical sense. In order to produce a good and well-printed job it is absolutely necessary to use good type—no battered letters—is it not? Such is the case if you desire a well-regulated office in which it is a pleasure to work; because if you mix good type with bad, you must, in order to produce a decent piece of workmanship, pick out the bad and battered letters. So it is with the men in your employ. If you have among your dozen or so of employes but one of the always-grumbling and ever-discontented specimen, it is a very easy matter to have

your entire working force demoralized; he is like a case of smallpox in a public school—it is catching—and unless he is isolated (thrown out) the disease will spread. The chronic grumbler is possessed of many tricks that one can see at a glance. When spoken to, he responds in a surly, curt manner; self-interest is the main object of his presence in an office, for he has not the interest of his employer at heart; he is fault-finding with everyone and everything, though oftentimes he is incapable enough to do the easiest piece of work to his employer's satisfaction, and his spacing reminds one of the teeth of an old and worn-out saw. The fire in the office is either too hot for him or too cold (I often wish it were too hot), and, as a matter of course, he is the only one in the office who knows anything at all about punctuation, proofreading, etc., these latter two being only minor causes of displeasure, since they are inherent in the average comp. In fact, he is like a badly spaced line himself, and is sorely in need of a "dutchman" in the shape of a well-planted foot on the inexpressibles, merely in order to make him "toe the line," as it were.

Give me an office that is possessed of no chronic grumblers, and bounce that individual wherever you may find him, for he is merely a detriment and hindrance to the welfare of any office.

Written for THE INLAND PRINTER.

#### THE TRAMP ABROAD.

AN ADVENTURE IN NAPLES WITH A LONDON PRINTER WHO WANTED TO SEE ROME, THE POPE AND THE VATICAN.

BY MALCOLM MC PHERSON.

THIS is not a story like Mark Twain's with the same title. He made a tramp abroad, but the tramp I mean was a genuine specimen of the tramp who is familiar to everybody in this country and the old, and is a terror to householders and farmers in outlying country districts.

Some years ago when I had occasion to visit Italy, I arrived in Naples. After admiring the marvelous whirl of gay equipages which flash along the Chiaja continuously on a pleasant evening in a semicircle along the borders of the famous amethystine bay which has made Bella Napoli a household word for beauty all the world over, I strolled toward those remarkable cliff caves which open out upon the bay and were at one time one of the blots upon Neapolitan civilization. This was not because they were not picturesque enough in their situation, but because they gave shelter nightly to a host of brigands, thieves and loafers, receivers of stolen property and lazzaroni, who actually for years defied the gendarmerie of the city. They have now, I believe, been cleaned out, thanks to the energetic measures taken by King Humbert, but they were not at the time I am writing of. These caves were supposed to be vast old wine vaults, wherein the "cool Falernian" of Horace imbibed the charms

which once upon a time delighted the epicureans of Rome. If they ever were used for such a purpose they had become deplorably diverted from their original design, and necessitated stringent measures to restore their dark recesses to a moderate condition of respectability and decency.

I had approached the nearest one, when I was accosted by a most singular-looking man. He wore no feather stuck within his hat, nor could he be called "Macaroni" like the character who used to delight the days of our youth in "Yankee Doodle Dandy." On the contrary, he wore an old felt hat which was broken into many grievous rents, a French *ouvrier's* blouse, and a pair of tattered British sailor trousers which were rolled up to near the knees. Shoes, sandals, sabots or stockings had he none. Taking off his ancient hat, he began to address me in execrable Italian which, to my astonishment, had a most unmistakable Whitechapel twang. I told him that I was no Italian, but a native of the British Isles, and wanted to know what it was he wanted. "Is that so, sir," he replied; "well, Lor' bless me, just to think of falling in with a fellow countryman in this blawsted, God-forsaken place! It do beat all. Well, sir, I wants to ax you a very pertickler favor. I am sick of spaghetti and macaroni and garlic, and bunking in at night up there in them caves with a lot of scoundrels who don't know even a word of Henglish. To tell you the truth, I'm afraid of my life among them, and, like the Irishman, sir, I never turns in at night but I expect to wake up and find myself a bloomin' corpse in the morning. Now, I wants you to help me to get along to Rome. That's what I started out to see, and I'm going to make my way there by hook or by crook."

I asked this extraordinary character how he, an Englishman, came to be in such a place, and he told me his story. He had been a compositor on one of the London dailies, and one day, being a good Catholic, he made up his mind that he would like to see his holiness the pope (who was then Pio Nono), St. Peters, the Vatican, and all the "blessed cardinals." He had enough money to carry him across the channel and a few miles beyond Calais on the road to Paris. Understanding nothing of the language, he naturally had a hard time of it before he reached Rouen, and on several occasions had a narrow escape from being arrested as a vagrant by the pompous *maire* of some small village. He pushed on, however, grubbing on such fruit and grain as he could find by the way, and at length, footsore and weary, he entered Paris. For one moment he felt proud; the next his heart sank, as he reflected that he was now a stranger in the heart of a big foreign city with only a shilling or two in his pocket, which he had tenaciously held on to. While wandering over some bridge—I think it was the Pont Neuf—with his hands behind his back and his eyes fixed intently on the ground, he thought he saw something glittering in a crevice on the trottoir or sidewalk. He stooped down and picked it up mechanically. To his astonishment it was a gold piece, and a napoleon at

that. This most fortuitous discovery gave him heart of grace, and already he saw the dome of St. Peter's and the massive vestibule of the Vatican in his imagination. After having sundry adventures in Paris, a young Englishman whom he accidentally met in a brasserie gave him a route for Naples, and he struck out across the Vosges mountains — many a weary hundred leagues — having the luck on one occasion of getting a lift from a wealthy English family, who were traveling across country *en diligence*. It would be tedious to tell the details of his tramp through Switzerland until he entered Piedmont. He could not, like Goldsmith, play the flute for the delight of some peasant family and the substantial following benefits of a humble supper and a bed, but he got along somehow — exactly how he could never tell, because he had neither the time nor the inclination to keep a diary. Wearily he plodded along on a crust of brown bread, some olives, and an occasional bunch of grapes. He passed around the Bay of Spezzia, where Shelley was drowned, but he did not care a straw for that fact, and he did not find that he had much of a hanker for beautiful scenery. Many another historical place, famous in Italian and Roman history, he passed, but he did not care a continental for their antique or medieval associations. At length he reached Naples. There is an Italian proverb, "See Naples and die." He saw Naples; he thought that certainly he was going to die. He had only rags of shoes left on his feet; the rest of his habiliments were equally disreputable. He saw lots of people driving gayly along the Chiaja whom he thought were English, but he could not beg like the lazzaroni, whose whine for help is heard on every thoroughfare in Naples. At length he heard of the caves, and thither he went for shelter. He could see no way of making money, not even by trying to help the gay families who were going off pleasure-yachting to Capri or Sorrento. He was rapidly going from bad to worse, when he met the writer, whom he told that if he could only reach Rome he was confident he could get a job either on the *Diritto*, the organ of the Vatican, or the *Osservatore Romano*, the principal political newspaper of the country. He was confident he could get a job for three reasons — he had picked up a good deal of the language, he was a good printer, and his tramp would prove him to be a mighty strong Roman Catholic. Well, he got the help he wanted. I never heard of him again.

Perhaps — who can tell? — that same forlorn adventurer and follower of the art of Caxton, who had thus literally carried out the original idea of a "journeyman" printer when every apprentice had to learn his business by traveling from one place to another, all over Europe, if necessary, now lies in a grave contiguous to that famous spot in the Campo Santo which is occupied by the remains of that sweet young singer, Keats, who wrote his own sad epitaph, "Here lies one whose name was writ in water." Or he may, after feasting his eyes upon the magnificence of the Vatican, and, haply, have caught a glimpse of Pio Nono, in his

papal chair, surrounded by all his cardinals, have tramped back to Europe to "hold cases" once more upon some of the London newspapers. If the latter possibility were actually the case, what stories he would be able to tell his brother "prints" of the wonders of that tramp he made to the famous city of the Cæsars and the Seven Hills!

#### THE MAINTENANCE OF DISCIPLINE.

BY A. H. M.

THE aphorism that the multitude suffer for the errors of the few is, perhaps, more completely illustrated in the management of workmen than in any other direction where discipline and good management are required. Occupations whose first requirement is discipline — the army or navy, for instance — assume to visit the sins of a culprit upon his head alone, while merit is rewarded, and mediocrity has its due. This may be truly said to be actuated by reason, a sense of justice and — policy. It is known that the best disciplinarians were those who had the secret of keeping their men contented without indulgence, and perhaps a consideration of the "anatomy of discontent," as it may be called, would not be out of place in solving the problem of acquiring cheerful and accurate service without galling restrictions.

An impetuous and hasty man is at a disadvantage in ruling others; he must first control himself, a task found by many to be beyond their ability. To be under compulsion to withdraw hasty orders is a prime cause of insubordination. To withdraw an order in the army or navy is looked upon as little short of disastrous, and, as a consequence, implicit obedience is secured, from the fact that no order is issued, as a general thing, without due calculation as to its justice and desirability, and then never withdrawn.

From the discipline of the profession of arms to that of the workshop is not so far a step, in this age of armies of workmen in mammoth shops and printing offices, whose many stories tower higher than the palaces of other days; and to the management of men in printing offices attention is particularly called. "Men are children of a larger growth," and to completely spoil the harmony in an office is to have a man at the head of it who is alternately overindulgent and harshly restrictive. The loss of respect is followed by contempt, and that again by intense and active dislike; for favors are quickly forgotten in a sense of injury, whether imaginary or well founded. There will always be grumblers; and if the discrimination of the management is such that it cannot discover the difference between captiousness and protests against injustice, then farewell to all confidence and charity in the establishment it controls. Threatening notices and dark and mysterious innuendoes of coming disaster to those who think themselves in permanent situations cannot but produce an evil effect — upon the timid, a desire to seek a less unquiet haven; and upon the more courageous, a determination

to defy restraint and cause as much trouble as possible. The attitude of some foremen toward the men under their sway is controlled frequently by personal regard as apart from merit as workmen, and an error committed by one will bring severe censure, while that caused by another will be condoned. Some foremen accept and demand favors of the workmen—a species of blackmail—and their yoke is not a light one, their favor being shown to the highest bidder, irrespective of the interest of the house. The position of the latter class of foremen may be likened to that of the Irish gamekeeper who failed to receive a *douceur* before accompanying his master's guest on a day's shooting. Pat was silent and surly, but the gentleman was in good spirits as he had remarkable success. Upon the sportsman bringing down a brace of fine birds, he exclaimed, "Pat, that was a good shot?" "Och, sure the fall ud a kilt them anyway!" was the disappointing reply, as Paddy very leisurely deposited the birds in the gamebag. This caused some chagrin, as a matter of course, but to make matters a little pleasanter a few shillings were slipped into Pat's hand just before another covey of birds arose. The sportsman took a hurried aim, but missed outrageously, and, standing transfixed with vexation, muttered, "Well, that *was* a bad one!" "Bedad, yez made thim lave that, anyhow!" exclaimed Pat loudly and cheerfully, as he felt the shillings rattle in his pocket.

Happily the management of an office is seldom committed to the charge of such men; but just such evils exist, incredible as it may seem. The discipline of an office is a question to be viewed from so many different sides that it is difficult to find two offices wherein the policy adopted is the same. It will almost go without saying, however, that due consideration for the worker will never result in loss. Unreasonable rules may show a little, petty economy; but the large-minded policy that takes a full view of the situation, from the smallest present detail to the most distant final result of a certain course of action, finds itself sustained by the *savoir faire* of those whom it controls: and a desire shown to give justice to all employed, will seldom fail to win the support of every fair-minded man against captious grumblers.

Written for THE INLAND PRINTER.

#### A CHAPTER ON APPRENTICES.

BY M. STANISLAUS MURPHY.

AS the wheels of time and progress revolve from year to year, effecting changes and improvements not only in nearly every branch of industry, but also to those connected with them as well, it is natural that each one should manifest an interest in this particular to the business in which his is directly concerned, and note some of the changes which are occurring. Thus it is that a certain matter in connection with the printing business has claimed my attention for a long period, and is a theme which affords ample discussion for members of the craft at any time,

and when good, practical suggestions are offered, if heeded, will prove advantageous to those interested.

It is an indisputable fact that the apprentice is an important factor in whatever occupation he may be engaged, and in no business is he more recognized as such than in ours. It is in reference to him that I desire to speak at the present time. In discussing this important question we must first remember that we were once apprentices ourselves, and some of us were not little ideals of perfection either. We should think of this when we are apt to criticise beginners too severely for their inability to grasp ideas which took you or I quite as long, and perhaps longer, to acquire. Remember that the knowledge we possess of the business was not gained in a month nor a year, and that something we were unable to accomplish ourselves must not be expected of others.

With the progress of time have come changes of ideas in regard to how a trade should be learned, not only on the part of employers, but also to apprentices as well. Time was when opportunities for acquiring a thorough knowledge of the printing business were two-fold greater than they are at present. In those days it was customary for an employer to make a personal investigation as to the progress an apprentice was making in regard to learning his trade, and it afforded him pride and pleasure to see such apprentice go forth a thorough, practical workman. In those times a boy was allowed to set something besides "straight matter," and it did not make much difference whether he set 1,000 or 5,000 ems per day, so long as he gave promise of becoming a competent workman. And apprentices in those days appreciated the kindly interest manifested in their welfare, which was an incentive to work diligently and faithfully and they applied themselves strictly to their work, and, as a consequence, in a majority of instances, became good practical printers.

But things have changed since then, for at the present time apprentices who can set the most type, and set it fairly well, seem to be the most desirable to employers. Little heed is paid as to the progress they are making toward becoming thorough workmen, and consequently, the country is being flooded with incompetents, who are oftentimes made to feel their position keenly when they go to an office, and because of their inability to set some intricate piece of work, are told to go and learn their trade over again. This is what is liable to occur at any time to the "straight matter" printer, he who, while serving his apprenticeship, must imagine that he is on a prolonged fishing excursion, for his sole anxiety appears to be in getting possession of a "big string." The most desirable thing nowadays to the average apprentice seems to be the ownership of a "card." With that he believes success is assured, but how often such theories are proven to be utterly fallacious. How anxiously the weeks and months are enumerated that intervene between the beginning and ending of an apprenticeship, and how often the discovery is made that after serving three or four years the

wrong trade has been learned, and that instead of an apprentice becoming a good, practical printer, he has developed into a full-fledged botch. There are other things to be considered besides getting possession of a journeyman's credentials, as they will avail you naught if you are not competent, because credentials will not set a daily paper. In your anxiety to reach the goal do not ignore the most essential thing—the acquirement of a thorough mastery of the business. But the modern apprentice is not always at fault for the inferior knowledge he acquires of his work. In a great many instances he is given no opportunity to tackle anything but straight composition. There are, in fact, too many employers who expect a man's work for a boy's pay, consequently he is not allowed the time for proper practice.

To the apprentice who has all the advantages, my advice is: Be content to become a journeyman when you have demonstrated by your ability the right to the title as such. Do not overestimate your capabilities, because you are liable to undergo the disappointment of seeing your mistake. Take your time, and whatever piece of work you undertake to do, endeavor to master it before you leave it. Remember that whatever is worth doing, is worth doing well. By so heeding you may be saved much disappointment and many trying perplexities.

### THE ROAD TO SUCCESS.

A NEW YEAR'S NIGHT PHANTASY.

BY G. BOEHM.

FRANÇOIS COPÉE, if I mistake not, has written a novel which the English translator has named "Disillusions." In it the author accompanies his hero from childhood to the grave, showing him at first to be a man whose breast is swollen from ardent endeavor to look at all sides of life with the eyes of the idealist, and who, on various ways and stages through his life, experiences severe disappointments. The rosy light of juvenile enthusiasm soon darkens, and at the end of the story there are so many shadows in the picture that the reader can hardly see a ray of sunshine. One is inclined to take the author or his hero as a pessimist of the clearest cut, rather than recognize in the latter the fiery, gay, all-embracing figure of the youth of previous chapters.

The worst in this beautiful picture as drawn by Copée is, that it is not fiction—it is the naked truth as we find it in every-day life, and in the life of almost everyone. Whosoever has the misfortune—this may seem paradoxical but it is not—to be born with an inclination to look at everything through rosy glasses, will feel it the more when arriving at the conclusion, a point which must and will be reached in everyone's life if sufficiently long to allow for any experiences, that the waves of enthusiasm for this or that which excited his bosom were but caused by a false impression of men and

things—different from what they actually are; an *experience* really due to *inexperience*, which must disappear like the mist on the river as soon as truth asserts its right of prevalence over the nebulous creations of imagination.

