At some period of every man's life there comes to him what I would term his golden opportunity. I care not if it be but the poor Polack who digs in our sewers, or the statesman that presides over the destinies of his countrymen, I say I care not who it may be, or in what plane of life he may move, there comes to each and every one of us a golden opportunity, whereby we may advance ourselves in the society in which we move, and mark, as it were, a new era of future prosperity. If we but grasp the opportunity when it presents itself, and in the common parlance of the day, take off our coat, and work at it with all the energies, both physical and mental, with which nature has blessed us, I say that if we do all this, there will be no such thing as failure.

The printer, from the peculiarity of his vocation, which brings him in contact with all kinds of trades and professions, naturally acquires a variety of knowledge which does not present itself to the average mechanic. He is naturally aggressive, and always on the lookout for an opportunity, and when he aims at anything rarely misses his mark. In proof of this, look in the senate, you find him there; in the legislature, you find him there—he is in the army, in the navy, at the bar, in the pulpit, on the stage, at the plow, and you will find many of them at the heads of large manufacturing concerns; he is always brilliant, always in the front rank. Benjamin Franklin, the man whose birth we commemorate tonight, was a man who never let an opportunity go by without grasping at it. From a tender age until his death, he never missed an opportunity to make a friend, to do a favor, or to improve his mind. What he did he did well, and his life is a glorious example for all printers to come.

I have little more to say, but to thank you for the honor in calling upon me to respond to this toast; yet, before I take my seat, let me congratulate those who have been instrumental in bringing us together this evening; let me tell them, however, that they too have a golden opportunity before them, and that is to use their influence to make such gatherings as these annual events, aye, and if you can, make them semi-annual—the more the better: for to my mind, and I do not hesitate to give expression to my thoughts, such gatherings as these—bringing as they do employer and employé side by side, basking in the sunshine of happiness, partaking of the bounties of this well-spread table, intermingled with good fellowship—I say, Mr. Chairman, that such gatherings as these will do more to solve the knotty problems that come up between man and master, between labor and capital, than weeks of debate in either typhothetæ or union.

"The Newspaper Printer." by Harry D. Lindley, was also one of the best of the evening. Mr. Lindley is a newspaper compositor and well qualified to speak on behalf of his associates. He spoke as follows :

The newspaper printer is the cosmopolitan; the beacon light of civilization; the lighthouse on the rocky shore of the seething sea of humanity; the alumni of the great educational storehouse of the world. 'Tis he who puts in place, one by one, the little leaden dies that make orators, statesmen and nations, build cities, tear to pieces the selfish structures of tyranny, break the chains of slavery and weld more firmly the encircling bands of fraternal love. 'Tis he before whom monarchs tremble and republics bow in homage.

The newspaper printer is a great traveler—not always in vestibule trains, however. Sometimes, in fact quite frequently, he travels in that class of rolling stock known to railroad men as double-deckers, with a little enthusiasm, a short pipe and a plug of tobacco for his diet. At other times he revels in the luxuries of a millionaire, and actually indulges in palace cars, champagne, Havanas, a little gold in his pocket, and even goes so far as to get a square meal. Then again, on the uppers of his shoes, he may be seen wearily measuring the miles from city to city, mother earth for his couch and the blue canopy of heaven for his mantle, happy as a clam at high tide. Yes, he may be found, alas! too often, at the punch bowl, with destruction of body, brain and soul staring him in the face—the prince of paupers, the pride of kings, the magnetic needle on the compass of empires.

The newspaper printer is a great comedian, a fair tragedian, a good emotional or melodramatic character, and his line in grand or comic opera is well up in the cast. As an orator he is emphatic, enthusiastic, sublime, and his greatest oratorical powers are brought into requisition when he takes from the copy-hook a piece of illegible manuscript. He turns it endwise, sideways, upside down, then lays it down and ponders over it till his brain seems on fire; then, in language more emphatic than poetic, he exclaims that the cockroach that crawled over and ruined that paper must have been crazy or drunk, and in the next breath, to sooth his aching brain, he bawls out in stentorian tones, "Who'll give out a pipe, tobacco and a match: I've got the wind?"

Charitable? I should say they are. They are charitable to a fault. They will give their last dime to a brother in distress, divide their lunch or Apollinaris water. A newspaper printer was never appealed to in vain for a worthy charity—his response always coming with that heaven-born impulse that dispels for the moment the dark clouds of despair.

The newspaper printer has tribulations and trials known only to his craft. Few there are who realize the fact that he stands at the case ten to

fourteen hours daily endeavoring to make English of the mangled language of some aspirant to reportorial fame, and in that endeavor makes use of some word unknown to the vocabulary of the would-be George William Curtis, only to find his proof butchered and the air blue with eloquence from the author, and perhaps the next issue of the paper will contain a paragraph explaining that the "intelligent compositor" made us say the printers' Ben Franklin banquet was a failure, when everybody knows it was a most enjoyable success.

The newspaper printer is full of patience and long suffering, and watchfully waits for the fame and fortune which come not till the merciless earth is thrown over his lifeless clay and his spirit has flown to the farther shore; but when Gabriel blows his trump, when "30" is in on the main line, may we all have the "take" with which we have been struggling these many years well "made even," our galleys all corrected and revised, and our final proofs found to be so clean by the great proofreader above that he will say to us, "Well done, thou good and faithful servants."

The other toasts of the evening were: "The Press," by V. W. Richardson, of the staff of the *Free Press*; "The Devil," Thomas Dixon, foreman of the *Times*; "Something," William Van Buren, United States Marshal; "The Pioneer Sub," James H. Kelly, Assistant City Clerk; "The Childs-Drexel Home for Printers," Charles O. Bryce; "Pi," Charles E. Miller, of the *Times*; "The Stereotyper," George Curtis; "The Ladies," Joseph A. Labadie. The banquet, taken all in all, was a glorious success, and will long be remembered by all who participated.

For a long time rumors had been afloat of newspaper changes. These rumors have proved to be true. The *Tribune* was the paper interested. The same has been sold to Mr. Dee, of the *News*, and other gentlemen. In a late issue the *Tribune* announces that it will improve its typographical appearance. They have contracted for the first output of the Rogers Typograph. At the same time the columns will be widened to standard measurement and the general appearance made as handsome as any paper in the country.

At the regular meeting of Detroit union last Sunday the nominations of delegates and officers for the ensuing year were made. It was agreed to send two delegates to the Boston convention. The following are the nominees: Patrick O'Grady, Philip A. Loersch, William L. Bessler, James P. Murtagh, Robert Jaffray; president—Fred Martin, Frank J. C. Ellis; vice-president—George W. Duncan; recording secretary—Noble Ashley, Harry D. Lindley; financial secretary—Thomas Jeffs, Richard Lindsay, Irving Carrier; treasurer—Aaron M. Bernhardt; sergeant-at-arms—W. M. Blight, Fred Greiner, Bion Hough, W. G. Shaughnessy; executive committee—W. A. Taylor, H. Marr, J. Mason, W. H. Wagner, W. B. Tilton, W. Palmer, A. Robinson.

Capt. J. W. Hall, marine reporter on the *Journal*, died on January 31. Mr. Hall was born at Fort Erie, Ontario, opposite Buffalo, New York, in 1813. He was well known in marine circles. In 1858 he began ship broking and marine reporting at this port, and was thus engaged up to the time of his death, and for a number of years furnished the marine news for the papers at all the principal lake ports.

Among the Detroit printers in attendance at the state convention of the Michigan Federation of Labor, at Grand Rapids, are G. W. Duncan, secretary of the federation; W. A. Taylor, delegate from No. 18, and C. E. Miller, delegate from the Trades Council.

P. A. L.

## PRINTING AND PUBLISHING PROSPECTS PLEASANT.

To the Editor:

NEW YORK, February 7, 1891.

The second month of the new year finds the printing trade and associated interests in an easy condition. The early part of February is regarded in business circles as "between seasons." Demands in numerous lines at the moment represent current consumption only. The prevailing sluggish state of trade throughout the country is therefore not unnatural. Preparations for the spring trade are progressing, and if there is no interference through unwise legislation, the present lull will doubtless be followed by renewed activity and energy in every department of trade.

The New York Typothetæ celebrated the one hundred and eighty-fifth anniversary of the birth of their patron saint, Benjamin Franklin, on Saturday night, January 17. A number of

prominent printers, among whom were the following, were present: William C. Martin, president of the typothetæ; Theodore L. De Vinne, Howard Lockwood, James A. Rogers, J. Thorne Harper, Martin B. Brown, J. W. Pratt, Louis D. Gallison, Edward Taylor, Homer Lee, W. W. Farmer, J. J. Little.

The banqueting room in the Hotel Brunswick was superbly decorated. Just above President Martin's chair hung an antique portrait of Franklin. The banquet was magnificent. At 9 o'clock President Martin called the gathering to order and made a bright and interesting address. In speaking of the late Richard M. Hoe, who, he said, had introduced the first cylinder press, he took pleasure in announcing that a beautiful marble statuette of the renowned printing-press builder had just been presented to the society by Peter S. Hoe.

Rev. Charles A. Meredith followed Mr. Martin. The reverend gentleman made a graceful oration, in which he said that he thought his hearers knew much more about Franklin than he did, yet he ventured to put the great printer-philosopher next to Washington in the constellation of patriotic and famous Americans. "Today," he declared, "there are just as great printers as Franklin, but we are a nation of giants, and none of them towers much above the head of his fellow man." He ended with some sharp remarks upon the avalanche of books which are burying the people alive.

Col. William J. Brown replied to the toast, "New York." Joseph Howard, Jr., made a spirited onslaught upon the pulpit, bench and press, in speaking to the toast, "Ourselves in 1891." "The Press" was Paul Dana's topic. W. H. McElroy talked about "The Editors." Brander Matthews followed on "The Author," and Isaac L. Bailey on "The Printer."

New York Typographical Union, No. 6, has adopted a union label and has requested industrial bodies generally to get their printing done in union offices. The Central Labor Union has promised to comply with the request.

At a recent meeting of New York union the question of reducing the death benefit from \$150 to \$100 was raised and discussed at great length. The men who favored the change said that \$150 was a little too much, and the payment of it was a heavy drain on the union's receipts. In December five members died and their deaths cost the union \$750. It was resolved to settle the matter by a general vote in March. The committee on scale was ordered to revise the scale of prices and, in doing so, to consider the nine-hour question, typesetting machines and time work. Prices are not to be raised.

It was announced, amid cheers, that New York Typographia, No. 7, which is composed of German compositors, had a charter from the International Union, and would be known as Union No. 274 hereafter. A committee was appointed to fix up the differences between No. 6 and No. 274.

The E. W. Bliss Company, manufacturers of printing presses, Brooklyn, have compromised their difficulties with their four hundred locked-out employes, and work has been resumed. Nearly all the rules objectionable to the men have been revoked, and the company has agreed to continue the present scale of wages for five years.

New York Typographia, No. 7, celebrated on Sunday, February 1, the receipt of a charter from the International Union. It will be known as Union No. 274.

Advices received here from Bogota, United States of Colombia, bring the news of the death of Señor Francisco Torres Amaya. He was one of the best-known citizens of Bogota, and the founder of the newspaper *El Catolicismo*, a weekly religious paper, to which Archbishop Mosquera and Drs. Gutierrez, Vugara, Madiado and other prominent writers contributed. He also published other newspapers, among them *El Eco de los Andes*. He edited the favorite prayer book in the republic entitled "Delicias al Pie del Altar" (pleasure at the foot of the altar). Of this prayer book eight editions have been printed in Colombia, and it has been translated into several European languages. Amaya introduced in Bogota the latest improvements in printing and lithography and made a wide reputation as a publisher and writer. The whole

republic of Colombia mourns his loss, and the press in general comment on his death.

The New York *Star*, after a long career of misfortune, during which it is said to have lost \$1,500,000, has acquired a new management, a new name and a new form. It appeared February 1 as the *Daily Continent*. The unique feature of the paper is its size, which is about the same as *Harper's Weekly*, an unusual form for a daily newspaper. Under John Kelly and William Dorsheimer, and the strong financial support of C. P. Huntington, which was extended during a part of Mr. Dorsheimer's management, and since, the *Star's* career has been checkered. Perhaps the change of name, form and style will alter its luck and give it the success which it could not achieve under its astral title. Frank A. Munsey is the new proprietor. He also publishes *Munsey's Weekly*.

The sheriff has sold out the stock and fixtures of the firm of Muller & Vogel, manufacturers of printing and lithographing inks at No. 107 Beekman street, under executions aggregating \$4,200. The firm claimed a capital of \$30,000.

Goodman's *Clothier and Tailor* is a new trade journal, published by the Goodman Printing & Publishing Company, 294 Broadway.

PRINTER-JOURNALIST.

#### FROM BOSTON.

To the Editor: BOSTON, Mass., February 4, 1891.

Trade continues good. The new democratic broom in the hands of Mayor Matthews has been employed effectively in this city during the past month—at least in its application to street cleaning.

It is "Gen." Charles H. Taylor, of the *Globe*, now, and the appointment by Governor Russell of the genial editor of Boston's great daily to a position on his staff, was an honor most worthily bestowed. "Governor" W. E. Barrett is mentioned as among the possibilities for 1892.

There is as good material for statesmen in the journalistic as in the legal profession, and who shall say that men trained in the newspaper school are not as a rule better qualified to represent the interests of the masses than those bred to the law!

The January meeting of the Suburban Press Association was well attended and interesting. Editor George M. Billings, of the *Milford Gazette*, was to have read a paper on "Heads," but gave instead a chapter on printing office and newspaper economics, which was full of practical suggestions and wise counsel. This association has always taken a lively interest in the establishment of more equitable relations between publishers and advertising agents, and in this direction perhaps more than any other has it proved a benefit to its members. In December, Messrs. Waterman & Son called attention to the seemingly arbitrary position taken by Messrs. N. W. Ayer & Son, regarding the cancellation of a contract for advertising in their paper, and a committee was appointed to consider the matter. At last month's meeting this committee reported as follows:

Your committee to whom was referred the grievance of Messrs. Waterman & Son, publishers of the *Athol Chronicle*, members of this association, against Messrs. N. W. Ayer & Son, advertising agents, present this statement of Waterman & Son pertaining thereto:

*First*, That they received from Ayer & Son an advertising proposition, calling for extra position, which they declined because the price offered was "too ridiculously low."

*Second*, In their reply, Ayer & Son, saying nothing about position—which was the point of difference—offered the straight card rate, which was accepted.

*Third*, In the absence of the business manager of the paper, the advertising matter came from Ayer & Son, accompanied by instructions "to insert at top of column, etc., in accordance with your written acceptance"; and those in charge of the office, under the phraseology of Ayer & Son's letter, thinking it the culmination of a "position" contract, commenced running it in the paper.

*Fourth*, On his return, some two weeks later, the business manager promptly notified Ayer & Son that the acceptance of their proposition allowed no position, and that unless advanced rates were added for position, the advertisement would be discontinued; to which notification no attention was paid by Ayer & Son, the advertisement was stopped, and bill sent. In their reply, Ayer & Son said, "We deny your right to cancel the contract."

They also waived the right of position which they had assumed outside the contract in their previous letter, but did not propose payment of the month's position they had had. In another letter they explicitly denied the right of any publisher to cancel contracts, but insisted on that right for the advertising agent.

*Fifth*, Waterman & Son say the reason why they did not continue the advertisement after Ayer & Son had waived "position" was because there was a month of "position" rate due them, and because, also, they wished to contest the right of a publisher to cancel a contract equally with an advertising agent.

*Sixth*, Accepting the statement of Waterman & Son as a basis, your committee present the following for your consideration and disposal:

*Resolved*, That the course pursued by Messrs. Ayer & Son, advertising agents of Philadelphia, in the matter of the "John Finzer Bro's" advertising contract with Messrs. Waterman & Son, publishers of the *Athol Chronicle*, and especially their method of claiming "position," outside the acceptance of Messrs. Waterman & Son, when their "position" proposition had already been declined definitely, was unbusinesslike and unfair.

*Resolved*, That the silly doctrine, advanced by Ayer & Son, that the advertising agent represents the jug, and the publisher the handle, in the matter of advertising contracts—that the former can break a contract at their own sweet will and pleasure, but that the latter can have no such privilege—might have passed current in days ago, when publishers scarcely knew each other by sight, but is "played out" in this day of press associations and kindred organizations. Moreover, it is opposed to the plainest principles of equity, honor and decency, as they are supposed to obtain among fairminded men. We protest against any such dogma as inimical to the interests of publishers and lowering to the dignity of journalism, and give our emphatic, unqualified condemnation.

After a prolonged discussion the report was adopted as presented.

The annual ball of Boston Typographical Union, No. 13, at Music Hall, on the evening of January 28, was an unqualified success, for which credit is due to a most zealous committee of arrangements and the determination of members of the union to make the event eclipse the balls given in former years. Among the invited guests present were ex-Mayor Hugh O'Brien, treasurer of the Franklin Typographical Society and honorary member of the union, President D. F. Barry, of the common council, Hon. Patrick McGuire, Alderman T. F. Keenan, Senator W. S. McNary, Mr. H. O. Whitcomb, Patrick Donohue, editor of the *Pilot*, master printers Frank Mudge and J. S. Cushing. Nearly two hundred couples joined in the grand march, which was led by President Thomas H. Gilman and wife. The decorations were profuse and tasteful. In a conspicuous position was the Boston *Post* banner, bearing the inscription,

"LOCKED OUT JANUARY 17."

Music was furnished by the full Germania band, Wilhelm Reitzel, conductor. The order of dances was a typographical gem. It was printed at the office of Messrs. A. T. Bliss & Co., under the supervision of Mr. Thomas A. Whalen.

On January 17, the proprietors of the Boston *Post* locked out the force of compositors employed on the paper, comprising fifty-one men and two boys. There had been no differences between employers and employed, and no other reason for the lockout was given than the disinclination of the *Post* management to abide by the rules of the union. "Fraternity" men at once took the places of the union printers, and the latter were obliged to seek employment elsewhere. The *Post* was involved in a similar trouble with its printers in 1879. On July 19, of that year, to quote from a statement made by Mr. Gilman, the present president of union No. 13, "The men quit work at 3:30 A. M., and without any intimation of the change that was to take place. When they returned at 12 o'clock to receive their pay, they found the doors locked, and were informed by the proprietors that their services were no longer required, as the business in the composing room had been let out on contract, and a new set of men employed. A sharp and bitter fight followed against the *Post*, and was continued until 1885 when the management changed and the *Post* once more came into the union."

What the outcome of the present difficulty will be time only can tell. In taking such a decisive step against the typographical organization the *Post's* proprietors doubtless counted well the cost and will not be easily moved from their position. That their experiment will result disastrously is freely predicted by members of No. 13, and the union printers will have the coöperation of

labor organizations representing all trades. Nearly half of the locked out compositors have been given employment in other offices, and those who remain idle receive assistance from the International Typographical Union, which pays \$7 weekly to married men, and \$5 to unmarried men, while Boston Union, No. 13, has voted to give in addition \$3 to those who are married and \$2 to the unmarried.

The name of Edward Bellamy is mentioned in connection with a new penny evening paper to be started in this city as an outgrowth of the *Post* trouble. No definite plans have yet taken form, but a committee is actively engaged with the matter. It is said that abundant financial support for such a venture can be obtained. If the plans materialize, it is understood that the paper will be devoted to laboring interests, and that it will be democratic in politics.

The electrotyper's union of this city has presented to master electrotypers an advanced scale of wages to go into effect on February 7. The most important change is in the pay of molders and finishers, which it is proposed to increase to \$4 per day. Several conferences have been held between a committee representing the union and the employers, but up to this time no decision has been reached. The adoption of the new scale would be sensibly felt by printers, as it would necessitate an advance in the price of electrotyping.

Boston Job Printing Pressmen's Union, No. 1, gave its first ball at Odd Fellows Hall on Thursday evening, January 8, just too late for a notice in last month's letter. Unsparring effort on the part of the committee of arrangements, a large and select attendance and excellent music were the elements which combined to make the party one of the most enjoyable social events of the season. Mr. Patrick P. Taine and Miss Mary Schwenk led the grand march, and the floor was in charge of the following committee: Floor director, P. P. Taine; assistants, B. G. Quinn, W. P. Kennedy; aids, J. A. Glenn, M. F. Landers, J. J. Whelan, E. F. Eagan, W. Gaynor, R. P. Barnes, F. J. Hayes, J. T. Landers, P. F. Burns, J. W. Archibald, Henry Hickey, J. Furlong; reception committee, F. W. Crowley, chairman, W. F. Lewis, W. H. Skeene, F. Walsh and J. J. Riley. The master printers, ink and roller trade and typefounders were well represented among the invited guests. A handsome souvenir order of dances, printed by Messrs. L. Barta & Co., was much admired.

The Ryder & Dearth Company, of Providence, have recently made extensive additions to their printing plant, and secured the services of Mr. D. F. Cooley, lately with Messrs. Winship, Daniels & Co., of this city, as foreman. Mr. Cooley is a good printer and a practical manager. Success to him in his new field.

Mr. Arthur H. Caldwell has left the salesroom of Messrs. Golding & Co., where he has been employed for a number of years, to engage in the real estate business in this city. G.

#### THE ORIGIN OF ITALIC.

The form of roman now known as italic was originally called Aldine. The first volume printed in this character had the capitals with their stems upright, like those of the current round hand. These first editions were the works of Virgil, printed by Aldus Pius Manutius in 1512, and it is known that this celebrated printer made use of a manuscript text entirely copied by Francesco Petrarca. Thus, it is said that Manutius, desiring to pay public and reverent homage to the author of the Canzoni, appropriately wished a hanging character cut in imitation of his writing, intrusting the design and the cutting to a skilled artist, one Francesco da Bologna. But the fashion of these editions in cursive italic type lasted only a short time, having been imitated by foreign printers in a careless and illegible manner. The cursive character was at that time known both in Italy and outside of the country under the name of Aldine, but later the title of cursive was given to it from the writing of the Roman chancellery, called *cursiveti seu cancellarii*, a title which in Italy has superseded every other.

#### A PRINTERIAN HINT.

BY SYDNEY T. BATES.

A poor old printer stands silent and glum,  
With type well pois'd 'tween finger and thumb,  
And eyes slanting up, expressive of doubt.  
If the words he has set are clearly made out,  
And a look on his face that tells of his scorn  
Of the old-fashioned quill and ink in a horn,  
And the scrawls on his copy, meant to be words,  
That look like the tracks of snails or of birds.

He strains his poor eyes and rubs up his hair,  
And bites his moustache, and searches with care,  
But patience and learning and good-natured will  
Won't turn into sense these words with a quill.  
He peers up and down for the cap-letter O,  
As a key to the noun which puzzles him so—  
He spies out a letter and has it, he hopes,  
When, lo! it's an A, as the spelling denotes!

He rubs up his glasses and starts off again  
To get at the thread of the intricate train,  
And a tear trickles down on the end of his nose  
As he carefully quarries the words of the prose,  
He's doubtful of *h*, and the *f* and the *j*,  
"They're made just alike," he whispers to say;  
"Writ with blue ink on the end of a quill,  
By confounded dude, with his usual skill!"

He reads along further, to get at the gist,  
And scans very closely each pot-hook and twist;  
But he finds that the *q* is made like the *g*,  
And the *r* and the *v* exactly agree;  
And as to the caps, why, the *J* is an *I*,  
And that *H* is an *A*, there's none will deny;  
For *F* he has *T*, and sometimes an *L*,  
And which one is meant he can't always tell.

He finds now an *l* that looks like a *t*,  
And an *i*, undotted, which answers for *e*;  
And the *u* and the *n* are always alike,  
And look just as though they were made with a pike.  
If he wishes for *h*, it's a very good *h*,  
But these never stand very much in his way;  
But the *a* and the *o*, when made just the same  
Are apt to confound in a tough proper name.

You may see how complete is the printer nonplussed,  
But never can feel his thorough disgust,  
Nor the dread that awaits the proofreader's skill,  
When the poor fellow's copy is writ with a quill.  
The characters found on the tombs of Luxore  
Still live in the hand of Ben: Perley Poore:  
And the prophetic script on Belsazzar's wall  
Is fairly outdone by Bob Ingersoll.

The Lowell and Holmes and Whittier quill  
Has made the world cry and laugh at its will;  
But, like gold in the mine or pearl in the shell,  
It taketh much labor to quarry it well.  
The words that are said about each little line  
You may think are profane or truly divine:  
But you never may know nor never can guess  
What trouble it is to correct for the press!

O, man of great genius! think not of thyself  
When wooing the muse for honor and pelf,  
But strive to obtain the printer's good will  
By writing quite plain, but *not* with a quill!  
Think always of him who works in the night,  
By the glare and the flare of the hot gas-light,  
Whose days are all told while yet he is young,  
And dieth unknown, while thy glory is sung!

THE following is said to be one of the simple methods of producing the peculiar effects known as chaostype. Make a piece of blotting paper damp and lay it on the inner surface of the brown paper packing used with flong, and cast in the stereo apparatus a block of the dimensions required. The hot metal coming in contact with the damp paper will cause it to spurt and fiz in extraordinary directions, with elevations and depressions as are required. If such a plate is mounted type high and printed with ink to contrast with the tone of paper, the result will be exceedingly pleasing and attractive. Care should be taken when pouring in the metal, or it may spurt out of the orifice of the casting box.

Written for THE INLAND PRINTER.

### EMINENT LIVING PRINTERS.

BY JOHN BASSETT, EDITOR AND PROPRIETOR OF THE "PRINTING WORLD," LONDON.

NO. XIII.—DANIEL ADDISON DARLING.

**M**OST English readers, and not a few Americans who read their trade journals, will remember seeing an account of the centenary festival of Messrs. Darling & Son, limited, 1, 2, 3 Great St. Thomas Apostle and 31 Eastcheap, London, E. C. The gathering in question took place at the Criterion restaurant, Piccadilly Circus, W., the chief event of the evening being the presentation by the employés of a massive silver punchbowl to

father and son as a memento of the auspicious occasion and commemorative of the cordial relationship so long existing between employers and employed.

The rise and progress of modern printing owe much to men who prefer to "blush unseen," and such a one is Mr. Darling, who was born in Aldgate as far back as May 28, 1813. He therefore deserves to rank as one of the patriarchs of the craft. Mr. Darling came into the business with an instinct of it in his veins so to speak, for his father was a printer and laid the foundation of the present extensive establishment. This gentleman—the late Mr. John Darling—was a Scotsman and emigrated from the "land o' cakes" more than a century ago. Here he threw in his lot with two other enterprising Caxtonians, and under the style and title of Darling, Newman & Co. made good headway in business. In addition to their ordinary calling of stationers and printers they added what was in those days a surprising innovation—a circulating library; and as many of the volumes placed within reach of their customers were printed by the firm, we may be certain that their plant and capacity for large orders were not limited.

This triumvirate was not, however, doomed to be of long duration, for after a short time Mr. John Darling withdrew and went into business for himself as a printer, his late partners still continuing. The results were very different, for while the former gradually forged ahead and built a solid structure, the latter "went by the board," and the "Minerva Press" for a while ceased to exist. By this time Mr. Darling had removed his increasing business to 31 Leadenhall street, where the "Minerva

Press," which he resuscitated, found a new home until the pulling down of the premises in Eastcheap necessitated a change, when the building at present occupied at 31 Eastcheap was secured, and here they have remained ever since. The statue of the goddess and patron of handicrafts which adorns the portals of this house, it may here be mentioned, is of solid marble. It was at the age of fifteen that Master Addison Darling entered the house, not as an associate and assistant of his father but as the right hand and fond hope of his widowed mother. Whatever some critics may say as regards the importation of women into business circles, it is manifest that their kindly influence goes a long way toward inculcating high principles and a wholesome moral tone in the sphere in which they move. It was undoubtedly so in the case under notice, and the young learner in the new business soon found the real worth of a good mother as the head of the firm. To this careful training may be attributed the possession of those sterling qualities—the surest foundation of commercial prosperity.

In 1839 Mr. Darling took unto himself a wife in the person of Miss Elizabeth Helen Foot, daughter of the late Mr. Joseph Foot, of Stoke Newington, N., a lady who has lived to celebrate that happy event which falls to the lot of so few—a golden wedding. The employés of the firm in 1888 presented Mr. and Mrs. Darling with a magnificently mounted illuminated address in kindly congratulation.

Of the three sons born only one has taken an active part in the business, Mr. Charles George Darling, who, as managing director of the company into which the firm was formed in 1888, has proved himself well worthy of wearing the cloak which one day must fall from his honored parent's shoulders.

Concerning the business itself much more remains to be written than can be adequately dealt with in the space at my disposal, but a few interesting details will suffice to prove the old adage that oftentimes small beginnings have important endings.

It was in 1886 that Messrs. Darling & Son first came prominently before the trade and public as one of the fortunate few who were accepted by her majesty's stationery office to do the printing for the several departments of the state. The wisdom of accepting a comparatively small and unknown firm for this purpose created some stir at the time; the new policy, however, has proved the soundness of the judgment which prompted it, for in addition to the commodious premises which were specially built by the firm for this purpose at Great St. Thomas Apostle, affording immense facilities for prompt completion of large orders, the work turned out has had the advantage of being executed by machinery and plant of the most modern type. If proof were needed that Messrs. Darling have established a good reputation in government quarters, I might say that when the contract for printing the census papers for England and Wales was thrown into the open market for public competition Messrs. Darling again proved successful. This job, it is needless to say, is one that is eagerly bid for by all the largest houses in the trade, for in addition to being "a big line"—over 9,000,000 copies are printed—the advertising aspect of the order is not to be overlooked, seeing that every householder in the kingdom is told in bold type who it is that has had the honor of preparing the somewhat stupendous list of questions placed before them. Another feat in the matter of expeditious printing may be cited in the shape of "Lloyd's Register of British and Foreign Shipping," a work of 2,200 printed pages, royal 4to, mostly complicated tabular matter and involving the use of over twenty-two tons of type and more than 2,000,000 runs on the press. This Messrs. Darling finished in the short space of six weeks—a record hard to beat.

Although Mr. Darling has reached the ripe age of three score years and seven he still continues to take a keen and active interest in the business, and few who have the privilege of knowing him can feel astonished at his continued activity and assiduity, seeing that for over half a century he has worked as hard as anyone in his employ. And as he still enjoys the blessings of a strong constitution there are well-founded hopes that he may long be spared to remain at the head of affairs.

**CUTS ON CYLINDERS AND PLATENS.**

It matters not what line of life or work is yours, if you continue in its groove continuously for a number of years, a lot of surprises await you the moment you move out of it into another.

One-half the world knows not how the other half lives, nor how it works. This was impressed upon us the other day when we saw a pressman, who had always worked on cylinders, and was a good all-round hand at that, trying for the first time in his life to make ready a large cut on a job or platen press. He went at it willingly enough, going through the same process as that to which he was accustomed on a cylinder. To his surprise, he found the result was not the same, and after fussing about for a good while, he began to make forcible remarks, adding protests about the division of labor, and a growling declaration that he "wasn't hired to work on job presses anyhow."

Had he succeeded in getting up that cut with as clean a finish and as nice an impression as on his cylinder, nothing but smiles would have illumined his face. It was not a question of "every man to his own branch of the business," but mere irritation at his failure to do what he had thought was a very simple thing. He was a pressman, and here was a press, only not the kind of press he was used to. It was largely his own fault that at this late day in his life he did not know the slight difference between the making ready of a cut for a cylinder and that for a platen press.

Fortunately for him, some one was near to explain that difference which grows out of the dissimilar action of a cylinder and of a platen press in taking an impression: the one *distributing pressure along a straight line* of a given length, and gradually and continuously changing that pressure with an advancing motion dependent upon the speed of the revolutions of the cylinder; the other devised to produce *equal pressure at every point* of the given surface *at the same moment of time*.

He found that on the platen press the cut showed a sharp line of impression all around the outer edge, and a lack of impression in the center, and required to be helped by underlaying toward the center and a little treatment on the overlay. He was surprised to discover how the strength of the impression *seemed* to be greatest at the apparently weakest point of the platen and bed—the edges; but a very short explanation showed him his error, and he then realized the difference in the working principle of impression on the two kinds of presses; the flat impression that comes down all at once; and the rolling impression that presses along a thin line of surface at a time, but by rolling on repeats itself.—*Ex.*

**IMPRESS THIS ON SUBSCRIBERS.**

The greatest aid you can give your newspaper is your job printing; if you do not feel able to run an advertisement, surely you can afford to give the newspaper your cards, dodgers, bill-heads, letterheads and envelopes to print. The newspaper man needs it, and it helps him pay his printer for setting up the thousand and one free notices he gives you and your town; but don't go and give it to the printer or job printing office that can give you no such return—is expending neither money, time nor brains in trying to help you build up your town. The time may come when a newspaper can live simply upon the revenue from advertising and subscription, but no ordinary newspaper in any ordinary city can exist without the auxiliary support derived from job printing. Therefore, if you want a good newspaper—one that can still further help you and your city, give it your job printing.—*Huntsville Independent.*

A CERTAIN quantity of finely ground glue of best quality is soaked in a sufficient quantity of alcohol; there must be enough of the latter to always cover the glue. Let the mixture stand for twenty-four hours, and stir from time to time. If the glue does not dissolve entirely, add more alcohol until the desired result is reached. Then pour the liquid glue into a bottle with a wide neck and keep it well corked. The glue may not be as strong as if it had been boiled, but it will remain liquid and retain the full force of its adhesiveness.

**A PRINTER'S TALE.**

We lift the annexed capital specimens of typographical portraiture, and the verses accompanying them, from a recent issue of the German *Journal für Buchdruckerkunst*. It is seldom that such good effect is obtained by such simple means as have been used in this instance:

When I was a little lad  
Lovely curly hair I had;  
Rounded cheeks and all the while  
Playing 'round my mouth a smile.

When my boyhood's days passed by,  
Quite a masher then was I;  
Flirting 'round with every "tart,"  
'Till I stole away her heart.

Then I married, and my wife  
Acts the queen right up to life.  
All my reign is o'er, for I  
Must obey when she is by.

In a choir I used to sing;  
How my splendid voice would ring  
Splitting people's ears, ah me!  
When I touched that tenor C.

Drinking followed after song,  
And the singer oft went wrong;  
Then I staggered home to bed  
Cursing my poor muddled head.

There she sat, with awful face,  
Like a judge, to try my case;  
Rating me, as if I were  
Worse than any murderer.

From this picture, you may see  
What great grief has done for me;  
Would you know the reason why  
Tears are rolling from mine eye?

From this space my wife you miss!  
She has gone to realms of bliss;  
Gone to boss the show, I fear;  
But I reign in comfort here.

On her grave I placed this stone,  
And the words are all mine own:

Since the Lord  
Has laid you by,  
You have peace,  
And so have I.

Reader, now, my moral take—  
Marriage is a great mistake;  
But in death you yet may find  
A corrector, not unkind. —From *British Printer.*

# The MIEHLE . . . . TWO-REVOLUTION . . . . BOOK, JOB AND NEWSPAPER PRESS.

PATENTED.

MANUFACTURED IN CHICAGO.

**T**HE MIEHLE PRESS increases the output of flat paper pressrooms to an extent which wide-awake printers cannot ignore. The practical speed, without fear of injuring the machinery, is limited only by the capacity of expert feeders to feed—or more than 50 per cent in excess of any other two-revolution press.

By the new movement, the heavy type-bed is reversed with every degree of graduated acceleration. Springs, cushions, weights, arms, and other devices for overcoming momentum are no longer a necessity,—an air-cushion being used only as an assistance when running at the highest speed. The cumbersome and complicated machinery under the beds of all other presses of this character, is replaced by one simple and powerful new mechanical motion, invented by Robert Miehle, for effecting graduated reversions. The type-bed is out of gear with the other machinery of the press during each reversion, but in gear while printing. The gearings are relieved from the special wear, when reversing, common to all geared presses. Registering features are not destroyed by vibrations, strains and bumps. A heavier type-bed, which cannot spring in the center, is a result permitted by the great power of the Miehle reverse movement.

A number of Miehle presses are in daily operation in first-class offices in Chicago, and printers are invited to inspect and compare them with all others.

The following testimonial speaks for itself:

KITTREDGE & FRIOTT,

COLORED LABELS AND SHOW-CARDS, PRINTERS, DESIGNING AND ENGRAVING,  
Nos. 52 TO 58 WEST JACKSON STREET.

MIEHLE PRINTING PRESS & MANUFACTURING CO.

CHICAGO, January 15, 1891.

GENTLEMEN:—We take pleasure in informing you, that the large Two-Revolution Miehle Printing Press purchased from you last July, has given us entire satisfaction from its first trial, and we consider it today the best two-revolution press in the market. It is well made and substantial in design, runs smoothly, and registers perfectly, and will do as good work and double the amount of any stop cylinder. Your continuous angle roller motion is in itself enough to recommend your machine, as a more perfect distribution cannot be obtained in any other way, and it saves fifty per cent in rollers in wear and tear, and keeps the ink table clean at all times. The top riders upon the vibrators, and the easy manipulation of the vibrators themselves for removing the form rollers is worthy of mention, also the ease of getting the finest adjustment of the feed guides, which does away with the usual lost motion and trouble of keeping the guides to stay in position when set. The all around conveniences and your foot-power for stopping the press at any point are commendable, and above all we like the bed motion which is PERFECTION ITSELF, as we run our 38½ x 58 Miehle as high as two thousand per hour without the least fear of injuring the machine, and the same runs smoothly and without any jarring whatever. We recommend the Miehle machine to all who wish to be abreast with the improvements of the times, as the making ready is but one-half the work of any other machine we know of.

Very respectfully,

KITTREDGE & FRIOTT.

CORRESPONDENCE  
SOLICITED.

THE MIEHLE PRINTING PRESS & MFG. CO., 701 Owings Building, CHICAGO.

MAIN OFFICE:

# The Huber Two-Color Press.

BED, 36 x 52. FORM, 32 x 48. PAPER, 33 x 50. SPEED, 900 to 1,200 per Hour.

DOUBLE ROLLING EACH FORM \* SIX TRACKS \* FRONT DELIVERY.

THE above cut represents our Two-Color Press as now built with air springs and double rolling device, thereby charging the forms with fresh ink both ways, also the double rack pinion bed-movement, and all patented improvements fully described in our Book Press Catalogue. The following is a short description of the construction and operation of the Press:

There are two impression cylinders, which engage a separate form each during the forward stroke of the bed, as in an ordinary two-revolution press. A fountain at each end of the press supplies the separate forms with ink in usual manner. Between the impression cylinders is a transfer cylinder which takes the printed sheet from the first impression cylinder and delivers it, in absolutely perfect register, to the second impression cylinder, from which it is delivered directly to the fly, clean side next the fly-sticks.

OPERATION.—The sheet is fed to the grippers of the first cylinder in the usual manner, and after receiving the first impression is taken by the grippers of the transfer cylinder and delivered to the grippers of the second impression cylinder. About this same time another sheet is fed to the first impression cylinder, and at each forward stroke of the bed both sheets are printed with a different color. The sheet with the two printings is then delivered to the fly, the sheet with one printing transferred to the second impression cylinder, and the first cylinder supplied with a clean sheet by the feeder.

We refer you to the following firms running Two-Color Presses: Crump Label Co., Hinds, Ketchum & Co., McLaughlin Bros., American Bank Note Co., Martin B. Brown, New York; Forbes' Litho. Mfg. Co., Boston, Mass.; C. I. Hood & Co., Lowell, Mass.; Rand, McNally & Co., Chicago, Ill.; National Bureau Engraving and Mfg. Co., Philadelphia, Pa.; Dickman-Jones Printing Co., San Francisco, Cal.

Twenty-eight presses running in the above offices.

It will be seen by the above description that we have in reality *two* presses in *one*; and, while running at a comparatively slow speed, which insures perfect register and "long life" to the press, it is actually doing about twice the work of an ordinary press of the same size. Having a separate impression surface for each form, a job is "made ready" exactly the same as for an ordinary press.

The principal advantages of this style of press over all others are: *First*—Comparatively slow speed, which lengthens the "life" of the press, and at the same time produces twice the usual amount of perfect work. *Second*—As the sheet is fed automatically from the first impression surface to the second, the risk of the feeder making a mistake is reduced fifty per cent. *Third*—As the sheet is fed but once for two colors, the handling of stock is reduced fifty per cent. *Fourth*—In illustrated bookwork, the advantage of using a better quality of ink upon the cuts than upon the type; thereby producing a finer class of work at a less expense.

This press is built on the same solid and substantial plan for which all our presses are justly noted, and has all latest improvements, including six roller bearings to support bed, noiseless and positive fly, safety gripper mechanism, ball-bearing, bed-reversing teeth, and air springs that can be regulated when press is in motion at any speed.

The

# COX • DUPLEX • PERFECTING • PRESS

## AND FOLDING MACHINE.

Delivers 3,500 to 4,500 perfect papers, folded, per hour, either four, six or eight pages, from flat beds and ordinary type forms.

MR. T. C. O'HARA, the well-known expert machinist of the *Boston Herald*, under date of September 10, 1890, writes as follows to MR. H. I. DILLENBACK, manager of the Rutland (Vt.) *Herald*, the purchaser of the first of the above machines :

BOSTON, MASS., September 10, 1890.

At your request I attended the shop test of the new COX DUPLEX WEB PERFECTING PRESS, built for the Rutland *Herald*, and carefully inspected its operation and made a thorough examination of its construction. The press stood partly over a pit and partly on the floor, upon planks, and was not fastened down in any way; and it was run by a four-inch belt. At the first trial of speed, it ran at the rate of 3,000 complete papers per hour; at the second, 3,600; at the third, 4,560. Its operation during these trials caused no perceptible jar of the machine nor of the floor of the building, nor did it give any indication of strain upon the machine, and it ran with perfect steadiness and smoothness. The principle of the machine, while novel, is entirely practical, and overcomes entirely the obstacles to speed and smooth running always heretofore encountered in the construction of flat-bed printing presses, and in my opinion the invention has solved the great problem in the construction of machines for the use of newspapers of moderate circulation, desiring to print from type at high speed, in a manner destined to revolutionize this branch of printing press manufacture.

The press is now in daily operation in the pressroom of the *Herald*, where it is fully demonstrating its capacity to do all that is claimed for it.

Full information may be obtained by addressing the manufacturers.

## THE ILLINOIS PRESS ASSOCIATION.

The twenty-sixth annual session of the Illinois Press Association convened in the Business Men's Association Rooms, Joliet, on Tuesday evening, February 3, at 8 o'clock, the president, E. B. Fletcher, of Morris, in the chair

After the divine blessing had been invoked on the deliberations of the association by the Rev. T. V. E. Sweet, the delegates and visitors were briefly welcomed to the city by the Hon. Thomas Kelly, mayor. His greetings were responded to by Vice-President Rees, of the Springfield *Register*, in his happiest vein. We regret lack of space prevents us from presenting both these gentlemen's remarks in full.

The following committees were then appointed:

*Credentials*—George Cyrus, H. Chrifield, Julius Schneider.

*Resolutions*—B. F. Shaw, J. J. Penny, J. K. Le Baron, M. H. Peters, R. T. Spencer.

An eloquent and able tribute to the memory of William Kennedy, late editor of the Dixon *Sun*, and an ex-president of the association, was read by Mr. J. W. Clinton, of the Polo *Press*.

On motion of L. A. McLean, an invitation was extended to visiting editorial brethren from other states to participate in the proceedings, after which the convention adjourned till 9 o'clock Wednesday morning.

## SECOND DAY'S PROCEEDINGS.

The convention assembled, pursuant to adjournment, at 9 o'clock. After the transaction of some routine matters, the day's business session was begun by the presentation of President Fletcher's annual report, which was an exceedingly instructive and interesting document. He referred at length to the great improvement made in recent years in the Illinois country newspapers, which had been mainly accomplished through the association's efforts, and urged the importance of definite action on questions discussed at the meetings, as the association had reached the point when their action would lead to definite results. New members should be brought in, and he expressed the belief that the association could afford to send a representative to the publishers outside their ranks inviting them to come in. He also spoke in affectionate terms of the members who had died during the past year, congratulated the body on its excellent financial standing and concluded with the wish that prosperity might ever follow the association collectively and individually.

After the president's address came the report of the Committee on Plates and Patents, which was presented by its chairman, Mr. L. H. Chapin, of the Brighton *News*, which was one of the ablest and most exhaustive papers presented, for which we hope to find room in the next issue of THE INLAND PRINTER.

"How to Illustrate a Newspaper" was the subject of an interesting paper, read by C. Gentile, of the Chicago *Eye*, which explained the various half-tone, zinc and other methods in vogue to produce good results in newspaper illustrations.

The Committee on Credentials presented the following report, which was adopted, after which the convention adjourned till half past one o'clock:

B. J. Slick, Naperville *Home News*; Vic H. Haven, Greenfield *Argus*; Morris Emmerson, Mount Vernon *Register*; Herm G. Weber, *News Democrat* and *Zeitung*, Belleville; N. A. Burnham, *Gazette*, Sheridan; M. F. Walsh, *Herald*, Harvard; William Florence, Irving Park *Democrat*; Samuel W. Kessinger, *Monitor*, Litchfield; W. J. Roberts, *Register*, Whitehall; Ed. Spink, *Sangamon Valley Times*, Chandlerville; Walter M. Givler, *Clarion*, Naperville.

The committee have other applications under consideration and ask further time to report thereon.

On reassembling the following paper on "Journalism," prepared by Mr. E. W. Stevens, president of the National Editorial Association, who was unfortunately prevented by family sickness from being present, was effectively read by Mr. Walter Williams. It will well repay perusal.

## THE JOURNALIST.

MR. PRESIDENT, LADIES AND GENTLEMEN,—In what will be said today the effort will be to present some of the qualifications of the true journalist. A discussion of the journalist involves a discussion of journalism. Every great journal is the product of some great journalist. The New York *Herald* is

Bennett; the New York *Tribune* is Greeley; the New York *Sun* is Dana; the New York *World* is Pulitzer; the Atlanta *Constitution* is Grady; the Chicago *Tribune* is Medill; and the Chicago *Herald* is Scott. Much as we may decry personalism in newspaper management, at last upon the person depends the paper.

Studying the qualities of these journalists and the histories of their papers, recognizing their merits and weaknesses, we may arrive at certain tangible conclusions touching the conditions of success in journalism.

I propose, therefore, to consider the journalist with reference to:

1. His equipment.
2. His power.

The primary qualification is common sense. It lies at the foundation of the whole business. If, instead of a school for journalism, as has been proposed, there could be established some metaphysical or phrenological laboratory wherein could be applied an unerring test for the detection of this great commodity of common sense, what a priceless boon would be secured to our profession. It would largely solve the problem. We are afflicted with cranks. A widespread and woeful misconception of its nature leads into journalism thousands who are wholly unfitted for its duties, and hence its history is strewn with wrecks. One man—perchance a college graduate—conceives that journalism consists chiefly in ability to write; another looks upon it as a lever to political preferment; another—the long-haired man or the short-haired woman, as the case may be—regards it as an instrument for a hobby; another as simply a medium of money making, and another as a refuge from failure somewhere else. The truth is that no profession requires more many-sidedness, more special fitness, a wider range of qualification—in other words, more of that broad common sense which is everywhere the prerequisite of success.

No man can be a journalist who does not possess the journalistic instinct. Some one has said that God Almighty puts his finger upon a man and makes him a journalist. To an extent he does. He leaves, however, the completion of the job to the man himself. The true journalist has an intuitive perception of what the public wants. He knows what is and what is not news. The highest art of editing is in knowing what to put in a paper and what to leave out of it. A capable journalist will discover news where an incapable one never sees it, and will reject as worthless what another will emphasize. He will not view events through the media of his own tastes or prejudices. He realizes that his paper is published for all and he will give prominence to facts in exact proportion to their value. Hence a professional politician is a poor journalist, as is any man afflicted with a hobby. He who conceives that the mission of his paper is to vent personal spites, is no journalist. It is told of the late James Gordon Bennett that men who cowered him received as fair treatment and were accorded as much credit for their meritorious acts as his personal friends. This may have been carrying journalism to an uncomfortable degree, but Bennett was a great journalist and honored his profession.

A newspaper must have equilibrium. It must exhibit constant equipoise and self-restraint. Its duty is to the public, and the public is not interested in our private feuds or selfish interests, and is quick to detect and resent them. A newspaper loses its influence the moment it becomes the vehicle of personal animosity or ambition. Nor must undue prominence be given to any department of news or editorial. The quality and quantity of each are to be largely determined by locality and circumstances, and here again is demanded the indispensable requisite of common sense.

A vast amount of the interest of the paper depends upon the incisiveness, pithiness and conciseness with which every item is prepared. Of all things it should avoid dreariness. Every paragraph, whether of news or editorial, should be well written, and in the true journalistic vein. The more racy, gossipy, or even conversational a newspaper is made the more interesting to the reader. It should keep out of beaten paths, and freshness and originality should pervade every page and every issue. One of the chief merits of every successful journalist has been that he did things differently from others.

A newspaper must not be simply a narrative. Hence the editorial must not be disregarded. It gives to the paper character and force and individuality. The journalistic instinct finds no truer expression than in its selection of subjects for editorial as well as in their methods of treatment. Editorials should be brief, "catchy," pertinent, suggestive, and upon themes which possess a direct interest to the reader. Numbers of papers, metropolitan and rural, fail dismally in their editorial department, not because they do not contain able and well written editorials, but because they select subjects of no special interest to their readers, and then treat them in a dreary and unentertaining manner. Much depends upon the phraseology of a heading. Mr. Joseph Pulitzer, who is not bad authority, declares that the people do not know a good item unless it is told to them in the heading. The caption should tell what the article is about in such way as to attract attention. If it is a lengthy news article, either the heading or the first paragraph should indicate the contents of all that is to follow; if an editorial, it should hit the nail on the head in the first sentence, and keep on hitting it to the end.

No man is fitted to write editorials who does not mingle with men. To prepare breezy, practical articles, calculated to engage and influence popular thought, he must draw his inspiration fresh from the people. To sit up in the fifth story of a printing establishment, amid books and cobwebs, away from any contact with the world, and undertake to direct public sentiment upon the vital issues of the day is to insure an impracticable, theoretical and musty view of things that will divest any paper of editorial power. A journalist must be in close and familiar touch with the people among whom his paper circulates. For a lack of this essential sympathy, many of

our city dailies fail to exercise the influence over the masses which they should.

In his constant contact with the world, the country editor possesses a great advantage over his city brother, and hence there is every reason why his editorial work should possess a freshness and a pertinence to the live issues of the time. Driven by a multiplicity of cares, he is constantly tempted to disregard his editorial duties. They constitute, however, a most important department of his profession, and he can not afford to neglect them.

Editorial work is in fact the highest and truest mission of the newspaper. The purpose of journalism is not simply the collation of news and the publishing of advertisements. Its real object is to mold public sentiment, and a blank editorial page makes a newspaper almost as meaningless as a man without a brain.

Common sense also implies business sense. No journalist can be truly successful who has not business ideas. Even though he never enter the counting room he is not fitted to write upon the great economic questions which engage public attention unless he has some practical knowledge of affairs himself. Mr. Greeley perhaps stands as the only great American journalist who was not also a business man, but he understood its value well enough to associate with himself one who supplied this necessary element of management. Upon the financial prosperity of a newspaper depends all of its prosperity, and likewise its independence and influence. A judicious expenditure of money, correct methods of bookkeeping, by which there can at all times be a knowledge of receipts and expenses, a constant pushing of circulation and advertising, securing good rates for work and getting paid for it—in other words sagacious business management—calls for the very highest qualities and is indispensable to success. No other vocation depends more upon energy, vigilance and judgment. It does not grow by accident. Its possibilities of development are almost illimitable. A successful newspaper manager will be fertile in expedients for securing patronage and will realize that ceaseless resource and originality are the price of prosperity. The phenomenal success of Robert Bonner stands as lasting proof of the value of advertising as a means of increasing circulation, and the result of the plan lately adopted by the Chicago newspapers ought to be convincing evidence that it is far more profitable to deal directly with advertisers than through any mediary or agency whatever.

I believe that the day is near at hand when every press association in this land will have its own agent, as the State of California has today, to not only contract for all the advertising the newspapers cannot secure themselves, but also to purchase all the material of every kind for its members at rates far below that paid today. The system of coöperation is growing among newspapers as never before. The metropolitan papers have already made rapid strides toward it, both in local organization and through the American Publishers' Association, which, by the way, is doing a great work for the newspapers of the country, and the rural press is approaching it with a steadiness that promises early attainment.

But the true journalist realizes that permanent success depends not so much upon soliciting the public for its patronage, as upon furnishing it with a newspaper that it cannot do without. When a paper has so far met demand as to make itself indispensable, it has been planted upon a footing that is impregnable. This it is within the power of any journal to do, and the striking success of such papers as the *New York World*, the *Chicago Herald* and the *Boston Globe* demonstrates that it may be done without years or even months of waiting. The public are not slow to appreciate a good thing when they see it.

The conditions are simple. First find an auspicious field, and then give the public a first-class article. The first condition is that it be attractive typographically and that it be well printed. If there is one criticism which may apply to the journals of this country, daily and weekly, it is the neglect of this most essential feature. The appearance of a paper will do almost as much to attract favor as the matter that is put in it. The eliminating of disfiguring cuts and ancient black type, and the adoption of the most modern letters and styles, combined with good presswork and handsome paper produce an effect that is sure to return more than all it costs. The make-up of a paper with a view to harmony and symmetry adds immeasurably to its attractiveness. Papers might be named not a thousand miles away which constantly neutralize undoubted merits in their editorial and news service by having their matter thrown together in a slovenly way and then printed correspondingly. The mechanical appearance must not be neglected.

But a first-class paper is impossible apart from first-class management. No paper has ever attained success which employed inferior men in its editorial or reportorial departments. It is a false economy which stints in either. While the editorial management should be vigorous and competent, an efficient news service is no less important. Nowhere is enterprise, intelligence, faithfulness or the journalistic instinct more essential than in the reporter. There is as much necessity for good writing and sound judgment at the reporter's table as in the sanctum. The man who can make an intelligent synopsis of a speech, who can describe an event in such manner as to vividly set forth its salient features, or who has a real "nose for news," possesses rare ability and should be well paid.

The newspaper of the future will be in many respects a reaction from the newspaper of today. Where the present journal contains columns it will have paragraphs. It will print the news—not the rubbish. It will be comprehensive as well as concise. It will be the daily world in a nutshell. It will be the antithesis of dreariness, and it will be a paper for the busy man which he can read at breakfast and go to his work informed. The people are fast wearying of wading through acres of stuff to get nuggets of

news. The papers today which most nearly approach this ideal are the most widely read, and they employ, as such papers must necessarily employ, the best talent at whatever cost.

The model country paper, in fact, now more nearly meets the popular demand than any other, because it is a condensed reflex of the world's news and thought, and this leads to the thought that the best school for the journalist today is in the country printing office. For a thorough knowledge of business and detail, for an understanding of men and things, a versatility in the profession and for thrift and resource, experience is there acquired and opportunities afforded as nowhere else. Yea, more. It requires a wider range of qualification, more energy and journalistic capacity to successfully conduct a weekly newspaper in a rural town than it does to manage an established daily in a city. Most of the great journalists of our country came from country newspapers, and will acknowledge that they owe their success largely to the experience there acquired.

But the journalist must realize that something more than natural and acquired qualification for the technical duties of his profession is essential. Given the brain—for which he may devoutly thank God—he must know how to use it. A disciplined mind is as essential to the editor as to the lawyer, or the doctor, or college professor. The power to think consecutively and methodically is extremely important, and while it is greatly developed by exercise it is also much aided by study. An evil which, owing to the fragmentary and varied nature of his work, every journalist has to combat, is the loss of concentrativeness. The only remedy is close application to a uniform line of reading. A knowledge of general literature, of history, of the theory of government, and most of all of the structure and principles of the English language is well nigh indispensable. Such culture enriches style, gives readiness and force to expression, facilitates editorial thought and affords piquancy and point in paragraphing. The necessity which is constantly upon an editor to write at once and intelligently upon an endless variety of subjects, and to rapidly gather and condense news from numberless sources renders his adequacy to the task possible only when he possesses a liberal culture.

The true journalist appreciates the dignity of his calling, and, whether he conducts a large daily or a small weekly, will not belittle it by reference to his poverty or efforts to impress the public with the idea that his profession is contemptible. If this is his only way of being witty he had better remain solemn. No quality is more important in journalism than humor, provided it is humor. It certainly is not when it is used to degrade a profession than which there is none more dignified or honorable.

The editor should be in love with his business. Next to his religion and his wife and children, it should absorb his entire thought and effort. Do not let them make you school director, or town councilman, or send you to the legislature. These but interfere with your work, cripple your influence and put you where you may be the target for your enemies. Most of all do not look upon your profession as a stepping stone to something else. Be an editor until you are an angel—which you will be if you are the right kind of editor.

Of course, now and then an editor's merits become so conspicuous that the public will lay violent hands upon him and send him to congress, or make him master in chancery, or put him in the service of the supreme court, or in the state senate, or some other position demanding extraordinary virtues, and he perhaps yields upon the patriotic principle which was the rule of action of the late Senator David Davis, of your state—that a public trust was neither to be sought nor declined by an American citizen; but as far as possible let us rescue our brethren from such fates, and, as speedily as we can, win them back to a profession which they so signally adorn and where their opportunities for usefulness are so much more exalted.

Journalism is a profession—just as much as is law, or medicine, or theology. But in the fact that it is not sufficiently thus regarded, either by the public or its devotees, lies one of the chief obstacles to its power. The public is the editor's client, and his fealty to it should be as loyal and as untrammelled as though he were a lawyer retained to defend it. The editor and the individual are two persons. James Parton, I believe it is, who has said that "the individual is a man speaking to men, but the editor is Providence speaking to men." While this may be placing the average journalist somewhat higher than he deserves, there is an element of truth in it. The editor who is unfaithful to the public is as guilty as the lawyer who is unfaithful to his client. Hence it is bad policy for an editor to sustain confidential relations with too many people, and it is simply fatal for him to be under such obligations financial or otherwise as to embarrass or restrain him when duty requires him to tell the truth. Therefore, we repeat, the extreme importance of him being financially independent and absolutely free from all personal or political complications. While he should seek to be respected and esteemed by all men, he should not let them slap him on the shoulder. The strength which will flow to him out of respect for his integrity and honesty as a journalist will be far more substantial than that which he can possibly gather by simply being a clever fellow. The public admire and will sustain an editor who stands for the right at all times irrespective of personal considerations. To maintain professional individuality and dignity is more difficult in the country than the city editor, but it is possible as well as profitable in both.

Mr. George William Curtis has well said that no man can attain success as a journalist who has not a clean character. However much truth he may tell, however brave, capable and faithful in his work, if he is vulnerable to the criticisms which he applies to others he will be shorn of his power. He is a standing discredit to his own statement! Strive as much as he may to conceal his personality, the public will discover it and will weigh his

utterances by the standard of his character. While it may be possible here and there men have achieved temporary success in journalism in spite of their unclean characters, they are the exception to the rule, and it may be claimed without fear of contradiction that no purer or more incorruptible class of workers adorn the history of our country than those who have won distinction in journalism.

The editor stands in the calcium light of constant criticism. His every weakness and foible are perpetually under public inspection, and are the themes for unlimited exaggeration and perversion. His life and labor are an unceasing invitation to the slanderer. In his mission of exposing iniquity he must provoke bitter and relentless hatred, and the only resource of scoundrels when convicted by a newspaper is to turn the shafts of their malice upon the editor. Let his character be invulnerable and they will fall harmless at his feet. He is thrice armed, and thus armed he may be utterly indifferent to assault.

The first great duty of the journalist is to tell the truth — tell it in his editorials, tell it in his news columns, tell it at all times and under all circumstances; not in malice or in bitterness or indiscretion, but in firmness and kindness and as the occasion may require. If a public official is recreant or unfit, tell it. If he is a member of your own party, still tell it, and in a louder tone. If a candidate is a scoundrel, tell it; if of your own party, still tell it. If any public character is a humbug, tell it. If a lecture or an entertainment was a fraud, tell it. Always tell the truth. But be sure that it is the truth. The editor who recklessly and indiscriminately assails men and things from motives of selfishness or malice is both a coward and a criminal. He deserves the execration of every honest man. It is not necessary always to tell all the truth. As to how much, judgment and a correct sense of justice must determine. An indiscreet editor will publish many things true in themselves which, however, should not appear in his columns. But nowhere does the newspaper so fulfill its mission or serve the public as in telling the truth wisely, and without fear or favor.

Do not tell more than the truth. If a lawyer made a fair address before the jury say so, but do not canonize it as the most thrillingly eloquent effort ever heard in the Buntown court house. If a fair maiden of average face and figure has just returned from college and upon a certain occasion has made her debut into that realm of snobdom commonly called fashionable life, do not her the cruelty of announcing that the beautiful and accomplished Miss So-and-so won all hearts by her brilliant and charming manner. Divest your fellow townsmen of all military and civil titles except such as belong to them; and if an esteemed member of the Farmers' Alliance is suddenly seized with statesmanship do not, in advocating him for congress, endeavor to impress the public that when he shall have taken his seat the country will receive an electric shock every time he arises to address the speaker. The Almighty did not create editors to lie for people, and the public resents snobbery in a newspaper as much as it does in a man. Tell the truth in your news columns. Extravagant puffing is extremely annoying to the public, and the worst sort of cruelty to the victims puffed. A delicate but truthful compliment is far more valuable, and is unobjectionable; and a newspaper may and should seek frequent occasions for kindly reference and temperate and deserved praise. The public loves a paper that tells the truth, and cordially despises one that does not.

The crowning element of a journalist's equipment is his courage — not the courage of the revolver and the Bowie knife, not the courage which fills his columns with villification of his neighbor across the way; but moral courage, which suffers as well as strikes, which attacks wrong as readily in opposition as in obedience to public sentiment — courage which will endure contumely and persecution for the right as cheerfully as it will lead a sympathetic crusade in its behalf. The true ournalist has but one standard by which to be guided, and that is the truth. He recognizes that he is the molder of opinion, that the public is nearly as often wrong as right, and that it is his duty to lead, not follow. He will sacrifice personal interests and friendships and, if necessary, life itself before he will compromise with evil, or be the instrument of corruption or wrong. Thank God that we have men who possess this courage and who are an honor alike to journalism and civilization.

Such, in my view, gentlemen, are the elements which constitute the true journalist. Thus equipped with common sense, the journalistic instinct, knowledge, business sense, a clean character, truthfulness and courage he stands as the highest exponent of intelligence and influence and the greatest of all protectors of public and private virtue, of personal and civil freedom. And he is no imaginative character. He may be found from one end of this country to the other — as often, yea, if not oftener in the control of the humble and modest weekly as at the head of the great city daily. And let me add that the exhibition of these characteristics is even more significant and at greater cost in the manager of the country journal, living as he does in closer contact and in greater dependence upon the public, limited in means and hence more environed by temptation, than they can be in the metropolitan editor who is remote from and independent of these impediments. The journalist who is a dishonor to his profession is the exception and not the rule.

Realizing as we must the grave responsibilities committed to our hands, we should strive to reach that standard of excellence which will secure the highest possible measure of efficiency and influence. The newspaper is today the greatest guide to the world's thought, and it is multiplying its forces and increasing its power with a rapidity that is bewildering. In this march of progress, in this approach to higher ideals, let every journalist, however humble he may be, feel that he is a constituent part. An eminent citizen of our country, a distinguished lawyer and senator of New York, has but recently

said that in his judgment the greatest profession, present and prospective, is that of journalism. In versatility, in responsibility, in opportunity, and at no distant day in its rewards it will stand supreme. Let us then strive to elevate, strengthen, purify and adorn it.

In this great State of Illinois, with its 1,500 newspapers, and its nearly 4,000,000 population, justly celebrated for its natural resources, its commercial energy and its patriotic traditions — a state which has given to civilization Abraham Lincoln and Stephen A. Douglas, and to the varied vocations, and conspicuously to journalism, so many bright and shining lights; within whose borders stands the future, if not the present, great city of America — may our profession receive an impetus and a development worthy of such congenial and splendid surroundings. And to do this I know of no better agency than that system of professional coöperation and fraternal sympathy so expressively illustrated in this representative State Press Association which I wish now to thank for the honor they have paid me, and whose patience I will now relieve.

Mr. Stevens' address was followed by an interesting paper by Mrs. J. J. Penny, of Pinckneyville, on "Country Editors' Wives," which we hope to present in full at an early date. It was well received, and concluded with the lines:

Oh, who would change this sweet content,  
This simple and trusting life,  
For that of a queen of royal birth?  
For the happiest woman on all the earth  
Is the country editor's wife.

After the reading of a paper by Mr. S. F. Greenleaf, of the *Savanna Journal*, on "How Much it Ought to Cost to Produce an Average Paper of One Thousand Circulation," the convention adjourned till 9 o'clock Thursday morning.

#### THIRD DAY'S PROCEEDINGS.

At 9 o'clock the association met in regular session to attend to business, and at 9:30 adjourned to the court house, and while there, a photograph of the group was taken at the request of A. C. Cameron, of *THE INLAND PRINTER*, for publication in that journal. Returning to the hall at 10 o'clock, the general programme was taken up.

Messrs. Cyrus, Clinton and Anderson were appointed by the chair as a committee to select delegates to the annual meeting of the National Press Association.

Mr. Snively, of the Legislative Committee, made his report, which was adopted, and that gentleman was continued as chairman of the same for the ensuing year.

The secretary reported that it had been decided not to have an excursion immediately after this meeting, but it was suggested that one be had later, and for that purpose correspondence had been had with the various railroads, and it had been ascertained that the Illinois Central would take the association from Chicago to New Orleans, on account of advertising, but some of the southern roads would not do as much. The secretary then read the correspondence he had with the various roads and associations of the South. The matter of an excursion was finally left to a committee of five, with full power to arrange for an excursion to Florida and Cuba.

Mr. J. J. Penny extended an invitation to the members of the Press Association to attend the annual meeting of the Southern Illinois Press Association in May.

After a somewhat protracted debate on two or three proposed amendments to the constitution, on the change of membership initiation and dues, and the changing of the date for holding the annual sessions, the convention adjourned till 1 o'clock.

On re-assembling, Mrs. P. F. Warner, of the *Havana Republican*, read an instructive essay on "The Press as a Moral Agent," which was followed by the recommendation of the Committee on Job Printing, consisting of Messrs. Clinton, McLean and Jones, that the members of the association be requested to collect during the coming year all available specimens for distribution and exchange among the delegates to the meeting of 1892. Adopted.

An able, apropos and interesting paper on "Postal Rates for Newspapers" was then read by C. D. Tufts, of the *Centralia Democrat*.

On motion, the secretary was requested to forward a copy of the same to the postmaster general.

The association next proceeded with the election of officers for the ensuing year with the following result: President, Thomas

Rees, Springfield; first vice-president, W. W. Lewis, Lena; second vice-president, John Warner, Hoopston; third vice-president, R. T. Spencer, Illiopolis; secretary, J. M. Page, Jerseyville; treasurer, George M. Tatham, Greenville.

The committee on representatives to the National Editorial Association at St. Paul presented the following names of delegates, which report was concurred in:

*At Large*—E. B. Fletcher, Morris; E. A. Snively, Springfield.

*Alternates*—A. C. Cameron, Chicago; Horace Chrifield, Atlanta.

*Delegates*—J. H. Barton, Carbondale; J. J. Penny, Pinckneyville; Morris Emmerson, Mount Vernon; Thomas H. Stokes, Lincoln; M. W. Matthews, Urbana; W. W. Lewis, Lena; J. C. Bundy, Chicago; A. G. Hawley, Lockport; C. J. Lumpkins, Carlinville; E. D. Conley, Joliet; Charles Bent, Morrison.

*Alternates*—Charles Baschenstein, Edwardsville; J. B. Parkinon, Savanna; Julius Schneider, Joliet; George W. Cyrus, Camp Point; F. G. Turner, Pittsfield.; Perry Hughes, Clinton; E. M. Johnston, Mount Morris; George Burt, Henry; B. F. Shaw, Dixon; R. D. Parker, Gray's Lake.

After this action, the twenty-sixth annual convention adjourned sine die.

#### COMMENTS.

We regret that lack of space compels us to simply refer in the present issue to the many courtesies extended by the citizens of Joliet to the members of the association. The visit to the penitentiary and steel works and entertainments thereat will long be remembered; also, to the club house, which would be a credit to a much larger city; the ride over the belt line, and last but not least, the banquet, are all deserving of special notice, and will, in due season, receive it at our hands. We also hope to be able to present in the March number a page plate of the delegates, as also portraits and sketches of the officers-elect.

A pleasing episode of Thursday afternoon's proceedings was the presentation of a handsome gold hunting-case watch to the retiring president, E. B. Fletcher, by Owen Scott, of Bloomington, on behalf of the excursionists who enjoyed the trip to Mexico under the auspices of the association in 1890. The honor was worthily bestowed, and was duly appreciated both by the recipient and the convention at large.

#### HOW TO MARK BRASS RULE.

What compositor is there who has not found the present system of stamping brass rules with the number of pica ems each measure to be a most unsatisfactory method?

The system which I now wish to bring to the notice of printers is one which depends upon nicking the rules at the ends so that each rule is known at a glance; and, secondly, the nicks are already used to distinguish case rules, that is to say those rules which are cut to standard lengths (pica ems and ens), from short lengths of odd sizes cut for special purposes. Now it would be not only impracticable but absolutely useless to introduce a large number of nicks, as first of all, they could not be put on for want of space; and secondly, if they could the compositor would have to count up the nicks—a process which would consume more time than measuring. I propose therefore to adopt only five nicks, with an extra one to denominate

1 em. 2 ems. 3 ems. 4 ems. 5 ems.

the half-em when it occurs. Commencing therefore with pieces 1-em long, we should have the five nicks, each denominating by their number pieces from 1 to 5 ems, but beyond this number we should simply begin over again, 6-em being represented by one

nick, 7-em by two nicks, and so on. Now, although this may appear rather confusing at first, a moment's consideration will dispel that idea, because a piece of rule marked with say one nick, must always represent a number which ends with a 1 or a 6, that is to say 1 with 5 added = 6; one with two nicks would represent a number ending with either a 2 or a 7, that is 2 with 5 added = 7; three nicks represent either a 3 or an 8, that is 3 with 5 added = 8; similarly four nicks represent either 4 or 4 + 5 = 9; and five nicks a number ending in either 5 or 5 + 5 = 10, that is a cipher.

If now this is thoroughly understood, it will be seen that a piece nicked with say three nicks must be either 3, 8, 13, 18, 23, 28, 33, 38, 43, 48, etc. (each ending with either a 3 or an 8); similarly a piece marked with five nicks must be either 5, 10, 15, 20, 25, 30, 35, 40, etc. (ending with either a 5 or a 0): which of these numbers it is can be told by the eye.

The half-em is distinguished by an extra nick run in close to the face, and at a distance from the others, but following the same system, thus:

1½ em. 2½ ems. 3½ ems. 4½ ems.

It will be noticed that this top nick is not taken into account in counting the number of nicks on the rule itself, but denominates that the rule measures a ½-em (or an en) more than the nicks show.

This system would not be more costly than numbering, as it would be easily done with a special machine on the principle of a rule cutter, with movable nicking pieces, so that it might be set for one or more nicks as required, and the whole cut at one operation. The great advantage of the system is that a man can tell the length of a rule at a glance, if lying on the stone.—*British Printer.*

#### QUICK WORK ON DAILIES.

"It has been a subject of wonder to me," said a retired newspaper compositor, "how the numerous advertisements in a morning newspaper these days are set up so tastily and in so brief a time. While standing in the counting room of the *Republic* a few minutes one evening last week there came fifteen or twenty persons with copy for advertisements to appear in the next day's paper, some to occupy a page, others a half page, and so down to fifty lines double column. The copy was mostly written on large sheets of manila paper, in some instances making quite a bundle for each advertisement. I fancied that the printer, to put in type the manuscript that came while I was waiting, to say nothing of what had already been received or came afterward, would have to run the matter together like a trustee's sale, with a line of big type at the top and bottom to make the required space. I was surprised next morning to see all the new advertisements properly classified, artistically arranged, and the feature of each displayed so as to catch the eye at once. When I was at the business a merchant or business man wanting an advertisement to occupy more than a column in width was required to furnish copy several days in advance of publication."—*St. Louis Republic.*

A. J. JOHNSTON, of Sacramento, California, an honorary member of Sacramento Typographical Union, No. 46, has been appointed by Governor Markham, superintendent of state printing. Mr. Johnston has made the following appointments: General foreman, O. B. Turrell; assistant foreman, J. L. Robinette; proof-reader, W. F. Preston; assistant proofreader, N. B. Sanborn; foreman of jobroom, A. E. Hornlein; foreman pressroom, John Simpson; assistant, A. J. Galligan; foreman of bindery, D. W. Hicks; assistant, J. O. Funston; electrotyper, L. W. Mathias.

**THE ROGERS TYPOGRAPH.**

Among the many typesetting machines which have recently been brought to the attention of the printing trade, none have attracted more attention than the Rogers Typograph, illustrations of which are herewith presented. This machine has what is well known in all English-speaking countries as the Remington keyboard. The operator touches the key for the required character, the proper matrix is released and slides down an inclined wire guide until it reaches its position opposite the casting box. When the line is filled by touching letter keys and space keys, exactly as in the Remington typewriter, a pressure of the foot justifies and spaces the lines by rotating all the spaces, which are compensating twin disks, until the matrix line is just full. The line is cast by the machine itself, and the frame which carries the matrices is tilted

The speed of the machine is limited only by that of the operator, as is proved by the fact that from memorized matter over 7,000 ems of minion an hour have been set, in 16-pica em measure. On the same machine which did this C. W. Thullen has set from copy 4,700 ems of minion an hour; and on the same machine, also, A. V. Phister, of Typographical Union No. 18, of Detroit, set up, after a week's steady practice, 3,000 ems an hour, with less than half a dozen errors per 3,000 ems.

ASSEMBLING THE MATRICES.  
(in effect setting the type.)

The length of line and the body of the type bar may be altered in twenty minutes, and the machines converted in that time from minion to nonpareil, or to any other face for which matrices and casting boxes have been provided. The machine, which is shown in the accompanying illustration, takes up only 4 by 4 feet on the floor, and stands about 4 feet 6 inches high over all; its weight being but 450 pounds. Its running makes less noise than that of a Remington or caligraph typewriter.

It is also claimed that the advantages which this machine will work to publishers, to compositors, and to the public at large, are almost incalculable. The publisher, by its use, will be enabled to give his paper a new dress each day, as it is cheaper to have extra sets of matrices than to carry extra fonts of type. It is possible to obtain any unexpected million ems of composition without having to wait for type, and to lock up any quantity without losing interest on expensive type, and with ability to put the whole affair in the melting-pot when desired, thus closing the interest account for the typemetal.

There is no book composition so large that the user of these machines cannot accept it. Publishers of directories may keep the matter standing any length of time at but minimal cost, and alter any one address line in it at any time. Mailing lists, regular or temporary, of any desired length, may be kept standing as long as desired, with but trifling outlay.

Thousands of small towns which have not been able to support even a weekly newspaper can now boldly enter upon the support of a daily, without risk to the publisher. This feature alone will cause an increase in the amount of composition done, far in excess of the increased amount over what every compositor can do by hand; thus paying employment will be found for everyone capable of running the machine. Compositors and proofreaders will also find the machine work beneficial to their eyesight, particularly where the type

RELEASING THE MATRICES.  
(in effect distributing the type.)

THE ROGERS  
TYPOGRAPH

THE ROGERS TYPOGRAPH.

back by about the same motion as is used in the Remington typewriter to raise the carriage to inspect the work. The frame is dropped as the Remington carriage is dropped, and another line is set. The matrices are suspended on wires attached to a frame, and are released one at a time by touching the proper keys; but no matrix ever leaves its guide. The operations of justifying, aligning, casting, releasing and depositing the type-line on the galley take about five seconds in the foot-power machine, but if the machine is driven by belt, carrying about one-eighth horsepower, three seconds suffice, during which time the operator is "getting his line" from the copy, so that the working of the machine is practically continuous. The spacing may be by the spacing disks alone, the thinnest portions of which are thinner than a three-to-em space, so that closer justification can be obtained than by any other method; or ordinary three-to-em spaces may be interspersed by the machine if desired.

The melting-pot will hold and keep melted about thirty pounds of metal, requiring about eight cubic feet of gas, costing a cent an hour, or an amount of gasoline costing even less. The operation by foot-power is not fatiguing, and the speed only about ten per cent less than where power is used.

face is small, and in German offices. The public will profit by the ability to have more local papers, to make the present local press local in fact as well as in name, and by being able to print more "locals"; and by the mere fact of every paper using this machine having a new dress every day, the good accruing to the public eyesight will be no small one.

The machines are put out at a uniform rental of \$1 per day for each working day, or \$300 per year for weekly papers, for which price the company agrees to keep them in repair. The company has taken unusual care in the matter of patents, and will assume at its own expense all suits that may be brought for any alleged infringement.

#### THE PHOTO-ENGRAVER'S ASSISTANT.

The "assistant" to be described in this article is not the ordinary, every-day helper whom the artist in photo-engraving employs to aid him in his work, but a new and useful electric invention, recently patented, that promises to very materially lighten the labors of the workman in producing process engravings. THE INLAND PRINTER endeavors to present everything new in printing and engraving, and in mentioning this appliance feels that it is doing a good work in disseminating knowledge for those interested in this branch of the business.

FIG. 1.

Engraving by the various chemical processes has increased to such an extent within the last few years that improved methods and devices for the production of process plates have been found necessary, to enable houses that desire to be in the front rank to keep up with their orders and to produce the most perfect results. One of the most important of these improvements is the device shown in the accompanying illustrations, which has lately been improved and patented by Mr. William A. Blomgren, of the Blomgren & Lindholm Company, 359 Dearborn street, Chicago, for the correct timing of the various sensitive films used in photo process work. Mr. Blomgren, during several years of experimenting in process photography, devised an electrical apparatus (shown in Fig. 1) for exposing or timing negatives in the camera, and for printing the sensitized gelatine and zinc films, thus leaving him free to attend to other duties without fear of neglecting or overexposing the plates. So satisfactory has been the service of this invention, that he has manufactured and placed upon the market several of them. The device, in brief, consists of a powerful double spring eight-day movement having a special form of dial with sixty points traced or cut thereon, around which revolves a hand in unison with the movement of the apparatus. This hand, having completed the circuit, springs back to the starting point, and is ready for the next exposure. The second hand or indicator (shown in cut as pointing to figure 15), and insulated from the other, has a handle by which it can be moved to the desired point at the will of the operator. This indicator is close to the dial, and both hands have platinum points that make a rubbing contact while the large or minute hand passes the indicator. From the indicator a wire passes to the battery, consisting of two Burnley cells, which is connected with the vibrating bell in the dome of the instrument. From the bell a wire connects with the minute hand. When an exposure is to be limited to six or six and a half minutes, the indicator is moved around to the number six or six and a half. The lever at the right, on being pulled down, starts the minute hand, which revolves until it reaches the indicator. The platinum points then close the circuit, causing the bell to ring while rubbing past, and notifying the operator to change the plate.

A further improvement of especial value is a small coil and armature placed on the inner surface of the camera (Fig. 2) back

of the lens and connected in the circuit with the bell and instrument. When the circuit is open the shutter or blind is slightly supported by the armature of the coil, and is released and allowed to fall on the closing of the circuit, thereby preventing further exposure, and allowing the operator to continue any special work he may have in hand at the time, and which he may be unable to lay aside at that particular moment.

The instruments are accurately made, and present an attractive appearance, besides being so very useful for the work intended. This brief description does not fully explain the advantages of this patent, but enough has been said to show the value of it. Mr. Blomgren will gladly show the apparatus in operation to all callers at his place of business.

#### ACROSTIC.

BY A. H. M.

The days of youth are past for him,  
His hands their cunning skill have lost;  
Each day that passes brings him nearer yet  
Poverty's grim gripe—and he must make  
Room for the younger—Bitter thought:  
Is this the goal his years of toil have won?—  
Neglected, old, half-blind and poor.  
Time was when high in hope and favor  
Eulogiums were his—and he was courted.  
Repellant now the looks—his presence shunned  
Since all he strove for has but come to naught.  
Hope he has yet! His firmament  
One planet bright contains, that banishes  
Mists from the portal of his aged ease—  
Eureka! here at last his rest on earth he sees!

#### WORLD'S FAIR DEPARTMENTS.

The departments of the World's Fair, as officially announced, are as follows:

- A. Agriculture, food products, farming machinery and appliances.
- B. Viticulture, horticulture and floriculture.
- C. Live stock, domestic and wild animals.
- D. Fish, fish products and apparatus of fishing.
- E. Mines, mining and metallurgy.
- F. Machinery.
- G. Transportation exhibits, railways, vessels, vehicles.
- H. Manufactures.
- J. Electricity and electrical appliances.
- K. Fine arts, pictorial, plastic and decorative.
- L. Liberal arts, education, engineering, public works, architecture, music and the drama.
- M. Ethnology, archæology, progress of labor and invention, isolated and collective exhibits.
- N. Forestry and forest products.
- O. Publicity and promotion.
- P. Foreign affairs.

A LUDICROUS effect is sometimes produced by the intermingling of the matter belonging to different paragraphs. In a Lancashire evening paper this curious obituary notice was inserted not long since: "A large cast-iron wheel, revolving nine hundred times a minute, exploded in the city lately, after a long and painful illness. Deceased was a prominent member of the local temperance association."

407-425 Dearborn street, Chicago.

## THE PAPER MILLS OF THE UNITED STATES.

NO. VIII — VALLEY PAPER COMPANY, HOLYOKE.

Without question, the city of Holyoke, Massachusetts, is the largest paper producing town in the United States if not in the world. A person could stop there two or three weeks, and scarcely be able to visit all the mills and look them over thoroughly. The quantity of paper daily shipped from Holyoke is enormous, and there is hardly a town of any importance anywhere in the country that does not receive and use paper made by some mill there. Holyoke—paper—the names are almost synonymous. We have already mentioned, in previous numbers of THE INLAND PRINTER, some of the paper mills located in Holyoke, and in this issue shall take occasion to say a few words in relation to the Valley Paper Company.

VALLEY PAPER COMPANY'S MILL.

This company was formed in 1866, with a capital stock of \$100,000, and conducted on such a successful basis that in 1868 the stock was increased to \$125,000. From that time, until 1882, the capacity of the mill was hardly adequate to meet the constantly increasing demands for the reliable papers manufactured, and in the latter year another increase in capital stock was made — this time to \$200,000, new buildings and machinery added, and the capacity of the mill doubled. Today the company is well equipped with all the latest labor-saving machinery and modern appliances for producing the best papers, and, with the selection of the choicest stock always in mind, and by using the most perfected methods of manufacture, their products can not fail to be unsurpassed.

The principal product of the mill consists of bond, ledger and linen papers — the following brands being among the most celebrated and best liked by those who have used them: "Commercial Bond," "Valley Linen Ledger," "Our Ledger," "French," "Old English" and "Congress" linens. These brands are especially adapted to the everyday needs of the trade, are of moderate price, acknowledged merit and deservedly popular. The papers named above are not, however, all that are made — a fair proportion of the product being run into fine and superfine flats and ruled writings, all excellent lines. Recently there has been added, also, choice lines of wedding and society stationery, of best stock, and put up in most attractive forms. In all the different brands and makes, it is always the endeavor of the company to produce the best that can be put upon the market for the price.

The present officers of the Valley Paper Company are: J. S. McElwain, president; Henry E. McElwain, treasurer; L. F. Hayward, Jr., assistant treasurer; and A. M. French, superintendent. Callers at the mill at almost any time will find the pleasant and genial treasurer ready to welcome them, whether their mission is to place a large order, or only make a visit to look

over the establishment. All orders received have the most prompt attention, and letters of inquiry in regard to brands of paper produced, given immediate reply. The Valley's sample book will be sent to any address.

## THE MANUFACTURE OF COLORED PAPER.

In a new process for the manufacture of colored paper the pulp is prepared in the usual way by agitation with water. The coloring matter is then irregularly mixed with the pulp while the pulp is in such relation to the web-forming devices that the diffusion of color may be checked by the immediate withdrawal of the water from the pulp in the process of forming the web before a uniform tint is reached and then pressing and drying the web in the usual way. By this process shaded and clouded color effects are produced in the finished paper.

It is essential that the coloring matter shall be irregularly mixed with the pulp while it is in a fluid or semi-fluid state and before it has been formed into a web. Otherwise unsightly strips and blotches of color are produced, having abrupt and ragged edges, because no sufficient diffusion of the color takes place to soften and shade the edges of the color patches. It is necessary that immediately after the coloring material has been introduced the withdrawal of the water should begin. Otherwise the color will spread through the pulp, so as to produce a uniform tint in the paper when finished.

When the Fourdrinier machine is used, the color, which may consist of an aqueous solution of aniline dye, is applied in a stream or shower to the pulp at or near the point where it enters on the making wire.

When the cylinder machine is used the color should be added to the pulp in the vat at a point near the cylinder and upon or just below the surface of the pulp, so that the current of escaping water will draw the coloring matter toward the cylinder and not be generally diffused throughout the vat.

When two or more streams or showers of coloring matter are used, the colors or tints are shaded and blended together according as the points of application are more or less widely separated, and by varying the relative position of the point of application and the amount and character of the coloring matter an endless variety of artistic effects may be produced. In spite of this variety the product is always characterized by a peculiar softness of shading or clouding of the tints and can be readily distinguished from colored paper made in the ordinary way, or from paper printed in colors or tints. — *United States Paper Maker.*

## STILL THEY COME.

There has of late been a noticeable increase in the number of papers printed on the coöperative plan. Revised statistics place the number of ready-print papers in the United States at 7,042 as against 6,824, the number of papers embraced in the various coöperative lists when this subject was last mentioned in *Printers' Ink*. This is an increase of 218. As these figures show, the coöperative papers constitute a very considerable proportion of the entire number of papers published in the United States. — *Printers' Ink.*

We sincerely regret to learn that Mr. O. L. Smith, of Denver, a gentleman well known to the craft, is confined to his residence with an attack of nervous prostration. His many friends sympathize with him in his affliction, and earnestly trust ere long to hear of his convalescence.

## A TYPEFOUNDER GONE HOME.

It is always a sad duty to chronicle the death of an upright citizen whose prominence in commercial life, whose energy and sterling integrity, have united to give him a high position in the esteem of his associates and the general public. Such a man was Mr. A. P. Luse, of Marder, Luse & Co., typefounders, Chicago, whose portrait appears on this page, and who departed this life at Los Angeles, California, on Friday, January 16, while sojourning there for the recovery of his health.

Those whose business relations with the concern began within the last five or six years will not realize the truth of this so well as the earlier patrons of Marder, Luse & Co., for Mr. Luse has not been actively engaged in the affairs of the house since 1883. Up to that period he had led a remarkably busy life, but was then compelled to yield to the imperative demands of failing health.

The deceased was born at Indianapolis, April 3, 1831, and learned the printer's trade in the office of the *Sentinel*, of that city. He attended Wabash College from 1849 to 1851, but did not graduate there. In 1852, in company with his brother, he purchased the *Lafayette Journal*, and entered into business on his own account. In 1854 he was married to Miss Sarah Wade, of that city. Mrs. Luse died in 1884.

In the fall of 1854 Mr. Luse went to Davenport, Iowa, where for fourteen years he was engaged in the printing and stationery business, and wherein he was eminently successful. He first entered into partnership with the Hon. Hiram Price, under the firm name of A. P. Luse & Co. Soon afterward the style of the concern became Luse & Scott, then Luse, Lane & Co., the partners in the latter firm being Mr. Luse, Mr. Price and E. Y. Lane. Later it was Luse & Griggs, F. H. Griggs being the partner, and this was the name of the house when Mr. Luse withdrew to enter a wider field of usefulness in the great metropolis of the West. It was in 1869 that he purchased an interest in the firm of Schofield, Marder & Co., proprietors of the Chicago Typefoundry, and the style of the house became Marder, Luse & Co. Under this proprietorship the house has made its greatest strides in growth and prosperity, and it is in no small degree due to the enterprise and business sagacity of A. P. Luse that the firm of Marder, Luse & Co. stands today as one of the pillars of the typefoundry interests of the world.

When the firm was incorporated, in 1883, Mr. Luse was obliged, from the precarious condition of his health, to withdraw

from active participation in business, and for four years made his residence in Crawfordsville, Indiana, where he has won many friends. After that time he traveled extensively in Europe, Florida and California, and made his last visit to the latter state in the hope of bettering his physical condition. The hope, however, proved to be in vain, and his friends were soon called upon to mourn his demise.

The attendance at his funeral affords some indication of the esteem in which he was held and the wide circle of friends which he had made. His remains were interred at Crawfordsville, Indiana, on January 26. In addition to the local attendance a special car conveyed Chicago mourners to participate in the last sad rites. Among these were Mr. and Mrs. John Marder, J. W. Marder, Walter and Clarence Marder, Miss Amy Marder, Herbert Luse and Miss Alethea Luse, of Chicago, and Mr. Cyrus P. Luse, of Minneapolis.

Mr. John Marder, his partner of many years, was one of the pallbearers, and a clear idea of the mutual faith that existed between the two partners is furnished in the fact that John Marder was made executor of Mr. Luse's estate, without bond.

Mr. Luse was a man of modest and unassuming deportment, irreproachable character, unswerving integrity, iron will and the kindest of sympathies and impulses. He had acquired a moderate fortune, and those who know of his energy and strict business methods will cheerfully acknowledge that he was fully entitled to it, and add the wish that he might have lived many years in the enjoyment of an independence which he had so honorably earned.

In the death of Mr. Luse the typefoundry business loses one of its staunchest promoters, one who has made his influence widely felt in its growth and prosperity, and who would now have been prominently identified with its development had not disease compelled him to relinquish the harness of business activity while yet it sat upon him with honor and credit, and when he should still have had many years of effective labor before him.

THE Key West (Fla.) *Equator-Democrat* has evolved an ingenious plan for preventing unscrupulous newsboys from reselling copies of papers belonging to subscribers and wrongfully diverted from their intended destination by ways that are dark. At the head of its editorial columns it has a notice in large type requesting the public not to buy from any newsboy an *Equator-Democrat* having the following printed warning: "Subscriber's Paper. Do Not Buy It."

## DEATH OF MR. STEPHEN McNAMARA.

The death of Mr. Stephen McNamara, which it is our sad duty to chronicle, and which occurred at his residence, No. 1258 Fulton street, Chicago, on Thursday, February 5, after a somewhat brief though painful illness, removes from our midst one of the ablest, best known, most highly respected and deservedly popular pressmen in the United States. Cut down by the remorseless destroyer in the zenith of his manhood, when an assured lease of life seemed before him, and his business prospects were all that could be desired, his demise under such circumstances is one of those inscrutable dispensations of Providence which is beyond all mortal ken.

Mr. McNamara was born in the city of Boston, Massachusetts, December 25, 1841. At the age of twelve years he removed with his family to Columbus, Ohio, where he entered the pressroom of the *Ohio Statesman*, then controlled by Richard Nevans and Samuel Medairy, where he remained till 1861, in which year he accepted a position in the *Cleveland Herald* pressroom, of which he retained charge till 1863. In this year he came to Chicago and entered the service of Church, Goodman & Cushing, afterward Church, Goodman & Donnelley, with whom he continued till 1868, with the exception of being connected for a short time with the *Republican* pressroom, in all of which positions he commanded the highest respect, both as a man and a workman.

In 1868 he took charge of the job pressroom of Horton & Leonard, afterward the Knight & Leonard Company, in whose employ he remained for twenty-one years, and there earned a reputation as a painstaking, skillful pressman, which ever afterward secured him a front rank in his profession.

In the fall of 1888 he embarked in the roller making business (having as partner for a short period Mr. Albert Auer, now in charge of the government printing office pressroom), and in which he was actively and successfully engaged at the date of his untimely death.

He was married in 1867 to Miss Annie Knowles, by whom he had four sons and a daughter, four of whom survive. His family associations were of the most pleasant character, his relations as a husband, father and friend endearing him to all who had the pleasure of his acquaintance.

Such is a brief sketch of the career of one who was recognized as one of the best printing press mechanics to be found in the country, and was regarded as authority on all matters pertaining to the particular interests of his craft. As a writer he was forcible, graceful and painstaking, as his series of articles on the history or evolution of the printing press, which appeared in several volumes of *THE INLAND PRINTER*, and which attracted so much attention at the time of their publication, abundantly testify.

Mr. McNamara was not only a powerful and well informed writer, but a constructor as well. In 1864 he commenced on a model of a printing press on an entirely different principle from those now in operation, which was completed in 1871, from which

he anticipated great results. Unfortunately it was destroyed in the great fire in October of that year which laid the business portion of Chicago in ashes, and thus ended his hopes and aspirations as a builder.

There was one trait in his character which we deem worthy of especial mention, and which endeared him to the younger generation of pressmen — the pains he took to instruct those under him, from the feeder up, and to be assured that they thoroughly understood the explanations given. This is so scarce a virtue, at the present day, that where it is exemplified, it is invariably appreciated by those it seeks to benefit.

The writer of this tribute had an acquaintance with the deceased for twenty-five years, and has no hesitation in saying that in the death of Stephen McNamara the craft has lost one of its bright and shining lights, the family a devoted husband and father, and society a useful and hon-

ored citizen, and this is no idle, meaningless tribute. Peace to his ashes.

The funeral, which took place from the late residence of the deceased, on Sunday, February 8, was attended by a large concourse of friends, including the members of the Pressmen's Association, Catholic Foresters and United Workmen. The floral tributes were both extensive and beautiful, and included a floral roller from *THE INLAND PRINTER*; an easel bearing a star, anchor and a broken wrench, from his old associates of the Knight & Leonard Company, and a large wheel with four broken cogs, each one representing the loss of a charter member of the Pressmen's Association. The remains were interred in Calvary cemetery.

## PERSONAL.

We acknowledge calls during the past month from the following gentlemen: Charles Eneu Johnson, of Charles Eneu Johnson & Co., Philadelphia; Samuel J. Potter, Topeka, Kansas; O. J. Maigne, firm of D. J. Reilly & Co., New York; L. L. Talbott and Thomas Watters, Des Moines, of the Watters-Talbott Printing Company; Edgar H. Cottrell, C. B. Cottrell & Sons, New York; A. C. Rogers, Cleveland, Ohio; Henry Gibson, of Gibson, Miller & Richardson, Omaha, Nebraska; A. F. Wagner, Freeport, Illinois; A. L. Rose and W. L. Clark, *Ingham County Democrat*, Mason, Michigan.

## ANSWERS TO CORRESPONDENTS.

A. R. A., Batavia, New York: Will try and answer all your questions in next issue.

C. E. G., Moline, Kansas: There is no such press as you refer to manufactured to our knowledge.

A. W. McDonald, Alexandria, Ontario: Please tell me the best remedy to clean woollens and tweeds from printers' ink.

*Answer.*—Benzine.

E. C. D., Chicago: We do not think, after a careful examination of the merits of the same, that it will pay you to patent your scheme for placing a measure on a galley for catalogue or other work.

S. C. W., Stromsberg, Nebraska: In closing a letter or statement with the words, "Yours truly," is it ever correct to keep "truly" up?

*Answer.*—In written correspondence, there is no absolute rule; in printed matter we should say keep "truly" down.

S. W. G., Galesburg, Illinois: Will you please tell me what is the custom, within the range of your observation, on the following proposition: "Where a measure contains just twenty-six ems in a line, how many lines should be counted to make one thousand ems?"

*Answer.*—Thirty-nine lines, containing twenty-six ems in each line, make one thousand and fourteen ems. In a single thousand the compositor would not be allowed the extra fourteen ems, but such an allowance would apply, of course, to a number of thousand ems.

A Montreal (Canada) correspondent asks: "What is your opinion of a paper firm which uses rubber-stamped envelope corners like annexed sample, as agents for a prominent New England paper manufacturing company?"

*Answer.*—Silence is golden, as our opinion, if expressed, would be more emphatic than polite.

T. K., Saint Paul, Minnesota: Will you please inform me through the columns of THE INLAND PRINTER who was the inventor of the first tapeless delivery cylinder, and what year it was put on the market.

*Answer.*—Marinoni, a Frenchman, was the inventor; the patent was bought by R. Hoe & Co., of New York, about the year 1868 or 1869.

P. D., Meadville, Pennsylvania: Of what substance is the enamel on coated paper composed, and how applied to paper, as same in body. Also what weight and quality of paper is best adapted for overlay on half-tone cuts.

*Answer.*—The enamel is made from a mixture of the finest French clay (which is sifted to a consistency of flour) and glue. The paper is run through a vat, containing these ingredients, and from thence is carried to a dripping machine. It is then placed beneath a series of brushes, the first of which is a coarse one, which removes all excrescences. The series increase in fineness as the paper is passed over the drum, the last one used being a camel's-hair brush. 2. From French folio up to seventy-pound paper, according as circumstances warrant.

## ST. LOUIS NOTES.

William R. Knox, printer on Locust street, quietly took unto himself a wife just after the holidays. A good beginning for the new year. We wish him happiness and success.

Carl Schraubstadter, Jr., dealer in typefounders' and stereotypers' supplies, has added a full line of machinery and supplies needed by photo-engravers to his line of goods.

Woodward & Tiernan Printing Company has moved into the new addition to their already commodious building.

The new building erected over the place at Third and Locust streets, where a number of printing offices were burned about a year ago, is almost ready for occupancy, and we understand will become the abode of printing and binding establishments, with the F. O. Sawyer Paper Company on the lower floors.

Politics are beginning to get heated up, and ye journalist is kept busy chronicling the various candidates and their doings and prospects.

Two of our leading dailies are devoting a goodly amount of their space to the airing of personalities and hard words, which their respective editors see fit to hurl at each other to the disgust of the readers of the papers in question. Shame!

Mr. C. A. Gitchell, manager of the *Star-Sayings*, since making peace with Typographical Union No. 8, has begun laying his plans to reach the house of delegates at the next election, for which office he made a race in November, but was defeated through the efforts of the typographical union, which, at that time, Mr. Gitchell was opposing.

The strike is still "on" at the Central Typefoundry, and we understand the foundry has difficulty in filling orders for their type, and especially for sorts.

During the afternoon of February 2, Eugene Meyer, a young cylinder-press feeder at Bemis Bros. Bag Company, became entangled in the belting to his press and was lifted from the floor and thrown head foremost into his press as the bed was returning to the cylinder, and before the machinery could be stopped his head and the upper part of his body were mashed and mangled beyond all semblance to a human being. Death was of course instantaneous.

The stockholders of the Westliche Post Publishing Company recently held a meeting and election, which resulted in the old officers holding over for another year. This company has made many extensive improvements during the last year, and has placed itself well in the lead as the leading German paper of this section.

Pierce Bros., who suspended about two years ago, have again engaged in the printing business, and are located at No. 9 North Eighth street.

The trial of R. D. Lancaster against Florence White, editor of the *Post-Dispatch*, for criminal libel took place during the last week of January, when witnesses were examined, and arguments presented by counsel. The judge deferred his decision until February 12. THE PRINCESS.

## PRESS ASSOCIATION NEWS.

AN organization to be known as the West Texas Press Association is proposed, and the progressive town of Abilene is pressing its claims for the honor of the first meeting.

We acknowledge the receipt of an invitation to attend the winter meeting of the Minnesota Editors' and Publishers' Association at Westmoreland Hall, Tenth and St. Peters streets, St. Paul, Wednesday evening, February 11.

THE annual meeting of the Maine Press Association was held in Augusta, January 22 and 23. Literary exercises were held in the senate chamber and included an essay by Ray Thompson, of the *Richmond Bee*, and a poem by Elliott C. Mitchell, of Portland. A reception at the residence of Mr. and Mrs. P. O. Vickery was enjoyed in the evening.

AT the recent twenty-fourth annual meeting of the New Hampshire Press Association, the following named officers were elected:

President, A. E. Clarke, of Manchester; vice-presidents, E. N. Pearson, of Concord; L. M. Gould, of Lake Village; J. W. Bourlet, of Concord; recording secretary, P. B. Cogswell, of Concord; corresponding secretary, S. C. Gould, of Manchester; treasurer, T. W. Lane, of Manchester. Executive Committee—G. A. Blanchard, of Concord; W. C. Clark, of Manchester; J. M. Hill, of Concord. Auditors, E. E. Eastman and Frank G. Edgerly, of Concord. S. C. Gould and E. N. Pearson were appointed delegates to the convention of the National Editorial Association.

THE Lynn (Conn.) Press Association on January 17 dined at Young's Hotel, Boston, to celebrate the one hundred and eighty-fifth anniversary of Franklin's birth. For many years it has been their custom to celebrate in some such way. After partaking of a sumptuous spread, the president, Charles H. Hastings, called upon the Rev. L. L. Briggs, a guest of the association, who gave a very interesting address with some remarks on the life of Franklin. He reminded the association that it was assembled, not only in the city of Franklin's birth, but in the very locality. The committee on permanent organization reported by-laws which were accepted, after which the following officers were elected: President, John L. Parker; vice president, John Macfarlane; secretary, G. B. M. Houston; treasurer, Fred H. Nichols. Executive Committee—President and secretary *ex-officio*, Horace N. Hastings, Bertram B. Newhall, Chester E. Morse, Charles E. Mann, Luther C. Parker. Membership Committee—Charles H. Hastings, J. Edward Law, Charles R. Cass. It is proposed to open quarters where members can find the papers and magazines of the day, and where the association can hold their meetings and discuss various topics of interest to all printers.

#### CHICAGO NOTES.

THE Illustrated Christian Weekly Company has been incorporated at Chicago, with a capital of \$100,000, to do a general printing and publishing business.

THE Hamilton Manufacturing Company, wood type makers, will soon move from 259 Dearborn street to 303 Dearborn street, in the Shnidewend & Lee Company Building.

THE W. J. Jefferson Printing & Publishing Company has been incorporated at Chicago, with a capital stock of \$100,000, by W. J. Jefferson, W. H. Hennessy and B. H. Jefferson.

WE acknowledge receipt of a neat advertising novelty sent us by W. B. Conkey, the book manufacturer, 341-351 Dearborn street, in the shape of a little clock suitable for use upon the office desk.

THE lithogravure specimens turned out by A. Zeese & Co., 341-351 Dearborn street, as illustrated in the firm's letter and bill heads and monthly statements, rank among the most beautiful samples of work it has ever been our lot to examine, and must be seen to be appreciated.

THE W. B. Conkey Company, of Chicago, has been incorporated; capital stock, \$300,000; for electrotyping, lithographing, engraving, printing, binding, book manufacturing and publishing; incorporators, Walter B. Conkey, Bradford A. Lawrence, Thomas Knapp and Prosper D. Fenn.

IT pleases us to announce that the business heretofore conducted by Mr. Stephen McNamara, whose demise is noticed elsewhere, will be continued by his son, Stephen McNamara, who has been associated with his father in the roller business for some years past. The location remains unchanged.

GEORGE H. TAYLOR & Co., wholesale paper dealers, have moved their warehouse to 207 and 209 Monroe street, on the opposite side of the street from their old location, in the next block west, where, with greatly increased storage room and facilities, they will be enabled to materially increase the size of their stock.

E. A. BLAKE, representing C. Potter, Jr. & Co., New York, manufacturers of cylinder, lithographic and web presses, has

opened a handsome and spacious office at 362 Dearborn street, where he will at all times be pleased to see old and new customers. Mr. Blake's well known energy, push and experience will, no doubt, redound to the interest of the firm with which he has associated himself.

ABOUT April 1, Messrs. T. W. & C. B. Sheridan, manufacturers of paper cutters and bookbinders and paper-box makers' machinery, whose New York offices and salesrooms are at 25 Centre street, will open up a branch house in Chicago. They have secured quarters in the Donohue & Henneberry Building on Dearborn street, and will carry a full and complete line of all the machinery made or handled by them, and placed the branch in charge of Mr. A. D. Sheridan, a gentleman well known to the trade throughout the country.

MR. F. J. HURLBUT, a gentleman well and favorably known to the trade, has connected himself with the National Printing Ink and Dry Color Company, and will represent its interests in Chicago. The factory, which is situated at the corner of Diller street and Austin avenue, is one of the best equipped in the country, and is supervised by practical men who have grown up in the ink business. The company will manufacture all grades of black and colored inks and dry colors. We congratulate Mr. Hurlbut and the company on his appointment, as we are well satisfied it will prove mutually beneficial. He brings to the discharge of his duties energy, experience, and the benefit of a large acquaintance with the employing printers of this city.

MORTIMER C. MISENER, one of Chicago's oldest and best known printers, died on Thursday night, February 5, at Root and Halsted streets, in the Town of Lake. At 11:30 o'clock he was found unconscious on the walk near the Ross Hotel. He was placed in the patrol wagon and died almost immediately after. Heart disease is supposed to have been the cause of his death. Mr. Misener was born at Watkin's Glen, Schuyler county, New York, January 1, 1829, and came to Chicago in 1843, when he commenced to learn the printing business in the office of Earle & Fergus. He subsequently worked in the *Democrat* and *Journal* newsrooms, and for years occupied a prominent position in the typographical union of this city, on more than one occasion filling the position of president. During the war he was one of the correspondents of the *Chicago Times* and made quite a record as a writer, and some time after was news editor. For the past eight or ten years, however, he had worked as a compositor on the Stock Yards *Daily Sun*, where he was employed at the time of his death. His remains were buried from 715 Chestnut street, Englewood, on Sunday, February 8, the pallbearers being A. H. Brown, Joseph C. Snow, A. McCutcheon, J. B. Hutchinson, E. S. Davis and L. C. Boudreau, members of Chicago and Lake typographical unions.

THE Typothetæ of Chicago gave a banquet at the Wellington Hotel, corner of Jackson street and Wabash avenue, on Saturday evening, January 17, which was attended by a large number of employing printers, publishers, stationers and invited guests. President Blakely occupied the chair, and P. F. Pettibone acted as toastmaster. The toasts were "Benjamin Franklin, Statesman, Philosopher, Patriot," responded to by Franklin H. Head. "The Ideal Citizen of Chicago," by Ferd W. Peck. "From the Soap House to the State House, or, the Evolution of Man," by the Rev. Dr. Canfield, who made the most telling and eloquent speech of the evening. "Types and Morals," by Gen. A. C. McClurg. "The Press," by Melville E. Stone, and Major Moses P. Handy, and "The United Typothetæ of America," by A. M. Pugh, president of the national association. Among those present were the following: Messrs. George E. Cole, J. W. Butler, G. P. Englehard, J. W. C. Hull, C. H. Blakely, George H. Taylor, Charles J. Whipple, E. A. Blake, Dwight Jackson, J. C. Haynes, C. M. Smith, M. F. Bingham, R. B. Martin, A. C. Cameron, James White, M. E. Stone, F. H. Head, R. W. Murphy, Ferd W. Peck, Amos Pettibone, C. M. Davis, Charles B. Russ, J. W. Donohue, C. D. Rogers, Franz Gindele, W. B. Conkey, A. R. Barnes, H. E. Thayer, T. F. Rice, C. F. Blakely, H. W. Thornton, C. E. Battell, F. A. Barnard, A. C. McClurg,

William C. Swain, James T. Hair, William Johnston, C. E. Strong, Charles M. Moore, Frank Barhydt, James Joyce, R. R. Donnelley, Thomas Knapp, F. H. Head, D. A. Arnold, T. Ruborits, E. W. Coppage, C. E. Leonard, H. A. Rodgers, H. T. Hodge, W. T. Gunthorp, Moses P. Handy, A. H. Pugh, A. A. McCormick.

THE Old-Time Printers' Association of Chicago gave its fourth annual banquet in honor of its patron saint at Kinsley's banquet hall, Saturday evening, January 17. The attendance exceeded expectations, and the occasion and reunion was a thoroughly enjoyable one. The half hour before the banquet was spent pleasantly in the reception rooms, the members and their ladies being received by the officers of the association and the committee of arrangements. A shake of the hand that night was no idle formality, because it carried many back in memory to an acquaintance formed thirty and in some cases thirty-five years ago. The supper was served at 9:30, every seat at the table being filled. Grace was said by the Rev. J. C. Burroughs, D. D., a divine who occupies, and deservedly so, a warm place in the hearts of the printers of Chicago. An interesting programme followed the repast, the first feature of which was an address of welcome by A. L. Fyfe, president of the association. G. W. Morris then read a short poem composed for the occasion, after which a solo, "The Song That Reached My Heart," was sung by Miss P. B. Luff, and heartily applauded. Col. E. A. Calkins, of the *Evening Journal*, responded in an able and eloquent manner to the toast "Benjamin Franklin." He was listened to with rapt attention, and was loudly applauded at the conclusion of his remarks. Mayor Cregier responded in a befitting manner to the "City of Chicago," Misses P. B. Luff and May C. McDonald, sang a duett entitled, "Kind Words," and Mr. M. J. Carroll spoke to the toast, "The Old-Time Printers," in his happiest vein. Charles M. Moore told one of his inimitable stories, and Mr. J. C. K. Forest, who certainly needs no introduction to our Chicago readers, responded to the toast of "The Press," in an effort worthy of the speaker and his subject. Then Miss McDonald sang "Winter Lullaby," and Charles B. Ross—who does not know him—closed the programme by responding to the toast of "The Ladies," in a manner which reflected credit on his well earned reputation as a post-prandial orator, especially when "The Ladies, God bless them," is his theme. The officers of the association are: A. L. Fyfe, president; G. W. McDonald, vice president; A. C. Cameron, secretary and treasurer. The Committee of Arrangements consisted of A. C. Cameron, J. S. Thompson and J. C. Snow. Among those present were Messrs. and Mesdames J. C. Snow, John B. Jeffery, Nels Johnson, S. M. Kearns, Ed James, J. L. Lee, C. N. Bond, D. T. Brock, John Anderson, O. H. Perry, E. S. Davis, G. W. Morris, F. M. Powell, A. L. Fyfe, C. B. Langley, J. S. Thompson, James Bond, G. W. McDonald, B. G. Herring. Mesdames John Buckie, E. Jones, H. C. Jenks, E. Irwin, A. Chaffer. Misses M. Buckie, Barbara Buckie, B. Buckie, McDonald, Snow, Langley. Messrs. John Gordon, A. H. Brown, Frank Anderson, M. L. Crawford, Henry R. Boss, Rev. Dr. J. C. Burroughs, H. S. Streat, M. J. Carroll, S. E. Pinta, J. F. Buckie, E. A. Calkins, J. K. C. Forest, J. A. Williamson, G. L. Frisbee, J. J. R. Daley, R. B. Spencer.

#### NEWSPAPER GOSSIP.

THE *Iron Belt* is a new monthly journal at Roanoke, Virginia.

E. W. WILLIARD has assumed the management of the Joliet (Ill.) *Daily Press*.

ISHPEMING, Michigan, has a new paper called the *Daily Press*. Horace J. Stevens is its editor.

A NEW daily paper, to be started in New York City, is to be called the *Wall Street Farmer*.

E. R. MORSE has taken editorial charge of the Moline (Ill.) *Daily Journal*. Mr. Morse has been for nine years editor of the Bloomington (Ill.) *Daily Leader*, and is considered an able man.

RICHARD HARDING DAVIS is to become a co-editor with George William Curtis of *Harper's Weekly*.

THE Jersey City (N. J.) *Argus* has been sold at auction to William and Horace Farrier for \$41,000.

THE first copy of Edward Bellamy's *New Nation* will appear February 14. It is to be published in Boston.

THE Woburn (Mass.) City Press Company has commenced the publication of a daily paper called the *City Press*.

THE only colored democratic newspaper in the South is the *Southern Appeal*, of Atlanta. Its editor is C. E. Yarboro.

A STOCK company, with \$10,000 capital, has been organized at Valdosta, Georgia, for the purpose of publishing a daily paper.

THE *Champaign County Republican* is to be published by the Champaign County Printing Company, of Champaign and Urbana.

MONDAY, February 10, witnessed the appearance in Evansville, Indiana, of a new daily paper called the *Standard*. It is published by a stock company.

PENNSYLVANIA papers no longer issued are: The *Derry Clipper*, *Allentown Republican*, *Butler Daily Herald*, *Shamokin Journal*, *Altoona Globe*, and *Alleghany Daily News*.

THE straight-out democrats of South Carolina are to have a daily eight-page organ at Columbia. It will begin publication about the middle of February, under the editorial guidance of N. G. Gonzales.

THE *Trowel and Mortar* is a new monthly magazine devoted to the interests of bricklayers, plasterers, stonemen, fireproofers and manufacturers of builders' supplies. It is published in New York, from No. 834 Broadway.

IT is stated that the London Sunday edition of the *New York Herald* will not appear again. It once rejoiced in a circulation of 50,000, which gradually sank under bad management and through frequent changes in the staff, until it lately only printed a few thousands, the majority of which were given to the newsboys.

A COMPANY has been incorporated in New Castle, Indiana, for the publication of a weekly newspaper, to be conducted in the interests of the farmers' alliance. It will also enter the local field. The corporation is mostly composed of farmers, and the *People's Press*, the name of the paper, will be the organ of the alliance throughout the county, and represent some thirty lodges therein.

#### DANGEROUS INK.

There has recently been placed upon the market in Europe an ink which seems to be identical with a preparation advertised about twenty years ago as "disappearing ink," the sale of which was finally prohibited by the government on account of the dangerous use it was put to by unscrupulous parties. The ink is a watery solution of iodide of amyllum. It produces beautiful blue-black writing, which begins to fade after a few days, and disappears entirely after the lapse of a week. It can be easily imagined how dangerous this ink can be when used by swindlers for notes, acceptances, etc., but, on the other hand, many a politician in the United States might have paid liberally for a bottle, had he known of its existence.—*Lithographic Art Journal*.

ONCE upon a time a certain man got mad with the editor and stopped his paper. The next week he sold his corn at 4 cents below the market price. Then his property was sold for taxes because he didn't read the sheriff's sales. He was arrested and fined \$8 for hunting on Sunday, simply because he did not know it was Sunday, and he paid \$3 for a lot of forged notes that had been advertised for two weeks, and the public cautioned not to negotiate them. He then paid a big Irishman, with a foot like a forge hammer, to kick him all the way to the newspaper office, where he paid four years' subscription in advance, and had the editor sign an agreement to knock him down and rob him if he ever ordered his paper stopped again.—*Yamhill County Herald*.

## LAID OVER.

Review of specimens received; also several valued contributions and communications, too late for insertion in February issue.

## TRADE NEWS.

N. PEMBROKE, printer, Salt Lake City, Utah, has sold out.

ACKERMAN & Co., printers, Salt Lake City, Utah, have dissolved partnership.

THE Chronicle Publishing Company, of Spokane Falls, has incorporated for \$150,000.

A. J. JOHNSON & Co., job printers, Sacramento, California, have dissolved partnership.

FORD BROTHERS, printers, Sioux City, Iowa, have been succeeded by Tabor & Ford.

D. B. MOSELEY'S SONS, printers and publishers, Hartford, Connecticut, have dissolved partnership.

WILLARD BROTHERS, printers and publishers, Booneville, New York, have been succeeded by Gary A. Willard.

McDONALD & BOTSFORD, printers, Portland, Oregon, have dissolved partnership. Mr. McDonald continues the business.

THE Baker-Randolph Lithograph & Engraving Company has been incorporated at Indianapolis, Indiana, with a capital stock of \$125,000.

MR. WILLIAM J. KELLY, who started the *American Model Printer* twelve years ago, has assumed the control of the *American Art Printer*.

McCLURE & ROSE, printers, and the Round Table Company, publishers, Nashville, Tennessee, have been succeeded by the University Press.

THE *Denver Times* has been sold to Mr. H. W. Hawley, representing a Minneapolis company. The consideration is reported to have been \$175,000.

THE *Star*, Valparaiso, Indiana, has recently added a new engine to its office. This was rendered necessary by its largely increased circulation.

JAMES IMRIE has been admitted to the firm of Imrie & Graham, printers and publishers, Toronto, Ontario, and the style of the firm remains unchanged.

THE Woodstock Sentinel Company has been incorporated at Woodstock, Illinois, to conduct a general printing and publishing business; capital stock, \$6,000.

MR. E. E. JAMESON has been appointed the New England selling agent for the Campbell Printing Press & Manufacturing Company, with headquarters at 191 Fort Hill square, Boston.

THE Allison Coupon Company, of Indianapolis, Indiana, owing to the death of Mr. Allison, will be made into a stock company. Business is running as usual with it under the charge of an administrator.

MESSRS. McCLURE & ROSE, Nashville, Tennessee, whose office was recently visited by a fire, which destroyed a large amount of material, have replenished from the foundry of Messrs. Barnhart Bros. & Spindler.

THE Globe Publishing Company, Tacoma, Washington, has filed articles of incorporation with a capital stock of \$100,000. The incorporators were C. H. Boynton, Ralph Metcalf, Louis D. Campbell and Miles C. Moore.

THE Chance-Matthews Printing Company, of Indianapolis, has recently had to enlarge its quarters, owing to its increased business. It has also had to increase its facilities, and among other things has purchased a new Standard Babcock pony press.

MESSRS. CHANDLER & PRICE, makers of the Chandler & Price old style Gordon press, Cleveland, Ohio, have plans and specifications ready for a four-story addition to their factory, and will begin work on it about March 1. When completed, this addi-

tion will add seventy-five per cent to the capacity of their works. The demand for their presses and printing machinery is constantly on the increase.

MR. BULLEN, with Alexander Cowan & Sons, limited Melbourne, Australia, agents for THE INLAND PRINTER, will, soon return to America, and take charge of the Hamilton Manufacturing Company's new branch to be started in New York City.

THE business heretofore conducted by L. A. Ault and F. B. Wiborg, Cincinnati, manufacturers of printing inks and makers of fine dry colors, was, January 15, transferred to the Ault & Wiborg Company, who assumed all the liabilities of the old firm.

THE Cleveland Gordon Press Company, 71 Ontario street, Cleveland, Ohio, reports that it is making several very valuable improvements in its press, and will shortly put upon the market the perfected machines, for which the orders thus far have been ahead of their ability to manufacture.

THE Recorder Company, of New York, has been incorporated to carry on the business of printing, publishing and selling books, pamphlets and newspapers, and a general printing and advertising business. Capital, \$50,000. Trustees: Joseph P. Knapp, John R. Patterson, William H. Cammeyer, Jr. (Brooklyn).

GILLETT & WESTON, printers, Olean, New York, are the successors to Henry Gillett, of the same town, the partnership taking effect February 5, 1891. The firm are now prepared to turn out promptly and in an artistic manner all orders committed to their trust, as their facilities for doing so have been materially increased.

THE Franklin Machine Works, Philadelphia, H. P. Feister, have been removed from 515 Minor street to 506-508 North street (west of Fifth below Arch street), where they are prepared to supply everything needed in printing, bookbinding and kindred machinery, expeditiously, economically, and to the entire satisfaction of their patrons.

THE entire business of the Wm. H. Page Wood Type Company, Norwich, Connecticut, together with all its machinery, patterns, designs, patents and good will, has been sold to the Hamilton Manufacturing Company, of Two Rivers, Wisconsin, who will operate the business at Norwich until it has completed a factory now in process of construction at Two Rivers. After its completion the entire manufacture of wood type will be carried on at Two Rivers, and the Norwich branch discontinued. Before removing, however, it intends to open a salesroom in New York city, where a full stock of its goods will be given to the trade. In the meantime all orders addressed to Two Rivers, Wisconsin, 259 Dearborn street, Chicago, or Norwich, Connecticut, will receive prompt and careful attention. Mr. W. C. Luse, the Chicago representative, is always glad to see callers. Drop in at 259 when in the World's Fair city.

MR. WALTER SCOTT, of printing press fame, has recently been granted patents for his well-known and unique sheet-cutting and feeding mechanism, which cuts sheets of different lengths by a simple adjustment with one set of cutting cylinders, and which has been in use for four years, giving entire satisfaction. These patents were applied for June, 1886, and have been contested by several interference suits in the patent office. All the decisions have been in Mr. Scott's favor. The machine is very simple and easily managed. There are only three adjustments necessary in changing from one size to another. First, the length to be cut; second, the speed of the cutter to that length; third, the register of gripper margin to the impression cylinder. Each adjustment is made to an indicated scale pointing to a common number for each size to be cut. Changes from one size to another can be made in one minute. About fifty different lengths, ranging from eighteen inches to forty-four inches, can be cut. Previous to this invention experts concluded that it was impossible for a rotary cutter to be adjusted and arranged so as to cut from a roll of paper sheets of various lengths. The invention is especially applicable to fast jobbing or book presses, either flat bed or rotary perfecting, and virtually gives Mr. Scott a monopoly of this invention.—*Plainfield News*.

## PAPER TRADE ITEMS.

IT is proposed to build a paper mill at Lexington, Virginia.

A STRAW wrapping mill is soon to be built at Eaton Rapids, Michigan.

THE Judd Paper Company, Holyoke, Massachusetts, has been incorporated with a capital of \$24,000.

THE Crescent Paper Company has been incorporated at Fort Wayne, Indiana, with a capital of \$100,000.

THE Potomac Paper Company, Cumberland, Maryland, has increased its capital stock from \$100,000 to \$130,000.

THE pulp mill at Beaver Falls uses over 2,000 cords of spruce wood annually, turning out six and a half tons of pulp daily.

F. H. DAVIS & CO., 101 Milk street, Boston, Massachusetts, have purchased the Bridge Paper Mills, at Pawtucket, Rhode Island.

THE Lake Erie Fiber Company has been organized at Cleveland, Ohio, to manufacture paper pulps from shavings; capital stock is \$100,000.

THE American Envelope Company has been incorporated at Jersey City, New Jersey, to manufacture paper, envelopes, etc.; capital stock \$250,000.

ON January 30, the Hudson River Pulp & Paper Company shipped from their mill at Corinth, New York, 277,200 pounds—ten carloads—of paper to Australia.

ONONO, Maine, is rejoicing over the establishment of a fine paper mill by the Webster Paper Company. It is to be run night and day, with two full sets of machinery.

THE Standard Envelope Company, of Philadelphia, was recently incorporated under the laws of Pennsylvania. The concern is said to have \$50,000 capital.

FISHER BROS., wholesale paper dealers at Fort Wayne, have purchased a site upon which early in the spring they will erect a fine building for their increasing business.

THE Indiana Paper Company, of South Bend, has purchased the extensive pulp mills of the M. W. Stokes Pulp Company, of Mishawaka, which it will run to the full capacity.

THE L. L. Brown Paper Company, at Adams, Massachusetts, is getting out a big special order for the war department at Washington, D. C. This indicates proper appreciation.

R. J. WEATHERHEAD, formerly superintendent of the mills of the Kaukauna Paper Company, has been engaged in a similar capacity by the Westmoreland Paper Company, of West Newton, Pennsylvania.

THE erection of a pulp mill at Huntsville, Alabama, has been begun by the American Fiber Association of New York. The plant is to cost \$80,000, and will use hulls from the cotton-seed oil mills of that city.

THE Whiteman Pulp & Paper Company, of North Dansville, Livingston county, New York, has been incorporated to manufacture and sell pulp and paper. Its capital stock is fixed at \$100,000, divided into 10,000 shares of \$10 each.

THE annual meeting of the Fort Edward Paper Company was held on January 13. A dividend of ten per cent upon the capital stock was declared. The plant was then sold to the Glens Falls Paper Mill Company, which took immediate possession.

THE Anderson Paper Company, Indianapolis, Indiana, has filed articles of incorporation. The capital stock is stated to be \$100,000, and N. S. Byram, E. G. Cornelius, F. M. Callard, A. N. Reynolds and J. C. Blake are named as the directors.

JOSEPH PARKER & SONS, New Haven, Connecticut, propose in order to wind up the estate of Joseph Parker, late senior member of the firm, to dispose of their mill to a corporation. Its value has been fixed at \$450,000. It claims to have made \$40,000 per annum for the past ten years.

THE Halifax (N. S.) Wood Fiber Company, doing business in Sheet Harbor, Nova Scotia, and which has been shipping about

sixty tons of wood pulp a week to Boston and Portland, has suspended operations, as it is unable, on account of the tariff, to compete with American manufacturers.

THE principal paper mills in Canada were represented at a recent meeting held in Montreal, at which the trade situation was carefully discussed, and it was decided that in consideration of the advanced price of chemicals and paper stock, the price of paper should also be advanced, and steps were taken to reach that result.

THE Bardeen Paper Company, Otsego, Michigan, will build a large new book mill on the flour and saw mill powers, on opposite side of Kalamazoo river from their present mill. Specifications for machinery have not been sent out yet, but they will let their machinery and building contracts within two weeks, as soon as the extension to railroad track and bridge are completed, so as to unload onto the site of the new plant. They will later turn their chair factory buildings, now leased to the Otsego Chair Company, into a lower grade mill for using refuse from their two book mills.

## OF INTEREST TO THE CRAFT.

THE *Union Printer*, New York, has again changed hands. G. V. Tuohey is now the publisher.

ORGANIZER WILLIAMS, of the fourth district, has appointed Julius Pichol deputy organizer for Pennsylvania.

THE annual ball of Buffalo Typographical Union, No. 9, will be held February 23, and a pleasant time is expected.

C. W. RHODES, formerly telegraph editor of the *Denver Republican*, has been appointed foreman of its composing room.

JOHN SEXTON, of Indianapolis Typographical Union, No. 1, has been appointed to a place on the Federation legislative committee.

WE acknowledge invitation to attend the annual ball given by the St. Louis Printing Pressmen's Union, No. 6, on Saturday evening, February 28. Thanks.

ON Saturday, January 17, fifteen union compositors were discharged from the office of the *Boston Post*, and their places filled by members of the Protective Printers' Fraternity.

THE *Pacific Printer*, published by Palmer & Rey, 405-407 Sansome street, has recently been enlarged and remodeled. It is ably conducted, and is an especially valuable publication to the printers of the Pacific slope.

CAPT. F. N. MARION, the foreman of the *Evening Express*, of Los Angeles, California, was elected to the assembly at the last election by the handsome majority of thirteen hundred and fifty-two votes. Captain Marion served through the late war with distinction in the 14th Ohio, and has been a resident of California for about four years.

FRANKLIN'S birthday was celebrated in Toronto, at the Rossin House, by the Employing Printers' Association. Members and guests to the number of seventy-five sat down to the bountiful repast prepared. W. A. Shepard presided, and the vice-chair was held by C. Blackett Robinson. President Prescott, of No. 91, was given the seat of honor to the right of the chair, and John I. Davidson, president of the board of trade, the left.

WE regret to learn that Mr. A. O. Russell, Cincinnati, of the Russell-Morgan Printing Company, recently met with a serious accident while boarding a cable car in front of the postoffice in that city. He was violently thrown to the ground, and was dragged for some distance in front of the car, but was fortunately rescued before being run over, although his escape from instant death was a miraculous one. Although receiving some severe cuts and bruises, it will gratify our readers to know that no serious consequences are anticipated.

TYPOGRAPHICAL UNION No. 72, of Lansing, Michigan, had a very nice, interesting time at its annual election of officers, January 31. A good number were present, and all came prepared to spend the evening, as there was considerable business on hand. There were several quite spirited discussions, and things were moving along rather slow, but at last they came to time and elected the following officers: President, C. K. Essler; vice-

president, Casper Schelling; treasurer, S. M. Mitchell; financial secretary, O. A. Calkins; corresponding and recording secretary, George A. Menard; sergeant-at-arms, C. R. Sykes; assistant, Charles Huffman. Board of Directors—Charles Band, Frank Rose, T. J. Cook, William Cooper, John T. Crane. The following committees were appointed by the president: Executive—L. W. Goucher, Fay Strickland, S. M. Mitchell, Frank Doolittle, V. W. Shields; Membership—John Crane, George Atkins, William Cooper. Delegates to Central Labor Union—S. N. Chilton, F. F. Pierce, Fay Strickland, A. Stewart, L. W. Goucher.

At the regular meeting of Atlanta Typographical Union, No. 48, held Tuesday night, January 13, 1891, Mr. George W. Morgan introduced the following resolution, which was unanimously adopted:

WHEREAS, Notice of the passage of the "Simonds Copyright Bill" in the house of representatives has come to the knowledge of this union through publication in the *Typographical Journal*, the official organ of the International Typographical Union, and

WHEREAS, The union printers of the United States believe that, should the bill above referred to become a law, it would be for the best interest of honest labor, and materially assist the cause of literature in the United States; therefore, be it

Resolved, That we, the members of Atlanta Typographical Union, No. 48, in meeting assembled, call upon, and urge the senators from the State of Georgia in the United States senate at Washington, D. C., to support the above named "Simonds Copyright Bill" in the United States senate. Be it further

Resolved, That we urge upon our senators the need of securing the passage of the above named bill in the United States senate without amendment. Be it further

Resolved, That a copy of these resolutions be sent to each of the senators from Georgia, the Hon. Joseph H. Brown and Hon. Alfred H. Colquitt; also to the president of the senate. Be it further

Resolved, That a copy of these resolutions be sent to THE INLAND PRINTER, the *Typographical Journal* and the *Union Printer*, for publication. Be it further

Resolved, That a copy be furnished the daily papers of Atlanta for publication.

### BUSINESS OUTLOOK.

**Akron, Ohio.**—State of trade, fair; prospects, bright; composition on morning papers, 30 cents; evening papers, 25 cents; bookwork, 25 cents; job printers, per week, \$14 to \$17. O. D. Capron, for 21 years connected with the *Beacon*, and George L. Curtice, former superintendent Mail Publishing Company, Fort Worth, Texas, have purchased a new outfit from Shnieland & Lee, Chicago, and are catering to the trade at 142 South Howard street.

**Austin, Texas.**—State of trade, good; prospects, very good; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, \$20; job printers, per week, \$20—nine hours. The legislature convened on the 13th of January, and since then the town has been full of tourists; but all seem to be getting all the work wanted. Hutchings' office runs two forces on legislative bills.

**Bay City, Mich.**—State of trade, fair; prospects, not bright; composition on morning papers, 34 cents; evening papers, 32 cents; bookwork, \$14; job printers, per week, \$14. Owing to all of the newspapers "sliding" one or more men each day it makes subbing very bad just now.

**Burlington, Iowa.**—State of trade, dull; prospects, not very bright; composition on morning papers, 30 cents; evening papers, 25 cents; bookwork, \$14; job printers, per week, \$14 and \$15. The *Iowa Tribune* (German) now has a new dress of bourgeois and nonpareil, the first since 1876, for daily and weekly use. Subs are plentiful.

**Charleston, S. C.**—State of trade, fair; prospects, fair; composition on morning papers, 37½ cents; bookwork, 35 cents; job printers, per week, \$17. The grip has made subbing plentiful during the past month; "it's an ill wind," etc. At last regular meeting of No. 43 the old officers were reelected for the ensuing year.

**Cincinnati, Ohio.**—State of trade, fair; prospects, good; composition on morning papers, 45 cents; evening papers, 41 cents; bookwork, 40 cents; job printers, per week, \$18. Business has been good here in book and job offices for the past month. Job printers are in demand.

**Dayton, Ohio.**—State of trade, good; prospects, fair; composition on morning papers, 35 cents; evening papers, 32 cents; book and job printers, per week, \$15. Trade good but an abundance of printers—some idle. The Christian Publishing House intends to close up and let its work out on contract. Owing to mismanagement it has lost money.

**Denver, Colo.**—State of trade, dull; prospects, none too good; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$20 for 53 hours. The pressmen's strike was lost; they were out about a week.

**Detroit, Mich.**—State of trade, dull; prospects, fair; composition on morning papers, 38 cents; evening papers, 36 cents; bookwork, 35 cents; job printers, per week, \$14. Machines will probably be in use in *Tribune* soon.

**Dubuque, Iowa.**—State of trade, fair; prospects, no change; composition on morning papers, 30 cents; evening papers, 28 cents; bookwork, 30 cents; job printers, per week, \$14. Quite a large number of "subs" in town at present—usually the case in winter.

**Grand Rapids, Mich.**—State of trade, good; prospects, good; composition on morning papers, 35 cents; evening papers, 30 cents; bookwork, per week, \$14; job printers, per week, \$14. We have four seven-day papers and no hungry subs. It is a little quiet in job offices at present, but business will be good in another month.

**Hartford, Conn.**—State of trade, good; prospects, fair; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 35 cents; job printers, per week, \$15. The legislative work is quiet as they are still fighting for the governor, but other work holds on good.

**Houston, Texas.**—Composition on morning papers, 40 cents; evening papers, 40 cents; job printers, per week, \$20. Work dull.

**Indianapolis, Ind.**—State of trade, good; prospects, good; composition on morning papers, 38 cents; evening papers, 36 cents; bookwork, 40 cents; job printers, per week, \$16.50. Work in all branches of the trade is excellent, and is expected to continue so until the legislature adjourns, at least.

**Jackson, Mich.**—State of trade, very fair; prospects, good; composition on morning papers, 33 cents; evening papers, 30 cents; bookwork, per week, \$13 or 30 cents; job printers, per week, \$13. The new constitutions have been issued and reflect credit on the printers, Hunt & Bridgeman.

**Jacksonville, Fla.**—State of trade, not so brisk; prospects, fair; composition on morning papers, 33½ cents; evening papers, 30 cents; bookwork, 33½ cents; job printers, per week, \$16 to \$20. *Times-Union* (P. P. F.'s stronghold) commenced last week issuing a new evening paper, the *Telegram*, trying to run three other papers out.

**Kansas City, Mo.**—State of trade, dull; prospects, not encouraging; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 37½ cents; job printers, per week, \$17. Outlook no better since last report. Work extremely dull in job offices. Heavy phalanxes running on morning and evening papers.

**Kearney, Neb.**—State of trade, dull; prospects, encouraging; composition on morning papers, 35 cents; evening papers, 25 cents; bookwork, \$12; job printers, per week, \$13 to \$16. No place now for the traveling printer, as the best morning journal succumbed to the inevitable. The plant is intact and will start up with a fourth of July hurrah.

**Keokuk, Iowa.**—State of trade, poor; prospects, fair; composition on morning papers, 30 cents; evening papers, 26 cents; bookwork, 30 cents; job printers, per week, \$12. The *Constitution-Democrat* was sold February 1, to C. A. Warwick, representing a stock company. R. S. Ranson retires.

**Logansport, Ind.**—State of trade, moderate; prospects, not very good; composition on morning papers, 28 cents; evening papers, 23 cents; book and job printers, per week, \$12. Trade is very dull here, but enough work to keep what are here busy. The *Chronicle* office and Burroughs' job office have come into the union.

**London, Ont.**—State of trade, good; prospects, good; composition on morning papers, 30 cents; evening papers, 28 cents; bookwork, per week, \$9; job printers, per week, \$9 to \$10. The Dominion elections having been brought on sooner than expected has given an impetus to the trade, and all the officers, particularly the newspapers, are busy. However, the campaign will be a short one, the elections being held on the 6th of March next. In this city the contest gives promise of being a sharp one.

**Los Angeles, Cal.**—State of trade, very dull; prospects, anything but encouraging; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$18 and \$20. The *Tribune* was sold by the sheriff on the 10th inst., and is now a thing of the past. The town still remains closed to the reception of cards.

**Macon, Ga.**—State of trade, dull except jobbing; prospects, fair; composition on morning papers, 33½ cents; evening papers, 30 cents; bookwork, 35 cents; job printers, per week, \$13 to \$20. Little bookwork doing. More travelers on the road than can be taken care of, and have been for a month or more.

**Milwaukee, Wis.**—State of trade, fair; prospects, good; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 35 cents; job printers, per week, \$14 to \$18. Riverside expects to get in the Omaha directory in a week or two, which will take up the surplus men now in town.

**Minneapolis, Minn.**—State of trade, fair; prospects, good; composition on morning papers, 42 cents; evening papers, 37 cents; bookwork, 35 cents; job printers, per week, \$16. Plenty of printers in town, and some of the papers are running a phalanx every day.

**Mobile, Ala.**—State of trade, good; prospects, good; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, 45 cents; job printers, per week, \$16. There are more "subs" than work.

**New Haven, Conn.**—State of trade, very quiet; prospects, uncertain; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 35 and 40 cents; job printers, per week, \$15. Business has not improved much since my last report. There is nothing new to communicate. The *Morning News* has resorted to the weekly scale of \$22, and abolished piecework.

**New Orleans, La.**—State of trade, fair; prospects, not good; composition on morning papers, 45 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$18. Warn prints to keep clear of New Orleans

till further advice. About thirty more subs than are needed. Suppose they will remain till after Mardi Gras.

**Peoria, Ill.**—State of trade, fair; prospects, fair; composition on morning papers, 36 cents; evening papers, 33 cents; bookwork, 38 cents; job printers, per week, \$15, \$18, \$21. Work has been good here the past few weeks, and subs have fared well, but business slacked up a little now, and there are plenty of men to do the work.

**Philadelphia, Pa.**—State of trade, very good; prospects, encouraging; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$16. Reports from thirty-nine offices show: Ten, brisk; four, good; seven, medium; ten, fair; four, dull; four, as usual. Total number of members on roll at last report, 1,162. A committee has been appointed to revise scale, to report at next meeting in March. March meeting nomination of officers. Candidates for delegates to International Typographical Union are already announcing themselves.

**Portland, Ore.**—State of trade, very dull; prospects, not encouraging. The membership of Multnomah Typographical Union No. 58 is increasing rapidly, it reaching now 130.

**Pueblo, Colo.**—State of trade, dull; prospects, not very good; composition on morning papers, 45 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$20. Rumors of a new morning paper have kept a good many extra men in town, and has crowded the capacity of the town a little.

**Richmond, Va.**—State of trade, fair; prospects, fair; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$16 to \$20. Would advise printers to keep away from this city, as there are plenty here at present to fill the demand.

**Rome, N. Y.**—State of trade, medium; prospects, none too good; composition on evening papers, 25 cents; bookwork, 25 cents; job printers, per week, \$9 to \$12. Rumor says another office is to be opened in the city this spring, but whether a newspaper will be published is not yet determined.

**San Antonio, Texas.**—State of trade, dull; prospects, dull; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 40 cents; job printers, per week, \$20. The printers here are burdened with an assessment of five per cent of their earnings at present to defray expenses incurred by consumptive prints from northern unions.

**San Diego, Cal.**—State of trade, fair; prospects, poor; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 40 cents; job printers, per week, \$18. The *Evening Sun* has again changed hands, but with not much hopes of any benefit for the typographical union. The membership of the union is gradually increasing in members and strength.

**San Francisco, Cal.**—State of trade, bad; prospects, not good; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 40 cents; job printers per week, \$18 to \$21. On February 2 a strike occurred in Crocker's job office, which threw thirty-four jobbers out of work. Hence printers should keep away.

**Seattle, Wash.**—State of trade, very dull; prospects, gloomy; composition on morning papers, 50 cents; evening papers, 45 cents; job printers per week, \$21. The suspension of the *Morning Journal*, the *Leader*, the *Budget* and a couple of other weekly publications, and the consolidation of three job offices and influx of prints from the lower country have brought about a complete change from good to bad.

**Springfield, Ill.**—State of trade, very fair; prospects, fair; composition on morning papers, 33½ cents; evening papers, 30 cents; book and job printers, per week, \$15. Our union is still increasing in numbers. The bill work is a little slow, owing to the deadlock in the senatorial contest. Job-work pretty fair.

**Springfield, Ohio.**—State of trade, good; prospects, fair; composition on evening papers, 30 cents; job printers, per week, \$15. Job offices are having a good run of work. Newspaper work is also fair, giving work to quite a number of extras. *On dit*, that a first-class morning daily will appear in the spring.

**St. Catharines, Ont.**—State of trade, mild; prospects, good; composition on evening papers, 28 cents; job printers per week, \$9. There are no union offices here at present, Union No. 223 having been suspended by the International Typographical Union through the strike in the *Journal* office last March, and all the union printers are leaving town. This city will long be remembered as the tourists' last "resting" place in Canada, and that its name is erased from the roll of unionism by all traveling printers.

**St. John, N. B.**—State of trade, good; prospects, good; composition on morning papers, 30 cents; evening papers, per week, \$10; job printers, per week, \$10. There are plenty of hands in the city to meet present demand. At last meeting of union, January 10, the following officers were elected for ensuing term: President, Cornelius Hennessy; vice-president, R. W. McKenney; recording and corresponding secretary, J. J. Ryan; financial secretary, F. D. Carpenter; treasurer, Robert Kennedy; sergeant-at-arms, S. Fitzpatrick; trustees, George H. Maxwell, William J. Errington and W. J. Clark.

**St. Louis, Mo.**—State of trade, job printing good; prospects, fair; composition on morning papers, 43 cents; evening papers, 38 cents; bookwork, 45 cents; job printers, per week, \$18. There is nobody idle who wishes to work among job printers, and business generally is good for the season.

**St. Paul, Minn.**—State of trade, awful dull; prospects, poor; composition on morning papers, 42 cents; evening papers, 37 cents; bookwork, 35 to

43 cents; job printers, per week, \$16 to \$20. Thorne typesetting machines scale, 22 cents minion, 19 cents brevier.

**Topeka, Kan.**—State of trade, very good; prospects, good; composition on morning papers, 33½ cents; evening papers, 28½ cents; bookwork, 40 cents; job printers, per week, \$15. Work is very brisk on account of the legislature, which will last a month longer.

**Toronto, Ont.**—State of trade, fair; prospects, cloudy; composition on morning papers, 30 cents, with optional scale for ads. of 33½ cents; evening papers, 28 cents; bookwork, 33½ cents; job printers, per week, \$11. E. A. Macdonald, the defeated candidate for mayor, is endeavoring to unseat E. F. Clarke, on the ground of being interested in the city printing contract. If the evidence published by the *Telegram* is true, E. A.'s chances are good. As the evidence taken is private, we must wait until it is given in court.

**Utica, N. Y.**—State of trade, good; prospects, fair; composition on morning papers, 35 cents; evening papers, 31½ cents; bookwork, 31½ cents; job printers, per week, \$12.50. The matters on the *Herald* were brought to a crisis February 1, when union men who had been working there were ordered out. Seven others who were not members of the union came with them, making twelve in all. The union had submitted propositions which were unfavorably received by the management. Hence the above action. The struggle promises to be a protracted one, and no one can foretell the result.

**Wheeling, W. Va.**—State of trade, good; prospects, good; composition on morning papers, 35 cents; evening papers, 30 cents; bookwork, 40 cents; job printers, per week, \$15.00. The *News* has received its new perfecting press, and will have it in operation in a few days. The *Intelligencer* will be the next paper to put in a perfecting press. As soon as they get their press in they will make their paper eight pages. The *Register* will also be an eight-page sheet in a short time. The *Graphic* and the *Quest*, both weeklies, will put in new presses. Martin's Ferry, our neighboring city, is to have an evening daily. Candidates for delegate to International Typographical Union are hustling. Three in the field.

**Wichita, Kan.**—State of trade, rather dull; prospects, only fair; composition on morning papers, 35 cents; evening papers, 30 cents; job printers, per week, \$15. There has been very little change in trade here during January. As is usual, work of all kinds has dropped off since the first of the year, especially advertising, which is unusually light.

**Worcester, Mass.**—State of trade, quiet; prospects, uncertain; composition on morning papers, 40 cents; evening papers, 33½ cents; bookwork, 35 cents; job printers, per week, \$10 to \$15. The firm of Blanchard & Co. have secured the contract for printing the city reports for the year just ended, and it meets the approval of No. 165 very well. Your correspondent is more than glad.

## BUSINESS NOTICES.

### WHERE SHALL I BUY?

Be sure you are right in ordering. Then when you  
Use an article of merchandise it will be  
Found to give the required result.  
First, the quality must be up to the mark;  
A poor ink can never show good work,  
Let the workman do his best.  
Order of firms who guarantee good value.

Paper has also much to do in giving the  
Requisite finish to a good job;  
In some cases the ink dries into,  
Not on to the paper. But in some cases  
The reverse is true; so that  
It is a good plan to give the  
Name or quality of paper to be used in  
Giving the order for ink.

Intelligent and careful printers are  
Now giving more attention to these details, for  
Knowledge is born of experience.

Who has not seen a catalogue or  
Other nice piece of printing  
Ruined by not having suitable ink.  
Knowing the wants of the customer the manufacturer is  
Sure to give the best value for the work to be done.

THE Elite Rule Bender, manufactured by The Elite Manufacturing Company, Marshall, Michigan, is a practical tool for bending brass rule, and should be in every printing office. It is simple in operation and will be sent, if desired, on thirty days' trial. Price, \$3.00. See advertisement on page 477.

MESSRS. GOLDING & Co., of Boston, Massachusetts, the well known manufacturers of printing presses, tools and material, have established a branch salesroom in Philadelphia, at 710 Sansom street. At this branch, which was opened for business on February 15, will be carried a full line of printers' supplies, with the exception of type, which will be sold only at the main office, in Boston—and the stock will include a complete assortment of the popular Owl brand black and colored printing inks and art tones. This will enable printers in the Middle and Southern states to obtain machinery and material advertised by Messrs. Golding & Co. more quickly than has been possible heretofore, and with a considerable saving in the cost of transportation. Resident printers and visitors to Philadelphia are invited to call at the salesroom, which will be in charge of an experienced salesman, and examine the stock.

**THE NEW DICTIONARY.**—The answer of the publishers of Webster's Unabridged Dictionary to the attempt of pirates to steal their thunder by issuing cheap phototype reproductions of the antiquated edition of 1847, is the publication of a new and completely re-edited and enlarged edition of the authentic Unabridged, which, as a distinguishing title, bears the name of INTERNATIONAL.

The publishers have expended in the last ten years over \$300,000 in the preparation of this new book before issuing the first copy, and the improvements of the various editions since that of 1847 have cost over three-fourths of a million of dollars for editing, illustrating, typesetting and electrotyping alone.

The new dictionary is the best book of its kind in the English language. It unlocks mysteries, resolves doubts, and decides disputes. The possession of it and the habit of consulting it will tend to promote knowledge, literary taste and social refinement. For every family, the members of which have mastered the art of reading, the purchase of WEBSTER'S INTERNATIONAL DICTIONARY will prove a profitable investment, and the more they advance in knowledge and cultivation the more they will appreciate its aid and worth.

#### E. B. STIMPSON & SON, NEW YORK.

This enterprising firm, whose place of business is at 31 Spruce street, New York, show upon page 426 of this number two cuts of their well-known makes of round-hole perforating machines. The style of machine made by Messrs. Stimpson & Son is recognized everywhere as the correct one for the most perfect work in perforating, and the finish and workmanship on the machines are such, and the material used in the manufacture so excellent, that no one ever buying this make would change to any other style of machine, and no one about to buy, and using his best judgment, would even think of selecting other styles. This firm also makes eyeletting and punching machinery of the most approved patterns and the most reliable quality. Their "O. K." self-feed foot power eyeletting machine is meeting with much favor by printers and binders, and the No. 4 punch machine, to go with it, is also a handy adjunct for the uses intended. They can supply eyelets of all kinds and sizes. Write for circulars of any of above if about to order any machinery in their line. Prices will be right and goods the best.

#### "PERFECTION" WIRE STITCHING MACHINES.

The J. L. Morrison Company, of 21 and 23 Centre street, New York, are the manufacturers of a number of styles of wire stitching machines, which, as so aptly named, are "Perfection." The machines are noted for speed, economy and applicability, and are simple, effective and low priced. On page 427 is shown a cut of "Perfection H," which will stitch from one-sixteenth of an inch up to one and three-quarters inches, either flat or table, using either round or flat wire. The machine is arranged for either foot or steam power, and is so simple that a boy or girl can readily understand and run it. The company make every conceivable style of wire stitcher needed by the trade—can furnish them to make one, two, three or four stitches at one operation—the larger

machines cutting the staples and turning out the work with as much ease and neatness as the single stitchers. The complete catalogue gotten out by this company shows cuts of all their various machines, with prices and full information, and they will gladly send a copy on request. Besides regular machines for printers and bookbinders the company makes all styles of paper-box machines for square, round or odd shaped boxes, and can furnish wire of all kinds and in any quantities. Send to them for prices and terms.

**ALL LIVE PRINTERS** should have Bishop's "PRACTICAL PRINTER." Second Edition, revised. 200 pages, cloth. Price \$1. Also his "DIAGRAMS OF IMPOSITION" and "PRINTERS' READY RECKONER," price 50 cents each; also the "PRINTER'S ORDER BOOK," price \$3.00, and "SPECIMENS OF JOB WORK," price \$2.00. Order of H. G. Bishop, Box 13, Oneonta, New York, Farmer, Little & Co., and all typefounders. The handiest and most useful works ever published for printers. Indorsed by everyone.

**COMPOSITORS**—Send 10 cents for patented copy holder. Agents wanted. GEO. W. BANTA, 792 Chapel street, New Haven, Conn.

**FOREMAN**, now in charge of job office employing sixteen hands, desires to make a change to a more healthful climate. References exchanged; present employer as reference. Address "BETTER HEALTH," care INLAND PRINTER.

**FOR SALE**—A rare chance. An old and well established job office, with good reputation for fine work. Best location; good business. W. W. CHEW, 712 Chestnut street, Philadelphia, Pa.

**FOR SALE**—Two complete electrotype foundries, one in Dallas, Texas, one in Omaha, Neb.; each cost \$3,600, and each only one year in use. Address GEO. A. JOSLYN, Omaha, Neb.

**JOB PRINTERS**—One of the best job printing offices in large manufacturing city of over 100,000 inhabitants. Established business, modern material and appliances; good reasons for selling; will pay to investigate. A rare opportunity for live, practical printer. Address "LARNED," care INLAND PRINTER.

**WANTED**—A republican newspaper and job office within 100 miles of Chicago. Will pay cash. State what you have. Address "F. E. T.," care INLAND PRINTER.

**WANTED**—Cylinder pressman to take charge of pressroom in large book and job office; must be able to produce the best work from cuts, plates and type. Address "L. W.," Boston, care of INLAND PRINTER, Chicago.

**WANTED**—Foreman of experience to take entire charge of large book and job printing office; must thoroughly understand all departments. Address "A. D.," Boston, care of INLAND PRINTER, Chicago.

**WANTED**—Subscribers to THE INLAND PRINTER; per year, \$2; six months, \$1; single copies, 20 cents; Also, send 10 cents for 16-page circular, "How to Impose Forms," giving complete schemes of imposition.

**WANTED**—Position as business manager or foreman of news and job office, city or country, by a temperate, married man of seventeen years' experience (10 in charge); thorough knowledge of making estimates, etc. Unquestionable references. Address "MANAGER," care of INLAND PRINTER.

**WELL EDUCATED YOUNG MAN** wants position as business manager in first-class printing office; five years' experience; thoroughly competent to estimate on all kinds of job and catalogue work, and well acquainted with the paper trade. Best New York references. Will go West or South. Address "PROSPECTS," care of INLAND PRINTER.

**THE ELITE MANUFACTURING CO.**  
MARSHALL, MICH.

The Lightning Ink Reducer and Dryer. Awarded Diploma, Paris, 1889, in London, 1887, for Unexcelled Excellence.

Inkoleum is the only article in the world that gives pressmen complete control over printing and lithograph inks, rollers and stock in any weather and climate. It refines inks of any color or shade and makes them dry quick and glossy, enabling rushed work to be delivered immediately from press without offsetting. Inkoleum never dries on rollers, but preserves their suction, life and elasticity. On starting press in morning or whenever rollers are too sticky or ink dry on them, or the ink pulls the paper, a drop or two of Inkoleum put on the rollers with your finger immediately softens the ink and makes them do the finest work, a saving of five times its cost every hour in the day.

Beware of Infringements! Order Inkoleum and accept no worthless Piratical imitation, said to be just as good. Price, only 50 cents. For sale by every typefoundry in the world. Read circulars printed in five languages, put up only by

JOS. H. BARNETT - Secy.

The advertisement features a central globe with a cityscape on it. Above the globe is a winged cherub. To the left and right are two female figures in classical attire. Below the globe are two circular vignettes: one showing a landscape with a building and the year 1871, and another showing a landscape with a building and the year 1836. The text is arranged in a decorative, stylized font.

## DID IT EVER OCCUR TO YOU . . .

That in order to reach the cream of the trade when advertising your goods, your advertisement should be placed with the journal that reaches that class? For *over seven years* THE INLAND PRINTER has been the *leader of Trade Journals* devoted to printing, and all lines of business in any way connected with it. *Today* it can do you more good than ever before. Why not patronize it?

## AS STRAWS SHOW WHICH WAY . . .

The wind blows, so the following expressions, culled at random from hundreds of flattering testimonial letters, indicate the general appreciation felt for THE INLAND PRINTER:

### A. L. Butler, Manager Crescent Steel Co., Chicago.

It is certainly a marvel of typography, and as such is highly appreciated by us.

### Van Allens & Boughton, New York.

It certainly makes a beautiful book, and we can simply say that we are satisfied with the work it does for us in our business.

### Blomgren Bros. & Co., Chicago.

We cannot add anything to our previous testimonials, "that for an advertising medium it cannot be beat."

### John Royle & Sons, Paterson, N. J.

As a source of information we regard THE INLAND PRINTER a very excellent one, and we have reason to know that it is a valuable medium for advertising.

### Chambers Brothers Company, Philadelphia, Pa.

THE INLAND PRINTER is certainly a very handsome trade publication, and we think that it reflects great credit upon you and upon the trade represented.

### F. A. Ringler & Co., New York.

We assure you that we agree with your many friends as to its merits as a medium for advertising. It is, without doubt, typographically superior to any other trade paper which we have had occasion to examine.

### Johnson Peerless Works, New York.

THE INLAND PRINTER is an old-time friend of ours. We always look upon it as the right thing in the right place—a valuable journal of general information for the printer, and a most excellent advertising medium for the trade.

### Brown Folding Machine Company, Erie, Pa.

We have always had the highest opinion of THE INLAND PRINTER, and in so far as returns from advertising are concerned, can say that it has served us better than any medium we have patronized.

### Crosscup & West Engraving Co., Philadelphia, Pa.

Our opinion of THE INLAND PRINTER as an advertising medium and as a book of general information for the trade is simply a corroboration of what seems to be your own, judging by that blast from your trumpet: that it is superior to anything published in the country in the line of a trade publication.

### James Conners' Sons, New York.

Editorially and typographically THE INLAND PRINTER is one of the best conducted and neatest trade papers published in the United States. The matter contained therein is full of interest to the craft, taking, as it does, all branches in its fold. One good feature in it is that its advertising pages are displayed to the best advantage, and exhibit taste in conception and care in execution.

# READ THE VERDICT!

## THE UNIVERSAL OPINION IS

THAT FOR HIGH TYPOGRAPHICAL EXCELLENCE,  
PERFECT PRESSWORK,  
GENERAL INFORMATION,  
BEAUTIFUL CHARACTER OF ITS ENGRAVINGS  
AND EFFECTIVENESS AS AN ADVERTISING MEDIUM

## THE INLAND PRINTER *Stands at the Head!*

TYPE FOUNDERS,  
PRESS MANUFACTURERS,  
PAPER DEALERS AND MAKERS,  
INK AND COLOR FACTORIES

And Manufacturers of all Machinery, Tools and  
Materials used by people connected in any way  
with printing, can use its pages to advantage.

### J. M. Ives & Co., Chicago.

We admire THE INLAND PRINTER very much, and as an advertising medium and book of information it can not be excelled.

### C. Potter, Jr., & Co., New York.

We express to you our appreciation of THE INLAND PRINTER's superior merits.

### Moss Engraving Company, New York.

THE INLAND PRINTER is one of the most effective mediums for reaching the people who patronize us that we know of.

### Chicago Paper Company, Chicago.

THE INLAND PRINTER is, without doubt, the most valuable of all trade papers that we receive, and we consider for our business it is the best advertising medium we could possibly get.

### F. P. Elliott & Co., Chicago.

We know of no publication in the printer's line that excels THE INLAND PRINTER, and our experience has been that it has no superior as an advertising medium for the paper trade.

### Calumet Paper Company, Chicago.

As to the value of THE INLAND PRINTER as an advertising medium we have more confidence in it than in any other publication in which we place an "ad." This is shown by the fact that we have had an "ad" in it ever since our organization.

### Hamilton Manufacturing Company, Chicago.

As a work of reference THE INLAND PRINTER is excellent—a veritable encyclopedia of the typographic art. As an advertising medium we consider that it heads the list of the trade journals of the country.

### Chandler & Price, Cleveland, Ohio.

Its equal as an advertising medium we do not believe exists today. It is certainly a superior work of art. As soon as we are able to supply the demand for our goods we shall avail ourselves of the advantages which THE INLAND PRINTER can surely give us.

### Phelps, Dalton & Co., Boston, Mass.

Turning the pages of the bound volume of THE INLAND PRINTER is like reviewing the progress of a whole year of printerdom. It is only when massed together between cover-boards that one realizes the value of the monthly work done by Mr. Cameron. It is a permanent reference book for the thoughtful printer.

### E. W. Stephens, President National Editorial Association of the United States.

In addition to being a most beautiful specimen of work, THE INLAND PRINTER is an invaluable compendium of information for every member of the profession. It is certainly an honor as well as an inestimable benefit to the printing fraternity.

**Sigmund Ullman, New York.**

You decidedly deserve the success you have had with your publication.

**Barnhart Bros. & Spindler, Chicago.**

We have a pleasant sensation of artistic afflatus in looking over the bound Volume VII of THE INLAND PRINTER.

**J. H. Cranston, Norwich, Conn.**

We appreciate THE INLAND PRINTER as a trade journal, alive to its own interest and that of its patrons.

**Whitlock Machine Company, Birmingham, Conn.**

The bound volume of THE INLAND PRINTER, we are free to say, is a very handsome book.

**Walter Scott & Co., Plainfield, N. J.**

We believe THE INLAND PRINTER has no superior—editorially, typographically or as an advertising medium for printers' supplies.

**The Ault & Wiborg Company, Cincinnati, Ohio.**

THE INLAND PRINTER stands at the very front in the ranks of printers' journals coming to our office, and there is none other that we value more highly or greet more heartily each month.

**John H. Vivian, Western Manager Campbell Printing Press and Manufacturing Company, Chicago.**

We do not hesitate to state that we hold THE INLAND PRINTER in high esteem, and consider it at the head of the list as an advertising medium.

**The Hamilton Manufacturing Company, Two Rivers, Wis.**

It is not necessary for you to "blow your own horn" in regard to THE INLAND PRINTER as an advertising medium. There is no question about its being the best advertising medium of all the trade papers in our line.

**Cincinnati Typefoundry, Cincinnati, Ohio.**

THE INLAND PRINTER stands at the head of the list of publications of its kind—both in mechanical execution and as to contents. It is full of useful information and ought to be read and studied by all who are interested in the typographic art.

**J. W. Butler Paper Company, Chicago.**

We prize THE INLAND PRINTER very highly as a work of mechanical skill and art, and of general valuable information in our own and kindred lines of business. As an advertising medium we consider it the best of any we patronize.

**Montague & Fuller, New York.**

It is always a surprise to us to see what a beautiful book THE INLAND PRINTER makes, bound up. The numerous advertisements that THE INLAND PRINTER has indicate the value your advertisers put upon the paper, which is the only testimony the paper needs we think.

**The Queen City Printing Ink Co., Cincinnati, Ohio.**

THE INLAND PRINTER is eagerly looked for each month, and all hands take their turn in perusing its contents. As an advertising medium it cannot be excelled, as we can testify by the numerous references to our advertisement from parties who mention your journal.

**The MacKellar, Smiths & Jordan Co., Philadelphia, Pa.**

Another substantial book has been on our desk for some days, waiting for a little time to examine it before placing it in the library with the six volumes preceding it, namely, Vol. VII of THE INLAND PRINTER. A model it is in its make-up and its presswork, and, if we were not specially interested, and our modesty didn't forbid, we should say its type also, as well as its paper and ink. The reading matter has a wide scope, embracing articles relating to the arts and the sciences, and the "kindred trades," by competent writers. The "advs." are fully up to the top rung of the ladder. They seem to challenge a reading, for they doubtless are as well entitled to it as are the editorials, correspondence, etc. We wish you continued success.

**Bingham, Daley & O'Hara, New York.**

We value THE INLAND PRINTER very highly for its many excellent features.

**Illinois Typefounding Company, Chicago.**

The bound volume of THE INLAND PRINTER is a beauty in every respect, and its equal cannot be found in the land.

**A. Zeese & Co., Chicago.**

We are pleased to state that our advertisements in THE INLAND PRINTER have been profitable and very satisfactory.

**The W. O. Hickok Manufacturing Co., Harrisburg, Pa.**

We are delighted with the handsome appearance and convenience for reference of bound volume seven of THE INLAND PRINTER.

**The Cleveland Gordon Press Company, Cleveland, Ohio.**

We look upon THE INLAND PRINTER as one of the best advertising mediums in the country. It has given us very satisfactory results after a trial of its merits.

**The Child Acme Cutter and Press Co., Boston, Mass.**

We are always pleased to receive your handsome monthly, and hope you will continue to give many thousands the pleasure and profit to be obtained by its perusal.

**Geo. H. Benedict & Co., Chicago.**

Any other testimonial than the fact that we have been "in it" for the past five years, and expect to continue as long as we are in business, is, we think, unnecessary. We consider it superior to that of any other publication of its kind that we have ever seen.

**Electro-Tint Engraving Company, Philadelphia, Pa.**

We have always found THE INLAND PRINTER a very valuable advertising medium, and shall continue to patronize it in that respect. We wish you a prosperous continuance of your already well-earned success.

**Babcock Printing Press Company, New London, Conn.**

THE INLAND PRINTER is a journal of vast and varied information concerning printing and kindred arts, as well as a splendid specimen of typography. What we think of it as an advertising medium is best expressed by the fact that we use it constantly.

**Heber Wells, New York.**

The bound Volume VII of THE INLAND PRINTER is a fine piece of workmanship and a thing of beauty. In the issue of such a work by your house can be plainly seen a spirit of enterprise and thoroughness which is in perfect harmony with the journal you publish, and which cannot fail to keep you to the front.

**Golding & Co., Boston, Mass.**

As an originator and reflector of advanced thought upon all matters pertaining to the printing trade, and as an index, through its advertising pages, to the newest and best appliances for the use of those in any way connected with the business, THE INLAND PRINTER has no peer. We intend to carry in stock every desirable new article that is put on the market, but occasionally an inquiry comes about something that has escaped our notice. Where do we first seek it? In THE INLAND PRINTER, to be sure—and seldom in vain.

**The Liberty Machine Works, New York.**

Looking over a single number of THE INLAND PRINTER seems an immense source of information, but a volume is a perfect mine of wealth in knowledge of the state of the art preservative of our day. Comparing Volume VII with its predecessors, side by side on the shelves, the steady growth in size shows best the rapid strides made, and the contents have kept pace with the size, and the great success thus shown is fully deserved, as the never-tiring energy of Mr. Shepard is so most ably seconded by the excellent editorial management of Mr. Cameron, assisted by a picked staff fitted to deal fully with all the questions of the day as well as with the history of Gutenberg's art. We consider THE INLAND PRINTER the leading advertising medium in our line, since we had our "ad" once in it we stayed with you and will continue so.

Look to your interest, and place your advertising where it will do you the most good. If not in our pages now, we solicit your business. Try THE INLAND PRINTER for six months or a year. You will not regret it. Rates and all information furnished on request. Address

## YOU ARE BUILDING UP A PRINTING BUSINESS.

If, instead of a business, you were building a race of men you wouldn't build them with cheap brains. You would give them first quality brains, if you had to cheapen a little on their bodies.

In the same way, don't use cheap presses. Your profits depend on it. Economize elsewhere as much as you like.