I have often heard the discussion in business circles that one may start out with the best intentions to do the right thing, to set an example to other people and never move a finger's breadth from the path selected, and still ere long this personification of system and good-will lands within a point in a totally different direction from the one chosen at the start. I remember well a young man who had started in the printing business with the very best of intentions. He was to do no other than the best class of work; his examples were specimens of the Haight, the De Vinne and other renowned presses; on his bookshelves were to be found the classics of the printing fraternity; he studied the theory of colors, the system of symmetrical composition, etc. No specimen of odd and queer work passed his eye without critical comment. To make a long story short, he was a model for the craft, such as we "write and read about," but, alas! such as we cannot find in the practical push of business life, simply because—it does not pay. In this age of intense competition the enthusiasm of the young man whose heart beats higher when he reads and speaks about the masterpieces of old printers, is totally out of place. This is in the main a money-making decade, and all manner of work is directed in that direction, or will have to be paid for by the enthusiast himself through loss of time, ergo, the lack of compensation for labor spent. There are a conspicuous few whose reputations for exquisite workmanship permit them to indulge in this class of heart-elevating work without a pecuniary loss; nay, even with a decided gain for their reputations. Their trade demands this class of high-grade endeavor. But how few, how very few can permit themselves this luxury and indulge in it! There is the De Vinne press of New York, for example, which may be said to be at the top of the ladder in this regard. Its imprint is considered a guaranty of first-class, exquisite workmanship. Mr. Theodore L. De Vinne is known far over the limits of the trade circles as a "learned printer," and anyone who has a volume, a job to do which requires particular technical attention, is apt to go to his office. This is a blessing, the value of which can but be understood by one who has started out with the "De Vinne press" intentions before his mental eye and the motto *In hoc signo vinces*, and who has gone through the experience of insufficient orders and the demand for low figures, which slowly dragged him to the bottom of the craft, bleeding, aching, may be, but still strong enough to grasp the straw of the drowning, *quantity not quality*, and save himself from ruin.

This is a sad, a dark picture, but it is not merely imagination. How many of the thousands of printers in this country can indulge in the luxury of exquisite workmanship? The thrift goes in a different direction; not that the demand for good work is not very apparent,

but it is almost invariably accompanied by the request for low prices, and the former is frequently, *very frequently*, sacrificed for the latter when both cannot be furnished without conflict.

Machinery built nowadays is constructed with the view of doing quick work. True enough, the one doing the best work under the circumstances will have the preference, but the matter of speed will always remain the great desideratum. The market for the quick worker is incomparably larger than for the exquisite producer, in machinery as well as in human labor. The vast majority of master printers must compete with prices rather than with workmanship. The deteriorating influence of this fact is or will be sadly felt. The slur, the slob, the incompetent hustler is threatening to gain the top of the heap and to crush the tender system of the fine worker.

Competition, the life of trade, will soon dig the grave of respectable work. The prices obtained for quantities are almost ridiculously low, and one only wonders how such prices allow any margin for profit at all. Truly, my dear, enthusiastic fellow, drop your good intentions from the start and you will fare better! Fine work requiring time pays well occasionally, but—occasions are very rare. Leave it to firms which have sacrificed years of labor and suffered disappointment and loss to obtain their reputation, and are now gathering the fruits of their long-sown seed. The secret of success lies in the cheapness of your ware. If your neighbor furnishes circulars at 30 cents per thousand in quantities, you must try to furnish them at 25 cents and make money by it. How can this be done? Well, I do not know! I do not know your business facilities; I do not know whether honesty will do it, but if you want to make money you must do it, somehow or other. Beat! beat! beat him! that is the motto of success. The motto of our forefathers, "honesty is the best policy," has lost its importance at the present time; it has changed, it seems, to "Underselling is the sure road to success." The entire attention of the modern business man is directed toward the focus, *sell at the lowest*. Therein really seems the crown to his success. The means to reach it are frequently dirty, low, despicable, but who will care, when you are decorously retired, whence your wealth comes, or how you have acquired it! Nobody in the world, perhaps! You are simply a "successful" man; the stench of the cadavers strewn upon the road you have wandered, the—to say the least—doubtful means applied to the practices by which you have acquired your wealth, do not reach the nostrils of your present associates; to them you are simply a "rich and successful man."

My observations lead me to believe that industry is frequently driven to the verge of insane competition, which has no other object than to kill industry. For, sure enough, if the industrious day and night worker sees that he must sacrifice his entire self merely to come up to the demands of the buyer, without a paying profit—that he must work to the utmost simply to keep alive

and honest—then the industrious worker must admit he is a fool to eke out an existence in such a manner, and will give up the struggle, or, which is more frequent, will change his methods.

I have had occasion, and made it an object, to study the situation among the smaller and middle class offices, and have left the field convinced that something ought to be said to halt the rolling stone of disaster. Competition among this class is crushing the staunch—the morally best ones—and driving the others—the morally weak—straight into the strata of dishonesty. Few can be found among all that vast class who have not started in with the best of intentions. Many of them, enthusiasts, like Copée's hero, have been disillusioned and are hardly capable, at present, to continue the struggle. The ghost of failure stares into their countenances; the bridge which divides them from disaster is but a narrow plank. I am convinced, earnestly convinced, that, among the best of these unsuccessful strugglers, many a hand creeps slowly up under the coverlet toward the region where the heart beats, in the early dawn of morn, and the ugly thought traverses the poor brain, "Ah! if it only were at an end!"

Pshaw! no more of these pictures! While General Booth's book is creating a furore on two continents, while all the world is debating the possibility of the project of this noble soul to clear the earth of its poor and wretched beings, let me indulge in the thought that this "New Year's Night Phantasy" will help to draw attention to a situation which, I hope, may not be as serious as I think it is, and help, for the sake of many, to check in a manner unhealthy, ruinous competition and do its share in finding the real "road to success."

#### A VALUABLE SUGGESTION.

A NEW ENGLAND pressman writes, under date of January 21: "For the benefit of anyone who has to print from a large, solid plate, I send the following method which I have adopted, which has saved me a great deal of trouble, and which I claim as an idea of my own. Take a piece of common pine board, type high, and a piece of thick tin, or zinc; have the board exactly the size of the printing you want, but have the tin or zinc one inch longer one way; then make a scoring in the tin or zinc so as to have one-half inch hang over the block on each end. Bend over so as to lay on one side of block. Take some three-quarter inch brads, and nail on each end, and you have a better block you can print from than one which would cost you twenty times as much. Be sure, however, you have the ends that you nail down in a line with your bearers. I have printed from a block such as I have described, one yard square, with better results than from an electrotype, the tin requiring less impression than the electro, for when the tin comes in contact with the material to be printed on there is a great tendency to draw the tin toward it. I hope this suggestion will prove of value to some of your readers."

### THE NEW SIDE-GAUGE.

FOR ALL JOB PRESSES.

FIRST ever invented for the purpose, and offered to the trade at so low a price as to make it look as though it was a sham. But it will do wonders, and when we think how often we have wanted a side-gauge that we could use without dispensing with the gripper, we are surprised that it was not thought of before; and then

to be presented in such a simple form, and in a single piece of metal! It can be crowded right between the gripper and the tympan without smashing, losing its elasticity, or bearing off the gripper. Don't you believe it? You will as soon as you try them. You will also find in them many more uses too numerous to mention in an advertisement; and all for the small sum of

75c. per Dozen, assorted shapes. 25c. per set of three.

SOLD BY ALL DEALERS AND BY THE INVENTOR AND MANUFACTURER.

# Colt's Armory Platen Presses.

BUILT IN FOUR REGULAR SIZES AND EIGHT STYLES.

ADAPTED FOR LETTERPRESS,  
TINT AND CUT PRINTING,  
HOT STAMPING, EMBOSsing,  
PAPER BOX CUTTING,  
AND CREASING, ETC.

THE SWIFTEST,  
THE STRONGEST,  
AND THE  
MOST DURABLE  
PRESS MADE.

## CONTROLLING ADVANTAGES.

The controlling advantages in the mechanical movements, and to be found only in our **COLT'S PRESSES**, may be enumerated as follows:

The rolling platen motion — frictionless.

The direct slide to the impression, during which time the platen is firmly locked, and must make an absolutely square, perfect impact upon the types.

The chase-latch, operated by a pedal, leaving both hands free to manipulate the chase.

The improved system of ink distribution, surpassing any attempts heretofore made, consisting in a simple arrangement of self-contained gears to reciprocate the main ink cylinder. In this wise cross-line distribution is effected, not only upon the distributor stocks, but directly upon the form inking rollers as well.

Separate journal boxes for the distributor stocks, avoiding wear of the carriage ways.

The carriage action entirely remodeled, with means for stopping the form rollers, at the will of the feeder, upon the ink cylinder.

Impression throw-off and adjustment combined.

New platen motion for feeding; an entirely original system. By this arrangement the platen is constantly moving; but during the time corresponding to the old stop or "dwell" the movement is very slow. This has uniformly been declared the most desirable motion for accurate and rapid feeding that has ever been applied to platen presses.

New belt shifter and automatic adjusting brake combined.

A most effective device, by which means a single thrust of the hand shifts the belt to the loose pulley and applies great friction to the fly wheel, making it possible to stop the machine almost instantly.

## "IT IS SIMPLY GREAT."

WILLIAM H. BURTIS, Esq., Artist Printer, of Rochester, N. Y., writes us as follows:

"To say that I am satisfied with my quarto medium does not express it. It is simply great. I have printed 1,000 envelopes in 25 minutes; 5,000 circulars, set up twice, in 1 hour 35 minutes; have started press with fountain at 9 A. M., run until 10.45 P. M., and made 19,000 separate impressions, and with two on sheet, 39,000 impressions. How is that for a day's work? And think that one-eighth of a horse power electric motor drove it!"

## "PRINTED ENTIRELY UPON THE COLT'S ARMORY PRESS."

In regard to Messrs. EARHART & RICHARDSON'S exquisite specimen sheet, which appeared in the December number of THE INLAND PRINTER, they write us this:

"Your favor of December 26 to hand this A. M. In reply have to say that the specimen sheet which you refer to was printed entirely upon the Colt's Armory Press, in six colors, single rolling. The presswork was pushed through very rapidly, owing to the fact that we were somewhat late in commencing the printing. You are entirely welcome to refer to this sheet as a specimen of work done on the Colt's Armory Press."

*Catalogue on application.*

A TECHNICAL JOURNAL, DEVOTED TO THE ART OF PRINTING,  
A. C. CAMERON, EDITOR.

Published Monthly by

THE INLAND PRINTER COMPANY,  
183, 185, 187 MONROE STREET, CHICAGO.

H. O. SHEPARD, *Pres.*; C. F. WHITMARSH, *Sec.*; D. L. EVANS, *Treas.*

Address all business correspondence to the Inland Printer Company.

Entered at the Chicago postoffice as second class matter.

CHICAGO, FEBRUARY, 1891.

#### SUBSCRIPTION RATES.

TWO DOLLARS per annum in advance; one dollar for six months in advance sample copies, twenty cents each.  
FOREIGN.—To countries within the postal union, eighty-five cents per annum additional. To Great Britain and Ireland, postage paid, twelve shillings per annum in advance. Make money orders payable to H. O. Shepard.  
SUBSCRIPTIONS may be sent by express, draft, money order or registered letter. Postage stamps are not desirable, but if necessary to remit them, one-cent stamps are preferred. No foreign postage stamps accepted.  
CLUB RATES.—Six or more subscriptions, sent at one time, one dollar and fifty cents per year each. Cash to accompany order.

THE INLAND PRINTER is issued promptly on the twentieth of each month, and will spare no endeavor to furnish valuable news and information to those interested professionally or incidentally in printing, engraving, electrotyping, stereotyping, bookbinding, and in the paper and stationery trades. Persons connected with any of these lines of industry will confer a favor upon the Editor of this Journal by sending him news from their section of the country pertaining to the above trades, particularly individual theories and experiences of practical value.

THE INLAND PRINTER publishes its net rates in each issue of the paper. No agent or representative of this Journal is authorized to deviate therefrom or make any discounts. It solicits advertisements from dealers in or manufacturers of any goods used by printers, bookbinders, stationers and similar lines of trade. Its value as an advertising medium is unquestioned. The character of the advertisements now in its columns, and the number of them, tell the whole story. Circulation considered, it is the cheapest trade journal in the United States to advertise in. Advertisements to insure insertion in the current number should reach this office not later than the fifth of the month.

#### ADVERTISING RATES.

SPACE.	ONE MONTH.	THREE MONTHS.	SIX MONTHS.	ONE YEAR.

#### WHAT IS THE REMEDY?

AS its readers are well aware, THE INLAND PRINTER has always claimed to be an independent journal, whose columns could not be used editorially to give expression to any opinions which were not the result of our honest convictions. Our purpose always has been—and we trust always will be—to advocate the best interests and produce the well-matured thought of the printing fraternity, to comment thereon and, when necessary, in our judgment, to frankly and openly attempt to help those who seem to be in the wrong to see aright.

With the above preface we propose to somewhat briefly refer to the merits of the typefounders' war as seen from the standpoint of the observant printers of this country. We have heretofore refrained from so doing under the hope and belief that within a reasonable time the senseless strife would be brought to an end; but as nearly two years have elapsed since its baneful effects have been felt, and matters seem to be growing worse instead of better, the present seems an opportune time printers should have expression given to their views.

That they are most deeply interested in the fluctuation of prices in type requires no argument. The products of the typefoundries of the United States are about \$5,000,000 in value per annum, and it is probably fair to estimate that the average life of type is six or seven years. It will therefore be seen that the American printers have invested about \$30,000,000 of their capital and savings in type. This is a vast sum, but we do not think it overestimated. Few interests in any business are larger, and at present writing we know of none which are being subjected to such terrible and unreasonable shrinkage. Well is it then that the evil complained of should be thoroughly discussed, and a remedy sought for. The cause of this war, for war it is, is unquestionably overproduction of type by the foundries, which has inevitably led to a system of throat-cutting competition. Whether this is attributable to our national policy of protection is a question on which there are many divergent opinions; but no matter what the cause of this overproduction, it is evident that overproduction is the cause of price cutting; and since this evil has assumed such proportions that it threatens to wipe out the savings of years of thrifty business, it is high time for those most deeply interested to speak out in defense of their rights and property.

Be it remembered, printers do not object to the natural and healthy lowering of prices. They expect that the price of type will fluctuate, as do articles of other manufacture. Every business, intelligent printer, however, not only charges off yearly enough of his profits to offset the wear and tear of his material, but sufficient also to bring it down to any probable lowering in the cost of production; but when the typefounders go to war and attempt to exterminate enough of their fellows in order to leave the field free to the survivors, we realize that the tactics adopted are of a character to

do more harm to the employing printer than themselves. The value of the plants of the typefounders is, we believe, estimated at about \$6,000,000, and of this amount only about one-fourth, or \$1,500,000, is invested in type. So if, by giving fifty per cent discount, they succeed in wiping out half their number, they will approximately cause a loss among themselves of not more than \$3,000,000; but this cutting of values in halves will cause a shrinkage of at least \$15,000,000 among printers, independent of the hundreds who will be ruined in the meantime.

But many of our readers may say they are not aware that fifty per cent discount had been given on type. This is no doubt true, and therein lies one of the most indefensible features of this war. As is known, the old and established printer has, in the main, his body and display type supplied from one particular foundry, and to him is given little if any more rebate than was formerly allowed. Under such circumstances he is *compelled* to buy from that particular establishment, or else indiscriminately mix or virtually throw out the greater portion of the material in his office. The typefounder, aware of this fact, declines, unjust or inconsistent as it may seem, to sell at as low rates to the old as he does to the new customer. And because of this unhealthy and unbusinesslike inducement, thousands of mushroom printing houses have been established during the years 1889 and 1890, many of them under the semi-protection and patronage of the founders furnishing their outfit. Of course they partly filled the places of some establishments which had been ruined by low prices and unhealthy competition, but through the lack of business experience of their management, instead of benefiting the trade they are daily demoralizing it, and helping to bring down the price of printing to starvation rates. It would be interesting to go into the ramifications of this part of the subject, but space will not permit.

Though expecting some reduction in the price of type in sympathy with most every other manufactured article, we are disposed to believe the statement made by some of the best standing founders, and others who are in a position to know the facts quite thoroughly, that considering the better quality of metal required in type by the faster running and harder wear of presses, and the better grade of finish necessitated by the advance in artistic printing, there is no reason to believe that the cost of production of type has been in the past five years more than ten to twelve per cent on the average, yet, in the face of this fact, in many instances, large dresses have been furnished at from fifty to sixty per cent discount; and the founders doing this sort of business have openly declared that they did it in order to injure a competitor, or to retort in kind for like treatment. This is competition with a vengeance, but printers cannot lose sight of the fact that no matter how much they pay for their type, even a few such sales practically fix the commercial value of their plants, on the same basis, for the simple reason that it proves they could be replaced at a like discount.

It might be a good idea to let the founders fight out their battle in their own way, if, in the encounter, they did not deal to the printers the worst blows, and more of them, than to themselves.