The point for your economy is OPERATING EXPENSES. Now economy in operating expenses is never secured by economy in first cost; it is more often attained by extravagance in first cost.

Only a few printers have caught on to this idea. Just think it over, it will pay you to do so.

## COMPENSATION OF PRINTERS.

A SUBJECT OF MUCH IMPORTANCE—WHAT EMINENT AUTHORITIES SAY—A SOLUTION.

BY DUNCAN F. YOUNG.

WHEN a great many men still following the printing business first began the "art" as journeymen, they received salaries considered, even at that time, enormous. Why they should then and now receive more compensation than any other class of employés is plain to any reasoning mind; first, because perfection was required in preparation as regarded mind, honor and education; second, because the calling was an extremely unhealthy one, in that it was sedentary and subjected the printer to undue and unusual exposure, resulting in a short average life. Notwithstanding these serious and dangerous obstacles there was material ever offering itself, until the employing printer at last became master of the situation, ending in the crushing of the standard and the downfall of the liberal remuneration in the printing business of those days. Like cankering pork on an overstocked market, printers for a time brought the best price they could, knocking themselves down to the highest bidder. Yet, notwithstanding the fact that this particular market was glutted, the product was increasing still.

Now, when the business had been changed so as to be a following something worthy of consideration, though not comparing with what it was formerly or what it should be, some (to us now) evil genius has cast among us a dire competitor in the typesetting machine. What this will bring forth is now mere conjecture, but the alarm has been sounded and printers today throughout the world are to arms and awaiting the fray. The conjectures of the members of this vast army act as a lesson in making up the maneuvers to be dictated by the one grand head, and the more the conjectures are discussed and the forces drilled before the final onslaught, the more certain are we of success.

Agès ago it was said that the world owes to every man a living, and this is true, all contradictions and

misinterpretations to the contrary notwithstanding. The world owes a man a living just as it gives him air to breathe, water to drink and trees to shelter him from the heated sun and drenching rain, but he must do his part in taking advantage of that air so lavishly bestowed upon us all, saving the water which is so vast in its extent, and felling and severing the trees with which to erect structures to inhabit. But these different things are to be done by those particularly fitted to perform each kind of duty.

In Blackstone's "The Rights of Things," we find the following:

As the world by degrees grew more populous it daily became more difficult to find out new spots to inhabit without encroaching upon former occupants, and by constantly occupying the same individual spot the fruits of the earth were consumed and its spontaneous produce destroyed without any provision for future supply or concession. It therefore became necessary to pursue some regular method of providing a constant subsistence, and this necessity produced, or at least promoted and encouraged, the art of agriculture. And the art of agriculture, by a regular connection and consequence, introduced and established the idea of a more permanent property in the soil than had hitherto been received and adopted. It was clear that the earth would not produce her fruits in sufficient quantities without the assistance of tillage, but who would be at the pains of tilling it if another might watch an opportunity to seize upon and enjoy the product of his industry, art and labor? Had not, therefore, a separate property in lands, as well as movables, been vested in some individuals the world must have continued a forest and men have been mere animals of prey, which, according to some philosophers, is the genuine state of nature. Whereas, now (so graciously has Providence interwoven our duty and our happiness together), the result of this very necessity has been the ennobling of the human species by giving it opportunities of improving its rational faculties, as well as of exerting its natural. Necessity begot property, and in order to insure that property recourse was had to civil society, which brought along with it a long train of inseparable concomitants—states, governments, laws, punishments and the public exercise of religious duties. Thus connected together it was found that a part only of society was sufficient to provide, by their manual labor, for the necessary subsistence of all, and leisure was given to others to cultivate the human mind, to invent useful arts and to lay the foundations of science.

In this we find much food for reflection—some so palpable that we see no need to direct attention to it, the other points being reserved to be used subsequently.

Say says that "taxation is the transfer of a portion of the national products from the hands of individuals to those of the government for the purpose of meeting the public consumption or expenditure."

In labor matters this means: The poor men of the world give a tax to the community or government of rich men for the privilege of working for them for the pittance with which they eke out an existence, and give a portion of that pittance to municipal, parochial, state and national governments in taxes besides. In other words, a man, say, is worth \$3 per day according to our method of computing wages. On this man's work his employer clears twenty-five per cent net on all work he executes. Say he is a printer and sets and distributes 7,000 ems a day. He has earned for himself, at 40 cents per 1,000 ems, \$2.80, while the employer charges 50 cents per 1,000 ems for composition and wear and tear of material. This amounts to \$3.50, leaving 70 cents, or nearly thirty per cent, a day on each man's labor for wear and tear of material—type material, I mean—and profits. The same thing is done in the case of the pressman, making a profit here, and he does not neglect to make a margin on his paper, either. Who will scrutinize these figures and say the workingman does not pay a tax to the community of wealthy people for the privilege of working for them?

Further, Say gives, among others, as the least bad taxes, the following: 1. Such as press impartially on all classes. 2. Such as are least injurious to reproduction. 3. Such as are rather favorable than otherwise to the national morality; that is to say, to the prevalence of habits useful and beneficial to society.

I have shown that workmen are forced to pay a tax partially in being permitted to work. Say's second point is violated, since this undoubtedly works an injury to reproduction, for a man cannot be expected to work more and better when that work benefits another, but not himself. Finally, the third measure is not carried out, for the grand majority of this civilized world has not the time or the means to form and execute "habits useful and beneficial to society."

Man is above the brute creation in that he possesses a fine taste, is moral and humane, and when he does possess those characteristics he is considered civilized. Now, the man or set of men who sit supinely by and see the suffering of their fellow men, due, mainly, to their machinations or their disinterestedness—can they be truly called moral, humane, civilized people?

Now we reach the main point of this article. We find two of the greatest authorities, each on a different subject, agreeing with us in the rights of things and in the method of necessary taxation. While twice right maketh not thrice right, history will not belie itself, and I take these two powerful authorities to prove my position. We find that everything was created to serve a common purpose and for the common good. As one brother is ashamed to see another one go ragged and hungry, to retain the good opinion of him held by others he will assist him in so far as he can—thus it is

with the vast brotherhood of civilized man. Pauperism bespeaks an unsuccessful government, and civilization is the mother of pride or self-respect, and this latter will not permit man to allow an undertaking of his to be unsuccessful.

With these premises it is evidently clear to the thinking mind that in this difficulty the sympathy of the civilized world is with the printers. Everybody knows that from the nature of his calling the printer is unfitted for any other position, but those who are so unfortunate as to be the defeated ones in this particularly trying hour are in no worse position than those one or two in different places who are unable to secure employment under the present system, except that the number is greater and consequently attracts more attention, and will have to make the best of an unfortunate circumstance. Improved machinery is demanded by the requirements of the times and will be received, encouraged and supported to the last degree, so there is no use contesting with the inevitable. As in all inventions, this will have its beneficial as well as its injurious effects, opening up avenues of calling in places where it closes them in others. But while these things are regulating themselves, those affected must be provided for in some way. In this great and inevitable struggle we must appeal to the employing printer, the United States government and the true-hearted people of the civilized world to come to our aid. We must seek from the government a pension for those who are thrown out of employment, for she has given a patent to this incubus to cast upon a pitiless world the veterans of many a hard night's service in the cause of education and humanity. We must demand from the employer a tax on this national production and a revenue of the fruits of this terrible viper which has obstructed the "prevalence of habits useful and beneficial to society." Finally, we must ask of the civilized people of this world that since the requirements of the printing business are met by improved machinery; that since those individuals heretofore consuming the products of other human hands are displaced and there is no demand for their services in other avenues; that since they possess not that which is necessary to procure the products of others, consequently there is the lack of that much consumption, necessitating the cessation of employment in so far as that consumption may affect the producers; that since printers have worked studiously and earnestly in the cause of civilization, many of them becoming disabled and invalids; that since machinery produces at so much less cost than man, it not requiring in such quantities food, clothing and fuel, and consequently is less welcome on account of consuming so little; that since these men have no avenue of employment the fundamental principles of society demand that they be provided for—on account of these things we ask that those who are selected to be retained shall receive a larger salary than now per day, work less hours each day and less days each week, and that the remainder, or those displaced, be allowed a

pension of a reasonable amount for a reasonable number of years, and on this line, friends, let us fight it to the death, for right, reason and justice are with us.

### PRACTICAL TALKS ON PRESSWORK.

NO. XII.—BY A PRESSMAN.

FROM the interest being manifested by correspondents to THE INLAND PRINTER it is very evident that in calling attention to the faulty placing of angle rollers on table distribution presses I have "hit the blot." This being admitted, it will necessarily follow that pressmakers who desire to keep in the front rank will endeavor in the future to construct their presses so as to overcome the objectionable features at present prevailing. This they will do, not because I or any other individual say it ought to be done, but that experience demonstrates its necessity, and the spirit of competition will compel it.

\* \* \*

What a multiplicity of new makes of presses are being put upon the market today! Among these are several bed and platen presses; one—especially a revival of the old Adams press principle, adapted for printing from a web—is the Eckerson press. From the statements made by the manufacturers, it seems to be calculated to work quite a revolution in some branches of presswork—color work, for instance, for which it would seem to be especially suited. I have lately seen a couple of those presses so connected that four colors could be printed on the sheet at one operation, or, after printing two colors on one side, the sheet could be reversed and two other colors printed on the opposite side. I understood, also, that there was practically no limit to the number of presses that might be connected in this manner, and for each press so connected, two colors could be added to the job. A wonderful effect of invention, truly, and apparently a successful one; at least, of a large number of practical pressmen to whom the process was explained, almost every one was convinced of its practicability. As soon as I can learn more of its workings, the readers of these articles will learn of them also.

\* \* \*

Two months ago I wrote about the evils of bribing as between inkmakers and foremen of pressrooms. In looking over what I then wrote, I think it is questionable if press manufacturers have not to pay more largely still for the favor of those who can either praise or condemn the presses they make. I have in mind at this moment a certain firm in New York who are understood to pay several hundred dollars to the foreman of one city pressroom whenever a new press is put in. If they do it in one instance, it is plausible to suppose that they will in another. Of course, the proprietors of those offices are assured that the presses are the very best to be had. In the particular office to which I refer, the pressmen are among the worst treated

and poorest-paid of any in the city. While they profess to want first-class pressmen, and have work that demands that kind of men, they pay only the minimum scale. The difference between what the pressmen ought to get and what they do get finds its way, through the pressmaker, into the pockets of the foreman.

\* \* \*

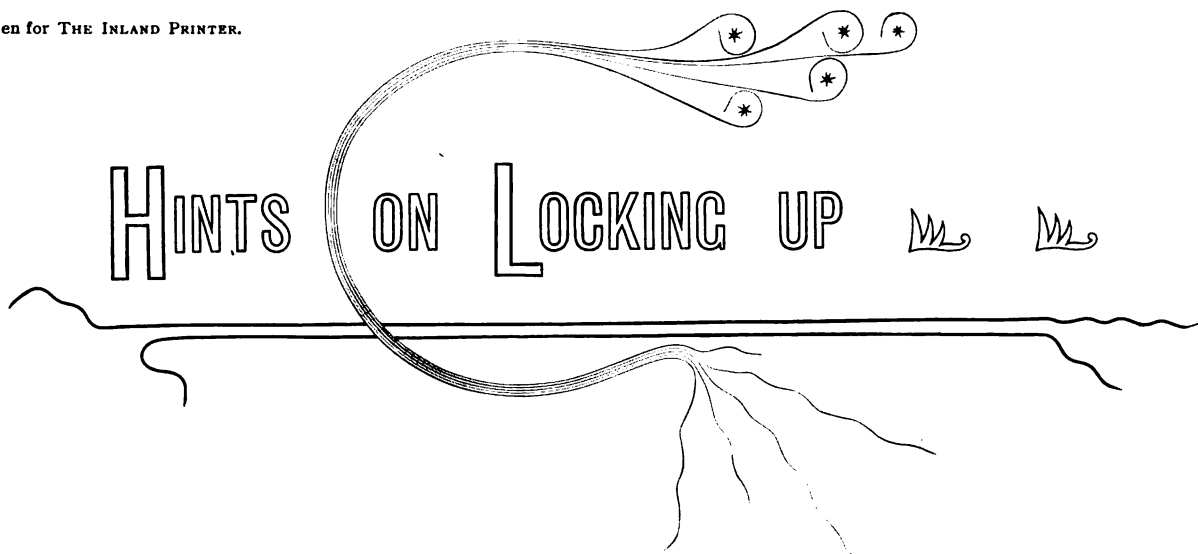

There is a saying that "one-half the world does not know how the other half lives." This was forcibly brought to my mind lately on reading an article in the *British Printer* on making ready by the hard-packing process. What between printing "half-a-dozen pulls on tissue paper" and "dusting the cylinder with powdered chalk to prevent the next impression from pulling off the overlays," I confess that I was in a quandary to know what the writer meant. If our editor would permit, I would like to print the article entire—it is so much at variance with what we in America consider the best method of make-ready.

In the initial number of the *Printing World* is given a French method of making ready, which is, to say the least, as antiquated as that of their British neighbors. This article not being concluded in that number, I will reserve for further consideration.

\* \* \*

I was at one time employed on the *Canadian Illustrated News* (since defunct), published in Montreal, and found prevailing there a system of hard packing that came nearer to agreeing with the name of the process than any I have ever seen. To begin, the underlaying was similar to the method now in vogue; the packing on the cylinder consisted of *three* thicknesses of press board covered with a muslin draw sheet. A wet sheet was affixed to this by pasting it on, applying a very thin paste with a brush to the whole surface of the sheet. An impression would be taken with three or four sheets at the most, just sufficient to show a faint impression on the face, but none on the back of the sheet. This would show quite a number of white spots all over the form. An impression would be taken on the cylinder, and on each of the light spots on the first sheet a piece of thin manila would be pasted, also with a brush, on the corresponding place on the cylinder. In fact, the brush and paste pot were used throughout. After all white or very light spots were thus treated, one or two sheets of the manila would be pasted on each page, the second one slightly overlapping the first. This would be covered with another pasted sheet over all. This treatment would be continued until the impression was fairly brought up all over. After this make-ready was dry it was as hard as the cardboard packing itself and would give a splendid result in good hands. Every letter would be brought up fully and without any impression showing on the back of the sheet. I understood, at the time, that the process was a German one brought over by an engraver named Bock, who had been imported by the firm to assist in developing a photo-electro process they were introducing, known as the Leggotype.

WITH ILLUSTRATIONS BY THE AUTHOR.

BY F. W. THOMAS, TOLEDO, OHIO.

SINCE the publication of my booklet on brass rule bending I have received many inquiries as to the locking up of such work, and take this opportunity for answering them.

Now, brother printers, do not for one moment suppose that I am about to explain any "royal road" to follow in locking up rule forms; or that you are about to obtain a recipe for some magical preparation that you can throw at a piece of brass rule and, presto! it will become like a squared block of metal furniture. No such formula can be given. Ingenuity and patience will invariably be required. As rule designs are usually very different from each other, it is impossible to give explicit directions. A few hints, however, may save time and patience for the rest of you.

In the first place, remember that the difficulty of making a design does *not* constitute its beauty. Endeavor to get up such designs as can be locked up with comparative ease. A good idea is to have some one place in the design where all of the rules pass each other and at which place they can be securely clamped

together. An excellent example of this is to be found in the second of the accompanying illustrations, the position of the furniture being indicated. This plan is especially convenient, as it enables you to obtain a press proof of your design and correct any inequalities in the bending before the rules are permanently set in position with plaster. By using full high bearers, forms which are not too fragile and from which too many impressions are not needed can be run without other locking up than this. The bearers are indispensable, however, as without them the rollers are apt to slide over the delicate rules instead of rolling, and thus draw some of the curves out of place, and also making the printing smutty because of improper inking. Forms containing but a few rules can usually be satisfactorily fastened by wedging alone.

All brass rule ornaments consisting of straight lines with the ends waved or curled usually work admirably with simply the straight portion locked and the form left open around the flourishes. Any rule which has simply the end curved a little can be locked up with as

little trouble as a common lead in the following manner: Instead of bending the entire rule, cut a slit with the shears about one-eighth of an inch below and parallel with the face and then bend the narrow upper portion only. This will lap over a lead or quad. A great variety of pleasing effects can be produced by this simple means. When bent in this way it is well to use six-to-pica rule and *not* to take the temper out of it.

Complicated designs and delicate forms must be finished by being set with plaster of paris. The rule should be locked up as perfectly as possible and laid on the stone so that it stands square on its feet, and then the plaster poured in around it. It is also a good idea while pouring the plaster to keep a level piece of wood on the face of the form and to weight it down. This holds the rule square on its feet, and also prevents any of the plaster from getting under the rule or throwing it out of position.

In designs like the first one, circular quads can be used advantageously in the preliminary locking up of the rules. Square furniture is apt to straighten out that portion of the curve against which it rests. The stars in the small curves at the end of each line can readily be secured by wrapping them in strips of paper cut the width of a lead until they are just large enough around to fit snugly in their places. The word "Twists" was very easily cast in plaster, as, with the exception of the dot to the "i" and the cross to the "t," it was bent entirely from one piece of rule.

### THE CURSE AND DELIGHTS OF READING.

A STUDY IN BOOKS AND BOOKMEN.

BY GUSTAV BOEHM.

A DELIGHTFUL CURSE—THE POWER OF READING—A BOOKWORM DESCRIBED: HABITS AND DELIGHTS—AN APOLOGY—CHARACTERISTICS—A BOOK THIEF—THE HUNGER FOR BOOKS—STARVATION—A PERSONAL EXPERIENCE—BOOKS AS A BLESSING—VARIOUS MANNERS IN READING—CUT OR UNCUT EDGES—ANNA L. DAWES IN THE "CRITIC"—FINIS.

"DAS ist der Fluch der bösen"—"Such is the curse of the evil"—is a time-honored German proverb. It may not be quite an appropriate adaptation for the purpose, yet there are cases in which the most divine habit of human existence—the pleasure of reading—turns into a curse, a curse no less weighty to the soul of the afflicted, suffering under its heavy load, than the curse of drink pressing upon the conscience of the unfortunate, regulating, or, better, "unhinging" his habits and system, a curse to himself and his surroundings.

For an ardent lover of books it is hard to say such harsh things of his best friends. Therefore I grasp the occasion to continue: That it is the indescribable power of reading over the mind which enslaves body and soul of the victim, if victim we may call him, who has fallen a prey to the godly habit of being an "habitual

bookworm." The lion who has tasted human blood cannot abstain from it, but the most ferocious beast would rather be seen to go without a meal of Indian "cooly" than he who has taken to reading could exist without books. Deplorable victim of this heavenly pleasure: thou art dead to the world, to the pulsating world of rushing life, dead to the charms of woman's ever-inspiring beauty. Thy constitution seems disturbed, thy stomach to have lost its natural functions; thine eyes are blind; you need not eat or drink. What is the classic beauty of Venus Aphrodite to thee compared to a chapter of Chaucer? to a snug volume of an Elzevir?

I dare say there is no place in heaven or on earth equal to a life-threatening seat upon the top of a rickety, old, worm-eaten ladder in the region of the eighth or ninth shelf in an antiquary's depository! What a delight to roam about this region! There are dangers of breaking your neck every second, but what do you care! Lightly you sit down on the edge of your improvised throne, the top of the ladder, your heart beating with delight, right among the beloved treasures of your soul; you draw your legs up, resting your heels one or two steps lower, to form a handy table with your lap, to reach the selected volume and indulge the better in the perusal of its contents. But this is not enough. You must have feeling with your friends in various manners. Your back turned to the shelves rests against the precious works of typo's art; it acts like an electric charm, this touch of the bindings rejuvenating you in every fiber; you are insatiable. There is a neatly bound "Sesame" between your knees and a leafy volume of "Curiosal," bound in pigskin, somewhat split along the edge where back and cover meet, under your right armpit, tightly hugged, as if you intend to press its contents this way to the knowledge of your heart. You are a bookworm!

A bookworm! Alas! this specimen of mankind is understood only by his own species. Ridiculed by the one, awed by the other—a unicum in itself—but happy, happy among his old or modern pasteboard covered friends, happy among the dust-beaten, worm-eaten shelves, happy as the bird in the air under the blue sky of God's heaven.

The printer who alone makes the bookworm possible ought to know more about him. This may count as an apology of this essay in this place.

The real bookworm—to continue to use the vulgarity—as I have described him above in his favorite haunt, is harmless to a great extent: this extent ends where his passion begins. The bookworm can forgive the commission of almost any crime, he can understand and explain the unnatural motives of parricide, but he will forgive no man the spoiling of a book. The son who assassinates his mother appears to him more natural than the brute who cuts and tears or maltreats a volume. The granger who robs his volumes of the leaves is his most hated, deadly despised enemy. You

may ask the bookworm for his last cent, he will give it to you, but, alas! do not ask him the loan of one of his pet volumes. He will be sick, cranky, miserable until the hole on his shelves is again filled by his lost friend.

In the matter of time he is absolutely without any sense of calculation. I have seen bookworms enter Leggett's depository in Chambers street, New York City, in the morning and leave it when the place was closed in the evening, and all that time without dinner, without a bit to eat, a drop to drink. There is a power vested in books which even physical necessities cannot overcome, I am sure. Any librarian can duplicate this experience many times.

The moral sense of the bookworm appears to be at times very much deranged. I have read among police reports about a young man who has carried away from a bookstand under his coat small volumes. There was actually no value in these books. He was treated as a common thief, sent up for stealing, although he pleaded in heart-rending phrases of his love for books. I pitied the poor fellow, understanding quite well the power the perusal of a book may exercise over a man. This was the case of the starving who steals a loaf of bread. Justice seems to be somewhat in the wrong in such cases. Conditions count for something and ought to be held up against the letter of the law. The bookworm without the means to buy his beloved treasure, in front of a bookstall, is no more or less than the starving man before a baker's counter filled with steaming loaves. Who would not admit these conditions—and forgive? "Tout comprendre, c'est tout pardonner"—"to understand is to forgive"—is the beautiful saying of Mme. de Staël. The fact is that comparatively few can understand the "hunger for books," while many can judge the physical pangs of an empty stomach. I may assure the reader from personal experience that the desire to obtain a book can become as craving as the necessity for bread.

A story—a true one—from my own circle. Some time ago I visited a bookstore uptown in New York City and there found a volume on the shelves which attracted my attention. It was an English book. The seller had two copies of it, and asked a good price, as they, apparently, were not to be obtained in the United States. I was not in the condition to purchase the book, still I wandered two or three times a week, like a pilgrim to Mecca, fully an hour out of my way, to see whether the book was yet to be had. One fine day I found it gone. I had expected this calamity, still a pain in the heart, as if stung by an electric shock, made itself felt even before I had time to glance over the other shelves to make sure that it was not misplaced. It was gone, gone! I learned on inquiry that it had been sold to a Boston party and that no other copy could be obtained in New York. My throat appeared to reduce in size—I felt like crying. I had taken note of the publishers at my first visit (a precaution which I always take when looking at a book

which I cannot purchase at the time) and wrote at once to London for it, giving at the same time an order to Messrs. Scribner's Sons to get the book for me. Many weeks thereafter I received notice from both sources that the book was out of print, but that I might be able to obtain a copy second-hand. I have given orders to that effect, and feel assured that I will not rest until the volume graces my shelves.

The soothing property of books is a well-known fact. We have often read of prisoners who were enabled to retain their mental powers in long solitary confinement by the aid of reading. After serious emotions, from misfortunes, nothing acts so much as a soothing balm as a book. There is no better friend in trouble than a book. It talks to you, continually trying to call your thoughts away from the sad event which has befallen you, and an hour's attentive listening to its words will help a great deal to make you realize your position and save you from despair.

I remember with warmest thankfulness the service my books rendered me when the dearest object on earth was taken from me—my ever beloved mother. I admit today that without my books I would not have been capable to find that consolation which kept me from joining her in unknown regions. In many a dark and wearisome hour I have found them the same valued friends. Thanks to them, lifeless as they are, and the men who produce them, authors and printers, the greatest blessing for an intelligent being.

The delights offered to readers in the method of reading and treating books and magazines—for these also belong to the joy of the bookworm—are various and differ in importance according to the tastes of the individual.

The matter is generally divided in so many subdivisions by the real book lover, each subdivision offering a special delight. There is the charm of the title page, the dedication, the preface, the index, the re-reading of the index as captions over the chapters, the footnotes, the appendix, the references, the key, and last, the book itself. Each of these divisions has its own peculiar flavor for the bookman, and preferences are made according to the various tastes as men have their preferences between blondes and brunettes, blue or dark eyes, in ordinary life. Above all, though, and considered as a general delight, for I have not yet found a constant, systematic reader who has differed in this respect, is the cutting of the leaves of books and magazines. Would it be that book-makers take more notice of this important fact and manufacture more books with uncut edges. As a rule, the uncut edge is considered a specially aristocratic work of a high-class (high-priced) book. The editions intended for the best class are frequently published with uncut edges. But most publications are sent on the market smoothly shaven and razed down, apparently a time-saving scheme for the reader, but in reality a cruelty toward the real bookworm, who thus is deprived of his main delight, the cutting of the leaves. Why

not do as it is done with many magazines — publish two editions, cut and uncut. If the publishers of the *Century*, *Scribner's*, etc., acknowledge the importance of uncut edges and thus honor the taste of a large class of their readers, why is it that book publishers do not wander in the same path? The method of the future is doubtless the uncut edge, and an admirable method it is. A correspondent of Miss Jeanette Gilder's exquisite literary weekly, the *Critic* (New York City), describes the delight of cutting the leaves in a charming manner. I cannot withhold from the readers of *THE INLAND PRINTER* an excerpt from this neatly put description at the close of my essay. Anna L. Dawes says "On Cutting the Leaves of a Magazine":

Why does no pen proclaim the joys of cutting the leaves of a magazine? The eager interest; the glimpses of hidden wealth — a phrase, a title that seizes the eye and toles along the brain; the dipping here and there into treasures already ours, and yet to be explored; the sudden haste to look upon some other hoard, before the first is half discovered — surely the charm, the fascination, the excitement thereof deserve their own chronicler. It is very easy to bring great witness. All the world remembers the calm, considering soul, who was yet in such a hurry that he must needs sacrifice the book itself! That buttered knife tells a tale of a desire to see what comes next which began even with books themselves methinks. It may be — who can tell? — that the simple artifice of shut and forbidden leaves adds value to their contents. Those half-finished sentences, those promised pictures, that lost dénouement — what may not be behind the closed door when once it is wrenched open? Was it true, then, that the ancients stitched across the papyrus here and there, lest it roll too swiftly off the ready blocks? What became of that ancient sage who suddenly found his little cylinder broken in two, and the half of it vanished? No such dire calamity befalling us, as we sit by the fire and look at the familiar covers we have looked on twelve times these many years. What strange tales of strange countries wait inside those fastened sheets lying with shut mouths till they shall be entreated to reveal their secret! Or those unopened pages under that weird face — they hold state secrets, it may be. The firelight leaps up. Let us draw the curtain and listen awhile to the talk of these old friends.

It is unnecessary to continue. Every real lover of book and magazine knows the indescribable delight experienced in cutting the leaves of his printed pets.

Written for *THE INLAND PRINTER*.

#### THE INVENTION OF PRINTING.

BY O. S. JENKS.

TO China, the birthplace of so many of the useful arts and inventions, we must look for the origin of the "art preservative." Early in the tenth century, five hundred years before Gutenberg contrived the movable metal types which have rendered his name imperishable, an imperial edition of the sacred books was published in that far oriental country. But on the same principle that the glory of America's discovery rests with Columbus and not with Lief Ericson, must the honor of the invention of the most powerful factor in civilization be ascribed to Gutenberg and his contemporaries.

No advancement commercially or politically of the civilized nations of Western Europe resulted from the discovery of America by the Norsemen, and had these

early explorers exerted themselves to permanently colonize the western hemisphere, their semi-barbarous character affords no indication that civilization would have been promoted by their conquests. So, had the knowledge of printing remained the sole property of the inhabitants of the Flowery Kingdom and neighboring countries, the progress of civilization would have been retarded centuries, as it was not until a comparatively recent date that western energy and perseverance succeeded in penetrating their exclusiveness and in acquainting us with their peculiar customs and modes of living. The history of printing properly begins with the employment of movable metal types by Europeans.

Few inventions are the spontaneous conceptions of individual minds. An invention is generally the climax to a series of efforts of different individuals at different times, and the inventor is he who embodies the conclusions of himself and others in something that shall be serviceable to man.

The desirability of a method of rapidly multiplying copies of law records and the works of eminent writers was probably practically manifested with the first written law and literature.

Block printing was practiced in China, Japan and Corea centuries before the time of Coster and Gutenberg, and was occasionally employed by early European sovereigns for impressions of seals and coats of arms. Books printed by this process were quite common in China in the tenth century, and it is said that the Chinese printed from movable types of clay as early as the middle of the eleventh century; the Coreans are credited with the invention of copper types in the beginning of the fifteenth century. Yet, until the middle of the fourteenth century the laborious process of multiplying copies of manuscripts by handwriting was universal in Europe.

"Necessity is the mother of invention." The first books printed were impressions on paper or parchment from blocks of wood on which the letters or designs to be reproduced had to be cut in reverse. If an error that required correction was made in carving the block, it was generally necessary to substitute a new block and do the carving over again, and the desirability of obviating the extreme difficulty of correction led doubtless to the invention and employment of movable wooden types by Laurent Coster, of Haarlem.

But a great deal of labor was involved in the cutting of these letters, and as it was impossible to make any two exactly alike (being engraved one at a time), they made a very irregular and uneven impression.

A process of producing types which should be uniform, durable, not easily broken, and produced with less expense and labor, was the object of the researches of the early printers.

For a long time Coster endeavored to perfect his invention by the discovery of such a process, and, according to Hadrian Junius, actually invented metal types. The same authority states that a workman in

Coster's employ discovered the secret of their manufacture and fled to Mayence. This workman's name is said to have been John. If we assume the correctness of the above account, which, however, is a matter of controversy, the John spoken of may have been John Fust or John Gaensefleisch (who afterward assumed the name of Gutenberg), who is said to have communicated the secret to his nephew, later the partner of Schöffer. There are good reasons, however, for believing that neither Gutenberg nor Fust were ever in Coster's employ. As M. Bouchot says, in his excellent work—"The Printed Book"—"But it is not at all apparent that Gutenberg, a gentleman of Mayence exiled from his country, was ever in the service of the Dutch inventor. As to Fust, we believe his only intervention in the association of printers of Mayence was as a money lender, from which may be comprehended the unlikelihood of his having been with Coster, the more so as we find Gutenberg retired to Strasburg where he pursued his researches. There he was, as it were, out of his sphere, a ruined noble whose great knowledge was bent entirely on invention. Doubtless, like many others, he may have had in his hands one of the printed works of Laurent Coster, and conceived the idea of appropriating the infant process." *(To be continued.)*

Written for THE INLAND PRINTER.

#### INATTENTION AND SENSELESS ARGUMENT.

BY M. STANISLAUS MURPHY.

ONE of the unexplained mysteries in connection with the art of typesetting is "Why is it that some printers, above the average in intelligence, and possessing a thorough knowledge of the business, will invariably receive from the proofreader their proofs adorned with innumerable "outs" and "doublets," while others, inferior in every respect as far as the business is concerned, will set galley after galley with scarcely an omission or repetition occurring. For a lack of something more conclusive, I am forced to the belief that a partial solution of the mystery lies in the consideration of two things, namely, inattention and senseless argument. A printer cannot work to any advantage who is endeavoring to set type in New York and whose mind at the same time is wandering in Chicago, or vice versa. Neither can a printer set type accurately whose brain is forever hampered by some scheme which of itself would require the full capacity of his thinking apparatus. Inattention to business, in whatever calling one may be engaged, is apt to work disastrously in one way or another to the work being performed. A printer may have his copy before him, apparently plain and intelligible, yet, owing to inattention, he is unable to catch the sense of it, and he works away, not knowing for the time being whether he is setting local, telegraph or editorial. He is certain of only one thing, which is, that he is setting type. So, in my estimation, one of the principal reasons for "outs" and "doublets" is mind wandering or inattention. Another thing which I believe to be responsible for

bad proofs is senseless argument. I do not wish to be understood as believing that all arguments advanced in printing offices are shallow and meaningless, for I believe the majority of members of the craft are capable of entering in discussion upon any subject calling for an expression of good, practical suggestions, but I have reference to those arguments which have their origin in smoke, progress in smoke, and terminate in the same substance. Much time is squandered in such arguments and good workmanship is often prevented thereby. Such discussions not only work disadvantageously to those engaged in them, but also to the ones who are forced to listen. Some loquacious individual, for the sake of argument, will make an assertion in regard to something he knows little or nothing about, and in a short space of time a dozen or more will be discussing the subject with avidity, some of them totally ignorant of the matter under discussion, and when the argument ceases no knowledge will have been gained, but the chances are good that sentences have been overlooked or doubled in the copy of some of those engaged in the controversy. In this connection I will relate a little personal experience which has been the means of convincing me of the utter uselessness of endeavoring to set type accurately and at the same time manifest a desire to hold up your end in a heated argument. A discussion arose over something nonsensical—some trivial matter, not worth the waste of a dozen words, but the argument was intensified by some of the assertions made, and the debators (myself included) became a trifle warm. I was setting a piece of miscellany, and one of the sentences read: "There are other house painters who are satisfied to stand on a ladder or scaffold at \$2.50 per day." It was only necessary to set that sentence once, but *Shades of Ink!* when the proof was returned I discovered I had set it just four times, and if the argument had been prolonged it is possible I would have continued setting house painters for an indefinite period; and, what was more aggravating, it eluded the vigilance of the proofreader, and was run through the entire edition of the paper. It nearly cost me my situation, and to this day the sight of a house painter will awaken in my mind recollections of that spicy composing room debate which was the means of impressing upon me the necessity of avoiding useless discussions while setting type. One of the other comps who was engaged in the same argument was setting the word hotel when he was "drawn in," and when his proof was returned to him he discovered that he had four hotels in one line, just three more than was required. Thus I might continue enumerating facts to prove that it is impossible to set clean proofs and at the same time remain an active member of a composing room prating society, but it is not necessary. No matter how intelligent we may be or how thoroughly we may understand our business, if we are given to inattention and senseless argument we will continue to receive "decorations" from the proofreader.

**KEITH LEDGER PAPERS** are well made, strong, hard sized, rule nicely, write easily, erase and rewrite without difficulty, and have been given the preference by good judges in competitive tests with all other leading brands of Ledger paper.

**RAVELSTONE** Flats are made in Laid and Wove, White and Perfection Tints, and are used by Lithographers, Stationers and Printers for first-class Commercial Stationery for Banks, Insurance Offices and Business Houses generally. These papers are also put up ruled and folded, in the usual sizes.

**WESTLOCK** Flats are well known and highly prized for their good color, cleanness, freedom from imperfections and all adulterants, strength, hard sizing, and are used for all kinds of commercial work, being especially preferred by makers of Blank Books, because they are thicker for the weight than other papers. These papers are put up folded, and in Note, Letter and Bill Heads, etc.

The above Papers are offered to the Trade through Agents located in the principal centers of distribution throughout the Country.

*To Our Patrons and the Printing Fraternity in General:*

We deem it but proper to notify our patrons, and it may likewise be of interest to the Printing Fraternity in general; that our department at the Colt's Arms Company's Factory is now being run **14 HOURS A DAY** on "Colt's Armory presses."

The work is being pushed with all possible dispatch, additional men and machinery employed, and we calculate that in about 30 days our back orders will be filled and a sufficient stock be accumulated to fill new orders for regular machines, promptly upon receipt thereof.

The success which has attended us in this enterprise has exceeded our most sanguine expectations.

It is true that our best efforts have been directed, persistently conscientiously and, we believe, skillfully, to the production of a High Grade Machine, worthy of the best and most advanced patronage; but we do not forget that to **YOU** belongs the credit of promptly discerning and accepting on its merits even a good thing.

Accept our thanks for the patronage of the past and our assurance that the future shall have our continued best endeavors to merit its continuance.

Respectfully submitted,

A TECHNICAL JOURNAL, DEVOTED TO THE ART OF PRINTING,  
A. C. CAMERON, EDITOR.

Published Monthly by

THE INLAND PRINTER COMPANY,  
183, 185, 187 MONROE STREET, CHICAGO.

H. O. SHEPARD, *Pres.*; C. F. WHITMARSH, *Sec.*; D. L. EVANS, *Treas.*

Address all business correspondence to the *Inland Printer Company*.

Entered at the Chicago postoffice as second class matter.

CHICAGO, MARCH, 1891.

SUBSCRIPTION RATES.

TWO DOLLARS per annum in advance; one dollar for six months in advance; sample copies, twenty cents each.  
FOREIGN.—To countries within the postal union, eighty-five cents per annum additional. To Great Britain and Ireland, postage paid, twelve shillings per annum in advance. Make money orders payable to H. O. Shepard.  
SUBSCRIPTIONS may be sent by express, draft, money order or registered letter. Postage stamps are not desirable, but if necessary to remit them, one-cent stamps are preferred. No foreign postage stamps accepted.  
CLUB RATES.—Six or more subscriptions, sent at one time, one dollar and fifty cents per year each. Cash to accompany order.

THE INLAND PRINTER is issued promptly on the twentieth of each month, and will spare no endeavor to furnish valuable news and information to those interested professionally or incidentally in printing, engraving, electrotyping, stereotyping, bookbinding, and in the paper and stationery trades. Persons connected with any of these lines of industry will confer a favor upon the Editor of this Journal by sending him news from their section of the country pertaining to the above trades, particularly individual theories and experiences of practical value.

THE INLAND PRINTER publishes its net rates in each issue of the paper. No agent or representative of this Journal is authorized to deviate therefrom or make any discounts. It solicits advertisements from dealers in or manufacturers of any goods used by printers, bookbinders, stationers and similar lines of trade. Its value as an advertising medium is unquestioned. The character of the advertisements now in its columns, and the number of them, tell the whole story. Circulation considered, it is the cheapest trade journal in the United States to advertise in. Advertisements to insure insertion in the current number should reach this office not later than the fifth of the month.

WHAT IS THE REMEDY?

HAVING in a previous number condemned the unbusiness-like and senseless competition which has too long prevailed among the typefounders of the country, and its injurious effects upon the printing trade at large, we propose in the present issue to suggest what, in our judgment, seems a practical remedy for the same. Experience is the best though frequently the most expensive teacher, and experience has proven that *promises* of reform in this connection have been like pie crust—made but to be broken. In view of this fact some importance has been attached to the rumor prevailing for some months past that a new combination was to be formed among the founders, although no one seems to know exactly on what lines. It appears certain, however, that the larger establishments will not entertain the idea of any more *agreements* which experience has demonstrated have been more honored in the breach than in the observance. Under these circumstances it seems to us the most rational and feasible means out of the dilemma is the consolidation of most, if not all, the typefounders into one large corporation. This, we have reason to believe, is and has been the desire of several leading founders, who are anxious to quit a warfare which not only injures themselves, but is cruel and heartless to their competitors, and at the same time fraught with larger harm and loss to their patrons. It is impossible to learn definitely why this consolidation has not been projected ere this, but Dame Rumor says that at the last annual meeting of the typefounders all heretofore existing difficulties were overcome, with the exception that a small minority interest obstinately refused to join with the others unless it had its own way, to the injury of all the rest. We believe, however, that cool consideration, and the realization of the harm being done to so many thousands of the fraternity, will soon eliminate this opposition.

We have little fear that a consolidation of the typefoundries will create a monopoly in the sense of imposing burdensome prices. In fact we do not believe that prices would be much if any higher than most established printers now pay; but it would most effectually put a stop to the unrighteous discrimination which at present writing allows a new customer to buy his outfit at less than cost, and enables and encourages him to enter upon a career of price slashing which, if even temporarily successful, can only result in injury and undermining of those now in the business, and utterly demoralizing any fair schedule of rates. Who is benefited thereby? The founder is not, for he not only sacrifices his profits, but knows he is taking the surest course to destroy the financial responsibility of his customers; the established printer is certainly not benefited, for it is only the latest comer who gets the benefits of those high discounts, and the encouragement thus afforded to such to start in business is surely no benefit to those already in; and lastly, the public are not benefited, for though the prices of printing are spasmodically slaughtered, it can only be temporarily,

as it is a well understood fact that no commodity will long continue to be sold at a figure which will not fully cover all the expenses of production, and keeping up the plant, and also interest on the capital invested. And whatever benefit the public would realize while prices were low or irregular would be more than offset by a depreciation in the value of the stock of printed matter on hand, and the disarrangement of long established and satisfactory connections.

We are aware the bugbear of monopoly has been raised as an objection to the proposed scheme. While we do not claim to be an authority on political economy, we think the plain truth is too frequently lost sight of. From our standpoint no monopoly, *per se*, can exist under present circumstances, unless (1) protected by secret processes; (2) protected by patents; (3) protected by a tariff, or (4) protected by exclusive and comprehensive ownership. An instance of this last named species of monopolies is that of the Standard Oil Company, which is understood to own or control directly or indirectly all the oil wells in this country, whose products are of commercial value in the trade centers. This sort of monopoly is doubtless against public policy, and should be prohibited, if possible. But why should a large typefoundry be any more a monopoly than the large stores in our great commercial centers. Is it not true that because of their size they have economized in their expenses, and shared this saving with the public by virtue of lower prices? And why should not printers share in like manner in the many economies a consolidation of the typefoundries would bring about? No, we cannot see how such a combination as referred to would be a monopoly; lead, antimony, tin and copper are free to all who can pay market prices, and there are now no patents to protect any necessary process in the manufacture of type.

But, for the sake of argument, let us suppose that consolidation should, through greed or shortsightedness on the part of the founders, result in an unwarranted advance in prices. For a short time, no doubt, printers would be compelled to submit, but the comparatively small amount of type they must needs buy at such prices would practically cut no figure in comparison to the increase in the market value of their plants—their restoration to normal value—and it would not be long before new typefoundries sprung up, because the natural laws of trade, of supply and demand, would inevitably soon bring prices down to a fair basis. Indeed, we are satisfied the founders are well aware of the fact that in every large city in the United States there are numbers of progressive, enterprising printers who could and would establish typefoundries in abundance if any of the evils of monopoly should show themselves; and such establishments would be certain to be self-supporting, because of the assured patronage of the trade at large. Again, in case of necessity, the printers and press would undoubtedly raise their united voices, either through self-interest, or principle, or both, and demand the repeal of all duties on foreign manufactured type;

and it would take only a few years to introduce type from new or foreign foundries in sufficient quantity to bring any monopolist foundry or combination of foundries to their senses.

Our deliberate conclusion, therefore, is that the interests of the printing fraternity will be best subserved, as well as those of the public at large, by the stoppage of the type war through the consolidation of the foundries. This seems to be the best, quickest and cheapest way back to honest prices, and we believe that this conclusion is indorsed by every intelligent printer in the land who has given the subject an hour's serious consideration.

#### A ONE-SIDED ARGUMENT.

UNDER the caption of "Compensation of Printers" will be found in the present issue a communication from an esteemed correspondent, which, while containing much that is true, also contains statements which we cannot allow to go unchallenged, among them the following:

The poor men of the world give a tax to the community or government of rich men for the privilege of working for them for the pittance with which they eke out an existence, and give a portion of that pittance to municipal, parochial, state and national governments in taxes besides. In other words, a man, say, is worth \$3 per day according to our method of computing wages. On this man's work his employer clears twenty-five per cent net on all work he executes. Say he is a printer and sets and distributes 7,000 ems a day. He has earned for himself, at 40 cents per 1,000 ems, \$2.80, while the employer charges 50 cents per 1,000 ems for composition and wear and tear of material. This amounts to \$3.50, leaving 70 cents, or nearly thirty per cent, a day on each man's labor for wear and tear of material—type material, I mean—and profits. The same thing is done in the case of the pressman, making a profit here, and he does not neglect to make a margin on his paper, either. Who will scrutinize these figures and say the workingman does not pay a tax to the community of wealthy people for the privilege of working for them?

Is this a fair or correct estimate of the situation? Is the wear and tear of material and machinery the *only* item the employer has to take into consideration when making his estimates? What provision is allowed for rent, insurance, interest on capital invested, bad debts, taxes, superintendent's and foreman's expenses, spoiled jobs, proofreading, light, fuel, necessary repairs, bookkeeping, collecting, clerk's, apprentice's, janitor's and stockkeeper's hire and the hundred and one incidental expenses which are forever presenting themselves, and must be met, independent of the constant anxiety, vexation and liability which cannot be measured by dollars and cents, which enter into the daily practical experience of an employing printer.

Again, with the excessive, unhealthy competition existing, to how many "wealthy people" in the printing business can our correspondent refer? Let him make an intelligent, impartial investigation, and then give the result of his labor. The truth of the matter is, there is no branch of business which as a rule gives such meager returns for the amount of capital invested or which requires a larger outlay to secure them than that

of printing. Let us for illustration select two callings, that of the employing bricklayer and carpenter—and comparisons are odious. The former provides the scaffolding and the material used in the erection of the structure, and there his expenses, outside of wages paid, cease, the journeyman furnishing even his own trowel; the carpenter supplies the lumber and nails, sometimes the workshop, the journeymen providing the required tools—a no unimportant item—and there *his* outlay ceases. With the employing printer the case is entirely different; a permanent office must be provided; type, material, machinery, paper and ink and even the composing stick and galley of the workmen furnished—incurring an outlay to what the so-called building trades are strangers.

We might pursue this subject further, but we have said enough to prove the untenable position of our correspondent and show at least there are two sides to the question.

#### THE ENGRAVER'S AND PRINTER'S ART IN AMERICA.

IN American art there has been greater advances in the past ten years than there has been in the art of any other country. A prominent gentleman who has traveled extensively and visited the leading art centers of the world said, "I have been greatly surprised to note this wonderful advancement because American art is little known in Europe—little known as it should be. Of course Mr. Millet, Mr. Reinhart, Mr. Abby and others are known and appreciated there, but the great number of excellent painters, particularly in landscape, are comparatively little known. Your artists contribute to the Salon far more liberally than to the Royal Academy exhibitions, and those that my countrymen know best they know 'by way of Paris.' I wish American art might be shown in London, so that our people could obtain such an idea of it as one gathers in a few weeks here. It would be a revelation to many to know what is being performed in America. It is certain that the United States will be one of the leading nations in art, as in so many other matters. The painters who are growing up in this country in these days are ambitious and are ambitious in the right direction. They are students, and students of the artistic in life and in nature. They are not mere imitators of what they see. There are many young men here for whom great futures may be predicted, and the time is close at hand, I believe, when they will be adequately appreciated by their own countrymen, as I think many who merit the highest kind of success are not at present."

This wonderful progress is not confined to painting. Printing, engraving, photography, bookbinding and the other allied arts show a degree of advancement that is at once great and creditable. Particularly in all branches of printing and engraving has vast and pleasing progression been made. The splendid productions of the printer's and engraver's art today in America surpass European work, and numerous

instances could be cited where unprejudiced foreign critics have largely favored American typographical and engraved work in their *critiques*.

The printers and engravers of this country certainly have within their grasp every opportunity that, if embraced, is destined to lead on to victory in the battle for supremacy in the art world. In almost every instance where American typographical and engraved specimens have been displayed at European expositions, the designs have not only won enthusiastic admiration and commendation but have carried off first-class prizes, as well as receiving honorable mention besides.

All this is inspiring to the ambitious, progressive American artist, and creates an eagerness and determination to "conquer other worlds." With the appliances, machinery and material at hand to aid him in producing chaste, meritorious, graceful and correct examples of work, the printer and engraver of the present time should be able to reach a point of prominence in his profession. The American artist can be a winner. Let him exert himself and capture the prize that awaits talent, industry and ambition.

#### FREE SCHOOL BOOKS.

THE General Assembly of Illinois is considering a bill providing for uniform text books in the public schools of the state, to be furnished, according to one plan, at actual cost, and, by another bill, each child is to be provided with necessary books free of cost. The logic of a system of free public schools, sustained by the state, with provision in the law for compulsory attendance, would seem to demand that the state also furnish the text books, as this is a burden which many families are unable to bear. But if the state should decide to require uniformity in the books throughout the state, it would be more economical for taxpayers if a clause be inserted that all the work be done in our own state. Why pay royalty to eastern school-book monopolists when we have as scholarly educators in our own borders as can be found abroad, and as capable printers and binders? A competent commission should be appointed to attend to this important matter, and the copyright of every book published should rest in the state; and even if it be thought best to charge the pupil a sum sufficient to cover actual cost the price would be trifling and within the means of all.

WE direct special attention to the request published in the present issue of THE INLAND PRINTER from the committee appointed by the International Printing Pressmen's Union to arrange for and take charge of the proposed exhibit of fine presswork at the Columbian Fair at Chicago in 1893, and hope the appeal will secure a prompt and generous response. Ample time is afforded to make the display worthy of the craft and the occasion. All inquiries in connection therewith will be promptly answered by Mr. Benjamin Thompson, 810 Lexington Avenue, Brooklyn, New

York, who has charge of the district composing New York, New Jersey, the New England states and Canada ; Mr. Gayou, 1527 South Eleventh street, St. Louis, Missouri, who has charge of the district west of the Mississippi river, including Illinois, and Mr. Alton B. Carty, 614 G street, N. E., Washington, D. C., in charge of the states of the country not embraced in the above mentioned sections.

**D**URING the past two months we have had the pleasure of attending the annual and semi-annual sessions of the Illinois, Wisconsin and Missouri Press Associations, renewing old acquaintances and making many new ones. The papers read and discussed at these gatherings, for they were all *business* meetings, were of a practical and highly instructive character, and proved that the country publishers are fast coming to realize the important position they do, or at least should and can occupy, as the molders of public opinion. For the many courtesies received thereat, we extend our sincere thanks, and hope to have the privilege of again attending future meetings. A reference to the proceedings will be found elsewhere.

**S**TUDENTS of our shorthand lessons can have their writing exercises corrected free by sending them, with return postage, to Lock Box 1052, Valparaiso, Indiana, U. S. A.

Written for THE INLAND PRINTER.

**THE SHORTHAND GUIDE.**

A COMPLETE TEXT-BOOK FOR SELF-INSTRUCTION AND SCHOOL USE.

NO. II.—BY T. G. LA MOILLE.

[Copyright, 1891, by the Inland Printer Company. All rights reserved.]

WRITING CONSONANTS.

**A**LTHOUGH the shorthand consonants are sometimes for convenience written forward or back, or up or down, experience has shown that the easiest methods of writing them are as follows :

- (a) Down, all perpendicular signs ; as, | t, | d, (ith, (thee, ) s, ) z.
- (b) Down, all signs inclined to the left ; as, \ p, \ b, \ f, \ v, \ r, \ way.
- (c) Left to right, all horizontal signs ; as, — k, — gay, — m, — n, — ing.
- (d) Down, all heavy signs inclined to the right ; as, / j, / zhay, / yay.
- (e) Down, / chay.
- (f) Up, / ray and / hay.
- (g) Down, when alone, / ish.
- (h) Up, when alone, / lay.
- (i) Sometimes down, / l, called el.
- (j) Sometimes up, / sh, called shay.

8. / Chay being always written down, and / ray always written up, they are thus distinguished, because / chay is more perpendicular than / ray. When written with other strokes their directions distinguish

them ; as, / chay-ray, / ray-chay, / chay-d, / ray-d.

ANALYSIS OF CONSONANTS.

9. Describe the consonants as you read and write them ; as, | t, straight, light, down, sound as in *top* ; \ f, curved, light, down, curve's direction to left, sound as in *foe* ; / hay, hooked below, straight, light, up, sound as in *aha*. The *name* and *sound* of a letter are unlike.

SIGN.	FORM.	SHADE.	DIRECTION.
\	Straight.	Light.	Down.
	"	"	"
/	"	"	"
/	"	"	Up.
/	"	"	Up, hooked.
—	"	"	Left to right.
\	"	Heavy.	Down.
	"	"	"
/	"	"	"
—	"	"	Left to right.
(	Curved.	Light.	Down.
(	"	"	"
)	"	"	"
)	"	"	Up or down.
)	"	"	" "
)	"	"	Left to right.
)	"	"	" "
)	"	Heavy.	Down.
)	"	"	"
)	"	"	"
)	"	"	"
)	"	"	"
)	"	"	Left to right.

10. The different directions for ) s, ) z, o iss, \ r, / ray, / lay (el), / ish (shay), etc., will be explained in a future lesson.

11. Fail not to observe that in phonography the silent letters are omitted ; therefore, c, q and x are otherwise represented : c by k, s or zh ; q by k ; x by ks or gz. In writing initials, use longhand for C, Q and X.

12. Cover page after page with each character, and read all you write. Do not pass a sound until you can read or write it not less than sixty times a minute. A good plan is to devote a line to each letter. Use the author's copybooks, mailed for 20 cents by the Inland Printer Company, Chicago, Illinois.

REVIEW QUESTIONS.

- 1. What is phonography ? Why are most shorthand systems phonetic ?
- 2. What must you be familiar with ?
- 3. What kind of pencil or pen should be used ?
- 4. What is the best method of study and practice of shorthand ?
- 5. What do we mean by a

consonant? How are the shorthand consonants formed? 6. How long should the marks for consonants be made? What is the difference between shaded and unshaded marks? Light and heavy curves? Describe the consonants by kind, name, sign and power. 7. What has experience shown to be the best methods of writing consonants: Perpendicular signs? Signs inclined to the left? Horizontal signs? Heavy signs inclined to the right? Chay, ray, hay, ish, shay, lay, l, t, d, ith, thee, s, z? Why? P, b, f, v, r, way? Why? K, gay, m, n, ing? Why? J, zhay, yay? Why? 8. How are chay and ray distinguished from each other: When standing alone? When with other strokes? 9. Analyze p, t, chay, ray, hay, k; b, d, j, gay; f, ith, s, lay, ish, m, n; v, yay, zhay, way, thee, z, ing. 11. Are silent letters used in phonography? How are c, q and x represented in shorthand? 12. What must you do with each character? Do you read all you write?

JOINING CONSONANTS.

13. In joining letters, the second begins where the first ends; the third follows the second, etc.; as, ray-chay, r-r-ray, p-k-d-m.

14. Two straight consonants of the same direction, following each other, are made double the length of one; as, t-t, p-p, chay-chay, gay-gay.

15. Two letters curved alike, following each other, are repeated; as, n-n, m-m, f-f, lay-lay.

16. Curves resembling each other, in different directions, always make angles; as, ith-m, m-lay, n-s, n-ish.

17. Opposing curves in the same direction, always make a wavy line; as, shay-lay, lay-shay, n-m, thee-z.

18. Curves which face, and which, if straight lines, would form acute angles, are joined without angles; as, lay-s, m-ish, ith-shay.

19. Curves which face, and which, if straight lines, would form right angles, are joined in half circles; as, lay-r, lay-way, f-shay, r-ish.

20. Curves which face, and which, if straight lines, would form obtuse angles, are joined at an angle; as, f-n, v-n, lay-m, r-z.

21. When a straight line and curve join, when the curve faces the angle, and would, if straight, form an obtuse angle with the joined straight line, no angle must be made; as, k-r, n-ray, lay-k, p-s.

22. Horizontal letters should rest upon the line of writing; as, k-k, ing-ing, m-m, n-n.

23. Two descending letters joined should have the first letter rest upon the line of writing; as, j-j, d-d, v-v, j-r.

24. In a combination where a descending letter follows a horizontal, the descending letter should be written on the line; as, k-chay, k-p, n-d, n-l.

25. In a combination containing only one descending letter, that letter should rest upon the line of writing; as, n-j, p-gay, n-f, b-m.

26. The first perpendicular or inclined letter should rest on the line of writing; as, r-m, b-ray, ray-n, n-d.

27. To obtain an easy junction, the inclination of a straight or curved letter may be slightly varied; as, m-t, m-k, k-p, d-p.

28. The ease of joining signs at an angle is in proportion to the acuteness of the angle; as, t-p, p-t, b-d, d-b,

m-k, k-m, m-d, m-t.

29. Letters unshaded or shaded, or both, having no angle between them, are blended so their point of union is not visible; as, t-d, b-p, v-gay, f-gay.

REVIEW QUESTIONS.

13. In joining letters, where does the second begin? the third? the fourth? 14. When two straight consonants of the same direction follow each other, how are they made? 15. When two letters are curved alike, and follow each other, how are they made? 16. What are formed from curves resembling each other in different directions? 17. What is made by opposing curves in the same directions? 18. How are curves joined which face, and would form acute angles if they were straight lines? 19. Similar curves which would form right angles? 20. Similar curves which would form obtuse angles? 21. What must not be made where a curve faces an angle, and if straight, would form an obtuse angle with the joined straight line? 22. Where should horizontal letters rest? 23. When two descending letters join each other, where should the first rest? 24. In a combination where a descending letter follows a horizontal, on what should the descending rest? 25. When a combination contains only one descending letter, where should that rest? 26. Where should the first perpendicular or inclined stroke rest? 27. May the inclination of a letter ever be varied? why? 28. What governs the ease of joining signs at an angle? 29. When letters have no angle between them, how are they blended?

(To be continued.)

Written for THE INLAND PRINTER.

STEREOTYPING.

NO. XVI.—BY CARL SCHRAUBSTADTER, JR.

INSTEAD of tacks, some stereotypers use short screws, countersinking the plate so that the heads will not project. This attaches the plate more firmly, but is slower and more expensive. Many stereotypers prefer to use blocking wood which is a trifle too thick, running the completed cuts through a shaver, face downward. As this shaver can be set type-high, the plates are sure to be uniform in height. Still another way, practicable only when plates are of some standard size, as in book-work, is to bevel the edges as in Fig. 6 in the last article. Such plates are made pica in thickness, as, if thinner, they are liable to bend when clamped. When there is a large number of plates to be beveled, the work is done on a machine made especially for this purpose, but when such work is only occasionally done the shootboard is used by inserting a beveling plane, or by slanting the plate so that the cut may be made with the

regular plane at the correct angle. The oldest form of patent blocks is shown in Fig. 1. The small pinions in the fore part are connected with screws bearing slides working in the slots. By actuating the pinions with a

FIG. 1.

key made in the form of a rack, the screws revolve and the slides are brought forward, pressing the plate against the slanting projections shown immediately behind the pinions. They are generally made so as to lock at the ends as well as at the sides, and there are

FIG. 2.

several hundred modifications of the idea, possessing greater or less merit. The most common modification is that shown in Fig. 2, the base proper being of metal sections justifying with standard pica type. Clamps and end pieces, also on standard sections,

FIG. 3.

can be used in combination with the furniture to make mounting blocks of any size. A device quite popular in Europe, but less so in this country,

consists of iron press beds slotted diagonally across the plate, as in Fig. 3. In these slots vertical screws are placed, which hold the plate to the base. The plates may be beveled in the usual form, but are generally cut so that a cross section will present the appearance of Fig. 4, and flat-headed screws can be

FIG. 4.

used. Another method of mounting stereotypes is to drive wire nails through the plate, bend them on the back, then, laying the plate upon a level surface, surround it with type-high bearers. Scrape off the superfluous cement with a straight edge and let it stand for twenty-four hours, after which remove the bearers. It can then be soaked in water another day, when it will be thoroughly hardened. Cement is a poor conductor of heat, and for this reason is not recommended where the plate will have to be re-stereotyped. Still another way is to strip the plate from the wooden base and smoothly attach a sheet of paper by a glue made of gelatine dissolved in acetic acid. Spread a layer of the glue on the surface of the paper and press tightly against the mounting block until dry. This method, also, is not adapted to blocks which will be subjected to re-stereotyping. Type-high or solid cuts are usually cast the right height direct from the matrix, as explained in a former article, but it is sometimes necessary to mount a thin stereotype or electrotype which is already cast. There are a number of ways to do this. The most common is to bevel the edges of the plate from the bottom exactly opposite from the way in which it is beveled for patent blocks. The top of the mounting plate is then polished, and the plate laid upon it so that a cross section will be like Fig. 5. Filling the triangular space between the plate

FIG. 5.

and base with solder will attach them firmly together. Soldering irons should previously be touched on a piece of sal ammoniac, and the groove filled with soldering acid made by dissolving zinc in muriatic acid and adding a little sal ammoniac and water. Solder may be purchased or made of equal parts of lead or tin. Another solder, which melts at a much lower temperature, is made of eight parts bismuth, three parts tin, and eight parts lead, but as bismuth is very expensive, it is seldom used except for corrections. Another way is to prepare the plate as for mounting on cement base as above directed, taking care that the back is perfectly clean. Then paste the face of the plate to a sheet of matrix paper, using a thick mucilage of yellow dextrine and water. Lay the plate on the bottom of the casting box, paper down, and rest the L-bars on the projecting edges of the paper. This will keep the plate from rising and insure correct height. Now clamp and tilt the box and pour in the metal.

Care should be taken to have the paper thoroughly dry and the metal of the right temperature. If too cold, the cast will be chilled; if too hot, the face of the plate may be injured. The paper may be removed from the face of the cut by soaking it in water.

#### A FORECAST.

BY A. H. M.

THERE is a disposition shown by the unthinking to "fight" the typesetting machine, and the changes its advent will occasion. Arguments have been made in the past that no degree of perfection in machinery could be reached that would interfere with hand composition—"until a machine could be made to think, there was no need for compositors to be uneasy." This view has been abandoned to a large extent as further improvements have been made, and as the inevitable supremacy of the typesetting machines has become manifest printers are bestirring themselves to study the mechanism and methods of operating them. This is as it should be. The time for wrecking looms and destroying steam printing presses has gone by, and any attempts to hold back the inventive genius of the age need only be hinted at to be denounced.

If the machine enables a compositor to set twice as much as by hand and he should receive a correspondingly reduced price per thousand, he would lose nothing. In fact he indirectly would be a gainer, for all his attention being concentrated on typesetting he will acquire a degree of skill and accuracy that would not be possible were his labors divided with the irksome task of distribution. The swiftest compositors are those employed on the daily press, and they as a rule prefer to pay for distribution. The contention that women will take the place of men as compositors when the machines are an assured success, is one that looks portentous enough, the difference between running a typesetting machine and a typewriting machine being very small; and the number of applicants for situations as typewriters, it needs only a glance at the advertising columns of the daily papers to show, far exceeds the demand. But take the average typewritten page, and what degree of knowledge of composition, punctuation capitalization, or orthography does it show? Manual dexterity in punching a bank of keys will not comprise all the requirements from an operator of a typesetting machine, and employers will find out as they ever have done that economy beyond a certain point is extravagance. It will be found that the employment of women to run machines will not be greater, if as great, as their employment in hand composition. We gain some encouragement in the belief that an increased output will result from the additional facility with which work can be turned out and from the greater cheapness resulting. Many a convention's proceedings, and hurried work of similar character, is withheld from the printer, for lack of time and money. Then again, our public libraries are flooded with the books of foreign

manufacture. The editions of Bernard Tauchnitz, of Leipsic, abound in the libraries of America because almost any work in fiction can be obtained from them and because they are cheaper. The passing of the copyright law, defending the compositor from foreign competition, and the cheapening power of the typesetting machines will cause a condition of affairs that will put the American printer at the head of the line of the mighty army of workmen who have profited from improvement in machinery.

#### PRINTERS AND THE WORLD'S FAIR.

BY ALTON B. CARTY.

THERE seems to be a general impression among printers that the craft should be represented in some manner at the World's Fair at Chicago in 1893. Of what nature the representation should partake but little has been said, although it is generally acknowledged that among other matters a display of fine printing should be made. Such was the conclusion arrived at by the second annual convention of the printing pressmen at Boston in September last and a committee was appointed to have charge of the display. In my opinion the pressmen acted wisely in deciding to conduct such an enterprise and the committee should be given all the encouragement needed to make the display a success. To what extent they succeed depends entirely upon the cooperation of printers generally with the efforts of the committee. Employing printers, compositors and pressmen are equally interested in the result attained, which should be such that the printers of this country could consider well worthy of their high vocation. It is for the members of the art to say to what extent the display will be a success. Of course there should be other motives than that of patriotism connected with the work, otherwise it would fail. Not that printers are lost to all patriotism, for the record of their institutions proves otherwise. But there should be some consideration other than that of patriotism and that is the advertisement of our trade to the world at large. Patriotism and advertisement are two good incentives, and both play a prominent part in the subject now under discussion. This advertisement need not be confined to the employing printers, but can be partaken of by the employed compositor and pressman as well, and who knows what good can be accomplished in this manner. The plans of the committee are not definitely fixed, for the very good reason that the wish and desire of those directly interested have not been secured nor the extent of the display known. All will depend upon what the majority want, and what they want they shall have. It is also the desire of the committee that a collection of curiosities be shown which will exhibit the progress of the art since the days of Franklin. I believe the pressmen should have charge of the printers' representation at the Fair, and I make that assertion for several reasons, and I am satisfied they will prove worthy of the trust.

**THE COX STOP CYLINDER ART PRINTING PRESS.**

**T**HE accompanying cut represents a new four-roller stop cylinder press manufactured by the Duplex Printing Press Company, of Battle Creek, Michigan. This machine is intended for fine work, requiring a perfect distribution of ink, accurate register and solid, even impression. It is thoroughly built, of the finest materials, and according to the best forms of modern press construction, the size of bed between bearers being 34 by 49 inches. It is claimed that this machine is equal in all respects for practical work to the most

The inking device is new, and said to be a great improvement in the method of distribution of ink. With four form rollers in this system the makers claim that better results can be obtained than with six in other machines. The following diagram illustrates the device and its practical operation.

F is the fountain. D, D, D, D, are four ductor rollers, carried at the ends of the arms of a revolving reel twelve inches in diameter. This reel is speeded at about three times the rate of the bed movement, and one or more or all of the four rollers may be used at

costly six-roller stop cylinder presses manufactured. Among its special advantages are the following :

It is a low down press. The bed is but thirty inches from the floor, making the handling and locking of the forms a matter of great convenience. The printed sheets, as laid down by the front delivery mechanism, are low enough to enable the pressman standing on the floor to inspect the work and "watch his color," without climbing upon the press.

The front delivery is very simple and effective.

The form rollers by the movement of a lever are simultaneously lowered from contact with the vibrators when the press is not in operation. Practical pressmen will appreciate the value of this arrangement.

once. These rollers pass upward by the fountain roller, and in passing each takes a supply of ink. B is a curved, inverted, vibrating ink table, hinged at the rear side, so as to be easily turned over. The reel-rollers pass under this vibrating table, effecting a very complete table distribution, with the added advantage that the table, being inverted, is protected from all falling lint, dust, etc. After leaving the table, the rollers in the reel pass downward, touching the ten-inch iron distributing drum, H, which is revolving in the opposite direction. The ink already distributed on the table is thus transferred to this drum, on which lie three vibrating composition rollers. This drum, like the reel, is driven independently of the bed movement,

and at a much more rapid rate. From the drum, H, the ink is taken by the ductor roller, J, to the five-inch iron roller, K, whence it is carried by the intermediates, P, P, to the five-inch vibrating rollers, A, A, which directly feed, respectively, the form rollers, L, L, L, L.

It will be observed that the ink is fed to all the form rollers in equal quantity, and in equal time. The set of fountains farthest from the fountain gets the ink just as soon and in the same quantity as the set nearest the fountain. Not only is the ink distributed more perfectly than in old-style presses, but it is laid upon the type forms with absolute uniformity, not in

one direction only, but in both directions. The great advantage of this result, the absolutely equal quantity of ink deposited upon every part of the form, will be at once recognized by all printers who understand the secrets of fine printing.

It is further claimed that so great is the distributing capacity of the above described inking device, which is a part of the Cox art press, that with only two form rollers, one main vibrator and one reel roller in use excellent results are obtained and that the total number of rollers in the system is less by from two to four than in other competing presses in the market.

The object sought in the construction of this press was twofold:

1. To offer a machine having important advantages over all others, intended for similar work.
2. To build a machine so simplified, while being improved, that it could be sold for less money.

#### HOW TO RUN A NEWSPAPER.

II.—BY FRANK J. COHEN, ATLANTA.

**D**EAR JOHN,—My eyes temporarily “gave out,” and caused this delay in writing you again on the subject of your contemplated journalistic venture, but I will try to make up for lost time.

There must exist a cause, other than a thickly settled community, to demand the frequent or daily issue of a paper. The fact that a town contains twenty thousand people does not of itself justify such a

publication. If population were a sufficient cause, numerous cities in Mexico would have daily papers, which do not now boast and would not sustain a weekly publication. The people must be intelligent, educated and enterprising, and such a community would only support a paper which printed the news while the bloom is on—a faithful and complete record of events, both local and foreign. In other words, John, a community which will not sustain a daily paper carrying the associated press dispatches, neither needs nor deserves a daily publication. Local happenings, in an intelligent community, are not so numerous and startling as to command

attention from the public every day, and it is the intelligent people of every community which supports the papers. Of course, John, telegraphic news is expensive, but a community that would be satisfied with a daily paper without dispatches, would be equally as well pleased with a weekly publication. Besides, in publishing a paper, the expenses must be considered only in connection with the receipts—all moneys paid out being charged to the “loss” account, and all receipts of money to “profit.” There is but a small merchandise account in a newspaper office; that is, a comparatively small merchandise in a tangible or material shape. The grocery merchant shows on his shelves the goods his capital

has purchased, but the newspaper’s capital is locked up in what is termed good-will of the people. The successful buyer of boots, in most instances, would prove a dismal failure as a purchaser of brains.

There exists a peculiar instinct or get-there activeness about successful newspaper men, which can hardly be described or accounted for. The stock-in-trade of a newspaper is its reputation or good-will, hence the business manager should be in sympathy with, and easy touch of, the public pulse, that he may calculate the results of his movements, and, with the nerve of a gambler, lavishly “cast bread upon the waters,” and stand always at the wheel, ready to pilot the craft through breakers. If you think that your community would sustain a daily issue of a newspaper, then sail in, and may success crown your efforts; but do not allow yourself to be inveigled into printing a one-gallus, lop-eared, bastard, mongrel sheet. Print a neat, well “made-up” and newsy paper, or none at all. Do not allow drummers to “monkey” with your workmen, or you will buy yourself poor, while the workmen, in many instances, will fatten on “commissions.”

Insist on your establishment being kept neat and orderly. Do not employ a dirty man, for nine times out of ten he will prove a botch; good “union men” are more satisfactory, more reliable, and better workmen than non-unionists. Insist on having the most reliable men in every department, and you will never have cause to regret it.

AN OLD LOVEMAKER.

### GERMAN PRESSWORK.

BY MATH. MILLER.

**A**FTER reading Article XI by a pressman in the February issue of THE INLAND PRINTER, a few recollections from over the water came back to me, and I thought I would pen the following few lines, which may be read with interest by a number of its readers.

The advantages which the Germans have over the Americans in producing illustrated work are :

1. They have the forms or impressions of cuts a month or more before the time when the publication appears, and consequently can afford to spend lots of time on their cut overlays.

2. They moisten their paper very carefully ; then run it through a calendering machine, which gives it a very smooth, moist face to print on. It is then printed slowly and dried with smut sheets between. After it is thoroughly dry it is run through a calendering machine again.

3. Where we have one pressman and one feeder for a press, they as a rule have three and four pressmen working on the same press and form at the same time ; as many as four girls on the calendering machine getting the paper ready for the press ; two girls to feed it, and two girls to straighten the sheets and lay smut sheets between, excepting some publications which are printed on rotary presses, built especially for them, with moistening, calendering and smut sheet attachments, on which they print nothing but perfect electrotypes made from very carefully executed engravings. I will not hesitate to say that, with even that army of help, the German cannot walk over the American in presswork.

The German and European countries being overcrowded with engravers, they can be employed at very low salaries. They get more time to put the finer touches to a wood cut, while the American engraver must have his cut ready for a publication which appears at a stated time, and is generally in a rush.

You can go into any of our leading news or stationery stores and pick up the American publications, and you will see where we have one fine wood engraving we have a half dozen common, coarse process engravings. Such is not the case with the Germans. They usually have finely executed wood engravings, and if they put in a process engraving or etching it generally is a very good one. The Americans are farther advanced in the art of process engraving than our European brethren, but it is only on our best publications where we show it. We are always in a hurry, and on the rush.

We use a class of fine finished paper with a hard face which shows our work off very sharp, and helps shallow cuts along. Again, where the Germans use the moist, soft face paper and hand made engravings, they use better black inks than we do, and in most cases have their inks made to order for this class of paper, ink being cheaper there than here. The Americans have better machinery. Our presses are perfect, and fitted

with all arrangements for regulating the fountain and distribution ; and can be adjusted in every way to suit the requirements of any class of work. When it comes to colored work we leave them away behind. We do not need to feed to pointers and run our presses at say 500 to 700 per hour. We do not need two feeders ; we set our guides, get a register, and put a good feeder up to stick the sheets down as fast as we like. Our colored inks come out with a gloss or finish, and there is no necessity to make an extra impression for varnish or gloss.

I have been among German pressmen and have worked alongside of them on their machines, and know what I am talking about when I assert that a first-class American pressman can turn out more work in ten minutes on an American press than a German pressman in the old country will do in one hour on a German printing machine.

I would like to see some of those European manufacturers send some of their presses to the Columbian Exposition, so that pressmen here could see what their presses look like. They possess some good points, but are very slow, too slow for this country.

Written for THE INLAND PRINTER.

### THE EARLY MORNING TYPO'S CONVIVIAL CHATS.

WHEN THE "JIG IS UP" HE FINDS A VERY WIDE FIELD OF CONVERSATION TO EXCHANGE OPINIONS ABOUT BEFORE HE SEEKS HIS WEARY COUCH.

BY ONE OF THE BOYS.

**T**HERE exists in the minds of a great many people an impression that the printer employed on a morning paper in a big city like Chicago is generally a worthless, thriftless, careless sort of a fellow, who is not possessed of more than the average amount of intelligence he ought to have, considering his intimate connection with the illustrious "art preservative." For this erroneous idea — that is, erroneous considered as a sweeping opinion about the majority of the morning newspaper printing craft — a certain class of compositors are undoubtedly responsible. They are loud-voiced, foul-mouthed, addicted to coarse horseplay, and are not troubled by any conscientious qualms, as they would just as soon take advantage of the drinking infirmities of a fellow-workman as they would pour the vilest 5-cent barrel whisky down their throats. There are, unfortunately, certain all-night houses in Chicago which are constantly resorted to by this class of men and well-known thieves. They have no shame in proclaiming that they are on the outlook for "suckers," and shouting, swearing and trying to cheat each other at dice, cards or pool, form their most prominent, if not their principal amusement. When they venture into the realms of discussion, the conversation is generally about the merits of some prizefighter like John L. Sullivan, a dogfight, a horserace, or the attractions of some unfortunate profligate on the levee ; and the palm of controversy is generally conceded to the man with the loudest voice and the most fluent vocabulary of foul, abominable epithets.

Men of this description, however, only become prominent by their noisy, swaggering attempts to look "tough," and it would be a foul slander for any person, however ill-informed on the subject, to take them as representatives of the whole class of newspaper printers. For a number of years past, the moral, intellectual and personal standard of the printer has been steadily rising throughout the country, and no sane, responsible foreman would think of giving employment to the old-fashioned type of "bum" in preference to

the quiet, respectable workman who not only knows his profession, but respects it for its honorable traditions and its magnificent possibilities in the elevation of mankind.

There are several quiet and respectably kept saloon-restaurants in the neighborhood of Fifth avenue, in this city, which receive their principal patronage from the men who have finished their night's work on the morning papers, and nothing would sooner dispel any impressions derogatory to the intelligence of the representative printer of today than to listen to a group of these when they have sat down to a snack of lunch and the enjoyment of a glass of beer. The subjects chosen for conversation are cosmopolitan in their character. Indeed, they are almost as diversified as the articles that are spread upon the pages of the modern first-class daily newspaper, showing that the compositor of today reads the articles he sets, not merely mechanically, but understandingly.

The writer happened to listen to one of those typical conversations one morning in the vicinity of last New Year's Day. Shortly after 2 o'clock nine or ten well-dressed men dropped into the restaurant, most of them carrying lunch boxes. Each called for a lunch and a glass of beer, or something "soft," and then took their seats at tables, where they played cribbage or pedro for about half an hour. Then they all gathered together and the general conversation began and very soon certainly ranged "from grave to gay, from lively to severe." National, state and foreign politics were freely discussed, but without any tinge of that acrimony which too frequently characterizes the utterances of the bigoted partisan. One gray-bearded veteran broached the Irish dilemma, and said that, in his opinion, the honorable thing for Mr. Parnell to have done was to resign from the leadership of the Nationalist party at once when he saw the mischievous effects of the decision in the scandalous O'Shea divorce case. This opinion was promptly disputed by two or three of the others, particularly by a stout *News* man, on the ground that Parnell's private conduct had nothing to do with his public conduct, and that the Roman Catholic priests were using undue influence in a political matter which did not concern them as spiritual leaders. This called forth some general remarks about the policy of the Church of Rome in trying to meddle with the political concerns of nations all over the world.

"Yes, just look what a mess the interference of priests and ministers of all denominations have plunged the politics of this state and Wisconsin into," exclaimed another man. "In my opinion, priests and ministers should stick to their spiritual duties and leave politics severely alone. We do not want politics and religion leading to bloody wars in this country, as history tells us they have done again and again in the Old World."

"That's true," remarked a dark-mustached man who seemed to be known as "Judge," "and what's more, church property should be taxed everywhere just the same as any other kind of property. Nobody has a right to tax me for his religion if I don't want it. Just look at the enormous wealth which some church associations have amassed out of properties which they don't have to pay a cent in taxes for, although all other properties have to pay their share of these taxes. Of course, it all has to come out of the pockets of the general community."

Each man complacently puffed his pipe or his cigar, and the last statement seemed to meet with general approval.

After a pause a tall, dark-whiskered man said that he didn't approve of working men entering into building associations, as they had to pay taxes and interest on the property long before they had been able to occupy it. "Thus they have to pay taxes twice over-taxes on the house they do occupy and taxes again on the property they don't occupy. Every man should save up his money and buy for himself when he gets ready, and then he'll reap all the profits himself."

"Yes, but the trouble is most workingmen ain't able to save up any money unless they have to pay down so much every week," was the remark made by another. "At all events, I know I could never do it."

"I believe you, Walter," laughed a third speaker, "and another thing is, I would advise every man to have nothing to do with buying on the installment plan. Why, I agreed once to buy

a gold watch on that plan, and I kept paying up and paying up for it and I didn't have it in my possession three weeks before it was stolen from me, and I had to pay up the full price of a watch which I didn't possess."

At this point the telegraph editor of a morning paper came in for his usual sandwich, and he was asked by several at the table what the news was that morning.

"Oh," he replied, "the Indians out West are just raising the devil. They're fighting and massacring all around the agencies."

This led to a pretty animated discussion, in which some held to the opinion that the Indians should be swept into the Pacific, while a few cautiously thought that perhaps the Indians were not so much to blame as a lot of scoundrelly politicians who were robbing them right and left besides trying to steal their lands.

Somehow the conversation turned upon mistakes in spelling, and in this a stout proofreader on the *Herald*, who has made orthography a special study, took a prominent and interesting part. He incidentally remarked that writers were also often very careless in giving their authorities for quotations, and cited the well-known case of the sentence, "The Lord tempers the wind to the shorn lamb," being frequently attributed to the Bible, when the author of it was really Laurence Sterne, the famous novelist.

"Why, of course, that's in the Bible," said a brash young fellow that had just come in.

"I'll bet you ten dollars to a nickel that I'm right," replied the doughty man of proof. As nobody seemed inclined to tackle him on the subject, it dropped cold and flat.

"Well, I'm going home," said one of the party, as he rose and buttoned up his overcoat. Everyone present followed his example, and filed slowly out to catch his car.

Now, I considered all this half-hour's conversation over a smoke a convincing proof that printers, as a class, are just as thoughtful and widely read about the affairs of the world as any other section of the community.

#### THAT BOY JIM.

He was the "devil," that boy Jim,  
 Couldn't do nothing at all with him;  
 Ragged and dirty—a gutter snipe—  
 Pi'in' the cases, distributin' type;  
 Peltin' the neighbors on their heads  
 With bran' new quoins an' slugs an' leads,  
 From early mornin' to evenin' dim—  
 He was the "devil," that boy Jim.

Editor cussed him—'twan't no good;  
 Head as hard as a piece o' wood;  
 Jest bust out in a loud hooray,  
 An' kept right on his hard-head way.  
 But onct when the train was passin' by  
 An' the editor's child on the track—Oh, my!—  
 Jim he rushed with the same don't care,  
 Right in front o' the engine there!

Child was saved! . . . But where was Jim?  
 With flamin' lanterns they looked for him,  
 While the people trembled and held their breath!—  
 "Under the engine, crushed to death!"  
 There in the dust an' grime he lay—  
 Jim, he had given his life away!  
 'Twasn't no use to weep for him;  
 He was a' angel—that boy Jim!

—*Atlanta Constitution.*

THE latest evolution of paper is a paper oil-can so prepared with a patent composition lining that it is impervious to even kerosene oil, and is handsomer and more durable than any can in the market. It is very difficult to solder tin cans so that some are not defective, besides which kerosene oil seems to soon corrode them so that the oil works through, while those which are glass-lined are easily broken; hence, the paper oil-can fills a want.

“A precedent embalms a principle.”

If the printers of this country who have built up a large business and made money have done it by buying cheap presses—if they have made their success by using inferior tools—if they have built their trade up by building their office down—then the worst thing that a printer can do today is to buy a Cottrell press.

But, if, as we believe, the founding of their prosperity in nearly every instance has been coeval with the purchase of their first high-class press, then the best thing a printer can do is to act, promptly and unhesitatingly, upon the principles which these precedents establish.

“If you will not hear Reason she'll surely rap your knuckles.”

# FREER'S COLOR ATTACHMENT.

IT IS A MONEY-MAKING MACHINE IN ANY OFFICE.

*Simple! Practical! Cheap!*

IT HAS NO RIVAL

PRINTING many different colors at ONE IMPRESSION and printing one color over another. It is especially adapted to newspaper and job work, for printing tints and lines in different colors at once through the press. THIS ATTACHMENT WILL DO THE WORK with a very little more time than required on a one-color job.

*"The quality of the pudding is ascertained by masticating the twine."*

Consequently, don't fail to send for Circulars and Samples of work.

PRICES OF ATTACHMENTS COMPLETE—No. 6, \$50.00; No. 8, \$60.00; No. 10, \$65.00.

Order blanks furnished on application. We guarantee our attachment to give satisfaction.

## FREER'S TAPELESS DELIVERY

Is attachable to all Drum Cylinders, and does away with both cylinder and down tapes. It is very simple and easily attached.

NORWALK, OHIO, January 28, 1891.

Mr. W. E. Freer's Tapeless Delivery is the most simple and practical device for delivering a sheet I ever saw. It works splendidly on any size margin and *does not smut the sheets.*

ED. J. RYAN, Foreman Reflector Printing Co's Pressroom.

Boxed and shipped, with a guarantee, to any address for \$20.00.

# ENVELOPES

WE desire again to call the attention of the trade to the *Eagle Brand* of Envelopes, which have been on the market for the past *fifteen years*, and are conceded by Envelope-makers to be the best made and the most regular and popular goods on the market. They possess all the desirable qualities, being *well gummed*, evenly made from the very best quality of paper, and are nicely banded and boxed. We carry in stock at all times *fifteen millions* of Envelopes, and can furnish any size, color or quality, and can fill orders promptly. Customers can depend on not having the vexatious delays with any orders they may favor us with. Below we give the number and prices of those now having a large sale, and which give much satisfaction. A sample order solicited.

BRIDGE AT BERNE, SWITZERLAND.

While our columns are always open for the discussion of any relevant subjects, we do not necessarily indorse the opinions of contributors. Anonymous letters will not be noticed; therefore our correspondents will please give names—not for publication, if they desire to remain incog., but as a guarantee of good faith.

#### A WORD WITH CORRESPONDENTS.

We hope our valued corps of correspondents will not take offense when we ask them to **BOIL DOWN** their effusions in future as much as possible. We are very glad to hear from every section of the country, but our correspondence feature has assumed such proportions that it is impossible to publish all that is sent us. Friends, be brief and to the point, and **THE INLAND PRINTER** readers will think all the more of your contributions for their being so.

#### FROM CALIFORNIA.

*To the Editor:* REDLANDS, February 19, 1891.

I drop you a line to inform you how the printing trade is progressing here. Redlands Typographical Union, No. 278, was organized December 27, 1890, and sent for a charter, which has been duly received, and the union is now in good working order. The following are the officers elected for one year: President, A. J. Waters; vice-president, Charles Cramer; secretary-treasurer, James W. Dallas. There were only eleven charter members, but it is expected to increase this number before long.

FORWARD.

#### THE TORONTO PRESSMEN.

*To the Editor:* TORONTO, Ont., February 16, 1891.

The Toronto Pressmen's Union, No. 10, of the International Printing Pressmen's Union, held their fourth annual dinner and re-union Monday evening, February 9, 1891, in St. Charles restaurant, which was a grand success. Some sixty sat down to the table to partake of and enjoy the good things provided for them, which was a first-class menu. The employers' union was represented at the banquet by its president, Mr. Shepard, manager of the *Mail* job department, who occupied the seat of honor at the right of the president, and Mr. Prescott, president of Typographical Union No. 91, occupied the seat at his left; we also had representatives from all the friendly trades, namely, electrotypers, type manufacturers, ink manufacturers, roller manufacturers, etc., who all ably responded to the several toasts proposed. We had some very excellent songs and recitations which helped to enliven and make the evening very enjoyable.

JAMES KEW.

#### A PREVENTIVE FOR TAPE FRAYING.

*To the Editor:* DES MOINES, Iowa, February 25, 1891.

I have been troubled, as doubtless many other pressmen have, with tapes fraying out at the joints, after they run a little while. I have been experimenting a good deal lately with them, and have discovered a way of sewing them that makes it impossible for them to fray out. If, instead of sewing the tapes in the old way, straight across the end, the thread is lapped over the joint, and sewed closely together, and then placed on some smooth surface and tapped lightly with a wrench or hammer, it will make the joint perfectly smooth. (I inclose a joint made in this manner so you can judge of its merits for yourself.) Tapes sewed in this way will last double the length of time an ordinary joint will, besides I never have any trouble with the tapes tearing the paper. This method is especially adapted for perfecting presses, but I have no doubt it will work equally well on folding machines.

As I have never seen any articles in **THE INLAND PRINTER** on perfecting presswork, I thought this little suggestion would not be out of place.

R. B. DRYSDALE.

#### LANSING NEWS.

*To the Editor:* LANSING, Mich., March 4, 1891.

Frank Doolittle, of the state printing office, is seriously ill with inflammation of the lungs.

Frank Pierce and Alf. Ringe, who have been on the sick list are able to be about again.

Business in the printing line is none too brisk here at present, although the boys who are at work have all they can do. Subbing is poor, and the "subs" who are in the city are not in very great demand.

The delegate question is getting rather warm. There are three candidates in the field with S. N. Chilton, ex-president of No. 72, in the lead. It is rumored that a "dark horse" will be entered in the race on the 25th.

At the last regular meeting of No. 72 the new officers took hold of matters, and everything went on as smoothly as though they had always held office.

E. C. Alchin, a former employé of the *State Republican* office, who recently started a paper at Copemish, Michigan, sold out last week and returned to this city.

"Deck" La Mont, a former Lansing typo, and Miss Mary Ernest Barry were married February 26, at Montgomery, Alabama. His many friends and acquaintances here extend their congratulations.

SLUG ONE.

#### FROM MILWAUKEE.

*To the Editor:* MILWAUKEE, Wis., March 1, 1891.

As nothing has appeared in your columns from the Cream City of late, will write and let your readers know that this burg continues to exist.

Matters in printerdom have been decidedly sluggish since the holidays, many of the offices being so slack that the regular hands have been rotating and taking their "offs," something that many of the offices have not done before in years. Yewdale manages to keep pretty busy at catalogue work, as also does the Wisconsin. Swain & Tate, the Riverside, Burdick & Armitage and Keogh just about manage to keep their regular forces moving, and many of the small-fry offices are doing practically nothing.

The Minn Printing Company which was organized about a year ago, and which has secured a splendid reputation for doing fine work, has been sold out by the Minn Brothers, but I have been unable to learn the name of the purchaser. C. S. H.

#### AN EMPHATIC DENIAL.

*To the Editor:* CHICAGO, February 27, 1891.

"F. W. N. L.," writing in the November (1890) issue of **THE INLAND PRINTER**, from Buenos Aires, regarding the C. S. A. de B. de B. establishment of that city, says: "This company is about the only one, with the exception of Kidd & Co., in Buenos Aires, where everything to do with the named trade, besides engraving, coloring, gilding and all work of art is turned out, which would really surprise the Yankees to look at."

Now I wish to say a few more words in regard to the city herein referred to (your readers will perhaps remember my previous letters). The work done there will only surprise the Yankees in this way: they will wonder how a country as old as Argentine can be so far behind the times, and would class the work as there turned out with that of our poorest amateur productions. There is not a printing machine in any of their largest concerns fit to set alongside of a respectable American press. If a good man goes down there, he must accustom himself to the class of work turned out, and do just as they do or he will not last long. I could mention a dozen firms in Buenos Aires who are doing just as good work, and better, than the firms he mentions. I was employed by one of the firms he speaks of, for three years, and know whereof I write. I know that a printing office down there is just like the government; the employés and employers are continually at swords' points and cannot work hand in hand with a competent

workman. I know it took me and many others a long time to convince people down there that they were taking hold of things the wrong way.

I know of a case where \$20,000 worth of machinery and other supplies for a steel plate outfit (from the United States) were lying around in wet cellars and out in the open moist atmosphere, just because the people who went there from this country to run them and take charge of them could not agree with the people who were there from Germany, Italy and France, many of them thinking they knew more about them than the men who had worked on them, built them and spent all the best part of their lives on just that class of machinery, and had worked for the United States government and other large establishments at Washington, D. C.

If people wanting to go there will take my advice, they will stay away and leave competition to the German and Latin races.

MATH. A. MILLER.

#### FROM LYNCHBURG.

To the Editor:

LYNCHBURG, Va., March 4, 1891.

Thinking that some news from the "Hill City" might prove interesting to some of your many readers I will endeavor to give a few notes. Trade is very good at present, the job offices having all they can do, and book compositors are in demand in several of them. The newspapers are having a large advertising patronage and if they are ever to make anything this seems to be the time, but the proprietors still persist in saying they are unable to pay over 25 cents per thousand for composition. Both the morning papers have combined the foremanship (?) and ad. cases, and one man is compelled, by contract, to do the work of both for \$21 per week, and pay all help out of his pocket, and there are plenty of union (?) men ready to sign the contract and undertake the work. No. 116 had some trouble a few weeks since about the signing of such a contract.

There is some talk of a new daily for this city, but of what size has not been learned, but it might be inferred that in order to be abreast of the times it will be a large plate-matter sheet.

The *Busy Bee* published monthly in the interest of the Bedford City Business College will make its first appearance on March 9. John W. Rohr, of this city, will do the composition and press-work.

Robert Lynn, who has been running a small office for the past few years has come down into the business portion of the city, put in new type, presses, electric power and union men. We wish him success.

The election of officers in No. 116 takes place the last Friday in this month, and there is quite an interest manifested as the present offices are trying to hold over while the men nominated in opposition are in earnest and mean to win if possible.

WILLIAM.

#### FROM COLORADO SPRINGS.

To the Editor: COLORADO SPRINGS, Colo., Feb. 25, 1891.

As nothing has appeared in your journal for a long time from the "home for union printers," your readers may think us a little indifferent; but such is not the case, as we have one of the liveliest and most persistent unions in the country. The members of No. 82 have collected and forwarded \$1,000 for the home fund, which was given by the citizens of Colorado Springs. In addition to this, two lots were donated — one inside the city limits, the other at Woodland Park, one of the popular resorts near here.

It has been suggested by some of the members of the local union that the trustees of the home fund dispose of this lot at Woodland Park by raffle, say at 25 or 50 cents a ticket, and that every union printer be given an opportunity to purchase these tickets. By this means quite a sum would be realized, and the outlay by the purchasers of the tickets would be but a trifle.

The Park, in which this lot is located, has become quite a noted resort. It is twenty miles west of Colorado Springs, up the famous Ute Pass, and on the line of the Colorado Midland railway. The town is on a broad plateau, at an elevation of nearly

nine thousand feet above sea level; and just north of the townsite is the "Divide," which separates the waters of the Arkansas and Platte rivers. The scenery at this point is magnificent, and an uninterrupted view can be had of the Snowy Range, one hundred miles to the west, while to the east, only eight miles, is the west slope of Pike's Peak in full view. The Park has a splendid water system, two large hotels, several business blocks, mineral springs within a short distance, and last, but not least, a newspaper. A more delightful place for a printer to "pitch his tent" could not be found.

The *Evening Telegraph* is the name of a new evening paper which made its first appearance here on February 5, and was most favorably received. It is a seven-column folio, bright and newsy, well gotten up, and seems destined to be a fixture here. It has the exclusive afternoon telegraph report. Mr. Charles S. Sprague is the editor. The office is strictly union.

The *Gazette* will remove the latter part of this month to their fine four-story building on Pike's Peak avenue, where their quarters and facilities will be greatly increased. We understand the paper will be enlarged, and a couple of cases added. They will have the finest and most complete printing office in the state. The new building will be opened with a grand ball by No. 82.

The firm of Holt & Cravens, job printers, has been dissolved by mutual consent, Mr. Holt retiring.

Mr. C. O. Finch, recently of Kansas, has purchased an interest in the *Pike's Peak Herald*. The *Herald* has been moved into larger quarters, and its force increased. There are now an even half-dozen weekly publications turned out by this company.

No. 82 is now recognized in three newsrooms here, namely, the *Gazette*, the *Evening Telegraph* and *Pike's Peak Herald*; also in the jobrooms of these papers and the job office of R. M. Cravens.

The *Republic* and *Mail*, both evening papers, have been closed to union men, and the union is making a vigorous fight against them.

Work has been very good of late in the book and job rooms, while in the newsrooms the demand for subs has been very light. There has been an unusually large number of arrivals during the last three weeks, and the town is full of "prints." H. K.

#### FROM PITTSBURGH.

To the Editor:

PITTSBURGH, Pa., March 7, 1891.

The annual nominations of officers for No. 7 were made at the meeting held last Sunday. The scale committee was appointed to fix a scale for the ensuing year.

This committee has a very important work to do, as the present Pittsburgh scale has defects in it for which remedies have not yet been found. This is true especially of the clause forbidding plate matter. Some months ago the proprietor of an alleged labor paper called the *Trades Journal* enlarged the sheet from four to eight pages. He used plate matter, and there was not a corresponding increase to his force. The scale absolutely forbids the use of plates that are not paid for. In the case of a weekly paper employing men by the week no provision is made as to who will receive the money. After some trouble with the proprietor of this paper, supposed to be run in the interest of labor, it was agreed that the foreman should be paid at the scale rate for all plate matter used. The foreman has made affidavit that he is being paid for the plate matter, but says nothing about the other work that is done, such as setting "ads" and making up. The members of the union feel convinced that they are being hoodwinked, and that the proprietor of the *Trades Journal* is saving considerable money in the way of composition to the detriment of the union.

There are a number of union job offices in the city who publish weekly and monthly periodicals by contract. The scale is also evaded at those offices, and plate matter is being used without payment. A way to settle the trouble is hard to find. The popular idea is to charge the scale rate for plate matter used and

turn the money into the treasury of the union, or else provide that no weekly hands shall be employed on any paper. The scale committee will probably report to adopt one of these alternatives.

The election of officers takes place on March 25, and the new officers will take their seats at the next meeting. MEMO.

#### FROM SAN FRANCISCO.

To the Editor: SAN FRANCISCO, Cal., March 4, 1891.

The strike predicted in the last letter from this city took place during the beginning of February. However, it was of brief duration, not occupying two days in all. According to instructions from the San Francisco Typographical Union, the employés of the printing department of the H. S. Crocker Company refused to work unless the non-union men were discharged. This the H. S. Crocker Company refused to do, claiming it to be their prerogative to employ whomsoever they saw fit, and that they did not desire to force their employés to join any organization against their will. The employés then walked out. However, the non-union men applied for admission to the organization and there being no further cause for continuing the strike, it was immediately declared off by the typographical union. Thus was ended what promised to be one of the greatest strikes that has ever taken place on this coast. Whether it is the end or only a postponement is yet to be proven, for the typographical union, at its last meeting held a few days since, only admitted three of the non-union employés who applied for admission, rejecting the other three and passing a resolution to the effect that in the event of the H. S. Crocker Company refusing to discharge these three rejected applicants, the executive committee was instructed to order the union men to walk out.

It is apparent that the typographical union intends to abide by this decision, as arrangements were also made for supporting the men on strike, and it is stated that no quarter will be given in behalf of the H. S. Crocker Company unless the demands are acceded to. The executive committee has been given power not only to divert the present two per cent assessment now being levied on the members of the union, but also to add two per cent more for the purpose of assistance to the striking employés. It remains to be seen whether the H. S. Crocker Company will accept this dictum and thereby fully end the trouble, or whether the demands of the union will be refused and a hard struggle begun. For it assuredly will assume formidable proportions, as the Typothetæ of San Francisco, at its last meeting, agreed unanimously to stand by the H. S. Crocker Company, and is desirous of establishing the precedent that employing printers have the right to employ whomsoever they desire, irrespective of the wishes of the typographical union.

The last regular monthly meeting of the San Francisco Typographical Union was held February 22, and was largely attended. Thirty-five cards were received and sixteen issued. Three members were transferred to the exempt list and three to the veteran list. There were nineteen applications for membership received. Seventeen new members were elected, and the ten candidates elected at the preceding meeting were inaugurated. No amendments to the constitution were acted upon, as the committee recently appointed to formulate a new constitution is actively engaged in its work, and will submit its report at the next regular meeting. Nearly the entire time of the meeting was occupied in the nomination of officers for the ensuing term. The result of the election, which will take place at the end of the month, is in doubt, as there is some opposition for a few of the principal offices. It is, however, assured that the two vice-presidents and the treasurer will be elected unanimously, being the only nominees for the respective positions, and can now be named: First vice-president, L. Compton; second vice-president, M. Rothchild, and treasurer, J. P. Olwell.

Charles A. Murdock, a prominent member of the Typothetæ of San Francisco, was married on February 18 to Miss Winifred White, of this city. After an enjoyable visit to the Hotel Del Monte at Monterey of a week's duration, the newly wedded couple returned to this city to take up their permanent residence. Mr. Murdock is the president of the Typothetæ, in which capacity

he has shown great ability. Hearty congratulations have been tendered him from all quarters, where his ability is well recognized and appreciated, ranking, as he does, at the head of the printing trade in San Francisco, and his success proving what energy will accomplish.

The strike at Sacramento, California, continues without prospect of abatement. Notwithstanding the judicial decisions against the boycott of the typographical union of Sacramento, the *Bee* still feels the strength of strikers. In consequence, a letter was recently sent to the typographical union of this city by the proprietors of this newspaper, James McClatchy & Co., setting forth their side of the trouble. At the last meeting the San Francisco organization instructed its secretary to inform the firm that it entirely sympathized with the boycotters, and that it always supported sister unions when in trouble.

The next regular meeting of the Typothetæ of San Francisco will take place tomorrow evening. It is understood that the recent action of the typographical union in reference to the H. S. Crocker Company will be one of the principal topics of discussion.

J. P. Le Count, of Le Count Brothers, wholesale stationers and printers, has recently been elected president of the Board of Trade of San Francisco. He has just completed his fourth year as a director of this body, and his efficient services in that capacity have received the reward they deserved. Mr. Le Count's numerous friends, in and out of the trade, join in congratulations and are confident that his well-known energy and ability will insure an administration which will not only rank among the best, but also excel that of his predecessors. E. P.

#### SMOOTH SPRING SITUATION.

To the Editor: PHILADELPHIA, Pa., March 7, 1891.

The printers and publishers are enjoying reasonably prosperous times. There is a little excitement in some quarters about the proposed combination of typefounders, as the impression prevails that consolidation of interests will result disadvantageously to all typographical, publishing and kindred interests. However, it remains to be seen what the end will be. In the meantime the organizers of the typefounders' trust are quietly perfecting their plans.

Every branch of business in any way connected with the printing, lithographic, engraving and bookbinding trades is running along smoothly and satisfactorily. The job printers and manufacturing stationers are busily engaged in turning out large contracts, and the outlook for the future is bright and encouraging.

The silver jubilee of Israel F. Sheppard's connection with the *Public Ledger* as night editor was celebrated on Saturday night, February 28, by the "Ledger Family" tendering Mr. Sheppard a banquet, at which were present nearly one hundred of his associates on the journal. Joel Cook, financial editor of the *Ledger*, presided, and occupied a seat at the center of the table. To his right was seated Mr. Sheppard, the guest of the "family." Before the dinner was commenced grace was said by J. E. De La Motta. While the menu was being discussed Mr. Cook proposed separate toasts for George W. Childs, A. J. Drexel and William V. McKean, the managing editor of the *Ledger*. Chairman Cook, in introducing Mr. Sheppard, stated how he was associated with him on the *Age* before coming to the *Ledger*. He paid a handsome tribute to Mr. Sheppard's worth as a newspaper man, and indicated valuable features which he had introduced on the *Ledger*, notably "The Latest News" column on the first page, it being a summary of all the news of each day. Mr. Sheppard upon arising was greeted with prolonged applause. His remarks were pleasant and interesting. He concluded by saying: "The members of the 'Ledger Family' have good reason to congratulate themselves upon their relations to each other and to Mr. Childs. The kindness of Mr. Childs is proverbial, and none know or appreciate the fact better than our 'family.' To us he is more than an employer merely; he is our best friend. If we are in trouble, he helps us; he remembers us in the Christmas season; he condones many of our

shortcomings; he praises whatever good service we may perform, and when we grow too old for active work he retires us on his pension list. It is a privilege to be in the employment of such a man. There is another gentleman associated with him in the maintenance of the *Ledger*, whom we hold also in high esteem, a solid man, a distinguished citizen, who is interested in our well-doing and welfare, Mr. Anthony J. Drexel. I will close with a wish, in which you will all join, for long life and continued prosperity for the 'Ledger Family,' the *Public Ledger*, Mr. Anthony J. Drexel and Mr. George W. Childs." Addresses and songs followed, until nearly midnight, when the "family" adjourned. The members of the "Ledger Family" who tendered the dinner to Mr. Sheppard, nearly all of whom were present, represented over one hundred attachés, employed in the various branches of the *Ledger's* editorial and newsgathering departments.

A meeting of young men to form a printers' technical school has been held here. Philip E. Margerum, the president, presided. Robert C. Ogden made an address to show the good that accrues from self improvement. George H. Buchanan also spoke, and predicted that financial support would not be lacking. Other addresses calculated to encourage those present were made by Walter W. Hastings, J. Whitehead, William E. Yost, Mr. Margerum and Richard Green, Jr., the secretary. Another meeting will be held during March, when J. W. Ringwalt, of the *Railway World*, is to address the members. The movement was inaugurated by a few young printers who "feel a desire for a more extended knowledge of the business than can be had in the busy hours of the day." Its object is to awaken an interest and enthusiasm among apprentices and young printers and supplement the routine knowledge of the office with the theoretical instruction of the school. At the meeting reported, a letter from Richard T. Auchmuty, of New York, in which a check for \$25 had been inclosed, was read. Dr. James MacAlister, who was expected to address the meeting, was unable to be present, but it was announced that he would probably attend the next meeting, as he had said he was greatly interested in the movement.

Otto Maass, a former resident of Philadelphia, and now printer, publisher and advertising agent, in Vienna, is about to lecture, in that city and in other Austrian industrial centers, on the United States. He proposes to call attention to the wonderful progress which the American people have made in its mercantile, mechanical and industrial pursuits, particularly within the last ten years. He has issued a circular asking for copies of illustrated catalogues, pamphlets, business circulars, trade and mechanical papers, to be used in illustrating his lectures, and to present a graphic, interesting and attractive picture of American growth, prosperity, daring, ability and skill. The American, and, notably, our Philadelphia industrial establishments, have made an art of their illustrated catalogues, and it may be well for them—as well as others elsewhere in the United States—to respond quickly by forwarding copies to Otto Maass, United States Vice-Consul General, Vienna, Austria.

Negotiations between Dunlap & Clarke, the prominent printers and publishers, and the Girard Life Insurance Company for the purchase of the large old-style broad brick-front, three-and-a-half-story dwelling house, No. 1308 Filbert street, have resulted in the firm agreeing to take the property for \$40,000. This is considered a good price, but the neighborhood is one in which property is not likely to depreciate in value. By this purchase Dunlap & Clarke secure the building, now occupied as a boarding house, and a lot 33 by 106 feet. In this transaction the Girard company represented Ellis H. Tarnall and others, owners of the property. Dunlap & Clarke now have their large printing establishment on Filbert street, above Eighth. They propose to erect a six-story building on the site purchased as soon as the preliminary details can be arranged. The building, all of which but the first floor they will probably occupy for their own business, is to be completed and ready for occupancy by October 1, when their present lease expires.

The following intelligence has been received here in relation to the Childs-Drexel Printers' Home: On Saturday morning,

February 21, a meeting was held in the office of Secretary of State Eaton, at Denver, Colorado, in the interest of the proposed home for disabled printers, which is to be erected at Colorado Springs, Colorado, in the near future. There were present at the meeting City Clerk Milburn, Senator McGovney, Secretary of State Eaton, Editor Steele, of the Colorado Springs *Gazette*, and John D. Vaughan. The object of the meeting was to examine the plans and specifications and hold a general conference. "Architects Meredith & Mau have spread themselves on these plans," said Mr. Milburn, "and we feel that we are going to have a home for disabled printers which will be a credit to all parties concerned. Ground will be broken as soon as the weather will permit, and immediately after the adjournment of the international convention, which will be held in Boston next June, we will bring the Executive Committee and Messrs. Childs and Drexel, who gave us the first \$10,000 to start the fund, which now reaches \$50,000, to visit the site which has been selected, as we wish them at that time to assist in laying the corner-stone. It will be a big day for Colorado Springs and Colorado. After its erection the home will be maintained by the International Typographical Union, which includes the United States and Canada."

ARGUS.

#### FROM BOSTON.

To the Editor:

BOSTON, Mass., March 5, 1891.

The fifth of March and snow well up to the fence tops. That's the kind of inspiration spring poets must weave their doggerel from this year, here in Boston.

But the printing trade is not half as much concerned about the unusually severe opening of spring as it is about the strike of the electrotypers. On February 25 all the employés of the different electrotype foundries, having failed to obtain the advance in wages asked for, left their work and went out on strike. The principal firms affected are the Bay State Electrotype Foundry, H. C. Whitcomb & Co., the Boston Stereotype Foundry, J. C. Heyman & Co., Phelps, Dalton & Co. and George C. Scott & Son. For nearly two months negotiations have been pending between a committee of Electrotypers' Union No. 11 and the employing electrotypers looking toward the adoption of a new scale of wages and certain rules regulating the hours of labor and number of apprentices. The scale called for \$4 per day for finishers, \$3 for blockers, and \$2.50 for helpers in the finishing department; in the foundry department, \$4 for molders, \$3.50 for builders and backers, and \$2.50 for battery; and in stereotype department, \$4 for molders and casters-on, and \$3 for electrotypers. The strikers claim that the average of wages in Boston is below that of other cities in the country. In New York, they say, wages vary from \$24 per week, the minimum, to \$35, while at the same time Boston has better workmen than can be found elsewhere. Some of the employers, on the other hand, represent that the wages paid here are fully equivalent to those ruling in New York, owing to the increased cost of living in that city. The strike has seriously interfered with the printing business, more particularly in the book offices. Some of the foundries are working a few hands, and helping out their patrons who are in greatest need of plates.

A report is current that the *Youth's Companion* is running its half-million edition from type, but an inquiry develops the fact that plates have been obtained, and with a delay of only a few hours. So far as can be learned few, if any, outsiders have taken the places of the strikers. The employers are determined to maintain the position they have taken, and at this writing there is no sign of weakening on the part of the men.

The cases of alleged boycotting, charged against a committee of the Job Pressmen's Union, and of alleged misappropriation of the funds of the union by C. F. Mahoney, remain unsettled.

At the February meeting of the Suburban Press Association, Editor Hayden, of the *Somerville Journal*, read a paper on "Personality in Journalism." He characterized as uncalled for and unbusiness-like the custom of wordy warfare between rival newspapers. It would be as warrantable, he said, for tradesmen to post placards in their windows ridiculing the goods displayed by

their neighbors, as it is for editors to say unkind things about their contemporaries. Mr. H. E. Greene contributed a paper on "Presses and Presswork."

The new Hoe web perfecting press which Messrs. L. Barta & Co. will soon add to their plant, will print on both sides and fold 50,000 sheets per day, which is equal to the work of about ten two-revolution cylinders and nine folders.

The Boston Printers' Club is arranging for its second large party, to take place on Fast Day Eve, April 1. Barges will leave postoffice square, at 8:30 P.M., and proceed to the Union Market Hotel, where there will be dancing and a banquet. The club now has a membership of 180, made up of representatives of all branches of the printing trade. Meetings are held monthly at Carroll Hall. The objects of the club are to promote sociability among its members, and to render pecuniary aid in case of sickness. The officers are: President, R. P. Barnes; vice-president, Bernard G. Quinn; treasurer, James Alexander; secretary, F. L. Walsh. G.

#### SOME AMERICO-ENGLISH CONTINENTAL PRINTING AND PRESS NOTES.

To the Editor:

PARIS, February 4, 1891.

Under above head, could send in from time to time, irregularly, with long intervals between, matter relating to Americo-English typographic interests on the continent. Advertisers will find these items, with their precise addresses, a valuable medium for reaching United States continental consumers direct.

After various shifts, the New York *Herald* Paris edition has settled down into an alleged printing office of its own, at rue du Louvre 38. It remains at four pages (20½ by 14 inches), and is now priced at 15 centimes (3 cents) per copy. Printer Boignard, who left Paris specially to manage the printing of the English venture, has returned from the London wreck. Much money has been spent over Bennett's French enterprise, yet the actual good-faith daily circulation does not exceed 850, and each number appearing is a dead loss to both advertisers and proprietor.

A. Chambers, the Anglo-American printer, at rue St. Honoré 225, Paris, who does all the United States local legation work, is just bringing out the third annual issue of his "Monumental Guide of Paris," the feature of which is, besides the pages of descriptive text, a map of the monuments of the city. Chambers' electric-lighted petty printery is now getting rather too much (with increased work) into the "C. C. and C." state; but he proposes making important changes in the course of a few months.

T. Symonds, the visibly-British printer of Paris, who has shifted his printery to rue Cretet 6, will continue (as heretofore) to get out for the current year the American avenue Alma church monthly, the *Parish Kalender*. He also prints a number of other periodicals in English. Symonds is a thick friend of H. Tucker, the conductor of the monthly *Typologic-Tucker*, at rue Jacob 35, and printer Tucker is a Stratford-on-Avon man; his two sons are compositors. Between them Symonds and Tucker probably know more about Paris printing affairs generally than any other two Britishers in the capital. Both have been long in the French city but have always remained loyal bourgeois Albions.\*

C. Schlaeber, the French-Albionese printer, at rue St. Honoré 257, is (like all Frenchmen) a pretty inveterate liar. Noticing that the monthly *Kremer's Graphic Railway Guide*, of 300 pages, which he prints (when it comes out), has not been issued regularly for a long while, I looked up upon him the other day. Textual translation: "It appears very regularly all the months" (!), he had the brazen impudence to assert; . . . "and if you state anything which displeases me I shall have resort to an arrêt [petty process] against you." Hence this note to hasten the "arrêt." Schlaeber's decayed, tumbled-down, wretched printery produces some of the crudest bricklayer's-ladder "typography" of Paris. He does, in loose style, some amount of English periodical work—such as *Paris as it Was and Is*, semi-annual, of some 110 pages (5 by 3

inches), priced at 1¼ francs per copy; *Galignani's Paris Guide*, an annual of 350 pages (6 by 3 inches), not worth 5 francs; and divers other shady advertising brochures.

At rue Montmartre 142, where the *Galignani's Messenger*, Paris, is printed, there was an uneasy feeling the other day owing to the paper being, with little or no notice, suddenly reduced from eight to four pages. That meant a sweep-down of one-half the London compositors, who are probably back in the English metropolis by this time. The daily is the father of the English continental-printed press (established 1814), and paid as a poor affair. But competition had made it ambitious and it has been a fearful drain on shareholders, every issue appearing at a loss. Still, when the cash of the present concern has been all expended, the paper will be bolstered by some flattering advertisements, a new company formed, some more dupes fished in and a renewed impetus given. Then, when those speculators are cleared out, and with burnt fingers the same process will be repeated. And so it will go on. The bona fide circulation of the *Galignani Messenger* does not exceed 1300 per diem.

Boussod & Valadon combination, rue Chaptal 9, the clumsy forgers of British printing, had a long time ago to renounce the English edition of their beautiful (pictorially) *Paris Illustré*, and, soon after, the French one, too. But they still keep on the edition for America and England, of *Figaro Illustré*, a superb monthly publication, in colors. It is turned out in the concern's own establishment, in Asnières (just outside Paris). It is shameful that the concern are so shortsighted as not to see that the pages of their otherwise excellent periodical are spoiled by shocks of technical errors. Boussod & Valadon should be ashamed of themselves.

F. Webb, runner of the weekly *Swiss and Nice Times*, actually printed at rue St. François-de-Paul 16, Nice, announces that this year he removes to Luzerne (Switzerland) for the summer season. In the Swiss town, J. Bücher, who owns a printery on Zurich strasse, will probably have the work. It was he who turned out, in indifferent style, the now extinct hebdomadal *Anglo-American*, a semi-immoral, big advertising rag.

From an issue of twelve pages (12 by 9 inches) the English-American weekly of Alger, the *Algerian Advertiser*, boulevard de la République 12, has dropped to a regular publication of eight pages, but has increased its size to 47 by 35 centimeters. Altogether, publisher J. C. Hyam's sheet is a slovenly produced periodical as regards typography, and has been so ever since its start in 1888. It has a doubtful circulation, and its value as an advertising medium is more doubtful still. It appears but from November to May each year, at the modest price of 6 francs (\$1.20) the season; but it is really a shady, give-away affair.

Jasomirgott street 2 is the new address of the English-American weekly of the Austrian capital, *Wien Weekly News*; but it maintains the same printer at Stadion Gasse 5—L. Schönberger. To look at, it is a very decently produced journal, the type and blocks looking well on the glossy paper; but the typo eye soon perceives that the composition is spoilt by any amount of technical mistakes. The correcting pen quickly peppers most every column of the eight pages (14½ by 10½ inches) with marks of these petty errors. The general *Wien Weekly News* was started in 1886, and appears every Tuesday.

The generally creditable (although faulty in typesetting) monthly, *Anglo-Austria*, for English residents in the polyglot state, printed at Meran (Tyrol), contains in its January number a second compilation on the Americo-British continental-printed press. A first installment on this subject appeared in the issue of last June. Particulars are given in fullest manner of some 120 United States and United Kingdom periodicals actually existing and regularly appearing in the European countries outside Britain; but that figure is believed to not represent by half the total number of American and English continental journals and diverse periodicals.

To Georg strasse 4 has the hebdomadal *Anglo-American*, of Hanover, shifted from Lange strasse 8. This shocking specimen of Deutsch-English "typography" consists of four (sometimes six) pages, printed surface covering 17¼ by 12 inches. It has the

\*Our correspondent is mistaken. Mr. Tucker became a naturalized French citizen during the Franco-Prussian war.—EDITOR

lying impudence to assert a circulation of five thousand, whereas five hundred would be too much of a bona-fide for it. B. Wolff has run it since 1888, at 8 marks per annum; but it is doubtful if he has a single genuine subscriber other than an advertiser, or some persons who take it on "consideration" (with an eye-wink).

That fortnightly English-American periodical of Rome, which appears to change its title more or less with every reappearance each season—for it but appears from November to May yearly—has again altered its name. Now it is the *Roman News and Directory*, and continues its office at via Babuino 90, under editorship of S. R. Forbes. It is printed at the Americo-Italiano printing orphanage at via Magenta 18, founded some years ago by a kind Boston lady named Gould, and still maintained in part by female subscriptions from the Hub and from New York City. It was a charitable idea to put poor Italian boys "to the printing"; but, not knowing English, the composition they do in that idiom is simply disreputable.

SLUG NOUGHT.

#### PRINTING POINTS PLENTIFULLY PRESENTED.

To the Editor:

NEW YORK, March 5, 1891.

The outlook for the spring trade is reasonably good. The freshening up of business in the industrial, transportation, commercial and mercantile interests, has created a spirited improvement in the printing and kindred industries. It is admitted on all sides that the volume of spring transactions will be enormous, when the business current commences to run actively and steadily, and all typographical interests must, consequently, be greatly and profitably benefited. The demand for presses, paper, type and all kinds of printing material continues to be unlimited, and producers and dealers find it difficult to fill orders quickly enough to suit customers.

It is certainly definitely and positively indicated that the typefounders' trust is soon to be established. The negotiations have been conducted very quietly, and information in regard to the matter, if obtained at all, is obtained with difficulty. It is understood, however, that the trust—so-called, though really it will not be a trust, but a company—will be incorporated with a capital of \$10,000,000. The property of the different typefounders' establishments in the United States is valued at \$6,000,000, so that the capitalization will be considerably in excess of the real value of the plant and business. There are about thirty typefounders in this country, all of whom, it is understood, have finally been brought into the arrangement. Ten of them do very little business, ten transact a moderate business and ten control the larger share of the business. They have been fighting each other and cutting prices for an extended period. When the company will be incorporated and under what name is not disclosed, but a reliable authority states that capitalists formerly interested in the cracker bakers' trust are putting up most of the first money, and that a prominent trust company here is acting as their agent. The effect of the combination will probably be an advance in prices and a reduction of expenses. It is whispered that the principal organizers are Edward F. C. Young, president of the First National Bank, Jersey City, and Charles DeHart Brower, a lawyer, of this city. Prominent among the typefounders interested in this important movement are James Conners' Sons and Farmer, Little & Co., this city; Phelps, Dalton & Co., Dickinson Typefoundry and the Boston Typefoundry, Boston; MacKellar, Smiths & Jordan Company (Johnston Typefoundry), Philadelphia; Cincinnati Typefoundry, Cincinnati; Collins & McLeester Typefoundry, Philadelphia; Marder, Luse & Co., Barnhart Brothers & Spindler, Chicago; St. Louis Typefoundry, St. Louis; Palmer & Rey, San Francisco.

The American Newspaper Publishers' Association, at its recent meeting here, provided for a competitive test of the different typesetting machines. G. W. Brennan, agent of the association, is busily engaged in arranging the details for the contest. The terms have already been settled upon and the exhibition will take place this spring, probably in Chicago. Invitations to enter the contest

have already been accepted by the Mergenthaler, Rogers, Thorne and McMillan companies, and the others will also doubtless enter.

There is no enterprise in the United States today that is managed by brighter, bolder, brainier men than the leaders of journalism in New York. Ten years ago this statement could not have been made by one familiar with the facts. Then railroading, shipping and mercantile pursuits were handled by men of a higher order of intellect and a stronger grasp. Journalism did not rank with the foremost professions, but today, in its vast conception, it has no superior. Capital ideas, brilliant daring, unceasing toil, energy, education, genius, push, have combined to elevate it to the very front rank.

The *Sun*, *Herald* and *World* are brilliant examples of this most shining journalism. Mr. Dana has raised the standard of clever newspaper work and made the *Sun* the dazzling target at which all journalists throughout America have aimed. Mr. Pulitzer brought a dash and energy to the newspaper business which it had never known before, and to him is due much of the enterprise that publishers are everywhere displaying today. Mr. Bennett has always exhibited a liberal policy in the management of the *Herald*, to which his present magnificent success is almost entirely due. The *Tribune* and *Times* are also great in all that goes to make up a solid, substantial newspaper.

The annual convention of the American Newspaper Publishers' Association has been held here, the meeting continuing in session three days. Something like two hundred publishers were in attendance, representing nearly every important city and town from Maine to California.

The reading of the officers' reports occupied the first session. The annual statement of Secretary Cowper showed that the association had performed good work during the past year, and that its membership was increasing rapidly. The report of the treasurer, W. M. Tappan, of the New York *Sun*, was also an encouraging document. It showed that the receipts for the past year amounted to \$7,776.99, and the expenditures \$6,087.32, leaving a balance of \$1,679.67.

The right of a newspaper employé to receive free a copy of the daily or weekly paper on which he is employed, was the subject of informal discussion at the second day's session. One western man said he bought his own paper and expected everyone in his employ to do the same.

Early in the proceedings of the third day's session a resolution was presented and adopted, sympathizing with the efforts to establish the World's Fair on a basis of national favor. The president was empowered to appoint a committee for the purpose of advising them from time to time with officials of the fair, so that their counsel might serve in making the undertaking a success. The regular order of business was then proceeded with and the delegates spent some time in discussing the various new processes of stereotyping. It was finally resolved that the chairman should be empowered to inquire into the different processes and report at the next convention. It was decided that the date of the annual convention should be changed from the second to the third Wednesday in every February. Mr. Holmes, of the Toronto *Telegram*, addressed the convention on the subject of rubber rollers; he was not very much in favor of them, saying they were too hard.

The delegates elected the following gentlemen as officers of the association for the ensuing year: President, James W. Scott, Chicago *Herald*; vice-president, E. H. Woods, Boston *Herald*; secretary, L. L. Morgan, New Haven *Register*; treasurer, William F. Tappan, New York *Sun*. Executive Committee—William Cullen Bryant, Brooklyn *Times*; C. W. Knapp, St. Louis *Republic*; Louis Baker, St. Paul *Globe*; J. A. Butler, Buffalo *News*, and Milton McRae, of the Cincinnati *Post* and St. Louis *Chronicle*. After the election the delegates went into executive session.

The City Record Board have awarded contracts for supplying the departments of the city government with stationery to the T. W. Ahrens Company, R. A. Robbins and W. C. Hamblin. The contracts aggregate \$27,000.

Ex-Congressman George West, a prominent American paper manufacturer, whose extensive mills are located in New York, says:

"I am a paper maker; my mills turn out several million paper bags daily, and I own several small daily newspapers besides, and am always on the lookout for new ideas. The tendency of the times is undoubtedly toward compression and condensation. I do not recall any paper today of any importance that retains the old-time blanket form. I am not prepared to say that the people desire any further change in that direction, but the experiment is worth trying."

Will the *Sun* put up a newspaper building which will overtop the structures of all its tall rivals on Park Row, and catch the sunlight something like one hundred feet above the tallest of them? This question is pertinent to an article which appeared recently in the *Sun*, giving a cut and description of a steel building seventy-five feet square, and headed "If the *Sun* Should Try It!" And as the size of the lot suggested for the steel building is about the same as that occupied by the Sun Building, and as there is reason to believe that the luminary that "shines for all" is not wholly satisfied with its lowly place, architecturally considered, among its rivals, the three-column article elaborating the architect's idea is at least significant. But imagine a thirty-two-story building that is 442 feet high and but 75 feet square! The evolution of buildings skyward in the last decade has been surprising, but this would eclipse all previous efforts and give a higher, if not a deeper, meaning to the well-known legal maxim that the owner of a piece of land owns all the air above it.

Among the books belonging to Brayton Ives, which are to be sold here this month, is the Gutenberg bible, which is the first book ever printed with movable types. Another volume is very ancient, it being the fourth book printed with a date (1400), and is the first lexicon or dictionary published. The work is the "Catholicon of Balbus."

Fifty new black and whites have been hung upon the walls of the Fellowcraft Club by the courtesy of the Century Company. Between thirty and forty of the Century's pictures had been hanging there for a year or more and the new deal is made in order to freshen up the club house. In the pictures just hung are interesting examples by Kemble, Redwood, Remington, Landham, Edwards, Pennell and three or four other men. These pictures have a peculiar interest, as presenting the originals for magazine illustrations. There must be several hundred such pictures hanging upon the walls of the various club houses, but there are few collections equalling in interest those now exhibited at the Fellowcraft.

A new daily 2-cent newspaper, called the New York *Recorder*, has appeared. It is edited by Howard Carroll. The *Recorder* is a twelve-page sheet of the size of the *Herald*.

PRINTER-JOURNALIST.

#### THE LATE STEPHEN McNAMARA.

To the Editor:

CHICAGO, February 28, 1891.

It was my good fortune to have known the late Stephen McNamara almost from the time of his arrival in Chicago to the date of his death, a period of some thirty years, and during that time I have had numerous opportunities of noting the prominent characteristics of his nature, which, with his pronounced and varied abilities, resulted in his becoming one of the best-known personages in the printing business on the continent.

Endowed with a very sanguine temperament, he possessed in a large measure the happy faculty of looking on the bright side of every situation; and when others were doubtful or timid, his energetic actions and confident manner would go far toward dispelling their apprehensions, and impelling to renewed activity all with whom he came in contact. A high sense of integrity and honesty of purpose in thought and deed characterized his dealings with his fellow men, winning him the respect and esteem of all who enjoyed the pleasure of his acquaintance.

Mr. McNamara was among the first in the ranks of the pressmen of the country who saw the necessity of having separate local organizations for the government and regulation of the affairs of the pressmen and the compositors. For a time this measure was looked upon with a great deal of apprehension, many believing

that it would result in weakening the organizations of both branches. But whatever of ill feeling might have been engendered by this proposition at the time has long since disappeared, as the justice and wisdom of the movement has long been acknowledged. The overwhelming preponderance of numbers possessed by the compositors, and the consequent inability at times to fully recognize the obvious requirements of the pressmen, and to intelligently legislate thereon, would naturally lead a man of Mr. McNamara's acute observation to the conclusion referred to. But he did more than to merely advocate the separation of the two bodies under different charters. It is due to him more than to any other one person that the pressmen, so far as the local organization is concerned at least, have been so conspicuously successful in their efforts to manage their own affairs. It was he who laid down the policy and outlined the platform which should be their governing principle, the strict adherence to which has made their success not only possible but almost unavoidable. For his services and far-reaching sagacity in this direction, he is entitled to the unqualified thanks of every union pressman in this city.

In the early stages of the existence of pressmen's unions, Mr. McNamara was also an advocate for the formation of a national or international union of pressmen, a consummation which would of necessity result in severing all connection with the International Typographical Union. But in his later years and with his riper experience and judgment, he unhesitatingly rejected this measure as unsafe. He clearly saw that from the way things were shaping themselves in this country, the interests of the printing trades would be best subserved by preserving an alliance that could be used to advantage against the possibility of unjust encroachments.

I have met but few men in the printing business who could, as a speaker, express his views so clearly and so logically, or, as a writer, so forcibly and trenchantly. A thorough mechanic, he was master of all the details of his art theoretically and practically. Always a student, there was nothing connected with the art of printing, however trifling or insignificant an object it might be, that he did not consider worthy of familiarizing himself with. In every way he could easily be recognized as the intellectual peer of any pressman of his time in America.

By his hosts of friends and acquaintances outside of the printing business, Mr. McNamara was in every way regarded as a worthy citizen and an upright gentleman. Straightforward and open in his dealings with all, he showed little toleration for underhanded methods or dishonest intrigues on the part of others. His family and social relations were of the most happy and pleasant nature; and of course it is here that the keenest regret and sorrow will be manifested for his loss, and where the tenderest memories will longest cling about his name. But we shall all miss him for his many excellent qualities; we shall miss him for his honesty of purpose, for his uprightness, and his sturdy manhood; we shall miss him for his cheerfulness, his generosity, and his frankness. It would be difficult to conceive how anyone that knew him could have any but the kindest respect for the memory of Stephen McNamara.

M. J. CARROLL.

#### FROM WASHINGTON.

To the Editor:

WASHINGTON, D. C., March 9, 1891.

I heartily approve of the sentiments expressed by your "Practical Pressman" in regard to the display of fine printing at the World's Fair. His suggestions are timely, but I am of the opinion they will not meet with the approval of the International Typographical Union, who, it seems, has decided to antagonize the International Printing Pressmen's Union. What the International Typographical Union can gain by such a policy I am unable to comprehend, but I assure you if the International Typographical Union can stand it the International Printing Pressmen's Union can. But it is far from being a fraternal policy. The World's Fair Display Committee of the International Printing Pressmen's Union on fine printing are working to secure

a good display, and are well satisfied with the progress made. They have secured the support of individuals whom the International Typographical Union cannot afford to antagonize. The International Typographical Union and International Printing Pressmen's Union could separately secure very creditable displays reflecting honor upon each, but jointly could accomplish a larger measure of success. While this matter has never been discussed by the members of the International Printing Pressmen's Union committee, I am satisfied they would be willing to join with the International Typographical Union, and do all in their power to carry along matters to a successful culmination. The object to be attained should be paramount and all minor differences of organization ought to be laid aside, although the truth is no antagonistic differences on any subject should exist between members of the printer's craft when the general good is considered. If I was not sure of being snubbed by the International Typographical Union, I would suggest to the International Printing Pressmen's Union committee to propose to the Boston convention to join our forces in this very important matter, but you know no man cares to invite a snub. However, whatever the outcome is, I do most heartily approve of the wise desire of your "Practical Pressman," and would say that if he is an International Typographical Union pressman, and I very much doubt it, he is far in advance of the organization of which he is a member.

ALTON B. CARTY.

#### OUR NEW ZEALAND LETTER.

To the Editor :

WELLINGTON, January 24, 1891.

After the very busy year the printers have just gone through, I suppose they feel they must have a rest. This will account for the scarcity of my news this month, for there has been nothing stirring since I last wrote you. The old year has been rung out and a new one been welcomed with much rejoicing and the anticipation that there is good in store for us in its days before us. What a blessing it is that Hope was left in Pandora's box, for to have its power springing eternally within us creates an oasis in a desert of trouble. The reports of the secretaries of the New Zealand Typographical Association notify that there is every prospect of success before the different branches, and within the last few months Otago's membership has risen from 80 to 113; Napier gaining also about twenty members; while Wellington, owing to the commencement of parliament this week, will make the usual session increase in her membership. A branch has also been established on the west coast of the South Island, which promises to not only do a great deal of good in the way of reform, but increase our membership. Other parts of the colony are gradually seeing the importance of the unity of printers, more especially as within the past few months the Canterbury Typographical Association has succeeded, after much diplomacy, in bringing up the scale to 24 cents per 1000 ems (the recognized scale of the New Zealand Typographical Association), and at their next meeting a notice of motion will be dealt with which has for its object the affiliation of that body with the New Zealand Typographical Association.

The trades and labor councils of our colony have not been at all hurt or injured by the late strike, as it was prognosticated on all hands they would be—some going so far as to express the opinion they would cease to exist. Our Wellington council, under the secretaryship of Mr. D. P. Fisher, is working exceedingly well, he having established a free reading room and library in connection therewith for the use of all unemployed, and masters are requested to telephone to the Trades hall when wanting workers. It is worthy of mention that Mr. Fisher has written to all the leading newspapers (daily and weekly) in Australasia, and in no single instance has he met with a refusal. The Canterbury Typographical Association is to deal with a notice at its next meeting, which has for its object the withdrawal of that body from the Trades and Labor Council which it was the founder of, but I do not think the motion will be carried.

Owing to Mr. Mills having been offered the sub editor's chair of the *New Zealand Times*, he has resigned his position of

secretary to the executive council of the New Zealand Typographical Association. Mr. Mills was offered his rise in life while working at case.

The new parliament was opened yesterday, when the old ministry, who were returned in a minority, resigned, and Mr. Ballance (who is the editor of a northern country daily) was sent for to form a ministry. Mr. Ballance's right-hand man is Mr. W. P. Reeves, a young man who is likewise an editor, connected with the *Lyttelton Times*, so that we shall have at least two journalists in the new ministry. In the contest yesterday for the speakership of the lower house, another journalist won honors, Major Steward being successful, and he is the editor-proprietor of a southern country daily. There are several "journs." who are members of the house, and it is probable that Mr. George Fisher will get the chairmanship of a committee.

I give here the interesting portion of the annual report of the Canterbury Typographical Association.

The year 1890 will live long in the memories of trade unionists in this colony, as well as in all other parts of the globe, as one of intense interest and excitement. The beginning of the year witnessed a phenomenal growth of trade unionism in the Australasian colonies, which was evidently viewed with unjustifiable alarm by employers in all branches of industry. This led to the formation and federation of employers' associations, both in this and the neighboring colonies, and precipitated the unfortunate maritime strike, with all the circumstances of which members are familiar. In this connection the Canterbury Typographical Association was brought prominently before the public, owing to the vigorous attitude assumed by the maritime council in reference to our dispute with Messrs. Whitcombe and Tombs. It will be remembered that the council wisely determined to retire from the position it had taken up in that affair, but, unfortunately, was soon after plunged into a desperate struggle with the shipowners' and other employers' associations. The result is too well known to need recapitulation of details. Suffice it to say, that the defeat sustained by the unions has not been without its advantages, inasmuch as it has disclosed to unionists their vulnerable points, and care must, in future, be taken to render these impregnable before venturing on another struggle, should one be again necessary. It is hoped, however, that a more enlightened mode will be found of settling disputes between capital and labor than that which we have recently witnessed. Of one thing we are confident, and that is the willingness of the great majority of unionists to submit to decisions of legally constituted boards of arbitration. It now remains for the employers to manifest their approval of such a step. In order to mark our appreciation of the efforts made in our behalf by the maritime bodies, in September last, it was resolved, by a general meeting, to strike a special levy of 2½ per cent on the earnings of members. As a result of this, we have been enabled to contribute £51 8s. 7d. to the Maritime Strike Fund in Dunedin, and £52 19s. 9d. to the Lyttelton Wharf Laborers' Union. In addition to these two sums we have contributed a special grant of £25 to the Lyttelton Wharf Laborers (making £77 19s. 9d. in all) and £53 3s. 10d. to the strike fund of the Canterbury Trades and Labor Council. Altogether, we have contributed £182 14s. 2d. in aid of those affected by the late strike, an amount which will, your board think, compare favorably with that contributed by any other union of like strength. There is still a small amount in the secretary's hands to credit of levy fund, and some outstanding contributions, and it will be for this meeting to decide in what manner these shall be dealt with.

Your board desire to gratefully acknowledge receipt of the following amounts in aid of our struggle with Messrs. Whitcombe and Tombs: Boot-makers' Union, £10; Amalgamated Society of Carpenters and Joiners, £10; Railway Servants' Society, £7 10s.; Carriers' Union, £5; Laborers' Union, £5; Amalgamated Society of Engineers, £10; Belfast Union, £5 5s.; Boiler-makers' Union, £3; Butchers' Union, £2 2s.; total, £57 15s.

Coming now to our immediate trade affairs, your board have much pleasure in announcing that, despite the troublous period through which we have passed, the business of the society is progressing satisfactorily. The shilling per 1,000 is, as you all know, an accomplished fact, and the arrangements entered into between the society and the jobbing office proprietors are, on the whole, working smoothly. There are one or two matters, however, which will need some consideration when the revised rules are under discussion, the principal one being that of casual labor. A special committee, appointed by the board, have revised the rules, and it is proposed to call an early meeting to discuss the result of their labors.

Efforts have been made by your board and our Timaru branch to arrange for the recent increase to take effect in the *Timaru Herald* office, but, at the request of the proprietor, it was decided to defer the matter until the beginning of the present year.

At a recent meeting of the board it was determined to make a further effort to open the office of Messrs. Whitcombe and Tombs, but in consequence of the receipt of information to the effect that there is no probability of doing this on anything like satisfactory terms, it has been decided to defer the matter.

As showing the amount of business transacted by the board, no less than twenty-three meetings were held—an average of nearly two per month.

TOM L. MILLS.

WONDERLAND.

911 Filbert street, Philadelphia, Pennsylvania.

## FROM VERMONT.

To the Editor :

MONTPELIER, Vt., March 8, 1891.

This, the capital of the Green Mountain State, contains in all about sixty members of the art preservative. About one-third of the entire number are job printers while the other two-thirds are compositors. Most of the printers are natives of the state, and it may be truthfully said that there are some fair job printers among them. Their experience in most cases was obtained in a comparatively limited territory, but they profited, in fact, were apt pupils in the art. Little is heard in Vermont of typographical unions except in Rutland, where a flourishing one exists. Outside of Rutland no typographical union exists in the state.

As to wages here: Both the newspaper offices—*Watchman* and *Argus and Patriot*—pay compositors on newspaper work 23 cents per thousand. The job printers receive from \$10 to \$12 per week, and the pressmen the same.

H. C. Bean, formerly of the *Watchman*, has gone to Manchester, New Hampshire, where he is employed at newspaper work.

There is a good opening for a daily paper in Montpelier. In the capital there are something over four thousand inhabitants, and it is a growing town of considerable business. Where is the man who will start one? There's millions in it. One of the weekly papers claims a bona fide circulation of 8,000 copies, which shows that this section of the country is composed of reading people. Ho! for a good morning or evening daily for Montpelier! is the wish of at least one of the members of the craft.

W. E. H.

## FROM WASHINGTON.

To the Editor :

WASHINGTON, D. C., March 5, 1891.

As has been the case for the past few months, news is just a little scarce here now. The most important to the craft was the adjournment of congress, which took place yesterday at 12 o'clock sharp, and unless an extra session is called, the *Congressional Record* will be a thing of the past until December next. It is utterly impossible at this early period to attempt to chronicle the result at the printing office. We have not, as yet, learned of any changes in the force, though Dame Rumor has it that there will be a large number of "removals" at an early date. The "subs" on the *Record*, of course, were nearly all discharged; a few, we are glad to state, received permanent appointments. The session just closed has been a hard one to the printer, and though a number of nights they were compelled to begin labors at an early hour, the sun shone brightly ere they left the office. Long speeches, a large number of bills on hand, etc., rendered it an actual case of necessity for the typos to remain until the "paper was out." Work was in progress there during all the recent holidays, and they were compelled to labor all last Sunday night. For a person of intelligence to state that these hard-working people do not deserve extra compensation for night work, seems brutal in the extreme. Unfortunately, the night hands at the government printing office (among whom are a large number of young ladies) have a very few sympathizers among the alleged solons at the capitol, or it would not require so much speech-making to secure the passage of a bill granting them additional compensation for night work. It seems very strange that persons of the slightest caliber cannot perceive this fact; but such was the opinion of a certain western congressman expressed in the house of representatives during the progress of the twenty per cent bill a few days ago. It is safe to say, however, that a few narrow-minded individuals occasionally gain entrance to places of dignity.

It is rumored today that there will be a sufficiency of copy, such as speeches, proceedings of the senate, and some of the house, to compel the employés of the *Record* to labor two or three more days yet. This will doubtless be done in daytime.

Most of the thirty-five or forty "subs" on the *Record* are beginning to leave town and those who will remain in the city are already "sizing up" some of the down-town offices. Many will remain here until their twenty per cent will have been available.

This donation by congress will afford them a handsome "bonus" with which to leave town by rail. "Subs" on the *Record* this session received just about as much work as they desired and many were heard to say, on Wednesday, that they were glad that congress had adjourned, and in the same breath expressed themselves that the one just closed was their last session on the *Record*. If it was not for the twenty per cent addition for composition on the *Record*, we have no doubt that there would not be such a rush for situations as there always is.

Messrs. George J. Zimmerman, J. C. Spencer, William Wilson, Joseph E. Reese and E. F. Morrison have been acting in the capacity of copyholders in the proofroom off and on during the session just closed. We unhesitatingly state that the transfers, though temporary, were very acceptable when was taken into consideration the fact that many nights were not made in the composing room.

Before our next letter is in print the annual election of No. 101 will have "been an' gone." At present candidates are all confident of being elected, and the manner in which they are doing the buttonhole act is a caution, to say the least. Nearly all the candidates are employés from the government printing office, and it is safe to say that down-town aspirants will have little or no show. It will be remembered that last year two of the four delegates to the international convention at Atlanta were down-town typos. Our next letter, however, will give you the result in full.

Foreman Aven Pearson and assistant William Hickman are, no doubt, greatly rejoiced over the fact that night work has ceased. There are no employés on the *Record* who have been more faithful to their posts than these two gentlemen. Every night, with but one or two exceptions, they have not been absent for any great period from their duties.

The *Sunday Herald*, of this city, is about the only weekly issue here that is especially noteworthy. Last Sunday's issue was the finest that has ever been known in the history of that journal. It contained all in all thirty-six pages. They offered a prize for the most popular boy and girl, which award was made known in the above edition referred to. The votes were counted by a committee appointed for that purpose. The first prize was a pair of handsome ponies and a surrey and a seal plush coat. A gold watch and chain and a Parisian hat constituted the second prize. This alone has won for the *Herald* a large circle of patrons.

Congress has failed, after a good deal of bluster, to locate a site for the new printing office, and the matter will now lay dormant until the next congress. It is a very sad and serious matter that this intelligent body did not succeed in doing something in this line. It is, and has been for a number of years, a well-known fact that the present government printing office is unsafe in many particulars. The tons and tons of pressure upon that rickety old frame makes an employé sometimes wish that he or she were anywhere but within its walls. There are doubtless more persons in the building now than ever before, and the matter of securing a new building has been agitated for years. We suppose nothing short of a serious accident will bring about a change.

Again, the hearts of those people who do night work at the government printing office were made glad the other day, when it was made known that the twenty per cent bill passed. Twenty-five per cent was asked for, but when congress said that "twenty per cent or nothing" would be paid, the employés yielded at once to their terms, so it is to be supposed that that amount will be available in a few weeks.

Subbing down-town is said to be fairly good now, and the adjournment of congress is expected to greatly swell the list, which is already a very large one. Between the evening *Star* and morning *Post* there is a good deal of work given out.

Jobwork is fairly good here, and prospects are yet bright for the future.

Public Printer Palmer and Foreman of Printing Bryan, have been kept quite busy for the past few weeks arranging for changes that the adjournment of congress is sure to bring about.

President Kennedy, of the government printing office, is sure to succeed himself as presiding officer of No. 101. No one would

rather hear of it than your correspondent, for in him we believe that our union has secured the proper individual.

The last monthly report of No. 101 shows a very flattering condition of affairs in our union. Secretary Frank Padgett takes great care in the preparation of that document, and is kept quite busy with a thousand and one other matters pertaining to his office.

EM DASH.

#### FROM BALTIMORE.

To the Editor:

BALTIMORE, Md., March 5, 1891.

It is said of the elder Bennett, the founder of the New York *Herald*, that he studied how to make his paper talked about, as the best mode of advertising it, in order to bring his new venture prominently before the public. We all know how well he succeeded. But the enterprising and shrewd Scotchman indulged in personalities to a degree that often imperiled his physical well-being. It would seem as if the publishers of the *Evening World*, a late addition to afternoon journalism in this city, would imitate the style of the New York *Herald* in its early days. For some weeks past the *World* has been pouring a hot fire in the direction of the House of Refuge, but principally upon the general manager, or superintendent, charging this very worthy gentleman with being delinquent in a thousand ways. While mismanagement reigns everywhere within the walls of this reformatory institution, according to the *World*, order and cleanliness is observed at the St. Mary's Industrial School, a sectarian institution of a reformatory character situated in the neighborhood of the Refuge. "At the Industrial School," says the *World* with much apparent satisfaction, "there is the printing office where twenty-five boys learn a trade that will carry them through life anywhere in the civilized world. Both book and job work are done here for Baltimore firms, and there is seldom a lack of orders. It is good work, too."

That book and job work is done at this place, legitimate printshops in this city know only too well. It is charged by our printers, that solicitors for jobwork for this Industrial School daily importune our merchants and others for orders at a price which would bankrupt any printing office in the city. No wonder the school is seldom without orders. Here is another statement made by the *World* that I would correct. Boys do not learn a trade of any kind at this reformatory, much less the "art preservative." There are several graduates from this school at work at the case in as many offices in Baltimore, but nearly all of these are called "blacksmiths." An effort was made a few years ago by Baltimore Typographical Union, to have printing excluded from this Industrial School, but without success.

The publisher of the *Revealer*, a sensational weekly here, was found guilty today in the United States court on the charge of sending obscene matter through the mails. The proprietor of the *Pall Mall Gazette* was tried in the same court last week on a similar charge, but the jury failed to agree; he will have to stand a new trial, as the prosecuting attorney would not consent to have the case *steted*.

I was informed on good authority today that William O. Beckenbaugh will start a new paper in Baltimore in a few days. Mr. Beckenbaugh is a noted auctioneer of this city. He has just returned from the South, where he has been engaged in selling land in sections where they are getting up "booms" of a business character. The new paper is to be on the order of the *Manufacturers' Record*, a paper which has attained much prominence throughout the country as a journal devoted to the general industries of the South. The *Record* is published in this city.

The funeral of Mr. Robert B. Lotty, for the last twenty years a compositor on the *American*, took place last week. He was a member of the union and also of the Ben Franklin Relief Association.

Mr. Robert Hayden, a well-known Baltimore journalist, who for some years past has been managing editor of the Charlotte (N. C.) *Chronicle*, has returned to this city to assume the management of the Baltimore *Journal of Commerce*.

To newspaper men the fact is well known that an editor on a daily paper of republican proclivities is as liable to be a democrat

himself as not, and that the same apparent inconsistency holds as good on the sheet of a democratic organ. In this connection mention may be made of the fact that Mr. James R. Randall, the author of "My Maryland," who wrote—

"She is not dead, nor deaf nor dumb!  
Huzza! She spurns the Northern scum!  
She breathes! She burns! She'll come! She'll come!  
My Maryland! My Maryland!"

Yes, it is true that Mr. Randall but a year or two ago was a leading writer on the only republican paper in this city—the *American*. About the time Mr. Randall wrote his famous song, the present proprietor and publisher of this journal, General Felix Agnus, was one of the vandals, as he was at that period, like Pulitzer, of the New York *World*, engaged in a menial occupation in Gotham. Rumor says that the general began life as a barber.

But I was not prepared for a bit of information which was told me today concerning the *Catholic Mirror*. The *Mirror* is an eight-page weekly of long established reputation and is apparently quite prosperous. It is orthodox to the core and quite aggressive. My surprise was this—that it is owned by a Protestant, one J. J. Nicholson, a well-known banker of this city. The paper is issued by the Baltimore Publishing Company, and is now to be sold, provided a number of Catholic gentlemen can raise sufficient money to purchase it. The object in buying out Mr. Nicholson is to put the *Mirror* into Catholic hands. It is one of the best journals of its class in the country.

The German printers' union will not send delegates to the international convention.

Harlem Assembly of Bookbinders appointed a committee to wait on the mayor and city council and urge that all city bookbinding be done in Baltimore.

Proposals for printing and binding 2,500 catalogues of the Manual Training School were opened last week. The bids were as follows: William T. Hanzsche, \$182.50; J. W. Bond & Co., \$189.45; William J. C. Dulaney & Co., \$199; Thomas & Evans, \$202; Isaac Friedenwald & Co., \$210. The contract was awarded to William T. Hanzsche.

The publishers of the *Every Saturday* have at last placed their office in the union. This weekly paper is about twelve years old and has never before been within the jurisdiction of the union. Instead of using plates in the forms, as heretofore, it will have its syndicate matter set up in the office. Of course, this method is going to cost the publishers more money than before, but it will call a "sub" or two off the corner once a week for a day's work. There are not many idle printers now and business may be said to be picking up.

FIDELITIES.

#### TYPOGRAVURE UPON ZINC.\*

The zinc must be free from striæ, lines, or spots of oxide; do not clean it with charcoal, but with a soft brush dipped in water containing three per cent of chlorhydrique acid. Wash and plunge the plate while wet into a bath at an ordinary temperature, composed of one part iodine and the other gallic acid, to which must be added two per cent of liquid phosphoric acid. Stroke the zinc with a brush while in this liquid to prevent blisters; next wash the plate well, drying between blotting paper. When the plate is quite dry, give it a sensitive coat in the ordinary manner, and develop as usual. Grone it for fifty seconds in water with three per cent nitric acid, keeping it isolated from the bottom, and wipe dry without scratching. Ink it by rubbing it with ordinary oil with the palm of the hand, taking care that it is perfectly dry before using the oil; wipe off the superfluous oil, entroll with lithographic black, and wipe with damp flannel very carefully. The parts acted upon by the nitric acid cease to be hygroscopic as is the part prepared by the iodine. Thus one has a plate susceptible of retaining the impression, and is always ready for use, as it is very simply cleaned with nitric acid.

\*Translated from *L'Imprimerie* by Miss Ella Garoutte for THE INLAND PRINTER.

Written for THE INLAND PRINTER.

### EMINENT LIVING PRINTERS.

BY JOHN BASSETT, EDITOR AND PROPRIETOR OF THE "PRINTING WORLD," LONDON.

NO. XIV.—M. P. MCCOY.

His first attempt at any kind of work was as a "devil" to a small printer in Dublin. After three days the proprietor dispensed with his services. First, because he was too young (twelve years), secondly, because he was not tall enough to handle the inking roller on a hand-press, and thirdly, because the printer had scarcely anything to do for himself, much less for a boy. Mr. McCoy returned to school for three years and then went to America with his people. He tried several trades but found nothing suitable. At the age of seventeen he gave three months of his time gratis in order to get an opening in the printing business. It was a small office where he did a little of everything, not forgetting the treading of an old Ruggles machine. Mr. McCoy says: "I executed so many things that I thought there was nothing more to learn; and in three months sought for glory elsewhere only to find out that I had considerably overrated my abilities as a printer. I had no time to lose if I wanted to become a competent workman before my majority. After a variety of experiences in nearly every printing office of importance in New York, I found myself obtaining journeyman's wages of \$20 per week before I was quite twenty." In six months he was managing an office employing about forty men. Mr. McCoy fancies he owes his promotion to the way the material was applied under his direction, the employer being rather skeptical that good work could be turned out with his plant. Twelve months after, Mr. McCoy started in business with a partner, a highly honorable man with great experience. "Within a few months," said Mr. McCoy, smiling, "I had some experience and he had the money. This failure took a good deal of the starch out of me, not mentioning capital."

About this time Mr. McCoy met Mr. W. J. Kelly, of New York, one of the best printers of his day, and an enthusiast on matters relating to the art typographic. Under the influence of Mr. Kelly he became more imbued with an enthusiasm for the craft; its advancement socially, its improvement practically and its possibilities in the future. At this period the number of really expert printers in New York could be counted on the finger ends and the fine printers had a hard job to live. In 1878, in company with Mr. Kelly, he went to the Paris exhibition with an American model printing office; his object in going to France being to

acquire, if possible, a more thorough knowledge of the business, but was grievously disappointed to find nothing in France that an American letterpress printer could regard as an improvement. While in France Mr. McCoy had the offer of an important position not connected with printing, and as it would take him to England he accepted the proposal, arriving in London in December the same year. The negotiations took longer than anticipated and having some six weeks to wait, he determined to utilize the time and succeeded in entering Messrs. Waterlow & Sons' Finsbury establishment as a jobbing "comp" on a 'stab just to learn how that mighty house conducted printing, and to be in touch with all the latest wrinkles that an English printing office could teach. His disappointment was great, and although considered in New York a workman sufficiently expert, "I found," says Mr. McCoy, "I could

not work side by side with Waterlow's men. Two weeks convinced me what was needed in that establishment — *an ability to stow away sorts and other material for a needful occasion.* The man who knew where the former were standing and who could make it all right with the stoneroom, turned out the most work. Skill was not necessary, rather the reverse; and even today I doubt if the Finsbury works can send out a bit of perfect work, either in presswork or composition." Shortly after, at the request of an American importer, Mr. McCoy undertook to get up for him a catalogue in the American style. Mr. McCoy thought he could do it for him by getting a good printer and personally superintending the display, and also by making such suggestions as would be necessary to bring the presswork up to the required standard. At last a printer was found, but he quoted a price higher than the job could be done for in New York, where wages were exactly double. However, the job was commenced,

but it took eighteen months to get a very poor catalogue printed. There was no one in England at that time who knew how to make ready a form properly. The general want of skill was overcome to some extent by wetting the paper and putting a blanket or soft packing on the machine; paper makers only made paper for wetting, consequently no paper could be obtained with a finish suitable for dry work.

Such was the condition of the printing business in 1879. There was not in Great Britain an office that could turn out a form of first-class presswork, such as *Harper's*, nor a first-class job, such as might be seen every day in offices like Kelly's, and many others in New York.

Mr. McCoy sought to alter the existing state of affairs, and his first venture was with the fancy type made by the MacKellar, Smiths & Jordan Company. In those days he was told that the

English printer could not and would not use such gingerbread stuff. After two years' hard work the business was on a firm basis; everything was brought over that had any practical advantage over methods or appliances in use in England.

For some time Mr. McCoy resigned the agency but was again asked to take it up; he therefore returned to London in 1883 and has since then been plodding away. For a few years Mr. McCoy worked in conjunction with Messrs. Lawrence Brothers, but when they retired he commenced for himself and has met with a fair measure of success.

Before Mr. McCoy's efforts not a dollar's worth of American printing material was used in England; now English printers are familiar with the products of every house of importance in America. The difficulties to be overcome at the outset were very great; many have stepped in at the eleventh hour and have reaped where he has sown. Such, moreover, is the fortune of war. As a printer he has always tried to impress upon others that good printing pays both printers and customers, and that it was as easy to do good work as bad, with the proper materials; but work should not be too elaborate to destroy the profit.

At the Paris exhibition of 1889, Mr. McCoy showed an American model printing office. The total earning capacity of the office, measured by the speed of the machines, is shown as follows:

	SIZE INSIDE CHASR.	
No. 8 Chromatic jobber	12 by 18	1,500 per hour.
No. 7 " "	10 by 15	2,500 "
No. 6 " "	8 by 12	2,800 "
No. 1 Pearl jobber	5 by 8	3,000 "
No. 3 " "	7 by 11	2,800 "
No. 5 " "	9 by 14	2,500 "

bringing the total output, if worked to their full capacity, ten hours per day, to 151,000; this, at 2s. per thousand, would give an earning power of \$95 per day, \$450 per week.

**FREER'S COLOR ATTACHMENT.**

A DEVICE FOR CYLINDER PASSES FOR PRINTING IN DIFFERENT COLORS AT ONE IMPRESSION.

We herewith present to our readers a description and illustrations of a device which has recently been invented and patented by W. E. Freer & Co., of Norwalk, Ohio,—an attachment for cylinder presses for printing many colors, and printing one color over another at *one impression*.

This attachment is adapted to be used on a drum cylinder printing press of any approved construction and provided with the usual frame, A, in which is mounted to rotate the impression cylinder, B, traveling over the type-bed, C, and carrying the paper on the same to receive the impression in the usual manner. The frame, A, supports in front of the impression cylinder, B, a transversely extending fixed bar, D, carrying the printing attachment, E. The latter is provided with two arms, F and F', secured on the

transverse bar, D, and supporting journal boxes, G, adapted to be adjusted sidewise by set-screws, G', as is plainly shown in Figs. 6 and 7.

In the journal boxes, G, and the arms, F and F', is mounted to turn a transversely extending shaft, H, held parallel with the shaft of the impression cylinder, B, and supporting an auxiliary cylinder, I, on the periphery of which are placed the type, J, for making an

auxiliary impression on the paper passing from the feed-table of the printing press over the impression cylinder, B, previous to receiving the usual impression on the type-bed, C. The type, J, are preferably made of flexible material.

On the shaft, H, is secured a toothed wheel, K, adapted to be engaged at its teeth by a flexible strip, L, secured on the periphery of the impression cylinder, B, the teeth of the said wheel, K, being pointed to imbed themselves in the said flexible strip, L, when the impression cylinder, B, rotates and brings the said flexible strip, L, in contact with the teeth of the wheel, K, whereby the latter is rotated and the similar motion is imparted to the shaft, H, and the cylinder, I. On the shaft, H, is also secured one end of a spiral

spring, N, fastened by its other end on the arm, F', so that when the shaft, H, is turned in one direction by the wheel, K, being in contact with the strip, L, on the rotating impression cylinder, B, then the said spring, N, is coiled up, and as soon as the strip, L, is disconnected from the wheel, K, said compressed spring returns the shaft, H, to its former position.

On the shaft, H, is also secured a stop-arm, O, adapted to engage a pin, P, secured on the arm, F, so that the return motion of the shaft, H, caused by the spring, N, as above described, is limited, and the cylinder, I, always stands at the same normal position.

The type, J, are inked by a roller, R, journaled in arms, Q, secured on the transverse bar, D. The roller, R, receives its ink supply from a second roller, S, also journaled in the said arms, Q, and held in contact with the roller, R. Ink is fed onto roller, S, by means of an adjustable fountain when so desired (not shown in illustrations). The journal boxes, G, are made adjustable, so as to regulate the impression of the type, J, on the paper carried by the cylinder, B.

The operation is as follows: The spring, N, holds the shaft, H, in its normal position and the type, J, are placed on the periphery of the cylinder, I, and cylinder, I, adjusted so as to imprint at certain places on the paper carried by the impression cylinder, B. The strip, L, is fastened on the cylinder, B, so that when the cylinder, B, is rotated the strip, L, travels therewith, and when the latter comes in contact with the teeth of the wheel, K, said wheel is turned, thus turning the shaft, H, and the cylinder, I, and bringing the type, J, onto the paper carried by the cylinder, B. As the sheets of paper are fed onto the cylinder, B, at the same place, the impression made by the type, J, is always made at the same spot on the paper, and then when the latter receives its regular impression on the type-bed, C,

two impressions appear at the same place. For instance, a certain advertisement in the newspaper printed by the printing press is to receive an additional color. Then the type, J, are adjusted to the space of the advertisement placed on the cylinder, I, to correspond with the space to be marked with the additional color, and cylinder,

I, adjusted to bring the type, J, onto the paper at the spot in which the advertisement is printed by the type in the bed, C.

It will be seen that when the machine is started, the type on the cylinder, I, will make one impression on the paper, and a second impression is made by the type in the bed, C, on the same spot. Thus the device can be used for printing advertisements, cuts or designs, for marking advertisements, for printing lines in colors across reading matter, advertisements or on the margin of a newspaper, for printing tints for jobwork, for printing one color over another, for printing lines in jobwork in as many colors as may be desired at one impression, or at the same time a newspaper is printed. This attachment will do the work in a satisfactory manner, with a *very little more time than required on a one-color job.*

In further explanation we may add the *type* used in combination with this machine is *very hard* vulcanized rubber type, made expressly for use therein, and is of a uniform thickness and hardness and is one-eighth of an inch high. It can be kept in a case and set in a stick the same as metal type. The type costs about half as much as the same style in metal, and will last nearly as long. Several fonts go with each machine. The *tint* material

used is made from a composition which is firm, very tough and without suction, and is cast on cloth to prevent stretching. It is also one-eighth of an inch in thickness, the same height as the type, and is easily and quickly cut into any shape desired. While ordinary ink can be used, specially prepared inks, finely ground and thoroughly mixed, are recommended. They can be mixed the same as printing inks, to produce any tint or color desired, and cost about one-fourth as much as printing inks. They dry very quickly on paper and will not set back. A liberal supply is furnished with each machine. The *rollers* are made over a thick paper quill to fit over the wooden rollers, R and S, that hold them in position, and are covered with thick, heavy felt and wrapped with fine silk, and when charged will hold a sufficient amount of ink to run a large number of impressions without the use of the fountain attachment, and without much variation in color. The ink, it is claimed, will not dry on the rollers, and they will last a long time. They are two-and-a-half inches in diameter and one-quarter of an inch in thickness. The *ink fountain* is in front and a little above the inking rollers (not shown in cut), and consists of large and small reservoirs for each color of ink, from one-half to six inches in width, and can be adjusted so as to feed any roller, while the flow of ink can be governed as desired. Each reservoir is separate and can be easily washed and replaced.

In regard to the flexible strips, L, that the toothed wheel, K, runs on, they will wear from six to eight weeks with constant usage.

They cost about 10 cents each and it takes about ten minutes to put a new one on.

All supplies, such as type, tint material, inks, rollers, etc., used in connection with this attachment, can be obtained through printers' supply dealers, or by addressing direct to the manufacturers.

The cheapness and simplicity of the attachment are two of its leading features, while the results obtained for the amount of time spent is simply astonishing. It is not claimed, however, that it is adapted for large poster work or fine letterpress printing, but for dodgers, circulars, commercial and general job work.

All further particulars as to price, etc., can be obtained by addressing W. E. Freer & Co., Norwalk, Ohio.

ST. LOUIS NOTES.

Trade is now very good and many offices are working overtime. The prospects for a continuance of this state of affairs are good.

*As You Like It* has the appearances of having furnished the public what it wanted, as they have recently purchased an outfit of type and printing materials and now do their own publishing. Mr. Smith, who was the unsuccessful candidate for the office of city recorder of deeds last fall, is now the business manager of the paper.

The Printing Pressmen's Union gave a very enjoyable hop at West St. Louis Turner Hall, Beaumont and Morgan streets, on the evening of February 28. The attendance was quite large.

A new weekly made its appearance on Sunday, March 1, named the *Sunday Mirror*. It is edited by M. A. Fanning, who has been private secretary to D. A. Francis during his term as mayor of St. Louis and as governor of Missouri, until a few weeks ago, when he resigned that position. James Galvin is the business manager. The paper starts out well and its initial number contains a goodly amount of advertising. We wish the new venture success, and no doubt it will attain it.

We are not done with new ventures in weekly journalism, though. Mr. John Jennings, for many years a reporter on the *Post-Dispatch*, and who gained such wide notoriety as the author of the "McGoogan" humorous articles, and recently of the New York *World* staff, will soon launch a weekly paper, and it is almost a certainty that it will be a "go," for Mr. Jennings is well acquainted with what the readers of this section demand; and, moreover, it is reported he has accumulated a snug sum from operations on 'change in the large city, and the paper will be well backed financially.

The criminal libel suit by D. R. Lancaster against Florence White as editor of the *Post-Dispatch* resulted in the assessing of a fine of \$50 against the defendant, which was paid. The suit by the same party against the *Post-Dispatch* itself has not yet come to trial.

The *Globe-Democrat* appeared in a beautiful new dress on the morning of February 23. The appearance of the paper is very much improved for the old dress was very badly worn. In the dress was included new styles of head letters which still more change the appearance of the paper.

The St. Louis *Republic* a few months ago inaugurated a twice-a-week weekly edition for the low rate of \$1 per year and the plan resulted so favorably that it has made this edition a feature of the paper.

Mr. Joseph Dayball, foreman of the pressroom of A. N. Kellogg Newspaper Company and an old-time pressman, very widely known, died on February 17 from pneumonia brought on by an attack of "la grippe." He was buried on February 20, a great number of friends following the corpse to the cemetery and assisting in the last sad rites. Mr. Dayball leaves an invalid wife and a family of several children, some of them grown up. Mr. Dayball was a pleasant gentleman to meet and well informed in his trade and was a pressman who did a great deal of "head work" and was not content with working simply with his hands. He was a graduate physician and had recently invented a very successful side-stick for the purpose of locking-up forms for stereotyping and obviating

the "growing" of type during the process. The family and relatives have the heartfelt sympathy of the printing fraternity of St. Louis.

The election of Typographical Union No. 8 will take place March 25, and the candidates for the different offices are busy electioneering nowadays. Three delegates are to be elected and so far I have heard of five candidates, among the number being Mr. Witter, foreman of the *Globe-Democrat* composing room, and S. D. Holden, holding a similar position with the Great Western Printing Company. So far there has no very great rivalry sprung up as to the other offices.

We hear it rumored that H. M. Brockstedt contemplates a retirement from the printing business soon, but we cannot vouch for the truth of the assertion as yet.