But why is it that not a single typefoundry has been forced to the wall during these two years of warfare? Simply because, as already referred to, each has a nucleus of patronage which is virtually compelled to stick to it through thick and thin, no matter whether the discounts afforded be just or unjust, or whether the same material would be furnished a new customer at more than double that discount. Thus we see how hard it is to ruin a founder, and how easy to cause ruin or enormous shrinkage in value to printers. This game of battledoor and shuttlecock has been played long enough; and having, as we think, shown its injurious effects on the trade at large, we propose, in our next issue, to refer to what we have reason to believe would prove a remedy for the same.

#### A PLAIN QUESTION AND A PLAIN ANSWER.

A LOS ANGELES correspondent, who signs himself a non-unionist printer, under a recent date, writes as follows:

SIR,—In an article in the August number of THE INLAND PRINTER I read the following extract from an article headed, "Civil Service in the Government Printing Office": "Suppose we should succeed in overcoming all difficulties attendant upon the examination, and certify to the public printer the names of three candidates who were highest upon our register, and those persons happened to be non-union men, what would be the result? What would become of the public printer who would appoint them? What would become of the administration which would support him if he insisted on retaining them?" In a sense of fairness I want to ask what this means. Does it mean that a free born American citizen, said to be or who should prove to be a competent workman, is to be denied the right that is extended to another no less competent, simply because he does not belong to the typographical union? What guarantee to the government whom he expects to serve is his belonging to such a body? Does it insure him to be a competent, sober, industrious workman? You say no. [See article headed, "Meeting of the United Typothetæ," third paragraph.] Then, in the name of equal rights, why is it so? Has the union built a wall around the office and placed a man at the gate who says, "You must join the union. You must think as we think; you must subject your future actions (mechanical) to our will or you can't come in."

If you will answer this question in as extended a manner as you may deem necessary, you will greatly oblige. Yours, etc.

If our interrogator will again carefully read the article referred to, he will find the language to which he takes exception was not published as the views of our correspondent, but as the deliberate opinion of "Commissioner Lyman," a government official especially appointed to examine into and report upon the subject, for which we are certainly not responsible, though we have no doubt that gentleman is perfectly able and willing to give a reason for the faith that is in him. The gist of the article mentioned— and we are in perfect accord with the position there taken—is that a civil service examination as applied to the applicants for employment in the government printing office is

worthless and impracticable. That it is far more important for an appointee to be a skillful, *thoroughly qualified printer* than that he should be able to tell what was the religion of the Aztecs, the composition of the soil of the Azore islands or the comparative temperature of the Black sea and Gulf stream. We have read questions submitted to candidates for positions in the postal service which would puzzle a Harvard professor, and which had no bearing directly or indirectly on the duties of the office to which they aspired, or their qualifications to fill the same.

In support of his argument our correspondent truthfully and forcibly said :

In the government printing office, more than any office in the country, a peculiar education and exhaustive knowledge of the art is required. The work is peculiar, arbitrary, and runs from "plain reprint copy" through all the various grades of scientific, technical and tabulated; and many a compositor who had an A1 reputation finds himself unqualified to do the work required without instruction and considerable perplexity; to serve a new apprenticeship.

\* \* \* \* \*

And should he prove skilled in the labor, has he not filled the bill of requirements? Very far from it. There are some virtues beyond typesetting, making forms ready and directing presswork. Of course most printers are and all printers should be masters of orthography, grammar and punctuation (in the government printing office he will find a system completely upsetting all preconceived ideas), with a reasonable amount of intelligence and a "fair education." There is no necessity of his being a linguist, historian, scientist or versed in ologies or abstruse calculations—though, to the credit of the craft, many are.

These taken for granted, he would, under civil service rules, be qualified. Would he? The most important attainments yet remain unmentioned—punctuality, sobriety, gentlemanly deportment, and these, although virtually ignored, should receive the closest attention. Make them, other qualifications being equal, obligatory, and civil service might be beneficial.

To return to the original idea. Any examination other than a practical one (with character of applicant considered) would be absurd and of no effect—would be impossible. This, we are glad to find, the commissioners know, if others remain in ignorance. The printer, though standing in the highest and most intellectual rank, is still a mechanic, can never be anything else, and should be proud of the name so many, from Franklin down, have honored. As a mechanic, then, he must be judged, and not as a scholar, and the ordinary civil service questions would be the rankest nonsense, as, we regret to say (not bearing upon the work to be done), they are in the great majority of cases.

\* \* \* \* \*

In a nutshell, all of civil service that would be of use to workman and public can be found in a better, longer, more thorough system of apprenticeship.

Again, if our interrogator will refer to the editorial paragraph to which he directs attention he will find we were alluding to the (in our judgment) senseless antagonism unhappily existing between the Typothetæ and the Typographical Union, and the necessity for united action by both parties before an effective apprenticeship system—the need of the hour—could be enforced; and that so long as such estrangement existed both parties were the sufferers thereby. We said :

Apart from matters of a purely business character, however, there is another question within the jurisdiction of the United Typothetæ to which it has devoted considerable time and attention—the apprenticeship system—in which THE INLAND PRINTER

has also taken a deal of interest. And we here repeat what we have stated a hundred times before, that no *valid* reason can be given why the Typothetæ and the Typographical Union cannot act in harmony on this question. In fact if there is one subject upon which the employers and proficient workmen can and should unite and coöperate, it is on the recognition, adoption and enforcement of a thorough apprenticeship system, because their interests are identical.

In this connection we penned the paragraph to which he refers. It reads as follows :

We are well aware that under present circumstances, membership in a typographical union is *not* what it should be—a guarantee of qualification, and will not be until a common line of policy is adopted. The employer takes exception because he is too often compelled to pay the incompetent the same rate of wages as he pays the competent printer; while, on the other hand, it is claimed that self-preservation being nature's first law, the admission of these half-fledged printers to membership is justified because employers have no scruples to engage their services when they can be used to defeat the claims of trades unionists. And thus matters go on from year to year.

To every word of which we again say, *amen!*

With regard to our position on the right or wrong of trades' unions we will aim at least to give a frank and unequivocal reply. We have no fight to make on organized labor, as such. On the contrary we believe, under existing circumstances or conditions of society, in the right of workingmen to combine for *legitimate* purposes, and to secure the highest wages they can command for their services; and we believe further, that their status, socially, morally, intellectually, politically and financially, has been improved by the establishment and influences of trade organizations. The skill, mechanical and otherwise, which it has taken years to acquire, is their capital—their stock in trade; and we insist they have the same right to combine to protect their interests, as the representatives of capital have to combine to protect theirs. In their petty squabbles we take no interest, and when they go beyond their legitimate functions—the objects for which they were organized—THE INLAND PRINTER will be the first to condemn such action—in the future, as it has in the past.

Relating directly to the burden of his complaint, the present control of the government printing office, and the exclusion of non-union men therefrom, we desire to say that experience has demonstrated the capacity of its present employés; and unless an appointee proves himself a qualified workman, his unionism does not avail him twenty-four hours. In this utilitarian age mere sentiment must give way to the stern logic of facts, and in our judgment it would be a suicidal policy for any public printer, in order to gratify the crotchets of one or a dozen applicants, to risk a certainty for an uncertainty, and jeopardize public interests and the work of twelve hundred proficient. Oil and water will not mix, and it is not in accord with human nature that men will quietly submit to the presence of those who have done all in their power to antagonize and destroy an organization to which they believe they are indebted for the scale of wages they are now receiving. It may and perhaps does seem unjust, from a certain standpoint, that even

an avowed enemy of a typographical union cannot find employment in the establishment referred to, but we must look at things as they exist and not as we would have them; and as the mountain will not go to Mahomet, we see no other way out of the dilemma than that Mahomet must go to the mountain.

#### PUBLICATION OF THE LAWS.

EVERY person is presumed to know the law, and ignorance thereof is not received in the courts as a valid excuse for its infraction. And yet, no adequate means is taken by the legislature to acquaint the people with the enactments at each biennial session. True an edition of 8,000 copies is printed by the public printer, but provision is made for the distribution of this edition to state and federal courts, judges, members of the general assembly, libraries, etc., and not one copy can legitimately get into the possession of the business man, the mechanic or the farmer. In many of the states all laws of a public nature are printed by the secretary of state in two papers in each county of the state, and paid for by the state at usual rates of advertising. That is a measure of reform which the Press Association of Illinois should press upon the attention of our solons now in session at Springfield. It is so manifestly just and so clearly in the interest of the common people, that there ought to be no hesitation in passing such a bill. It is to be hoped that the proper authorities in the Press Association will act promptly in this matter.

#### TAX-LIST ADVERTISING.

SENATOR CRAWFORD, of Rock Island county, has introduced into the Illinois senate a bill providing for a reduction of the printer's fees for publishing the delinquent tax list. The rates now paid for this work by the several counties of this state are lower than the advertising public is charged and are, therefore, reasonable. Senator Crawford's bill proposes an unwarrantable cut from 20 cents to 5 cents for each town lot, and from 20 cents to 10 cents for each tract of land. The amount of free advertising and puffing bestowed upon these embryo "statesmen" assembled at Springfield, by the country press, when they are seeking election, entitle publishers to at least fair treatment from the legislature, when subjects affecting their business are under consideration. The protest that should go up from all over the state against the passage of this bill ought to be so loud and strong as to overwhelm not only the iniquitous measure, but its ungrateful author as well.

#### OUR BOTCH SPECIMENS.

SEVERAL of our readers have expressed the opinion that there is little if any danger to be feared from the competition of so-called amateurs, and that too much prominence had been given to their productions. The specimens shown in the present issue are from offices — we are assured by those sending them — which claim to do first-class printing. And yet we are told there is no need for an apprenticeship system!

#### A DOUBLE TYPE COMPOSING STICK.

THE device shown herewith, which has been patented by Mr. James G. Webster, is designed to practically serve the purpose of two printer's composing sticks, and is designed especially to meet the requirements of printers where the variety of work demands quick adaptation, accuracy and convenience. The side-flange of the stick has a longitudinal slot through nearly its whole length, along which travels the thumb-screw

WEBSTER'S PRINTER'S COMPOSING STICK.

by which the main set-bar or knee is held in place and adjusted as desired for any required measure. The other set-bar is shorter, and is fitted to slide in and along the base part of the main knee in a similar manner, being adjusted in the desired position by a separable thumb-screw, the finger-piece of which may be placed on the outside if preferred. Both sides of the main knee are beveled away at the bottom, where it crosses and rests on the broad flat body of the stick where the feet of the type rest. The inside of the other knee, and also the inside of the end piece, are similarly beveled at the base, thus doing away with right-angled seats for the feet of the type, which are not always accurately made, and which are liable to become imperfect when the stick is not well taken care of. These bottom bevels also allow the types to more readily adjust themselves squarely on their feet. For further information relative to this invention address Messrs. Webster & Smith, St. Johns, Province of Quebec, Canada.

#### STEREOTYPING.

NO. XV.—BY CARL SCHRAUBSTADTER, JR.

IF due precautions are taken, small plates can be cast well enough to mount without shaving, but large plates are liable to be more or less uneven, and for safety's sake are generally passed through a machine for that purpose. Fig. 1 shows the usual construction. The head which bears the knife is gibbed to a perfectly smooth bed-plate, and is actuated forward and backward by racks and pinions, the latter being fastened to a shaft on one end of which is a powerful hand-wheel. In using this machine the knife is set to the proper depth, the head run back and the plate laid flat upon the bed, being prevented from moving forward by a ledge at the front. The head is moved forward by the hand-wheel, taking off a light shaving. The plate is then lifted and a piece of paper laid beneath it. This raises it so that the second cut will take off a little more. Usually the shaver is set for type high, in which case an iron plate

of such thickness as the difference between the plate and type high is laid upon the bed, and the plate laid upon this. By removing the iron plate the shaver can be used for type-high work. To prevent bowing of plate by too sudden a start, the edge on which the cut is started is usually beveled with a plane so as to com-

FIG. 1.

mence gradually. It is best to hold down the plate with one hand while revolving the hand-wheel with the other. On large plates several persons are required to do the work, as in case the shave is not taken quickly and evenly, the back may present inequalities. Large shavers are generally operated by steam power, in which case but one man is required. They are seldom used except in foundries doing electrotyping as well, and there are a number of different constructions.

A roller or similar device is sometimes placed before the knife to prevent the plate from bowing. Jobwork is generally mounted on wood. The softer varieties, such as pine, cannot well be used, as the continual strain against the plate will compress the wood, making the printing block lower. This is true to a limited extent of all woods, but in the harder varieties the compression is so slight as to make no material difference. From their nature many of the hard woods are unsuitable for mounting stereotypes, being too hard, liable to split, or affected by moisture. Those generally used are mahogany, birch and cherry, their desirability and cost being in the above named order. Mahogany is an excellent wood for mounting, but cherry is probably used more largely than any other. It should be thoroughly seasoned and dried under cover. Unseasoned

wood, or wood which has been hurriedly kiln-dried, will not answer, as it is sure to warp after plates have been mounted. Most stereotypers who use it in large quantities cut into lengths of two or three feet and store in their work-room for six months or more. When ready to be used it is planed down in an ordinary wood planing machine, or in a Daniels planer. This latter machine has a rapidly revolving cutter-head, beneath which a bed slowly bears the board, cutting it true. Several cuts are necessary, particularly when lumber is not true, or, as it is generally expressed, "in wind." Much better results are obtained when the lumber is fed in at right angles with its grain instead of parallel with it, as is usually done.

It is better to make the wood a trifle too thin than to leave it thick, as a block can be underlaid with less trouble than it can be planed off. Small blocks are sawed to size with miter box and saw or a circular saw. They are usually squared and brought down to exact size with a shute board and plane, shown in Fig. 2. Small blocks are generally made of a single piece, but

FIG. 2.

when of any considerable size, particularly when there is no certainty that the wood will not warp, the main piece is grooved or rabbetted like B in Figs. 3 and 4, and small pieces (A) are tongued so as to fit into the

FIG. 3.

FIG. 4.

mortises. There are special machines made for this purpose, but work can also be done with a carpenter's mortising plane. These mortises are sometimes dovetailed, the narrow pieces being slid in from the ends.

This has the advantage of preventing them from moving without the necessity of tacking or gluing together. Still another plan is shown in Fig. 5.

The main block has triangular grooves cut in the sides. As one part of the end strips receives the mounting tacks, it may be made of hard wood, such as oak.

When the blocks are very large the main piece is often made up of several small sections, a space being left between the

FIG. 5.

pairs to prevent warping in case the pieces should swell from dampness. Still another plan is to score the bottom of the wood with a saw, cutting two-thirds through, and dividing it into a number of small blocks two inches square. This reduces the liability to warp, but is objectionable on account of the tendency of the squares to break off in case the forms are locked too tightly. For

fastening the plates to the blocks wire nails are used. They should be seven-eighths of an inch long, and stout enough to be driven through the block without bending. The tacks should be driven so that the heads will not print. When space is limited, a small nail punch of the same size as the head should be used for driving it home.

Where there is no room for tacks the plate may be beveled as if for patent blocks, and the nails driven through the edge as in Fig. 6. This necessitates the block being slightly larger than the printing surface, and is undesirable, inasmuch as holding the plate by the edges leaves the

FIG. 6.

middle of the plate insecure, and if the block shrinks or is compressed by side pressure it will bow. A better way is to bore holes through the wood about one and one-half inches apart, and about one-fourth or three-eighths of an inch in diameter. The part intended for the bottom of the block should be countersunk so that a cross section of the hole is the shape of A in Fig. 7. The back of the plate being polished, the block is laid upon it and clamped tightly. Ordinary half-and-half solder is then poured into the holes from the back, the heat being sufficient to fasten it to the plate, and the countersinks holding it firmly in place.

**THE SHORTHAND GUIDE.**

A COMPLETE TEXT-BOOK FOR SELF-INSTRUCTION AND SCHOOL USE.

BY T. G. LA MOILLE.

[Copyright, 1891, by the Inland Printer Company. All rights reserved.]

**LESSON I.—CONSONANTS.**

**METHOD OF STUDY.**

**P**HONOGRAPHY is writing by sound. It requires less signs of expression: therefore, most shorthand systems are phonetic.

2. You must be thoroughly familiar with the "Principles of Pronunciation," which are to be found in any good English dictionary. Phonography is also adapted to foreign languages by the use of special characters, which will be introduced later in this work.

3. Some prefer a steel pen, others a gold one. Most fountain pens are worthless. Use a pen which shades easily. Also accustom yourself to a pencil, which should be sharp and somewhat soft. The paper may be ruled or unruled. For penciling, use unsized paper: with ink, use good letter-paper and black ink. This shorthand requires light and heavy marks, shaded or unshaded, in various directions. The best position for some persons for shorthand writing is to hold the pen, or pencil, between the first and second fingers, and steady it with

the thumb. It is a great disadvantage to write with a heavy hand. Typewriting should be acquired.

4. Every rule must be learned by heart, and every example must be understood, if the student desires the surest progress. Master each section before you take up the next one. Repeatedly write and name aloud each illustration, until it is thoroughly familiar. Test your knowledge of the lesson by the review questions. Frequently review preceding lessons. When the principles are acquired, practice the reading exercise of each lesson. Do not leave it until every phonograph is as readable as common print; then copy the reading lesson many times, or until you can write and read it correctly and rapidly. At first, make the characters as if you were drawing them. Practice will bring dexterity and speed. Make the characters small and close, but not too close and small, and thus assist your speed both in writing and reading. Ink may be cheap, but the distance your hand travels is something of an object in shorthand. After the reading exercise take the writing one. Write this exercise and read it often. Fear not labor. Burn into your memory the principles and examples. Train your hand and mind. Work some at shorthand every week-day. Do not expect to report the sermon the first Sunday.

**THE SIMPLE CONSONANTS.**

5. By a "consonant" we mean any sound or sign not a vowel or diphthong. The shorthand consonants are large signs formed from straight and curved lines, made from arcs and diameters of circles, light or unshaded, and heavy or shaded. They are derived from the geometrical forms:

6. The consonant marks should be about one-sixth of an inch, or less, in length. The light lines should be light, and the shaded not heavily shaded. The heavy curves should be shaded only in the middle. The unshaded consonants represent whispered sounds; the shaded, vocalized.

**CONSONANTS:**

WRITTEN FOR THE INLAND PRINTER.

LAW OR NO LAW.

BY DUNCAN F. YOUNG.

LAWYERS have a world-wide reputation for picking flaws, finding inconsistencies and contrarily interpreting laws. But they have a right to do this. It is their business. That is the way they make their money. When they get a chance they sometimes lend a helping hand toward enacting a law which they know is illegal and which they know, at the time, that they intend to fling brickbats at. That is their business too, and it is perfectly legitimate, so far as law goes. After

lawyers and legislators, though, there is no class in existence which can equal printers in enacting laws and then impeaching them, and for what reason is beyond the comprehension of man. It can be accounted for only in petty jealousies and chronic obstructors. In this unfortunate fact we have two living issues, each pulling hard against the other. This is both unfortunate and unreasonable. It is unfortunate because only harm can come of it—certainly no good, for a regiment in battle has no difficulty in conquering its adversary, the units of which are in deadly conflict with each other. It is unreasonable because it is opposing a decided majority. Without a majority a measure can not be adopted. Then if it is the will of the majority, why obstruct that which you have obligated yourself to uphold?

It is a God-given right, it is a constitutional right to make known your objections to any measure which may affect you directly or indirectly; but when those objections are of no avail and are useless, why continue them to annoyance and then throw every obstacle in the way of that which is the decided will of the majority and which you can not remedy? Our wisest heads have found that to enforce an objectionable law is the surest way to secure its repeal; and oppose the violation of a bad law, for that encourages the violation of a good law. Where a law is violated it is no law, but a rut in which some unwary, unpopular individual may fall. Laws are made to deal justly and equally with all, and where they do not they should be repealed, for they are then not in themselves laws.

There is such a thing as too much legislation, and I fear this condition exists among printers. This, as intimated, will do for those who are compensated per diem, occupying as much time as possible in enacting those laws which they may have the opportunity of remodeling or repealing at some future time. Laws are necessary, it is true, lest we have no order, but have these laws few and plain—so plain, indeed, that "he who runs may read." That is what printers want, and that is what they must have. When a decision is required among printers it is generally wanted instanter, and to give a decision authoritatively one has to delve among dusty books without indices, and yet he has not the time in which to do it that a justice has. And when that decision is made there is always some chronic objector who will show some obsolete law or inconsistent section contrary thereto. Then follow the disputes and bickerings, which could be finally settled by an appeal, if there be ground, from the decision made. If the decision is not sustained it does not make the appellant appear any wiser or any greater by parading his success about and telling people "I told you so." We want matters so, in fine, that there will be no grounds for complaint, no room for dispute in reason. We want laws just sufficient to cover the scope of our province, we want them concise and we want them so plain that they will not bear misinterpretation. And when these things are done we want them enforced.

and we want a proper head to see that they are enforced. There is no sentiment about this—nothing but pure justice—justice to employer and employé alike.

Nothing causes disruption more readily than impartiality, and no one can deny but that there are laws which bear unequally upon some of our members and that decisions are sometimes made within local bodies which are impartial, yet there is the law, plainly bearing more than one interpretation, on which to fall back. But this does not heal the wound in the affiant, nor does it justify the wrong. This continues until it affects too many, when, like the boy who is continuously beaten at home, they leave, even if they get nothing better, for they expected better, fairer treatment there.

### SCREEN PLATES FOR HALF-TONE PHOTO-ENGRAVING.

NO. III.—BY URANUS HORD, DAYTON, OHIO.

HOW TO USE THEM.

THE writer takes it for granted that those interested in the use of screen plates are familiar with the wet-plate process and that he need not enter into the details of preparing the bath collodion, etc., further than to say that the silver bath will stand more acid than is usually required for portrait negatives.

In order to protect the screen, and for convenience, it is necessary to have a kit with silver corners to separate the screen from sensitive plate. Fasten screen in kit, and place in holder with face of screen toward you, and after draining and thoroughly wiping back of sensitive plate, place in kit with the silver corners between the screen and plate. If you are using a stipple or cross-line plate the operation requires but one exposure, which should be about five times as long as if making a black and white negative under like conditions. Having exposed and developed the plate, should you find that the high lights are too open, with the shadows full of detail, then the screen is too close to the sensitive plate. Separate them more, which will cause the light to spread and close up the dots in high lights—a few trials will enable you to judge it properly.

But in the use of single-line plates you have an entirely different thing to deal with. The best results are obtained by using two single-line plates, one with the transparent line twice as wide as the opaque line, the other just the reverse, the opaque line being twice as wide as the transparent line. Place the line plate having the narrow transparent line in the kit as already explained and expose in the same manner and remove to darkroom, placing the plate-holder on shelf with slide toward you; withdraw the same and then remove the screen from in front of sensitive plate and place in its stead the one having the wide transparent line—this is to be placed again on the camera and another exposure given; however, this exposure should only be about one-fourth as long as the first. The object sought by this method is that by using a plate with

narrow transparent lines it admits of an exposure long enough to get all the details in the shadows without filling up the lights, thus by giving a second exposure with a screen with a wide transparent line running in the opposite direction, and exposing just long enough to cross the lights without affecting the shadows, all the details of the original are preserved.

### NOTES ON WOOD ENGRAVING.

NO. XLV.—BY S. W. FALLIS.

ELIAS J. WHITNEY, a pupil of E. Bookhout, took the management of the illustrating department in the Tract Society on the death of Mr. Childs. Whitney's engraving was generally superior in feeling, tone and finish to that of Childs, and indeed superior to any other American wood engraver at that period (the sixties). His engravings, from drawings by Gilbert, were equal in every respect to the best English engravings from drawings by this same artist, which were at the time the *ne plus ultra* of wood engraving; and although the American Tract Society for some years past have resorted to cheaper methods of illustration, such as the various photo processes of reproduction, imported electros, etc., yet they did as much as any establishment in those earlier days toward encouraging the advancement and perfection of the capabilities of the art, and deserve much credit for the present high standard of American wood engraving. They gave the impetus for the encouragement of careful study and perfection in the art.

In the fifties, several books handsomely illustrated (for the time and condition of the art) were published, which really deserve some notice. "Irving's Sketch Book" of 1852 was the most artistically gotten up book in all respects up to this date, with figure designs by Darley and Hoppin, and landscapes by William Hart, Bellew and others, the engravings being principally by Richardson. The landscapes show more tone and feeling than any former productions. The figure pieces are clean and firm, but rather poor in line, without much feeling of the pencil; in short they are painfully mechanical.

"Knickerbocker's History of New York," of this same date and by the same publisher, is not so handsomely produced, but has larger cuts, from drawings by Darley, engraved by Childs, Herrick, Harley, Lossing & Barrett, J. W. Orr, Bobbett & Edmunds and Orr (N.) & Andrew.

In 1855, the Messrs. Harper published "Abbott's Life of Napoleon Bonaparte" in two volumes, with designs by Doepler, and engravings chiefly by J. W. Orr, Richardson & Cox, Whitney, Jocelyn & Annin, J. A. Bogert, Roberts and Edmunds. The cuts by Orr and Richardson bear the closest criticism. This book deserves more credit for its numerous illustrations than for any individual excellence of any particular cut. The cuts are as a rule fully equal to the best productions of this period. These three books may fairly be considered

the first illustrated American books with original cuts. Their merits are differently defined, the "Sketch Book" being remarkable for its artistic getting up throughout, the "Knickerbocker" for its excellence of designing and engraving, the "Napoleon" for its large quantity of illustrations.

One book I have passed by which deserves especial notice, namely the "American Drawing Book," by J. G. Chapman, N. A., published by J. S. Redfield, New York, in 1847. This is a manual for the amateur, and a valuable reference book for the professional artist.

The drawings were of the most careful execution, and Chapman evidently devoted much time and careful study to them. The engravings are by Kinnersley, Herrick, Howland, Wright, Bobbett and Bookhout. The illustrations throughout are evidences of the most careful work and tax of mechanical and artistic skill, many of the cuts being filled with the most intricate crosshatching, yet preserving color and expression—devoid of any harshness usual in this method of engraving. The whole series of illustrations are purely fac similes, being drawn on the block line for line, leaving nothing for the imagination of the engraver, but testing his mechanical ability to its utmost. The scrollwork cut at the beginning, engraved by William Howland, is most exquisite in execution and bears a close resemblance to steel.

So excellent is this work that it has held its own among later works on the same subject for over forty years, and is at the present day a standard reference book, and deserves a more extended notice than I have given it; but as it can be purchased today, those of our readers who desire to become more familiar with this truly great book can do so by buying it. It costs but \$5.

(To be continued.)

Written for THE INLAND PRINTER.

#### AS TO CREDIT BY "EX."

BY SAM. G. SLOANE.

I UTTERLY abhor that makeshift, half-way credit, *Ex. or Exchange*, but I am well aware that every newspaper editor often finds himself obliged to choose between using it, giving credit where credit is not due, or appropriating matter not his own, because of not knowing to whom credit should be given. I believe in always giving full and impartial credit to whom the credit belongs. I consider it a meanness and littleness highly reprehensible for an editor to copy something from a contemporary and give credit by *Ex. or Exchange*, when he knows full well to whom the credit belongs. It seems to me this course can be pursued only through a spirit of jealousy or the fear of advertising a fellow-editor or publisher. It is to me a half confession of superiority in the one from whom the copied matter is taken. Credit by *Ex. or Exchange* appears to me to say for the editor using it, "I do not possess the ability to produce matter like this, but I do not want you to know who has."

As credits now go an editor is often forced to resort to this half-way, blind style of credit, as he frequently

finds in publications coming into his hands items, articles, etc., thus credited which he desires to use and would gladly give full credit to their authors had he the means of knowing them. The blame, for blame it certainly is, lies with the first editor copying and crediting to *Ex. or Exchange*. Let no editor fail or fear to "give credit to whom credit is due." It is the honest, manly course. If a brother editor produces something worthy of use let him be given full credit therefor, or do not use it. You will be none the worse for so doing, and a better and more cordial feeling will prevail all around.

Mr. S. B. Cook, of the *Mexico (Mo.) Register*, in a paper read before the Missouri Editorial Association, not only "hit the nail on the head" but he drove it home and clinched it in the following language: "Never credit to *Exchange*; always give the name of the paper when known. In case of sharp rivalry some papers can become so small that rather than pay the compliment to a rival of reproducing an article with the proper credit they will resort to the *Exchange* dodge. This may not be piracy, but it is equally mean, and ought to go with its companion evil."

#### TO CLEAN RUBBER BLANKETS.

The following practical suggestions to pressmen who use rubber blankets are taken from a circular price-list issued by Messrs. R. Hoe & Co.: "The use of turpentine in removing grease and color from rubber blankets is increasing to such an extent that we desire to make a few suggestions as to its use and effect. The quantity used should be as small as possible, and great care taken that it is thoroughly dried before the blanket is used in printing. Otherwise, as turpentine softens the rubber face, the blanket will be injured by the pressure of the cylinder, causing wrinkles to appear on the face. It is preferable to *clean the blanket* after work *at night*, thereby giving ample time for the turpentine to dry out, rather than in the daytime, when the press is in use. We strongly recommend the use of ammonia as a substitute for turpentine. It will do the work quicker, and generally fully as effectively, and with less chance of damage to the blanket. The ammonia should be diluted to about six to nine degrees strength (18 degree can be easily obtained and diluted with one or two parts water), and after using it, the blanket should be dusted with powdered chalk or magnesia. Ammonia will dry out very quickly (in much less time than turpentine), and when dried out leaves the blanket perfect and ready for use."

#### TYPESETTING MACHINES.

A member of the Typothetæ tells me that fully \$10,000,000 have been expended during the past twenty years on inventions of new typesetting machines. Nevertheless the old method of setting type by hand has not yet been superseded by mechanical appliances. For one reason or another the inventions have proved more or less impracticable. Within the last year, however, there has been a notable revival of interest in typesetting machines, and the prediction is made by many that it is now only a question of a short time when, for ordinary and straightforward work, the machines will be in general use. As there are no less than eleven different inventions now before the public, or soon to be placed before the public, the advocates of mechanical typesetting have a chance to prove their predictions true. The different machines appear to be divided into two main classes, one using movable type, but providing machinery for its setting and distribution, and the other discarding movable type altogether and manufacturing a matrix outright. — *Philadelphia Ledger*.

## THE LEGIBILITY OF TYPE.\*

NOTWITHSTANDING the intimate relation of literature with the foundry and printing house, by a singularity, which it may not be useless to note, the foundry and printing house have never consulted literature for enlightenment in their march and progress. Even at the present time, the printers and founders, anxious to proceed without the aid of authors, and the authors content to be brought to light by the printers, have never approached each other in consultation upon the means of preserving and perfecting an art which has the authors for principal base and the readers for chief end. Writers are, without doubt, the class who read most, consequently the most capable of judging of the manner of treating the characters and impressions to acquire the maximum of utility, convenience and agreeableness.

Since we are entered upon this subject, let us say what we think concerning the art of the engraver of letters and its natural auxiliary, the founder of characters.

The artist in letters ought to consult the *savants* concerning his work. He ought to submit his attempts to men of letters for advice, should he fail in attaining success; for approbation, should he reach the desired end. This intercourse could not fail to result in benefit, and too much praise could not be given to the zeal and modesty of gravers, printers and founders who will carry out the idea practically.

In order to judge of the value of an innovation in type, it is necessary to ask what is the end or aim of the printing office: Is it the beauty of a picture, or the facility of reading? Is it the delicacy of the form of the letters, or the evidence of that form? It is neither the one nor the other absolutely, and it is the one and the other concurrently. It is necessary that the two intentions should be combined. To reach the perfection of printed letters is to solve the problem of uniting beauty of forms with the strength of these forms, in a manner to produce the best effect upon the eye.

The letters destined to compose the writing of extreme length should be letters graven for the effect and not merely some lines in which fineness constitutes the essential feature. It is a fact that if one wishes to make some fine strokes, very thin and true, the alphabet does not offer such difficulty but that a good engraver can easily introduce some perfect strokes. This is what the engravers and English and American founders have commenced to do, and the French after them, the past forty years; they have adopted some superfine strokes. But the gravers and founders of former times did precisely the contrary. In perfecting the roman letter, which, it may be remarked, is a French character, Garamond, among others, discarded the thin, sharp lines which had previously distinguished the italic. This last was exclusively employed by the Aldis, of Venice; the Grifes, of Lyons, and Robert Estienne, of Paris. But the italic was abandoned because of the fatigue to the eye in reading in comparison with the roman, and was laid aside as soon as the roman system was established. The Vascosans, the Posuels, the Cramoisy and Anissons adopted it exclusively.

In other countries, artists of the greatest merit had pushed the art of printing to its greatest perfection, and nothing equals the beauty of style which the Elzévir and Janson gave to their books in the Pays-Bas. These celebrated printers were made a special means of assuring to posterity the transmission of literary monuments. Their system was to render the reading of books as easy as possible. Such was the spirit of edification which animated these generous printers, commendable also by the correctness, fidelity and fine harmony of their learned pages. Brindley, Faulis and Baskerville did not surpass these good French printers, who were able to oppose them with advantage. If any one surpassed our ancient *chefs d'œuvre*, the glory should be given to Bodoni, of Parma. But these illustrious printers did not employ the system of thin letters. Bodoni, moreover, embellished his letters by enriching them with the heavy strokes of the French letter. When the system of fine letters began to grow in favor in

France, the last of the Anisson, who always refused to adopt it, established a comparison destined to enlighten the public upon the defects of this innovation. Anisson took a page of impression of this system, executed it with the same spacing in letters of the same size of the Garamond system. He placed the two pages side by side upon a reading desk in front of the experts. At first they read the two pages without perceiving any marked difference. Anisson caused the reading to be repeated while stepping further away, so that it could be no longer distinguished. It happened that the Garamond page could be read several times after the other had become undistinguishable. This experience is a fact which decides peremptorily the question between the old and new types.