An attempt was made March 4 by swearing out and issuing an attachment against the *Evening Call*, to prevent its appearance, but the attempt was unsuccessful as the attachment was settled and the paper appeared only a little later than usual. The *Call* is the official paper of the city, and experienced any amount of trouble to become so, and it seems it will be necessary for it to do a great deal of fighting to retain the contract. Of course, if the attachment had accomplished what it was evidently intended to

#### A GREAT WESTERN ENTERPRISE.

During our attendance at the Wisconsin Editorial Association recently held in the city of Madison, we paid a visit to the printing press works of W. G. Walker & Co., and were somewhat surprised at the extent of their establishment and the variety of the presses and machinery there manufactured. During the convention they had on exhibition and in operation, running by steam power, four styles of presses manufactured by the company, namely, the "Improved Country Prouty," the "Madison Taylor" drum cylinder, the "Madison King" drum cylinder, and their new book press, the "Madison Queen," which certainly made a fine display. It is needless to refer to the "Improved Country Prouty," as this press is too well known to printers and publishers in the United States, Canada and South America to require any recommendation for its special adaptation for a certain class of work. It is simple, effective and rapid in operation, and consequently it is not, or, at least, should not be, a matter of surprise that a thousand of them have been sold in a comparatively short time. The "Prouty" has had a marvelous success, and is probably sold today by as many—if not more—printers' supply houses as any other press manufactured on the American continent.

do, to prevent the appearance of the *Call*, the contract would have been forfeited.

Mr. William Hyde, since the failure of his newspaper venture in St. Joseph, may be expected to return to St. Louis and reënter journalism here. He is a good journalist and we would be glad to welcome him back. He fought a hard and stubborn fight in St. Joseph before he consented to let the *Ballot* suspend, but it was no use to contend against so many adverse conditions over which the colonel had no control.

The new building of the *Globe-Democrat* is rapidly nearing completion and it will certainly be a handsome and imposing structure when completed.

The strike of the typesetters at the Central Typefoundry is still unsettled.

In the Army headquarters in the city there is in use an old-fashioned old-style Gordon press which General Sherman captured in Atlanta during his famous march and which is doing good work yet; upon February 21, the day of General Sherman's funeral, the press was draped in mourning. THE PRINCESS.

THE first typesetting machine was invented by Mr. George Bruce, a gentleman still alive and hearty. It was introduced by the Boston Typefoundry, Boston, Massachusetts. The world has produced few men who have done more to its advancement than George Bruce, by this single invention. Long may he live.

But the principal center of attraction were the new candidates for public favor, the "Madison King" and the "Madison Queen." The former is a massive, solid drum cylinder, weighing about four tons. It is a splendid piece of machinery and finely finished, and must eventually take high rank among the best class of cylinder presses. It will well repay printers who have an opportunity to do so to carefully examine its advantages.

The "Madison Queen," a cut of which is herewith presented, is a press built especially for *book and job work*, and if its merits can be judged by its beauty of finish, its thorough ink distribution and its quiet, effective motion, it is destined to make for itself a favored place in the estimation of printers. It is a press well worthy the attention of parties desirous of doing fine book and job work, and practically carries fourteen rollers, arranged in such a manner as to secure a *perfect* distribution.

Madison, Wisconsin, is not only famous for its beauty of situation and fine educational institutions, but is also known over the entire United States, Canada and even South America as the place where one of the best-known and deservedly popular country printing presses of modern times is manufactured, and we predict that ere long it will be equally well known for its fine book press manufacturing establishment. It will certainly repay any printer to visit this beautiful and far-famed City of the Lakes and make an examination of the Prouty Press Works and their productions.

## DEATH OF DR. OTTO.

We regret to record the death, at Cologne, on January 26, of Dr. N. Aug. Otto, the inventor of the Otto gas engine. He succumbed, after a brief illness. His career exemplifies the success of perseverance and energy paired with skill and ingenuity. Luck often follows pluck, and a false start is not fatal. Mr. Otto started as a commercial traveler, for which duties his great mechanical skill was of little avail. Some circumstance turned his attention to gas engines, where his commercial capacity remained valuable. In 1867 he, in conjunction with Eugen Langen, surprised the engineers who had flocked to the Paris

*Dr. N. Aug. Otto*  
*Köln 30 Sept. 1889.*

exhibition, with a real practical gas engine, an engine of the vertical type, with flywheels on the top, not uncanny in appearance, but terribly noisy. The noise had to be borne, and was borne—for the new engine became very popular—for nine years, when the "Otto Silent" was presented. That engine has undergone such manifold improvements by the inventor and by Messrs. Crossley, that startling innovations and perfections are hardly to be looked for.

The gas engine in its practical career has thus quickly attained maturity. Yet the early history of the gas engine has to go back more than two hundred years. It is orthodox to quote Huyghens as the first in the field; the series of originators commences, therefore, with one of the best names of physical science. Among the papers of the great physicist is one dated 1640, on a "Novel Motive Force Derived from Gunpowder and Air." Papin took this idea up in 1688, one year after his classical experiment which initiated the steam engine; but he was not satisfied with the results. Fully a century later, Street reopened the researches by bringing out and patenting a motor cylinder with explosion by means of a torch. Many others followed, Lebon, Samuel Brown, Wright, Barnett, Newton, Barsanti and Matteucci, Million, and Lenoir and Hugon, who came very near producing a practical engine. But Langen and Otto's engine of 1867 was so decidedly superior in the economy of gas consumption that the Lenoir and

Hugon engines were at once put out of the field. Otto's gas engine embraced the characteristic features of some of its predecessors—it is rarely otherwise in our days—the compression of Barnett, the cycle of Beau de Rochas, and the free piston and other advantages of Barsanti and Matteucci's engine which was remarkable in many respects and effected ignition by means of the electric spark. But engineers remain indebted to Dr. Otto for supplying an engine which realized and did what others, who deserve all credit, had been aiming at. We will not here contest the question of priority of invention. It has been fought out many a time; and we believe that no one will grudge Dr. Otto the benefits and comfort which his work and exertions brought him.

He was an honorable man, esteemed by all who knew him, and his invention was not a lucky hit. He was not trained as an engineer, but he made himself one by hard work and study; and his achievements prove his great theoretical knowledge, mechanical dexterity, and fertility of resources.—*London Engineering.*

## OVERLAYING.

The theory of overlaying may be explained by this diagram:

Suppose A B C D to be separate hand stamps engraved on wood. If the surface of the stamp marked D were inked, the moderate pressure of ten pounds would transfer these thin lines to paper. C, having more lines, and offering more resistance, would call for a pressure of twenty pounds or more to insure a good print. B is still blacker, and resists much more, requiring say fifty pounds to force it fairly. A, which is entirely black, could not be smoothly printed with a pressure of less than one hundred pounds—perhaps more. If the pressure of ten pounds were put on each square, B and C would show weak and ragged lines, while A would be blotched all over with irregular gray spots. If the pressure were made one hundred pounds or more, the lines of B and C would be hard and muddy, and D would be worn out before one hundred impressions had been taken.

Overlaying is merely an intelligent adjustment of pressure on wood cuts—a pressure adjusted to suit the resistance, so that light lines shall have little and solid surfaces much pressure. So treated, light lines will print sharp and clear; the compact and closer lines of middle tints will be smoothly gray, and the solid portions of the dark shadows will be full velvety black. The different degrees of light and shade in every wood cut require this graduation of pressure. The theory seems simple enough, but putting the theory in practice is not. Every printing machine is made so that the pressed and the pressing surfaces shall be in exact parallel—so that pressure shall be absolutely uniform in every part. If wood cuts were like the ordinary text-types of books and newspapers in their equality of color and their equal resistance to impression, there would be no need of overlaying; no more pressure would be required in one portion than in another. But wood cuts are conspicuously unequal—the thin lines, the close lines, the solid blacks, are irregularly combined. Yet each must have a different degree of pressure. On simple diagrams, like A B C and D, the result desired can be reached by pasting one or more thickness of paper over C, two thicknesses over B, and three or four over A. Adding thickness to the pressing surface gives the additional pressure. On a wood cut in which light and shade are intermixed, the work is extremely difficult—not to be explained by words; to be learned only by experiment and the study of repeated failures. The rarity of well-printed, and the commonness of badly printed, wood cuts are indications of the difficulty of the art.—*T. De Vinne in the Century.*

"To err is human," he was saying, as he corrected a dirty take of agate on the nonpareil case. And next day, when the foreman got hold of him, he thought, "To forgive divine."

(ROMAN AND ITALIC.)

The moonlit eve when first we met  
Beside the twinkling rill;  
The lane where all our trysts were set,  
Tree-shaded, lone, and still,  
Which many a nook afforded meet  
For whispering lovers' secret seat;

Our virgin kiss, first passionate sip  
From love's delicious bowl,  
But pure as ever angel-lip  
From sleeping infant stole, -  
Though Mary hid her cheek of flame  
As blushing at a deed of shame;

And every act and word and look  
Which, lost on all beside,  
Revealed to me what still you took

All, all and yon gray twilight hour  
When 'neath the hawthorn bough  
You yielded first to love's soft power,  
And gave me vow for vow;  
All, all around me shift and gleam,  
Like visions in an opium dream!

They whirl around me—swifter still!  
My brain begins to swim:  
Where art thou, love? My heart grows chill,  
My eyes are very dim.  
Where art thou love? I feel thee now,  
Thy hand is still upon my brow.

Mary, the awful moment nears!  
O keep me in thy heart;  
A dreadful noise is in my ears -  
Mary, we two must part.  
My head upon thy bosom lay  
*There let me sigh my soul away.* 345

346 CYLINDER MACHINE FOR

The theory of passing successfully a continuous web of paper through two type cylinders—yielding a perfect register, well-printed on both sides—has long been regarded as the very “ideal” of economic and rapid printing; all the fabrics requiring to be impressed with objects obtained from types, engraven surfaces, blocks, or any arrangement for giving certain designs upon the surface, have been tending towards the application of revolving cylinders to accomplish this result. It is a remarkable coincidence that at the period corresponding with the substitution of engraven rollers for blocks in calico printing in England, letter-press printing by cylinders should have been commenced by Mr. Wilkinson in America. The first press for printing the continuous web by cylinder was at work in 1837, following on a series of preparatory experiments. The design had for years existed in his mind, and the practical demonstration of the principle then made may be considered as the commencement of a new epoch in typography; and which, under various modifications, as for instance, in the use of single sheets of paper instead of continuous webs, has tended so much to facilitate the satisfying of the prime necessity in newspaper printing (induced by the ever rapid increasing circulation), viz: the greatest possible dispatch

MARDER, LUSE & CO., TYPE FOUNDERS, CHICAGO, ILL.

PRINTING PAPER IN THE WEB. 347

in throwing off the greatest possible number in the smallest space of time.

Various circumstances, partly of a commercial and partly of a mechanical kind, very much retarded the more perfect utilization of the object for which Mr. Wilkinson so long labored. Just before the commencement of the late American war, a company with adequate capital was organized in New York for fully carrying out his invention. A press was built, and other agencies of a necessary kind provided, such as dampening paper in the web, the casting of stereotype plates, etc., but the fearful disturbance to mercantile affairs occasioned by the war, caused the premature collapse of the company, and immediately preceding this calamity Mr. Wilkinson was dispatched to Europe to secure patents for Great Britain and the Continent. He introduced a working model at the Great Exhibition of 1862, resulting in an appeal to provide capital necessary to build a press; and the reason why in the long interval the same has never been put to work regularly, after the capability of successfully printing was abundantly confirmed by the working model, was simply owing to the fact that this, the primary principle (printing), having been regarded as a foregone conclusion, the time was consumed in vague experiments designed to apply the best method of providing the most suitable delivery of the enormous amount of paper a *machine of this kind is capable of printing, and the comparatively small cost at which it is effected. The time thus expended produced its natural effects in impairing* 426

# THE HAMILTON MANUFACTURING CO.

MANUFACTURERS OF

## WOOD • TYPE

### NOTICE OF SALE.

Notice is hereby given that we have this day sold our entire Wood Type business, located at Norwich, Conn., to the Hamilton Mfg. Co., of Two Rivers, Wis., together with all machinery, patterns, designs, patents and good will. All accounts due the Wm. H. Page Co. will be collected by ourselves, and we will pay all our liabilities. Thanking our friends for their liberal patronage in the past, and hoping our successors may be favored with a continuance of the same, we are

Very truly yours,

NORWICH, Conn., January 4, 1891. THE WM. H. PAGE WOOD TYPE CO.

### ANNOUNCEMENT.

Having purchased the business of The Wm. H. Page Wood Type Co., we take pleasure in informing our patrons, and the trade in general, that with our increased facilities, in the acquirement of new designs and patterns and all the latest improved methods of manufacture, we are enabled to fill the largest orders for Wood Type, Borders, Engravers' Wood, and all Printers' Wood Goods, in the most prompt and satisfactory manner.

We wish to announce that Mr. Wm. H. Page does not retire from the Wood Type business by this transfer, but he now becomes a stockholder in The Hamilton Mfg. Co. Mr. Page has been in the business for the past forty years, and the fact that we now have the benefit of his vast experience, together with our own large facilities, is a source of great satisfaction to us. By this change we are the largest manufacturers of Wood Type in the world.

We can offer to Printers a selection of faces such as no other Wood Type manufacturer has been able to offer, and at the same time we are in a position to produce the goods at the lowest possible cost. We shall continue to operate the business at Norwich, Conn., until we have completed a new factory at Two Rivers, Wis., after which the entire manufacture of Wood Type will be carried on at Two Rivers, and the Norwich branch discontinued, but before removing the works from Norwich we intend to open a salesroom in New York City, where a full stock of our goods will be constantly carried; due notice of location will be given to the trade; for the present all orders addressed to us either at Two Rivers, Wis., 327 & 329 Dearborn street, Chicago, or Norwich, Conn., will receive prompt and careful attention.

Thanking our friends for their liberal patronage in the past, and hoping that we may be favored with a continuance of the same, and also that we may make many new friends, we are,

Very truly yours,

TWO RIVERS, Wis., January 4, 1891.

## THE NEW SIDE-GAUGE.

FOR ALL JOB PRESSES.

FIRST ever invented for the purpose, and offered to the trade at so low a price as to make it look as though it was a sham. But it will do wonders, and when we think how often we have wanted a side-gauge that we could use without dispensing with the gripper, we are surprised that it was not thought of before; and then

to be presented in such a simple form, and in a single piece of metal! It can be crowded right between the gripper and the tympan without smashing, losing its elasticity, or bearing off the gripper. Don't you believe it? You will as soon as you try them. You will also find in them many more uses too numerous to mention in an advertisement; and all for the small sum of

75c. per Dozen, assorted shapes. 25c. per set of three.

SOLD BY ALL DEALERS AND BY THE INVENTOR AND MANUFACTURER,

**E. L. MEGILL, 60 Duane Street, NEW YORK.**

# THE HUBER TWO-REVOLUTION PRESS

**DOUBLE ROLLING + SINGLE END + SIX TRACKS + AIR SPRINGS  
FRONT OR BACK DELIVERY.**

The Impression is taken over a six-track bed, which is supported every ten or twelve inches across the press. We guarantee the impression sharp and rigid, and the bed and cylinder are warranted not to spring or give way in the least degree.

The Impression can be tripped at the moment grippers close or before.

The Register is absolutely perfect at all speeds of the press, the bed and cylinder being locked in full gear twelve inches before the contact of bearers takes place, and remaining in gear for several inches after the head line has passed.

The Distribution is uniform from head to tail of sheet. This is accomplished by charging the form with fresh ink both ways from one fountain.

The Air Springs are applied vertically; the piston-head does not come out of the cylinder; no packing ever required; the pressure can be regulated while press is in motion at all speeds.

The simplicity, accuracy and durability of the bed movement is unequaled by any other machine. The double rack teeth are made of steel, with the best rolling curve known to mechanics. From two to three teeth always in contact, thus obviating lost motion.

The sheet is delivered in front, clean side to the fly, without the printed side coming in contact with anything. Fly motion positive, no strap, no slamming. The motion is the same in delivering sheet and returning for next sheet.

The Fly can be disconnected at a moment's notice.

This press is designed for the finest quality of cut and color work; can be used to charge the form both ways with fresh ink, or as a single end press, four or two rollers.

No complicated movements to get out of order.

**SIZES:**

No. 1.	4	Rollers, covering entire form.	Bed, 44	x 60	inches inside bearers.	Matter, 40½	x 56	inches.
No. 1.	3	" " " "	" 48	x 60	" " "	" 44½	x 56	"
No. 2.	4	" " " "	" 37½	x 52	" " "	" 34	x 48	"
No. 2.	3	" " " "	" 41½	x 52	" " "	" 38	x 48	"

**DIMENSIONS, WEIGHT AND SPEED:**

No. 1.	4	Rollers.	Length over all, 15 ft.	Width over all, 9 ft. 3 in.	Height over all, 6 ft. 4 in.	Weight boxed, about 9 tons.	Speed, 900 to 1,300.
No. 1.	3	"	" 15 ft. 8 in.	" 9 ft. 3 in.	" 6 ft. 4 in.	" 9½ tons.	" 850 to 1,200.
No. 2.	4	"	" 13 ft. 6 in.	" 8 ft. 7 in.	" 5 ft. 5 in.	" 7 tons.	" 950 to 1,500.
No. 2.	3	"	" 14 ft. 2 in.	" 8 ft. 7 in.	" 5 ft. 5 in.	" 7½ tons.	" 900 to 1,500.

We furnish with press, counter-shaft, hangers, cone-pulleys, driving-pulleys, two sets of roller-stocks, wrenches, boxing and shipping, at Taunton, Mass.

MEMBERS OF THE ILLINOIS STATE PRESS ASSOCIATION.

Taken at Joliet, Illinois, Wednesday, February 4, 1891, expressly for THE INLAND PRINTER.

GEORGE W. WEST, ENGR. PHILA.

## OFFICERS OF THE ILLINOIS PRESS ASSOCIATION.

THOMAS REES,

Of the Springfield *State Register*, president-elect, is a gentleman who needs no introduction to the editors of Illinois or the readers of THE INLAND PRINTER, as he has taken a prominent part in the deliberations of the association for several years past, and a sketch of his life having appeared in our columns in March, 1890. He is in the prime of life, a thorough, wide-awake newspaper man, full of energy and push, and under his administration we shall look for the continued progress of the organization.

W. W. LOWIS,

First vice-president, the editor and proprietor of the *Lena Star*, is a native of England, having been born in Spalding, Lincolnshire, February 10, 1846, from whence he came with his parents to the United States in 1850. After receiving a common school education in the public schools of Freeport, Illinois, circumstances compelled him at the age of fifteen to abandon his cherished idea of securing a collegiate education, and earn a livelihood for himself. He chose the farm as his field of operations, and for more than a year labored on the then stump-dotted fields of Wisconsin. Realizing that the labor required was of a too arduous character he secured a position as clerk in Janesville, Wisconsin, which he held till the spring of 1864, when he entered the Union army as a member of Company A, 40th Wisconsin Infantry. After completing his term of service he returned to Freeport, the home of his schoolboy days, and in the spring of 1865 apprenticed himself to the printing trade under Mr. J. R. Scroggs, then proprietor of the *Freeport Bulletin*. During the latter part of the first year of his apprenticeship Mr. Scroggs died, and although there were three journeymen and an older apprentice in the office, Mr. Lewis was called upon to take the responsible position of foreman, which he accepted and filled creditably for thirteen years both to the office and the merchants whose patronage it enjoyed. In the fall of 1878 he associated himself in partnership with Mr. George Hay, and together they published the *Carroll County Gazette*, in the city of Lanark, Illinois, until the spring of 1878, when Mr. Lewis purchased the *Lena Star* from J. S. McCall. He immediately enlarged the paper and changed it from a seven-column folio to a five-column quarto, put on a new dress, and reduced the subscription price from \$2 to \$1.50 per year; and soon thereafter its list of readers increased so rapidly that the old Washington hand-press was soon supplanted by a "Campbell Country," and today its circulation equals that of any similar publication in northern Illinois. The job office connected with the institution is a model of neatness, and the work turned out therein is equal in style and workmanship to that of many more pretentious establishments.

Mr. Lewis has held many positions of trust and responsibility, having been thrice elected secretary of the Stephenson County Soldiers' and Sailors' Reunion Association and twice first vice-president of the Illinois Press Association. In politics he is a staunch republican, and has taken an active interest in all the principal political campaigns since the war. In April, 1890, he was appointed postmaster at Lena by President Harrison, which position he now fills to the satisfaction of the people he serves.

He was married January 6, 1870, to Miss Mary J. Newcomer, of Freeport, Illinois. In social life he enjoys the acquaintance of a large circle of friends, in this and other states, who wish him many years of connubial happiness and business prosperity.

CHARLES W. WARNER,

Who was honored with the position of second vice-president, is editor and proprietor of the Hoopston daily and weekly *Chronicle*, an enterprising and intelligent gentleman, and a clever and forcible writer. Last year he occupied the position of third vice-president of the association.

ROSWELL T. SPENCER,

Third vice-president, publisher of the *State Center*, Illiopolis, is a native of Bluffdale, Green county, Illinois, where he was born August 7, 1850. His great-grandfather, Gideon Spencer, came from England in 1770 and settled in Vermont. He and his wife,

Elizabeth Winchell, his son, Stephen Winchell Spencer, and his wife, Mary Smith, and their son, Marshal Smith Spencer, the father of the subject of this sketch, moved to this state in 1820, where they resided the remainder of their lives. His mother, Sarah Simmons Spencer, was born in Ohio and came to Illinois in 1830. She is now living in Ann Arbor, Michigan.

Roswell T. was the eldest of ten children. He received his education in the common schools, but, being fond of books, he "burned the midnight oil" and fitted himself for teaching, which business he followed for a number of years previous to engaging in newspaper work. In 1881 he established the *Kenny Gazette*, and the year following the *Waynesville Record*, both of which are still flourishing. Having disposed of these, he established the *Williamsville Gazette* in 1884 and the *Mechanicsburg Times* in 1886. In the meantime he purchased the *Illinois State Center*, at Illiopolis, where he now resides. He prints all three of his papers at Illiopolis and is making a success in the business. He became a member of the Illinois Press Association at Quincy in 1887, and takes great pleasure in attending its sessions. He was married to Anna E. Wells in 1869. They have two children living, Mrs. May L. Gasaway and Carl Edwin, the latter a lad of six years.

GEORGE M. TATHAM,

Editor and publisher of the *Greenville Advocate*, was reelected for the twelfth time treasurer, and this in itself is sufficient to show the estimation in which he is held by the members of the association.

J. M. PAGE,

Editor and proprietor of the *Jersey County Democrat*, who was reelected secretary, is one of the most popular members of the association, and is also secretary of the National Editorial Association. He is emphatically the right man in the right place, and has proven himself to be an efficient and courteous official.

## TO PRESSMEN AND PRINTERS GENERALLY.

Greeting: The International Printing Pressmen's Union of North America, at the Boston Convention in September, 1890, decided to conduct a display of fine presswork at the World's Fair at Chicago, in 1893, and later the president appointed Alton B. Carty, of Washington; Benjamin Thompson, of New York, and Ed. Gayou, of St. Louis, a committee to have charge of the display. The object is not money-making and the committee is unsalaried. It would have been a great oversight if the printing industry of the country should be without proper representation at the fair. But such will not be the case, and the committee begs leave to assure you that all will be done that is possible to make the display a grand effort and worthy of the American printers. The employing printers of the country will be called upon to interest themselves in the enterprise, and as they will receive the lion's share of the advantage to accrue from the same, their coöperation is assured. But there are many pressmen and printers who, for many reasons, would no doubt desire to make an individual display, which, in a general collection of their employers' work, might be overlooked. Special inducements will be offered to such individuals, who should signify their intentions in the matter at as early a date as possible. That the display may be further interesting it is intended that a collection of curiosities in the way of printing appliances of the days of the infancy of the art and also some modern appliances will be exhibited, and the committee, in addition to asking for your full coöperation in the exhibit of fine printing, further ask for your support in the collection of curiosities. Suggestions will be gladly received.

Mr. Thompson has charge of the district composing New York, New Jersey, the New England states and Canada; Mr. Gayou, the district west of the Mississippi river, including Illinois; Mr. Carty to have charge of that section of the country not above set forth.

Yours fraternally,

ALTON B. CARTY, 614 G street, N. E., Washington, D. C.

BENJAMIN THOMPSON, 810 Lexington avenue, Brooklyn, N. Y.

ED. GAYOU, 1527 South Eleventh street, St. Louis, Mo.

Committee.

W. W. Lewis, First Vice-President, *Star*, Lena.

THOMAS REES, President, *State Register*, Springfield.

OFFICERS OF THE ILLINOIS STATE PRESS ASSOCIATION.

JOHN WARNER, Second Vice-President, *Chronicle*, Hoopston.

OFFICERS OF THE ILLINOIS STATE PRESS ASSOCIATION.

R. T. SPENCER, Third Vice-President, *Illinois State Center*, Illinois.

J. M. PAGE, Secretary, *Jersey County Democrat*, Jerseyville.

GEORGE M. TATHAM, Treasurer, *Advocate*, Greenville.

OFFICERS OF THE ILLINOIS STATE PRESS ASSOCIATION.

## MISSOURI PRESS ASSOCIATION.

The second annual winter meeting of the Missouri Press Association convened in the capitol building, Jefferson City, on Thursday, February 19, at 10 o'clock A. M., the president, J. West Goodwin, of the Sedalia *Basin*, in the chair. About one hundred and thirty members were in attendance, including many of the leading editors and publishers of the state.

The first paper on the programme was read by Mr. William M. Bumbarger, of the Nevada *Democrat*, his subject being "The Personal Column," which he treated in a semi-humorous vein, and which he esteemed a most valuable adjunct of the country newspaper. A large number of members participated in the discussion which followed, most of them concurring in the ideas advanced.

The president then announced the following committees.

*Credentials*—Walter Williams, W. S. Thomas, R. M. White, Sam Kellar, J. M. Rice.

*Laws*—E. W. Stephens, W. H. Williams, George W. Trigg, T. J. Lingle, Fred King.

*Resolutions*—W. O. L. Jewett, T. B. White, L. Robertson, Eli Ake, C. J. Walden.

*Memorials*—T. D. Bogie, Men. Mayhall, S. G. Tetweiler, E. T. Conger, J. G. Newbill.

At the afternoon session Mr. F. H. Childers, of the Troy *Free Press*, submitted a report to which was appended a schedule of prices to be charged for foreign or patent medicine advertisements. He said that the rates in the schedule were from twenty to fifty per cent higher than ruling prices reported to him by 185 weeklies in 1890. Considerable discussion, pro and con, ensued, and the matter was finally disposed of by the passage of a resolution thanking Mr. Childers for the labor expended on the report, but recommending that the same rates be charged for foreign as for home advertisements.

L. H. Chapin, delegate from the Illinois Press Association, was then introduced, and made a brief address, which was favorably received.

Reports from members of the senatorial committee appointed to increase membership of the association were received. Mr. Walter M. Monroe, in discussing them, said that each member of the association ought to take pride enough in the organization to constitute himself a committee of one to increase its membership and usefulness, and make it more practical in its benefits to the newspaper men of the state. A discussion of the best method of increasing the membership followed, which brought out the fact that the membership had largely increased during the past year. It now numbers 193, and Secretary Williams stated that 193 members of the press when moving together in a common cause were a power that was bound to make its influence felt and respected.

After a discussion on "Kellogg's Auxiliary," the association adjourned to 7:30 P. M.

In the evening Mr. E. W. Stephens, president of the National Press Association, delivered an address in the house of representatives on "The Newspaper and its Relation to the Public," which was listened to with rapt attention by an appreciative audience. It is needless to add that the subject was handled in an able and exhaustive manner. He closed by saying that the Missouri Press Association, representing 625 newspapers with three million of readers, has expressed the opinion that the interest of good government will be subserved by publishing in the newspapers the session acts of its general assemblies, thus giving to the people a knowledge of the laws which they pay to have enacted and for which they are punished if they do not obey.

## SECOND DAY'S PROCEEDINGS.

The second day's session was called to order Friday morning at 8:30, by Vice-President W. H. Williams, of St. Louis.

The first subject for discussion, "When Should Gratuitous Advertising Commence and When Should it End," developed a variety of opinions. The debate was somewhat desultory in character, and no action was taken thereon.

The amendment to the constitution to make the membership fee \$5, to be paid at the time of the election, and the annual dues

\$3, was, after discussion, postponed for action till the summer meeting of the association.

Mr. A. C. Cameron, editor of THE INLAND PRINTER, then read a paper on "The Mechanical Management of a Printing Office," for which a vote of thanks was tendered, and its publication ordered in the proceedings.

Mr. E. W. Stephens, from the committee on legislation, made a verbal report to the effect that the committee had drafted a bill for publishing the session acts of the general assembly in accordance with instructions received at the Hannibal meeting. The debate which followed was somewhat heated and protracted, but just at its close the announcement was made that the house committee had made a favorable report on the bill, and the news was received with manifestations of satisfaction.

The afternoon session was brief. It was held in the senate chamber, where the members listened to a magnificent address on "The Partisan Press, its Power for Good or Evil," by the Hon. C. I. Cochran, of St. Joseph. It was received with earnest attention and hearty plaudits, and we certainly trust will be published in full. A vote of thanks was unanimously tendered the eloquent speaker.

An invitation from the mayor of Butler was read, asking the association to hold its next annual meeting at that place. The inducements held out were of the most tempting character, and the communication was referred to the executive committee.

Mr. W. O. L. Jewett, of the Shelbina *Democrat*, presented a series of resolutions, invoking the services of the legislature in amending the law so that the board of health shall be compelled to issue certificates to all competent persons, irrespective of the fact that they advertise in the papers, or otherwise make their calling or specialty known to the people; recommending that all the enactments of the general assembly, all ordinances of cities or other municipalities be published in the newspapers for the information of the people; also voting thanks to the members of the senate and house for the use of their rooms; to the hotels of Jefferson City and the state for favors shown, and likewise to the passenger agents of the several roads who had extended courtesies to the delegates in attendance.

The convention then adjourned sine die.

In conclusion, we can only say that the occasion was a thoroughly enjoyable one, both from an intellectual and social standpoint. The Missouri Press Association is an organization of which the editors of that state have every reason to feel proud, and at the same time we wish to drop a hint to similar bodies in other states, which imagine they are "cock of the walk," that it is time they were looking to their laurels.

## IN THE EVENING.

The hospitality of Governor and Mrs. D. R. Francis—a lady whose presence would dignify the white house as well as a gubernatorial mansion—was extended to members of the association. The reception was attended by the delegates, senators and representatives, state officers and the citizens of Jefferson City. Coffee, tea and punch were served, and the visitors passed a delightful evening.

THE office of Gibson, Miller & Richardson, Omaha, was entirely destroyed by fire on the morning of March 9. It had the reputation of being one of the most extensive printing, lithographing and binding establishments west of Chicago. The estimated loss is about \$125,000, insurance \$76,000. The four-story building was completely destroyed from top to bottom. The fortunate side to the catastrophe is that it occurred a quarter of an hour before commencing time, so that there was no scramble for life, as so often happens. Fortunately, also, for the firm, they had delivered their state printing and other orders but a few days before. Seventy-five people are thrown out of employment by the fire. It is stated that Mr. Gibson will open up another establishment as soon as the business arrangements are completed, and that Mr. Miller and Mr. Richardson have decided to withdraw from the firm.

### THE MANUFACTURE OF WOOD TYPE.

One of the essential needs of the modern printing office is a supply of wood type, large or small, according to the class of work turned out. There is probably no article used by printers the manufacture of which is so little understood. There being but four manufactories in the United States and these, with one exception, being located in comparatively small cities, the opportunity of the average printer to become acquainted with the details of its manufacture are limited indeed. Until recent years the prices for this material were so excessive that the poster printing business was confined to a few large houses who had fortunes invested in wood type; but strong competition among the manufacturers has resulted in new methods of manufacture, and today wood type is selling at about one-third the price received for it ten years ago. This state of affairs has had a pronounced effect upon the number of houses engaged in poster printing. The low price has enabled printers of moderate means to stock up on wood type and compete for this class of work.

Originally all wood type was cut by hand. The design was made upon the block of wood, and the workmen with their carving tools would remove the surrounding wood leaving the letter raised. This process was necessarily slow and tedious, and the class of work produced would not compare favorably with the beautifully cut and artistically designed wood type offered to printers today.

Wood type was first cut by machinery in the year 1846 at South Windham, Connecticut, by Edwin Allen, who continued its manufacture there for six years, and in the year 1850 his works fell into the hands of J. G. Cooley. Cooley continued to manufacture at South Windham until the year 1859, when he removed to New York City and, in 1868, sold out his entire plant to William H. Page, then of Greenville, Connecticut.

William H. Page first began the manufacture of wood type in 1854, and was then twenty-five years old. Located at that time at South Windham, he continued there until 1857, when he removed to Greenville and manufactured there for about twenty years moving thence to Norwich, Connecticut, where his works have been located up to the present time. On January 4, of this year, the William H. Page Wood Type Company sold its entire plant to the Hamilton Manufacturing Company, located at Two Rivers, Wisconsin.

About July 1, next, the entire plant will be removed from Norwich to Two Rivers, and a business of forty-five years standing in the old State of Connecticut will, like the proverbial star of empire, take its way westward.

Mr. Page has done more than any other man toward the development of the manufacture of wood type. As a letter designer his equal has never appeared. About the year 1872 he issued a catalogue of chromatic border and type that at once placed him

at the head of the business in the world. The intricate and artistic designs of this color work have never been equaled by our best printers to this day. Mr. Page issued a thousand of these catalogues at a cost to his firm of \$10,000. All the designs in this magnificent catalogue emanated from Mr. Page's fertile brain. He has taken many patents upon type faces and type-making machines, and is also an inventor of distinction in other branches of trade. A few years ago he secured letters patent for producing type by the new stamping process, and now has this style of type protected by nine domestic and four foreign patents. The machines for producing type under this process are wonderful pieces of mechanism which can stamp no less than 100,000 letters per day, and will eventually revolutionize the manufacture of wood type in the plain and standard faces.

By the transfer of his plant to the Hamilton Manufacturing Company Mr. Page does not retire from the business, but becomes a stockholder in the western company, and while he will not hereafter be directly identified with the manufacturing process, the benefit of his vast experience will still be enjoyed by the men in charge.

The Hamilton Manufacturing Company, which now becomes the greatest producer of wood type in the world, and probably manufactures more than all others in the world combined, has had a most phenomenal growth. Its first appearance as J. E. Hamilton was in 1880. Mr. Hamilton was at that time a mechanic, working at the bench in Two Rivers, without money or business experience. Receiving a call from the local printer, whose stock of wood type was limited, for the words "Turner Hall" in a line of type mounted on one block to run across a half sheet bill, the result was so satisfactory that Mr. Hamilton began to do a little thinking, and he soon produced several fonts of wood type

J. E. HAMILTON.

for this same printer. Having no knowledge of the requirements of type as to accuracy, etc., these fonts of type were necessarily very defective and would hardly stand comparison with the goods produced by this firm today. After producing these fonts of type an order was received from a neighboring printer, and thus the business started.

Mr. Hamilton deserted his bench, and, setting up a small foot-power saw in the loft of his dwelling house, he issued circulars at first to the printers in his immediate vicinity, soliciting a share of their patronage. The type produced was called holly wood type, and the process of manufacturing it was essentially different from any heretofore known. The faces of the type were sawed out of thin strips of holly wood and then mounted on their bases. While not so good an article as the old style of end wood type, it made a cheap article and enabled printers of moderate means to compete for the trade of poster printing. In a short time the business increased so rapidly that a little capital was required and also more room, and in 1881 the firm of Hamilton & Katz appeared,

a factory building was erected, more machinery purchased and set up, and the sale of holly wood type was pushed until the term became familiar to printers throughout the country.

The firm ran along under this name until 1885, when Mr. Katz sold his interest, and the firm became Hamilton & Baker; meanwhile trade had been constantly on the increase, and in 1887 a new plant was purchased and the firm began the manufacture of a complete line of printers' wood goods. In 1888 Mr. Baker severed his connection with the firm and the business was reorganized as a stock company under its present name, with J. E. Hamilton as president and general manager, and has since continued under this style. Mr. Hamilton has been the soul of the concern since its infancy. He has superintended all the details of the manufacturing and financial management, and designed and constructed intricate machines at the company's own machine shops which have greatly cheapened the cost of production of all articles in the firm's line, and have placed the firm at the head of the business in the world. For the past two years the company has kept constantly employed two experienced machine builders in constructing the special machines designed by Mr. Hamilton. In many instances these machines produce fully ten times the amount formerly turned out by the best machines in use. From the small order of eleven years ago the business of the firm has grown to the aggregate of nearly a quarter of a million per annum, employing one hundred and fifty skilled workmen in the manufacture of its goods.

One peculiarity, and an astonishing one it is, is the fact that until recently purchasing the Page business, the firm derived no benefit from the long experience of its competitors. Entering the field unaided and alone in the West, it never sought the services of one of their workmen, but proceeded to unravel the problems of the manufacture of wood type and wood goods, gathering its experience by hard knocks, and always triumphing in the end.

In 1889 a Chicago branch was established under the management of W. C. Luse, who has since continued in charge. Previous to removing the works of the Page Company at Norwich to Two Rivers, the firm will establish a branch at New York City under the management of one of the most experienced printers' supply men in the United States. Liberal and aggressive in his policy, Mr. Hamilton has guided his company safely over the dangerous places which occur in the career of all business ventures, and placed it upon a substantial basis, enjoying the full confidence of its friends and respected by its competitors.

The manufacture of wood type is quite intricate, requiring considerable skill in its production and the use of accurate machinery. Very little holly wood type is now produced by this firm. Its perfected machines enable it to produce end wood type at prices very little in advance of the cost of holly, except in the larger sizes, which the firm still continues to manufacture under the holly

system, as they claim it to be more durable and less liable to warp than the end wood. The timber from which the type is cut is sawed from the end of a log to a thickness somewhat more than type-high in the winter months when the weather is cold to enable the timber to freeze and remain so for some time. As the season advances and the weather grows warmer, the timber dries out and should season at least two years in this manner before being prepared for the manufacture of type. After being thoroughly seasoned it is dressed by hand with smoothing planes and planed type-high, which is  $\frac{2}{16}$  of an inch. The smooth and even face so often admired on wood type is then applied, after which the process of cutting type on the block is proceeded with. The machines for doing this work are quite a novelty; they enable the operator to cut a twelve-line letter from a thirty-line pattern, or an eighteen-line letter from the same pattern, as he desires, and also other sizes. The cutter which removes the wood runs at

a high rate of speed, being no less than 18,000 revolutions per minute.

After the machine work on the type is completed it goes to the trimming department, where each type is closely examined, the corners cut out with carving tools, the edges smoothed off to give a clear impression and all imperfections removed. It would be impossible in a short article to give all the interesting details of the manufacture of wood type and wood goods, and it is a pity the works are so far removed from the average printer as to bar him from observing the details of a business in which he is so deeply interested.

The works of this company at present occupy three distinct plants, two situated at Two Rivers and the one recently purchased at Norwich. Operations are in active progress looking to the consolidation of the whole business of manufacturing in one plant. The present type factory and office will be abandoned and sixty feet

WILLIAM H. PAGE.

east of the case factory, which is 67 by 125 feet and three stories high, will be constructed a new factory building 40 by 100 feet, two stories, to be used for type purposes. This will be connected to a brick fireproof office building 30 by 38 feet, with pattern room in second story. Adjoining this building will be a new warehouse and finishing department 40 by 100 feet and three stories high.

The machines of the entire plant will be driven by an improved Corliss engine of 250-horse power, located directly between the two factory buildings. The plant will be lighted by electricity under the Edison incandescent system, generated by its own dynamos. It will be protected against fire by a complete system of sprinklers and steam fire pumps connected by hydrants with all parts of the works, and heated by the Sturtevant hot air blast system.

The works are situated on lots having several hundred feet of river frontage which are docked and capable of floating the largest vessels to the factory door. Taken as a whole, this plant will constitute the most complete one in the country for the manufacture of printers' wood goods.

### A PRINTERS' TECHNICAL SCHOOL.

THE INSTITUTION ESTABLISHED IN PHILADELPHIA TO EDUCATE YOUNG MEN.

The second meeting of the Printers' Technical School was held in Philadelphia, Thursday evening, March 6. Philip Margerum, president of the organization, explained its nature and purposes, and the secretary, Richard Linn, read a letter from Philadelphia Pressmen's Union, No. 4, expressing the warmest sympathy with the movement, and the earnest wishes of the pressmen for its success and rapid development.

Since the first meeting and organization of the school, numerous congratulatory and encouraging letters have been received from Philadelphia and New York printing houses. Theodore De Vinne, of the latter city, sent two handsome and interesting volumes on printing as a donation to the library of the school. Another printing firm in the same city sent \$25.

It is the intention, as far as possible, to carry on the school in such a manner that not only journeymen printers and apprentices will take an interest in it, but that the employing printers of Philadelphia will realize that it will be not only a benefit to the practical printer and the profession to aid the school, but a good investment from a business point of view. In this connection abundant evidence of the good will of employers has already been received, and at the meetings George H. Buchanan, a prominent employing printer, was present.

J. Luther Ringwalt, author of "The Encyclopedia of Printing," delivered an exceedingly interesting and instructive talk on printing, covering in rapid, but very comprehensive style, the progress of man in the art from its earliest stages down to the present day explaining many of the difficulties in the way of advancement and the alternate strokes of good and ill fortune that befell those who did most to bring it to its present stage of perfection. He said that as it was formerly called the "art preservative," it might now be said to be the art that employs all other arts, because in its various ramifications it takes in nearly all the others.

Thomas Harrison, of the Philadelphia Pressmen's Union, also delivered an address. He was followed by John Whitehead. The school is solely established for the purposes of instruction and improvement, and will in no way be connected with or conflict with any other organization of printers.

The next meeting will be addressed by Thomas MacKellar, of the MacKellar, Smiths & Jordan Company (Johnson Type-foundry), and at every meeting in the future some well-known and practical printer, or person prominently identified with the typographical or publishing interests, will deliver an instructive lecture.

### A STEP IN THE RIGHT DIRECTION.

At a recent meeting of the St. Paul Typothetæ, the following preamble and resolutions were unanimously adopted:

Your committee, to whom was referred the matter of the United States government printing, without charge, and delivering free to our customers, upward of two hundred million envelopes yearly, the printing of which amounts to hundreds of thousands of dollars, and properly belongs to the job printers of the country, beg to report the following:

**WHEREAS**, Through the effects of this intermeddling, the prices for printing envelopes have been brought down below the cost of labor, thereby closing the channels to which such work belongs—the job printers of the United States; and

**WHEREAS**, We have every reason to believe that this detriment to our business is growing and that we are constantly losing work that properly belongs to us, by this continued action of the government, with which it is beyond our power to compete; and

**WHEREAS**, Believing the citizens of the United States are willing and desire to return an adequate compensation to the printers of the United States for such work properly executed; therefore, be it

*Resolved*, By the Typothetæ of the city of St. Paul, an organization embracing all the employing printers (and a branch of the national organization), that a great injustice is done to a large body of workmen, by reason of government interference in labor which properly belongs to the citizen; that the efforts of the employing printers are confronted by the ponderous power of the general government in the furnishing of printed envelopes, making no charge for the printing, and forwarding same in any quantity from Washington,

free of expense to the consumer, thus rendering competition on the part of printers impracticable.

*Resolved*, That we earnestly appeal to the proper authorities to remedy this great and increasing evil.

*Resolved*, That a copy of these resolutions be sent to all the Typothetæ organizations, the postmaster-general, and to our representatives in congress assembled.

W. T. RICH, Secretary.

GEORGE M. STANCHFIELD, President.

### AWARDS FOR PAPER FOR PUBLIC PRINTING.

The awards for the paper for the public printing have been made. The most important are as follows:

**First Class Ledger Paper.**—900 reams to L. L. Brown Paper Company, 20 cents; Keith Paper Company, 1,000 reams at 14.1 cents, 2,000 reams at 14.8 cents, 500 reams at 14.2 cents and 1,000 reams at 14.9 cents; Mount Holly Paper Company, 2,500 reams at 14.1 cents; Parsons Paper Company, 4,000 reams at 17.7 cents.

**Second Class Ledger.**—Mount Holly Paper Company, 6,000 reams 9.8 to 10 cents.

**Writing Paper.**—The successful bidders were Stoever & Devoll, Alex. Balfour, O. F. H. Warren, and Winona Paper Company at prices ranging from 6.3 to 7.7 cents.

**Book Printing Paper, Class A.**—In this class the successful bidders were F. W. McDowell, W. M. Singerly and Stoever & Devoll at prices ranging from 3.8 to 3.9 cents.

**Book Printing Paper, Class B.**—F. W. McDonell was the successful bidder at 4.9 cents.

Syms & Dudley received the award for 100 reams colored writing at 8 cents.

The award for plate paper, 100,000 pounds at 8.9 cents, went to the Peter Adams Company.

The awards for artificial parchment, 15,000 pounds at 15.3 cents, went to the Fairfield Paper Company as also did that for parchment deed at 14.7 cents.

The Mount Holly Paper Company was awarded the map paper, 100,000 pounds at 17 cents.

The awards for tissue paper went to A. G. Elliot & Co., Bulkley, Ward & Co. and F. R. Coffin, and cardboard to A. G. Elliot & Co., Linton Brothers & Co., Alex. Balfour, Stoever & Devoll and Bulkley, Ward & Co.; cover paper to A. G. Elliot & Co. and Alex. Balfour, and manila paper A. G. Elliot & Co. and Bulkley, Ward & Co.

### IMPERMEABLE WRAPPING PAPER.

A receipt for manufacturing a paper absolutely impermeable by water, and of great suppleness, is given as follows in the *Chronicle Industrielle*: Thirteen pounds of gelatine are dissolved in a bath of thirteen pounds of glycerine with one and one-half gallons of water, and while the mixture is constantly kept warm by means of a wet bath, the paper is immersed in it. After being taken out the paper is soaked in another composed of about three pounds of bichromate of potash dissolved in one and one-half gallons of water, after which it is exposed to light.

The chief feature of the preparation lies in the fact that when a combination of bichromate potash and gelatine is exposed to the light the last-named product becomes insoluble and can be submitted to a high temperature without becoming fluid.

Another method consists in preparing in a dark chamber a solution of glycerine and bichromate of potash. The paper is passed through this solution and is then exposed to light.

### GOLD LEAF.

Gold beaters, by hammering, can reduce gold leaves to such minute thinness that 282,000 must be laid upon each other to produce the thickness of an inch. Yet each leaf is so perfect and free from holes that one of them laid on any surface, as in gilding, gives the appearance of solid gold. They are so thin that if formed into a book 1,500 would only occupy the space of a single leaf of book paper. A single volume of a gold-leaf book one inch in thickness would have as many pages as an entire library of 1,500 volumes of common books, even though the volumes averaged 400 pages each.—*Boston Cultivator*.

THE MORNING MEAL.

Specimen of half-tone engraving, by STEVENS & MORRIS, 24 Cortlandt street, New York.

### WINTER SESSION OF THE WISCONSIN PRESS ASSOCIATION.

The fifth annual session of the Wisconsin Press Association was held in the agricultural rooms, Capitol building, Madison, on Wednesday and Thursday, February 17 and 18, 1891. President J. B. Price in the chair. The members in attendance, about one hundred and forty in number, were welcomed in a characteristic speech by Governor Peck, which was happily responded to by W. T. Street, of the Superior *Inter Ocean*.

The president then read his annual address, which was as follows:

#### Members of the Wisconsin Press:

LADIES AND GENTLEMEN,—Association aims to accomplish desired ends by united effort, that cannot be attained as well, if at all, by individual effort.

Our constitution says the object of its compact is to "promote the interests of the press, enlarge its usefulness and cultivate friendly relations and a spirit of fraternal regard among its members."

How well we have followed the chief end of our existence is difficult to determine. It is certain that something has been done in the past thirty-odd years, along all the lines indicated in our preamble, but there is still much more to do before the Wisconsin press reaches the acme of its possibilities. We sometimes plume ourselves over the fact that ours is the father of American press organizations, but the honor counts for little unless we are also in the van of practical achievements. There is no valid reason why the Badger publishers should not enjoy as many privileges, manage their affairs as sagaciously, make their papers as readable and profitable, as the fraternity, similarly conditioned, in any other part of the world. We should also receive as considerate treatment at the hands of the state, for nowhere does the press do more for the general advancement of the commonwealth than the editors of Wisconsin.

It is sometimes said we, as an association, are great on summer "outings" but small on winter "innings." If there has been any foundation for such innuendoes in the past, let this session be so full of valuable results as to fully overcome all former defects. The meeting is for friendly discussion, and, as far as may be, to arrive at practical conclusions. It is to be hoped, therefore, that every person present will take part freely, and act for the best. We are here to consider expediencies, needed legislation, fraternal comity, and the general advancement of the "art preservative."

Our papers should be short, pointed and directed, as far as possible, toward definite ends. Let us try to find out just what we ought to have in any given line, and then proceed to crystallize it into vital form.

This is an age of nip and tuck. Time was when a printer could get along fairly well with a cheese-press, a few fonts of shoe-pegs, and an abnormally small nose for news; but in these days of close competition, it is coming to require the combined resources of tact, skill, art and intelligence for a paper, in any given community, "to make its calling and election sure." Especially its election!

Invention, electricity, telegraphy, patent "inwards," patent "outwards" and patent brains have so multiplied, subdivided and centralized the news markets as to produce a complete transformation. A country weekly or even a fair-sized city daily, can no longer keep up with the procession as a general news dispenser. As concentrating forces have driven the public to a few favored centers for commercial commodities, and relegated the old-time skilled mechanic to the "custom grind" of his little neighborhood, so has the hard hand of fate "put a corner on events" and closely circumscribed the field of the rural editor. He can no longer declare: "The world is my parish." He feels himself forced into a "pent-up Utica" for the exercise of his powers. In face of the great dailies, he cannot now adjust his chases nor his purse to the endless flow of news. But need he repine? Not necessarily.

When Sir Walter Scott found himself eclipsed in the realm of poetry by Lord Byron, a star of more brilliant magnitude, he wisely sought fame and fortune in the field of romance, where his old rival could not disturb. And he discovered his highland home filled with themes of interest to all mankind.

The country press cannot successfully vie with the metropolitan in the domain of general news; but just as truly the great dailies are powerless to furnish the balm of consolation which a live local paper supplies its patrons, when turned to the true ideal. Someone has said that there is a time in every man's life when he is forced to conclude that no grain of corn can come to him except upon the allotted spot of ground that is given him to till. That time has come to the large mass of newspapers, and the situation must be accepted.

When the thrifty Bohemian farmers realized themselves, by the tide of destiny, doomed to coax a livelihood from five or ten acres of soil per family, they studied diligently the law of compensations, and found rich returns in tilling deeper and tilling better. The results were golden harvests and well-filled barns. *Mulum in parvo* used to be a familiar heading in our papers. It must become the shibboleth for many of us in our callings. Much in a little. This is a hopeful resort for relief to many who feel the encroachments of irresistible competition. Work your local fields more assiduously. Fertilize the soil with industry; plow deep and harrow fine. Put in the choicest seeds of your intellect and versatility. Make your subscribers feel that every issue of the paper is as welcome as a letter from home. Get the

community to feel that it is a vital part of the body corporate and not a parasite; indigenous not exotic. The home paper should be alive to the best interests of the town and its people. It should be an oracle, as it were — if possible as magnetic and inspiring as far-famed Apollo of Delphi. To gain such a hold upon the affections of a local constituency requires talent of no mean order. But it is forthcoming in Wisconsin. Our provincial papers are yearly growing better, broader and nearer the every-day life of the masses.

With this nearness to the people should also come broader equipment. There never was a period in the history of newspapers when correct thinkers, with sound impulses, were needed more than now. The whole social, political and religious fabric is in a state of unrest. Foundation principles are being disturbed by the heedless, slipshod utterances of eager demagogues, and the devil-may-care vaporings of irresponsible agitators. Order must be brought out of this chaos of ideas. If the press of the country is to play an important part in settling vexed questions, those who are at the Archimedean levers must become properly settled themselves. They should become well grounded in the axioms and underlying principles of social, economical and moral science. They must learn to know what the right is; be brave enough to assert it and patient enough to wait its triumphs. When it once gets abroad that an editor's heart is right, his patrons will stand by him through many vicissitudes. When they see that his head is right and that he is informed on the questions of the day, his opinions will carry weight and very often conviction. Thus, with warm hearts and trained heads, I believe that the members of the Wisconsin press will, in the future, even more grandly than in the past, fill an important niche in the temple of fame.

This was followed by an able and interesting paper on "Editorial Character," by A. J. Dodge, of the *State Journal*, the essential attributes of which he declared were truth, intelligence and industry, which are promotive of sincerity, fairness and independence.

E. D. Coe, of the *Whitewater Register*, on behalf of the committee on legislation, made a detailed report, the essence of which was that the newspaper men of Wisconsin do not ask any changes in the statutes as affecting their guild, except as to the law of libel. No publisher asks exemption from punishment of the willful or careless detractor. But in view of the present work of the press and the conditions which surround it, occasional wrong will be done and done innocently, and when all possible reparation has been made, it held that the publisher should be shielded from legal prosecution prompted solely by motives of greed or malice. The report was adopted, after a lengthened discussion, and the committee made a standing committee to look after matters of a similar character.

H. F. Bliss, of the *Janesville Gazette*, read an interesting paper upon the "Cooper Law and the Newspaper," which provoked considerable discussion, participated in by a large number of members. On motion the whole subject was laid upon the table, after which the association took a recess to 2 P.M.

On reassembling "Wisconsin and Minnesota Libel Laws" was discussed in one of the most interesting papers of the session by J. M. Chapple, of the *Ashland Press*. He was followed by F. A. Worden, in a plain, practical talk on "How to Run a Country Newspaper," after which Mr. Nagle, of the *Manitowoc Pilot*, presented an able and carefully prepared opinion on the subject "Should Newspaper Men Hold Office?"

Colonel Watrous presented, in tender and loving phrase, a fitting testimonial to the memory of the late Gen. George C. Ginty, and with this closed the exercises of the afternoon.

The evening session was held in the assembly chamber. A good attendance listened to Dr. Albert Shaw, of New York (editor of the *Review of Reviews*), who delivered an interesting lecture on "Higher Education, as related to Journalism." Miss Kellogg, of Chicago, followed with an address on "Associated Woman," and Mr. E. C. Gotty, of Minnesota, read a humorous poem.

Thursday's morning session was largely devoted to business. Resolutions were adopted, all in a thankful strain, for the attentions shown visitors while in the city. The legislature was asked to make a liberal appropriation for Wisconsin's exhibit at the coming World's Fair.

The following officers were elected for the ensuing year: President — J. E. Heg, Lake Geneva. Vice-Presidents — E. Hurlburt, Oconomowoc; Samuel Shaw, Crandon; E. D. Charlton, Brodhead; L. W. Nieman, Milwaukee; John Nagle, Manitowoc; Charles W. Bowron, Oshkosh; John H. Powers, Baraboo; F. F.

Morgan, Cumberland; E. D. Coe, Whitewater. Secretary — F. W. Coon, Edgerton. Treasurer — J. M. Chapple, Ashland. Executive Committee — M. P. Rindlaub, Platteville; T. B. Reid, Appleton; David Decker, Green Bay; B. J. Price, Hudson, and O. D. Brandenburg, Madison.

Various schemes for the next summer's outing were presented, the most popular one being a steamer trip from St. Paul to Dubuque and a return to La Crosse by the same means.

Taken altogether, the proceedings were of a highly instructive character. On parting there was one theme on all tongues, the splendid service which the retiring president, B. J. Price, had rendered, who has the proud satisfaction of knowing that he possesses the esteem and kindest regard of every member of the association.

#### SPECIMENS RECEIVED.

LAREW, THE PRINTER, Knoxville, Tennessee. A large assortment of fair, average commercial work.

THOMAS P. NICHOLS, Lynn, Massachusetts. Handsome and effective silk-fringed concert programme.

W. H. O'BRIEN & Co., St. Louis. Business card in colors, attractive, original in design and well balanced.

SMITH & RAY, Tacoma, Washington. Firm card in colors. Design artistic, but, but, but — the same old story.

A. MEEKIN & Co., Troy, New York. Two programmes worthy of and executed by an artist, and the pressman helped him materially.

McGILL & WALLACE, Washington, D. C. Several specimens of artistic printing, the composition and presswork on which are worthy of all praise.

SYL. LESTER & Co., Atlanta, Georgia. A large number of stock certificates executed in colors and bronze, every one of which is a job to be proud of.

KLINGER & STEARNS, Sedalia, Missouri. Note and bill heads, cards, etc., in colors, the tints of which are made from patent leather, and all of which will pass muster.

VOLKSZEITUNG PRINTING & PUBLISHING COMPANY, St. Paul, Minnesota. Circulars in which Keystone Series 5 and 7, Combination 98, Series 1 and Dragon borders are used to advantage.

WILLIAM C. GAGE & SONS, Battle Creek, Michigan. A very neat and unique organ concert programme, each page of which contains a single number and the name of the artist.

A. V. HAIGHT, Poughkeepsie, New York. A thirty-two-page book, containing specimens of printing executed at his office. Price 50 cents. Address A. V. Haight, 12 Liberty street, Poughkeepsie.

JOSEPH C. DUPORT, Westfield, Massachusetts. A handsome sixteen-page souvenir, printed on coated paper with multi-colored inks. Each page is a gem, and the presswork, as a whole, is worthy of commendation.

C. B. HIBBERD, South Bend, Indiana. A handsomely executed catalogue of thirty-two pages and cover. Typographically it is a very neatly designed and executed job, while the presswork on the cuts is all that could be desired.

McCULLOCH & WHITCOMB, Albert Lea, Minnesota. A general assortment of every-day job printing — the kind of work we like to examine and commend — neat, attractive though unpretentious — work likely to secure and retain a customer.

DANDO PRINTING & PUBLISHING COMPANY, Philadelphia. A number of specimens of artistic printing, the execution of which, in composition and presswork, fully sustains the well-earned reputation of this establishment for turning out good work.

WILLIAM C. GAGE & SONS, Battle Creek, Michigan. A handsome souvenir of twenty-two pages and cover, giving a brief historical and descriptive account of the phenomenal progress made by this firm during the past seven years. Also an interesting

chapter on "How Type Is Made." It is printed on heavy coated paper; the presswork is simply perfection, and it goes without saying that the business men of Battle Creek do not go outside of that city to have their printing done.

F. DIAMOND, Winthrop, Minnesota. Several specimens of commercial printing, such as circulars, letter, note and bill heads, statements, receipts, cards, etc., worthy of praise, especially the firm business card in colors, which is well proportioned and attractive.

J. H. MAYERS & Co., Fort Smith, Arkansas. Firm card embossed and in colors. The design and execution are worthy of praise. It would add materially to its symmetrical appearance, however, if the words "Printers, Stationers, Binders" were a little more prominent.

CARL H. UHLER, Bunker Hill, Illinois. Annual circular and calendar. Too much straining after effect. A plainer job with the means at his disposal would have appeared to much better advantage. The colors do not harmonize, the register is imperfect and the presswork is far from being what it should be.

NEWS PUBLISHING COMPANY, Middlesborough, Kentucky. Several samples of somewhat pretentious letter and note heads in colors. The designs are creditable, but the execution is far from being "O. K." When will printers learn that such efforts, to be effective, must have perfect curves and joints, and that good presswork is indispensable?

GEORGE LEWIS & SON, Selkirk, Scotland. A large variety of artistic specimens of printing, mostly in colors, which for beauty of design, perfection of execution, harmonious blending of colors and first-class presswork would be difficult to surpass. We are within the bounds of moderation when we state that every sample before us is a gem of the first water.

ALSO from Moulton's Printing House, Schenectady, N. Y.; Robert K. Thomas, Fernwood, Ill.; Daniel A. Chambon; Methodist Publishing House, Nashville, Tenn.; The Correspondent Printing, Publishing and Binding House, Piqua, Ohio; Charles E. Marble, Chicago; Henry Gillett, Olean, N. Y.; Thomas Nichols, Lynn, Mass.; Free Trader Office, Ottawa, Ill., two odd though really meritorious specimens of jobwork; "Christie, the Fine Printer," Brandon, Man; The State Printing and Publishing Company, Olympia, Wash.; Robinson & Stephens, Boston, Mass.; N. P. Gatling & Co., Norfolk, Va.; Cushing Printing Company, Chicago; Quirk & Co., Cincinnati; Pueblo Printing Company, Pueblo, Colo.

#### CALENDARS.

THE following calendars were received too late for notice in the February number: Vandercook & Co., engravers, 407 Dearborn street, Chicago, neat calendar in brown, the principal feature of which is half-tone cut of six pug dogs, an excellent piece of work; the Courier Company, Buffalo, New York, lithographed calendar, in gold, drab and brown in their usual good style; the Russell & Morgan Printing Company, Cincinnati, Ohio, highly colored calendar, showing different design for each month, in coloring and design, a joy to look upon; C. C. Bartis & Bro., Baltimore, Maryland.

#### NEW BOOKS.

PAINTING IN OIL; A Practical Manual for the Use of Students. Square 12mo., cloth; \$1.

"The thorough preparation that appears in Miss McLaughlin's writings, and her clear, direct style, have given her a place of distinction among makers of art books. In the present volume she gives a lucid statement of the scientific theories and facts relative to colors, treating the whole subject broadly as well as technically. This book is also largely realistic, enlarging on the material side of the subject, the tools which the student should use and the best method of handling them."—*Cincinnati Gazette*.

Sent by mail, prepaid, on receipt of the price, by Robert Clarke & Co., Publishers, Cincinnati, Ohio.

## PERSONAL.

•WE acknowledge calls from the following gentlemen during the past month: Thomas Rees, president Illinois Press Association; Abraham Garrison, George Mather's Sons, New York; J. C. McQuiddy and J. N. Hudson, Nashville, Tennessee; W. C. Gage, Battle Creek, Michigan; E. W. Stephens, president National Editorial Association, Columbia, Missouri.

## CHICAGO NOTES.

THE *News*, of this city, will occupy its new building, April 1. It will also be enlarged, and will thereafter issue a country edition.

THE Hamilton Manufacturing Company, makers of wood type and wood goods for printers, have removed to 327 and 329 Dearborn street.

AT the Columbian Exposition in this city, space has already been taken for an exhibit showing the entire process of the manufacture of ledger paper.

THE office of the Law News Bureau, has been removed to room 611 Monon Block, 320 Dearborn street. Its officers are W. H. Ellis, president, George D. Ellis, secretary.

THE establishments heretofore doing business under the names of W. B. Conkey, and Knapp & Johnston Company, have been consolidated and are now doing business under the style of W. B. Conkey Company.

MAJOR HANDY, Superintendent of the Department of Promotion and Publicity of the World's Fair, will soon be in a position to supply interesting information in connection therewith to every paper favorable to the enterprise.

WILLIAM C. HOLLISTER & BRO., now at 119 Clark street, will shortly remove to 148 and 150 Monroe street, the old Rand-McNally building, where, with enlarged facilities, they will be better able to meet the demands of their increasing business.

AT the annual meeting of the Chicago Typotheta, held on February 5, the following officers were elected for the ensuing year: President, C. H. Blakely; vice-presidents, P. F. Pettibone, Charles E. Leonard; secretary, Thomas Knapp; treasurer, Franz Gindele; executive committee—A. McNally, chairman; R. R. Donnelly, W. P. Dunn, Amos Pettibone, Frederick Barnard.

THE monthly banquet of the Chicago Paper Club was given at the Wellington Hotel, February 19. Among the speakers were Melville E. Stone, who spoke on "Newspapers Read Abroad," Judge Prendergast, whose topic was "Paper, Good or Bad," and P. F. Pettibone, who found new ideas in his text, "Sermons in Stones." A number of guests were present, and all were agreeably entertained, and passed a pleasant evening.

AT a meeting of the Chicago Pressmen's Union, No. 3, held on Saturday, March 7, the following officers were elected for the ensuing year: President, R. F. Sullivan; vice-president, George Meinz; treasurer, J. H. Bowman; financial secretary, M. Knowles; recording secretary, M. J. Ford; executive committee—M. Curtis, W. Casey, M. J. Kiley; board of directors—William Young, J. Donnelly, J. Kelly, George Nolan, F. Beck; guardian, C. Rogers; delegate, Henry Wendorff; alternate, W. H. Casey.

A WIDELY known lithographing establishment in Buffalo recently received from a western customer a circular note, announcing the death of the head of the firm. The notes were lithographed by a large house in Chicago. The head of the Buffalo house gave the note to his shorthand clerk, who is ambitious to rise in the business, and told him to write a letter of condolence. When it was handed in for signature the lithographer read the following:

" — — —: We are greatly pained to learn of the loss sustained by your firm, and extend to you our heartiest sympathy. We notice that the circular you send us, announcing Mr. — — —'s death, is lithographed by Chicago parties. We regret that you did not see it in your way to let us figure on this job. The next time there is a bereavement in your house we shall be glad to

quote you on lithographed circulars, and are confident that we can give you better work at less cost than anybody else in the business. Trusting we may soon have an opportunity of quoting you prices, we remain, with profound sympathy, yours truly, — — —." — *Buffalo Courier*.

AS far as learned the following named individuals have announced themselves candidates for the positions named, at the annual election of officers of the Chicago Typographical Union, to be held Wednesday, March 25: President, A. H. Brown; secretary-treasurer, William McEvoy and Edward Langston; recording secretary and organizer, O. G. Wood, T. N. Francis and W. D. Kinney; sergeant-at-arms, James Rathgeber; delegates to International Typographical Union—James Gunthorp, H. S. Streat, W. S. Timblin, George W. Jarse, Charles P. Stiles, Frank A. Kidd, W. J. Creevy, D. J. Lyman, James T. McCullough, John Conway, W. G. Glennon.

MR. JOHN WAGNER, of the Wilson & Wagner Lithographic Company, Chicago, died at his residence, Wiedland street, on March 5, aged forty-four years. This gentleman was well and favorably known throughout the country as one of the ablest workmen in the lithographic trade. He was for some years foreman of the press department of the Strowbridge Lithographic Company, Cincinnati, which he left to assume a similar position with Culver, Page & Hoyne, of this city. He afterward associated himself with Mr. Wilson, under the name and title of the Wilson & Wagner Lithographing Company. The remains were taken to Cincinnati for interment.

THE famous Gutenberg bible recently purchased by Mr. Ellsworth at the Brayton Ives sale in New York, for which \$14,500 was paid, arrived in Chicago, Friday, March 13. It was carefully unpacked and immediately taken to the Art Institute, where it was deposited in a handsome ebony case specially constructed for its reception. Although the Gutenberg bible, published in 1455, was the first book ever printed with movable types, "the print and paper are yet pure and clean, the illuminations shine out resplendent in their burnished gold and unfading blue as when first laid on by the limner's brush." A number of the leaves are uncut, and measure 11½ by 15¾ inches on the leaf. On the outer margins can be easily descried the holes made by the pins by which the sheets were fastened while going through the press. There are 641 leaves, printed in double columns, forty-two lines to the column. The initials and rubrics are in manuscript throughout. The first volume contains 324 leaves, of which there is one in fac simile, and ends with Psalms; the second volume has 317 leaves, of which sixteen are in fac simile.

## TRADE NOTES.

JOHN N. FARRAR, printer, Fort Lupton, Colorado, has sold out.

W. H. MANSFIELD, job printer, Portland, Oregon, has sold out.

B. H. TOWNSEND, printer and publisher, Durham, Ontario, has sold out.

DOAN & SANDY, printers, Santa Barbara, California, have dissolved partnership.

T. B. & L. WILLIAMS, printers, Hamilton, Ontario, have dissolved partnership.

LAIN & Co., printers and publishers, Brooklyn, New York, have dissolved partnership.

THE Marsh Printing Company, of Bedford City, Virginia, is about to enlarge its capacity.

S. P. ROUNDS has decided to remove the old *Hastings (Neb.) Gazette-Journal* to Salt Lake City.

THE state printing for Nebraska was divided between Pace, Williams & North and the *State Journal*, of Lincoln, and the Festner Printing Company, of Omaha.

EDWARD L. MILLER, manufacturer of the Paragon paper cutting machines, 328 Vine street, Philadelphia, reports the call for his popular machines constantly on the increase. The Paragon

has been in use thirteen years and is proving itself a most excellent cutter.

HENRY C. DANIELS, printer, Hartford, Connecticut, has been succeeded by Daniels & Wiley.

C. O. BRANCHEMIN ET FILS, printers, Montreal, who were burned out lately, intend to rebuild at once.

THE Southern Printers' Supply Company, dealers in type, presses and ink, Atlanta, Georgia, is closing out.

ELMER P. SARGENT, JR., & Co., printers and stationers, Boston, Massachusetts, have dissolved partnership.

THE International Telegram Company has been incorporated at Jersey City, New Jersey, to print and publish books and newspapers; capital stock, \$300,000.

THE Miner Publishing Company has been incorporated at Barker, Montana, to publish a newspaper and conduct a general printing business; capital stock, \$60,000.

ENOCH POND, printer, San Francisco, California, has consolidated his business with the S. Carson Company and will supervise the printing department of that concern.

MORGANS & WILCOX MANUFACTURING COMPANY, of Middletown, New York, advertise a new metal quoin, the Nitschke, which is claimed to be one that wears well and does not slip.

THE Opinion Printing & Publishing Company has been incorporated at Pueblo, Colorado, with a capital stock of \$100,000, to publish a newspaper and do a general printing business.

JOHN MURPHY & Co., printers and publishers, Baltimore, Maryland, have dissolved partnership, Isaac Kleiner retiring. The remaining partners continue the business under the old style.

THE label and job office of Parker & Son, 908 Fourth street northwest, and Ninth and H streets northeast, Charlton Heights, Prince George's county, Maryland, has removed to Oakland, Maryland.

THE business of H. S. Crocker & Co., paper dealers, printers and manufacturing stationers, at San Francisco, has been transferred to the recently organized H. S. Crocker Company, which has a capital of \$150,000.

MR. GEORGE E. DUNBAR has formed a partnership with Mr. W. E. Eaton, of the Malden (Mass.) *News*, and will conduct a well-equipped job department which has been established in connection with the paper.

MR. THOMAS P. ELLIOTT, a well-known contributor to THE INLAND PRINTER, has established himself in business in Toronto, Ontario, under the name of the Elliott Illustrating Company. The operating gallery is 28 by 25 feet.

COSACK & Co., lithographers, of Buffalo, New York, have sent us one of their zylonite calendars, a handsome novelty in the calendar line, and a most attractive piece of work. On page 519 appears the advertisement of this firm. Notice recent change in it.

THE Cleveland (Ohio) Printing and Publishing Company, who enjoy a high reputation in their line, have recently occupied commodious new quarters on Vincent street, where they have five floors, each 47 by 100 feet. The officers of the company are: W. M. Day, president; F. J. Staral, secretary; G. H. Gardner, treasurer, and A. Wintemberg, superintendent.

A FRIEND in St. John, Apache county, Arizona, sends us a postal sent by R. D. Wilson, Collierville, Tennessee, offering to furnish 500 letterheads, billheads, statements, all in nice boxes, of 125 sheets each, for \$1.75. The postal before us looks as if the office sending it out had the *smallpox*, and had it bad; in fact it looks as though it had come from a \$1.75 office.

WE acknowledge the receipt from J. H. Cranston, Norwich, Connecticut, of a neat and attractive catalogue devoted to a description, features and illustration of his two-revolution presses. In his circular Mr. Cranston says: "These presses are of the latest design, built from new patterns, with special reference to solidity

and least degree of wear. For ease in running, convenience in handling, and adaptability to various grades of work, they are unexcelled, attaining the best results with economy of labor. We invite inquiries, and will promptly respond in personal interview or correspondence, as may be desired."

ARTICLES of incorporation have been filed at Camden, New Jersey, by the Stewart & Woolley Company. The objects of the corporation are to purchase materials for the printing, binding and publishing of the periodicals known as the Philadelphia *Music and Drama* and Philadelphia *Music Journal*. The capital stock of the company is \$50,000, and the amount paid in is stated to be \$1,000.

THE April issue of THE INLAND PRINTER will contain a full and detailed description of the Miehle press—built by the Miehle Printing Press Manufacturing Company—a machine which is destined ere long to become a general favorite. Mr. R. P. Yorkston, a gentleman who certainly needs no introduction to our readers, is the eastern manager, with his office at 114 Tribune building, New York.

THE Cleveland (Ohio) *World* has recently added a new Stone-metz web perfecting press to its plant. Its length over all is only 9 feet, its width about 6 feet; the highest part of the machine stands about 5 feet 6 inches above the floor. It does not require a pit. It prints and folds about 10,000 eight-page papers an hour. The press is so constructed that the roll of paper can be placed upon the top or on the floor.

#### PAPER TRADE ITEMS.

THE Oak Cliff paper mill at Dallas, Texas, is ready to start up.

THE Albemarle Paper Manufacturing Company, Richmond, Virginia, will enlarge its plant.

SHERWOOD & RAYMOND, wholesale paper dealers, Penn Yan, New York, have dissolved partnership.

THE Nelson Paper Company, at Minneapolis Minnesota, succeeds the Nelson-Spencer Paper Company.

W. E. S. CRANE, of Bayonne, New Jersey, is organizing a stock company to erect a paper mill at Montgomery, Alabama.

THE Emerson Paper Company has recently put in a new calendering machine at its Star mill, Mechanics Falls, Maine.

STOEVER & DEVOLL, wholesale paper dealers, Philadelphia, Pennsylvania, have been succeeded by Charles H. M. Stoever & Co.

THE Castle Mill at Yorkville, Illinois, will probably be rebuilt. A stock company with \$40,000 capital is being organized for the purpose.

It is now very certain that the new pulp and paper mills at Mineral Point, Wisconsin, are to be built. They will cost \$100,000.

MILLS to manufacture pulp and paper from cotton-seed hulls are projected at Memphis, Tennessee, and other points in the Southwest.

G. W. COOKE & Co., paper dealers, at Los Angeles, California, have sold their paper business to Blake, Moffit & Towne, of San Francisco.

C. A. PAULSON, wholesale paper dealer, Dayton, Ohio, has been succeeded by Paulson, Clark & Co., and the firm has removed to Springfield.

THE Muncie (Ind.) Pulp Company, with its ten-ton plant, is turning out seventeen tons daily, and expects to make it twenty tons in the spring.

It is claimed that all the creditors of the Winona Paper Company, except four in Holyoke and vicinity, have signed the agreement to accept 40 cents on the dollar.

THE Parsons Paper Company are offering a new specialty which meets with much favor, in the form of buff sermon paper. It is in fact their popular buff ledger paper, put up in the usual styles of sermon paper. The price is moderate, and while the

color is entirely agreeable, it relieves sensitive eyes in a very grateful manner from the glare of white paper.

THE prospect of a large paper mill at Marinette, Michigan, with a \$200,000 company back of it and one hundred and fifty men employed, pleases the residents immensely.

A MOVEMENT to build strawboard mills to compete with the American Strawboard Company is said to be on foot, and it is reported that these mills are now under construction in Southern Michigan at a point which is kept secret.

THE Anderson Paper Company, recently organized at Toledo by capitalists of that city, will operate mills at Anderson, Indiana, for the manufacture of printing paper. The company have a capital stock of \$100,000, own a five-acre tract at Anderson, and have completed a gas well which experts put down as good for 10,000,000 cubic feet.

SALINA, Kansas, is entertaining the proposition of outside capitalists to establish there a paper mill which shall cost about \$75,000, employ twenty-five hands, and use twenty tons of straw per day, provided the Salina folks will donate a site of about three acres and some money "or its equivalent." There is but one paper mill in the state.

CANADA has fifty-six paper and pulp mills now in operation, employing 2,250 hands. Says the *Canada Lumberman*: "The manufacture of pulp is fast becoming a special industry, and it is probable that before long wood pulp will form a special item of export. The best wood fiber is made from spruce and poplar, of which the country produces unlimited quantities, particularly in Quebec and New Brunswick, and the conditions for manufacture in those provinces are very favorable."

OUR correspondent when in Springfield, Massachusetts, a short time since, had the pleasure of meeting Mr. S. M. Hunt, an old-time dealer in paper stock in Chicago and a most genial gentleman. Mr. Hunt is now selling paper stock strictly on commission, and has a large trade with all the principal mills in the East. He has offices both in Springfield and South Lee, Massachusetts, and letters addressed to him at either place will have prompt attention. Residing, as he does, in the heart of the best paper-making section of the country, being familiar with the particular wants of each mill, and being so well and favorably known by the buyers at the mills, he has every advantage in selling, and getting the best possible terms for people dealing through him. Rag dealers in the West will do well to correspond with Mr. Hunt.

#### OF INTEREST TO THE CRAFT.

THE Seattle (Washington) printers have adopted a time scale of \$4 per day.

WE acknowledge with thanks an invitation to attend the annual ball of Syracuse Typographical Union, No. 55.

THE Boston Press Club recently blackballed Colonel Morgan, of the *Post* of that city, who recently discharged the union printers from his office.

GEORGE W. MORGAN, deputy organizer for the State of Georgia, has been elected president of the Atlanta Federation of Trades, an honor worthily bestowed.

THANKS for invitation to attend the ball of St. Louis Printing Pressmen's Union, No. 6, on Thursday evening, February 28. Those who were present, we learn, had a good time.

THE *Pacific Union Printer* says it has been developed that the state office will continue to be run as a thoroughly union office, which is a matter for great congratulation to the craft at large.

THE recent difficulty resulting in a strike which occurred in the office of H. S. Crocker & Co., San Francisco, has been settled to the entire satisfaction of both the typographical union and the firm. Matters are now running along smoothly, and everyone appears correspondingly happy.

THE oldest compositor now working at a case in Ohio is doubtless Walsh C. Wolf, eighty-two years of age, who "holds a frame" on the Columbus *Standard*. It is over sixty-five years since he

began to pick up type in the office of the Baltimore *Gazette*, and he has followed his calling faithfully from that early day to the present.

JOSEPHUS DANIELS, editor of the *Daily Chronicle*, Raleigh, North Carolina, was elected state printer for North Carolina, by acclamation, on January 20. The election of this gentleman has given general satisfaction, he having proved himself at all times a friend of the printers. He is about thirty years old, one of the brainiest young men in the state.

THE printing and publishing establishment of the Sunday School Union of the American Methodist Episcopal Church, 206 Public Square, Nashville, Tennessee, is owned and controlled exclusively by colored men, and is the only one of the kind in America. Over twenty-five persons are employed, all of whom are colored people except the pressmen and engineer.

THE new web press of the New York *Herald* is to turn out 90,000 copies of four or six page papers per hour, and will be the most prolific in the world. The Woonsocket (R. I.) *Reporter* claims the fastest single press in New England, with a capacity of 28,000 per hour. The Boston *Globe* and Providence *Journal* have single presses which turn off 24,000 papers hourly.

A PRINTERS' technical school has been established at Dental Hall, northwest corner Thirteenth and Arch streets, Philadelphia. It is a movement inaugurated by a few energetic young men engaged in the printing business who feel the need of a more extended knowledge of the business than can be found in the busy hours of the day. Success to the enterprise.

MR. CHARLES GUY BROWN, formerly editor and publisher of the *Union Printer*, died at his home, Ninth street and Fourth avenue, New York, on Thursday night, February 26, in the thirty-fifth year of his age. His remains were embalmed and sent to Manchester, Iowa, the residence of his parents, where the funeral was held. The deceased had many friends in every section of the country, who will learn with sorrow of his demise.

ACCORDING to the semi-annual report, just issued, the German-American Typographical Union has 22 local unions with 1,310 members in good standing. The total income from July 1 to December 31, 1891, was \$20,152.60. Expenses—Strike benefit, \$3,644.35; out of work benefit, \$3,948; sick benefit, \$2,667.80; death benefit, \$1,200; traveling benefit, \$328.28; official organ, salaries, agitation, etc., \$1,925.40. Total expenses, \$13,731.83; surplus, \$7,438.77.

HON. AMOS CUMMINGS and Hon. John M. Farquhar proved themselves true friends of organized labor in the discussion which took place in the house of representatives, January 28, on the amendment of the former gentleman that the extra pay of enlisted men as printers at headquarters United States Military Academy be \$21 per week instead of 50 cents per day, as reported by the committee on printing. The amendment, however, was rejected by a vote of 38 to 49.

THE Boston electrotypers' strike is assuming serious proportions. The strike has been sanctioned by the International Typographical Union, which means not only financial aid, but is also interpreted that pressmen employed in book and job offices will not do any presswork from plates made by non-union electrotypers. Further than this, if non-union electrotypers and pressmen are secured, the type from which plates are made by men who take the strikers' places will not be distributed by union printers.

AT the last meeting of the Union Printers' Mutual Aid Society of San Francisco, the report of the recording secretary showed 82 members in good standing, while that of the financial secretary summed up \$486 as the collections for the past six months. The treasurer's book showed the sum of \$3,064 to the credit of the society—\$3,044 of which is on deposit in the San Francisco Savings Union. The board of directors, in their report, paid the officers a high compliment for the admirable manner in which the affairs of the society had been conducted during their term of office.

## PRESS ASSOCIATION NEWS.

THE Mississippi Press Association meets at Bazoo City, May 13.

THE State Press Association of Arkansas will hold its annual meeting in May at Batesville.

THE Woman's Press Association of California will hold its first convention the third week in March.

THE semi-annual meeting of the California Press Association meets at Napa City, April 21, for a two days' session.

THE thirty-fifth annual meeting of the New Jersey Editorial Association was held at Trenton on February 2. The treasurer, James S. Yard, reported \$1,384.07 on hand. F. W. Baldwin, of Orange, was elected president for the ensuing year, and James S. Yard, treasurer. Thirty-two members attended and banqueted at the State Street House.

AT the convention of the Alliance editors of Kansas, held February 24, in Hutchinson, the following permanent officers were elected: president, W. A. Peffer; vice-president, A. C. Pattee, Salina; secretary and treasurer, S. McLallin, Topeka; executive committee — D. T. Armstrong, Great Bend; C. Vincent, Arkansas City, and A. H. Harris, Iola. The organization effected is called the Reformed Press Association of Kansas.

## IMPORTANT ANNOUNCEMENT.

The executive committee of the National Editorial Association will meet at the Southern Hotel in St. Louis on Thursday, March 26, at 10 o'clock A. M., for the purpose of preparing a program and making necessary arrangements for the next annual meeting of the association to be held at St. Paul, July, 1891. A full attendance is desired.  
E. W. STEPHENS, President.

## NEWSPAPER GOSSIP.

THE Farmers' Alliance has 116 papers in Kansas.

THE Atlanta (Ga.) *Business Directory* has suspended publication.

THE Portland (Me.) *Patriot*, a new venture, is the smallest daily paper in New England.

THE latest comer in the juvenile journalistic field is the *Young American*, published at Brooklyn.

AFTER an existence of twenty-five years, the Troy (Mo.) *Herald* has climbed the golden stairway.

THE *Traveler* is a new paper published at Washington, D. C., by E. S. Riley, of the Annapolis *Record*.

SECRETARY OF STATE LESSEUR has sold the Lexington (Mo.) *Intelligence* to James E. Payne for \$12,000.

A NEW weekly republican paper has been started in Brooklyn. The name of the journal is the *Brooklyn Republican*.

THE *Register*, published at Cave in Rock, Illinois, could be materially improved in composition, make-up and presswork.

THE Ishpeming (Mich.) *Daily Press* is a new venture, by H. J. Stevens. It is a seven-column folio, and takes United Press.

THE Wellsboro (Pa.) *Agitator* has donned a new dress, and is now one of the handsomest publications which comes to our sanctum.

THE Norwalk (Conn.) *Gazette*, after a successful career of more than a century as a weekly, now appears as a daily, in addition to its weekly issue.

SECRETARY E. W. WILLARD, of the eighth congressional district republican committee, assumes the management of the Joliet (Ill.) *Daily Press*.

THE purchasers of the Detroit (Mich.) *Tribune* are M. J. Dee, George H. and James E. Scripps, and George G. Booth, of the Detroit *Evening News*.

THE Memphis (Tenn.) *Appeal* and the *Avalanche* of the same city have been consolidated by the outright purchase of the latter,

thus giving to the *Appeal*, which was established some fifty years ago, full control of both the Associated and the United Press franchises.

A LEGAL notice in a New York paper states that the name of *Frank Leslie's Illustrated Weekly* is soon to be changed to *Arkell's Illustrated Weekly*.

A COMPANY has been organized for the purpose of publishing a morning republican paper at Manchester, New Hampshire. The capital stock is \$100,000.

A MOVEMENT is on foot to establish a weekly paper in Brockton, Massachusetts, in the interests of organized labor. It will be known as the *Labor Standard*.

THE *Seattle World* is a very neatly printed illustrated sixteen-page monthly devoted, in the main, to the interests of that remarkable and progressive city.

THE Geauga (Ohio) *Republican* has just entered upon its forty-second year, and since 1859 has been edited by Hon. J. O. Converse. It is a good, reliable paper.

A NEW daily paper has been established at Raleigh, North Carolina. It is called the *Evening Capital*, and Col. John C. Tipton, late of Greensboro, is editor.

THE Massachusetts legislature is now represented by a weekly paper called the *Big Indian*. It is a four-column folio, and is published weekly by Bridgman & Beal.

THE *Evening Telegram* is the name of a new daily which has recently made its appearance in Montreal. It is a miserable looking thing, gotten up in genuine country style.

THE Aberdeen, (S. D.) *News* will change from a morning to an evening sheet until times become better. The Aberdeen *Republican* a short time ago discontinued its daily edition.

THE *Index* and the *Despatch*, of Columbus, Mississippi, both tri-weekly papers, are managed and edited by ladies — the former by Miss Lucile Banks and the latter by Mrs. S. C. Maer.

R. B. GELATT, at one time editor of the Dubuque *Times* and afterward occupying a similar position on the Minneapolis *Times*, has just been elected editor-in-chief of the Detroit (Mich.) *Tribune*.

THE *Duluth Daily Union* is the name of a neatly gotten-up and ably edited six-column, four-page newspaper recently established by the typographical union of that city. We wish it abundant success.

THE Grand Rapids (Mich.) *Democrat* presents a marked change for the better, under the guidance of M. A. Aldrich, an experienced and able editor. In all its departments the paper leaves nothing to be desired, and the territory contiguous to Grand Rapids will not be slow in appreciating this fact.

WE acknowledge the receipt of the *Colorado Collegian*, a neatly printed and ably edited sixteen-page monthly, published by the students of Colorado College, Colorado Springs. The presswork is especially commendable, and altogether it is a production of which both publishers and printers have especial reason to feel proud.

THE Richmond (Va.) *Times* has wrought a wonderful revolution in Virginia journalism and with phenomenal success. In four years it has grown from an experiment to a quarto daily and double quarto Sunday, bearing every mark of the metropolitan newspaper, including the latest Hoe perfecting press; and it is now issued from its own publishing temple that is a model of business convenience and building art.

WE have received the initial number of the *Aurora*, Waconia, Minnesota. It is published by Frank Rossman. It is a curiosity, both from a literary and mechanical standpoint. We are informed therein that the "lake has 11 miles in circumference, and the conveyance to the island does a large steamboat." Mr. Rossman, remember that a paragraph should be indented, and that it is more proper to use an fi, ff, ffi, than fi, ff, ffi. A word to the wise is sufficient.

## SOUTHERN NEWS NOTES.

SPARTANBURG, South Carolina, has a new daily paper.

THE *Tribune*, Rome, Georgia, has donned a new dress.

COLUMBIA, South Carolina, is to have a new morning paper.

A WEEKLY German paper will soon be issued in Atlanta, Georgia.

THE *Capitol*, Ocala, Florida, is issued daily during the winter months.

THE Robinson Printing Company, Savannah, Georgia, has been incorporated.

AUGUSTA, Georgia, now boasts one morning and two evening papers, while a third is threatened.

THE Memphis daily papers, and their name was legion, have been consolidated by recent purchase of a wealthy syndicate.

THE *Advocate*, Meadville, Mississippi, is the newest bud in the southern garland of journalism. Y. D. Butler, editor.

THE South is full of mineral, new booms and new papers, with unusually large crops promised for the coming summer.

THE recent death of Julius A. Bouitz, proprietor of the Wilmington (N. C.) *Messenger* will doubtless cause the sale of that valuable property.

THE *Times-Union*, Jacksonville, Florida, now issue a morning and evening edition. This is a fight against two already established afternoon papers.

THE *Ledger*, Adairsville, Georgia, is seeking another and more nourishing pasture, as there are so many gossipy old maids in Adairsville that a newspaper can find no news to print.

THE *World*, Charleston, South Carolina, claims the largest circulation in the state. The *World* was the strongest of Tillman's advocates during the recent very hot gubernatorial campaign.

THE *Constitution and Journal*, Atlanta, both use two perfecting presses in printing their enormous editions. The *Weekly Constitution* boasts a circulation of over one hundred and fifty thousand copies.

## ITEMS OF INTEREST.

*Harper's Weekly*, of February 28, contains a readable account of the St. Clair tunnel, by T. G. LaMoille, who is furnishing the shorthand lessons which are now being published in THE INLAND PRINTER.

A COPY of the *Pennsylvania Gazette* for the year 1740, printed by Benjamin Franklin, was recently sold at auction sale in England for \$120. What would the philosopher have thought of such a price?

EDWARD N. MARTINEAU, of Holyoke, Massachusetts, has invented a method of and mechanism for making blank books. The process is fully described in the specifications. The patent was issued January 13, 1891.

A PITTSFIELD (Ill.) mechanic has invented a folding type-case stand, which when not in use can be compactly stowed away in small compass and may be easily jointed up to hold cases for a compositor, either standing or sitting.

STANLEY was born in Wales, at an early age was left an orphan and spent several years of his childhood as the ward of the poor authorities. Being adopted by a Mr. Stanley, of New Orleans, he changed his name from Rowlands to Stanley.

A VERY popular style of printing without having the regular luster-ink on hand, a substitute, in every way suitable, can be procured easily by taking gum arabic and pouring vinegar over it until it has softened into a thick black mush. This is added to the ink (slightly warming the latter) and then well ground.

THE inventors and manufacturers of patented inventions of the United States will hold meetings in celebration of the beginning of the second century of the American patent system in the city of Washington, April 8, 9 and 10. The President, members

of the cabinet and all the most prominent inventors will be in attendance.

A PAIR of printers' quoins having inclined contact faces, one of said quoins being provided with a corrugated or toothed side, and the other with a fixed tooth adapted to engage with the toothed side of the opposing quoin by a slight lateral movement of one quoin on another, is the invention of Henry A. Hempel, Gotha, Florida.

THE *Lithographic Journal*, New York, publishes the following process for the manufacture of liquid bronze, which is patented by T. E. Stroschein, Berlin, Germany: Melt gum damar, together with carbonate of potash; reduce the mixture then to a very fine powder and expose this powder to a temperature of about 125 degrees Fahrenheit for several minutes. The alkalioid rosin thus obtained is dissolved in distilled mineral oil, while boiling at 300 degrees Fahrenheit. Any acid contained in the mineral oil must have been previously neutralized by conducting ammoniac gases through it. A mixture of this preparation with any bronze powder will keep for a long time.

## INTERVIEWED CHILDS.

A recent issue of the Colorado Springs *Gazette* contained the following interesting letter from Capt. M. L. De Coursey, of that city, written from Beverly, New Jersey. It will well repay perusal.

"I yesterday had the honor of being received by the Hon. George W. Childs, of the *Public Ledger* of Philadelphia, in his office in the Ledger building, and it occurs to me that what I saw and heard in that celebrated office may interest your readers. Our mutual friend, Mr. James J. Dailey, of the *Public Ledger* force, who is one of the trustees of the Childs-Drexel Home for Union Printers, had kindly offered to present me to Mr. Childs, and 3 o'clock yesterday afternoon was the time fixed. We entered Mr. Childs' office, a medium sized room on the ground floor, immediately in the rear of the business offices of the *Ledger*, and found the author and owner of it all sitting quietly at his desk, looking as young, and fresh, and placid, and rosy, and cheerful and bright-eyed as I remember him over ten years ago. He greeted me with a cordial handshake, and at once made me feel at home by commencing to talk of my father, whose friend and associate he was in the years gone by, in many measures relating to the history of the city of Philadelphia. After a time Mr. Childs reached up to the top of a chest of drawers and handed down an ebony model of the Printers' Home according to the plan adopted by the trustees, which model had been carved and presented to Mr. Childs by a Washington printer. Of course this started the conversation on a congenial course for me, and I was exceedingly glad to perceive what a very great interest Mr. Childs takes in this home project. It is quite evident that he is proud of the use the boys have made of his and Mr. Drexel's \$10,000 subscription, and that he is glad of the action of the trustees in voting to build a structure in consonance with the power and dignity of the International Typographical Union, and that he is looking forward to the completion of the home with feelings both of pleasure and of pride. Mr. Childs is emphatically the printer's friend and he is, moreover, proud of having himself been a printer. I think that his interest in this enterprise will not cease with his gift of \$10,000, but will find further expression in ways peculiarly his own. He asked me whether our people at Colorado Springs seemed to be taking any interest in the home; and he gave it as his opinion that scarcely anything else could advertise the city to the world so extensively as the location of the Printers' Home. I replied to him that our people appreciated this fact, and had evidenced their good will in various ways, one of which was a proposition in embryo for our ladies to take hold and furnish the rooms of the home, as was done in the case of the Bellevue sanitarium. And, by the way, I beg to call the attention of our good people to this worthy project, so that they may be giving thought to it in good time.

Mr. Dailey, in the course of the conversation, remarked that the corner stone of the home would be laid in May, and we both

assured Mr. Childs of the great pleasure the printers and our Colorado Springs citizens would experience in having him for our guest, present on that occasion. To be sure this was informal, but it will doubtless be followed up by official action from the proper quarters.

Mr. Childs was kind enough to show me the treasures of his cabinets of curiosities and objects of virtu and of art, and to explain to me the meaning and history of many of the treasures of his collection of pictures, armor, porcelain, clocks and bric-a-brac, of which the room is full, and with which the walls thereof are crowded. It would take a week to look through this lovely collection, but I saw enough to make me wonder and somewhat envy. Most of the articles, or at all events a great many of them, have been presented to Mr. Childs out of regard to his friendship, or in appreciation of his worth.

Upon shaking hands at parting, Mr. Childs handed me a volume of his 'Recollections,' in which he had written with his own hand, the words:

M. L. De Coursey: With the kind regards and appreciation of his father's old friend, George W. Childs, Philadelphia, January 16, 1891.

It is by such kindnesses that Mr. Childs makes and retains as friends all with whom he is thrown into contact.

I trust that, through the interest he takes in the Printers' Home, he may come to know and appreciate our lovely and beloved city of Colorado Springs."

#### A VERY COSTLY COMMA.

There is scarcely ever a session of congress in which bills are not found to contain mistakes in orthography or punctuation, says the Philadelphia Press. The only wonder is that many more do not occur, when it is remembered that all such work near adjournment is performed under extraordinary circumstances. All is haste, noise and confusion. Rest or sleep is unknown oftentime, for two or three days and nights in succession. The clerks become nervous, wearied and sometimes wholly exhausted by the intense strain and prolonged physical labor.

Probably the smallest, and apparently most insignificant, of all such blunders was the most expensive one of the kind ever made. It occurred in a tariff bill more than twenty years ago. There was a section enumerating what articles should be admitted free of duty. Among the many articles specified were "all foreign fruit-plants," etc., meaning plants imported for transplanting, propagation or experiment. The enrolling clerk, in copying the bill, accidentally changed the hyphen in the compound word "fruit-plants" to a comma, making it read, "all foreign fruit, plants," etc. The consequence was that for a year—until congress could remedy the blunder—all the oranges, lemons, bananas, grapes and other foreign fruit were admitted free of duty. This little mistake, which the most careful man might easily have made, cost the government about \$2,000,000.

#### BUSINESS OUTLOOK.

**Akron, Ohio.**—State of trade, fair; composition on morning paper, 30 cents; evening paper, 25 cents; bookwork, 25 cents; job printers, per week, \$14 to \$17; pressmen, \$16. Those desirous of subscribing for, or perusing a copy of, THE INLAND PRINTER will now find the same on file at C. J. Maurer's, 120 South Howard street.

**Bay City, Mich.**—State of trade, fair; prospects, not bright; composition on morning papers, 34 cents; evening papers, 32 cents; bookwork, 34 cents; job printers, per week, \$14. Work still remains quiet. The daily Post has once more resumed publication, but only runs two or three cases.

**Boston, Mass.**—State of trade, fair; prospects, fair; composition on morning papers, 45 cents; evening papers, 38 cents; bookwork, 40 cents; job printers, per week, \$15. Lock-out continues. Electrotypers on strike. Prospects for an evening daily paper.

**Burlington, Iowa.**—State of trade, dull; prospects, fair; composition on morning paper, 30 cents; evening papers, 25 cents; bookwork, \$14; job printers, per week, \$14 and \$15. The Sons of Veterans Company have dissolved partnership, F. B. Tabor purchasing the office.

**Charleston, S. C.**—State of trade, dull; prospects, poor; composition on morning papers, 37½ cents; bookwork, 35 cents; job printers, per week, \$17. Bottom dropped out of job printing during past month; it is picking up a little, but the indications are for a protracted dull season.

**Denver, Colo.**—State of trade, medium; prospects, fair; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$20, fifty-three hours. New morning paper started early in March with twenty cases. Candidates for delegates to International Typographical Union number five or six, with more, probably, as dark horses; the canvass bids fair to be a warm one.

**Dubuque, Iowa.**—State of trade, dull; prospects, fair; composition on morning papers, 30 cents; evening papers, 28 cents; bookwork, 30 cents; job printers, per week, \$14. Quite a surplus of printers in the city at present. Dubuque would be a good place for tourists to steer clear of.

**Fort Wayne, Ind.**—State of trade, fair; prospects, fair; composition on morning papers, 35 cents; evening papers, 30 cents; book and job printers, per week, \$13.50. The Trades and Labor Council has decided to issue a weekly paper in the interest of organized labor in this city, to be called the *Labor Herald*. It is to be a four-column quarto.

**Galesburg, Ill.**—State of trade, rather quiet; prospects, not very bright; composition on evening papers, 25 cents; bookwork, 25 cents; job printers, per week, \$12 and \$15. The *Plainsdealer* and *Sunday News* consolidated on March 1, and will continue under former name. The printers here are organizing a union and hope to receive charter some time this month.

**Grand Rapids, Mich.**—State of trade, good; prospects, good; composition on morning papers, 35 cents; evening papers, 30 cents; bookwork, per week, \$14; job printers, per week, \$14. A good deal of interest seems to hinge upon the election of delegate to Boston. J. D. Flanigan, of the *Leader*, has the lead, with A. K. Tyson and M. J. O'Connor in hot pursuit. Election March 25, when union officers will also be elected.

**Hartford, Conn.**—State of trade, good; prospects, good; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 35 cents; job printers, per week, \$15. The legislative work has not amounted to much this winter, on account of the governor question, but the other work holds out very good.

**Houston, Texas.**—State of trade, fair; prospects, poor; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$20. Supply equal to demand, but everybody is doing well.

**Jackson, Mich.**—State of trade, very good; prospects, good; composition on morning papers, 33 cents; evening papers, 30 cents; bookwork, per week, \$13; job printers, per week, \$13. C. M. Seger has gone to Buffalo and is succeeded, as foreman of the *Courier*, by Paul A. Gardner. James Frank, foreman of the *Patriot*, is now reporter on that paper, and A. J. Horton is foreman. No. 99 will be represented at the Boston convention.

**Jacksonville, Fla.**—State of trade, only fair; prospects, somewhat favorable; composition on morning papers, 33½ cents; evening papers, 30 cents; bookwork, 33½ cents; job printers, per week, \$16 to \$20. Mr. Matt. Johnson now has charge of the *Times-Union* job office.

**Kearney, Neb.**—State of trade, fair; prospects, good; composition on morning papers, 30 cents; evening papers, 25 cents; bookwork, 25 cents; job printers, per week, \$12 to \$16. Not a place to invite anyone to stop off at. Several offices and papers trying to start, with the other offices having a good run of work for the hard times.

**Keokuk, Iowa.**—State of trade, fair; prospects, good; composition on morning papers, 30 cents; evening papers, 26 cents; bookwork, 30 cents; job printers, per week, \$12. Work in the jobrooms has been slack, but with the near approach of spring it is hoped it will get better.

**London, Ont.**—State of trade, fair; prospects, none too good; composition on morning papers, 30 cents; evening papers, 28 cents; bookwork, per week, \$9; job printers, per week, \$9 to \$10. At the present time the election campaign is at its height. The electors of this city have been favored with two stirring speeches from Mr. A. F. Jury, the labor reformer of Toronto, who is a firm believer in the policy advocated by the reform party—free trade with the United States.

**Los Angeles, Cal.**—State of trade, very dull; prospects, improving; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$18 and \$20. The *Times* has reduced its non-union compositors to 45 cents, and pays its job hands \$15 per week.

**Louisville, Ky.**—State of trade, good; prospects, fair; composition on morning papers, 42½ cents; evening papers, 39½ cents; bookwork, 40 cents; job printers, per week, \$18. Trade has been good the past month, with fair prospects for the future.

**Macon, Ga.**—State of trade, jobbing, good; prospects, jobbing, fair; bookwork, dull; composition on morning papers, 33½ cents; evening papers, 30 cents; bookwork, 35 cents; job printers, per week, \$15 to \$20. Not so many printers in town as at last report. The union, at its meeting today, decided to send a delegate to Boston; also requested organizer to issue call for district convention.

**Minneapolis, Minn.**—State of trade, fair; prospects, fair; composition on morning papers, 42 cents; evening papers, 37 cents; bookwork, 35 cents; job printers, per week, \$16. No idle job printers here, but plenty of "subs" on the newspapers.

**Mobile, Ala.**—State of trade, good; prospects, fair; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$16. Plenty of "subs" here.

**New Haven, Conn.**—State of trade, not very brisk; prospects, unascertainable; composition on morning papers, 40 cents; evening papers, 35 cents;

bookwork, 35 and 40 cents; job printers, per week, \$15. Trade is very quiet, notwithstanding this is supposed to be the busy season. The *Morning News* kept up the "time" system one week and then returned to piecework. Business of all kinds is sorely depressed in consequence of the deadlock in the Connecticut legislature.

**New Orleans, La.**—State of trade, fair; prospects, uncertain; composition on morning papers, 45 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$18. At the meeting of this union on Sunday, March 8, the question of establishing a district union was discussed. The vote was strongly against the proposition.

**Peoria, Ill.**—State of trade, fair; prospects, good; composition on morning papers, 36 cents; evening papers, 33 cents; bookwork, 38 cents; job printers, per week, \$15, \$18, \$21. Trade has only been fair, and prospects are favorable for a good run of work when spring fairly opens. There will be two directories published this spring.

**Pueblo, Colo.**—State of trade, dull; prospects, moderate; composition on morning papers, 45 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$20. Work in job offices is very dull for this season of the year. A new paper starting Sunday, March 15, will help out the newspaper printers. There are a large number of "subs" in town. A good deal of interest is being taken in the election of International Typographical Union delegates.

**Richmond, Va.**—State of trade, good; prospects, good; composition on morning papers, 45 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$16 to \$20. First-class compositors find no trouble in getting work.

**San Francisco, Cal.**—State of trade, dull; prospects, bad; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 40 cents; job printers, per week, \$18 and \$21. The city is overrun with printers of every description.

**San Diego, Cal.**—State of trade, quiet; prospects, live in hopes; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 40 cents; job printers, per week, \$18. It would not be a surprise to hear that a new morning paper was to start at any time, as rumors are floating about tending that way.

**Seattle, Wash.**—Job printers, per week, \$21. Piecework having been abolished, all work hereafter will be done on time on both morning and evening papers, namely, 50 cents per hour, eight hours to constitute a day's work, and all overtime to be price and one-half. This new scale was adopted at Sunday's (March 1) meeting, and signed today by the proprietors of both morning papers and the *Evening Press-Times* and the executive committee for one year. The new scale was unanimously adopted, and met with little or no opposition from the proprietors. It is as yet hard to tell how it will affect subbing. You will observe the *Press* and *Times* have been consolidated, the *Times* force being thrown out. There are at least fifty printers too many here at present.

**Springfield, Ill.**—State of trade, a little dull; prospects, uncertain; composition on morning papers, 33½ cents; evening papers, 30 cents; book and job printers, per week, \$15. At our meeting last Sunday this union decided to send a delegate to the next session of the International Typographical Union. Several candidates are in the field and the prospects are that the contest will be interesting.

**Springfield, Ohio.**—State of trade, good; prospects, fair; composition on evening papers, 30 cents; job printers, per week, \$15. The three dailies are each running a phalanx three days in the week, which makes newspaper work dull. Job offices are busy, and have been all winter. The *Republican-Times* will soon appear in a new dress of brevity, minion and nonpareil. L. E. Miller, late of the *Democrat* reportorial force, has in view the publication of a labor paper.

**St. John, N. B.**—State of trade remains unchanged; prospects, fair; composition on morning papers, 30 cents; evening papers, 30 cents, or \$10 per week; weekly paper, 25 cents; job printers, per week, \$10.

**St. Louis, Mo.**—State of trade, fair; prospects, good; composition on morning papers, 43 cents; evening papers, 38 cents; bookwork, 45 cents; job printers, per week, \$18. Job printing good; no good job printer unemployed. There is always, however, an abundance of "subs."

**Topeka, Kan.**—State of trade, fair; prospects, poor; composition on morning papers, 33½ cents; evening papers, 28½ cents; bookwork, 40 cents; job printers, per week, \$15. About thirty men will be laid off at the adjournment of the legislature, which will probably be next week or at the end of this.

**Toronto, Ont.**—State of trade, fair; prospects, fair; composition on morning papers, 30 cents, with optional scale for ads. of 33½ cents; evening papers, 28 cents; bookwork, 33½ cents; job printers, per week, \$11. Everything is topsy-turvy on account of election.

**Utica, N. Y.**—State of trade, quiet; prospects, uncertain; composition on morning papers, 35 cents; evening papers, 31½ cents; bookwork, 31½ cents; job printers, per week, \$12.50. Calling out the union men from the *Herald* has increased the number of "subs" in town, but so far there has been more or less work for all. Some of those who came out have left the city and the remaining ones will be taken care of. There are no new developments in the case and the situation remains about the same.

**Westminster, B. C.**—State of trade, fair; prospects, good; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$21. The overflow from Seattle has been crowding us

lately and tourists are numerous. Our union elects a delegate to attend district convention next month.

**Wichita, Kan.**—State of trade, dull; prospects, only fair; composition on morning papers, 35 cents; evening papers, 30 cents; book and job printers, per week, \$15. There has been very little change during February. Jobwork has been a little better the past two weeks. More men in town than there is work for.

**Worcester, Mass.**—State of trade, not very brisk; prospects, about same; composition on morning papers, 40 cents; evening papers, 33½ cents; bookwork, 35 cents; job printers, per week, \$10 to \$15. We have about half a dozen candidates for delegates for International Typographical Union. Indications point to Secretary Duggan, of Felt's job office, and Assistant Foreman Foskett, of the *Gazette*, as the probable ones who will "get there."

## BUSINESS NOTICES.

The Élite Manufacturing Company of Marshall, Michigan, have sent us one of their benders advertised on another page. We have not had an opportunity at time of going to press to test the tool very thoroughly, but should say that in the hands of a careful printer it would be capable of producing many attractive pieces of rulework.

A NEW series of type has just been issued from the Dickinson Type Foundry of Boston, called

## ERRATICK

in sizes from

Six Point

to

# 48-Point

which will be found useful in every job printing office. It is "erratick" enough to be very popular.

We acknowledge receipt of a new specimen book of type issued by James Conner's Sons, of New York. They have very aptly named the work "Compact Specimens," for the book is of very convenient size. It contains all the standard book, newspaper and job faces, specimens of brass rule, etc., and a part of the many electrotyped cuts made by the firm. It is a handsome work and should be in the hands of every printer.

MR. JAMES G. WEBSTER, of St. Johns, Quebec, has made an improvement on his composing stick, which was illustrated and explained in the February issue of THE INLAND PRINTER. This

consists of a device made on the principle of an eccentric, so that by raising the main knee at the left of the stick the knee is disengaged, and by lowering it is made fast. With this improvement the stick will appear as above.

For the beginner — the apprentice — in the art of job printing, a most useful and instructive book is "The Young Job Printer," by S. M. Weatherly, Chicago, an advertisement of which appears on another page. The second edition of this work, carefully revised, has just been issued, and contains chapters on definitions of technical terms, names and sizes of type, selection of type, labor-saving material, arrangement of outfit, "laying" type, composition, spacing, making up, job composition, punctuation, tabular work, locking up, presswork, overlaying and underlaying.

causes of a bad impression, setting the guides, care of presses and rollers, cleaning type, printing inks, color printing, mixing colors, bronzing, imposition, making the margin, locking up book forms, about estimating, cost of presswork, sizes and weights of paper, and much other useful information. Every ambitious young printer should possess one.

We take pleasure in calling the attention of our readers to the advertisement of the "Peerless Perforator," manufactured by Avery & Burton, corner Clinton and Washington streets, Chicago, to be found on page 586 of the present issue of THE INLAND PRINTER. Any printer or binder desiring a machine of this character, will do well to examine its merits before purchasing. Applications for descriptive circulars and samples of work will meet with prompt attention.

#### WILLARD'S NOISELESS JOBBER.

This machine, a new candidate for public favor, an illustration of which is herewith presented, is the invention of a practical printer who has given his personal attention to every class of job-work for more than twenty years.

Among the distinctive features or special recommendations claimed for it are: (1) Its ease and rapidity of movement, and

firmness and power of impression. (2) It is provided with two disks, one above and one beneath the bed, a feature unlike any platen press on the market, which makes the inking equal to *double inking*, while the lower disk is a valuable auxiliary when working a heavy rule or border running down the sides of the form. The disk serves to distribute the ink more thoroughly than on other job presses, and also recharges the rollers with ink and obliterates from their faces the marks of the type and puts them in perfect condition before they ascend to again ink the type. Inking the form from both ends is one of the most radical improvements ever made in presses for the finest class of cut and book work. (3) The frame, bed and braces are in separate parts. The sides are held together by steel shafts having nuts on the outside and inside of the frame, which allow of the finest adjustment, a feature in advance of the usual construction of shafts, with shoulders and nuts on the outside of the frame to force the same against the shoulders; besides a positively true and unyielding impression surface is obtained by this form of construction. The bed is supported by cross braces, and has solid iron bearings which can never wear out. (4) Improved impression regulators. Two hand screws, one on each side of the bed on the outside of the frame in a convenient position, act upon wedges in a vertical position back of the bed on their respective sides, through an opening in the frame, and regulate the impression for printing a single line or a full form of type. A perfectly true impression can be obtained

almost instantly, which is impossible with an eccentric movement. The impression can also be increased or decreased instantly on either side of the bed, while if it is considered desirable to change the impression of the bed it can be done by simply loosening the nuts that hold the lugs in position and moving the tops forward or backward to cause the face of the bed to assume a position exactly parallel with the platen. The sides of the bed are beveled to conform to the face of the wedges against which they rest, and have a bearing on its entire length. The steel spring operated on by a thumbscrew holds the bed firmly on the face of the two wedges. The spring is relaxed when the impression is adjusted by the movement of the wedges. (5) A self-acting throw-off. A lever at the side of the press convenient to the left hand serves to lock the bed in position. By lifting this rod less than an inch, which requires no effort, the bed, influenced by a counterbalance at the rear of the press, rises and at the same time recedes from the face of the platen and the rollers. This counterbalance is adjustable to the weight of the form being printed. By pushing on the lever the bed slides down the faces of the wedges and is again locked in position for printing. By its use any quantity of ink may be placed on the disks and the press run and ink distributed without removing the form from the press. (6) Lateral movement of the rollers. This is the most radical improvement ever made in platen press inking devices. On this press the roller carriage-ways or groove in the sides of the frame in which travels the lip on the inner side of the roller carriage, are so constructed that the rollers have a *lateral* as well as a *rotary* motion, while passing up and down over the face of the type, thus presenting a continuous or freshly inked surface to the type at every revolution. This peculiar and very desirable motion of the rollers is possible only on this press, owing to its novel construction. This feature, coupled with the disk below the form, leaves nothing to be desired. (7) The absence of cam wheels. By dispensing with them sufficient weight of metal can be placed in the wheels to permit of the insertion of one or more gears should they become broken from any cause.

Parties desirous of obtaining further information can receive the same by addressing Fred G. Willard, 236 Randolph street, Chicago.

#### CHEAP BRASS BRACES.

The Central Typefoundry, of St. Louis, have introduced a new series of brass braces, made on two-point body, and very cheap.

#### BOOKBINDERS' TYPE.

Brass type made by the Central Typefoundry, of St. Louis, are much more perfect in every way than those imported, and very much cheaper.

#### TYPE SPECIMEN BOOK.

English and American typefounders and printers all agree that the Central Typefoundry book is the best ever issued—full of beautiful styles and splendidly printed.

#### ENGLISH TYPOGRAPHICAL JOURNALS.

The *Printing World*, *British Printer*, *Paper and Printing Trades Journal*, all use the Central Typefoundry type in their display advertisements.

#### ELZEVIR, 1659.

Printers and publishers will appreciate the charming borders of the seventeenth century, reproduced by the Dickinson Type Foundry, Boston, and specimens of which are shown on other pages. They are close imitations from the Elzevir (Leyden) tomes, and are full of the quaint strength of light and heavy contrasts for which that century's printing was so famous. These antique designs have been much sought after by admirers of the Elzevir editions, and in the hands of the appreciative printer will artistically combine into numberless head and tail pieces of old-time effectiveness.

**NEW JOB FACES.**

The Central Typefoundry, of St. Louis, have at least twenty new series of job type which they will soon bring out. There is no field of printing that their beautiful copper alloy type does not fill.

**LABOR-SAVING MAILING TYPE.**

Those who have adopted the Central Typefoundry labor-saving mailing type, which requires *no spacing*, wonder how they got along with the ordinary type.

**SANDERS ENGRAVING COMPANY, ST. LOUIS, MO.**

This company has recently issued a specimen book showing the various styles of work produced in their establishment. The specimens include half-tone, zinc-etching and other processes, all executed in their best style. This firm is patronized by leading publishers in the West, and their trade is growing constantly. In order to show the readers of this paper the character of work they produce they would be pleased to send a copy of their book to any printer interested in engraving. Their address is 400 and 402 North Third street.

**A CHEAP LEAD-MOLD.**

The Central Typefoundry manufacture a perfect lead-mold, which casts 3-point, 6-point and 12-point slugs. It only costs \$5. Every country printer should have one.

**TWO-COLOR LETTER.**

The success of the Hades and Erebus two-colored series has induced the Central Typefoundry to cut another series, each size made in four varieties. It is very novel and very beautiful.

**THE PRESSMAN'S FRIEND.**

The merits of inkoleum as an ink reducer, refiner and drier are too well known to the readers of THE INLAND PRINTER to need any further encomium at our hands. Suffice it to say it is a preparation no pressman can afford to be without, as its effects are instantaneous while its use does not in any manner injure the rollers or the most delicate shades of ink. It has been appropriately termed the "Pressman's Friend," and it richly deserves the appellation, those who have tested its merits being loudest in its praise, as evidenced by the hundreds of testimonials in its favor received from practical pressmen in every portion of the civilized world. See advertisement on another page of THE INLAND PRINTER.

**NEWSPAPER FACES FOR STEREOTYPING.**

The new series of newspaper faces produced by the Central Typefoundry, cut expressly for papers that stereotype, is having an immense run. The new dresses just put on St. Louis *Globe-Democrat* and *Post-Dispatch* are splendid.

**ROYLE'S ROUTING MACHINES.**

The fact that these popular routers are being placed in the best establishments in the country speaks well for the value put upon them. Messrs. John Royle & Sons, the manufacturers, Paterson, New Jersey, are constantly striving to improve them, and have recently applied an improved elevating guide-bar to both the straight line and radial arm machines, which enables the operator to rout into very narrow and closely converging spaces, and to "square out" corners with a degree of precision that renders subsequent hand trimming of such parts almost entirely unnecessary. This is a feature that will be much appreciated by users of machinery of this class. This firm has also brought out a new routing machine called their No. 3, which sells for about one-half what the other machines cost, and for many uses is exactly as good. The workmanship on it is fully up to that of any machinery they make, and the price puts it within reach of all. When you want a router, routing cutters, or cabinet or column saws, write to this firm.

**A FIRST-CLASS INK MAKER** can hear of a good opening by addressing "M," care INLAND PRINTER.

**ALL LIVE PRINTERS** should have Bishop's "PRACTICAL PRINTER," 200 pages, \$1. Also his "DIAGRAMS OF IMPOSITION" and "PRINTERS' POSITION" and "PRINTERS' ORDER BOOK," price \$3, and "SPECI- MENS OF JOB WORK," price \$2. Sold by H. G. Bishop, Box 13, Oneonta, N. Y., and by all type foundry. The handiest and most useful works ever published for printers. Indorsed by everyone.

**AMERICAN PRINTERS' SPECIMEN EXCHANGE.**—About ten more of the complete unbound sets at \$3 to close out (formerly \$3.75). Sets have been sold in the last three months to H. R. Bryan, Hudson, N. Y.; P. B. Medler, Montpelier, Vt.; J. F. Keary, Cleveland, Ohio; A. E. McMaster, Oklahoma City, I. T.; Charles F. Vail, Peoria, Ill.; M. P. McCoy, London, Eng.; L. A. MacDonald, Portland, Ore.; T. H. Collins, Oxford, N. C.; C. E. Van Pelt & Co., Stanton, Va.; C. L. Laren, Knoxville, Tenn. (who already had two bound volumes), and about thirty others in different parts of the country. After these are gone will sell single unbound volumes at 80 cents each, post-paid, except Volume 4, \$1.50. ED. H. McCLURE, Buffalo, N. Y.

**FOR SALE**—Printing office, will invoice at \$2,500, in a manufacturing city of 20,000 population; a splendid bargain for an enterprising, practical printer; satisfactory reasons for selling; price \$1,600 cash. Address E. C. JONES, 315 Ludlow street, Hamilton, Ohio.

**FOR SALE**—\$5,000 (and market value for unused stock on hand), cash, buys fine job printing establishment of eight years in a leading city. Gross business now over \$12,000 yearly at paying prices; a bargain. For full particulars address "BARGAIN," care INLAND PRINTER.

**FOR SALE**—Newspaper and job office in a manufacturing town in Southern Ohio. Machinery and type in good order. Paper established five years, and has circulation of thirty-one quires. Independent in politics. Steady run of jobwork. Owner wants to go west. GEO. C. JAMES & CO., 62 Longworth street, Cincinnati, Ohio.

**FOR SALE**—A first-class, medium-sized job office, well established, doing good business, and has many leading houses among its custom; material new, well selected and ALL on point system; location central, rent cheap. Will net good living and profits for two industrious and practical job printers. This is a rare opportunity. Reasons for selling, other business on hand. For particulars address "H. F. B.," 58 Griswold street, Detroit, Michigan. N. B.—This opportunity is open only until May 1, 1891.

**FOR SALE**—Country newspaper and job printing outfit. BEST OFFER TAKES IT. Material can be removed if desired. This outfit is complete in every detail, with the exception of newspaper press. It consists of eighth Gordon press, powerful 30-inch lever paper cutter, 12-inch card cutter, over 500 pounds long primer, small pica, brier and nonpareil body type, about 200 fonts wood and metal display type, stones, cases, racks, galleys, cuts, ornaments, brass rule, etc.; large amount of leads and slugs, furniture, ink, paper, stock, etc. For particulars address THE NEW SOUTH, Summertown, Tennessee.

**FOR SALE OR TRADE**—The *Hartford Weekly Call*, consisting of 700 good paying subscribers, Washington hand press, Gordon job press, full supply of type. Everything in good running order. Will trade or sell on payment plan. T. O. GIBBON, Hartford, Kansas.

**JOB FOREMAN WANTED** in a city in Illinois; must be familiar with stock and prices, and give good reference; wages \$18. Address "FOREMAN," care of or inquire of W. J. Mize & Bros., newspaper brokers, 149 La Salle street, Chicago, Ill.

**SITUATION WANTED**—By a practical printer in a first-class weekly, daily or job office. Capable of taking entire charge. Address "K. C.," care INLAND PRINTER.

**WANTED**—Copies of Nos. 2 and 10 of Volume I, INLAND PRINTER. Will pay 25 cents apiece for these if in good condition. Mail or bring them in. Inland Printer Company, Chicago.

**WANTED**—First-class job foreman. Must have experience in commercial and color show printing and take full responsibility of job department. Address "JACOB," care INLAND PRINTER, stating terms, etc.

**WANTED**—Subscribers to THE INLAND PRINTER; per year, \$2; six months, \$1; single copies, 20 cents. Also, send 10 cents for 16-page circular, "How to Impose Forms," giving complete schemes of imposition.

**WANTED**—A practical printer, experienced as proofreader and make-up, desires situation as foreman of good newspaper or book office. All city references as to sobriety and reliability. Address "H. S. W.," care INLAND PRINTER.

**WANTED**—A foreman of fifteen years' experience on general catalogue, book, periodical and job work, now holding a foremanship in an office doing a business of \$30,000 a year, desires to make a change to a more responsible position. Address "6x37," care INLAND PRINTER.

**IF YOU WANT SEE THIS: BARGAINS**

- We offer the following machinery, in good order, at prices named, for cash:

**THE ELITE MANUFACTURING CO.**  
 MARSHALL, MICH.

The Lightning Ink Reducer and Dryer. Awarded Diploma, Paris, 1889, in London, 1897, for Unexcelled Excellence.

Inkoleum is the only article in the world that gives pressmen complete control over printing and lithograph inks, rollers and stock in any weather and climate. It refines inks of any color or shade and makes them dry quick and glossy, enabling rushed work to be delivered immediately from press without offsetting. Inkoleum never dries on rollers, but preserves their suction, life and elasticity. On starting press in morning or whenever rollers are too sticky or ink dry on them, or the ink pulls the paper, a drop or two of Inkoleum put on the rollers with your finger immediately softens the ink and makes them do the finest work, a saving of five times its cost every hour in the day.

Beware of Infringements! Order Inkoleum and accept no worthless Piratical imitation, said to be just as good. Price, only 50 cents. For sale by every typefoundry in the world. Read circulars printed in five languages, put up only by

RIVERSIDE SERIES, No. 13

designed by Mr. H. O. Houghton, of the Riverside Press, Cambridge  
 Set in Steel by Phelps, Dalton & Co. Dickinson Type Foundry, Boston

THEO. L. De VINNE

In Historic Printing Types.

long ago Mr. Henry O. F. 'Riverside Press,' solicited me under to make for good speed types, of color, and impress models the types founder decline me was for light old cast no other had the types variety shows the soundness of his judgment.

EDWARD H. PHELPS

of England Homestead, Farm and Home, etc.

No. 13 Series (the Minion size of you cut for us) has proved A1. It is especially because it is so compact at the same time so legible. The letter being tall rather than broad, the eye in each word as a word and not as so successive letters, which must often be case with a "fat" type. At the same time the readability of this Minion

is much enhanced by the appearance between the lines, solid matter thin-leaded. I had always type foundry were interested but the wearing quality of seem to show that you will the purchase of our next you!) to as distant a day that as it may, it is mightily entirely satisfactory to.

H. O. HOUGHTON

Riverside Press, Cambridge

series of types, Dickinson Type Foundry my suggestion, seen more excellencies, such beauty of far series I know. The beauty of the early printer.

A. ROPE

The Rural Vermonter, Mt.

We purchased recently, a of your Riverside Series, N never regretted following you the contrary, we have been satisfied with the selector week we have become fans. Its and advantages. The character is the extraordinary compact with remarkable clearness. It also makes a very hand-pact page. The type wear satisfaction, and if we were outfit we should have chosen the No. 13.

**ALL OF THEM A SUCCESS!**

We are thoroughly satisfied with our New Universal. It is considered by all as the best press in the market.  
 TEMAY & CO., 205 E. 75th St., New York.

We have in our establishment now fifteen presses—embossing, color and type presses—nine of which are Universals, the others being patterns of various prominent manufacturers.

Our foreman assures us that in every respect he finds the Universal superior to the others. For register, rapid and neat work we do not think the Universal can be surpassed.  
 J. W. CARROLL, 78 Duane St., New York.

We have used your New Universal Wood Printing Press over two years steady, and I am pleased to say it has given the best of satisfaction.  
 H. W. SMITH, Bangor, Me.

When asked what we think of your presses, would say that we have fourteen of them in operation and they give us good satisfaction in every way.

The

# COX • DUPLEX • PERFECTING • PRESS

## AND FOLDING MACHINE.

Delivers 3,500 to 4,500 perfect papers, folded, per hour, either four, six or eight pages, from flat beds and ordinary type forms.

MR. T. C. O'HARA, the well-known expert machinist of the *Boston Herald*, under date of September 10, 1890, writes as follows to MR. H. I. DILLENBACK, manager of the Rutland (Vt.) *Herald*, the purchaser of the first of the above machines :

BOSTON, MASS., September 10, 1890.

At your request I attended the shop test of the new COX DUPLEX WEB PERFECTING PRESS, built for the Rutland *Herald*, and carefully inspected its operation and made a thorough examination of its construction. The press stood partly over a pit and partly on the floor, upon planks, and was not fastened down in any way; and it was run by a four-inch belt. At the first trial of speed, it ran at the rate of 3,000 complete papers per hour; at the second, 3,600; at the third, 4,560. Its operation during these trials caused no perceptible jar of the machine nor of the floor of the building, nor did it give any indication of strain upon the machine, and it ran with perfect steadiness and smoothness. The principle of the machine, while novel, is entirely practical, and overcomes entirely the obstacles to speed and smooth running always heretofore encountered in the construction of flat-bed printing presses, and in my opinion the invention has solved the great problem in the construction of machines for the use of newspapers of moderate circulation, desiring to print from type at high speed, in a manner destined to revolutionize this branch of printing press manufacture.

The press is now in daily operation in the pressroom of the *Herald*, where it is fully demonstrating its capacity to do all that is claimed for it.

Full information may be obtained by addressing the manufacturers.

## PRACTICAL TALKS ON PRESSWORK.

NO. XIII.—BY A PRESSMAN.

THAT the interest excited by these articles is on the increase may plainly be seen from the contributions and communications appearing in THE INLAND PRINTER from month to month invoked by the ideas advocated or the opinions expressed by the present writer. This is gratifying, as it evinces the fact that pressmen are a reading and thinking class, and I hope will shortly be a writing one as well. In regard to an evident misunderstanding of my meaning in a recent article which Mr. Math. Miller writes about in the March number of THE INLAND PRINTER, I desire to call attention to one fact which he overlooks, namely—that my contention was that American pressmen were superior not only to German, but to all other pressmen. I did not consider it necessary to decry the work of the foreign pressman in order to prove this; on the contrary, if it can be shown that the products of German press-rooms have excellence and our own products surpass them, the case is all the better for the American. Another point is that in considering the production of the pressman's craft from the artistic side, the methods of working do not enter into the case. The simple fact that a finished work is before us to be judged on its merits as a work of art is the whole question.

\* \*

It is almost time to be looking out for a supply of summer rollers. The hot weather comes upon us so rapidly that very many are caught napping. It is not the most pleasant thing in the world to find that though we spend never so much pains on the make-ready of a job that our rollers that have carried us through so well for the cold weather have gone back on us. Foresight will prevent such mishaps.

\* \*

How often it occurs that in using a palette knife the pressman gets his hands covered with ink. This can be obviated entirely by a very simple contrivance of my invention and which in the extreme generosity of my nature I give freely and without price. It is as follows:

Drive a nail in the wall, or post, or any convenient place near the ink fountain, and one inch or one and a half inches to the left and three quarters of an inch higher drive another one. Both nails should be perfectly horizontal and project about one and a half inches from the wall. Insert the point of the blade of the palette knife between the two nails and it will remain there, the weight of the handle keeping it in place. The handle itself need never touch the ink.

\* \*

Pressmen in the East are awaiting an opportunity to study the new movements of the Miehle press which genial "Bob" Yorkston has been advocating for some time past. If it has merit, if it approaches, even, a fulfillment of the claims made for it, it has a most profitable career before it. It is undeniable that the ordinary rack and star wheel bed motion is not an entirely satisfactory or perfect one, and if it can be improved on in such a way as to permit large presses to be driven at a high rate of speed the presses embodying such improvement, other things being equal, must become popular. The Miehle Company are fortunate in securing the services of Mr. Yorkston, who is as well known and popular in the East as in the West.

\* \*

Ben Abou, a book critic writing for New York papers, in speaking of Stanley's "In Darkest Africa," deplores the miserable printing of the American edition, thinking it a disgrace that with the possibilities existing here in the shape of good workmen, first-class presses and the other concomitants such a notable book should show such inferior work. He is right.

The bane of the trade, something which this particular critic probably knows nothing of, is that the commercial has excluded the artistic spirit in a great many of our printing and publishing houses. I know of my own personal knowledge that the pressmen engaged on that work are capable of much better work, but I also know that time, that absolute requisite for the production of fine printing, will not be given them. How often do we not see an unequal and unjust distribution of blame where conditions are imposed, let

us say on pressmen, which are an absolute bar to good work; and the superintendent, the foreman or the employer will endeavor to saddle, on the unfortunate workman, the blame for a failure for which he alone is responsible.

\* \* \*

I have seen and read of a great many remedies, more or less efficient, for preventing electricity from interfering in the pressman's work. Very few of them are more than makeshifts, while some are a positive injury to the work itself. A plan I have seen tried recently, and with good effect, is to provide one's self with a supply of this hard manila overlaying paper in sheets sufficiently large to be able to cover one-half the tympan, saturate them thoroughly with a mixture of machine oil and plumbago; the latter may be dusted on and then rubbed into the oiled sheet. After the form is thoroughly made ready cover the tympan with the prepared paper changing it as often as it is found necessary. Of course the careful pressman will not forget to print some waste sheets after every change to remove the superfluous oil and plumbago. This will be found, probably, as good as any of the remedies in use. It originated, I believe, with Mr. George Ferguson, of New York, an artistic pressman if there ever was one.

Written for THE INLAND PRINTER.

#### STEREOTYPING.

NO. XVII.—BY CARL SCHRAUBSTADTER, JR.

**I**F any serious mistakes have been made in the plate, and the form has not yet been distributed, it will usually be found cheapest to make a new matrix and new plate. If a paragraph is wrong, it can be sawed out and the defective part re-stereotyped and tacked in its place. If a single word or letter is found defective after the plate is mounted, it should be separated from the block by carefully inserting a stiff knife between the two, and forcing them apart until the tacks are sufficiently loosened to be withdrawn with nippers. With the calipers illustrated in a former article the position is marked on the back, and with the finishers' chisel, graver, punch or square file, a hole is cut through the plate barely large enough to allow the word to be forced in. The type, carefully cleaned, are forced through the opening and tapped to make them agree in height with the face of the plate. Care should be taken to have the types at right angles with the back of the plate. They should then be touched lightly with soldering acid and fastened with a soldering iron. The projecting shanks of the type are now cut off and the back of the plate filed smooth.

If a form contains a wood-mounted cut which cannot be conveniently remounted on metal, the block should be built up from below with cardboard of about one typographical point in thickness. The cut should be carefully cleaned, otherwise the matrix may adhere to it. The utmost care should be exercised that the face of the matrix is free from any foreign substance. If the cut is very fine and has isolated lines, use a soft

brush and beat somewhat longer than usual. Afterward use a planer, striking lightly with the mallet. In place of French chalk, use plumbago for polishing the surface before casting.

Wood cuts should never be stereotyped if it is possible to avoid it. The block is composed of a number of small pieces joined and glued together. Under the influence of heat and moisture the block is apt to warp and even come apart. An electrotype should be used instead of the original. Where this is impossible, the following procedure is recommended: Underlay the cut with a sheet of hard paper, and oil thoroughly with coal oil. It is a good plan to soak the cut in coal oil until it will absorb no more, and then dry thoroughly in sawdust. An extra sheet of tissue should be put into the matrix. Carefully examine the surface for hairs from the brush, lumps of hard paste and other irregularities, and remove all folds or blisters with a roller or by covering with a sheet of hard paper and rubbing with a folder. Observe the same precautions in beating as indicated in the last paragraph. Fill up the large counters with backing powder, felt or straw-board, and paste on another sheet of backing paper. Place the form face downward in the drying press with the blanket beneath it and screw tightly. It should not remain long enough to become hot, but as the heat travels slowly through the blanket there is little danger of this occurring. Now remove the damp matrix from the form and lay it face upward on the surface of the drying press on casting box. Then lay the gauges upon the matrix as though you were going to cast from it. Lay a piece of slug or rule on the impression of the top bearer and clamp the box tightly. The casting box should be heated so that the drying is performed in as short time as possible. If care is observed the matrix will not warp, and the cast taken from it will be almost as sharp as one dried on the form, the difference being so slight as to be detected by none but experts.

Stereotyping is not recommended for fine wood cuts, zinc etchings or half tone engravings. They can be faithfully reproduced, but the metal, being relatively soft, will not stand many impressions with hard packing or stiff paper without showing wear. If cast with moderately hard metal they will wear better than the ordinary electro, which is composed of the veriest film of copper and backed by the softest metal, but for fine work on hard paper the very best electro procurable is none too good. For ordinary work, and even for fine work where few isolated lines occur, stereotyping will answer very well. If possible the zinc etchings should be mounted on metal. Use a very hot drying press, and thin paste containing a large proportion of whiting and toughened by the addition of glue, gelatine or gum arabic. Use at least three sheets of cream tissue in the matrix and beat lightly while covered with a damp cloth, as heretofore indicated. Cast with metal as cold as practicable.

An article has of late been circulated directing how to make stereotypes from wood cuts by spreading a

film of plaster of paris on paper and taking an impression from this. Another preparation long in use consists of magnesia mixed with glycerine and water and spread in the same manner. However, they present no advantages over the papier-maché method, which is capable of reproducing the finest cut, and as the proceeding is difficult, slower, more expensive and not always successful, it has not been described more carefully.

In making stereotypes from wood type the same precautions should be taken as with wood cuts. Some stereotypers cover the face of the type with a thin layer of tinfoil before laying on the damp flong. This to a great extent prevents the moisture from affecting the wood, and as the work on which it is used is seldom of a high order, the small loss in sharpness is unimportant.

There is considerable room for ingenuity in casting tint plates. A piece of cardboard, backing paper, or other stock not liable to be warped by the heat, should form the surface. The shape of the tint block may be cut out of straw or pasteboard with a sharp knife, and affixed to the bottom sheet by means of paste. Care must be taken that the paste does not run over the inside edges and detract from their sharpness. If it is desirable to have an even tint, the sheet must be smooth and matrix perfectly dry. Tint blocks are usually cast in large pieces and trimmed to shape with a graver and chisel. By pouring the metal into the casting box when the latter is cold, the surface is chilled in peculiar, wave-like forms, the sizes and shapes of which depend upon the temperature of the box and metal and the way in which the matter is poured in. Casts which will give beautiful effects can also be taken from stamped and embossed paper or cloth. If rosin is dusted irregularly over the piece of cardboard it will, when the metal is cast upon it, evolve gas, making bubbles and rough formations, which will give a peculiar effect to the tint blocks if printed in two or more colors. But a very small quantity of rosin should be used.

Similar effects may be obtained by applying water, but care must be taken to avoid accidents. Another method is, to take an impression of the key plate on paper or cardboard, and then paint such parts of the cardboard as is desired shall remain white with a solution of dextrine or gum arabic, to which a few drops of glycerine have been added, and then sifting finely-powdered chalk on the wet size. This will give the counters, which may be built up or routed deeper after the block has been cast.

Still another method is to mix equal parts of whiting and starch, and apply to the sheet of cardboard with a brush, through a sieve, or in any other manner which will produce regular or irregular patterns. If it is desired to have any part black, it may be temporarily covered with cardboard. If it is desired to have parts remain white, the cardboard may be permanently attached. The card should be stretched and thoroughly dried before casting.

Written for THE INLAND PRINTER.

### THE INVENTION OF PRINTING.

NO. II.—BY O. S. JENKS.

IN 1439, Gutenberg, in partnership with two artizans of Strasburg, established a printing office. Their researches were conducted with the utmost secrecy. We must depend upon the legal document discovered at Strasburg in 1760 for an account of the experiences of Gutenberg and his co-workers, Andrew Dritzehen and Andrew Heilmann. The trials and reverses of Gutenberg have been so often narrated in trade journals that a detailed account is not necessary to the purpose of this sketch.

It appears that an agreement had been made between the three partners in the enterprise that, in the event of the death of either of them, no right should vest in the heirs of the deceased to more than a sum corresponding to the amount invested by him. At the death of Dritzchen, his brother tried to secure a partnership in the business. After troublesome litigation and many reverses, Gutenberg, now a poor man—his partnership venture having proved unsuccessful—returned to Mayence, his native town.

Gutenberg's aspirations were next directed to the production of a bible. His printing outfit at this time consisted of a few boxes of type, an inconvenient form, and a press—probably a wine-press—with a wooden screw. It was doubtful if this latter instrument would serve the purpose better than the old method, the *frotton* (which consisted in rubbing the paper with a brush upon a form coated with ink thicker than ordinary ink), as the wretched type could illy resist the force of the blow from the bar of the press.

About this time Gutenberg's acquaintance with Fust began. Fust was a financier of Mayence, who was looking for some profitable business to invest in; from him Gutenberg procured a loan which was frittered away in fruitless experimenting.

For the payment of this loan Gutenberg had, confident of the success of his experiments, signed away all that he possessed, and to add to his embarrassment Peter Schöffer, of Gernsheim, employed as a designer in his office, having made a study of his (Gutenberg's) experiments, carried them to successful completion.

The accuracy of this story of Schöffer's success, related by John, of Tritenheim, called Trithemius, abbot of Spanheim, may be questioned, as the account is said to have emanated from Schöffer himself. Schöffer was, however, possessed of a good education, and it is not likely that he confined his researches to the particular branch of the business for which he was employed. It is possible that Gutenberg divulged some of the secrets of his methods to Schöffer.

On account of the success Schöffer had achieved, Fust found it quite profitable to establish the most friendly relations with the young man; he invested more capital in the business and even gave him his granddaughter in marriage. It is likely that Schöffer had

discovered a method for the rapid founding of types, and also employed the matrix and punch.

In 1454, the lavish issuance of letters of indulgence by Pope Nicholas V, which were sold to raise funds to aid in the prosecution of the war of the king of Cyprus against the Turks, furnished employment for numerous copyists. The distributors having arrived at Mayence, all the material of the printing office was brought into requisition to supply printed copies of these letters, which had a commercial value and were used much in the manner of bonds. Their issue was one of the causes of Luther's Reformation.

Fust and Schöffer, now having all the necessary material and a knowledge of the methods for conducting the business, endeavored to rid themselves of Gutenberg. This Fust accomplished by demanding of Gutenberg the repayment of the entire loan. This demand compelled Gutenberg to abandon the printing of the bible, and to sacrifice all the material he had accumulated for the purpose.

In November, 1455, he endeavored, with the help of charitable people, to establish a shop outside of the city, where work was conducted with the utmost secrecy. Fust and Schöffer were now enabled to complete the bible of Gutenberg, which appeared in the latter part of 1455, or early in 1456, and was the first book printed in Europe.

The history of printing now becomes a part of the history of the world's progress. It would be presumptuous for the author of this article to air his theories on the long-mooted question as to whom belongs the most credit in the invention of our art. As MacKellar says, "The merit of the invention of printing, however rude it may have been, belongs to Coster of Haarlem; Gutenberg placed the art on a permanent foundation; its economical application was insured by Peter Schöffer's invention of cast metal types."

I have simply pursued the narrative of the efforts of the early printers far enough to show the indomitable perseverance and devotion to his art, despite the treachery of his colleagues and frequent financial reverses, that characterized the labors of Gutenberg, and have won for him the homage of modern craftsmen as the "Father of Printing."

Written for THE INLAND PRINTER.

#### NOTES ON WOOD ENGRAVING.

NO. XLVI—BY S. W. FALLIS.

THE illustrated newspapers and magazines in America have had great influence, and have been of inestimable benefit to the advancement of American wood engraving. We are informed by Mr. Lossing, in his "Memorial of Anderson," that the first illustrated publication was the *Family Magazine*, the first number of which appeared in April, 1833. It was published in New York by Julius S. Redfield, the publisher of "Chapman's Drawing Book," and a brother of the engraver Redfield. This magazine was wholly and profusely illustrated with engravings on wood, and held the field

almost without a competitor for eight years. It was published monthly. We find from other authority that the New York *Mirror* began its career in July, 1823, and in Volume viii—1830-1 contains five engravings on wood, and the succeeding volumes were more profusely illustrated, therefore the New York *Mirror* surely antedates the *Family Magazine* as an illustrated paper. The majority of these early illustrations in the papers referred to were not possessed of any great amount of merit or skill, yet they were wood engraving illustrations and bear an important feature in the advancing history of American wood engraving. During this same period, however, the *American Magazine* and two reproductions of the London *Penny Magazine* also made their appearance.

In 1842, the only illustrated paper in New York was the *Sunday Atlas*, illustrated to the extent of one four-inch portrait on the first page of each issue. The *Mercury* followed with cheap outline cuts in its Sunday issues about double the size of the cuts in the *Atlas*. The *Herald* soon fell into line with occasional illustrations, but all of these engravings were of the cheapest possible grade, costing less than \$5 each on the average, and while they possessed no real encouragement for the draftsman and engraver the publication of illustrations in these papers was slowly paving the way for greater things in the way of newspaper illustrations which should have in the future a widespread influence on both the skilled and unskilled wood engraver. "Brother Jonathan," an illustrated annual, also made its appearance with a decided advance in the quality of its engravings, and held a high grade of popularity for some years, steadily improving in quality of its engravings with each yearly issue, doing much for the advancement of illustrating newspapers and magazines. In 1843 a monthly called the *Picture Gallery* was started by Mr. Wykoff. The illustrations, however, were few and very coarse, common-place cuts. It did not meet with any very satisfactory encouragement, and suspended after a three months' trial. The publication of the *Gallery*, however, was the occasion for bringing to this country an English engraver, "George Thomas," who was afterward well known for his designs for bank-notes. He, however, returned to England, and gained an enviable reputation as painter and draftsman on wood.

In June, 1850, appeared *Harper's New Monthly Magazine*, the first volume of which was fairly but not profusely illustrated, but had the merit of containing a higher standard of engravings than its predecessors, which at best were what could be considered very good. These first engravings were by Lossing and Barrett, then carrying on an engraving office in New York.

*Harper's* was soon followed by the *International Magazine*, published by Stringer & Townsend, which, however, was short-lived. At this period *Godey's Ladies' Book* and *Graham's Magazine* were also occasionally embellished with wood engraving illustrations; and thus step by step wood engraving became a case of necessity for almost all publications that catered for appreciative

support, and the publisher, the printer and the engraver became inseparable, and with each succeeding year were more closely cemented together, and dependent one on the other. The practice of illustrating became so popular that it was almost a case of necessity for any publication to be illustrated in order to secure support from the public. This demand for wood engraving had the effect of bringing to light much heretofore hidden talent in engravers that had been laying dormant. It also brought many new engravers, of all grades and qualities, into the field. Some artistic, careful and painstaking, while others were fairly good and rapid but laboring for the money there was in it, others without even a shadow of talent or appreciation of the art, merely crude human machines, but the demand becoming of such magnitude that all classes found employment without difficulty in some way or another. Very coarse and unmeritorious wood engraving was in demand as well as the finer and more artistic results of the wood engraving art.

*(To be continued.)*

Written for THE INLAND PRINTER.

#### THE PROGRESSIVE PRINTER.

BY ALTON B. CARTY.

BY progressive I mean one who is always alert to the advances the leaders of the trade are continually making in labor-saving contrivances and the many methods by which printing of today is so far in advance of that of yesterday. Did you ever compare the printing offices in any city, I don't care which one, without an expression of wonder as to the utter blindness of some printers to their best interests? There is a lesson in such comparisons that will do us all good if properly appreciated. I visited an office in a neighboring city recently, but which is by no means the only place possessing such an institution, where I was surprised at the methods of the proprietor. On entering the place the first sound I heard was the screeching of the shafting for want of oil. One of the pressboys informed me that they had no ladder in the place and so the shafting would have to cry for oil until it got tired. The boy informed me that he had been working in the office for six months and he never remembered seeing anyone oil the shafting. The engine and boiler occupied one of the corners of the room and the dust from the same was settling on the presses and paper stock continually. I could readily understand why no very fine work was done in that office. The belting was allowed to run as long as a section of the laces would hold it, and the uncertain diagonal course it took frequently threw it off the driving pulley; common inks were used, and I was told that whenever the fountain on the cylinder press was cleaned out the dregs were put back into the ink barrel to permit them being ground over again in the fountain. Whenever one desired to lock up a form (hickory quoins being used) it was often necessary to cut a quoin from some cherry furniture. Dead type and "pi" laid around in heaps, the

accumulation of ages (?) and some of the type was so aged that the boys often remarked that the proprietor was thinking seriously of turning it up and printing from the other end. The job type was put in the case, caps and lower case together, with very few quads, and in some instances three fonts of type could be found in the same case. The rollers on the presses were used twice as long as they should have been, although their life could, by proper attention, have been prolonged; the foreman never heard of summer and winter rollers, so he made his summer ones answer for winter by giving them a thorough warming up behind the boiler before putting them on the press and then with very unsatisfactory presswork. Cheap labor is employed. The other day in the office above referred to it was found that the form on the cylinder press was not being inked properly and the foreman set about remedying the difficulty. The first thing he did was to let out more ink, but the result was not satisfactory. He was puzzled. Thinking I was conferring a favor on the foreman I suggested that he look at the rollers. He did so and found that only one of the form rollers was taking ink from the distributor. Both rollers were then placed snugly against the distributor and the result was rather pleasing to the foreman, although it would not have been so to me, as the presswork was not perfect, but as he accepted my suggestion in such bad demeanor I did not feel justified in looking further into the trouble. The following day he put a sheet of cardboard under the form and raised the cylinder and the result was all right. It was a roundabout way of getting into Robin Hood's barn, as the whole trouble was that the form rollers simply required resetting owing to shrinkage. I would not be surprised but that the foreman is still putting cardboard under the forms. Is it any wonder such printers are always poor? One would imagine we lived in the days of the babyhood of the printing art instead of the full majesty of its matured manhood. There is one good office in the place, where order reigns, and the contrast with the methods of the printer above referred to leaves no doubt in anyone's mind where the advantages lie. Quick work and good printing characterize the one, while slow work and botch printing is the product of the other. One is prospering while the other is on the verge of bankruptcy.

Now a word as to the progressive printer in contrast with the non-progressive one. Sometimes truth is portrayed more forcibly by bringing it into juxtaposition with untruth. So it is with the subject of this article. A progressive printer is all that the individual mentioned in the first part of this article is not. His office is the type of neatness; a place for everything and everything in its place; sufficient material to do the work he advertises to do; possesses all the conveniences necessary to do quick work, and above all he is a practical man and his employes are being benefited by contact with him. He is constantly watching the announcement of "new things;" caters to the wants of his customers; does not use type after it is worn out, but

replaces it with new faces ; is a close reader of his trade journal, THE INLAND PRINTER, and hence is farther in advance in all branches of the trade than the printer who is not a reader of THE PRINTER. The result of all this is that although he does not ask more for his work than others he still makes a good profit, which the ledger of his competitors fails to show.

Written for THE INLAND PRINTER.

### CALL A HALT.

BY CHARLES N. ANDREWS.

I HAVE read THE INLAND PRINTER with interest and, I am frank to confess, with profit for over three years, and propose continuing to do so while life and the necessary 20 cents hold out. I exceedingly regret, however, the feculent persistence with which this preëminently the most able printing trade's journal published in the world pursues, and, I think, needlessly, that type of the genus homo, the amateur printer. That the amateur (not *amachever*, as pronounced by all the printers I ever met) is not what THE INLAND PRINTER and its high-class, satirical contributor, Mr. Baker, continually would make of him, a botch, I do not pretend to deny. That he is a menace to the printing business, and that he should be the subject of perpetual and uncalled for attacks is first an adept's fallacy, and second, as Mr. Baker's particular amateur has said, is niggardliness clear through, since all the caustic rhetoric and ridicule of the meaner order will avail nothing in finally disposing of the much-hated amateur. Inasmuch as the amateur is not a reader of printers' literature anyway, he never sees the ridicule nor feels the sting of causticity, no matter how hard laid on. This THE INLAND PRINTER must needs know. What, then, is to be gained by keeping everlastingly at it? To this question I can frame but one answer : it enables the writers of such articles to tickle their palates at a so much per column rate, equalized, perhaps, only by that tickling of the palate to which too many printers who are not amateurs are prone.

While I understand perfectly the torrent of abuse I am inviting about myself from the men who went the long way of an actual apprenticeship (and the only correct way, I am frank to admit, but how seldom followed to a successful ending) I hesitate not to boldly proclaim myself an amateur, an amateur who "went over the fence" in a short cut, and even more boldly declare that right here in this fourth city of the Union I execute with limited facilities better jobwork on a six-by-nine hand press, and entirely at night, than a very respectable percentage of the practical and unpractical printers who hang out their boldface signs and boast of having *learned the trade* by reason of their having gone around by way of the slower and more methodical course of apprenticeship. In case it be not fully understood what I mean by having taken the short cut over the fence, I will at once state that I am self-taught, therefore entitled to a reasonable amount of self-importance (since I will be accused of pouterpigeonism anyway,

I see no reason why I should not assume the character); that I never spent five minutes of my life under the tutorship of anybody, much less of the too seldom to be found thoroughly apprenticed professional printer.

This statement of my capabilities may seem a most bold one to make before the audience of intelligent and progressive printers and readers of so high class a journal as is THE INLAND PRINTER, since, as I have already said, the botch in all of his many callings eschews anything and everything technical that would tend to make him more capable, more useful to himself and to his fellow men, but I have no hesitancy in making it ; furthermore I do not ask that my own statement of being a printer out of the too common horse-sense order be accepted unsubstantiated. Under another cover I have handed to the editor of this journal a package of such specimens of my workmanship as I have been able to gather together. Other and perhaps some better specimens might have been submitted had I forseen the necessity for preserving same ; at any rate, I have no fear of the editor's decision regarding these samples.

Of course, the amateur is, in a sense, a botch in almost every pursuit he undertakes. This I freely admit. Certainly nobody will attempt to deny his botchiness, when he essays the art preservative, after a reference to the "as they are — an improvement" ("an improvement" is infinitely superior to the injudicious "as they should be"). And right here let me say that while we can all recognize at once the immense improvement displayed in these reproduced specimens, the fact should not be lost sight of that the originals were probably produced under difficulties and with very limited facilities, while the improved specimen is executed by high-class artists with unlimited resources. The reproduction of these botch specimens of printing by THE INLAND PRINTER'S artists, using the same type, borders, etc., would be a test of skill that is not shown in the "improvement" series.

I repeat, though, to accuse the amateur printer who does work for gain of being an injury to the printing craft is like unto a fallacy, for, in truth, he is not ; and to accuse him of being the author of such monstrosities as appear in the are and could be pages of THE INLAND PRINTER is ridiculously funny, since no sane man would, in my opinion, pay out good money for such frightful stationery.

To the question, where, then, did these merchants get their inartistic art stationery, there can be but one answer : they did it with their own little presses, robbing the legitimate printer, true, but robbing him only so far as their own individual requirements for printing are concerned.

There is a vast distinction between the merchant who does the robbing (and no one can deny his right to rob, in the sense he does it) and the amateur who works for remuneration — the latter soon does better work and gets correspondingly better prices, or quits. Abuse and ridicule are only the weapons of those people who have no case. Call a halt.

Written for THE INLAND PRINTER.

### PRINTING UNDER DIFFICULTIES.

BY HARRY S. MERRILL, LOS ANGELES.

**D**URING the recent California "boom" there was once started a newspaper; in fact, there were several newspapers started; but this particular newspaper was interesting, not from its bright, crisp locals, stinging editorials or mechanical make-up, but from the difficulty with which the first issue was gotten out.

There were several capitalists who bought a large tract of land near the coast, many miles from any railroad or steamboat landing. This was a real nice stretch of country consisting of 25,000 acres of very nice land, with a park-like growth of large oak trees. There were several wooden buildings of an ancient style of architecture, besides numerous adobes. The land company proceeded to put the land upon the market as soon as possible, and streets were laid out, water piped, etc., and when everything was thought to be in readiness, they discovered that they had neglected the first essential of "booming"—a newspaper. A journalist acquaintance of a member of the company was quickly informed and soon there was enough capital raised for the plant, which was to consist of a good assortment of display and body letter, Washington press, etc.

In a few days the journalist arrived; we will call him J. Wilson Wilkins, a typical Yankee from Maine. I say from Maine, but from Maine about twenty-eight years ago, when he shipped from Bangor on the good ship Cinderella, with the sole intention of giving up the case and seeing the world. J. Wilson had seen many parts of the world and spoke many languages quite fluently, barring English, which he spoke with a rich Irish accent; his writings were also garnished with the same.

It was several weeks before the outfit arrived at the distant landing, via steamer from San Francisco. Meanwhile, J. Wilson had enjoyed what he termed a "daisy drunk," and was quite well sobered up before Craig's trail wagon and six mules pulled the outfit into town and proceeded to unload it at an old grain storehouse, which was to be the newspaper office and real estate bureau combined. What a smile overspread J. Wilson's face the next morning as he opened the boxes. J. Wilson had a real sunny smile. He also had a real rosy complexion that seemed to cluster about his nose. J. Wilson discovered, after all the boxes were opened, that there was but one pair of news cases, and none provided for the "ad." type. J. Wilson struck an attitude and made several remarks in small caps and italics that would not do to print. J. Wilson had an elegant flow of anger words, and for impressiveness, blend and feeling, I have never heard them equaled.

About this time the new bookkeeper, who had been viewing operations, discovered that the large, plump roller felt very damp and looked sweaty. He took it out to the door and hung it in the sun to dry. Now, it gets very hot there about this time and was about ninety-two degrees that day. After lunch J. Wilson searched high and low for the roller and at last found it, some on the

core, some on the steps, some on the weeds that grew around the office. J. Wilson called the bookkeeper, and shaking his fist in his face, said some more real harsh words and breathed his strong breath in the vicinity.

When everything was in readiness for work except the "ad." type, J. Wilson scratched his head and thought real hard. Pretty soon an idea struck him and with smiling face he took a few pieces of billiard chalk and made several diagrams of cases promiscuously over the warehouse floor, on which the "ad." type was laid.

A few weeks later, when all was in type, the new roller that was ordered from 'Frisco did not show up. But after two days more of hard thinking J. Wilson hit upon the idea of using a large bologna sausage in its place. He tied a stout cord at each end of it, and, striking another attitude, pronounced it one of the greatest discoveries of the age. The paper printed very well.

I was the bookkeeper and rolled my end of the sausage.

### "ONLY A TRAMP PRINTER."

BY DUNCAN F. YOUNG.

**H**OW contemptible the epithet, yet how sad: "Only a tramp printer." How touching, how galling, yet how true. In the good old days—those days when printers were few and wages high—we never saw or heard the expression so familiar to us all now. Then it was that the sentence, "The bearer hereof is entitled to the good offices of all union men," was inserted in the certificate of membership, the now traveling card, of union printers; that card which has been so extensively abused; that card, intended only for the eyes of printers, which has become nearly as familiar to the eyes of the outside world as the railroad ticket or hotel check. When, years gone by, the framers of the typographical union constitution were legislating for the welfare of the craft of the country over, little did they think that the results of their efforts would be misapplied; little did they know the work of their hearts' desire would be so degraded. Alas! could they but look down from on high and view the rank digression from the pure and legitimate lines they inculcated, would not their hearts ache (if it could be); would not their faces be mantled with shame, would not their eyes fill with tears of sorrow for the good men and true of the craft of today? Alas! that this must be so.

Scanning in the vista of the near future we can view the scene as from bad to worse. We know that the human mind is prone to error, and the path downward is precipitous. Must we, then, who have a firm footing stand idly by without tendering a hand of assistance to those who are going, rapidly going, on the path of degradation, carrying with them the reputation of our beloved craft?

We do not for a moment forget that within the rugged and illy-clad breast of "only a tramp printer," beats the heart of one who might have been a better man; of one who may be the father, brother or son of

an aching heart and dampened eye at home. God forbid that we could possess a heart so callous that we could not feel sorely with those in affliction. But may it not be our fault, our goodness of heart, that gives rise to the result of a vacant seat at some hearthstone?

Never was the expression, "A rolling stone gathers no moss," more fittingly used than on this occasion, where we find that traveling is carried on to an extreme, accomplishing no good results, and ending oftentimes in the death in ignominy of one loved and cherished by some one perhaps dear to him.

Let even the "haute beaux\*" themselves learn the error of their way and join the attentive element in the demand that legislation be enacted prohibitory of unnecessary traveling, so that in the chronicling of a railway disaster it may not be said that among the dead one was "only a tramp printer."

Written for THE INLAND PRINTER.

### HIT OR MISS.

BY HERBERT L. BAKER.

PRESS associations are a good thing, broaden the editor's outlook, widen his acquaintance and interest, and show him there is something of some importance going on outside of his own little field; but readers of some papers must be very tired of the press associations. I have seen two or three columns in a single paper devoted, not to anything which concerns or interests the reader, but to matters which no one but brother editors would care a rap about—personal hits on other editors, fulsome flattery ladled out by the quart with the hope of receiving a liberal return in kind, etc. Now if this isn't a swindle on the readers what is it? If an editor wants to poke a little private fun at fellow-editors, or discuss questions in which only they are interested, why not inclose a supplement to send to all exchanges, and not steal space which belongs to the subscriber?

\* \*

A private letter, a few days ago, brought the following query from a suffering country printer: "Can't you do something to help a fellow out? I am trying to print a page of my paper on a job press; the electrotype cuts in the form are higher than the plates and the plates are higher than the type; the type is old and well worn, and somehow I can't make it show up sharp, clear and beautiful."

Strange, isn't it! If a form of worn-out type, filled with high cuts, will not come up sharp and clear like new type, something must be wrong with the press! I would suggest that if one end of the type does not print well, the form might be turned bottom up. By the time type is worn down to the second nick, it really ought to be turned bottom up to get the best results. Or, if the cuts are high, why not lay the form on a stone and smooth it off with a jackplane?—a few slices taken from the face of a cut would probably not hurt its appearance any, in the hands of a printer who

\* Typographical tourists.

can ask such a question. Or, he might condemn the press, and get another—the maker of the new press will guarantee it to do anything. Or he might cut a hole in the platen wherever a high cut strikes, so as to let the type come up to the squeeze. Or he might take out the cuts and run them in the next edition. As a last resort, he might use a little common sense, trim the cuts down to type-high, put on a soft paper tympan or rubber blanket, and use only good soft rollers with good ink.

\* \*

How many people know that the venerable Degener, whose name will always be associated with the "Liberty" press, was the real inventor of the "Gordon" press? In early days, he put his patents against Gordon's money and they began the manufacture of what at first was called the "Franklin" press. But the company soon got into difficulty and went to the wall; Gordon and his friends had money to buy in the factory for a song, and lo! they owned Degener's patents without any obligation to share profits with the inventor. There was a great fortune in it for the manufacturer, while Degener was sore pushed financially until he and Weiler got the "Liberty" well upon the market.

\* \*

"When I was a young chap, just starting in business" said an old printer who had laid by a goodly fortune from his business, "I once got into a tight pinch for lack of \$200 owing on my little plant. A venerable friend, to whom I applied in my emergency, voluntarily loaned me \$500. He told me to pay my debt and use the balance of the loan to buy stock and material with. He made only one condition of acceptance, and that was never to go into debt but always pay cash or not buy. I could pay cash. I date my prosperity from that time. I would not have believed that the chink of spot cash would make such a difference. As soon as it became known that I paid spot cash invariably, I not only bought stock and material cheaper, but my groceries, dry goods, meats and all living expenses diminished very appreciably in cost. 'The world is the slave of the man with the cash,' is not a new saying, but no one realizes how true it is until he tries it. Dickens knew it when he wrote of Nickelby, the money loaner; when the old skinflint's victims refused to pay the exorbitant interest he demanded, and turned to leave his office, he rattled a little box of gold pieces lying on his desk, and the seductive chink of gold usually brought them to terms. A cash customer has opportunities for bargains offered him constantly which the credit buyer never sees. Then a man with the cash ahead is not so afraid of losing an order or a customer; realizing the worth of cash in hand, he will be more strict in his own credits, cut his own sales down to cash or short-time deals, so as to supply the funds he needs himself. In a year I had saved that \$500 by having the cash to buy with, and feel that whatever of good fortune I have had in business is really owing to the good advice and timely assistance of my wise benefactor."

A TECHNICAL JOURNAL, DEVOTED TO THE ART OF PRINTING.

Published Monthly by

THE INLAND PRINTER COMPANY,

183, 185, 187 MONROE STREET, CHICAGO.

H. O. SHEPARD, *Pres.* DR. JOHN E. HURLBUT, *Vice-Prest.*  
C. F. WHITMARSH, *Sec.* D. L. EVANS, *Treas.*

ADDRESS ALL CORRESPONDENCE TO THE INLAND PRINTER COMPANY.

Entered at the Chicago postoffice as second class matter.

CHICAGO, APRIL, 1891.

#### SUBSCRIPTION RATES.

TWO DOLLARS per annum in advance; one dollar for six months in advance; sample copies, twenty cents each.

FOREIGN.—To countries within the postal union, ninety-six cents per annum additional. To Great Britain and Ireland, postage paid, twelve shillings per annum in advance. Make money orders payable to H. O. Shepard.

SUBSCRIPTIONS may be sent by express, draft, money order or registered letter. Postage stamps are not desirable, but if necessary to remit them, one-cent stamps are preferred. No foreign postage stamps accepted.

CLUB RATES.—Six or more subscriptions, sent at one time, one dollar and fifty cents per year each. Cash to accompany order.

THE INLAND PRINTER is issued promptly on the fifteenth of each month, and will spare no endeavor to furnish valuable news and information to those interested professionally or incidentally in printing, engraving, electrotyping, stereotyping, bookbinding, and in the paper and stationery trades. Persons connected with any of these lines of industry will confer a favor by sending news from their section of the country pertaining to the above trades, particularly individual theories and experiences of practical value.

THE INLAND PRINTER publishes its net rates in each issue of the paper. No agent or representative of this Journal is authorized to deviate therefrom or make any discounts. It solicits advertisements from dealers in or manufacturers of any goods used by printers, bookbinders, stationers and similar lines of trade. Its value as an advertising medium is unquestioned. The character of the advertisements now in its columns, and the number of them, tell the whole story. Circulation considered, it is the cheapest trade journal in the United States to advertise in. Advertisements to insure insertion in the current number should reach this office not later than the fifth of the month.

#### ADVERTISING RATES.

#### THE INTERNATIONAL COPYRIGHT BILL.

FOR the benefit of a number of our readers who have written us respecting the same, we herewith publish the full text of the International Copyright Bill, passed at the close of the session of the last congress.

As might have been expected, or rather as predicted, our British cousins are not altogether satisfied with some of its provisions, the principal objection being to the clause which requires that the productions of foreign authors copyrighted and sold in this country "shall be printed from types set within the limits of the United States, or from plates made therefrom, or from negatives or drawings on stone made within the limits of the United States, or from transfers made therefrom. During the existence of such copyright the importation into the United States of any book, chromo, lithograph or photograph so copyrighted, or any edition or editions thereof, or any plates of the same not made from type set, negatives or drawings on stone made within the limits of the United States, shall be and is hereby prohibited."