But it is not sufficient to know this fact. The cause which produced it must be developed. We must know why the eye, falling upon a line of the Garamond system, runs across it without difficulty, with rapidity, without thinking of the letters, and only occupied with the text, while the eye scanning a line of the fine letters, moves more slowly and exercises a species of inspection which fastens upon the characters instead of the ideas which the characters represent, which is a great inconvenience, for one should only be occupied with the subject matter, and it is not necessary for him to even be conscious that he reads.

It is because Garamond took care to bring the strength of his letters into the parts of their forms which distinguished them one from another, such as the attachments; while in the most of modern type, the heavy stroke of the characters is carried only in the part of their form common to all, such as the pot-hooks. Accordingly, when one sees the *u* or *u* of Garamond, the force of the full stroke being carried from the top or the bottom of the letter, even when the two strokes unite to form a particular letter, there is not a moment of doubt before distinguishing the exact character. On the other hand, when one sees the *u* or *u* of the modern type, the lines of attachment are so fine that the eye must be continually exercised in order to distinguish one from the other. It frequently happens that in removing the page a short distance the *u*, the *u* and the *m* only form some parallel lines. In adopting these fine strokes the founders have not only weakened the forms of the letters, but also the color. In the management of these letters, it is necessary to use lighter tints of ink, a circumstance which has made the books of perfect impression exceedingly rare, and introduced the pale tints which give to the books thus printed a delicate beauty of a faint type, which makes one almost afraid to handle them. The letters of the Garamond type unite, on the contrary, beauty of form with force of outline, taking always a deep black, which catches the eye and invites a reading.

The books of Vascosan, Cramoisy and Anisson, all distinguished by this strong tint, are still the charm of readers. They will always be sought for on account of this essential merit of the impression, which is the legibility, and the gravers, founders and printers of our time cannot be too strongly urged to promptly reestablish this prime quality in the works which they prepare for us.

The fashion is a thing which imposes itself, but the fashion is not always perfection; in many cases it is more rational to consult principles rather than taste.

It is fatiguing to read these pale thin letters continuously, and many persons are not able to read them at all. It may be remarked here, that printing, which is only an art expedient for supplying the place of writing and engraving, has finally taken the preference over both.

Printing owes this preference to the regularity, the continuity, the evidence and fine ensemble of its features. This quality must be faithfully guarded and preserved. It results from this development of the principles of book printing that the greatest perfection was attained by Garamond and his followers. Moreover, it is evident that those who have followed the modern style have done as well as their contemporaries, but they have not done as well as Garamond and his imitators.

The science of printing will very soon be restored to its former splendor if the artists will undertake the task of leading it back to its principles by discarding the fatal style of beauty which has been introduced only to cause a visible degeneration.

## PATENT IMPROVED TWO-REVOLUTION PRESS.

**W**ITH patented mechanism for controlling the vertical movement of the impression cylinder. It is extremely powerful, accurately fitted, free from friction and evenly balanced. A patented automatic device is also provided which prevents lost motion and governs the degree of impression. Its patent reversing mechanism consisting of a cross-belt and spring shifter, is operated by the foot, which places the Press under the immediate control of the feeder. These advantages, with its Sheet Delivery, Hinged Distributor, Caps, Positive Slide Motion, Noiseless Grippers, etc., complete a printing machine that in every respect is equal to the most exacting demands of the times.

## WHAT IS SAID OF STEEL FURNITURE.

Nothing that we have put to use in our printing office has given better satisfaction, nor been the means of economizing the time of the compositor so practically as this steel furniture.

P. F. PETTIBONE & Co., Chicago, Ill.

We consider it a valuable adjunct to our printing department. Would not be without it. You can send us another font, No. 3, with crossbars.

HERALD PTG. AND PUB. CO., Erie, Pa.

We find it invaluable in work requiring minute justification, to have lines strike faint-lines exact, and at the same time straight. It has not its equal in the market. We have also utilized it in locking up small ruled jobs by completely enclosing the job in one of the squares of the furniture, and by so doing you can guarantee the job's squareness, and do it in one-half the time, and therefore must ask you to send us 50 pounds more.

BLADE PRINTING AND PAPER COMPANY,  
Toledo, Ohio.

It proves that we are advancing, and steel furniture is not one of the least important inventions to help the printer make money. Mine saved its cost in 30 days. I would not do without it, now that I know how useful it is. I could not do without it. With it I can beat the man who does not use it.

JOHN N. NEARN, Bridgeport, Ct.

We have been entirely pleased with it, and wish to thank you for placing such a valuable help within the printer's reach.

MARIGOLD PRINTING COMPANY,  
Bridgeport, Ct.

The larger sizes of Skeleton Steel Furniture work in so well we are anxious to have our order completed, and would ask you to hurry forward the small series.

GUGGENHEIMER, WEIL & Co.,  
Baltimore, Md.

It is one of the handiest things in the house, and it is a wonder how we got along without it. Why didn't some one think of it years ago?

SLAWSON PRINTING COMPANY,  
St. Louis, Mo.

Price 40 cents per pound. Fonts, 35, 50, 100 and 200 pounds. Write for circular.

MORGANS & WILCOX MFG. CO.,  
Middletown, New York.

While our columns are always open for the discussion of any relevant subjects, we do not necessarily indorse the opinions of contributors. Anonymous letters will not be noticed; therefore our correspondents will please give names—not for publication, if they desire to remain incog., but as a guarantee of good faith.

#### A WORD WITH CORRESPONDENTS.

We hope our valued corps of correspondents will not take offense when we ask them to **BOIL DOWN** their effusions in future as much as possible. We are very glad to hear from every section of the country, but our correspondence feature has assumed such proportions that it is impossible to publish all that is sent us. Friends, be brief and to the point, and **THE INLAND PRINTER** readers will think all the more of your contributions for their being so.

#### FROM MARDER, LUSE & CO.

To the Editor: CHICAGO, January 28, 1891.

We notice in an article in the last number of **THE INLAND PRINTER**, on page 333, a suggestion from "F. S. H.," Philadelphia, in regard to the difficulty of distinguishing the small-cap letters "o, s, v, w, x and z," from the lower case, and asking why the typesetters do not put a distinguishing mark on these small-cap letters, so that they can be readily separated from the lower case.

In reply we would say, that for the last two years it has been our custom to cut a small nick in these small-cap letters, at a height of four picas from the jet, or bottom of the type, and in our fonts there will be no difficulty whatever in correctly distributing the small caps, as we do not make any other nick which would in any way conflict with the small-cap nick.

Yours truly, MARDER, LUSE & CO.

#### HOW TO PREVENT ANGLE ROLLERS CHIPPING.

To the Editor: PITTSBURGH, Pa., January 27, 1891.

Having read several articles in your valued publication on "How to prevent angle rollers chipping," and believing that every workman who has any information of interest to his fellow-workmen should make it known for the good of all, I herewith send you a very simple remedy for the above, if you see fit to give it space. To pressmen in general, I would say I have tried it, and found it to work admirably. It is as follows:

Make a solution of alum, say one tablespoonful of powdered alum to a cup of water. After washing the angle rollers perfectly clean with lye and water, wash about seven or eight inches on both ends with the solution. After standing a short time, you will find the parts treated dry and without suction. Alum being an astringent, will make the ends tough. This will also work like a charm in damp, wet weather, when you are at your wits' end with soft, sticky rollers which refuse to take ink. I would not advise its use on *form rollers*, except in case of getting badly stuck with sticky rollers. Use a weaker solution for them, say one teaspoonful, "scant," to a cup of water; exercise judgment in its use; try it on one roller first. If it makes your roller too dry, try less alum. I lay great stress on having the rollers perfectly free from ink or grease before applying the wash. It is a well-known fact that oil and water will not mix, so where grease spots occur, the wash will not take, hence you will have a roller mottled with dry and sticky spots.

I have tried this little wrinkle on angle rollers with splendid results, having a set treated in this manner running for the past nine months on a Campbell double ender, and have not experienced the slightest trouble since. If this should prove of use to a fellow-workman, perhaps he has a good idea which would equally benefit myself and others. If you have a good one, out with it, brother.

LUAP GITSUL.

#### FROM SHEFFIELD, ALABAMA.

To the Editor: SHEFFIELD, January 30, 1891.

As I believe a few notes from this part of the United States would prove interesting, I propose to send in a few for the benefit of the many readers of **THE INLAND PRINTER**.

A new job office was opened up here last month by O. E. Comstock and J. H. Baldwin. The firm name is Comstock & Baldwin. They are not only doing the finest jobwork in the state, but all over the South. It is one of the best equipped job offices in this country, capable of turning out anything from a newspaper to a visiting card, and in the best of style. Mr. Comstock enjoys the honor of being acknowledged one of the finest job compositors in the South. Much success to the new firm.

On Saturday evening, December 27, 1890, an elegant Christmas luncheon was given to Typographical Union, No. 234, by Col. Tom L. Cannon, editor and business manager of the *Enterprise*. It was a delightful affair, everything being served in the most elaborate style, consisting of all the delicacies of the day.

At a meeting of Sheffield Typographical Union, No. 234, held Sunday, January 11, the following officers were elected for the ensuing year: President, J. H. Baldwin; vice-president, Will T. Oglesby; secretary-treasurer, F. V. Baker; sergeant-at-arms, C. S. Key. Executive Committee—W. C. Copes, chairman; Charles Peppel and J. N. Thornton.

Mr. J. H. Baldwin will leave for Paducah, Kentucky, where he goes to wed one of that state's charming young ladies.

Comstock & Baldwin are daily ordering and receiving goods in order to meet the increasing demands for jobwork. They are running night and day.

SLUG 3.

#### THE TOLEDO TYPOTHETÆ.

To the Editor: TOLEDO, Ohio, January 22, 1891.

The Toledo Typothetæ have had a banquet. We celebrated Benjamin Franklin's birthday in royal style. If the old gentleman himself had been present he could not have desired anything better. We had exclusively to ourselves the private dining room of our most swell hotel; a sumptuous feast, and served as only "gentlemen of color" can serve, you know.

Mr. C. H. Vortriede made a most excellent toastmaster. He called first on Mr. C. C. Packard to respond to the toast, "Benjamin Franklin." Among other things Mr. Packard said, "If there is a soft spot in heaven, the job printer ought to have it," and we all internally and some externally groaned—Amen! Mr. Robinson Locke, of Toledo *Blade* fame, responded neatly to the toast, "The Newspaper of Olden Time." Mr. Buttelle, editor of the *Business World*, demonstrated by his speech that the humorous world, as well, claims a good share of leisure moments. Mr. Meyers was to have responded to "Our Grandfather's Job-room," but he failed to materialize. Some suggested he had gone home to don his full-dress suit and that he would eventually come in, arrayed as printer never was before, or, possibly, just as Franklin used to be—but time wore on and no grandfather's job-room was heard from.

Considerable amusement was created by two of the younger members of the Typothetæ who have great reputations as regards eating. Neither said very much and both ate a great deal. The question now is, how to decide who ate the most. It was an interesting sight to see all of us competitors sitting around there talking like old friends, though as a matter of fact a good many introductions were necessary. Probably a number of Mr. So-and-so's got acquainted with their competitor, some other Mr. So-and-so, and found out he was not such a bad man after all.

And right here I want to put in a strong argument for the organization of Typothetæ. Such an association of printers and publishers furnishes the *only* practicable method for these men to become acquainted, thus creating a feeling of confidence in each other which is bound to result in active measures for the betterment of the printing business. Experience has shown that, especially in a business of so varied a character as that of job printing, anything like a combination for the fixing of prices is impossible,

but careful discussions regarding the cost of production will accomplish much toward abolishing some of the present ruinous cutting. Many minor abuses, as the unnecessary showing of press proofs, might be controlled. In short it would be possible to regulate our offices so that when we meet together to celebrate each succeeding birthday of our American grandfather, we would all wear brighter faces and look forward to the coming year as one of still greater advancement *and profit*. F. W. THOMAS.

#### THE CURSE OF THE TRADE.

To the Editor : CINCINNATI, Ohio, January 23, 1891.

Noting the remarks of Mr. Alton B. Carty, on page 315 of your January issue, on the competition of amateurs, I would say that I don't think any danger to the craft comes from that direction. The whole amount of rollers that we cast for amateurs in a year would not buy one cheap pair of pants. The amateur appears to me to be a remarkably scarce article. If I were in the printing business and had nothing else to bother me, I wouldn't worry very much.

But what hurts the business, and hurts it decidedly, is the number of journeymen who, after having saved a little money, or got a little somehow, make a payment of about one-fourth in cash and set up for themselves. They don't reflect that there is already a large overstock of printing offices, and that they are not needed in the least. They don't reflect that no new business exists to call for them, but that they must rob some other office of part of its established trade, and that to do this they must break already low prices. And my experience about union men when they go into business for themselves is, that they are the worst "rats" of all about cutting prices. They have religious scruples against conceding a dollar a week to their employer while they are journeymen, but when they go to beg work of the public, which doesn't care a straw whether they are union or not, and doesn't care to give them a dollar's worth of work anyhow, and doesn't care a copper whether they "live like a white man" or not, then they weaken promptly and take what they can get. They think they are cutting prices temporarily, but others like them come into the field continually, and the up-turn never comes. Of course, when they start they have always got an air-castle before them like a jack-o'-lantern, which they never reach. Their efforts might be justifiable if they could reach a paying business in one or two years. But my observation of them (and it is a pretty extensive one) shows me that in nearly every case they fail to reach it at all. Sometimes they are so fortunate as to hang on somehow for five or ten years in a miserable hand-to-mouth existence, paying their bills always with the greatest slowness and difficulty, a bore to all their patrons, and a nuisance to every house they buy goods of.

No matter if the printing offices of a city are only employed to one-fourth of their capacity; no matter how dull business is, these men are constantly starting up to supply a long-felt want. If they have a little money saved, and are discharged because of dull business, and if business is so dull that they can't find another place, that is sufficient reason to go to a typefoundry and purchase a small office on credit, because it is clear that by so doing he makes a place for himself. He escapes from the control of an employer who actually knew him and took some slight interest in him, and he puts himself into the clutches of an infinitely harder employer—the strange public—who does not care whether he lives or dies, exists or not. The career of these young men appears to me to lead to nothing. The journeymen who remain journeymen appear to me to be a much happier race. The others, nearly invariably, continue to be a poverty-stricken, worried, care-ridden tribe, continually, year after year, owing more than they can pay. I'd rather have a secure job as a cart-driver than live such a life.

And what is there in the printing business to attract these men and to induce them to enter upon such a life? Perhaps my long familiarity with the printing business has shown me its bad points and its unattractive ones. In proportion to the reward, it demands the investment of more money than any other business requires.

And as soon as a press is bought it becomes that day a second-hand press, and at least one-half its value should be charged up at once as dead loss. And the same with type, cabinets, etc. They are not investment, they are expense. Compared with a small printing office, a beer saloon costing the same is a bonanza.

Saloon keepers build fine buildings for rent. Printers don't. Small family groceries, as a rule, pay much better than printing offices for the same investment, and they have the blessed advantage that your customers come to you, and you don't have to go out and find them and beg for cut-priced work.

I have among my personal friends many who are employers in various mechanical and mercantile businesses. I am familiar with the business of many of them, and I will say that there is no business I know of that gives so small a return, compared with the investment and expense, as the printing business. If it was not for the constant springing up of entirely unneeded competition, it would probably not be so. But one-third of the number of printing offices in Cincinnati could be wiped out of existence without the slightest loss or inconvenience to the public, and with a decidedly beneficial effect to the remaining offices, which would not be pushed with work even then. And I presume the same is true of any other city. Of course, if a man is a marvel of business ability there is room for him in the printing business, and he will make his way. But if he is such a man I would be very much puzzled why he selected the printing business. And I would think that there was a dull spot in his brain somewhere.

ANDREW VAN BIBBER.

#### OUR AUSTRALIAN LETTER.

To the Editor :

SYDNEY, December 16, 1890.

The great strike is over, though many are still suffering from it now, and will, I suppose, for some time to come. Both the Sydney and Melbourne societies have stopped their levies, the Melbourne ceasing from November 1, and Sydney a little later, but both societies still pay relief donations to the committee. The typographical societies paid a goodly share of the help rendered toward the strikers, Melbourne printers paying about £2,000 and Sydney a little over that amount.

Alluding to the result of the strike the *Melbourne Typographical Journal*, the only printers' journal on the continent, says :

"One of the satisfactory consequences of the late strike is the growing interest in trades unionism taken by provincial printers. We were threatened with annihilation by inspired members of the 'fourth estate' in their daily croakers. The power of the unions was gone. Capitalists had found out a vulnerable portion of the armor, and the bladder was to be pricked. The mighty were to fall, and the noble army of free laborers were to billet themselves upon a grateful and appreciative public. This cheerful information was scientifically supplied to our up-country brethren, with a view to disheartening them in their missionary efforts in the labor cause. We are therefore doubly pleased with what has actually taken place. Increased activity has been evinced by our country members with the most gratifying results. A little assistance might easily be given by every trades unionist who knows an up-country printer who is not a member of a typographical society. Let him forward the necessary information as to the objects and advantages of belonging to a powerful union. Coming from one who is enjoying the bondage of unity, it will doubtless have an encouraging effect upon many who have not been quite satisfied with the lot of a free laborer in the past."

In these days some people are trying to make out that Australia is not loyal to the English monarchy. Whether that is so, judge ye from these facts :

The editor of a newspaper published at Bourke (N. S. W.) has been removed from the local magistracy in consequence of an article reflecting in strong terms on the private character of H. R. H. the prince of Wales having appeared in his paper.

I mentioned in one of my letters that there was some little trouble over the publication of Barton's "History of New South Wales," giving particulars concerning certain questions asked by

a member in the legislature. The colonial treasurer laid upon the table of the assembly early in December a return, in answer to questions of Mr. O'Sullivan with reference to Barton's "History of New South Wales." The return showed that 5,500 copies of the history had been printed. Of these 1,802 were sold in the colonies and 150 were forwarded to London for sale, but no returns were to hand. The total amount received from sales was £1,227 12s and the total cost of publication, including outlay in type, paper and other materials, was £1,888 8s 3d. No arrangement had yet been made for the continuance of the work.

Regret is expressed in the circles of the Melbourne Typographical society upon the death of a former member, Led Goodwin, who had worked on the San Francisco *Chronicle*, of which staff he was a member when he died. He leaves a brother, married sister and aged parents in Melbourne to mourn his death.

The Australasian Typographical Union holds a special meeting shortly to discuss an Australasian scale of charges; the apprentice question; female labor; reciprocity of out-of-work and mortality allowances; and legislation in country districts. This discussion takes place at the request of the New South Wales society, since whose advent into the union the latter body seems to have made us aware of its existence. The discussion is bound to result in much good to the craft throughout the whole of the colonies, as the different scales are a source of annoyance to the tramp.

A new penny paper has appeared during the month in Melbourne—the *Blade*—with an ultra-radical platform. It promises to cut out a place for itself among the journals of the colony.

Attention has been drawn recently to a remarkable caricaturist who signs his pictures "Leo" in *Life*. Some of his pictures which I have seen mark him as the greatest artist in his line in the colonies, and as I believe Leo is young, he may be expected to become a lion in the future.

The *Evening Standard*, which has not been long established in Melbourne, is seeking a man with plenty of money to buy it, while the recently established *Australian Star*, of Sydney, has already assured us that it has come to stay. AMICUS.

#### VERMONT JOURNALISM.

To the Editor: BELLOWS FALLS, Vt., February 2, 1891.

The *Argus and Patriot*, of Montpelier, issued one of the finest Christmas editions that ever came from the Vermont press. It was illustrated with numerous cuts of Vermont scenery, and was entitled, "Through Vermont by Rail." Nothing like it was ever attempted before, and Editor Atkins is to be congratulated on the success of his first attempt in that direction.

George Fisk, formerly of the Morrisville *News and Citizen*, has gone to work as local editor on the St. Johnsbury *Caledonian*. A. G. Clay, of Bridgton, Maine, takes Fisk's place on the *Caledonian*. This paper, by the way, has the reputation of having the best appearing advertising pages in the state. The editor, A. F. Stone, is a young man, not over twenty-seven, but he had the opportunity of beginning where his father left off, and must succeed. He can scarcely do otherwise.

E. H. Wolcott, managing editor of the Burlington *Free Press*, has fallen heir to \$57,000 by the death of an uncle in Natick, Massachusetts. The fraternity extend congratulations, and hope his new fortune will not cause him to abandon the profession he has adorned.

W. E. Barrett, of the Boston *Advertiser*, speaker of the Massachusetts house of representatives, now prominently mentioned for next governor, is a Vermont boy, and begun his journalistic work on the St. Albans *Messenger*. He proved to be wanted elsewhere, and after going to Boston his rise was rapid.

H. I. Dillenback, of the Rutland *Herald*, will soon go to Providence, Rhode Island.

George Eaton, formerly editor of the Danville *North Star*, late of the Troy *Press*, died recently in Troy, New York. He was one of Vermont's good newspaper men, and made a good paper of the

*North Star*. Later, he sold it out and took a half interest in the *Press*. After that the *Star* was burned out, and the editor got into difficulties so that it was finally suspended.

All the prominent high schools and academies are issuing papers. Some of them are very creditable sheets, and some are not. However that may be, they are undoubtedly of vast benefit to the pupils who have charge of them.

The *Protectionist*, the new paper at White River Junction, while not being guilty of causing a great rush, is meeting with a fair measure of success. Mr. Dunbar is evidently working hard to get up a good paper.

The *Teacher's Journal*, in its new form, is taking well. It is an attractive sheet, and is filled with matter of help to all teachers. The subscription list is growing, particularly in the West, at a rapid rate.

The question of whether the printer's trade and the profession of journalism is overcrowded or not, is being seriously considered by a number of young men of the writer's acquaintance. Yes and no. There is always room for a really good man, and such a workman need not be out of a situation long. But for the half-way, shiftless sort of fellows who disgrace the business, there should be no place. It is only the hard, steady work that counts. The boy who is willing to do what Agassiz called "dead work," will finally get the good snaps, while his easy-going companion will be compelled to remain always a hired man.

B. H. ALBEE.

#### JOTTINGS FROM ESSEX COUNTY, ONTARIO.

To the Editor:

ESSEX, Ont., January 12, 1891.

We sometimes see in your columns items regarding the freaks of electricity in connection with printing presses. My experience in this line may not be uninteresting to some of your readers. Our press is an old-style Fairhaven and the fly-table in connection with it is covered with zinc, and this, I think, together with the fact that we work our paper dry, explains why our press generates so much electricity; or, rather, why the table throws off the fiery fluid with such force to surrounding objects. Our paper is an extra quality No. 3 print, not very highly calendered. One day recently a few minutes after we had started to run off our first side, I was standing at the fly-table with my knees touching its edge, watching the color, when I felt a prickly sensation in my knees where they came in contact with the table. My curiosity being aroused, I watched and found that every time the fly came down with a paper on the table, and again when raising, I received a distinct electric shock, and that as the pile of paper grew in thickness the shocks grew in strength. Since then we have experimented with our "battery" in various ways. After the press had been running for perhaps an hour, by placing the hand about an inch from the end of the table, flame could be seen passing from the table to the hand, and not only seen, but felt with sufficient force to make the experimenter hesitate about trying it a second time. A number of persons have joined hands and one touched the table; a shock was sharply felt by all. In attempting to take the papers from the table we find they cling very tenaciously, and when finally drawn off, a snapping sound is emitted similar to that made by a brisk wood fire. A few days since, I was in the act of taking some papers from the table while the press was in motion; in doing so my hand slipped from the edge of the papers and I received a shock that made my fingers ache for ten minutes after. The presence of this little imp does not trouble us much, as we are all becoming quite familiar with its pranks. Occasionally the sheets manifest a particular fondness for the fly, but as our press is not very speedy this does not cause much annoyance.

A Windsor paper claims the honor of being the first in Canada to use the typograph. I understand these machines are being manufactured in that town.

My prediction some time ago that tube inks would be used in preference to those put up in the old way, as soon as printers realized the saving to be effected by their use, has about been fulfilled. I induced one of our wholesale men to try them, and he now tells

me that they are taking so well that as soon as his house can run off their stock of can and pot inks he will handle nothing but tubes. About every other wholesale man who drops in upon us now is handling tube inks. It is remarkable that most of our wholesale paper and ink firms have not the snap to furnish any new article that is put on the market until the printer either demands it of them or goes across the line and pays the duty. By the way, this matter of duty is another piece of clap-trap that printers generally on this side would like to see abolished. On type alone it is a tax we can ill-afford, but which we must pay unless we are content with moving along in the old rut and adopting sixteenth century styles. And, as to presses — well, I believe they are turning out a very fair press now in Toronto, but outside of that particular make, we cannot get a good press unless we call on our American cousins. To my mind it appears ridiculous for our government, on the one hand, to pile on the duty in order to encourage home manufactures, and on the other, our manufacturers standing with their hands in their pockets while Uncle Sam smilingly pockets our cash and our government heaps up the revenue. I suppose this sort of thing is all right; at any rate our politicians say it is, and of course they know.

Mr. McNee, of the Windsor *Record*, has taken into partnership with him a Mr. McKay, who latterly has been engaged on the Woodstock *Sentinel-Review*. W. H. H.

#### FROM SAN FRANCISCO.

To the Editor: SAN FRANCISCO, Cal., February 2, 1891.

There is trouble brewing in this city between the typographical union and the employing printers. As stated in the last communication from San Francisco, the union had determined to enforce its laws in regard to the employment of apprentices and non-union men by members of the Typothetæ. The first move in this direction was made recently by a demand on the H. S. Crocker Company to not only discharge the extra number of apprentices employed, the non-union men, and other employés who were expelled from the union, but also to sign an agreement to not infringe on the rules of the organization in the future. The H. S. Crocker Company refused to answer the demand until a meeting of the Typothetæ could be called, determining then to present its case to the members and ask their advice in the matter.

Accordingly a special meeting of the San Francisco Typothetæ was called for Friday evening, January 30, at which nearly every printing firm in the city was represented. Mr. Crocker stated the circumstances, saying that he had many men in his employ who were not members of the union, and who did not want to become such; also, men who had been expelled from said organization. These men were excellent workmen and fully satisfied their employers. By an unanimous vote, the Typothetæ passed resolutions advising the H. S. Crocker Company not to sign said agreement, and that they all would refuse to do likewise, and stand by each other to preserve their rights of employing whomsoever they may see fit. It was also stated, at this meeting, that upon the committee of the typographical union being asked if an employing printer, or his foreman, desired to discharge a union employé, if the rules of the organization permitted it, the committee, after consulting the rules of the union, responded in the negative.

The typographical union held a special meeting on Sunday afternoon and determined that unless the H. S. Crocker Company shall immediately agree to act in accordance with the rules of the organization, the employés belonging to the union will refuse to go to work. There is thus hardly any doubt but that the commencement of a strike has been inaugurated. What the chances of success are, or what the results will be, cannot be determined at the present date. It seems a very inopportune time for a strike, however, as the printing trade in this city is quite dull, as is usual at this period of the year.

The last regular meeting of the San Francisco Typographical Union was held January 25, with a large attendance. Fifteen

applications for membership were presented to be voted for at the next regular meeting. Twelve new members were elected, and the eleven members and two apprentices who were elected at the previous meeting in December were initiated.

The committee which was appointed by the Executive Committee to formulate a system to equalize the measurement of type below the standard, made the following report, which was adopted and has consequently become one of the rules of the organization: To measure type below the standard, first find the number of ems set in that type, then divide that result by the number of ems in the alphabet and multiply the product by the difference between the alphabet and the standard."

Another new rule, accepted by the union on the decision of the Executive Committee, is that in reference to the amount to be paid by employers for overtime work. It reads as follows: "In the case of working overtime, a compositor shall receive price and one-half of the daily wages paid to him."

The decision recently made by the Executive Committee of the typographical union, referring to "Langley's San Francisco Directory," has been rescinded by the union at the request of said committee. The reason given was that the publishers of this directory are in litigation as to their respective interests. Whatever the reason it is but just that the new rules in regard to the measurement of the publication should not go into effect, on account of their arbitrary and unfair character. A large part of the directory consists of descriptive information about the streets, societies, clubs, municipal offices, churches, halls, blocks, wharves, amounting to seventy-six pages, which, as very few changes are necessary, is carried over from year to year set up. The new rules stated that this matter should be measured, and the amount received divided among the chapel. Electrotype "ads." of five to ten lines, running throughout the book at the head and bottom of each page, were also to be charged for as composition. The extra charge on this alone would amount to about \$400, making, in all, probably an additional cost of \$1,000 for publishing the work. However, it is now shelved, and is so palpably unjust, that the matter will probably never be brought up again, demanding, as it does, pay for work which is in nowise performed, or which can be made by any combination of circumstances or explanation to appear as having been of any source whereby it became of a chargeable nature.

By amendments to the constitution recently adopted by the typographical union, some changes have been made in the election law. At the next election, which takes place the last Wednesday in March, all nominations must be made in open meeting the last Sunday in February. The executive and membership committees and delegates to the Federated Trades Assembly will also be elected the same day, their names going on the regular ticket the same as other offices. The majority vote necessary to elect has been changed to a plurality one.

The Pressmen's Union of San Francisco has opened an employment bureau, having secured quarters at 606 Montgomery street, where employing printers desirous of obtaining the services of competent pressmen can secure the same upon application to the secretary.

The annual banquet of the Typothetæ of San Francisco was held at the Maison Riche Saturday evening, January 17. The attendance was large and the event proved a most enjoyable affair to all participating. Considerable important business was transacted, among which figured prominently the election of officers for the ensuing year, which resulted as follows: President, Charles A. Murdock; secretary, Ai Rollins; treasurer, Charles Barker. Mr. Murdock has acted in this capacity for a number of terms and his reflection shows the confidence he inspires and the respect his intelligence and ability have acquired for him in the printing community.

Brunt & Co. are constantly increasing their facilities. The latest addition to their large establishment is an improved Prouty embossing press, which is turning out very satisfactory work. Walter Brunt reports the necessity of frequently working at night to keep up with their orders for printing. E. P.

## FROM WASHINGTON.

To the Editor: WASHINGTON, D. C., February 4, 1891.

At the present writing there is very little of a newsy nature stirring, but we hope your readers will bear with our letter this time, if it does not reach their expectation. The unexpected death of Secretary Windom has cast a gloom over the entire city, and flags at half-mast and abundance of crape tell us that death is among us. The funeral took place yesterday, and as a mark of respect the government printing office closed its doors for the day, as did all of the other departments of the government. The closing of the government printing office was a slight surprise to the employés in general, as many of them thought that that establishment rarely ever closed except on a legal holiday. Nevertheless the *Record* hands worked as usual, as both the house and senate held sessions. After the members attended the funeral of Secretary Windom they convened at two o'clock and proceeded to business. Unless something unforeseen shall take place, the next holiday for the government printing office boys will be on February 22. These hard-working people appreciate a holiday to the fullest extent.

There is a good deal of hustling around here now by the various candidates for delegate to the International Typographical Union convention, which takes place in Boston in June next. There are also a number of candidates for offices in No. 101, of this city, the election for all of which will occur on March 25. We venture the opinion that there are more aspirants to the office of delegate this year than ever before. A full list of voters is requested at the polls. Besides numerous others, we might mention the following candidates who are already beginning to "button-hole" printers of all classes: For delegates—Charles W. Otis, J. T. Harper, Harry Springer, A. J. Alden, Wallace Brewer, Louis H. Jullien, David O'Connell and O. H. Brodburn; for president of No. 101, John L. Kennedy (the present incumbent), R. H. Busted; vice-president, Edwin Payne and C. C. Casterline; reading clerk, Joseph E. Reese. There are a few other names, but at this writing we are unable to obtain them. There are very few down-town candidates this year, most all being from the government printing office.

The hearts of the night hands at the government printing office were made glad, a few weeks ago, by the paying of the balance of the twenty per cent due them from the last session of congress. There was a great demand for "subs" that day. This recognition on the part of the government is nothing more than just to those hands who do night labor. In every city throughout the United States extra compensation is granted to morning newspaper employés or those working at night; and why not the government printing office? This being a short session of congress, the boys have issued a petition, to be presented to the Committee on Appropriations of the house of representatives, asking for twenty-five per cent instead of twenty, as was granted the night hands last session. The *Sunday Herald* will move into their newly-leased quarters on Eleventh street, within a stone's throw of the *Star* office. The *Herald* is still booming, and we bespeak for it continued prosperity. Messrs. Soule and Hensey are "hustlers," to say the least.

The January number of THE INLAND PRINTER was a beauty in many respects. Its handsome and artistic specimens, its elaborate displays of new series of type, and its spicy correspondence and solid editorials all added to its value.

Secretary Frank Padget, of No. 101, is kept very busy in the various branches of his duties. We have not been able to ascertain as yet whether he will be a candidate for reelection or not, but if he is, we have not the slightest doubt but that he will succeed himself. Frank has made himself very popular with the craft in general, and seems certainly the right man in the right place. Aside from plenty of other business, he has nearly twelve hundred members to look after.