The *Paper Makers' Monthly Journal*, London, which has always been a strenuous opponent of the amended bill, in referring to the situation says:

We shall be told, in short, that the author's rights in a book or publication mean not only his rights in the thoughts expressed as against the pirate or copyist, but the rights of printers and book-makers in general in the country where it is published. This is what we have to accept as the latest definition of copyright. We shall be told that any attempt to controvert it will be against the well-being of the human race. Very well. If this be so, let us settle it by passing a precisely identical prohibition in this country for the benefit of American authors and the progress and enlightenment of the British people who read and profit by their books.

\* \* \* It is to be hoped that nobody will make the mistake of representing that the necessary adoption of such a measure by our legislature would be for the purpose of protection or defense. Not at all. It is, of course, only an enlightened recognition of the eternal fitness of things, and therefore there is no need to delay its application. Let us not delay.

That there is a strong feeling in favor of such action among the publishers, printers, paper makers and newspaper press of Great Britain cannot be denied. Nor should this be a matter difficult to comprehend. What is sauce for the goose is sauce for the gander, and the passage of similar restrictions when granting copyright to American authors would neither be a matter of surprise nor regret.

By the insertion of the clause referred to, the law-makers of the United States did what they deemed best for the interest of American manufacturers, publishers and printers, and if the legislators of Great Britain adopt a similar line of policy no just cause for complaint can be found. There is one fact, however, in connection with this subject which should not be lost sight of, and that is no matter what action is taken the United States has the best of the bargain, because it stands to reason that the market afforded by a nation of sixty-five millions intelligent, progressive, reading persons—and which is increasing at an unparalleled ratio—is and must continue to be a more profitable

field both for the author and publisher, than that of an overcrowded country, whose area cannot be increased, and the limits of whose population, forty millions, has well nigh been reached.

#### WHY IS IT?

IN a recent issue of THE INLAND PRINTER, in one of the monthly reports from the local typographical unions, referring to the state of trade, occurs the following sententious expression: "Trade dull, but no good job printer unemployed." The question which naturally presents itself in connection therewith is Why does the *proficient* instead of the *botch* compositor secure employment under such circumstances, and what motive, business or selfish, induces an employer or foreman to retain the services of the former and dispense with those of the latter? Further, what steps are being taken by those most deeply interested to perpetuate the supply of the essential first-class workman?

Always willing to give a hearing to both sides of the question, we publish in the present issue a temperate communication from Mr. Charles N. Andrews, who takes exception to the warfare we have waged—and which we propose to wage—on the bane of the trade, the so-called amateur, though we fail to see that he materially helps his cause therein. The fact that *one* self-taught individual has raised himself to mediocrity in the printing profession certainly furnishes no evidence that an apprenticeship system is uncalled for. For one who has achieved success under such circumstances a hundred have failed and will fail. We have seen a two-headed calf and a five-footed colt, but simply regarded them as freaks of nature, exceptions to the rule. We have witnessed the lightning calculator add up three or four columns of figures simultaneously, who loudly proclaimed he had never gone to school a day in his life, but we thought none the less of the little red schoolhouse as an indispensable educator. The fact that the correspondent referred to admits that all the work he turns out is printed on a 6 by 9 hand press, and entirely at night, proves that even his business or financial success has not been commensurate with his ability to dispense with the advice or experience of those who have "learned the trade by reason of their having gone around by way of the slower and more methodical course of apprenticeship."

In referring to the specimens of botch work which have been published from time to time, in contrast to the "improvement" series, he says:

While we can all recognize at once the immense improvement displayed in these reproduced specimens, the fact should not be lost sight of that the originals were probably produced under difficulties and with very limited facilities, while the improved specimen is executed by high-class artists with unlimited resources. The reproduction of these botch specimens of printing by THE INLAND PRINTER'S artists, using the same type, borders, etc., would be a test of skill that is not shown in the "improvement" series.

This is really no argument in defense of either the botch or the amateur, because no qualified printer

would, *under any circumstances*, make use of the same type, borders, etc., used in the specimens referred to. He would not use them because they are entirely out of place, and it is in such discrimination that the good workman shows one of his essential qualifications. A builder would not be apt to use bric-a-brac in furnishing a kitchen, or embellish a drawing room with the utensils required in a pantry. The characteristics of these "botched" specimens have not been so much a lack of material, as a lack of knowledge how and where to use it to advantage, and it must have been evident to any intelligent observer that if the authors of some of them had had the products of a typefoundry at their command the hodgepodes turned out would have been more grotesque than they were. On the "improvement" specimens published no attempt at elaboration or display was made. Good, plain, ordinary work was all that was required, all that was produced; in fact, just such work as an office with a reputation at stake would under all circumstances demand. Thus much for the "unlimited resources" claim.

In this connection we herewith present a verbatim copy of a letter received by the same mail which brought the article referred to, the location being omitted.

In as few words as possible I would like to ask you a little of advice in the manner of learning my trade. I am now only an amateur printer and but sixteen years of age, but would like some day to become someone or somebody, and not an amateur. In two more years I will graduate from the — school in this city. Now what is your advice—quit school now or go through; I thought you would know what was best.

Please state a good reliable house that you think would be a good place to learn the trade, but I want some place where I can learn it right.

Our advice would depend on circumstances. The spirit manifested, however, is a laudable one—a desire to be a *good* workman—or as our inquirer puts it, *to learn the trade right*—and that is the only way to learn it. If he intends to follow printing as a profession and as a proficient, our advice would be to make an arrangement with a reliable firm, which has a reputation for turning out first-class work, as soon as an opening occurs, giving the preference to one where he can have the opportunity of graduating as an all-round printer, instead of an establishment where the department system prevails. Let him improve his leisure hours by study and investigation, mastering all details and picking up an idea wherever he can, no matter whether in or out of the office; and when he becomes an honor to his craft, as he doubtless will, he will look back with pride to the time he "called a halt" on longer being a so-called amateur.

#### TO OUR CORRESPONDENTS.

OUR correspondents will confer a favor on the editor if they will kindly forward their contributions so as to reach this office by the 5th of the month, at latest.

**ANOTHER TRIUMPH OF AMERICAN WORKMANSHIP.**

**I**N the November (1890) issue of THE INLAND PRINTER appeared the following editorial paragraph :

The Imperial State Printing Office, Vienna, Austria, will give a calendar exhibit the latter part of December, 1890, and extends an invitation to all printing and lithographic firms in the United States which make a specialty of this class of work to forward specimens of the same to the *Staats-Druckerei*, Vienna.

The exhibit referred to was held in the club rooms of the Imperial Printing Office in the Imperial Academy of Sciences building, at which was represented nearly every country on the globe where our art has a home. It would require more space than is at our disposal to present the full particulars of this interesting display, and we select only that part of a lecture delivered on the occasion by Mr. G. Fritz, an eminent and well-known Austrian printer, before a large audience of the disciples of Gutenberg and their friends. He said : "Without comparison, ingenuous, free and unaffected in selection and combination of the subject are these exhibited American productions of the printing press. John A. Lowell's, Boston, landscapes, "Fishing Children," etc., are perfect in artistic composition, and of an excellent and elegant execution. I. Prang & Co., Boston, renowned throughout Europe for their New Year's and Christmas cards, have through their selection added praise to their work. Among the specimens of jobwork you will see finely (unsurpassed) executed samples from the Swinburne Printing Company, Minneapolis ; Beck & Pauli, Milwaukee, lithographers ; Mangan Printing Company, St. Louis ; Rand, McNally & Co., Henry O. Shepard & Co., Poole Bros., Emil Simon & Co. (German jobs), Chicago," etc. He concluded his address with these words : "Anybody in search for richness in ideas, originality, striking effects and everlasting power of creating new and novel productions need only to look at these displayed American productions."

In this connection the following communication explains itself :

*To the Editor :*

LA GRANGE, Ill., March 21, 1891.

The management of the Imperial Printing Office, Vienna, Austria, tenders its heartfelt thanks to above named firms, and especially to THE INLAND PRINTER for kindly announcement of the exhibit in November (1890) issue, and I am authorized to bring it to your kind notice. Respectfully,

JOHN E. SCHILLING.

**THE PRINTERS' HOME.**

**T**HE site for the Childs-Drexel Home for Union Printers has been selected by the committee appointed at the Atlanta session of the International Typographical Union, consisting of Messrs. August Donath, of Washington, D. C. ; George W. Morgan, of Atlanta, and John D. Vaughan, of Denver. It is nearly in the center of the eighty acres donated by Messrs. McGovney and Martin ; it faces the mountains and is but a short distance from the rapid transit line and Prospect lake. It would be difficult to find or even imagine a more beautiful location. The building will

be plainly seen from the town, and also command a fine view of the mountains and city. The bids for the erection of the structure were opened in Denver, Tuesday, March 17, and the contract will soon be let. The ground will be broken in a few weeks, and every effort made to lay the cornerstone May 12, Mr. Childs' birthday. It is the intention, we understand, to complete the building in nine months, and the celebration at which Messrs. Childs and Drexel are expected to be present will not take place until the Home is formally opened.

**W**E earnestly trust that the delegates to the next convention of the International Typographical Union will prove themselves to be men of broad, catholic, comprehensive ideas in indorsing the action taken by their authorized representatives in regard to the erection of the Printers' Home. These gentlemen have acted wisely and well and should have the undivided support of every intelligent printer.

Written for THE INLAND PRINTER.

**PROOFREADING.**

BY J. B. C.

**T**HE object of reading proof is to have the printed page appear free from errors of typography and of grammar. Whatever will contribute to this end is very desirable. With human nature constituted as it is, the certainty that errors will be unerringly traced to the perpetrator will have a wholesome effect.

To have the matter open, so that the author may blame the publisher, the publisher the proofreader, the proofreader the compositor and the compositor the writer, is a most fruitful source of error, misunderstanding and loss.

An incident occurs to mind, where a very grievous mistake was overlooked, and run through an entire night edition, simply because a systematic form was not followed. The proof was read and properly marked, but in first proof was overlooked by the compositor. The revise was taken, but not compared with first proof. The "make-up" saw that the revise was unmarked, and took it for granted that it was "O. K."

In the morning there was a "hubbub," and a column or more of valuable space taken up with "explanation."

To obviate such blunders the revised proof should always be taken and compared with the first proof, by the proofreader or a competent assistant. He should retain the first proof and send the revised proof back with any remaining errors marked. This revised proof should, where accuracy is very desirable, or where there are many or serious errors, be again revised. Then, if errors occur, as they occasionally will, it is an easy matter to trace the blame to its proper source, and secure satisfaction. It seems clear that a person who receives pay as a skilled laborer, and who undertakes a difficult or easy task, and fails through negligence or incompetency, should make good the loss resulting from such failure.

CONSONANT WRITING EXERCISES.

GUIDE, § 1-29.

The following directions apply to all the writing, and other, exercises :  
30. Letters or words joined by a hyphen are written without lifting the pen. *Read* the characters, and form a mental picture of each; *write* the characters slowly, until their outlines are fixed in your mind, then write them faster and faster, until your hand and mind easily and rapidly execute them; *read* your shorthand; *compare* your shorthand with the key, if any key is given, that you may see if you have the correct forms; *translate* your shorthand into longhand, and compare your translation with the copy given. *When* you can accurately read and write both the shorthand and the longhand, and understand what you are doing, take the next paragraph. There is no objection to your practicing until you can write and read the shorthand in even less time than the minutes specified at the end of each exercise; but that given limit must be accomplished before taking up the next writing exercise.

I.—1. T, d, ith, thee, s, z; p, b, f, v, r, way; k, gay, m, n, ing; j, zhay, yay; chay, ray, hay; ish, lay; chay, ray, chay-ray, ray-chay, chay-d, ray-d; t, f, hay.

2. P, t, chay, ray, hay, k, b, d, j, gay, f, ith, s, lay, ish, m, n, v, yay, zhay, way, thee, z, ing; s, z, iss, r, ray, lay, ish.

3. Ray-chay, r-r-ray, p-k-d-m; t-t, p-p, chay-chay, gay-gay; n-n, m-m, f-f, lay-lay; ith-m, m-lay, n-s, n-ish; shay-lay, lay-shay, n-m, thee-z; lay-s, m-ish, ith-shay; lay-r, lay-way, f-shay, r-ish.

4. F-n, v-n, lay-m, r-z; k-r, n-ray, lay-k, p-s; k-k, ing-ing, m-m, n-n; j-j, d-d, v-v, j-r; k-chay, k-p, n-d, n-l, n-j, p-gay; n-f, b-m; r-m, b-ray, ray-n, n-d; m-t, m-k, k-p, d-p; t-p, p-t, b-d, d-b, m-k, k-m, m-d, m-t; t-d, b-p, v-gay, f-gay.

Time, 3½ minutes. The key to this exercise is found in the characters in this Guide, from Section 7 to 29, inclusive. Write, read, write back into longhand, etc.

II.—P-chay, f-chay, chay-p, chay-t, r-f, t-f, f-d, v-t, t-b, f-t, t-p, p-t, b-t, k-t-lay, k-p-lay, n-p-lay, k-chay-k, n-t-k, n-t-lay, k-t-n, k-t-k, k-t-m, n-chay, m-chay, m-v, m-f, k-j, k-chay, k-v, k-f, n-v, n-f, k-b, k-p, n-p, n-t, m-t, k-t, lay-p, lay-t, lay-f, t-m-n, t-m-k, t-m-lay, m-lay-n, lay-n-t, lay-t-lay, lay-t-m, k-lay, m-lay, p-lay, t-lay, n-l, l-n, chay-k, chay-n, chay-m, p-k, p-m, m-m, n-n, m-n, n-m, k-n, n-k, m-k, k-m, m-d, d-m, m-t, t-m, k-t, t-k, lay-k, m-ray.

Time, 2½ minutes. Write, read, write back into longhand, etc.

III.—I. T-k, k-p, b-k, chay-k, chay-t, ray-p, gay-d, b-ray, t-chay, chay-ray, ray-chay, d-t, t-d, k-ray, j-k, r-m, f-l, f-lay, v-lay, v-l, s-n, f-r, n-m, m-n, m-lay, f-f, v-v, r-r, ing-ish, k-k, p-p, hay-p, j-b, hay-t, j-t, d-j, lay-v, lay-f.

2. P-k, ish-r, l-m, shay-lay, z-n, m-ing, m-ith, way-lay, thee-m, f-shay, s-n, yay-r, yay-k, f-t, ray-f, d-m, ish-p, ith-m, d-shay, j-m, ray-ith, ish-k, m-k, p-lay, hay-lay, r-k, ray-ith, m-chay, gay-lay, ish-k, n-b, j-m, d-shay, d-n, l-gay, ray-n, v-gay, way-k, k-l, k-lay, t-r, t-ray, m-ray, m-lay, lay-m, yay-n, chay-p, p-f, lay-k, l-gay, l-m, v-gay, m-t, zhay-n, lay-r, lay-ray, r-lay, r-m, chay-lay, p-n, n-p, n-ray, chay-n, d-ith, b-v, b-n, b-m, s-ith, way-lay, lay-way.

3. M-ray, n-k-t, p-p-lay-r, m-n-ith, n-gay-m, f-k-t, p-lay-t, p-lay-s, hay-d-lay, m-lay-d, hay-z-n, way-k-lay, ish-p-lay, l-ing-l, l-ing-k-p, z-d-k, ish-p-lay, gay-m-ray, p-r-lay, l-m-n, f-l-ing, p-p-lay, r-m-n, p-ray-t, t-d-m, p-p-lay, ray-ing-t-gay, p-p-lay, l-m-d, p-lay-r, p-lay-t, chay-m-n, ray-d-m, ray-d-ith, r-k-lay, d-gay-f-n, p-lay-t-m, v-k-t-ray, d-m-ray-ray, p-k-lay-r, p-b-n-k, ray-ing-t-ing, k-ith-lay-k, v-lay-b-lay, p-k-p-s, ish-b-n, v-lay-p-ray-z, s-ith-m-r-k, v-k-b-lay-ray, t-gay-l-m-lay.

Time, 6½ minutes. Write, read, write back into longhand, and repeat at pleasure.

IV.—I. P, t, chay, ray, k, hay, b, d, j, gay, chay, ray, f, ith, lay, r, ish, s, m, n, way, lay, v, zhay, thee, z, ing.

2. P-lay, chay-ray, ray-j-ray, lay-p, r-lay-d, p-k-lay-m, r-m-lay-s, ray-s, chay-chay, ray-ray, k-k, p-p, t-t, j-j, b-b, d-d, gay-gay.

3. F-v, m-m, ing-ing, ish-ish, f-f, lay-lay, r-r, l-m, lay-m, n-ish, ith-m, m-ith, n-s, m-lay, ith-m.

4. M-n, n-m, lay-shay, shay-lay, z-thee, thee-z, f-r, r-f, ith-shay, lay-s, m-ish, ish, r-ish, f-shay, lay-r, j-f, m-ish.

5. Lay-m, r-way, f-n, v-ing, way-r, r-r, v-ing, n-ray, k-r, lay-k, p-s, b-z, l-gay, p-z.

6. M-m, n-n, k-k, gay-gay, ing-ing, n-ing, t-t, d-d, chay-chay, j-j, f-f, v-v, j-r, ith-ith, z-s, r-r, lay-lay.

7. K-ish, b-k, k-p, n-p, n-b, k-j, n-l, k-b, n-f, b-m, n-chay, ing-chay, p-k, k-p, gay-p.

8. P-ray, ray-p, n-p, ray-n, d-n, n-d, r-m, b-m, m-k, n-k, d-z, t-p, d-p, t-m, m-d, m-t, p-k.

9. P-t, t-p, d-d, d-b, k-b, k-p, chay-m, m-j, k-chay, d-t, t-d, v-k, f-gay, b-p, p-b, gay-k, k-gay.

10. P-lay, z, k-ray-ing, s, v, ray-t, r, d-k, p, t, lay, b, k-d, t, s-m, t-m, v-lay, lay-v.

11. V-lay-f-ray-z, ish-b-n, l-n, gay-ray-v, z, n-s, p-lay-s, t, k, m-v, f-r-m, f, yay, n-ray-d, m-ray-d, k-ray-d, chay-ray-d.

12. Chay-ray-ray, chay-j, ray-ray, chay-chay, p-m-lay-k, p-k-p-ray, b-k-b-s, m-lay-d-m, r-ray-ray, d-n, p-n, m-n, n, k-ing, gay-n, d-shay.

Time, 7 minutes. Write, read, write back into longhand, etc.

(To be continued.)

#### THE ORGANIZER AND THE TRADE SCHOOL.

BY A. H. M.

THE agitation for a printers' technical school in Chicago has rapidly been gaining favor with the craft. The appointment or election of an organizer is a move in the right direction, and, coupled with an effort systematic and sustained for the higher cultivation of the craft by means of technical instruction, will be of great benefit to the typographical union and the trade in general. The creating of the office of organizer may also be assumed to be an act of justice to printers employing union labor, as measures may now be taken to disseminate the teachings of unionism in a more progressive and energetic manner, and thereby the non-union competitors may have their field for procuring low-priced help narrowed sufficiently to oblige them to charge living prices for their work.

To organize labor indiscriminately as respects competence would be hardly a judicious step, inasmuch as the less skillful are only employed under pressure when more skilled labor is not procurable, and the office of the organizer will prove one in which much tact and discrimination will be demanded, and the greatest aid that can be rendered him will come in the form of the trade school. The apprentice of today will be the printer of tomorrow, and on his education and training the future wellbeing of the craft depends. The organizer will be in a position to see in a more marked degree than anyone the lack of system at present in the training of apprentices, and his reports on the condition of trade and kindred matters will doubtless contain some expressions on this topic that will rouse the typographical union to a sense of the desirability of some action in the matter.

Notwithstanding that an eminent authority on the printing trade has in effect pronounced an apprenticeship system as un-American and a relic of feudalism,

the good sense of printers generally will doubtless show them that the amount of restraint put upon youth is but that of the necessary business method. As well would it be to condemn all conditional contracts in the same category as that of an apprenticeship system.

At no time should more care be exercised by the employers and the union than when boys are being engaged to learn the art. The plan at present is to allow some years to be frittered away at the printing trade by apprentices who have no fitness for it. With no natural adaptability, the mistake made in engaging them only becomes more glaring with time, and at last, their full term being matured, they are declared to have served an apprenticeship to the printing trade. They may hold a steady situation, too, in large offices where system is at a discount—being cunning enough to make use of the competence of their fellow workmen to cover their own deficiencies. Such instances are not uncommon, and the exceptions are generally the result of the boys' own ambition and desire to excel, and not from any amount of encouragement and instruction they may receive from their employers, whose plea in defense may be, and truly, that they have suffered so much from time thrown away in instruction that a policy of everyone for himself has been the result. There is no doubt there are numerous cases where youths have been deceived by unscrupulous employers—their time wasted and their circumstances taken advantage of, and there are equally as many instances where the reverse has been the case, where thoughtful and almost paternal care in the education of the apprentice by the employer has been met by ingratitude and deceit. The remedy for this condition of affairs we may hope to see in the inauguration of a printers' technical school under the auspices of the typographical union, where not only may the judicious selection of suitable apprentices be made, but the business methods of the trade be explained and the economics of commerce lectured upon, so that the position of employers may be more fully understood and a better feeling between capital and labor in the printing business engendered.

By the influence of the school, recalcitrant apprentices would have an amount of condemnation placed upon them by an investigation of their conduct that would be a decided bar to others indulging in dishonorable practices, and the chicanery of employers in respect to apprentices under their charge would be exposed and the rights of the apprentice defended, as his competence and application would be known to his instructors in the school. The founding of technical schools has been looked upon with much distrust by trades unions as being a means of putting a horde of half trained workmen in competition with them and of instilling false notions of unionism, and denouncing it as a sort of slavery. Such a fear need not be entertained, as an institution on the lines proposed would be in the hands of the typographical union itself and be a means of aiding the organizer in his duty of increasing the membership.

### NONSENSE.

BY S. B.

FROM Professor Sumner and many lesser lunatics we hear much, in these later days, of "cold-blooded business principles." We hear that the altruistic saying: "From each according to his ability, and to each according to his wants," sounds very nice in sentiment, but does not and cannot have existence in cold fact under free play of our inborn human traits.

In my humble opinion the communistic thought expressed above is not nice, either in sentiment or in "cold fact." It involves the forced division of the fruits of industry—the appropriation by some of that which the labor of others has won—and Sumnerans conceive this notion to be nice in sentiment. It strikes me as sufficiently "cold-blooded" to be pleasing to the most fastidious.

While it is true that this doctrine "cannot have existence under free play of our inborn human traits," nor under the suppression of those same traits for that matter, it is also true that the communistic formula is but the protest of earnest and thoughtful men and women to the limited application of the supply and demand doctrine—the inevitable result of monopoly supported by law. It is an attempt to cut a knot, and at the same time an admission of want of capacity to untie the same. The disciple of Sumner very properly laughs to scorn any attempt to "cut" an economic snarl, but does he show greater wisdom when loudly asserting the tangle does not exist? Note the following: "Let the printer who bewails his condition because it is not as good as that of his fellow workman know that the reason lies wholly within himself." It is safe to "jeff" that the author of the above sentence never had the pleasure of working under an unfair foreman. If he ever held a "sit," it was probably after the communistic force exerted by trade unions had attained sufficient strength to compel some degree of fairness on the part of employers and their fuglemen. Does anyone believe that printers working "in the same alley" are always treated with equal fairness by their employer; and that therefore any complaint as to condition on the part of either is fully met by the statement that "the reason lies wholly within himself"? Free competition is interfered with by the arbitrary action of some one in authority, and the cause of the unequal condition lies not "wholly within," but, on the contrary, wholly without, the victim. Carrying the idea to a wider field, as the illustration was intended to serve that purpose: Did the Star Route proprietors secure their wealth under free competition? Was the navy department administered on a demand and supply basis under Robeson? Is 1500 per cent "protection" on Wanamaker's pearl buttons necessary to maintain an untrammelled market? Is Carnegie's wealth the result of forces "wholly within," or did force exerted by the sovereign power of the United States have its due effect? Did the Pacific railroad companies produce

their millions, or did the government land grants and other subsidies add a few coppers? Have the bondholders earned their money (\$1.28), or did the "credit strengthening act" and other financial legislation help them somewhat from "without" while the soldier, poor fool, was compelled by law to take greenbacks whose purchasing power depended on "reasons wholly within" himself? In 1626 Manhattan Island was sold for \$24 worth of goods. Today it brings an annual rental of \$100,000,000. Do the Astors, et al., earn this enormous income by the exercise of powers "wholly within" or do laws "wholly without" reason, which "protect" the unearned income of landholders by taxing the product of labor, aid them to a degree—and so limit the action of competition, and at the same time prevent the "free play of our inborn human traits," and give rise and impetus to our acquired cannibalistic instincts?

The idea that each man's success, or want of it, as the case may be, is entirely dependent on himself, is very generally held, and while to a great degree true, it cannot, without qualification, be admitted as an exact statement of the "cold fact." The owners of legally supported monopolies secure a portion of the earnings of labor without rendering an equivalent, and to that extent the natural operation of the law of demand and supply is hindered. That such hindrance is colossal in amount is evidenced by reference to two values only: Lands in the United States in 1880 were valued at \$10,000,000,000; railroads, same date, \$8,000,000,000. All of former amount and half of latter amount are purely of the nature of monopoly. Think of it! \$14,000,000,000 annually drawing dividends from the product of labor, and then we are coolly told that lack of success is entirely because of lack of capacity or energy. "Bear in mind that knowledge is power, which, rightly used, will always command a price and bring a reward to its possessor." Same old story—opportunity has no place in the calculation. General Grant would have been known as the greatest general of his time even if there had been no rebellion; Bruce, of Mississippi, would have been senator of the United States whether the fourteenth and fifteenth amendments were adopted or not. Does the communistic formula contain more nonsense?

The simple truth is that competition or demand and supply deals exact justice to each and all, provided the natural or common rights of all are equitably maintained by law. If government fails to secure the natural rights of each individual, for which purpose solely popular governments are instituted (*vide* Declaration), there follows, as an inevitable secondary consequence, the inequitable operation of demand and supply. When this truth is recognized and our common, or communal, rights are honestly secured and maintained by law, and as a necessary result competition showing its full and beneficent effect, we shall discover that there exist warm-blooded business principles in the economy of nature; and we shall, let us

hope, haply hear no more of those "cold-blooded business principles" whose issue has already been a nation of gamblers and is rapidly becoming a nation of thieves.

### TOO MUCH BOOM IS BAD.

BY R. M. TUTTLE.

IN the new towns of the far West, where houses are being erected with rapidity, where new store and office buildings are going up high in the air, and where everything is "booming," the newspapers are among the first to profit by the "boom." That is to say, they profit if the taking in of large sums of money for advertising town lots, new additions and promising acre property can be called such. The newspapers in such towns grow to an abnormal size. Their advertising columns are swollen to great proportions, and usually, if the proprietor sells out at the period when the boom is at its height, he gets a good round sum for the goodwill of his paper. But I have often been led to question if the work of conducting a newspaper in such towns as I have described possessed much solid satisfaction. Take, for example, such a town as Duluth—the "Zenith City of the Unsalted Seas." Its newspapers have borne on their fronts every evidence of prosperity. Enterprise in news and local columns have been conspicuous. And yet the sheriff has been painfully frequent with his visits to the offices of several of these papers. His business has been to take possession under writs of execution, and the rating of the papers with the commercial agencies has been sadly deficient.

The trouble has been that the business of publishing newspapers in such towns has been largely overdone. In some towns, such as Tacoma and Seattle, on the Pacific coast there are papers published that have made money for their proprietors, the result of exceptionally good business management. But the fact remains that there is nothing at which a man can lose money any faster than publishing a newspaper in a town where business is booming, and where the newspapers have large incomes from current real estate advertising. The paramount idea that seems in such a case to have taken possession of everybody, the newspaper man included, is that the extraordinary growth is bound to continue—that this, at least, is one of those towns which will see no set-back, for does it not possess extraordinary advantages? The Dakotas are dotted over with towns that were to become future centers of an enormous population. Every little paper, even before it got out of the swaddling clothes of a hand press, was to become speedily a paper of state reputation, and very shortly thereafter it was to be known and freely quoted all over the nation.

Many of us who are publishing papers that we once fondly hoped would in a very few years make us independently rich, find today that we have, perhaps, newspaper property that brings in a fair income, but our

expectations have not been reached. A good weekly newspaper, whose province it is to give the county news, and that has a good healthy circulation in the locality where it is published is a property worth having. Many a proprietor of a city newspaper, burdened with debt, with creditors clamoring for their interest and principal, would be far better off if he owned a country weekly with a plant worth \$10,000, all paid for, and with an income of a couple of thousand dollars a year. There is the minimum of wear and tear and worry in the possession of such a newspaper property. The young man may think that this is a tame sort of a business. But as the years come he will grow gradually more satisfied. He will, as he watches the men who are floundering around with plants that are too big for them — where the competition is inordinately keen — have a real pity for their condition, and as the streaks of gray appear on his head be more and more satisfied with his own condition.

### REMINISCENCES.

BY JAMES BARNET.

SMITH & DU MOULIN'S CITY DIRECTORY.

In the "History of Chicago," published by Andreas & Co., as found on the shelves of the Historical Society, no mention is made of the writer's connection with Smith & Du Moulin's City Directory, a book of over 500 pages, 8vo. brevier, double column, and dated 1859-60. A copy of the volume itself (once the property of another directory man, J. C. W. Bailey) stands side by side with its more pretentious neighbors, and bears irrefutable testimony to the fact of the omission. Of the compositors engaged upon what seemed a "big job" at the time, there may be some yet alive, but two of them have gone to "the undiscovered country from whose bourne no traveler returns," namely, John Fordham and James Rattray. As I had no steam machinery, the forms were sent to the pressroom of Scott & Co., a firm which was reckoned one of the best for turning out good bookwork, Charles Zeller being in charge. It was the practice to send a boy over with a sheet of the form when put on the press, so as to notice if anything was amiss. One of these happened to be light in color, and inadvertently I said that some more ink was needed. Almost as quick as a telephone message the boy hastened back, carrying the remark with him. When the next sheet was shown, the lad failed not to say, in referring to color, that "Mr. Zeller knew his business." If slapping one's self could have made any amends for the innocent innuendo, it would have willingly been done, and without recourse to the slapper. Now, however, it seemed to me the only way open to assuage wounded honor was to assure Mr. Zeller that there was no room to doubt his veracity nor the truthfulness of his messenger.

Being under bonds to get out sixteen pages a day, there was no room for dallying. One of the jours, punctual and attentive as he was, both to his case and copy, had an unendurable habit of taking an hour and a half at dinner-time without any apparent reason of distance or hindrance. On a complaint being made that his absence delayed the make-up, I spoke to him of shortening the time of his mid-day meal. Instead of explaining or giving an excuse, he felt as though he had been stung by a mosquito, and raising himself up to a dignified attitude, exclaimed, "What! can't a man who is on the piece take an hour and a half to his dinner if he has a mind to?" "No," I replied; "he cannot do it on the piece if it interferes with the getting out of the form." With that he left, as though in high dudgeon; but as there was no law on the subject except the usual custom of taking an hour for

dinner, I considered his question of no force or regard, wondering, at the same time, "what can the matter be?"

His place was filled by a stranger, seemingly, to both city and country; but as time would not admit of a selection, he was set to work. A good many mistakes decorated his proof. So much might be expected. The worst of it was, however, he did not return, after a day's work, to make the corrections, and the proof was given to another to do that for him. Saturday afternoon came around and the stranger also to get pay for what he had done. Two hours were deducted. This he could not understand, although he was told the reason. His dignity became affected and he decisively blurted out, "Why, I had five pounds a week in Dublin, and never heard of such a thing before as charging for corrections." I told him that another compositor was under no obligations to spend two hours' time on his mistakes for nothing. This did not satisfy him. I then put his money down on the desk that he might pick it up and retire; but he stayed and ineffectually tried to argue the point. I did not believe in physical force, except as a last resort, and in this case I was relieved from the necessity by the waiting jours behind him, when one of them said to the stranger that "he would throw him down stairs if he did not take his money and get out." He took the hint, as bluster and delay were of no avail, and the twenty-five-dollar-a-week Dublin man was not seen again. This settled the matter and the few weeks thereafter went into the past, bringing forth another record of the growing Garden City.

### NEWSPAPER MAKING IN THE EAST.

One of the most curious specimens of journalism that we have come across, says the editor of a London paper, is the *Shi Gio Shu Dan Kwai Zasshi*, the tenth number of which has been kindly lent to us. It is about the size of an octavo pamphlet, 9¼ by 6¼ inches. As usual in Oriental books, the title page is at what we should regard the end of the book, and the reading throughout is in the direction that Occidentals would call backward. The name, of which we cannot give the English equivalent, is engraved and runs down, column-wise, the center of the title page. On the left are three, to us, cabalistic characters which convey to the initiated the injunction that "it is forbidden to sell or to buy this journal." The title leaf is on white paper; the inside leaves are on various brightly colored papers, as green, orange and yellow. The book is made up of single leaves; that is, the paper is not printed on both sides (anopisthographic, as the bibliographers would say); the sheet is folded at the fore-edge, not at the back, as with us; and the printing is done on the first and four pages. These leaves are then fastened together at the back, and although double, open as if single. In this case, all are fastened by wire staples — an evidence of the extent to which Japan is availing herself of recent inventions. The body characters are in movable types, about small pica body, but there are what appear to be quotations in a body no larger than nonpareil. Considering the complexity of the Japanese characters, these latter form quite a typefounding achievement. A thick and thin brass rule borders every page. These are the typographical characteristics of the *Shi Gio Shu Dan Kwai Zasshi*; its literary features, unfortunately, are hidden from us.

### PAPER MADE OF IRON.

In the great exhibition of 1851 an American specimen of iron paper was exhibited. Immediately a lively competition ensued among British iron manufacturers as to the thinness to which cold iron could be rolled. Mr. Gillett rolled sheets the average thickness of which was the eighteen-hundredth part of an inch. In other words, 1,800 sheets of this iron piled one upon the other would only measure one inch in thickness. The wonderful fineness of this work may be more readily understood when the reader is informed that 1,200 sheets of the thinnest tissue paper measures a fraction over an inch. These wonderful iron sheets were perfectly smooth and easy to write upon, notwithstanding the fact that they were porous when held up to a strong light.

**THE SIGN LANGUAGE OF THE AMERICAN INDIANS.**

The language of signs is the only universal language and it is the oldest language, says the *Illustrated Christian Weekly* (to which we are indebted for the accompanying engraving and article). It is by signs that the brutes converse. Monkeys talk with their hands and legs, and even insects talk with their antennæ. The child speaks at first by gesture, though the gesture language is discouraged, and the limbs are put aside for the tongue. But just as we have to converse with a little child by signs, so we have to talk to the insane, who often have no knowledge of words. And signs are still used by the sane. When we pray we use our clasped hands as a sign of appeal, or bow the head in sign of reverence or adoration; and when we welcome a friend we clasp hands in token of welcome. In fact, try as we will, we cannot yet dispense with the gesture language.

At Washington, on March 6, 1880, seven Ute Indians who were proficient in the sign language were introduced to seven deaf mutes and conversed with them. The experiment was entirely successful. They told each other stories and the stories were written down and examined and found to agree in every particular.

The Indians are the best sign talkers in the world. The multiplicity of their dialects rendered some general means of communication inevitable among them, and though legend assigns the invention of the sign language of the plains to the Kaioways, we shall not be far wrong in assuming that it is much older than the division of the Indian race into its minor tribes. This language, to which we propose to devote some attention, is curiously complete. By it one Indian can converse with another from Alaska to Panama. It has its general signs, its conversational signs, and its tribal signs. Let us take the general signs first.

The blanket is often used for signaling. When the Omahas discover buffalo, the blanket is held out at length, with the hands as far apart as can be. When it is intended to camp, the blanket is raised aloft on a pole. When a signal is made to approach, the lower edge of the robe or blanket is waved inward to the legs. The signal of the discovery of enemies, game, or anything else, is to ride round and round in a circle, passing and re-passing each other if there is danger.

If at any time it becomes necessary to communicate with friends at a distance, smoke signals or dust signals are used, so many pillars at different intervals apart signifying certain warnings or encouragements. At night a most

SIGN LANGUAGE OF THE AMERICAN INDIANS.

remarkable system of signaling by means of arrows of fire is in use. The arrows are wrapped with tow round their heads; the tow is dipped in some resinous matter and lighted and the blazing messenger is then shot aloft, to be visible over a wide extent of country and by many to be mistaken for a meteor.

But it is with the conversational signs that most interest lies. Furs have been sold, leases granted and treaties made in the far West without a word being spoken between the parties. The Indian interpreters employed by the United States government are all proficient in this wonderful universal language; and, though it varies in different districts, yet its meaning is always unmistakable. Some of the gestures used are strangely eloquent.

Take "bad," for instance. The general sign for this is to scatter the right-hand fingers outward, as if spurting away water from them. But among the Arapahoes the fingers of the right hand are half closed, the thumb is hooked over the fore and middle fingers, the hand is moved back upward a foot or so toward the object referred to, and then the fingers are scattered, so as to show that the object is only worth throwing away.

"Brave" is shown among the Shoshones by clenching the right fist and placing it on the breast. But among the Sioux the two fists are pushed forward about a foot at the height of the breast, with the palms inward, the right being about two inches behind the left. Among the Comanches and Kaioways the sign is that given in the illustration.

"Dead" is shown by throwing the forefinger from the perpendicular into a horizontal position toward the earth, with the back downward, or else by crossing the arms on the chest and then letting them drop at the same time on the head. The Bannack sign is that we give, which is also in use among the Shoshones. For "dying," we give the sign common to the Apaches, Comanches and Kaioways. For "nearly dying, but recovered," the Kaioways have a most significant gesture. The hand is moved slowly downward, and then upward again.

"Grow" has another eloquent sign, the hand being held as in the illustration and moved upward in an interrupted manner. Much the same sort of sign is used for "smoke," but in that the hand is thrown upward several times from the same place instead of continuing the whole motion upward.

For "none," "nothing," or "I have none," a very expressive sign is used among the Sioux. The palm of the flat right hand is passed over the left from the wrist toward and off the tips of the fingers. With a little modification this sign is used among the Kaioways, Comanches and Apaches.

For "friend," we give the Dakota sign. It is worthy of note that an Indian rarely shakes hands with Indians; that is a ceremony he reserves for his paleface friend.

For "killed," the Cheyenne sign is given.

"Rain" is denoted by the Shoshones and Apaches by apparently dripping fingers.

We give the ordinary "sun" and the Cheyenne "sun." Both mean the same, the complete disc being shown in each case.

"Tree" is given according to the Dakotas, the right hand being held before the body, as shown, and pushed slightly upward, to give the idea of growth.

"Untrue." The Arikara emblem of a falsehood is significant, the first and second fingers being moved in the direction of the dotted line.

The American Indians are the most stolid of races. We hear of them time and again sitting for hours without moving a muscle, and yet among them the language of pantomime flourishes at its fullest. It is much the same with them as it is with the Italians. As a nation of gesticulators we should class the Italians far below the French, but owing to their peculiar divisions it has been found indispensable to have one general language and to keep it at a fair average of cultivation. A most striking example of the perfection to which sign language can be brought, forced itself into history in 1282. In that year the Sicilian Vespers rebellion was arranged throughout the island, and even the day and hour fixed, without a word being spoken or written. Every detail of the conspiracy was commanded by gesture.

#### THE GREAT ENGLISH PRINTERS.

We extract the following interesting information about the early fathers of the art of printing from a circular recently issued by Messrs. A. B. Fleming & Co., the well-known printing ink manufacturers:

It may be useful to give the names and the dates of birth and death of the great English printers from the earliest times. A chronological epitome of the kind is often wanted, but it has not, as far as we know, been put in a concise and connected form.

In the fifteenth century, commencing with the introduction of printing to this country in 1476 or 1477, the first name to be mentioned is of William Caxton, the date of whose death is not known, but supposed to be 1491. Theod. Rood printed at Oxford from 1478 to 1485; "the Schoolmaster" (name not known), at St. Albans, from 1480 to 1486; John Lettoun in 1480 and 1481; Wynken de Worde, employed by Caxton at Westminster, printed there after his master's death and up to 1500, when he went to the city of London; Pynson, another servant of Caxton, printed here as early as 1493, became "King's Printer," and seems to have worked on till 1523.

There were few English printers of any eminence in the sixteenth century, except Richard Grafton, who printed from 1537 to 1553, and John Day, born 1522, died 1584. This dearth of eminent typographers was due to the neglect or opposition of the legislature, the oppression of the licensers, and the tyrannical decrees of the star chamber. Abroad there were giants even in those days. Among them may be named Aldus Pius Manutius, of Venice, born 1449, died 1515; John Amerbach, of Basle, died 1515; J. A. Badensius, of Pfortzheim, printed 1502 to 1526; J. Froben, of Basle, born 1460, died 1527; Badius Ascensius, of Lyons and Paris, died 1535; Sebastian Gryphe, of Lyons, born 1493, died 1556; Robert Stephens, of Geneva, born 1503, died 1559; John Oporin, of Basle, born 1507, died 1568, and Christopher Plantin, of Antwerp, born 1514, died 1590.

In the seventeenth century the only notable English names are: John Norton, who printed to about 1610; Richard Atkyn, who printed about 1677, and Joseph Moxon, best known as a writer about printing, born 1624, died 1686. Abroad there were Louis Elzevir, of Leyden, died 1617; G. Blaeu, of Amsterdam, 1571-1638; Balthazar Moretus, Antwerp, born 1574, died 1651; D. Elzevir, Amsterdam, born 1626, died about 1680.

The eighteenth century was more prolific. Of English printers may be enumerated: Samuel Palmer, died 1732; W. Bowyer, the elder, born 1663, died 1737; Cave, died 1754; Ruddiman, died 1757; Watts, died 1763; Woodfall, died 1769; Foulis, died 1774; Baskerville, born 1706, died 1775; Faulkner, died 1775; W. Bowyer, the younger, born 1699, died 1777; R. Foulis, died 1778, and W. Strahan, born 1715, died 1785. The foreign notabilities in this line were Isaac Enschedé, of Haarlem, born 1681, died 1761; P. S. Fournier, Paris, born 1712, died 1768; J. Enschedé, Haarlem, born 1708, died 1781; E. A. Duperron, Paris, born 1748, died 1790; Benjamin Franklin, Philadelphia, born 1706, died 1790; J. G. Breitkopf, Leipsic, born 1719, died 1794.

The nineteenth century bears on its scroll, W. Woodfall, died 1803; John Nichols, born 1745, died 1826; Luke Hansard, born 1752, died 1828; Miller Ritchie, born 1751, died 1828; W. Bulmer, born 1756, died 1830; J. M'Creery, born 1768, died 1832; Thomas Curson Hansard, born 1776, died 1833; Thomas Bensley, died 1835; William Savage, born 1770, died 1843; William Clowes, born 1779, died 1847; J. B. Nichols, born 1779, died 1853; Charles Knight, born 1791, died 1873; Charles Whittingham, died 1876; William Clowes, the second, born 1807, died 1883; William Spottiswoode, born 1825, died 1883, and many others. The chief printers abroad have been: Firmin Ambroise Didot, Paris, died 1804; J. B. Bodoni, Parma, born 1740, died 1813; Firmin Didot, Paris, born 1764, died 1836; J. M. P. Renouvier, Paris, born 1804, died 1860; Henri Plon, Paris, born 1806, died 1872; Ambroise F. Didot, born 1790, died 1876; J. C. Derriey, Paris, born 1808, died 1877; Joel Munsel, New York, born 1808, died 1880.

+++  
 +++  
 +++

In our WOOD-ENGRAVING department none but the most skilled and thoroughly-trained engravers and artists are employed.

Our PHOTO-ENGRAVING department is well equipped and equally well supplied with artists of superior skill, while our apparatus is the best that money can procure. Our three departments occupy separate rooms.

By our "HALF-TONE" ENGRAVING we make plates ready for the printing press direct from photograph.

52 MADISON STREET, CHICAGO, ILL.

We are sometimes too near an object to see it. One foot away from Washington Monument you could not rightly pass judgment upon it.

So of your business. It is only by getting away from your business and studying other occupations that you perceive certain laws, which later you apply to your own case.

One is that the tools of a trade must never be subjects for economy. The barber never buys cheap razors, nor the dentist cheap instruments, nor the carpenter cheap tools; the attorney doesn't select his law-books according to their cost, nor the physician his remedies by their price.

Go back to your business, convinced that the *second* thing in importance about a press is its price. You know what the first is.

**SANBORN'S**  
**NEWEST**  
**CUTTER**

For a thoroughly GOOD hand and power Cutter at a comparatively small figure, the "ECLIPSE" leads all of its competitors.

The "ECLIPSE" is guaranteed to excel, in all the points requisite in a good machine, all other low-price Hand and Power Cutters in the market.

**"ECLIPSE"**

THE construction is simple, the power and strength warranted, the fitting and finish first-class. Only small exertion is necessary to operate by hand, and the fly-wheel is made extra large as an additional advantage. The pulley for power is always ready for the belt when needed. The knife cuts from left to right; has a sliding, draw movement, which is uniform and rapid and can be stopped at any point in the cut. There are gibs in the frames for the adjustment of the knife-bar. Either the usual style of clamp and gauge or the intersecting clamp and gauge is furnished, as may be preferred. The back-gauge is split, thus admitting of two sizes being cut at one operation. In the front table is a brass measuring rule divided into eighths of inches. Only SPECIAL boxing charged for.

The

# COX • DUPLEX • PERFECTING • PRESS

## AND FOLDING MACHINE.

Delivers 3,500 to 4,500 perfect papers, folded, per hour, either four, six or eight pages, from flat beds and ordinary type forms.

MR. T. C. O'HARA, the well-known expert machinist of the *Boston Herald*, under date of September 10, 1890, writes as follows to MR. H. I. DILLENBACK, manager of the Rutland (Vt.) *Herald*, the purchaser of the first of the above machines:

BOSTON, MASS., September 10, 1890.

At your request I attended the shop test of the new COX DUPLEX WEB PERFECTING PRESS, built for the Rutland *Herald*, and carefully inspected its operation and made a thorough examination of its construction. The press stood partly over a pit and partly on the floor, upon planks, and was not fastened down in any way; and it was run by a four-inch belt. At the first trial of speed, it ran at the rate of 3,000 complete papers per hour; at the second, 3,600; at the third, 4,560. Its operation during these trials caused no perceptible jar of the machine nor of the floor of the building, nor did it give any indication of strain upon the machine, and it ran with perfect steadiness and smoothness. The principle of the machine, while novel, is entirely practical, and overcomes entirely the obstacles to speed and smooth running always heretofore encountered in the construction of flat-bed printing presses, and in my opinion the invention has solved the great problem in the construction of machines for the use of newspapers of moderate circulation, desiring to print from type at high speed, in a manner destined to revolutionize this branch of printing press manufacture.

Under date of December 9, 1890, Mr. Dillenback, Manager of the *Herald* writes:

The press is running nicely. I believe it to be the press, without a rival, for newspapers desiring to secure all the advantages of a fast perfecting press without the delays, expense and other disadvantages of stereotyping; and I do not hesitate to recommend it unqualifiedly. The press runs smoothly and economically, is handled with ease by a young man who never before saw a perfecting press, is thoroughly well built, and does better work than the vast majority of presses. I know of no "outs" about it, and feel justified in saying that no one can say aught but in praise of it.

The press is now in daily operation in the pressroom of the *Herald*, where it is fully demonstrating its capacity to do all that is claimed for it.

Full information may be obtained by addressing the manufacturers.

While our columns are always open for the discussion of any relevant subjects, we do not necessarily indorse the opinions of contributors. Anonymous letters will not be noticed; therefore our correspondents will please give names—not for publication, if they desire to remain incog., but as a guarantee of good faith.

#### A WORD WITH CORRESPONDENTS.

We hope our valued corps of correspondents will not take offense when we ask them to **BOIL DOWN** their effusions in future as much as possible. We are very glad to hear from every section of the country, but our correspondence feature has assumed such proportions that it is impossible to publish all that is sent us. Friends, be brief and to the point, and **THE INLAND PRINTER** readers will think all the more of your contributions for their being so.

Mr. A. C. Cameron having retired from the editorship of **THE INLAND PRINTER**, all communications and correspondence should be addressed to The Inland Printer Company, Chicago.

#### FROM TORONTO.

To the Editor:

TORONTO, Ont., April 1, 1891.

State of trade in this city cannot be said to be encouraging. We have quite a number of men idle. At a special meeting of the union on Saturday evening last the reply of the Employing Printers' Association to our new book and job scale was taken up. After some discussion, accepting many of their proposals and standing by the more important of our own, the matter was referred back to the committee to proceed further with it. We expect to get safely through without trouble. Scale, 30 and 33½ cents for morning papers; 28 cents for weekly and evening papers; 33½ cents for bookwork; week work, \$11 per fifty-four hours.

Messrs. W. B. Prescott and Amos Pudsey were elected delegates from Toronto Typographical Union, No. 91, to Boston.

W. G. FOWLER.

#### FROM A VETERAN PRESSMAN.

To the Editor:

NEW YORK, March 18, 1891.

I recently saw a notice in a Columbus (Ohio) paper credited to **THE INLAND PRINTER**, announcing the death of Stephen McNamara. He was one of several journeymen who served their apprenticeship under my care in Columbus, and I have always been much interested in his career. We were the best of friends and he always gave me the credit of bringing him out. Let that be as it may, he was a first-class workman and always took great interest in the trade.

I suppose I may lay claim to be one of the *old* pressmen. On the 23d of this month it will be sixty years since I went into the *Boston Evening Transcript* office to learn my trade, with Dutton & Wentworth. In 1838 I took one of Adams' double presses out to Vandalia for William Wotton to do the state printing, and moved it to Springfield the next year, and am now seventy-five years old.

J. WENTWORTH OSGOOD.

#### VERMONT JOURNALISTS.

To the Editor:

BELLOWS FALLS, Vt., April 1, 1891.

The *Bellows Falls Times* has improved greatly under its new management and bids fair to eventually rival the best papers in the state. Some changes are rumored which will put it far ahead of what it is now. The management is certainly progressive and open to new ideas, and ready to adopt anything which seems feasible or likely to improve the paper in any way.

The *Brattleboro Phoenix* which, by the way, is one of the best papers going, typographically, has announced the necessity of a change as soon as the proper machinery can be put in position. The *Phoenix* is ably conducted and is one of the best examples of

journalism, both in its mechanical and editorial departments, Vermont has on her list.

The *Teachers' Journal*, which was so recently moved to Bellows Falls, has been sold and will go elsewhere with its next issue.

C. P. Spencer, at Brattleboro, is doing remarkably well at his job printing, notwithstanding the fact that he must come in competition with several older established firms.

The *Woodstock Standard* recently celebrated its thirty-ninth birthday, and closed its thirty-first year under the management of L. O. Greene, its present proprietor. It is a good paper and is always found on the right side of the important public questions.

The *Swanton Courier* recently celebrated its fifteenth birthday with all the pomp and glory befitting such a long existence.

I can report job printing as good in all parts of the state, probably better than ever before. There is a constantly increasing demand for printing of all sorts, not always what could be desired in the way of first-class work, but taste is improving and the jobs turned out now average better than they did five years ago. The masses of the people are getting to appreciate really good printing more than ever before. It has taken a long time to educate the public taste up to its present standard, but, like all art education, it has its own reward, and those who have assisted in the development of the present appreciation of good printing are being amply repaid for all the time and labor spent by them in those directions. The watchword, however, is still onward, and not until all can understand thoroughly the advantages of first-class work should printers cease their endeavors to raise the standard of taste.

B. H. ALBEE.

#### THE PRINTERS' HOME.

To the Editor:

COLORADO SPRINGS, COLO., March 28, 1891.

The contracts for the erection of the Printers' Home have been awarded, the survey made and the grades established. The foundation will be well advanced by the time the April number of **THE INLAND PRINTER** reaches the mail sacks. The work of raising money to build the institute, the securing of plans and specifications and other preliminaries necessary to complete title to the slightly location has been performed. The indistinct lines of the Utopian vision of the typo are appearing in bold relief in a Colorado sunrise. The health-laden air of mountain and plain is charged with fragrant welcome for those now delving, that others may enjoy a season of rest and reinvigoration.

The friends of the home, the Abou Ben Adhems of the craft, will soon be required to assemble and place the cornerstone and arrange for the formal dedication. The delegates-elect to the Boston convention, together with the directors, have these, with financial subjects and management connected with the home, to seriously consider before the meeting in June. The proverbial generosity and carelessness of the printer will soon be required to take on the color of business methods and foresight.

The contractors will be ready for laying the cornerstone in June or July, and the building will be completed within a year. Each of these events are of interest to all friends of the enterprise, and the question should soon be considered as to the proper course to pursue.

The ballots cast on Wednesday last have called many new men to the international council. With them in a measure rests the successful continuation of an enterprise matured by their predecessors. A careful study of this trust, in its magnitude, in its possibilities and its future should be made by every member of the international union who contemplates visiting Boston in June.

The comments and criticisms in craft journals for and against the liberal expenditure of funds in the erection of a home were of value to the directors, having resulted in the selection of a medium course which, while not satisfying the broad-gauge advocates of the \$100,000 edifice, will at least merit the confidence of those who hesitate to expend a large amount in that which they consider a doubtful experiment.

The eighty acres of land donated for the home site has doubled in value since the acceptance of the gift in June, 1889, thus verifying the predictions of those who were then considered

enthusiasts on the subject. With a conservative estimate on probable increase in values at the time of contract completion of the building, it is safe to assume the printers will then have a property worth \$200,000. In the East End, a platted addition joining the home site on the west, lots are held at \$800 each. This will give an idea of the value of the home tract, if platted for sale.

Will not some of THE INLAND PRINTER correspondents furnish suggestions on cornerstone laying, dedication and other topics pertaining to the home prior to the June meeting? DURANGO.

#### FROM LYNCHBURG.

*To the Editor:* LYNCHBURG, Va., April 3, 1891.

On March 25, John W. Pickett was elected delegate to the International Typographical Union, but whether No. 116 will (as is the case with most small unions) have to be satisfied with electing and trying to send a representative remains to be seen. On March 27, No. 116 elected the following officers for the ensuing year: F. S. Lyon, president; W. E. Braton, vice-president; John W. Pickett, secretary-treasurer; A. C. Wilkinson, recording secretary, and D. M. Shearer, sergeant-at-arms. A business committee will be appointed at the April meeting. We hope the newly-elected officers will prove creditable to the union and themselves.

The doings of the standing committees of the city council for the past year will be submitted for estimates, this month, I presume, as March is generally the month; this is the largest job given out, in the way of printing, by the city, yet the bids are not made public. The work consists of about one hundred 16mo. pages brevier, mostly tabular work, and has been done as low as \$1.17 per page; but as cutting prices seems to be the order here at present some of the bids this year may be lower than that.

The printers of Farmville, a thriving town between this place and Richmond, have organized a union and elected the following officers: C. G. Kizer, president; K. H. Cowan, vice-president; James Hart, secretary-treasurer; W. P. Holt, recording secretary; C. G. Kizer, delegate. We wish them abundant success in their labors for the right.

There are more towns in this part of the Fourth District that should have unions, but as they do not know the name of the district organizer or where to find him, and as that individual has never visited this section of his domain, we think it would be in order to appoint a deputy for this state and North Carolina. We believe such an appointment would prove beneficial.

WILLIAM.

#### FROM OMAHA.

*To the Editor:* OMAHA, Neb., March 31, 1891.

The annual election of officers of Omaha Typographical Union, No. 190, was held March 25, at their hall, Fourteenth and Douglas, with the following result: President, T. F. Sturgess; vice-president, C. W. Bigelow; recording secretary, W. A. Pangburn; financial and corresponding secretary, Joseph Stemm; treasurer, J. M. Sirpless; executive committee, Herman Matthes, Frank J. Kennedy, J. B. Corcoran, George W. Bills, W. S. Broadfield; finance committee, Frank M. Tracy, A. F. Clark, E. J. Machette; sergeant-at-arms, George D. Henderson; sick committee, George Farrell, Frank Keatley, G. H. Frederic; reading clerk, Nelson Bradley; delegates to International Typographical Union, W. C. Boyer, William Maxwell. The election was as devoid of enthusiasm, outside of the struggle between the several candidates for delegates, as one can imagine. The Australian system of balloting was used. Three years ago No. 190 adopted this mode of conducting its elections, that being the first trial of the system in this state. It has now just become a state law, and hereafter all elections throughout Nebraska will be conducted on the Australian plan.

Business is dull at present and printers are plenty. On the newspapers the number of subs are in excess of the regulars. The burning out of the office of Gibson, Miller & Richardson has given some of the larger offices extra work, so that a full force is

kept going. At Ackerman Brothers & Heintze, on the city directory, about thirty printers are at work, both a night and day force being employed. That will be finished, however, in a few days. The first number of the Omaha *Original*, a new publication, copyrighted by Mrs. Helen A. Brown Van Camp, appeared as an Easter greeting. It is a household paper and will be issued weekly.

*Topics*, an illustrated society publication which has heretofore been issued as a weekly, will be changed to a monthly and enlarged to sixty-four pages.

Omaha *United Labor* is the name of a new paper recently started here by Lee Hartley. It is the official organ of the Central Labor Union, and will be issued weekly in the interest of organized labor.

A movement is on foot to raise a fund for the purpose of erecting a handsome monument to the memory of the late O. H. Rothacker, the gifted journalist and editor, who died here last May; a similar move has been started in Kansas City and probably will be in Denver and Chicago. It is believed that a monument befitting the brilliant Rothacker will be erected in a few months. In the October, 1888, number of *Harper's Magazine*, Mr. Rothacker was a subject of illustration, and was there very properly classed among the leading newspaper men of the West.

The firm of Hartley & McNaughton has been dissolved, Mr. Hartley continuing the business.

The Omaha *Mercury* will appear this week in a new dress throughout. SLEMERSON.

#### FROM GEORGIA.

*To the Editor:* MACON, Ga., April 4, 1891.

Jobwork is rather dull, with no particular indications of a better condition prevailing in the immediate future. This is ordinarily the case, and last month here was the only one in my recollection when work was uniformly good throughout. Work is good on the newspapers, but there are men enough and to spare to do it. More travelers have put in an appearance this winter than for several years before, and the town is pretty well stocked now. Among the more prominent tourists here now, I would mention Charles O'Connell, San Antonio; R. E. Pugh, "The River"; Thomas P. Farrell, Augusta, Georgia; J. A. Waring, M. D.; George W. Harvell, Kansas; John B. Campbell, Savannah.

The election for delegate was quietly conducted, resulting in the choice of Mr. C. P. Cullen, of the *Telegraph* force. He will doubtless ably represent us at Boston.

By the way, I hope the wisdom to be assembled at Boston will put in a few licks in endeavoring to bring some order out of that chaotic production of contrarities known as the "Constitution and General Laws." If this should meet the eye of any of the aforesaid "wisdom," will they please take a sly glance at sections 130 and 132 of the General Laws, and say which of them is law; for it is utterly impossible for both to be. And let them compare some of the "resolutions and decisions" with the portions of the Constitution and General Laws with which they conflict; resolutions 3 and 4 with section 36, General Laws; resolution 23 with section 4, Article IX, Constitution; resolution 30 with section 1, Article VII, which makes no provision for traveling expenses of the secretary-treasurer, while it does for those of president; decision 5 with section 4, General Laws; decision 6 with section 92, General Laws; resolution 35 with section 58 of General Laws—but I won't prolong the list, and would only remind them that according to section 130, General Laws, all of these resolutions and decisions are "still in force"; in which event the conflicting portions of the Constitution and General Laws should be eliminated from the next edition, or amended to "consist."

There is one thing I would like to see settled, and that is when delegates to the International Typographical Union should be elected; section 2, Article V, of the Constitution says they "shall" be elected on the last Wednesday in March preceding meeting of International Typographical Union; President Plank (see decision 12) says, conditionally, they may be elected at a subsequent date (I believe, however, he has reversed this in a subsequent

decision); while the Atlanta convention (see page 8 of Proceedings) says, in effect, that it is immaterial whether delegates are legally elected or not, the majority will seat them anyhow.

After the delegates who may read this have given the foregoing their prayerful consideration, I would recommend that each of them devote a day off to the study of standing rule 18, so that when a member introduces any measures covered by it, he may be summarily called down, unless he complies with its stipulations.

H. J.

#### FROM LANSING.

To the Editor:

LANSING, Mich., April 7, 1891.

William M. Clark, editor of the *State Republican*, was made a member of the executive committee of the Michigan Republican Newspaper Association, which was organized at Grand Rapids last week by several republican editors.

S. M. Mitchell of the *Republican* jobroom was called to Ionia by the severe illness of his family last week.

La grippe has taken hold of several of the printers here during the past few days, resulting in a few vacant frames temporarily. Jerre Rogers, James Armstrong, Caleb Smith, Fred Burr and Sidney Dolan being among the latest victims.

Frank Doolittle, who has been seriously ill for some weeks and was taken to his home in Dowagiac a few days ago, has partially regained his health and expects to return to work again soon.

Col. W. W. Cook has purchased an interest in the Launt Thompson job printing office, and has promised to open it to union men.

No. 72 seems to be in a favorable condition at present. It has sixty-one members, who are all at work except one or two, and prospects are not discouraging.

For some time past the union and the *State Democrat* have had more or less difficulty, Mr. Sanford, the proprietor, having promised on several occasions to make his office a "square shop," and two weeks ago he gave it out point blank that he would not do so, and that it would be a fight to the end, which resulted in No. 72 declaring the office an unfair one and debarring all union men from working therein.

The election of a delegate to the International Typographical Union was well attended, only three or four of the entire union being absent. The candidates were S. N. Chilton, Caleb T. Smith and L. W. Goucher. Mr. Smith had the best of it from the start and held his own to the finish, being elected by fifteen majority.

THE INLAND PRINTER is a great favorite among the boys here, and has a good subscription list. A number of other trade journals are taken by some of the craft, but THE INLAND PRINTER has the lead and intends to keep it.

G. A. M.

#### FROM WASHINGTON.

To the Editor:

WASHINGTON, D. C., March 4, 1891.

Since our last letter there has been considerable excitement here in matters of interest to the craft. The adjournment of congress has wrought many changes at the government printing office, at least there have been many "removals." One month has come and gone since adjournment, and today there are at least 175 less employes at that great workshop. The first discharge took place the following day after the adjournment of congress, at which time over one hundred fell victims to the "mighty ax," and since that time several more have been numbered with the "unfortunates." It is rumored that a large number will follow the list, and by the time the summer days have put in an appearance the force at the government printing office will have been reduced about one-eighth of its former size. This is a rather deplorable condition of affairs, and there does not appear to be any special pressure to bear that makes an employe "solid" at the government printing office.

The book and job printers down town have had a ripple of excitement in the way of a proposed "strike" recently, but as yet it is nothing but a bubble; yet in our opinion it will meet with an

explosion ere many days. At a meeting of No. 101 last week it was decided to enforce the new rules of the International Union. "The printers in book and job offices request that their pay be increased from 40 cents per 1,000 ems to 42½ cents for daywork, 45 cents for work after 5 o'clock in the evening; that nine hours constitute a day's work, and if a printer be obliged to work after midnight he be paid 10 cents an hour extra if he is working on time, and 10 cents advance if working by the 1,000 ems." The printers claim that they cannot exist on the present rates, and have notified the employing printers that the only redress they now have is to strike. They set aside the first day of April for that purpose, but for some reason it proved to be an April fool joke. In the meantime No. 101 held a special meeting, at which it was decided not to strike without thoroughly ventilating the subject, and giving the employers here a thorough and impartial idea of the present condition of affairs. President J. L. Kennedy stated at the meeting mentioned that he did not think there would be a strike, and that when the proprietors of the various book and job offices affected by the newly adopted scale of prices fully understood the matter, they would accede to the union's demands. It was also decided to still further confer with the proprietors of the various establishments regarding the union's action in relation to the increase. There have been rumors that the government printing office printers were forcing the raise in prices in order to further increase the scale in their office. This charge was refuted at the above mentioned meeting by the fact that the government printing office men refrained entirely from either participating in the discussion or voting pro or con. President Kennedy stated at the meeting that the men in book and job offices were not averaging \$10 a week, year in and year out. The men in the government printing office get over \$19 per week. The proposed increase in the book and job scale would only make a difference of about 75 cents a day in the men's earnings. At present the men in these offices are not as well off as the hod-carriers, who get \$2.50 a day, and only labor eight hours. Judd & Detwiler, one of the largest book and job firms here, came out in the *Star* a few evenings since, ridiculing Mr. Kennedy's statement.

LATER.—Last night a final meeting was held by No. 101, and came to a definite and unalterable conclusion by ordering all members of the union whose employers refused to accede to the terms laid down to strike today at 12 o'clock noon, and at precisely 12 o'clock today seventy-seven printers walked out on strike. The strike affects the firms of Judd & Detwiler, Rufus Darby, McGill & Wallace, H. L. McQueen, R. Beresford and Byron S. Adams. The firm of Gedney & Roberts have acknowledged their intention to accede to the demands of No. 101, and their employes are all busy and happy as a result. Each man on strike will receive the sum of \$7 per week as long as he is out, and it is to be hoped that an amicable settlement will be brought about soon. It is stated that both No. 101 and the employing printers are determined to hold out till the end in this battle.

According to a dispatch, about one-half of the non-union printers employed on the *Philadelphia Press* walked out on a strike a few nights ago, after their demand that the foreman of the composing room be discharged had been peremptorily refused. Although trouble had been anticipated for several days past, the strike in question was a complete surprise to the managers of the paper, and they were in a measure unprepared for it, as it took place just at the beginning of the evening working hour. The management, however, secured a sufficient force of non-union printers to get the paper out the next morning.

Last Wednesday, March 25, was the printers' annual election day, and to say that the greatest enthusiasm prevailed the entire day and night is but mildly putting the facts. It was stated by parties who were in position to know, 1,300 votes in all were cast. The various contests were conducted very mannerly, and outside of a little confusion incident to any election good order prevailed. The main fight was for the presidency of No. 101. The election this year, however, was not conducted as in former years. Heretofore a regular polling place was selected, and the voters were required to go there and deposit their ballots. This year the

electors were allowed to vote by chapels. Printers attached to offices in which no chapels existed were required to cast their ballots at the office of the secretary of the union. The new system was adopted by the union after a warm and lengthy argument, and it was considered by many to be a failure, as the result of the election could not be ascertained until late the day following the election. The following is the result of the election in full: President, J. L. Kennedy; vice-president, C. C. Casterline; secretary, F. H. Padgett (reëlected); treasurer, J. J. Higgins (reëlected); reading clerk, E. A. M. Lawson; sergeant-at-arms, Harry D. Armstrong; doorkeeper, Granville Harford; trustee, George M. Depue; delegates to International Typographical Union, W. E. Shields, Charles H. Leeds, L. H. Jullien, Charles W. Otis.

The officers above elected seem to give perfect satisfaction; such at least has been the opinion already expressed.

The "grip" has reached the government printing office, and we venture to say there are more members of No. 101 on the sick list at present than there has been in many a year.

Foreman Aven Pearson, of the *Record* room has just returned to duty from a severe attack of the "grip." EM DASH.

#### FROM OREGON.

To the Editor:

PORTLAND, Ore., March 18, 1891.

Printing in Portland has been very slow for some time, and it looks as though it would be for some time to come. The job offices seem to have about pulled through this winter with just enough work to keep the presses from rusting. In fact, there have been three or four offices that would like to sell out or lease for a long term. It is hoped by next month that work will open up enough to start all the presses running, and work out the oil and dirt that have accumulated in the oil holes of the machines.

Mansfield, the printer, has sold out to McKibben & Phillips.

The *World* has removed to the Marquann block.

There has been a new monthly paper started in the interest of the Foresters, called the *Northwest Forester*. The editor, Mr. John W. Kelly, is an old newspaper man and a member of Multnomah, No. 58. It presents a neat typographical appearance, and has already been enlarged from four to eight pages.

Messrs. Lewis & Dryden have issued a neat and tasty little pamphlet, entitled "A Reminder," showing samples of the class of work they turn out, thus giving the public a chance to see what they can do in the way of neat printing.

The firm of F. W. Baltes & Co., is still out and will not recognize the union, and claim they will not have anything to do with it.

They advertise that they will not discharge their present force of competent hands for an incompetent force, notwithstanding they have scoured the city for apprentices, and have given work to all that they could find. They claim that they pay the highest wages and employ competent hands. This is the offer they generally make an employé when they ascertain that he is a non-union hand, which shows that there is a mistake somewhere as regards wages, and competent hands. The foreman will address an employé thus: "Mr. K—, you seem to be a pretty fair printer—I have a good offer to make you. I will give you a steady situation at \$15 a week as long as you wish to stop here." If the employé replies, "No, sir," he is promptly dismissed the following Saturday. This offer is made Saturday morning, and if not accepted the employé is let out in the evening after being paid off. This is a fact, as the writer has worked for the firm for some time, and can recall three parties who were served in this manner. Still this same firm sends out circulars and advertisements informing the public that they employ competent men and pay the best of wages.

I would warn all printers (non-union) against coming here with the expectation of getting better wages, as they can do as good, if not better, if they stay where they are.

Union printers will please take notice, and give Portland a wide berth, as there is no extra help wanted. W. H. S.

#### CHIPPING OF ANGLE ROLLERS.

To the Editor:

CHICAGO, March 20, 1891.

I have read with great interest the articles in the November, December, January and February issues of your valuable journal, under the caption "To Prevent the Chipping of Angle Rollers." In one article a wash is suggested; in another a "patent friction starter," and still another says to "use the small iron riders on top of the angle rollers." The latter will, as the writer says, stop the motion of the angle rollers immediately on their leaving the plate, and thereby prevent their being in motion opposite to that of the plate on its return. But the writer seems to forget that the iron or rider roller causes double the friction to the angle roller, as when it is used there are *two* rollers to start instead of *one*, thus what is gained in stopping is lost in starting and the result is that the rollers chip just the same.

The remedy I wish to call attention to is one applied to our four-roller Miehle press, and briefly described is simply, instead of the small iron rider *stopping* the angle rollers, on leaving the plate, they are kept in motion by a very simple mechanism, which drives the riders and *reverses* them at the proper time, the same as the form rollers.

The angle rollers are set to the iron riders (properly speaking, the *small vibrators*) and the ink plate, the same as the *form* rollers are set to the vibrators and type surface, and are driven by and *with the bed*, thus giving a true motion without any grinding or unnecessary strain to the angle rollers and adding greatly to the distribution, as the angle rollers and riders are revolving at all times whether on or off the ink plate. I do not write this from theory but from practical experience, as the set of angle rollers furnished with our press last July are still in use, and although a trifle hard are *not chipped a particle*, notwithstanding the fact that we run this press very fast and use all colors of ink upon it daily.

I believe that the only way to *prevent chipping* of angle rollers is to revolve them the same as form rollers, *mechanically*.

R. J. KITTREDGE.

#### FROM BROOKLYN.

To the Editor:

BROOKLYN, N. Y., March 28, 1891.

Work is very good here at present with fair prospects for it continuing so. The advent of the new morning paper, the *Recorder*, in New York, has been the means of giving work to the surplus idle men across the river, and as a consequence livened up work here. The scale is 40 cents—there being no morning papers in Brooklyn except a Sunday edition, nightwork, which is 50 cents; job scale, \$18 per week.

Several important meetings of the union have been held regarding a proposed modification of the scale, and things had progressed even as far as a conference with the proprietors of the papers, which resulted in nothing. It appears that the publishers have formed themselves into the "Brooklyn Publishers' Protective Association" and when notice was served on them for a conference they held a meeting to determine upon the course to be pursued by them. The committee from the union met them and after stating as plainly as possible the changes proposed, the leading publishers announced that "we have made up our minds to refuse to accept any change of the union—did so previous to this conference—and as a substitute we wish to offer to the union a change of our own." The gentlemen then handed out a long paper stating that the office wanted all the ads, tables, fat of every kind, etc., apparently as a burlesque on the demands of the union, for it was too ridiculous to be construed other than such. The report of the committee was handed in to the union, which promptly and energetically refused any such substitution. The committee was continued with instructions to inform the publishers that the union was making its own by-laws and scales, at which point the matter now rests.

Considerable interest is being manifested among the fraternity of this state regarding the new state printing bill now before the legislature. This measure is intended for the state to do its own

printing, thereby taking it away from the contract non-union shops which now perform the work; and also to raise the price of labor in the vicinity of Albany and immediate cities to the capital. Of course "help one, help all." The great drawback to the bill is the senate, it having already passed the house. If it were made a law the governor of the state would have the power to appoint a state printer at an annual salary of \$3,000, and this is where the "hitch comes in." The democrats are willing for the bill to pass, for they are in power with the governor, but the republicans have control of the senate and, while some favor the measure, not enough votes have been secured to insure its adoption. The passage of this bill has been attempted for several years, but the prospects have never appeared as flattering as now.

"Big 6" gave its annual grand ball a few evenings since, which, despite the inclement weather, was a "glittering success." Many prominent personages were present and all enjoyed themselves abundantly.

Dame Rumor has it that the *Tribune* (New York City) is anticipating discarding the machines and putting on a large force of men; likewise returning to the fold. Also that the *News* will shortly establish a morning edition, giving work to about seventy-five extra men. As to the reliability of these reports your correspondent is not able to vouch.

President Wilkins and Secretary Harry Zeigler were unanimously renominated for their respective positions at the last meeting of No. 98, and as they have no opponents will certainly be reelected. The names of the delegates in the field are too numerous to mention.

LATER.—The annual election of officers of No. 98 took place on March 25, and resulted in the reelection of President William D. Wilkins and Secretary H. W. Zeigler; the other officers chosen are: R. L. Gillespie, vice-president; William C. Rosenkranz, treasurer; P. F. Finnen, reading clerk; D. M. Webster and F. Regel, trustees; H. Kyler, sergeant-at-arms; Hugh C. Curry and George B. Hall, delegates; total vote, 306. There was little or no excitement during the day, as the vote was cast by chapels and after the result was announced at the union rooms a nice lunch with liquid refreshments was served to the members, the successful nominees being the donors.

The following special, sent from Albany on March 25, tells the tale of the bill to create a state printing office: "The finance committee of the senate reported adversely today the bill to create a state printing office. A motion was made to disagree with the report, but it was made a party measure and beaten by a strict party vote, the republicans opposing the bill." The result of this action is keenly felt in labor circles here and possibly may have a tendency to influence the labor vote at the coming fall election. The stand taken by the opponents was that the establishing of such an office proposed would entail the state in an expenditure of some \$300,000. Non-union printing offices continue to turn out botchwork for the state. More's the shame. THINSPACE.

#### FROM MONACO.

To the Editor:

MONTE CARLO, February 7, 1891.

It is not often that a rambling compositor from the western democracy prolongs his journeys into such high-life resorts as these; but the liner has done it, and in the reading room of the superb Casino itself decided to jot down (after a tour of the pretty "state") these notes.

The big salon-de-lecture receives some three hundred diverse periodical publications from most countries of the universe, from the London *Daily News* to the St. Petersburg *Golos*, and of course newspapers from the American cities. But there is no evidence of any of the trade journals and advertising annuals which publishers assert are donated to reading rooms of notable public institutions in all visitors' resorts, and than Monte Carlo Casino what better-known aristocratic public building and amusement place in Europe?

Of course the writer was duly registered among the arrivals, but in a rather peculiar manner. Leaving the Casino at too late

an hour on first night of arrival, it was ascertained at all hotels that they were full up, almost even the doormats had been forespoken. Not one had a chamber to spare. Such was the result of neglecting to secure a rest earlier in the day. But, wandering about, tiring of ringing and inquiring at rude inns, scarcely knowing the vicinity, at last a gendarme in his box came up to, and a friendly conversation entered into. That was up on the rocky promontory of Monaco *ville* itself. Although he knew not a word of anything but French himself, we got along. "You had better do as others do who get short cut," said he; "walk about till dawn; then go into a café and enliven yourself over your coffee." But I had had enough of promenading that day, so suggested a stretch on the wide fern alongside. All right. The night was not very cold. Getting inside the thick warm rug (always an indispensable companion), and casting down, just as sleep was coming on, two midnight inspectors anticipated it. Questions. Replies. Passport? Hadn't it; left in Paris; first and only time it was ever demanded; had it not! Had I any money? Ample; showed it. Then it was understood that they thought the visitor had lost all his cash over the tables, was penniless, and had not the wherewithal to enter a hotel. Good! but don't rest there; come down to the military barracks; there a couch would be found, though rather rough. At the station more questions, mostly trivial. Satisfactory. Shown a soldier's trestle bed in next room. Left in peace. Slumber until 7:30. Toilette. Appearance before sergeant. Continued interrogations. Full particulars of printer visitor entered on register. All very polite and obliging, but the little officialism of the miniature territory required these formalities. Dismissal. Salutes. Will take care not to get shut out again, if only to avoid weariness of answering repeated questions.

Typographers are not such fools as to lose all their money in gambling; more often does it disappear down the red lane in liquid form. But being a strict temperance man the compositor has no fear of being shortened even that way.

Monaco has its one-horse state printing office of half-a-dozen employés, where the weekly *Journal* (entirely in French), about thirty years old, is printed. There is also impressed the *Annuaire de la Principauté de Monaco*, a useful yearly of data upon the minor pages. It is property of the princeling.

Printers here would have something to do if the two weekly newspapers of Monte Carlo were composed in local offices. As it is, the couple are set in Nice houses (forty-five minutes away by train). *Rives d'Or* is the most modern of the two, established last year and having its bureau close to the Casino. It is of four pages and appears weekly. A *réclame* (advertising) sham, it is at same time well produced, but its fortunes are not all "rivers of gold."

Printer of other hebdomadal sheet is N. Barral, the Alberti 12, Nice. This is *Monte Carlo Mondain*, the rather newsy organ of the house agent, A. Roustan, on the avenue de la Costa, Monte Carlo. A little part of it appears in English, which is choked with errors.

Anglo-American printing has its home, on the Riviera, at Nice. Half-a-score periodicals in English (including small monthlies) now appear there. During the summer months this number is reduced to three or two (from beginning of April to end of September). But nigh all are a struggling, foully-typed lot of issues.

Compositors in the Monaco principality—styling themselves Monagascos—consider themselves well-off with 35 to 40 francs weekly (\$7 to \$8), and working close on sixty hours. Same in the capital of the Alpes Maritimes, with the exception of a slightly better payroll. Work is difficult to obtain there: if one lays down his stick there will be three indifferent hands to pick it up. The American or British job compositor, quick and with good taste and swift and clean at news, will stay in any place doing English work once he gets a footing there, but the difficulty is to catch on first.

What opportunities are open to the tourist compositor to journey the world? He has simply to take up his stick and be off. He can seek cheap means of transit other than freight cars. He

can visit the land of the midnight sun by working for a short time on the (during seasonal months) English press of Bergen, Western Norway; can steam into the Bay of Naples of immortal splendor, to stick type on the local English weekly, *Observer*, and subsequently scale Vesuvius; can traverse mountainous Switzerland and revel in its landscapes, with all the poetry of vast horizons and distant prospects, by moving about among several English printeries of various Swiss towns; and he can run through the historic and beautiful cities of Italy by looking in at Anglo-American houses en route. For all these offices can generally find work, if they will, temporarily for tourists, their own staff as a rule not understanding English and making fearful blunders over the foreign composition. The tourist typographer can thus pay his way through eventful, magnificent Paris (but let him also have, especially at this place, a neat cash reserve) on to the smaller Paris, the capital of Belgium; thence through the German cities into Berlin. Next he can proceed to another (Eastern) Paris-Wien (for the British-American periodical press lines the way), after which to the Austro-Hungarian city of Budapesth, subsequently continuing on through whilom Turkish provinces until Constantinople—most cosmopolitan city of journalism and printing in the world. After a rest here, he can proceed on to see the moldering glories of ancient Greece, then to Cyprus, when he would be within a few days' run of Jerusalem (which he could visit if he tried); going on past the Suez Canal to Alexandria and have a look at the ruins of old Egypt. The boat will carry him from thence to Malta, Tunis, Algiers, Spain, Gibraltar, Lisbon, and home.

Such is the outline of a trip within the accomplishment of any intelligent printer desiring to travel, yet having limited means. And maybe one day, if there is a call for the information, will state in detail how it can be done.

PRINTER-TOURIST.

#### FROM BALTIMORE.

To the Editor:

BALTIMORE, Md., April 5, 1891.

It would seem that misfortune singles out some people for its own. I am reminded of this in the many calamities that have visited within the last year the printing house of Mr. James Young, whose establishment is on Baltimore street just opposite the *Sun* office. Within this time Mr. Young has experienced two fires, a robbery (which involved a malicious pi of type) and a lockout of workmen. The fire, which broke out at an early hour one morning last week, originated in the first floor of the building occupied by Mr. Young, and was quite disastrous. The department used in getting out the *Telegram*, Mr. Young's weekly paper, suffered to some extent, but the job office was nearly gutted. Cuts were lost or destroyed, cases and forms of type pied, tables burned and other damage done. The building is owned by Mr. Young, whose loss is estimated at \$1,300, which is covered by insurance.

Last week occurred the election of officers to control the destinies of Baltimore Typographical Union for the next twelvemonth. Delegates to represent the union at the international convention were also voted for. The contest was a spirited one and resulted in the election of Nicholas B. Talbott, for president; John B. Roche, vice-president; James H. McDowell, corresponding and recording secretary; William T. Fleming, secretary-treasurer. Lea J. Raber and George I. Mathison were elected delegates to the convention. Edwin J. Smead, of the *American*, polled 128 votes for the presidency of the union against Talbott's 233.

Death has invaded quite frequently of late the ranks of Baltimore printers. Mr. Thomas D. Sultzer, aged seventy-five years, one of the oldest typos of this city, was called to his last account a few days ago. During his lifetime Mr. Sultzer played many parts in connection with the art preservative, having been compositor, foreman, reporter, editor and publisher, and was known as one of the best newspaper men of his day.

A reunion of the former compositors of the Ellicott City *Times* took place a few evenings ago in the building of the *Howard County Progress*. Refreshments of a tempting character were served and many amusing incidents experienced in the early days of the paper were recalled. Those of the former employés present were:

Clinton G. G. Brown and George M. Mercier, editors and proprietors of the *Howard County Progress*; Moses C. Gosnell, first assistant foreman of the *Baltimore Daily News*, and Albert J. Mellor, editor and proprietor of the *Catonsville Argus*. Ellicott City is a town of some few thousand inhabitants and twelve miles west of Baltimore.

There is a lockout of printers in Frederick, Maryland. A short time ago Mr. Frank Watson, deputy organizer for Maryland for the International Typographical Union, went to Frederick and organized Union No. 27. The union then adopted rules and regulations governing the craft, and a scale of prices, all of which were submitted to the various proprietors. The answer was a refusal, and a lockout the result. And now the locked-out men are publishing a paper of their own called the *Journal*.

The officers of the new union are: William T. Montgomery, president; Robert M. H. Lease, vice-president; A. J. Tapper, secretary-treasurer; Val. McCleery, recording secretary. Mr. C. K. Stribling was elected editor of the *Journal*, which is a four-page sheet.

The committee of a bookbinders' organization that recently waited on the mayor learned that all the school and other books used under the direction of the school board are printed and bound in other cities, and come from firms connected with the American Book Trust. The bookbinders here are determined to change all this if possible; they say that our taxpayers' money should be expended at home, and not sent abroad for work which can be as well done in Baltimore as elsewhere.

The Electrotypers' Union, No. 18, was organized here last week by Mr. Frank Watson. It starts with twenty members and the following officers: Warren H. Shane, president; John H. Hall, vice-president; Samuel R. Copper, recording and financial secretary; J. Winfield Lovell, treasurer.

Mr. Albert Southwick, who for the past five years has been editor of the "Notes and Queries" of the *American*, has severed his connection with that journal, and will hereafter give his whole attention to the dual fields of literature—educational works and fiction.

The Stereotypers' Union has elected Mr. J. W. Evens, delegate to the International Typographical Union.

Charles Talmer, publisher of the *Revealer*, has been sentenced to one year in jail and to pay a fine of \$100 for sending obscene matter through the mails. The vile sheet still continues to make its appearance on our streets, but its sale has greatly fallen off since his conviction.

John W. Gibbs, the publisher of another paper of the kind, has not been brought to a second trial yet, the jury having failed to agree at the first trial; but if conviction shall follow, he will hear from Judge Wright, as the court plainly intimated when sentencing Talmer.

The *Farmers' Alliance* is the name of a new weekly paper which lately made its appearance in Baltimore. It is published by the Pearce Publishing Company, and presents a neat and attractive appearance.

The new city directory is out, and R. L. Polk & Co. have succeeded in publishing a most thorough and comprehensive book. It contains 164,973 names, an increase over 1890 of 5,315, showing an increase in population of 17,372 souls.

The certificate of paid up stock of \$20,000 of the World Newspaper Company has recently been filed for record.

Advertisements for printers appear quite frequently in the dailies just now, which is an indication, of course, of a demand. The first ad for an operator on a type machine figured in the "want" column of the *Sun* last week. As there are no printers or publishers using the machine in this city, the question arises among the typos, what will the advertiser do with him?

The trouble down in Washington between employing printers and the union accounts, I presume, for the following, which I noticed in one of our daily papers yesterday:

WANTED—Twenty-five NON-UNION PRINTERS, to take the place of strikers; steady employment; \$18 per week, 40 cents per thousand; foremen, proofreaders and job hands \$20 to \$25. DARBY'S PRINTING OFFICE, Washington, D. C.

FIDELITIES

THE SABBATH DAY.

Specimen of half-tone engraving by BLOMGREN & LINDHOLM COMPANY,  
Corner Dearborn and Harrison streets, Chicago.

## OUR NEW YORK LETTER.

To the Editor:

NEW YORK, April 2, 1891.

The printing trade is busy beyond its average condition in this city. This description applies to all three departments, book, news and job work. The law courts of late have given out copious orders; booklets and pamphlets have afforded a gratifying amount of work for willing hands, especially in the religious and educational sections which are largely cultivated here. The accounts from such houses as Harper's, Polhemus', Atkins' and Sherwood's indicate fairly well lined order books. The new morning daily, the *Recorder*, is spending a mint of money in advertising itself, having found avenues of publicity which everyone else failed to secure. It aspires to be a purer paper than its contemporaries in the city, but has as yet displayed no conspicuous literary ability. Another six months or so will test its staying powers. There is, however, little if any room for it in a city containing a contemporary circulating, as it *states*, 300,000 per day! However, the printing trade has the benefit of its speculativeness. The *Daily Continent*, recent devisee of the *Star*, is a decided improvement upon the latter, apart from any question of the change in politics; it is vigorous, able and aggressive. If there is room for it and its purse is long enough, it will live, but its advertising connection is very modest, even for a youngster.

It is rumored that the *Daily News*, a diminutive evening paper whose continued existence surprises some people, is to become a morning daily. However that may be, its proprietor is taking the premises formerly occupied by the *World*; and this fact alone may have started the rumor. The *Mail and Express*, a mixture of blatant Sunday-schoolism and dogmatic personalisms, leaves Park Row for Broadway before long.

The *World* alone in this city pays its printers on time wages. It is a bold experiment in a business in which under piecework wages a man's own abilities differentiate his earnings from those of his slower neighbor; but a placid view of the question as to the relative merits of the two systems shows the time system to have an amount of all-round considerateness for average merits, worthy of contemplation. I am told the *World* hands appreciate the arrangement as beneficial and that, strange as it may appear to some minds, the printers require no more watching or bossing than under piecework regulations. But that nine men out of ten work as hard at daily wages as under the incentive of so much per column is improbable under existing sublunary conditions, and with pork chops at their present price. There are compositors in this city who, with long hours and an avaricious "maw," earn on piecework \$25 a week on an average. Others strain a point and dirty a proof — at reasonable hours, granted — and can't get beyond \$18. Is the former a better citizen? Not necessarily; he is a quicker workman, hurrying from this world to the next, where there are probably no galleys to pull. On the other hand, a man who is a quick workman has shown what he is made of — has lived with a purpose. There are numerous arguments on both sides of the question.

The bitter personal attacks of the New York *Sun* upon Grover Cleveland are the subject of common comment, owing to their frequency and their evident petty spitefulness. There is no politics in the affair, thus enabling the public to gauge it the more clearly on its merits. It is not believed to be to any extent a question of alleged free trade on the one hand and quasi-protection on the other or sunny side. The *Sun* knows that a man who consistently and intelligently advocates the ideas of an acknowledged school of economics may possibly be a longheaded man simply fighting for a somewhat unpopular cause, and which may not be characteristic of rascaldom, but which may eventually win. That is not the trouble. It is believed to be a purely social affair in which one lady was piqued at the careless but unintentional oversight of another lady; or, if you like, change the gender of the individuals and for pique substitute mutual contempt as between a president and an editor. And how the latter keeps it up!

The resolution of the United States government to adopt a uniformity in spelling geographical names is more important in its

bearing than it has got credit for from printers. Why should there be any doubt as to the propriety of (say) Chili or Chile, Hayti or Haiti, Congo or Kongo, Muscat or Muskat? The wonder is that no country through its government offices arrived at such a wise decision years ago. Geographical knowledge in primary schools has been sadly hampered by the undecided, unauthoritative spellings of the same word, and proofreaders and printers will hail the change with acclamation. A few of the words affected are: Punjab, *not* Punjaub; Oudh, *not* Oude; Fiji *not* Fee-jee; Puerto-Rico *not* Porto-Rico; Barbados, *not* Barbadoes; Rajputana, *not* Rajpootana; Bering sea, *not* Behring sea; Helgoland, *not* Heligoland; Pribilof Islands, *not* Pribyloff; Unalaska (Bering sea), *not* Ounalashka; Makushin bay, *not* Makonchinskoy bay. One peculiar change is that of Rat Island to Icmisopochnoi, but as a rule the change is in favor of brevity and sanity. Between two and three hundred names have thus been altered by a "board on geographic names" — counties, cities, seas, rivers, lakes and mountains coming under their learned purview. The change is binding upon all American government departments, from the printer to the president.

Printers and publishers have looked to the effects of the copyright act when in operation as certain to increase the demand for American literature in quantity and probably also in quality. Some of them speak glowingly of the prospect, owing to the alleged healthy restrictions enforced in that piece of legislation.

The New York *Tribune*, Horace Greeley's well-known organ, celebrates its fiftieth anniversary on April 10. It deserves its success as a worthy exponent of clear-headed, consistent journalism, aside from party issues. I will, however, refer to this subject again.

LEONIDAS.

## FROM PORTLAND, OREGON.

To the Editor:

PORTLAND, Ore., April 3, 1891.

The outlook in the printing trade here is encouraging, and plenty of work is looked for in a short time. On March 16 the firm of F. W. Butler & Co. was thoroughly unionized, and is once more a union office. This office has been out for five or six months, and at last has seen the error of its ways. It is a hard matter now to find a printer here without a card. Offices, which a month ago were only running two to four men, now employ from four to eight.

Gus Bynon, of the *Nehalem Journal*, has sold out his interest to his partner, William Broden, who will continue to publish the paper.

The *Sunnyside Sentinel*, William Dunstone, editor, has enlarged to double its former size.

The *Northwest Forester*, devoted to the interest of the Ancient Order of Foresters of America, edited by John W. Kelly, made its initiatory bow to the public February last.

The *Oregon Express*, published in East Portland by D. C. Ireland & Son, printed its first number on April 1. Success to it.

It is generally believed that the mammoth new daily, about which so much has been said, will not soon materialize. This is to be regretted. A more inviting field for a first-class daily newspaper cannot be found. There is not a city in the United States, perhaps, of Portland's population, commercial position and business strength, so poorly supplied with first-class daily newspapers. Portland, Oregon, population 80,000 (and growing) — one daily morning newspaper!

George Halsey was elected delegate to represent Multnomah, No. 58, at the International Typographical Union at Boston.

The pressmen of this city are pretty well organized, and much good is expected from this.

Samuel Gompers, president of the American Federation of Labor, delivered a lecture here on March 19, which was largely attended by the different trades unions. Mayor De Lashmutt made the opening address, and after extending the freedom of the city to the distinguished gentleman, said: "I come as one of you, and not as one among you, as I have a working card in the typographical union that dates back twenty-six years, when there was little or no organization." This was received with rounds of

applause. He then introduced Samuel Gompers, who held the audience spellbound for over two hours.

Men of all trades contemplating coming to Oregon with the expectation of bettering themselves in the way of work and wages had better stay at home, as they can do as well, if not better, by so doing. Living is high here compared with eastern cities. If you should come, don't forget to bring enough of this world's goods to last you six months or a year. There are more idle men, both laborers and mechanics of all kinds, here in Portland today than in any town of its size in the United States. There are about ten or twelve persons to every situation, and one real estate agent to every ten persons.

W. NIMS.

#### FROM SAN FRANCISCO.

To the Editor:

SAN FRANCISCO, Cal., April 3, 1891.

It is very evident that the trouble between the San Francisco Typographical Union and the H. S. Crocker Company has by no means been ended, and that the threatened strike is only postponed temporarily. It is true that the employés of the printing department of the H. S. Crocker Company are all at their posts, but when the orders will come for them to walk out on a strike is only a matter of time, and they are expected at any moment. It appears that the union did not sustain their executive committee in its promise to the H. S. Crocker Company that, in the event of the non-union employés joining the union, everything would be satisfactory, as the original *causus belli* was the refusal of the H. S. Crocker Company to compel the non-union men in its employ to become members of the San Francisco Typographical Union.

As the men in dispute voluntarily applied for admission into this organization when the strike occurred, rather than that any unnecessary expense should be incurred by the company through them, it was considered that, as the employés all returned to work, the trouble was ended, the cause having been removed. However, at the next meeting of the typographical union, three of the six applicants for membership were elected members, and the remainder rejected. Measures were then adopted, instructing the executive committee to order the employés of the H. S. Crocker Company to walk out in case of the refusal of said company to discharge these three men, and to provide for the financial assistance of the men on strike.

According to these instructions, the executive committee called upon the H. S. Crocker Company and stated the demands of the union. Charles H. Crocker, the treasurer, replied that the company would take no action in the premises until the International Typographical Union was heard from, and that it was previously understood that if the non-union men in the company's employ applied for admission to the typographical union, the union would be satisfied. The executive committee postponed ordering a strike until the matter could be brought before the union at its next meeting. It is but right to state that throughout the difficulty the executive committee has been most fair in its actions, but the union as a body being opposed to a settlement of the trouble, this committee has been compelled to act in harmony with the feeling manifested.

The last meeting of the San Francisco Typographical Union was held Sunday, March 29. The report of the executive committee in regard to the H. S. Crocker Company's refusal to discharge the employés rejected as members by the union was submitted. This subject was taken under discussion, which continued till a late hour when the meeting adjourned without taking action in the matter. Another meeting has been called for Sunday, April 5, when definite measures will be adopted. What the results of the proceedings will be cannot be prophesied, as the members or officers will not divulge their opinions.

The Typothetæ of San Francisco has been holding several meetings lately in regard to this affair. The results of these meetings have not been given out, the organization desiring to see what action will be taken by the typographical union before making known what decisions it has come to. At the last meeting, held Wednesday, April 1, a conference committee was appointed, to which any intended action on the part of the typographical union will be reported by representatives of that body, and which will confer with a similar committee of the union with the endeavor to amicably settle the points at issue.

It is necessary to chronicle the death of one of San Francisco's oldest and best-known printers and publishers, A. J. Leary, which occurred in this city the beginning of last month. The cause of death was apoplexy, the second and fatal stroke happening three days after the first. Although a young man in years, the deceased being only about forty-five years of age, his connection with the trade dates far back. He early left the employ of H. S. Crocker & Co. to start in business for himself, and at the time of his death had a large printing, stationery and bookbinding establishment in profitable operation. Mr. Leary leaves a young daughter and a son. Special letters of administration have been issued to George R. Armstrong, the previous bookkeeper of the deceased, who will continue the business as administrator under the name of the estate of A. J. Leary.

Walter Brunt, of the firm of Brunt & Co., is the manager of a new monthly publication which is deserving of favorable comment. It is called the *Western Soldier*, being devoted to the interests of the army, militia and the Grand Army of the Republic of the Pacific coast. The paper used is a fine quality of coated book, and the make-up and printing is exceptionally fine. The cover is printed in three colors and is an excellent piece of workmanship, representing two unfurled American flags, drums, swords and guns artistically grouped with the title of the publication. The reading matter consists of articles contributed by leading military men on the coast.

The executive committee of Sacramento Typographical Union, No. 46, and the proprietors of the Sacramento *Bee* have entered into a satisfactory arrangement which ends the strike of the union against that publication. By the terms of the agreement, the *Bee* composing room will hereafter be run as a union office, under union rules. The managers of this newspaper withdrew their objections to the foreman of the composing room becoming a member of the union if he so desires. The *Bee*, in unionizing its office, is allowed to choose through its foreman, its own force and to say who shall work in its office. It is apparent that concessions have been made on both sides and it is only to be regretted that the conclusion was not reached sooner. During the five months of the struggle there has been much bitterness manifested and the differences should have been amicably adjusted in much less time.

E. P.

#### ARGENTINE REPUBLIC PAPER MILLS.

Notwithstanding the extent and importance of the Argentine Republic and its vast population, it possesses only one single paper mill. This is situated at Garate, about two hours run by rail from Buenos Ayres. Four new machines have lately been put in by Messrs. Escher, Wyss & Co., of Zurich. At present the mill only runs on packing papers and a little news, but when the new machines get fairly to work, colored paper and school-book papers will be placed upon the Buenos Ayres market. The packing paper referred to sells at from 40 to 50 piasters per 2 cwt. (100 kilos). The piaster is nominally worth 4s., but in consequence of the depreciation of paper money and the high premium on gold it does not fetch more than about 1s., 7d., but even at this price a good profit is assured, as the duties on imported papers are very high, thirty or thirty-five per cent being levied on ordinary kinds, while some descriptions of colored paper have to pay seventy per cent. Thus, high-priced packing papers have little chance as against the cheaper home-made article.—*Paper Trade Review*.

TO MAKE an impermeable glue, a method is given by a French journal. Soak ordinary glue in water until it softens, and remove it before it has lost its primitive form. After this, dissolve it in linseed oil over a slow fire until it is brought to the consistence of a jelly. This glue may be used for joining any kinds of material. In addition to strength and hardness, it has the advantage of resisting the action of water.

## THE TYPEFOUNDRIES OF THE UNITED STATES.

NO. III.—THE CENTRAL TYPEFOUNDRY, ST. LOUIS.

Prominent among the manufacturing and business houses of St. Louis is the Central Typefoundry, situated on the southeast corner of Fourth and Elm streets. It is a new building five stories high, with a frontage of fifty feet on Fourth street, and is provided with every facility for conducting an extensive and constantly increasing business.

As they feel perfectly comfortable and content in their quarters, an outline description of them and what they contain may be of interest to our readers.

In the basement is a fifty-horse power boiler, which furnishes steam for the engines and heaters, and a thirty-horse power engine furnishes power for all the floors. Two elevators, each having its separate engine, communicate with every floor, and facilitate the handling of freight. The building extends from Fourth street to an alley one hundred and fifty feet, and all goods are shipped from the back doors of the basement, which is on a level with the alley. In the basement are also stored the different metals used in the composition of their unexcelled and world-renowned "copper alloy."

The first floor is devoted to office and salesroom. It is handsomely fitted up, and most convenient for the display and sale of all articles required by printers. Here, on shelves and compartments is stored an immense stock of types, borders, cuts, ornaments, rules, etc., of their own manufacture and from other foundries, arranged for the greatest facility in filling orders. A full assortment of inks, bronzes and varnishes, is also placed within easy reach, as are all other articles required in the outfit of a well-appointed printing office. Speaking tubes and a dumb-waiter connect with all the floors, giving quick communication between the office and salesroom, and the employés in their manufacturing departments. Their immense salesroom is thoroughly lighted, producing a comfortable and cheery effect, in addition to displaying goods to the best advantage.

The second floor is used as a stockroom. It is fifty by one hundred and fifty feet and contains a large display of cabinets, stands, cylinder presses, paper cutters, and printers' machinery of all kinds.

On the third floor is the electrotype and stereotype foundry, the largest and most complete and commodious in the Southwest; also the brass rule department, and the department for the finishing of brass type for bookbinders' use; likewise the department for the manufacturing of brass galleys, leads and slugs.

On the fourth floor—fifty by one hundred and fifty feet in area, lighted by large windows on all sides, and conveniently arranged throughout—is the finishing and dressing department. In this room all their type is given the finishing touches—rubbing, setting, dressing, picking and paging. The finished type is then taken to the dividing department, where it is separated into fonts and put up in wrappers for the salesroom, to which it is then transferred. In this dividing the strictest attention is paid to giving the proper proportions of the various characters to each font, and their system has been so perfected that errors in the putting up of fonts are almost impossible.

On the same floor are the fire and burglar proof safes, which contain an extensive and valuable collection of matrices, the increasing number of which has necessitated the purchase of several new safes of larger capacity. The engraving and punch-

cutting department, in which their beautiful original patented faces are produced under the hands of skillful and artistic designers and engravers, is situated on the fourth floor, as is also the matrix-making department, in which superior workmen are engaged in following up the work begun by the engravers, in the process of getting out the new styles of type for the novelty, beauty and utility of which the Central Typefoundry has achieved such a world-wide reputation. As all the matrices have to be made to withstand the intense wearing action of the "copper alloy" metal in casting—against which the ordinary matrices of other foundries cannot hold out—this is in itself a very costly branch of the business, requiring superior methods and more than usual skill on the part of the matrix-makers.

On the same floor is also the specimen department and printing office, from which emanate the *Printers' Register* and the books, pamphlets and cards which are issued from time to time. Here the cases are well stocked with all their new designs in type, and orders for sorts from these are filled immediately. In the printing of the specimen sheets they use the same type as is sold from their shelves, no better care being exercised to cast more perfect type for their own use than is cast for their customers.

The office of the superintendent of the manufacturing departments of the foundry is on this floor, being neatly fitted up and in convenient position to oversee all work under his charge.

On the fifth floor is the casting department, where they have now thirty-five machines, including the wonderful Foucher French type casting and finishing machine, all of which are supplied with the improvements which they have found it necessary to make on the old-style casting machine, in order to enable them to use their metal, the "copper alloy."

Near the casting machines are placed the tables of the "breakers," who break off the jet formed at the foot of large type during the casting process. A large force of girls are employed at this work, as well as in that of rubbing, setting and paging on the floor below.

On this floor are four large furnaces for casting brass type. The Central is the only foundry in America casting brass type, and is now

not only supplying the bookbinders of America, but does a large export business with England and Australia. The demand for "copper alloy" type and patent faces abroad has compelled them to establish agencies in England and Australia, and in both countries the "Central" does a large and increasing business.

On the fifth floor is also the metal-mixing department, where every pound of the famous "copper alloy" is compounded. This is a process requiring the closest attention, and peculiarly is this the case with their metal, in order to have the proper proportions and the proper methods carried out. The proportions of the different metals in the "copper alloy," and the secret of combining them are known only to them.

On the fifth floor is the machinists' department, where superior casting machines, molds, etc., are constructed under the hands of the most skillful workmen. In each division of their foundry they have endeavored to obtain machines and tools which combine labor-saving qualities with the ability to turn out superior products. We believe that they have been successful and have secured the best facilities for obtaining the highest results.

A cordial invitation is extended to visitors to inspect their new building and look through the various departments, of which they are justly proud, being satisfied that when their inspection is over they will be convinced that the ability of the "Central" to furnish the best of everything wanted in a printing office is unsurpassed.

MR. H. C. HANSEN, 24 and 26 Hawley St., Boston, Mass.:

Dear Sir,—We have used your Perforating Machine for several months, and wish to say to you that we are very much pleased with it. It is the best machine of its kind that we ever saw.

Yours very truly,

THE PRICE, LEE & ADKINS CO.

Per M. B.

(DICTATED)

PRINTING HOUSE OF ROCKWELL & CHURCHILL,

BOSTON, February 1, 1889.

MR. H. C. HANSEN:

Dear Sir,—It is with pleasure that I write of our experience with the Perforating Machine purchased of you in July, 1888. It has been in use nearly every day on all kinds of stock, and the perforation is as clean on 16-lb. folio as it is on the heavy ledgers or card stock. Your instructions to run only one sheet at a time has not been our custom, as we run three or four at once of ordinary stock with clean work and without apparent injury to the machine. I have never seen its equal for rapidity and perfection on straight work.

E. L. SLOCOMB, Foreman Job Room.

H. C. HANSEN, 26 Hawley Street, Boston, Mass.:

NEW BEDFORD, MASS., June 18, 1890.

Dear Sir,—The Perforator purchased of you over a year ago has given entire satisfaction. Have found it very useful on all classes of work, and it certainly fills the place of a higher priced machine. In fact, we think every enterprising printer should have one.

Yours truly,

CHAS. W. KNIGHT.

# NOW READY FOR PRESENTATION

To Regular Subscribers to  
THE AMERICAN BOOKMAKER.

A Most Valuable Book for Printers, Bookbinders and Publishers.

## PART I. OF THE AMERICAN DICTIONARY OF PRINTING AND BOOKMAKING,

Comprising references to all that is known of the art from the earliest to the present time—technical, historical and biographical. The most comprehensive book of the kind ever published.

SIX HUNDRED PAGES.  
PROFUSELY ILLUSTRATED.

Published by HOWARD LOCKWOOD & CO., 126 and 128 Duane Street, New York.

This valuable work is now being issued in quarterly parts and is presented WITHOUT COST to all subscribers to The American Bookmaker. No one else will be able to obtain these parts, as no cash sales will be made until the whole volume is completed, when it will be placed on the market at \$12.00 a copy.

THE AMERICAN BOOKMAKER is a high-class independent trade journal, devoted to all branches of the printing and bookmaking arts. It contains articles written by men who have a practical knowledge of their business and are able to impart to others the knowledge they have ac-

quired from instruction and experience. It advocates the interests of the employee as well as those of the employer, and its pages are open for the consideration of all questions which affect the rights of either. The subscription price will continue to be \$2.00 a year, mailed free to any address.

## Competitive Department THE AMERICAN BOOKMAKER,

FOR THE ENCOURAGEMENT OF ALL EFFORTS TOWARD THE PRODUCTION OF GOOD WORK.

FIRST PRIZE, \$100.00; SECOND PRIZE, \$50.00; THIRD PRIZE, \$25.00, IN CASH.

JUDGES: THEO. L. DEVINNE, W. C. ROGERS, H. G. BISHOP.

### RULES TO BE OBSERVED BY COMPETITORS:

1. Competitors must be subscribers to THE AMERICAN BOOKMAKER and actually employed either as compositors or pressmen.
2. At least six copies of each specimen of work must be furnished, safely packed, without rolling or folding.
3. No specimen must be larger than the printed page of THE AMERICAN BOOKMAKER.
4. Any class of work may be sent in, printed in one or more colors, but electros for each color must be furnished when required for publication.

5. Excellence of workmanship and good taste will be regarded as the two chief essentials, and a well executed job in one color may be placed ahead of some of the more pretentious jobs printed in many colors.
6. Punctuating, capitalizing, spacing, divisions of words and other minor points will be taken into account by the judges. In fact, all points will be considered which enter into the production of good work.

The first competition will close in June, 1891.

It is hoped that competitors will begin their work at once, so that we may have as many specimens as possible to select for early publication. All communications to be addressed

HOWARD LOCKWOOD & CO., PUBLISHERS THE AMERICAN BOOKMAKER,

## THE NEW SIDE-GAUGE.

FOR ALL JOB PRESSES.

FIRST ever invented for the purpose, and offered to the trade at so low a price as to make it look as though it was a sham. But it will do wonders, and when we think how often we have wanted a side-gauge that we could use without dispensing with the gripper, we are surprised that it was not thought of before; and then

to be presented in such a simple form, and in a single piece of metal! It can be crowded right between the gripper and the tymp. without smashing, losing its elasticity, or bearing off the gripper. Don't you believe it? You will as soon as you try them. You will also find in them many more uses too numerous to mention in an advertisement; and all for the small sum of

75c. per Dozen, assorted shapes. 25c. per set of three.

SOLD BY ALL DEALERS AND BY THE INVENTOR AND MANUFACTURER,

E. L. MCGILL, 60 Duane Street, NEW YORK.

---

*To Our Patrons and the Printing Fraternity in General:*

We deem it but proper to notify our patrons, and it may likewise be of interest to the Printing Fraternity in general, that our department at the Colt's Arms Company's Factory is now being run **14 HOURS A DAY** on "Colt's Armory presses."

The work is being pushed with all possible dispatch, additional men and machinery employed, and we calculate that in about 30 days our back orders will be filled and a sufficient stock be accumulated to fill new orders for regular machines, promptly upon receipt thereof.

The success which has attended us in this enterprise has exceeded our most sanguine expectations.

It is true that our best efforts have been directed, persistently conscientiously and, we believe, skillfully, to the production of a High Grade Machine, worthy of the best and most advanced patronage; but we do not forget that to **YOU** belongs the credit of promptly discerning and accepting on its merits even a good thing.

Accept our thanks for the patronage of the past and our assurance that the future shall have our continued best endeavors to merit its continuance.

Respectfully submitted,

## OVERSIDE SERIES, No. 13

Developed by Mr. H. O. Houghton, of the  
Riverside Press, Cambridge  
Set in Steel by Phelps, Dalton & Co.  
Dickinson Type Foundry, Boston

THEO. L. De VINNE

In Historic Printing Types.

Some time ago Mr. Henry O. Phelps, of the Riverside Press, solicited me to make for him a set of new types, of a color, and an impression which would model the types of the foundry decline. I was for light and that would cast no other than the types in Boston. Their variety shows the soundness of his judgment.

EDWARD H. PHELPS

of England Homestead, Farm and Home, etc.

No. 13 Series (the Minion size of you cut for us) has proved A1. I like it especially because it is so compact at the same time so legible. The letter being tall rather than broad, the eye in each word as a word and not as so successive letters, which must often be the case with a "fat" type. At the same time, the readability of this Minion

is much enhanced by the arrangement between the lines, solid matter thin-leaded. I had always thought that type foundry were interested but the wearing quality of seem to show that you will purchase of our next year (to us distant a day that as it may, it is mightily entirely satisfactory to.

H. O. HOUGHTON

Riverside Press, Cambridge  
My series of types, I have seen your suggestion, seen more excellencies, such as beauty of face series I like. I am sure of the early printer.

A. ROPE

The Rural Vermonter, Mt.

We purchased recently, a set of your Riverside Series, N. I never regretted following you. On the contrary, we have been satisfied with the selection. In a week we have become fans of its merits and advantages. The chief is the extraordinary compactness with remarkable clearness. It also makes a very handsome page. The type wear is a satisfaction, and if we were to outfit we should choose the No. 13.

## THE UNION + + TYPE FOUNDRY

337 Dearborn Street,

Written for THE INLAND PRINTER.

ANOTHER LEAF FROM A SPECIAL CORRESPONDENT'S DIARY.

THE AWFUL MARBLE ROCKS OF JUBBULPORE AND THE FATAL BEES OF NERBUDDA.

BY MALCOLM MC PHERSON.

THERE is a good deal of sadness mingled with the pleasure that comes from looking over the leaves of one's old diary. I think it is Shelley, the English poet, who says there is no song, however sweet, but is fraught with some pain. Well, so it is with glancing over the brief records that were made years ago. On almost every page incidents that recall pleasant recollections stand side by side with others that bring up out of the past emotions of a totally different description. These latter are the unbidden guests at the feast, the skeletons that hover around the glittering and mirth-resounding banquet hall to serve the guests as grim reminders of mortality.

The writer, a few days ago, was idly turning over some memoranda of his East Indian experiences when he came upon a name which sent a flood of diversely mingled memories rushing to his brain. Ah, poor Nelson, what good times we used to have in your pleasant bungalow on the flower-girt banks of the Moota-Moola, and what a lamentable fate was yours, cut off in an instant in the very prime and flower of your splendid manhood!

When I first met Nelson he was a civil engineer employed on the Great Indian Peninsula railroad, which was then in process of construction between Bombay and Calcutta. He was a singularly handsome young fellow, with a frank sunburned face which invited admiration and true friendship. Standing six feet high, with a powerful frame, he was the typical picture of an athlete. His genial manners made him a favorite in ladies' society in the drawing room, the ball room or the dining room. Being a splendid horseman, a dead shot and an enthusiastic leader in all kinds of sports he was equally a favorite with the men, especially the military officers who form such a prominent and important part of Anglo-Indian society.

A few days before Christmas in 187-, Mr. Nelson invited a number of bachelor friends to spend a few days with him in his bungalow at Kirkee, which is a few miles from the great military cantonment of Poond, in the Bombay presidency. I happened to be among the number. There were eight or nine of us altogether, and a jollier party probably never met together. With the exception of myself, all the guests were either young officers or civil engineers, who could tell stories, play whist, drink champagne, and smoke gigantic Trichinopoly cheroots "to the Queen's taste." One evening after dinner we all went out on the veranda, which overlooked the tranquil, glistening waters of the Moota-Moola. Each man wore the regulation bachelor dinner costume of the East, which is a short white jacket, white cotton trousers supported by a silk cummerbund wound round and round the body, and a full dress shirt. Some threw themselves into long bamboo chairs, called to the khansamab for pegs (i.e., brandies and soda) and cheroots, while others leaned over the railing and lent themselves to the full enjoyment of the night. It was truly an entrancing night. The odors of roses exhaled from the garden, the cicada drummed his music among the shrubs, fireflies flickered among the mango trees, the river made just the slightest sound as it rippled along, and overhead, in a cloudless sky, the moon shone with a splendor which bathed water and land in molten silver. It was a lotus-eater's night, everything appeared to be so beautiful and so tranquil.

Nelson appeared to feel the influence of the scene, for he remained silent, gazing at the river, until he was suddenly roused out of his reverie by a voice from one of the bamboo reclining chairs:

"Hello, Nels, old man, what's the matter? Have you got a touch of the blues, or are you growing sentimental and thinking of that young lady you waltzed with twice at the last government

house hop? Own up, old man. Don't be afraid to speak out. We'll all help you if you are really pretty far gone."

Nelson took the raillery in good part and joined in the general laughter. Presently, however, he grew grave again and said:

"To tell you the truth, gentlemen, I do feel a trifle hipped. That river has a strange fascination for me tonight, somehow, and I think I hear it saying, as it flows along so softly, 'come to me; here you will find true tranquillity and rest.'"

"Rubbish!" cried out the young fellow who had previously been bantering him. "It isn't love you've got; it's only your liver a little out of order. Take another peg; that's what you want. Or, let us go in and play a round game at 'Nap' or ving-et-un."

Nelson cheerfully agreed to the latter proposition and soon recovered his usual gayety. In view of what happened a few days later, however, I could not help being struck by his remark about the river and the spell it seemed to cast over him for a time. When the game broke up, one of the engineers, named A—, mentioned that he had to go up the line as far as Jubbulpore, and said he thought it would be a good idea for us all to go with him, as we were sure to have any amount of fun. He would take us to the jail to see the few survivors of the gang of thugs, or professional poisoners and stranglers of India, which the government had broken up after immense difficulty; and after that he would show us the celebrated Marble Rocks of the sacred Nerbudda river. Well, the trip was agreed upon. Nelson said he wanted a change anyhow, and besides, he might get a shot at some of the big game which at that time used to infest the banks of the Nerbudda. Next day our rifles were packed in our dogcarts, a copious supply of liquor and provisions was not forgotten, and off we went to the railway station, singing and laughing like boys going to their first picnic. After a run of about two hundred miles we reached the banks of the Nerbudda, where the engineer stopped and asked one of the native contractors what was going on and how the finishing of the bridge was getting along.

"Sahib," replied that worthy, "Everyting alle right; nothing new only dô, teen (two or three) coolies eat with bagh (tiger) yesterday."

We all pricked up our ears at this information, for now there was a distinct prospect of exciting sport in sight. At that time it was quite a common occurrence for coolies working on the line to be picked up and carried into the jungle by man-eating tigers.

We reached Jubbulpore all right and after enjoying a hearty luncheon at one of the military messes, we went to the jail, where a villainous looking old thug who credited himself with the murder of two or three hundred people offered to show us, by practical experiment, how he used to throw the roomal, or strangling handkerchief around the neck of his victims; but his offer was declined with thanks. Nelson was all impatient to get out to the Marble Rocks, not because these are justly considered one of the greatest natural wonders of India, but because he was anxious to get at the big game there. I confess I was not quite so enthusiastic as he was, because I remembered a very graphic saying that it was all very well hunting the tiger, but the fun was all the other way when the tiger did the hunting. Nelson, however, was a natural-born shikaree, or huntsman, and most of the rest of the party had had some experience with big game in the open, and as there were plenty of guns there was really very little danger to be feared, even if we did come across the terrible man-eater. A journey of twelve miles brought us back to the bank of the Nerbudda and to the railway viaduct, which was not then quite completed. Inquiries were made of the natives as to whether anything had been seen of any big game. They replied that there had not, but they knew the baghs were somewhere near. Nelson and the other engineers then organized a big gang of beaters to go into the jungle and make all the noise they could with tomtoms, trumpets and yells, so as to drive out any animals that might be hiding there.

In the meantime, while the beaters were gone, it was decided that we should visit the Marble Rocks, which were about a mile distant. Boats were procured at the edge of the river, but as I had seen the rocks before, I did not go in the boats, preferring to watch the muggurs (alligators) which lay basking on the river in

hundreds. Everywhere you could see the razor-backs floating like logs, but nevertheless cunningly keeping a keen lookout for any dog or cow that might go down to the water's edge to drink, or until some superstitious Hindoo cast a sheep or a goat among them to propitiate them.

Nelson waved his hand to me from the boat and shouted that they would all be back again in about an hour. That was the last time I ever heard his voice or looked upon his handsome face. Slowly the party sailed into the majestic gorge, with rugged walls of glistening white granite beetling 200 feet high above them on each side. Silently, sullenly dark and deep, the great Nerbudda sweeps through this awe-inspiring gorge for at least a mile. One peculiarity of these Titanic walls is that they appear to be covered in spots with what look like bags suspended downward. These are bees' nests, and many a native will whisper, "Beware of the bees of Nerbudda!" Before the party entered the gorge they were adjured by the boatmen to keep absolutely silent until they got out of it again, and the myriads of bees' nests were significantly pointed out to them. They passed up through the gorge in safety, and were returning, when suddenly there was a loud explosion, and in an instant the canyon was filled with echoes which rolled and re-rolled from side to side. It was a magnificent effect, but the native boatmen did not heed the grandeur of the echoes. With a cry they pointed to the air above them, which had already grown dark with angry bees, and leaped out of the boat into the dark depths of the river. All but Nelson followed their example. He had become entangled with his rifle. Myriads of bees settled on his hands, his face, everywhere that was exposed. With a cry of agony he leaped, or rather tumbled out of the boat. He tried to save himself by diving, but when he rose to breathe again and again the remorseless bees swarmed upon his head. At length he sank in agony and exhaustion, never to rise again. And the river swept on as calmly as if no tragedy had just been enacted in its bosom.

The rest of the party were badly stung, but managed to escape with their lives. Whether by accident or otherwise, it was the explosion of poor Nelson's rifle that had caused the terrible affair. His body was never recovered, but a little square tomb on the right bank of the river marks the spot where the bees of Nerbudda took their terrible revenge for having the silence of their somber home disturbed.

#### A NEW SYSTEM OF CATCHES.

In printing offices where many impressions are made from stereotype plates, the employment of catches has become general. A number of systems more or less advantageous are in use; but the one which is best known at present is the system of catches simply bent at the top and bottom, which hold the plates by the pressure exercised upon the furniture and the side-sticks when the form is locked.

Many times we have called the attention of our readers to different inventions having for their object the fastening of plates or galvanos upon blocks; some were recommended by the rapidity with which they were put in place, others by their immovability while the press was in motion, still others because they could be fixed any place in the form without disturbing the press. All these systems, we repeat, have certainly their advantages.

Nevertheless we come to examine a new kind of blocks without combinations which is destined to replace others, and which will facilitate the use of catches as much by the solidity as by the rapidity of being put in place, two advantages of capital importance for the pressman as well as for the master printer. This new invention of blocks for catches without combinations is due to Messrs. Warnery Brothers, typefounders, No. 8 Rue Humbolt, Paris. It is composed as follows:

1. Of hollow quadrats on 48 points.
2. Of headpieces and catches mounted upon blocks of 12 and 24 points in thickness.
3. Of demi-quadrats and spaces, also 48 points.

As there is but the single body, 48, employed for the catches, they can be placed at any distance from each other according to the

dimensions of the plate. These distances are always easily determined by the removal of quadrats, demi-quadrats or spaces, since the justification is made with great rapidity and absolute precision, the whole being cast systematically on typographical points.

For the purpose of enabling our readers to comprehend the system, we give a cut showing each piece as follows:

Fig. 1. Hollow quadrat, 48 points, with which is made a first composition before fastening the plate above by means of the catches.

Fig. 2. Headpiece welded on 12 and 24 points.

Fig. 3. Catch welded on a demi-quadrat, 48 points.

Fig. 4. Catch welded on a quarter-quadrat, 12 points.

Fig. 5. Demi-quadrat, 48 points, which serves for the justification of the catches.

Fig. 6. Quarter-quadrat, 48 points.

Fig. 7. Space, cast on 2, 4 and 6 points.

The blocks, catches, demi-quadrats and spaces are cast with a transverse bar to facilitate the raising with the pincers.

#### MANNER OF USING.

Fill the form with quadrats, less the place necessary for locking; impose the plates, drawing out a quadrat at each place where a catch is needed, and replace the quadrat by a catch of 12 or 24 points, justifying by spaces so as to have, catch included, 48 points; lock the form, taking care to plane the catches lightly in order that they may touch the plates.

The following advantages may be enumerated for this system:

1. Lightness of at least twenty per cent over ordinary combination blocks, the quadrats being made hollow and by machinery instead of a mold.
2. Economy of material, there being no need of complete fonts of blocks, three-fourths of which are never used.
3. Regularity and facility of justification, slugs, leads and reglets of wood being unnecessary.
4. Absence of any possibility of lifting in the form, the blocks being beveled on the four sides, which insures the locking through the center.
5. The catches being secured to spaces of 12 points or to demi-quadrats, body 48, cannot be raised by the rollers as very frequently happens with the ordinary catches.
6. An economy of time in changing plates, an operation which can take place upon the machine even.
7. Regularity in the height.
8. Facility with which quadrats of matter can be replaced by quadrats of wood, for the purpose of nailing the plates if necessary.—*La Typologie-Tucker*.

## HARLAN P. HALL.

We are indebted to the *Western Printer*, of St. Paul, for the accompanying sketch of Mr. Harlan P. Hall, the president-elect of the Minnesota State Editorial Association :

" Harlan P. Hall, editor and proprietor of the St. Paul *Daily News*, is a man who has made a lasting impression upon Minnesota journalism. Right in the beginning of this article, I will take the liberty of giving a brief extract of his life history ; and then, perhaps, before it is finished we will consider some of his virtues, vices and peculiarities as a successful newspaper man.

" Mr. Hall was born at Ravenna, Ohio, August 27, 1838. He came of newspaper stock, his father being one of the best-known country editors of the Buckeye state. Harlan P. Hall began to tinker with the types as a means of amusement at ten years of age. A few years later, at fourteen or thereabouts, he entered into a regular apprenticeship in his father's office.

" The journalist or printer still living who played the devil in a country office forty years ago cannot fail to have fresh in his memory the duties devolving upon him. Neither can he forget the pride of responsibility that rested upon him. He carried papers to the home of the village subscribers on each recurring publication day—the proud hero who was a never failing source of envy to his former schoolmates and companions. He distributed the 'pi' made by the 'journ' under the influence of the hotly rushing 'growler.' He cast the perfumed composition into the cast-iron mold, and was midwife at the birth of every brand-new roller. He kept the roller sweet and clean

by means of the lye, which dripped and drizzled from the ash-barrel in the dark corner behind the press. He 'rolled' the forms on press-day—a job to be dreaded if it were not for the opportunity to besmear his face with ink. When the 'jour' went off to dinner it was his delightful prerogative to remain behind and ruin a whole column of types by amateur efforts to 'fly the frisket' and 'pull the devil's tail,' as well as the foreman himself.

" The hero of this sketch went through all this, and more, for a lingering period of three years, and then was mistakingly fired out of the most useful of free schools into college. He entered the Ohio Wesleyan University, a Methodist institution at Delaware, Ohio, and was graduated therefrom in June, 1861. Next

studied law and was admitted to the bar early in 1862. Later in the year he concluded to come west, wisely selecting Minnesota as the Medina of his first hegira, landed in St. Paul on October 6, 1863. He commenced his western experience as a 'comp,' enlisting in the ranks, as it were ; but shortly afterward was promoted to the position of reporter on the St. Paul *Daily Union*. Later the *Union* was consolidated with another daily paper, and the St. Paul *Daily Press* was born. On this sheet Mr. Hall continued to exercise his talents as reporter, telegraph editor, exchange editor, editorial writer, etc., until November, 1865, when in company with other parties he purchased the *Morning Pioneer*, and he took the position of editor-in-chief. The *Pioneer* had been a democratic paper, but under Mr. Hall's management it became inde-

pendent republican, and made itself so objectionable to its former friends and patrons, that in 1866 a stock company was organized by democratic capitalists, to whom Mr. Hall and his partners resold the concern. In the fall of 1866 Mr. Hall bought a half interest in the job printing establishment of D. Ramaley, the firm becoming Ramaley & Hall, and in February, 1868, this firm established the St. Paul *Evening Dispatch*, the junior partner becoming the editor-in-chief of the new paper. In 1870 the firm was, by mutual consent, dissolved, Mr. Hall taking the newspaper and its good-will for his share, and Mr. Ramaley falling heir to the job office. The proprietor of the *Dispatch* had already engaged in the ready print—or patent inside—business, being the third man in the world to engage in that branch of trade. In the fall of 1876 he disposed of the *Dispatch*, but continued for some time his ready print business.

" On the 15th day of January he issued the first number of the St. Paul *Daily Globe*, having first secured by purchase the morning franchise of the Associated Press for St. Paul. He continued the publication of the *Globe* until 1885, when the paper and all of its appurtenances and hereditaments were sold and transferred to its present owners. Being thus once more out of business, Mr. Hall resumed the ready print, and continued to assist worthy members of the local press of the Northwest until 1887, when he transferred that business to the A. N. Kellogg Company. In 1889 he became connected with the *Daily Evening News*, and still continues with it as editor and proprietor.

" Mr. Hall was happily married to Miss Harriet E. Lamb, a native of Franklin county, Massachusetts, in 1862."

### THE INTERNATIONAL COPYRIGHT BILL.

Be it enacted, That section 4,952 of the Revised Statutes be and the same is hereby amended so as to read as follows :

"SEC. 4,952. The author, inventor, designer, or proprietor of any book, map, chart, dramatical or musical composition engraving, cut, print, or photograph or negative thereof, or of a painting, drawing, chromo, statue, statuary, and of models or designs intended to be perfected as works of fine arts, and the executors, administrators, and assigns of any such person shall, upon complying with the provisions of this chapter, have the sole liberty of printing, reprinting, publishing, completing, copying, executing, finishing and vending the same, and, in the case of dramatic composition, of publicly performing or representing it, or causing it to be performed or represented by others ; and authors or their assigns shall have exclusive right to dramatize and translate any of their works for which copyright shall have been obtained under the laws of the United States."

SEC. 2. That section 4,954 of the Revised Statutes be and the same is hereby amended so as to read as follows :

"SEC. 4,954. The author, inventor, or designer, if he be still living, or his widow or children, if he be dead, shall have the same exclusive right continued for the further term of fourteen years, upon recording the title of the work or description of the article so secured a second time, and complying with all other regulations in regard to original copyrights, within six months before the expiration of the first time, and such persons shall, within two months from the date of said renewal, cause a copy of the record thereof to be published in one or more newspapers printed in the United States for the space of four weeks."

SEC. 3. That section 4,956 of the Revised Statutes of the United States be and the same is hereby amended so that it shall read as follows :

"SEC. 4,956. No person shall be entitled to a copyright unless he shall, on or before the day of publication in this or any foreign country, deliver at the office of the Librarian of Congress, or deposit in the mail within the United States, addressed to the Librarian of Congress at Washington, District of Columbia, a printed copy of the title of the book, map, chart, dramatic or musical composition, engraving, cut, print, photograph, or chromo, or a description of the painting, drawing, statue, statuary, or a model or design for a work of the fine arts for which he desires a copyright, nor unless he shall also, not later than the day of the publication thereof in this or any foreign country, deliver at the office of the Librarian of Congress at Washington, District of Columbia, or deposit in the mail within the United States, addressed to the Librarian of Congress at Washington, District of Columbia, two copies of such copyright book, map, chart, dramatic or musical composition, engraving, chromo, cut, print or photograph, or in case of a painting, drawing, statue, statuary, model, or design for a work of the fine arts, a photograph of same ; provided, that in the case of a book, photograph, chromo, or lithograph, the two copies of the same required to be delivered or deposited as above shall be printed from type set within the limits of the United States, or from plates made therefrom or from negatives or drawings on stone made within the limits of the United States or from transfers made therefrom. During the existence of such copyright the importation into the United States of any book, chromo, lithograph, or photograph so copyrighted, or any edition or editions thereof, or any plates of the same not made from type set, negatives or drawings on stone made within the limits of the United States shall be and is hereby prohibited, except in the cases specified in paragraphs 512 to 516 inclusive, in section 2 of the act entitled 'An act to reduce the revenue and equalize the duties on imports, and for other purposes,' approved Oct. 1, 1890; and except in the case of persons purchasing for use and not for sale, who import, subject to the duty thereon, not more than two copies of such book at any one time, and except in the case of newspapers and magazines not containing, in whole or in part, matter copyrighted under the provisions of this act, unauthorized by the author, which are hereby exempted from prohibition of

importation ; provided, nevertheless, that in the cases of books in foreign languages, of which only translations in English are copyrighted, the prohibition of importation shall apply only to the translation of the same, and the importation of the books in the original language shall be permitted."

SEC. 4. That section 4,958 of the Revised Statutes be and the same is hereby amended so that it will read as follows :

"SEC. 4,958. The Librarian of Congress shall receive from the persons to whom the services designated are rendered the following fees : First, for recording the title or description of any copyright book or other article, fifty cents ; second, for every copy under seal of such record, actually given to the person claiming the copyright or his assigns, fifty cents ; third, for recording and certifying any instrument of writing for the assignment of a copyright, one dollar ; fourth, for every copy of an assignment, one dollar. All fees so received shall be paid into the Treasury of the United States ; provided, that the charge for recording the title or description of any article entered for copyright, the production of a person not a citizen or resident of the United States, shall be one dollar, to be paid as above into the Treasury of the United States, to defray the expenses of lists of copyrighted articles as hereinafter provided for. And it is hereby made the duty of the Librarian of Congress to furnish to the Secretary of the Treasury copies of the entries of titles of all books and other articles wherein the copyright has been completed by the deposit of two copies of such books, printed from type set within the limits of the United States, in accordance with the provisions of this act and by the deposit of two copies of such other articles made or produced in the United States, and the Secretary of the Treasury is hereby directed to prepare and print at intervals of not more than a week, catalogues of such title entries for distribution to the collectors of customs of the United States and to the postmasters of all Postoffices receiving foreign mails, and such weekly lists, as they are issued, shall be furnished to all parties desiring them, at a sum not exceeding \$5 per annum ; and the Secretary and the Postmaster-General are hereby empowered and required to make and enforce such rules and regulations as shall prevent the importation into the United States, except upon the conditions prohibited by this act."

SEC. 5. That section 4,959 of the Revised Statutes be and the same is hereby amended so as to read as follows :

"SEC. 4,959. The proprietor of every copyright book or other article shall deliver at the office of the Librarian of Congress or deposit in the mail, addressed to the Librarian of Congress at Washington, District of Columbia, a copy of every subsequent edition wherein any substantial changes shall be made ; provided, however, that the alterations, revisions and additions made to books by foreign authors heretofore published, of which new editions shall appear subsequently to the taking effect of this act, shall be held and deemed capable of being copyrighted as above provided for in this act, unless they form a part of the series in course of publication at the time this act shall take effect."

SEC. 6. That section 4,963 of the Revised Statutes be and the same is hereby amended so as to read as follows :

"SEC. 4963. Every person who shall insert or impress such notice or words of the same purport in or upon any book, map, chart, dramatic or musical composition, print, cut, engraving, or photograph, or other articles, for which he has not obtained a copyright, shall be liable to a penalty of \$100, recoverable one-half to the person who shall sue for such penalty and one-half to the use of the United States."

SEC. 7. That section 4,964 of the Revised Statutes be and the same is hereby amended so as to read as follows :

"SEC. 4,964. Every person who, after the recording of the title of any book and the depositing of two copies of such book as provided by this act, shall, contrary to the provisions of this act, within the terms limited and without the consent of the proprietor of a copyright first obtained in writing, signed in presence of two or more witnesses, print, publish, dramatize, translate, or import, or knowing the same to be so printed, published, dramatized, translated, or imported, shall sell, or expose to sale, any copy of

such book, shall forfeit every copy thereof to such proprietor, and shall also forfeit and pay such damages as may be recovered in a civil action by such proprietor in any court of competent jurisdiction."

SEC. 8. That section 4,965 of the Revised Statutes be and the same is hereby so amended as to read as follows:

"SEC. 4,965. If any persons, after the recording of the title of any map, chart, dramatic or musical composition, print, cut, engraving, or photograph or chromo, or of the description of any painting, drawing, statue, statuary, or model or design intended to be perfected and executed as a work of the fine arts, as provided by this act, shall within the term limited, contrary to the provisions of this act and without the consent of the proprietor of the copyright, first obtained in writing, signed in presence of two or more witnesses, engrave, etch, work, copy, print, publish, dramatize, translate, or import, either in whole or in part, or by varying the main design with intent to evade the law, or knowing the same to be printed, published, dramatized, translated, or imported, shall sell or expose to sale any copy of such map or other article as aforesaid, he shall forfeit to the proprietor all the plates on which the same shall be copied and every sheet thereon, either copied or printed, and shall further forfeit one dollar for every sheet of the same found in his possession, either printing, printed copies published, imported or exposed for sale, and in case of a painting, statue or statuary, he shall forfeit ten dollars for every copy of the same in his possession or by him sold or exposed for sale, one-half thereof to the proprietor and the other half to the United States."

SEC. 9. That section 4,967 of the Revised Statutes be and the same is hereby amended so as to read as follows:

"SEC. 4,967. Every person who shall print or publish any manuscript whatever, without the consent of the author or proprietor first obtained, shall be liable to the author or proprietor for all damages occasioned by such injury."

SEC. 10. That section 4,971 of the Revised Statutes be and the same is hereby repealed.

SEC. 11. That for the purpose of this act each volume of a book in two or more volumes, when such volumes are published separately and the first one shall not have been issued before this act shall take effect, and each number of a periodical shall be considered an independent publication, subject to the form of copyrighting, as above.

SEC. 12. This act shall go into effect on the 1st day of July, A. D. 1891.

SEC. 13. That this act shall only apply to a citizen or subject of a foreign state or nation when such foreign state or nation permits to citizens of the United States of America the benefit of copyright on substantially the same basis as its own citizens, or when such foreign state or nation is a party to an international agreement which provides for reciprocity in the granting of copyright, by the terms of which agreement the United States of America may, at its pleasure, become a party to such agreement. The existence of either of the conditions aforesaid shall be determined by the President of the United States by proclamation, made from time to time, as the purposes of this act may require.

#### THE GOVERNMENT AND THE JOB PRINTERS.

The feeling that the United States government does an injustice to so important a body as the job printing fraternity of the country in the matter of gratuitous printing of return requests on stamped envelopes, is finding more general expression; and certainly every thinking man must admit the justice of the complaint. Here is a considerable money item involved; since the number of envelopes so printed amounts to some two hundred million per year, the matter of dollars and cents taken from the legitimate industry of the country is certainly worthy of consideration, as relating merely to the matter of "presswork" alone. But here, as in other cases, the principle is greater than the financial amount at stake, and the present agitation will call attention to the injustice that is being done.—*The Paper World*.

#### PERSONAL.

We acknowledge calls from the following gentlemen during the past month: E. B. Fletcher, Morris, Illinois; Thomas H. McKone, St. Paul, Minnesota; Fred Slocum, *Journal* office, Detroit, Michigan; John Rycken, president Queen City Printing Ink Company, Cincinnati, Ohio; L. A. McLean, *Herald*, Urbana, Illinois; R. O. Boyd, Denver, Colorado; F. J. Brainerd, Oakland, California; J. T. Story, of Story & Fox, Buffalo, New York; E. B. Dewey, Jamestown, New York; W. J. Irvine, *Broadaxe*, Lidgerwood, North Dakota.

#### SPECIMENS RECEIVED.

WILLIAM MARSHALL & Co., Melbourne, Australia. Twelve-page calendar in colors for 1891.

H. M. KENDALL, Hartford, Connecticut. Very neat business card, announcement and blotter.

GUIDE PRINTING & PUBLISHING COMPANY, Philadelphia. Very neat and attractive firm circular in colors.

F. W. BROWN, Marcellus, Michigan. A very attractive neatly designed and executed business card in colors.

ALFRED M. SLOCUM & Co., Philadelphia. Attractive business card, set in Keystone Typefoundry's new Ancient Gothic series.

THE Moline (Kan.) *Republican*. An assortment of bill, letter and note heads which would do credit to a much more pretentious office.

RAYNOR & TAYLOR, Detroit, Michigan. Neatly executed eight-page circular, with cover in colors, the design of which is unique and attractive.

THAD. B. MEAD, New York. A number of samples of commercial printing, of which the firm letter and bill head are worthy of special praise.

THE JOURNAL COMPANY, Fort Wayne, Indiana. A handsomely printed catalogue of fifty-six pages, neat and clean, the composition on which was done by Mr. C. J. Love.

ROBERT K. THOMAS, Fernwood, Illinois. Business card in colors! A genuine curiosity. Mr. T., remember the adage, *ne sutor ultra crepidam*—let the shoemaker stick to his last.

MCCULLOCH & WHITCOMB, Albert Lea, Minnesota. A number of neatly designed and executed specimens of general commercial printing. This firm deserves credit for their judicious selection of type faces.

C. N. ANDREWS, Brooklyn, New York. A large assortment of general commercial printing. Coming as they do from one who claims to be a non-professional, they are certainly worthy of commendation.

CURRY & RICHARDS, Bement, Illinois. Several specimens of fairly good work. The circle or rather what is intended for a circle on the firm letterhead could be materially improved. The card in colors is a very creditable job.

LATTA & McELHINNEY, *Morning Sun* office, Louisa county, Iowa. Several specimens, principally bank checks, invitations, etc., all of which are executed in a first-class manner. The selection of type is admirable, its use appropriate, and the presswork number one.

POMEROY BROTHERS, Chambersburgh, Pennsylvania. A large batch of general jobwork, such as folders, letter, note and bill heads, circulars, programmes, business cards, etc., which it gives us sincere pleasure to commend because it is worthy of commendation and also because it comes from a city which in the past has turned out some execrable work.

LEIGHTON BROTHERS, Minneapolis. Specimen book of seventy-five pages containing over 125 samples of artistic printing—plain and in colors. They are all printed on coated paper, and the designs, execution, register, blending of colors and last but not least, the presswork, are, we might truthfully say, beyond criticism. Price \$1.25. It will certainly pay to send for a copy.

## D. J. REILLY &amp; CO.

AN ENTERPRISING NEW YORK FIRM MAKING PRINTERS' ROLLERS AND ROLLER COMPOSITION.

To see the facilities and become acquainted with the amount of business transacted by the above firm at the present day, one is surprised at the rapid progress made in the short time the house has been in existence, starting as it did but about ten years ago in a very small way. The business was established in 1880, by Mr. D. J. Reilly, who bought out a small roller house at 59 Gold street, and named the new concern the New York Roller Composition Company. The character of the composition and rollers turned out soon gave the firm the reputation that caused the business to grow rapidly, and in the spring of 1882 it was found necessary to move to larger quarters. A store was rented at 326½ Pearl street, and a new impetus given the house by securing the services of Mr. O. J. Maigne, a gentleman well posted in all that pertained to roller making, and who was given entire charge of the mechanical part of the business. For three years the firm remained in these quarters, the volume of trade increasing continually, and the reputation for first-class materials, and prompt production growing greater each year. At the end of this time, it was again found necessary to move, and the large store at 324 and 326 Pearl street, adjoining, was leased, giving them about 3,294 square feet of floor space. This, with about the same space below in the basement, where all small job rollers are made, constitutes the present manufactory, and enables them to turn out an immense quantity of rollers. The building, shown in the accompanying illustration, is located in the printing house district of New York, opposite Harper & Brothers building and convenient for city trade.

In 1887, Mr. Reilly was compelled to retire from active participation in the business of the firm on account of sickness, and in October, 1889, died. Since that date, the surviving partner, Mr. Maigne, although crippled to a certain extent by Mr. Reilly's death, has by indefatigable work not only maintained the high reputation of the house established during Mr. Reilly's lifetime, but largely increased its business, and introduced and patented several new features in the manufacture of printers' rollers. The house has facilities for producing rollers, from the most diminutive job roller to the largest perfecting press roller, and uses for the ordinary class of work their "Acme" composition, which gives most excellent satisfaction, and the "Peerless" brand when a more expensive and durable composition is required. Besides these two popular brands of composition, this firm manufactures a special brand for use for export to hot climates. This latter has

proven to be one of the most valuable export compositions made, as it can withstand what ordinary roller material is not expected to, namely, heat.

In an article of this nature, it would not be proper to close without some reference to the gentleman whose energy and enterprise have in so great a measure made the firm of D. J. Reilly & Co., what it is today. We refer to Mr. O. J. Maigne, whose likeness appears on the opposite page. This gentleman does not claim to come from a family of roller makers, but has been in the printing and roller-making business all his life, and is as well posted on the wants of pressmen as anyone can be. He was born in Brooklyn, New York, in 1848, and when a boy went west with his parents and located in Chicago, being pressman for the J. M. W. Jones Company and Clark & Edwards a number of years, during which time he learned the making of printers' rollers. He afterward returned to the East to become foreman of the roller establishment

of W. H. H. Rogers & Co., of New York, who were finally bought out by another firm in that city, when he became connected with D. J. Reilly at the time the firm was at 326½ Pearl street. His success in business has been phenomenal, and we take pleasure in calling attention to it, and in showing his likeness in this number.

No matter in what part of the world rollers are wanted, D. J. Reilly & Co. can cast them specially for the uses and climate intended and ship promptly. They have all the latest and most improved methods for casting rollers, and guarantee that all their work will satisfy the most exacting requirement. Write to them for information and estimates, or give them a trial order. Once a trial is made of either of their famous brands of composition, you will continue with them thereafter. From the amount of business now being handled by this company, and the

general satisfaction expressed by all present customers in the work turned out by them, it is safe to assert that you will make no mistake in sending your order to D. J. Reilly & Co.

We regret to announce the death of Mrs. Clara W. Ketcheson, wife of our old and esteemed friend, Mr. John C. Ketcheson, at her residence, in Leavenworth, Kansas, on Saturday afternoon, March 14, 1891. The deceased was a lady of refinement and education, an ornament to society and beloved by all who had the pleasure of her acquaintance. The funeral services were held at the family residence on the North Esplanade, and the remains were sent to Rockford, Illinois, for interment. To the bereaved husband we tender our sincere condolence, and trust that He who tempers the wind to the shorn lamb may give him strength to bear with Christian fortitude his irreparable loss.

### TYPOGRAPHY IN ADVERTISEMENTS.

The object of an advertisement is to be read. Every other consideration should give way to this. An advertisement may be set up in faultless manner and yet may be so monotonous that it will not attract any more attention than one grain of rice among thousands of other grains about it. How, then, can an advertiser attract this attention?

*First.* His type must be plain. Ornamented or obscure type must be rigidly excluded.

*Second.* The style should be plain. Fantastic methods, such as are shown in curved, diagonal and perpendicular lines, are of doubtful value. Now and then one may make a hit by some audacious arrangement, but where one succeeds ten fail.

Some very good advertisements are made by calling attention to the subject by displaying some inconsequential word which arrests attention, leading readers to examine the whole paragraph. But this is also a difficult style to manage; a failure makes the advertiser ridiculous, and really defeats his purpose.

Engravings or process cuts, in the hands of a skillful designer, can make very attractive advertisements. The success of such an advertisement depends largely on the invention of the designer; if he is really inventive he can make an advertisement more attractive than can ever be done by type. If he is not inventive, if he draws badly, then his engraving is not as good as a composition in type.

The quality of engraving must be adapted to the quality of the printing. The outline style can be printed fairly well on any kind of paper, or with any kind of ink. To order for an advertisement a finished engraving with many graduated tints of light and shade is to throw away money to no purpose. It cannot be well printed on the ordinary newspaper. All engravings should be cut or etched with deep counters. If extra care is not given by the photo-engraver to a deep routing out of counters, and to a cleaning up of lines, the best open engraving will be marred in printing by muddy spots.

Another point: All engravings made for any press which stereotypes or electrotypes its forms should be on solid metal bodies. The wood body, which is barely good enough for letterpress work, cannot be used at all under an electrotyper's molding press with any hope of making a good plate for a newspaper. In a stereotyped form the extra cost of the metal body will be more than repaid in the improved appearance of the presswork.

The art of displaying types is not to be taught in one or even a dozen lessons. The novice will get the skill he wants largely from the study of his own failures and those of other compositors. These hints may be of value; the same rule which forbids the use of

ornamental type should also shut out extra condensed type. Many a display line of long words is often crowded in one obscure extra condensed line, when it would be more readable in two lines, which will occupy no more space on the paper.

Too many faces of type are used in miscellaneous display. If one has a thoroughly well-graded assortment of different sizes and different widths of gothic, running from pearl to four-line, with appropriate lower case, he has enough to make effective display. If the compositor is equipped with a full series of this face he has no need of antique, titles, clarendon, or any other plain face. The greater variety of faces he puts on a page, the worse he makes that page look. If he does not like gothic, let him use antique or clarendon, or any other form of letter; but having selected one style, let him stick to it. He will find that his customers, however much they may object in the beginning to this simplicity of style, will ultimately like it better than the use of mixed styles.

Borders judiciously used are a grace, but these borders must be plain black and white and not too fine. The gray-tinted and profusely ornamental borders with which our specimen books abound are very unsuitable for advertisements.

Signs and emblems can be very effectively used; the simpler they are the better. Here, again, one can find but little of value in the specimen book. The more striking ones can be made by an engraver in a very few minutes. The bold-face section mark or paragraph mark, an ivy leaf, a shamrock leaf, or any simpler form in this style can be effectively cut by any clever stereo-type finisher.

The young job printer who begins to set up advertisements for a newspaper is too often hampered by the rules he has been taught. He decides that this display line must be long, and that other line must be short, and these words

must be got in one display line, and other words must be paragraphed. For all these rules the average advertiser does not care a button. He wants a certain effect produced; if this effect can be had under rules, well; if not, the rules must be broken. He does not want the compositor to parade his notions about taste; he wants his own notions carried out. That compositor is wise who accepts the advertiser's notions, and tries to meet them.—*Theo. L. De Vinne, in Printers' Ink.*

In order to keep electricity from giving trouble on the printing press the paper ought to be at least lightly dampened before printing, and care should be taken that the web on leaving the press shall pass a gas jet or else a metallic bar furnished with needle points. As far as the calenders go there is nothing like dampening the paper, and if it has to go through more than once keeping it in the reel some time between each passage.

O. J. MAIGNE, OF D. J. REILLY & CO., NEW YORK.

## ANSWERS TO CORRESPONDENTS.

W. T. C., Piqua, Ohio: We do not consider the party you inquire about either reliable or responsible.

J., Notre Dame, Indiana. Please answer the following:

1. Who first designated printing the "art preservative of arts"?
2. Are stereotype plates used to any extent for the printing of books and magazines throughout the country?

*Answer.*—1. We are unable to answer. 2. Yes.

L. P., Columbus, Ohio. Could you inform me what formula and methods celluloid printers use to affix ink to the surface of celluloid.

*Answer.*—Write to Charles Eneu Johnson & Co., Philadelphia or Chicago; or to J. H. Bonnell & Co., New York, and they will furnish you an ink especially adapted to celluloid printing.

W. K., Chicago. Will you inform me in your next issue what is the cost of the *Archiv für Buchdruckerkunst*, and also how I can obtain it.

*Answer.*—The *Archiv für Buchdruckerkunst* is a monthly publication issued by Alexander Waldow, in Leipsic, Saxony. Price by mail in Germany, 13 marks and 20 pfennig. It can be secured, however, through Koelling & Klappen, 48 Dearborn street, Chicago.

H. C. F. S., Los Angeles, California. Will you tell me how the plates are prepared which are used for making newspaper cuts. I mean the process in which they use a steel plate, and put on a composition of plaster of paris; then draw the design on it, and take a stereotype from it.

*Answer.*—We make the following extract in answer to the foregoing question from an address delivered by M. Gentile, before the recent session of the Illinois Press Association, on "How Newspapers are Illustrated": "A simple method of making a newspaper illustration is by what is termed the chalk method. This is done by taking a thin bed of smooth chalk laid upon a metal surface and drawing upon it with a small steel point any picture you wish to produce. The steel point will cut the chalk clear to the metal, when you have an intaglio. A stereotype is made from the intaglio, which is ready to print from. In St. Louis and Chicago metal plates of various sizes are procurable ready for the artist to draw on. Sometimes instead of pure chalk a mixture of plaster of paris with white Carolina clay is applied on the metal plate to an even thickness of about one-thirty-second of an inch. The preparation must be thoroughly hardened before it can be touched with a drawing needle." The plates referred to can be obtained of Carl Schraubstadter, 303 North Third street, St. Louis.

## TRADE NEWS.

TABOR & FORD, printers, Sioux City, Iowa, have dissolved partnership.

THE F. H. Hesse Printing Company, St. Louis, Missouri, has published a notice of dissolution.

THE office of the *Journal*, Syracuse, New York, was destroyed by fire, March 14. Loss, \$59,000; insurance, \$43,000.

THE *Graphische Künste*, a Leipsic weekly, devoted to the graphic arts, and founded in 1861, has ceased publication.

THE Ashtabula Printing & Publishing Company, Ashtabula, Ohio, is a new corporation, and will print and publish a newspaper. Capital, \$15,000.

R. H. SCHWAB & BRO., printers and lithographers, Portland, Oregon, have become incorporated as Schwab Brothers Printing and Lithographic Company.

THE label and job printing office of Parker & Son, 908 Fourth street northwest, and Ninth and H streets northeast, Washington, has removed to Lakeland, Maryland.

WE acknowledge the receipt of an illuminated print of "Belshazzar's Feast," from Van Allens & Boughton, New York and Chicago, done upon a No. 2 four-roller Huber two-revolution

press at McIndoe Brothers, Boston, Massachusetts. It presents some new features in color-work distinct from the time-honored chromo, and well shows the capabilities of the standard Huber.

FORTY-TWO printing offices in North Dakota make reports to the commissioner of agriculture and labor. These offices paid for labor during the last year the sum of \$146,228, nearly as much as all the other manufacturing industries combined.

MOLLESON BROTHERS, paper dealers, New York, have been succeeded by the Molleson Brothers Company. The company has filed a certificate of incorporation in which it is stated that the capital is \$65,000, and the trustees are Kate E. Molleson, William G. Killmer and William A. Losey.

MR. CARL SCHRAUBSTADTER, of the Central Typefoundry, St. Louis, will during the present month celebrate his fiftieth anniversary in the typefounding business. To the best of our knowledge there is no one in the United States who has served continuously in this branch of trade for that length of time.

THE Dexter Folder Company, of Fulton, New York, are fully equipped to furnish their folding machines. These folders are meeting with great favor wherever introduced. Since the removal of this company from Des Moines, Iowa, their business has doubled in volume, and with increased facilities they are enabled to meet any demands made upon them. Shniedewend & Lee Company, 303 Dearborn street, Chicago, are their agents in the West. See advertisement on page 674.

G. EDW. OSBORN & Co. have succeeded George E. Ives, of 379 State street, New Haven, Connecticut. Mr. Osborn was formerly the secretary of the Whitlock Machine Company, of Birmingham, having been with them six years. Associated with him in this new venture is Mr. A. M. Fiske, of New York, who traveled for the Whitlock Company for three years, and who for the last two years has been with the Campbell Press Company. All the specialties made and sold by Mr. Ives will be handled by the new firm, and they will keep a full line of presses, type, inks and tools. The celebrated Elm City card cutter, counting machine and bronzing pad are their specialties. Their new location is at 393 State street.

BELOW is what the editor of the *Macomb (Ohio) Herald* thinks of foreign paper and printing houses that solicit job printing in country towns: "An agent of the Blade Printing Company, of Toledo, came to this office the other day soliciting orders for stock. As we did not need anything in his line, and choosing not to patronize his house anyhow, having agreeable relations with other houses, he had the uncalculated impudence to attempt to scare us into buying of him by a threat to take printing away from this town. This whining hypochondriac has been doing that business all over this section of the country. We pause to state that before we will purchase immunity from this snake-in-the-grass competition we'll starve."

THE following notification from the Campbell Printing Press and Manufacturing Company, 160 William street, New York, will, no doubt, prove of interest to a large number of printers who have evidently been imposed on. "Two parties by the name of F. C. Taylor and P. C. Perkins are traveling through the country, selling some patent chromatic attachment for printing presses, and representing themselves as being connected with us. We have used every means to stop their misrepresentations, but without avail, and we now take this opportunity to advise you direct that the said F. C. Taylor and P. C. Perkins have no connection with the Campbell Printing Press and Manufacturing Company, and any representations to the contrary are made with intent to deceive."

STATE SENATOR T. J. CALDWELL, of Adel, Dallas county, Iowa, was married March 10, at Tampa, Florida, to Miss Ella Garoutte, a lady well known to the readers of THE INLAND PRINTER through her translations which have so frequently appeared in its columns. We wish the happy couple many years of married bliss.

THE CHASE.

Specimen of halftone engraving, direct from a drawing, by VANDERCOOK & Co., engravers,  
407-425 Dearborn street, Chicago.

### THE SELECTION OF PAPER.

Papers made from flax and hemp are smooth, fine, substantial, solid and strong, and are the best for works which have to stand much handling, and are expected to last a long time. Paper made of cotton is rough, spongy, soft, and loose in structure.

At present, wood is a great medium in the manufacture of paper, and a large percentage of it is used. There are two processes for working up the wood for conversion into paper, which give different results and effects. One way is to grind it, and the other is to reduce it by chemical action. Wood pulp is by no means adapted to produce a fine paper which can be used for any kind of art printing. Paper made from it is brittle, and turns yellow or brown when the air and light reach it.

The durability of the paper and its value in preserving colors depend also very much upon the bleaching. If the bleaching agent is not neutralized thoroughly, the acid, which will accumulate to a greater or less degree, will not only destroy the colors, but cause even plain black to lose all of its effect.

Paper for the best art work should be absolutely free from all wood and minerals, and not too much bleached. The sizing of the paper is also to be taken into consideration, for copper and steel engraving and heliogravure produce the best results on a soft, rough-surfaced paper. Photogravure and lithography are greatly benefited by the use of a little smoother-surfaced, better-finished paper, and book printing needs a paper with a very smooth and well-finished surface in order that brilliancy and life may be secured for all of the colors. It must not be so hard as to cause the picture to lose the depth which artistic work requires, and a uniform thickness of paper is also essential.

### THE GUTENBERG BIBLE.

An eastern correspondent sends us the following interesting details concerning the history and purchase of the famous Gutenberg bible recently purchased by Mr. Ellsworth, of Chicago, briefly referred to in our last issue: "The sale of General Brayton Ives' collection of rare books and manuscripts last month in New York, was an important and highly interesting one. The gem of Mr. Ives' collection was the famous Gutenberg bible, the first book printed with types. It was printed by Johannes Gutenberg (1450-55). It is in the original binding—thick oak boards—covered with stamped calf, embellished with ornamented brass corners and cut pieces. The book is in two volumes, containing 324 leaves, of which seventeen are in fac simile. The honor of producing the first perfect work is now ascribed to Gutenberg alone. This book was first known as the 'Mazarin bible,' from the fact that the earliest published description of it was based on a copy discovered in the Mazarin library.

"As neither the name of the printer nor the date appears in the book, it is impossible to fix, with accuracy, when it was printed, but it is generally believed between the dates given above. That it was not later than 1454 is shown by the note which is in the copy in the National Library in Paris, which states that the volume was 'illuminated, bound and completed on the day of the assumption of the Virgin Mary, August 15, 1456, by Henricus Albrech, alias Cremer,' vicar of the Collegiate Church of St. Stephen, at Mayence.

"The copy of this bible sold in New York is said to be the most perfect copy in existence. It was discovered in a little country church in Germany and purchased for a song. It was bought from the finder by Mr. Asher, a noted collector, and was sold by him to Henry Stephens. Mr. Stephens disposed of it to George Brindly and it was purchased at the Brindly sale by the late Hamilton Cole for \$8,000. Mr. Ives was at the sale at the time it was sold to Mr. Cole, but for some reason did not bid upon it.

"When it was too late, however, he determined that he wanted the book and at last secured it from Mr. Cole for \$15,000. The only other copy of this bible in the United States is in the Lenox Library, but this is generally regarded as a later edition. A copy was sold in December, 1884, in London, for £3,900, and this was a much smaller book in modern binding. There are not many book

collectors who can afford to pay \$15,000 for any one book, but there were several people present at the sale ready to expend it and more if necessary.

"The person who was willing to pay the highest figure, \$7,400 a volume, was J. W. Ellsworth, of Chicago. The next number on the catalogue after the Gutenberg bible was another very rare bible, known as the Eliot Indian bible, published at Cambridge, Massachusetts, by Samuel Green and Marmaduke Johnson, 1663. This bible is always catalogued as excessively rare, but such is not the case, except when the copies, as in the case of General Ives, have the dedication to King Charles II, only twenty copies of which were printed; whereas, of the ordinary edition four thousand copies were issued.

"The copy sold in New York was purchased by Mr. Mitchell for \$1,650. Mr. Ives paid \$1,250 for it. An attractive number on the catalogue was a rare and interesting little Italian block book dated 1510, the only one printed in Italy and an important volume in the early history of block printing. This book has been well described by Ambrose Firmin-Didot, the noted French bibliophile. It was sold to Mr. Benjamin for \$170. A book compiled by Pope Bonifacius XIII and printed in 1465 by Faust and Schöffer, was sold to Mr. Mitchell for \$450."

### AN OLD JOURNALISTIC ANNIVERSARY.

The present week in March is interesting as the anniversary of the first daily paper in England, one hundred and eighty-nine years ago. One cannot help wishing that in the course of the truly fascinating events which preceded that date there had been richer records—as for instance in the quarrels between King Charles I and the parliament, the civil war and the Protectorate, as well as the more exciting portions of the reign of James II and the accession of William and Mary. The daily paper attained its highest development as a political factor in Paris during the months preceding the Reign of Terror, when its influence was in many instances frightful. Every French gamin could read or get someone to read to him enough to influence his mind still more against all law and order. The circulation of these papers was then tremendous and they were as truly the arbiters of French destiny as were those gloomy deliberations in the convention. The records of the French Revolution are made very clear and coherent from the files of the *Moniteur* and other papers which have been preserved in some shape or other.

It may seem singular, but even in the present day, while a population of fifty or a hundred thousand may support three or four daily papers, the population of such cities as London, Paris and New York does little more. For instance, considering those as the principal papers of which we hear most frequently from abroad and which we see most frequently here—how few they are. About the only London papers whose names are familiar universally to Americans are the *Times*, *Standard*, *St. James' Gazette*, *Truth and News*. In Paris the *Temps*, *Figaro*, *Petit Journal* and one or two others.

We exclude, of course, all papers of a magazine character or religious papers or those which have any specialty that gives them an exclusive character, or one published in any other than the vernacular language of the place. Of course, the number of serial and periodical publications, exclusive of programmes and advertising sheets, is, in any one of these cities, almost countless. But taking the daily political paper of high grade and large circulation, and even in these centers the competition is confined to a few.

\* \* \* \* \*

One hundred and eighty-nine years of journalism in the English language. How the world has toddled along since that first date and what a faithful nurse daily journalism has been to the toddler!—*The Union and Advertiser, Rochester, New York, March 13, 1891.*

A MEMBER of the Denver (Colo.) *Republican* chapel was fined \$1 and had the fine remitted, but would not accept the same, and the chapel voted that the amount be donated to the Childs-Drexel Home Fund.

## CHICAGO NOTES.

C. JURGENS & BRO., the electrotypers, have removed to 148 to 154 Monroe street.

THE Calendar Publishing Company has been incorporated at Chicago to print and publish calendars; capital stock, \$162,000.

THE New York *Sun* says: "There is no paper in this country that is more beautifully printed than the Chicago *Herald*." The *Sun* is correct.

THE Chicago Typesetting Machine Company has been incorporated at Chicago to manufacture typesetting machines; capital stock, \$100,000.

AT a recent meeting of the stockholders of the Illinois Type-founding Company it was decided to increase the capital stock from \$20,000 to \$100,000.

C. B. COTTRELL & SONS announce that on May 1 their Chicago office will be removed to the store, No. 319 Dearborn street, in the new Manhattan building.

THE Brotherhood of Chicago Pressfeeders gave their fifth annual ball at West Twelfth street Turner hall on April 11. It was a grand success and everyone had a good time.

THE western branch office of Charles Eneu Johnson & Co., makers of printing inks and varnishes, has been removed from 40 La Salle street to 99 Harrison street, corner of Dearborn.

THE German Republican Publishing Company has been incorporated at Chicago, to do a general printing and publishing business, with a capital stock of \$50,000.

THE E. S. Jewell Company has been incorporated at Chicago, with a capital of \$100,000, to do a publishing and printing business. The incorporators are E. S. Jewell, A. G. Jewell and A. Davis.

IN their new location at 109 Quincy street, Farmer, Little & Co. have a cosy little store, fully stocked with type, and are ready to fill all orders. Mr. C. B. Ross, their genial manager, reports business good.

MR. J. W. OSTRANDER, the well-known manufacturer, of this city, recently celebrated the twenty-fifth anniversary of his marriage. He was the recipient of many beautiful gifts from his many friends throughout the country.

THE Calumet Paper Company has secured the contract for furnishing writing papers to the State of Wisconsin for the ensuing term. The amount for immediate shipment is small, but future orders will doubtless make it a good thing.

THE Peerless Perforator, manufactured by Messrs. Avery & Burton at 42 South Clinton street, is one of the most perfect machines made for the purpose intended. In our May number we will print a descriptive article relating to this perforator.

WE are pleased to hear that Mr. A. H. McLaughlin, the western manager for Charles Eneu Johnson & Co., ink manufacturers, has so far recovered from his recent accident as to be about again, and trust that in a short time he will be fully as well as he was before his mishap.

BARNHART BROS. & SPINDLER, typefounders, 117 Fifth avenue, have been awarded the contract for furnishing 33,000 lbs. of body type for the government printing office at Washington. The order includes nonpareil, brevier and pica sizes, and is to be completed by September next. This firm is also making a new dress for the *Detroit Tribune*.