The *Morning Post*, with its recent increase in size, and the *Evening Star*, with its new dress, and extra eight pages on Saturday, afford an opportunity for many a hungry "sub" to catch a

day's work. At present there are a good many "subs" in town, and by the time congress will have adjourned the number will be doubled. Day work here on newspapers is 42½ cents, and night-work 45 cents per thousand ems, and a situation down town is almost as desirable as one at the government printing office. Though the two above named are the leading papers of the city, there are many less important issues that afford good situations to the lucky printer. The *Sunday Herald*, *Gazette* and *Evening Critic* employ at least fifty hands, barring a number of "subs" in each office.

Clarkson, Gibson Bros., Darby, McGill & Wallace, McQueen Bros. and Judd & Detwiler, the leading book and job printers of the city, are all busy, though not rushed. There are a lot of "jim crow" shops around town that get a sprinkling of the trade, but of a lighter character.

We understand that Philadelphia Typographical Union has adopted a novel plan of prohibiting a man from holding his situation down too "fine." It only applies to those prints who are employed on a seven-day paper. If they work over six days a week, they are subject to a fine of no small amount. There is considerable comment upon this punishment here, and the opinion seems to prevail that this is a good plan, and surely beneficial to the "sub." There are some printers holding situations that never think of giving out a day's work, and you do not have to leave this city to find them. We would be glad to hear of more cities following the example of the "City of Brotherly Love" in this respect. We understand that there are a number of employés at the government printing office who turn in from fourteen to sixteen hours time every night. We deem this utterly unfair, and we also understand that it could be easily avoided if the public printer would assert his authority.

At a recent adjourned meeting of No. 101, of this city, the subject of changing the day of meeting from Sunday to a week day was brought up and very warmly discussed pro and con. The object of this organization holding their sessions on Sunday was simply to give those employés who labor upon morning newspapers an opportunity of attending the meetings, and the general attendance was noticeably increased thereby, but some of the down-town element got it into their heads that it was not the proper time, and hence the discussion. They failed, however, in their endeavor, and as a result the day of meeting until further notice will still remain the first day of the week. It was also suggested that the hours for labor in printing offices should be reduced to six per day, but wisely enough this suggestion was also "snowed under."

EM DASH.

## FROM CONCORD.

To the Editor: CONCORD, N. H., February 5, 1891.

As has been noted before in THE INLAND PRINTER, the Republican Press Association, publishing the *Evening Monitor* and the *Independent Statesman*, have a new four-story building. This was erected immediately in rear of its old quarters, facing Depot square and running back on Depot street. It has a frontage of seventy-seven feet and its depth is seventy-eight feet. The first floor comprises the business offices and the press and engine rooms, the former being handsomely decorated and elegantly furnished. The engine is a new thirty horse-power running the Sturtevant fan, by which the entire block is heated, and the dynamo, wired for about one hundred and thirty-six lights. On the second floor are the editorial rooms, the jobroom, and newspaper composing room. The third floor is taken up by the bookroom and the stereotyping department. There is also a handsome suite of offices for rent. The fourth floor is occupied by the bindery. The estimated cost, including new material, was about \$65,000. The building is conveniently arranged, provided with modern plumbing, and is plainly the best in New England outside of Boston. The entire machinery from the old building, including four cylinder presses, four job presses, standing presses, etc., were removed and set up by Dennan & Tarbett, of Boston, under the personal supervision of Mr. Tarbett, and was accomplished without a break of any kind. The business manager of the Republican Press Association

is Edward A. Jenks. The managing editor of the *Monitor* and the *Statesman* is Edward N. Pearson, assisted by P. B. Cogswell and F. H. Kelsey. The pressroom is in charge of Frederick E. Cloudman, while Frank H. Miner is foreman of the newsroom, John W. Bourlet of the jobroom, Charles W. Sargent of the bookroom, A. B. Cross of the stereotyping department and Frederick A. Landers of the bindery. The payroll contains the names of some forty employés.

The outcome of the state printing contest was somewhat unexpected, and yet perhaps was the legitimate result of certain actions on the part of Senator Chandler, whose managing editor was his candidate for the office. A great many republicans did not approve of the senator's statements made previous to the state election, and took this occasion to "get back" at him. He secured the caucus nomination, but in the house enough republicans bolted to make no choice on the first ballot, his opponent in the caucus, Ira C. Evans, receiving their votes. On the second ballot, however, the democrats took a hand, and voted for Evans in a body, thus easily electing him. The state printing has hitherto alternated between the office of the Republican Press Association (Senator Chandler's office) and that of John B. Clarke, of Manchester, the latter now having had it for six years. Evans has been a candidate before but has been unable to secure the nomination. He is a printer of some thirty years' experience and is perfectly competent to do the work, which amount to about \$20,000 per year. He has ordered a new "Optimus" cylinder and is enlarging his facilities generally.

The hardly credible rumor comes up from Manchester that there are fifteen girl apprentices in the *Mirror* office. Apparently the management is determined to avoid the necessity of advertising for help in the future.

D.

#### BRIGHT, BRISK, BUSTLING BUSINESS BETOKENED.

To the Editor: PHILADELPHIA, Pa., February 10, 1891.

Intelligence received from all parts of Pennsylvania, Maryland, Delaware and New Jersey is to the effect that business is good. At the state capitals the legislatures are in session and considerable printing is being done. There has been a great scarcity of competent printers at Harrisburg, Trenton, Annapolis and Dover, but the want seems to be supplied now.

The outlook for the spring trade is excellent and encouraging. Paper makers are doing an immense business. The makers of presses are as busy as they can be. Manufacturing stationers are running their establishments day and night. The printers' supply houses are well supplied with orders. Typefounders are doing well, and are hopeful of the future.

The job printers and book publishers are jogging along at about their usual rate, while the newspaper people are enjoying particularly prosperous and profitable times.

The fine art publishers are just now transacting quite a brisk trade in valentines. The productions of Louis Prang & Co., Boston, and Raphael Tuck & Sons, New York, are magnificent and command a ready sale.

Benjamin Franklin's birthday was celebrated in a splendid manner by the Philadelphia Printing Pressmen's Union, No. 4. It was the sixth annual reunion of the association, and nearly one hundred and fifty members and guests were present. John W. Norman, chairman of the Entertainment Committee, presided. Among the guests present were T. J. Hawkins, of New York, editor of the *American Pressman*; J. G. Hardie, of Washington, D. C., president of Union No. 1; W. G. Dunn, known as the "Poet Pressman," of Washington; William J. Dornan, William Dornan, Jr., Clifford Dando, Ralph Ezekial, of New York; P. J. Sprightly, Fernando Carpenter and Stephen Brown, of Washington. There were also delegations from Baltimore and New York. The first speaker was W. J. Adams, who responded to the toast, "The Day We Celebrate." During his remarks he said:

"Six years ago today the pressmen of Philadelphia gathered in this hall to do honor to the memory of Franklin. It was the first meeting of the kind for many years, his birthday coming and

going with scarcely any mention of his name. But one man in this great city, whose great heart is always open to do honor to the deserving, could think of no better man than Franklin as a fitting monument to grace the corner stone of the *Public Ledger*.

"Franklin's birthday is an institution that has come to stay, and from this first meeting of pressmen a suggestion has gone broadcast throughout the land, so that now there is scarcely a city of pretentious size but will have its social gathering of printers tonight, meeting in honor of the occasion, and renewing their friendships for the coming year."

Edward Sutton, president of the union, followed. Giving his views of the organization, he said: "We do not exist as a menace to our employers, but rather extend a friendly aid to them. What more equal and just way can we treat our employers than by telling them that a member of our organization shall not work for less wages than another?" He referred to crises through which the union successfully passed during 1890. At every meeting, he claimed, new members were being added to the rolls, and now the membership is 115.

Charles Miller, the executive head of the International Printing Pressmen's Union, reports of the friendship prevailing in the international body. "This friendship," he continued, "is not confined to one city, nor to any state, but is the rule throughout the continent. Whatever is good among us, has its counterpart in every other individual union in the country. We should look to our laurels, for, like all new ventures, we shall be met with opposition. This, instead of being an injury, I believe, will eventually prove a benefit."

Addresses were also made by John W. Norman, T. J. Hawkins, of New York; J. G. Hardie, of Washington; W. G. Dunn, of the same city, and others. Songs were sung by Edward Bayless, John Kelly, Bret Hart, Edward Jackson and Frank Hennelin. A xylophone solo was given by Harry Wesley, and selections by the Philadelphia Mandolin Club. The Entertainment Committee consisted of John W. Norman, Howard Rumpf, Torrence F. Gibbons, James Mellon, Thomas Collins.

The quarterly meeting of the Typothetæ of Philadelphia was held Saturday, January 17, and was largely attended. Upon the conclusion of the general routine business, those present celebrated Benjamin Franklin's birthday by a banquet, at which John R. McFetridge presided. A pleasant time at the banqueting board was terminated with songs and speeches.

Mayor Fitler has awarded contracts for printing and binding his annual report and message, and for stationery and miscellaneous printing. The Dando Printing Company secured the printing of the message and report at 40 cents per 1,000 ems for plain composition, 59 cents per 1,000 ems for tabular, rule and figure composition, 35 cents per hour for time work, and 60 cents per token for printing. To the same company was also awarded the contract for supplying fifty-pound No. 1 book paper at \$2.75 per ream. Dunlap & Clarke will bind 6,287 copies of the report for \$1,571.26, and will supply sixty-pound super-calendered book paper at \$3.49 per ream. The stationery and miscellaneous printing were divided among Detre & Blackburn, Dunlap & Clarke, D. J. Gallagher & Co. and George F. Lasher.

William H. Hodgson, proprietor of the *Daily Local News*, of West Chester, has purchased of the Scattergood estate a large brick building for \$1,800, possession to be had on April 1. Mr. Hodgson intends remodeling the building into a fine annex to his printing establishment, which will make it one of the largest in rural Pennsylvania.

The *Daily Gazette* has appeared at Bellefonte, Pennsylvania.

The partnership heretofore existing between H. S. Smith and C. R. Graham, of Philadelphia, and W. S. Bryan, of St. Louis, under the firm name of Historical Publishing Company, has been dissolved, W. S. Bryan retiring. H. S. Smith and C. R. Graham will continue the business.

A continuous sheet of fine book paper was recently made at the Johnsonburg (Pa.) paper mill which was fifty-four miles long and one hundred inches wide. For twenty-four hours the paper passed through the machine without a break.

ARGUS.

Half-tone engraving, by A. Zeese & Co., Chicago.

JUSTICE IN THE GOOD OLD TIMES.

## FROM BALTIMORE.

To the Editor: BALTIMORE, Md., January 5, 1891.

I had hoped to be able to write in this letter a favorable report of the Baltimore Typothetæ, but President Boyle informed me today that but four members attended the last monthly meeting, which adjourned without a quorum. Mr. Boyle said he regretted this, as he had received two important communications from other cities and desired to have the papers read before the association.

Last week the publishers of the secular weeklies of this city formed an organization, under the title of "The Weekly Newspaper Association of Baltimore." The papers included in the organization are as follows: *Baltimore Life*, the *Telegram*, the *Baltimorean*, *Every Saturday*, the *Free Press* and the *Critic*. The officers of the association are Messrs. T. J. Wentworth, president; E. S. Judge, vice-president and George S. Steuart, secretary. The primary objects of the association are mutual advancement both of the journals represented and the city at large. The circulation and character of the weekly press of this city is not recognized as it should be, and the step taken by these publishers is one to be commended.

The two weekly sensational papers of Baltimore, the *Revealer* and the *Pull Mall Gazette*, have gotten into trouble, the publishers having been recently presented by the grand jury for sending obscene matter through the mails.

Messrs. Edwin and George W. Abell, publishers and proprietors of the *Sun*, were the executors named in the will and testament of the late Walter R. Abell, and they have given bond in the penalty of \$1,000,000 and qualified in the orphan's court as executors. The Fidelity and Deposit Company of Maryland furnished the bond. The Messrs. Abell could easily have furnished personal security for the required amount, as friends offered to become surety for them, but they preferred to pay a corporation and thus relieve themselves of obligations. This is characteristic of the publishers of the *Sun* and may be said to date back to its founder, the later A. S. Abell, father of the present owners of the *Sun*.

A weekly paper, illustrated, made its appearance here a few weeks ago. J. V. Boyle, book and job printer, on Baltimore street, did the composition and presswork. *Gossip* was the title of the sheet, which was edited and managed by three newspaper men. It was not destined for a long career, for *Gossip* lived and died in a day. The pictorial side of the paper was got up by the Atlantic Pictorial Publishing Company of New York. This concern sold out a few days ago to the Pictorial Weeklies Company of New York. Another paper of this character, called *Light*, got out in Chicago (all but the cover), made its appearance here a few weeks ago. It survived two or three issues.

There is some complaint in this section against those obliging typesetters who do not restrict themselves to electrotyping an advertisement which you may take to them already set, but will put the matter in type as well. Some of our typos object to this latter practice, upon the ground, I suppose, that it deprives them of considerable fat. By the way, our typesetters appear to be quite busy, a number of them filling orders for their country customers.

At no time during my correspondence, Mr. Editor, have I found news of interest to the craft so scarce as at present writing. It seems to be an off season with regard to business of all kinds.

Messrs. Thomas & Evans, printers and publishers, are getting out the first number of a weekly paper. It is to make its bow to the public on Saturday. The new comer is to be a political sheet of the democratic persuasion, and will be controlled by politicians in a certain interest.

Mr. J. S. Judge, editor and proprietor of the *Trade*, has bought the *Free Press*, a whilom labor paper, and is now running these two weekly journals.

Editor George S. Steuart, of *Baltimore Life*, has taken into partnership Mr. Charles A. Gareis in the publication of that paper. This firm will also run a job office in connection with the weekly, having put new material into the office of *Life* today.

Mr. Gareis is a practical printer and leaves cases at the *Sun* to join Mr. Steuart, who has thus secured a first-class young man to coöperate with him in the conduct of the printing and publishing business.

Some months ago Mr. James Young, book and job printer and publisher of the *Telegram*, leased his book and job department together with his presses and material to one J. P. O'Brien, of Philadelphia. O'Brien put his own force of hands in the newly acquired office, and Mr. Young's old employes had to step down and out, including pressman McLeod, who is secretary of the Pressmen's Union. But all this is changed now, for O'Brien failed to come up to time in the way of money matters a few weeks ago, and he then found the doors barred against him. Mr. Young is again running his printing office, and his old hands are all back, including pressman McLeod.

FIDELITIES.

## OUR NEW ZEALAND LETTER.

To the Editor: WELLINGTON, December 27, 1890.

Again the Christmas season has come round and gone by in our southern seas, and we in New Zealand have had a good time, for the strike is past, and the future seems bright with the promise that strikes will be no more, but that arbitration will take its place. Politicians speak of establishing a permanent court of conciliation, with district boards of arbitration. Since I last had the pleasure of giving the readers of THE INLAND PRINTER Christmas greetings many things have happened, and, spite of the great strikes recorded, I think I can safely say that we, as workers, have advanced, and the future appears ripe with promises of fulfillment of cherished reforms, which will still further advance the worker.

Since I last wrote you, the general elections have taken place, and to the astonishment of all and every, have resulted in a great victory for trades unions, for no less than twenty labor candidates have been returned, out of a total of seventy members for our house of representatives, and many of these are genuine workers, including a printer, baker, bootmaker, tailor, ironworker, carpenter, and lamplighter, some of whom I personally know to be sound-on-the-goose unionists. Mr. George Fisher, a printer, was returned top of the poll again for Wellington, while the top man in Christchurch (where the whole labor ticket was returned) was Mr. W. P. Reeves, editor, son of the proprietor of the *Lyttelton Times*, and Dunedin placed Mr. D. Pinkerton, president of the trades' council, top of the poll. Another newspaper man returned was Mr. A. W. Hogg for Masterton; also Major Steward for Waimate, and the leader of the late opposition, Mr. John Ballance, *Wanganui Herald*. Mr. W. Hutchinson, a new member for Dunedin (which city also returns a complete labor ticket) is a proprietor of a printing office in that city.

The knights of labor, in my opinion, prevented the workers obtaining more victories than they did, as the candidates they chose were not acceptable to the majority, which resulted in a split. All the single-tax candidates put forward by the order were bottom of the polls.

Five of the compositors of the *New Zealand Times* were going home after the "cut," a few weeks ago, when they discovered a couple of burglars in a drapery shop. A policeman, for a wonder (!) happened to be on hand, and after a big struggle between one of the comps and the policeman and the burglars, the latter were captured, and at the supreme court one got twelve months and the other five years, and the other day the draper gave each of the comps (brave comps, the papers say) a Christmas gift.