T. W. & C. B. SHERIDAN have opened their branch in Chicago, at 413 Dearborn street, and are now ready to fill all orders for binders' machinery of every description, and all materials used by bookbinders. They make a specialty of wire for stitching machines. Mr. A. D. Sheridan has charge of the Chicago house. Notice their advertisement on another page.

C. R. VANDERCOOK, the old settler and veteran engraver, of this city, has in his possession the commission of his grandfather, Simon Vandercook (the name was then spelled Van der Cook), as ensign of Captain Henry Van der Hoff's company of militia in the

County of Albany, New York, in the regiment of which Peter Yates was colonel. The commission was issued by command of Gen. George Washington, and is dated August 6, 1778.

MESSRS. STORY & FOX, of Buffalo, New York, whose advertisement appears on page 648, have opened an establishment in Chicago, at 151 and 153 West Washington street, under the name of Story & Co. Mr. R. J. Story, late of Buffalo, has entire charge of the business, and would be pleased to hear from printers in the city, or anywhere in the West, when they need anything in the line of varnishing, gumming, mounting, eyeletting, etc.

AT the annual election of Chicago Typographical Union, No. 16, held on March 25, the following votes were cast for the gentlemen named: President, A. H. Brown, 1,218; vice-president, S. E. Van Alen, 1,195; Board of Trustees, James C. Hutchins, chairman, 1,273, L. C. Boudreau 1,273, W. A. Hornish 1,264; recording secretary and organizer, T. N. Francis 784, O. G. Wood 468; secretary-treasurer, William McEvoy 847, Edward Langston 413; sergeant-at-arms, James Rathgeber, 1,255; four delegates to International Typographical Union, Boston, John Conway 319, Will J. Creevy 435, W. G. Glennon 589, James Gunthorp 598, George W. Jarse 335, Frank A. Kidd 656, D. J. Lyman 569, James T. McCullough 274, Charles P. Stiles 688, H. S. Streat 360, W. S. Timblin 384. The reelection of Mr. A. H. Brown, as president, is an honor worthily bestowed. The successful candidates for delegates were Charles P. Stiles, Frank A. Kidd, James Gunthorp and W. G. Glennon.

## PAPER TRADE ITEMS.

T. B. HARDY & Co., paper dealers, Denver, Colorado, have sold out.

THE new paper mill at Hughesville, New Jersey, has commenced making paper.

HARRIS BROTHERS, dealers in paper stock, etc., Minneapolis, have dissolved partnership.

THE Pioneer Roll Paper Company, not incorporated, Los Angeles, California, has been dissolved.

CLARK & IVES, dealers in paper stock, etc., New Haven, Connecticut, have dissolved partnership.

LINCOLN, Illinois, is trying to secure the erection of a paper mill, which it is expected will consume the straw of Logan county.

IT is reported that a stock company with \$250,000 will be organized, with Jacob Grimm as president, to rebuild the burned paper mill at Beckleysville, Maryland.

THE Texas Paper Mill at Dallas, which was started up several weeks ago, is running along nicely, and the management reports a demand for all the wrapping paper they can manufacture.

THE Bardeen Paper Company, of Otsego, Michigan, manufacture one hundred tons weekly of super-sized, super-calendered and extra machine finished Fourdrinier papers, used for map, lithograph, plate, book and blotting papers.

THE Housatonic Mill, of Lee, Massachusetts, has been sold to W. H. Eaton, late of Joseph Parker & Sons, of New Haven, Connecticut, the celebrated blotting paper mill. The mill will be organized as a stock company and Mr. Eaton will remove to Lee and have charge.

THE Madison (Wis.) Commissioners of Printing have awarded the paper contracts, after four weeks' advertising, as follows: Standard Paper Company, of Milwaukee, 2,000 reams of first-class book paper at 6½ cents per pound; Henry J. Meier, of Milwaukee, 40 reams ledger medium, \$1.83; 40 reams of 24-pound folio and 40 reams of 28-pound double flat cap, 13 cents. These were the lowest bids where the paper came up to the required grade.

THE Richmond Paper Manufacturing Company, of Richmond, Virginia, have made a contract for machinery which will treble the capacity of their present large mills and enable them to turn out daily from twelve to sixteen tons of finished paper. When

the improvements are completed, which will be by July next, the company will have one of the largest mills in the United States. E. D. Christian is president, A. H. Christian, Jr., secretary and manager, and A. S. Bacon superintendent.

THE eighteenth annual meeting of the Canada Paper Company was held on March 10, at Montreal, and a satisfactory report and statement of the year's business was presented. The following gentlemen were re-elected directors for the current year: Messrs. Andrew Allan, Thomas Logan, John Macfarlane, Robert Anderson and Jonathan Hodgson. At a subsequent meeting of the board, Thomas Logan was elected president, John Macfarlane, vice-president and managing director, and Mr. John G. Young, secretary-treasurer.

#### NEWSPAPER GOSSIP.

THE Newburyport (Mass.) *News* is rejoicing over a double cylinder press.

THE Saginaw (Mich.) *Globe* was sold to C. B. Schaefer for \$1 and the debts.

THE Georgia *Staats Zeitung*, a German daily, has been started in Savannah, Georgia.

A NEW morning daily has been started at Hastings, Nebraska. It is republican in politics.

THE Bloomington (Ill.) *Bulletin* has been sold by Hon. Owen Scott to James F. O'Donnell, for \$12,000.

THE *Republican*, of Weeping Water, Cass county, Nebraska, recently completed the ninth year of its existence.

FRANK TRIPP and A. C. Tripp have begun the publication of the *News*, a seven-column folio, at Highland Falls, New York.

THE Boston *Post* has just removed from Milk street to "Newspaper row," occupying pleasant quarters near the *Herald*.

JOHN J. MOODY, formerly connected with the Mobile (Ala.) *Evening News*, has established the *Transcript*, a weekly paper.

THE Morrisdale Mines *News*, Meadville *Saturday Night* and Pittsburgh *Visitor*, Pennsylvania papers, have given up the ghost.

THE *New Age*, of Augusta, Maine, the new organ of the Maine democracy, has come out in eight-page form, with a new dress of type.

THE Detroit *Free Press* has entered upon a new enterprise, the issuing of a semi-weekly edition, to be published Tuesday and Friday.

THE *Evening Post*, the only democratic daily in Columbus, Ohio, has been bought by Charles Q. Davis, a lieutenant of Senator Brice.

THE Akron (Ohio) *City Times* sends out a large, handsome weekly edition, and has placed an order for a large amount of new office material.

GALESBURG, Illinois, has a new democratic newspaper called the *Spectator*. It is neatly printed, well edited and starts forth on a promising career.

THE *Police Gazette*, New York, has offered a prize of \$200 to the person naming the first three horses in the Brooklyn Jockey Club Handicap Race.

TENNESSEE papers that have stopped publishing are: the Louisville *Hayseed*, Louisville *Republican*, Jellico *Independent*, Irwin *Unequian* and Athens *Democrat*.

THE *Methodist Advocate*, of Chattanooga, has been brought into court for libel by two ministerial brethren demanding \$45,000 damages for defamation of character.

THE Express Printing Company, of Red Oak, Iowa, has started a new paper devoted to the interests of the Farmers' Alliance named the *Alliance Programme*.

THE springtime number of the *Typographic Advertiser*, published by the MacKellar, Smiths & Jordan Company, of Philadelphia, comes to us full of good things for printers in the line of type. The new faces shown include: "Giraffe," "Dynamo,"

"Shado," "Typo," "Obelisk," and "Zinco"; also a new set of index initials. Every printer should secure a copy of this paper.

THE *Honest Miller*, devoted to its name implies to the interests of the milling trade, is a monthly recently established at Silver Creek, New York. G. B. Douglas is editor and proprietor.

THE Michigan City (Ind.) *Evening News* has been enlarged to an eight-column folio, and is now the largest daily ever published in Michigan City. It is certainly a credit to its publishers.

THE Inland Daily Press Association is composed of the publishers of forty daily newspapers in the smaller cities tributary to Chicago, and including papers in Illinois, Michigan, Wisconsin, Iowa, Minnesota and Indiana.

THE *Beacon and Telegraph*, two leading publications of Ashtabula, Ohio, have been consolidated. An incorporated company with a capital stock of \$15,000 will be organized, the stockholders consisting of the present proprietors of each paper.

THE *Aluminum Age*, an illustrated monthly trade journal for metal-workers, mechanics, manufacturers, etc., and devoted to the interests of that wonderful new metal, has appeared from Cincinnati, Ohio. Published by the Aluminum Age Company.

THE *Mechanical News*, published by James Leffel & Co., New York City, has changed its form for the better, and greatly improved its appearance. It is now a 32-page quarto, illustrated, and in convenient shape for preservation. We are glad to note the fact.

A STOCK company is being formed at Yankton, South Dakota, for the purpose of publishing a daily morning paper. If the plans do not miscarry, a first-class daily paper will make its appearance there about May 1. Twenty-five thousand dollars will be invested in the enterprise.

THE St. Joseph (Mich.) postmaster reports that his town is in need of a good paper. St. Joseph has a population of nearly five thousand; it is sixty miles from Chicago, and located on the Chicago & West Michigan railway. This is a good opening for an enterprising man.

THE New York Photo Electrotpe Company, New York City, will issue a monthly magazine, of the size of the *Century*, devoted to short reviews of current periodicals and books. It will contain a large number of illustrations. The name will be the *Photo-American Review*.

THE *Tribune*, of Minneapolis, was sold by A. J. Blethen to a syndicate headed by W. J. Murphy, of Grand Forks, for \$400,000. It is generally understood that Thomas Lowry, ex-Governor Pierce and eastern politicians are interested with Mr. Murphy. The editorial department will be under Mr. Pierce's control.

THE Duluth Herald Company, publishers of the *Evening Herald*, made an assignment, March 16, to D. H. Stevenson. The paper has lost money steadily for the last year or two and owes between \$20,000 and \$30,000, of which \$14,000 is secured by mortgage on the plant to Miron Bunnell, the former proprietor.

A. MINER GRISWOLD died of apoplexy at Sheboygan Falls, Wisconsin March 13. After delivering his lecture, "A Trip Around the World," he retired to a hotel, and in a short time after going to bed died of apoplexy. Mr. Griswold was an old newspaper man, and since 1886 he has been the managing editor of *Texas Siftings*.

THE police and fire departments of Chicago, together with the letter carriers, now have a new illustrated organ, called *Right*, independent in politics and unsectarian in religion. We are unable to determine whether it is a weekly, monthly, semi-monthly or semi-occasionally, but — but, ah — we presume it is; anyhow, it is a very creditable production, and we wish it success. Right Publishing Company, 157 Washington street.

THE partnership heretofore existing between C. B. Turner and F. C. Turner, doing business under the firm name of Turner Brothers, printers and publishers, Pittsfield, Illinois, was dissolved by mutual consent, March 31, C. B. Turner retiring to embark

in other business. The publication of the *Old Flag* will be continued by F. C. Turner, who assumes all indebtedness, and who will carry out all unfinished contracts on subscription, advertising and jobwork.

THERE are two hundred and ninety-two newspapers published in New Jersey, this year, or six more than last year. Of this number seventy-eight are independent in politics, sixty-eight republican, seventy-five democratic, forty-five politics not stated, six religious, seven educational, four labor, four prohibition and one each Masonic, Odd Fellow, Knights of Pythias, manufacturing, law and angling. Twenty-one are published in German and one in the Dutch language.

OUR old and esteemed friend, Mr. Samuel G. Sloane, a well-known and valued contributor to the pages of THE INLAND PRINTER, has recently become the editor and proprietor of the *Iowa Citizen*, published at Charles City, Iowa. Judging from the numbers now before us we have no hesitation in saying that it is destined to become a model journal from a mechanical standpoint, while the facile pen which directs it is bound to make its influence felt and respected. Mr. Sloane is a graceful and forcible writer, a journalist of large practical experience, and under his management we expect the *Citizen* will become a powerful factor in the politics of the state.

THE *Solid Muldoon*, of Ouray, Colorado, says: "The Glenwood *Avalanche* declines the advertisements of newspaper advertising agents upon the grounds that they 'want the earth.' The *Muldoon* has managed to exist over a dozen years without the aid of advertising pirates, and they are still denied a hearing in this office. When we have space to spare we give it to our local patrons, and under no circumstances will we give place to patent medicine, piano, organ, or that class of ads." And still the *Muldoon* looks fat and healthy as if it was enjoying life first rate. But suppose this plan should apply to the religious papers—what would they do then, poor things?

FROM Northfield, Minnesota, comes the *Sideral Messenger*, a monthly review of astronomy, conducted by Prof. William W. Payne, director of the Carleton College Observatory. Wherever there is a student engaged in unraveling the secrets of other worlds than ours this publication should be found on his table. The study of the universe, the unveiling of the hidden mysteries that surround us through infinite space, the solving of celestial phenomena that universally command reverence and respect, are matters of profound interest, and the manner in which the able editor of the *Messenger* brings forth a monthly résumé of the workings of the tireless army of stargazers is the happy realization of a fortunate idea that cannot fail to please and satisfy those who should profit by it. The magazine contains forty-eight pages, well gotten up, and may be accepted as a model of typographical excellence.

#### OF INTEREST TO THE CRAFT.

THE office of the Sacramento (Cal.) *Bee* has been unjonized.

ON April 3, ground was broken for the Printers' Home building at Colorado Springs, Colorado.

JOHN A. MILLER, the newly elected vice-president of the Pittsburgh Typographical Union, died recently.

THE thirty-ninth annual convention of the International Typographical Union will be held in Boston, Massachusetts, from June 8 to 14 next.

THE fifth annual ball of Denver Typographical Union, No. 49, was held on Monday evening, March 30. The programme was an enjoyable one.

THE annual election of officers of Toronto Typographical Union, No. 91, was held Wednesday, March 25. The following officers were elected by acclamation: President, W. B. Prescott; vice-president, Sol. Cassidy; recording secretary, Amos Pudsey; financial secretary, M. J. Meehan; treasurer, E. J. How; investigating committee, John Swalwell, R. G. Stewart, R. Munn.

Delegates to eight-hour league, George Devlin, G. F. Timms, E. Webb, J. A. Smith, James Davey; trustee, Ed. M. Meehan.

THE following is the financial report of W. S. McClevey, secretary-treasurer of the International Typographical Union, for the month of February, 1891:

Balance on hand as per statement of January 31, 1891.....	\$20,602.34
Receipts to date.....	5,943.00
	\$26,545.34
Disbursements.....	5,783.79
	\$20,761.55

THE election of officers of Pittsburgh Typographical Union, No. 7, was held March 25, and resulted as follows: E. J. Adams, president; John A. Miller, vice-president; Benjamin Fink, recording secretary; Thomas T. Lemmon, corresponding secretary; Thomas J. Dicus, financial secretary; Hugh Adams, treasurer; Walter McKee, sergeant-at-arms; T. A. Boullt, door-keeper; trustees, George B. Acklin, James B. Neal and Frank M. Harrington; delegates to International Typographical Union, Oscar E. Adams, O. A. Williams and George L. Happer.

#### RECENT PATENTS.

The following list of patents relating to the printing interests is specially reported by Franklin H. Hough, solicitor of American and foreign patents, No. 925 F street, N. W., Washington, D. C.

##### ISSUE OF MARCH 3, 1891.

- 447,293.—Printer's press guide, J. G. & J. A. Boehringer, Buffalo, New York.  
 447,701.—Printing in colors, W. Schumacher, assignor of one-half to L. Raimier, Brooklyn, New York.  
 447,491.—Printing press, W. B. Lawrence, Columbus, Ohio.  
 447,507.—Printing press, chromatic, A. Fayol, Bordeaux, France.  
 447,536.—Printing presses, registering device for, J. Brooks, Plainfield, New Jersey.

##### ISSUE OF MARCH 10, 1891.

No issues on March 10, 1891.

##### ISSUE OF MARCH 17, 1891.

- 448,219.—Printing device, J. S. Foley, London, England.  
 448,264.—Printing device, hand, T. G. Saxton, assignor of one-half to O. G. Vanderhoof, Lexington, Kentucky.

##### ISSUE OF MARCH 24, 1891.

- 448,775.—Printing machine, C. B. Cottrell, Westerly, Rhode Island.  
 448,807.—Printing machine, chromatic, C. W. Dickinson, Belleville, New Jersey.  
 448,749.—Printing machine, inking mechanism, A. Fayol.  
 448,806.—Printing presses, paper cutting mechanism for, L. E. Brooks, Chicago, Illinois.  
 448,642.—Printing presses, stone, protector for lithographic, J. Eberle, Vienna, Austro-Hungary.

#### BUSINESS OUTLOOK.

**Auburn, N. Y.**—State of trade, fair; prospects, none too good; composition on evening papers, female, 16 cents; bookwork, female, 16 and 18 cents; job printers, per week, \$8 to \$12. THE INLAND PRINTER is eagerly looked for here the 20th of each month, and is read and re-read by all.

**Austin, Texas.**—State of trade, good; prospects, very good; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, per week, \$20; job printers per week, \$20 (nine hours per day). The legislature adjourned on April 15, and several men will be thrown out of employment.

**Bay City, Mich.**—State of trade, fair; prospects, fair; composition on morning papers, 34 cents; evening papers, 32 cents; bookwork, 34 cents; job printers, per week, \$14. Work is picking up now, and few idle printers are in town. M. H. Garrels has gone to Detroit to take the foremanship of the *Tribune*.

**Boston, Mass.**—State of trade, very dull; prospects, not very good; composition on morning papers, 45 cents; evening papers, 35 cents; bookwork, 38 cents; job printers, per week, \$15. Election of officers: A. McCraith, president; D. F. Welling, vice-president; John Douglass, secretary; W. J. Thomas, treasurer; N. M. Bishop, sergeant-at-arms.

**Burlington, Iowa.**—State of trade, fair; prospects, good; composition on morning paper, 30 cents; evening papers, 25 cents; bookwork, \$14; job printers, per week, \$14 and \$15. No. 75 will not send a delegate to Boston. It is expected the new laws will go into effect at the next meeting.

**Cincinnati, Ohio.**—State of trade, fair; prospects, good; composition on morning papers, 45 cents; evening papers, 41 cents; bookwork, 40 cents; job printers, per week, \$18.

**Columbia, S. C.**—State of trade, fair; prospects, fair; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, \$15 per week, nine hours; job printers, per week, \$18 and \$20. C. R. McJunkin

was elected as delegate to the International Typographical Union, to meet in Boston, Massachusetts, in June.

**Dayton, Ohio.**—State of trade, very quiet; prospects, favorable; composition on morning papers, 35 cents; evening papers, 32 cents; book and job printers, per week, \$20, fifty-three hours. At the election, March 25, B. L. Wilson and E. H. Kimberly were chosen delegates to Boston; James T. Garvey, president; Frank Birdsall, secretary-treasurer; T. F. Dolan, recording and corresponding secretary. Plenty of men here to do all work needed.

**Denver, Colo.**—State of trade, fair; prospects, medium; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$20, fifty-three hours. At the election, March 25, B. L. Wilson and E. H. Kimberly were chosen delegates to Boston; James T. Garvey, president; Frank Birdsall, secretary-treasurer; T. F. Dolan, recording and corresponding secretary. Plenty of men here to do all work needed.

**Dubuque, Iowa.**—State of trade, fair; prospects, fair; composition on morning papers, 30 cents; evening papers, 28 cents; bookwork, 30 cents; job printers, per week, \$14. Business improving some. More than enough on hand to do the work, however.

**Fort Wayne, Ind.**—State of trade, fair; prospects, fair; composition on morning papers, 35 cents; evening papers, 30 cents; book and job printers, per week, \$13.50. The *Labor Herald*, a six-column folio weekly, published by the Trades and Labor Council, has made its appearance, and is a credit to the council.

**Galesburg, Ill.**—State of trade, good the past month; prospects, fair for continuance; composition on evening papers, 25 cents; bookwork, 25 cents; job printers, per week, \$12 and \$15. The new daily, *Mail*, republican in politics, is announced to appear on April 6; the *Spectator*, new democratic weekly, on the 4th—the former by Colville & Barnes, the latter by Cunningham & Husted. This gives us two dailies and five weeklies, besides the *Trainmen's Journal*, a monthly.

**Hartford, Conn.**—State of trade, good; prospects, fair; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 35 cents; job printers, per week, \$15. The house has taken a "recess" until next November, and we expect the senate will do the same this week; but for all this work has held on good so far, and the chances for the summer will be rather uncertain.

**Indianapolis, Ind.**—State of trade, fair; prospects, good; composition on morning papers, 38 cents; evening papers, 36 cents; bookwork, 40 cents; job printers, per week, \$16.50. Supply of work only moderate, with a large number of printers in town.

**Jacksonville, Fla.**—Composition on morning papers, 33½ cents; evening papers, 30 cents; bookwork, 33½ cents; job printers, per week, \$16 to \$20. The usual summerer will be upon us soon, but the job offices are, at present, well supplied with work; bookwork is somewhat brisk, but it will last only a week or so longer. Only one union paper in the city.

**Keokuk, Iowa.**—State of trade, fair; prospects, good; composition on morning papers, 30 cents; evening papers, 26 cents; bookwork, 30 cents; job printers, per week, \$12. Work has been very dull for the last month, but is picking up now, and the prospects for spring are excellent. The painters and decorators are out on a demand for nine hours.

**London, Ont.**—State of trade, good; prospects, fair; composition on morning papers, 30 cents; evening papers, 28 cents; book and job printers, per week, \$9 to \$10. Work in all the job offices has been good for the past month, especially so in the *Advertiser*, where the new city and county directory is being published.

**Los Angeles, Cal.**—State of trade, dull; prospects, not encouraging; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$20. The *Times* is still employing non-union printers at 45 cents. The union still refuses to receive cards.

**Milwaukee, Wis.**—State of trade, very good; prospects, good; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 35 cents; job printers, per week, \$14 to \$18. *Daily Journal* is running twenty-two cases, being rushed with the state laws. Yewdale, Burdick & Armitage and all job offices are rushed.

**Minneapolis, Minn.**—State of trade, good; prospects, good; composition on morning papers, 42 cents; evening papers, 37 cents; bookwork, 35 cents; job printers, per week, \$16. Very few idle men here at present.

**Mobile, Ala.**—State of trade, fair; prospects, not encouraging; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$16.50.

**New Haven, Conn.**—State of trade, fair; prospects, improved from last report; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 35 and 40 cents; job printers, per week, \$15. Business has improved a little since last report. Dorman's non-union shop has again secured the City Year Book. No. 47's officers will have to be more on the alert, as this state of affairs should not be tolerated.

**Peoria, Ill.**—State of trade, fair; prospects, better; composition on morning papers, 36 cents; evening papers, 33 cents; bookwork, 38 cents; job printers, per week, \$15, \$18, \$21. Trade has been good, and with the opening of April promises to be better. At the election of delegates to attend the Boston convention, J. A. Onyun, present financial and corresponding secretary, was elected delegate, and George C. Joseph, who represented No. 29 in Buffalo convention, was chosen as alternate. There were five candidates in the field. The regular election of officers occurs on the last Sunday in April. The delegate-elect was instructed to vote in favor of six-day law.

**Philadelphia, Pa.**—State of trade, good; prospects, encouraging; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$16. Reports from forty offices show: Nine, brisk; six, good; five, fair; eleven, medium; four, as usual; five, dull.

**Pueblo, Colo.**—State of trade, fair; prospects, fair; composition on morning papers, 45 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$20. While work is fair, there are still a large number of extra printers in town.

**Richmond, Va.**—State of trade, fair; prospects, good only; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$16 to \$20. No. 90 has elected W. F. Crump and D. J. Quinn as delegates to the International Typographical Union, which meets at Boston. There are enough compositors here to fill the demand.

**Rome, N. Y.**—State of trade, good; prospects, bright; composition on evening papers, 25 cents; bookwork, 25 cents; job printers, per week, \$9 to \$12. Some talk again of forming a union in this city, but the boys appear deficient in "backbone" and interest.

**St. John, N. B.**—State of trade, good; prospects, good; composition on morning papers, 30 cents; evening papers, \$10 per week; weekly paper, 25 cents; job printers, per week, \$10.

**St. Louis, Mo.**—State of trade, fair; prospects, pretty good; composition on morning papers, 43 cents; evening papers, 38 cents; bookwork, 45 cents; job printers, per week, \$18. Trade in job offices continues good.

**San Diego, Cal.**—State of trade, fair; prospects, fair; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 40 cents; job printers, per week, \$18. No. 221 is feeling quite jubilant. The *Evening Sun* has been unionized by working in union men, who have by proselyting succeeded in getting all of the non-union men to become "square." The last men were taken in last Sunday. We feel sure that a new morning paper will be started in a short time. It will be union throughout.

**Springfield, Ill.**—State of trade, fair; prospects, uncertain; composition on morning papers, 33½ cents; evening papers, 30 cents; book and job printers, per week, \$15. At our meeting on April 5 the following officers were elected: President, W. H. L. Rotramel; vice-president, C. M. Higgins; recording secretary, H. A. Breusing; secretary-treasurer, George Hoole; sergeant-at-arms, J. H. Goldsmith; executive board, T. F. Lennox, Jr., H. Duggan, T. C. Kerr, T. Thorpe, D. J. O'Crowley. Mr. John C. Ankrom, who has served the past year as chairman of the executive board, will represent this union at the International Typographical Union session in Boston. John is very popular with the boys, and we feel that No. 177 will be ably represented.

**Springfield, Ohio.**—State of trade, fair; prospects, uncertain; composition on evening papers, 30 cents; job printers, per week, \$15. The *New Era* establishment has been enlarged and additions made to the plant. The *Farm and Fireside* building will also be enlarged this season. Newspaper work is rather dull. Job offices seem to be prospering.

**Topeka, Kan.**—State of trade, fair; prospects, fair; composition on morning papers, 33½ cents; evening papers, 28½ cents; bookwork, 40 cents; job printers, per week, \$15. E. H. Snow will take charge of state printing July 1. The *Capital* has reduced the price of subscription, followed by the *Journal*, both gaining many readers thereby.

**Utica, N. Y.**—State of trade, good; prospects, cheering; composition on morning papers, 35 cents; evening papers, 31½ cents; bookwork, 31½ cents; job printers, per week, \$12.50. With the advent of spring comes a feeling of cheerfulness among members of the craft here, and though perhaps work is not as brisk as it might be, yet the warm sunshine, in conjunction with the work given out, imparts an all-around degree of cheerfulness.

**Victoria, B. C.**—State of trade, good; prospects, good; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$21. The *British Columbia Commercial Journal* made its appearance on March 13, and is a well edited and creditably gotten-up paper of sixteen pages. L. G. Henderson is manager, and Dave M. Carley, a well known traveling journalist, will look after the editorial work. The job and book offices have been crowded with work since the opening of the legislature. The *Evening Times* is starting on a special number to be completed in two weeks. R. T. Williams, bookbinder and publisher of British Columbia directory, is building a handsome five-story building to meet the demands of his growing business.

**Wheeling, W. Va.**—State of trade, fair; prospects, uncertain; composition on morning papers, 35 cents; evening papers, 30 cents; bookwork, 40 cents; job printers, per week, \$15.00. Elmer E. Carlin was elected to represent this union at the next session of the International Typographical Union. Mr. Carlin will make a first-class representative, and No. 79 could not have chosen a better one.

**Wichita, Kan.**—State of trade, only fair; prospects, fair; composition on morning papers, 35 cents; evening papers, 30 cents; book and job printers, per week, \$15. Work of all kinds is slowly picking up.

**Worcester, Mass.**—State of trade, good; prospects, about same; composition on morning papers, 40 cents; evening papers, 33½ cents; bookwork, 35 cents; job printers, per week, \$12 to \$15. Business is very encouraging. Not many idle printers, that is men who are willing to work. Central Labor Union is experimenting in the newspaper line. Delegates to represent No. 165 at International Typographical Union in June are Eben Foskett and Secretary Duggan.

**BUSINESS NOTICES.**

**MEGILL'S GENUINE GRIPPER FINGERS.**

E. L. Megill, of 60 Duane street, New York, is constantly producing new things in the line of feed-guides and grippers. His latest invention is the set of gripper fingers shown in the

accompanying cuts. As will be seen, the fingers are made in a variety of widths and sizes, and can be attached to the press grippers in a hundred different ways. It does not matter whether the grippers are wide or narrow—the fingers can be attached with ease. One great advantage in the use of these fingers is the small margin room

needed—it being possible to run forms that nearly cover the sheet. Mr. Megill has issued a circular fully describing this latest invention of his, and showing scarcely any margin, which was printed on a press using his flexible guides and these new fingers. A copy of this will be sent to any printer on request. Write for one.

Four interference suits in the United States patent office, referring to grippers, fingers and gauges, have recently been decided in favor of Mr. Megill.

**ELZEVIR, 1659.**

Printers and publishers will appreciate the charming borders of the seventeenth century, reproduced by the Dickinson Type Foundry, Boston, and specimens of which are shown on other pages. They are close imitations from the Elzevir (Leyden) tomes, and are full of the quaint strength of light and heavy contrasts for which that century's printing was so famous. It was intended to show these specimens in our March number, but we could not get the insert ready in time.

**STEVENS & MORRIS, NEW YORK.**

This firm of photo-engravers and designers have been located for a number of years at 24 Cortlandt street, New York, but on May 1 will remove to 20 College Place. They make cuts and designs for all illustrative purposes by all the various processes. In half-tone work they produce the most excellent plates. The illustration, "The Morning Meal," in our March number, attracted much attention. Having artists of known merit in their designing department, and skilled workmen in producing plates, and facilities ample enough to insure promptness, they are in a position to furnish superior work. They will be pleased to send specimens and quote prices. Parties interested should communicate with them.

**WHITE'S MULTI-COLOR CHARTS.**

Mr. James White, of the Illinois Paper Company, 181 Monroe street, Chicago, informs us that he has been allowed his claim for patent on the Multi-Color Charts, first brought to the notice of the trade in our last December issue. As this patent covers an ingeniously arranged series of circles or other forms in color printing for five or more colors on various-colored paper, and there being nothing in any way similar to it in existence, it is very valuable. Primarily as a standard guide and reference book for printers, etc., it is invaluable, but as a means for the display of inks, it would be a powerful aid to an ink manufacturer, and as Mr. White is not in that business, he would, no doubt, consider a reasonable offer for it.

**WETTER NUMBERING MACHINES.**

When printers want a numbering machine that can be locked in the form and used on any printing machine to number consecutively, they should write Messrs. Joseph Wetter & Co., 20 and 22 Morton street, Brooklyn, New York. This firm, whose advertisement appears on page 605, manufacture all classes of numbering machines. Their hand numbering machine, a cut of which is shown in their advertisement, is a most useful article for office use. It is simple and durable, will do the work of larger machines, and its price puts it within the reach of all. In small offices where regular numbering machines are not used, this hand machine will be found indispensable. Ask for information from this firm, if you need anything in their line.

**PERFECT PASSENGER SERVICE.**

PULLMAN PARLOR CARS IN DAY TRAINS OF THE CHICAGO & ALTON RAILROAD BETWEEN CHICAGO AND ST. LOUIS.

To afford even better accommodations for first-class day travel between Chicago and St. Louis than have heretofore been given, and for the purpose of giving to the traveler a complete Pullman

INTERIOR VIEW OF PULLMAN PARLOR CAR, SHOWING OPEN DRAWING ROOM.

service by day and night, the Chicago & Alton railroad has placed upon its day trains between Chicago and St. Louis the two new Pullman palace parlor cars, "Evelyn" and "Mercedes."

These two cars have just been turned out of the shops of the Pullman Company, who have spared neither pains nor expense to make them, without exception, the finest parlor cars ever built. The "Evelyn" and "Mercedes" are each sixty-four feet in length, vestibuled, contain sixteen revolving and six wicker chairs, and the latest improvement, an open drawing room. They are provided with commodious smoking rooms, buffet and toilet rooms. The interiors are finished in mahogany, old gold and blue plush, while the chairs are upholstered in white mohair. The cars are lighted by the Pintsch gas system. Wide and spacious bay windows occupy most of the wall space, and each car contains a well selected library of fiction, adventure and travel.

Day trains Nos. 1 and 2 are now composed of palace reclining chair cars, equipped with Hitchcock chairs (free of extra charge), new Pullman palace parlor cars described above, dining cars, and new and commodious day cars for local travel, and smoking cars. Ask your local agent for tickets and particulars. James Charlton, General Passenger and Ticket Agent, 210 Dearborn street, Chicago, Illinois.

**CUT THIS OUT.**

Sometime this spring you may want some special colored ink for a particular piece of work, or a good bright black that works well. The Buffalo Printing Ink Works make it, and they will prove it, too, if you will give them the chance.

**"ONLY PERFECT" GALLEY-LOCK.**

By reference to page 648, our readers will notice cuts of a new galley-lock, manufactured by Carson, Fenesy & Co., 11 Ninth street, Pittsburgh, Pennsylvania, an excellent device for the purpose intended. The advantages claimed for it are: Adjustability, it requiring but a moment to lock or unlock the galley; perfect fitting, as every line of type is held by same even pressure; simple, as it has no complicated parts to get out of order; light and durable; can be used on any galley; made in all sizes. Full information in regard to this invention will be cheerfully furnished by the above firm. It is worth your time to look into its merits.

**ALL LIVE PRINTERS** should have Bishop's "PRACTICAL PRINTER," 200 pages, \$1. POSITION" and "PRINTERS' ORDER" each; the "PRINTERS' ORDER MENS OF JOB WORK," price Oneonta, N. Y., and by all type useful works ever published for

Also his "DIAGRAMS OF IM-READY RECKONER," 50 cents BOOK," price \$3, and "SPECI-\$2. Sold by H. G. Bishop, Box 13, founders. The handiest and most printers. Indorsed by everyone.

**FOR SALE.**—Official republican county paper in county seat of one of the best counties in Southeastern Kansas; large circulation; good job office; will sell cheap; failing health reason for selling. Address "Kansas," care INLAND PRINTER.

**FOR SALE**—\$5,000 (and market value for unused stock on hand), cash, buys fine job printing establishment of eight years in a leading city. Gross business now over \$12,000 yearly at paying prices; a bargain. For full particulars address "BARGAIN," care INLAND PRINTER.

**FOR SALE.**—Point folding machine, capable of folding 16 by 23 to 32 by 46; three or four fold; can be used for marginal machine for newspaper work. This is a new machine, has never been used, too large for our run of work; can secure this machine at a bargain. Address "B. D.," care INLAND PRINTER.

**FOR SALE**—Country newspaper and job printing outfit. **BEST OFFER TAKES IT.** Material can be removed if desired. This outfit is complete in every detail, with the exception of newspaper press. It consists of eighth Gordon press, powerful 30-inch lever paper cutter, 12-inch card cutter, over 500 pounds long primer, small pica, brevier and nonpareil body type, about 200 fonts wood and metal display type, stones, cases, racks, galleys, cuts, ornaments, brass rule, etc.; large amount of leads and slugs, furniture, ink, paper, stock, etc. For particulars address THE NEW SOUTH, Summertown, Tennessee.

**FULL** and complete instructions on zinc etching, photo-engraving, etc., by Frank J. Cohen. A 38-page pamphlet, giving full information on above topic, will be mailed to any address on receipt of \$2. Address THE INLAND PRINTER COMPANY, Chicago, Illinois.

**PATENTS** and improvements in the printing trade. A prominent firm in Berlin desires the agencies for Germany of American houses in this line. Address "R. S.," care INLAND PRINTER.

**THE** average job printer knows the trouble of making fancy-shaped advertising stickers. The Akins Novelty Company manufacture them for reliable parties. For particulars write 293 and 295 Broadway, New York.

**WANTED**—Copies of Nos. 2 and 10 of Volume I, INLAND PRINTER. Will pay 25 cents apiece for these if in good condition. Mail or bring them in. Inland Printer Company, Chicago.

**WANTED.**—A No. 1 solicitor for commercial printing, to work in Eastern Pennsylvania, Western Ohio and West Virginia; give references. Address "Commercial," care INLAND PRINTER.

**WANTED**—Subscribers to THE INLAND PRINTER; per year, \$2; six months, \$1; single copies, 20 cents. Also, send 10 cents for 16-page circular, "How to Impose Forms," giving complete schemes of imposition.

**The Lightning Ink Reducer and Dryer,** Awarded Diploma, Paris, 1889, in London, 1887, for Unexcelled Excellence.

**Inkoleum** is the only article in the world that gives pressmen complete control over printing and lithograph inks, rollers and stock in any weather and climate. It rebines inks of any color or shade and makes them dry quick and glossy, enabling rushed work to be delivered immediately from press without offsetting. Inkoleum never dries on rollers, but preserves their suction, life and elasticity. On starting press in morning or whenever rollers are too sticky or ink dry on them, or the ink pulls the paper, a drop or two of Inkoleum put on the rollers with your finger immediately softens the ink and makes them do the finest work, a saving of five times its cost every hour in the day.

**Beware of Infringements!** Order Inkoleum and accept no worthless piratical imitation, said to be just as good. Price, only 50 cents. For sale by every typefoundry in the world. Read circulars printed in five languages, put up only by

# C. POTTER, JR. & CO'S

12-14 SPRUCE STREET,  
NEW YORK

## PATENT IMPROVED TWO-REVOLUTION PRESS.

**W**ITH patented mechanism for controlling the vertical movement of the impression cylinder. It is extremely powerful, accurately fitted, free from friction and evenly balanced. A patented automatic device is also provided which prevents lost motion and governs the degree of impression. Its patent reversing mechanism consisting of a cross-belt and spring shifter, is operated by the foot, which places the Press under the immediate control of the feeder. These advantages, with its Sheet Delivery, Hinged Distributor, Caps, Positive Slide Motion, Noiseless Grippers, etc., complete a printing machine that in every respect is equal to the most exacting demands of the times.

C. POTTER, JR. & CO., 12 and 14 Spruce Street, New York.

# THE HUBER SHEET PERFECTING PRESS

•• Double Rolling each Form • Six Tracks • Air Springs • Back Delivery. ••

The Impression is taken over a six-track bed, which is supported every ten to twelve inches across the press. We guarantee the impression sharp and rigid, and the bed and cylinder are warranted not to spring or give way in the least degree.

The Impression can be tripped at the moment grippers close or before.

The Register is perfect at all speeds of the press.

The Distribution is uniform from head to tail of sheet; each form is charged with fresh ink both ways.

The Air Springs are applied vertically, the piston-head does not come out of the cylinder, no packing ever required; the pressure can be regulated while press is in motion at all speeds.

The simplicity, accuracy and durability of the bed movement is unequalled by any other machine. The double rack teeth are made of steel, with the best rolling curve known to mechanics. From two to three teeth always in contact, thus obviating lost motion.

The sheets are delivered in the back by positive motion.

The Fly can be disconnected at a moment's notice.

No complicated movements to get out of order.

This press is especially designed for the use of book printers and publishers of weekly and monthly papers, pamphlet and almanac work.

It is constructed upon the two-revolution principle and has four rollers for each form; aside from it having two impression cylinders, it is substantially the duplicate in construction of our Two-Revolution Book Press.

The sheet is fed in the usual manner from the feed board on to the first impression cylinder, and passing between the bed receives an impression from the first form; it is then taken by the grippers of the second cylinder, and around between the bed again, where it receives an impression from the second form, thus printing both sides at one feeding.

Any off-set deposited from the first printed side, on the second cylinder, is at once removed by our Patented Off-set Device, and ordinary work can be run from ten to twenty hours without change of tympan sheet.

Either or both cylinders can be tripped at the will of the feeder, before or at the time grippers close, and at all speeds.

The speed in sheets per hour is practically the same as single presses of same size, and, as it prints both sides of the sheet in perfect register, the result is equivalent to the product of two presses.

We believe that printers and publishers will appreciate this press to its full value, filling as it does a long felt want, of a press capable of large or small sheets, and after one operation delivering it upon the fly-board finished.

SIZES:—	NO.	ROLLERS.	BED SIZES.	MATTER.	SPEED.	We furnish with press, counter-shaft, hangers, cone pulleys, driving pulleys, two sets of roller stocks, wrenches, boxing and shipping, at Taunton, Mass.

Our new General Circular, "D D," shows specimens of Mosstype, Photo-engraving and Zinc Process work; also printing and electrotyping. Send stamp for copy.

WE have just issued a catalogue of photo-engravers' machinery and supplies. It is artistically printed, profusely illustrated, and is the first full list of requisites for this important trade. The expense of its production compels us to limit its free issue to photo-engravers, whom it will be sent on receipt of business card. To all others we will make a nominal charge of 25 cents, which amount will be allowed on the first purchase. To such as merely wish an outline of the different engraving processes we will send "A Few Words on Engraving" or "A Few Words on Zinc Etching" free of charge. We have similar circulars regarding both stereotyping and electrotyping, and solicit correspondence from intending purchasers.

## PRACTICAL TALKS ON PRESSWORK.

NO. XIV—BY A PRESSMAN.

WHY do not some of our enterprising press manufacturers embody in the make-up of their fast two-revolution presses the easy, beautiful crank motion by which the bed is driven in place of the present nerve destroying and press shattering Napier movement? It certainly is capable of as great speed as the latter, and is much more accurate, besides the life of the press, once rid of the bumping which seems to be an essential feature of the present movement, would be prolonged to the manifest profit of printers. I would not for a moment think of accusing press manufacturers of not taking the interests of their patrons into consideration, but it certainly seems at times as if they were on the verge of doing so.

\* \*

In one of these papers a few months since I had occasion to criticise severely the miserable presswork displayed in a certain English printing trade journal. I notice that the *British Printer*, in taking exceptions to some remarks on the journal alluded to, copies, with some mutilation, the paragraph in which the criticism occurred. I think the mutilation was uncalled for, as well as the making me use the antiquated form of spelling the word "color." However, let that pass; my main object in calling attention to it is that I may have an opportunity to revise my opinion of English presswork, for I find that the *British Printer* is an elegantly printed journal indeed, one that will rank with the best of the printing trade journals of America. I am somewhat curious as to whether the method of making ready by the hard-packing process, which it gives in a recent number in reply to a correspondent, is the method used on the *British Printer* itself.

\* \*

While on the subject of the appearance of printing trade papers, I might allude to a monstrosity that has found its way to my table. It is the *Union Pressman* of Oakland, California. It claims to be "the only

paper published in the interests of pressmen," which leads me to the conclusion that pressmen must be in a very bad way indeed, if the *Union Pressman* is a representative of their craft. It is an eight-page, 5 by 9 affair, printed on a poor laid paper from worn-out country newspaper type, the presswork poor, and the editing as bad. Why any pressman should consider that our craft is crying aloud for such an organ, while THE INLAND PRINTER and other excellent journals are in the field, is beyond my imagination. In passing I will venture the remark that the *Union Pressman* will hardly find a place in the "World's Fair Display of Fine Printing," which the International Printing Pressmen's Union is conducting, except, perhaps, as a frightful example.

\* \*

Roller making has today become a special industry, so much so that very few pressmen either know the ingredients, or their proportion, of which they are made, and, even if given that information, could not cast a perfect roller once in a dozen trials. This exemplifies the constant evolution taking place in the printing as in all other industries. I remember well when a lad how much importance was attached to the necessity for knowing how to make good rollers, and how, on the days when rollers were being made, everything else had to give way to that all important duty. Now we are relieved of all that, and it is well, for leaving aside the obvious fact that a man who devotes his whole time to roller making will necessarily produce a more uniform roller, of better staying or printing qualities than he who only occasionally does so, the still greater benefit of allowing the pressman to devote his whole time to printing, in its best sense, is gained. There is really no more sense in having the pressman make his own rollers in these days than there would be in requiring him to build his own press, make his own paper or ink, all of those things being much better done by those whose special vocation lies in that direction than any pressman can possibly do it. At the same time I hold that every pressman should labor to acquire such an intimate knowledge of the

things he works with as to know where any fault lies, if necessary. How frequently we hear of the ink, the paper, the rollers or the press being blamed for some fault which knowledge and research would show lay in some other cause.

\* \* \*

Some device for effectually preventing offset on the second cylinder of the web press or other perfecting presses seems to be the necessity of the hour. Whether the successful means for doing this be mechanical or chemical remains to be seen, but it is certain that successful work such as is demanded in this age needs this aid as much as anything else. It is true that whoever provides it will reap large pecuniary rewards, provided he, or someone acting for him, possesses sufficient business acumen to secure the profits of his invention to himself. Too often the consciousness of having deserved well of his day and generation is all the reward the inventor reaps for years of study and labor.

#### REMUNERATION OF PROOFREADERS.

BY O. S. J.

CONSIDERABLE has been written of late concerning the relatively humble position of proofreaders, both with regard to salary and the manner in which they are treated, as contrasted with that of others whose duties are somewhat similar, so far as the responsibilities and exacting nature of the work are concerned.

Almost everyone in a position to know will concede that proofreaders as a rule are more at the mercy of their employers, as to remuneration and employment or discharge, than are the workers in any other trade of the dignity of printing. This fact is, without doubt, mainly attributable to the want of organization, and will find no parallel in any line of trade where the workers are unionized.

In the April issue of THE INLAND PRINTER, "J. B. C.," however, holds opinions at variance with those of most writers on this subject. After impressing upon his readers the importance of having all proofs revised in the proofroom, thus making it easy to fix the responsibility for any error that may be overlooked, he cites an instance where a proof was not revised and a mistake was allowed to pass into the final print—an instance of all-around stupidity that is amazing. He says:

The proof was read and properly marked, but in first proof was overlooked by the compositor. The revise was taken but not compared with first proof. The "make-up" saw that the proof was unmarked, and took it for granted that it was "O. K." In the morning there was a "hubbub," and a column or more of valuable space taken up with "explanation."

Now, as to the responsibility in this case, it seems that the proofreader discharged his duty properly so far as an opportunity was given him, and was, perhaps, excusable for not insisting upon the compositor submitting a revise. Proofreaders usually have plenty of work to engage their entire attention without making

themselves responsible for others who neglect to discharge their plain duties. However, many employers no doubt would have held the proofreader to account for not having gone to the composing room within a reasonable length of time and demanded a revise.

I think we may presume that in this case the blame for negligence rested in the composing room; for the fact of the proofreader's responsibility should not absolve a rational human being from the necessity of thinking for himself—of exercising that faculty of common sense which nature has given to most individuals and which is essential in the printing trade.

The compositor who failed to take the proofs into the proofroom for revise was stupidly neglectful of his duty. Perhaps he was "rushed," and so beset by various functionaries of the office that he quite lost his head; or, he might have been one of those compositors who conceive that what they do will be done correctly, despite various object lessons to the contrary.

Then "the 'make-up' took it for granted that it was 'O. K.," though there was nothing about the proof to indicate it. Perhaps it was not customary in that office to "check" or "O. K." proofs by means of a mark of some kind. This, however, is hardly probable. After the "make-up" had assumed that the proof was correct, it is strange that the proofreader or whoever verified the making up of the form failed to notice that the galley proof was not checked, or to discover the error.

After dwelling upon the advisability of having all proofs corrected in the proofroom, "J. B. C." closes with the following observation:

It seems clear that a person who receives pay as a skilled laborer, and who undertakes a difficult or easy task, and fails through negligence or incompetency, should make good the loss resulting from such failure.

This is doubtless intended for proofreaders, and I would like to ask "J. B. C." if they are paid, generally, a salary equal to what is usually paid "skilled laborers." Perhaps where "J. B. C." is employed they are, and in some other offices, but in many offices their wages are lower than those paid to compositors—in some, scarcely half as much. To be sure, these poorest-paid proofreaders are not as a rule graduates of the case, and have not that thorough acquaintance with the business which is desirable in any line of trade.

I have known of proofreaders, however, who, having no preliminary knowledge of typesetting, rose in time to trustworthy positions, and were enabled to command high salaries. I have also known of others who, taken from the composing room to read proof, allowed to pass so many ridiculous errors, and bad spacing (which compositors certainly should be able to detect), that further employment in that capacity was out of the question.

The experience of a proofreader is too often about as follows: A young person starts with copyholding, and, after some years of experience, is allowed to read proof for a remuneration considerably less than that

which a hodcarrier receives. If he protests, he is informed that Miss So-and-so will read proof at that figure, or that his ignorance of typesetting detracts from the merit of his work. Some utilize the keenness of perception and knowledge of correct language, born of long experience, to forge their way to success in the world of business or of literature, but I would caution young people who have an aptitude for such work against throwing away the best years of their life, and enjoin them to employ their talents to better advantage by acquiring a thorough schooling, or entering into some business that shall be of profit to them when they have mastered it, and shall guarantee an independent and comfortable living in manhood.

Written for THE INLAND PRINTER.

### STARTING IN BUSINESS.

BY RODERIC C. PENFIELD.

PROBABLY half the readers of THE INLAND PRINTER are bright, enterprising young men who are looking forward to the time when they shall themselves be employing printers. My business relations have given me a considerable amount of experience in starting new offices, or in selecting the material, and it is of these matters I write.

In the first place, the young printer should be sure of a field before going any further with his project. It is not good policy to try to edge in with a view of getting business by taking it away from other printers already "scratching" for what they have. Then make up your mind to make a specialty of some certain class of work, and stick to your determination as far as possible. No one printing house, except it be of the largest class, can do every kind of work.

Two or three partners in a firm greatly strengthen it. Not only is the work divided, each being able to give his department better supervision, but three men in a firm will draw more trade than one. I do not believe in stock companies, however. A good pressman, a good compositor and a good business man (not necessarily a printer) make a most desirable combination, and one whose success is assured from the start. Each partner should constantly bear in mind, however, that the others have opinions as well as he, and that he probably does not know it all, even if he is apt in his own line of business.

The location is important nowadays, particularly in a town of any size. If you can get into a building equipped with elevators, take a floor or a room, even if it is pretty well up, in preference to one reached only by stairs. Always keep in view the fact that to make money you must keep expenses down. Do not pay too much rent, get a well lighted room, and secure one where you can rent power, if possible, as that is cheaper than furnishing your own where you are using under twenty-horse power.

The class of work you decide to do will largely govern your selection of material. If you intend to make a specialty of show and poster printing you will

find that a "country" cylinder with tape delivery is better than any other make of press for that class of work; a two-revolution is best for fine cut work, while a "first-class" drum is about as good for all ordinary work as a more expensive machine. To start in business in a city of moderate size, and to be fairly equipped, a plant should consist of two cylinder presses—one a "pony," printing a sheet 19 by 24 or 22 by 28, and one to print a sheet at least 33 by 46. A two-revolution is to be preferred, of course, if the extra expense will not be too heavy a burden. Two job presses, one an eighth, and one a quarter medium, will also be necessary, of course. A good hand-lever paper cutter of thirty-two inches capacity will be sufficient to start with. If you must employ your own power, secure an electric motor, as an engine requires constant care and watching, besides the increased insurance likely to accrue to its owner. Buy only the standard makes of machines. Do not experiment. If you know a machine is good, do not be persuaded to buy another because it is a little cheaper, or has a few alleged improvements.

In the type department always bear in mind that where one customer likes fancy texts, wonderful combination borders or eccentric rule twisting, fifty like plain, neat type. A full selection of gothics, light, medium and black, condensed, and regular faces are the first necessities—then a moderate selection of antiques, romans, shaded letters and texts. The plain types *always* look well in a job—the fancy ones only now and then. For body type, have good sized fonts of nonpareil, brevier and long primer—it does not pay to have too many sizes, but rather plenty of each size.

Three or four fonts of neat wood type will be useful in a plant of this sort, even if no great amount of poster work be done. The arrangement of the composing room will require careful consideration to save the time of the men. In fact this applies to the whole office. Let the presses be together but well supplied with drying racks and tables. There should also be plenty of conveniences in the composing room, such as leads, slugs, furniture, quads, spaces and galleys. It will pay the young printer to put his money into these articles rather than into a rule twister or a patent mitring machine.

When you are ready to begin business, get up your office rules and then insist upon your employes obeying them. Do not hire men who are addicted to the use of liquor, if you can help it; never permit them to hold any responsible position, or you will find yourself in trouble some day—probably one of your busiest. Do not try to hire your help too cheap, and do not keep an employe when you find he is not what he represented himself to be, even if he is a friend.

Do not promise your customers what you do not easily see your way clear to perform. Tell them frankly if you cannot get their work out just as they want it. There is not one chance in a hundred of their taking it away. Do not start in without a thousand dollars in the

bank as capital. Settle bills promptly by cash or note. I close the article with these few pointers :

See that *every* job pays for itself, and always try to make every job give you a fair profit.

Send out all work securely and neatly tied up, addressed with a neat label or tag.

Use your own medicine — i. e., advertise.

Do every job well. Even if it is a cheap dodger, print it straight, and keep the color even.

Keep a record of the work you do every week, and what it costs you, and you can quickly tell whether you are making or losing.

Have your work on the presses all "made ready." It will save the time in the wear of the type.

Buy at the very lowest prices. Get every discount you possibly can. Everything is susceptible to a discount, if you insist upon having it. Do not buy too largely of any one house.

Subscribe for two or three good printers' journals, and then read them through from cover to cover.

Go over every estimate twice at least before sending it out. Thoroughly investigate the standing and credit of all strangers, and let the job go rather than risk much.

Send out all proofs in good shape. Do not use scraps, but have the proofs all on one size paper, together with the copy in proper order.

Get a receipt for every job you send out, including number of copies sent. Have every electro returned to a customer and receipted for.

Save all waste paper, trimmings, etc. Keep them sorted, pure white in one bag, mixed in another, waste in a third. They help out with the rent.

Keep a careful and constant eye out for waste in every department. It will be there unless checked from headquarters.

Written for THE INLAND PRINTER.

#### THE SPHERE OF WOMAN.

BY B. S.

THE much-mooted question of woman's true sphere has been discussed from almost every standpoint by the leading newspapers and periodicals of the day.

One writer has said, "Woman's sphere is home"; but whether it be fireside, the factory, the platform or the office, a true woman will take her place wherever duty calls.

She has been compelled, by the force of necessity, to associate and acquaint herself with all the different occupations and leading ideas that require both mental and physical labor, and this she has done without aid or encouragement from the opposite sex.

The demands of the times have called into requisition the best and worthiest efforts of mankind. Whether man or woman, we have been called upon to exercise the noblest endowments kind nature has bestowed.

It is an evident truth that this century has wrought a comparatively greater change in the condition of woman than in the condition of man. If we glance

back at the beginning of this wonderful era of advancement, we find woman occupying a sphere widely removed from the position of the woman of today. Then the idea of woman stepping outside the circle of her fireside into the occupations exclusively engaging man was considered a highly improper move. In fact, it was a step that she rarely made, more in deference to public opinion than on account of her inability.

The high character of her attainments in those early days is exhibited by the sterling qualities of those patriotic women foremost among whom are Abigail Adams and Martha Washington. Withal, the question of woman's ability, then as now, is beyond the ground of dispute; and in my opinion the greatest obstacle in the way of woman's highest advancement then was adverse public opinion.

The long years that have elapsed since the opening of this century — years so full of social pleasures and woes, victories and defeats — have served to soften the harsh, ungenerous radicalism fostered and preached by our honored forefathers. From the oppressive view then entertained of woman's sphere, the idea of the proper thing for her to do has broadened so as to encompass all the trades, professions and callings, giving her the almost indisputed right to do and advance as her best efforts will permit.

While the advancement has been all along the line, in no case has the change been more marked or achievements more notable than in journalism and the art of printing.

The name of the sex in journalism today is legion. Scores upon scores of women who have won success in this enchanted field could be enumerated, but space forbids. A few of the most noted instances are seen in the career of Mrs. Frank Leslie, who so successfully manages the immense newspaper interests formerly controlled by her husband, and Mary Louise Booth, who for twenty-one years shaped the course of *Harper's Bazaar*, and by her earnest work and womanly influence has traced upon the hearts of the people thoughts and teachings that will withstand the restless tides of ever-changing opinions, and will shine forever a star of the first magnitude in the literary firmament.

In the printing office, woman has taken her place and steadily advanced against the primary disheartening prejudices of the public. No work has seemed too difficult for her to undertake; and undertaking, she has made preëminent success. At the case she is quick, mastering the tricks of the trade with a rapidity that rivals that of her brother worker. She is accurate, and almost universally sets a clean proof. In the bookbindery, proofroom, and in every department of a publishing house she has proven herself equally useful. Today has witnessed a wonderful change in the condition of her sex, both socially and industrially; but it remains for the opening years of the twentieth century to see womankind exalted to her ideal position in the trades and professions, the sciences and the arts.

### POLICY VS. PRINCIPLE.

BY M. STANISLAUS MURPHY.

THERE is a common substance, whose component ingredients are formed principally for the purpose of putting a new surface upon sooty walls and ceilings which have become blackened and begrimed by time and neglect, and which is commonly known as whitewash. Time and again this substance is brought into requisition and, after a thorough application, the old walls become whitened, shining with a new luster, and for the time being all blemishes seem entirely obliterated. But the effect is only temporary, for in a short time the preparation wears off, spots and imperfections once more come to the surface, and the whitewash is again applied with the same effect. Surely, this must be a very useful article, and for the purpose described it certainly is.

But its use (or I might say abuse) is applied in other instances, where blackened walls give way to violated obligations, where soot-begrimed ceilings are supplanted by treachery and sacrificed principles, and it is here where the use of whitewash is being outrageously abused. Too much whitewash is being used in the typographical union today, and not a small amount of it is being injudiciously wasted. Its application in a great many cases is utterly ineffective, and unfruitful of any good whatsoever.

Who are the ones who appeal to us from time to time to have their obligations renewed, their records whitened and made clean, and what motives have they in doing so? Are they sincere and honorable in their intentions, or are their desires selfish and conscienceless? The ones who are forced to undergo the process of renovation before they can be received back into the fold were once members of the same organization to which they are again appealing for protection. They promised by a sacred obligation to abide by its laws, to uphold its principles, to defend its constitution, and thus affirming upon their honor as men were cordially welcomed and received into the union by their fellow-craftsmen who had preceded them.

For a time all went well, and they remained true to their obligations and to principle. But the test came, and they turned their backs upon the organization whose protective influences had sheltered them, and violated, without any compunction whatever, the sacred obligations which they but a short time since had solemnly affirmed. In the face of circumstances disastrous to the union and the cause of unionism, when their fidelity and assistance were most needed, they treacherously enrolled themselves in the enemy's ranks, and for selfish reasons and a lack of manhood arrayed themselves with the oppressors of honest, organized labor. Many of their fellow-craftsmen, unshaken in their principles, and with a sacred regard for the obligations they had taken, with that sense of right and justice which every true union man possesses, were obliged to sacrifice their position, and many of them

forced to leave happy homes to seek employment elsewhere. The sacrifice was great, but to remain honorable there was no other alternative.

But circumstances often change as suddenly one way as another. Influences are brought to bear, and there appears a possibility of an office being redeemed. Then it is that the craftiness of the deserters becomes apparent. They at once begin to play policy. The wind begins blowing the other way and they are anxious to blow with it, and ten chances to one, after being given another opportunity, with a returning wind the majority of them will blow back. Like whitewash upon the blackened walls, the effect soon wears away, and the blemishes in their records once more come to the surface. They are union or non-union, according to circumstances. Their motto is policy first, principle a second consideration.

This is the class of men on whom whitewash is being foolishly lavished from time to time, in futile endeavors to cover up defects in records contaminated by falsehood and treachery, and in a great many instances we are rewarded by nothing but renewed exhibitions of cowardice and deceit on the part of the ones so favored. No thought of whitewash should ever be entertained in regard to some men. There is less danger in keeping them out of a union than there would be in admitting them. Outside their position is known, and we know what they are capable of doing. Inside our entire time would be spent in watching them. With a great many it is, "once a traitor, always a traitor," and the sooner we begin to realize this fact the less use there will be for whitewash in the typographical union. Men who join unions for policy's sake are dangerous. They are unreliable, and are with us only to better their conditions. We want men of principle, with a sense of honor and manhood so keen that, whatever influences may be brought to bear, their records shall forever remain unimpeachable, and their obligations stand as a barrier against which nothing can ever successfully prevail.

Written for THE INLAND PRINTER.

### THE COMPOSITOR AND THE DICTIONARY.

BY M. A. C.

THE compositor as a philologist asks not to be placed among the learned, but as a critic of the opinions of dictionary makers he is ubiquitous. He rarely, it is true, gives vent to his opinions in print, but among his fellows he expresses himself freely and emphatically. When we consider for a moment the multitude of variations in English orthography, it is not astonishing that the compositor should grow restive when called upon to follow some antiquated spelling, Johnson's for instance, for a portion of a day and then to follow Webster or Worcester on some other publication for the remainder. Although any particular dictionary may be taken as the authority to be followed in a printing establishment, there are generally modifications made by authors which complicate matters still more

than when instructions are given for a spelling of some distinct style to be used.

The printer casts his affection upon the dictionary that simplifies matters for him, and that which he finds most consistent in spelling, compounding, hyphenating and syllabication wins his regard — though, indeed, it may be difficult to say which does meet these desiderata. The general public uses a dictionary for spellings and definitions almost exclusively, and so long as any mode of spelling has the sanction though not the preference of a lexicographer no exception is taken to it.

The uniform use of the preferred spellings of either of the American authorities, Webster or Worcester, is seldom if ever seen in any publication, and it perhaps never occurs to the minds of the various writers the never-ending struggle the compositors and the proof-readers of a printing office are engaged in to guard against the unsightly appearance caused by using the various spellings indiscriminately.

“Webster’s Unabridged Dictionary” has been the standard in many printing offices, and its rules of syllabication have been used in the majority of publications in America. With the advent of the revised edition of Webster’s dictionary, that of 1890, under the distinctive title of “International,” a return to the English usage in syllabication is noted in many instances, that cannot fail to make confusion worse confounded. Hopes were entertained that the “International” would be a step toward consistency in line with the editions on which it is based, but the reversion of the rules long obeyed has sorely disappointed the expectations entertained. That the rules have been discarded only after careful and long deliberation no one will be disposed to deny, but this concession does not lessen the difficulties of the compositor in wrestling with conflicting usages.

The following are a few of the changes that may be noted :

OLD	NEW
Act-ive	Ac-tive
Bill-iard	Bil-liard
Burg-lar	Bur-glar
Di-vis-ion	Di-vi-sion
Inn-ing	In-ning
Press-ure	Pres-sure
Pig-eon	Pi-geon
Com-pos-ure	Com-po-sure
Seiz-ure	Sei-zure
Nat-ure	Na-ture
Feat-ure	Fea-ture
De-part-ure	De-par-ture
Vest-ure	Ves-ture
Cult-ure	Cul-ture
Pro-ced-ure	Pro-ce-dure
Tu-mult-u-ous	Tu-mul-tu-ous
Man-u-fact-ure	Man-u-fac-ture
Cent-u-ry	Cen-tu-ry

It will thus be seen that it would be well for the compositor if he could sometimes take Talleyrand’s advice, and occasionally forget that which is not expedient to remember.

Written for THE INLAND PRINTER.

### PHOTO-ENGRAVING.

BY H. D. FARQUHAR.

THE art of photo-engraving for illustrative purposes, to be used with type forms and printed on the letterpress, dates from the advent of photography ; but until the last fifteen years it has not been made a business of, and but lately to any great extent, owing to the difficulties usually encountered when introducing a new article.

Not only was the consumer slow to take hold of the new mechanical processes of engraving, but the printer was always ready to make objections and advise the use of wood cuts ; but that time is now past. At present there are four times as many process cuts used as wood. The printer finds that they are as easily made ready on the press, produce equally as good results and cost about one-half the price of a wood cut.

Gillotage introduced the first practical process of mechanical engraving. It consisted of simply a drawing in line, made direct on zinc with a pen and lithographic tusch, same as the lithographer draws on stone.

To prevent the tusch from spreading, the zinc is grained, which is to give it a surface similar to a finely grained lithographic stone. This is accomplished by putting a well polished plate in a very weak solution of nitric acid and alum in water.

The disadvantages of this process are that the drawing has to be made reversed, as very few artists can make a satisfactory drawing in a limited space. The etching ground is also hard to hold on the zinc during etching.

These difficulties were soon overcome by the use of photography, thus securing firmer and finer lines ; the drawing being made on white paper much larger than the cut is to be, when completed. This allows more room for the artist to work in and study his design.

Both of these processes were etched similar to the mode of the present day, by making a light etch in a very weak bath of nitric acid in water, then taken out, dried and heated slightly, not more than the hand can bear, when it is powdered from all four sides with finely powdered rosin or dragon’s-blood. After each application of powder and brushing, it is heated hot enough to melt the powder, which makes it adhere to the side of the lines, thus protecting them from the action of the acid. For the second etch the acid bath is made a little stronger and the etching carried deeper than the first.

When it is judged that the plate has gone far enough for the second etch, it is removed and treated the same as for the first. The finer lines on the second or third powdering will begin to fill up, which they should, as they will be deep enough for ordinary printing. The etching if properly done will be deeper than most wood cuts.

The foregoing processes are suitable for line work only, and do not deal with the finer results of half-tone

engravings, which at present gives plates with all the gradations of half-tones seen in a photograph or wash-drawing.

This much sought for process did not come into practical use until 1884 or 1885 when Meisenbach produced plates in half-tone which showed superior effects to the former processes of line work, besides doing away with the expense of drawing.

Meisenbach's method of making half-tone plates is supposed to be by interposing a screen plate between a transparency and the lens—the screen being made like an ordinary wet plate copied from a print on white paper; the block from which the print is made being ruled on metal with a wood engraver's ruling machine. Still better results are obtained by coating a negative glass with a suitable ground, cutting through to the glass. This makes a sharper clearer plate than is possible to make by photography.

The screen when satisfactory is put face to face with a positive and placed in the kits on the front of the camera, when the exposure and development will be about the same as for ordinary work. The negative upon examination will be found to be made up of dots and lines which form the picture.

Other means for obtaining this class of work were by embossing a paper photograph with a grain by putting in contact under heavy pressure an inked wire gauze from which a negative was made, then a print made on zinc and etched.

This process will be seen by the experienced not to be of much value, as it would be impossible to produce negatives clear enough to make suitable prints on zinc.

Mr. Fox Talbot obtained a patent in England in the year 1852 for producing half-tone negatives by placing bolting cloth between a positive and the sensitive plate.

Two years later Pretsch made grain on prepared gelatine plates by reticulations. This process gives satisfactory plates for certain classes of work, but for general use is not of much value. The use of gelatine makes it harder to understand and manipulate, therefore it never gained much favor.

In 1865 E. & J. Bullock published results from experiments made by them. It contained all the practical methods for obtaining half-tone plates then known. They placed screens of various structure between lens and sensitive plate or between lens and copy to be photographed, also by placing screens face to face with positives, both being copied together.

The simplest method and, for ordinary work, the best plates, were produced by making the stipple when printing on the zinc.

A wet plate negative was first made by copying from a ruled print on paper. The resulting negative was then stripped from the glass by coating with a heavy layer of rubber and collodion. This film was then placed between any negative and the sensitized zinc, when it was exposed to light. After exposure the

plate being rolled up with ink, developed and etched as usual.

The only secret of half-tone work is to have a good screen plate. By good I mean one that is perfectly opaque with sharp lines and transparent dots. By placing such a plate from one thirty-second to one-sixteenth of an inch in front of the sensitive plate in the plateholder, and with ordinary photographic knowledge and by giving sufficient exposure, the best results can be attained.

Screen plates can now be purchased at a very moderate price and will last for years with a little care. They can be had either single diagonal or cross lined. The latter style is used the most and for fine work gives the best results. The sensitive solution generally used for sensitizing the zinc is composed of albumen, water and bichromate of ammonia.

For half-tone work, what is known among photo-engravers as bitumen printing solution is the best. It should be coated on the zinc thick enough to complete the engraving with one etch. It requires a considerably longer time to print with this solution, but the prints are so far superior to the albumen prints that this method is used almost entirely.

#### ICH BIN DEIN.

This ingenious poem, written in five languages—English, French, German, Greek and Latin—is one of the best specimens of Macaronic verse in existence, and worthy of preservation by all collectors. A good chance for the scholarly "devils" to exercise their ingenuity.

In tempus old a hero lived,  
Qui loved puellas duex;  
He no pouvait pas quite to say,  
Which one amabat mieux.

Dit-il-lui-meme un beau matin,  
"Non possum both avoir,  
Sed si address Amanda Ann,  
Then Kate and I have war.

Amanda habet argent coin,  
Sed Kate has aureas curls;  
Et both sunt very agathæ  
Et quite formosæ girls."

Enfin the youthful anthropos,  
Philoun the dun maids,  
Resolved proponere ad Kate,  
Devant cet evening's shades.

Procedens then to Kate's domo,  
Il trouve Amanda there,  
Kai quite forgot his late resolves,  
Both sunt so goodly fair.

Sed smiling on the new tapis,  
Between puellas twain,  
Cœpit to tell his love a Kate  
Dans un poetique strain.

Mais, glancing ever et anon  
At fair Amanda's eyes,  
Illæ non possunt dicere  
Pro which he meant his sighs.

Each virgo heard the demi-vow,  
With cheeks as rough as wine,  
And off'ring each a milk-white hand,  
Both whispered, "Ich bin dein."

# THE HUBER TWO-REVOLUTION SUPER ROYAL "MUSTANG."

**NO SPRINGS + CRANK BED MOVEMENT + BOX FRAME.  
THE FASTEST RUNNING PRESS OF ITS SIZE BUILT.**

**WE** take great satisfaction in calling the attention of the printing trade to this press, which is our latest production, and which has in its construction the novelty of being a combination of the best points of both the Stop-Cylinder and Two-Revolution style of presses.

The Bed is driven by means of a crank, which gives the smoothest reciprocating motion known to mechanics, and does away with the necessity of springs and the accompanying extra strain and wear, which more especially is liable to occur in a small size press having a large variety of speeds, from their non-adjustment.

The Cylinder is driven in a constant direction and at a speed to correspond exactly to the varying speed of the bed, by means of a perfectly shaped cam-gear. This cam-gear makes two turns to each complete stroke of the bed, and the same gear teeth are in mesh during the printing of every sheet, thus making the register absolutely correct. The cylinder never comes to a full stop when the press is in operation, but keeps moving slowly when the bed is reversing, until the speed of the bed is equal, when it increases in unison with the bed. The sheet is taken by the grippers when the cylinder is moving slowly, another point in favor of perfect register.

There are no complicated cam or stop motions to get out of order, or limit the speed of the press, and we guarantee every machine to print twenty-two hundred sheets per hour, when properly fed, in perfect register and without jar or extra wear.

The cylinder can be tripped at the will of the feeder, and up to the moment when the grippers have taken the sheet.

The bed is supported, under the line of impression, by four large adjustable rollers, journaled in stands, which are fastened to a rigid box stay that cannot spring or give in the least degree.

The side frames are of the box pattern, and every part of the machine is constructed with an eye to great strength and durability.

The sheets are delivered in front of the cylinder, clean side to the fly, which is positive and noiseless in its action.

We unhesitatingly pronounce this press the most simple, complete and serviceable of its size ever introduced, and we invite the closest inspection and comparison.

	BED.	FORM.	NO. ROLLERS	SPEED.	WEIGHT.
	26 x 35	23 x 32	2	1,000 to 2,200	7,000 pounds.
	26 x 35	19 x 32	3	1,000 to 2,200	7,000 pounds.

A TECHNICAL JOURNAL, DEVOTED TO THE ART OF PRINTING.

Published Monthly by

THE INLAND PRINTER COMPANY,  
183, 185, 187 MONROE STREET, CHICAGO.

H. O. SHEPARD, *Pres't.*      DR. JOHN E. HURLBUT, *Vice-Pres't.*  
C. F. WHITMARSH, *Sec.*      D. L. EVANS, *Treas.*

ADDRESS ALL CORRESPONDENCE TO THE INLAND PRINTER COMPANY.

Entered at the Chicago postoffice as second class matter.

CHICAGO, MAY, 1891.

**SUBSCRIPTION RATES.**

TWO DOLLARS per annum in advance; one dollar for six months in advance; sample copies, twenty cents each.  
FOREIGN.—To countries within the postal union, ninety-six cents per annum additional. To Great Britain and Ireland, postage paid, twelve shillings per annum in advance. Make money orders payable to H. O. Shepard.  
SUBSCRIPTIONS may be sent by express, draft, money order or registered letter. Postage stamps are not desirable, but if necessary to remit them, one-cent stamps are preferred. No foreign postage stamps accepted.  
CLUB RATES.—Six or more subscriptions, sent at one time, one dollar and fifty cents per year each. Cash to accompany order.

THE INLAND PRINTER is issued promptly on the fifth of each month, and will spare no endeavor to furnish valuable news and information to those interested professionally or incidentally in printing, engraving, electrotyping, stereotyping, bookbinding, and in the paper and stationery trades. Persons connected with any of these lines of industry will confer a favor by sending news from their section of the country pertaining to the above trades, particularly individual theories and experiences of practical value.

THE INLAND PRINTER publishes its net rates in each issue of the paper. No agent or representative of this Journal is authorized to deviate therefrom or make any discounts. It solicits advertisements from dealers in or manufacturers of any goods used by printers, bookbinders, stationers and similar lines of trade. Its value as an advertising medium is unquestioned. The character of the advertisements now in its columns, and the number of them, tell the whole story. Circulation considered, it is the cheapest trade journal in the United States to advertise in. Advertisements to insure insertion in the issue of any month, should reach this office not later than the twentieth of the month preceding.

**ADVERTISING RATES.**

**ANNOUNCEMENT.**

FOLLOWING the retirement of Mr. A. C. Cameron from THE INLAND PRINTER, hereafter its editorial control will be under the direct supervision of its founder, Mr. Henry O. Shepard, who has shaped its policy from the initial number, and under whose management it has attained such remarkable success and commanding influence in the field of technical journalism. From its inception to the present time neither money nor effort has been spared to make it the acknowledged representative of American typographical art, and in the future it will be the aim, not only to maintain the high position it already occupies, but to enlarge its domain of educational work, thus extending its usefulness, and render it a positive necessity to every sincere follower of Franklin that earnestly and honestly seeketh perfection in the art that covereth all arts.

THE INLAND PRINTER believes in progression; more than that, it believes in its own manifest destiny to make that progression felt among members of the printing and allied industries. The wonderful inventions and discoveries of the last decade have almost upset the old order of doing things, and the future is full of expectation and promise of a complete revolution in the technism of the past. That THE INLAND PRINTER has been abreast the wave of advancement we are gratified to say is abundantly attested by its enormous increase in circulation, which now extends to every habitable portion of the globe, and it is our object at all times to avail ourselves of whatever means unlimited capital, untiring energy and indomitable perseverance can command to make it more worthy of the generous patronage already received.

**THE COMING CONVENTION.**

THE thirty-ninth annual convention of the International Typographical Union will be held in the city of Boston, Massachusetts, commencing on the second Monday in June next. From a hasty perusal of a list of the delegates chosen to compose that convention, we are led to believe that it will be a very notable assemblage of the representative printers of America. It is very rarely that the local unions have selected so many well-known and experienced members to represent them as they have done on this occasion. The entire list is studded here and there with the names of veterans whose services have made them familiar to the craft in years gone by—names that stand prominently forth as champions of progressiveness without radicalism, conservatism without fogyism.

The last three or four conventions of this time-honored organization have been conspicuous ones in

many respects, easily overshadowing those held in all previous years of its history in the volume and importance of the measures they have projected, and, so far as time and circumstances would permit, brought to that point where an immediate anticipation of a final successful issue may be reasonably indulged in. It is but fair to assume that it is the ambition of every delegate to make the record of the next convention fully as meritorious as were those referred to, or, better still, to place the standard of industrious effort in advance of any point yet reached.

Among the many questions that will engage the attention of the members of the convention none, in our opinion, is of more real importance than that of the Printers' Home at Colorado Springs. Since the inception of this project THE INLAND PRINTER has always maintained that this was, above all others, the most creditable enterprise in which the printers of America have ever been engaged. Entirely separated from local issues in its breadth and comprehensiveness, it is certainly a question broad enough in its scope to warrant the support of printers of every class and locality, and one, as it now presents itself, in which there is little room for a difference of opinion as to the proper course to pursue. Instigated solely by a desire to advance the future interests of the printing fraternity, and without the least intention to imply the shadow of dictation or coercion, we will now, as we have in the past, firmly urge that the active interest of the journeymen printers and the esteem and good will of the public at large can be more directly secured by placing this noble enterprise upon a solid financial basis than they can by any other act or series of acts of legislation.

Happily, this work has progressed beyond its incipient stage. What remains to be done lies chiefly in the direction of making adequate provision for the future support of the Home. Everything else remaining to be done comes within the domain of details. While the settlement of this financial provision may rightly be regarded as a somewhat stupendous task, we cannot regard it as an insurmountable one for the convention to master, especially when we consider the fact that the delegates have a clientage of nearly thirty thousand members in the local unions upon which to rely for support.

The perfection and adoption of the necessary requirements relative to the building and operation of the Printers' Home might justly be regarded as work enough and honor enough for any one convention, and here they might properly rest for a popular verdict upon their endeavors. This, with the multiplicity of local questions and minor issues that force recognition and burden every convention, will no doubt keep the members comfortably busy during their week's stay in Boston. Still, if the convention is mainly composed of men of practical quality and orderly thought, they may, by eschewing exhaustive discussion on irrelevant and unimportant matters, find sufficient time to amplify and enlarge the present laws relative to organization.

This question is second to none in the opinions of many as to its importance on the future prosperity of the craft. Reorganization on the lines in vogue in other trade federations has frequently been advanced, but the idea has never been very enthusiastically received by printers generally. What they would seem to require, and what would no doubt serve every purpose, is a plan that will secure the organization of the competent printers of America on the same basis as is at present in operation.

To abolish the present system of referring important legislation to the local unions for final approval would undoubtedly be a step in the right direction and free the international body of much of the unwieldy and uncertain features which inseparably attend the adoption of all important measures under the present rule. When a new departure is proposed in the International Union, the reasons for such action are set forth at length and fully discussed. Cause and effect go hand in hand. When the question is finally submitted to the local unions the conditions are altogether changed. The measure is stripped of everything but the bare proposition of whether the members will vote for or against a certain rule. The reasons why the measure was favorably considered by the International are wholly lacking, a condition that would no doubt secure its rejection in the first instance in the convention.

#### THE NEW DAY OF PUBLICATION.

BY reference to the first editorial page, subscribers and advertisers will notice that our day of publication has been made the fifth of the month. It has been decided best to make this change for several reasons, which will probably be apparent to all, without our mentioning them at this time. A person naturally looks for a copy of a publication for a certain month sometime during the first part of that month; and there is no question but what this change just inaugurated will meet with the approval of all admirers of THE INLAND PRINTER. In this connection we would ask our contributors and correspondents to send on their articles and letters so that they will reach this office on the twentieth of the month preceding the month in which they are intended to appear; and our advertisers are also requested to furnish copy for new advertisements, and any change they wish to make in old ones, by the same date. Typefounding establishments desiring to show specimen pages of their new faces of type, borders or ornaments will please have them here by the twentieth of the month.

#### A SUGGESTION.

WOULD it not be well for the delegates to the International Typographical Union, convening in Boston in June next, to take some action looking toward a proper display of matters relating to the typographic art at the World's Columbian Exposition, to be held in Chicago in 1893? The International Printing Pressman's Union has already appointed a committee

to arrange for and take charge of an exhibition of this kind, and it seems to us that the typographical union should not be behind in the matter. If it is decided that the interests of printers and pressmen are so closely allied that it would hardly be worth while to make a separate exhibit, why not arrange to join hands with the pressmen and assist in making the display which they propose to have more attractive than if managed by the pressmen alone? This subject is certainly entitled to careful consideration, and we trust that the delegates to the International Typographical Union convention will unite upon some plan for taking an active part in the typographic exhibition at the coming fair, which is to be the greatest the world has ever seen.

#### SEND IN YOUR SPECIMENS.

**S**UBSCRIBERS everywhere are requested to send specimens of jobwork to us for review. Every package received will be promptly acknowledged in the issue following its receipt. We cannot expect, of course, to please everyone in the criticisms made on specimens received, but will endeavor to make suggestions where necessary to point out methods of improvement, and where work really deserves it will give proper credit and approval.

**I**T seems that our editorial reference to Mr. Duncan F. Young's article in the March issue, although combating his arguments thoroughly as to certain points, still leaves a little more to be said on the question, according to two of our readers, and we take pleasure in publishing in this number the articles of Mr. Theodore L. De Vinne and Mr. W. B. Baker. Certain it is that a workman is helping himself and his trade, too, when he helps to make his employer's business more productive; and every effort he makes to diminish production, to diminish profits, to keep out machinery, is sure to injure him, directly or indirectly. The labor-saving devices of the day should be accepted as an inevitable outcome of the genius of this inventive age, and be looked upon as blessings rather than as curses. A proper view of the subject should be taken by every member of the craft who has the best interests of himself, his society, his home, and his work, at heart.

**W**E ask our readers to overlook the apparent tardiness in publishing some of the communications that appear under the heading of "Correspondence." A number of them came too late for insertion in the April issue and are published in this, and although somewhat old it is through no fault of the writers. The items of news therein will undoubtedly be read with interest, notwithstanding the fact that they are printed a week or two later than intended. By the time the June number goes to press we expect that everything will be moving smoothly, and that the inconvenience caused by change in date of publication will have been entirely overcome.

**E**MERSON says: "Our knowledge is the amassed thought and experience of innumerable minds," and, judging from the subscriptions that come in by every mail, we are satisfied that progressive and ambitious printers are finding that the best fount to look to for topics of the trade and bright and timely discussion of technical problems is *THE INLAND PRINTER*, in the columns of which the contribution of thought and experience is world-wide.

**S**AMPLE copies of *THE INLAND PRINTER* cost 20 cents each. We have from ten to fifty applications a day for these, and it is too much of a tax upon us to supply them unless cash accompanies the order.

Written for *THE INLAND PRINTER*.

#### COMPENSATION OF PRINTERS.

A REPLY TO THE ARTICLE OF DUNCAN F. YOUNG, IN THE MARCH NUMBER.

BY THEO. L. DE VINNE.

**I**T was shown in the editorial remarks on Mr. Young's article that any estimate of the cost of composition which is limited to the price per 1,000 ems paid to the piece compositor is necessarily "one-sided" and incorrect, and that every employing printer has to incur large expenses to provide the printer with the materials to do his work. Some of the items were specified, but no attempt was made to price them. Nor shall I, for it would take too much space. I confine myself merely to this side of the question: How much money does an employing printer have to invest to provide materials for a printer?

In a very small job office, or village newspaper office, the sum required may not exceed \$400 a man. In a few very meagerly equipped offices it may be less, but \$400 is a low average. Can an office that costs but \$4,000 give steady employment, as a rule, to more than ten men and boys?

In a daily newspaper office, or a large city book and job office, the sum required cannot be put lower than \$1,000 to every hand, man and boy included. To keep one hundred men constantly (not spasmodically) employed there must be material worth \$100,000. Here and there an exception may be noted in an office doing peculiar work, but the estimate of \$1,000 to every workman is based on an actual knowledge of the capital and the working force of many offices. In a prosperous office the capital required is often much more than \$1,000.

Who pays this tax? The printer or the employer? As I reckon, the employer has to put up from \$400 to \$1,000 to provide tools for the workman. Considering the interest on money invested and the deterioration of material, the employer pays a tax from \$1 to \$3 a week for the privilege of getting the workman's services.

Please note another conclusion. In the small office, where \$400 is the value of the materials furnished, the printer gets from \$9 to \$12 a week. In a large daily

newspaper office compositors get from \$20 to \$30 a week, and the pressmen as much or more.

Why does the printer in the large office get more? It does not follow that he always does more labor. He often does less. Only because he derives a collateral benefit from the capital and enterprise of the employer, from the services of editors, reporters and telegraphers, from the skill of inventors, as is notably shown in the rotary printing machines. Could compositors earn even \$3 a day if they had to compose and sell their own thoughts, and not those of authors and editors? Could the night pressman on a rotary machine earn \$5 or \$6 a day if put to the harder work of the hand press. The printer who is attached to a prosperous printing office gets his higher wages because he is a member and a partaker of the advantages of the organization. He is really in debt to capital, to intelligence and to the inventor for a good share of his wages.

The same observation can be applied to compositors on thrifty weekly papers and in prosperous book and job offices. The wages now paid to compositors, whether on piece or time, comes but partly from the profits of their own work. Every employing printer who has had seven years' experience—for it needs this time to get the knowledge—will testify that the prevailing rates of composition are altogether too high for the receipts. How, then, it may be asked, are workmen paid? There is only one answer—by averaging the receipts of composition with that of the other branches of printing done in the same house. In newspaper and publishing houses, the deficiency of profit in the compositor's earnings is made up by a practical tax on the larger profit reaped from publication or advertising. In book and job offices, it is made up by a similar tax on the profits from sales of paper, or from electrotyping, presswork or binding. So far from paying a tax for the privilege of working, the compositor is receiving the profits of a tax paid by his associates in other branches. To keep up the standard wages of compositors, the pressmen, electrotypers and bookbinders have to contribute through their employers a portion of their own profits. If employers had to depend for their living on the profits of composition only, compositors' wages would have to be largely reduced. At present rates, no office that does composition only could keep its composing room open; yet the employer does keep it open, often at a loss, but only because it is a feeder to the departments of presswork, electrotyping and binding, from which he does derive profit.

The printers who get the least wages are those who work in offices that have least capital and machinery. No compositor expects to earn \$5 or even \$3 a day in an office that has a few meager fonts of type and hand or treadle presses only. He knows, or soon learns, that no employer of this class can afford to pay liberal wages. His receipts will not warrant it. This rule will hold good, the scantier the materials provided, the worse it is for the workman.

There is a system of philosophy, now in high fashion among some workingmen, which teaches that the bane of labor is capital: If the workman could sell his labor direct without the intervention of the employer, he would thrive; if there were less machinery, wages would be higher. I shall not undertake now to show the fallacy of these propositions; but I may say that the few specious illustrations that have been adduced concerning the exactions of middlemen and monopolists have no point and no application whatever when attempt is made to apply them to the printing business. I maintain that new inventions, new processes and increased capital in printing have increased wages and every way bettered the condition of printers. The printer who quarrels with capital as exacting a tax on labor for its right to earn a living should study the social conditions of countries in which capital is not invested in factories or machinery. In Japan, China and India, the mechanic as a rule works for himself, in his own house, in his own way, on work designed by himself only, and he sells the product of his labor to whom he pleases. As weavers and embroiderers of silk and textile fabrics, as carvers of ivory, stone and metal, as workers of porcelain and lacquers, and as cunning workmen in every kind of elegant industry that can be done at home, they are, beyond dispute, the most skilled of mechanics. They are slow but faithful workers; they are protected in the practice of their respective trades by caste, by governmental regulations, and by trade union laws more stringent than any dreamed of here, and yet the average good Asiatic mechanic, who is not oppressed by capital or machinery, does not earn in one day as many dimes as the American mechanic does dollars.

Allow one more suggestion before I close. Would it not be better for the compositor to ally himself with capital and machinery instead of putting himself in the attitude of passive or factious hostility? His opposition will not stop invention or new processes. It is for him to say whether he will join hands with his employer in trying to get a mutual benefit from machinery, or whether he shall waste his strength in an opposition that must be ultimately unavailing. Instead of seeking "a pension from the government" for loss of work through new machinery (a contingency that seems most improbable), would it not be better to try to make himself a master of the machine. He can be its master if he chooses. Capital and machinery are continually demanding abler men for their management. There is an unsatisfied demand at all times for better compositors, makers-up, proofreaders, foremen, overlay cutters, wood-cut pressmen and managers of machines. But this ability in management is not to be acquired by a neglect of machines or a refusal to recognize their right to exist, or by a diligent reading of treatises on political economy. If the workman chooses to study abstruse theories in preference to practical work, he has himself, and himself only, to blame if capital and machinery neglect him.

**LESSON II.**

VOWELS AND DIPHTHONGS.

**V**OWELS are vocal sounds made by uninterrupted emissions of breath. Diphthongs are close unions of vowels. Vowels and diphthongs should be pronounced as single sounds for shorthand purposes.

32. In this shorthand the marks for the vowels and diphthongs are, like the consonant marks, unchangeable in form. They do not depend upon position for legibility in this shorthand.

33. The vowels and diphthongs are divided into three classes:

(a) Long, \ ā, | i, / ē, - ō, = ōō, < ū, > aw.

(b) Short, \ ă, | ĩ, / ě, - ȃ, = ȃȃ, u ũ, U ur.

(c) Extra, 7 oy, 7 ow.

NOTE.—>, <, 7 and 7 are also called "Quaternions" because they are four made with two marks.

34. The vowel and diphthong marks are short. They are scarcely long enough to be told from dots in their ideal size, which size is as follows:

— / | > > < < <

They are, however, usually made a length of one-sixteenth of an inch for each stroke.

35. The long vowels and diphthongs are shaded, except > aw and < ū; these two, the short vowels, and two other diphthongs, are unshaded.

36. Twelve vowel marks are derived from strokes having the same directions as the corresponding consonant marks, formed from

37. The marks for short ũ, and long and short double-o are joined by a tick for ease of writing. This joining tick may be omitted in these letters; as,

= = " "

38. Theories of pronunciation having caused verbal scrimages, and acrimonious and interminable discussions, we shall not here enter the field of controversy; but group now, for practical purposes, the vowel and diphthong sounds as follows:

(a) The single shaded straight marks are used for the regular long sounds of ā, i, ē and ō.

(b) The unshaded single straight marks are used for the regular short sounds of ă, ĩ, ě and ȃ.

(c) Unshaded marks with angles are used for the sounds of ũr, oy, oi, ow, ou (as in *bough*), aw, long ū, short ũ, ȃȃ, ew and eu.

(d) \ short ā, is used for a in the classes of *care* and *staff*.

(e) - short ō, is used for the Italian a, as in *Cuba* and *what*, this sound being identical with the short ō's.

(f) The sound of ě, as in *her*; ĩ, in *irksome*; ũ, in *surge*, is almost identical. This sound may be represented by short ě, ĩ or ũ, according to the letter in

the word. This method preserves the original spelling, which aids in deciphering the characters. Another, and useful method, is to represent this sound of ě, ĩ or ũ, and also the accompanying r, by the character U ũr; otherwise, r would be represented by / ray or \ r, and the ě, ĩ or ũ by /, ĩ, U.

(g) Vowels often have other sounds than their own; in such a case, write the sound and not the name; as, any, ěnĭ; machine, mǎshĕn; full, fȃōl; soup, sȃōp; feign, fǎn; there, thǎr.

ANALYSIS OF VOWELS.

SIGN.	NAME.	SOUND.	SHADE.	FORM.	DIRECTION.
\	a	a as in <i>pry</i> .	Shaded.	Straight.	Down or up.
-	ā	i " " <i>pie</i> .	"	"	"
/	i	e " " <i>eat</i> .	"	"	"
	ē	o " " <i>oak</i> .	"	"	Left to right or right to left.
∟	ō	oo " " <i>boo</i> .	"	"	Left to right, tick, right to left.
<	ū	u " " <i>rude</i> .	Unshaded.	Straight and curved.	R. to l., straight; l. to r., curved.
>	aw	aw " " <i>law</i> .	"	"	L. to r., straight; r. to l., curved.
∟	ā	a " " <i>at</i> .	"	Straight.	Down or up.
/	ĭ	i " " <i>in</i> .	"	"	"
-	ě	e " " <i>pet</i> .	"	"	"
\	ȃ	o " " <i>on</i> .	"	"	Left to right or right to left.
∟	ȃȃ	oo " " <i>wool</i> .	"	"	Left to right, tick, right to left.
∟	ū	u " " <i>hurt</i> .	"	"	Down, tick, up.
∟	ur	ur " " <i>hurt</i> .	"	"	Down, up, down.
∟	oy	oy " " <i>toy</i> .	"	"	Left to right, down.
∟	ow	ow " " <i>how</i> .	"	Straight and curved.	L. to r., straight; r. to l., curved.

REVIEW QUESTIONS.

31. What are vowels? Diphthongs? How should they be pronounced? 32. Are the marks for vowels and diphthongs changeable in form? 33. Into how many classes are the vowels and diphthongs divided? Name them. Name the vowels and diphthongs in each. Name the "quaternions." 34. How long are the marks for vowels and diphthongs made? 35. What marks are shaded? What two exceptions are there for long sounds being unshaded? Are the short vowels and two other diphthongs shaded or unshaded? 36. From what geometrical forms are eight vowel and one of the diphthong marks derived? 37. What marks are joined by a tick? Why? May this tick ever be omitted? 38. In grouping the vowel and diphthong sounds, what are used for the regular long sounds of what letters? What are used for the regular short sounds of what letters? What are the unshaded marks with angles used for? What mark is used for A, as in *care* and *staff*? What mark is used for the Italian A? How may certain sounds of E, I and U be represented? What is another

and useful way to represent those sounds? What is this combination called? Do vowels ever have the sounds of other vowels? Give some examples. What must we do in such cases? Describe each vowel and diphthong mark by form, name, sound, shade and direction.

## LESSON III.

## WRITING WORDS.

39. This shorthand uses three methods of writing words:

40. *First Method*: Write the pronounced elements of the word, both consonants and vowels (including diphthongs), continuously, as in longhand; as, namely, top, mop.

41. *Second Method*: Write first the consonants, one after another, one beginning where the other ends, and insert the vowels or diphthongs afterward, before or after the consonants; as, namely, top.

42. *Third Method*: A combination of the first and second, considering legibility and convenience; as, comely, nobby.

43. Using the first method saves time, in many cases, of lifting the pen, and it greatly increases the legibility of the written word; therefore, the first method should be used as much as possible in this style, which we call the literary style.

44. Using the second method avoids some awkward outlines; these outlines are such as do not readily join each other; as, decay, tip. This difficulty of

joining parts of outlines may often be overcome by the device explained in the next section.

45. *The Connecting Tick*: (a) The connecting tick is an unpronounced mark, unshaded, very short, a mere offset, made in any direction for the best angle between consonant or vowel strokes, or both, otherwise difficult to join; as, decay, tip.

(b) Using the connecting tick is sometimes very convenient, especially when two adjacent marks have the same direction; as, pay-day, Jew.

(c) The connecting tick's least convenient use is with certain unshaded marks; as, i, oy, ow, aw and u.

46. *Reporting verbatim* requires nearly all the vowels to be omitted. Our reporting style is composed of modifications of the literary style, with reporting style principles. For the present, use the first method of writing whenever you can. The examples and reading exercises give the correct shorthand forms of many words. The writing exercises contain no word whose correct outline has not been explained, and probably illustrated.

## CAUTION.

47. Write no word during your course which has not been illustrated by an engraving, given in a writing exercise, or fully explained in the principles. If you do experiment with unknown outlines, you will be

apt to learn wrong forms. Each lesson will give a shortening process for some forms or letters in certain combinations. When you have acquired the shorthand principles, and understand their examples, you will be able to write any word in its best form and manner.

## POSITIONS.

48. *Single letters, or words*.—All single letters, or words, rest, in this (the literary) style, on the ruled, or imaginary, line of writing; as, t, a, O!

49. *Combined letters, or words*.—All combined letters, or words, rest, in this style, as follows:

50. *Horizontals* rest upon the line of writing; as, oö, Coe.

51. *Inclined, or perpendicular, or part horizontal and the rest inclined, or perpendicular*; the first inclined or perpendicular stroke rests upon the line of writing:

(a) When all the letters are entirely consonants, or entirely vowels; as, k-p, t-chay, e-i, ä-ö.

(b) When the letters are part consonants and part vowels, or diphthongs, the first inclined, or perpendicular, consonant stroke rests upon the line of writing and governs the position of the other marks in the word, they following the first in their order; as, keep, teach, toe, ray, fö.

52. Our vowel scheme does away with the need of the vowels being placed with reference to the consonants' "beginning, middle, or end." We do not require ruled nor dotted lines in this, the literary style.

## READING WORDS.

53. In reading a word written by the *first method*, read the vowels and consonants as they come; as, D-ö-ray-ö, Dora; t-i-i-ing, tying; M-ä-ray-i, Mary.

54. In reading a word written by the *second method*, read the vowel, or diphthong, before or after the consonant, according to the following

## RULES FOR INSERTING VOWELS.

55. *A vowel before a consonant*.—By the second method, if a vowel, or diphthong, is to be read before a consonant, it is written at the left of a vertical, or inclined, consonant; or above a horizontal consonant; as, ape, eight, etch, ache, oak, aim.

56. *A vowel after a consonant*.—By the second method, if a vowel, or diphthong, is to be read after a consonant, it is written at the right of a vertical, or inclined, consonant, or below a horizontal consonant; as, Joe, day, pew, mummy, key, knee.

57. *A long vowel between two consonants*.—By the second method, if a long vowel, or a diphthong, comes between two consonants, it is written after the first of these two consonants; as, died, babe, tomb.

The vowels or diphthongs written after the first consonant, when coming between two consonants, are:

a, i, e, o

### AN ANSWER TO DUNCAN F. YOUNG.

BY W. B. BAKER.

THE discussion in THE INLAND PRINTER of the various problems which now confront the followers of the "art preservative of arts" will prove invaluable to progressive members of the craft in all parts of the world, but I am bound to say that the article of Duncan F. Young, on "Compensation of Printers," in the March number of THE INLAND PRINTER, created no little surprise.

That Mr. Young's position in reference to a tax to capital being paid by the workingman is not well taken was fully demonstrated by the editorial discussion of that paragraph of his article; but a position that seems to me equally absurd is that printers must combat by every means possible the introduction of any improvement in the method of typesetting that has prevailed for four hundred years, though Mr. Young virtually confesses that a great change in this line is an event of the very near future.

Anyone who has given the matter careful study will not hesitate to say that a method of typesetting by machinery is surely coming, and coming to stay. This being so, is it wisdom for the members of our great craft, particularly the organized members, the International Typographical Union, to wage what will be a hopeless warfare against the introduction of the typesetting machine? What will be the natural result of such opposition? Not that the typesetting machine will be abandoned, nor that its introduction will be materially delayed, but that instead of giving employment to a large number of the printers now employed in this and other countries, the machines will be operated by typewriters, by young women and, as the proof will doubtless show, by "blacksmiths."

That the intelligent printer is by far the best equipped to successfully operate a typesetting machine, of whatever kind it may be, no one will deny. Now is it not the part of wisdom that the individual printer and the International Typographical Union, as representing the great body of printers, instead of hopelessly antagonizing this improvement, accept the change with good grace, demanding only that in the operation of the machines competent printers shall be employed?

That some will be thrown out of employment is probably unavoidable, but when we consider the large number of foremen, job printers, etc., who will not be affected by the change, the percentage will not be large, and it will be a case of the "survival of the fittest," and why should the competent and progressive printer fear and tremble? As the revolution in press construction during the past century has multiplied the production of printed matter, so will a cheapening of the cost of composition increase the demand, and in a very brief period the number employed will greatly exceed that of the present day. Though at first the demand may be lessened, in the same ratio will the supply decrease, and

the change is not to be made in a day, but gradually, covering a long period of years.

Mr. Young's proposition, that those thrown out of employment by any change, as foreshadowed, be given a pension by the government, or otherwise, would seem to me to be so thoroughly impracticable and unreasonable that I feel bound to consider it as a humorous suggestion.

### THE "PATENT INSIDE" THAT I WOULD PUBLISH.

BY THEOPRACTICUS.

THAT I am a lover of "patent insides" I will not for an instant admit; but I have to recognize the fact that they are a necessary evil, in these days when every country printer (and, for that matter, nearly every city printer) is ambitious to be a "publisher," and which ambition, be it laudable or not, can in the majority of cases be easiest filled by the aid of the "auxiliary" printer.

The evil genius who inflicted the "patent inside" system upon the world can only be excused on the score of economy. No one who publishes a paper by its aid can truthfully claim that any other reason than its lower cost actuates him in taking advantage of this system. To argue on this point would be an idle waste of words.

The economies of auxiliary publishing are occasionally astonishing from the small amount of home-set matter some publishers succeed in getting along with. But as yet I have not seen it dwindled down to less than one page of a five-column sheet, either folio or quarto; though some of these single home-print pages are often nearly all advertisements. The auxiliaries are furnished to the country printer with either three or seven pages ready printed as he may choose, and with some rickety old hand or "army" press he supplies the additional "local" page in his own office. I have never done such work, though I have handled hand presses, yet I have no hesitancy in declaring that it is a very disagreeable job to work off such papers, folded, as they are, to enable one to print them on as small a press as possible.

If the country publisher is the least bit enterprising he will also want to do jobwork. For this his hand press will not be available. It will be necessary for him to procure a jobber, one appropriate in capacity to the work he expects to do. A quarto medium is the smallest press he can afford to indulge in for general work, costing — if he should pay list prices — from \$250 to \$320. His hand press, for a five-column folio, to print one page at a time, will cost at least \$150; or an "army" press about \$60.

Now I question: why get a hand press at all? Why not print the home part of your paper on your quarto medium jobber? It is not big enough, you say. Let me give my scheme — "the 'patent inside' that I would publish."

A quarto medium chase will hold a four-column page, measuring 9 by 13¾ inches, and a four-page paper can

be easily printed with it, one page at a time. But I would rather print a three-column page, also one page at a time.

The three-column page is my ideal for newspapers, and I fondly hope within my own generation to see it the universal size for the daily and weekly press. The signs are already in the air toward such a desideratum; in fact, a daily just established in New York has adopted a small-size page, and with such a pretentious beginning we may soon expect to see others adopting rational dimensions. The three-column page cannot come any too soon to please the average reader, who detests the handling of the bulky pages of the present day newspapers, though they are a vast improvement upon the blanket folios of the last generation. No one will weep at the disappearance of the large folios and quartos except the thrifty housewife who uses them to cover her kitchen and pantry shelves. What a delight it would be to the reader to receive his morning or evening paper in magazine form! No spreading of arms all over the room, car or table in the effort to hold it or turn pages.

But to come back to my "patent inside," and how I would manage it. I would order the auxiliary man to furnish me a sixteen-page three-column sheet, all complete, folded, pasted and cut. If a sixteen-page sheet were more than I could afford, I would order an eight-page sheet, complete, folded and cut. Within either of these I would fold a four-page section printed on my quarto medium. Stitching or pasting the whole together I would consider advisable, and would do so if at all possible. Thus I would furnish my patrons a neat, convenient, easily handled journal, either of twelve or twenty pages, at the minimum of outlay in trouble and expense. I could get along with less type, could print my forms quicker, avoid the outlay of money for a hand press, do better presswork, and economize on room.

After a while, when I would be prosperous enough to discard the "patent inside," and could set and print my whole paper at home, on either a 20 by 25 pony or a 24 by 36 full-size cylinder, I would still stick to my three-column page. I would add a stitching machine and paper-cutter, if I did not have them already, in order to furnish my paper nicely stitched. On holiday occasions I could easily put a colored cover on my paper, and thus advertise my enterprise, and do it at a moderate expense.

As to the details of the typography of my paper, a few points may be mentioned as of value to those to whom I suggest these above plans. My columns would be 10 inches long (easy for figuring on advertisements) and 13 ems, 12 point, wide; three columns and two 9 point column rules would equal  $6\frac{3}{4}$  inches, which would be the length of my head rules. My back margins in chase would be  $1\frac{3}{4}$  inches (or  $\frac{7}{8}$  inches from center of fold to edge of type), and my head margins the same. On a sheet of paper 24 by 35 (the auxiliary's regular seven-column folio size) this would leave a margin of  $1\frac{1}{8}$  inches at the foot and outside margin of

the page, to me a very neat, respectable and satisfactory margin.

Under no circumstances would I use a font of body type larger than bourgeois, or 9 point; I would, however, prefer brevier, or 8 point — nonpareil, or 6 point, at all times, of course, for the body type of advertisements. In my heading and display letter I would religiously follow the style of my "patent inside" printer, in order to have the appearance of my paper harmonious throughout. As soon as I could afford to issue an all home-print sheet, I would use my own taste as to display letter; this, however, would not permit me to use anything but plain styles of type for my paper; fancy job faces are entirely out of place in a daily or weekly paper.

There may possibly be some disinclination on the part of auxiliary houses to furnish three-column sheets. Perhaps it would incur extra expense for them to supply such a demand. Yet I have no doubt that in the end it would pay them to foster such a size of page. Instead of stereotyping matter in single columns as now, they could stereotype it in single pages, a decided advantage in imposing and locking up. Those that furnish plate matter would do well to offer it made up in pages after my ideal, and encourage the country editor to adopt this size page. It would do away with much of the slovenly make-up now so common on plate matter when sawed apart and joined in the country office. These ideas are worth considering and I hope to see some enterprising auxiliary house "trying it on."

#### NOTES ON WOOD ENGRAVING.

NO. XLVIII — BY S. W. FALLIS.

THE first illustrated American newspaper really worthy the name was projected and published by T. W. Strong, under the name of the *Illustrated American News*, making its first appearance, No. 1, Vol. 1, on June 7, 1851. The drawings for this paper were mostly by Thomas, Wallin, Hoppin, Bellew and Hitchcock, and the engravings were by Strong, Anthony, J. W. Orr, N. Orr, Frank Leslie and John Andrew. The engravings were not of a very superior quality, but may be classed as a collection of cheap newspaper illustrations about on a par with this class of cuts of the cheap nature that has flooded America for the last twenty-five or thirty years. The life of the *News* was of short duration; the financial support not being equal to the expense, it was compelled to suspend, the last number appearing under date of March 12, 1852. In the following year, however, a vigorous effort was made to revive the publication of the *News*, and under the management of the great showman, P. T. Barnum, and Mr. Beach, of the *Sun*, the second *Illustrated News*, of New York, made its appearance January 1, 1853; but, from the same cause as its predecessor, a second failure was recorded, the *News* making its last appearance on November 26, 1853. The cuts for the second *News* were very similar in point of merit to those of the earlier

paper, and, while they did little for the advancement of the true beauties of the art, they served as an educator of some of its capabilities in cheapness, and gave the engravers an understanding of their own speed in plying the graver, which speed, once acquired in this coarser work, was of great assistance in the rapid execution of the more meritorious engravings that were to follow.

Strong had an experience, by his failure, which was beneficial to him in his understanding of the popular requirements in this line of the engraver's and printer's art. Another venture of Strong was *Diogenes—his Lantern*, which, however, lasted but six months, from January to June, 1852, inclusive. The cuts were an imitation of *Punch*, from drawings chiefly by Bellew, but as this venture was to be met by the inevitable fate of failure the publication was suspended, and in the same year Strong started his *Yankee Notions*, which was crowned with a profitable success for this enterprising publisher. It reached a sale of forty-seven thousand and lasted for fifteen years; the drawings were of great spirit and telling effect, from the pencils of McLean, Hoppin and Howard, while Brougham and "Artemus Ward" were among its contributors. Edison, the inventor of the telephone, began life under its auspices, hawking it for sale. The unparalleled success of the *Notions* prompted Strong to another venture in imitation of *Punch*, in 1856, under the title of *Yankee Doodle or Young America*. This venture, however, did not prove a financial success and only lived six months.

The art of illustrating by wood engraving was now fully awake and its capabilities being rapidly realized, prompting enterprising and energetic publishers and men of means to ventures that would bring to light the talent of designers and engravers on wood, thereby spreading intelligent understanding of objects and places real, and subjects of allegory and imagination. This rapidly increasing demand for pictorial illustrations was met as rapidly as it was fully understood, and in December, 1855, *Frank Leslie's Illustrated Newspaper* made its first appearance and courted public favor with illustrations superior to any of its predecessors. This paper gained a popularity which has continued to increase to the present day. The popularity of *Frank Leslie's* enthused the spirit of rivalry, and in January, 1857, *Harper's Weekly* began its eventful career, and has kept pace hand in hand with *Leslie's*. These two leading illustrated newspapers are too well known to call for any comments in these "Notes," as not only are they known to all intelligent Americans, but throughout the civilized world; and as to the benefit of advancing the art of wood engraving there can be no intelligent estimate, only that these two papers have been the mainstay and support of the art for lo these many years. In years gone by it was the great aim of engravers on wood to gain employment, if only for a short time, on one of these papers, as to be able to say "I worked for Harper or Leslie" was all the recommendation required for the securing of a lucrative situation in any of the rapidly multiplying engraving

offices throughout the country. An engraver who had worked on *Leslie's* or *Harper's* was regarded with envy and admiration by his less fortunate brother in art, and anyone who had ambitious aims eagerly looked forward to each issue of these two papers and bought them regularly to study the engravings; the line and effect of each particular engraving received their careful study. Thus these two papers have been invaluable instructors to engravers throughout America for the advancement of the art of engraving on wood.

(To be continued.)

#### SUSCEPTIBLE PRINTERESSES.

The *Washington Post*, in an account of the recent book and job strike in the capital city, has the following:

"The striking printers won their first fall from Mr. Rufus H. Darby yesterday. From the beginning they had failed to make any apparent inroads on Mr. Darby's position; but that they won a point Mr. Darby acknowledges manfully. 'It was no use,' he said; 'they couldn't resist those handsome young fellows from the government printing office.'

"The good clothes and Chesterfieldian graces of the young government office printers might not seem, to a casual observer, to be a very potent factor in a strike crisis, but Mr. Darby admits that they have worsted him once. It will be remembered that when Mr. Darby's printers walked out he filled their places, in many instances, with women.

"He had over a dozen of them—some comely, some not so—but, alas, for Publisher Darby, all susceptible. He says that the good-looking union missionaries paid court to them in the street cars and on the streets as they came to and went from work. They reasoned and pleaded and wheedled and coaxed, he says, and yesterday all of his printeresses were gone but one, 'and she's wavering,' Mr. Darby added.

"Mr. Darby does not say that the union missionaries did anything ungentlemanly, by no means. Rather the contrary. They made themselves so agreeable that no wonder the susceptible typesetters capitulated. 'They couldn't resist the buggy-rides and ice cream and soda water and theater parties, and they've all gone but one. She was the most outspoken of all in her anti-union sentiments,' Mr. Darby says, 'and she was a capable, quick and intelligent compositor. I thought she would resist all attempts to win her over, but she's weakening, and I'm afraid I've lost her.'"

#### EDITORIAL ABILITY.

In a recent number of the *New York Journalist* that paper takes the ground that the shears are quite as important at times as the quill. The following is what it says:

"A good many people do not know that an editor's selections from his contemporaries are quite often the best test of his editorial ability, and that the function of the scissors is not merely to fill up vacant spaces, but to reproduce the brightest and best thoughts and the most attractive news from all sources at the editor's command. There are times when the editor opens his exchanges and finds a feast for eyes, heart and soul. The thoughts of his contemporaries glow with life. He wishes his readers to enjoy the feast, and he lovingly takes up the scissors and clips and clips, and sighs to think that his space is inadequate to contain all the treasures so prodigally spread before him. Your true editor is generous, and will sacrifice his own ambition as a writer during such festal occasions, and it is of far more profit to his readers to set before them the original dish of dainties with the label of the real author affixed, than to appropriate its best thoughts to himself, and reproduce them as his own. After all, the true test of a newspaper's real value is not the amount of original matter it contains, but the average quality of all the matter appearing in its columns, whether original or selected."

## WILLIAM B. MACKELLAR.

William B. MacKellar, typefounder, was born in Philadelphia, January 27, 1844. His early education was in a school controlled by Friends, which was situated on Walnut street, below Seventh street. Following upon this earlier training came a course in the Rittenhouse Grammar School, and in the Philadelphia High School, afterward, at the age of sixteen, being taken into the typefoundry with which his father had been connected from his youth, and well known as being the most complete of its character in the world. Here a thorough course of practical training in one of the most complex arts was entered into. Whatever he attempted was undertaken with a thorough determination to make it a success, and with this fixed view failures were rare, in consequence of which in his nineteenth year he found himself foreman of one of the departments devoted to the preparation of the elaborate specimens of the productions of the house.

From the workshop to the warehouse, for the acquirement of a financial and commercial knowledge, was the next step. Seven years at the books, and controlling the payroll of the hundreds of employes, gave him an efficient insight into the commercial character and standing of the many patrons of the establishment, and amply fitted him for the more important positions he was yet to assume.

During the greater portion of his life he has been greatly interested in mission work. In his younger days he was, in company with the late William Adamson, connected with the Wakefield Mission, Fisher's Lane, Germantown, and for some years he was treasurer of the Bedford Street Mission, being now its vice-president. Musically, Mr. MacKellar possesses the rare combination of being a thorough organist and, as a pupil of the late Signor Barilli, an accomplished vocalist. He was organist for the Trinity Lutheran Church, Germantown, for a period of twelve years, and the instrument now in that church was built under his supervision. He has performed upon some of the largest organs in the world, and during a temporary stay in San Francisco was organist of the great organ in the Metropolitan Temple.

His musical talent in connection with the mission work proved a blessing to many, and he never withheld it. Under him the "Gospel Hymns" have rung over nearly the entire world, among

the civilized and among the unenlightened. He is a manager of the Home Missionary Society of Philadelphia, and a trustee of the Hahnemann College and Hospital. He is a member of the Manufacturers' Club, the Columbia and the Utopian Clubs. He is affiliated with the Consistory, Scottish Rite, Thirty-second Degree, and is connected with numerous organizations and societies. He is secretary of the Typefounders' Association of the United States, and treasurer of the Typothetæ of Philadelphia, and these are but incidental to the cares of an active business life.

Mr. MacKellar has been quite an extensive explorer, and still delights in the romantic and unusual features of travel. His recent descent, in company with his wife, from the summit of

Mount Washington, on the Glen side, a distance of eight miles to the base, is evidence of this, although his chief field of research lay in the continent of Australia, a country whose charms and peculiarities are unknown to most people; where rivers of any size exist only in proximity to the coast line during the rainy season, almost disappearing when the drought comes on; where the most beautiful plumaged birds, devoid of song, throng the bush; where the cockatoos in their white and gold fill the air; where the laughing jackass in his mockery greets the early morning riser; where the flowers exhale no perfume, and where the bee possesses no insidious sting; where the ferns and grass grow to become large trees, and species of a cherry have the pit on the outside; where two hundred varieties of one class of trees, the eucalyptus,

exist; a country without snow or ice; a country with no wild animals; a country alive with an endless variety of snakes, all venomous, with but one exception; a country in which the aborigine, when making his vow of love to his chosen one, knocks her down with a club, and whose belief is that at his death he will become a white man—this is the country that Mr. MacKellar traversed, and at times at the peril of his life.

His first trip was overland, from Sydney to Tenterfield, a distance of some four hundred miles, which was done by coaching at the rate of about sixty miles a day; when his journalistic propensities having taken control of him, and the Tenterfield *Star* being without an editor, he took control of the paper for several months, until a new editor was secured. Away from the track of civilization, the return was made with a friend to Sydney, through

the bush, stores being laid in whenever opportunity afforded. The greatest privation was the lack of water, they at times being compelled to travel far into the night before reaching a supply, and then the source proving no more than a series of yellow mud holes, from which the semi-fluid was taken and thoroughly boiled, and then remaining unpalatable for drinking.

The next journey of any note was from Sydney to Melbourne by steamer, and a return overland, six hundred miles, to Sydney, when the famous Old Man's Plain was crossed, a distance of ninety miles, and not a drop of water on its surface. On the way from Melbourne the journalistic fire again developed. Passing through Romsey he became acquainted with the proprietor of the *Gazette*. At the time a plague had taken possession of the town, and the force of the paper was smitten. With death on every side, Mr. MacKellar took hold of the paper, and for six weeks, by working night and day, performed the phenomenal task of gathering news, setting the entire type of the newspaper, which was a weekly, made it up, wet down the paper, kept the rollers in order, and fed and worked the paper on the hand press, an edition of some hundreds, besides a few jobs of fancy work thrown in. He was ostracized from the hotel at which he had been living on account of the plague in the family of the proprietor of the newspaper, and was compelled to fix up a sleeping abode in the upper room of his carriage house.

After the return to Sydney a journey was made of eleven hundred miles to Adelaide, and, upon a subsequent return, a tour to the far north of Queensland, of fifteen hundred miles, partly by steamer, to Cookstown, nearly under the Equator, and adjacent to the noted Palmer River Gold Diggings. Here with the temperature ranging one hundred and twenty-five degrees in the shade, surrounded by the wild aborigine, who at times at night would spear horses in the precincts of the village, where the strong man wilted and died by the roadside, where none but the Chinaman or black man could long survive, Mr. MacKellar spent some three months before his return to Sydney. During this period he acted as organist of the little Presbyterian church of the place, the pulpit being occupied by the magistrate of the town, a solid old Scotchman, who read the sermons from a published work.

Mr. MacKellar's return was made to California, where, in connection with business, under the guidance of an accomplished sportsman, his attention was turned to hunting, and with considerable success. He has also been an extensive traveler in this country, Canada, Cuba, the Fiji and Sandwich Islands, and in New Zealand and Europe.

He is today an active worker and a large stockholder in the company of which he is secretary. He assumes entire control of the commercial part of the business and of the credits; and edits the trade paper of the house, the *Typographic Advertiser*, and its specimen books, which are among the most perfect examples of printing in the world.

The typefoundry company of which Mr. MacKellar is secretary have today important agencies in the three large cities of Australia, and an extensive branch of the house exists in San Francisco; also others in Chicago, Canada, Great Britain and India.

Mr. MacKellar is a married man, with one son and two daughters.

#### MARK TWAIN'S PROFESSORSHIP.

That genial humorist, Samuel Langhorne Clemens, whose early days were spent at the case, and in whose witty writings all printers feel a fraternal pride, made plenty of fun for a delighted audience at Bryn Mawr College lately, according to the *Philadelphia Record*:

"I have been elected an honorary member of the class of '94," said Mr. Clemens. "I feel deeply grateful to my fellow-classmates for the compliment they have done me, the more so because I feel I have never deserved such treatment. I will reveal a secret to you. I have an ambition; that I may go up and up on the ladder of education until at last I may be a professor of Bryn Mawr College. I would be a professor of telling anecdotes. This art is not a very high one, but it is a very useful one. One class of anecdotes is that which contains only words. You begin almost

as you please and talk and talk until your allotted time and close when you get ready. I will illustrate this by a story of an Irish and Scotch christening. In this Scotch-Irish village a child had been born and a large number of friends had collected to see it christened. The minister, thinking this a good opportunity for displaying his oratorical powers, took the baby in his arms saying: 'He is a little fellow, yes, a little fellow, and as I look in your faces I see an expression of scorn which suggests that you despise him. But if you had the soul of a poet and the gift of prophecy you would not despise him. You would look far into the future and see what it might be. Consider how small the acorn is from which grows the mighty oak. So this little child may be a great poet and write tragedies, or a great statesman, or perhaps a future warrior wading in blood to his neck; he may be—er—what is his name? His name, oh, is Mary Ann.'"

#### EFFECT OF THE NEW COPYRIGHT LAW ON PERIODICAL PUBLICATIONS.

Inquiries having been made as to the effect of the new International Copyright law upon periodical publications, a reporter for the *Tribune* recently asked Ainsworth R. Spofford, the librarian of congress:

"Cannot you venture an opinion on the general question whether, for example, an American eclectic periodical would be privileged to copy a story or an essay from an English magazine."

"Not if the English magazine was copyrighted in this country."

"Would the English magazine be compelled to be reprinted in this country in order to be copyrighted?"

"I should say yes, assuredly."

"The same rule applying to a magazine as to a book?"

"For copyright purposes a magazine is a book. A pamphlet of any kind—even a 'leaflet'—has been held, for all such purposes, to be a book. You have in your hand at this moment a sheet of paper with the new copyright law printed on. That is a book just as much as this 300-page volume on my desk."

"Has no difference ever prevailed between the two?"

"No. I have always been obliged to treat magazines, reviews, literary weeklies—all the current periodicals—as so many 'books' in order to conform to the terms of the statute."

"And will it be necessary to copyright the English magazines number by number, or may a whole year's numbers be included in one entry?"

"Oh, number by number. If you will look at section 111 of this act you will see that each number of a periodical shall be considered as an independent publication."

"That suggests at once the question whether, since the term 'periodical' is used in the section concerning independent publications, but omitted in the section concerning reprints, a point may not be raised by some English periodical publisher against the application of the reprint clause to his work."

"It is not improbable that such a fight will be made. And supposing the courts to require a reprint in this country, what then? The standard of literary taste has risen so in America that there is a large and profitable market for the best foreign periodicals in any shape. It would add to the expense of course to have them reprinted."—*Stationer and Printer*.

#### THEN AND NOW.

In a second-hand book store on Grand avenue, Detroit, is shown a copy of the London *Times* containing the first report of the battle of Waterloo. It would be difficult to find a basis for a more interesting comparison between the gazette of the time of Wellington, Blucher and Napoleon and the newspaper of today. The report simply records the defeat of the French by the allies, "with great slaughter," and states that 241 pieces of artillery were captured. This is as far as the particulars go, although there are columns of gush. No detailed account of the engagement is given; no estimate of losses is made, and four lines of chalk on a bulletin board would express everything of real value contained in almost two pages of print.—*Chicago News*.

3 METHODS.

*Half-Tone Process.  
Wood Engraving. . .  
Zinc Engraving. . .*

In our WOOD-ENGRAVING department none but the most skilled and thoroughly-trained engravers and artists are employed.  
Our PHOTO-ENGRAVING department is well equipped and equally well supplied with artists of superior skill, while our apparatus is the best that money can procure. Our three departments occupy separate rooms.  
By our "HALF-TONE" ENGRAVING we make plates ready for the printing press direct from photograph.

While our columns are always open for the discussion of any relevant subjects, we do not necessarily indorse the opinions of contributors. Anonymous letters will not be noticed; therefore our correspondents will please give names—not for publication, if they desire to remain incog., but as a guarantee of good faith.

#### A WORD WITH CORRESPONDENTS.

We hope our valued corps of correspondents will not take offense when we ask them to **BOIL DOWN** their effusions in future as much as possible. We are very glad to hear from every section of the country, but our correspondence feature has assumed such proportions that it is impossible to publish all that is sent us. Friends, be brief and to the point, and **THE INLAND PRINTER** readers will think all the more of your contributions for their being so.

#### A CORRECTION.

*To the Editor :* WASHINGTON, D. C., April 15, 1891.

In the February number of **THE INLAND PRINTER** your Washington correspondent, "Em Dash," mentions a number of leading printing firms as having a "rush" of business. Either designedly or inadvertently he omits to include in his list the printing house of George R. Gray, and thus relegates that establishment to the class designated by him as "jim crow."

This does Mr. Gray a great injustice, as his office is eminently a leading one, having a large force of employes—compositors, pressmen, feeders, binders, etc.—who are kept more or less busy the year round. Mr. Gray is one of the most popular employing printers in the city. During the recent strike here among the book and job printers for a reduction of hours and an increase in the scale of prices, he unhesitatingly acknowledged the justness of the demand, and conceded everything asked. Without an hour's interruption to business the new scale went sailing into effect in his office over peaceful and unruffled waters, and the good feeling always existing between him and his employes became more firmly cemented. Would that there were more like him. ELIO.

#### FROM VERMONT.

*To the Editor :* MONTPELIER, Vt., April 17, 1891.

This is not what would be called a very lively printing town, but it happens just now that there is considerable work being done in the various establishments, particularly in the Watchman Publishing Company. Here there is a great rush of book and job work, more than in many years past. This concern is now on a directory for the villages of Montpelier, Barre and Williamstown. Besides they have a large quantity of bookwork. Bert L. Taylor, formerly of the Manchester (N. H.) *Telegram*, has been employed as managing editor of the *Argus and Patriot*, in place of Harry G. Dewing, who goes to St. Albans to fill a similar position on the staff of the *St. Albans Messenger* (daily). Elmer E. Whitman is now foreman in the composing room of the *Morrisville News and Citizen*.

It would be well for the International Typographical Union to pay a good man for the purpose of organizing the working printers of the various important towns contained in the Green Mountain State. It would have the desired effect—to improve the condition of printing and printers. No doubt such a movement would meet with formidable opposition on the part of many proprietors and employing printers at first, but if such an attempt were made for the good of all concerned I, for one member of the craft, believe that success would follow. "In union there is strength," and there is no reason to doubt that if the important burroughs of the state were unionized printing would be raised to a higher standard. In New York and other states thriving unions are contained in very small towns. If Montpelier, Burlington, Fair Haven and

other places of the state had union charters like Rutland, for instance, it would redound to the financial benefit of employers and employes alike. Let us have the printers organized, and the way to do it is for each typesetter, job printer, pressman and stereotyper to interest him or her self in the matter, and the benefits which will accrue will more than pay for the labor done.

W. E. H.

#### FROM BOSTON.

*To the Editor :*

BOSTON, Mass., April 16, 1891.

The electrotypers of this city, who left their work six weeks ago because of failure to obtain certain concessions asked of their employers, have returned to their respective shops. The trouble has caused serious interference with the printing business of the city and the idleness of nearly a hundred men for a month and a half without the accomplishment of a single object for which the strike was inaugurated, for the return of the strikers was an unconditional surrender. The prospective results are the possibility that wages will be advanced by the different employers as they may decide in individual instances, and the probability that future differences will be settled without recourse to strikes.

The office of the *Boston Post* has been removed from Milk street, where it has been located for many years, to a building especially fitted for its use on Washington street, next door to the *Herald*. The *Post*, *Herald*, *Globe*, *Journal*, *Advertiser* and *Record* offices are now clustered together within biscuit toss of each other.

An effort is being made by the officers of Typographical Union No. 13 to organize the female compositors of Suffolk county to the end that everyone connected with the trade may be benefited through higher wages and fewer hours of labor.

A committee has been appointed by Typographical Union No. 13 to secure, if possible, the enactment of a law by the legislature rendering it impossible to have any portion of the state printing work performed by non-union labor. There is an existing law, passed in 1887, which pledges the state to have its printing done only in offices recognizing the union scale of wages.

Arrangements are being made for the thirty-ninth annual convention of the International Typographical Union, to be held in this city from June 8 to 14.

The *Referee*, a new Boston sporting and dramatic paper, is edited by Mr. Ed A. Perry, a former writer for the *Boston Herald*.

It has been decided to hold the pressmen's annual picnic this year at Melville Gardens on June 20. Messrs. F. A. Walsh, R. P. Barnes, J. F. O'Sullivan, B. G. Quinn and J. J. Doherty constitute the committee of arrangements.

The case of the committee of the Boston Pressmen's Union, against whom action was brought by a Boston printer for the issuing of an alleged boycotting circular, has been decided in favor of the defendants.

Messrs. L. Barta & Co., have recently put in a Thorne type-setting machine.

There was an attendance of nearly two hundred at the barge party of the Boston Printers' Club on Fast Day evening. Barges were taken at Post Office Square, and after an enjoyable ride through the suburbs the members of the party alighted at the Union Market Hotel, in Waltham, where a banquet was held and dancing indulged in.

The annual meeting and banquet of the Boston Master Printers' Club was held April 15, at Young's Hotel. There was a good attendance, and the reports of the officers and committees showed that the year which ended with the meeting had been a prosperous one for the club, financially and otherwise. The election of officers for the current year resulted as follows: President, F. H. Mudge; vice-president, J. S. Cushing; secretary, L. A. Wyman; treasurer, S. J. Parkhill; executive committee, H. G. Rockwell, H. O. Houghton, Jr., Thomas Todd, C. J. Peters. Among the invited guests at the banquet were ex-President Lee, of the National Editorial Association; Mr. Theodore L. De Vinne, of New York; Mr. H. G. Bishop, of New York, and Mr. Charles Gray, of Providence, Rhode Island. G.

## FROM DETROIT.

To the Editor :

DETROIT, Mich., April 7, 1891.

Detroit Union held its annual election on March 25 for delegates and officers, with the following result : Delegates to International Typographical Union, Patrick J. O'Grady, Robert Jaffray ; president, Fred B. Martin ; vice-president, George W. Duncan ; recording secretary, Harry D. Lindley ; financial secretary, Richard Lindsay ; treasurer, Edward Look ; sergeant-at-arms, William N. Neack ; executive committee, Thomas G. Cornyn, William J. Palmer, Arthur Robinson, William A. Taylor and William H. Wagner. The gentlemen selected as delegates are both well-known members. Mr. O'Grady has served the union well as a member of the executive committee the past two years, and Mr. Jaffray has been financial secretary the past three years, and is well qualified to fill the office of delegate. The newly elected officers were duly installed at the regular meeting, April 5. The board of directors appointed for the ensuing year are, William N. Barnes, John Carroll, George B. Des Autels, Fred Kendall, Philip A. Loersch.

The Rogers typograph has been in use on the *Tribune* for about two months. The publishers of the *Tribune* announce that they have made a contract for a new dress of type and other improvements which will add greatly to the appearance of the paper.

The *Evening Sun* has been removed from Croghan street to Woodward avenue.

Detroit Union voted \$25 to Frederick City Union, and \$15 to Aberdeen, South Dakota, Union, to help them along in their troubles.

William G Rathman, a member of No. 18, was elected a member of the board of education at the spring election on April 6.

Fred Kelly, of the *Tribune*, has resigned the foremanship of the newsroom.

P. A. L.

## GOVERNMENT PRINTED ENVELOPES.

To the Editor :

GALENA, Ill., March 28, 1891.

It has been said that "Republics are ungrateful." It seems that the Typothetæ of St. Paul has felt the force of this saying in a way that has caused it to take some action in the matter (see page 564, March number of THE INLAND PRINTER). All who are in the printing business for profit are injured by competition coming from the government furnishing stamped envelopes, printed at prices that are ruinous. But, can any man be stupid enough to think that a lot of "whereases" and "resolves" will do any good, or that "our representatives in congress assembled" will do anything to change the situation? No, gentlemen; they have little use for the printer except to make a handle of him to lift them into office. They are not under any obligations to the printer when once they get in. It is perhaps three years since the editors of the State of Illinois had a talk on the subject of government envelopes and they resolved this and that, and what came of it? It is sheer nonsense to resolve any more. The setting of the wisdom of one man against that of the Typothetæ of St. Paul may appear presumptuous, but this plan is offered for what it is worth :

Let the Typothetæ, not of St. Paul alone but of every city in the country, employ a solicitor, to be paid wages out of the general fund, and have him solicit orders for printed envelopes from all those who use them. When he finds a person who uses envelopes from the government, let him make a note of the fact in a book made for that purpose. Then let every member of the Typothetæ be furnished with the list and when a man orders bill, letter or note heads or other printing and his name appears on the list, charge him from twenty-five to fifty per cent advance on the regular price. Tell him, also, that when he decides to "live and let live" you will be glad to quote him the regular price. But if we do that he will go to the amateur, you say. Well, if he will, why, just let him. Don't lose any sleep on that score. If he does go to the amateur the chances are that he wont stay long enough to hurt anyone, and when he gets tired of the amateur and

returns to the old place he will be a more tractable customer than before.

The resolve business smacks of the fable of the old man throwing grass at the boy who was stealing his apples. So long as the merchant can get his printed envelopes for nearly dead cost, he will do so. But if the members of the Typothetæ organizations will make a decided stand, and work on the plan outlined above, they must surely succeed. It seems, however, that the resolve business and all such twaddle must be done away with ; the proper thing to do is to pinch the buyers of the government printed envelopes right where it will hurt them the most — in the pocketbook.

If the press of the country would use its influence against it, the government would perhaps stop furnishing envelopes in this unjust manner. Who ever saw a paper that made any mention of the matter at all? But the sod-corn newspaper is ready at all times to do the baby act and set up a howl if the job printer encroaches on its preserves. A newspaper will give two or more stickfuls of its valuable space to an outcry against county work going away from home, when the office is about as well fitted for doing such work as a canary would be to build a nest for an eagle.

J. B. P.

## FROM BALTIMORE.

To the Editor :

BALTIMORE, Md., April 18, 1891.

The local staff of the *American* last week presented Mr. W. B. Clarke, the retiring city editor, with a handsome testimonial of their esteem. The relations of Mr. Clarke and his men have been of an unusually friendly character. The *American* is to have the assistance of Mr. Clarke in its editorial department, while Mr. James Doyle goes up from the business office to fill the position of city editor, made vacant by Mr. Clarke's promotion. Mr. Doyle recently had charge of the United Press Association in this city.

The *Morning Herald* recently came out in a new dress of minion and in enlarged form, having added an extra column, all of which gives it a handsome appearance. The counting room has also been greatly improved, and is now one of the prettiest newspaper offices in the city. Mr. Bechofer is the general business manager, and much of the paper's prosperity is due to his push and enterprise.

*Baltimore Life*, a popular pictorial weekly of this city, celebrated its first anniversary last week. Some of the notices given *Life* on the occasion by the daily press were highly eulogistic, and were, no doubt, greatly prized by the publishers of this handsome weekly.

The daily papers here, for the most part, are very liberal in dealing with publishers of books, magazines, etc., giving valuable space for the mere exchange of some book or magazine not worth in money value very often over a quarter of a dollar. The *American* and some of the weeklies will give at times a whole column of what purports to be a review of current literature in the shape of publications just issued from the press, when the fact is the entire stuff is set from proof sheets sent out by the publishers of these books and magazines, and is nothing more than mere puffery to make the wares of a literary character sell well with the reading public, regardless of any merit whatever. The *Baltimore Sun*, I understand, is going to call a halt in this direction. A book or magazine advertisement in its columns will in the future have to be paid for at regular advertising rates.

The *New York Recorder* is taking the wind out of the sails of the *New York World* in Baltimore. I speak only of the Sunday edition of these papers. Of the respective merits of these sheets nothing shall be said ; I only know that newsdealers tell me that the late newcomer is outselling the *World*, and that the secret of this is the fact that a handsome lithograph goes with every copy of the *Recorder* sold.

So far this spring advertising has been very hard to catch on to for the weeklies. This is what the solicitors say. The dailies, however, appear to be doing a good business in the "ad." line. Mr. Hugh Coyle, advertising agent for Forepaugh's circus, was in

Baltimore this week and signed contracts for pretty good space in most of the papers, both daily and weekly. Mr. Coyle is a newspaper man himself and very popular with the boys of the press gang. He will be very soon working his way on to Chicago, where the "show" is to exhibit.

Our paper men, book and job people and printers generally can be said to be quite busy at present. The mention made in my last letter concerning the *Catholic Mirror*, as to its present ownership and contemplated change of hands, proved to be something of a surprise to the craft here and newspaper people generally in this locality. Thus, it often happens that you have to go from home to learn the news. In this instance it was not exactly going away from home, but the information imparted came this direction in rather a roundabout way.

FIDELITIES.

## FROM MONTREAL.

To the Editor: MONTREAL, P. Q., April 6, 1891.

More fires have occurred in printing houses this year than in many years past. First of all was C. O. Beauchemin & Fils, St. Gabriel street; "Printing House row," Craig street, had a large fire about January 12: The Benallack Lithographing and Printing Company; Southam & Carey, ticket printers; Waters Brothers & Co., printers; J. H. Elliott, lithographer and printer; H. Owen & Co., printer; the *True Witness* and City Printing Company being all in that building. Later on Mitchell & Wilson, Notre Dame street, and Joseph Fortur, St. James street, stationer and printer, were badly scorched. They all survive, and many of them are far better equipped than formerly. The two best wood engravers in the city also had the same experience, C. W. Koppel and J. L. Wiseman, both on St. James street.

M. St. John, formerly editor and leading spirit in locking out union printers on the *Herald*, has resigned and taken a position on the Canadian Pacific railway. This leaves Peter Mitchell alone in the fight, which has not abated one iota. By the way, the great Peter is not so great since his defeat on March 5, 1891, in Northumberland county. He had had a monopoly for years as a member of parliament for that locality, and could easily be elected with seven hundred majority. The tables were turned this time, for after Typographical Union No. 176 had sent to the printers and organized labor there a history of his action here he was elected by a rousing majority of five hundred to stay at home in the future.

No. 176 held its annual election April 4, and the following were elected for one year: C. J. Maguire, president; T. J. Finn, Jr., vice-president; John Taylor, recording and corresponding secretary; David Smith, financial secretary; L. Z. Boudreau, treasurer; James Freels, sergeant-at-arms. The boys are talking of having an excursion on Queen's Birthday to Quebec, going May 23 and returning May 26.

The *True Witness* issued a St. Patrick Day number that was a credit to that institution.

Goodchild & Madley is the name of a new printing office situated on William street. Mr. Madley received a fat take of about \$5,000 from the old country a few months ago, and hence the new firm. He is well known in the city and will hustle things.

The *Echo*, published by David Taylor and Louis Z. Boudreau, two members of No. 176, is meeting with considerable favor. They do a good amount of jobwork. Mr. Boudreau is also president of the Central Trades and Labor Council.

Printing Pressmen's Union No. 52 held its annual election April 3. The officers are as follows: N. Stephens, president; George Owen, vice-president; Albert Abson, corresponding and recording secretary; T. Bell, financial secretary; John Clendinning, treasurer; Arthur Tock, sergeant-at-arms. They will send a delegate to the international convention at Detroit in June, and he will be Albert Abson.

The *Herald* issued a daily during election time called the *Telegraph*, but it died when Peter Mitchell was made ex-member of parliament.

J. P. M.

## FROM WASHINGTON.

To the Editor:

WASHINGTON, D. C., April 21, 1891.

In our April letter we made mention of the strike of the book and job printers here. We are now pleased to state that out of the seventy-five men who walked out about fifty have been called back to their former offices, and at their own prices. Every office except two, that at first refused to accept the demands of the union, has concluded that a "walk-out" was of too expensive a nature, and called their men back. The two exceptions are those of Rufus Darby, and Mr. McQueen, whose employes are still out. We are very sorry to see the latter gentleman refuse to pay the additional two cents asked by the union, for we consider that he has one of the best equipped and cleanest offices in the city. As for Mr. Darby's establishment, we have known the real standing of his office so long that we deem No. 101 better off by not giving it cognizance. About two years ago our union issued an order that all plate matter should be paid for at the rate of regular reading matter composition. Those offices openly refusing to accede to these terms would be branded "unfair." To this order Mr. Darby (who edits the *Sunday Republic*) paid no heed. Though Mr. Darby has the facilities for doing good work, he will find that this "break" will be a bad one.

There are now about twenty-five typos yet on strike, and we cannot but congratulate President Kennedy for the successful manner in which he has conducted this affair. We consider him the right man in the right place.

Secretary Padgett, of No. 101, is about as busy now as he has been since he first took that position. The striking printers have to be paid each week, vouchers made out, traveling cards issued and various other business transacted.

About one hundred employes at the government printing office have suffered the loss of their positions since our last letter, and each succeeding Wednesday "more to follow" is expected. Several of these "unfortunates" have called upon the public printer to ascertain the cause of their removal, and the only reply they received was that a reduction of the force was necessary. We learn that there have been a few reinstatements already made.

The *Sunday Chronicle* (an unfair paper published here) has placed the blame of the recent printers' strike upon employes of the government printing office, and stated that it was intended to give them an opportunity to advance their scale of prices in the future. We would advise the editor to look back a little, and peruse the proceedings of the recent meetings of No. 101, and he will see if the government printing office printers took any action in the strike at all. The matter was left solely in the hands of the down-town book and job printers, where it rightfully belonged. We make this correction merely in behalf of the government printing office typos, whose sympathies are always with the down-town people.

Mr. Willis Hawkins, editor *Anacostian Magazine*, has sold that paper to the proprietors of *Kate Field's Washington*, and it will be amalgamated with that publication. It is understood that the price paid for the above magazine reached nearly \$8,000, from which fact it is readily seen that the paper is quite valuable.

The *Woman Inventor*, a new and novel publication, made its initial appearance on our streets a few days ago. It is edited by Charlotte Smith, well and favorably known here for her untiring efforts in behalf of her sex.

The bright and spicy little bi-weekly, *Inventive Age*, made its appearance April 7, with a fine illustrated edition of a history of the Patent Centennial, which was celebrated here a week or so ago. The *Inventive Age* is one of the brightest little journals issued in this city, and the recent Patent Centennial celebration here was first suggested by the Messrs. Du Bois, editors of that journal. The last issue was printed in a pale blue ink, and showed up to good advantage, the general make-up and presswork being of the finest mechanical order.

*Three Links*, a four-page weekly sheet issued in the interest of the Odd Fellows of this city, bids fair to be a success. The journal is issued from the office of Wilkins & Rynex, and is a breezy little paper.

### THE TYPEFOUNDRY SYNDICATE.

BY TYPOGRAPHICUS.

THE final passage of the great typefoundry interests of this country into the hands of a syndicate of capitalists who will control them as one corporation is so nearly a foregone conclusion that it is not too early to anticipate some of the possible effects of such an event upon those who are, next to the founders themselves, most vitally interested in the matter, namely, the printing fraternity.

Certain facts in relation to its formation are in the possession of the public. It is understood that the capital for the enterprise (which is variously stated at \$15,000,000 to \$30,000,000) is to come from Europe, and that a part of it is already on deposit in this country. It is difficult to understand why it was necessary to enlist European capital in such an enterprise when there is an abundance of it in the United States that is seeking investment, and it seems almost a pity that so important an industry should pass into the control of foreigners, for there is no gainsaying the fact that the control of any commercial enterprise is in the hands of the majority stockholders. It is to be hoped that this feature of the affair is misunderstood, and that after all the industry of typefounding in the United States will still be dominated by American capital and American brains—the two powers that have built it up until it is greatly in advance of its competitors in all other quarters of the world.

The process of bringing this combination to the point where it is almost a conclusion has been a long and tedious one, for there were many conflicting interests to harmonize, and some that sturdily refused to harmonize at all. Nearly all the founders have now consented to the agreement, and those who have not and will not have set prices on their plants and have given the syndicate an option upon them. The formation of the corporation from its inception has been in the hands of men who are eminent among typefounders for their enterprise and business ability, and the persistence with which they have maintained their purpose until it is almost realized, in the face of great opposition on the part of some and exasperating indifference on the part of others, proves that these promoters are entitled to all the distinction that has been accorded them.

The plan, so far as its projectors have seen fit to make it known, is to take into one corporation all the typefounders who would join it, and buy out those who would not, thus bringing into the possession of a single corporate ownership all the typefoundries of the United States. A new and radical change in the system of manufacturing type will be made, which will so simplify the business that some of the foundries will be closed entirely, as those which will remain in operation will be able to furnish all that is required. This will effect a great saving in the aggregate expense of running, and that saving can be added to the dividend of the corporation. But the greatest item of economy will be found in contracting the output of individual foundries, or confining each to certain special lines. Many faces of body type will be discontinued in a short time. They were never necessary, and were produced simply because each foundry was obliged to have its quota of modern or old style faces, and each one sought to originate something different from all others, with only partial and often unfortunate success.

No doubt the printers would be benefited if nearly all these faces were eliminated entirely, leaving two or three good series each of old style and modern, which would be standard and could be purchased from any branch of the corporation in the United States. By this method sorts of every description could be kept in stock in large quantities, another source of convenience to printers.

The new corporation, however, will give the death blow to that most desirable element in commerce, namely, competition. It matters not that the typefounders themselves have by their unreasonable war in prices brought about the condition of affairs whereby they are compelled to seek relief through the medium of a single corporate ownership; it matters not how plausible are

their protestations of an upright and honorable purpose, nor how loftily they disclaim any intention of organizing a monopoly. No one doubts the sincerity of their intentions. The gentlemen who have been most active in the promotion of the affair are the builders of the typefounding interests of this country, and they have the entire confidence of the printing fraternity. But are they not erecting an institution which has within it all the possibilities of a monopoly, and which they cannot control against the authority of the majority stockholders? Men do not transact business for their health nor for pastime, but for hard cash. If the business of typemaking has developed rapidly in this country, furnished us a great variety of new faces from time to time and assisted in educating the public taste for a high class of printing, it is all owing to the competitive element, not to any patriotic sentiment on the part of the founders. So long as each foundry strives to outdo its competitors in the production of new and attractive faces there is an incentive to renewed effort and a prospect of steady development. But the moment that a single ownership dominates the entire industry this incentive is lost, and the whole question becomes simply one of economy and profit.

It is throwing dust in the eyes of the public to say that new and independent foundries would be started if the monopoly became oppressive. They might, indeed, be started, but it would be years before they could get together matrices sufficient to afford the printers any relief, and during the process they would be bitterly opposed by a corporation which had reduced the industry to such a system that it could make type much cheaper than they, and could afford to fight them for an indefinite period.

At the beginning, every matrix in the country will be owned by the combine. These matrices represent a lifetime of toil by many hands and millions of money. They could probably be reproduced in less time, but where are the hands and the millions for their reproduction to come from?

The promoters of the syndicate scheme will doubtless be its executive officers for a time, but they will be simply employés, and if at any time the majority stockholders choose to increase the price of type they must comply with the choice or resign.

It will seem like parting with old friends to feel that such old and respected houses as Marder, Luse & Co., Barnhart Bros. & Spindler, MacKellar, Smiths & Jordan, George Bruce & Sons, and others who have earned the confidence and esteem of their patrons, will be sunk in a great corporation, and that the men whose energy and enterprise have created a great industry will no longer have dominion over it; but such will be the case. Their signs may swing to the breeze as usual, but they will be empty and meaningless, for the absolute control of the business will be in the hands of men who care no more for its higher development or for its patrons than they do for the South Sea Islanders.

Competition, that public safety-valve, will be dead. The splendid industry of typefounding might as well be owned by one man as by one corporation, so far as the interests of its patrons are concerned.

### THE PAPER IN THE WORLD.

According to the *Paper World*, the total number of existing paper mills is put at 3,985, with an annual production of 1,055,000 tons of paper, made from all kinds of material. No less than ninety thousand men, and twice that number of women and children, are employed in this industry, while the capital invested is over \$300,000,000. The annual consumption of the paper made is thus divided:

	POUNDS.
Newspapers, daily.....	498,000,000
Newspapers, weekly and monthly.....	380,000,000
Books.....	150,000,000
Total, printed matter.....	1,028,000,000
For schools.....	180,000,000
For public offices.....	160,000,000
For correspondence.....	220,000,000
For mercantile records.....	120,000,000
For wrapping paper.....	450,000,000
For papier-maché, etc.....	200,000,000
Total.....	2,358,000,000

## THE MIEHLE PRINTING PRESS.

Among all the improvements and inventions upon which patents are issued, it is common knowledge that a very small percentage ever reach the degree of practical adaptability to the needs and circumstances of industrial life. The marked exceptions to this rule are the patented improvements and inventions of a young friend and personal acquaintance of the staff of THE INLAND PRINTER, a personal acquaintance of nearly all the expert pressmen in the city of Chicago, a man whose name is already a household word to the printers of the Northwest, and whose genial disposition, honest countenance and skillful and peculiar mechanical ability, have won for him the respect of the employers and employés engaged in the art of printing in this busy time. We refer to Mr. Robert Miehle, the inventor and perfecter of the cylinder printing presses bearing his name, whose portrait is given herewith.

We are sufficiently bigoted, after our long experience with printing, to modestly declare that we know a good thing in our line. We are convinced by common observation, and by the unrestricted expressions of approval of such expert pressmen as R. F. Sullivan, of the Henry O. Shepard Company; Henry J. Wendorff and Martin Knowles, of the Knight & Leonard Company; Garrett Burns and Rudolph Timroth, of Rand, McNally & Co.; Robert Granger, of Donohue & Henneberry, and R. P. Yorkston, of New York, the undoubted king of printing press salesmen of America, that old friend and companion of Andrew Campbell and the late lamented Stephen McNamara, that Miehle's printing press bed motion is a short cut from complexity to simplicity and superiority.

Five years ago Miehle built his first press and put it into his brother's office, on Chicago avenue in this city. In all essential features it was perfect. It has been watched by the pressmen of this city ever since with deep interest and admiration, and a description of it appeared in this journal in the October issue of 1887. In 1889 Mr. S. K. White became interested as builder of the presses, and since then the Miehle Printing Press and Manufacturing Company has been organized, and that company is now supplying the Miehle presses. It is very much to the credit of the mechanical ability associated in the company that every press yet erected has given instantaneous satisfaction, a very unusual result in printing press erection, and especially with a new kind of press. We are reliably informed that no Miehle press yet erected has given the

company an hour's serious trouble or worry since the moment it was left in running order. This is a very remarkable fact, and is due partially to their simplicity and partly to the pains and care taken in the manufacture.

The points of interest to our readers may be stated to be :

First. The bed motion, or mechanism governing the action of the type bed in its reversions. How to reverse a rapidly moving bed with greatest ease, least jar, and all within a very few inches of space, has been an open problem for fifty years in flat-bed cylinder press construction. The machinery usually employed for that purpose is known to everybody as springs, weights, bumper shoes, air cushions, etc., in their various combinations. Miehle believed that the weaknesses developed under high speed with the old

mechanism could be overcome if retarding and starting could be done by applying the principles of positive mathematical accelerations. The motion of an arm attached to a crank handle illustrates the crude principle, as it develops every degree of acceleration. The application of the principle to the requirements of printing presses has been abandoned by inventors because of seemingly insurmountable obstacles which would always present themselves. We had believed it to be an impracticable field of experiment, but when we are confronted with Miehle's roller on the circumference of an enlarged star wheel, the roller sliding on a straight steel plate, and witness the reversion of his largest presses at the rate of 4,000 times per hour (2,000 impressions), with such ease as not to throw over an unsupported pica em quad standing on end, we bow to the inevitable and are happy to be the medium by which the printers of America may become acquainted with the works of Miehle.

ROBERT MIEHLE.

Second. A prominent and valuable feature of the bed motion is the entire disconnection of the bed during the periods of reversion in the fullest sense of that term. So complete is the disconnection that the labor of the reversion has no effect on the other mechanism of the press. At reversion there are no connected gearings to cause a retarding vibration to the constantly revolving cylinder, and the result is that all the other mechanism of the press has at all times the same and equal resisting pressure, always doing the same amount of work, and operating constantly in the same direction.

Third. The great power of the Miehle movement has rendered unnecessary the usual custom of making the lightest possible bed, so there will be the least possible momentum to overcome. Light

beds spring under heavy frames, rendering the "make-ready" very difficult. Miehle contended that strength of bed was essential to quick "make-ready," consequently his beds are made as heavy and strong as would ever be required for any class of work. Without the great power in his reverse motion, he would also have been governed by the rules of other press makers, that of making a comparatively light bed, which tends to spring and work up the quads.

Fourth. This ingenious and practical inventor first conceived and put into practical operation the idea of giving to the angle roller a positive motion, not depending on the inking plate to revolve them. This preserves the angle roller from being chipped at the ends or being torn by the sudden contact with the plate, and increases the distributing facilities, because the driving and angle rollers are always at work, whether in contact with the plate or not.

There are various other features of minor import, such as improved feed guides, foot brake, to stop the press almost instantly, dipping stripping fingers, and, by no means the least important, his greatly improved tripping mechanism which will trip the cylinder twelve inches after the grippers are closed, and at any time, without the least injury to the press.

Colonel Yorkston, in speaking of the press a few days since, made the remark that Mr. Miehle was the first practical expert pressman who has taken wholly upon himself the task of building a printing press. The combination of pressman, mechanic and draftsman is rarely found in one man, but any day Mr. Miehle may now be seen in the machine shop or the drafting room, hard at work on the drawings of different sizes of presses which the Miehle Printing Press and Manufacturing Company are expecting to put on the market, besides the standard sizes now in use.

THE INLAND PRINTER desires to state its candid belief that when the printers of this country really want a good, practical and scientifically made article in the line of cylinder presses, they will find that the city of Chicago is exactly the place to visit to purchase them. Few persons really comprehend the strife to excel in the various branches of industrial life in this city. The tide of practical inventions in nearly all classes of machinery and appliances has come westward, and seems to be advancing more rapidly in the atmosphere which pervades this city than any other. Never in the history of printing press manufacture has a comparatively new machine taken such a strong hold upon the trade as the Miehle press, as it is already the pet of the pressmen and pride of the proprietors wherever running.

### ELECTROTYPING.\*

NO. I.

Electrotyping, as applied to plate printing, consists in the molding or reproducing of printing surfaces by means of a plastic material, and the deposition of a copper shell thereon, by separating the metal from the solution and depositing the same in solid form by means of a galvanic or electric current. The resulting shell is removed from the mold and backed with a suitable metal, after which it is finished, ready for the printer.

Much as we are indebted to the scientific men of Europe for many of the earlier discoveries in this beautiful process, to the electrotypers of the United States alone belongs the credit of its practical application to the purposes of the printer. Their ingenuity and skill, and the application of labor-saving machinery and appliances, have brought the art to its present high state of perfection.

Of late years the process has been so much improved that it is found more economical, in the printing of large editions, to electrotype the forms as set up than to wear out the type on the press.

\*Through the kind permission of Messrs. C. B. Cottrell & Sons, New York, manufacturers of printing presses and electrotype and stereotype machinery, we reprint this article on Electrotyping from a work recently issued by them. It will run through five or six numbers of THE INLAND PRINTER, and will no doubt prove of great interest to our readers.

The same holds good in regard to complicated jobs, blanks, tables, etc., which otherwise would have to be tied up for future use.

The saving in time, material and money by having an electrotype foundry attached to a printing office is beyond question, as it enables the printer to duplicate his forms rapidly and distribute them without delay. It also enables the office to dispense with a great amount of expensive material, which otherwise would be in constant use and wear. Economy in presswork is an important item and should not be overlooked, particularly for long runs, as the forms may be duplicated at a trifling expense over the cost of composition, reducing the number of impressions to a minimum, and thereby increasing the profit on the work. Should the plates get damaged in any way, or corrections or alterations become necessary, they can be attended to at once on the premises, avoiding expensive delays caused by having the work done outside. Finally, a sharper and cleaner impression is obtained from a copper surface than is possible from either type or stereotype metal.

With a firm belief that electrotyping will eventually be adopted by the more enterprising printers of the country, we propose giving a detailed and practical description of the best methods and latest improved appliances necessary to carry on the business successfully.

#### THE FOUNDRY.

Electrotype foundries should be located on top floors, where plenty of light and ventilation can be obtained. When electrotyping is carried on extensively it is best to have two rooms—a molding and a finishing room.

#### THE MOLDING ROOM.

The molding room should be well ventilated, have a high ceiling, a concreted floor and a plentiful supply of water, and should contain all the necessary appliances for melting the wax, preparing and taking the molds, and depositing the shells and backing them ready for the finisher.

#### THE FINISHING ROOM.

The finishing room should have plenty of light, and should contain all the tools and machinery necessary for finishing, mounting and repairing the plates.

#### TO THE PRINTER.

All quads, leads and furniture should be high if possible. In offices having no high quads, etc., low material is used; but greater care is necessary and more time is consumed in cutting down the displaced wax on the mold. More labor is also required on the electrotypes, and the plates are not so perfect as when high material is used.

White and copper-faced type should not be used in the same form, as the deposit of copper on the type, be it ever so thin, causes a variation in their height, which is quite noticeable when the printing is done on sized and calendered paper.

When the matter occupies only a portion of a page, or the lines are shorter than its full width, as in poetry, an inverted letter should be placed in each corner as a guide to the finisher in beveling the plate. All large blanks, title pages, and unprotected lines, should have inverted lines so placed as to protect the exposed lines from injury while the plate is being shaved.

Owing to the immense strain on the form in the operation of molding, it is necessary, in order to bind the type securely, that the chase and furniture should be three-quarters of an inch high and perfectly true and square. The form must be properly justified and every type squarely on its feet. Use plenty of quoins, and lock the form much tighter than for letterpress; otherwise the displacement caused by the entering of the wax between the type will spread the lines in both form and mold, in consequence of which the type will be thrown off its feet and an imperfect plate will be the result besides the annoyance of having to scrape the wax from the type.

When the types are placed in the chase they should be surrounded by type-high guards, shaved perfectly true, with the shoulder toward the type. These guards prevent the wax from spreading during the operation of molding; they facilitate the process of backing the shell, protect the plate while being shaved,

and are finally cut down and used as bevels, by which means the plate is clamped to the patent block.

Should the spaces or leads rise to the surface of the type while the form is being planed down, it is a sure indication that either the matter is not properly justified, or the rules or guards bind.

All imperfect letters should be marked by the proofreader and thrown out before the form is sent to the foundry, as the plate will be an exact duplicate of the type. This is an important matter, especially to printers who do their own electrotyping, as the imperfect letters, unless discarded, will continually reappear, and be the means of causing unnecessary labor and expense by inserting good type to replace the battered or damaged ones in the plate, and this annoyance and expense will continue so long as the imperfect type is allowed to remain.

#### WOOD CUTS.

Wood cuts should be surrounded by type-high guards and locked up in the same manner as type forms, in order to prevent the blocks from cracking. The guards also prevent the wax from spreading and causing a heavy edge around the outside of the mold.

Wood cuts should be carefully cleaned with ammonia or benzine and thoroughly dried before being blacklead. Lye should never be used, as it opens the joints and swells the lines of the engravings.

Should fine checks or cracks appear on the face of a wood cut that is to be molded, place a strip of moist blotting paper about an inch wide over the crack, and apply a heated building iron to the blotting paper for a few seconds, or until the paper becomes partly dry, when the check will close or disappear. The cut must be immediately rubbed dry with a brush, and blacklead and molded at once, as the crack is liable to reappear.

When cuts and type are used in the same form, the cuts should be perfectly true and square; otherwise the type will be thrown off its feet. When cuts are too high they should be reduced to the height of the types; if too low they should be made type-high by proper underlaying.

#### MOLDING FROM DUPLICATES.

Every remove from the original means an inferior plate, to avoid which never use stereotypes or electrotypes to duplicate from, if possible, as a much better mold can be made from the wood cut or the original.

#### MOLDING FROM PLATES MOUNTED ON WOOD.

Plates mounted on wooden bases, when used in type forms from which electrotypes are to be made, are a great source of annoyance to the electrotype molder and finisher, as the wooden base gives way or sinks below the type in the process of molding, so that the finisher is obliged to beat up the cut from the back, to a true and even surface with the face of the plate. This is a waste of much valuable time and adds considerable unnecessary expense to the cost of the work; and even when done by an expert, and in a careful manner, the fine lines are distorted and the plate often destroyed.

The details of process cuts or half-tones are often lost in molding by being mounted on wooden bases.

Too much cannot be said in regard to this matter, as pressmen are often censured for defects in printing that are sometimes due to the imperfect molding and finishing of plates.

In order to remedy this evil, or at least place the blame where it properly belongs, the pressman should be supplied with a good hand-press proof from the original, before the impression is taken in the wax.

If plates are used in type forms from which electrotypes are to be made, they should be mounted on *solid metal bases*. The cost is trifling as compared with the results.

#### MOLDING COMPOSITION.

New molding composition consists of about 85 per cent of pure beeswax, 10 per cent of crude or virgin turpentine and 5 per cent of plumbago, which should be thoroughly mixed and freed from moisture (before being used) by boiling for about two hours in a

jacketed steam-pot. Five per cent of Burgundy pitch should be added to the above in extreme hot weather. The crude turpentine is added to reduce the cone-like structure of the wax, and the blacklead to prevent the composition from sticking to the cuts or form, while Burgundy pitch prevents the composition from becoming too soft in warm weather.

#### BEESWAX.

Beeswax is the natural secretion of the bee, and is formed under the rings of the belly of the insect, which constructs with it the cells of the comb in which the honey and larvæ are deposited. The wax is obtained by slicing the comb taken from the hive, draining and afterward expressing the honey, and melting the residue in boiling water, which is kept hot for some time in order to allow the impurities to separate and be dissolved. When the liquid cools, the wax concretes and is then placed in pans or other suitable vessels. In this state it has a yellowish color and is of a firm, solid consistency and somewhat brittle. Pure beeswax has a granular structure, and when rubbed with the thumb (when the thumb is perfectly dry) emits a slight squeaking noise. Its point of fusion is 142 degrees Fahrenheit, and its specific gravity from .960 to .965.

Various adulterations have been practiced, most of which may be detected.

Meal, earth and other insoluble substances are separated by melting and straining the wax.

When the fracture is smooth and shining, instead of granular, the presence of rosin may be suspected; this is dissolved by cold alcohol, while the wax is left untouched.

Chloroform will dissolve only 25 per cent of pure wax, while stearine and fatty matters are dissolved completely.

Spermaceti, lard, oil, tallow and suet reduce the melting point and specific gravity, and also render the wax softer and less cohesive; they also produce a smooth and less granular fracture.

(To be continued.)

#### NEW POSTAL ORDER.

At Washington, D. C., on April 20, the following order was issued by Acting Postmaster-General Whitfield, which modified former regulations of the department as to postage on newspapers and periodicals:

Order No. 138.—Ruling 68, page 794, January, 1891, postal guide is amended so as to read as follows: Under the proviso of section 352, postal laws and regulations, the postage on newspapers (excepting weeklies) and periodicals deposited in a letter carrier office by publishers, when sent to regular subscribers, or as sample copies, or by newsdealers, when sent to regular subscribers, for delivery by its carriers, is as follows:

1. On newspapers (excepting weeklies, for the rate of which see division 4 of this ruling), without regard to weight or frequency of issue, one cent each, to be prepaid by affixing ordinary one cent stamps to each paper.
2. On periodicals (other than newspapers) not exceeding two ounces in weight, one cent each, to be prepaid by affixing ordinary one cent stamps to each publication.
3. On periodicals (other than newspapers) exceeding two ounces in weight, two cents each, to be prepaid by affixing ordinary two cent stamps to each publication.
4. Weekly newspapers entitled to second class rates, except on above, one cent per pound, to be weighed in bulk and to be prepaid with newspaper and periodical stamps, at office of mailing.
5. The rate of postage on newspapers and periodicals of the second class, when sent by others than the publishers or news agents, shall be one cent for each four ounces or fractional part thereof, without regard to place of mailing or destination. (Sec. 351, postal laws and regulations.)

PRESSMEN frequently find they cannot print plated papers in bronze with success. The heavy coating on the paper absorbs the size so that the bronze will not "stick." This can be obviated by running the sheets twice through the press, using size each time, and allowing it to dry after the first impression, which it will do very quickly. The first printing fills up the pores in the paper, leaving an excellent ground for the second impression, to which the bronze will adhere firmly. The extra cost of the double working should of course be taken into consideration in estimating the cost of the work.

SKETCHING IN THE COUNTRY.

Specimen of half-tone engraving, by ELKTRO-TINT ENGRAVING COMPANY, 736 Chestnut street, Philadelphia, Pennsylvania.

Written for THE INLAND PRINTER.

### FIRST PRINTING ON BOSTON COMMON.

BY H. E. ROUNDS.

IT may be a mistaken idea on my part, of course; possibly some enterprising disciple of the "art preservative," long ago, in the times that tried men's souls, had a printing office on Boston Common somewhere — that classic ground so endeared to the heart of every true American — but until proof is furnished to the contrary I shall claim that honor, and herewith have it recorded.

The way of it was this: When the reunion of the Grand Army of the Republic was held here in Milwaukee in 1889, I, among other printers of the city, printed quite a number of orders for cards for the "vets," but not as many as might have been done had I known beforehand how universal the custom of exchanging cards was on such occasions. Last summer, before the annual meeting, I became struck with the idea of attending the reunion at the "Hub," having never been East since leaving Vermont when a year and a half old; and naturally having forgotten all I ever knew about the effete East, I desired to see as many historical places as possible.

The time and expense could hardly be afforded, particularly the latter, even at greatly reduced rates of transportation; but suddenly a bright idea occurred to me. I had on hand for sale a small self-inking press suitable for card work, though not fast, and knew where I could get a stock of G. A. R. cards to take along, with the privilege of returning what I didn't use. The risk was small, the chances great (in my mind). So, at it I went preparing for the momentous trip. As a preliminary, in the army, and that I might be *en rapport* with the "boys," I became a member of a local post, having never before joined, mainly on account of the short time I was in the service, and feeling a certain diffidence in claiming a veteran's honors therefor.