The *Wellington Evening Post* and *New Zealand Times* chapels played a cricket match on Christmas Day, the latter winning by ten runs, the score being 94 to 84 runs. Messrs. Mills (26) and France (17) were best scorers for the *Times*, and Kilner (10) and Lonsdale (16) for the *Post*. A large crowd witnessed the match.

The *Evening Post* of December 22 says: "All that was mortal of the late Mr. Samuel Duncan Parnell, whose name will be forever revered by the wage-earners of the southern hemisphere for its connection with the eight hours movement, was laid to rest in the Sydney-street cemetery on Saturday afternoon.

The funeral, which left the late residence of the deceased in Cambridge terrace soon after 3:30 o'clock, was attended by between twelve and fifteen hundred persons, representing all classes of the community, including the mayor, Messrs. Fisher, Duthie, and Macdonald, M. H. R's, and members of the city council. The coffin, upon which several very beautiful wreaths were laid, was carried all the way to the cemetery by members of the carpenters' union, and as the cortège passed along the thoroughfares of the city, most of the places of business closed their shutters as a mark of respect. The Garrison band, assisted by several members of the city band, played the dead march. At the grave there was no regular burial service, but an eloquent panegyric was delivered by Mr. J. C. Harris. Mr. Parnell was a socialist. The Executive Council of the New Zealand Typographical Association was represented by Messrs. Joslin (treasurer) and Mills (secretary).

TOM L. MILLS.

#### REMEDY FOR CHIPPING OF ANGLE ROLLERS.

To the Editor: PARSONS, Kan., February 6, 1891.

In your January number, in the article on "Practical Talks on Presswork," the writer speaks of means to prevent the chipping or grinding of angle rollers on a cylinder press. Now, I am not a pressman, but I have practical, everyday knowledge of a Campbell cylinder press, and I think I can, in a few words, give you the cause, and suggest a remedy therefor.

First, if you will go to any press of this make with rack and table distribution, and stand and watch the rollers as they roll on and off the table, you will notice that they jump or rattle. The cause of this jarring motion has been proven on my press, and is because the roller bearings are too low, and so I took a pica reglet and placed under them, raising them so that when the table passed under them they turned evenly and without jarring, and worked without noise or rattle. My press is so made that I can place the rollers on an angle, or straight-across; they also have iron riders.

The advantage to be derived by placing the distributors at right angles is, that when the fountain roller lifts the ink onto the table, the ink is straight across; the table and the rollers being the same, the ink is carried to the form rollers evenly across the table.

I have studied every make of press turned out in the past three years, and in my judgment there are serious defects to practical work in nearly every one; notably that of the small rollers over which the bed passes. Their bearings are solid, and cause these rollers to wear flat. These bearings should be made to rise and fall just as the cylinder is adjusted, and then the bed would cause each and every one to roll.

E. S. STEVENS.

#### ITEMS FROM NEW YORK.

To the Editor: NEW YORK, January 25, 1891.

I presume you have heard that William J. Kelly has assumed editorial charge of the *American Art Printer*. Mr. Munro is at present running a local Brooklyn sheet, weekly, I believe, called *The Exponent*.

Messrs. Tomkins, McIndoe & Co., bookbinders of this city, joined with Mr. Taylor, formerly manager for the Trow Printing & Binding Company, will start in, probably in February, to take their share of the book printing of New York. It is said they will start with fifteen cylinder presses. They assume the style of "The Caxton Press."

The outlook is especially good here if the order books of the press manufacturers may be accepted as a criterion. More presses are being built for New York city printers than ever before, and they are not being bought for fun either.

P. F. Collier, publisher of *Once a Week*, has again removed his printing office, this time to the extreme west side, Thirteenth street and Thirteenth avenue. The building, one of the largest occupied as a printing office in America, was formerly the Delamater Iron Works. It covers twenty city lots. This enables Mr. Collier to have both of his offices (he had two large ones) under one roof,

and, no doubt, will increase their efficiency. Mr. Frank Kelly is superintendent of the pressroom, with Messrs. Benjamin Thompson and Henry Evans as his assistants. The success of *Once a Week*, the principal publication of this house, is phenomenal. Started but a couple of years back it has taken the popular taste and has already reached a circulation of almost a quarter of a million copies weekly.

Among the printing houses of New York devoted to the better class of printing, none stands higher than that of C. K. Alley. Founded in 1885 under the style of Fleming, Brewster & Alley, it quickly took a place in the front rank of art printers. For a young house, catering to those requiring only the finest of work, vicissitudes necessarily arise and their case proved no exception. About a year ago, however, both Messrs. Fleming and Brewster retired from the firm, Mr. Alley assuming control, with Mr. George F. Taylor (formerly occupying a responsible position with J. J. Little) as superintendent. Since the change in the firm not a dull day has been experienced, every part of the establishment being kept fully employed, and on such work as proved that reputation tells. Messrs. Cottrell & Sons have orders now to build several new presses for Mr. Alley.

H. J. T.

#### FROM KANSAS CITY.

To the Editor: KANSAS CITY, Mo., February 9, 1891.

The past few months have witnessed the lowest depression in all branches of the printing business ever known in this city. Retrenchment has been the universal cry and practice among proprietors, and as a result the newspapers have greatly reduced their number of regular cases; every member of the various editorial and reportorial staffs whose services could be dispensed with has had to submit to the inevitable; and the union compositors have deemed it wise, under existing circumstances, to give up all phats and pick-ups for the term of three months from January 4, at the end of which time the old rules governing these matters to again be in effect. In consequence of the present state of affairs, quite a number of newspaper men have departed for other fields of labor. The conditions in the job offices have somewhat improved since last month, and while work is not rushing, the supply and demand of job printers are about equal.

There has been much talk of a consolidation of the *Globe* and *Journal*. Rumor has had it that Louis Hammerslough, proprietor of the former named paper, had secured a controlling interest in the incumbrances against its rival, and would soon bring about a foreclosure and thereby a merging of the two publications. This is all speculative, however, and no such action will be taken soon. Mr. Hammerslough's journalistic aspirations, while not fully realized, have been entirely subdued, and he longs to return to the more lucrative investment of his capital, which, although still ample, has been greatly reduced by his two years' experience with the *Globe*. The paper is for sale.

The *Journal* has reduced its subscription price to 15 cents a week.

Mr. James M. Rhodes, one of the old-timers here, has removed with his family to San Antonio, Texas. The gentleman has been one of the most earnest and active members of No. 80 for years. As president of the union, as delegate to the international, as a committeeman, his work was always performed faithfully and well, and he had become one of the wheel-horses of unionism in this city. In his departure, Kansas City loses one of its best men of the craft, while San Antonio gains a most valuable member to her ranks.

Eleven fraternity printers were recently shipped from this, the P. P. F.'s recruiting point to Boston to take the places of union men locked out on the *Post* of that city.

The *Midland Mechanic*, the representative of the labor organizations of this city, is now owned and controlled by a stock company, composed of the different unions. As yet the management of the paper has not been changed. Mr. Frank Hall, president of No. 80, at present in charge of the mechanical department of the

*Mechanic*, is being favorably considered for the position of general manager. A more worthy or capable man could not be selected.

Mr. G. H. Stone, president of St. Louis Typographical Union, No. 8, and international organizer of the second district, comprising the states of Colorado, Kansas, Nebraska, Missouri, Iowa, Wisconsin and Indian Territory, was present at the February meeting of No. 80.

Mr. J. H. Platt, of the *Times*, has been appointed deputy district organizer of the international for this city.

No. 80 numbers at present two hundred and thirty-five members.

About April 1 there will be a dissolution of the firm of the Inter-State Publishing Company. Mr. Emor Kimber, the present manager, it is stated will continue in business by selecting an office out of the present plant equal to his share of stock therein, and the balance of the material and machinery will be purchased by various other offices in the city. That such an extensive and complete plant as this should be divided up in this manner is to be deplored.

So far the only contest developed in the coming election in No. 80 is that for delegate to Boston. Two are to be elected. So far the candidates announced are as follows: Frank Hall, J. F. Klunk, E. M. Lovendale, Frank Foes, Jesse Calvert and W. S. Johnston.

Under the able direction of Mr. R. B. Teachenor, its head artist, the Inter-State Company is issuing one of the finest pieces of art work in the printing line ever executed in the West. It consists of a 64-page souvenir of a recent excursion through Texas by the Kansas City Commercial Club. Mr. Teachenor accompanied the tourists, and from material collected with pencil and camera he has compiled the elaborate work which would do credit to any concern in the country. Advance sheets of the publication justify the assertion that as a piece of art printing it has never been approached in this city for beauty of design and correctness of detail. The edition of 4,000 copies will cost \$2,000.

THE INLAND PRINTER can at all times be found on sale at Fitzgibbon Bros.' cigar store, No. 14 East Eighth street.

The Inter-State Company has in hand the work of a 1,000-page catalogue for the A. Baldwin Hardware Company, of New Orleans. The contract amounts to \$20,000.

The six-day law is being rigidly lived up to on the newspapers here.

There are twenty-seven union offices here at present. As many more are sailing under the non-union banner, but the former class embraces the most important offices of the city. BEN.

#### FROM CINCINNATI.

To the Editor: CINCINNATI, Ohio, February 8, 1891.

Business here the past month has been very brisk among the different book and job offices, the secretary of the union receiving repeated calls to supply extra men. Considerable night-work is being done in order to get the work out.

One of the coming offices here is the Webb Printing & Stationery Company, of 124 Walnut street. They do a large line of commercial work, with railroad printing as a specialty, and during the past week added over \$1,600 worth of new job type to their already large composing room.

The prettiest calendar received this year is that gotten out by the Russell & Morgan Printing Company, in twelve sheets, and all in fancy colors. It excels all their previous efforts in this line.

A fire in the office of the Elm Street Printing Company last Friday night resulted in a loss of about \$1,500 to that concern.

Mr. Henry Shepker, a member of the firm of Keating & Co., who has been ill for some time, died last Saturday, from a complication of diseases. He was about 35 years of age, and quite popular among the printing fraternity.

The firm of McBrair & Co., lithographers, will shortly remove to more commodious quarters in the new Nevada building, a large factory building which more than a year ago burned down, completely gutting the offices of the Henderson-Achert Lithographing Company, Knight & Co., and George P. Houston,

printers, and a large number of other lines of business. Knight & Co. have also gone back into the same building again, and have enlarged their plant.

G. J. Braam, a son of Mr. Cornelius Braam, the business manager of the Cincinnati Typefoundry, has formed a partnership with Nick Feckter, late of the firm of Oppenheimer & Feckter, at No. 92 Sycamore street. The new firm are mainly commercial printers.

Billy Bloebaum, who is the full force of the Cincinnati Typefoundry in their composing room, has lately patented a new machine for mitering rules, and will soon put his invention on the market. The above named foundry has quite an extensive composing room, but do no composition for other than their own work, specimen sheets, etc., preferring not to enter into competition with the regular printing firms of the city.

"Pic" Russell, the senior member of the Russell & Morgan Printing Company, in attempting to board a rapidly-moving cable car about ten days ago, was dashed to the ground and very seriously injured. He was taken to the Good Samaritan Hospital for treatment.

"Bob" Morgan, of the same firm, when a member of the board of police commissioners four years ago, made arrangements to present the most efficient police officer each year a handsome gold medal, and the fourth Morgan medal will be presented to Sergeant William Copelan on February 21.

Ault & Wiborg, ink makers, have turned their business into the Ault & Wiborg Printing Ink Company, following the example of the Standard Printing Ink Works, which was some time ago made a stock company.

The "political pot" in the union circles is commencing to boil; as usual candidates for delegates to the International Typographical Union being the first to appear. This early in the game but three candidates for that position have announced themselves — William H. Seaman and Chris C. Kenney, of the *Enquirer*, and W. H. Gensley, of the Methodist Book Concern. The race for delegate has been very exciting and costly here for several years past. It is said that the election of one delegate two years ago cost one of our members about \$400 in cold cash, and one of our delegates to the Atlanta meeting is said to have spent over \$250 to secure his election. It is a pretty state of affairs when candidates for delegate to the International Typographical Union pursue the methods of ward politicians in the purchase of votes. I heard the other day of at least one man soliciting votes for one of the candidates last year, calling up a crowd of printers in a saloon to drink, as he flashed up a ten-dollar bill: "Come on, boys; have something to drink. This is not my money. This is ———'s money. I'm hustling for him." Such methods and such "hustling" is a disgrace to union printers. It is pretty safe to say, from the character of the three men named above, that there will be none of this kind of business this year. At least let us hope so.

The election last year was held under the Australian system, and it virtually done away with the pulling and hauling of members from one candidate to another just before the casting of votes. It gave members an opportunity to go into booths and scratch their tickets in privacy, and to the surprise of all, at least one man whose calling seemed sure before the election was defeated badly. There is some talk of having the union do away with the Australian system at this election, but I do not think the opponents to it will be able to carry their point.

The *Union Bulletin*, which has now been published monthly by the union for over three years, has done more to create union offices than all the efforts put forth by the non-union office committee. The sending out of the *Bulletin* monthly keeps the list of union offices prominently before the public, and job and book printers particularly are beginning to see that the absence of their names from the union list works to their disadvantage frequently, and the union at the present time is considering the putting on of at least three more offices on the list.

The *Law Bulletin*, which lately came into the possession of two members of our union, has not yet been put on the list of union offices. Why this delay? Is this to be another instance of

the old saying that "when a union man works for some one else he wants all that the scale calls for, but when he goes in business for himself he runs a 'rat' office." I can call several cases of the above kind to mind, and not half try.

Typesetting machines are to be introduced in the *Commercial-Gazette* composing room shortly. Five "dummies," or key-boards, are already in, and a number of compositors are practicing so as to be able to manipulate the keys when the machines arrive.

Early in December the Covington *Commonwealth* sued Typographical Union No. 3 for \$10,000 damages in the United States court, and a temporary restraining order was granted preventing the union from further boycotting that sheet until the suit for damages was settled. Suit was set for February 2, but was again postponed. Boycotting is rather expensive business—especially to the boycotted.

Robert Clarke & Co. are printing a one thousand page brief, three hundred pages of which were turned out last week. The *Commercial* jobrooms have the city reports, which make about eight hundred pages. Williams' City Directory starts up this month—fifteen hundred pages; and every office on the list is pretty well pushed with work. In fact, there is a greater demand for book and job printers than I have seen in Cincinnati for several years. Still there are plenty of "subs" on the daily papers, but they do not like to work in job offices, as working for a little while outside seems to hurt their chances for work on their return to the dailies.

SCRIBE.

#### FROM DETROIT.

To the Editor :

DETROIT, Mich., February 3, 1891.

The banquet given by Detroit Typographical Union, No. 18, on January 19, in honor of Franklin's birthday was a most enjoyable affair. The same was given at the Wayne, one of the leading hotels of the city. The supper was excellent, the menu being elaborate and varied. About one hundred and fifty members of the union were present. The invitations and programmes were rare creations of typography, from the firm of Winn & Hammond. After partaking of the supper, President James P. Murtagh, who acted as toastmaster, made a brief speech in which he traced the history of No. 18 from its birth, in 1852, to the present day. Of the seven original charter members, only two are living. In closing, Mr. Murtagh named many of its members who have achieved distinction in the city in the different professions and branches of the national and municipal governments.

"The International Typographical Union" was the first toast announced, and was responded to by John McVicar, the Centennial President of the International Typographical Union. He gave an interesting history of that organization and its work, replete with valuable statistics, and strongly recommended trade papers as being of the greatest value to the craft.

"The Day We Celebrate" was responded to by Robert Y. Ogg, who paid a high eulogy to the character and philanthropic services to humanity of Benjamin Franklin, predicting that his name would live longer in history than that of any other American with the exception of the two illustrious names of Washington and Lincoln. Whatever he accomplished as statesman and patriot, he is still known among men as "Benjamin Franklin the printer."

John Drew, an old-time printer, spoke on "Reminiscences," relating many humorous and pathetic incidents of printing in the earlier history of the city.

Judge C. J. Reilly, of the Wayne circuit court, answered to the toast of the "Honorary Members." The judge in his remarks deplored the lack of education in both professional and mechanical callings that prevail nowadays.

"The Golden Opportunity." This toast was answered by Harry R. Winn, who spoke as follows :

MR. CHAIRMAN AND FRIENDS,—I have little to say in reference to the toast; but before I proceed with my remarks, and before the thoughts in my mind pass away, let me state that this is one of the happiest moments of my life, for when I see those with whom I have stood shoulder to shoulder at the

case, when I see those for whom I have many and many a time been glad to sub, when I see those who have been my companions on my weary march homeward at early daydawn, and when I see yonder an old foreman under whom I have worked for years, and then when I see on my right hand and on my left my own employés, it makes me feel, from the bottom of my heart, how true the sentiment of the words, "One touch of nature makes the whole world kin."