I selected a sufficient number of fonts of suitable type, laid them in a little cabinet, tacked strawboard over each case to keep the type from becoming "pied," packed the cabinet, press and fixtures carefully in an old trunk, and then purchased another small packing trunk and partly filled it with the G. A. R. cards in good variety, about sixteen thousand in all. So far, so good. Visions of a pleasant and instructive trip, not only costing me nothing but paying a handsome surplus, floated before me, but "the best-laid plans of mice and men gang aft a-glee." Let us not anticipate, however.

Passing by all mention of the trip, Sunday evening, August 10, found our post in Boston, too late to attend church. Monday morning I started out to find a suitable room wherein to open up my mammoth printing establishment, but met with no success. Every desirable place looked at was occupied or not obtainable. Being a stranger in the city, of course, I did not know just where the best points were. Finally, in my perambulations, about 3 o'clock P.M., I came to Boston Common and sat down in the shade of a tree to rest and reflect, although I was too full of my scheme to do much solid reflecting.

It was a lively and inspiring scene, a great many G. A. R. men being there walking about, greeting old comrades and "fighting their battles o'er again." One side of the Common, facing Tremont street, was lined with booths and tents in all stages of erection, the proprietors of which were busy making preparations for the coming harvest of nickels and dimes from hungry and thirsty soldiers.

Then and there it occurred to me that the Common ought to be just the place for card printing. There was an absence of that crowded, excited condition of things in the city, the boys taking their ease, as it were, and it seemed as if they would be more apt to give me their orders than they would in the most favorable location down town. The headquarters of the Woman's Relief Corps was also there and had many visitors.

The idea grew on me the more I considered it; so, approaching a shrewd-looking Yankee busy preparing his booth, I asked him how much he would charge for room therein for my outfit during

the week, or, say till the following Friday afternoon, by which time I thought the rush for cards would be over and my stock exhausted. He scratched his head, masticated his quid vigorously, and finally "reckoned" that \$1.50 per day would be about the proper figure. I demurred and a compromise was made on the basis of \$5.00 for the term. Then I hustled around, found an expressman, rode down to the depot with him, got my trunks, after considerable delay, and returned to the Common. By this time it was too late to open up, as there was a regulation requiring all booths to suspend operations at 5 o'clock. I had supper, took a long street car ride in the evening and retired to post headquarters in a hall on Hanover street, which was not, by any means, all that fancy had painted it before leaving Milwaukee, in the matter of accommodations. About midnight I retired to my 2 by 7 dirty and lumpy mattress on the floor, to dream of a steady stream of "almighty dollars" flowing in on the morrow.

\* \* \* \* \*

It was rather late in the morning when I reached my "office," owing to a long wait getting breakfast, and upon opening up and arranging my material, I found that the type in the little cabinet which I had so carefully packed, was hopelessly "pied." The tacks used were too small and too few in number and had not held the strawboard down firmly to place; so that the smaller type had wandered to and fro in the boxes and had all to be put back in their proper places before anything could be done. It was disheartening, and took me all the forenoon. When this was done and the press got ready, I hung out my placards and samples and rested. A sandwich, a piece of pie and a cup of alleged coffee, taken in the booth, constituted my frugal meal, to save time.

The afternoon was almost barren of results. It was the day of the great parade and most of the soldiers were, of course, in the procession. Such as were not were busy looking on. Total receipts for the day, \$1.75. "Never mind," thought I; "there are yet three days left, and tomorrow I ought to keep busy, surely."

I was unavoidably late again Wednesday morning, and the proprietor of the booth said that several parties had been there inquiring about cards. He also added, laughingly, "The early bird catches the worm." I felt a little "wormy," but off with my coat and then and there set up and worked off what I have reason to suppose was the first job of printing ever done on Boston Common. It was a G. A. R. card, with my name, city, state, number of regiment, etc., on the front, with the word "over" on lower corner, and on the back was the following legend in pica roman:

#### FIRST PRINTING EVER DONE ON BOSTON COMMON.

The undersigned has rented space in Booth No. 27, and is prepared to print cards for G. A. R. men, Sons of Veterans and ladies of the Woman's Relief Corps. Prices, from 95c to \$1.75 per 100, according to quality. Leave your orders early. Good work, promptness and satisfaction guaranteed. Remember the place, opposite ———, 159 Tremont street.

While I was working off a few hundred of these cards, quite a number of soldiers came to the booth for lemonade or eatables of some kind, but seemed to be in a hurry and did not stop to investigate the operations of the silent disciple of Franklin, in the corner. Very likely they did not know that such a momentous deed was being enacted, the little press making but slight noise and looking more like a toy than a printing machine. A few came around to my side of the booth, and to those, of course, I ventured the query if they would like some cards printed. Up to that time I was under the impression that the mountain was coming to Mahomet; not that Mahomet would have to go to the mountain. In other words, I thought that the mere announcement of there being a printing "office" on the ground would suffice to give me all the work I could do alone, and came near securing the services of a boy who said he had "one of them kind of presses at home," to help me out in case of a rush. It was just as well that we could not agree on terms. He was Bostonese and it was an extraordinary occasion. He struck me for \$1.50 per day, the same figure that the booth man gave, and said he did not care much about working, anyway. He volunteered, however, to go about the Common and hand my cards to the "bluecoats," for fifty cents, and I closed the bargain. I have reason to believe that as soon as

he was out of the range of my vision he left for other green pastures (the Common was a cow pasture in Revolutionary times, we are told); at least, there was no marked influx of business that afternoon, and the idea began to dawn upon my mind that if I did not want to take that trunk full of cards back home with the laugh on me, I had got to "hustle." Total receipts for the day, three orders, \$4.50.

The next (Thursday) morning I was at Booth 27 in good season, determined to push business; so, taking my sample sheets, I made frequent short trips on the Common, interviewing such soldiers as I met; but that plan did not seem to work well. A large proportion of them had cards, some (from the back counties) had no use for them, and those who thought favorably of the idea said they would call around during the day and leave their orders. I succeeded in getting one order from an Ohio comrade who was peddling souvenirs of the encampment in the shape of three "buckeyes" attached together by ribbon, taking enough of his unique souvenirs to pay for fifty cards. It almost always happened, also, that when I was gone from the booth for any length of time, upon returning my landlord would report visitors, who went away saying they would call again; so I concluded to stay there and try another method.

I have never been very successful as a solicitor or canvasser, not having the "gift of gab" and peculiar tact so necessary in that calling, and had not before acted as "fakir"; but, mastering my natural repugnance to becoming one of that numerous and valuable class (and every kind under the sun was represented there), I kept my eyes open and whenever a G. A. R. man approached the vicinity of Booth No. 27, I chipped in my dulcet voice with those of my landlord and his helpers, and the occupants of the booths on either side—one a "souvenir" dealer and the other a man selling walking canes. The salute given to possible customers was about as follows, with variations: Booth 26: "Grand Army canes here! Going fast! Only a few more left!" Booth 27: "Here's the place to get your lunch! Hot coffee and sandwiches!" "*First printing ever done on Boston Common! Step right up and have your cards printed while you wait!*" "Ice-cold lemonade, only five a glass! Pies and peanuts! *G. A. R. cards printed here—the only place on the Common!*" Booth 28: "Here's your Grand Army souvenirs," (pronounced *so-ve-nighers*), "and Guide to Boston!" etc. Perambulating fakirs would also occasionally chip in with a mention of their wares, and that locality was decidedly noisy at times.

Booth 27 did an excellent business that day, keeping one man busy going for and returning with the various eatables and drinkables required, but my oratorical efforts did not seem to "pan out" very well, and the printing business still languished. Only six orders, mostly for fifty cards each; total receipts, \$6.75. Deducting the cost of the expensive cards, there was "nothing in it." So I determined to fool away my time no longer, and late in the afternoon took down my sign, packed up, locked the trunks and told my landlord I would go to the clam-bake at Plymouth upon the following day (never having attended one) and would call and get the trunks late in the afternoon. He said that would be all right, they would probably stay there till Saturday forenoon and would take care of them. He also, in consideration of my poor success, knocked off \$1.25 from my rent—at my suggestion.

I went to the clam-bake and it was "a big thing," well worthy of description; but as it is foreign to the subject of this sketch, I will not attempt to describe that most interesting trip. It served to make me "kick myself," to use a popular phrase, to think that I had almost wasted four days of valuable time when I might have been taking in other interesting objects in Boston and vicinity. It was supper time when the excursion train reached the city on its return, and in the evening I went to the Common to see if my trunks were safe.

Upon coming in view of the now familiar locality, I was struck dumb with astonishment at the magic transformation scene which had occurred within twenty-four hours. Not a booth or tent was visible. Like the wandering Arab, they had folded their tents and silently stolen away. To all intents and purposes it was as if the busy scene of the previous days had never been. The Common was bare, save a few scraps of paper here and there, and

the silvery moonlight, bathing with its splendor all objects, animate and inanimate, made it a picture long to be remembered.

But I was not easy enough in mind to enjoy the tranquil scene. My trunks, containing property worth about \$125, were missing, and I did not even know the address of my landlord, who, I presumed, had taken care of them. Calling on the chief of police, who received me very courteously, he said that I had better confer with the policeman whose beat took in Booth 27, and whose duty it was to oversee matters thereabouts. I found him but he knew nothing of the trunks; said nothing could be done then, but told me to go in the morning to a little house on the Common where all articles found thereon were taken, and if my trunks were not there, to let him know and the matter would be investigated. It worried me considerably, but did not entirely deprive me of sleep, and in the morning I found the trunks all right and had no difficulty whatever in reclaiming them. Indeed, anybody could have gone there, claimed them and taken them away without any questioning.

Saturday and Sunday I devoted to seeing some of the most notable sights of the historical city, regretting that my time was then so limited, and Monday afternoon went to Providence for a few days' visit with friends; and thus ended my first trip to the East. (May it not be the last!) I like Boston and Providence. To a westerner they are quaint and interesting, and I would like to make the trip over again, minus the outfit which, presumably, did the "first printing ever done on Boston Common."

#### TO PREVENT ELECTRICITY ON THE PRINTING PRESS.

Wet a cloth with water and wring it out well until it is only damp, then pour a little glycerine upon the damp cloth and wipe the surface of the tympan sheet with it, only on that part of the sheet where the impression is, as it is there that the reaction is effected—at the point of pressure. Do not put on too much glycerine, as it will wrinkle the sheet too much. Simply go over it as you would in oiling the sheet to prevent offset, but do not saturate it. If you find that one application or wiping will not stop the trouble, go over the impression parts again in the same manner. Some kinds of stock are more susceptible than others, and call for an additional application.—*American Art Printer.*

#### HOW NOT TO DO IT.

Sometimes one can learn as much by other people's failures as by studying the successes of their more brilliant brothers. Thus much by way of preface or apology for Johnny's composition, made public in the San Francisco *Examiner*.

Gees hisses, but ducks quacks, and wen Franky, that's the baby, is painfle in his lap he hollers, but the lionroars like dissan thunder and makes the welkon wring! Uncle Ned, which has been in Injy, and every where, he says one nite a lion came out of the woods and went to his correl for to eat his cattle Uncle Ned he got up and looked in the correl thru a crack, the lion shode his teeth, and Uncle Ned sed, "The iddiot thinks I am a dentist, but I haven't no time for to tend to him. Ile send for the lion tamer to quell him with his I."

#### AN ARAB SAYING.

Remember three things come not back:

The arrow sent upon its track—  
It will not swerve, it will not stay  
Its speed; it flies to wound or slay.

The spoken word, so soon forgot  
By thee, but it has perished not.  
In other hearts 'tis living still  
And doing work for good or ill.

And the lost opportunity,  
That cometh back no more to thee.  
In vain thou weapest, in vain dost yearn,  
Those three will nevermore return.

The

# COX • DUPLEX • PERFECTING • PRESS

## AND FOLDING MACHINE.

Delivers 3,500 to 4,500 perfect papers, folded, per hour, either four, six or eight pages, from flat beds and ordinary type forms.

MR. T. C. O'HARA, the well-known expert machinist of the *Boston Herald*, under date of September 10, 1890, writes as follows to MR. H. I. DILLENBACK, manager of the Rutland (Vt.) *Herald*, the purchaser of the first of the above machines :

BOSTON, MASS., September 10, 1890.

At your request I attended the shop test of the new COX DUPLEX WEB PERFECTING PRESS, built for the Rutland *Herald*, and carefully inspected its operation and made a thorough examination of its construction. The press stood partly over a pit and partly on the floor, upon planks, and was not fastened down in any way ; and it was run by a four-inch belt. At the first trial of speed, it ran at the rate of 3,000 complete papers per hour ; at the second, 3,600 ; at the third, 4,560. Its operation during these trials caused no perceptible jar of the machine nor of the floor of the building, nor did it give any indication of strain upon the machine, and it ran with perfect steadiness and smoothness. The principle of the machine, while novel, is entirely practical, and overcomes entirely the obstacles to speed and smooth running always heretofore encountered in the construction of flat-bed printing presses, and in my opinion the invention has solved the great problem in the construction of machines for the use of newspapers of moderate circulation, desiring to print from type at high speed, in a manner destined to revolutionize this branch of printing press manufacture.

Under date of December 9, 1890, Mr. Dillenback, Manager of the *Herald* writes :

The press is running nicely. I believe it to be the press, without a rival, for newspapers desiring to secure all the advantages of a fast perfecting press without the delays, expense and other disadvantages of stereotyping ; and I do not hesitate to recommend it unqualifiedly. The press runs smoothly and economically, is handled with ease by a young man who never before saw a perfecting press, is thoroughly well built, and does better work than the vast majority of presses. I know of no "outs" about it, and feel justified in saying that no one can say aught but in praise of it.

The press is now in daily operation in the pressroom of the *Herald*, where it is fully demonstrating its capacity to do all that is claimed for it.

Full information may be obtained by addressing the manufacturers.

**NEWEST**  
**CUTTER**

For a thoroughly GOOD hand and power Cutter at a comparatively small figure, the "ECLIPSE" leads all of its competitors.

The "ECLIPSE" is guaranteed to excel, in all the points requisite in a good machine, all other low-price Hand and Power Cutters in the market.

**"ECLIPSE"**

THE construction is simple, the power and strength warranted, the fitting and finish first-class. Only small exertion is necessary to operate by hand, and the fly-wheel is made extra large as an additional advantage. The pulley for power is always ready for the belt when needed. The knife cuts from left to right; has a sliding, draw movement, which is uniform and rapid and can be stopped at any point in the cut. There are gibs in the frames for the adjustment of the knife-bar. Either the usual style of clamp and gauge or the intersecting clamp and gauge is furnished, as may be preferred. The back-gauge is split, thus admitting of two sizes being cut at one operation. In the front table is a brass measuring rule divided into eighths of inches. Only SPECIAL boxing charged for.

Inches	Size of Pulley.		Speed for Power	Shipping Weight	Price at Factory
	Inches face	Inches diam.

Mr. H. C. HANSEN, 24 and 26 Hawley St., Boston, Mass.:

Dear Sir,—We have used your Perforating Machine for several months, and wish to say to you that we are very much pleased with it. It is the best machine of its kind that we ever saw.

Yours very truly,  
THE PRICE, LEE & ADKINS CO.  
Per M. B.

(DICTATED)

PRINTING HOUSE OF ROCKWELL & CHURCHILL,

BOSTON, February 1, 1889.

Mr. H. C. HANSEN:

Dear Sir,—It is with pleasure that I write of our experience with the Perforating Machine purchased of you in July, 1888. It has been in use nearly every day on all kinds of stock, and the perforation is as clean on 16-lb. folio as it is on the heavy ledgers or card stock. Your instructions to run only one sheet at a time has not been our custom, as we run three or four at once of ordinary stock with clean work and without apparent injury to the machine. I have never seen its equal for rapidity and perfection on straight work.

E. L. SLOCOMB, Foreman Job Room.

H. C. HANSEN, 26 Hawley Street, Boston, Mass.:

NEW BEDFORD, MASS., June 18, 1890.

Dear Sir,—The Perforator purchased of you over a year ago has given entire satisfaction. Have found it very useful on all classes of work, and it certainly fills the place of a higher priced machine. In fact, we think every enterprising printer should have one.

Yours truly,  
CHAS. W. KNIGHT.

## THE ART DIVINE.\*

THERE is at Paris a place of pilgrimage for the typographer in love with his art and desirous of turning to account his leisure moments. It is the Mazarine gallery, where the most precious monuments of European printing are exhibited. Beside the xylographic specimens of the fifteenth century, one sees there the marvelous impressions of Mayence in movable characters, near by some books of Pfister, of Faust, and Pierre Schöffer, all three cotemporaries, associates or pupils of Gutenberg.

By the side of these authentic witnesses of the origin of an art which spontaneously spreads and multiplies to infinity, like all that is beautiful and useful, the visitors to the Mazarine gallery are also permitted to admire the first typographic models of the presses of Strasburg, Rome, Venice, Cologne, etc. This collection of hundreds of *chefs-d'œuvre* offers to the student a field so vast and varied that, after taking one taste, there is no more regret for the hours of leisure, since they can be rendered both pleasant and instructive.

The prototypographié savants who have instituted these *chefs-d'œuvre*, had the spirit of large-heartedness and devotion, and, far from pursuing a mercantile end in the exercise of the new art, they only saw a means of diffusing the light impatiently awaited. For one who is enriched, how many of these precursors have found ruin, while as to covering themselves with glory and honor, all, with few exceptions, have fully succeeded. Their names are immortal as the art which they have assisted in publishing.

Long as may appear this preamble, it may not be useless at this moment, when the memories of the Universal Exposition are still present in all minds; when the noise made around the composing machines, after having put the finger in the ear of the typographers, tends gradually to weaken. We repeat that all this fine bluster vanishes as the song of a nightingale in the morning! But here it is awakening in the descriptions of the new linotype, not less marvelous, we are assured, than the machines of Kasteinbein, Fraser, Thorne and Lagerman.

Without wishing to strike at such or such of these inventors, we may be permitted to inquire if they have ever seen a book, or, better, if they have ever seen some books; if they have taken the trouble to compare them, to analyze them from a technical point of view; in a word, to study them.

If they have done this, they ought to be convinced that a book, like an edifice, has its peculiar physiognomy; that it is from this alone that it takes its value; that its typographical aspect, intimately allied with its *esprit*, is as the resultant of the thoughts which it incloses, and that this personal seal being taken away there would only remain a commonplace formula if the hand of the artist had not been sufficiently wise to give it a particular imprint.

Each book worthy of the name is now a monument erected to one of the branches of vast human knowledge; although formed from the same materials and perhaps fashioned by the same hand, where does one see one book resembling another book? Can a Horace or Virgil have the same aspect as a Tacitus or a Xenophon? A collection of celebrated authors, presented in an identical form cannot command the price that it could if each volume which composed it differed from its companions. That is elementary, save, it seems, for certain inventors.

All start out with this principle: that composition is a mechanical work; so be it. But into this operation, mechanical in appearance, there enters a touch of cerebral function sufficiently notable. A foreign princess understood this when on visiting a composing room and a workman said to her with modesty, "You see, Madam, we are only machines," she responded, "Yes, but very intelligent machines!"

Now, if a finely mechanical work is distinguished by its mathematical regularity, almost automatic, that of the composition includes, on the contrary, a great variety of details. One line does not resemble another line. Scarcely one page resembles another page. Like the thoughts of which they are the image, they succeed each other and are distinguishable one from the

other comparable in that to the children of one mother, who, while preserving a certain family air do not reproduce absolutely the portrait of it. What is the cause of this forced dissemblance? The diversity of the words themselves, in a word their spacing. It is a fact that in spacing lies the chief difficulty of composing, to speak truly, the only difficulty, but it remains a difficulty for the most practical workman; judge if the workman is replaced by machinery! For example, a certain line is spaced by two points another by four or five; this one by three points, that one by one and a half. These unhappy doves, the thoughts, whom it is the mission of the typograph to imprison, do not all present themselves in the same manner to enter their cages; some are docile, others refractory, all of unequal size and plumage, and sometimes it is necessary to take out one already captured, for the purpose of introducing another!

Think of a machine performing all that is required of an active workman, but it may be that tomorrow the linotype, distancing all the systems of the present, will present the last word of progress in solving the difficult problem of spacing.

What a fate would menace the industry of the book if the machines should ever attain the desired perfection.

Happily, it is not a danger; the machines cannot even execute the body of the book. At most it can only be employed in the making up of a paper. And in considering the "fine copy," the parceling out of this copy, the multiple corrections, the incessant overrunning, one can judge if this task itself is easy. But the greater the difficulties which the inventor encounters, the more obstinate he becomes in his efforts to surmount and conquer them; nothing abates his courage and the systems succeed each other desperately without bringing the solution of the problem. The problem is one which cannot be treated mechanically. Printing is an art, not a trade. No other art lends itself less readily to mechanical execution. It is this which the inventors seem too kindly to disregard. It is necessary to remind them. Do they follow a trade, who, inventing the types, reproducing faithfully the characters and signs employed by the scribes in their most perfect illuminating, succeed at the first stroke in giving, by the clearness of their impressions, the illusion of the writing itself?

Was Pierre Schöffer only practicing a trade who invented, in addition to the metallic font, those superb initials with double clamps, making red and blue, marvels of the imagination, the secret of which was not penetrated for four centuries?

Also, we must recall the names of Nicolas Jenson, who, in 1740, invented the beautiful roman type which is still employed for the finest editions.

The Nereli brothers, of Florence, who, seconded by Demetrius, of Crete, abandoned their occupation of silversmiths to make themselves the revealers of Homer.

Alde Manuce, who, in concert with François, of Boulogne, invented the beautiful cursive Italian which ravishes the eyes of our cotemporaries.

Junte and Elzevir, who vied in activity in producing such wonders of taste and erudition.

The Estiennes, grand educators of the family and of the people, and whose smallest glory is to have given the treasure of the Greek language and the first version of Anacreon.

Christopher Plantin, of Anvers, who, to crown twenty marvelous works (buds out of his garden) produced, after seven years of study and vigils, the incomparable Polyglot bible.

The valiant Etienne Dolet, who paid for the so called erroneous interpretation of a text of Plato with his life.

Have they only exercised a trade who, lettered and learned, restored the mutilated texts of poets and philosophers of antiquity for the increased pleasure of humanity past, present and future?

Do they only pursue a trade who, continuing the noble traditions of their predecessors, find still the means, by the application of modern science, to execute typographical wonders which Firmin Didot would not disown?

Printing is not a trade, but an art — the grand, graphic art.

It is not the wish that anyone should fail to realize his ideal, but the inventors of the composing machines resign themselves to

\* Translated by Miss Ella Garoutte, from *L'Intermédiaire des Imprimeurs*, for, THE INLAND PRINTER.

unsay the prophetic words of Gutenberg, presenting to his associates a sheet of the Catholicon: "This is the art divine!" It is about four hundred and fifty years since the words were pronounced. The expression was gathered up and adopted by the bishops and cardinal under the pontificate of Paul II. No one has come to annul it; nothing has been able to destroy it.

For being the intelligence which has enlightened, consoled and enlarged the confines of the world, for discovering the mode necessary to the perpetuation of their thoughts, there was needed a man who was the equal of the brightest genius. This the inventor of the printing press was. Its glory cannot but enlarge as the centuries advance, those propagators of human knowledge. The linotype will not efface the word with which Gutenberg has baptized his immortal work until the day when printing, becoming a mechanical art of writing, which it is, will cease to be "the art divine."

[The above translation is one of the best that has appeared from the pen of Miss Garoutte, who has made a good selection from the French journal and put it in the best shape for English readers.—EDITOR.]

Written for THE INLAND PRINTER.

### EMINENT LIVING PRINTERS.

BY JOHN BASSETT, EDITOR AND PROPRIETOR OF THE "PRINTING WORLD."

NO. XV.—E. MENKEN.

PRACTICAL printers will read with pleasure the following particulars concerning a brother craftsman and one of the leading lights of English printing trades journalism. Mr. Menken was born in the year 1846, and he humorously adds, "I don't know what for and wish I hadn't." From this remark we must infer that Mr. Menken has had his share of printer's worry. Many old stagers will smile with satisfaction to think that someone else has not been allowed to escape the usual brain-racking wear and tear of a printing office. Mr. Menken has worked his way from printer's devil to editor, and during the whole of his life has been a most diligent student and reader and a great lover and collector of books. He has a perfect knowledge of four languages and a smattering of one or two more; therefore it is not to be wondered that he rose rapidly. For twenty years Mr. Menken was associated with the late firm of Wyman & Sons, and the amount of literary work he has managed to get through has been enormous. He was assistant editor of the *Printing Times* until Mr. Charles Wyman had a serious illness, when he was appointed editor, a position he occupied for many years.

Concurrently with the above paper, Mr. Menken sub-edited the *Furniture Gazette*, and subsequently being offered the editorial chair on this paper, he accepted it and only resigned recently through pressure of other business, after having held the appointment for fourteen years. Messrs. Wyman & Sons, in 1887, published "The Royal Album of Arts and Industries" (price three guineas, and edited by Mr. Menken), a unique work, which was a means of greatly furthering the interests of British commerce and industry by making known in the most distant quarters of the globe the productions of the best manufacturing houses of Great Britain. The great value of the "Royal Album" in this direction was wisely acknowledged at the time. Messrs. Wyman's appreciation of Mr. Menken's work on the album is shown by the following letter:

74 AND 76 GREAT QUEEN STREET, JUNE 28, 1887.

DEAR MENKEN,—I wish to tender you my success and appreciative thanks for your admirable work on the "Album." I inclose you a check for one hundred guineas, which I hope may be some recompense for your extra exertions, which I most gratefully recognize. Yours very truly, E. WYMAN.

In 1888 Mr. Menken edited another work brought out under the title of "Wyman's Commercial Encyclopedia." It contains a mass of invaluable commercial, legal and statistical information not to be met with in any other work. The extreme usefulness

of the encyclopedia as a commercial reference book has been readily conceded by competent men. The special features are of Mr. Menken's conception and execution. The book has met with a well-deserved success; a second edition has since been published.

Mr. Menken has been an able and prolific writer on technical subjects and in his editorial capacity visited and described many of the largest and most famous industrial establishments throughout the United Kingdom, and his descriptive powers and grasp of technical detail has won him golden opinions on all such occasions. Messrs. Wyman relinquished the publishing business in 1889, and Mr. Menken purchased the whole of the copyrights of "Wyman's Technical Series," including the "Printer's Library of Technical Works." Further additions have since been made and these books are known as the best series of practical text-books in the English language. Several of the books comprised in the series were

written at the instance of Mr. Menken, who also originated the "Printing Trades Diary and Reference Work," and the "Furniture Gazette Diary," both of which annuals are still in a flourishing condition.

To the above business of publisher, Mr. Menken has added that of second-hand bookseller, and well compiled catalogues of rare and curious works are issued by him monthly. That most voracious of book lovers and book readers, Mr. Gladstone, is a large buyer, as evidenced by his orders written on the margin of the returned catalogues and exhibited in the window.

Any American printers visiting London will find the original of the portrait at Bury street, Oxford street, near the British Museum. It is unnecessary to say that books on printing are a speciality; in fact, what printer could resist a Hansard, a Simperley, a Savage or a Johnson?

**PROGRESS OF TYPOGRAPHICAL EXCELLENCE IN THE WEST—AS OTHERS SEE US.**

Mr. Joseph Hatton, the well known English littérateur, recently arrived in this country, where he is almost as well known as he is on the other side of the Atlantic. So much at home is he here that when he dropped into the Chicago Forty Club the other night with his friend Willard, the actor, nobody appeared to be much surprised. The members just seemed to think it the most natural thing in the world that he should drop in upon them from London without any fuss or ceremony.

Although Mr. Hatton does not stand in the first rank as a literary man, a scholar, or a scientist, yet he is a gentleman whose opinion is always worth having with regard to anything connected with the art preservative. He has few equals in the literary field for industry, fertility and breadth of scope. He is a critic, novelist, dramatist, all-round journalist, lecturer, musician, and welcome club raconteur and bon vivant. Few persons possess a more comprehensive knowledge of the men of the times than he does, a fact which was aptly illustrated in the series of articles he published a few years ago in *Harper's Magazine* on "Journalistic London." In these articles the leading characteristics of his co-workers in the metropolitan journalistic field were lightly but deftly touched. And so, when he accompanied Henry Irving as historian on the actor's great tour through the United States, it was generally recognized by the press that he had done his work judiciously in spite of the strong temptation that existed in the circumstances to flatter Mr. Irving not wisely but too well.

During the brief visit that Mr. Hatton has just made to Chicago he expressed himself as being more delighted with the city than any other he was acquainted with in the United States. "The enterprise, the go and push and life and soul of the great West are concentrated here in Chicago," he says, "while all the world seems to attach itself to New York. The chief difference between Chicago and New York is that the latter is a foreign city, while Chicago is an American city." As the successful career of THE INLAND PRINTER has been and still is identified with the progress of this city, it naturally feels some pride in the praise bestowed upon Chicago by men whose praise, like Sir Hubert's, "is praise indeed." Hence it fully appreciates all the good things that Mr. Hatton has been saying about the city, both in the press and in private conversation with his friends.

Just at present, however, THE INLAND PRINTER is chiefly concerned about what Mr. Hatton has to say about the progress of the typographical art in the West, so far as he has been able to observe it by what opportunities he has had. He thinks that our daily press, with one or two exceptions, are models of get-up and typographical excellence—that is, of course, bearing in mind the hurry which must necessarily attend the publication "on time" of a great live newspaper. He is not so bigoted that he recognizes no merit or beauty in any type or class of journal but that of the heavy-looking daily newspapers published in the British metropolis. He is too cosmopolitan for that. In fact, he is glad to notice that some of the leading London journals, such as the *Pull Mall Gazette*, are making creditable efforts to enliven the appearance of their columns by adopting the best systems of the best American dailies. As for publications other than the journals of the West, Mr. Hatton—we confess it with all becoming modesty—spoke in terms of astonishment and admiration of the excellent typographical appearance of THE INLAND PRINTER. He could compare no British monthly with it except the celebrated *Art Journal*, and then the comparison was hardly fair, because the *Art Journal* is exactly what its name implies, namely, a publication intended solely for the advancement and illustration of the progress of the fine arts of the world, while THE INLAND PRINTER aims at combining the *utile* with the *dulce* for the benefit of all the occupations connected directly or collaterally with the printing trade. In the opinion of competent judges like Joseph Hatton THE INLAND PRINTER has no peer today in its line as a trade journal, and it shall always be our endeavor to push onward and upward

from our present by no means unenviable position. As the glorious art preservative advances to further excellence in the West we shall not fail to try to keep up, shoulder to shoulder, with the foremost ranks.

**OVERLAYING.**

This is the problem in all pressrooms where speed is the great desideratum. Indeed, in our get-up-and-get era speed is such a leading point that "How to Make Ready in the Shortest Time" may be said to be the one great question in all our pressrooms. Many conflicting theories have found advocates. "Paste as you go," is the one that has been most generally adopted, where the very highest class work was not called for. Wherever the high grade, or art finish, was wanted, resort has been always had to what is known as the "overlay" system; in other words, to the plan of making special overlays apart from the form and sheet and pasting them in place on the printed tympan sheet.

While the special overlay system has always won the prize for fine work on cuts, etc., yet, with the vast increase of cut work in our day, and the prospect of still greater volume, the time spent in overlaying cuts becomes a very serious item of expense, and eyes and brains are cast about to find a speedier system that will produce as good results.

Many years ago, a very clever French Canadian—a genuine artist in his way—stumbled upon a method of using a thin, gummy paste in such a way as to represent the layers of paper that pressmen employ in making overlays. His recipe for preparing that paste was his own. With it, and his artistic taste in manipulating and spreading it, he produced wonderful results in an incredibly short time, distancing all his fellow-workmen both in speed and quality. Efforts to obtain his secret failed. Even his feeder, who to some extent was in his confidence, and who is still working on presses in this city, does not know the composition of that paste. But it did its work, and well. After five, ten, fifteen or twenty thousand impressions, it remained the same elastic yet firm coating that had been put on with brush or finger, as the case might be; and the impressions taken were as fine and delicate as the most labored overlay worked out with paper.

Innumerable experiments have been made in this country to imitate the high results in finish and time which our friend the "Canuck" accomplished, but thus far they have been measurably unsuccessful. The nearest to winning has been a preparation, or paint, in which liquid rubber or caoutchouc was a prominent ingredient. But even this, fine, delicate and elastic as it was, left something to be desired, and thus failed to match the exquisite effects of the paper overlays; although on ordinary work it was a surprising time-saver, as, being put on with a brush wherever needed, it could be applied in any thickness or in as many layers as were required, saving most of the time spent in the innumerable cut-outs and layer-on-layer of pastings of the other method.

The "paint" idea has gone across the ocean and found recent adopters in Great Britain. Critical examination of cut work that comes to us from there, and which was produced by the paint method (though without the caoutchouc ingredient, we are certain), convinces us that they are behind us, even in this. There is an immature, unfinished look about their cuts, that shows the pressmen were either in too great a hurry, or their "paint" was too coarse or too soft for its work; or else the pressmen had not an artistic sense of the true values in the pictures.

There is little doubt that with the enormous increase that is coming in fine illustrated work the old method of overlaying with pasted paper will have to go, and be displaced by some method that will combine speed with finish. The "paint" principle looks like the thing; but the true ingredients have not yet been found. Besides, for the very highest work, it will require a genuine artist to apply it. Here is a field for study and experiment open to the pushing young pressmen of America. Those who get first on the ground will pick up the gold. It is a fair field for discovery.—*American Art Printer*.

### THE PEERLESS PERFORATOR.

With its earliest conception this machine received its name ; but how appropriately it was christened, even the inventor, at that time, little knew. Men propose and promise great achievements, but the man who performs is one among thousands ; likewise the machine that with use proves all that has been proposed and promised for it will ever be found one of a very small and select company.

In the light of such reflection it is most gratifying to have it said, that among the number of clever and successful machines

used by printers and binders this one stands eminent ; that in its particular class it remains today without a successful rival. This may seem a somewhat extraordinary assertion, but it is well substantiated, both by the machine's own record in work, and by the testimony of everyone who has used it. The accompanying illustration gives an excellent idea of the machine.

In order to obtain the desired perfection in all parts it has been found necessary by the manufacturers to produce every portion in their own factory. Gearing, which can usually be purchased ready-made in any desired form, it was found impossible to obtain and therefore it has to be cut at home, by men trained to the work. An examination of the machine in detail will best show what we are able here to scarcely more than mention.

**GAUGES.**— Careful observation of what was demanded, tedious experiment before reaching the desired point, and no small expense of ingenuity and time, have resulted finally in what was especially desired — accuracy in adjustment and simplicity in handling. The gauges are so arranged as to be easily changed from point to point ; also to compensate for any irregularity in cutting or printing of the paper.

**STRIKING CAMS.**— These are made of steel, and by means of a set-screw and graduated disk can be quickly adjusted for skipping any distance, from the usual lengths of stub to very short spaces. One machine is in successful operation on which these cams were made for very special work, the skip being only a half-inch. Any such change in the cams for special work can be made at very small expense.

**TABLE AND LAY-BOY.**— These are made of the choicest quality of seasoned whitewood, handsomely finished, and so constructed

as to occupy as small space as possible when the machine is not in use, or to fold most conveniently in packing for shipment. Both are attached to and supported entirely by the frame of the machine, instead of resting upon the floor in any manner.

**CUTTERS AND DIES.**— In these are found the vital parts of this machine. It is in these parts that even imitation has been found difficult by the two or three who have unlawfully attempted it ; while reproduction is simply impossible to anybody not in possession of certain processes known only in the factory. More than that, patents completely bar any would-be infringers.

The cutters are made from the finest Crescent steel, every pound of which is made especially for this work. The proper milling of these cutters would be difficult outside the factory, and the tempering impossible. This is accomplished by a process known only to the inventor, and upon it depends all the beauty of the perforation, and the durability of the cutter.

Of the dies it is only necessary to say that they are made from the same choice material and tempered by the same special process, and calculated to perfectly perform their part of the delicate work required.

There are furnished with each machine six pairs of cutters and dies ; also one scoring cutter and die. Duplicates of these parts are kept in stock and can be obtained quickly and at no great expense.

**STYLES OF CUTTER.**— No. 1. This produces the perforation earliest seen and best known in connection with the machine. It is a more cunningly devised instrument than appears upon first examination. At first sight it seems to have a sharp edge, and one would say that, instead of perforating, it would simply puncture the paper. But that would be a mistaken conclusion, either as to its form or the character of its work. Its form serves, on the one hand, to make a clean cut through the paper, and to remove at the same time every particle of the paper cut out and every trace of burr ; on the other hand, it serves to make the cutter less liable to injury, and makes it more durable in every way.

No. 2. This is known as the "new style" of cutter. The serrations upon its circumference resemble more some form of the saw-tooth, delicately executed. These cut an oblong hole, cut clean, and remove completely all paper cut out and all burr. One of the very remarkable performances of the machine with this cutter is its perforation of a single sheet of the finest manifold paper without the usual aid of a thicker sheet.

We have nothing to suggest as to a choice of these two styles of cutters. It is a matter usually decided by a trial, and by the demands of the work to be done. It will be seen, of course, that the second style serves all purposes — doing perfect work, either upon finest tissue or heaviest manila paper, and for that reason may be preferable.

**CHARACTER OF PERFORATION.**— The character of the perforation constitutes one of the distinctive features of the machine. To a person who has seen only the old round-hole, or cut-rule perforation, that done by the Peerless is simply a revelation. No other machine cuts and removes the particles so that the binder need not handle the paper again, in order to clean it fit for binding. No other machine makes a perforation that does not present difficulties in tearing. There is no other machine that does not leave enough paper and burr to be noticeable, in a bound book, in the form of a swell along the line of perforation. In the work of the Peerless there is no displacement or swell of the paper along the perforated lines ; while the clean cut of every hole, the absence of all burr, and the accuracy and facility with which the paper separates through the perforations, all excite admiration and commend the work at sight.

This work has gone largely into banks and railroad offices, and it is quite the order of things in these quarters to demand the "Peerless" perforation. More than any other agency employed, the actual work done has advertised the machine

and created a demand for it in the leading bitderies in the country.

**SIMPLICITY AND CONVENIENCE.**—Almost as rare as the combination of perfect beauty and perfect goodness in one person is the combination in one machine of great simplicity and great convenience: but such combination is noticeably present in the Peerless Perforator. Every important point has been sought and treated, and the minor ones at the same time. The result is a machine easily and quickly prepared for work; simple, accurate and convenient in operation; easy and inexpensive to repair. This is of much importance, and upon which we might enlarge indefinitely.

**MATERIAL.**—The greatest care is taken in the selection of stock used in every part of the machine, steel and brass of the finest quality entering largely into its construction. All screws subject to wear, all shafting and spindles, and all gudgeons for rollers are made of steel; all small rollers, the striker, with smaller parts, of brass. All the boxes, including the center bearings for the spindles that carry the cutters and dies, are of gun metal. The large rollers are of wrought-iron tubing, turned and fitted to the greatest nicety, and the rubber coating for these and the rubber carrying bands are of a material manufactured especially in order for this work. Every part of metal is nickel-plated, where practical either for ornamentation or utility.

**WORKMANSHIP.**—It is important to say that it is the habit of the inventor to be in the factory from the beginning to the end of every day, and to personally superintend the labor on every part of the machine, however small. Next in importance is the fact that the labor is performed by trained workmen, several of whom have been in his employ for years.

There is not a single working part that does not demand very careful and skillful labor in producing it. One of these parts varied in the smallest degree from the design, or executed without skill, would destroy the operation of the whole machine.

Messrs. Avery & Burton, 42 to 48 S. Clinton street, Chicago, are the manufacturers of the Peerless Perforator, and will take pleasure in giving any further information in regard to their machine.

#### ST. LOUIS NOTES.

A new weekly paper called the Carondelet *Progress* has made its appearance in the southern section of the city. It is a five-column folio, and is issued every Saturday. Herbert & Co. are the publishers.

Edgar F. Alden, the job printer at Second and Locust streets, was married, April 16, to Miss Grace Boutelle. All their friends wish them a long and happy life.

State Labor Commissioner Hall has appointed as factory inspector Hugh T. McMurtry, president of Typographical Union No. 8.

The attachment suit against the *Evening Call* resulted in its suspension, and the awarding of the contract for the city printing to the *Star-Sayings*. Ben Deering, the editor and manager of the *Call*, immediately brought to life again the *St. Louis Times*, a paper which he conducts for a season during political campaigns.

The *St. Louis Christian Advocate* has recently removed to commodious quarters at Fourteenth street and Lucas place, and the company controlling has been incorporated under the name of "The St. Louis Christian Advocate Company," capital \$45,000.

A new job office has been established at No. 8 North Tenth street, Fred Harpel being the proprietor.

The St. Louis Typothetæ has elected the following delegates to the National Convention to be held in Cincinnati in October: George D. Barnard, O. M. Skinner, Richard Ennis, Stewart Scott, Samuel Slawson, Edward Freeguard, N. T. Gray, E. S. Hart, W. H. Woodward.

The Cylinder Job Press Feeders' Union gave a grand ball at Uhrig's Cave upon the evening of Saturday, April 11.

On March 26 the Executive Committee of the National Editorial Association held a meeting in this city, and a programme for the National Convention, to be held in St. Paul, Minnesota, July

14-17, 1891, was arranged, after which the members in attendance were treated to a supper by the Mercantile Club at its club house. The attendance at the meeting was large.

Typographical Union No. 8 held its annual election March 25, which resulted as follows, the total vote being 508: President, Hugh T. McMurtry, *Globe-Democrat*; vice president, I. W. Campbell, *St. Louis Grocer*; secretary-treasurer, James Friel, Sr.; sergeant-at-arms, L. C. Lewis, *Republic*; Chairman Investigating Committee, James Heirs, *Star-Sayings*; Chairman Finance Committee, Wilfrid Dandurand, *Globe-Democrat*; delegates to International Convention, M. R. H. Witter and L. H. Bird, *Globe-Democrat*, and A. G. Wines, *Republic*; delegates to Trades Assembly, John J. Smyth, Kellogg's Newspaper Union.

At the regular meeting of Typographical Union No. 8, held March 29, the officers recently elected were installed, and vacancies filled by the election of Philip F. Coghlan and William Waite on the Board of Trustees, and John C. Hook, Belton Hall and Dennis Dunn as delegates to the Trades and Labor Union. Louis H. Zehnder was appointed reading clerk for the ensuing year, and the standing committees remain the same as last year. Proposed changes in the Trades and Labor Union constitution and by-laws were fully indorsed by No. 8.

The C. B. Woodward Printing and Bookbinding Company have removed from the stand on Sixth street near Franklin avenue, which they have for so long occupied, to the large and commodious building at Second street and Lucas avenue.

Scharr Bros., stationers, engravers and printers, whose stock was recently sold by the assignee, have opened up an exclusive copperplate engraving business at 1405 Olive street, under the title of Scharr Engraving Company.

Upon the evening of March 30, the St. Louis Press Club enjoyed a benefit at the Grand Opera House. On the evening of April 5 the German Press Club were tendered a benefit, which took place simultaneously at three different Turner Halls. Both clubs realized a snug sum from the different benefits.

We understand that during the afternoon of March 31 J. E. Mangan, of the printing firm bearing his name, was quietly married, and no one knew of the affair until it was over. It was very admirably and quietly planned. We were unable to ascertain who was the happy bride. The Princess wishes them a long and happy married life.

THE PRINCESS.

#### RECENT PATENTS.

The following list of patents relating to the printing interests is specially reported by Franklin H. Hough, solicitor of American and foreign patents, 925 F street N. W., Washington, D. C.:

##### ISSUE OF MARCH 31, 1891.

- 449,110—Inking device. M. J. Dolphin, Brooklyn, New York.
- 449,405—Inking device. M. J. Dolphin, Brooklyn, New York.
- 449,420—Printing machine, card. J. Jordan, London, England.
- 449,128—Printing machine, chromatic. J. Michaud, Paris, France.
- 449,446—Printing machine, perfecting. R. M. Hunter, assignor to Feister Printing Company, Philadelphia, Pennsylvania.
- 449,223—Printing office apparatus. J. L. Knight, New York City.
- 449,290—Printing presses, feed-gauge for. E. L. Megill, Brooklyn, New York.

##### ISSUE OF APRIL 7, 1891.

- 449,851—Printer's chase. W. P. Harding, Cambridge City, Indiana.
- 449,909—Printing presses, feed-gauge for. E. L. Megill, Brooklyn, New York.

##### ISSUE OF APRIL 14, 1891.

- 450,155—Printing cylinders, pantograph machine for tracing designs upon.
- 450,368—Printing press. J. M. Jones, Palmyra, New York.
- 450,369—Printing press, chromatic. J. C. Kellburg, Harrisburg, Pennsylvania.

##### ISSUE OF APRIL 28, 1891.

- 451,168—Printing machines, sheet delivery apparatus for. C. B. Cottrell, Westerly, Rhode Island.
- 451,373—Printing presses, ink roller lifting device for cylinder. M. W. Fisher, York, Pennsylvania.

MR. DANA's salary as editor of the New York *Sun* has been increased from \$25,000 to \$50,000 a year; that of his son Paul from \$150 a week to \$15,000 yearly; and a similar increase from a like sum was made for Chester Lord, the managing editor. Business Manager Laffan's stipend was increased to \$25,000 a year.

SPECIMEN OF BRASS RULE WORK.

Designed and executed by Lewis Rudy, of the "Intelligencer" jobrooms, Lancaster, Pennsylvania.

SPECIMEN OF BRASS RULE WORK.

Designed and executed by A. Koester, with C. J. Kelly, Denver, Colorado.

## PERSONAL.

We have received calls from the following gentlemen during the past month: Charles D. Mackay, of the J. L. Morrison Company, New York; Alexander M. Fiske, of G. Edw. Osborn & Co., New Haven, Conn.; Joseph F. McCaughtry, paper broker, Pittsburgh, Pa.; E. W. Stephens, president National Editorial Association, Columbia, Mo.; E. C. Fuller, of Montague & Fuller, New York; John W. Lyon, publisher National Atlas of the United States, Binghamton, N. Y.; E. H. Wimpfheimer, of Sigmund Ullman's ink house, New York; C. H. Collins, of the W. O. Hickok Manufacturing Company, Harrisburg, Pa.; Henry L. Sisler, Duluth, Minn.

## CHICAGO NOTES.

THE capital stock of the Knight & Leonard Company, printers, has been increased to \$150,000, and the firm name changed to Knight, Leonard & Co.

CLARENCE P. DRESSER, a member of the Press Club, and formerly connected with several Chicago dailies as correspondent, died in Kansas City on April 24.

THE H. O. Sykes Company has just been incorporated, with a capital stock of \$10,000, to do a printing, publishing, engraving, lithographing and stationery business.

REMOVALS are the order of the day. Geo. H. Morrill & Co., manufacturers of inks, have taken new quarters at 304 Dearborn street, down in the printing house district.

THE printing and paper trades are to be well represented at the World's Fair. Preparations are being made by those interested, and in a short time we will be in a position to give full information as to firms to be represented and space to be taken by each.

STEPHEN McNAMARA, son of the late Stephen McNamara, continues the roller-making business of his father, at the old stand, corner Clark and Van Buren streets, and is determined to sustain the reputation of the house by furnishing only the best rollers.

CHARLES J. COX, for some time past the western representative of the Hastings Card Company, of New York, is now connected with the J. W. Butler Paper Company. New York's loss is Chicago's gain, for Charlie is a "hustler" and well liked by the trade.

EARLY closing on Saturdays will be adopted by a number of the paper houses and printing establishments this year. The Chicago Paper Company, 120 Franklin street, announce that their store will be closed at 1 o'clock on Saturdays during May, June, July and August.

A BASE BALL league, made up of representatives from the composing rooms of the *Tribune*, *News*, *Post*, *Herald*, *Times* and *Globe*, has been formed; James B. Fullerton, of the *Tribune*, is president, and Gus Bilger, of the *Times*, secretary. A schedule has been adopted, and the first game will take place May 19.

THE Photo Tint Engraving Company have removed from 69 Dearborn street to new and enlarged quarters at 76 to 82 Dearborn street, where with increased facilities they will be better able to handle all business. They make a specialty of half-tone and half-tone color work, but do all kinds of photo-engraving.

A NEW concern has been incorporated here, to be known as the Western Coated Paper and Card Company, with a capital stock of \$1,000,000. The demand for coated paper in the West has grown so rapidly that a manufactory in Chicago is considered a necessity. This new company is the first to locate west of Albany. John Schmidt is president, C. Pagenstecker treasurer, and John W. Krueger secretary.

MR. PETER M. BALKEN, who has been connected with the *Journal* office for thirty-five consecutive years, leaves shortly for a three months' trip to Europe, sailing from New York on June 6 on the *Servia*, of the Cunard line. He intends to visit England first, then go to Stavanger, Norway, his native city, thence through Norway to Sweden and Denmark, visiting relatives in Copenhagen.

After a short stop in Hamburg and Berlin, he will return to Liverpool, from whence he will sail for this country. Mr. Balken certainly deserves a vacation of this kind, and his many friends on the *Journal* and in printing circles here wish him a pleasant voyage and a safe return. So does THE INLAND PRINTER, and trusts he will call the attention of printers and pressmen on that side of the water to the great advance made in the art of printing in America.

Two seedy looking printers, who were evidently not weighed down by silver or gold, were trudging slowly across the Lake Front park one hot day last week. As he bared his throbbing brow to the zephyrs, one remarked: "Ah, Jim, do you know what I'd like just at the present moment? I would like to be on the inside of a fine big steamer on the billowy ocean." "Well, just at present, Jack, I would like to be outside of a good big schooner," remarked his more practical companion with a sigh.

THE Sunset Club, of this city, has become notable. It is modeled somewhat after the Twilight Club, of New York, and the Six O'Clock Club, of Washington, its object being "to foster rational good fellowship and tolerant discussion among business and professional men of all classes." Its membership includes men in all the various walks of life: The banker or millionaire sits and discusses social and other problems with the workingman. Anarchists, socialists, single-tax men, democrats, republicans, mugwumps, sons of America, Europe, Asia and Australia, agnostics, atheists, Christians and freethinkers are alike welcome at its banquets. Everyone having any views to discuss has an opportunity of doing so. That its meetings have a wonderfully humanizing effect is certain. When men of pronounced anarchistic and socialistic views, whose personality is unknown outside their immediate following, but whose names are familiar to every newspaper reader, are seen at the Sunset Club gatherings, and their more conservative brethren are thus brought in direct contact with them, and see that, like themselves, these leaders are real human beings, faulty in judgment, mayhap, but terribly in earnest, it engenders a certain respect in their hearts that in no other way could have been attained. Let any serious trouble arise today in Chicago in which men of opposing views are pitted against each other, and a solution of such difficulty would be far easier now and in the future than could have been possible prior to the organization of the Sunset Club. Mr. W. W. Catlin was the energetic founder of this unique club, which was organized about two years ago, was its first secretary, and is given most of the credit for the great success attained by it, but he modestly insists that this is not true, but that the success is due entirely to his wisdom in selecting his successor, Mr. Alexander A. McCormick, who is the present secretary. However this may be, the fact remains that the Sunset Club is a power in the land and has come to stay. Mr. McCormick, who now holds the reins of government, for the secretary is the autocrat of the organization, is a bright and intelligent young man, very popular with all the members of the club, and has done and is still doing all in his power to widen the Sunset's sphere of usefulness.

## PRESS ASSOCIATION NEWS.

THE Kentucky State Press Association will hold a convention at Paducah on June 4.

THE National Editorial Association Convention is to be held in St. Paul, Minnesota, on July 14.

THOMAS REES, the newly elected president of the Illinois Press Association, is a good all-round newspaper man and an excellent presiding officer. The selection was a wise one.

O. G. WARREN, of the Buffalo *Commercial*, has just been elected president of the New York State Press Association, and Royal R. Soper, of the Elmira *Gazette*, secretary and treasurer.

THE Inland Daily Press Association, representing the leading dailies in Michigan, Illinois, Indiana and Wisconsin, has elected delegates to the national convention to meet in St. Paul in July next.

THE Arizona Press Association was organized last February with thirty-four members. L. C. Hughes, of the Tucson *Star*, is

president, and J. W. Dorrington, of the Yuma *Sentinel*, secretary. They will send delegates to the national convention to be held in July next.

THE regular meeting of the Tennessee Press Association held in Memphis a short time since was a most interesting and successful affair. One of the features of the meeting was a trip up the White river to the head of navigation, the round trip being about nine hundred miles.

THE Suburban Press Association, of Boston, Massachusetts, held its annual reunion and banquet at the American House on April 7. About sixty members with their ladies were present. President A. Starbuck presided, and postprandial speeches were made by a number of the members. At the close of the banquet an illustrated lecture on "Journalism" was given, in the hotel parlors, by Mr. T. A. Anderson. All present had an enjoyable evening.

AT the twelfth annual meeting of the Rhode Island Press Association, held at Pawtucket, officers were elected as follows: President, George O. Willard; vice-presidents, John H. Campbell, John P. Sanborn, L. B. Pease, D. H. Whittemore; secretary and treasurer, Charles A. Lee; Executive Committee—president and secretary, ex-officio, Edward P. Tobie, E. F. Sibley, George A. Smith; auditors, Arthur Pease, J. G. Colburn, George H. Utter; Excursion Committee—John H. Campbell, Charles A. Lee, Edward P. Tobie.

#### TRADE NEWS.

E. N. ALLING, job printer, New Haven, Connecticut, has sold out.

THE Sentinel Publishing Company is a new concern at Portland, Oregon.

TABOR & FORD, printers, Sioux City, Iowa, have dissolved partnership.

MILLER & GARRISON succeed Smith & Garrison, publishers, at Iowa Falls, Iowa.

THE Inter-State Publishing Company, of Kansas City, Missouri, is out of business.

A FIRE destroyed the office of E. H. Freeman, printer, at Los Angeles, California, recently.

REED & DE MARIA, printers, Detroit, Michigan, have recently added a cylinder press to their office.

ROSEBURG, Oregon, has a new printing and publishing house, called the Review Publishing Company.

THE Lewis & Dryden Printing Company, of Portland, Oregon, has increased its capital stock to \$100,000.

A TYPEFOUNDRY has been established at Charlotte, North Carolina, by the Southern Newspaper Union.

STORMONT & JACKSON is the firm name of a recently started job printing establishment at Washington, D. C.

THE plant of the Courier Printing and Binding Company, Saginaw, Michigan, has recently changed ownership.

THE Bell Printing and Manufacturing Company, of Roanoke, Virginia, has begun work on a \$25,000 printing establishment.

THE Carolina Printing and Manufacturing Company has been incorporated, at Charleston, South Carolina, with a capital of \$15,000.

ELIZABETH, New Jersey, has a new stationery and printing firm, called the John C. Rankin Company. The capital stock is \$125,000.

FIELD & TUER, London, England, have dissolved partnership. Andrew W. Tuer will continue the business of the old firm, under the name of the Leadenhall Press.

THE printing office of H. F. Boldt, at 58 Griswold street, Detroit, Michigan, has recently been purchased by Lee & Rule. Mr. Lee was formerly in business at Norwalk, Ohio.

RENUMBERING Boylston street, Boston, brings the Boston Photogravure Company's office at No. 132. Their engraving and printing establishment has been removed to 227 Cambridge street.

MR. C. S. AXTELL has sold his interest in the Griffith, Axtell & Cady Company, of Holyoke, Massachusetts, and is now connected with the Transcript Publishing Company, of that place.

ELKHART, Indiana, is liberally supplied with three first-class offices, all complete and doing good work, and of a nature not usually found in cities of that size. The *Truth* office is a new plant, finely located and doing a thriving business, with several first-class cylinder presses, and rapid ones. The Review Printing Company removed in January to a new building built for their special use after their own designs. The building is two stories high, built of brick, and is 40 by 95 feet. The first floor is devoted to counting room, private offices, stockroom and pressroom, while the upper floor is occupied by the newspaper and job composing departments. The building is finely arranged, has light from three sides, and such desirable quarters are seldom seen.

#### NEWSPAPER GOSSIP.

THE *Spectator* is a new weekly published in Galesburg, Illinois. A new daily has been started in Galesburg, Illinois, called the *Mail*.

THE *Michigan Farmer*, of Detroit, will soon appear in a new dress.

THE *Intelligencer*, of Wheeling, West Virginia, has put on a new dress.

THE *Evening Herald*, of Auburn, New York, has suspended publication.

THE *Weekly Advertiser*, of London, Ontario, is now issued semi-weekly.

AT Burlington, Iowa, the Burdette Company issues a sixteen-page weekly called *By the Way*.

THE *Rambler*, published at Forest, Illinois, has been sold by Editor Stickney to J. M. Fellhoefer.

N. P. REED, the senior editor and principal stockholder in the *Commercial Gazette*, of Pittsburgh, Pennsylvania, died recently.

THE *Republican Examiner*, of Jerseyville, Illinois, has been sold to C. Ladd, publisher of the Carlinville, Illinois, *Democrat*.

E. H. STALEY has sold the Frankfort, Indiana, daily and weekly *Crescent* to Senator Browne, of Columbia City, for \$7,700.

A NEW paper, called the *St. Charles Local*, is about to be started at St. Charles, Michigan, by Mr. J. F. Austin, formerly of Geneva, Ohio.

ON May 1 the Detroit (Mich.) *Tribune* appeared in a new dress. Hereafter the printing will be done on a new perfecting press which has just been put in.

THE Reading (Pa.) *Evening World* celebrated its first anniversary April 7 with an illustrated issue of twenty-two pages. It is very much elated over its own success, and it has a right to be, for it exemplifies in itself the trinity that wins—pluck, perseverance and push.

THE *Evening News*, of New York City, will shortly commence the publishing of a morning issue. The name of the paper has not fully been decided upon, but it will probably be known as the *Olive Branch*.

THE *Recorder*, New York's new daily, has been advertised more extensively than any other paper ever started in that city. It is called "the one million dollar beauty," and has strong financial backing.

THE newspapers of Rio de Janeiro have, within a few weeks, published some interesting information concerning the policy of the government of Brazil during the last year with respect to land, railroads and immigration.

AN American edition of the *Review of Reviews* is now issued at 52 La Fayette Place, New York, under the direction of Dr. Albert Shaw. The London edition, established by W. J. Stead, formerly editor of the *Pall Mall Gazette*, has proved to be a great success. The magazine is published monthly, is finely

illustrated and is said to be a most complete condensation of best periodical literature.

AT Yonkers, New York, on the evening of April 21, the local common council gave the official patronage to the *Daily Herald* and *Daily Statesman*, of that city; the former democratic and the latter republican in political bias.

THE *Courier-Journal* office, at Grand Haven, Michigan, has been sold to H. G. Nichols, the foreman of the office. Hiram Potts, the former proprietor, is about to start a new weekly in Muskegon, and will keep the same name for his paper.

BENJAMIN A. BURR, formerly the senior publisher of the Bangor *Whig and Courier*, died April 22, aged seventy. He was also the publisher in previous years of the *Jeffersonian* and *Burr's Monthly*, and an ex-president of the board of agriculture of the State of Maine.

IT is said that Chauncey M. Depew has recently refused \$100,000 per year for five years to do the editorial work on a prominent magazine published in the East. Many men would jump at such a tempting offer, but Chauncey -- well, railroading suits him better, and there is more "in it."

#### OF INTEREST TO THE CRAFT AND OTHERS.

DETROIT PRINTING PRESSMEN'S UNION, No. 2, intend to spare no effort to assist in making the coming convention in their city a big success.

FANEUIL HALL, Boston, has been secured in which to hold the thirty-ninth annual convention of International Typographical Union, June 8 to 14 next.

IT is rumored that there is a movement on foot among the Farmers' Alliance and Labor papers of Ohio, Indiana and Illinois to establish a "ready print shop" of their own, so they can avoid dealing with a "trust."

THE annual meeting and banquet of the Worcester (Massachusetts) Typothetæ will take place on May 12. The officers of the Typothetæ are: L. P. Goddard, president; Charles Hamilton, treasurer, and F. S. Blanchard, secretary.

MR. C. P. CULLEN, of Typographical Union No. 93, Macon, Georgia, has been elected to represent his union at the International Typographical Union Convention to be held in Boston in June. He is a charter member, No. 93's first secretary, and very popular with the craft in Macon.

THE Printers' Legion of Kings County, Brooklyn, New York, gave its first annual ball recently, the object of the entertainment being to raise money to enable the Brooklyn printers to contribute to the fund for erecting a statute to the printer-editor, Horace Greeley. Quite a sum was realized, and all present had a good time.

THE following officers were elected at the last regular meeting of Salt Lake City (Utah) Printing Pressmen's and Stereotypers' Union No. 41: Burdett S. Hoag, president; Thomas Tisdale, vice-president; Peter N. Haan, financial and corresponding secretary; Frank Merwin, secretary-treasurer; William Jack, sergeant-at-arms.

AT the April meeting of Typographical Union No. 235, New Westminster, British Columbia, the following gentlemen were elected: Vice-president, C. S. Campbell in place of B. James; Messrs. F. H. Ross and A. S. Coutts to the executive committee, and C. C. Stewart delegate to the proposed district union convention. Scale of prices unchanged.

ORGANIZER WILLIAMS instituted Galesburg (Illinois) Typographical Union, No. 288, on April 22, with twenty-one charter members. The officers are: O. W. Walkup, president; J. V. Beatty, vice-president; C. F. Carlson, recording secretary; E. E. Phillips, financial secretary; B. H. Swan, treasurer; A. G. Matheson, sergeant-at-arms; executive board: J. L. Wilcox, H. C. Smalley and A. G. Matheson.

THE *Journal of the Knights of Labor* says, in a recent issue: "Surely there must be something radically wrong in the treatment

of employes on the Philadelphia *Press*, when men will voluntarily leave their good (?) situations and seek employment in offices where organized labor is recognized, and how utterly at variance it is with the professions of the 'great organ' of 'Protection to American Workmen!' In the adjustment of difficulties like those that have occurred on the *Press* both sides should be governed by their sense of justice and right, and in that struggle public opinion was certainly with the union.

PRINTERS are recognized as great schemers. Some of them are forever puzzling their brains how to make a dollar aside from their regular vocation. Messrs. E. B. Horton and John A. Cantwell, members of Utica Typographical Union, No. 62, are endeavoring to leap into wealth and prominence through the instrumentality of the frog. Mr. Horton, who is something of an inventive genius, has conceived a new idea in puzzles, which promises to create as much of a craze as did the famous "Fifteen Puzzle," "Pigs in Clover," and others. It is called the "Leap Frog Puzzle," and those familiar with puzzles say it is sure to prove remunerative. Mr. Cantwell has considerable business ability, and together they will push the scheme. A contract has been made with an extensive toy firm in New York for the exclusive sale of the puzzles, which promises to be large. Messrs. Horton and Cantwell are being congratulated by members of the craft for their lucky find.

AT the annual election of Philadelphia Typographical Union, No. 2, held recently, the following gentlemen were elected: Ira Somers, president, and Owen A. Duffie, B. J. Dagney, Charles J. Meagher and William Kohler, delegates to the International Typographical Union. Ira Somers is as well known to New Yorkers as he is to Philadelphians. He was born in Atlantic County, New Jersey, May 4, 1863, and is therefore not yet twenty-eight years of age. He served his apprenticeship on the *Atlantic City Review*, entering that office when only eleven years old. He remained there until 1882, his last position in the office being foreman. Since then he has worked in most of the principal cities of the East and West, but principally in New York and Philadelphia. Ira (or "Dick," as he is familiarly called) gained a national reputation at the session of the International Typographical Union in New York in 1885, when he and Mr. Joseph McCann had their great typesetting contest. Mr. McCann was the victor, but both gentlemen broke all previous records. Dick is very popular and will make a good officer. Mr. Duffie was one of the charter members in 1850 of Typographical Union No. 2, and has been employed on the *Public Ledger* for nearly fifty years.

#### PAPER TRADE ITEMS.

VINCENNES, Indiana, is to have a new paper mill.

SUNAPEE, New Hampshire, will soon have a new paper mill.

THE paper mill at Fergus Falls, Minnesota, has again started operating.

A STOCK company has been formed to rebuild the Castle mill, at Yorkville, Illinois.

JAMES WREN is erecting a paper mill at Boyertown, Pennsylvania, to cost \$26,000.

BECKLEY'S mill, at Beckleysville, Maryland, recently destroyed by fire, is to be rebuilt.

THE Michigan Paper Company has purchased the B. F. Lyon Paper Mill, at Plainwell, Michigan.

A LARGE strawboard plant is to be erected at Carthage, Indiana, by the Leonard Paper Box Company.

THE Parsons Paper Company, of Holyoke, Massachusetts, are making an addition to their Mill No. 1.

THE Genesee Rag and Paper Company has been incorporated at Rochester, New York. Capital \$10,000.

THE lower mill of the Morley Paper Company, at Loudville, Massachusetts, was recently destroyed by fire.

THE Crescent mills, at Russell, Massachusetts, owned by Chapin & Gould, are to be largely improved, and new machinery added, which will increase the output very materially.

THE Hartland Paper Company is the name of a new concern recently incorporated at Middleport, New York.

THE Boston Paper Trade Association gave its fifth annual dinner recently, and elected officers for the ensuing year.

HOWLAND & CO., have their new mill at Sandy Hill, New York, well under way, and expect to start up in a short time.

TEXAS has a new paper mill, located at Oak Cliff, near Fort Worth. It has a capacity of fifteen tons per day, and is valued at \$50,000.

A. W. HOFFMAN of South Hadley Falls, Massachusetts, has purchased a half interest in the Excelsior Paper Company's mill in Holyoke.

THE Mead Paper Company, Chillicothe, Ohio, will have their paper mill in operation in a short time, and expect to turn out 15,000 pounds of paper a day.

THE Shattuck & Babcock Company have begun work on their loft-dried fine paper mill at De Pere, Wisconsin. It will probably be about a year before the mill will be in operation.

MESSRS. CRANE BROTHERS, of Westfield, Massachusetts, have recently put into their mill a new fifty-horse power Kimball engine, and are also about to add a Marshall perfecting engine to their plant.

AT Kaukauna, Wisconsin, the Shartel Paper Company intend to manufacture manila tissue, and have just ordered a sixty-eight inch machine of the Black & Clawson Company, of Hamilton, Ohio. The Kaukauna Paper Company, of the same place, have nearly completed the changes on their mill.

JOHN MCCOY, of York, Pennsylvania, has been awarded a patent for a cardboard machine. As cards are ordinarily made by pasting two or more layers of paper together, this invention provides a machine for easily and effectively performing such work, comprising paper supports, pressure rolls, tension devices and driers, the machines being designated to unite linen, cotton, or other cloth with the paper when so desired.

A NOVEL paper exhibit will be one of the features of the World's Columbian Exposition, in Chicago, in 1893. It is that of Crane Brothers, manufacturers of fine linen papers, Westfield, Massachusetts, consisting of a large dome, surmounted by a stuffed crane. This dome is between twelve and fifteen feet high and twenty feet in diameter at the base, and is constructed entirely of paper fiber ware, the same material from which the so-called paper car wheels, umbrella stands, coffins, boats, etc., are made. The dome is made in twenty-four sections, and can readily be taken apart for transportation. It has been nearly all over the United States, having been exhibited at fairs in New Orleans, Louisville, St. Louis, Cincinnati, Minneapolis, New York and Boston. This firm will also have on exhibition all sizes of linen paper, in two grades, "warranted all linen," and "Japanese linen." In the center of the dome is to be a high pyramid of linen ledger paper, the base of which is a ream of paper, measuring 31 by 53 inches, the largest size manufactured. In the pyramid are fifty-three reams of paper, the apex being a ream of special size, which is only 2 by 4 inches. A short distance from this pyramid stands another, also containing fifty-three reams, but which is of note paper, ranging from the largest bank sizes down to the daintiest of ladies' note paper. Each sheet of paper manufactured by Crane Brothers has in water mark the trade mark of the firm, a crane, which is patented, and consumers can always distinguish this make of paper from that of other firms. One of the attractions of this exhibit is a large visitors' register, which has traveled around the country with the dome, and contains 2,000 pages with fifteen names on a page. The first man who placed his autograph in this book was Jefferson Davis, who registered at New Orleans in the 1884-85 exhibition. Crane Brothers received a pressing invitation to send this exhibit to London to the recent Printing Exhibition at Agricultural Hall, but were unable to do so on account of the distance and short duration of the fair there. It will be an interesting feature at the coming exposition in Chicago, and will attract many visitors.

#### HINTS ON NEWSPAPER DISPLAY.

To display an advertisement properly is work which requires time, care and a certain amount of experience. These essentials are not necessary, of course, in the reproduction of reprint advertisements, where all a compositor has to do is to follow copy. The business man who sits down late in the day, and hurriedly writes up his announcement with the expectation of seeing a well-displayed advertisement in the papers on the following morning is almost sure to meet with disappointment. The copy for his advertisement is sent up to the composing room, with scarcely any preparation, but with the stereotyped phrase "good display" attached.

If it happens to be a lengthy announcement it is cut up into several "takes" and handed to as many different compositors, whose only object is to get up the greatest amount of type possible in the six or seven hours which constitute a night's work, as on all the principal dailies the piece system is in vogue. There are exceptions, however, such as the New York *Tribune*, on which the plain matter is set by machines and the advertisements on time. Consequently the compositor is not willing to bother much with your advertisement, as the time spent in brain work would be but so much money out of his pocket. The result is that the very part you intended to have brought out prominently is very often set in plain agate roman, and what should have been in agate is brought out in large display type.

It is always better and more satisfactory to have your advertisement put in type to suit you before giving it to the newspaper, even if it entails a cost of a few dollars extra.

If you are having your advertisement put in type, don't start in by making the printer believe you "know all about it," and then, after he has followed your instructions to the letter, give him to understand you don't think he knows much about the business. Be willing to be guided, to a certain extent, by his judgment in the selection of type, and, if necessary, change the reading so as to get the best effect possible when it will not spoil the sense of the advertisement. Never try to get into one inch of pearl enough matter to cover five inches of long primer. Don't have every other word full face, small caps, italic or gothic. The public doesn't care to use magnifying glasses to read what you have to say.

When cuts are used in general advertising, much better results are obtained if they are in outline.

The best advertisement, and the one most likely to be read, in my opinion, should start out with a good catchy line in plain, bold type, the balance set in, say, long primer or pica roman. A little white space all around is often very effective. If the body of the advertisement is set in old style, use antique for words that require prominence. If set in modern-faced type, use full-face. Avoid, above all things, fancy type, and never, under any circumstances, use the hieroglyphics or illegible faces gotten out of late. The foundries and typographical journals will attend to the "specimen sheets." A little ornamentation might be employed in advertisements intended for magazines and well-printed weeklies; but the skilled advertiser seldom indulges in this.

For the daily papers and country weeklies the plainer the advertisement the more effective it will be and also the better printed. The best advertisements to be seen in the papers today are those gotten up by professionals having their own printing offices. In conclusion I may say that it is the exception, not the rule, for job printers to turn out really good advertisements. They are too much given to fancy type and brass rules.—*Wm. Johnston in Printer's Ink.*

THE dollar sign (\$) is not a monogram of "U. S.," but dates from the days when the transfer was made from Spanish to American dollars, and accounts were kept equally in dollars and reals. Thus: One dollar | eight reals (American parallel accounts). Later the 8 was placed between the cancellation mark | 8 |; then the perpendicular lines crossed the eight, and, combined with the cancellation line evolved the present sign (\$).

**SPECIMEN OF RULE WORK — ANCIENT MONUMENTS.**

The typographic feature of the Paris Exposition, reproduced by half-tone process from original (23 by 36 inches),  
by A. ZESSE & Co., Chicago.

ITEMS OF INTEREST.

HORACE GREELEY'S daughter Gabrielle was married recently.

A MULTI-COLOR printing apparatus, shown at the Printing Trades Exhibition in London, printed a poster with seven colors at once.

THE editorial chair of the *Forum*, New York, has been made vacant by the resignation of Loretta S. Metcalf. Walter Page will assume the position as editor of that magazine.

It is usually said that there are but seven nine-lettered monosyllabic words in the English language, viz: scratched, stretched, crunched, scranched, screeched, squelched and staunched.

By fixing a mirror behind any machine or other object, and taking a photograph from a point sufficiently above it to include both the natural front view and reflected back view in one plate, time is saved in preparing illustrations for the press.

JOHN CLARK RIDPATH, the historian, was tendered a "semi-centennial reception" on his birthday, April 27, at Greencastle, Indiana. Letters of congratulation were received from authors and writers in all parts of the United States.

GOVERNOR PECK, of Wisconsin, has appointed Dud. W. Fernandez, an old Madison printer, for many years a resident of Oshkosh, state game warden. Fernandez has hosts of friends in the state, and his selection gives great satisfaction.

P. T. BARNUM, the great showman, who died last month, at one time published a paper called the *Herald of Freedom*. One experience in the way of a libel suit, and a sixty-day sentence to prison, discouraged him in this direction, and he soon gave up that line of business and drifted into the one that afterward made him famous.

A PROOF of Washington's farewell address, which is particularly valuable because of the corrections written on it by the first president himself, has been presented by Mr. George W. Childs to the Mount Vernon Association, and will soon be placed among the other treasures at Washington's old Virginia home. It is a valuable relic.

SAMUEL M. PETTENGILL, of Brooklyn, New York, whose death has been announced, was the oldest of the advertising agents of the country, and one of the fathers of the business which he followed during an extended lifetime. He was an honest, pure, genial man, who made friends easily, and held them steadily with the golden links of welded esteem.

IN New York's somewhat vari-colored literary circles a rumor has been heard that as soon as "Little Breeches" Hay finishes some business engagements which occupy his time he will undertake the writing of a book which, while not exactly fiction or romance, will nevertheless portray certain business and political types with which his experience has made him familiar.

PUZZLES seem to be the prevalent rage, and the following is known as the Ilfracombe Hotel puzzle: From six you take nine, and from nine you take ten; then from forty take fifty and six will remain:

SIX	IX	XL
IX	x	L
S	I	X

ONE of the most remarkable works of graphic art, if not the choicest volume of that character extant, is the Book of Kells, in the National Library at Dublin. This is a work of about the seventh or eighth century of our era, a time when all Western Europe was still steeped in barbarism. The delicacy of colors, the treatment of concentric lines, the general harmony, give the illuminations an ornamental effect unexcelled in any period or any country.

OF making books there is no end. So remarked a wise man many years ago, and the truth of the saying is made the more apparent when it is learned that there were 4,559 books published in the United States in 1890, as follows: Fiction, 1,118; theology and religion, 467; law, 428; juvenile, 408; education and language, 399; biography, memoirs, 218; literary, history and miscellany, 183; political and social science, 183; poetry and the

drama, 168; description and travel, 162; history, 153; fine art and illustrated books, 135; useful arts, 133; medical science and hygiene, 117; physical science and mathematics, 93; sports and amusements, 82; humor and satire, 42; domestic and rural, 29; mental and moral philosophy, 11.

IN one of the Albany newspapers there were recently advertised thirteen volumes of the New York *Daily Advertiser*, from 1829 to 1836; seven volumes of the New York *Daily Express*, from 1836 to 1839; eight volumes New York *Evening Post*, for years 1821, 1822, 1824 and 1832; two scarce volumes of Major Mordecai M. Noah's New York *Sunday Times*; the New York *Daily World* complete for 1861 and 1862, and the *Patron of Industry* for the year 1820.

AFRICAN-EXPLORER STANLEY, "our great Congonian," as he has been styled by Henry Clay Lukens, the journalistic word-maker, sailed for Europe last month, taking with him his wife Dorothy, a couple of other Tennants, and \$110,000, net cash coinage of his lecture tour in this country. In return for this outlay the American people have had the satisfaction of hearing him declare that he liked them. "Well," demurely comments the *Utica (N. Y.) Observer*, "we should think *he* would!"

A FEW SMILES.

"WHY is *v* the sweetest letter in the alphabet, Ferdinand?"  
 "Because it comes nearest to *u*."—*Baltimore Life*.

A CONNECTICUT editor gives an account of a man who "blew out his brains after bidding his wife good-bye with a shot-gun."

ON the fence around a cemetery in a western town is this notice: "Use ——— Bitters if you would keep out of here."

A COMP, setting a job, on being asked by a customer to put in something *striking*, complied by sticking a whacking big fist in the center!

WHY should the letter "i" be the happiest of the vowels? Because it is in the middle of bliss, while "e" is in hell and all the rest are in purgatory.

"THAT comp's a humorist," quietly remarked the proofreader as he corrected the proof from "English snydicat" to "English syndicate."

AN eminent surgeon says that with four cuts and a few stitches he can alter a man's face so his own mother would not know him. Any newspaper can do that with only one cut.

AN English printing trades journal in a recent issue prints an article headed "How to Walk Fast." The editor possibly took the witticisms at the expense of the tourists seriously, and concluded the article would be acceptable as "advice to printers."

SHE—The newspapers never get anything right.  
 Her visitor—Yes, that's so. By the way, did you see that very flattering paragraph in the *Era* night before last about your husband?

A WESTERN editor published this item: "FOR the effects of intemperance, see our inside"; and another local item reads: "Our new schoolhouse is large enough to accommodate four hundred pupils four stories high."

CHEERFULLY GRANTED.

Breezy Whiskers—Boss, can't you help me?  
 Suave Stranger—Certainly, sir; here is a card of the *Daily Trombone*. Our rates for "Help Wanted" are twenty cents a line.—*Puck*.

It seems rather queer that an advertisement that runs a long time should be called a *standing* advertisement.

## IT WILL TAKE.

Editor— I am going to make an innovation with the next serial I print which will be popular with the ladies.

Publisher— What are you going to do?

Editor— I intend to print the closing chapter first.—*Judge*.

## HOW MANY WIVES.

It is funny how a typographical error will slip into a paper after the most careful proofreading. In the *Houston Post* recently Senator Garwood is reported as saying in a speech on the Commission bill that he "entertained the same wives years ago that he does now."—*Taylor Journal*.

## HE WANTED SOMETHING RECENT.

Countryman (in book store)— My wife wanted me to get her some good magazine to read.

Proprietor— Yes, sir, how would the *Century* magazine do?

Countryman— Gosh, no! She wants a monthly magazine.—*Texas Siftings*.

## SOCIETY AS HE FOUND IT.

Mrs. Intrade— Where is your father?

Adult Son— He is at the store editing his edition of "Society as I Found It."

Mrs. Intrade— What! A book?

Son— Yes, a ledger, full of unpaid and uncollectible bills.

## IT WAS ALL THE SAME.

Managing Editor— How could you overlook such a blunder? I wrote "When a man gets married," and here it is in the paper "When a man gets worried." That doesn't make sense.

Proofreader— Doesn't, eh? Young man, you may know more about the tariff than I do, but if you think the printer didn't improve that sentence without changing the sense you're mightily mistaken.—*Spokane Spokesman*.

## ENTERPRISE.

Managing Editor of the *Screamer*— Did you interview Smelton?

Reporter— Couldn't do it.

Managing Editor— Couldn't do it! Why not, I should like to know?

Reporter— Smelton died half an hour before I got to his house.

Managing Editor— What's that got to do with it? You were ordered to get an interview and it's your business to get it. Sit down and write it, and make a column of it, dy' hear?—*Boston Transcript*.

## FREEDOM OF THE PRESS.

Around her waist I put my arm—

It felt as soft as cake;

"Oh, dear!" says she, "what liberty

You printermen do take!"

"Why, yes, my girl, my charming girl,

(I squeezed her some, I guess)

Can you say aught, my love, against

The freedom of the press?"

I kissed her some— I did, by gum,

She colored like a beet;

Upon my living soul, she looked

Almost too good to eat!

I gave another kiss, and then

Says she, "I do confess,

I rather kinder sorter like

The freedom of the press."

—*Kinggold (Ga.) New South*.

THE catchy phrase originated by the manufacturers of the kodak: "You press the button; we do the rest," has had the changes rung on it until it has become almost tiresome, but an undertaker out in Candelaria, Nevada, has taken advantage of the expression in a way that is really amusing. He has hung out a sign reading: "You kick the bucket; we do the rest."

## NO, NEVER!

The man who cheats his printer

Out of a single cent

Will never reach the heavenly land

Where old Elijah went.

He'll never gain admittance there,

But be by demons driven,

And made to loaf his time about

Outside the gates of Heaven.

He'll never meet a pleasant face,

Or see one festive grin;

His only chance of happiness

Will be almighty thin. —*Sitka Alaskan*.

## BUSINESS OUTLOOK.

**Auburn, N. Y.**—State of trade, fair; prospects, good; composition on evening papers, 16 cents; bookwork, 16 and 18 cents; job printers, per week, \$8 to \$12. The *Evening Herald*, a penny paper, after a so-called existence of four or five months, has suspended. Who will start the next in this newspaper graveyard?

**Austin, Texas.**—State of trade, good; prospects, good; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, per week, \$20; job printers per week, \$20 (nine hours per day). The different trades unions will celebrate May 1 with a big procession. The "prints" will play a prominent part.

**Bay City, Mich.**—State of trade, good; prospects, good; composition on morning papers, 34 cents; evening papers, 32 cents; bookwork, 34 cents; job printers, per week, \$14. Work is picking up in this city now, and all are getting a fair quota of work.

**Boston, Mass.**—State of trade, dull; prospects, not very good; composition on morning papers, 45 cents; evening papers, 38 cents; bookwork, 40 cents; job printers, per week, \$15. Faneuil Hall has been secured for holding International Typographical Union Convention. An active committee is making preparations for a large attendance of delegates and visitors.

**Burlington, Iowa.**—State of trade, fair; prospects, fair; composition on morning papers, 30 cents; evening papers, 25 cents; bookwork, \$14; job printers, per week, \$14 and \$15. The Burdette Company is publishing a weekly 16-page patent-side paper, called *By-the-Way*. Plenty of men in town to do all the work.

**Concord, N. H.**—State of trade, fair; prospects, good; composition on evening papers, 20 cents; bookwork, 25 cents; job printers, per week, \$10 to \$12. The new public printer, I. C. Evans, will not take possession of the office till June 1, the act to fix his term in accordance with the new constitution (two years from January) having been defeated in the senate.

**Dubuque, Iowa.**—State of trade, fair; prospects, good; composition on morning papers, 30 cents; evening papers, 28 cents; bookwork, 30 cents; job printers, per week, \$14. Business has been dull during the winter, but is picking up some.

**Fort Wayne, Ind.**—State of trade, fair; prospects, fair; composition on morning papers, 35 cents; evening papers, 30 cents; book and job printers, per week, \$13.50.

**Galesburg, Ill.**—State of trade, very good; prospects, fair; composition on evening papers, 25 cents; bookwork, 25 cents; job printers, per week, \$12 to \$15. The new weekly, the *Spectator*, has made its appearance, and is a neat paper. The new daily, the *Mail*, has not yet appeared. Charter has arrived for Galesburg Union, No. 288, and we will be instituted as soon as Organizer Williams can come.

**Grand Rapids, Mich.**—State of trade, good; prospects, good; composition on morning papers, 35 cents; evening papers, 30 cents; bookwork, per week, \$14; job printers, per week, \$14. Business is brisk in both news and job offices. John D. Flanigan is our delegate to Boston; H. J. Aiken, president of local union; W. C. Robertson, vice-president; J. B. Greenway, secretary-treasurer; Louis Gunther, secretary.

**Hartford, Conn.**—State of trade, fair; prospects, not encouraging; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 35 cents; job printers, per week, \$15. Work for the coming summer does not look as good as we expected, but the regular hands in all the offices are all at work at present.

**Jacksonville, Fla.**—State of trade, moderately fair; prospects, not so good; composition on morning papers, 33 $\frac{1}{3}$  cents; evening papers, 30 cents;

bookwork, 33½ cents; job printers, per week, \$16 to \$20. Unionism is gaining ground, though slow; however in the last three months ten members were taken into the fold. State work has carried a number of the boys to Tallahassee. Reports are that they have all they can do to handle it.

**London, Ont.**—State of trade, fair; prospects, doubtful; composition on morning papers, 30 cents; evening papers, 28 cents; bookwork, \$9; job printers, per week, \$9 to \$10. The *London Weekly Advertiser* will hereafter be issued semi-weekly. It is believed the change will be appreciated by the rural districts, and be a success financially for the proprietors. The subscription price has been increased to \$1.50.

**Los Angeles, Cal.**—State of trade, exceedingly quiet; prospects, not flattering; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$20. The union is still waging war on the *Times*, which employs non-union men at 45 cents, with good prospects of causing it to recede from its unenviable position.

**Milwaukee, Wis.**—State of trade, good; prospects very good; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 35 cents; job printers, per week, \$14 to \$18. Work for the past month has been very brisk. The *Journal* has had ten extra cases on state work, but the men all went out last week on account of the long hours, the office refusing to pay price and a half after 6 P.M.

**Minneapolis, Minn.**—State of trade, good; prospects, good; composition on morning papers, 42 cents; evening papers, 37 cents; bookwork, 35 cents; job printers, per week, \$16. There are not too many printers in town just now.

**Mobile, Ala.**—State of trade, fair; prospects, fair; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$16.

**Peoria, Ill.**—State of trade, fair; prospects, fair; composition on morning papers, 36 cents; evening papers, 33 cents; bookwork, 38 cents; job printers, per week, \$15, \$18, \$21. Trade has been very fair since last report, with prospects bright for future. No. 29 elected and installed officers at last meeting.

**Richmond, Va.**—State of trade, not so good; prospects, not so bright; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$16 to \$20. There is but little doing in book and job offices at the present time. Glad to note change in date of issue of *THE INLAND PRINTER*. It is looked for with much delight every month.

**San Diego, Cal.**—State of trade, fair; prospects, good; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 40 cents; job printers, per week, \$18. Work the coming month will be better than for some time. The city directory will employ many men, and there is considerable other work in prospect.

**San Francisco, Cal.**—State of trade, bad; prospects, not good; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 40 cents; job printers, per week, \$18 and \$21. Every office is overrun, and business exceedingly dull.

**Seattle, Wash.**—State of trade, fair; prospects, same; composition on morning papers, 50 cents per hour, eight hours; evening papers, 50 cents per hour, eight hours; job printers, per week, nine hours per day, \$21. Subs have dispersed to such an extent that those remaining seem to do very well. The new system seems to be a wonderful improvement. Prospects of a new religious paper.

**Springfield, Ill.**—State of trade, good; prospects, fair; composition on morning papers, 33½ cents; evening papers, 30 cents; book and job printers, per week, \$15. At the recent city election Mr. Thomas F. Lennox, Sr., was elected by a large majority to the office of city treasurer. He is an old-timer in the printing business, and when elected was foreman of *Register* pressroom.

**Topeka, Kan.**—State of trade, good; prospects, fair; composition on morning papers, 33½ cents; evening papers, 28½ cents; bookwork, 40 cents; job printers, per week, \$15. Work is picking up, and prospects are good for a good summer.

**Utica, N. Y.**—State of trade, fair; prospects, good; composition on morning papers, 35 cents; evening papers, 31½ cents; bookwork, 31½ cents; job printers, per week, \$12.50. There is a lull in business here just at present, which occurs almost annually preceding the opening up of spring work, which generally begins about the middle of May.

**Wheeling, W. Va.**—State of trade, good; prospects, encouraging; composition on morning papers, 35 cents; evening papers, 30 cents; bookwork, 40 cents; job printers, per week, \$15. The *Intelligencer* has received its new dress and will put it on as soon as their new perfecting press arrives.

**Wichita, Kan.**—State of trade, only fair; prospects, fair; composition on morning papers, 35 cents; evening papers, 30 cents; book and job printers, per week, \$15. There has been very little change in all branches of the trade, but what changes were made show slight improvement. Plenty of men in town at present.

**Worcester, Mass.**—State of trade, fair; prospects, about same; composition on morning papers, 40 cents; evening papers, 33½ cents; bookwork, 35 cents; job printers, per week, \$12 to \$15. Business this spring has been good as a general thing. All who have any desire to work have their wants supplied. Worcester Typotheta hold their first "love feast" at Lincoln House this month. Intend to have something nice for a souvenir, I understand.

## BUSINESS NOTICES.

### DEXTER FOLDING MACHINES.

We call attention to the advertisement of the Dexter Folder Company, of Fulton, New York, on another page. This company manufactures machines that are giving great satisfaction. If you need a folder, do not fail to write them. This firm also makes the Dexter alarm counter, a most useful addition to every printing press. The advantage of an alarm attachment on a counter is appreciated by pressmen and feeders. They also make the "Little Giant" auxiliary gripper, for bed and platen presses. Circulars in regard to any of these will be sent to anyone interested. Write for them.

### THE WHITLOCK MACHINE COMPANY.

This firm, located at Birmingham, Connecticut, manufacture the celebrated Whitlock two-revolution press and other makes, as well as paper cutters, and is so well and favorably known to the readers of *THE INLAND PRINTER* that words of praise on our part would add nothing to their reputation for producing fine printing machinery. There are many little points about their presses, besides the well-known solid character of the parts most requiring strength, general finish, etc., that make the presses popular, such as their new tipping ink fountain, patent guide for assisting in making perfect register when running color work, and others. In our June number we expect to call attention to these and to the Whitlock Machine Company's presses at greater length.

### A NEW AND VALUABLE WORK.

In our April number appeared an advertisement of "The American Dictionary of Printing and Bookmaking," Part 1 of which is now ready for delivery. We received a copy of the work too late for notice in that issue, and take pleasure in now referring to it. The dictionary will comprise references to all that is known of the art from the earliest to the present time, technical, historical and biographical, and when completed will be a perfect cyclopedia of matters relating to printing and bookbinding. The first installment of this invaluable work (Part 1) now before us contains forty-eight pages, and if taken as a criterion of what the completed volume is to be, we are justified in saying that it will be one of the most valuable books of reference for those interested in the arts with which it deals that has ever been issued. The work when finished will comprise 600 pages, profusely illustrated. This dictionary can only be obtained by subscribers to the *American Bookmaker*, who will receive the parts as issued without extra charge. The publishers expect to complete the work in three years, delivering the parts quarterly to all subscribers to the above paper. This is as valuable a premium as has ever been offered by any paper. The subscription price of the *American Bookmaker* is \$2 per year, but parties desiring to remit \$6 for three years' subscription can do so, the publishers guaranteeing to deliver the parts of the dictionary as issued, without additional expense, no matter how many pages the work makes or the time taken to get it out. Howard Lockwood & Co., 126 Duane street, New York, are the publishers.

### THE "UNIVERSAL" WIRE STITCHING MACHINE.

This new double machine has been designed to meet the requirements of all in need of a wire-stitching machine, and the builder has succeeded in combining in one stitcher all the many advantages long needed — and found in no two machines of any other make. These advantages consist of simple adjustments, and few of them, to change from one thickness of work to another, a greater range of work, economy of room required, and speed. Two operators can work at the same machine at one time, one doing "saddle" work and the other side stitching. One side is fitted up for saddle work and round wire, and will stitch from a single sheet to three-eighths of an inch in thickness. The opposite side is fitted with flat table, to do work with flat wire from a single sheet up to seven-eighths of an inch in thickness. Both tables are

made convertible to do flat or saddle work, but each side is limited to the class of wire and capacity as described above. The machine can also be fitted with convertible tables and extra bars and parts to do both kinds of work on both sides of machine alike. Any fair, good wire can be used on this machine; there is no lease connected with it that forces the trade to purchase at a high price an inferior quality of wire. All duplicate parts will be supplied at a reasonable price, and each piece will be guaranteed. A good idea of the machine can be obtained by referring to the cut on page 757. Montague & Fuller are the agents, 28 Reade street, New York, or 345 Dearborn street, Chicago.

#### OUR SPECIMEN PAGES.

We show in this number three specimen pages of type and border. The "Penstroke" is a novelty in the way of ornaments that can be put to many uses by the intelligent compositor. The different characters are all cast on twelve point body, a very convenient size for ornamentation of this description. Some of the combinations capable of being produced are shown in the specimen page, but many others can be made with a little ingenuity. The John Ryan Co., of Baltimore, are the makers.

MacKellar, Smiths & Jordan Company, always in the field with something new, show two pages of new faces; one a ray-shaded letter, called "Shadow," which is made in four sizes, from twelve to thirty-six point, will prove to be a handsome and useful face in many kinds of jobwork; the other, called "Typo," made in upper and lower case, from eighteen point up to sixty point, will meet the wants of many printers desiring a condensed letter of a medium heavy face. The latter lines accurately at top and bottom, with point justification, and the linking together of several of the letters is a unique and attractive feature.

#### "PERFECTION" WIRE STITCHING MACHINES.

The J. L. Morrison Company, of New York, manufacture wire stitching machines for every class of work, the prices ranging from \$80 to \$750. The machine shown in their advertisement in this issue is the best general jobber made. It is called perfection "G," and is made specially for pamphlet binders and printers. It will stitch anything from a single sheet up to one-quarter inch, either saddle or flat sewed. If about to purchase a wire stitcher, it would be well to write to this company for circulars, or information in regard to their machines. They can furnish you with a machine suited for just the class of work you have. It is expected that in a short time this company will open a branch in Chicago, and due notice of the same will be given. Their business has increased so largely of late in the West, that they find it necessary to have an office here. This firm has recently moved its New York office from 21 Centre street to new and commodious quarters in Clinton Hall, corner Astor place and Eighth street. Do not forget the J. L. Morrison Company when looking about for wire stitchers.

#### THE "PEERLESS" MONEY MAKER.

On page 707 of this issue our readers will find an illustration of this celebrated press, and also of the Ben Franklin Gordon, two fine specimens of printing press mechanism. The Johnson Peerless Works manufacture these machines, the New York office being at 44 Beekman street, and the Chicago office at 202 Clark street. Both styles of presses are too well known to need extended notice. The mere mention of them, simply to keep printers advised of the address of the company, is sufficient. All information desired in regard to them will be promptly given by either office. We trust that those in need of a press will look carefully into the advantages of these, but after perusing the advertisement, should anyone, inspired by the spirit of Richard Grant White, cavil at the expression "depressible grippers" as too reminiscent of green cucumbers, we beg to deny complicity in its perpetration, and in a spirit of earnest inquiry would ask if "depressible grippers" would not be less suggestive of anguish?

#### FUCHS & LANG.

Upon another page of this issue appears the advertisement of the above firm, who manufacture lithographing and printing inks, bronze powders, fine dry colors, photogravure and steel plate inks, etc., and whose goods have the reputation of being the best to be obtained. The main office of this company is located at 29 Warren street, New York City, and their factory and machine shop in Brooklyn. Their trade becoming so extensive in the West, they found it necessary, some years ago, to establish an office in Chicago, which they placed under the management of Mr. Hans Fuchs, a cousin of the senior member of the firm, and a gentleman well qualified to transact the large and growing business of the house throughout the West. Lithographers and printers in need of extra fine inks for colored work should communicate with this company. The Chicago office is located at 273 Dearborn street, and all business in the West should be addressed to that office. With a large stock constantly on hand, orders can be filled on very shortest notice.

#### A FLORAL GUIDE.

With the "seed catalogue" all are familiar, but valuable and useful as it is no one regards it as a literary or art work. "Vick's Floral Guide" for the current year passes, however, beyond the domain of seed catalogues into the region of art if not of literature. It is a beautifully illustrated volume of instruction in the art of raising flowers and the more prosaic but none the less necessary industry of producing vegetables. There are lists, of course, of all seeds and plants that can possibly be required in either the art or the industry, and suggestions very naturally as to their procurement from the publisher. But for all that the work is a guide and not a mere catalogue. Rochester, New York: James Vick, seedsman. Price only 10 cents, which may be deducted from first order.—*The Detroit Free Press.*

**ALL LIVE PRINTERS** should have Bishop's "PRACTICAL A PRINTER," 200 pages, \$1. Also his "DIAGRAMS OF IM- POSITION" and "PRINTERS' READY RECKONER," 50 cents each; the "PRINTERS' ORDER BOOK," price \$3, and "SPECIMENS OF JOB WORK," price \$2. Sold by H. G. Bishop, Box 13, Oneonta, N. Y., and by all type useful works ever published for printers. Indorsed by everyone.

**FOR SALE**—Point folding machine, capable of folding 16 by 23 to 32 by 46; three or four fold; can be used for marginal machine for newspaper work. This is a new machine, has never been used, too large for our run of work; can secure this machine at a bargain. Address "B. D.," care INLAND PRINTER.

**FOR SALE**—The proprietor having spent thirty-five years of his life in a printing office desires to retire from business and offers his establishment for sale. It has five cylinder presses and three Gordons, paper cutter, hand press and a large assortment of job and body type. The material and presses are all in good condition. It is located in a large and rapidly growing city in York State. The office has, and is now, doing a good paying business, and to any one wishing to engage in the business it affords a rare opportunity. The balance sheets are open for inspection to any one who may wish to invest. For particulars address P. S. LYMAN, 60 Pearl street, Buffalo, N. Y.

**FULL** and complete instructions on zinc etching, photo-engraving, etc., by Frank J. Cohen. A 38-page pamphlet, giving full information on above topic, will be mailed to any address on receipt of \$2. Address THE INLAND PRINTER COMPANY, Chicago, Illinois.

**PATENTS** and improvements in the printing trade. A prominent firm in Berlin desires the agencies for Germany of American houses in this line. Address "R. S.," care INLAND PRINTER.

**PRESSMAN WANTED**—To take charge 3 cylinders, 2 platens. Night and day work. Give age and experience, ILLINOIS STATE REGISTER, Springfield, Ill.

**WANTED**—Copies of Nos. 2 and 10 of Volume I, INLAND PRINTER. Will pay 25 cents apiece for these if in good condition. Mail or bring them in. INLAND PRINTER COMPANY, Chicago.

**WANTED**—Subscribers to THE INLAND PRINTER; per year, \$2; six months, \$1; single copies, 20 cents. Also, send 10 cents for 16-page circular, "How to Impose Forms," giving complete schemes of imposition.

#### SECOND-HAND MACHINERY.

On hand for quick delivery, three Chambers Book Folding Machines, to work sixteen pages and adjustable for all regular bookwork. All modern machines; in first-class order. Address

**CHAMBERS BROTHERS COMPANY,**

Fifty-second St., bel. Lancaster Ave., Philadelphia, Pa.

## YOUR LAST!

This is your last number of THE INLAND PRINTER unless you renew, if the date on your address tab reads May '91. Look the matter up and renew at once if you do not wish to miss any numbers.

### COUNTING MACHINES.

Send for Circular and Prices to  
**W. N. DURANT,**  
 Milwaukee, Wis.

A Valuable Instruction Book for Printers—Second Edition, Improved and Enlarged—just out.  
 FOR SALE BY . . . **FARMER, LITTLE & CO.** PRICE, 50 CENTS.  
 109 Quincy Street, CHICAGO.

The Lightning Ink Reducer and Dryer, Awarded Diploma, Paris, 1889, in London, 1887, for Unexcelled Excellence.

Inkoleum is the only article in the world that gives pressmen complete control over printing and lithograph inks, rollers and stock in any weather and climate. It refines inks of any color or shade and makes them dry quick and glossy, enabling rushed work to be delivered immediately from press without offsetting. Inkoleum never dries on rollers, but preserves their suction, life and elasticity. On starting press in morning or whenever rollers are too sticky or ink dry on them, or the ink pulls the paper, a drop or two of Inkoleum put on the rollers with your finger immediately softens the ink and makes them do the finest work, a saving of five times its cost every hour in the day.

Beware of Infringements! Order Inkoleum and accept no worthless Piratical imitation, said to be just as good. Price, only 50 cents. For sale by every typefoundry in the world. Read circulars printed in five languages. put up only by

## The "Only Perfect" Galley-Lock.

**PERFECT IN PRINCIPLE. PERFECT IN ACTION.  
PERFECT IN ECONOMY.**

**ONE SINGLE MOVEMENT** adjusts it. Holds each line of type perfectly and securely. Earns its cost in time saved in three months. Saves type and galley.

**ADJUSTABLE.** The "Only Perfect" Lock has a spread of over a half inch, and thus adjusts to any width of column or galley.

**MADE OF BRASS.** Light, durable, wear many years. We make a 13-INCH LOCK, for use of daily papers and job galleys. Engraving shows full size, 23 inches.

**ATTACHABLE.** By a slight change in outside bar, we make the Lock, and furnish attachments, so that in a few minutes anyone can attach it to galley. Outside bar works against side of galley; inside bar is held to top of galley, and has perfect movement back and forward. Daily papers adopt this on sight.

**SEND ORDER** to your printers' supply house. 23-inch lock, \$18.00 per dozen. Attachable lock (23-inch), with attachments, \$22.00 per dozen. 13-inch lock, \$16.20 per dozen. On receipt of \$1.50 will express you free a 23-inch lock, and know you will order a supply. Liberal discounts to trade.

## TIME VS. MATERIAL.

BY S. K. PARKER.

THIS is a subject which has already been somewhat discussed, but which, nevertheless, to the mind of the writer has not yet received, in a practical way, the attention it deserves.

How many instances will recur to the memory of every worker in the composing room whose eye meets these lines, where the *timely* purchase of a few sorts, or whatever material was at the time needed, would have saved hours of time, acres of vexation, bushels of profanity, and last, but not least, great risk of error.

The delay in the procurement of necessary material is sometimes attributable to red-tape in the business management of an establishment, whereby the foreman is deprived of the authority to act promptly in ordering material so soon as he perceives the emergency for its use has arisen. Or, where he does possess this authority, the delay may be owing to a conservative disposition, a fear that his action may be unfavorably criticised by his employer, or in accordance with a general instruction to defer purchases until after a certain day of the month in order to secure time credit at the foundry.

For these or similar reasons, the compositor will be permitted to go ahead with the work in which the sorts are required, setting galley after galley which when the proof is taken will be black with turned letters.

It is seldom the case, in these days of low-paid piece-work, that the compositor will take the trouble to turn something the exact equivalent in size of the letter turned for, thereby necessitating attention to the justification when the proper sorts are finally put in. As this is done by "the office," here occurs loss of time No. 1.

When the proofs reach the reader it is usually impracticable to mark the turned letters in the margin; therefore after the turns have been rectified it becomes necessary to refer to the copy again to see if the work is correctly done. Here occurs loss of time to the office No. 2.

When the work is hurried and a thorough system and great care is not observed at every step, the liability to

error becomes very great. So long as the matter is handled for any purpose whatever, mistakes will almost inevitably occur, and in consequence not only is this loss No. 3, but work will be spoiled.

Another loophole through which time is lost is very frequently found in the job as well as in the book department, in the shape of an insufficient supply of *spaces*. In but one office in which the writer has been employed has he found anything like an adequate amount of spaces for the speedy and satisfactory composition of work—book or job. On the contrary, it has been the general rule of his experience that it would take about twice as long to find stuff wherewith to justify a line as it took to set it. (I leave out of consideration, in this connection, time spent in picking for sorts.) Where a scarcity of spaces in the book cases exists it usually arises on account of neglect on the part of the office to procure spaces with job fonts, italic, extra small caps, headletter, etc. The job hands will make raids on the cases of the book hands, and they in turn will gut the job cases, the state of affairs becoming worse as the business increases. When work is slack the time on jobs is always less than in busy seasons, because material is then plentiful.

The effect of this penny-wise, pound-foolish policy is also felt very largely in the pressroom. I have frequently seen cylinder presses standing idle while the office was being ransacked for type with which to replace turned or broken letters, and even for a few thin spaces with which to make justification when an error or alteration is being attended to on press, as much time being wasted in one day on this account as would pay for sufficient material to avoid these losses for years. The result is, that calculations for getting other forms to press are upset, customers are disappointed and vexed, winding up with the withdrawal of their patronage, which is the most serious loss of all when they are "good pay."

An insufficient supply of quoin-keys, mallets, planers, etc., is another fruitful source of loss of time to the office and of vexation to the worker. What merchant employing a number of clerks would for an instant think

of compelling them to use the same pen, inkstand, blotting pad, etc., and to trot around to each other's desks waiting in turn to use these implements? Yet just such foolishness as this is daily seen in many a printing office where several are locking up forms at the same time.

What makes all this loss of time so unnecessary and the continuance of these conditions so absurd, is that the amount of money necessary to obviate all the trouble is such a mere bagatelle compared with the saving that would result if these conveniences were supplied.

Written for THE INLAND PRINTER.

### ART PRINTING.

BY H. M. K.

PRINTING is a fine art as much as painting, sculpture or engraving. There are natural-born printers, as well, and there are so-called printers who have no more adaptability to the business than a blacksmith has for watchmaking. A finely executed piece of typographical art may be as much an inspiration of design, color and symmetry as any inspiration that ever graced the painter's or sculptor's touch, or prompted the brilliant flow of poetic muse. The highest works of art, the grandest achievements of human genius and skill are more than mechanical productions. They have an individuality peculiar to the emotional powers of the finer nature. They have soul in them. A natural-born musician will execute a difficult piece of music with an expression and a depth of power and feeling to which a mere mechanical rendering has no comparison. There is just this difference between art and mechanics always. True art is born of the soul. Mechanics call into practice only the physical powers and the laws of motion and force. A mechanic is not necessarily an artist; but an artist must be a mechanic as well. We study mechanics by rule; but when we come to art, we are thrown upon our natural resources of ingenuity and the higher susceptibilities of culture and refinement.

There is no trade or profession that calls for greater natural ability and schooling than the printing business. Natural taste and ingenuity is essential above all else, supplemented by intelligence and common sense. And with this foundation to build on, there is no trade or profession that holds out to the student such possibilities of development and assurances of success. But success in any business depends upon a systematic plan of operation based upon business principles. The more complicated the business, the more difficult its plan; and more than any other, the printing business demands system and economy of time and labor as well as strict supervision over all its details. It is a business where labor, material and appliances are combined.

Unlike the building of a house or locomotive, there are no specific rules which might serve as a model for any particular work of typographical art, for no two orders are found exactly alike, and in case there were, it would be impossible to fulfill the two under

precisely the same circumstances; neither would two fulfill the same order with the same results, although one might be just as commendable as the other. As the knowledge of printing is gained more by experience than by rule, it takes longer to thoroughly master the "art preservative" than any other trade or profession. In fact it is a trade never learned, for, like the styles of bonnets and dresses, the printers' types and appliances are continually changing to suit the ever-varying demands of business and fancy, each of which requires its peculiar study, say nothing about the kindred trades and professions which crowd themselves more or less into the printer's experience if he would be qualified to stand at the head of a successful and growing business. Like a professional man, a printer who has spent a score of years or more gaining this knowledge, justly considers his time and experience worth something. But a great many seem to have the idea that a printer does business for fun. He is oftentimes beat down to the very lowest margin of profits, made a general target for everybody's kicks, and blamed for what the devil (printer's devil) alone is to blame for. Like other callings in life, it is not altogether the professional service, or mechanical execution of a title page, or card, or heading alone, but the knowing *how* to do it systematically and expeditiously—the knowing how to do it well, that when completed it shall be "a thing of beauty and a joy forever."

The first ambition of a printer seems to be to get as many styles of type and ornaments on a card or circular as possible, thinking more of advertising his own wares; but as he advances in the knowledge of the business and public demand he will learn to use as few as possible to produce a pleasing effect and emphasize the special features of the business of his customer. Experience has taught that the simplest is the neatest always, and the best is the cheapest. Art reaches its highest perfection in simplicity, grace and richness.

These are facts which the majority of business men are ignorant of; for when a customer finds \$1.40 difference in the estimates on 1,000 half-note circulars (an instance in the writer's experience) he thinks he is going to get the same quality at the cheaper price, when if he does, it is most sure to be at the printer's expense. If all the estimates had been made on the same basis, there should not have been a difference of 25 cents at the most. First-class labor has a standard value which varies but a little in different sections of the country. Then the per cent of doing business to capital invested should not vary very much, whether a large plant employing hundreds of men or a small plant employing one man, providing the plant is worked to its full capacity, with no extravagance in labor. If there is any material difference, it would be found in rent and power. Finally, after all expenses have been allowed for, a certain per cent to capital invested must be added for wear and tear, an important item overlooked by many; for a successful printer must keep up with the times in types and appliances. It is just here

where so many fail. Business houses of long standing have been built upon strictly business principles, sound and reliable, gaining and holding the confidence of all with whom they deal.

Amateur printing has done more than anything else to lower the standard of work and keep the prices below the cost of best quality and workmanship. The demand of the times calls for intelligent, sober and reliable men to represent the business; and every means possible should be used to discourage the amateur and advance the interests of the professional and thoroughly experienced men called to the "art preservative." The union is doing much to accomplish this, and it should receive the commendation and hearty coöperation of all members of the craft, looking to its highest and best interests. Business men, too, should be acquainted with these facts and encourage and patronize only those parties known to be honest, reliable and qualified. This much is due the healthy business growth of any community, and is the true incentive to American genius, ambition and pride.

Written for THE INLAND PRINTER.

#### SOME FRAUDS.

BY J. B. C.

THERE are many fraudulent printing concerns in the country. Some of these are willfully so. The great majority of them, we think, are the result of ignorance. The "art preservative," that is supposed to contain among its devotees the equals in intelligence of any other profession, does not produce this intelligence immediately in all who adopt it. There is a never-ending number of things to be learned, and it is only by the most painstaking care and persistent application that any can truly succeed in mastering the profession in all of its details.

Because some have achieved eminent success in the calling, others, utterly unfitted for it, are induced to enter, and thus the profession contains many well-meaning incompetents, who bring disgrace to the calling and failure to themselves.

The erroneous impressions that prevail are largely responsible for the fraudulent printing concerns that exist. A few of these errors will be briefly noticed.

"Anyone can succeed in the printing business if he has ordinary sense, and plenty of capital." Bitter experience alone will teach those who hold this fallacy that a practical knowledge of details is essential to success. He who enters the business without experience must pay dearly for experience ere success will come to him.

"Printing is nearly all clear profit." With this notion the incompetent manager or proprietor of a printing office feels conscientious scruples in charging his customer fifty cents per thousand for what he pays his compositor twenty-five cents. If he should leave out cost of proofreading, rent, interest, wear of type, and personal oversight requisite to good work, the profit then in a small business would not be large. But if each item

mentioned is fairly reckoned and paid for, the profits rapidly fall to zero, or even below.

"If Cheapjohn can do that work for one hundred dollars, I can do it for ninety dollars." Cheapjohn may have facilities for doing the work at one hundred dollars, and make money out of it, while you might lose money if you got one hundred and fifty dollars for it. In bidding for work it is essential to be equipped for it. It is not what Cheapjohn can do it for, but what you can afford to do it for. Do not trust to others' figures and prices, but know for yourself. You need have no fears of an honest man who does business on a fair basis, and promptly pays his bills and fairly remunerates his help.

Written for THE INLAND PRINTER.

#### A SUGGESTION FOR COMPOSITORS.

BY FRANKLYNN.

COMPOSITORS frequently have occasion to set a list of names, such as come under "aids" or "committees" on dance orders, and in other work of a like nature, principally in the general run of job printing.

Instead of setting them in two or three columns to the measure, and lining each column, it is very often desirable, when there are not too many names, to indent them on a graduated slant, making the first on the list justified flush to left of line and the last flush to right. This can be done by a simple rule; and, although not always positive in its results, yet, by a little closer or wider spacing in justifying the last line, it can be made practically correct. It will certainly give the compositor an approximate knowledge of the indention required for each line, the usual guesswork, employed in such cases, being overcome by this method.

For example, a compositor has ten names, and he desires to know how much to indent each line, so that the first and last names shall stand at the extreme left and right of the measure respectively. The last name should be set in the stick first, and justified to extreme right of measure, thus:

(27 ems indention)

BENJAMIN HARRISON.

He finds that it is indented 27 ems. Now, as there are ten names in the list, he must figure on the indention of nine lines only, as the first is set flush to left of measure. He therefore divides 27 by 9, obtaining 3, and the lines as set would stand thus:

FRANKLIN PIERCE,

(3 ems) JAMES BUCHANAN,

(6 ems) ABRAHAM LINCOLN,

(9 ems) ANDREW JOHNSON,

(12 ems) ULYSSES S. GRANT,

(15 ems) RUTHERFORD B. HAVES,

(18 ems) JAMES A. GARFIELD,

(21 ems) CHESTER A. ARTHUR,

(24 ems) GROVER CLEVELAND,

(27 ems) BENJAMIN HARRISON.

This is an example where the indention would be easily found. If the last line had been indented 30 ems,

the process would have been  $30 \div 9 = 3\frac{1}{3}$ ; then, commencing with the second line, indent 3 ems and thick space; third line, 6 ems and two spaces; fourth line, 9 ems and three spaces (or 10 ems), and so on.

There will, of course, be an occasional difficulty to overcome; as, supposing next to last name to be so long as to require the indentation to be figured with that as the right flush line; in that case the indentation of the ninth line would be divided by eight to obtain the desired result. We always employ this method at our office, and with practically correct results.

Written for THE INLAND PRINTER.

### RECIPROCITY VS. HOGOCITY.

BY HERBERT L. BAKER.

RECIPROCITY is a good thing. Printers heartily favor good things. But when reciprocity is all on one side it becomes hogocity, and that's a "gray horse of another color."

When in a thoughtless moment we sent over to the office of our only "esteemed contemporary" and rival, the *Herald*, to borrow a chase for a few hours till our broken one could be repaired, we little dreamed what a disastrous door we were opening.

Soon after, an advance agent struck the town to arrange for a show, Uncle Tom's Cabin, probably. Since we possessed the only type in town large enough to print a date or a poster, we made no scruple about asking a good round price for the work, as we always had. To our surprise the *Herald* cut away below our price; but that did not worry us at all, because we expected they would have to get us to print it, anyhow, and we could still get our price.

That is where we slipped up on our calculations, for the *Herald* man sent his boy over to borrow large wood type enough to set up these jobs. We were about to refuse indignantly when something brought yesterday's chase to memory.

Reciprocity? Confound reciprocity!

No help for it! We had to sit there in silent disgust and see that giggling idiot of a kid help himself to all our costly wood type—hand him a knife, in fact, to cut our own throat. Next day our own precious wood type stared at us from every window and billboard in town over the bold imprint: "Herald Print."

It was not long before they were using our wood type more than we did. Since they were not wearing out any material of their own, they could afford to underbid us whenever they had a chance. It soon became too much trouble to ask every time a line was wanted, and the *Herald* boy made himself thoroughly at home, appropriating whatever he chose without so much as "by your leave."

Our best customer was a merchant of rather eccentric ideas and tastes, and we had bought several fonts of his selection just to hold his trade. Heretofore he had resisted all offer of lower prices, because he wanted his peculiar type used and we were the only concern which had it. But one day the *Herald* "devil" walked in and

asked for two lines of that very type—"Henry K. Johnson," and "Dry Goods, Clothing, Notions, Etc."

Our customer! It was on the tip of our tongue to reply more forcibly than politely: "Not by a ——!" when the boy spoke up: "Whenever you want to use our chase again, send over."

That chase! With a groan of disgust and dismay we gritted our teeth and told the boy to help himself. From that time on all barriers were down and the reciprocity was ideally complete, so far as the *Herald* office was concerned. They borrowed type, paper stock and ink; they used our paper cutter, borrowed our half medium chase and worked forms on our press, without offering a cent; and what was most aggravating, they took no care of our material, but returned it often dirty, battered and worn.

What we were gaining by this reciprocity a magnifying glass would fail to discover. The *Herald* had an old worn-out plant, never bought a new face or new machine (why should they when ours cost them nothing?), and had nothing we would care to borrow even if so disposed. The whole imposition had grown so gradually that there did not seem to be a good opportunity to call a halt.

There finally did come a straw which dislocated the dromedary's vertebræ. With the idea of stealing a march on the printing for the commencement exercises of a local school, we quietly bought a new font of delicate script, and setting up the invitation took a press proof on elegant stock and submitted it to the committee, "on the side," to show what we meant to give them if we got the order. We considered this a pretty shrewd move until a few days later the *Herald* boy brought over that identical proof, and asked for the form we had set to print the job!

We're a Job, a whole family of Jobs, as the silence of our restive wrath under the growing imposition proves. For a moment or two words failed us, the colossal nerve of the request was simply staggering. Calmly surveying the envoy plenipotentiary of the "cheeky" print shop down street, while we felt the "hot" swelling up under our collar like an untamable geyser, we finally got our breath again and sent our "reciprocity neighbor" a message, couched in our most dulcet tones:

"Tell your boss, young fellow, that if he wants to borrow our pants so he can look like a gentleman for once in his life, we will go to bed a few hours so he can have them; if he wants to borrow our local page next week so as to get out one rattling good paper, we will get it set up and let him use it the day before we do; if he wants to wear our false teeth so as to get outside one square meal at the church supper tonight, we will stay home and chew milk for our supper; if he feels his 'nerve' failing him, he can borrow our Moxie bottle at any time; and if there is anything else of ours he hasn't borrowed, he has only to ask for it; but as for that form you are after, we'll be d—— if he can have it! And as for you, you ornery little cuss, if we ever catch you or anybody

else from your office asking to borrow even a diamond hair space, we'll boot your tender anatomy all over the premises. Now git!"

He got! The reciprocity idea does not seem to work so freely as it did somehow. Do we get any thanks for the months of daily accommodation? Not a word, except the vilest, bitterest personal abuse in the *Herald*, because we refused to be bled any longer.

Yes, reciprocity is a good thing. When it does not become hogocity!

#### ABOUT SPACING.

BY J. A. V. D.

THERE is perhaps no subject connected with printing that has received so much attention as "spacing," and there is no other that is coupled with so much absurdity and inconsistency. To say to a compositor, "on this work you must make even and uniform spacing and at the same time avoid divisions at the ends of lines," is tantamount to ordering an impossibility.

In 1835, some publisher in New York City conceived the idea of putting forth a serial to be called "The American National Portrait Gallery," to compete with a similar work (published in England, with a similar name), in appearance and mechanical execution. In fact, it was to be superior to anything ever before issued from the press. In spacing, the order was that "no line must have in it more than four or five en quads, nor more, on the other hand, than three four-em spaces; and at the same time no word of less than three syllables should be divided at the end of a line." If it was found impossible to do this with the language used, the editor must change the phraseology; and the result was that the alterations cost more than the original composition. About three numbers were issued, when the publication died, as it deserved to do, being based upon so much absurdity.

The inconsistency mentioned has, to a greater or lesser extent, been handed down to the present time, and has been the cause of more discord in the printing office than any other one thing, for the compositor will slight his spacing whenever he can, so long as this in consistency and absurdity is insisted upon.

There is away, however, to insure even and uniform spacing, which will be shown in the typographical construction of this article. But before describing that way in words, a little history may be interesting. It has been stated that at one period types were set without spaces between the words, as shown in this paragraph, and the lines were necessarily of uneven length. No doubt many were sorely puzzled to read the words, yet practice might have made it possible.

At another time, while spaces were put between the words, all lines were spaced out at the ends, so that the appearance was like the typewriting of today. But in this method the type in common use would show far less discrepancy in the length of the lines than is now shown in typewriting, and consequently would not be

so offensive to the eye, and the hyphen, that great eye sore to all printers, would be dispensed with.

Uniform and even spacing can be attained by filling the line with letters, as near as may be, dividing a word anywhere, regardless of its length or of its syllables, space out the line as it then stands, in the usual manner, between words, leaving out the hyphen in every case. Perhaps it would be as well not to have less than two letters of a word ending a line, nor carry over less than two letters. Words of one syllable may be divided as well as of two or more. The amount of time saved by this method would be incalculable, the obnoxious hyphen would disappear, and the spacing would look beautiful. The reader would in twenty-four hours overcome all difficulties, in making out the divided word, and all discord in regard to "bad spacing" would vanish. No special instruction would be required on any plain composition of straight matter in respect to spacing.

#### THE VALUE OF LITERATURE AND ART TO THE WORKINGMAN.

BY O. S. J.

IT is not my purpose to give an elaborate dissertation on the theories or fundamentals of art and literature. I am not sufficiently versed in either to write an essay of that nature, and if I were I should know that it would defeat my purpose—to direct the attention of the workingman to the wealth of entertainment and instruction that lies within reach of everyone.

The contributors to our literary and art journals are too much given to analysis and detail. A theory is elaborated upon, but the application of art culture to the elevation and entertainment of the masses is a phase of art that writers seem to disregard. So it is in literature and the sciences also. The productions of the eminent writers of a century and more ago are characterized by a freshness, a vigor, a clearness of expression and a fidelity to nature that make it possible for one of only average intelligence to enter into the spirit of their writings. But literature seems to have partaken of the materialism of the age, and many of our writers have cast aside the sweet simplicity of the old masters and have each endeavored to develop peculiar fashions of his own, known as style. How many poems we read nowadays that have a tone of insipid gayety, or, on the other hand, whose meaning is obscure or that abound in words and expressions that are a test of verbal ingenuity. Why lead up the heights of literary achievement over rocks and through gulches when there is a pleasant pathway where the prospect becomes more beautiful as one advances and only a progressive appreciation is required to accomplish the ascent.

So many of our young craftsmen—the generation that will in time be the exponents of unionism—distinguish their arrival at an age of independence and spending money by the assumption of an air of reckless bravado—a mock heroism that is a sad foretaste of the unpleasant influence this ignorant and vicious

element will exert in the councils of labor. If these young men would devote half as much time to reading or otherwise developing their talents as they do to their self-abasement they would become conspicuous and honorable representatives of labor and respected citizens, instead of degenerating into common "tramps"—slaves to dissipation and without a competence in their old age.

Labor has many advantages of literary and art entertainment unknown to our ancestors. The Apollo Club concerts given in Chicago at a low price for the especial benefit of workingmen are a notable example; and the large and appreciative audiences at these concerts must have convinced the club managers of the wisdom of their benevolence. All over the land libraries and lyceums have been constructed that attest the growth of that liberal spirit which recognizes the arts and sciences as the common possession of all rather than of any class.

I believe that these libraries, concerts and other friendly overtures of capital to labor; together with economic conferences and debates where representatives of both classes can meet on an equality for the discussion of questions of common concern, do more to bring about a solution of the labor problem than all the theories of those apostles of discontent who recognize labor and capital as two contesting and irreconcilable elements.

Labor organizations have nobly provided for their sick and aged. Now let them establish reading rooms—places of rest and recreation—that shall be attractive to the tired worker and build up character, which the saloon destroys.

#### BACK-CAPPING.

BY DUNCAN F. YOUNG.

FEW people there are in any walk of life who are not given to back-biting, or personal gossiping, or back-capping to a more or less extent; but the printing fraternity as back-cappers, it may be safely asserted, as a class have no equals in the success and elaboration of criticism. This may not be altogether through malice, but from constitutional reasons, engendered by the peculiarities of a calling unnatural in the extreme in every particular. To illustrate this it is but necessary to say that the business in its unnatural components unfits the follower for pleasant feelings and happy intercourse by the isolation which is part and parcel of a life literally transposed. Man sleeping in the daytime, working at night, forced to associate with none but members of his own class and calling, selfishness and cynicism force themselves upon the unwilling victim.

Regretfully it is found necessary to make this acknowledgement, but the truth must and shall prevail, and it were better to come from ourselves than from others. Man meeting crosses in every path of life cannot but look on the dark side of the picture of his existence, thus being in no condition to be in a happy frame of mind or to meet things in a pleasant way.

How much more unfitted for gayeties is the printer! No pen on earth can express the disagreeable features attending his calling—insomnia, worry, overwork, no work, heat, cold, petty animosities, dismissals, withdrawals, early hours, late hours, fat, no fat, are but a few of the realities of the printing business. Every man serving an apprenticeship feels and must know, if he has any intelligence at all, that he is a thorough printer, and naturally finds fault with the way some foremen partially execute the internal workings of an office.

It must be admitted that foremen are the prime cause of the major portion of the complaint, or back-capping, emanating from the rank and file of union men. Taken from the rank and file themselves, complaint is often given rise to by their acting so strikingly opposite to the manner in which they formerly worked and agitated. With some people it seems to be the ambition of life to attain a hump-backed rule, and once secured it is served like the horse in the well-known inch and ell fable. This would create disgust and contempt in the minds of disinterested parties, leaving alone those whom it affects.

One of the principal grounds of organization is to encourage honor and morality, and it would seem that when one of the members, in whatever position, so far forgets himself as to encourage a degree of favoritism, he should be debarred from membership, for he thereby tacitly agrees that he is opposed to, and tramples upon that which he has obligated himself to maintain, and violating his obligation he should be admonished. This is certainly a consistent view to take of the question—do that which you expect others to do unto you; and if it is desired to maintain honor and morality among the fraternity and have people on the outside to respect the individuals and the fraternity, we must respect each other first; and there certainly can never exist respect for ourselves and each other so long as any of our members are forced (and that by their friends!) to humble themselves and smother dignity and honor by bending to the arbitrary will of an egotistical foreman.

I have nothing in general against foremen. There are men in every walk of life meeting successes who rise above themselves. There is nothing more contemptible to men of common intelligence. Some foremen seem to think they are the only individuals in creation capable of filling the position they occupy. If they had common sense they would know that a whole cartload of them might die and still the newspapers and job offices would continue to run; and they would know also that their actions fill the average compositor with extreme disgust and cannot but engender back-capping, the subjects being both the foreman and his pets.

If we are to work peaceably and maintain that respect which is due us, we must denounce favoritism, and legislate it out of existence, and it will then be an assured fact that back-capping will cease, for, as all well know, by eliminating this grievance, much ill-feeling will be done away with.

HOMELESS.

Reproduced from wood cut, by PHOTO-ENGRAVING COMPANY, 67 Park Place, New York City.

Written for THE INLAND PRINTER.

A RARA AVIS.

BY "RED INK."

MR. LEONIDAS CAPCASE was the owner of a well-regulated printing office not a hundred miles from where I write, and had the reputation of being a thoroughly conscientious and capable workman. His place was well filled with material, and he was known to be a hard-working man himself; but, although there was no one who could say he was Mr. Capcase's creditor, yet it was remarked that his days of recreation were few and far between. To use a vulgar expression, his nose was always on the grindstone; and still he did not appear to accumulate wealth. On the present occasion he was sitting at his desk, alone, one Saturday afternoon—his employes taking the benefit of the half-holiday—and looking sufficiently disconsolate, with a sheet covered with figures lying before him, which he was wearily checking over, and making comments thereon as he did so, in the following fashion:

"It beats me how they figure! This paper, I know, was quoted me at a rock bottom rate, and I have only added ten per cent to it, which barely allows anything over the cost of cutting and handling. Then I put in the composition at the lowest possible notch above cost. The presswork, too, allowing proper time to fetch those cuts up properly, with first-class ink, would leave a very small margin; and I've only put ten per cent on the binding. Yet this makes the sixth job I've tendered on and got left. Some folks have a queer idea of business, seems to me. Looks as if guessing was the principal part of their calculations, and that they had a blind confidence that things would come right at the end of the year. There would be some consolation in seeing them brought up with a round turn by irate creditors, if there was'n't always some other blame fool ready to step into their shoes and methods."

The cause of his mournful lucubrations was a rejected tender for a catalogue of sausage casings for Hickenhopper & Lobscouse, who, moreover, while exacting the highest market price for their goods by means of a combination with their rivals, made a practice of getting estimates for every lot of printing they used, from the half dozen offices in the place. The tender in question was secured by Messrs. Cuthroat & Graball, who, while always causing astonishment among their brother printers by the lowness of their figures on tendered work, were known to tax other customers pretty steeply for the confidence reposed in them as to the fairness of their prices.

It was a very warm day, and Mr. Capcase's head nodded as he ended his soliloquy. At this moment he was greeted by a pleasant voice at his side. The owner passed the time of day, and Mr. Capcase noted a burly roll under the visitor's arm.

"Another tender!" he inwardly groaned, while he somewhat hypocritically asked the man in a courteous manner what was his will.

"I have a price list here," he responded with a smile, "which I have brought you. You will notice it is a

sizable affair—some two hundred pages—and we want five thousand copies."

"Very well," replied Mr. Capcase, getting a crick in his neck in his effort to suppress a yawn. "If you will kindly leave it, I will go over it carefully and give you my lowest figures. It will take a couple of hours to get quotations from the stationer's for the paper, and to work out the rest of the cost."

"No, no!" said the gentleman in a hearty way. "I intend you to print it, and haven't any doubt but that you will charge only what is fair. Put in good stock and use your own judgment in getting up a tasty piece of work. I will give you a cheque for the amount as soon as the job is finished."

So saying, he departed, leaving Capcase in a state of profound bewilderment. The cost of the work would be considerable, and he was stunned by the fact that it had been given him to do with a chance to make a fair profit, instead of having to be content with a price that would barely pay the wages of his hands—a not unusual case. Not but what he appreciated the action, and thought that that was as it should be, but such cases of generous dealing were oh, so rare! He was reaching for the order book in which to record it, when a fly lit on his nose, and in making a vicious jab at it he awoke, to find that he had upset the ink-bottle and that his pleasant little experience with the new customer was but a dream.

"Thought it was too good to be true," grumbled Mr. Capcase, as he reached for his hat to go home. "If it had been an invitation to tender on a thousand billheads for old Sugarsand, the grocer, it would have seemed more natural."

PRINTERS' EPITAPHS.

One of the oldest epitaphs upon a printer, says the Manchester (England) *Times*, is that inscribed upon a monument erected in St. Mary's Church, Datchet, to Christopher Barker, at one time printer to Queen Elizabeth. It runs as follows:

"Here Barker lies, once printer to the Crown,  
Whose works of art acquired a great renown;  
Time saw his worth, and spread around his fame,  
That future printers might imprint his name.  
But when his strength could work the press no more,  
And his last sheets were folded into store,  
Pure faith, with hope (the greatest treasures given),  
Opened their gates and bade him pass to heaven."

In a different strain is the next epitaph we shall quote. It purports to be written by the defunct himself, but whoever wrote it showed a pretty turn for making a merry quip of a serious topic. No better idea of death being a release from cares and troubles could be conveyed than in the following lines:

"No more shall copy bad perplex my brain;  
No more shall type's small face my eyeballs strain;  
No more the proof's foul page create me troubles  
By errors, transpositions, outs and doubles;  
No more to overrun shall I begin;  
No more be driving out or driving in;  
The stubborn pressman's brow I now may scoff,  
Revised, corrected, and finally worked off."

Here is a curt complaint:

"Weary of distributing pye,  
Pressed out of life, I now must die.  
I've cut my stick, my fount is sped,  
My case is empty, as in life my head.  
In fact, my last impression is— I'm dead."

**KEITH LEDGER PAPERS** are well made, strong, hard sized, rule nicely, write easily, erase and rewrite without difficulty, and have been given the preference by good judges in competitive tests with all other leading brands of Ledger paper.

**RAVELSTONE** Flats are made in Laid and Wove, White and Perfection Tints, and are used by Lithographers, Stationers and Printers for first-class Commercial Stationery for Banks, Insurance Offices and Business Houses generally. These papers are also put up ruled and folded, in the usual sizes.

**WESTLOCK** Flats are well known and highly prized for their good color, cleanness, freedom from imperfections and all adulterants, strength, hard sizing, and are used for all kinds of commercial work, being especially preferred by makers of Blank Books, because they are thicker for the weight than other papers. These papers are put up folded, and in Note, Letter and Bill Heads, etc.

The above Papers are offered to the Trade through Agents located in the principal centers of distribution throughout the Country.

**NEWEST**  
**CUTTER**

For a thoroughly GOOD hand and power Cutter at a comparatively small figure, the "ECLIPSE" leads all of its competitors.

The "ECLIPSE" is guaranteed to excel, in all the points requisite in a good machine, all other low-price Hand and Power Cutters in the market.

**"ECLIPSE"**

THE construction is simple, the power and strength warranted, the fitting and finish first-class. Only small exertion is necessary to operate by hand, and the fly-wheel is made extra large as an additional advantage. The pulley for power is always ready for the belt when needed. The knife cuts from left to right; has a sliding, draw movement, which is uniform and rapid and can be stopped at any point in the cut. There are gibs in the frames for the adjustment of the knife-bar. Either the usual style of clamp and gauge or the intersecting clamp and gauge is furnished, as may be preferred. The back-gauge is split, thus admitting of two sizes being cut at one operation. In the front table is a brass measuring rule divided into eighths of inches. Only SPECIAL boxing charged for.

# The INLAND PRINTER

A TECHNICAL JOURNAL, DEVOTED TO THE ART OF PRINTING.

Published Monthly by

THE INLAND PRINTER COMPANY,  
183, 185, 187 MONROE STREET, CHICAGO.

H. O. SHEPARD, *President and Managing Editor.*

A. H. McQUILKIN, *Associate Editor.*

DR. JOHN E. HURLBUT, *Vice-Prest.*

C. F. WHITMARSH, *Secretary.*

D. L. EVANS, *Treasurer.*

ADDRESS ALL CORRESPONDENCE TO THE INLAND PRINTER COMPANY.  
Entered at the Chicago postoffice as second class matter.

CHICAGO, JUNE, 1891.

## SUBSCRIPTION RATES.

TWO DOLLARS per annum in advance; one dollar for six months in advance; sample copies, twenty cents each.  
FOREIGN.—To countries within the postal union, ninety-six cents per annum additional. To Great Britain and Ireland, postage paid, twelve shillings per annum in advance. Make money orders payable to H. O. Shepard.  
SUBSCRIPTIONS may be sent by express, draft, money order or registered letter. Postage stamps are not desirable, but if necessary to remit them, one-cent stamps are preferred. No foreign postage stamps accepted.  
CLUB RATES.—Six or more subscriptions, sent at one time, one dollar and fifty cents per year each. Cash to accompany order.

THE INLAND PRINTER is issued promptly on the fifth of each month, and will spare no endeavor to furnish valuable news and information to those interested professionally or incidentally in printing, engraving, electrotyping, stereotyping, bookbinding, and in the paper and stationery trades. Persons connected with any of these lines of industry will confer a favor by sending news from their section of the country pertaining to the above trades, particularly individual theories and experiences of practical value.

THE INLAND PRINTER publishes its net rates in each issue of the paper. No agent or representative of this Journal is authorized to deviate therefrom or make any discounts. It solicits advertisements from dealers in or manufacturers of any goods used by printers, bookbinders, stationers and similar lines of trade. Its value as an advertising medium is unquestioned. The character of the advertisements now in its columns, and the number of them, tell the whole story. Circulation considered, it is the cheapest trade journal in the United States to advertise in. Advertisements to insure insertion in the issue of any month, should reach this office not later than the twentieth of the month preceding.

## ADVERTISING RATES.

SPACE.	ONE MONTH.	THREE MONTHS.	SIX MONTHS.	ONE YEAR.
Plain card .....	\$ 5 00	\$ 13 50	\$ 25 50	\$ 48 00
One-eighth page .....	10 00	27 00	51 00	96 00
One-quarter page .....	15 00	40 50	76 50	144 00
One-half page .....	25 00	67 50	127 50	240 00
One page .....	42 00	113 50	214 00	400 00

WANT COLUMN.—Twenty-five cents per line; minimum, 75 cents. Orders for this column *must* be accompanied by cash.

THE INLAND PRINTER may be obtained at retail, and subscriptions will be received by the following:

M. P. McCoy, 54 Farringdon Road, London, Eng.  
ALEX. COWAN & SONS (LIMITED), General Agents, Melbourne, Sydney and Adelaide, Australia, and Dunedin, New Zealand.  
G. HEDELER, Grimmaischer Steinweg 3, Leipzig, Germany.

J. L. ROBINETTE, State Printing Office, Sacramento, Cal.  
E. A. CHEEVER, care of *Evening Express*, Los Angeles, Cal.

## STARTING IN BUSINESS.

UNDER this heading, Mr. Roderic C. Penfield, in the May issue of THE INLAND PRINTER, gives some valuable advice to those contemplating engaging in the printing business as employers. Some of the points touched upon we desire to emphasize, and to present a slightly different phase of the matter to our readers.

The journeyman printer who starts in business nowadays with small capital, and smaller experience as a business man, is not only running a serious risk himself of ultimate disaster, but, in his efforts to secure patronage, he usually cuts rates, and alike jeopardizes the well-being of employers and of employés in the printing trade.

The motives that prompt a printer to this step are sometimes of a character that foretell failure. Business may be a little dull, and, being out of a situation, our friend may think to put his savings to account and be his own master. He can get credit, he knows, and, though trade is dull, he can cut prices a little till he gets a patronage—his own time will go in for nothing—and when he turns the stream of trade his way by a little ditch cut in living prices, he will get even on other work if customers insist on his old prices being adhered to. Any attempt to dissuade him from the undertaking is looked upon with suspicion. The prospect is so pleasant and the path so plain, that none but the jealous-minded can see aught but success in it.

The clouds gather quickly when he is fairly launched, however; his estimates on work are so low that he gets some trade; but he is merely turning his money over. Needless is it to inquire into the gradations of his embarrassment and final failure, with desperate cutting of rates to get a little ready money to stave off the evil day. All is of no avail, and the sometime master printer goes back gladly to the case as a jour, with his savings gone, but with a mind free from all strain and vexation, little recking how much he has helped to demoralize rates, and that he has injured both himself and his fellows none the less seriously because indirectly.

We know of a job printer, and there are others like him, who had a printing outfit at his home, and after his work was finished for the day would run off orders at his private establishment. *He succeeded*, and has a good job office at the present time, turning out neat and tasteful work. But he cut prices, and it cannot be denied that as a union man he took a one-sided view of the question of his obligation to his fellow-workmen—he belonged to the union, but he was not union in principle. This way of starting in business is not to be commended, for the method of it is demoralizing in all its features.

If a journeyman printer contemplates starting in business for himself, he should make a careful canvass of the state of trade. If it is necessary for him to cut rates to secure a patronage, he will do well to abandon the project, but if the state of trade warrants it and his acquaintance is such as will secure him profitable custom, if he has push and business sagacity, we would say "Go on and prosper."

**A VEXED PROBLEM.**

THE question of the employment of women in the arts, professions and trades has long engaged the attention of political economists and essayists on the rights of women, and although frequently allowed to lapse into quiescence is revived time and again as incidents occur which strengthen or weaken the positions held by the controversialists. The action of the Sydney (New South Wales) union in refusing to admit women to its membership is in striking contrast to the liberal policy pursued by the International Typographical Union. The views held in Australia by the majority of unionists in the printing trade are exemplified by the following resolution of the New South Wales Typographical Association :

The question of female labor is one of much importance. While some societies have enjoyed immunity from this evil, others have had, and some still have, the matter seriously before them. Female labor means nothing more than *cheap labor*, and all societies are enjoined to look upon it in this light, and set their faces steadily against it. With the experience of societies in whose districts female compositors have been introduced — notably New Zealand and Western Australia — for their guide, societies will plainly see that it would be highly detrimental to their welfare to recognize female labor in any way, and the council's advice lies most decisively in this direction.

The American printer puts himself on record against this form of exclusiveness, feeling that if women find it expedient to learn typesetting it is better to have them in the union and working for the scale than arrayed against it in non-union employment.

**THE MAY-DAY DEMONSTRATIONS.**

FOR the past twenty-five years the workmen of America have been vigorously agitating the desirability of a reduction in the hours of labor; and while some trades and occupations in sections of the country have accomplished their desires in this respect, and many others have secured gratifying concessions in the same direction, still the great body of wage-earners are laboring under the same conditions today that have prevailed during the greater portion of the present century. The reasons of this success or partial success in some cases, and of absolute failure in a greater number of instances, must now be apparent to every well-informed mechanic. In a business where the employment of a large amount of capital for the accumulation of necessary material and the purchase of costly machinery is a requisite consideration, and where unlimited competition is practically open and invited from like establishments in any part of the country, there we will find the greatest obstacles to any innovation that will make a readjustment in the estimates of the cost of production necessary, and where the question naturally assumes far greater importance than would be the case where such conditions did not present themselves.

Since the beginning of this agitation, no class of people have been more actively identified with the movement, nor been more eager for its accomplishment,

than the printers; and yet it would be difficult to discover another trade that has made so little progress in the direction of a realization of their aims. Is it not a fact that the obstacles referred to obtrude themselves to a greater extent in the printing business than they do in almost any other occupation that can be held up for a comparison? We fail to see that these obstacles are of so intricate a nature that they cannot be overcome if the proper spirit governs and rational methods are employed. It is generally conceded that every tendency of the day points to a reduction of the working hours as a certainty, and that its final introduction is but a question of time in any event. This being the case, would it not be the part of wisdom for all concerned to come together and put the measure into effect with as little friction as possible, and so gradually that its effect upon business calculations would scarcely be perceptible.

The opinion is general among workmen and students of social economy, that a readjustment of the hours of labor is essentially necessary and entirely feasible. This conclusion they base largely upon the universal introduction of labor-saving machinery, and, so far as this country is concerned, on the enormous immigration of foreign labor annually flowing to our shores. The first day of May appears to have been tacitly agreed upon as the proper time when a display in favor of this movement should be indulged in. In the past these demonstrations have consisted chiefly of parades and brass bands, speech-making and banner-flying, with an occasional strike here and there as an enlivening concomitant to the proceedings.

As to the utility of the methods employed on these occasions, there is undoubtedly much room for a difference of opinion as to their efficacy. While a resort to force or violence of any description cannot be countenanced, it must still be admitted that the brass-band style of argument has lost much of its former force as a conclusive persuasion for the advancement of social or other reforms. A brass band or two, followed by a scattering procession made up of a comparative handful of the workmen of any particular locality, while it may be very edifying to those who take part in it, and to the children and unthinking portion of the community who witness it, we yet must realize that the display lacks every element of argument calculated to impress those of an opposite interest with the necessity of compliance in the demands set forth. Parades are at best but a relic of a barbarous or semi-civilized condition of society, when a show of numbers and a display of force were the only alternatives of the common people, when they desired to secure the consent of the controlling powers to needed reforms. We claim to live in an age of reason, and if we desire to accomplish any great reform we must adopt methods that are based in principle upon equity and reason.

Many of the oratorical displays perpetrated at these May-day demonstrations are entirely beneath the dignity and intelligence of the American workman. To

seriously engage in a discussion where the sole topic is in reference to the tyranny of capital, is a useless waste of time. We all know that capital is tyrannical by necessity and sensitive by nature. It follows that it will fight shy of avenues where the probabilities of profitable employment are not reasonably transparent. A fool with an abundance of money is not necessarily a capitalist. It requires some stability of character and sanity of purpose to warrant the title.

It would appear that a reduction of the hours of labor would be highly beneficial to the working classes. But how to bring this about without possible disorder to the business and manufacturing interests of the country is a problem as yet unsolved. Moderation and a spirit of fairness on the part of the representatives of opposing interests would no doubt remove much of the antagonism now existing, and go far to pave the way for an amicable settlement of this question. We must remember that the industrial shield has two sides in common with all other subjects, and that any material advantage secured by one interest wholly at the expense of another may prove in the long run of more injury than benefit to all concerned.

#### ADVERTISING IN TRADE JOURNALS.

“**K**NOWLEDGE is of two kinds,” said the Great Lexicographer. “We know a subject ourselves, or we know where we can find information upon it.” When a trade journal of indifferent mechanical execution has been read, it usually meets with the fate of the daily paper: is thrown aside and forgotten. But when it is an artistic and beautiful specimen of typography, when its pages teem with information on the trade to which it pertains, then it is referred to again and again by the happy possessor, and its beauties are eagerly pointed out to admiring friends. Its accumulating numbers are carefully preserved as a veritable encyclopedia, and the patrons of its advertising pages feel that those in need of their wares—to paraphrase the gruff old doctor—know where to get information about them.

#### THE INTERNATIONAL CONVENTION.

**E**VERY indication warrants the belief that the coming convention of the International Typographical Union will be a memorable one in many respects. The convention will be composed of an exceptionally large number of men who have seen like service before; its officers are men of experience and acknowledged ability; the principal measures that will engage its attention have long been widely discussed, while financially the union is in better shape now than ever before. All things considered, we see little occasion to fear that the results will be in any way a disappointment. The historic associations which cluster so thickly around this year's convention city, and by which the delegates will find themselves confronted on every hand, will no doubt have a stimulating effect upon their ambitions and their energies.

#### AN IMPOSITION.

**N**UMEROUS complaints come from the stationery and printing trades against the government printing return envelopes, and our sympathy is with them, though the argument has been made that the desire to facilitate the work of the postal department is the only cause of the government's interference. That the accommodation of the public and the improvement of the public service are paramount to any particular industry must be admitted; but until it has been shown that efforts have been made by the postoffice authorities to seek a remedy for the carelessness of the individual citizen in other directions than forcing the printing and stationery trades to bear the burden, the outcry against this evil will continue.

#### A MATTER OF TASTE.

**T**HE advantages of conforming our taste, or, rather, educating ourselves to tolerate radical departures from what we have always been taught to consider fundamental rules of punctuation and syllabication, have at different times been enlarged upon. The contributed article “About Spacing,” on another page, though containing suggestions offered at various times in the past, will doubtless strike many of our readers as entirely novel. The distaste to putting the idea in practice would possibly be overcome in printing offices, where the mechanical advantages would win for it much sympathy, but the public takes as unkindly to innovations in this respect as to the agitation for spelling reform. If the system of dividing words, as outlined, were at any time adopted, the advantages in accelerated speed to some of the typesetting machines, as well as in hand composition, would be of marked importance.

#### OUR COLORED INSERT.

**A** SUGGESTION to typefounders is embodied in the colored insert sheet which appears in this number, and if any wish to adopt it the opportunity is open. The floral design in borders and ornamentation is becoming the popular craze, and it is not improbable that a production in type metal, arranged so as to be easily set up by the compositor, after the style presented, would have a large sale and meet with approval. Whether the making of dies and matrices and the casting of the fonts would entail too large an expense to justify adopting the suggestion is a matter to be decided by the typefounders themselves. The design is by Mr. Will Bradley, of Chicago, an artist whose work appears in many of the best publications in the country.

**T**HE following unsolicited commendation is from the Hon. Theodore L. De Land, of the Board of Examiners of the Treasury Department, Washington, D. C.: “I have read the article on shorthand, No. II, by La Moille—I did not see No. I—and I must say that it is good. The symbols are cut with precision; they are arranged with much judgment; and if it is your intention to reprint it in a book, I predict for it success.”

Written for THE INLAND PRINTER.

## THE SHORTHAND GUIDE.

A COMPLETE TEXT-BOOK FOR SELF-INSTRUCTION AND SCHOOL USE.

NO. V.—BY T. G. LA MOILLE.

[Copyright, 1891, by the Inland Printer Company. All rights reserved.]

WHERE reference is made to sections of the Complete Guide, those sections must be studied thoroughly first of all. The principles must be acquired, the forms of letters and words imprinted on the memory, and all exercises so mastered that every letter or word can be instantly read or written without hesitation. The exercises are divided into paragraphs for class use. No wrong outlines will be given. No word will be given until the principles telling its correct form have been given.

- V.—1. Write all the unshaded straight consonants.  
 2. Write all the shaded straight consonants.  
 3. Write all the unshaded curved consonants.  
 4. Write all the shaded curved consonants.  
 5. Write each straight consonant with each straight consonant.  
 6. Write each straight consonant with every curved consonant.

Time, 4½ minutes. Write, read, write back into longhand, etc.

To some extent, the character *V* will be used for *ür*, *ër*, and *ir*, in such words as *surge*, *service* and *fir*.

VOWEL AND DIPHTHONG WRITING EXERCISES.  
COMPLETE GUIDE, § 30-38.

- I.—1. *ā*, *ī*, *ē*, *ō*, *ōō*, *ū*, *ūr*.  
 2. *ā*, *ī*, *ē*, *ō*, *ōō*, *ū*, *aw*, *oy*, *ow*.  
 3. *ā-ī*, *ā-ē*, *ā-ō*, *ā-ā*, *ā-aw*, *ā-ōō*, *ā-ū*, *ā-oy*, *ā-ow*.  
 4. *ā-ī*, *ā-ē*, *ā-ō*, *ā-ā*, *ā-ōō*, *ā-ū*, *ā-ūr*, *ā-aw*, *ā-oy*, *ā-ow*.  
 5. *ī-ā*, *ī-ē*, *ī-ō*, *ī-ī*, *ī-aw*, *ī-ōō*, *ī-ū*, *ī-oy*, *ī-ow*, *ī-ō*, *ī-ā*.  
 6. *ī-ā*, *ī-ē*, *ī-ī*, *ī-ō*, *ī-ōō*, *ī-ūr*, *ī-ū*, *ī-ow*, *ī-aw*, *ī-oy*.  
 7. *ē-ā*, *ē-ē*, *ē-ī*, *ē-ōō*, *ē-ō*, *ē-ū*, *ē-ow*, *ē-aw*, *ē-oy*.  
 8. *ē-ē*, *ē-ā*, *ē-ō*, *ē-ī*, *ē-ōō*, *ē-ū*, *ē-ūr*, *ē-aw*, *ē-oy*, *ē-ow*.  
 9. *ō-ō*, *ō-ā*, *ō-ē*, *ō-ī*, *ō-ū*, *ō-ōō*, *ō-ow*, *ō-oy*, *ō-aw*.  
 10. *ō-ā*, *ō-ō*, *ō-ē*, *ō-ī*, *ō-ū*, *ō-ow*, *ō-ōō*, *ō-oy*, *ō-aw*, *ō-ūr*.  
 11. *ōō-ā*, *ōō-ō*, *ōō-ī*, *ōō-ē*, *ōō-aw*, *ōō-ū*, *ōō-ow*, *ōō-ōō*, *ōō-oy*, *ōō-ō*, *ōō-ē*, *ōō-ā*, *ōō-ī*, *ōō-ū*.  
 12. *ōō-ō*, *ōō-ā*, *ōō-ī*, *ōō-ē*, *ōō-ū*, *ōō-ūr*, *ōō-ōō*, *ōō-aw*, *ōō-ow*, *ōō-oy*, *ōō-ō*, *ōō-ē*, *ōō-ā*, *ōō-ī*, *ōō-ū*.  
 13. *ū-ī*, *ū-ā*, *ū-ē*, *ū-ō*, *ū-ū*, *ū-aw*, *ū-ow*, *ū-ōō*, *ū-oy*.  
 14. *ū-ā*, *ū-ē*, *ū-ī*, *ū-ō*, *ū-ōō*, *ū-ūr*, *ū-ū*, *ū-aw*, *ū-oy*, *ū-ow*.  
 Time, 4½ minutes. Write, read, write back into longhand.

- II.—1. *aw-ā*, *aw-ī*, *aw-ē*, *aw-ō*, *aw-ū*, *aw-ōō*, *aw-aw*, *aw-oy*, *aw-ow*.  
 2. *aw-ā*, *aw-ī*, *aw-ō*, *aw-ē*, *aw-ū*, *aw-ōō*, *aw-ūr*.  
 3. *oy-oy*, *oy-ow*, *oy-aw*, *oy-ē*, *oy-ī*, *oy-ā*, *oy-ō*, *oy-ū*, *oy-ōō*.  
 4. *oy-ō*, *oy-ā*, *oy-ī*, *oy-ē*, *oy-ū*, *oy-ūr*, *oy-ōō*.  
 5. *ow-oy*, *ow-aw*, *ow-ow*, *ow-ē*, *ow-ā*, *ow-ī*, *ow-ō*, *ow-ōō*, *ow-ū*.  
 6. *ow-ī*, *ow-ā*, *ow-ā*, *ow-ō*, *ow-ē*, *ow-ū*, *ow-ūr*, *ow-ōō*.

Time, 1½ minutes. Write, read, write in longhand, rewrite in shorthand, etc.

III.—1. *ī-ā*, *ī-ō*, *ī-ī*, *ī-ē*, *ī-ōō*, *ī-ū*.

2. *ā-ē*, *ā-ō*, *ā-ī*, *ā-ū*, *ā-ōō*, *ā-ā*.  
 3. *ē-ō*, *ē-ē*, *ē-ī*, *ē-ōō*, *ē-ā*, *ē-ū*.  
 4. *ō-ē*, *ō-ō*, *ō-ā*, *ō-ī*, *ō-ōō*, *ō-ū*.  
 5. *ū-ā*, *ū-ī*, *ū-ē*, *ū-ō*, *ū-ōō*, *ū-ū*.  
 6. *ōō-ī*, *ōō-ē*, *ōō-ā*, *ōō-ō*, *ōō-ū*, *ōō-ōō*.  
 7. *ūr-ā*, *ūr-ī*, *ūr-ē*, *ūr-ō*, *ūr-ōō*, *ūr-ū*.

Time, 1½ minutes. Write, read, rewrite in longhand, and repeat several times.

IV.—1. Write each of the *long* vowels and diphthongs *before* all the *straight* consonants.2. Write each of the *short* vowels and *V* *ür* *after* all the *curved* consonants.

Time, 3 minutes. Write, read, write in longhand, and repeat until written and read without hesitation.

V.—1. Write each of the *short* vowels *after* all the *straight* consonants.2. Write each of the *long* vowels and diphthongs *before* all the *curved* consonants.

Time, 3½ minutes. Write, read, rewrite, reread, etc.

57. *A long vowel between two consonants*.—By the second method, if a long vowel, or a diphthong, comes between two consonants, it is written after the first of these two consonants; as, *died*, *babe*, *tomb*.The vowels, or diphthongs, written after the first consonant, when coming between two consonants, are: *ā*, *ī*, *ē*, *ō*, *ōō*, *ū*, *aw*, *oy*, and *ow*.58. *A short vowel between two consonants*.—By the second method, if a short vowel comes between two consonants, it is written before the second consonant; as, *death*, *bab*, *tub*. The vowels writtenbefore the second consonant, when coming between two consonants, are: *ā*, *ī*, *ē*, *ō*, *ōō* and *ū*.59. *Two vowels between two consonants*.—By the second method, when two vowels, or diphthongs, occur between two consonants the first vowel, or diphthong, is written near the first consonant, and the second vowel, or diphthong, is written near the second consonant; as, *poem*, *poesy*; except in the following:60. *Exception*, when it may be more convenient to write both of the vowels, or diphthongs, by one consonant; as, *towel*, *jewel*.61. *Two vowels before, or after, a single consonant*.—By the second method, when a single consonant is preceded, or followed, by two vowels, or by a vowel and a diphthong, the vowel, or diphthong, which is pronounced nearest the consonant is written nearest to the consonant; as, *idea*, *Ohio*, *iota*.62. *Two or more vowels together*.—When two or more vowels come together it is often most convenient to write them by the first method; as, *poem*, *poesy*, *idea*, *Ohio*, *iota*.

## REPORTING RULES OF POSITION.

63. These rules may, for the present, be passed over, except by those who desire to become fast reporters.

They are inserted here for the convenience of those students who wish from the first to acquire and practice the reporting style. Other students who desire shorthand for many purposes where legibility, consistent with a fair rate of speed, is sought, can use the literary style to the best advantage, and save memorizing more rules and many "skeletons" of words. Use these reporting style principles from now on if you wish. You will find, however, that a thorough mastery of the literary style will be sufficient for many occasions which require the reporting style of some other systems of shorthand. Our literary style is rather rapid, and it is easily read. There is little difficulty experienced in changing from our literary style's one position and almost full vocalization to our reporting style's three positions and rare insertion of vowels.

64. In the reporting style, the position of the consonant outline, or skeleton, is determined by the word's chiefly accented vowel or diphthong. Vowels or diphthongs are seldom, if ever, inserted; as,  $\neg$  cap, | it,  $\neg$  knock.

65. Ruled paper is used. In using unruled paper, the second position is considered on the line, and the first and third positions may be indicated by three or more dots used to represent the line. Dots are used because a straight line written in might be mistaken for a — k, or a double-k ——. In print, small figures called "superiors," indicate reporting positions; as,  $\overset{1}{a}$ ,  $\overset{2}{i}$ ;  $\overset{1}{p}o^2$ , pa,  $\backslash$ ; bow<sup>3</sup>,  $\neg$ .

THE REPORTING FIRST POSITION.

66. If the *chiefly accented vowel, or diphthong*, in the word is one of the following long sounds, given in § 67, that word's consonant or consonants are written in the first reporting position.

67. The *first* reporting position is indicated by the following vowels and diphthongs:

$\backslash$  ā, | i, / ē, — ō, = öö, and < ū.

68. The *first* reporting position for the *long vowels and diphthongs*, given in the preceding section, and for *all horizontal consonants*, is the height of a | t stroke above the line of writing; as,  $\neg$  or  $\neg$  gay;  $\neg$  or  $\neg$  nigh;  $\neg$  or  $\neg$  knee;  $\neg$  or  $\neg$  oak;  $\neg$  or  $\neg$  goo;  $\neg$  or  $\neg$  mew.

69. The *first* reporting position for *all perpendicular, or inclined, consonants* is half the height of a | t stroke above the line of writing; as,  $\neg$  or  $\neg$  pay;  $\neg$  or  $\neg$  bee;  $\neg$  or  $\neg$  show;  $\neg$  or  $\neg$  woo;  $\neg$  or  $\neg$  Jew.

THE REPORTING SECOND POSITION.

70. If the *chiefly accented vowel, or diphthong*, in the word is a short sound, as given in § 71, that word's consonant, or consonants, are written in the second reporting position.

71. The *second* reporting position is indicated by the following vowels and diphthongs:

$\backslash$  ā, | i, / ē, — ō, = öö, | ū, and / ūr.

72. The *second* reporting position for *all short vowels and diphthongs* and *all consonants* is on the line of writing; as,  $\neg$  or  $\neg$  dash;  $\neg$  or  $\neg$  Nellie;  $\neg$  or

$\neg$  bah;  $\neg$  or  $\neg$  mush;  $\neg$  or — cur;  $\neg$  or  $\neg$  burr;  $\neg$  or  $\neg$  lush.

THE REPORTING THIRD POSITION.

73. If the *chiefly accented diphthong* in the word is  $\neg$  aw,  $\neg$  oy, or  $\neg$  ow, that word's *consonant* or *consonants* are written in the third reporting position.

74. The *third* reporting position for the *three diphthongs*,  $\neg$  aw,  $\neg$  oy, and  $\neg$  ow, and for *all horizontal consonants*, is just below the line of writing:  $\neg$  or  $\neg$  gnaw;  $\neg$  or  $\neg$  coy;  $\neg$  or  $\neg$  go;  $\neg$  or  $\neg$  mow.

75. The *third* reporting position for *all perpendicular, or inclined, consonants* is through the line of writing; as,  $\neg$  or  $\neg$  jaw;  $\neg$  or  $\neg$  toy;  $\neg$  or  $\neg$  bough;  $\neg$  or  $\neg$  chow-chow.

EXCEPTIONS IN REPORTING POSITIONS.

76. Some words and phrases have their natural reporting positions varied, all of which will be fully explained, in connection with the entire reporting style, in a later portion of this work. These exceptions are made for the following reasons:

- (a) To avoid confusing similar outlines;
- (b) To afford more word-signs and contractions;
- (c) To provide more convenient phrase-joinings.

OMITTING VOWELS.

77. To obtain speed, numerous vowels are omitted. Do not carry too far the omission of vowels, or the result will be illegibility. Some writers safely leave out more vowels than others can omit. Each writer must, to some extent, decide for himself how many vowels not to write. It is absolutely necessary to know all about the vowels in order to omit them. The following rules must be heeded:

78. *Few Consonants*.—The less consonants in a word the more it needs to be vocalized, because words containing a few consonants are the most common, and the less consonants there are in the word the more the chance of the word having a "consonant outline" similar to that of many words; as, / chay might stand for the consonant sound of numerous words, while  $\neg$  r-r-ray would be easily selected as the outline for some word like "Aurora."

79. *Several Consonants*.—The more consonants in a word the less it needs to be vocalized; as,  $\neg$  f-m-lay, family.

80. *Self-explained Outlines*.—Many words almost spell themselves by something of a resemblance between letters and sounds; as,  $\neg$  lay-d-lay-k, lady-like.

81. *Aided by Context*.—The context aids materially in deciphering unvocalized shorthand. The sense of the passage, the grammatical relations, and shades of meaning assist the translation into longhand or speech.

IMPORTANCE OF VOWELS.

82. The following scale of the importance of vowels for legibility is useful in determining the degrees of omission of vowels and diphthongs:

- (a) 1st. Omit medial and unaccented vowels; as,  $\neg$  dying,  $\neg$  enemy.

(b) 2d. Omit initial and final vowels; as, Elijah, vowel.

(c) 3d. Omit diphthongs; as, bowel, toil.

(d) 4th. Omit accented vowels; as, enemy, Johnnie, team, cow.

#### REVIEW QUESTIONS.

58. By the second method, how is a short vowel written between two consonants? In such a case what vowels are written? 59. By the second method, how are two vowels, or diphthongs, written? 60. Is there any exception to writing the first and second vowel, or diphthong, near the first and second consonants? If so, when? And why? 61. By the second method, how are two vowels before, or after, a single consonant written? 62. Which is often the most convenient method of writing two or more vowels which come together? 63. What may the student now do? 64. In the reporting style, how is the position of the consonant outline determined? Are vowels, or diphthongs, frequently inserted in the reporting style? 65. In the reporting style, should ruled paper be used? If unruled paper is used, how are the three reporting positions indicated? Why are the three, or more, dots used? How are the three positions indicated in print? 66. How is the first position determined? 67. What vowels and diphthongs indicate the first reporting position? 68. What is the first reporting position for the long vowels and diphthongs? What for all horizontal consonants? 69. What is the first reporting position for all perpendicular, or inclined, consonants? 70. What determines the second reporting position? 71. What vowels and diphthongs indicate the second reporting position? 72. What is the second reporting position for all short vowels and diphthongs? What for all consonants? 73. What determines the third reporting position? 74. What is the third reporting position for three diphthongs? Please name those three diphthongs? What is the third reporting position for all horizontal consonants? 75. What is the third reporting position for all perpendicular, or inclined, consonants? 76. Are reporting positions of some words and phrases ever varied? Why? 77. Why are many vowels omitted? What must not be done? What must be known? Why? 78. Why must a word with a few consonants be more vocalized than a word with several consonants? 79. If a word contains numerous consonants, does it need to be vocalized as much as a word containing a few consonants? 80. How do some words aid in translating their outlines? 81. How does the context assist the deciphering of the shorthand? 82. Give the order of rules of importance of vowels in omitting vowels and diphthongs.

(To be continued.)

#### A GLIMPSE AT THE PRINTERS' HOME.

BY J. D. VAUGHAN.

THE Childs-Drexel Home for union printers, now being erected at Colorado Springs, will be an imposing structure when completed. The plan is renaissance in architectural style, the elevation showing a pleasing and harmonious combination design. The interior is arranged with a view of adopting the latest modern sanitary advantages. The structure, completed, will commend itself favorably to all interested in institutions projected for sanitarium purposes. Located in the center of the northwest twenty acres of the tract donated, the building faces Pike's Peak, one of the monarchs of the Rocky range. Distant only a mile from one of the most noted health resorts on the continent, broad avenues reach and intersect the grounds,

affording easy access to this little gem in an Arcadian valley.

In scenic surroundings, the Home is the center of a vast panorama. Situated on a commanding eminence, aided by the pure atmosphere and cerulean skies, the range of vision is almost boundless. The kaleidoscopic views presented at different points of the compass are as distinct and different as are the cardinal points. Here nature appears to have finished her labor and rests to gaze upon her varied efforts of handiwork. The beautiful, the sublime, the grand and awe-inspiring meet the eye in every direction.

With each successive hour a new landscape of splendor appears, bewitching the beholder, until one forgets the leaden scenes of life and seems translated into a new sphere of contentment and happiness. As the skeptic at sea acknowledges a deity when the storm king rides the wave, so the sojourner beneath the mountain shadow realizes that his Redeemer liveth, as he beholds the sublimity of the mountains and the beauty of the plains united.

In the views to the east, as the silver streams of light are being tinged with gold and crimson, the imagination needs no spur to behold in the gently rolling plain a billowy ocean, or see in the outlines of the bluffs the cliffs of a rock-ribbed coast with its castles and battlements. As the stars fade in the ethereal blue of a sunlit Colorado sky, the fleecy clouds rise from the summits of the giants of the divide. The Spanish Peaks, one hundred miles away, are seen to the south, while to the north, an equal distance, Long's Peak and Gray's bare their hoary heads to the Holy Cross.

In the morning sun the silver glitter of the mountain streams seems to lend a brighter hue to the green of glen and vale as they leave the densely wooded cañon's track. The fretting of the streams as they run the narrow gorges, half concealed by waving pines, furnish a music that lures to rest and peace. Fantastic forms and vivid colors of crags and spires towering in air stand out in bold relief, as if guarding the approaches to heavenly retreats beyond. The mountain air is perfumed with the fragrance of myriads of flowers concealed beneath the evergreens which extend from snowy crest to verdant base.

Picturesque bits of scenery so lavishly strewn around furnish the artist and poet themes for brush and pen, and health and pleasure for those who have regarded life a failure. The drives through the glens and parks, and the boating and fishing of the lakes and streams, attract the invalid and worn-out until, with reinvigoration and fresh desire, they grasp the alpenstock of nature and climb the heights where float banners of health and hope.

Summer resorts, educational institutes, sanitariums and residences of the wealthy and lovers of the beautiful, dot the plains and mountain slopes, furnishing retreats for the invalid, the feeble and heavy laden. The tourist tarries at the Garden of the Gods and drinks of the living streams of Manitou, that he may return with

new life and sing praises of the magical waters and marvelous climate of Colorado.

The dedication of the Home will mark an era in the history of trades unionism, which will not only be productive of great good for all those who will avail themselves of the advantages of the institution, but will serve to bind closer all who have been instrumental in its establishment, even to the setting of one thousand ems. With each coming anniversary of the completion of the edifice built of love to fellow man, praises will be sung of the good will of those who add to the usefulness and beauty of the printers' paradise. Nature has given largely of her choicest treasures; it remains for the generous and noble to continue the work so auspiciously begun, and soon the wildest dream of the typo enthusiast will become a happy reality.

### PRACTICAL TALKS ON PRESSWORK.

NO. XV.—BY A PRESSMAN.

THE art of working colored inks without "filling up" or corroding on the type or plates would seem to be not in the possession of a vast number of the pressmen of the country. This conclusion is reached after studying for years, not alone the productions of our pressrooms, but the methods of the very great number of pressmen, some good, some otherwise, with whom it has been my fortune to come in contact. Indeed I can remember very distinctly, the worry and discomfort that I have, in bygone years, suffered from the same cause. Today, when I see a fellow-pressman wrestling with this problem, worry struggling with disgust showing in every lineament, I do not feel at all put out that the suggestion I invariably offer is treated with disdain, for I know that time was when I would act likewise, if such a simple remedy were offered me, and thus I can make allowances for his contempt.

But to come to our remedy; it is simplicity itself: Use plenty of varnish in your colored inks. If they corrode or "fill up," put more varnish in, and you will finally succeed in exorcising that demon. To my intercourse with some label printers I acknowledge my indebtedness for this exceedingly useful information. When next you have trouble with your colored inks, try it.

\* \*

A beautiful brown ink can be produced by mixing an equal quantity of lemon yellow and vermilion, toning it by the addition of a very small quantity of black.

\* \*

The world's fair of 1893 will probably have the finest collection of presswork that has ever yet been brought together. If, to the indefatigable efforts of the committee appointed by the International Printing Pressmen's Union were added the concerted action of the National Typothetæ and the International Typographical Union, the display would be ample recompense to any lover of fine printing for a journey to

Chicago, even from the farthest corner of the globe. Come, gentlemen, sink unworthy motives, place the good name of American printers above everything else, and with willing effort prove to the world that our proud boast of being the leaders in the printing craft is a true one.

\* \*

It is becoming more evident every day that the contention of a certain firm, largely engaged in making newspaper web presses, that machinists from their shops were the most competent persons to run web presses, is being disproved. If the newspapers that are run by these men are compared with those printed by pressmen, the merest tyro can tell that while the latter is really printing, the former is neither more nor less than botchwork. A notable example of the latter class is the *New York World*. Complaint is being made on every hand that the miserable appearance of this particular sheet, and the apparent disregard by its proprietors of the right of its readers to a well-printed sheet that will not tax or strain the eye, is but another insult to the intelligence of a long-suffering public.

\* \*

At least three, probably four, parties are laying claim to an invention by which portions of a newspaper printed on a web press may be printed in a different color from the rest of the form. The idea is that special prominence may be given to advertisements, etc., securing greater notice for the advertiser and larger remuneration for the publisher. It is safe to say that none of the inventors have made a practical success of their ideas as yet, although a New York daily has on several occasions printed small sections of its space in red. This same paper is pursuing the subject further, and if unlimited capital and business enterprise count for anything it is fair to presume that success will sooner or later reward it.

Right here is a field that might be productive of profit to pressmen of an inventive turn of mind. They, more than anyone else, should have the requisite knowledge to produce such an attachment as will do the thing required, and they may rest assured that in the progressive newspapers of the day a certain and profitable market may be found.

\* \*

I have lately had an opportunity to examine the mechanism of the Miehle press and I must say that it is a wonderful machine. The bed movement is one that will captivate every pressman who sees it, and as for the work on the press itself, it is as near perfection as anyone can wish for today. One thing that particularly took my attention was the apparatus by which the angle rollers are kept constantly in motion and in the same direction that the bed is moving. This, it seems to me, is a complete solution of the problem first noticed in these papers some time ago, namely: the prevention of chipping of angle rollers. In this press there is no chipping of the angle rollers and the pressman can rely on it that he will have no picks on his

plates from that cause. Mr. Miehle, who is a quiet, unassuming gentleman, deserves well of his fellow-pressmen, for if he who makes two blades of grass to grow where but one grew before is a benefactor of the race, how much more so is he who by his superlative genius has produced an almost perfect machine, which improves the quality and increases the output of every pressroom where one of them is set up.

\* \* \*

System, if laid out on a common-sense foundation, is of vast benefit in producing the best results in a pressroom. While at first glance it might seem that an unnecessary amount of red tape is being used in some of our large pressrooms, yet it is quite true that the use of it enables the management to secure better results than any hap-hazard methods could possibly obtain. But the main object of every system of operating pressrooms should be to get the most work, of the best quality, and with the least friction possible. Rules that have no apparent purpose but that of making the life of those working under them irksome should have no place in a pressroom above all places on earth, for the pressman who is a master of his profession is generally an independent individual and will not brook rules that are not called for by common sense.

Written for THE INLAND PRINTER.

#### THE LINOTYPE.

BY EB. WILLIAMS.

A GOOD deal has been written in regard to the "Linotype" (the invention of Mergenthaler), and a good deal yet remains to be said. That the Linotype is destined to play no unimportant part in the production of reading matter in the future is almost a certainty, but it cannot and never will be used in the production of first-class work, either for newspaper or other classes of printing.

Statements have been made from time to time in regard to the *quantity* of work done by the machines, but never a word as to the *quality* of the work.

The writer has been connected with the operation of the Linotype and in continual contact and association with the operators thereon since their introduction into the office of the *Daily News*, of Chicago, and he is, or ought to be, qualified to speak as to the results actually obtained in the practical working of the machines for the three years they have been in use in that office, and desires to say in no uncertain terms that almost every claim which has been made for them is absolutely untrue, and the amount of work done upon them greatly exaggerated.

To avoid the appearance of untruth, I will say that I have not been continually employed in the operation of the machines in all the time they have been in use, but there has hardly been a week in which I have not been in the machine room and conversed with the workers and the machinists in charge of the machines.

It is not the desire of the writer to discourage the use of the machines or to belittle their worth, but

rather to give to the craft the experience of one who makes the modest claim of being a practical printer, by force of circumstances, but who would have probably made a much better machinist, not to say "blacksmith." I do not believe the Linotype or any other machine will be a detriment to the craft, but rather a benefit, and I believe that in time the machine will find its proper place in the economy of the art, and in my humble opinion that place will be the manufacture of cheap books of all kinds and the production of a class of matter for newspapers which would never be produced by the old process of hand composition.

Following are a few of the claims made for the Linotype, and also the opinion of the writer as to how closely his experience shows these claims can be borne out in practice:

"1. They can be operated by anyone who has the ability to strike the keys and read.

"2. They will do the work of at least three compositors with one operator.

"3. A cheaper grade of labor can be successfully used.

"4. Typographical errors are less likely to occur, on account of the absolutely correct mechanical distribution.

"5. A great saving in wear of type, because the same metal is used over and over indefinitely."

Theoretically all of the above claims are correct, but in practice they have each proved fallacious, although I am not prepared to say that such improvements cannot be made as will bring theory and practice into closer harmony.

The first claim, that "anyone can operate the machine," is not borne out by experience, because, even if a person can operate a typewriter, that person does not, of a necessity, know enough of mechanics to operate a machine as complicated as is the Linotype, and in addition to the mechanical knowledge required, the operator must have some knowledge of spelling, punctuation, division of words, capitalization and the ever-prevalent "style." The result is that when you put a typewriter or telegraph operator on one of these machines, he has nearly always to learn, not only to run the machine, and to properly strike the keys, but also to learn the English language "as she is wrote," which it appears that not one in ten typewriters and public school graduates have done, hence it takes as long to learn to properly run a Linotype as to learn to set type by hand, which is never less than six months.

The second claim, "they will do the work of three compositors," is proved unqualifiedly false in practice. It would be a very ordinary compositor who could not average 900 ems per hour for every hour worked, or 9,000 ems for each ten hours; therefore, to do the work of three compositors the Linotype operator must turn out 2,700 ems an hour, or 27,000 ems for ten hours work. I do not know of any operator, expert or otherwise, who ever has, or who ever hopes to turn out an average of 2,700 ems an hour, even with the aid of one

first-class machinist and three assistants (boys) to each ten machines. This statement I expect to see controverted, but I am in a position to prove its correctness, namely: That there is no operator in Chicago who can turn out 2,700 nonpareil ems on an average. Of course I am aware of the fact that some employers claim that there are operators in their offices averaging nearly 3,000 ems per hour, yet, notwithstanding this, I tell you that the 3,000 ems *are not there*.

The third claim, "a cheaper grade of labor can be used," is shown to be untrue, by the fact that as soon as a Linotyper becomes expert, he or she can and does earn from \$18 to \$24 per week, and the union scale is no higher. There appears to be a discrepancy here, but the writer can explain it, and perhaps will at another time.

The fourth claim, that "typographical errors are less likely to occur," etc., is shown to be a fallacy by the fact that the proofs, even of expert operators, are more foul than those of the same persons on the case. The reason for this is that the distribution is not clean, the matrices often falling into the wrong tubes. In the case of an "n" falling into the "s" tube it would result in a stoppage of the machine, but the "s" could drop into the "n" tube and it would never be discovered till the proofreader found it. Another cause of foul proof, and the more frequent, is the failure of the matrices to be carried by the blast to the place of assembly quick enough. Thus, if the operator strikes the letters "t" "h" "e" quickly—the position of the tubes being "e" "t" "h"—if they hang fire in coming down, the word will read "eth"; and so with numerous other combinations.

The fifth claim, "great saving in the wear of type," is not borne out by the cold facts of experience, because the continual remelting of the metal results in a percentage of loss fully equal to the wear of the type. This percentage of loss, being caused by the burning or granulation of the metal, cannot be remedied.

In addition to the above there are faults too numerous to mention and which it will take years of research and improvement to rectify, and which stand an insurmountable obstacle to the use of the machine for the text of first-class work. But, as I said in the beginning of this article, they will do well enough to grind out reading matter for the masses, and will undoubtedly result in the publication of a great amount of reading matter for sale at prices which the people will be able to pay, and I expect to live to see the time when, through the use of typesetting machines, great and standard works will be within the reach of every man, and when every man's home will contain copies of all the great authors, both ancient and modern, and when no author will be too poor to see the results of his study, toil and thought in print; and if this fond hope is realized then will the printer bless the inventor of the *Machine* and cease to worry over his probable loss of work, and devote less of his time to degrading pleasures and pursuits and

more to the study of the works of the great authors of the past and present.

In conclusion let me say that in place of antagonizing machines, printers should take hold of them and see what they can do with them, and instead of leaving the Linotyper out in the cold and speaking of him with contempt, they should extend to him the hand of fellowship, and take him into the union. And if there is no place for the Linotyper in the union, we cannot make a place for him too quick.

#### TYPOGRAPHICAL UNIONS.

NEVER before in the history of the world has there been exhibited such a universal tendency to form pools or combinations in the interests of business enterprises as is apparent at the present time. Scarcely a week passes but that the public is startled by the announcement of the formation of a gigantic amalgamation of the leading establishments in some important line of trade, which announcement is generally coupled with the declaration that the pool has been formed with the avowed object of benefiting the public by a reduction in the selling price of the commodity in which they are interested, but with the real intent of controlling the market by curtailing the output and reducing the cost of production by restricting competition within the narrowest possible limits. Of course it is made to appear that this is all done in the interests of the public; but the public is not slow to observe in all such cases, that if the selling price of the particular article in question is not advanced it is at least firmly maintained at the old figures, while the dividends of the shareholders in the combine are increased in a very satisfactory manner—*from the shareholder's point of view*.

But while all this is going on, if an occasion presents itself working-men will be sagely advised that combinations of labor are entirely unnecessary. That while they can serve no good purpose, they have a very decided tendency to abridge that freedom and independence of action so highly prized as invaluable heritages by the American people; that the relations of capital and labor are liable to become strained under such conditions; and that the interests of labor will be best served when its affairs are left wholly under the control of the employer or capitalist.

Whether this advice is prompted by disinterested motives or not, it is difficult to determine and immaterial to the purpose. It may be fair to assume that in some cases the advice is given with the best wishes for the welfare of the people in general. Be this as it may, the fact remains that where one argument can be made in justification of these frequent combinations of capital, scores of good and sufficient reasons can be advanced in proof of the wisdom of workmen combining with a view to their mutual protection and material advancement. There are a number of employers in this country whose treatment of this subject has been so fair-minded and liberal handed, that, were it possible to accept their conduct as a fair index of the guiding spirit of the great body of the representatives of capital, it would probably insure a condition of affairs where the existence or necessity of trades unions might be deemed unnecessary. But where there is one employer like Mr. G. W. Childs, of the Philadelphia *Public Ledger*, for instance, there will be found hundreds who represent the very opposite idea as to what constitutes their duty in respect to the labor question. While the gentleman named, together with a few others of like character, can readily see the wisdom and justice of sharing in some measure the advantages accruing to a successful business with the people who do the work, the latter class consider it their duty, in the interests of and in defense of the rights of capital, to oppose every contemplated movement looking to the amelioration of the condition of the working classes.

If this is a correct statement of the condition of affairs, and the experiences of many years have long since led me to the conclusion that it is, then what is the plain duty of the workmen of

America in the premises, so far as their obligations to themselves, their families and their posterity is concerned? Are they not justified, and is it not their plain duty in fact, to adopt such measures and to form such combinations as will best protect their interests against the unjust encroachments of a certain class of unscrupulous employers and greedy combinations of capital? And this protection will be found just as necessary in the ranks of the printing fraternity as in any other branch of business. Combinations of labor inimical to the proper pursuit and development of capital should not be countenanced or tolerated. It is our policy to build up rather than tear down. But I hold that a penurious compensation for labor is not in any way conducive to national prosperity. Where the purchasing power of the mechanic is unduly restricted, the opportunity of the manufacturer to sell will be correspondingly affected.

The aims and objects of typographical unions, which have been so frequently put forward, may be stated briefly as follows: (1) To elevate the position and maintain and protect the interests of the craft in general. (2) To establish and uphold a fair and equitable rate of wages, and to regulate all trade matters appertaining to the welfare of members. (3) To influence the apprenticeship system in the direction of intelligence, competency and skill, in the interests alike of employer and employes. (4) To endeavor to replace strikes and their attendant bitterness and pecuniary loss by arbitration and conciliation in the settlement of all disputes concerning wages and conditions of employment. (5) To relieve the deserving needy, and provide for the proper burial of deceased members.

It is difficult to realize how any considerable number of men, possessing the intelligence necessary to enable them to become competent printers, can find reasonable exceptions to the foregoing platform or declaration of principles. I recognize the fact that many people imagine that they will best retain their independence by holding aloof from active connection with trade organizations of any kind, and can at the same time command a satisfactory, remunerative amount of wages by strict attention to business, coupled with a fair mastery of the intricacies of the mechanical requirements of the art preservative. This is the most delusive idea that could possibly be put forward to govern the actions of any set of men. If people so inclined will but look around them in an unprejudiced spirit, they will see that their wage is governed by the union scale in nine cases out of ten. They will also find that, as a general thing, they are paid a certain percentage less than the scale adopted by the union or unions in their particular locality. Occasionally a very rare instance may be met with where a man's services will command a higher remuneration than that fixed upon by these organizations; but let it be a higher or a lower rate that he may receive, the fact remains that when a union is forced to make a reduction in its scale, a corresponding reduction will immediately take place in the ranks of non-union men. This has occurred so frequently that there can be no doubt as to the accuracy of the statement. Does it not follow then that it is the duty of every man connected with the printing business to array himself on the side of unionism as soon as he is qualified to do so?

The advantages derived from the establishment and maintenance of typographical unions are many and varied, and have been so often dwelt upon that I feel constrained to devote the remainder of this letter to a mere mention of a few of the more salient ones. For people working for daily wages, certainly no question is of more importance than the necessity of keeping the rate of compensation at such a figure as will enable the worker to maintain himself and family in decent circumstances, and at the same time endow his children with a moderate education. This is the ambition of every self-respecting man, and certainly is a laudable one. The restriction of the hours of labor to a uniform and reasonable number is probably a question of equal importance with that of the amount of wages paid. In fact, these two provisions go hand in hand, and the regulation of one will bring a settlement of the other within the range of possibility. The continued enormous immigration to this country, together with the

never-ceasing flow of labor-saving machinery that is being introduced, are circumstances that will inevitably force the problem of the shortening of the hours of labor upon the attention of the working people as one of paramount importance, and without organization this question will never be settled in a way that will accrue to the benefit of the mechanic.

The universal custom of typographical unions making provision for the relief of their sick and needy members, and the burial of their dead, is certainly a very commendable feature in these organizations; and in connection with this benevolent inclination, I wish to direct attention to the movement now about completed looking to the erection of the Printers' Home in Colorado Springs. This project is the outgrowth of a very munificent donation in money to the International Typographical Union by Messrs. G. W. Childs and A. J. Drexel, of Philadelphia, and is designed as a home for the superannuated or disabled members of the craft. Since this donation was received, the success of the project has been guaranteed by the contribution of many thousand dollars by the journeymen printers of America, supplemented by the gift of eighty acres of valuable land by the citizens of Colorado Springs, on which the Home will be erected. Surely every printer in the land should place himself in a position where he would be entitled to the benefits of this grand institution, and to a voice in its establishment and control.

But instead of reciting the benefits and advantages to be derived from an active membership in a typographical union, would it not be pertinent to ask what possible advantage is to be looked for by pursuing a course of non-affiliation with organized labor? It must occur to the most obtuse that while there is some possibility of an organization of workingmen securing some recognition in a question affecting their own interests, the man who can accomplish any reform in the present condition of affairs by his individual efforts must be endowed with such superlative talents as will speedily lift him beyond the necessity of working for daily wages. — *M. J. Carroll in Typographical Journal.*

#### AN OCCASION OF SATISFACTION.

After the completion of the Sweet Water dam, in San Diego county, California, by a Boston syndicate, the vast body of water which it caught, amounting to 6,000,000,000 gallons, covered land the title to which they had not acquired. Long and tedious litigation ensued, covering a period of two years, and pending the litigation, under an order of the court, nearly all this water had to be let out of the dam and kept off the land in controversy. Every man in the country felt a deep personal interest in the matter, and no daily paper was complete without some reference to the subject. Finally, two or three months ago, the case was compromised, the company secured a perfect title to the land, and all over San Diego county there was general rejoicing. The papers devoted whole pages to the matter, and the *National City Record*, a weekly paper, inserted a square, 4 by 6, in the center of the first page, thus:

.....  
 : THAT DAM CASE :

#### A BABEL OF TECHNICAL TERMS.

So many have contributed to the new processes of graphic reproduction that each contributor thought he had the right of an author and factor to give his production a name. And thus originated the mass of confusing terms, one process often being designated by half a dozen different high-sounding words at once. We clip the following from the *Gutenberg Journal*: Tissiérography, zincography, paniconography (or gillottage, after the name of its inventor, Gillot), photogravure, photozincography, heliogravure, heliography, heliotype, heliochromotype, heliogylypt, phototype, hélioplanography, photogylyptie, phototypography, photochrome, pantotype, woodburytype, panotype, albertype, typochrome, colotype, autotype, diaphanotype, chrysogypsy, gelatinography, téténo-type, lencography, chaotype, etc.

# The Huber Two-Color Press.

BED, 36 x 52. FORM, 32 x 48. PAPER, 33 x 50. SPEED, 900 to 1,200 per Hour.

DOUBLE ROLLING EACH FORM \* SIX TRACKS \* FRONT DELIVERY.

THE above cut represents our Two-Color Press as now built with air springs and double rolling device, thereby charging the forms with fresh ink both ways, also the double rack pinion bed-movement, and all patented improvements fully described in our Book Press Catalogue. The following is a short description of the construction and operation of the Press:

There are two impression cylinders, which engage a separate form each during the forward stroke of the bed, as in an ordinary two-revolution press. A fountain at each end of the press supplies the separate forms with ink in usual manner. Between the impression cylinders is a transfer cylinder which takes the printed sheet from the first impression cylinder and delivers it, in absolutely perfect register, to the second impression cylinder, from which it is delivered directly to the fly, clean side next the fly-sticks.

**OPERATION.**—The sheet is fed to the grippers of the first cylinder in the usual manner, and after receiving the first impression is taken by the grippers of the transfer cylinder and delivered to the grippers of the second impression cylinder. About this same time another sheet is fed to the first impression cylinder, and at each forward stroke of the bed both sheets are printed with a different color. The sheet with the two printings is then delivered to the fly, the sheet with one printing transferred to the second impression cylinder, and the first cylinder supplied with a clean sheet by the feeder.

We refer to the following firms running Two-Color Presses: The Hinds-Ketchum Co., McLaughlin Bros., American Bank Note Co., Martin B. Brown, New York; Forbes' Litho. Mfg. Co., Boston, Mass.; C. I. Hood & Co., J. C. Ayer Co., Lowell, Mass.; Frey Printing Co., Russell & Morgan Co., A. H. Pugh Printing Co., Cincinnati, O.; Rand, McNally & Co., Chicago, Ill.; Woodward & Tiernan Printing Co., Christian Pub. Co., St. Louis, Mo.; Werner Litho. Co., Akron, O.; Courier Journal Job Printing Co., Louisville, Ky.; Dickman-Jones Co., San Francisco, Cal.

Forty-three (43) presses running in the above offices.

It will be seen by the above description that we have in reality *two* presses in *one*; and, while running at a comparatively slow speed, which insures perfect register and "long life" to the press, it is actually doing about twice the work of an ordinary press of the same size. Having a separate impression surface for each form, a job is "made ready" exactly the same as for an ordinary press.

The principal advantages of this style of press over all others are: *First*—Comparatively slow speed, which lengthens the "life" of the press, and at the same time produces twice the usual amount of perfect work. *Second*—As the sheet is fed automatically from the first impression surface to the second, the risk of the feeder making a mistake is reduced fifty per cent. *Third*—As the sheet is fed but once for two colors, the handling of stock is reduced fifty per cent. *Fourth*—In illustrated bookwork, the advantage of using a better quality of ink upon the cuts than upon the type; thereby producing a finer class of work at a less expense.

This press is built on the same solid and substantial plan for which all our presses are justly noted, and has all latest improvements, including six roller bearings to support bed, noiseless and positive fly, safety gripper mechanism, ball-bearing, bed-reversing teeth, and air springs that can be regulated when press is in motion at any speed.

The

# COX • DUPLEX • PERFECTING • PRESS

## AND FOLDING MACHINE.

Delivers 3,500 to 4,500 perfect papers, folded, per hour, either four, six or eight pages, from flat beds and ordinary type forms.

MR. T. C. O'HARA, the well-known expert machinist of the *Boston Herald*, under date of September 10, 1890, writes as follows to MR. H. I. DILLENBACK, manager of the Rutland (Vt.) *Herald*, the purchaser of the first of the above machines:

BOSTON, MASS., September 10, 1890.

At your request I attended the shop test of the new COX DUPLEX WEB PERFECTING PRESS, built for the Rutland *Herald*, and carefully inspected its operation and made a thorough examination of its construction. The press stood partly over a pit and partly on the floor, upon planks, and was not fastened down in any way; and it was run by a four-inch belt. At the first trial of speed, it ran at the rate of 3,000 complete papers per hour; at the second, 3,600; at the third, 4,560. Its operation during these trials caused no perceptible jar of the machine nor of the floor of the building, nor did it give any indication of strain upon the machine, and it ran with perfect steadiness and smoothness. The principle of the machine, while novel, is entirely practical, and overcomes entirely the obstacles to speed and smooth running always heretofore encountered in the construction of flat-bed printing presses, and in my opinion the invention has solved the great problem in the construction of machines for the use of newspapers of moderate circulation, desiring to print from type at high speed, in a manner destined to revolutionize this branch of printing press manufacture.

Under date of December 9, 1890, Mr. Dillenback, Manager of the *Herald* writes:

The press is running nicely. I believe it to be the press, without a rival, for newspapers desiring to secure all the advantages of a fast perfecting press without the delays, expense and other disadvantages of stereotyping; and I do not hesitate to recommend it unqualifiedly. The press runs smoothly and economically, is handled with ease by a young man who never before saw a perfecting press, is thoroughly well built, and does better work than the vast majority of presses. I know of no "outs" about it, and feel justified in saying that no one can say aught but in praise of it.

The press is now in daily operation in the pressroom of the *Herald*, where it is fully demonstrating its capacity to do all that is claimed for it.

Full information may be obtained by addressing the manufacturers.

**THE DUPLEX PRINTING PRESS CO.,  
BATTLE CREEK, MICH.**

# THE BASCOM NEWS PAPER FOLDER.

The Best, Simplest, Most Durable and Only Practical Folder for Country Offices built anywhere.

PRICE  
\$175

**S**OLD on the most liberal terms ever offered to newspaper men, and fully warranted for five years. This machine makes either three or four folds with positive delivery. There are more Bascom Folders in use in country offices than any other folder made; requires but one-tenth horse power and no extra shaft or pulleys; easily adjusted for any size paper (4 or 8 page—with supplement when desired); folds from 1,200 to 1,800 per hour, and any boy or girl can operate it. We have testimonials from all parts of the United States where

these machines are in use. A liberal discount will be given to those who set up the machine according to our printed directions. Full information, with testimonials, furnished on application to

#### GOVERNMENT PRINTED ENVELOPES.

To the Editor: BOSTON, Mass., May 11, 1891.

It does not seem to me to be possible to stop this injustice to printers in the way suggested by J. B. P. (INLAND PRINTER, May, p. 720), but it does need the united action of all kinds of printers in all parts of the country. The injustice is so palpable that it seems possible, by united action of all — employé and employer — to exact promises from every congressman in the country in favor of the repeal of the law — if there is any law.

It is not a favor, *but justice*, that we seek. C. W. R.

#### FROM NEW ORLEANS.

To the Editor: NEW ORLEANS, La., May 12, 1891.

Business is quite brisk in this city though there is quite a number of idle printers about town. The *Times-Democrat* purposes using the Mergenthaler typesetting machine and already has six of them in position. No change has been made in the working force and none is contemplated. The Sunday issue of the *New Delta* now consists of twelve pages. W. J. Hammond and E. E. Norman, delegates from No. 17 to the International Typographical Union convention, leave shortly for Boston. A. C. Lindauer, for a long time identified with the *Evening News*, has severed his connection with that paper. D. F. Y.

#### FROM SPRINGFIELD, OHIO.

To the Editor: SPRINGFIELD, Ohio, May 19, 1891.

Typographical Union No. 117 is at present engaged in "controversy" with the Hosterman Publishing Company. The manager of this establishment has always been a source of annoyance to our union, from the inception of the double-headed *Republic-Times*, and has let no opportunity pass whereby he might override our local constitution and by-laws as well as the International laws.

Some two weeks since (May 5), four men were called out of the jobroom on account of non-compliance with our apprentice law, which stipulates that but one apprentice shall be employed to every five men, and one for every fraction of five. Job and news rooms were designated as separate and distinct departments, and there being six men in the newsroom, Mr. Hosterman was by virtue of this law entitled to two apprentices in this department; there being four men in the jobroom he was entitled to but one apprentice there. But by counting extra hands whom he had employed during last winter, he computes the number of apprentices he is entitled to on the basis of the number of men he employed during the year. At any rate, he has concluded, with his associates, to rid himself of union men, and employ men, as he says, who belong to a reputable (?) organization — the Printers' Protective Fraternity. He says he believes in "competition in labor!" Think of that, fellow-craftsmen. With the assistance of the Trades' Assembly, representing 5,000 laboring men of the city (who are with us), we hope to cope successfully with this unnatural advocate of the Cole system of labor. The entire newsroom force is soon expected to be displaced, and then the fight will be "on" in earnest.

In consequence of the foregoing we would advise all "tourists" to steer clear of this city at present. Business generally is rather

dull, the *Farm and Fireside* having let off eight men within the past two weeks. The pressmen of this city are taking an active interest in union matters lately, and will probably organize for themselves before a great while.

The scale of prices is as follows: morning newspapers (there are none at present),  $33\frac{1}{3}$  cents per 1,000 ems; evening papers and book composition, 30 cents; week work, \$15. Foremen on daily evening papers, \$17; weekly papers, \$16. J. F. F.

#### THE COPYRIGHT BILL AND THE INTERNATIONAL TYPOGRAPHICAL UNION.

To the Editor: WELLINGTON, April 23, 1891.

The New Zealand *Times*, which is the central morning newspaper of New Zealand, and is edited by one of that colony's ablest journalists, Mr. R. A. Loughman, in a leading article commenting upon a cable message which conveyed the information that the copyright bill had passed through the senate, says: "The passage of the copyright bill through the senate of the United States \* \* \* \* removes the reproach of unfairness from a great industry; a reproach which has been with it for a century and more. So sure were the Americans that the bill would pass, that in the latest newspapers to hand all kinds of people are represented as claiming the credit for its success. The authors of America made the most plausible claim, after the bill had passed through the house of representatives. But they were promptly met by Mr. Cummings, the champion of the International Typographical Union. The bill, he pointed out, passed by 139 to 95; seventy-eight of those who voted for it representing cities in which there were typographical unions, all of which had sent a special request that the bill might be passed. It is creditable to the authors of America that they should have actively bestirred themselves to get a measure passed which the piratical publishing fraternity affected to regard as prejudicial to the interest of the authors. But it is clear that without the printers of America, whose interests were conserved by the typesetting clause, under which American copyright can be only secured by foreign authors on getting their books printed by American printers, the authors would not have been strong enough. To the printers of America it can make no difference financially whether the foreign books they print are copyright or not. In either case they would have the printing. We owe it to their sense of honor that they have used their political power to get a measure of justice for foreign authors placed on the statute book of their country."

Of course all of our papers have commented upon this great event, but none of them have looked at the matter from the above point of view, and that is my excuse for sending it as copy to your journal, as it is very rarely that our foreign brethren are thus noticed in these new lands of ours in Australasia. T. L. M.

#### FROM LANSING.

To the Editor: LANSING, Mich., May 16, 1891.

Another new paper has made its appearance here, the North Lansing *Record*, edited and published by Messrs. Bailey & Callahan.

Charles K. Esler, president of No. 72, has been appointed city auditor by the common council, and has assumed the duties of his new position.

To Mr. and Mrs. George A. Menard, April 12, a seven-pound girl.

Work is not very brisk here at present, and prospects are not flattering, in consequence of which some of the boys have been laid off.

Messrs. Calkins and Lewis, employés of the state printing office, have purchased the *Saturday Call*, published by Orin Stair, and will continue business in the present quarters.

Oscar L. McKinley, for many years an employé of the *State Republican* office, and Miss Alma Porter, were married two weeks ago, at the residence of the bride's parents, near Williamston. The bride is a cultured and highly accomplished young lady, and has hosts of friends in this vicinity. Mr. McKinley is well known

here, having resided in Lansing since boyhood. After a brief visit to Chicago and other cities, the happy couple returned to Lansing, which they will make their future home.

Messrs. Reynolds & Davies, publishers of the *Michigan Statesman*, contemplated making their present weekly paper into a full-bloom morning daily, with associated press dispatches, but the scheme has been indefinitely postponed.

G. A. M.

#### FROM OMAHA.

To the Editor:

OMAHA, Neb., May 15, 1891.

May day passed by very quietly with no labor demonstrations of any sort. If there is to be any movement made it will most likely be July 1, when the new state law providing for an eight-hour working day goes into effect.

We can record at this writing that business in the line of printing has improved since our last report. The job offices all have plenty of work, and the *Bee* having made arrangements to receive the same telegraphic and market reports as is given by Chicago papers, which is much larger than heretofore given here, the printer as well as the public will be benefited.

As the result of a failure to fix a uniform price of subscription between the dailies, the *Bee* is being delivered by carriers at 5 cents a week.

The *Democrat* has made its reappearance as an evening daily, under a different management than formerly, and with the assistance of a foreman, three regulars, and a box of plates.

The office of McBride & Co. has been removed to larger and better-lighted apartments at 106 South Fourteenth street.

The Directory Printing Company has been consolidated with the English department of the *Pokrok Zapadu*, and removed to South Thirteenth street.

The state printing for the next two years has been awarded as follows: Two thousand copies each of the senate and house journals and four issues of the supreme court calendars to the Festner Printing Company, this city; the revenue blanks and session laws to the *State Journal*, Lincoln; volumes 4, 5, 6, 7 and 8 of the supreme court reports to Pace, Williams & North, Lincoln.

Heyn's album of Omaha is the finest publication yet issued in the interest of this city. It contains thirty-six pages of photo-gravures of the city, illustrating in all seventy-two different subjects. It is handsomely bound in leather and has no advertisements to mar its beauty. The Board of Trade has issued an illustrated and descriptive book, finely printed and bound by the Rees Printing Company, which will be used to advertise Omaha.

A new publication, the *American*, made its appearance last week under the management of John C. Thompson, a member of No. 190. It is a neat eight-page quarto, and will appear weekly.

Harry Meyers, for a long time employed in the office of the Rees Printing Company, died of consumption, at his home in Arlington, Nebraska, whither he had gone with the hope of benefiting his health. "Pete" Begle, an honorary member of No. 190, committed suicide by shooting, at Council Bluffs, a few days ago.

The *Illustrated West* is the name of a new publication devoted to art, music and literature.

James M. Sirpless, for the past year treasurer of No. 190, has established himself in the printing business at the corner of Thirteenth and Douglas.

The South Omaha *Drover's Journal* has been sold to Perry Selden, of Blair, Nebraska.

SLEMERSON.

#### FROM BALTIMORE.

To the Editor:

BALTIMORE, Md., May 18, 1891.

Suit has been brought against the *American* for alleged libel, with a claim for damages to the amount of \$100,000.

The *German Correspondent* celebrated its fiftieth anniversary on Wednesday last, by the issuance of a sixteen-page paper, full of interesting reading matter, and a beautifully engraved supplement illustrative of the paper's birth and progress, from the Washington hand press to the lightning Hoe cylinder, with an elegant portrait of the proprietor, Mr. Frederick Raine, who also celebrated his

seventieth birthday. On this occasion Mr. Raine received his many callers in his business office, and regaled them with the flowing bowl. The front of the building was handsomely decorated with evergreens and banners. The supplement referred to is a fine piece of lithographic work, and was executed by A. Hoen & Co., of this city.

There is a current rumor that the *Baltimore Sun* will soon put in new presses.

Mr. Purdy, managing editor of the *Evening World*, was summoned one day last week to his native city, Indianapolis, by the death of his mother, a most estimable lady, another son of whom is managing editor of the *Indianapolis Sun*.

Last week was the anniversary of the *Baltimorean*, it having entered upon its twentieth volume.

The *Every Saturday*, a weekly paper published here, was discovered a week or two ago, by Baltimore Typographical Union, to have more apprentices than the law allows—that is, union law, of course. Things were finally straightened out, and all was well in the office for a time. But last week the union foreman was discharged and a non-union printer placed in charge. Trouble then began again, but was soon allayed when the publisher informed the malcontents that the new-comer had bought an interest in the paper, and was simply an employer and not an employé. Mr. J. Fred Roxbrough is the new partner in the *Every Saturday*. A few months ago he sold his paper, the *Baltimore Free Press*, and started a job office on Baltimore street.

It looks as if the association of master printers here known as the Baltimore Typothetæ had utterly collapsed. In a conversation today with the president of the organization I was informed that he was unable to get the members together, and that no meeting had taken place for the past three months.

The *Spectator* is the name of a new weekly paper just started down at Annapolis. W. Meade Holladay is the editor and publisher.

The *Evening World* will soon leave its present quarters on Fayette street, opposite the postoffice. The new location will be on the west side of Calvert street, just north of Lexington street, where a large building is being fitted up for its reception.

There is much complaint of dullness with book and job printers. The boys on the dailies are making big strings, for business is booming with this class of publications. The scale is 45 cents per thousand.

FIDELITIES.

#### CHIPPING OF ANGLE ROLLERS.

To the Editor:

CHICAGO, April 17, 1891.

In Germany they have no trouble with chipping of angle rollers, as they build no table distribution presses. Their presses are all built on the stop-cylinder plan and have overset cylinder distribution, something similar to the Cox stop cylinder. The German presses are more simple, but still it is very inconvenient to get the rollers out and wash them.

Press builders in putting a new press on the market should see that they are more simple and have less machinery. Cylinder distribution is better than table distribution, but the cylinder must be placed in such a way that the rollers can be gotten at and taken out easily to wash. I dare say it will take fully thirty minutes to wash up a Cox press properly. The German railway bed carriage is also a very good one, and could be used to great advantage on some of the presses in this country. It is similar to that of the Campbell press, only the wheels are larger and run direct on the bed plate of the press, the bed being moved backward and forward by a crank motion. The wheels run in gearing on the bed plate as well as on the bed. The Germans using six wheels and in some cases only four wheels, this motion requires no center springs or air plungers. Another good point on the German printing machines which the American press builders ought to take notice of is the Hypocycloidal bed motion, a motion which has no dead center and could be run at an unlimited speed. It is nothing more than a gear wheel on the top of a dancer traveling in a round or circle gearing twice its diameter, the rod which draws the bed being

connected to the gear wheel which travels around in the gear circle. This motion needs no springs or air bumpers, as the motion of the stud on the gear wheel, to which the bed rod is connected, is that of a long oval, and consequently in passing over the centers the bed comes to a slowing motion. This motion could be applied to any make of press—stop, two-revolution or perfecting—and would work on one as well as another.

The form rollers on the German two-roller presses are of a large diameter and will more than cover the form with one revolution.

The above are a few of the good points on a German press. Below I mention a few of the many faults:

Grippers made of two pieces of sheet iron fastened to a square slotted bar, by a nut and screw.

No tympan clamps.

Packing or cylinder dressing is fastened on with a square strip of iron with from three to six screws through it.

Muslin is sewed to a round rod.

Tympan must be pasted on the muslin under the grippers.

Short grippers, causing sheets to be kicked back.

Double-deck feed boards; feeder must carry his sheets twice their width in order to reach the guides.

All colored work is fed to points.

Tape delivery, fly sticks and fly cams not adjustable.

Sectional ink fountain has push and pull screws. Blade not adjustable like the long blade.

On presses of most makes they have no guide rests or tongues, the guides resting directly on the tympan.

They have no cylinder bearers; the cylinder is set to type-height, then the racks on each side of the bed are set according to the cylinder by lines cut in the side of the teeth.

I write of the average machines and will admit that there are some makers who are now improving their machines, but as a general thing they still cling to their "way-back" ideas. They are not like the Americans who are continually putting practical improvements on their presses, every press leaving the factory having something new.

M. A. MILLER.

#### VERMONT PRINTERS.

To the Editor: BELLWAS FALLS, Vt., May 12, 1891.

Monday, April 25, the first number of Brattleboro's new daily, the *Evening Times*, appeared. It is a five-column folio, 17½ inches in length, and made up partially from plates. Charles P. Spencer, proprietor of a job office, is the owner, and H. R. Dawley, formerly of Greenwich, New York, is editor. The paper is independent and has evidence of considerable snap, but its field is exceedingly limited. Brattleboro has a population of 7,000. The field, too, is remarkably well covered by newspapers. The *Phoenix* (republican) has a large circulation in Brattleboro and Windham county; the *Reformer* (democratic) has a circulation which averages three out of every five families in the county and a large state edition besides. Then the weekly, Sunday and daily Springfield *Republican* have a big sale there, so that the field is well covered without a local daily.

There has been some important changes in the Burlington *Free Press* staff. E. H. Wolcott, who has been managing editor for the past few years, has resigned and goes to Natick, Massachusetts, where he has important business interests bequeathed him by an uncle who died recently. J. L. Southwick, formerly city editor, has been advanced to managing editor. Joseph Auld, formerly business manager, has gone to New York as manager of the Rapid Printing Company, and his place is filled by Willard Howe, formerly of Boston, a brother-in-law of Mr. Auld's. The change in the paper is noticeable, more especially in the make-up of the Saturday issue, which is very much better. The ability displayed in the editorials is much more marked, also.

The Rutland *Herald* has been changing its staff and make-up somewhat lately. H. I. Dillenback, formerly managing editor, has gone to Providence, Rhode Island, as manager of the *Telegram*. Robert A. Perkins, some years ago editor, and more recently editorial writer, is now managing editor. The night editor has also been changed and one Fletcher, formerly of St. Johnsbury,

is temporarily filling the vacancy. The course of the *Herald* on the liquor question last fall unquestionably injured it in the minds of a majority of the people, though why outspoken honesty should injure any paper is not clear.

The Montpelier *Argus and Patriot* is publishing occasional illustrated articles on Vermont which are excellent. The *Argus* is a great newspaper and is doing much for the state in pictorially advertising its beauties.

Governor Carroll S. Page has endeared himself to the editor's hearts by his fair distribution of important new items. He does not do as former governors have done, telegraph the matter to the two dailies and let the weeklies depend upon them for the news, but he telegraphs to every paper, great or small.

The prosperity of the printers and publishers throughout Vermont is evidenced by the fact that improvements and additions to plants are going on or contemplated. The Brattleboro *Phoenix* is putting in a new Cottrell press and changing their paper from a nine-column folio to a seven-column quarto. The Londonderry *Sifter* changed not long ago to all home print; some sort of a change is rumored for the Bellows Falls *Times*, and changes are advertised for the Springfield *Reporter*. New job offices are springing into existence and present offices are being enlarged both in size and apparatus. The outlook is certainly encouraging and it would seem that better and better work should be done by the printers. A public educated in good printing will not tolerate second-class work.

B. H. A.

#### FROM AUSTRALIA.

To the Editor: SYDNEY, N. S. W., April 20, 1891.

Trade, at the time of writing, is becoming somewhat brisk in different parts of the continent. The great federal convention has closed its sittings, and I think it has been a general surprise that our politicians entertained federation so seriously. The convention drafted a constitution bill for the Commonwealth of Australia and adopted it before dissolving, and now the matter is to be brought before the different parliaments for its adoption or rejection. There are a lot of difficulties in the way before the "Commonwealth of Australia" will send a representative to your "court" at Washington; and as to its being represented at your World's Fair, well—at any rate from what I hear a good many of its subjects that "are to be" have already begun putting a little in the bank, so as to be able to visit Chicago in 1893.

The shearers, of Queensland, are bringing disgrace on the name of unionism by their mode of carrying on the warfare against the pastoralists. They have been trailing "firesticks" through the country, which at this time of the year is as dry as the proverbial bone, and the consequence is that there has been a great loss of haystacks, fodder, houses and fencing. The mobs of unionists have been charged repeatedly by the soldiery at the point of the bayonet, and the strike leaders have been imprisoned for inciting to riot and treason. The latest outrage was the firing of a court house. The Melbourne Trades Hall has publicly denounced these actions as unworthy of unionists.

In the midst of the turmoil in the labor world which is going on upon this continent, especially among the shearers in Queensland, it is pleasant to read the speech uttered by Chief Justice Lilley in laying the foundation stone of the Trades Hall in Brisbane on the 7th inst. During the course of his speech he said the labor movement was now confronted by the power of organized wealth, backed up by the power of intellectual education and of organized intelligence, and therefore, it behooved workingmen to meet these forces by educated intelligence of their own. They were a power, said the judge, and he wished them to be an educated power. He went on to say that he had every belief in educated democracy, but would rather see uneducated democracy than see the country ruled by tyrants. The means by which workers would attain their ends would be by education, and the wealth which they would draw from their own temperance, prudence and thrift. He referred them to the precept upon which all social systems must be built, namely, they must not work merely for themselves, but for each other; and they were

getting near the day when the man who did not work neither should he eat. The chief justice's speech was frequently cheered, and he was presented with a silver trowel by the trades unions. The friendship and counsel of Judge Lilley and Chief Justice Higginbotham, of Victoria, are doing an immense amount of good to the workers of Australia — not excepting printers.

Good tidings of great joy among the printers comes to hand just before the departure of the mail. The news is from Melbourne, and reads to the effect that Mr. John Hancock, the popular secretary of the Melbourne Typographical Association, has been elected to represent the Collingwood seat in the Victorian Parliament, rendered vacant through the death of the chief secretary for the colony, Mr. Langridge. Mr. Hancock has been a prominent unionist for many years, although a youngish man, having held such offices as president of the Trades Hall Council and president of the Melbourne Typographical Association. He took a very prominent part in the late strike, being a member of the finance and control committee. His election is a grand event for the workers, who just now need such white men as Mr. Hancock in our halls of legislature. I rejoice with those that do rejoice on this event, having had the opportunity of knowing what manner of man he is who has been thus elevated to a great responsibility.

ASMODEUS.

#### FROM PHILADELPHIA.

To the Editor: PHILADELPHIA, Pa., May 20, 1891.

The typographical and kindred interests have experienced a season of prosperity since the advent of spring.

All lines of trade connected with paper making and marketing are holding their own, although prices are low. The machinery, type and supply people are busy, as are also the manufacturing stationers. The newspapers are all doing well, their advertising patronage being enormous and profitable.

The ex-delegates to the International Typographical Union celebrated the birthday of George W. Childs, publisher of the *Ledger*, on Tuesday, May 12, in a magnificent manner. The assemblage was a large one, many of the printers being accompanied by their wives, daughters and sweethearts. The banquet hall was beautifully decorated with flowers and other appropriate emblems. John A. Dardis, president of the Philadelphia ex-Delegates' Association, after the edibles were served, rapped for attention, and said: "We are assembled here tonight to celebrate the birthday of a man who, by his whole-heartedness and his kindness to the printing fraternity, has endeared himself not only to the ex-delegates, but to their families. We will drink to the health of Mr. Childs." George Chance, of the *Record*, was the toastmaster, and assumed the position with a humorous story. The opening toast was the "International Union of North America," responded to by the late secretary-treasurer, E. S. McIntosh, of the *Evening Telegraph*, who sketched the career of the union, and in concluding expressed the sentiment that it would long live to drink the health of George W. Childs and A. J. Drexel. J. B. Roberts recited "How the French Took Saragossa." James J. Daily, the foreman of the *Ledger* composing room, and who is also a trustee of the Childs-Drexel Fund, then read a letter from Mr. Childs, who regretted his inability to be present, and thanked the association for the honor done him by celebrating his birthday. Mr. Daily also read a pleasant and congratulatory letter from Hon. James G. Blaine to Mr. Childs. "The Day We Celebrate" was replied to by James Welsh, who paid a splendid and enthusiastic tribute to Mr. Childs' kindness and generosity. He closed by saying: "The name of George W. Childs will live forever, borne on by that title which we all honor. 'A Union home for Union printers' is indissolubly connected with him." The other toasts were "The Philadelphia Typographical Union," responded to by Ira Somers, of the *Evening Telegraph*, and "The ex-Delegates' Association," by Jacob Glaser, of the *Railway World*, a former president of No. 2. A number of invited guests were present. A dispatch was received from W. W. Maloney, president of the George W. Childs' Club, of Washington, D. C., stating that the members were

honoring Mr. Childs' birthday with great enthusiasm, and proffering their congratulations.

Seven union compositors, employed upon the *Daily Republican*, Wilmington, Delaware, recently went on a strike, because the proprietors of the paper had introduced stereotype plate matter. Six columns of this matter is used daily, and the printers claimed they were unable to make more than \$10 a week. Other compositors were engaged and the paper has appeared as usual. The strikers have procured work elsewhere.

This year is the zooth anniversary of the birth of Wilhelm W. Rittenhouse, and of the first paper made in America by Wilhelm, the original member of the family, who also adopted the cloverleaf as his paper mark. The Rittenhouse Memorial Association will celebrate the event at Germantown, Pennsylvania, in September.

Since the *Item* opened its annex on Taylor street, and erected there another Hoe quadruple press, it is perhaps the best equipped printing office in Philadelphia, as far as press facilities go, being now provided with three quadruple presses. Hoe & Co. are building another monster quadruple for it, which will be delivered some time during June.

The *Press* has also ordered from Hoe & Co. three quadruple stereotype perfecting presses, and they will be completed some time during the summer. They will cost \$137,500. The machines will have an aggregate running capacity each hour of 144,000 four-page papers, 144,000 six-page, 144,000 eight-page, 72,000 ten-page, 72,000 twelve-page, 72,000 fourteen-page, 72,000 sixteen-page, 36,000 twenty-page, 36,000 twenty-four page, cut at the top, counted and the supplements inset and pasted, if desired. The Hoe Company are pushing the work upon these machines as rapidly as possible.

ARGUS.

#### FROM NEW ZEALAND.

To the Editor: WELLINGTON, April 22, 1891.

The executive council of the New Zealand Typographical Association sent a deputation down to Dunedin to meet the Federated Master Printers in conference. Our delegates assembled in Dunedin on April 1, when there were present Mr. J. McIndoe, president of the Otago branch (in the chair), representing Otago; Mr. A. T. W. Bradwell, representing Canterbury; Mr. John Rigg, representing Wellington; Mr. George Long, representing Hawkes Bay; and Mr. A. Walker, representing the executive council. The delegates have just sent in their reports to the bodies they represent, and they will not be made public until after the boards have examined them, but I understand that nothing practical resulted.

Trade has been jogging along in a steady way, and the government postoffice is just increasing its staff.

As will be seen in the different paragraphs of this letter, death has been busy in the newspaper ranks during the past month. The most prominent victim of his sickle was the Hon. W. Reeves, M.L.C., and proprietor of the *Lyttelton Times* (Christchurch), one of the leading papers in our colony. Mr. Reeves was one of the earliest of the *Little Tin Times*, as its opponents used to dub it, and unionist printers can recall many a fight with the owner. But of recent years Mr. Reeves had changed his tactics toward workers, and at this present time the latter had not a stouter advocate, and is not the Hon. W. P. Reeves (eldest son of the deceased) the idol of the people and minister of education and of justice? and it is worthy of remark that the man who had sworn he would never have a union compositor in his office, changed his nature and became a leader in assisting to form the Canterbury Typographical Association — and now he is dead. The past is buried with his bones, and we all rejoice that he gave us much help and assistance before he passed away; and more than all, that he leaves a son, to whom I believe all credit is due for the change, and whose future beams with promise.

On Friday, April 17, instant, Mr. Philip Corliss, chief accountant in the Wellington *Evening Post* office, died of typhoid fever, at the age of thirty-two years. He was a most genial fellow, and his funeral, on Sunday, was one of the largest seen in this city,

attended by all classes, printers predominating. Many wreaths were sent. Each department of the *Post*, in which place he had served from errand boy upward, for seventeen years, sent a floral wreath with an appropriate printed inscription.

At 6:30 A.M., on April 16, a fire broke out behind the editor's room of the *Marlborough Times* (Blenheim) office, and in a very short time the place was in ashes. The loss to the proprietor, Mr. G. C. Beckett, is \$7,000, with an insurance of \$2,000. Nothing is known of the origin of the fire, and the editor was out of town. Mr. Beckett, who has lost everything, having received spontaneous offers of support and sympathy from all parts of the district, including money promises and every form of assistance, has decided to start the *Times* again, which he notifies to do shortly.

Mr. W. Munro, for many years the chief engraver on the staff of the *New Zealand Herald* (Auckland), died early in the present month. He was one of New Zealand's best chess players, editing for years that department of the journal to which he was attached.

A return which has just been issued by the Postoffice Savings Bank, which is under the management of the government of the colony, shows the thriftiness of our population. The return states that there are 100,000 depositors in the above bank, with an aggregate deposit of nearly \$12,500,000. Considering that New Zealand's population is just about 600,000, this speaks well.

The *Evening Press*, of Wellington, has again changed hands, this time coming into the possession of Mr. Kirkbridge, who for many years owned the best-looking of colonial country journals up the Wairarapa. Now, it was his custom, when running the country paper, to train smart boys to do his picking up, but when they had served such a term that they thought it was time to get a "rise," and made such a demand, then he would make them a present of a Waterbury watch, tell them to regulate their life by it (who does not know its merits?) and give them as a parting gift a "note" to the government printer, with whom he was on the best of terms. The government printer has never been known to dishonor a note from Kirkbridge, and the country apprentice has graduated as a first-class compositor from the government printing office, and there are now scattered over the colonies many young men who are thankful to both gentlemen. When Mr. Kirkbridge came down from the country and assumed control of the *Press*, the board of management of our society, well knowing his love for boy-labor, waited upon him to know whether his intentions were honorable, reminding him of an agreement recently entered into with the late proprietary. Their relief was great when he informed the deputation that it was his intention to observe the agreement referred to.

TOM L. MILLS.

#### FROM SPAIN.

To the Editor :

BARCELONA, April 30, 1891.

Revisiting Spain after a long absence, its chief commercial city was fixed upon for a short stay. My first visit was to the journeymen printers' association of Barcelona, *Sociedad de Impresores*, at calle Ferlandina 20, where it was learned that a fusion had been arrived at between the two typographical unions of less than three years ago, and now they are united, and firmer than before the division. The secession had been caused by various reasons, the principal of which was that the more advanced members objected to the expense of maintaining a president—considering the post unnecessary—and it is this section that has triumphed. Now when meetings are called they select a chairman for the occasion, his duties ceasing at the end of the meeting, and the affairs of the society are managed by a duly appointed junta.

It is pleasing to note in the new regulations (issued August last) of this society that provision has been made for the foundation of a library, which is already under way. Donations of printing-trade journals are acceptable from all parts of the world, for some of the members are polyglots, and understand the Latin languages as well as Anglo-teutonic.

The Society has a monthly bulletin of eight well-printed pages, printed at the office of B. Baseda, calle Villarreal 17, priced at 25 centimos per copy, which forms a useful exchange for those

journals desiring to be posted on typographic matters in Spain. Members of the society also belong to the *Federacion Tipografica Espanola*, of Madrid (which is to the various printers' societies of the peninsula what the International Typographical Union is to the subordinate unions in the United States).

Visiting the new premises of the well-known typefounder, C. Gorchs, on the calle Cortes, he stated that, what with losses and disappointments, he had been having a hard time of it, which had in measure accounted for the irregular appearance of the illustrated periodical of his concern, *el Correo Tipografico*. Formerly this was a promising fortnightly, and the proprietor speaks of raising it to its former standard position. Gorchs is believed to be a hard worker, yet has realized that "all that glitters," etc. The city bureau of the Ramirer combination was also called upon, where one of the chiefs reported business slack. (In somnolent Spain, can they expect ever to be much otherwise?) This company, it is said, owns the largest printery in Spain.

Barcelona (about twenty-eight hours from Paris by express) has some 300,000 inhabitants, for whom a total number of periodicals approaching 150 are provided (including several in the Catalan dialect.) The two chief dailies, *el Diario de Barcelona* and *el Diluvio*, take the form of brochures, consisting of from 16 to 32 pages, measuring 8 by 6 inches. The latter (*Deluge*) is an uncompromising democratic issue, and, appropriate to its unique title, it has a circulation larger than any daily published in the town. *La Publicidad* and *el Noticiero Universal* are the next two important diurnals of radical opinions. *La Anarquia*, the new socialist daily, appears to promise well, although its implacable tenets do not please everybody. The capital of Catalonia is to Spain what Marseilles is to Gaul—a nucleus of republicanism and communalistic opinions of the non-compromising, archarnée sort.

Of all central European countries, Spain is least frequented by American and English tourists, yet it is a most historic country. No United States rambler who made a journey through the land of the Cid would regret it. But so few have been its English speaking residents, that it has never been known to have printed within its boundaries a journal or periodical in English.

Spain has an effective periodical press of about 2,000 regularly appearing issues. No good directory of Spanish journalism is known to exist, though it is likely that the postoffice administration possesses one, for, as in other continental countries, all the bureaux-de-poste receive subscriptions for newspapers, magazines, etc.

Barcelona may generally be considered a city of beauty. Such lengthy, umbrageous and wide public walks the writer has never seen eclipsed anywhere. And it has many diversions to offer to visitors—from the great theatre Liceo to the minor and gay *Novedades*. It is believed to possess the finest monument ever erected in Spain to a man—the noble Columbus pedestal and statue, made of iron and bronze, the top of which is reached by elevator, where a grand panoramic view is obtained.

Of Spanish daily newspapers, the chief in almost all respects is *el Imparcial*, of Madrid, with a circulation of from 75,000 to 80,000; and after it, a good second, comes *la Correspondencia de Espana*, with a circulation of 60,000. Both are printed on Marinoni presses. *El Dia*, *el Liberal*, *la Epoca*, *el Globo*, *el Pats*: these are all prominent dailies of diverse politics.

In Madrid, color-printing is at a fair standard, the exigencies of the Spanish taste for fancy shades bringing this about. For their pictures of bullfighting scenes they have not yet so far been eclipsed by any nation. Their periodicals devoted to the national sport bear proof of this. In Zaragoza, Cadiz, Santander, Malaga, Seville, Valencia, etc., exist facilities for good color-printing, if not for first-class letterpress work; but, unfortunately, the labor is not put to a good use—being used only to satisfy the morbid and Spanish curiosity for illustrations of bullfight sport.

Illustrated journalism on the peninsula finds its apex in the weekly *Ilustracion Espanola y Americana*, Madrid, which is quite up to any of the high class pictorial journals of America or Europe.

WORLD TRAMP.

ROSALIND.

Specimen of half-tone engraving, direct from photograph, by the **BLOMGREN & LINDHOLM COMPANY**,  
corner Dearborn and Harrison streets, Chicago.

## FROM SAN FRANCISCO.

To the Editor: SAN FRANCISCO, Cal., May 12, 1891.

This city is crowded with visitors from the country and coast cities and towns, all of whom are anxious to be present at the various entertainments being given in honor of President Harrison and his party. The launching of the new coast defense war vessel, the Monterey, was timed so as to occur during the president's visit, and it is questionable if such a like event in reference to the other new war vessels and cruisers recently floated has been attended by such a large assemblage of people.

Business in printing circles has been quite dull during the past month, but an increase is now perceptible. This is no doubt due, to a large extent, to the usual demand at this season of the year from the schools, colleges and academies for the necessary printing for their closing exercises.

The trouble between the Typographical Union of San Francisco and the H. S. Crocker Company has now reached a stage at which a satisfactory settlement is insured. Two of the three men who applied for admission to the union upon the return of the employés of this company to work, were reinstated upon the recommendation of the executive committee. A fine of \$50 was exacted from one of these employés and a fine of \$25 from the other. To the third man, the union positively refused admission, although three votes were taken on his name. Alfred Pennington, the chairman of the executive committee, states that the members were all well acquainted with this rejected man's unsavory record, and were determined not to have him in their fraternity. Charles H. Crocker, the treasurer of the H. S. Crocker Company, states that the matter has been entirely turned over to the Typothetæ of San Francisco, with full power to act and do what in its judgment is best to secure an amicable settlement.

The next meeting of the Typothetæ of San Francisco will be held on Wednesday, May 6, when the report of the typographical union in reference to the non-admission of one of the Crocker employés will be acted upon by this body. Charles A. Murdock, the president, states that the Typothetæ will undoubtedly advise the H. S. Crocker Company to discharge this man and thus end the difficulty. He adds that the more he thinks over the matter, the more convinced is he that the typographical union's action is fair and entirely justifiable in the premises, for not only has the man in dispute a bad record, but when he was first asked to join the union during the strike and was presented an application for admission into that organization by the executive committee, he tore it up and threw it into the faces of those gentlemen.

The Filmer-Rollins Electrotpe Company is rapidly becoming the foremost house of its kind in San Francisco, and gathering to itself by far the largest part of the electrotyping and stereotyping work here. William P. Filmer, the president of the company, may be justly termed "the father of electro and stereotyping of the Pacific coast." For many years he managed that department of Painter & Co's typefoundry when that concern was the only electrotyping establishment in San Francisco or on the coast. However, he started in business for himself some six or seven years ago, and his successful efforts in this direction have resulted in the formation of the present company and the large additions to the plant which make it in a large degree the most extensive of its kind on the coast.

A. Carlisle & Co. are branching out extensively in the printing line. The chief attention of this firm is given to new forms of printing whereby large expense is saved to the purchasers.

S. W. Raveley's large printing establishment has recently received an addition in the shape of a new 32 by 46 Hoe press, making a total of four presses of this size in the office. Mr. Raveley has the reputation of being at the very head of the printing trade for fine presswork. Among the regular work turned out by this office may be mentioned the weekly edition of the official organ of the Salvation Army, amounting to 10,000 copies. The San Francisco directory is also printed at this establishment. Mr. Raveley has an invention of his own for placing rollers to keep off the dust, which is quite ingenious. It consists of cabinets

set close to and arranged along the walls, in which the rollers are placed one above the other, with a door sliding up and down, which, when pushed in its place, makes almost an air-tight compartment. The rollers are thus always kept clean, but little space being taken up by the cabinets. E. P.

## FROM NEW YORK.

To the Editor: NEW YORK, May 2, 1891.

The printing today in this city remains active, and trade is gratifyingly brisk for this time of the year. In another six or eight weeks business will become quieter; but, meantime, the wheels of trade whirl rapidly in all trade quarters. There are several publications issued in this city of which thousands of persons in it know nothing, from the *Philatelic World* to the *United States Mail*, or again, to the new organ for children, the *Doll's Dressmaker*—a sparkling little serial of a practical and imaginative turn, conducted by, of course, a lady, "Jenny Wren." Jobbing work is unusually brisk. Very few "long-headed" compositors are in want of work—those who care to work. At the same time, looking at the dirty proofs that most offices put up with, it is not clear that the average compositor has yet become a fond disciple of either Noah Webster or Lindley Murray.

I am told that on the advent of the new copyright act in July next, the effect of the same will at once be seen in the multiplication of native authors, that the existing itch for writing will be intensified when the foreign glut is shut down, and that the prices charged by the publishing houses will probably be reasonable at the outset, until a rush of work ensues, when they will "put on the screws." There is much undiscovered literary talent on this continent which looks for its innings, a good deal of it in the comic department. "Nyeisms" are the cause of much complaint from the intelligent readers of the Sunday papers in this city, who enjoy genuine fun, but have no taste for the forced, paid-by-the-line article by so-called humorists who consider gross exaggeration and burlesque the essence of merriment.

I am told that the old well-known printing house of John Polhemus has lately become incorporated through the addition, among others, of the son, Charles Polhemus, and the manager and the sub-manager of the business. Mr. Polhemus is considered a high authority in trade matters, and is treasurer of the Typothetæ association. A few days ago, at the burial of his wife, the ceremonies were attended by a large number of friends and employés.

The New York *Sun* should be taking steps to stay the progress of its contemporary, the *World*, into whose maw a large portion of the *Sun's* interests and income have disappeared in the past three years. It is reported that the salary of its chief editor, and that of his son, have been doubled of late. They are stated to be in receipt of about \$40,000 a year between them. Observe, I said *stated*, as I would not in any sense commit myself to this as verified. There have been few firm changes since my previous letter. The *Catholic World's* new premises on Sixtieth street is nearly finished. It is to be a well-stocked emporium of the printer's art, having the most complete and modern arrangements. It is owned by the Paulist Fathers.

A section of the daily press is saying that ninety per cent of the Knights of Labor "favor a third party indorsement." Is that so with the typesetters? If so, *what* third party, and will this proposed third party forward the interests of the printing trade generally? If so, by all means "Up, Guards, and at 'em!" But past experience does not show that *any* political party is likely to take the place of individual and combined self-help in industrial affairs.

The intention to erect a palatial set of buildings between Broadway and Sixth avenue, Thirty-fifth and Thirty-sixth streets, this city, for the New York *Herald*, has apparently been postponed by order of Mr. J. G. Bennett, who, it is stated, is not prepared yet to commit himself to some of the projected details, before further consultation. Mr. Bennett is said to be consulting every imaginable authority of importance in the two hemispheres for what he intends to be a remarkable structure in design and cost,

likely to cast into the shade the *World* building, whose most conspicuous features externally are height and color, which appeal less to artistic taste than to loudness of expression. The land is said to have been leased for thirty years, at \$50,000, \$60,000 and \$70,000 respectively for each third of the period named, and the American News Company is said to intend leasing half of the first floor and basement.

The *Daily News* has moved into the *World's* former habitat in Park row, and, with its usual un-American flatness, has made nothing of the occasion by way of self advertising in any way. This would be commendable if it were modesty and reserve; but it isn't; it is incapacity to see a good chance.

The *Commercial Advertiser*, late of Fulton street, has moved into Park row, which ought to prove a wise step. E. P. Dutton & Co., publishers, of this city, are said to have made a departure, which may prove a wise one, as circumstances occur—in recently distributing among their employes a portion of their business profits, earned in the past year. Publishers do make money evidently; and in this way one firm is trying to enlist the personal interest of its hands. Very good, while the sun shines; but if their ordinary wages partly depend on these divided profits and a losing year ensues at any time—well, coöperative experience elsewhere shows plainly that work-people then "kick," though it may not be so here, and I hope not. Speaking of printers' or publishers' dividends, I see it stated that the well-known English firm, Cassell & Co., lately declared a dividend of ten per cent for 1890, besides adding \$10,000 to their surplus fund. Evidently there is money in the business.

LEONIDAS.

## FROM WASHINGTON.

To the Editor: WASHINGTON, D. C., May 20, 1891.

At the government printing office there is a good deal of work to do, but as there is a scarcity of money to pay the hands, Public Printer Palmer cannot push it. There have been but very few reinstatements since the "big discharge," and it is understood that there would not be any employes taken back until about July 1, the beginning of the fiscal year. On that date, it is rumored, there will be a large number of the old hands called back. The force in every department has been largely reduced; the third division, *Record* room and specification room, have scarcely half the number of men that they had the beginning of March. We also learned that there would be few or no leaves of absence granted to any of the employes until the arrival of the fiscal year, which fact we deem a rather discouraging one to the public printer. All of these inconveniences are due, of course, to the negligence of congress to donate a sufficient amount of money to properly run the government printing office, where, we venture to state, there are engaged the hardest worked government employes in the city.

The recent strike here in the book and job printing offices, referred to in our last letter, does not seem to have changed a great deal, and there are still a number of printers receiving compensation from the "strike fund" of the International Union. Rufus Darby and Mr. McQueen are still rated as proprietors of "unfair" offices, and positively refuse to accept the terms of No. 101. The fact that these two offices did not employ a very large force of men, does not make a great deal of difference in affairs.

About the most deplorable condition of affairs here now in the line of newspaperdom, is the recent suspension of the *Washington Critic*, an evening issue printed here. By its suspension about forty compositors have lost situations. At present, it is not positively known what will be the result, but it is thought that the property will be purchased by a syndicate of newspaper men, and at an early day resume publication.

Since the new management has taken hold of the *Herald*, it seems to have improved in every particular. The Messrs. Henessy & Soulé know how to appreciate a good thing when they once get hold of it.

We very cordially accept the correction made by "Elio" in the last number of THE INLAND PRINTER. We by no means

"designedly" omitted the printing-house of George R. Gray in our list of "fair" offices here, but on the other hand, accept as positive facts all the good things "Elio" has said in praise of Mr. Gray's establishment. This blunder was undoubtedly "inadvertently" made.

Work in the book and job offices is pretty slow right now, and we venture that there are more idle printers here than has been known in a long time. This condition of affairs is partially owing to the recent strike, and also the suspension of the *Critic*.

Subbing on the *Post* and *Star* is said to be pretty fair, but considering the number of "subs" on hand, there is scarcely a "living for all."

Ed. H. Burch, an employe of the government printing office, has resigned, and expects to leave the city soon for his home in New Jersey.

R. P. Fithian, of the specification room, and L. Hearn Patterson, of the *Record* room, recently discharged from the government printing office, are among the late reinstatements.

Copyholder Helms, of the *Record* room, government printing office, has been recently transferred to the "case," and the manner in which "Bunny" manipulates the metal would startle a New York or Chicago "swift."

EM DASH.

## FROM KANSAS CITY.

To the Editor: KANSAS CITY, Mo., May 4, 1891.

Since my last quarterly communication to THE INLAND PRINTER, the typographical kaleidoscope in this city has been given another turn, and the effect produced is anything but pleasing or satisfactory. The first of the year opened with business in the printing line at an unusually low ebb, and the hopes then entertained that the coming of spring would witness a gratifying revival of trade have not been realized. Numerous failures in business other than ours have caused the mercantile class to curtail expenses in every possible manner and as a natural consequence many contracts for printing and kindred work which are usually placed at this season have been indefinitely postponed or given up entirely. Job offices which depend chiefly or altogether upon commercial work are experiencing hard lines, and only those which enjoy the patronage of the larger manufacturing concerns and the railway companies can be quoted as prosperous at the present time. The Inter-State Publishing Company found its business making a showing on the wrong side of the ledger, and closed out its extensive plant at a sacrifice and thereby no doubt avoided more serious future results. Then, but a few days ago, the printing establishment of S. G. Spencer was taken in charge by the Graham Paper Company under a writ of assignment. The newspaper circle, too, has been broken into by financial embarrassments, and last week the *Daily Globe*, which had had an existence of less than three years, succumbed to the inevitable, suspended publication and closed down its plant, which is now for sale at a sacrifice. These misfortunes coming upon the employers naturally bring no gladness to the hearts of those who perform the mechanical part of the business, and as a result here in Kansas City a great many members of the craft have been thrown out of employment. Quite naturally considerable of an exodus has taken place lately among the "prints," some going one direction and some another in search of newer pastures. There is, however, still remaining an overplus of subs on the newspapers, and the job offices have all the men they need, with numerous applications "on the hook." The Gate City just now presents an uninviting field for incoming printers.

The Rowan-Taber Company is the name of a new firm recently established here in the printing commission business. They are taking contracts for considerable work, and are giving out the greater part of it to home establishments.

The death of William M. Connolly, a member of Typographical Union No. 80, occurred on April 19, from consumption. Mr. Connolly was foreman at the Bradner-Andrews printing establishment, and a member of the executive board of the local union. He was formerly from Saratoga Springs, New York, where his

relatives now reside. The interment took place here under the auspices of No. 80, and was largely attended by the deceased's many friends. L. E. Hoffman, formerly proofreader with the Inter-State, is now foreman in the Bradner-Andrews composing room.

The George W. Crane Company, of Topeka, has the contract for a 1,000-page catalogue for the A. Baldwin Hardware Company, limited, of New Orleans, and is now engaged upon the work. The contract was originally secured by the Inter-State Publishing Company, of this city.

The very enterprising and successful firm of Teachenor & Bartberger, art engravers, has been established since my last. Both gentlemen were formerly in the employ of the Inter-State Publishing Company, Mr. Teachenor as artist and Mr. Bartberger as wood engraver. Their reputation for occupying the top notch in their profession was made in the West long ago, and the late productions of the firm only add to the laurels already achieved. The new firm are running a full force of hands upon a good paying class of work.

Messrs. S. S. Harrison, Billy Cline and Mont. Knapp, of the *Times*, threw up cases recently and went to St. Louis to join the Kansas City colony already flourishing there.

Mr. W. P. Dougherty, formerly foreman of the Inter State Publishing Company's establishment, is now in Galveston, Texas, where he has charge of the extensive house of Clarke & Courts. While in this city Mr. Dougherty enjoyed the reputation of being thoroughly conversant with all branches of the printing business, as is evinced by the many splendidly executed contracts he left behind; a thorough gentleman, as is testified to by his many friends and business associates here. The best wishes follow him to his new field of labor, where the very responsible position he has accepted is certain to be filled with credit to himself as well as satisfaction to his employers.

The morning *Times*, the evening *Times* and the evening *Star* have again been cutting down expenses by laying off cases.

The *Midland Mechanic* has passed into the control of the Industrial Council, and Mr. Frank Hall now occupies the editorial chair. This change was predicted in my last letter, and the move is certainly a wise one in the interests of labor in Kansas City. Mr. Hall is a man of ability in the sanctum, and being fully conversant with the labor question cannot fail to prove a success in his new capacity. Mr. F. A. Rathiel, one of the most enthusiastic members of No. 80, has charge of the mechanical department of the paper, and the two departments being thus ably headed, the *Mechanic* is a sure winner.

Two of the *Times* stereotypers were unfortunate enough, the middle of last month, to be stricken down with smallpox. Quite a panic was created around the "junction" by the occurrence, but things quieted down after something like a hundred printers and others had been vaccinated.

Messrs. Frank Foos, of the *Times*, and J. Frank Klunk, of the *Star*, will represent No. 80 at Boston in June.

Among the Kansas City printers who have recently gone to Chicago, are Messrs. Frank Klink, Henry Reichert and Albert Olson.

Messrs. T. G. Croft and Mort Bookwalter have gone to Galveston, Texas, and are employed at Clarke & Courts', in which house Mr. D. B. Skinner, formerly of this city, holds the assistant foremanship.

The city directory for this year is being printed by Hudson & Kimberly. As that office is sailing in the wrong boat, the union printers, together with the members of other union organizations, are refusing to give their names and addresses to the directory canvassers.

The Tiernan-Havens Printing Company have lately purchased a large amount of the material of the late Inter-State Company, together with the entire stereotype and electrotype outfit. In consequence of these additions to their already extensive equipment, the firm will shortly enlarge their business by occupying a new composing room with all modern improvements. The Tiernan-Havens Company is one of the oldest printing houses in the

West and well deserves the extended patronage it receives. Under the able management of Mr. Charles Parsons the house employs more printers and turns out more work than any other job office in the city.

Captain J. A. Chapman, well-known in the West as an expert newspaper pressman, has for some time past had charge of the *Globe* pressroom until the recent collapse of that journal. Together with others the captain has been endeavoring to form a coöperative company to put the *Globe* on its feet again. BEN.

#### BAD FOR THE PROOFREADER.

The miseries of the proofreader have been held up time and again as a warning to all complaining mortals — though the accumulation of misfortunes that come upon him sometimes, even when seriously told, seem like a Bill Nye yarn for exaggeration, and only excite the hearer to laughter. It has remained for a German institution, having a name with enough consonants in it to shake out any loose teeth the unwary one who would seek to pronounce it might have, to fill the cup of the unfortunate proofreader to the brim — though the German reader has an advantage over his English prototype inasmuch as he can "cuss" deeper down in his throat. We clip the following from the Chicago *Herald's* special from Berlin:

It has been left for the ritschgericht to place the most odious, unjust and absurd construction on the law of journalistic responsibility. Henceforward the proofreaders of a daily paper will be liable to imprisonment for obnoxious or libelous articles appearing in the paper with which they are connected. The industrious state's attorney and the newspaper-hating officials will no doubt see that the law, as interpreted by the highest court of the realm, is properly carried out. In the case which gave birth to this iniquitous ruling, the editor of the paper which published the libel has been sentenced months ago, so that the offense, if it existed, has been fully atoned for. But outraged justice was apparently not satisfied with a single victim. The typesetter was not to be found, and the foreman who placed the article between the column rules was dead, so the legal lightnings fell upon the proofreader. He at the trial had admitted having read the article and to having made in it slight alterations to the extent of turning three Ms right side uppermost and putting in a couple of spaces. For these heinous offenses he is now undergoing four months' imprisonment in a striped uniform while making matches.

#### PAPER MADE FROM LOGS.

Chauncey M. Depew is such a keen observer and accurate and able reporter, says the *New York Tribune*, that, if he were old enough, he might be suspected of being the bright boy in the children's story of "Eyes and no Eyes," "grewed up." He always brings back lots to talk about from his travels and voyages, even his little ones. Speaking the other day about his recent trip over the Rome and Watertown road, he said:

"Let me tell you about the most interesting thing which I saw in my trip. It illustrates the beneficent power of invention. It was the manufacture of wood pulp in the mills at Watertown, and of wood pulp into paper. I was familiar with the old paper mill, and its consumption of rags. Those rags were gathered from all the hospitals and pest houses, slums and reservoirs of misery in the world. They frequently carried with them serious epidemics and fatal plagues, and the paper mill was the last place that any man would want to take anybody to, except his creditors, and he would take them there upon the chance that he would get rid of part of them from the diseases which they might contract.

"But Yankee genius, accomplishing the unexpected and utilizing the unforeseen, put a log, about as big as a good-sized dude, into a hopper. It comes out in about two minutes in small chips, rolls along upon an automatic railway into a big vat, is reduced by sulphuric acid to a soft pulp, flattened out by machinery into long strips about two feet wide, and cut three feet long, which are piled in stacks all around for use, then run through other innumerable rollers until it comes out at the other end, a prepared and marketable roll of paper for the press, and before you are well out of the building the log which you saw enter the hopper is being shipped to New York to carry the news of the world, and the intelligent discussion of every conceivable subject interesting to humanity, and the education of a first-class university, upon its face."

Written for THE INLAND PRINTER.

### EMINENT LIVING PRINTERS.

BY JOHN BASSETT, EDITOR AND PROPRIETOR OF THE "PRINTING WORLD," LONDON.

NO. XVI — WILLIAM KNIGHT CLOWES.

FAMOUS among the great printing establishments of London is the well-known house of Messrs. Clowes & Sons. It was founded in 1803 by William Clowes, grandfather of the gentleman whose portrait illustrates this article. In the year mentioned, Mr. Clowes commenced business in Villiers street, Strand, with a capital of £350. Fortune favored his exertions throughout. Especially was this to be noticed when he married a cousin of a statesman who had much influence in government quarters. This recommendation combined with good business ability soon made him a prominent printer, and in less than one year he had an office in Northumberland Court of which anyone might well be proud. Twenty years from the outset Mr. Clowes printed by steam. He had two or three machines in a dark cellar, and the process being novel, his office had many visitors of repute in the literary world. Like many more printers in the metropolis, Mr. Clowes and his steam press were objected to, and his neighbor, the Duke of Northumberland, whose palace was close by, brought an action against him which ended in a verdict for Mr. Clowes. He, however, decided to remove, and in 1826 he became the occupier of the spacious premises at Duke street, Stamford street (or to better fix the locality for Americans, just over Blackfriars Bridge).

While writing of Mr. Clowes and the Duke of Northumberland, I well remember a similar incident which happened many years ago. The printers in this case had built up a big concern, and had actually tenanted the premises for nineteen and one-half years, but some over-officious personage complained of the noise, and though six months only had to expire when they could legally snap their fingers at anybody, yet were they compelled to move *entirely*. The firm in question built a splendid office right in the heart of the city and specially suited to a printer's work. I have been told by the principal that they have taken care to avoid a recurrence of such an experience.

After Mr. Clowes' death, which took place in the year 1847, the business was carried on by his sons, William and George Clowes.

Mr. William Knight Clowes, our eminent printer for this month and the present head of the firm, was educated at Eton and Christ Church, Oxford, where he took his degree. His maternal grandfather was Charles Knight, the author and publisher and the pioneer of high-class cheap literature. About the year 1860, Mr. Clowes entered the business and worked his way *downward* from the composing room to the machine room. I doubt whether in

any other profession a man has to work downward in order to rise in the world. In England, at least, it is an unwritten law for the composing room to be on the top floor and machine room on the ground floor. Having mastered the details of the printing office Mr. Clowes in a very short time took an active part in its management, and without a man conscientiously learns his business when young he will find his knowledge little or of no use to him when the mighty concern is under his personal control.

Nowadays employers know the value of training their sons to every mystery of the art, and to this end such sons as choose to follow the business of their fathers must go through the routine of each department. In no other way can they hope to succeed. Managers are very good men; *but no man works for another the same as he would for himself*; it is against the law of Nature. This beneficent dame instils into us that extra vitality when the golden apple to be won is for ourselves.

Mr. Clowes has had a good deal to say on the American copyright bill in the *London Times*, and his remarks may be taken as from the best authority in this country. Mr. Clowes' statements are based on practical facts, yet printers generally have taken this bill as coolly as if they were having their breakfast. Wait till it touches their pockets and then we shall find the British printer take something more than a lukewarm interest in this great measure. Printers over here have had enough to contend with this winter in the copyright bill and the rise of the London compositor's wages, by both of which Mr. Clowes has found his time most severely taxed. He says, "you (meaning myself) ought to be much obliged to me for giving you all these details when I have not a moment to spare on so uninteresting a subject."

In 1880, for family reasons, the business was made a limited company, and the managing directors are William Clowes, eldest son of William, already referred to, and William Charles Knight

Clowes, eldest son, and Edward Arnott Clowes, youngest son of George, before mentioned. The branches are: 13 and 14 Charing Cross, where there is a printing office and the publishing office of "Hymns, Ancient and Modern," and military drill works, etc.; 27 Fleet street, from whence the law reports are issued for England and Wales; and at Seccles, Suffolk, there are also large printing and binding works, the head office and works being at Duke street, Stamford street.

### A TRADE WITH HIM.

Julian Hawthorne says that literature is a trade with him, and that he does not write with enthusiasm, but of necessity. He thinks that the production of the best work demands the ability on the part of the author to wait on his moods and take his time. "If I ever," he says, "get so that I can see a year ahead, I shall try and write something for myself; something I may take delight in."—*Pike's Peak Herald*.

Copyright, 1890, by C. B. COTTRELL & SONS.

## ELECTROTYPING.\*

NO. II.

### THE MOLDING CASE.

Some molders use a brass molding case with a rim about one-eighth of an inch deep, while the modern method is to mold in a flat or rimless case. The latter is superior to the old method both as regards economy and results, as the flat case can be cast at a trifling cost from electrotype metal in use in the department, and can be shaved to the desired thickness on a plate-shaving machine. Should the flat case get out of true, or become damaged in any way, it may be thrown back into the metal pot and a new case cast at leisure.

### FILLING THE CASE.

The molding-case, having been slightly warmed, is placed on a level iron table and surrounded by guards about an eighth of an inch higher than the case. The wax is now poured on the case with a *warm* ladle through a fine sieve, in order to prevent the wax from chilling and also to keep out any foreign substances that may have fallen into the wax-pot.

The operator immediately draws a heated round iron rod slowly over the wax to wipe off the air bubbles that rise to the surface.

If the water is not thoroughly boiled out of the wax, a heated building-iron or gas flame is passed over its surface in order to evaporate any remaining moisture.

After the wax has set, but while still warm, the guards should be relieved from the sides of the case, and all adhering wax scraped therefrom, that they may be ready for immediate or future use.

Should the wax shrink away from the sides of the case, or crack while cooling, it should be thrown back into the wax-pot, and five per cent of crude or virgin turpentine added, stirring for about five minutes, and proceed as before.

### SHAVING THE WAX CASE.

While the wax is still warm, it is shaved to any desired thickness on a plate-shaving machine used expressly for the purpose. This insures a true and even case, and the result is that a true and even impression is obtained with less strain on the press, and less labor for the molder, than is possible when the case is not shaved.

### BLACKLEADING THE CASE BEFORE MOLDING.

After the case has been shaved it is then carefully blacklead by means of a goat or badger hair brush used for that purpose. A cleaner and more economical method is to mix in a large bowl a solution of plumbago and water to the consistency of cream, and with a soft sponge rub the solution carefully and evenly over the surface of the wax, which should be rubbed dry with the palm of the hand before the mold is taken.

### GRAPHITE.

Graphite and plumbago, more commonly called blacklead, are different terms for the same substance. Graphite does not contain a trace of lead, and only occasionally a slight trace of iron, which is foreign to it.

Graphite is one of two forms — the other being the diamond — in which carbon appears in nature. It is unaffected by any chemical compound, and is also unaffected by heat, except at very high temperatures, when it slowly combines with oxygen. It occurs either in mica-like scales scattered through rock, or in a powder disseminated through clay, or in solid masses like coal.

These three kinds are very different in appearance. The first, after being separated from the rock in which it occurs, resembles, except in color, flakes of bran. This variety is found principally in this country, by far the larger portion being produced at Ticonderoga, New York. The second variety is produced in Germany and Austria-Hungary, and occurs disseminated through clay beds. The third variety comes from the Island of Ceylon, where it frequently occurs in large masses like coal and is mined in a crude

\*Through the kind permission of Messrs. C. B. Cottrell & Sons, New York, manufacturers of printing presses and electrotype and stereotype machinery, we reprint this article on Electrotyping from a work recently issued by them.

manner by the natives, often containing as high as ninety-five per cent of pure graphite. Pure graphite is the softest and is selected especially for the use of electrotypers. The American and Ceylon forms show a silvery-black color and are very slippery and soft to the touch. The German form is dead black in color and only acquires a polish by rubbing.

The usual trade test for graphite is to place a spoonful in the mouth; clay, if present, will cause the sample to stick to the tongue; soapstone and slate are recognized by their taste, while the finest particles of silica are felt between the teeth.

### WASHING THE FORM.

After the form is laid on the stone, the operator removes all adhering ink from the face of the type and cuts, by means of benzine and a stiff brush, and when thoroughly dried, the form is then planed down. The molder in the meantime must be careful to observe that all the types are squarely on their feet, and that all spaces, quads and leads are pushed back in their proper places.

### BLACKLEADING THE FORM.

Plumbago is now rubbed into the form by means of a moderately stiff brush, particular attention being paid to blackleading the *sides* of the rules and types, and seeing that the plumbago penetrates every crevice, in order to prevent the wax from sticking to the form. If this operation is carefully attended to, the form will relieve freely from the wax, and when held to the light will present a smooth and polished surface on the face and sides of the mold. Great care must be taken that no blacklead clogs the fine lines of engravings, as much depends on the preparation of cuts for molding.

Before the forms are returned to the printer all plumbago and adhering wax should be removed by means of hot lye and a stiff brush, after which they should be rinsed with running water by means of a hose.

### CONCAVE IN TYPE.

Concave has been for years and is still a constant source of annoyance to electrotypers and printers. Several theories have been advanced as to its cause, but the difficulty still remains to annoy those molders who have not discovered a remedy for this much-talked-of annoyance.

The custom of running sufficient cases in advance to last for several hours or during the day is a good idea, provided the wax is kept in proper condition for molding; but generally the wax becomes cold and hardens before the cases are needed, and the molder loses much valuable time in reheating the wax from the back of the case, after which he places the cold form on the face of the wax and takes the impression, the result being a concave mold and consequently a concave surface on the face of the electrotype.

In order to avoid concave and have the face of the plate as true and sharp as the original, first shave the molding composition to an eighth of an inch thick, and then place a sufficient number of cases for immediate use in a steam-heated box, which should be kept at a uniform temperature until needed; when the wax is sufficiently warm on the face to take an impression of the thumb, blacklead the wax, and mold the form to the shoulder of the type.

If it becomes necessary to reheat the case, do it thoroughly, or until it is quite warm, and then cool it from the back, as the metal case, being a better conductor, retains the heat much longer than the wax. Hence the wax is softest nearer the metal. This must be reversed if good results are expected. Or in other words the surface of the composition must be softer than that portion nearer the metal case.

### MOLDING THE FORM.

The form, *if large*, is placed on the projecting table of the molding press, and the warmed wax case, previously polished with plumbago, is placed thereon; a stiff bookbinder's board about an eighth of an inch thick, cut to the size of the bed of the press, is then placed on the back of the case, in order to retain the proper temperature in the wax while the molds are being taken.

In molding *small forms, or cuts*, the case is laid on a bookbinder's board on the projecting table of the molding press, and

the form or cut placed face down thereon. The form and case are now slid under the head of the press and molded in quick succession, being careful to blacklead the form or cut before each impression.

When electrotype or process cuts are to be duplicated, or plates and type are used in the same form, it has been found almost impossible to make a perfect mold in the first impression. In order to produce the desired results, spread (with a separate brush) a thin film of *Crocus Martis* carefully and evenly over the blackened film on the surface of wax; or the *Crocus* may be rubbed into the cuts instead of on the wax, with equally good results. The form and case are now slid under the head and center of the press, and sufficient hand or steam power applied to force the wax to the shoulder of the type. Should the wax stick to the form in molding, pry the case gently at both ends with a screwdriver or similar tool, and then lift it squarely from the form; otherwise you are liable to tear the wax from between the type or distort the sides of the mold.

#### CUTTING DOWN THE MOLD.

The mold is now examined to see if a perfect impression is obtained, and if satisfactory, the displaced wax is cut down to the shoulder of the type. This operation is best performed by means of a sheath knife with a blade about eight inches long, bent on an angle to elevate the handle, and sharpened on the under or beveled side to a keen edge.

The cutting down of the displaced wax on the mold is done in the following manner: The operator, after seeing that the mold is slightly warm, lays the case on a level table in front of him, and while holding the cutting-tool in the right hand, heats it over a gas flame, and after laying the tool on its edge, quickly cuts the displacement from around the sides of the mold. The tool is again heated, and the operator, with a quick swinging motion, cuts diagonally across the mold, with a slight upward tendency toward the end of the cut, being careful to hold the knife firmly with the right hand, and to guide the blade on its bevel with the fingers of the left hand, in order to prevent the tool from digging into the wax. The cutting-tool should have a keen edge and be repeatedly heated over a gas flame, otherwise a film of wax is formed over the openings to the rules or bowls of the type, which, if allowed to remain, would prevent the cavities of the mold from being properly blackleaded.

Cutting down the mold is a difficult operation for the beginner, and considerable practice is necessary before perfection is attained. This operation is unnecessary if the impression is taken from a high-spaced form.

After the displaced wax is cut down, the operator looks carefully over his work, and with a needle or other pointed tool, picks out any wax that may have been forced into the rules or the cups of the letters.

(To be continued.)

Written for THE INLAND PRINTER.

#### DESERVING.

BY ENO.

St. Peter stood at the pearly gates,  
Greeting a clamoring throng;  
Men, dead and alive, were leaving earth  
At the sound of Gabriel's horn.  
'Twas then an old printer, scarred and tough  
From age and toil and war,  
Walked up in front of the judgment seat,  
To enter the gates ajar.

"Your sins are many," St. Peter said,  
"But there are things you haven't done:  
We'll have to let you in, I guess,  
To the bliss you well have won.  
Enter the gates, forget the past,  
Enjoy a home forever—  
You didn't bend spaces to tighten your lines,  
And you never threw pi in the river."

#### GREELEY CHANGED HIS MIND.

When I was first connected with his paper, said Mr. Charles A. Dana at the recent "golden anniversary" of the *New York Tribune*, Mr. Greeley would allow no reports of the theaters or horse races in its columns. In fact, he did not want to take advertisements of that character. He conducted the paper on strictly Puritanical principles and abhorred anything that he did not think conducive to the public good. One day, in 1842, there was a horse race to come off which was of extreme importance. It was virtually a struggle for supremacy between the racing men of the North and of the South, and most of the staff thought it ought to be reported in the columns of the *Tribune*. The man whose business it was to write the article went to Mr. Greeley and told him that all had agreed that the race should be reported as an important item of news. "Well," said the old man, shaking his head doubtfully, "I don't know; I guess we'll have to do it. We have to report hangings anyway." After that horse races and theaters received notice in the paper.

#### A JAPANESE TYPOGRAPHICAL JOURNAL.

We have received from Tokio a copy of the first number of a Japanese typographical journal entitled "The Press and Paper"—at least that is what we presume to be its name, being the only

English words on the title, which appears upon the fourth page of cover, reckoned by Occidental usage. The cover design is a tasteful conception showing vignettes of the various departments of the printing, lithographing and papermaking trades, interwoven by gracefully arranged sprays, presumably of apple blossoms and chrysanthemums. There are six illustrations, and one specimen of rule work which we reproduce for the benefit of our readers, in respect to which we desire to state that a platform on which the gentleman (or lady?) was prancing we have not included, and have also left out a peculiarly spiky and uncomfortable looking tree which was in dangerous proximity to his (or her?) bare feet.

Of the literary excellence of the journal we are unable to speak, but if it is on a par with its mechanical execution we have no doubt that the enterprising proprietor and talented editor will meet with deserved success in their venture, which we understand is the first of its kind in Japan.

# Price's Improved Cover-Presser.

PATENTED NOVEMBER 8, 1887.

This invention has for its object to avoid the evils ordinarily met with and provide a means for expeditiously attaching covers to pamphlets by pressure after being pasted.

In order that those skilled may fully understand this invention, reference is made to the accompanying drawing by the following description :

Figure 1 is a view showing the manner in which the thimble or shield is used upon the finger and applied to the work. Fig. 2, a perspective view of shield or thimble. Fig. 3, a view of under surface of the same. Fig. 4, a sectional view at line *x x* of Fig. 2. Fig. 5, a detachable heel. Fig. 6, a detachable toe-plate.

Similar letters indicate like parts in the several figures.

*A* is the improved shield or thimble, which can be made of wood, metal, or other suitable material, the bottom or under surface having its sides grooved or channeled at *a*.

*B* is a detachable heel, with flanges *b* to correspond with channels or grooves *a* on under sides of shield or thimble.

*C* is a detachable toe-piece, so arranged as to permit its face to be on a line with channels or grooves *a*, and attached to the toe by means of screw *c* or its equivalent.

To operate the invention, slip the shield or thimble *A* upon the forefinger, the lower surface, *B*, facing toward the back of the hand. Place the pamphlet so as to allow the pasted edge to lie in proper position near the center of the cover. Now turn the cover so as to inclose the pamphlet. Close the

hand. This will bring the thumb in contact with the upper end or toe of shield *A*, as shown in Fig. 1, and the heel *B* and toe-plate *C* are brought in position to fit the side and edge of pamphlet *D*. Now, by moving the hand back and forth, and at the same time applying the required pressure by means of the thumb and finger, the operation is complete. The pressure obtained by this method is such as to obviate the necessity of repeating the operation on the opposite side.

To apply the heel *B* to the body of the shield or thimble *A*, it is slid into the grooves *a* from the front or toe, as indicated by dotted lines in Fig. 3, and pushed back until the edge *b'* comes in contact with shoulder *a''* on the shield or thimble *A*. This shoulder is formed in rear of seat for toe-plate *C*, its object being to hold the heel in position and to keep it from moving back when the required pressure is given to the edge of the pamphlet.

Each shield or thimble is to be furnished with heels of different depths to accommodate the thickness of the pamphlet, book, etc. It frequently occurs that pamphlets of intermediate thicknesses have to be covered, which would require but slight variation in the depth. This difficulty is overcome by removing the toe-plate *C*.

The patentee is not limited in the construction of this improved pamphlet-presser to any particular size or shape, as it may be varied in any of these particulars without departing from the spirit of the invention.

Having thus described the invention, what is claimed is :

FIRST—As a new article of manufacture, a device for pressing covers to books, pamphlets, etc., which consists of a shield or thimble having two flat surfaces, one arranged at right angles to the other, substantially as described.

SECOND—In a device for pressing and attaching covers to books, pamphlets, etc., the combination of a shield or thimble with toe and heel arranged at right angles to each other, and constructed substantially as described, to allow the heel to be removed and substituting others of different depths to suit the thickness of the book or pamphlet, substantially as and for the purpose set forth.

FOR SALE BY

THE PRICE COVER-PRESSER COMPANY,

Globe Building, 339 Pennsylvania Ave., N. W.

WASHINGTON, D. C.

Nearly every man spends something on the mere adornment of his establishment.

A fancy sign, handsome office furniture, tasteful stationery, uniformed office boys, and all such devices are mere externals. But the world counts them important.

What shall we say of the importance, then, of the actual machinery itself, which, by deciding the cost of doing each job, virtually decides the profit in it.

As much as a producer is above a non-producer—as much as success itself is above all mere appearances of success—so much is the *press that you run* more important than the looks of your building, your counting room, your stationery or your furniture.

And you know how important the world considers even these non-producing things.

# BURTON'S "PEERLESS" PERFORATOR

MANUFACTURED BY

**Avery & Burton,**

42, 44, 46 & 48 S. Clinton St.,

Chicago, Ill.

Messrs. Avery & Burton, Chicago, Ill. :

*Gentlemen,*—We have had one of your "Peerless" Perforators in constant use for five years, during which time it has been operated by a girl. The machine has not only given perfect satisfaction, but has become indispensable to us.

We could not replace it with any other perforator in the market. The wear and tear from use is remarkably slight, and in the five years we have used it the expense for repairs has been almost nothing when we consider the amount of work done.

Yours truly, J. S. McDONALD & CO.

**THE EASIEST RUNNING AND MOST PERFECT PERFORATOR ON THE MARKET TODAY.**

**A** MISTAKE often made is to purchase too large an outfit. It will pay you better to purchase one suited to your regular work, and "splice" or send out the occasional large job, than to tie up your capital in a few large tools which are difficult to handle, and the purchase of which will necessitate doing without many useful smaller articles. This applies alike to Photo-Engraving, Electrotyping and Stereotyping. We manufacture every article required for these branches, and, on application, will send printed matter and our candid opinion as to your wants.

"The Wise Men of the East"

... ARE USING ...

**KELGUM TAPE**

SPECIAL ATTENTION of all users of printing press tapes, whether for printing presses, folding machines, perfecting machines, or other purposes, is called to the new article which we present herewith, known as Kelgum Patent Tape. The features which particularly commend themselves to users are, that it is absolutely impervious to the action of water, steam, oils, varnishes, acids, or fumes of acids, being thoroughly *waterproof*. It will, therefore, neither expand nor contract under different conditions, and the value of a tape that will not stretch will be readily appreciated by all users of the article.

In addition to the above, tapes treated with Kelgum will not harden nor crack, and their *tensile strength is doubled*. They will not mildew nor rot, and are not affected with extremes of intense cold or heat.

It has been in use for two years in some of the largest offices, and has demonstrated that it will outwear anything of its kind ever used, besides saving all labor for frequent adjusting and taking up of stretched tapes. In folding machines of all classes, the most frequent cause of difficulty has been the loss of tension from the stretching of the operating tapes. Kelgum tape completely overcomes this trouble.

The first cost is a trifle more than the plain tape, but not to be considered in the convenience and durability of the article.

Owing to its flexibility it is especially adapted to the running of light and rapid running machinery of all kinds.

We ask you to give it a practical trial. Below are the prices:

3/8 inch wide,	per roll,	\$ .75
1/2 " " "	"	1 00
5/8 " " "	"	1.25
3/4 " " "	"	1 50
1 " " "	"	1.75
1 1/8 " " "	"	2.00

36 yards in each roll.

### THE OLDEST HISTORY OF MAN IN THE LIGHT OF LATEST RESEARCHES.

LECTURE BY THE REV. W. H. HECHLER, CHAPLAIN OF THE BRITISH LEGATION AT VIENNA, DELIVERED BEFORE THE TECHNICAL CLUB OF THE GOVERNMENT PRINTING OFFICE.

NO. 1.—BY ADOLPH SCHOLL.

THE lecturer had already as a student become convinced that history, in order to be properly understood, should be *seen*.

The same reason that a map is a great factor in the study of geography applies to the use of a map or chart in the study of history. No matter how well a person may know the history of Noah, Abraham, etc., it is difficult to place them in their proper century and the relative position and condition they occupy toward each other.

With this idea in view, the Rev. Mr. Hechler has constructed a number of charts or maps, the largest of which represents in a graphic manner 3,000 years of history. Blue perpendicular lines divide the whole into sections of 1,000 years each, red lines denote

The lecturer substantially said: The results of the latest researches in Egyptology and Assyriology are really marvelous. Names which are only found in Holy Writ have been discovered in inscriptions on bricks. We know now the exact position which Nebukadrezzar (he wrote his name with an "r," not an "n") occupies, as well as Salmanassar and the different kings of Jerusalem who were waging war against the Assyrians. Regarding the deciphering of the Assyrian cuneiform writing, I may mention the fact that it was a German savant who, at the beginning of the present century, discovered the key to the writing. Toward the close of the last century Niebuhr, the celebrated Oriental traveler (father of the well-known historian), returned from his travels and brought with him several specimens of cuneiform writing. One day a number of teachers were assembled in Göttingen, among them being colleague Grotefend, who among his friends was noted as a decipherer of illegible manuscripts. One of the teachers said to G., in a bantering way: "The hen-scratches of Niebuhr are too difficult for you." Grotefend seriously accepted the challenge, copied the inscriptions carefully, divided them into groups, and it is now demonstrated that of twelve characters which he deciphered eight were correct. His

FIG. 1.

divisions of 500 years, gray lines of 100 years, and punctured lines of 10 years — the space between two points denoting one year. A second large chart contains the 1,000 years B.C. It is on a larger scale, as the general history of the world as well as biblical history is represented. Historical names and occurrences are placed upon this net of lines with the same exactitude that cities, rivers, mountains, etc., are placed upon the degree-net of the ordinary geographical map, thus showing at a glance the chronological position of each historical event. These charts show that each of the four millennia before the birth of Christ commences with a well-known name. The first begins with the Creation (Adam); the second with the birth of Noah; the third with the birth of Abraham; and at the beginning of the fourth we find Solomon in the fifteenth year of his reign as King of Jerusalem. The fifth begins with the birth of Christ; consequently Abraham's position is exactly midway between Adam and Christ; Noah's, midway between Adam and Abraham; Solomon's, midway between Abraham and Christ. Between Abraham and Solomon we see Moses, and between Abraham and Moses is Joseph. In this way the study is made easy to the scholar, and he knows at once the correct position of each name or event, just as he knows that on a map of Central Europe the city of Budapesth is located to the right and Munich to the left of the city of Vienna.

report was submitted to the Göttingen academicians in 1802, but they were unable to understand him, and Grotefend abandoned further research. In 1815, however, he sent an essay on the subject to Silvestre de Sacy, an eminent French orientalist. De Sacy immediately recognized the great value of the work, published it, and in this way we come in possession of the first cuneiform characters in readable shape. English scholars at once took it up, later on the French and Germans, until now there are savants in different countries who read Assyrian almost as fluently as Latin.

The deciphering of the hieroglyphics was a comparatively easier matter. The celebrated stone now in the British museum, found by the French engineer Bouchard at Rosette, contains a decree in three languages. The lowest division of the inscription is in Greek and can be easily read by Greek scholars. The top are hieroglyphics, and in the center is another unknown writing, the demotic. In the Greek version were found several proper names, such as Ptolemy, Cleopatra, Berenike, etc. The students of these writings naturally concluded that these names were also in the hieroglyphics; but where are they? was the question. Then it was discovered that certain of the character groups were surrounded with rings, and an effort was made to adapt these characters to the sound of the respective names. In these three

names the first character of the first word corresponds with the fifth character of the second word. The character ■ appears, therefore, to be a "p."

and the seventh of the second word are the asme——or "t"; the third character of the first word is an "o" and occupies fourth place in the second word; the fourth character of the first word and the second of the second word are similar——or "l."

In this manner the hieroglyphic characters for p, t, o and l were ascertained. Further study also developed the fact that the hieroglyphics may be composed so as to read from right to left, left to right, top to bottom, or bottom to top, the starting point being the direction in which the human and animal faces are pointed.

To me, as a theologian, the question has naturally always been uppermost: How do the results of these researches agree with the statements contained in Holy Scriptures? In what relative positions stand the kings of Jerusalem, Samaria, Assyria, Babylon and Persia, and the rulers of Egypt, Greece and Rome? Few of those who speak of the founding of Rome know or think that at that very time Hosea, Isaiah and Micha were prophesying in Palestine. On the chart all this is at once apparent. It is only by such a comparison of the histories of the different nations that a perfect picture of the whole can be drawn. At a single glance may be seen in this graphic representation where the royal lines end, as, for instance, the fall of Samaria, 721 B.C., the destruction of Jerusalem, 586 B.C.—thus showing the downfall of the Kingdom of Israel in the North to have been 135 years previous to the downfall of the kingdom of Judah in the South. The kingdom of Nineveh succumbed twenty-five years before the destruction of Jerusalem, and about this time the Persian dynasty had its beginning. It is thus seen how nations have come and gone. When I read of Nebukadnezzar, Xerxes, Alexander the Great or Herodotus, I can at once fix in my mind the century in which their names belong, and can see the struggles of other nations for existence or supremacy. In this manner should history be seen and read in order to be understood.

A drawing eight metres long (Fig. 1), from the sepulchre at Beni Hassan, contains unmistakably Semitic faces. The Egyptian inscription calls them Amu. These Amu came, as many of the inscriptions set forth, from the East—Palestine and Syria—from the countries which Abraham and his people left when they entered Egypt, and I am of the opinion, with many others, that, even if it does not actually represent the entry of the Jews into Egypt, it was certainly executed about that time. The governor of that part of Egypt receives the report of the writer and is informed that these Amu beg for permission to enter his province; that they bring presents and have "Mestim" for sale. Although this word "Mestim" is quite legible, it is impossible to determine definitely what it means, but is supposed to stand for a sort of eye-salve. The name of the chief is plainly given. His title is Hyk, or chief of the foreign country, and at the bottom is his name in full—Abischah. At the time this drawing or picture was discovered on the rock in the sepulcher at Beni Hassan and deciphered, it was declared to represent the entry of Abraham and Jacob into Egypt; but positive proof of this is missing. It is remarkably strange, however, that this name Abischah is a biblical one, and may be translated as "Father of the Sand." A striking coincidence is the fact that the name "Abraham" means "Father of the People," and Holy Script tells us that God promised Abraham that his descendants would be numerous as the sand of the sea. An interesting feature of the picture are the costumes of the characters, male and female. About 150 years later, after the entry of Abraham into Egypt, Jacob presented his favorite son Joseph with a many-colored gown, which, as is stated, aroused the

jealousy of his brethren. As the picture is well-preserved, even as to colors, and there can be no doubt as to the date of its origin, it is safe to assume that we have here authentic patterns of the costumes worn in the days of Abraham by his people. The mode of carrying children in baskets upon a donkey's back is shown to have been precisely the same in Abraham's time that it is today in that country. The picture also shows a musician who plays upon a stringed instrument at the formal audience of the governor. The end of the picture (not given in the accompanying cut) shows a flock of birds of the crane species, led by two men, and a tall Egyptian with bow and arrow.

Among Egyptian inscriptions the royal name of Sisak is particularly interesting, from the fact that it is that of the first Pharaoh mentioned by name in Holy Writ (2 Book of Chronicles, chapter 12, verse 2; 1 Book of Kings, chapter 11, verse 40, and chapter 14, verse 25). He lived at the time of Solomon, one thousand years B.C. The history of his wars is engraved upon the walls of the temple at Karnak (Fig. 2). He is represented as holding in his

FIG. 2.

left hand a number of strings or ropes, which lead to framed inscriptions in different directions. These inscriptions contain the names of conquered kings and captured cities. Among these framed inscriptions we find one mentioning the name of Judha malek—the royal Judea. It is possible that Pharaoh Schischah(n)k had forgotten the name of Rehoboam, the son of Solomon. Rehoboam had followed his father Solomon on the throne, and in the North Jeroboam had established himself in the kingdom of

Israel with ten of the tribes. In order to annoy Rehoboam, Jeroboam had asked his friend, Pharaoh Sisak of Egypt, to attack Jerusalem, the capital of Rehoboam. These biblical statements (2 Chronicles, chapter 12, verse 2) we find verified by the inscriptions on the walls of the temple at Karnak.

(To be continued.)

#### JAMES E. HEG.

We herewith present a portrait of Mr. James E. Heg, president of the Wisconsin Press Association, in conjunction with which we offer the following brief biographical sketch: Mr. Heg is a native of Wisconsin, having been born in Racine county September 22, 1852. He was graduated at Beloit College in 1874, and in 1876 he purchased a half interest in the *Lake Geneva Herald*, of which in 1877 he became sole owner, continuing its proprietor until 1888, when he sold one-half the establishment to John E. Nethercut, his present partner. Mr. Heg for five years was compiler of the "Wisconsin Blue Book," the statistical manual of the state, which he made the best of its kind issued by any state in the country. In 1883 he was elected secretary of the State Press Association, which position he held for five years. His newspaper, the *Herald*, is recognized as one of the leading republican papers of the state and has done much toward making Lake Geneva one of the most prominent summer resorts in the West, a fact appreciated by the residents of the village and the people about the beautiful lake.

Mr. Heg is married and has a family of five children. He owns one of the finest residences in the village, and is about as happy as a man with a good business, a happy home and an easy conscience can be. In addition to his editorial duties, to which he faithfully attends, Mr. Heg is political (or legislative) agent of the Milwaukee, Lake Shore & Western railroad, one of the leading railways of the Badger State. He is also a director in the Chicago, Lake Geneva & Pacific railway, a branch of the Northern Pacific, about to be constructed from Antioch, Illinois, to Portage, Wisconsin. Mr. Heg has an abundance of business tact and energy, which, combined with his genial social qualities and sunny disposition, make him a useful citizen, a cordial friend and gentleman whom to know is to esteem.

A RECENT issue of the Harrisburg (Pa.) Sunday *Telegram* contained a fac simile copy of a document printed in three colors, at one operation, by a fast Bullock press. Mr. J. C. Kelberg, the pressman on the *Telegram*, has achieved this remarkable success. Mr. Kelberg has secured a patent for his invention, which he claims to be the only one by which printing in various colors at one time on a lightning press is accomplished successfully.

#### PRINTING WITH GOLD LEAF.

A correspondent writes: "For a long time I have had in my possession a specimen of printing, one line of which is printed in gold. I have shown it on many different occasions to perhaps a hundred different printers. Among the hundred I am sure not more than two or three did not ask me how it was done. 'How did you lay the leaf?' 'Was it not very slow work?' 'What size did you use?' 'How did you varnish it?' These and a dozen other queries I have answered over and over again. Knowing this, I am able to say something about printing in gold leaf that will be interesting.

"To print a line or lines of a job in gold is not an economical process, but it is genuine when done. Its use will generally be confined to a prominent display line on a fancy show card or something similar. The line to be laid with leaf should be made ready first,

before any colors or bronze, and made ready as for ordinary work. Use good gold size, and if for a line as large as four-line pica or larger, thin the size as much as possible compatible with clean, sharp outlines. To handle the leaf rapidly and successfully, use a palette knife, such as is used by bookbinders for the same purpose. Cut the leaf in strips wider than the size of the line to be printed. Nothing less than considerable practice and the loss of some leaf will enable one entirely ignorant of its texture to remove the sheets from the book intact. It is best accomplished by laying the knife-blade across the sheet of leaf and carefully blowing, with the merest breath, the edge of the leaf over the knife, when it may be removed whole to the cushion and cut up. A piece of ordinary leather with a few sheets of paper under it answers well for a cushion. Now make your impression as you would for bronzing the line, being sure that the form is suffi-

JAMES E. HEG,  
President of the Wisconsin Press Association.

ciently rolled to give the face of the letter on the printed sheet a full, smooth, even body of the color. This is imperative, as upon it depends the close, adhesive and smooth finish of the leaf. When you have thus printed the line, lay the card upon your table, take a strip of paper as wide, or nearly so, as your strips of cut leaf, and, holding it by the ends, draw it across the bare forehead or breathe upon it on one side, and lay that side upon the strip of leaf, which will lightly adhere to it, when it may be carried to your printed card and applied to the line, to which it will immediately closely adhere, leaving the strip of paper clean. If in this operation any size is accidentally taken from the print upon the strip of paper, another clean one must be used for the next application. If the line of type is longer than the strips of leaf, a second strip must be put on, or so much of it as may be needed to cover the line. The whole operation thus far is the same as that practiced by bookbinders in marking books, etc., and any printer can become conversant with it in a short time

by visiting a bindery. But if there is any merit in my method of working, it is in what follows. When the leaf is laid all over the line, place your card again upon the press (having, of course, been very careful in feeding that the two impressions may be in perfect register), lay over the card a piece of thin print paper, and make a second slow impression. Upon removing the paper from over the card, it will be found that the leaf is closely and smoothly, with almost the beauty of varnishing, fastened upon the impression, and after it has had a few moments to dry, the waste leaf may be, with a piece of cotton or silk handkerchief, brushed clean away, leaving the outline of the letters as sharp and perfect as if printed with the finest ink.

"To most printers this method of printing cannot, from its expensive nature, be often useful; but it is well to understand it, to be able to do it well, for to any printer the time may come when he can turn it to good account. It is only a few weeks since the writer found it peculiarly valuable in putting an elegant monogram on a hundred elaborate silk badges for firemen. The price to them was not a consideration; what they wanted was a fine job. They got it, in pure gold leaf, as it could have been done in no other manner."—*London Press News*.

#### THE SHNIEDEWEND & LEE COMPANY FAILURE.

On May 5 the above firm was compelled to suspend business, and confessed judgment to the amount of about \$45,000. The total liabilities were \$120,000, of which \$45,000 was secured and \$75,000 unsecured. It is claimed that the assets of the company in stocks and outstanding accounts amount to \$150,000. Jacob Newman, Jr., is the receiver.

At a meeting of the creditors, held on May 19, at which about \$60,000 in unsecured liabilities was represented, it was proposed to settle with the creditors on the following basis: twenty per cent in one year, twenty per cent in two years, twenty per cent in three years, and fifteen per cent in four years, all at five per cent interest, secured by mortgage on the plant, provided that eighty per cent of the unsecured creditors would accept. At this meeting the matter could not be fully decided on, owing to the fact that but \$60,000 was represented. This offer has not been accepted, and the establishment has been closed, and the one hundred and fifty employes discharged.

The Shniedewend & Lee Company has been in business in Chicago for about twenty years. It was burned out at 111 Madison street in 1871, and afterwards resumed operations at 202 Clark street, where the business remained until its removal to the present location at 303 Dearborn street, where its office and salesrooms are. The works are at 2529 Leo street. In 1884 the company incorporated with a capital stock of \$100,000, which was afterwards increased to \$150,000, only \$120,000 of which, however, had been paid in. The principal business of the firm has been the manufacture of presses and all kinds of printing machinery. The company also dealt in electrotype machinery, and did electrotyping on a large scale. At the time of the failure the company was doing a large business, and had it not been for slow collections, excessive competition and ruinous discounts would probably have been able to have withstood the storm. Among the largest creditors of the company are the Lake Shore Foundry of Chicago, which holds a claim for \$11,000, C. B. Cottrell & Sons, Campbell Printing Press and Manufacturing Company, and MacKellar, Smiths & Jordan Company. It is possible that, at the next meeting of the stockholders and creditors to be held at an early date, matters may be arranged so that the company may resume business. Paul Shniedewend is president; Samuel Schoeneman, vice-president; J. Edgar Lee, secretary, and James L. Lee, treasurer.

THE New York public is daily supplied with long words from the German press, in which such combinations appear as *stattseisenbahnversicherungsam* (insurance office of state railways); *tenementhausbrandkatastrophe* (disastrous tenement house fire); *Neapolitanersdude Isack pfeifer gesell schaftsunlerstutzungsverein* (Benefit Association of Neapolitan Bagpipe Players).

#### THE CONVENTION PROGRAMME.

On June 4, Columbia Union, No. 101, Washington, gives an excursion to Mount Vernon to delegates and visitors, followed in the evening by a banquet. The next morning the delegates will go to New York, and thence to Boston for the convention, where the reception committee of the Boston Typographical Union announce plans for their welcome and entertainment as follows: The convention will be opened in Faneuil Hall on Monday, June 8, and will continue for a week or more. Governor Russell will be present at the opening exercises of the convention, the first session of which will be opened with prayer by Rev. Father J. P. Bodfish. Previous to the convention, on Sunday, June 7, there will be an excursion of the delegates to Plymouth with a banquet. On returning in the evening they will attend a sacred concert in their honor at the Bijou theater. On Tuesday, June 9, it is proposed to give the delegates a clam bake at Nantasket beach. Wednesday the delegates will be the guests of the city and will be treated to the customary trip down the harbor on the J. Putnam Bradlee to Deer island. Thursday evening will take place a grand honorary banquet at the American House. It is expected that Governor Russell, Mayor Matthews, the president of the senate, speaker of the house, chairman of the board of aldermen, president of the common council, besides the heads of the different newspaper and book and job offices of the city, will attend as guests. Invitations have been sent to Congressmen Farquhar, of Buffalo, and Amos J. Cummings, of New York, both old printers, as well as to George W. Childs and A. J. Drexel, of Philadelphia. Friday and Saturday there will be no festivities, as the delegates will be hard at work to settle up the business of the convention. Upon adjournment, the Ex-Delegates Association of New York will tender the delegates an excursion and banquet.

#### THE WHITLOCK MACHINE COMPANY.

When in the East, a short time since, our representative had the pleasure of visiting the works of the above company, located at Birmingham, Connecticut.

The building consists of three floors and basement, and is specially fitted up with all tools and machinery necessary for building the fine presses and paper-cutters turned out by this company. Power is obtained, during a part of the year, from the river, but in case the water supply runs short, the company has provided steam engines, so that they are at all times enabled to carry on their extensive business without interruption. The building is lighted throughout by electric lights, and every convenience for the manufacture of machinery provided.

The principal machine manufactured by the company is their four-roller two-revolution press, specially intended for printing illustrated periodicals, or bookwork, but in the hands of the competent pressman, capable of turning out any work that may pay to run on it. The smaller sizes of this press are designed to do job-work, from the cheapest to the finest, with the greatest possible speed. Special attention has been given to the weight of the machine, the material used, and the adjustment and finish of the parts. The frame, cylinder, bed, and all other parts in proportion, are very heavy, and made as weighty as is consistent with speed and strength. The universal joint shaft and the bevel pinion are made of steel. The bevel rack, unlike any other make of press, is also of steel, and the teeth in the rack are separate and distinct. In case of accident, when a tooth, or several teeth, are broken, they can readily be replaced at small outlay, it not being necessary to discard the whole rack, as is usual with other presses.

The press is provided with the most approved adjustable air springs. On most printing presses using air springs, the air chambers are supplied with pet cocks, which are opened or shut by hand, as also are the plungers moved forward and backward. This takes too much valuable time. There are various devices for changing the air chambers when required, but all are more or less intricate, and universally unused by pressmen because of this. The air

controlling apparatus on the Whitlock press is extremely simple and effective. The air chambers are bolted to the frame, and have a pipe connection leading to the air valve. A set of pipes at each end of the press are brought together at the valve, and by means of a small lever, which can be turned by hand, the amount of air can be regulated in an instant, according to the speed at which the press is to be run. This apparatus is one of the most useful features of the Whitlock press.

The two-revolution presses have the following features, which make them most desirable: single tooth steel bevel rack; steel bevel pinion; steel universal joint shaft; air spring regulator; four tracks, on all sizes; patent coned steel friction roller tracks; patent coned steel friction rollers; swinging vibrator roller sockets; back-up motion; trip motion; movable fly fingers; tapeless delivery; front or rear delivery. The two-revolution presses are also made with two rollers instead of four, when desired, and with rack and screw, or plate distribution.

This company also manufacture extra heavy drum-cylinder presses, with table or rack and screw distribution, of perfect finish and accurate adjustment, this press containing the following important features: single tooth and bevel rack, steel bevel pinion, steel universal joint shaft, adjustable air spring, four tracks, patent coned steel friction rollers, patent coned steel friction roller tracks, full length register rack, swinging vibrator roller sockets, noiseless gripper motion, back-up motion, movable fly fingers, and tapeless delivery.

Their extra heavy pony press is designed and built for the execution of first-class work of every description, and will run at a speed of 2,500 per hour. They also make an air spring job and book press, containing all the advantages of the drum-cylinder, and made to take forms from 24 by 36 to 28 by 44. Their job and book pony press is built to take the place of large platen jobbers, and is much faster, and better adapted to do the work required. Its simplicity makes it very desirable. It has the patent reciprocating rack in lieu of springs, and in addition all the other features of the job and book press. It requires less power to run it than a half medium jobber. It will take a form 16½ by 24 inches.

The company builds no country presses for the reason that they consider that if a press is cheapened beyond a certain limit, it is weakened, and becomes a troublesome and expensive piece of machinery. On this account they build nothing but the regular makes, and use extra care in finishing, and give great strength to all parts most requiring it. For full particulars in regard to all the special merits of these presses, we refer our readers to the excellent catalogue issued by the company, which will be sent to any address on request. This catalogue gives complete descriptions in regard to the travel of the type bed, of the bed and cylinder, the back-up motion, the ink supply and distribution, the fountain roller adjustment, the delivery of sheets, and the gripper motion.

One of the latest features invented by this company and placed on all their two-revolution presses is the patent tipping fountain, which enables the pressman to tip the fountain to any angle of the knife, and avoids the necessity of constant watchfulness on his part to see that the ink is properly scattered in the fountain by means of the hand knife. The advantage of this invention will be readily appreciated by all pressmen.

Another important feature of their two-revolution presses is the patent feed guide, which holds the sheet gently before the gripper takes it, thus insuring a most perfect register, which, with the ordinary guide, is not obtainable.

Besides the making of presses this company also manufactures the well-known Champion Paper Cutter, a machine which is one of the most popular cutters now on the market. It is simple, strong, and durable in construction, and absolutely accurate in cutting.

Sturges Whitlock, president, and Julius G. Day, the treasurer of this company, will take pleasure in showing visitors through the works at any time.

#### POINTS FOR JOBBERS.

Follow as closely as you can the direction on your copy concerning display, as may be indicated by underscoring or otherwise. If copy is underscored too much, give the leading lines full prominence and reduce the size of the minor lines of display.

You will seldom go wrong in selecting small type for the text of a job that is marked for plenty of display. Fault is too often made in selecting for text a type so large that there is no room for display or for leading.

Set the matter as writer directs, so as to make the most show, even if the direction is in violation of established typographical rules.

Never crowd a long line of words marked for prominent display in one line of type, if to do so you have to use condensed or not easily read letter. Put the words in two lines of the same size and style of type.

Never select ornamental letters for advertisements, or for books, or legal, or mercantile work.

You may use the plainer faces of black letter and pointed text for the display of law and church work, but they must be used sparingly and with discretion.

Never use scripts, card-texts, or any type with large shoulders and long ascending and descending letters, on any work in which the space is contracted, and which does not allow a liberal use of leads.

Even in ornamental work use ornaments and ornamental letter sparingly. They are not ornamental when used in excess or inappropriately.

As a rule, legibility is wanted oftener than ornament. Plain faces have more admirers than fancy letters.

Plan your displayed work so that each displayed line will have about it a relief of small text type or of white space. Do not huddle large types together. As there can be no good display without relief, you should so try to arrange display lines that the relief of small text type will not be all at the tail of the work, nor all the contrast of white space at the ends of lines. Distribute display lines equally over the entire work, as far as a simple and orderly arrangement of the copy will allow.

If more lines in copy are marked for special lines of display than can be put in the space allowed, and if these lines consist chiefly of a few short words, set them up with the prominence desired, but justify some of them in the center of the text, or as side-heads with text about them.

Where a very bold display is wanted in a crowded space, use small bold-faced type for the text letter.

For color-work in bold display, select antique, gothic, or bold-faced types for text as well as for display.

When the copy for text is scant set the text in a fat or expanded letter.

When display has to be open, like that of a book-title, there being more space than matter, never let a single text line fill the measure. Make two short lines of the text words, the second line shorter than the first.

In all open display, bits of text that may make three or four lines should never be set in paragraph style, with paragraph indentation at the beginning. Set them all with half-diamond indentation.

Where a border is used, avoid putting a full line at the head of the matter and next to the border.

Where a great amount of matter has to be put on a large page with much display, try to put some of the text (especially if it can be put in small type) in two columns. If the type must be very small and the page is wide, three or four columns must be made a portion of the text.

If you have liberty to choose, never set a solid text type in a measure of more than fifty ems of that text type. Long lines are hard to read.

If you can do so, select for the body of the text a type that can be leaded. A dozen lines of leaded long primer are more readable than fifteen lines of solid small pica.—*H. T. Bishop in Union Printer.*

## SAMUEL REED JOHNSTON.

The announcement of the untimely death of Mr. Samuel Reed Johnston, which occurred at Pittsburgh, Pennsylvania, Monday, March 23, fell with universal sorrow upon the large circle of friends and acquaintances who had learned to admire and respect him, not alone for his acknowledged ability in the "art preservative," but for his conscious worth and unflinching integrity as a man and brother. In a private letter from Mr. John F. Marthens, who succeeds the deceased as superintendent of the printing department of the great firm of Joseph Eichbaum & Co., we learn that Mr. Johnston's last day at the office was Saturday, March 14. During the first days of the following week, as no news was received from him, it was supposed that he was suffering from a slight indisposition, and that he would again be at his place. Then word came that he had la grippe, which soon developed into pneumonia, to which he succumbed on the night of the 23d.

Mr. Marthens also kindly forwarded a copy of the last photograph taken of Mr. Johnston during life, which we have had reproduced and herewith present, together with a brief biographical sketch, by the courtesy of the *American Art Printer*—which appeared in the columns of our esteemed contemporary in December, 1887.

Samuel Reed Johnston was born in Pittsburgh, Pennsylvania, where his father, also a printer, was born and raised, and where his grandfather, who was a silversmith, lived for many years; so he was thus of genuine Pennsylvania stock. As early as 1816, his father, while a very young man, was one of the firm of Eichbaum & Johnston—the first-named being an uncle of the subject of the present sketch and father of one of the present partners, Joseph Eichbaum.

The senior Eichbaum was, in early life, a bookbinder and ruler, doing the latter branch of the work by hand, with a pen and a large round ruler—ruling machines being as yet in the womb of time.

Mr. Johnston spent much of his time in this office and bindery, the family residence being but a short distance away, and he thus picked up much information about the business. Upon leaving school, he entered mercantile life, where he continued five or six years, never dreaming of becoming a printer, but acquiring a knowledge of commercial affairs which stood him well in after years. His father at length prevailed on him to enter the printing office, though against his judgment and inclination, and he ever main-

tained that he made a great mistake and that he was never cut out for a printer, though the number who differed with him tallied exactly with the number who had the pleasure of examining his work.

Mr. Johnston became a printer, and ere long a good one. Before many years had flown he acquired charge of the printing department, and then began a warfare against all forms of foggyism in the business, no matter how covered with the respected dust of years. One old-fashioned notion he stuck to, however: he insisted that printing is a trade and not an art. Among the things Mr. Johnston held in aversion are bad brass rule jobs and "patent rigidly-rigid cut-out-of-sheet-tin flourishes," as he called them, which many typefounders furnish. Serpentine type lines never

had his favor, nor had adherence to the time honored red-and-blue and green-and-red in color work. He was first in Pittsburgh to deviate from them and mix and use shades of purple, as he was also the first in that city to demonstrate that a large power press could do fine black work, not only as good as the hand press but also many times faster.

He believed in the gospel of cleanliness; floors free from all waste paper, presses shining, walls free from handbills or showcards; and in the gospel of good order; in fine, in a systematic way of doing business; in knowing what to do first, how to do it right, and last and far from least, what the cost would be; not to disappoint a customer, but to get out work at the time and of the quality bargained for; never knowingly substituting a poorer article than promised, and often giving more than required; if an error was made, never let-

ting the customer suffer, but bearing the loss. He was one of the few men who acknowledge that they learn from mistakes.

The adoption of the "Owl" as the trade mark of the firm in 1873 was Mr. Johnston's idea, and though an odd choice, there was a future in it, for two years later he first printed *Oxulotype*, the name being suggested by the popularity of the trade mark.

Original as he was both as a designer and colorist, Mr. Johnston took more pride in a fine pure style of typework in black than he did in fancy jobwork. His ideas were bright and original, and ever on the alert in his superintendence of the printing department. He was the inventor and patentee of calendars with white instead of black lines between the figures, and of a large number of more and less useful devices.

His life was an exemplar to all men, and his death an occasion of bitter regret.

## Our Designs.

N original conception always has its admirers, and though the suggestion contained in the colored insert of the present issue of *THE INLAND PRINTER* will probably be productive of much discussion as to the practicability of carrying out its plan, yet, as to its merits as an artistic and tasteful design, there will be but little if any dispute. Rule work has had its day, and is at this time looked upon, even by its admirers, as becoming hackneyed and obsolete. Printers are now awaiting the birth of some chaste and novel designs in ornamental

work to please the taste of their patrons, while the trend of their inclination seems to be toward the architectural effect produced in type faces and ornamentation by our German cousins. The delicate tints used and the exquisite taste displayed by European printers in their selection of them, give this style a finish that renders it particularly pleasing, but generally speaking it will be found that such designs will prove too heavy and angular to keep a place very long in the regard of either the American printer or the American public, except in a very confined range of work. A design containing the elements of the flowing and graceful lines of the floral pattern, but without sharp and irregular terminations, permitting of greater adaptability, has been considered as desirable, and this idea is outlined in the suggestion to type-founders under discussion. That there will be some dissentient voices we are prepared to allow as to the feasibility of accomplishing this result in type, and we shall be glad of a discussion on this topic with our readers, as for some few months we expect to invite their criticism by similar suggestions.

The cover design, "In Summer Days," intended for a summer resort railroad tourist book, has a simplicity, with an effectiveness, that will commend itself to artistic taste. The difficulty which the designer and printer frequently, nay, almost always, have to contend with, is the insane desire of the customer to crowd too much matter upon a limited space, ruining the effect of many an otherwise good design and tastefully set job. This is so well known that it is only mentioned to call attention to the effect produced when the artist has latitude to follow his own inclination, the result being a rejection of all coarse and mechanical ideas, however ingenious. For a proper rendering of this design, it should be printed the full size of sheet upon enameled tinted paper, in a harmonizing color of ink.

Now, a word to the artist and designer is due, though the name of Mr. Will H. Bradley is too well known as a designer and illustrator of high-class work in the West to need any words of commendation here. Mr. Bradley possesses an artistic taste by right of heredity (his father having been an artist well known in Linn and Boston, Massachusetts, for his ability and genius), and is devoted to his art, as all those who excel in it are. While a very young man, in the light of his exceptional excellence as an original and painstaking designer, his genius is of a pronounced and rapid and facile character in his conceptions, and in the higher grade of designing he throws a meaning and poetic expression appreciated to the full only by connoisseurs, yet winning from the uninitiated unstinted praise and admiration.

### ANSWERS TO CORRESPONDENTS.

R. E. H., Chambersburg, Pennsylvania: The samples you sent are specimens of steel plate work, which can only be done by those having the special machinery for producing it.

MANILLA: Sample No. 1 is preferable to No. 2. We do not use either kind in running *THE INLAND PRINTER*, but prefer a good sheet of S. & S. C. book paper. We use "trays" in handling paper off press boards.

JOBBER, Albion, New York: Is there any patent on chromatic work, similar to card sent? *Answer.*—There is none that we know of. Golding & Co., Boston, Massachusetts, can give you information in regard to this.

JOSEPH A. KREITLER, Lowell, Massachusetts: 1. Is there a patent on "star" wheels, as applied to fly fingers? 2. Where can they be obtained? *Answer.*—1. There is no patent on these. 2. C. B. Cottrell & Sons, 8 Spruce street, New York, or any large press manufacturer.

A. J. MURPHY, Boston, Mass. I washed a new wood cut with benzine, and was afterward unable to work it. What is the trouble? *Answer.*—It does not hurt a wood cut to wash it with benzine or oil, but it must be thoroughly dried, and afterward washed with ether. A wood cut really never ought to be used to print from. You should have an electrotype made, and keep the wood cut for your original, in case of an accident on the press.

F. J. STILLMAN, Waucoma, Iowa. What is the best method of handling cylinder rollers in a room that is damp and clammy? They are sticky and too adhesive. *Answer.*—The best plan is to tell your roller maker the condition of your pressroom and he will make your rollers to suit. You can improve the condition of the rollers by washing them with alum water. The proportion of alum to water depends upon circumstances. A liberal quantity of alum can be used, but a saturated solution is not necessary.

W. L. W., Chicago. Can you give a recipe for a mixture to clean the polished portions of printing machinery and ordinary tools which have become a little rusty. Have used kerosene but it does not do. *Answer.*—Use a little paraffine, chipped fine, to which add a little petroleum, and place in a stoppered bottle. Let it stand for two or three days, shaking it occasionally until the paraffine is dissolved. Spread on the metal with a woolen rag or brush, and on the following day rub it off with a dry woolen cloth.

CARL E. GOODWIN, Moline, Kansas: 1. On damp days I am troubled with my job press rollers; they will not take ink. Can you suggest a remedy? 2. In printing photograph cards I desire to use a bronze powder, but find that on passing through the photographer's burnisher it blurs and spoils the card. What should I use? *Answer.*—1. Your rollers are evidently too green. Wash with oil and dry them thoroughly. The difficulty may be that your ink is too stiff. Reduce it with inkoleum. Perhaps you are using winter rollers when you should have those made for summer use. Look into these things. 2. Put on your bronze, using a good sizing, and let it dry thoroughly. You should then have no trouble. The best photograph cards are produced by embossing, using gold leaf instead of bronze. Burnishing will not hurt these.

### A PROOFREADER'S PREDICAMENT.

Lafcadio Hearn, the author, has climbed all the rounds of the literary ladder. In Cincinnati he procured a position as proofreader in Robert Clark & Co's book publishing establishment. His finicky ideas of punctuation and composition caused him to make so many corrections in the compositors' proofs that they became so enraged at him finally that they took him one dinner hour, and buckling a strap about his waist, attached him to the roof of a hoisting machine that depended from a beam outside the building, and swung him out into space six stories above Baker street. There they kept him dangling in the air like a bale of paper, until he promised to be less industrious with his correcting pencil. This heroic treatment convinced Hearn that he was not appreciated as a proofreader, and he left it shortly after. — *New York Journal*.

ORIGINAL DESIGN FOR BOOK COVER.

Drawn especially for THE INLAND PRINTER. See descriptive article, "Our Designs."

## RECENT PATENTS.

The following list of patents relating to the printing interests is specially reported by Franklin H. Hough, solicitor of American and foreign patents, No. 825 F street, N. W., Washington, D. C.:

ISSUE OF MAY 5, 1891.

- 451,681—Printing press. W. H. Golding, Chelsea, Massachusetts.  
451,625—Type frame for chases. N. E. Smith, assignor to himself and P. E. Martin, Jersey City, New Jersey.

ISSUE OF MAY 12, 1891.

- 451,953—Printers' chase. H. P. Feister, Philadelphia, Pennsylvania.  
451,990—Printers' quoin. W. Wickersham, Worcester, Massachusetts.  
452,058—Printing machine, block. G. E. Hamblet, Bury, England.  
452,243—Printing machines, cutting and switching mechanism for web. J. H. Stonemetz, Millbury, Massachusetts.  
452,244—Printing machines, cutting and switching mechanism for web. J. H. Stonemetz, Millbury, Massachusetts.  
452,022—Printing press, feed-gauge. W. Bartlett, Derry, New Hampshire.  
451,971—Printing press, hand. B. B. Hill, Philadelphia, Pennsylvania.  
452,024—Printing presses and folding machines, feeding paper to. J. A. Dear, Jersey City, New Jersey.

ISSUE OF MAY 19, 1891.

- 452,693—Printing machine, web. L. C. Crowell, New York City.  
452,596—Printing machines, printing attachment for the delivery mechanisms of web. L. C. Crowell, New York City.  
452,698—Printing press. G. P. Fenner, New London, Connecticut.  
452,491—Printing press attachment. M. N. and L. E. Tomblin, Des Moines, Iowa.  
452,745—Printing press grip. B. H. Bowman, Newark, New Jersey.

ISSUE OF MAY 26, 1891.

- 452,933—Printing and binding machine. H. P. Feister, Philadelphia, Pennsylvania.

## BOSTON NOTES.

THE ROBINSON ENGRAVING COMPANY have added a letterpress department to their business.

THE *Morning News*, a new morning paper, will make its appearance on May 25. The business office is located at 23 School street.

MR. HENRY Y. WIGGIN has returned to Boston after an absence of two years in the Argentine Republic, and reentered the employ of Messrs. Golding & Co.

BOSTON'S ex-delegates purpose entertaining the visitors and delegates to the International Typographical Union convention. Messrs. Harding, McGrath, Pym and Britton are the committee in charge.

AS MANY clergymen are going into journalism nowadays, to get a broader hearing, and also to improve journalism, the Boston *Transcript* thinks that turn about is fair play, and if a lot of experienced journalists should go into pulpits they would brighten up preaching wonderfully.

AT the May meeting of the Suburban Press Association the subject discussed was News Gathering. Bro. Waterman, in behalf of himself and citizens of Athol, Massachusetts, invited the association to take its early summer outing in Athol, on Saturday, Sunday and Monday, June 6, 7 and 8. The invitation was accepted.

MRS. ANNIE BESANT, who has been lecturing recently in New York and Boston on labor topics, believes in recognizing and supporting labor unions. She is a member of the London School board, and she introduced the motion, which that board adopted, refusing to employ contractors on school work who did not employ union men and pay union wages. This action was duplicated by the London council and nearly all the other municipal governing bodies.

THAT enterprising firm of Boston printers, the Sparrel Print, are producing some most excellent effects in unique advertising. They possess the happy faculty of arranging matter so that every word will be read and a longing created for more information on the subject. A circular recently printed by them for the Campbell Press Company is a model of skillful handling, and it will pay printers in search of new ideas to write to the company's Boston representatives for samples.

## RECENT CHICAGO REMOVALS.

So many Chicago firms have lately removed that the list below may interest quite a number of our readers doing business with the houses whose names are mentioned:

Charles Eneu Johnson & Co., manufacturers of printers' inks and varnishes, have gone from 40 La Salle street to 99 Harrison street, in the Pontiac building.

William C. Hollister & Bro., printers, found their quarters, in the rear of 119 Clark street, too small, and now their friends will find them at 148 and 150 Monroe street.

The Hamilton Manufacturing Company, makers of wood type and printers' wood goods generally, were crowded for space at 259 Dearborn, and went south on the same street to No. 325.

The Photo-Tint Engraving Company, general designers and engravers, formerly at 69 Dearborn street, are now located at 76 to 82 Dearborn street.

The Ault & Wiborg Company, makers of printing inks and dry colors, for a number of years at 154 Monroe street, will now be found at 332 Dearborn street.

C. Jurgens & Bro., electrotypers and stereotypers, formerly at 12 Calhoun place, have recently removed to 148 to 154 Monroe street.

George H. Morrill & Co., manufacturers of printers' inks and varnishes, at one time located at 119 Fifth avenue, removed, on May 1, to 304 Dearborn street.

C. B. Cottrell & Sons, makers of the well-known Cottrell presses, have changed their location from 392 Dearborn street to 309 Dearborn street, across the road.

W. J. Jefferson, the printer, formerly at 170 Madison street, has just moved to 175 Monroe street, into a building recently purchased by him, and to which he has added two extra stories.

Wyckoff, Seamans & Benedict, manufacturers of the Remington standard typewriter, have taken the ground floor of Mr. Jefferson's building, at 175 Monroe street, removing from their old stand at 196 La Salle street.

The E. P. Donnell Manufacturing Company, manufacturers of wire stitchers and bookbinders' machinery, have moved a few doors north of their old location at 325 Dearborn street into the Como building.

The Graphic Company, publishers of the *Graphic*, have removed from 69 Dearborn street to 358 Dearborn street. The *Western Druggist* has also removed from the same place to the same place as the *Graphic*.

The P. Aug. Rosen Company, manufacturers of cabinets, cases, galleys, etc., for printers, formerly at 243 Wells street, are now located at 320 South Clinton street, where they have much larger quarters.

George H. Taylor & Co., commission paper dealers, have removed from 184 Monroe street to 207 and 209 Monroe street, in the next block west.

Farmer, Little & Co., the typefounders, for some time located at 154 Monroe street, are now at 109 Quincy street, in the new Rand-McNally building.

Landis & Co., manufacturers of printers' leads and slugs, have removed to 215, 217 and 219 South Clinton street.

M. A. Ehrsam & Co., general engravers, have removed to 128 and 130 South Clark street.

Besides the changes mentioned above, there have been a number of eastern firms who have established branches in Chicago, among whom we may name the MacKellar, Smiths & Jordan Company, typefounders, 328 and 330 Dearborn street, and T. W. & C. B. Sheridan, makers of paper cutters and bookbinders' machinery, 413 Dearborn street.

THIS is decidedly "fresh," if not refreshing. The advertisement (*verbatim*) is clipped from a New York daily: "Newspaper publisher desires to meet printer with office suitable to print high-class weekly quarto paper, with good presswork runs, who will arrange time of payments to correspond with collections. Address Desirable Opportunity, — office."

## BOOKS RECEIVED.

GUIDE TO SOLDIER'S HOME, with sketches of Dayton. Guide Publishing Company, Dayton, Ohio.

An instructive and interesting pamphlet of 88 pages, creditable to the compilers and printers.

LEFFINGWELL'S RULES OF ORDER. Samuel L. Leffingwell, Indianapolis, Indiana.

A neat and desirable booklet, the material of which is arranged in admirable form for reference and having all the advantages of brevity and accuracy.

QUICK METHODS FOR FINISHING SOLAR PRINTS IN CRAYON, PASTEL, OIL AND WATER COLORS, and many Useful Hints to Artists and Beginners. W. H. Clarke, Chicago.

A neat little manual of instruction, tastefully printed, and answering many inquiries from those interested in drawing, and that line of art.

THE PRACTICAL PRINTER. Second Edition. H. G. Bishop, Oneonta, New York.

In a note to this second edition the author states that it is practically the same as the first, showing that it has met the requirements of the craft, and that the author's ideas have been abreast of the times. Every printer should possess a copy.

SELF-INSTRUCTION IN BUSINESS QUALIFICATIONS. Charles S. Macnair Publishing Company, Detroit, Michigan.

This book of two hundred and forty four pages should be in the hands of every young man or woman, no matter what their occupation in life. There is always a time when the information contained between its covers is invaluable, and we commend the work to our readers as eminently desirable.

BISHOP'S SPECIMENS OF JOBWORK. H. G. Bishop, Oneonta, New York.

This volume contains one hundred and twenty-eight pages of specimens of jobwork all regularly indexed, so that the printer who is in doubt as to the shape a piece of work should be put in will find it a ready text book, which with other instructive matter, makes the work one which should meet a large sale, considering its moderate price, \$2.

BOOK OF IDEAS FOR ADVERTISERS. D. F. Mallett, publisher, New Haven, Connecticut.

The man that does not advertise, and, therefore, does not wish to increase his business, should carefully avoid this book, for if he sends a dollar for it and thoughtfully studies it, a new light will break in upon him, a new energy enthuse him, and before he is aware of it he will be spending his money in printers' ink, judiciously and profitably. It is a great head-work saver.

IN THE HAUNTS OF BLOOM AND BIRD. By Brainerd Prescott Emery, Press of Charles N. Andrews, Brooklyn, New York.

We acknowledge receipt of a copy of the above work, an edition of only 114 copies of which was printed, our copy being No. 92. Typographically it is one of the neatest little books of poems that we have seen in many a day, and reflects great credit on the printer. This we say with the full knowledge that Mr. Andrews has not reached the goal of his success by the usual preliminary training that most printers go through, and are free to acknowledge that in this case a volume has been produced of which any printer might feel proud.

PATERSON, NEW JERSEY: Its Advantages for Manufacturing and Residence; its Industries, Prominent Men, Banks, Schools, Churches, etc. By Charles A. Shriner. Published under the auspices of the Board of Trade.

On looking over this well printed volume of 825 quarto pages, finely illustrated with two hundred and more photo-engravings, some of them veritable works of art, we cease to wonder how Paterson has become so famous with its concentration of varied bustling industries. The advantages of situation, natural power and proximity to market are good, but only good in direct ratio to the extent of their becoming known to those seeking desirable locations for manufacturing and residence. The board of trade of this bouncing New Jersey city is made up of long heads, full of brains and broad ideas—quick discerning and discreet men, who

know the value of a generous spread of ink and type, and the futility of attempting to boom a town with niggardly parsimony, and squeezing the printer. Hence this princely book, which ought to serve as a guide and model to other places ambitious to become prominent manufacturing centers.

Paterson is of interest to printers, electrotypers and photo-engravers, because it is the abiding place of John Royle & Sons, whose business covers the earth, and exemplifies what unadulterated honesty in trade can do. Their specialties are routing machines and cutters, repeaters for rapidly reproducing Jacquard cards, cabinet saws for squaring up electrotype plates, etc. Every prominent establishment uses them—they have to—or else fall behind in the struggle for supremacy in high class work. It is also of interest because Heber Wells, manufacturer of wood type, cases and printers' wood goods, has his factory here. Mr. Wells' office and salesrooms are at 8 Spruce street, New York city, but the manufacturing is done in Paterson. Either of these firms would be pleased to see callers when in that thriving city.

We acknowledge the receipt of volume XI of the "Printers' International Specimen Exchange." The space at our disposal forbids an extended notice of its beauties in the present number, but we hope to speak of its merits more fully in the July issue.

We are always glad to see the good old face of the *Popular Science News and Boston Journal of Chemistry*, which has entertained us for a score or more of years. It is invariably interesting and reliable with its monthly presentation of current discoveries and developments in the different branches of physical and natural science—occupying the field almost entirely to itself, and doing it well, exceedingly well.

J. G. SCHELTER & GIESECKE, typefounders, Leipsic, Germany. The fourth number of the third volume of their *Typographic News — Typographischen Mitteilungen*—replete with rich and ornate engraved and typework designs, in tints, which, with the specimens of handsome script faces produced by their foundry, makes one of the most elegant achievements of the printers' and engravers' art.

THE *Amateur Electrician* from Ravenswood, Illinois—a journal for amateurs and beginners in the study of electricity—is an exceedingly interesting and well managed publication, worthy of the attention of older and wiser heads than those it modestly lays its claims before for encouragement and support. The "science of the nineteenth century" is advancing wonderfully rapid and the thousands who are awakening to the possibilities of its subtle force will find this little journal of valuable assistance.

THE first number of the *Quarterly Register of Current History*, published by the Evening News Association, Detroit, Michigan, has been received, and is in every way a very creditable production. Its purpose is the bringing together of such matters appearing in the daily newspapers as may be valuable for permanent preservation. The present number contains a review of the entire year of 1890, but hereafter the review will be made quarterly. The articles are well selected and arranged for reference, and so convenient that the *Register* is worthy of a large circulation.

THOMAS TODD, Boston, Massachusetts. Dainty little brochure on the cover of which appear the words: "The Boys Wanted It Printed." It is Mr. Todd's speech put in excellent shape, the title being, "Some Smoke Talk Puffed Out at the Master Printers' Club, Boston, Massachusetts, February 19, 1890." Mr. Todd has enlightened those who did not have the pleasure of listening to his remarks, by two very suggestive quotations, the one at the beginning being, "All were awake," and the one at the end, "All were asleep." Whether he was economical of truth or not in putting these in, we cannot say. But seriously, the speech has been printed in unique style, and in its present form will be preserved as a beautiful souvenir of the occasion. It is set in French old style throughout, and the only attempt at color is the initial printed in blue. Heavy laid paper inside and imitation parchment leaves outside, give it an elegant and tasteful look.

THE *Colorado and Texas Exchange Journal*, published by the E. N. Baker Company, of Denver, Colorado, comes to hand in a

great special industrial edition of seventy-five thousand copies, devoted to the State of Texas, one hundred folio pages well illustrated, using up fifty-five tons of book paper, and costing over \$22,000 to issue. It is very well gotten up, indeed, and contains a vast amount of information, statistics and solid facts about the Lone Star State, presented in an attractive and interesting manner. The unfortunate omission of a state map, alone detracts from its value.

ANYBODY that supposes, for a moment, that there is an end to the good things that come out of Gotham, should send at once to the Rural Publishing Company, *Times* building, New York, and get a copy of the *American Garden*. Everything is good about it but the name, and that is not so very bad, after all, only it fails to convey any idea of the treasures that are carried between its covers. It is a magazine devoted to the esthetic, as well as economic and practical culture of fruits and flowers. Every number is a choice entertainment in itself, full of delightfully written articles, and illustrated, well! we are getting art journals right along that don't equal it in the display of beautiful photo and other engravings, which are lavishly used as if such adornments didn't cost anything—engravings, too, that are evidently not made to do service in somebody's seed catalogue. After carefully studying its finely printed pages we find ourself unconsciously turning over a new leaf in the almanac to find out how long before the next month's issue will make its appearance.

#### SPECIMENS RECEIVED.

- J. H. PARRY, Salt Lake City, Utah. Business card.
- CASH & GEYER, Joplin, Missouri. Business card, tint on which is too heavy.
- BRADNER-ANDREWS PRINTING COMPANY, Kansas City, Missouri. Business card.
- H. L. CARLISLE, Oakland, California. Invitation card of envelope form.
- R. P. TUTEN, Iron Mountain, Michigan. Engraved card and letterhead in colors.
- R. R. McCABE & Co., Chicago. Announcement circular in colors, tints and bronzes.
- CONNECTICUT HOME PRINTING COMPANY, Hartford, Connecticut. Business card in excellent taste.
- GILES BROS., Troy, New York. Trade circular and business card, evincing good taste and workmanship.
- PENFIELD BROTHERS, Philadelphia, Pennsylvania. Calendar-blotter of creditable design and good execution.
- W. H. WHITE, Cleveland, Ohio. A calendar-blotter in colors, the presswork on which would be hard to excel.
- McCULLOCH & WHITCOMB, Albert Lea, Minnesota. An assortment of general commercial work, of fair execution.
- BEELS & HOWARD, Emmetsburg, Iowa. Specimens of everyday printing that are creditable in all their features.
- C. L. LAREW, Knoxville, Tennessee. Business card printed on fancy bristol. Attractive in design and of fair execution.
- FRED S. LANG, Los Angeles, California. Noteheads and business cards of considerable merit in selection of colors and harmony of design.
- PACIFIC PRINTING CO., Portland, Oregon. Several specimens of everyday commercial work displaying tasteful composition and clean presswork.
- PEASE & SON, Kalamazoo, Michigan. Firm card in colors and tints, which shows that the title of "artistic printers" is deservedly used.
- WM. G. JOHNSTON & Co., Pittsburgh, Pennsylvania. Firm circular and business card of original and humorous design and good workmanship.
- FLETCHER, BROWN & Co., Boston, Massachusetts. Embossed business cards in colors, bronzes and tints, anything more elegant

than which we have rarely seen, showing as they do a richness in decoration and a quietness in general tone that produces the true artistic effect.

O. A. GANDY, Plymouth, Indiana. Design for page advertisement, showing good mechanical execution, but no particular originality in design.

THE BELL PRINTING AND MANUFACTURING COMPANY, Roanoke, Virginia. Trade booklet and business card. Bright in conception and admirably worked out.

TERWILLIGER & PECK, New York. Business circular and announcement cards of novel and chaste design, well rendered in the composition and presswork.

PLOWMAN PUBLISHING COMPANY, Moline, Illinois. Business circular in colors and specimen of letterpress in black. Creditable in execution and original in design.

JOSEPH C. DUPORT, Westfield, Massachusetts. Second souvenir edition of specimens of printing, which show that Mr. Duport turns out an average excellence of work.

D. HAMILTON, *Gazette* office, Waukegan, Illinois. A large assortment of general commercial printing, the composition on which is tasteful and the presswork of a high standard.

W. H. WAGNER, Freeport, Illinois. Specimens of commercial, society and catalogue work, showing the general run of printing turned out, and we must say that it is good in all its features.

P. C. DARROW PRINTING COMPANY, Chicago. Engraved business card printed in colors, and engraved and letterpress circular in tints and colors, both striking in effect and admirable in design.

ALLEN A. EDMONDS, Maysville, Kentucky. A large collection of general commercial and society printing, bearing that clear, clean and tasteful appearance that only a first-class printer can confer.

NATIONAL LINSEED OIL Co., Chicago. Business card, lithographed, in colors. The name of the lithographer is not given, but he is to be congratulated on the effectiveness of his design and color selection.

E. N. ALLING, New Haven, Connecticut. Book of specimens of printing, displaying an artistic and judicious taste in composition and in the selection of colors, admirably sustained by first-class presswork.

E. McC. AFRICA, Huntingdon, Pennsylvania. Design for commercial traveler's advance postal, singularly apropos to the alleged diversions of that guild, as it contains an ace of each suite in the four corners respectively.

E. H. FREEMAN, Los Angeles, California. Embossed business cards and envelope corner card in colors, bronzes and tints. Clever and humorous in their designs, and showing first-class workmanship in their development.

C. M. STONE & Co., St. Johnsbury, Vermont. Specimens of embossed and colorwork and plain letterpress, showing a judicious and tasteful conception of the requirements of the work, and a thorough execution in composition and presswork.

UNION BANK NOTE COMPANY, Kansas City, Missouri. Embossed letterhead and blotter, in colors, of handsome design and good workmanship. As the result of an original method in embossing they show the merit of the process to the best advantage.

KINGSLEY & BARNES, Los Angeles, California. Business card, in which a combination of typework and engraving is shown in colors and tints. Beautiful in effect and chaste in design. A lack of solidity in the central block, printed in brown, is observable.

H. O. SHEPARD COMPANY, Chicago. Four-page business circular in colors, displaying much ingenuity in design. The colors are well chosen and harmoniously combined, the composition is perfect, and the presswork, as usual with the work turned out from this house, leaves nothing to be desired.

W. E. W. FELT, Worcester, Massachusetts. Programme and menu of the banquet of the Worcester Typothetæ. One of the most beautiful specimens of the printer's and engraver's art;

gracefulness and artistic taste are displayed upon every page, making it a souvenir of the highest excellence. We regret that the space at our disposal will not permit of a description in full of this elegant typographical production.

GEO. W. RUNYAN, New London, Ohio. Business cards and programme of high school commencement exercises, in colors and tints. The latter is an artistic and meritorious piece of work, and evidences that the mediocrity of the composition on the cards is not from lack of ability. The presswork is creditable.

CHARLES E. MAY, Forest City, Iowa. Badge and business card, the designs and workmanship of which are of marked merit, considering the youth of the contributor and the material at his disposal. The successful treatment of the flag upon the badge in three colors from a single cut is particularly commendable.

JOHN W. SHEPHERD, Brockport, New York. The specimen submitted is the announcement of the marriage of Miss Ellen M. Doyle, in Albion, New York, on April 21, 1891, to the sender, and we are in doubt if criticisms or congratulations are in order, though we trust our good wishes will be none the less acceptable because a little late and in the wrong column.

L. BARTA & Co., Boston, Massachusetts. Spring announcement catalogue for clothing house of L. P. Hollander & Co., the illustrative engravings in which are superb, the letterpress admirable and the presswork of a character sustaining the excellence of the other departments. The cover design is chaste and attractive, and the whole production has a tone of quiet elegance.

ROBINSON & STEPHENSON, Boston, Massachusetts. Edition No. 2 of *Scraps from Grand Rivers*, a book of some one hundred and twenty-five pages printed on brown wrapping paper. With President Lincoln we can say "For people that want this sort of thing, this is the sort of thing they want," but doubt the utility of this *outré* style. It is novel, true enough; but the difficulty in reading the print defeats its object.

R. Y. MCBRIDE, Los Angeles, California. An elegant and tasteful announcement circular, with embossed covers and body in tints and colors. The design is novel, the composition first-class, the selection of tints and colors artistic, which, with the presswork all that could be desired, is an endorsement of the motto on the cover, "Tis not in mortals to command success:  
But we'll do more, Sempronius, we'll deserve it."

W. H. WRIGHT, JR., Buffalo, New York. Business circular and advertising blotter and calendar combined. Mr. Wright's printing seems to be appreciated not only in his own city, but by every printer who has had the privilege of examining it, both abroad and at home, judging by the well-advised criticism appearing in his circular, a fac simile of a clipping from the Buffalo Sunday morning *News*, of May 10, in which he is styled "Buffalo's fine printer," and from the handsome specimens sent us we consider the expression eminently just and deserved.

#### OUR TYPE SPECIMEN PAGES.

The MacKellar, Smiths & Jordan Company show in this number a page of their new face called "Dynamo," made in sizes from twelve to forty-eight point. The letter has a lower-case, is all complete with figures, and will be found useful in every office.

The Keystone Typefoundry show a page of their Lining Gothic, a letter that is so well known that it needs no extended notice. The page contains all the various sizes. The fact that this letter lines perfectly, both at top and bottom, is a feature that readily commends it to all.

Farmer, Little & Co., of New York, show the various sizes of their Abbey series and Old Style Aldine. The criticisms made on the Abbey series by one of our contemporaries recently were considered by the makers of this letter entirely uncalled for, as Farmer, Little & Co. were the first to produce the face or anything like it, and its enormous sale and the fact that all offices having the series use it constantly, goes to show that it is a most popular style of letter.

#### PERSONAL.

We acknowledge calls during the past month from the following gentlemen: R. L. Lee, printer, Mitchell, Ind.; R. W. Mansfield, representing International Typographical Union, Boston, Mass.; Henry Gibson, of Gibson, Miller & Richardson, printers, Omaha, Neb.; Earl Bronson, of the *Manchester Democrat*, Manchester, Iowa; John Rychen, president Queen City Printing Ink Company, Cincinnati, Ohio; A. E. Lindsly, of the St. Louis Printers' Supply Company, St. Louis, Mo.; H. E. Clark, representing the Fountain Tympan Oiler and Benzine Brush Company, Kansas City, Mo.; C. B. Cottrell, of C. B. Cottrell & Sons, press manufacturers, New York; J. W. Turner, former proprietor *Leader*, Earlville, Ill.; Frederick Van Wyck, secretary Liberty Machine Works, New York; H. F. Hackedorn, manager, E. Owen, city editor, *Republican*, Lima, Ohio; Walter B. Hull, of the International Printers' Supply Company, El Paso, Texas; Mr. Butler, of Butler & Kelley, printers, New York; Maj. W. J. Pollock, superintendent of the United States Free Delivery Service, Aurora, Ill.; Reed Campbell, editor and proprietor *Morning Sun*, Norwich, N. Y.; W. S. Morse, of Whitlock Machine Co., Boston, Mass.

#### A GREAT SEXTUPLE PRESS.

It is in order to wonder when the limit of size and capacity will be reached in great newspaper presses. When the first quadruple presses, with a capacity of 48,000 eight-page papers an hour, were built, it was not unreasonable to believe that in those leviathans of the pressroom was realized the maximum of capacity. But the New York *Herald* announces that a sextuple press has just been completed that will print 72,000 eight-page papers per hour, or a proportionate number of sixteen or twenty-four page papers. Twenty papers a second, printed and folded, is an achievement worthy of note even in this age of wonders, when nearly everything is considered a matter of course.

#### IMPORTANT LITERARY NOTES.

The latest news from the publishers is the purchase from Mrs. Frank Leslie of all her plates and copyrights of juvenile books, Christmas books and illustrated story books of travel, adventure, etc., by F. T. Neely, a Chicago publisher. This is probably the most important as well as the most extensive transaction that has lately occurred in the literary world. This immense purchase will open up to the Chicago house new avenues, in which Mr. Neely will find room for expansion to meet the demands of a trade more commensurate with his facilities and activity.

#### ETCHING STONES.

Messrs. Baylis, Lewis & Co., of Worcester, state that the following is a safe way to etch stones: Roll up solid and sharp; dust on fine powdered resin, then French chalk. Saturate a piece of flannel (or woolen material of any kind thick enough), stretched tightly on a piece of board of any suitable size (say 12 by 4 inches), with benzine. Lay two pieces of reglet on the margin of stone, and then turn the saturated flannel face downward to within an eighth of an inch of the stone, and in a few seconds the resin will have become melted and incorporated with the rolling-up ink, forming a perfect protection against nitric acid. As soon as the job begins to look glossy, the board must be moved on, as it will not do to remain too long, for obvious reasons. Of course, the benzine must never come in contact with the job. There are other things as well as benzine which will answer.—*Printing Times and Lithographer*.

An interesting programme has been arranged for the pressmen's picnic to be held at Melville gardens, Boston harbor, on June 20. The sports will consist of a three-legged race, each pair to be made up of a pressman and a compositor; a hundred yards dash, standing jump, and a ball game between teams made up from employes of the Barta Press and Alfred Mudge & Son. Handsome and appropriate prizes will be awarded to the winners.

**A SOUBRETTE.**

Photo-Zinc Etching from Pen Drawing, by A. ZEESSE & Co., Chicago.

## TRADE NEWS.

ARTICLES of incorporation of the Salt Lake City Tribune Job Printing Company were filed recently; capital stock, \$30,000.

THE *Crescent*, Frankfort, Indiana, will hereafter be published by the Crescent Publishing Company, they having purchased the paper and plant of Staley & Staley.

THE firm of Schimmel & Stevenson, job printers, Indianapolis, Indiana, was dissolved April 13, Mr. Stevenson purchasing his partner's interest and continuing the business.

F. W. CHRISTERN, the oldest foreign bookseller in the United States, died at his home in New York, on the last Saturday in April. He was highly esteemed for his probity and knowledge.

THE Henry Seibel Printing Company, of Cincinnati, Ohio, succumbed, May 6, to dull trade and dilatory collections. Colon Schott, assignee, will attempt to settle \$5,000 liabilities with \$3,000 assets. No preferences are declared.

THE stockholders of the Scranton *Tribune* have elected the following officers: President, W. T. Smith; vice-president, Hon. Alfred Hand; treasurer, Ezra H. Ripple; secretary, Everett Warren; editor, Claude G. Whetstone.

A NEW office will soon be opened in Nashville, Tennessee, by Charles O. La Hatte. Mr. La Hatte formerly worked in Nashville, but for some time has been located in Indianapolis, Indiana. He will make a specialty of artistic printing.

ARTICLES of incorporation of the St. Louis (Missouri) Eureka Publishing Company, capital \$10,000, were filed April 23. The stockholders are Annie C. Allen, 380 shares, and T. J. Christy, A. B. Hopkins, F. L. Bryan and A. E. Christy, 5 shares each.

THE Wessel Printing Company, of Lincoln, Nebraska, have decided to dispose of their job printing and stationery business, and devote their entire time to their paper, the *Capital City Courier*. This is a good chance for some one to purchase a good business.

THE Beard-Hudson Printing Company, of Minneapolis, Minnesota, capital stock \$10,000, has filed articles of incorporation with the secretary of state. The incorporators are: Harrington Beard, H. B. Hudson, F. R. Carrington, F. W. Reid and G. H. Rust, of Minneapolis.

THE Manhattan Typefoundry, of New York City, announce a change on May 1, 1891, from 61 Frankfort street, to larger and more convenient quarters at 52 Frankfort street, where they will carry in stock a complete assortment of printers' materials, in addition to their types, rules, etc.

F. R. BIRDSALL, who in March succeeded the firm of Arnold & Birdsall, Nashville, Tennessee, has been appointed State printer, and as a natural sequence has largely increased his facilities. He will shortly remove to the building until recently occupied by the Cumberland Presbyterian Publishing Company.

WE call the attention of our readers to the advertisement of G. Edward Osborn & Co., of New Haven, Connecticut, appearing on another page. The Kelgum tape referred to is something new, and we advise printers to look into its advantages. Circulars and all information will be promptly furnished by this firm.

FRED G. WILLARD has removed the manufacture of his job printing presses from Chicago to Poughkeepsie, New York. He has established an office in Utica, at 172 Genesee street, where he will control the sale of his presses, and act as agent for the sale of the Charles P. Willard & Co. steam engines and boilers, also metal type, typewriters and printers' supplies.

THE circulation, goodwill and plant of the *Daily Live Stock Recorder*, published by Mann & Wilson, at West Indianapolis, Indiana, was sold by the receiver, May 2, to Frederick Shepard, his bid being \$1,450. Mr. Shepard also assumed the incumbrances, amounting to \$2,300. It is understood that a stock company will be formed.

THE Stewart & Woolly Company has been incorporated at Camden, New Jersey. The objects of the corporation are to purchase materials for the printing, binding and publishing of the

periodicals known as the *Philadelphia Music and Drama* and *Philadelphia Music Journal*. The capital stock of the company is \$50,000, and the amount paid in is said to be \$1,000. The incorporators are W. Chandler Stewart and Dion M. Woolly, of Philadelphia, and Tenis Starr, of Woodbury, New Jersey.

THE business organized by J. H. Cranston, manufacturer of the Cranston press, for years conducted under his name, has been incorporated, and will hereafter be known as the Cranston Printing Press Company. Mr. Cranston holds the office of president and treasurer of the new company, and all its interests will be under his personal supervision, as heretofore. Mr. G. F. Noyes is secretary.

THE W. O. Hickok Manufacturing Company, of Harrisburg, Pennsylvania, have just issued a neat circular, advertising the Jones Signature Press, one side of which contains cuts and descriptive matter of the press, printed in brown ink, and the other side a fac simile of a page of the *Century* magazine, the article shown being a portion of that written by Theodore L. De Vinne, in the November, 1890, number, referring to the plan of dry-pressing the sheets before they are bound. It is a unique and attractive circular.

UNDER date of April 28, the announcement was made that the co-partnership heretofore existing between George E. Matthews, Frederick L. Hurlbutt and Robert E. Pollock, under the firm name of "The Buffalo Printing Ink Works," having been dissolved by the death of Mr. Hurlbutt, the business would be continued under the old firm name by the surviving members of the company and by George E. Burrows, who has been associated with them in the business. All demands against the former firm will be paid by the successors.

ON the first Monday in May, the venerable William C. Martin, the president of the New York Typothetæ, and the oldest employing printer in that city, died at his home, 155 West Twenty-fifth street, in his eighty-first year. He was the son of a physician and was born in New Jersey January 12, 1811. When only eleven years old he entered the employ of John C. Totten, who kept a printing office on the lower Bowery. He served his time both at the press and case, and then became a journeyman, working in New York and Philadelphia. He began business for himself in 1835. His office was at 111 John street, New York City. He was a member of the original Typothetæ, and chairman of the printers' meeting in the Astor House in 1872. When the Typothetæ was reorganized in 1883 he was chosen president, which office he held until his death.

## CHICAGO NOTES.

H. H. LATHAM, of Chicago, bought the state bindery printing establishment, at Pierre, South Dakota, April 30, for \$3,000.

MR. ANDRE MATTESON and Miss F. C. Haines, of the Chicago *Legal Adviser*, have been united in the holy bonds of matrimony.

THE Orcutt Company, Chicago, has been incorporated to do a printing and lithographing business, with a capital stock of \$100,000.

THE Hadley & Vawter Company, of Chicago, has been incorporated, with a capital stock of \$25,000, for printing and publishing; incorporators, G. W. Hadley, W. A. Vawter and C. W. Griggs.

MESSRS. GOLDING & Co., manufacturers of printing presses and supplies, will open a branch salesroom at 45 Plymouth Place, Chicago, on July 1. It will be in charge of Mr. Frank Estes, of Chicago.

J. L. REGAN has bought the old printing plant of the Clark & Longley Company, which has been running some time under the name of the United States Printing Company, and will consolidate the same with his already extensive establishment.

MR. BLOMGREN, of the firm of Blomgren & Lindholm, the well-known photo-process engravers, whose health has been greatly impaired of late, sailed from New York for Sweden on Wednesday,

May 6, to seek rest and restoration during the summer at the health-giving springs of that country. We join with his numerous friends in an earnest desire that he may return to Chicago reinvigorated and benefited.

GEORGE E. DETWEILER, editor of the *Rights of Labor*, mourns the loss of his two young daughters by scarlet fever. One, aged three years, died May 11, the other, six years old, died on the 12th. His wife is in a precarious condition and may not recover.

JOHN CULVER'S long deferred libel suit against the Herald Company for \$25,000 damages for publication of an article reflecting on his character as a Cronin juror, called for trial on the 12th, resulted in a verdict for the defendants on the 21st of May.

AUGUSTUS K. MILLER, a native of Chicago, died on April 24, at Troy, New York, where he had been associated with the *Daily Press*. He was also telegraph editor of the *Northern Budget*, of that city, and formerly managing editor of the *Syracuse Sunday Times*.

EX-EDITOR MELVILLE E. STONE was nominated May 21 by Director General Davis for chief of the department of foreign affairs of the World's Columbian Exposition. Altogether this is the most important nomination within the gift of the director general.

AMONG the stock companies licensed May 18 was the Chicago Tageblatt Publishing Company, Chicago, capital stock \$25,000; to issue a German daily newspaper and to do general printing; incorporators, Louis Wagner, George Leininger and Charles H. Puscheck.

JOHN GRAHAM, the typesetter, whose place of business is at 451 Belden avenue, is busily engaged in cutting some new features in type, which he expects to bring out in a short time. We are indebted to this gentleman for the ornaments used between the paragraphs under the heading "A Few Smiles," in this issue.

JOHN E. TANSEY, fifty years old and married, and the traveling agent for the *Breeder's Gazette*, died from heart failure at 6:10 o'clock on the evening of May 12, while sitting in a chair car of the Santa Fé road in Dearborn station. He was about to start out on a trip and died a few minutes before the train pulled out of the depot.

JAMES J. WEST, ex-editor of the *Times*, appeared in court May 14 as his own counsel in the suit of John Irwin and George Rand, of Keokuk, Iowa, to foreclose several mortgages for nearly \$100,000 on Mr. West's magnificent homestead in Hyde Park, which he built in the heyday of his prosperity. Mr. West concedes but \$40,000 of the mortgage, and contests the balance, over \$45,000.

IT was a pleasure to meet our old-time friend, Hon. W. J. Pollock, superintendent of the United States free delivery service, who has recently been on a tour of inspection among western post-offices. The major looks well, acts well and does well, bearing his distinguished honors with becoming meekness. We imagine he finds a hundred-fold less shadiness in his present department than he used to discover among the Indian agencies.

AMONG the names of those favored by Mayor Washburne with appointments in the municipal service we are glad to notice that of Byron E. Fish, a printer long and favorably known by the craft in Chicago and elsewhere. Mr. Fish vacates a position in the composing room of the H. O. Shepard Company and will be employed in the city water department, of which service he has a most thorough and accurate knowledge. No puns.

WORD now comes that the typesetting and machine composing contest that was to have taken place in this city on June 15 has been postponed by the committee until October 5. It was proposed to have the test last one week, two days being devoted to work from reprint in short takes, two days from manuscript in similar takes, one day of ten hours' continuous run on long takes, and one day's practice on make-even, market work, etc., but the plan may be changed before the contest comes off.

MR. STEPHEN McNAMARA, the well-known manufacturer of printers' rollers, corner of Clark and Van Buren streets, Chicago,

has found it necessary to add 2,000 square feet to the floor space of his premises owing to increase of business, and purposes putting in new and improved machinery. Mr. McNamara's slow recovery from an attack of la grippe, which was followed by lung fever, has been a source of much anxiety to his friends, but with more settled weather a marked improvement in his condition is hoped for.

THE *Scotsman*, one of the most influential journals in the three kingdoms and the leading paper in Scotland, in a long leader reviews the progress of the city of Chicago since the settlement of the place in 1833. Its advance is declared to be one of the wonders of a wonderful age. Chicago easily passed Philadelphia, and its only rival now is New York, which she will soon pass, and then compete with London for the rank of the greatest city of the world. Chicago's position and prospects make her the most suitable city in which to hold a world's fair.

OLESON, BARNARD & STOLZ is the name of a new firm of engravers, recently started in this city, whose place of business is at 113 Adams street. While the firm is new, the gentlemen composing it are well known for the character of work they turn out. Messrs. Oleson & Stoltz were formerly in business for themselves at 175 Clark street, and were afterwards connected with the firm of George H. Benedict & Co., with whom Mr. Barnard also was. The company produce wood, zinc and wax engraving and are general designers and electrotypers.

A CONTROLLING interest in the stock of the Chicago *Inter Ocean* has passed by purchase into the hands of H. H. Kohlsaas. The stock of the paper is divided into 3,000 shares, of which William Penn Nixon, the editor-in-chief, holds something less than 1,200, the difference between his holding and the number named being owned by a few employés of the newspaper. Mr. Kohlsaas held 100 shares and has now 1,800. The largest purchase was made from the Peck Brothers, while the balance of the shares came from people scattered throughout the United States. There will be no change in the personnel of the *Inter Ocean* staff as the result of Mr. Kohlsaas's purchase.

#### OF INTEREST TO THE CRAFT.

THE printers of Aurora, Illinois, organized a typographical union early in May, there being nineteen charter members.

CHICAGO PRESSFEEDERS UNION, with a membership of about eighty, is seeking admission to the International Typographical Union.

THE Middlesborough (Ky.) printers' strike has been settled. The objectionable foreman has resigned and the men have gone back to work.

AT a meeting of Duluth Typographical Union, held May 3, it was decided to furnish all laboring men printed lists of business firms which advertise in the *Tribune-Post*.

A MEETING of the Sioux City (Iowa) Typographical Union, on May 12, was brought abruptly to a close by the death of one of the members, Frank L. Fifield, from rupture of a blood vessel.

AT a meeting of New Orleans Typographical Union, No. 17, May 10, resolutions indorsing the strike of the workingmen of the Builders' Council and appropriating \$100 to aid the strikers, were passed.

THE *Northern Nebraska Journal*, Ponca, Nebraska, finds it difficult to secure compositors, and in consequence Mr. Huse, Sr., and Eugene are forced to make typos and general managers of themselves.

CHICAGO is overrun with printers and arrivals are numerous. The union will not assist the Messrs. Donnelley on the directory this year and advertisements for non-union printers are issued throughout the country.

THE Ogden Typographical Union is making great preparations for the ball to be given at Lester Park pavilion on the night of May 20. In addition to the terpsichorean pleasures of the evening, arrangements have been made to have a miniature newspaper in

operation, where the "copy" will be written, the type set, the forms "made up," and the paper printed in plain sight of the audience.

AN advance has been demanded by Pittsburgh Typographical Union, No. 7, and L. A. 1630, Knights of Labor, of from 42½ to 45 cents per thousand ems on morning papers, and from 37½ to 40 cents on afternoon papers.

THE *Typographical Journal* is replete with interesting matter for union printers. Well edited, and neat and clean in its mechanical execution, the desire of the craft for its weekly appearance testifies to its usefulness and appreciation.

ON invitation from the chairman of the fire department committee, E. R. Parker, Houston Typographical Union, No. 87, participated in the parade May 13, on the occasion of the assembling of the State Firemen's Association of Texas.

THE editor of the Clinton (Iowa) *Sunday Mercury*, C. H. Adams, had some trouble with Frank Brainard, his foreman, and drawing his revolver fired one shot. He was lodged in jail to think the matter over. The *Mercury* was but recently established.

A SUCCESSFUL entertainment was given by Indianapolis Typographical Union, No. 1, May 7, for the benefit of the state union, recently organized at La Fayette. President Frank L. Gates briefly spoke of the object of the entertainment and on the benefit of unions.

A PRINTERS' union was organized at Corpus Christi, Texas, May 7, and a charter applied for. There are now five papers published there, exclusive of the Mexican paper, and the union will have a membership of not less than twenty when it gets under full headway.

THE labor organizations of Illinois have won their victory over the Merritt conspiracy law. By a vote of 113 yeas to 9 nays the house on May 20 passed the senate bill repealing it in toto. Those voting against repeal of the law were: Anderson, Anthony, Brown, Callahan, Paddock, George Reed, Slanker, Straight, Weedon and White, of Whiteside.

THE delegates of St. Paul Typographical Union, No. 30, to the international convention were instructed, on May 3, to use all honorable means to secure the 1892 convention meeting for St. Paul, and also to vote in favor of international sick and burial benefits, for a larger strike fund, and to place the responsibility of ordering strikes in the hands of the international council.

THE Franklin Association of Pressmen and Assistants, L. A. 2,228, Knights of Labor, on May 12 ordered on strike thirteen members working as pressmen and feeders in the shop of the *Sterling Press*, George R. Macey, proprietor, at 97 South Fifth avenue, New York, to have the wages of the feeders raised from \$10 to \$12 a week, after several attempts at arbitration had failed. The bookbinders in the same shop have grievances against the management for reducing their wages, and against the foreman, who is disliked by the employés.

THE printers of Pensacola, Florida, have formed a branch organization of the International Typographical Union. The charter members are Peter McLellan, foreman of the *News* composing room; H. M. Roche, foreman of the *News* job office; Charles E. Hardick, William Bauer, L. S. Cleveland, E. J. Humphries, R. W. Cleveland, compositors on the *News*; E. M. Ackerman, foreman of H. S. White's job printing establishment; Benjamin Goldbach and Arthur Quina. Alonzo Beirne and Emmet Touart are apprentice members.

WORK upon the Printers' Home is making very rapid progress. J. D. Vaughan, of the board of trustees of the Home, gives a most encouraging report as to progress. The excavation for the foundation is finished and the stone is being put in. Carload after carload of stone and lumber are daily arriving on the ground. Through the efforts of Senator McGovney the Austin Bluffs Water Company has extended its mains to within about 500 feet of the Home. A main from the Home has been laid and connected with

the company's main. It is expected that the Home will be completed long before March 19, 1892, which is the date fixed by the contract. The trustees will hold a meeting the first week in June, at which further arrangements will be made.

AT the regular monthly meeting May 31, Chicago Typographical Union, No. 16, passed the following resolution:

*Resolved*, That it is the sense of Chicago Typographical Union, No. 16, that we favor the establishment of the nine-hour workday by the International Typographical Union, the same to take effect the first Monday in September, 1891 (Labor's National Holiday); and we hereby instruct our delegates to the Boston convention of the International union to use their best efforts and vote for the passage of a law creating the nine-hour workday.

TYPOGRAPHICAL UNION, No. 150, of Elizabeth, New Jersey, recently met and passed resolutions denouncing Governor Abbett and State Senator Marsch because the printing of the state was taken away from the *Journal* and *Herald* offices, where members of the union are employed, and given to the *Leader*, a daily afternoon paper, which is declared to be a non-union office. Gen. J. Madison Drake, the publisher of the *Leader*, had a quarrel with the union because he would not, he said, pay union rates, and persisted in employing non-union men and boys.

#### ITEMS OF INTEREST.

IN the text of the "Encyclopedia Britannica" there are 10,000 words which have never been formally entered and defined in any dictionary.

THE word "preface," used in the beginning of books, was originally a word of welcome to a meal, and was equivalent to "Much good may it do you."

A. W. WAGNALLS, of the firm of Funk & Wagnalls, publishers, New York city, was elected president of the East Tennessee Land Company at the meeting of the board of directors, April 24.

BY invitation of the president of the National Editorial Association the Mergenthaler Printing Company will have a linotype machine on trial at the editorial convention in St. Paul, July 14, 1891.

A WESTERN journalist has gone back to first principles, and announces the subscription to his paper as follows: Three months, two dozen of eggs; six months, two pounds of butter; one year, one cord of wood.

THE new directory of Westfield, Massachusetts, which has just been published, in addition to containing information usual to such works, also gives the population of every town and city in the state according to the last national census.

CYRUS T. GILLETT, of La Crosse, Wisconsin, foreman in the *Morning Chronicle* composing room, has received intelligence from a solicitor in New York that by the death of an uncle he has fallen heir to \$2,000,000. This is an exceptional "fat take."

A "LIVE" sub-editor of an English journal, in acknowledging the receipt of the news of a successful fishing excursion by Sir Algernon Borthwick, proprietor of the *London Morning Post*, wired that it was proposed to head it "Miraculous Draught of Fishes! Peter's Record Broken!"

IN a motion to dissolve an injunction, filed in the circuit court by W. H. Shoemaker against the Charles J. Johnson Printing Company, Chicago, the defendant testified that it was simply a game of freeze-out. Johnson said complainant began to swear at him because he asked who was secretary. Shoemaker picked up a large pot of paste and threw it violently at Johnson's head. He made a miss and the pot struck the foreman. The defendant himself, Johnson, seized two electrotype plates, and Shoemaker left the office in a hurry. The injunction was dissolved.

THE Minnesota state printing committee, Auditor Biermann, Treasurer Bobleter and Secretary Brown, met May 11, and unanimously elected David Ramaley state expert printer for the term of two years, at a salary of \$1,800 per year. Mr. Ramaley is already familiar with the duties of the office, and is regarded as the best possible selection that could have been made. Mr. Ramaley has

retired from the job printing firm of D. Ramaley & Sons, of which he has been the head for years. His sons will succeed him in the business. He is the veteran job printer and editor of St. Paul.

JOHN J. HALLENBECK, of the firm of Wynkoop, Hallenbeck & Co., printers, New York, died on May 6, at his home in Haddenfield, New Jersey, aged seventy-four years. Mr. Hallenbeck had been connected with the printing business all his life, and was for a number of years with Harper & Bros., where he held the position of foreman of their pressroom. In 1859 he started the business that he was connected with at the time of his death, the firm then being known as Wynkoop, Hallenbeck & Thomas. The firm was afterwards changed by Mr. Thomas' withdrawal, Mr. Hallenbeck's only son, Harry, forming the company.

### THIRD ANNUAL CONVENTION OF THE INTERNATIONAL PRINTING PRESSMEN'S UNION.

On Tuesday, June 16, 1891, the third annual convention of the International Printing Pressmen's Union will be held in Detroit, and from what we can learn it promises to be both interesting and profitable. The apprenticeship system, the action of the International Printing Pressmen's Union as regards the International Typographical Union, the organization of a benefit feature, the addition of new members, the organization of new unions, the World's Fair exhibit, and the advancement of the official journal, the *American Pressman*, are topics which will probably occupy a large portion of the time.

Detroit Union, No. 2, through the courtesy of the Michigan Stove Company, will be able to give the visiting delegates an insight into the practical workings of that mammoth concern, after which the delegates will be entertained by the company. Further arrangements for entertainment are not made known, but a most enjoyable and social time will doubtless be had. THE INLAND PRINTER wishes the delegates a pleasant and profitable convention, and trusts that much good may result from this annual meeting.

### PRESS ASSOCIATION NEWS.

THE Louisiana Press Association met at Ruston, May 27.

THE Texas State Press Association convened in annual session at Corsicana, May 12.

THE Michigan Woman's Press Association will hold its second annual meeting at Battle Creek, June 9, 10 and 11.

WISCONSIN will be well represented at the National Editorial Convention at St. Paul, July 14, 15, 16 and 17.

THE South Dakota Editorial Association will meet at Madison in August and go into camp at the lake for six days.

THE nineteenth annual meeting of the Arkansas Press Association was held at Batesville, Arkansas, May 20, 21, 22, 1891.

THE alliance editors of Kansas held a meeting at Hutchinson, that state, recently, and organized a state alliance editorial association.

THE next convention of the West Texas Press Association will take place at Baird in July next, and preparations are being made accordingly.

THE attempt to organize a "Sporting Writer's Association of the Northwest" will be continued at Rockford, Illinois, on Monday, May 25.

THE excursion committee of the Maine Press Association has arranged for an excursion to Montreal and Quebec, to take place early in July.

THE State Editorial Association of Pennsylvania will leave Harrisburg Tuesday morning, June 23, for a week's outing at Atlantic City.

THE first annual convention of the Western Inter-Collegiate Press Association was held in the parlors of the Palmer House, Chicago, May 23.

A BANQUET was given April 29 to Mrs. Sally Joy White, a well-known journalist of Boston, Mass., by the New England Woman's Press Association.

THE thirteenth annual session of the Alabama Editors' and Publishers' Association has been called to meet in Anniston on Wednesday, June 10.

ON May 4, the Georgia Woman's Press Club convened in the private parlors of the Kimball House, Atlanta, nearly all the charter members being present.

THE Northeast Nebraska Press Association was formally organized at Wayne, Monday afternoon, May 4, 1891. The next meeting will be held at Pender, Nebraska.

AT the meeting of the Pittsburgh-Johnstown Newspaper Men's Association, in April, it was decided to observe the anniversary of the flood by a visit to Johnstown on May 30.

THE Fifth Congressional Editorial Association met at Marshalltown, Iowa, May 9, the morning session being devoted to the very pertinent subject, "The Best Way to Secure Subscribers."

THE executive committee of the New Jersey Editorial Association at their recent meeting decided to visit Sulphur Springs, Virginia, on the annual excursion, starting Monday, June 22.

THE Southern Illinois Press Association, with a membership of sixty-five, met at Olney, Illinois, May 14. An address of welcome by Mayor Wharf was responded to by J. J. Penney, of Pinckneyville, president of the association.

A MEETING of the executive committee of the Kentucky State Press Association was recently held in Louisville, to arrange for the annual convention to be held in Paducah, June 4 and 5. An interesting programme was drawn up.

THE monthly meeting of the Illinois Woman's Press Association was held May 15, at the Palmer House, Chicago. Mrs. Frances Owens, Mrs. Jeannette Abbot, and Mrs. Herron were elected delegates to the national convention, July 14, at Minneapolis.

THE New York Press Club, May 5, approved the site, 50 by 150 feet, on Park place, for the new press club building and the appointment of a building committee was ordered. The land will cost probably \$375,000 and the structure itself about \$500,000.

MEMBERS of the Tennessee Press Association, April 22, held an important meeting in Memphis, and, after matters of importance to Tennessee journalism had been discussed and transacted, the members enjoyed a trip down the Mississippi and up the White river.

AT the meeting of the board of directors of the Pittsburgh Press Club, May 7, it was unanimously decided not to accept the resignation of President William M. Hartzell, tendered because of his retirement from active newspaper work to accept a place in the Pittsburgh pension office.

THE Southern California Editorial Association have elected their president, Scipio Craig, and H. B. Osborne, editor of the Los Angeles *Express*, delegates to the National Press Convention at St. Paul, July 14. They will cooperate with the Northern California Editorial Association to bring the next session of the National Association to California next year.

THE Clarendon (Ark.) *Sun* breaks forth thus: "At the meetings of the Tennessee Press Association heretofore some good, pious member has always objected to wine at the banquet. This time a dance is on the programme as one of the features of the entertainment. The *Sun* is temperance from head-rule to foot-slug, but we positively object to having a dance without wine. The two are inseparable, and let us have both or neither."

FIFTY employes of the New York *Daily News* and a few invited guests had a dinner on the night of May 11, in the library of the press club, in honor of the twenty-fifth anniversary of the connection of their managing editor, George Bartholomew, with that paper. Among the guests were Col. John A. Cockerill, president of the press club; ex-Judge Gunning S. Bedford and Alfred Trumbull. George Bates, of the *News* editorial staff, presided.

A TEA was given by the New York Woman's Press Club at their rooms, No. 11 West Eighteenth street, April 25. After considerable chatting over the cups of tea a little programme was carried out of music and recitations. Miss Mabel Stevenson warbled like

a bird — half a dozen in fact, Miss Miller sang some sweet songs, Mrs. Lippincott (Grace Greenwood) told some clever Yankee stories, and Miss Georgia Cayvan recited "The Blacksmith," a tale of the war, in a way to make every lady cry.

It is understood that the New York Associated Press is to organize a stock company, with a capital of \$3,000,000, to be divided among the present members of the association. David M. Stone, of the *Journal of Commerce*, is to be president of the company, and Whitelaw Reid, Charles A. Dana, James Gordon Bennett, Joseph Pulitzer, George Jones, and Elliott F. Shepard are to be directors. The company will engage in news distribution as a commercial enterprise, with a view to earning dividends on its stock, and this implies a larger liberty in the sale of franchises than was possible under the old régime. It is said that the change will take place about June 1.

#### PAPER TRADE ITEMS.

MOSCOW, Idaho, will soon have a paper mill.

A STRAWBOARD mill is to be built at Averyville, Michigan.

S. W. PIERCE'S new mill near Flint, Michigan, is now completed.

A COMPANY has been organized at Marseilles, Illinois, to build a pulp mill.

THE Mead Paper Company's mill at Dayton, Ohio, turns out 15,000 tons of paper per day.

PAUL SMITH, of St. Regis Lake, New York, is building a paper mill and dam to cost \$50,000.

THE new mill of the Marseilles Paper Company, at Ottawa, Illinois, is about ready for operation.

WHITING BROTHERS have commenced work on their large paper mill at Stevens Point, Wisconsin.

NEW water wheels have been put into the mills of the Worthy Paper Company, at Mittineague, Massachusetts.

THE John Strange Paper Company has been incorporated at Menasha, Wisconsin, with a capital stock of \$100,000.

A JAPANESE paper mill at Awotabi, in Echizen, has been in the hands of the same family upwards of a thousand years.

THE new Newton Mill, to be erected by James H. and Fred H. Newton, at Holyoke, Massachusetts, will cost \$250,000.

R. A. CUSHMAN'S new paper mill, at North Amherst, Massachusetts, has started up, and is fitted with all modern machinery.

FRANKLIN WESTON, of the Byron Weston Paper Company, of Dalton, Massachusetts, has been elected water commissioner of that town.

It is said that a number of Tacoma, Washington, capitalists will start a paper mill shortly, and expect to locate the plant in Puyallup.

A NEW paper company, to be known as the Norman Paper Company, has recently been chartered to do business at Holyoke, Massachusetts.

THE Montague Paper Mills, Turners Falls, Massachusetts, will shortly begin extensive alterations and improvements in their already fine plant.

THE Crocker Manufacturing Co., of Holyoke, Massachusetts, expects to spend \$5,000 this season in making improvements on its already large plant.

THE Denver Paper Manufacturing Company will soon occupy their new mills, which are by far the largest in the country west of the Missouri river.

THE Rock Falls Paper Company's mill, at Rock Falls, Illinois, which was destroyed by an explosion last January, will be rebuilt some time this year.

THE Kimberly & Clark Company's new mill at Kimberly, Wisconsin, is now in full operation, and is turning out twenty tons of print paper per day.

THE L. L. Brown Paper Company, of Adams, Massachusetts, continue to manufacture large quantities of paper for government use, as it has done in the past.

THE Hampden Envelope Company, located at Dayton, Ohio, is removing its plant to Franklin, in the same state, where it expects to largely increase its facilities.

THE George W. West Paper Bag Company, of Ballston Spa, New York, has been incorporated, with a capital of \$500,000, to manufacture all kinds of pulp, paper, paper bags and paper stock.

THE Worthington Paper Company, of Holyoke, Massachusetts, has recently been reorganized. The business was formerly run by S. Worthington, and it was only lately decided to make it a stock company.

WELLS RIVER, Vermont, has one paper mill now, owned by the Adams Paper Company, and in a short time expects to have another, a new company having just been organized there, with a capital stock of \$30,000.

THE S. E. Barrett Manufacturing Company's new mill at Beloit, Wisconsin, is nearly completed. The machinery is all in position, and is said to work admirably. When ready to start, this plant will be one of the finest in the state.

THE Old Berkshire Mills, Dalton, Massachusetts, have just shipped eight tons of fine writings to the forty-one departments of the State of New York. This is the second year that these papers have been called for by the state.

THE White-Corbin Company, of Rockville, Connecticut, has been awarded the contract for supplying envelopes for the United States government, to be used by postmasters for official business and registered packages. The bid was for \$81,376.27.

AT the Johnsburg (Pa.) Paper Mills a sheet of fine book paper has been turned out, which took twenty-four hours' time to run through the machine. The sheet was 54 miles long, 8 feet 4 inches wide. It was run through the cylinders without a break.

G. G. WILLIAMS & CO. succeed the Williams Paper Company, of Philadelphia, Pennsylvania, the new firm continuing the business at the old stand, with a stock of bag, news, manila and flat papers. They are the agents in that city for the Singerly Pulp and Paper Company.

THE scarcity of straw in the West has caused several mills to shut down, among them the paper mill at Waterloo, Iowa, and the strawboard mill at Fergus Falls, Minnesota. As soon as the farmers get through seeding, it is expected that they can furnish the mills with all the straw required, and that they will start up again.

E. J. HICKEY, who recently purchased the paper mill property of E. L. Crandall & Co., at Newton Upper Falls, Massachusetts, has made quite a number of improvements in the plant, and is now turning out a product of paper-hangings. The two mills at Newton Upper Falls, and his mill at Middleton, Massachusetts, give him a daily product of about sixteen tons.

THE government will soon have ready for distribution two new styles of postal cards, one of a pearl-gray color, slightly smaller than the present style, printed in blue ink, with an excellent likeness of General Grant thereon. The other style is much larger than the card now in use, and is the same color. The vignette is the same as on the pearl-gray, but the ink is dark. They are considered more elegant than the old cards.

MR. JAMES CONLEY, for a number of years the efficient and courteous salesman for F. P. Elliott & Co., paper dealers, 208 Randolph street, Chicago, has gone to Appleton, Wisconsin, to take charge of the general sales department of the Appleton Pulp & Paper Company, a position which he is well qualified to fill. Mr. Conley has hosts of friends in the trade in all parts of the country, and in his new venture will undoubtedly meet with great success.

## NEWSPAPER GOSSIP.

WEATHERFORD, Texas, is to have two new papers, both democratic in politics.

HORACE GREELEY BAYLESS will start a democratic paper at Oakland, Nebraska.

J. W. TURNER, of Earlville, Illinois, has disposed of his interest in the *Leader* of that town.

IT is reported that the Minneapolis (Minn.) *Evening Journal* is to swallow the *Evening Tribune*.

J. J. TOOLEY has discontinued the publication of the Anselmo (Neb.) *Sun*, and gone to farming.

MISS GRACE ESTHER DREW is acting as society editor of the *Continent*, the great New York daily.

THE Beaumont (Cal.) *Sentinel* has changed hands and will hereafter be conducted by Arthur Sherman.

THE Fort Worth (Tex.) *Gazette* is making preparations to build for itself a home, which will cost \$100,000.

W. G. HUNT has purchased the McIntosh (Minn.) *Tribune*, and will run it as a red-hot alliance sheet hereafter.

THE Tennille (Ga.) *Enterprise*, which has been sleeping for a few months, will soon be resurrected by B. F. Jacobson.

ON Sunday, May 3, Samuel G. Arnold, a veteran journalist, died at his residence in Washington in his eighty-sixth year.

THOMAS E. HEWITT, one of the oldest and best known of Pittsburgh newspaper men, died May 3, at his home in that city.

THERE are now 19,373 newspapers of different classes in the United States and Canada, a net gain of 1,613 over last year's record.

MRS. HELEN H. CHARLTON, assistant editor of the *Brodhead*, (Wis.) *Independent*, has been elected a member of the school board of that city.

THE cornerstone of the new home of the *Chattanooga* (Tenn.) *Times* was laid May 7. It is to be an imposing building, and will cost \$150,000.

A. MCGREGOR, editor of the Stark county (Ohio) *Democrat* for almost half a century, has been elected a trustee of the Fairmount Children's Home.

MELVILLE GARDNER has resigned the position of city editor of the *Chattanooga Press*, and will soon engage in the newspaper business in Georgia.

JOHN S. CLARKSON has sold a half interest in the *Iowa State Register* and the newspaper building to his brother, Richard P. Clarkson, for \$85,000.

HORACE WHITE, of the New York *Evening Post*, has left Berlin for Constantinople, from whence he will probably write a few harem-scare'em letters.

THE enterprising editor of the Norborne (Mo.) *Jeffersonian* has made the discovery that the belles of that city wear little silver bangles on their garters.

THE office of the Sandwich (Ill.) *Gazette* was closed by the sheriff, May 8, by virtue of an execution issued by order of the Chicago Newspaper Union.

THE *City and Country*, a monthly publication in Columbus, Ohio, has been sold by Mr. O. D. Jackson to Mr. J. H. Case. The consideration is not made public.

DENNY MAHONEY, well known in St. Louis, Missouri, as a newspaper reporter, and popular among politicians, died of consumption, May 3, in that city.

THE staff of the Toronto (Ont.) *Telegram* presented M. R. Clissold, late of London, Ontario, with a handsome marble clock on his return from his wedding tour.

THE Columbus *Sunday Capitol* passed into the hands of a receiver May 16, and under his direction it was issued the following morning. This action is the outgrowth of the suit filed by John H. Rees against Editor W. J. Elliott.

A NEW labor paper is about to be started by D. L. Minahan, to be issued monthly, in the interests of labor organizations, and known as the Toledo (Ohio) *Labor Record*.

JOHN G. GREGORY, associate editor of the Milwaukee *Evening Wisconsin*, mourns the loss of his wife, Caroline Strong Gregory, who died, May 5, from an attack of pneumonia.

ARTHUR C. GRISSOM, a Kansas City man, has been made editor of *Munsey's Weekly*, in New York. Charley Johnson, formerly of Atchison, is one of the staff artists on the paper.

MR. E. B. MOORE, editor of the Rockaway (N. Y.) *Journal* for a number of years and an old New York journalist, has resigned to take a position in the New York Custom House.

THE Lima (Ohio) *Daily Republican* has been bought by Messrs. Crum and McClintock, for several years identified with the Pittsburgh *Dispatch*, the latter being oil editor of that paper.

THE Washington *Herald*, published in Puyallup, Washington, by John W. Spalding, was printed in red, white and blue colors, in honor of the Grand Army of the Republic encampment.

MR. FREDERICK VILLIERS, the well-known artist of the London *Graphic*, has been in New York for several months, making sketches and studies which will appear in the great London weekly.

THE Kansas City *Globe* has joined the silent majority. It was a very good paper, but an expenditure of \$200,000 in a little over two years failing to put it on a paying basis, the publication was stopped.

THE *Western Ploverman*, of Moline, Illinois, has put on a new suit of clothes, and looks well enough now to be seen anywhere away from home. The change is creditable, and will surely prove profitable.

CASTLE, Montana, is to have another newspaper, backed by the Cumberland Mining Company. The *Red Lodge Picket* says: "Several Fort Benton citizens will bear us out in the statement that a newspaper needs a gold mine back of it, these days."

THE Call Publishing Company, of Lincoln, Nebraska, began suit in the district court, lately, against the Western Union Telegraph Company for \$1,962, said to have been unjustly exacted from the plaintiff in paying for Associated Press dispatches.

ON May 14, Charles G. Welch died at his residence in New York. He was formerly editor of the *Boston Post*, and while acting in this capacity he gained the friendship of George Bancroft, the historian, and went with him to Washington as his private secretary.

J. H. GLASS, editor and proprietor of the *Carver County News*, published at Waconia, Minnesota, has removed to Minneapolis, Minnesota. Mr. Glass contemplates publishing a comic weekly paper to be of particular local interest to residents in the Twin Cities.

WE acknowledge, with thanks, the receipt of an invitation to a complimentary banquet given to the newspaper delegates to the Trans-Mississippi Commercial Congress, by the Queen City Printing Ink Company and the Denver Printers' Roller Company, May 21, 1891, at Denver, Colorado.

THE funeral of Maj. J. B. Hinman took place April 30 at the La Salle Avenue Baptist church, Chicago. The Rev. Dr. Rowlands preached the sermon and Professor Swing made a few remarks upon the sterling qualities of the dead newspaper man. The pallbearers were all newspaper reporters.

ON the afternoon of May 9, Jeremiah George Harris died at the residence of his daughter, Mrs. Lucie Lindsley, in Nashville, Tennessee. He was one of Nashville's oldest and most honored citizens, having reached the ripe old age of eighty-one years. Mr. Harris was an editor in Nashville during the Jackson days.

HERE is a sample of a Montana journal's forceful rhetoric in speaking of two of its contemporaries. According to the New York *Continent* one is elegantly designated as "that scrawny vixen and rotten, blatant old lick-spittal [*sic*] of the newspaper world." The other is playfully nicknamed "Mr. Clark's sewer escape,"

and we read that it "hurrahs itself into a fit in its delight for carrion." Then both are included in one withering denunciation as "hungry vultures and Mafia-spirited defamers."

THE *Luray Times*, of which E. C. R. Humphries was the managing editor, owned and published by the Valley Land and Improvement Company, has been sold to the Goshen Land and Improvement Company, and will be moved to Goshen, Virginia, where it will be published in future in the interest of that town, with Major J. Ogden Murry as the managing editor.

THE *New Nation*, the well-known weekly, published in Boston, Massachusetts, by Edward Bellamy, needs hardly any commendation to our readers beyond the name of its editor. The progressive and bright editorial notes cannot but command the attention even of those holding radically different opinions, and as to its literary style there can be no question. It is in a neat and handy form, while the typographic execution is of a high grade.

THE negotiations which have been pending for several weeks as to the sale of the New York *Commercial Advertiser*, a historic paper made famous by the late Hugh J. Hastings, have been completed. This journal has become the property of George W. Turner and John A. Cockerill, both of whom did so much to lift Joseph Pulitzer into the gilded high niche of metropolitan notoriety. The *Commercial Advertiser*, under its new management, will be changed to a morning paper.

#### A FEW SMILES.

A BARONETCY and a fortune having fallen to Eugene Drake, of Oglethorpe, Georgia, all the girls of Oglethorpe hold that he is a duck.—*Ex.*

IGNATIUS DONNELLY says that he will make his enemies repent their attacks upon his cipher by writing another book. Ignatius knows what revenge is and how to get it.—*Ex.*

AN Idaho editor has exchanged his newspaper for a mule. His explanation of the curious bargain probably is that he can tell by the mule's ears when it is going to kick.—*Ex.*

"ONWARD and Upward" will be the maxim of the new paper, said the editor, proudly. And it proved a happy maxim, too. For three short months the paper went onward, and then it went upward.—*Canadian Bookseller.*

"Look here, Mr. Scribe, your paper says that my lecture is to be a comic one, and it isn't so."

"Then, my dear sir," returned the editor, "you must make it comic. This journal never makes mistakes."—*Harper's Bazar.*

EDITOR HATTON, of Washington, goes into a minute description of clavicles to show why a young woman cannot throw a stone as well as a young man can. The boy who said "it's 'cause she's a girl," could give Editor Hatton points in newspaper condensing.—*Ex.*

A LITTLE girl who is learning to read by studying the big print in the newspapers prayed as follows the other night, "Dear Lord, make me pure—make me absolutely pure, like baking powder." This beautiful, good and true story told by a contemporary is commended to the prayerful consideration of people who think that it does not pay to advertise.—*Ex.*

#### TRUE DISCRETION.

"Where were you when the first shot was fired in this row?" the magistrate asked the policeman who made the complaint.

"Right on the spot; right in the crowd," replied the officer, proudly.

"And where were you when the second shot was fired?"

And with blushing reserve the officer admitted:

"Three blocks down the street, under the stone bridge, at the end of the culvert."—*Rochester Talisman.*

STUDENT — Rex fugit, the king flees.

Professor — In what other tense can that form be made?

Student — Perfect.

Professor — Yes, and how would you then translate?

(Painful silence. Professor suggests "has.")

Student — The king has fleas.—*School Exchange.*

MAY BE APPRECIATED BY THE INTERNATIONAL TYPOGRAPHICAL UNION  
DELEGATES.

Teacher — Johnny Greyneck, you are a very bad boy, and I want you to go straight home.

Johnny Greyneck — I can't.

Teacher — You can't?

Johnny Greyneck — No ma'am, this is Boston.—*Boston Courier.*

#### THE TWO EM DASH.

The value of the sign — is such

It can't be told in cash;

It looks so mild, and means so much—

The

Two

#### BUSINESS OUTLOOK.

**Bay City, Mich.**—State of trade, fair; prospects, fair; composition on morning papers, 34 cents; evening papers, 32 cents; bookwork, 34 cents; job printers, per week, \$14.

**Burlington, Iowa.**—State of trade, good; prospects, fair; composition on morning paper, 30 cents; evening papers, 25 cents; bookwork, per week, \$14; job printers, per week, \$14 and \$15. No. 75 will hold its semi-annual election of officers on June 7. Enough men in town at present to supply the demand.

**Charleston, S. C.**—State of trade, fair; prospects, not encouraging; composition on morning papers, 37½ cents; bookwork, 35 cents; job printers per week, \$17. No. 43 will not send a delegate to Boston this year.

**Dayton, Ohio.**—State of trade, moderate; prospects, not very encouraging; composition on morning papers, 35 cents; evening papers, 32 cents; book and job printers, per week, \$15. Trade during the winter has been good, but at present it is at a standstill. Dayton is no place for tourists just now.

**Dubuque, Iowa.**—State of trade, fair; prospects, good; composition on morning papers, 30 cents; evening papers, 28 cents; bookwork, 30 cents; job printers, per week, \$14. The *Daily Ledger*, which was established nine months ago, was declared a non-union office at the last meeting of No. 22. The union used every endeavor to bring it into the fold, but the proprietor refused absolutely to make it a union office. The entire force, one union and three non-union compositors, walked out, as also the foreman. The work is now done by girls.

**Galesburg, Ill.**—State of trade, fair; prospects, very good for this season of the year; composition on evening papers, 25 cents; bookwork, per week, \$12; job printers, per week, \$12 to \$15. The Galesburg Printing Company has added another job press, so as to keep up with its job trade. This makes five presses, two of which are cylinders. A. G. Matheson has accepted the foremanship of the new daily, which appeared on May 14.

**Grand Rapids, Mich.**—State of trade, good; prospects, good; composition on morning papers, 35 cents; evening papers, 30 cents; bookwork, per week, \$14; job printers, per week, \$14. There is a move on foot to raise the scale. The meeting next month will settle the question. Work is good and subs are plentiful. No. 39 is receiving a good many applications for membership from country printers.

**Hartford, Conn.**—State of trade, fair; prospects, fair; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 35 cents; job printers, per week, \$15. Business has been very good since last report.

**Hornellsville, N. Y.**—State of trade, medium; prospects, better; composition on morning papers, 20 cents; evening papers, 20 cents; bookwork, 20 cents; job printers, per week, \$7 to \$12. The greater part of composition of our three daily papers is done by the week, and some of that by female help. The jobrooms are having a fair run of spring work.

**Jackson, Mich.**—State of trade, good; prospects, fair; composition on morning papers, 33 cents; evening papers, 30 cents; bookwork, per week, \$13; job printers per week, \$13. C. M. Peck has opened a printing office in the Cooley Block.

**Keokuk, Iowa.**—State of trade, good; prospects, good; composition on morning papers, 30 cents; evening papers, 26 cents; bookwork, 30 cents; job printers, per week, \$12. The Central Trades Union is in the field early this year with a committee to arrange for the celebration of Labor Day, September 1.

**Logansport, Ind.**—State of trade, moderate; prospects, not encouraging; composition on morning papers, 28 cents; evening papers, 23 cents; bookwork, per week, \$12; job printers, per week, \$12. Everything is moving along quietly. Mr. Longwell has moved his job office to Market and Fifth streets. Will Monson, of the *Journal* jobrooms, has been on the sick list for three weeks.

**London, Ont.**—State of trade, fair; prospects, uncertain; composition on morning papers, 30 cents; evening papers, 28 cents; bookwork, per week, \$9; job printers, per week, \$9 and \$10. Work in the several job offices has been good during the past month, all book and job hands being employed. There has been little change in the newspaper offices, but the supply of printers is generally equal to the demand.

**Los Angeles, Cal.**—State of trade, quiet; prospects, anything but bright; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$20. George C. McKay, a member of this union, and well known in Chicago and other eastern cities, died here on May 5 of typhoid-pneumonia. His remains were sent east.

**Minneapolis, Minn.**—State of trade, fair; prospects, fair; composition on morning papers, 42 cents; evening papers, 37 cents; bookwork, 35 cents; job printers, per week, \$16. Business quiet. Plenty of men here to do what is to be done.

**Montreal, Can.**—State of trade, fair; prospects, seem bright; composition on morning papers, 32 cents; evening papers, 28 and 30 cents; bookwork, 27 cents; job printers, per week, \$10. Montreal is at present overcrowded with printers, but an exodus will be made in a week or so to the capital for the session of parliament.

**New Haven, Conn.**—State of trade, fair; prospects, fair; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 35 to 40 cents; job printers, per week, \$15. Theodore Palmer, an old member of No. 47, died May 22 of pneumonia. He served in the late war.

**New Westminster, B. C.**—State of trade, fair; prospects, reasonable; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$21. C. S. Campbell, the popular "dad" on the *Columbian*, was elected vice-president at the April meeting. C. C. Stewart was elected district delegate, but Organizer Winders has seen fit to make the honor an empty one.

**Peoria, Ill.**—State of trade, fair; prospects, fair; composition on morning papers, 36 cents; evening papers, 33 cents; bookwork, 38 cents; job printers, per week, \$15, \$18 and \$21. Trade has been fair, but there has been a surplus of men—thirty-one arrivals in twenty-one days. Plenty here to do the work at present.

**Philadelphia, Pa.**—State of trade, good; prospects, cheering; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$16. Reports from thirty-eight offices show: 6 brisk, 5 good, 10 medium, 8 fair, 3 as usual, 6 dull. Delegates to Boston were instructed to vote for Philadelphia as the next meeting place of the International Typographical Union. Mr. Dagny, the chairman of No. 2's Boston delegation, is rapidly recovering from his recent severe illness.

**Richmond, Va.**—State of trade, not so good; prospects, not very encouraging; composition on morning papers, 40 cents; evening papers, 40 cents; bookwork, 40 cents; job printers, per week, \$16 to \$20.

**Rome, N. Y.**—State of trade, medium; prospects, not good; composition on evening papers, 25 cents; bookwork, 25 cents; job printers, per week, \$8 to \$14. The deaf-mute institute is a heavy "thorn in the side" of our regular shops, but the "dummies" do very nice work.

**San Antonio, Texas.**—State of trade, dull; prospects, fair; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 40 cents; job printers, per week, \$20. Last meeting of the union was election of officers, and the following were elected: President, C. B. Callan; vice-president, A. M. Jones; financial and corresponding secretary, E. G. Koerps; recording secretary, T. C. Millis; treasurer, Joe Hamilton; board of directors, F. W. Wellman, A. W. Hartman, W. B. Blount, J. D. Nordhaus, R. S. Roberts.

**San Diego, Cal.**—State of trade, fair; prospects, fair; composition on morning papers, 40 cents; evening papers, 35 cents; bookwork, 40 cents; job printers, per week, \$18.

**Seattle, Wash.**—State of trade, fair; prospects, dull for transients; composition on morning papers, 50 cents per hour, eight hours; evening papers,

50 cents per hour, eight hours; job printers, per week, nine hours per day, \$21. The printing craft is sailing along smoothly. No. 202's semi-annual election takes place the first Sunday in June. So far only two candidates have sought to enter the arena. Not much excitement.

**Springfield, Ill.**—State of trade, fair; prospects, fair; composition on morning papers, 33½ cents; evening papers, 30 cents; book and job work, per week, \$15. While business is not as brisk as it might be, job printers have no need to complain, for about all are employed. Another cheap office has started up here.

**Springfield, Ohio.**—State of trade, fair; prospects, poor; composition on evening papers, 30 cents; job printers, per week, \$15. A dull summer in newspaper work is anticipated here, and in consequence a number of the "boys" have left town, and more will soon follow. Jobwork is fair, with enough hands to fill all demands.

**St. John, N. B.**—State of trade, unchanged, good; prospects, unchanged, good; composition on morning papers, 30 cents; evening papers, per week, \$10; weekly papers, 25 cents; job printers, per week, \$10.

**St. Louis, Mo.**—State of trade, dull; prospects, not bright; composition on morning papers, 43 cents; evening papers, 38 cents; bookwork, 45 cents; job printers, per week, \$18. Business during the past four weeks has been extra dull.

**Tacoma, Wash.**—State of trade, quiet; prospects, not flattering; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, all time, eight hours, per week, \$18; job printers, nine hours, per week, \$21. The financial strain has reached the coast and its influence is manifest in printing circles.

**Topeka, Kan.**—State of trade, fair; prospects, poor; composition on morning papers, 33½ cents; evening papers, 28½ cents; bookwork, 40 cents; job printers, per week, \$15. The rush of work caused by the Botkin impeachment case is over and business about at the low tide.

**Toronto, Can.**—State of trade, fair; prospects, fair; composition on morning papers, 30 cents; evening papers, 28 cents; bookwork, 33½ cents; job printers, per week, \$11. The manager of Robinson's Musee theater is making arrangements for a typesetting contest, to be held in that musee next week, between local daily newspaper swifts. Nearly thirty cards were drawn out during the past month.

**Utica, N. Y.**—State of trade, fair; prospects, fair; composition on morning papers, 35 cents; evening papers, 31½ cents; bookwork, 31½ cents; job printers, per week, \$12.50. There is an unusually large number of subs in Utica at present, a great many of them coming from towns outlying this city, who, after joining the union, are either satisfied with securing their share of the work, or else lack the temerity to go abroad, the experience of which would be a benefit to some of them.

**Victoria, B. C.**—State of trade, good; prospects good; composition on morning papers, 50 cents; evening papers, 45 cents; bookwork, 45 cents; job printers, per week, \$21. The legislature having been prorogued today, several of the extras in the government printing bureau will doubtless be let out. The city is being canvassed to form a joint stock company to put another evening paper in the field. The *Colonist* label department is busy on a run of several million salmon cannery labels.

**Wichita, Kan.**—State of trade, fair; prospects, fair; composition on morning papers, 35 cents; evening papers, 30 cents; bookwork, per week, \$15; job printers, per week, \$15. There is little change from last month. More men in town than work.

**Worcester, Mass.**—State of trade, fair; prospects, about same; composition on morning papers, 40 cents; evening papers, 33½ cents; bookwork, 35 cents; job printers, per week, \$12 to \$15. Worcester Typothetae held their first social gathering in the Lincoln House on the evening of May 12. They failed to show that spirit of "brotherly love" that was shown them by the typographical union last December, in the matter of sending invitations to their social gathering. But the gentlemen possibly forgot us.

## BUSINESS NOTICES.

### PRICE'S PAMPHLET COVER-PRESSER.

A patent for a pamphlet cover-presser has been granted to Edwin F. Price, of Washington, D. C., which is destined to render most effective service to the art of binding. An illustration of this is given on another page. The present methods employed for pressing covers to pamphlets are imperfect and objectionable because, when rubbing down that portion of the cover pasted to the pamphlet, the thumb and forefinger become sore and unfit for use. The roller system is also faulty from the fact that an equal pressure is not obtained upon the side and edge, and to complete the work the pamphlet must be reversed and the operation repeated on the other side. By Mr. Price's new invention all of these objections are overcome. It provides a neat shield or thimble with surfaces arranged at right-angles, and so constructed as to allow one of the surfaces to project beyond the other so that they

may be brought in contact with the side and edge of the work to be done. These surfaces can be removed from the body of the shield and others of a different depth substituted according to the thickness of the work required. The operation of this device is very simple, and the pressure obtained by this method is such as to obviate the necessity of repeating the operation on the opposite side. It saves labor, enables one person to do the work of two under the old system, makes a perfect and solid job and is inexpensive. Every publisher in the United States should at least investigate the new invention.

#### SHERIDAN'S "AUTO" CUTTER.

In last month's INLAND PRINTER we showed a large illustration of Sheridan's "Auto," and in connection with this notice take pleasure in presenting a smaller cut of the same machine, which has become immensely popular during the past few years, being thoroughly up to the times, and certainly a machine the merits of which are well worth looking into by anyone interested in paper cutters. As to construction and finish, it is of the same high standard that has characterized the Sheridan machinery for over fifty years, and as a cutter it is remarkably rapid and accurate,

showing a saving of  $33\frac{1}{3}$  per cent over the old style of hand clamp cutters. It is under more complete control of the operator than any other cutter, and can be stopped instantly at any point and then allowed to run back automatically, or be held wherever stopped and the cut again started from that point, saving any loss of time.

In addition to the Sheridan "Auto," the "Sheridan" and "Perfect Gem" cutters and book trimmers, Messrs. T. W. & C. B. Sheridan will carry at their Chicago salesrooms, 413 Dearborn street, and 136 Plymouth place, a general stock of book-binder's and boxmaker's machinery, including embossing, inking and smashing presses, roller and job backers, rotary and table shears, standing presses, brass bound and cherry boards, wire, etc., as well as a full line of Thompson's wire stitchers, Belmont folding machines, and "Champion" and "Defiance" numbering machines, of which they are sole agents. Write to the Chicago house for circulars and particulars.

#### REGAN ELECTRIC VAPOR ENGINE.

On another page will be found an advertisement of the above engine, which is worthy of the attention of printers or book-binders about to add an engine to their plant. This engine has no equal for simplicity, durability and compactness. Either gas or gasoline can be used for fuel, and it is operated by an electric spark from a small battery, the vapor being drawn into the cylinder by the suction of the piston, and ignited by an electric spark. The carburetor contains a small quantity of gasoline, and is connected with the engine by a pipe. At each revolution of the fly-wheel a current of cold air is drawn through the carburetor and into the cylinder. In passing through the carburetor the air vaporizes with a quantity of the gasoline, and this when mixed with more air drawn through the pipe and air valve forms the charge, which, upon combustion, develops the power. The engine is well adapted for running paper cutters, printing presses and

other machinery connected with a printing office, and economical so far as fuel is concerned, and space occupied. Thomas Kane & Co., 137 Wabash avenue, Chicago, are the agents, and will take pleasure in sending a catalogue in regard to the engine to anyone interested.

#### DESERVEDLY POPULAR.

The establishment of Messrs. Story & Fox at 127 Erie street, Buffalo, New York, has become famous for its work of advertising novelties. It is said that this company have the most complete establishment of the kind in the country, and their designs have always been noted for their originality and beauty. They also cast printers' rollers and are manufacturers of roller composition for printers and bookbinders, and have a reputation for making a liquid composition tablet glue which is very flexible and can be applied on any kind of paper or labels, or can be used for lithographs. The varnish department has a capacity of turning out 25,000 sheets of labels daily, also for gumming paper and cutting it up to any size or shape for the trade in general. By this means you always have your labels nicely varnished, gummed and ready to apply upon your wares or goods, saving the delay of getting your gum or paste ready. Their varnish brightens up the colors of your labels, and it is a benefit, as it always makes the labels on canned goods look new. They also do die label and fan cutting; their capacity in this department is unlimited, as the heavy machinery that is made for this class of work is kept going constantly. They also do picture framing, tin mounting, etc. Their facilities are ample for the execution of any number of contracts in this department at any one time, and all work done by them is of the highest class and their prices are always moderate. No one is allowed to inspect any portion of their works.

#### THE P. AUG. ROSEN COMPANY.

We take pleasure in calling the attention of our readers to the above company, who have recently removed from their old location at 243 Wells street, to large and commodious quarters at 320 South Clinton street, Chicago. This company was incorporated in 1890, and since that time has largely increased its business, until today it turns out not only large quantities of printers' material but of the quality that will satisfy everyone. They make a specialty of printers' cabinets of all kinds, and take particular care of work from special specifications, especially cabinets built for all different uses. They also manufacture and sell cases, which are not only reliable in quality but reasonable in price. They also make patent smooth-lined galleys with wood rim. In addition to the specialties named above, they manufacture store fixings of every variety, two of the gentlemen connected with the firm having formerly been with Alexander H. Revell & Co. for a number of years, and are therefore thoroughly posted in this particular branch of the business. Printers requiring anything in their line would do well to write them, or call them up. Telephone No. 3347. The officers of the company are: P. Aug. Rosen, president; George W. Smith, secretary and treasurer, and Charles F. Kade, manager, all gentlemen who are well qualified to carry on the large and increasing business of the company.

#### BINGHAM BROTHERS COMPANY.

Under the above firm name a new company has been incorporated under the laws of the State of New York, to conduct a business of manufacturing printers' rollers and roller composition. The new company succeed the old firm of Bingham, Daley & O'Hara, which has been dissolved, and will continue at the old stand, 49 and 51 Rose street, New York city. Herbert M. Bingham is president, Charles Bingham, secretary, and Frederick L. Bingham, treasurer. The same class of goods will be furnished by this concern that the Bingham's have always been noted for. A full equipment of rapid roller casting machines will be used in the business, operated under United States Patents issued to L. K. Bingham, facilitating a rapidity in filling orders unequalled in this

or any country. The formulæ formerly used by Bingham, Daley & O'Hara were and still are a secret with the Bingham, notwithstanding any report or announcement to the contrary. All the old employes, many of whom have been employed under the Bingham for twenty years, have been engaged by the new concern. In regard to prices, they will be the same as always charged by the old house. All contracts entered into with the old firm will be maintained by the new one. The trade marks: "Star," "Diamond," "Crescent" and "Old Fashioned," remain the property of the Bingham, as formerly. It is now time to have your summer rollers prepared. Send in your orders at once. Business in all parts of the country promptly looked after.

**PERFECTION WIRE STITCHING MACHINES.**

On page 711 of our May number appears the advertisement of the J. L. Morrison Company, the cut therein showing their Perfection "G" machine. Through an oversight in the mention made of the machine on another page of that issue, we stated that the machine would stitch "anything from a single sheet to one-quarter inch, either saddle or flat sewed." This is a mistake, as their "G" machine stitches anything from one-sixteenth to over seven-eighths of an inch, using any wire from No. 20 to No. 28. The machine which stitches from one sheet to one-quarter inch is their Perfection "C," a smaller machine, costing considerably less than the other. Any printers or bookbinders contemplating placing a wire stitcher in their establishment would do well to correspond with the J. L. Morrison Company, whose place of business is now in Clinton Hall, corner Astor place and Eighth street, New York city.

**ALL LIVE PRINTERS** should have Bishop's "PRACTICAL PRINTER," 200 pages, \$1. POSITION" and "PRINTERS' ORDER" each; the "PRINTERS' ORDER MENS OF JOB WORK," price Oneonta, N. Y., and by all type useful works ever published for

Also his "DIAGRAMS OF IM-READY RECKONER," 50 cents BOOK," price \$3, and "SPECI-\$2. Sold by H. G. Bishop, Box 13, founders. The handiest and most printers. Indorsed by everyone.

**A YOUNG MAN**, temperate and of steady habits, has been foreman of a daily and weekly newspaper four years, desires a permanent situation. Best of references. Address, "G. X.," care INLAND PRINTER.

**FOR SALE**—A job office and newspaper in Michigan. Earning big money. \$4,000. Investigate. "MICHIGAN," care INLAND PRINTER.

**FOR SALE**—At a bargain; only exclusive job office in a city of 25,000 inhabitants, in Western New York. About \$4,000 in material, and \$1,500 in paper stock; business about \$5,000 a year. Address, "INVALID," care INLAND PRINTER.

**FOR SALE**—Two Chambers folding machines, making three folds, taking a sheet 19 by 24 to 34 by 46. One Stonemetz folding machine and paster, making three folds, taking a sheet 19 by 24 to 34 by 46, in good order and condition. Address, RICHARD K. FOX, P. O. Box 40, New York City.

**FOR SALE**—Point folding machine, capable of folding 16 by 23 to 32 by 46; three or four fold; can be used for marginal machine for newspaper work. This is a new machine, has never been used, too large for our run of work; can secure this machine at a bargain. Address "B. D.," care INLAND PRINTER.

**FOR SALE**—Complete job printing plant; 300 fonts of type, 6 presses, bindery, all necessary machinery; doing business of \$20,000 a year, state, county and bank work. Proprietor desires to devote attention to daily newspaper, and will sell at a bargain. Address, H. T. DOBBINS, P. O. Box 884, Lincoln, Nebraska.

**FOR SALE**—The oldest republican paper in the leading city in Northwestern Kansas. Official paper with the largest circulation in county. A finely equipped office with excellent advertising and job printing patronage. Best reasons for selling. Will be sold cheap on reasonable terms. Address, "O. N. E.," care INLAND PRINTER.

**FOR SALE**—The proprietor having spent thirty-five years of his life in a printing office desires to retire from business and offers his establishment for sale. It has five cylinder presses and three Gordons, paper cutter, hand press and a large assortment of job and body type. The material and presses are all in good condition. It is located in a large and rapidly growing city in York State. The office has, and is now, doing a good paying business, and to any one wishing to engage in the business it affords a rare opportunity. The balance sheets are open for inspection to any one who may wish to invest. For particulars address P. S. LYMAN, 60 Pearl street, Buffalo, N. Y.

**FULL and complete instructions** on zinc etching, photo-engraving, etc., by Frank J. Cohen. A 38-page pamphlet, giving full information on above topic, will be mailed to any address on receipt of \$2. Address THE INLAND PRINTER COMPANY, Chicago, Illinois.

**ONE-THIRD** interest in a job printing office for sale at \$1,300. The business has been established in Denver 6 years, is paying well, and the office is completely furnished for commercial and brief work. E. G. PHILLIPS, 1604 Arapahoe street, Denver, Colorado.

**WANTED**—Copies of Nos. 2 and 10 of Volume I, INLAND PRINTER. Will pay 25 cents apiece for these if in good condition. Mail or bring them in. INLAND PRINTER COMPANY, Chicago.

**WANTED**—Subscribers to THE INLAND PRINTER; per year, \$2; six months, \$1; single copies, 20 cents. Also, send 10 cents for circular, "How to Impose Forms," giving over fifty complete schemes of imposition.

A Valuable Instruction Book for Printers—Second Edition, Improved and Enlarged—JUST OUT!  
 FOR SALE BY . . . . . Price, 50 Cts.  
**FARMER, LITTLE & CO.**  
 109 QUINCY STREET. . . . . CHICAGO.

**COUNTING MACHINES.**

Send for Circular and Prices to  
**W. N. DURANT,**  
 Milwaukee, Wis.

**FOR SALE**—At a bargain—one new 10 x 15 inch Golding Job Press, with counter, steam fixtures and fountain. This press has never been taken from the boxes in which it was shipped from the factory. Apply to

**CHAMBERS BROTHERS COMPANY,**  
 Fifty-Second St., below Lancaster Ave.,  
 PHILADELPHIA, PA.

**The Lightning Ink Reducer and Dryer,** Awarded Diploma, Paris, 1889, in London, 1887, for Unexcelled Excellence.

**Inkoleum** is the only article in the world that gives pressmen complete control over printing and lithograph inks, rollers and stock in any weather and climate. It refines inks of

any color or shade and makes them dry quick and glossy, enabling rushed work to be delivered immediately from press without offsetting. Inkoleum never dries on rollers, but preserves their suction, life and elasticity. On starting press in morning or whenever rollers are too sticky or ink dry on them, or the ink pulls the paper, a drop or two of Inkoleum put on the rollers with your finger immediately softens the ink and makes them do the finest work, a saving of five times its cost every hour in the day.

**Beware of Infringements!** Order Inkoleum and accept no worthless piratical imitation, said to be just as good. Price, only 50 cents. For sale by every typefoundry in the world. Read circulars printed in five languages. Put up only by

**ELECTRINE MANUFACTURING CO.**  
 GEO. M. STANCHFIELD, Patentee. St. Paul, U. S. A.

**ELECTROTYPE FOUNDRY PLANT FOR SALE.**

**\$1,500** cash will buy the following lot of Electrotpe machinery of a foundry gone out of business:

- 1 Hoe Molding Press.
- 1 Hoe Power Plate Roughing Machine.
- 1 Hoe Power Blackleading Machine.
- 1 Hoe Power Beveling Machine.
- 1 Hand-power Plate Shaving Machine.
- 1 Power Rotary Wood Planer.
- 1 Power Routing Machine.
- 1 Power Circular Saw.
- 1 Large size Weston Dynamo, with lead-lined battery trough and connections.
- 1 Steam Wax Chest and Kettle.
- 1 Large Furnace.
- Slug Mold, Shoot Board and Planes.
- Finishing Blocks, etc.

Apply to **MENDEL'S TYPEFOUNDRY,**  
 NO. 111 E. GERMAN STREET, BALTIMORE, MD.

# The INLAND PRINTER BUSINESS DIRECTORY.

THE FIRMS ENUMERATED IN THIS DIRECTORY ARE RELIABLE, AND ARE COMMENDED TO THE NOTICE OF ALL CONSUMERS OF PRINTERS' WARES AND MATERIALS.

Insertions in this Directory are charged \$6.00 per year for two lines, and for more than two lines \$2.00 per line additional.

## BINDERS' MACHINERY.

Donnell (E. P.) Mfg. Co., 327 and 329 Dearborn street, Chicago. Bookbinders' machinery.

Hickok (The W. O.) Mfg. Co., Harrisburg, Pa., ruling, paging and numbering, roller backing, round-cornering, knife-grinding, sawing, etc., machines.

James, Geo. C., & Co., manufacturers and dealers, 62 Longworth street, Cincinnati, Ohio.

Montague & Fuller, 28 Reade street, New York. Stitching and folding machines, etc.

## BOOKBINDERS' SUPPLIES.

American Strawboard Co., 152 and 153 Michigan avenue, Chicago. Bookbinders' supplies.

## BRONZE POWDERS.

Fuchs & Lang, 29 Warren street, New York; 273 Dearborn street, Chicago.

## CARDS AND CARDBOARD.

Collins (A. M.) Manufacturing Co., No. 527 Arch street, Philadelphia, Pa.

St. Louis Typefoundry, Third and Vine streets, St. Louis, Mo.

Trier, S. & Son, 190 William street, New York. Cardboard and photo stock.

## CARDS—SOCIETY ADDRESS.

Smith, Milton H., publisher, 95 Andrews street, Rochester, N. Y. Embossing to order.

## CYLINDER PRESS MANUFACTURERS.

Babcock Printing Press Manufacturing Co., The, New London, Conn.; New York office, 9 and 10 Tribune Building; Barnhart Bros. & Spindler, general western agents, Chicago.

Campbell Printing Press and Manufacturing Co., 160 William street, New York; 325 Dearborn street, Chicago.

Cranston, J. H., Norwich, Conn., manufacturer of The Cranston patent improved steam-power printing presses, all sizes.

Duplex Printing Press Co. The Cox duplex, web and country presses, Battle Creek, Mich.

Potter, C., Jr., & Co., New York. Cylinder, lithographic and web presses. Branch office, 362 Dearborn street, Chicago.

## PATENT IMPROVED TWO-REVOLUTION PRESS.

**W**ITH patented mechanism for controlling the vertical movement of the impression cylinder. It is extremely powerful, accurately fitted, free from friction and evenly balanced. A patented automatic device is also provided which prevents lost motion and governs the degree of impression. Its patent reversing mechanism consisting of a cross-belt and spring shifter, is operated by the foot, which places the Press under the immediate control of the feeder. These advantages, with its Sheet Delivery, Hinged Distributor, Caps, Positive Slide Motion, Noiseless Grippers, etc., complete a printing machine that in every respect is equal to the most exacting demands of the times.

C. POTTER, JR. & CO., 12 and 14 Spruce Street, New York.

# JOSEPH WETTER & CO.

## WETTER NUMBERING MACHINE.

In use in every country throughout the world, and known as the only machine that can be locked in a form and used on any printing press to number consecutively at each impression, needing no attachments of any kind.

ALSO MANUFACTURERS OF THE  
**AMERICAN  
HAND NUMBERING MACHINE**

FOR GENERAL OFFICE USE.

THE SIMPLEST, CHEAPEST AND BEST  
MACHINE EVER MADE.

For Prices and Circulars address

20 and 22 Morton St., BROOKLYN, N. Y.

# The "Only Perfect" Galley-Lock.

PERFECT IN PRINCIPLE. PERFECT IN ACTION.  
PERFECT IN ECONOMY.

**ONE SINGLE MOVEMENT** adjusts it. Holds each line of type perfectly and securely. Earns its cost in time saved in three months. Saves type and galley.

**ADJUSTABLE.** The "Only Perfect" Lock has a spread of over a half inch, and thus adjusts to any width of column or galley.

**MADE OF BRASS.** Light, durable, wear many years. We make a 13-INCH LOCK, for use of daily papers and job galleys. Engraving shows full size, 23 inches.

**ATTACHABLE.** By a slight change in outside bar, we make the Lock, and furnish attachments, so that in a few minutes anyone can attach it to galley. Outside bar works against side of galley; inside bar is held to top of galley, and has perfect movement back and forward. Daily papers adopt this on sight.

**SEND ORDER** to your printers' supply house. 23-inch lock, \$18.00 per dozen. Attachable lock (23-inch), with attachments, \$22.00 per dozen. 13-inch lock, \$16.20 per dozen. On receipt of \$1.50 will express you free a 23-inch lock, and know you will order a supply. Liberal discounts to trade.

Written for THE INLAND PRINTER.

## THE SHORTHAND GUIDE:

A COMPLETE TEXT-BOOK FOR SELF-INSTRUCTION AND SCHOOL USE.

NO. VI.—BY T. G. LA MOILLE.

[Copyright, 1891, by the Inland Printer Company. All rights reserved.]

### VOWEL AND DIPHTHONG READING EXERCISES.

COMPLETE GUIDE, § 30-38.

- I.—1. \ \ | | / / - - = = > > 7 7 7 7  
 2. \ \ | | / / - - = = u u v v - | \ /  
 3. \ \ | | / / - - = = > < u v 7 7 \ |  
 4. \ \ | | / / - - > < 7 7 = = \ | / |  
 5. \ | / - > > < < < = " = "  
 6. | u = \ \ | / \ - u \ 7 / \ / < > \  
 7. \ | - < | - < | 7 / \ 7 7 < v u > =

Time, 2 minutes. Read, write, write in longhand, rewrite in shorthand, and repeat until mastered.

- II.—1. > > > / / 7 v v v v > > / / 7 >  
 2. 7 N u z c r p u z s s s 7 r s p z c

Time, 1 minute. Read, write, read, write in longhand, write again in shorthand, read, etc.

### WORD READING EXERCISES.

COMPLETE GUIDE, § 39-84.

- I.—1.
- 2.
- 3.
- 4.
- 5.
- 6.

Time, 1 minute. Read, write in longhand, write in shorthand, compare with engraved copy, read again, etc.

- II.—1.
- 2.
- 3.
- 4.
- 5.
- 6.
- 7.

Time, 1 minute. Read, write in longhand, rewrite in shorthand, reread, etc.

83. In rapid writing, the connecting tick in = oö, = öö, and u ü has a tendency to become rounded; as, = öö, = öö, and u ü, which forms are allowable, and often useful in the literary style, and will be used altogether in the reporting style.

### IMPORTANT ADVICE.

84. Do you read everything you write? Do you write all you read? If not, you must. Practice every day little or much. If you can have somebody read to you, you will make swifter progress. Read your writing when it is "cold." If you have difficulty in so doing, it is a sign you should review, for either you have not thoroughly learned the theory, or you have not practiced enough. Do not write the characters too large. In your private writing, or in correspondence with shorthand writers, you should use the phonographic outlines as fast as acquired, for you will thereby faster gain speed in writing and reading. The author will furnish addresses of shorthand correspondents. Learn to do your thinking in shorthand. You must learn to not hesitate in forming the correct "outline," or phonograph, for words and phrases. Always remember that shorthand is written by *sound*. As you master the "outlines," spell every word and phrase in shorthand characters, and you will thereby derive great benefit.

Spell phonographically all preceding and following exercises.

REVIEW QUESTIONS.

83. Into what form does the connecting tick sometimes change in rapid writing? Is this form allowable in the literary style? What form is used in the reporting style? 84. Repeat the points of "Important Advice."

LESSON IV.

PUNCTUATION, ACCENT, EMPHASIS, ITALICS, CAPITALS, INITIALS, PROPER NAMES, AND NUMBERS.

85. In this shorthand the following signs are used in punctuation:

Period..... / , ., or ×	Parenthesis..... { }
Comma..... ,	Brackets..... [ ]
Semicolon..... ;	Paragraph..... ¶
Colon..... :	Grief..... †
Hyphen..... -	Applause..... ☺
Dash..... —	Cheers..... ☺
Interrogation..... ?	Smiles..... ☺
Exclamation..... !	Laughter..... ☺
Quotation..... " "	Great laughter..... ☺

86. (a) In writing shorthand, the *period* is about the only mark of punctuation used, and / double-chay is the favorite period sign.

(b) After longhand titles, use the longhand period; as, *M.D.*, *A.M.*, *L.L.D.*

87. The *comma*, *colon*, *semicolon*, *quotation*, and *brackets* are the same as used in print. Write a circle around quotations. Do not write any form of the comma like / ē. The *apostrophe* is not used in shorthand. The *caret* must be long and acute.

88. The *hyphen* and *dash* are made wavy, to be told from - ō or — k.

89. The *interrogation*, *exclamation*, and *parenthesis* are varied, to be told from phonographs.

90. (a) The marks for *paragraph*, *grief*, *applause*, *cheers*, *smiles*, *laughter*, and *great laughter* are often useful.

(b) It is also a good plan to write the phonographs for *applause*, *cheers*, *grief*, *smiles*, *laughter*, and *great laughter*, and similar interjected expressions, and place a circle around them. All their phonographic forms will be later explained and illustrated.

91. *Accent* is shown by a small cross near the accented vowel; as,  $\overset{\times}{A}ugust$ ;  $\overset{\times}{a}ugust$ .

92. *Emphasis* and *italics* are indicated: (a) By drawing a wavy line underneath; as,  $\underline{\text{I}}$  will do it.

(b) Under several consecutive words write a straight line.

93. (a) *Capitals* are shown by drawing two lines underneath for the SMALL, and three lines for the LARGE.

(b) To merely indicate that a word begins with a capital, draw two short lines underneath; as,  $\underline{\text{I}}$  Tom.

(c) Generally, capitals need not be indicated.

94. *Initials* are written, surrounded by a circle, in longhand or shorthand.

(a) Our vowel forms dispense with the "nominal consonant" of other systems.

(b) Where any ambiguity is likely to result, or a letter has more than one sound, it is frequently best to write the initial in longhand; as, *C*, *Q*, and *X*. Charles can use /, but Philip must use \, not \. Theodore can use (, but Cyrus cannot use ), nor can Caleb use —.

(c) Initials of titles may be written in longhand or shorthand; as,  $\overline{\text{M.D.}}$ ;  $\overline{\text{A.M.}}$ .

95. *Proper names* may be written in longhand, or shorthand, or both. Draw a circle around proper names.

(a) When the spelling of a proper name is doubtful, it should be written in longhand.

(b) Writing a name in shorthand will give its pronunciation.

(c) It is generally safest to write in longhand all but very familiar names. Where a name frequently occurs, one longhand copy of it will usually be sufficient.

(d) A practical knowledge of shorthand will enable outlines for names to be readily composed.

(e) Any outline which might represent more than one name, should have one or more of its chief vowels inserted; as,  $\overline{\text{Lollie}}$ . (See § 82.)

96. *Numbers* may be expressed in the Arabic notation or in shorthand. In either case draw a circle around numbers. There are phonographs, special expedients, and special characters for numbers, which will be later fully explained.

WRITING EXERCISES.

COMPLETE GUIDE, § 39-84.

I.—1. Namely, top, mop; namely, top; comely, nobby; decay, tip; decay, tip; pay-day, Jew.

2. Coe, keep, teach, toe, ray, fa; Dora, tying, Mary; ape, eight, etch, ache, oak, aim; Joe, day.

3. Pew, mummy, key, knee; died, babe, tomb; death, bab, tub; poem, poesy; towel, jewel; idea, Ohio, iota; poem, poesy, idea, Ohio, iota; cap, it, knock, pa, bow.

4. (Vocalize and unvocalize:) Gay, gay; nigh, nigh; knee, knee; oak, oak; goo, goo; mew, mew; pay, pay; bee, bee; show, show; woo, woo; Jew, Jew; dash, dash; Nellie, Nellie; bah, bah; mush, mush; cur, cur; burr, burr; lush, lush; gnaw, gnaw; coy, coy; gow, gow; mow, mow; jaw, jaw; toy, toy; bough, bough; chow-chow, chow-chow.

5. Aurora, family, lady-like; dying, enemy; Elijah, vowel; bowel, toil; enemy, Johnnie, team, cow.

Time, 2 minutes, R. S. Read over, and imagine the shorthand forms. After this mental translation, write in shorthand, read your phonography, and compare it with the forms given in Lesson III. Repeat these processes until you are thoroughly acquainted with the correct forms of these words, and know why they are written as they are. Do not forget to learn how to read everything as fast as you can write it, and write it as fast as you can read it. Spell this exercise in shorthand.

II.—1. Toc, tea, eight, eat, paw, Poe, few, foe, Joe, jay, ache, oak, queue, coo, shoe, pshaw, dough,

aid, jaw, Jew, fee, fie, woe, woo, thigh, thaw, ma, aim, hay.

2. Hoe, know, gnaw, row, row, oar, ear, e'er, hour, ado, adieu, edge, age, no, knee, ah, oh, eh, I, eye, bay, boy, nay, neigh, bee, buy, foe, fay, oat, tea, ode, clay.

Time, 1 minute, R. S. Mentally translate, write in literary and reporting styles, read, etc. Spell this exercise in shorthand.

III.—1. Cheek, meal, beak, beech, beam, peach, sheep, peak, teeth, deem, team.

2. Mail, cake, dame, cape, make, fame, shame, game, lame, name, abate, babe, tape, came, vague, ague.

3. I, eye, dike, type, thigh, tie, knife, Myra, chime, mile, Guy, pike, nigh, shy, diet, Ida.

4. O! oh! joke, coach, comb, poem, choke, dome, poke, choke, Job, pope, know, dough, beau, Coe, show, ho, Poe.

5. Tomb, boom, coop, doom; knew, queue, view, hue, pew, Jew.

Time, 1¼ minutes, R. S. Mentally translate, write in literary and reporting styles, read, and repeat until "owned." Spell this exercise in shorthand.

IV.—1. Eh? egg, edge, echo, enemy, gem, beg, Shem, poem.

2. At, Jack, tack, back, Adam, knack, pack, shack, cache, cab, cabbage.

3. Kick, big, dig, fig, pig, nig, gig.

4. Ah! balm, palm, calm; knock, job, cog, bog.

5. Ugh! shook, book, nook, cook; mum, thumb, chum, bum, dumb.

6. Err, buhr, Burr, cur, fur, fir, myrrh, pur.

Time, ¾ minute, R. S. Mentally translate, write in literary style, and all but paragraph 6 in reporting style, read, and repeat until learned. Spell this exercise in shorthand.

V.—1. Awe, jaw, paw, gnaw, thaw, aught, ought, Baum, shawm, haw.

2. Boy, toy, coy, envoy, voyage, joy, annoy, ahoy, buoy.

3. Bow, bough, vow, vouch, ouch, pouch, couch.

Time, ½ minute, R. S. Mentally translate, write in literary and reporting styles, read all you write, and repeat again and again. Spell this exercise in shorthand.

VI.—1. Mob, job, gaudy, foggy, Dutch, gang, duck, epic, fiat, coffee, chip, botch, apathy, chop, cameo, idea, Ohio, buggy, bang, agony, odd, Enoch, acme, pith, Emma, Anna, Jennie, shock.

2. Cash, gnash, shook, shave, ship, shell, shallow, shake, coop, bake, move, peak, peek, chalk, took, cheek, make, check, cap, keep, cope, cape, patty, Patti, tie, boy, shy, joy, oak.

3. Mow, mow, neigh, nay, age, etch, though, rye, ray, roe, dado, maim, vacate, vague, beam, shape, sheep, teach, babe, bathe, both, day, mail, chew, balk, meek, team, joke, hoe, mill, ditty, jaw, faugh.

4. Pithy, busy, big, dip, ditch, rich, pitch, Bidy, Neddy, Jocko, Dick, tip, beck, peck, check, cheque, death, bevy, levy, keg, penny, Annie, peg, fetch, baggy, boggy, Fanny, ash, natty, patch.

5. Pussy, cuckoo, nag, jag, taffy, match, catch, bob, pop, poppy, Tom, knock, bonny, money, pup, puppy, tug, bung, buck, tub, bub, cub, dub, touch, touchy, Duchy, mummy, dummy, bummy.

6. Lowell, poet, Joab, pæan, Jewish, jewel, poesy, Vienna, idea, iota, Ohio, moiety, moving, move, bouquet, botch, batch, vetch, Ada, Ottawa, Chicago, Havana.

7. Tiny, China, enjoy, boyish, our, gouge, vie, dyke, decoy, alloy, allow, ally, thou, gibe, five, dowel, towel, mime, Zion, endow, bough, out, Mima, eying, fy, Pye, defy, cow, now, oil, owl, Nina, ivy.

Time, 3½ minutes, R. S. Mentally translate, write in literary and reporting styles, read over and over, and repeat the exercise several times. Spell this exercise in shorthand.

VII.—1. Bah, baa, pa, pea, boo, bean, go, goo, key, caw, coo, tea, Tay, taw, day, daw, do, do, view, faugh, foe, fa, fay, fee, pshaw, Shah, she, shoe, shay, shoo, show, zoo.

2. Knee, nigh, Nye, neigh, nay, gnaw, no, know, thee, they, though, though, thou, thaw, may, mow, mow, ma, moo, maw, ha, hay, ho, hoe, haw, chew, chaw, jay, Jew.

3. Add, odd, up, egg, by, pie, die, dye, tie, vie, fie, shy, thy, thigh, my, nigh, pew, cue, dew, queue, few, view, toy, coy, boy, bow, bough, cow, bib, big, pig, Pap, pip, gig, beck, beg, peg, peck, back, bag, bab, babe.

4. Bang, badge, bath, bathe, book, peep, buck, bug, buggy, bub, bubbly, bob, bobby, bog, boggy, bag, baggy, ache, aim, age, eight, ade, ape, Abe, aught, ought, auk, eke, lke, I'd.

5. Oat, ode, oak, ope, oil, out, page, gauge, gage, game, came, cape, cake, dame, tame, tape, take, vague, evade, fame, shave, shame, shake, shape, mail, mall, male, make.

6. Nail, knave, nave, name, nape, beach, beech, beam, peek, peak, peep, teach, team, deem, dame, tame, fief, thief, thief, theme, meal, meek, cheap.

7. Pike, pipe, dime, tithe, time, five, fife, mile, knife, both, pope, poach, poke, cope, coach, comb, beauty, duty, dupe, tube, cube, fugue, doom, boom, haughty, oily, owlsh.

Time, 3¼ minutes, R. S. Translate mentally, write in literary and reporting styles, read, and repeat over and over. Spell this exercise in shorthand.

VIII.—1. Jaw, chew, etch, age, edge, pay, bay, bey, Poe, ape, toe, ate, eight, day, add, odd, aid, key, coo, ache, quay, egg, go, view, Eph, eve, aim, may, oath, thaw, they, though, Shaw, she, ash, ashy, ma, me, Ann, Anna, Annie, knee, neigh, Ney, ho, hoe, fee, foh, pie, boy, iota, oil, owl, eighty, Etta, Eddie, obey, abbey, ivy, Emma, Noah, idea, Ida, Eddy.

2. Dutch, poke, tame, death, item, Gage, chime, Jack, faith, joke, gash, king, came, make, cab, cabby, cob, shop, vim, thick, voyage, ink, ask, thatch, knave, shape, fife, fief, knife, mile, haughty, China, muff, love, me, Ida, Roe, deny, pony, poet, poem, poesy,

dim, mush, pouch, push, pushing, fang, zero, damage, escape, mock, knock, rebuke.

3. Timothy, topic, Jacob, cash, bag, baggage, calm, Tom, nothing, review, vacate, dog, dogma, jam, Chicago, fame, infamy, peony, mouth, revenue, bevy, chimney, shook, puffy, namely, notary, shaggy, tomato, fume, fog, foggy, mulatto, chop, cheap, penny, apology, month, monthly, revoke, Tioga, earthly, muddy.

4. Length, unpack, engage, chime, chiming, Catholic, tawny, bony, Poughkeepsie, Tasso, dignify, piano, rebuke, orang-outang, chow-chow, outrage, Chemung, county, ahead, ahoy, needy, awake, awoke, Ezra, chaffy, taffy, into, oyer, body, Jew, Jewett, Jewish, Hugo, abed, acute, afoot, Jamaica, purity, bounty, Choctaw, bonnet, party, tiptoe, deputy.

5. Maccaboy, Mackinaw, memento, monk, monkey, milch, monied, pneumonia, bayonet, melody, avenge, effect, affect, vacuum, gagged, shank, oceanic, fathom, fagot, kick, kicked, fact, fifty, enigma, nominee, cogged, naming, Canada, anathema, became, cubic, Geneva, pink, period.

Time, 4 minutes. R. S. Mentally translate, write in literary and reporting styles, write and read several times. Spell this exercise in shorthand.

#### COMPOSING ROOM ECONOMICS.

BY S. K. PARKER.

**L**UBRICATE the slides or cleats of your typeboards and drawers with the scraps of soap left in the sink or wash-trough.

Do not waste time dampening each sheet of proof paper separately with a sponge during the day as required, but wet down, in bulk, over-night, a sufficient quantity for the next day's use, and cover with a board. This need not take over five minutes of a boy's time.

Mark all your chase-bars to correspond with the chases to which they belong. This can be done either by steel numbering punches or by dots made with a center-punch, or by notches with a file.

Type that has been dropped on the floor and trampled upon, throw away. It is false economy to put it in case. Time of press and compositors will be wasted in changing bad letters sufficient to pay for the damaged types a hundred times over.

Have a place for everything and everything in its place.

Do not permit anybody to clean the face of a form by rubbing the ink off with the hand. This practice is more wearing than many thousand impressions, particularly on delicate-faced type.

Have plenty of washing facilities — soap, towels, etc., and encourage their free and frequent use. It will result in fewer soiled sheets of stock in the pressroom, and a general stimulation of pride in cleanliness that will have its reflex throughout the establishment.

Have good ink and good rollers for proofs, and have the proofpress and proofplaner in good order.

Better proofs, fewer passed errors, and more satisfaction to customers will have its effect on the right side in the monthly balance of profit and loss.

Give your "fancy job man," if he has judgment and discretion, plenty of material to work with, do not hamper him; but let neatness, accuracy, and appropriateness be the aim in the composition of the every-day jobs required by the business man.

#### HINTS ON THE ARRANGEMENT OF THE PRINTING OFFICE.

BY CHARLES FRANCIS, NEW YORK.

**I**T is a very uncommon thing, in the observance of the writer, to see a job printing office laid out carefully with a view to the utmost utility, and especially when it is considered that it is always necessary, at intervals, to secure employés for a few days or weeks during busy seasons, and it is with this idea in mind that I desire to make some suggestions to remedy the evil, for such it is. Most printing offices have been started with a small quantity of material and presses, and gradually increased in size. This increase always occurs during a period of brisk business, and, in the consequent rush, type comes in from the foundry, is laid with the utmost haste, and rushed out of the case again in the same careless manner. Often it happens that, in ordering, cases have been forgotten, and so as to more rapidly get the type into use it is thrown in with some other font, and thus finds a temporary resting place, entirely out of range with other fonts of similar character; for want of time, and by oversight, it remains in this uncongenial locality, much to the disgust of everyone desiring to use either of the fonts in the case. This state of things is often multiplied in country offices to such an extent that one might as well set out of a "pi" box as out of the cases.

It will always pay, in starting, to have an eye to growth, and also to the fact that although yourself and regular employés may know the office thoroughly, times may, and will come, when it is necessary to obtain extra help, and if your office is not in good shape the result will be that the additional help will so retard the regulars in their work, by asking questions, that they are really of but little or no assistance.

The first thing to observe should be the relative convenience of the business office to the composition and pressrooms, if a large office, by means of speaking and pneumatic tubes, telephones, etc.; or, if otherwise, and this is the large majority, an office with from four to eight presses, and a corresponding amount of material, with an average of from fifteen to thirty hands, all told, and placed on one or two floors, then the composing room should be in close proximity to the office, and the foreman's desk in a position as nearly as possible, taking into consideration his oversight of the room, to the office door. Next the composing room should be looked into, and labor-saving leads, rules, reglet, slugs, metal furniture, and such other material as is of

general use in the make-up of your jobwork, so placed that the compositor can reach his arm around and grasp almost, if not all, of these important adjuncts with the least possible movement. The labor-saving wood furniture, quoins, mallets, shooting-sticks, quoin-keys, and the imposing stones should be so grouped as to have the minimum of movement to the maximum of work accomplished. Having paid attention to this part, it becomes necessary to look into the type portion, and this is very important indeed.

First. Arrange the cases, in such racks as will allow of it, to draw out at the back, if a compositor is "holding the fort" in front of it. It is a good thing as far as possible to have independent racks for job cases, but often impracticable; the main trouble experienced by the man who is set to work in a strange office is to find out what type there is in the office and then where it is.

Second. Have your cases and racks all of one size, so that you can, if necessary, transpose a case in order to get the type "in series."

Third. Beginning at a given point, say the left hand corner from the main entrance, number your racks from one up to the entire number you have, making the numbers of stiff cardboard and tacking on in a good substantial manner, and following round the room to the right until you complete the circuit; then—after placing your type "in series" and placing the light faces, old styles, antiques, gothics, etc., running down to the heaviest faces, in order, and keeping your fancy type all together—commence and make a specimen sheet and book, first numbering each case in each rack with a corresponding number on the rack itself. The label on the first case would read: "1—1. 8-point French Old Style," and underneath on same label, or printed with its own type, a sample of the face; then follow the same way all through the office. Having completed this arrangement, or during the work, print a number of copies on paper, and some on heavy cardboard, for the convenience of your customers and that of the new compositor whom you call in and expect a day's work from the first day he enters the office. If he has such a book placed in his hand, and he wants to find the Great Primer Payson Script, he looks in his book, finds it is numbered 10—3, and casting his eye over to the left-hand corner runs it around, at a glance locating number ten, and walking right over pulls out case three. It is a small matter to keep up such a system as this after once arranged. The cards before spoken of as printed with the specimen book are intended to hang at the side of the rack, showing just what is in that rack, to the further convenience of the compositor. Do not forget or lose sight of the fact that *one* font in *one* series of boxes in *one* case is quite enough, and it is better far to pay for the extra case room than to lose it over and over again by fumbling around in a case having more than one font in it.

Fourth. Nothing so detracts from the look of a proof of several pages of a job than to have each page taken on different stock, torn in different shapes, and

taken some wet and some dry. In this, a box, or drawer, made square, so as to contain half, quarter, and one-eighth sheets of French folio, and alongside a place for galley slips of a light book paper, machine finished, and all cut carefully to size, makes a very convenient style of handling, and can be taken *dry*, without trouble. Do not be too careful of the paper, and try to trim down a half sheet if the proof is just too large to go on a quarter sheet, the extra margin will not detract from its appearance, but will rather help it, and when you come to gather up it will be all of one size, or in equal divisions of a given size, which will fold together without trouble.

I have here touched upon the principal items of arranging an office; there are, however, many left untouched, and I may in some future issue give some more points on the composing room, and enter the sacred precincts of the pressroom.

Written for THE INLAND PRINTER.

#### MAINTAIN PRICES.

BY J. C. HUGHES.

IF there is one distinctive policy that has impressed itself upon the public of today with greater emphasis than another, it is that of *organization*. Not alone, or even chiefly, among workmen is this tendency observable; it extends through all classes of business men, employers and corporations. It has been ascertained that by organization and the close oversight obtained by a directing mind or power, not only is waste prevented, but the liability to underbid or undersell is reduced to a minimum. It is not my policy to pursue this subject any further than as it relates to and affects the printing fraternity.

In all responsible and reputable printing houses, at a given point, the cost of production is about the same. One house has but little advantage over another in buying stock, material and first-class service. Therefore cost of getting and doing business, volume of business and general management furnish the basis of fair and honorable competition among business rivals. If this policy, the truth of which will scarcely be challenged by any, were universally observed by printers, there would be much less seeking after "estimates" by customers who have a small amount of printing to give out, honest rates would not become demoralized in the general scramble to obtain a new customer or retain an old one, and the ends of conducting legitimate business would be promoted.

An incident illustrating the practice which we seek to condemn recently came under our notice. The secretary of a certain corporation had a small pamphlet to print, and submitted the copy to four printing houses for "estimates." Each house was a member of the local "typothetæ" and paid "union" rates to workmen. The maximum bid was \$81, two others ranged closely below, but the fourth bid was \$51, and the job was let for that sum. This work was undoubtedly done at a loss to the printing house, but the sage remark of

the customer who awarded the job was that his old printers must have been "bleeding" him pretty freely in the past, as he had paid \$78 for the same work the previous year. Comment on such a transaction is unnecessary. The practice is both dishonest and suicidal. The moral is that manufacturing printers should "get together" and agree to "hew to the line, let the chips (jobs) fall where they may." Under no conceivable combination of circumstances can a printing house be justified in taking work at a figure which will not leave a fair margin of profit. Not only is the victim himself the chief sufferer, but doubt and distrust is created and fostered in the minds of customers who, if honestly dealt with, would be willing to pay fair prices for their work.

Written for THE INLAND PRINTER.

#### TO THE YOUNG MAN IN THE PRINTING BUSINESS.

BY F. W. THOMAS, TOLEDO, OHIO.

**B**EING an American, you are ambitious. If that ambition is of the right kind, you are striving for two things: first of all, reputation, and second, money.

Success in these two things will make you an example of what is every American young man's ideal — "the successful business man."

In spite of ruinous competition, the oft-berated amateur, and the equally bad business methods of many large concerns, I believe that you can achieve these results in the printing business.

Allow me to admit, in the first place, that I am a young man myself, have never failed, nor made an assignment, and, consequently, my advice may be considered worthless. However, being a young man in the printing business, I have been confronted by the same difficulties which confront you, I am influenced by the same motives which actuate you, kept back by the same fears, and encouraged by the same influences which affect you. This is my apology for believing that you will be in sympathy with what these articles contain, and will be willing to give a trial to the methods which I have found so beneficial in my own business.

In the first place — no matter how perfect your business methods, no matter how much you advertise, and in spite of hosts of friends — if the mechanical facilities of your office are poor, or your workrooms slovenly, you cannot achieve a reputation. I call to mind a firm now who have been in business for, I believe, some fifteen or twenty years, who have to constantly solicit, in order to keep the wheels of a \$4,000 or \$5,000 office in motion. They may make money. I do not know as to that, but they certainly have no reputation for fine work; and surely every young man who has started a printing office desires that his establishment should be noted not only as profitable, but also as a place where artistic work is done. A printer should have *professional pride*, the same as a lawyer or doctor.

In short, then, make every possible effort to better the mechanical conditions under which your work is done. See to it that your machinery and shafting are

frequently overhauled, all loose nuts tightened, and bearings which have sagged out of line straightened up. Use good machine oil, and insist on its being used properly. Do not let an uninformed pressboy pour oil into the cam-way in the big cogwheel of your Gordon presses, in "any way he has a mind to," but see to it that the cam roller is oiled through its oil hole, and not on its outer surface. It is made to roll around, not to slide around. See to it that your belting does not run with half the lacings coming loose. Look out for new rollers before the present set are completely demoralized. So much for the pressroom. In your composing room, remember that "labor-saving material" was properly named. Have lots of it. It is money in pocket.

Right here, of course, arises that greatest of all questions to a young man of limited capital — Shall I go in debt? Yes. If you are starting a business where you believe there is a fair field for it, and have the pluck and perseverance to stick to it through the first few years of trial, then I say yes, go in debt to any reasonable extent. Do not, however, under any circumstances, allow your *credit* to suffer. Good credit does not consist so much in having lots of money as it does in doing as you agree. Be careful, therefore, not to contract debts which you cannot readily meet. If possible, do not buy machinery of manufacturers on time. It is an expensive method of borrowing money. To illustrate. A printer of my acquaintance bought an eighth medium press, and paid \$50 cash and \$50 at the end of three months, and another \$50 at the end of six months, making \$150 in all. Shortly after, I bought a precisely similar machine for \$127.50 cash — borrowed the *entire* amount on my note, with endorsement, at the bank. At the end of three months paid a part, and at the end of the next three months the remainder of the amount. I got the same press, and even more favorable terms, and it cost me, interest and all, over \$15 less than my neighbor. Fifteen dollars, or over ten per cent on the purchase, is worth saving.

There is this to guard against, however, in increasing your indebtedness. The complete printing office is an unknown thing. You look over your office today and think, "\$250 will make this just a perfect little gem of an office." You invest the \$250. In thirty days you want several hundred more. The perfect office is like the mirage of the desert, as fast as you approach it, it recedes. An employer has aptly styled the composing room as a bottomless pit, into which you can pour material forever with no visible effect. Do not, therefore, unduly strain yourself to fill this abyss. Buy all you can, select it judiciously, and then draw the line.

Make a personal study of the arrangement of your material. As much lies in knowing where to find a piece of rule as in the first possession of it.

You can manufacture, at slight expense, convenient lead racks, furniture cases, and other such articles.

I have a first-class drying rack, which is probably as fine a thing as can be added to your pressroom, which is listed in printers' catalogues at \$18. All the

material in this rack was purchased at a factory, cut to size, and ready to go together, and cost but \$4.50. It took two evenings' time to put it together.

If you are short of large sizes of wood type you can make plates for printing "for rent," "for sale" cards, etc., by cutting the letters out of patent leather and gluing them on boards the right thickness to make them type high. I have a complete assortment of such plates, which have been in use for over two years, and are yet good for any reasonable number of impressions.

So much for mechanical matters. In my next article I will speak of the matter of straining after big work—Does it pay? etc.

Written for THE INLAND PRINTER.

#### WANTED: DATA FOR THE SCIENCE OF ADVERTISING.

BY E. P. HARRIS.

WHO will give us a science or philosophy of advertising, or the data from which to construct it? Various writers reel off the art of advertising indefinitely, but somehow the rules given are either so general as to fail to be of value, or so limited in application as to presuppose an artist to use them, who himself would be capable of making new ones. We seem to have an art of advertising but no one has yet stated the general principles on which the art is founded.

Who will give a definition of advertising, sufficiently inclusive to cover the whole meaning of the term, and sufficiently exclusive as not to cover something that is no part of advertising? What function or functions does advertising perform in the business of distributing merchandise anyhow? Is advertising a mere fad, forced upon one by his neighbors, but really a useless expense? "We advertise," say some, "because our competitors do, but we should all be better off if no advertising were done."

Smith advertises, thereby attracting some of Brown's customers. So Brown is forced to advertise to get as many back again or more. But does the advertising create any new customers or make present ones buy more? What is the use of Smith and Brown spending money to march customers back and forth from the store of one to that of the other?

Is not the same thing true between all Smiths and all Browns, for does not every one who begins advertising merely cut into the trade of others, and therefore force them to advertise in self-defense? Is not advertising then an unmitigated burden upon the mercantile class, and therefore upon the consumer? Would it not be a wise plan for all the mischief-making Smiths and all the self-defending Browns to get together and mutually agree not to advertise?

But who knows of an instance in which the dealers in any line or locality have united in agreement to discontinue all advertising, and have thereby increased their prosperity? Who attributes his wealth to abstinence from advertising?

Is it not possible that advertising really does perform an important, if not necessary function, in the business

of distributing merchandise? Will it not appear, upon inquiry into the question, that the making known, which is the chief function of advertising, is absolutely necessary to be done in connection with selling? That it always has been done in one way or another, and that modern advertising differs from former ways, in being vastly more efficient and economical? The old wait-and-see-if-your-customers-will-not-hunt-you-up method of making known, may bear about the same relation to modern advertising that the stage coach does to the vestibuled limited.

Given a completed useful article at the time and place of manufacture, and before it reaches the time and place of consumption and its maximum value, what things must happen? The transporter stands ready to move it to the place, and the storekeeper to hold it until the time of consumption. But is this all? Does not the process of making known come in right here?

May we not say then that the business of merchandising consists primarily of doing three things, *moving*, *holding* and *making known*? But do you presuppose that the article is already known, and that the merchant merely moves and holds the goods for a sure demand? But that is not strictly the case even with the leading staples, unless they are put up under a well-known brand, which is merely saying that the maker has done the advertising.

To be sure, a large part of the making known is done by the salesmen, who help pass the article through various hands till it reaches the consumer, but may not the future development of the use of printers' ink show that a large part of this word-of-mouth advertising is very expensive and inefficient? In fact, is it not to a great extent already apparent?

The dealer will pay 80 cents for a well-known and meritorious article to sell for \$1 quicker than he will pay 60 cents for an equally good \$1 article that is unknown. Now just what has advertising done to give the former a third more value than the latter? Does advertising really create value? Is it not strictly true that advertising produces knowledge-value, just as transportation produces place-value, and holding, time-value?

Written for THE INLAND PRINTER.

#### CHARACTERS.

BY K. P. S.

THE printing office sloven is the man who saws a piece of furniture on the corner of the stone-frame and leaves the sawdust just where it falls; who, after locking up a form, leaves the stone strewn with material for which he has no use, compelling the next man who wants to use the stone to clear up the débris; who leaves his case full of cuttings of cardboard, bits of brass rule, leads, etc.; who will handle electrotype plates and cuts as if they were bricks; who will put quoin-keys and shooting-sticks on top of type; whose quad-box is full of "little quads"; who leaves his forms unwashed; who at quitting-time barely wets his hands, rubs the

dirt on the towel, puts on both coats at once in cold weather and skips — that's him!

\* \* \*

THE PRINTING OFFICE BOOR.—The man who grabs and walks off with your stick that you have carefully set for some particular job, without so much as “by your leave”; who squirts a puddle of tobacco juice against the legs of the stand of his fellow workman who does not use the weed; who carelessly joggles your elbow, and makes no apology nor shows any concern at the damage he has caused; who, if he knocks down anybody's hat or coat when reaching for his own, leaves it on the floor; who will, on every possible occasion, evade compliance with office rules tending to accommodate his fellow workmen; who is always ready to “make a kick”—that's him!

\* \* \*

THE PRINTING OFFICE GENTLEMAN.—The man who always strives to observe the precepts of the Golden Rule: “Do unto others as ye would that others should do unto you”—that's him!

Written for THE INLAND PRINTER.

#### WHAT I HAVE SEEN.

BY KARNAC.

I HAVE seen a corporation erect a \$60,000 building, including \$500 expended in decorating the business office, and still do its job printing on ancient Degeners, unprovided with throw-offs or ink fountains, while the business manager was perplexed to see his competitors, provided with modern machinery, take long runs of presswork at prices he could not touch except at a considerable loss.

I have seen a bookkeeper and advertising clerk accept town reports at \$1.25 per page, making no allowance for several pages of nonpareil full-page tables, actually costing \$4.50 per page to set up.

I have seen an office equipped with 600-pound fonts of old style and modern, and about 500 pounds extra of quads and sorts, replace its modern with a similar face from another foundry, necessitating the purchase of an equal amount of quads, etc., from that foundry, discovering too late, what any compositor could have told the manager, that the type would not justify.

I have seen a book office doing from \$20,000 to \$25,000 worth of business on state printing alone, ink galley proofs with a roller taken from a convenient job press. The time taken detaching and replacing the roller in one week would have paid for an elegant proof-roller and ink slab. The proofs were pulled on a hand press on cheap paper, and frequently came back from the proofreader with a request for a “better proof.”

I have seen a manager refuse to buy \$2 worth of sorts, and the amount of time consumed in pulling and replacing, and the delay incident to waiting for a form to be worked bring the cost of an eight-page form up to \$24, the contract price being less than \$3 per page. Comment on all of which is unnecessary.

#### NOTES ON WOOD ENGRAVING.

NO.-XLIX.—BY S. W. FALLIS.

THE marked success and popularity which characterized *Leslie* and *Harper* incited competition, all of which worked for the advancement of the art of wood engraving, and encouraged an increase in the number of American wood engravers, and young and new engravers began to come forth as plentifully as the buds on the trees in springtime, all of a varied degree of talent. Many conceived the idea that wood engraving was an easy way to fame and fortune, but, lacking either mechanical or artistic talent, dropped out of line altogether, or plodded along with a low grade of what should more properly be termed “wood butchering,” than wood engraving. Many a beginner has labored hard for three or four years, and some even longer, only to find that their abilities were entirely inadequate to the acquirement of even mediocrity in wood engraving, and have wisely abandoned an art for which they were entirely unfitted, while others in their self conceit have plodded along in an inartistic and mechanical way, eking out a miserable livelihood, damaging the art in one sense, and benefiting it in another and indirect way, by work of such a low grade as to either lower the public taste, or turn attention to work of higher grade, thereby creating a fuller appreciation of meritorious wood engraving from the contrast presented.

Gleasons' *Pictorial* made its appearance in 1859, and their *Vanity Fair* also made its appearance shortly before the civil war. Both of these illustrated papers were, however, short-lived, and succumbed to the inevitable. However, they played their part in American wood engraving. They brought to life new talents, good, bad and indifferent, but when once in the field of competitive engraving, they sought other fields in which to display their merit, and added to the army of engravers on wood, which were fast multiplying to meet the increasing demand for the capabilities of the art. *Leslie* and *Harper*, realizing the competition and advancing capabilities of graphic illustrations, endeavored to keep pace with the times by employing the most talented wood engravers, and improving the quality of their wood-engraved illustrations, thus advancing the art to a high standard. Up to 1867, however, there was no very striking improvement in the character of the illustrations in these two leading illustrated journals. The engravings were not bad, but only of a medium grade, with an occasional diversion in the way of a cut, now and then, embracing real merit in every particular; but the majority of illustrations consisted of commonplace work indeed, yet, as a rule, bore intelligence in expression, color and tooling, conveying to the public an intelligent understanding of what they were intended to represent. So with all the early illustrated American journals, they played an important part in the advance of wood engraving and educated the public to a higher appreciation of the art.

(To be continued.)

911 Filbert St., Philadelphia, Pa.

See specimen of our original Ives' process on other side of this sheet.

# CUT CARDS ▲▲▲▲

A few reasons why a Printer should buy them :

1. **BECAUSE** it is cheaper than he can cut them.
2. **BECAUSE** they are cut better than he can cut them.
3. **BECAUSE** it saves time.
4. **BECAUSE** there is no waste.
5. **BECAUSE** when cut *by band* there are no "feather edges," each card being perfect.
6. **BECAUSE** when banded in fifties and put up 500 in a BOX, it is much more convenient for him to take out four packages, 200 cards (size 70), than to cut three sheets of board on a *paper* cutter—with a dull knife, perhaps.
7. **BECAUSE** when put up in BOXES, he can keep his stock clean.
8. **BECAUSE** he will not have any unsightly broken packages on his shelf.
9. **BECAUSE** when he prints 500 or 1,000 cards he will put them back in the BOXES and send to his customer, thus securing his lasting gratitude.

He should Buy Cut Cards, and  
Buy them from Us!

10. **BECAUSE** we cut all our cards by hand, band them in fifties and put them up 500 in a nice, neat BOX.

Send for Samples and Prices, or have a talk with our salesman about it. Regular sizes in stock. Special sizes to order.

**KEITH LEDGER PAPERS** are well made, strong, hard sized, rule nicely, write easily, erase and rewrite without difficulty, and have been given the preference by good judges in competitive tests with all other leading brands of Ledger paper.

**RAVELSTONE** Flats are made in Laid and Wove, White and Perfection Tints, and are used by Lithographers, Stationers and Printers for first-class Commercial Stationery for Banks, Insurance Offices and Business Houses generally. These papers are also put up ruled and folded, in the usual sizes.

**WESTLOCK** Flats are well known and highly prized for their good color, cleanness, freedom from imperfections and all adulterants, strength, hard sizing, and are used for all kinds of commercial work, being especially preferred by makers of Blank Books, because they are thicker for the weight than other papers. These papers are put up folded, and in Note, Letter and Bill Heads, etc.

The above Papers are offered to the Trade through Agents located in the principal centers of distribution throughout the Country.

THE ACKNOWLEDGED LEADER!

THE CELEBRATED, ORIGINAL and ONLY **BROWN & CARVER PAPER CUTTING MACHINE.**

ANOTHER MANUFACTURER, unable to build a machine to compete with it, has copied it as nearly as possible, and where prevented from copying, by patents, claims great merit in the omission. I can build you a "Brown & Carver" with or without the grooved table, which is a valuable invention, in no way mars or injures the paper, and is condemned by him only because he DARE NOT use it.

There is NO MACHINE of ANY DESIGN that COMPARES with the BROWN & CARVER in

**DURABILITY,  
ACCURACY,  
RELIABILITY,  
WORKMANSHIP,  
FINISH,**

And all points that make VALUE.

**SANBORN'S**  
**NEWEST**  
**CUTTER**

For a thoroughly GOOD hand and power Cutter at a comparatively small figure, the "ECLIPSE" leads all of its competitors.

The "ECLIPSE" is guaranteed to excel, in all the points requisite in a good machine, all other low-price Hand and Power Cutters in the market.

**"ECLIPSE"**

THE construction is simple, the power and strength warranted, the fitting and finish first-class. Only small exertion is necessary to operate by hand, and the fly-wheel is made extra large as an additional advantage. The pulley for power is always ready for the belt when needed. The knife cuts from left to right; has a sliding, draw movement, which is uniform and rapid and can be stopped at any point in the cut. There are gibs in the frames for the adjustment of the knife-bar. Either the usual style of clamp and gauge or the intersecting clamp and gauge is furnished, as may be preferred. The back-gauge is split, thus admitting of two sizes being cut at one operation. In the front table is a brass measuring rule divided into eighths of inches. Only SPECIAL boxing charged for.

Sizes	Size of Pulley.		Speed for Power	Shipping Weight	Price at Factory
Inches	Inches face	Inches diam.		Lbs. about	
30	4	16	180	1,900	\$325
32	4	16	180	2,100	365

## A FABLE.

---

You recall the story of the old man and his sons, and how he showed them that so long as they kept together, like a bundle of fagots, they could not be broken, although each one separately could endure but little strain.

The Cottrell Press illustrates this fable.

A single good quality in this press would count for little. The doubtful buyer might easily overleap a single argument.

But when quality of work, the pressman's convenience, producing power, durability and price together seize him by the hand, he is led to purchase not only by inclination, but by the stern logic of facts.

It isn't *one* advantage only that he secures; it is a *dozen*. Taken together they designate that money-getting piece of machinery which men call the "Cottrell Press."

WANT COLUMN.—Twenty-five cents per line; minimum, 75 cents. Orders for this column *must* be accompanied by cash.

THE INLAND PRINTER publishes its net rates in each issue of the paper. No agent or representative of this Journal is authorized to deviate therefrom or make any discounts. It solicits advertisements from dealers in or manufacturers of any goods used by printers, bookbinders, stationers and similar lines of trade. Its value as an advertising medium is unquestioned. The character of the advertisements now in its columns, and the number of them, tell the whole story. Circulation considered, it is the cheapest trade journal in the United States to advertise in. Advertisements to insure insertion in the issue of any month, should reach this office not later than the twentieth of the month preceding.

THE INLAND PRINTER may be obtained at retail, and subscriptions will be received by all newsdealers throughout the United States and Canada. Subscriptions will also be received by all typefoundries and printers' supply houses.

**INTERNATIONAL TYPOGRAPHICAL UNION CONVENTION.**

IN accordance with arrangements announced previously, the thirty-ninth session of the International Typographical Union was convened in Faneuil Hall, Boston, on Monday morning, June 8. The convention was addressed by the talented young representative of the state, Governor Russell, who delivered an address of welcome on behalf of the commonwealth of Massachusetts. The same courtesy was performed on behalf of the city of Boston, by Alderman Stacey, acting as the representative of the mayor, who was absent from the city. The number of delegates and visitors present was larger than had ever before attended one of these conventions. The immediate surroundings were in complete harmony with the nature and objects of the work awaiting the delegates, and every indication pointed to the most successful and satisfactory session that the International Union had enjoyed for years. How far, then, expectations have been fulfilled will, of course, be largely a matter of opinion, and is a question that will present varying shades of merit, according to the interest, motive or standpoint of the critic. As a report of the proceedings is published in another column of this issue, we leave our readers to form their own conclusions in this regard.

So far as the Printer's Home is concerned, we must admit that the legislation indulged in was not of that positive, clear-cut, decisive character that we had advocated or looked for, or that the merits of the question warranted. A considerable element in the convention appeared to be imbued with the necessity of reducing the number of directors, for the purpose of economizing, while others desired a reorganization of the board, with a view to eliminating such members as were not actively engaged as journeymen printers. While such delegates may have been actuated by the best of intentions—and we have no desire to question their motives—we are of the opinion that a great majority of the printers of the country would prefer to have let matters stand as they were, so far as the directory was concerned, until such time as the Home was completed and placed in successful running order, in the meantime directing all the energies of the Union to that end, until the object was accomplished. A better understanding of the case would certainly show that it was a poor system of economy that necessitated the retirement of Congressman Amos J. Cummings from the Board of Trustees.

The question of a reduction of the hours of labor was one that consumed much of the time and attention of the convention, the matter being finally submitted to a vote of the membership of the local unions. This was unquestionably the best disposition of the case that presented itself, and one that will obviate the mistake made at the Buffalo convention. It places the responsibility where it rightfully belongs, and puts each individual member in a position to judge for himself as to the advisability and practicability of adopting the

measure at the present time. Their action will be final and conclusive, so far as the employé is concerned.

Another question that engaged the attention of the convention to a considerable extent was embraced in what was styled the priority law, a measure designed to make it imperative upon the part of the foreman of a newspaper office to place the oldest substitute, in point of service in the office, in the first regular situation made vacant in the office. While considerable discussion was indulged in for and against this measure, the final vote showed that a very large majority of the union were of the opinion that the employer, through his foreman, had certain rights of discrimination in the selection of his force that no organization would be warranted in disturbing.

We take advantage of the present opportunity to call the earnest attention of our readers to the plan of reorganization prepared and submitted by delegate John R. O'Donnell, of New York City. To a close observer of the workings of the Boston convention it must be evident that the time has come when radical changes in the method of legislating for so numerous a body of workmen must be considered. It is very clear that the convention, as at present constituted, is dangerously nearing that point when it will become unwieldy and unmethodical. It might be well to consider the advisability of some reform in this respect, before the organization in any way merits the opprobrium now so freely bestowed upon it by some of its enemies.

#### TRADE JOURNALS.

**I**N an able editorial, the *British and Colonial Stationer and Printer*, in its issue of June 11, comments forcibly on how advertisers in trade journals are deluded by that class of trade publications which "profess to give away sixpennyworth of paper for a penny or less, in enormous numbers, and to pay postage thereon." Such journals, it is indirectly said, are known by their fulsome praise of small things, and not having the courage of their convictions, hesitate to condemn where condemnation is due, and holding out erroneous guarantees as to circulation, beget suspicion by their importunity.

If sound business principles are not at the base of any publication, the end is generally disaster. To the journal that shows marks of progression, the shrewd advertiser will turn his attention without much urging. But to the subscribers of the trade journal, some remarks could be very pertinently made on the subject of supporting, not alone by their money, but by a fraternal interest in the publications whose beneficiaries they are. A trade journal nowadays representing one industry, may be said to represent as many industries as there are branches in the occupation covered by the trade title. Jealousy is frequently expressed that partisanship is shown in the amount of space devoted to some departments to the exclusion of others, the fact being lost sight of that if an undue proportion is

devoted incidentally to any one department, the cause lies in the enterprise and appreciation of its representatives in furnishing information relative to their occupation.

Fine writing is not what the trade journal requires from its clientèle, but facts and an interchange of ideas. The pressman, compositor, bookbinder or electrotyper all have ideas on matters relating to the industry, a branch of which they represent, yet wait for some other person to give expression to them. Such self-distrust should be overcome. A friendly letter to the trade journal is ever welcome, and is frequently the means of conveying benefit and encouragement to many a disheartened fellow subscriber.

#### THE INTERNATIONAL PRINTING PRESSMEN'S UNION CONVENTION.

**A**S the third annual convention of the International Printing Pressmen's Union, the session which closed Friday, June 19, is noteworthy in many important points. The representation of the subordinate unions was of the strongest, and much legislation was the natural outcome. A considerable amount of the business being transacted in executive session, a full account of the proceedings was not made public.

Although the deputation from the International Typographical Union failed to come to a satisfactory understanding with the convention, it is hoped that within another year a definite agreement will be reached.

The apprentice question has been legislated upon in so far as a limitation has been placed upon the number of apprentices that shall be employed; the matter of a more thorough technical education not being considered in any form.

The opposition to the establishment of a sick and death benefit fund is somewhat hard to understand, being strong enough to refer the subject for consideration to the next convention.

Energetic action was advocated to counteract the dictation of composing-room foremen to pressmen, and the justice of the action taken is obvious.

The creation of an international labor bureau, to aid unemployed members in securing work, is a most business-like advance and commendable in every way; and taken as a whole, in harmony of action and in amount of legislation, the third annual convention will doubtless prove of much benefit to its members.

#### THE DEBATE ON COMPENSATION.

**T**HE letter of Mr. Duncan F. Young in the present number of *THE INLAND PRINTER* we take to be a full exposition of his views, in that he has been arguing from the humanitarian idea of the question, upon which legislation can touch but lightly. *THE INLAND PRINTER*, and Messrs. De Vinne and Baker have argued from the business aspect which Mr. Young's argument presented, and we assume the matter has been ventilated to the satisfaction of our readers.

## ARE WE PROGRESSIVE?

HAVE we arrived at such a stage of perfection in the typographic art in America that we can learn nothing from other countries? A consideration of the immensity of our territory, peopled with representatives from every clime, who give us their experience, won in other lands, to aid in the development of the industries of this great nation, would indeed tend to finally affirm the assertion that the United States has within her own borders the best printers of the world; but yet we are not content to be taught, and thoroughness is a thing that is little thought of. In this connection the *Pacific Union Printer*, in a recent issue, very pertinently says: "If there ever was a time when the youth who has entered the printing trade should exert himself to the utmost in the direction of proficiency in the art, that time is the present. The gradual introduction of machinery for the performance of certain grades of work in composition is viewed with considerable alarm by the plain typesetter, and not without reason, for he will be the principal sufferer; hence it is obvious that if the apprentice of today expects to remain 'in the swim,' so to speak, he must be able to do something more than merely set up and paste a string."

This is good advice, but it is exceedingly difficult for a youth to surmount the many obstacles in his path when seeking a full and thorough knowledge of printing. With money at his command, of course, there is no impediment, but a youth whose wages are his sole support and with, perhaps, others dependent upon him, finds himself grievously handicapped in seeking further instruction. England, France, Germany and Spain have recognized this fact, and have placed technical instruction within the reach of every apprentice or journeyman, and yet progressive and enterprising America accepts the idea slowly and grudgingly.

Philadelphia, from whence so much has flowed to benefit the craft, has been the first of the American cities to adopt the idea of technical night schools, one having been formed on February 24, 1891; and while as yet, in the language of the secretary, no great results have been attained, the members feel that much good has been accomplished by their coming together.

In the preamble to their constitution the members of the school explain as follows:

We, Philadelphia printers, being desirous of having a more extended knowledge of the printing business, and to assist and instruct our apprentices from a scientific and practical point of view, which cannot be accomplished in the busy hours of the day, have formed ourselves into a school, and adopted the following constitution.

And in Article I of the constitution the title and objects are as here given:

SECTION 1. The name and title of this school shall be "The Philadelphia Printers' Technical School."

SEC. 2. The objects of this school shall be: First, The mutual improvement of all engaged in the printing business. Second, The elevation of the quality and character of work by intercourse and exchange of opinion. Third, To assist young men, as far as

possible, by practical and scientific instruction in the various branches of the business.

The encouragement to advocates of this movement by the action of the Philadelphia printers is enhanced by rumors that similar action is about to be taken in New York City, and it may be modestly claimed that the importunity of THE INLAND PRINTER has had no small share in bringing this about.

The printers of the United States have laid themselves open to reproach for their slackness in advocating this measure, and it remains to be seen if we are generally as progressive as we claim to be, now that two of our cities have at last shown an inclination to profit by European examples.

## THE GOVERNMENT PRINTING OFFICE.

OVERCROWDED and cramped, the employés of the government printing office have their ingenuity perpetually taxed to meet the demands made upon a branch of the government service whose appropriations are inadequate, and whose buildings are a curiosity in antiquity. The rambling and tortuous passages lead to rooms lumbered with material which has gone through perhaps one or two stages in the process to completion in book form, but which has been congested in the glut of matter awaiting the next stage through which it must pass.

The foremen of the various departments, having their versatility exhausted in meeting the difficulties thrown in their way consequent on a lack of space for the proper conduct of the work, no doubt must feel that Uncle Sam should be making some move to obviate their troubles; yet the encouragement which was felt when the site for the new building was reported as having been secured has been largely dissipated, now that the delay in building promises to be indefinite.

## A LUXURIOUS INVENTION.

MR. EDISON, the "wizard" of inventors, has announced the success of his latest conception, the "kinetograph," an invention which, it is claimed, will record motion, form and feature just as the "phonograph" records sound. What a blessing this will prove to the persecuted bald-headed man who erst has occupied the front chairs at the ballet, and has furnished for generations material for the mots of aspiring paragraphists. In the security and comfort of his own "den," in full possession of his beloved pipe, the whilom victim of the stock reporter has but to "press the button," so to speak, and presto! there appears before him the bewitching form and bewildering grace of his favorite premier! Happy bald-headed man! Delightful Edison!

CONSEQUENT on the pressure of work in connection with the conventions, our colored insert does not appear this month. In our next issue we shall present a novelty in this line that will satisfy the expectations of our readers.

Written for THE INLAND PRINTER.

### THE ART OF EDITING.

BY GUSTAV BOEHM.

AMONG the books and pamphlets published in recent years there are many which have for an object the abandonment of what is called "System," and by the aid of which their originators intend to build up a practical school of story writing, of dramatic poetry and the like. We have heard such worthy men as Walter Besant speak of the "Art of Fiction," De Laffan of the "Aspects of Fiction"; we have listened to Mr. Daniel Greenleaf Thompson on the "Philosophy of Fiction," to Mr. Alfred Hennequin on "The Art of Play Writing"; we have met with a circle of the best known writers in the symposium held on the question of story writing in "The Art of Authorship," and, with the aid of all these, if one of us not "to the manor born" should attempt to write a romance, it would be a very poor one indeed. And it is equally difficult to lay down certain rules to systemize the "Art of Editing"; for an art it is, as much as the art of pleasing, which latter is part of the obligation of an editor.

The peculiarity of every editor, in the opinion of his readers, is that he does not understand his business. It is a well-known fact in the editorial world that everyone who peruses a paper imagines he could do the thing much better himself. Sensitive people are not fit to be editors, if for no other than for this sole reason. There is not a person today among the readers of our great dailies who does not believe that the leaders could have been written much better, more to the point, or not so "spongy." They accuse the man whose business it is to study the political questions of the day, and who, in all probability, has thoroughly studied them (for no editor incompetent in his department has any chance to remain any longer in his chair nowadays than from sunset to sunset, until his incompetency has been proven by only one attempt), that he knows nothing of politics, and that he is an ignoramus and an ass. In other departments we find the same inclination on the part of the reader. Now it may easily occur, in the white heat of producing what is called "a great daily," that some slips of the pen, perhaps of the mind, must be recorded at times; but this certainly is, among newspapers and magazines of any standing, the exception. We find that great editors must be born, the same as great authors, artists or generals. We know that the recent attempt to establish a school for journalism was an utter failure, and simply because it could not teach that genius to its scholars which is necessary to a great editor, or even a good reporter. It is not the art to write which appears to be the main quality of a good editor. It is more the art to know how to select among the written, to find the proper food on the well supplied table of "articles" to dish out to the readers. The editor must be part of his paper, or of his magazine. He must constantly be on the lookout to satisfy his guests. Tastes differ — political, literary, or the like. Tastes are called opinions, and none vary more than those of the readers of the

daily paper or a magazine. Considering the number of friends which an editor has to please (I mean the subscribers and readers) one must really feel an awful reverence before the mind capable of doing so—that of the successful editor.

An editor is often obliged to suppress his own feelings in the interest of his paper and to suit the taste of its readers. This has caused the erroneous idea in good society that newspaper men cannot boast of that agent generally called "character," the lack of which debars them from social standing. It is certain that every local editor must sacrifice his own personal convictions at times in the interest of the great cause, his newspaper; but it is equally certain that our great editors are, as a rule, heart and soul with the cause they espouse. Whitelaw Reid, of the New York *Tribune*, for instance, will not undertake to act as the head of a strictly democratic paper, and we doubt whether any of the well-known heads of democratic papers would change over night and manage black republican sheets. It may occur at times that the principles of a party change in such a manner that one or the other of the editors finds it necessary to leave its quarters. The great public is at once ready to crucify the renegade and decry him as a rebel to his cause. We have had a number of such examples, during and after the last three or four presidential campaigns.

People are apt, as a rule, to consider the publication of a newspaper a moral obligation between publisher and reader. They do not permit any business principles in the question. Now, to publish a newspaper or a magazine is a very expensive enterprise, and generally a very hazardous one besides; indeed hardly any other undertaking in the world requires such an amount of outlay and work with so little certainty of success as the publication of a large daily newspaper. If the sheet inclines toward the sensational, it is shunned by the conservative; if it is conservative, you soon enough hear the people's voice speak of your dry, lifeless, dull way of editing. What is welcome to one is detested by the other. And the editor is expected to do everyone of his readers justice. So much about the difficulties encountered. Now let us turn back to the technicalities of the profession.

Can one be taught to become an editor? This question has often been put, and has never been satisfactorily answered. Some say that the art of editing ought to be taught in college after the manner in which they teach philosophy, mathematics and other sciences. Paris, I believe, possesses a chair for journalism. Professor Smith, of Cornell, a former newspaper man, has tried to introduce a similar chair into the curriculum of the Cornell University, and, as already mentioned, has utterly failed in the attempt. The reason is obvious. What is the art of editing? What are the qualities of an editor? What constitutes the properties of successful editing? If we answer these questions we will easily come to the root of the possibility or impossibility of "journalism as a college study." Let us try.

Editing is the practical application of knowledge for the benefit of a large number of people. This knowledge is as manifold as the minds in which it is to be implanted by means of the printed sheet called a newspaper or magazine. To successfully edit a paper one must above all command a vast amount of experience. Much of this experience is of an exact scientific character, the result of college or book training; much more of a practical character, the result of contact with people at large; and, above all, the schooling afforded in the newspaper office itself. We have often heard that the editors coming from the case are preferable to mere college men. This may be true to a certain extent, for the man at the case knows much more of the practical handling of copy — to be written or to be edited — than the college student. If he possesses a keen sense of what is wanted and good judgment as to how to serve it, he may even lack the deeper training of the university and still become a good editor. Horace Greeley is usually mentioned as an example of this class of editors. Very well; but we must not forget that Horace Greeley had from beginning to end taken an ardent interest in study, that he had read as much as he had worked in the printing office, and that without his hobby, his books, he would never have accomplished the important influence he attained as editor of the *New Yorker*, and later of the *New York Tribune*. We have a number of editors on our large dailies and magazines, who have never bothered with the curriculum of a college. But I dare say all of them have received a certain amount of training which has helped them as much as a systematic college education would.

The editors of important newspapers are men of mark. Their opinions must be and are considered important dicta in their way. The financial man of a large daily knows as much about bonds and stocks as any banker or broker on the exchange. The political editor is a historian, and although his opinion is generally asked on matters of recent occurrence, he must have in addition the entire history of the different parties on fingers' end. The art critic must have complete knowledge of the technicalities of the painter, the laws of the drama, the peculiarities of versification. The magazine editor, the most aristocratic writer of the craft, is an unusually important individual in the making of literature. Let anyone glance over the index sheets of our monthlies, the *North American Review*, the *Forum*, the *Arena*, etc., and he will be able to form an idea of the variety in the programme, each article representing a class of readers for which the editor is supposed to cater in good style. There are the political readers, the lovers of religious topics, the vast class devoted to literary and art subjects; there are those who look for the solution or at least intelligent if not authoritative discussion of the questions of the day, commerce or finance, and in every case the editor of a high-class magazine must furnish the best that can be had at the present time. He must know the sources from whence to get the best, and must possess the

talent to interest and induce the writer chosen to give it to his magazine. This is not as easy a matter as it appears. Money may go a great way, but it does not always go far enough. Distances, time and other engagements form frequently an undesirable blockade. It is in such cases, when one is at his wits' end, that the importance of the editor's individuality steps in and decides, as the great general who does not participate in a hand-to-hand fight decides the destiny of the battle. We find in our American magazines a gathering of authors from all zones of the hemisphere, a company that one hardly could expect to meet, and whose talk one could never hope to listen to, except under the cover of a magazine. These monthlies have become perfect treasures of knowledge. We may listen to Gladstone and Parnell on "Home Rule"; to Colonel Bryce on "The Commonwealth of America"; to Edwin Arnold on "The Light of the World"; to Felix Vohlkowsky on "Siberian Horrors"; to Mme. Arnold on "The Paris Salons"; to Professors Tyndall and Spencer on scientific subjects, to English, French, German, Italian and Russian authorities in one hour and one sitting. This is certainly a matter well worth the utmost appreciation of the cultured, and an accomplishment of the printing press which ever and ever assures us anew of the immense importance of this over all other inventions.

So we see, to become an editor one must be, above all, a well educated, if not a learned person. People boasting of such and such a capacity among the editors picked from the rank and file of the composing room, consciously or unconsciously forget the mention of the earnest work outside of the office which this capacity has undergone. Naturally the composing room is a good breeding place for editorial talents. The constant contact with copy of good editors, and perhaps with the writers themselves, must create a desire on the part of ambitious youth to "get there," as the vulgar would say, and put his entire self in the endeavor to accomplish his wish, and become — what no other tradesman ever will think of — a writer or editor.

Besides the scientific basis upon which an editor is built up, I think the practical knowledge of the printing business to a certain extent is very necessary. An editor ought at least to know enough of the business to set up a stick or two, to know the difference between the various type bodies, their names, their signification, etc. He ought to know the manufacture of his paper, at least in a theoretical way, from the type in the case to the folded sheet on the delivery table. He should not be the plaything of the foreman, and be informed at every step that this or that direction cannot be executed on account of technical reasons of which he understands nothing. He should be capable of judging of such matters himself, and insist on their being executed. This will give him authority in certain quarters which the mere book editor can never command; and as all know, who have been in actual

harness, that authority means a great deal in newspaper publication, it is well worth while to consider it.

To sum up, then, the art of editing consists:

First—In commanding a good general education, especially in being what is called “well read.” Second—In possessing the practical experience which can nowhere else be obtained than in the actual service of a newspaper, from the composing room up. Third—In possessing such talents as will qualify exceptionally well for the office of newspaper editing; for instance, news scent, vast knowledge of people and things, a good memory, etc. The first can be acquired through earnest study, especially by a systematic college training. The second is the fruit of trade education in an office at the case itself. The third, that agent which alone makes the great editor, and which every one of our great editors possesses or possessed, can neither be acquired between college walls, nor in the service of the stick. It is a talent given to few, a talent which lifts its gifted proprietor far above the limits of the everyday laborer, which makes the cart horse a Pegasus; it is born in man and needs but the chance to develop.

It is a sorrowful fact to record here that the importance and utility of the modern newspaper man has created an evil which we must take into the bargain without protest, for, in order to assure the astounding results of the present-day journalism, one must at times meet with individuals and methods which cannot serve to increase the public esteem toward the press. This evil is the system of espionage—the system of unwelcome interviewing—and, let us say it frankly, the individuality of the average reporter. The general public judges the press by its reporters. It knows hardly any distinction between editor and reporter. In speaking of the press it is always the reporter who is taken in view. The reporter is the only part of the press system with whom the world at large comes into contact. He is at the fire, the entertainment, the races, in the courts, everywhere; he sits at your table in the house—an unwelcome guest; he calls on you at midday or midnight; he insists on knowing the particulars of the suicide of your beloved son, while this unfortunate's corpse is still warm with life; he wrenches the items from the breast of the heartbroken mother, who mourns the elopement of her dearest daughter with the coachman of the family. You give him some information in confidence, and in the morning you find it fully printed in the widest circulated paper under a sensational heading conspicuously displayed. He slides through a chimney, disregarding the utmost dangers of being smoked alive, to listen to the opinions of a locked-in jury; he ascends in a balloon with all the chances of never feeling terra firma under his feet again; he braves the blizzard, and undertakes to walk against all human understanding in the rainy snowstorm over miles and miles of open country from New York city to Coney Island, for no other purpose and without extra pay, but to gain a “heat” for his paper and—as in the case

in view—dies in the attempt, and is found buried in a snowdrift days after the storm has ceased. It takes no special mental capacity to execute the orders technically called “assignments” of the editor. The corps of reporters of a great daily comprises all sorts and conditions of men, from the stranded European aristocrat to the cattle boy of doubtful character who came east to try an easier way of earning a livelihood; and it is not the latter who does the worst work when pluck and energy and wit are demanded—conditions more frequent and important in the career of the reporter than an exact knowledge of spelling. The latter is gladly mended by the editor, but the editor would hardly consent to slip down a redhot chimney and play the spy on a jury. The editor is the general, the executive power; the reporter, the brute force, the executing power. Very few in public life know the difference. Both are members of the press—that's all.

#### COMPENSATION OF PRINTERS.

AN EXCEPTION TO SOME OF THE CLAIMS OF MR. THEO. L. DE VINNE  
IN THE MAY NUMBER.

BY E. F. S.

MR. DE VINNE, in the May number of THE INLAND PRINTER, argues that, “considering the interest on money invested and the deterioration of material, the employer pays a tax of from \$1 to \$3 a week for the privilege of getting the workman's services.”

Without denying the correctness of Mr. De Vinne's figures, I fail to see the justice of his claim as to the “tax” imposed upon the employer. Whether an office employing one hundred men represents an investment of \$100,000 or \$1,000,000 is no concern of the workman; he merely sells his time and best efforts. An employer, in order to get business, must fit his office for the class of work he intends to do, and without the required material he would have no use for the services of the workman. In order to make money one must spend money, and no man would think of purchasing a plant unless with the intention of augmenting his income. Because he desires the greater income is the reason of the outlay, and the money paid out for the plant is an *investment*, the interest and depreciation of which should properly be charged in with other operating expenses. As the cost of the plant is an investment that has to be made before any work can be done, it cannot properly be called a “tax;” though it possibly might simplify matters and benefit the master printers, typefounders, and press builders if all journeymen were compelled to furnish their own outfits to work with.

Regarding the difference in wages between country and large city offices, the work in the latter is more continuous and laborious, and requires greater skill and experience, therefore, should be more remunerative. As a rule, the workman in a country office has an easy time as compared with his city brother. True, there are times when a rush of work and insufficiency of

material makes long hours and hard work, but these times are usually few and far between. The hours are not so exacting either, and while he usually gets less pay, his expenses are correspondingly less, and his surroundings a vast improvement on those of the city printer.

As to the rates for composition, it is no fault of the compositor if the employer figures the cost of composition at less than it can be done for. It is a well-known fact that composition is often figured at cost in order to secure the presswork, so I fail to see why a part of the profit on such work is not rightfully due the composing room. Instead of the other branches being taxed to make up a deficiency in the composing room, Mr. De Vinne's own argument proves that the composing room is taxed to produce a profit in the other departments.

Written for THE INLAND PRINTER.

### THE CAUSE OF BOTCHED PRINTING.

BY WM. L. BANNING, JR.

THAT so much unsightly printing has been done in the past, is due to the system known as "bidding." Those who have printed matter to issue, naturally want to get the best work for the least possible money. The grade of work being considered, this is perfectly just. But is it considered; that is, do results show that it has been considered? Most certainly not. Nine cases out of ten when a tradesman is screwed down to a notch below cost by this system, he will slight and cheapen the work in different ways, to come out even. In printing work, this cheapening lessens the general result, but in such a manner that no one but a printer can distinguish the details which have thus been slighted. Is this honorable? Certainly not; but the very men who will take work below cost, are either those who have no scruples in doing this, or are those who are mentally lacking, and do not see that they are doing anything wrong. In this way the reliable printing offices lose considerable work, which is given to "butcher shops," who "botch."

As is well known, too many so-called "practical" printers are in business for themselves, that is, in and out. They may be likened to the genus *fungi*, springing out of existence as quickly as they sprung in. Very often this class of men take work at the prices they were paid when working at the "case" as employes, and do not take the least account of the facts that their plant is depreciating in value by means of wear and tear, that their rent, light and fuel bills are accruing, and that the interest on their investment is to be realized. To be sure, this class of men do not continue long in business, but while they do, prices on printed matter are below par, and the grade of work also. Choose your operator, give him fair remuneration, and demand the best results. The West leads in many things, and why should she be outdone by the tasteful products of eastern presses?

The consumer is to blame for this. How often it occurs, that some customer takes a sample to his

printer, with a modest request that he figure as low as he can, as the expense of printing must be cut down, and that he is going to get "bids" on the work. The printer, having the constant pressure of this class of trade upon him, and not knowing the real money value of his work, undercuts cost. When the job is half completed, he realizes he has done this, and gets the work out of the way as quickly as possible, to its detriment. Western advertisers do not seem to see the advantage of good work, and will not pay the price for it. As a rule, they only make a "stab at it," as the slang expression goes, and that is as far as they get.

Listen to this little tale. A business man brings a sample of eastern work to his printer and requests that a job be printed for him in the same style. The printer, deserving man, gives figures on the work. The customer, good man, draws back with *hauteur*, and sternly says: "The price I shall give for this work is but half of that which you asked me." The printer explains that to obtain the results as depicted on the seductive sample, the best of skill in execution and the best of material is required. The outcome is as follows: The ruddy cherry ink and blue-black of the eastern job is altered to the familiar red and job black of mediocrity. The enticing cream or azure bond paper, and the heavy plated "book" stock give way to the half linen (which invariably bears the water-marked legend, "Trustworthy linen," "Honest bond," etc., etc.), or the "S. & S. C." book. The refined wide margins are reduced to the "regulation," thus saving in the amount of stock consumed.

All these changes are pointed out by the descendant of Gutenberg and Faust, and the requisite price is at last reached. The customer, good man, goes on his way rejoicing, humming to himself, "a penny saved is a penny earned." Time passes—necessary time to the printer, vexatious delay to the customer. The job is finally completed, and enters the customer's door, borne by a small boy with blackened face, by time-honored custom called "devil." The envelopes have been delivered beforehand, are all ready to receive the circular and go forth to the public to inaugurate the golden harvest of "a business chance." The "devil" retires, having given evidence of anything but a retiring disposition. The package is opened and the top sheet is held up for inspection, when lo! the job does not present the appearance at all which the sample given the printer did, and is not in harmony with the language in which the circular is couched. The printer is waited upon, painstaking individual. The eastern sample is demanded, produced and examined. The printer offers explanation as per his conversation with the customer at the time of receiving order, referring to the reduction in price made, that cost of work might be reduced to the amount which the customer desired to pay. Hold! "what is this?"—the eye of the worthy customer lights upon a grievous error in his own name. "A transposition, by the gods!" The proof comes forth by request, and the error shows thereon, which had not been observed

by the business man, although the proof had been sent him, busy man, before the job was printed. The "copy" is then referred to, and the customer's name, Peirce, defies recognition from that of Pierce, his business rival on the next street. The writing, to be sure, is not as legible as it might be, the "e" and "i" are neither of them looped, and the dot of the "i" is fairly between the two letters. Silence and scrutiny reign for the minute. The man of commerce clears his throat, assumes a look of dignity and after an impressive silence, speaks: "Mr. Galley, not being a printer, I cannot tell you in what particular you have slighted this work; but I can say that I am entirely dissatisfied with it. Now, I do not say that you have done me an intentional wrong, for then *I* would be in error. But *I do* say that your work does not please me. I cannot use it. The job must be reprinted and I think you should do this at cost. Of course I shall pay the full price for this lot, as *I* may, perhaps, be somewhat at fault myself. I make it a rule to do as I would be done by, and if a customer is dissatisfied with goods from *my* store, I charge him nothing for them and in place give him what he requires. I understand perfectly, that dealing in goods already manufactured and manufacturing goods are two separate and distinct businesses, but [impressively] the principle remains the same."

Whatever the outcome was, concerns us not; suffice it to say that the work was poorly done, for the simple reason that the price given was too low. *Choose your operator, give him fair remuneration and demand the best work.*

#### CONCERNING RECREATION.

BY MALCOLM MC PHERSON.

IT is a fact which goes without dispute the world over, that fresh air and recreation are necessary for the proper development of mankind. As sure as the flower raised in the darkness of a cellar will lose its natural color, blanch and fade, so surely will the man, woman, or child grow sickly and pine away if no advantage is taken of heaven's sunlight and the fresh air which whirls around the globe generously, full of life, joyousness, and vivifying ozone. It needs no poet to sing of the rapture of climbing wind-blown summer hills, wandering through flowery fields, or seeking the solitudes of the pathless woods or the wild freedom of the boundless ocean, to convince any reasonable human being of the true delights that live, move, and have their being in direct communion with nature's wonderful and beautiful external charms. Nor does it absolutely require any apostle and prophet of the divinity of work to thunder, like Carlyle, his warnings to mankind against the malignant dangers, and positive evils, of stagnation and idleness, for the world knows them already through the stern lessons of practical experience. The unused machine soon becomes rusty, corroded, and useless, and the ocean itself would lose its freshness if it were not kept in perpetual motion by the beneficent powers of nature.

If love rules the court, the camp, the grove, and makes the world go round, no less do the moving forces which govern the music of the earth and all the spheres.

While, however, all of mankind that is worth considering is well aware of the necessity, if it would live aright, of light and air and recreation, the exigencies of circumstances and civilization have decreed that everybody cannot enjoy these inestimable blessings equally. Man was made to mourn, but all men do not have to mourn alike, fate having decided that a vast multitude must have more of sorrow than their fellow beings. While there are those who never need to heed the storm, there are many for whom the harbor bar is perpetually moaning.

Among those who have been deeply affected by these same exigent circumstances is the great army of those connected with the printing trade. The nature of their work prevents them from getting all that light, fresh air and recreation which would be desired by a philanthropist. It also predisposes them to live a sedentary and semi-stagnant existence. There was a time, not so long ago, when the printing trade was considered one of the most unhealthy in the world, and the mortality among printers was consequently greater than the death-rate among almost any other class of the community. Within recent years, however, the rapid improvement in the condition of the printing fraternity has compelled a great and most satisfactory modification of this state of affairs. Any noxious cellar or ill-ventilated room is not now considered good enough for the compositor or the machinist. Intelligent employers have come to see that the welfare of their interests is identical with the physical and moral well-being of their employés. Hence the large number of airy, handsome, and splendidly equipped printing offices which are now to be found, not only in this country, but wherever there exists a reasonable appreciation of the advantages of treating a large and intelligent body of the community with ordinary common sense and humanity. We hope the day is not far distant when all printing office proprietors will provide light and healthy work-rooms for the men and women in their employment.

While, however, the employer can do much to elevate the moral and physical condition of his employés, the latter have also a duty to perform for themselves. They ought, at all events, to try to overcome that tendency to lead a sedentary life which is characteristic of the nature of their occupation. How many printers, for instance, would rather, after leaving the heat and glare of their workrooms, sit down and chat or play a game at cards together than save their energy for recreation out in the fresh air? There are many who are sensible enough to go fishing, or for a stroll in the parks, when their work is done for the day, but there are also, it is to be regretted, more who prefer an adjournment to a saloon and the social chat or glass of beer to an outdoor effort which would result in blowing the dust out of their lungs and making them feel that exhilarating thrill and tingling of the blood which

men must experience who have been cooped up for hours in a hot composing room or machine room. This is not as it should be. Nature may be slow to resent it, but there invariably comes a time when she will show in a very decisive manner that she will not permit any liberties to be taken with her with impunity. Her motto, like that of Scotland, is, No one wounds me with impunity—*Nemo me impune lacessit*.

Summer weather, green trees, fresh fields and pure and lovely flowers innumerable are now with us once again. Let these delights be taken advantage of to their full extent. The man sitting on the pier with a fishing-pole in his hand is much more sensible than the saloon habitue, even if the only result of his angling expedition is to let the fresh lake winds blow through his whiskers; and the man who seeks the parks and the companionship of flowers and trees shows no less wisdom in proving his method of how to be healthy, wealthy and wise, as the greatest of American printers might say.

#### ENGLISH AND AMERICAN JOURNALISM.

NO. III.—BY AN OBSERVER.

ONE of the most obnoxious phases of American newspaper "reporting" is that of commenting voluminously upon the alleged merits or demerits, as the case may be, of criminal trials, beforehand. The effect of this procedure is seen in the extreme difficulty of selecting juries, who are supposed not to have been prejudiced by the comments indulged in. The newspapers laboriously fish out the intricacies of the *circumstantial* "evidence" in advance, from any possible source, tainted or otherwise—almost invariably against the unfortunate defendant; the information being got in the heated atmosphere always attending the incipient stages of a criminal charge, and without any care or attention as to the nature of rebutting evidences of innocence or mitigation.

It is often a most unfair state of things, and when the victim comes out clear of the charges, or less guilty than was alleged *before* the trial, whoever finds a newspaper retracting its statements, in case the "scored" person is one of limited influence in purse or position? All this is done for what? To benefit the public? No: to create sensational reading matter! Is not the English system of making direct comments upon causes pending trial illegal, preferable on all counts, even irrespective of the ordeal of having to select an unprejudiced jury at the cost of several days' hard work? Should not the newspapers combine to have such restrictions enacted by law?

One of your contributors recently "scored" the servility of a portion of the country newspapers in America with just indignation. They are otherwise servile, namely, in being regularly afraid to justly criticise inferior entertainments. They curry favor with the principals because the advertisements might be withdrawn if honest criticism were exercised against a troupe

of theatrical "duffers." I have been on papers in Savannah, Georgia, and Milwaukee, Wisconsin—papers of standing, that could "afford" to be virtuous, whose proprietors had not the courage of their convictions, and whose reporters were "cribbed, cabined and confined" under most humiliating conditions. I am not saying this state of things does not obtain in England; it does, very largely. But it is a stranger state of things in a country where American burliness of sentiment exists, and where freedom is a vaunted qualification.

The "unattached" reporter is not an unknown being in the old country, where he is commonly known as a "penny-a-liner." Very often, in both countries, he is a clever, a necessary, but an inartistic creature. He is created by the requirements of excessive competition. In large American cities his services are considered a *sine qua non*; he usurps the place of the staff reporter very largely. This is a distinct pity; for he is not truthful or conscientious as a rule—but terribly realistic, harrowing, literal, long-winded, "precise," and infinitesimal to a fault. Oftentimes he has the ability of any three staff reporters, ten times their faculty of scenting a trail, and a hundred times their vigor of execution. He is paid by results. He will employ unfit and unpromising sources of information, and tell untruths about a fire or a murder to effect his object. He is no better in England, but he is less employed there. His so-called "powers" of description are only equaled by his unscrupulousness and his "nose for news." There is a building in New York where may be seen daily, in the windows, several of them, straining their eyes to watch the movements of police or other officials, who initiate reportable events, "like grim death." Everything they do is strained and overdrawn, until intelligent people, alas! have come to look upon it as necessary to deduct fifty per cent from some newspaper reports. Many of these men, verily, in England and America, are the curse of journalism, necessary though they seem to be, in the excessive competition of the day, and allowing for splendid exceptions to the rule.

It may be right or wrong, an unsettled question whether or not it is fitting that a reporter should express any bids or opinion in presenting a report; but that many of them clothe their convictions in "catch penny," clap-trap, old-fashioned verbiage is painfully evident, being unsuited to go beyond the mere description of the event they want to record. Others are lively, witty, original and readable, but as a rule, they should stick to the text of their notes. Some of them inartistically give themselves away by stating in the opening lines of their reports the *result* of an entire meeting, anticipating the gist of the same, and so making it unnecessary to read further on, instead of artistically "leading up" to the *denouement* by degrees and carrying the reader with them into their narrations.

I may have been prejudiced to some extent in what I have stated in these papers, as to American journalism—that is possible; but, admiring as I do the bulk

of its existence for its vigor, liberality and resources, I distinctly aim at its improvement. I believe most old institutions which survive have their abounding advantages; and I believe American journalism will more and more gravitate, with age, toward the mellowness, the cautiousness and the staidness of English journalism. Neither sordidness nor sensationalism is fit or calculated to be the *final* guiding principle of the newspapers of a progressive, fair-minded, liberty-loving people like the Americans, who already in pictorial journalism far surpass their old-country brethren. A few words as to the New York papers and I conclude.

Taking them in all respects I consider New York City has the cream of the papers in the United States. Some will dispute this standpoint, just as in England the provincial papers issued in Manchester, Liverpool and elsewhere are said to represent the national sentiment when the London papers are wallowing in petty prejudices and class hatreds. But in making the above statement I am referring to one or two metropolitan dailies of undoubted influence and ability. The *World* is an astonishing instance of rapid development under adverse circumstances, brought about by business instincts rather than by any conviction of possessing a literary mission. There are differences of opinion as to what constitutes the proper basis upon which to build a newspaper, namely, as to whether its *sole* mission should be to make money by the contest of methods, straight or circuitous, or whether its intellectual and moral responsibility should be the leading consideration. The proprietor of the *World* is a believer in the former dogma, and his experience *seems* to show he has been correct. Not that he has neglected in any way the *role* of a moral preceptor when the assumption of the character constitutes an opening for advertising the *World*. That is the secret of his wonderful success, his endless resources as a self-advertiser proving the astuteness of his understanding. The proprietor has sent expeditions to endless quarters, for good and noble purposes, for the advertisements therein.

The scriptural injunction as to not letting one hand know what the other is doing has no charms—nay, no existence—for this great journalist. No other newspaper in this world ever played the egotist so fully and so successfully. It never did a good stroke (of business) without pointing it out, whether it was causing a useful law to be enacted, advocating an upright (but popular) movement, or sending an envoy round the world in so many days. All its movements and its advocacy have been interested and worked in consciously popular directions. It never “did good by stealth and blushed to find it fame.” That is left to sentimental enthusiasts. And it has had its reward. But the *World* is not, strictly speaking, an influential paper, beyond certain sections of the working classes. That is the cost of its astuteness; it is essentially a plebian organ. So far as circulation and the advertising patronage of the humbler classes go, it has the run of the metropolis, and a paying run; but a large quantity

of the recent provincial lament on the part of brother editors toward the *World's* proprietor were written at a safe distance from New York. It *has* benefited the country much; done splendid service—in spite of its Asiatic weakness. It will accept, however, cash readily for the advertisement of a libertine who “solicits correspondence from a handsome brunette—object, amusement.” In other countries such advertisements have at least to *pretend* to have matrimony in view in explicit terms. The same paper goes as much astray on European subjects as the puniest of country papers. Some time ago it had a paragraph headed, “The Queen said to favor Home Rule,” because the queen’s speech was to include the promise of an Irish local government bill—two huge “bulls” in one paragraph. It termed Augustus Harris, the well-known lessee, an alderman of the city of London, and considered that the late Hon. A. J. F. Egerton, M.P. for Eccles (England), was a leading conservative.

In some respects the *Times* and *Tribune*, and, in a general, all-round sense, the New York *Herald*, are admitted to be the most influential papers in the metropolis—I mean the papers most read by level-headed business people. The *Herald* is known to be—leaving politics aside as being foreign to our subject—on the whole, honest, fearless and respectable. Some of the other dailies at times run it into a corner through getting “exclusive” news by preconcerted arrangements; but as a liberally managed newspaper it is seldom behind the requirements of the day, presents its news in good readable form, is considered a splendid advertising medium—appealing as it does to merchants, dealers and manufacturers largely, and is about, apparently, to inaugurate an era of increased vigor and prosperity in new premises. There are both brains and money behind this paper, which has maintained its position without the astuteness and extraordinary egotism of its contemporary, in a praiseworthy, legitimate channel, such as the discerning public appreciate through thick and thin, after more flashy presentations have become “a weariness to the flesh.”

#### A KNOTTY PROBLEM SOLVED.

BY S. P. WHITMARSH.

SCIENTIFIC men are puzzled in trying to account for the increase of insanity in proportion to the population, as shown by census reports. But if one reflects a moment he may find the clue to one main cause, and that confronts every wide-awake man today who reads the papers.

From the advent of the first portrait of Lydia Pinkham to the distorted caricatures of the late Canadian Premier, the deadly newspaper cut has struck its paralyzing force into the brains of old and young. No one can take up a paper without meeting the ghost of an abortive attempt at a portrait of some kind in infinite variety. From the president down to the man as he looked “before and after taking” they tend to breed

an anarchism of sensation sufficient to demoralize the strongest intellect. He who runs may read, but unless he who reads runs at once his mental balance is endangered.

It is in vain to try and counteract the influence of these newspaper monstrosities by getting up art loan exhibitions, and feasting our eyes on something that is

AS HE IS.

AS HE APPEARED.

at least like reality, for the purpose of elevating the mind and cultivating an artistic taste. As long as the human eye is constructed on the present plan, all the benefits thus received will vanish on contact with the never-to-be-avoided cut in advertisement or news item.

Civilization seems to be nearing a crisis. The wonderful strides made by inventors, whereby powers long unknown, or mysterious, have been discovered and harnessed to the car of progress, have caused the American eye to be peeled for novelty in every direction. The busy American wants his story told him in the shortest possible time. It can be quickest told and impressed on the perceptive faculties by means of an illustration. So, to meet this prevailing want, millions of things called pictures are gotten up on the spur of the moment, leaving the spur attached; and, as they strike the eye, glare and horrify, and disappear like a phantom beating his board bill by scowling it out of countenance, the damning work begins. And from that time the mind of the reader is one degree nearer the other side of reason, where fogs and chimeras chase each other through the demon-haunted chambers of the brain.

It is not because the newspaper cut is wholly bad that it produces such evil results. Mechanical skill, in pity to human weakness, has improved their quality to such a degree that many can be viewed without a shudder, and sometimes even with a feeling of blissful calmness. Even the adorable Lydia grows handsomer as she floats gently down the stream of time; though there is still left a simper that has never succeeded in deluding the census enumerator.

So it is not altogether the *character* of the illustration that creates the evils we deplore, but rather its everlasting omnipresence and continuousness. A drop of water falling on one's head gives no very unpleasant sensation. But ten million drops falling, one at a time,

on one spot, at regular and frequent intervals, becomes torture. "This way madness lies."

Today, thoughtless panderers to the depraved intellectual taste of a fast age are multiplying these messengers of evil, that wing their way through the sensitive organs of vision to the human brain. There they breed nervous prostration, despair, and at last insanity.

Each state adds room to their already large asylums, while philanthropic people, official and otherwise, discuss the question with all the aid afforded by expert research, and wonder and wonder, and guess and guess, and never suspect the actual cause is right in front of their gold-bowed spectacles.

### THE CARE OF THE HANDS.

BY TOM L. MILLS.

IT is generally considered that it is the privilege of the ladies to devote special attention to the hands, and many of THE INLAND PRINTER'S readers may be inclined to pass this article by with an opinion that it is written for the sole benefit of the lady readers of this journal. But their surmise will be wrong, for this article is written with the intention of benefiting all and sundry who have to do with typesetting, whether it be in the lowly rank of the distributor or the highest grade of bookwork.

There is an old English saying to the effect that if you "take care of the pence, the pounds will take care of themselves." I would apply this saying to the life of the compositor, and advise him—"Take care of your hands, and your hands will take care of you."

One of the greatest troubles of the "type-snatcher's" life is the hard, dry feeling which occasionally takes possession of his pick-up fingers, these useful members seeming to lose their sense of touch, and the life of the unfortunate typo becomes a torment. When the fingers are in this state, and the thousands have to be piled up whether the man is fit to lift them or not, the dryness of the skin brings about a roughness of the parts used, and this roughness in a short time causes little patches of "tails," which are either snipped off as they ruffle, or are bitten off, and a sore place is raised. In a very short time the ends of the fingers used become cracked, and then I truly pity the man of types.

Newspaper and book compositors are the greatest sufferers with dryness of the fingers, and I have seen so much of it that I thought my experience would prove useful to those who take the trouble to look after themselves. I have myself tried several experiments to keep my fingers moist and pliable and have heard of other experiments tried. Vaseline is used in various ways; ointments of various kinds have been tried; and an endless variety of soaps are recommended. Who has not seen the piece of alum in the upper case to kill perspiration in the heat of summer, and then when that antidote has worked its end but too well, have we not seen the piece of sponge which takes the place of the alum in the upper, by its dampness used to give the fingers their moisture back again?

Now I believe prevention to be better than cure, and if comps will take the little advice upon this subject which I have to give them they will never be troubled with "dry fingers." When the work is finished, be it either distribution or composition, wash the hands well, using a nail-brush, and occasionally a gentle application of the pumice stone, to keep the dirt from becoming ingrained in the finger tips. All this can be, and no doubt is with many, done at the office. At home you must keep a small bottle of the best glycerine. This you may use at any time, but I always use it at bedtime.

Glycerine is the most popular of all applications for the hands, and it should be so; but it is so misapplied that its wonderful properties have no effect. The commonest mode is to pour some

into the palm of the hand and rub it on the hands and then wear a pair of gloves while in bed with this still on. If you stay for a moment and inquire the object in using glycerine you will convince yourself of the mistake in applying it as above. The object is to get the glycerine into the pores of the skin, whereupon the pliability of the epidermis is restored. Now, by putting the mixture on thick as above described the pores are *stopped* instead of *opened*.

My advice as to the proper application of glycerine is as follows: Wash the hands thoroughly in either hot or cold water, the object being to open the pores, which is fully attained by the process of washing. While the hands are thoroughly *wet* pour some glycerine into the palm of the hand; then use this as though it were soap and work it round your hands for about the same time as you would work soap round your fingers when washing—say one minute. By this time your hands will have become warm with the exercise, and therefore the pores will have all been opened—thus attaining the desired object. Rinse your hands through the water just as you would rinse the soap off; wipe them on the towel, and you have done all that is necessary—the glycerine will do the rest in its own mysterious way. Once a week will be often enough to go through this office of lubricating the pores, always remembering that it is absolutely necessary to keep the hands clean and in good order.

I have not only carried out this operation in my own case, curing my old complaint of dryness, but in every assembly of knights of the stick and rule where I have been, and having always heard the plaint: "Who knows a good cure for dry fingers?" I have given the simple directions here set forth, and in every instance when they have been followed complaint has ceased, and the fingers have even become in better condition to stand life's wear and tear than they were before the application of the lubricant. Remember that long strings can only be pulled by good fingers.

#### PRINTING GOVERNMENT MONEY.

The Washington special correspondent of the *New York Evening Post* says that the first question which naturally arises in the mind of a person studying the system in the treasury printing office is, what is to prevent a pressman from entering into collusion with a confederate at the paper mill, possessing himself of a few sheets of the distinctive paper, and slipping them into his press while he is in the course of a regular job?

There are three things to prevent: First, he would have to corrupt his helper, a woman whom he has no claim upon, and with whose appointment he has nothing to do, as she comes certified from the civil-service commission. Next he would have no assurance of ever being set to work at the reverse side of notes of the same denomination as that of which he got the first impression. He might print one side of a \$50 note, and the time might never come around when he could get a chance to do the other side. But a more potent preventive than either of these is the little tell-tale automatic register which is attached to the side of his machine, and which records every single impression, light or heavy, made by his agency. He cannot even see the dial, for it is under a locked lid, the key to which is in the pocket of the officer in charge of the room. It is noiseless, too; and he has no means of knowing, till his day's work is done and his final tally is taken, what the little monitor has reported about him. If, therefore, he should conceal a sheet of paper about his person and try to run it through his press, the automatic register would show one more impression than the number of printed sheets he has turned over to the dryers, and he would be arrested before leaving the building.

Another possibility of leak seems, at a first glance, to offer itself in the theft of imperfect notes. The average citizen is so poor a judge of fine engraving that a note would have to be very bad indeed to cause him to reject it; and anyone who made off with a lot of notes good in every respect except perfection of execution would have, it seems, an easy task disposing of them. Two preventives apply here. One is the fact that the imperfect

notes must be accounted for just like the rest, sheet by sheet, and carried to the macerator, there to be ground up and made into pulp. But supposing some means were devised for "beating" the macerator; even then the notes are without the red seal and the blue check number. The number is not put on until the note has passed inspection, and for the seal the note is sent over to the treasury department, passing out of the custody of the bureau altogether. These features are so essential to the familiar appearance of the note that their absence would be noticed by the most careless observer if an attempt were made to pass them; and their forgery would add immensely to the dangers of detection as soon as the spurious notes were handed across the counter of a bank.

Still, some one asks, why may not plates, which have been condemned and discarded, be stolen occasionally and used to print genuine looking notes, even though the impressions might be inferior? First, because as soon as a plate has served its day, the superintendent of engraving scrapes it with a sharp tool and defaces it so that it is useless. Then it is kept in the custodian's vault till a committee, periodically appointed, and made up of a number of high treasury officers and one person from private life, visit the vault, inspect the defaced plates, and pack them in a box, a list being kept in the custodian's books and a duplicate list put inside the box itself. Then the box is bound with strap-iron, a hole is bored in one side and sealing-wax poured into it, and the seal of the United States is put upon the wax. When enough boxes have accumulated to make a load they are taken by the committee down to the navy yard, where a furnace is specially prepared for them. Each box is opened, the seal examined, and the contents compared with the list enclosed; and each plate, after identification, is put into the smelting pot and reduced to a fluid state. The committee then make their report, which goes on file, and the history of each plate concerned is thus brought to an end.

#### LONG LIVE THE PULP-PRESSER!

The daily papers of this country and Europe, which find sermons in syndicates, books in pulp, news in revamped history (which is usually spoiled in its overmaking), and advertising in almost everything, frequently refer (says the *Paper Trade Journal*) to certain vocations of men or women which are noteworthy as being conducive to prolongation of human life. It is curious that the paper manufacturer is almost invariably omitted from these tabulated modern instances of longevity among laboring classes. And yet it is a fact, incontrovertible, that seventy years is by no means the average earthly measure of the life of a paper maker. He knows a trick of living, and living hale, worth ten or a dozen years longer than the biblical allotment. While not quite so numerous as the proverbial leaves in the woods of Vallombrosa, there are (to our knowledge) many American paper makers who, at eighty and odd, will enjoy reading this truth about themselves. Occasionally a nonogenarian springs up as the active grandsire of a practical, hustling grandson who has learned more about chemical fibre in a year than his progenitor knew about rags or straw after grinding them patiently for a whole generation. It will be found, as we have said, that the paper maker exists for a period of time full as long as any other man who has been born to live until he dies. Why shouldn't he who has filled the land of freedom, ingenuity and bric-à-brac with that fabric which is the basis of books, umbrella stands, wash tubs, car wheels and various other necessities, live, move (twice every May, if he wants to), and have his broth and his porridge for five score years? The paper maker is the architect of other people's fortunes. To be sure, he has considerable money of his own, which he has earned and prudently banked; but, as a regular thing, his name isn't Midas or Rothschild. Neither is it ever Cressus, Rockefeller nor Vanderbilt. Perhaps the reason of this is that he multiplies too rapidly, and is therefore compelled to divide profits too often and among too many. May he live while he lives, like the epicure of classic lore; for surely he is the greatest benefactor to literature and makers of bundles, as well as an exemplar of longevity, virtue, progress and good repute.

**ADVERTISING SPECIALTIES**

... CONSISTING OF ...  
*Calendars, Calendar Tablets, Cards, Banners,  
 Fans, Memorandum Books,  
 Folders, Etc.*

Increase your profits, enlarge your business by having these goods to offer your customers. No other branch of your business will pay you as well. Inclose us your business card and we will mail you our prices on all goods we manufacture, or inclose us 10 cents in stamps and receive a set of Four "Little Beauty Panels." Full line of Calendars ready August 1, over 75 designs, from \$8.00 to \$60.00 per 1,000. Samples sent by express on receipt of \$2.00 (rebate given). For prices of other samples see catalogue, sent on application. Liberal discount to the trade.
