(Used with Multiple Slug 1½" Sticks)				
Roman No. S 530A each (Steel)			9.25	POMES

SPACES AND QUADS

Roman Spaces and Quads. For Roman (Perpendicular) Body Matrices

Sold in complete sets or in sorts as required. At least one set needed for each cabinet.

The No. 11 Italics, No. 18 Victoria Italics and No. 28 Tempo Italics are driven on a Roman body. Roman spaces are used with these "Italic" typefaces.

Italic Spaces and Quads, For Italic (Angular) Body Matrices.

Sold in complete sets or in sorts as required. At least one set needed for each cabinet containing Italic matrices.

High Spaces and Quads

For use with the double-column single-slug matrix sticks and for letter-spacing the larger point size typefaces to give added support to the head of the slug. Although the high spaces and quads are referred to as "8-pt. cut-out" and "12-pt. cut-out" the cut-out is not the full 6 or 12 pt. If accurate point size "cut-out" is required "special" high spaces and quads should be ordered. Sold in complete sets or in sorts as required.

Standard 1¼" spaces and quads (not quad blocks) are made only as high spaces and high quads with a 36 pt. cut-out, so the head of the slug between characters will have added support.

Special ⅞" Roman or Italic high spaces will be furnished in any point size cut-out to fit with any ⅞" point size typefaces, or in any special height for casting slugs for special height base material.

Special Precision Roman Spaces & Quads (⅞")

The precision spaces and quads are made with the same precise accuracy as the Ludlow horizontal and intersecting ruleform matrices. It is intended that such precision spaces be used only with ruleform equipment

Division Quads

Division quads are used in the multiple-slug sticks for casting multiple-slug lines. The use of the division quad makes possible the accurate spacing of long lines of typeface matrices in multiple-slug sticks with one justification, and provides for the overhang on one slug and a corresponding indention on the next slug, which permits the butting of multiple slugs without sawing.

SPACES AND QUADS

Double-slug sticks require one division quad; three-slug sticks require two division quads; five-slug sticks require four division quads. The number of division quads to be included with the original machine varies somewhat depending on the class of work and the number of multiple-slug sticks likely to be used at the same time in the composing room.

Special offset division quads are required with the multiple-slug adjustable offset matrix stick, because of the wider opening in the stick.

6-LP Lining Plate Gothic division quads are required with the Lining Plate Gothic multiple-slug sticks. These division quads are offset three points to compensate for the 3-point difference in the sides of the stick.

Clamping Italic Division Quads

In locking up a long stick full of Italic matrices it is possible to spread the middle of the stick due to the slant of the Italic matrices. The tighter the stick is locked, the wider becomes this spread, resulting in the matrices being forced out of alignment and forming a saw-tooth effect on the slug.

To overcome this, Italic clamping division quads should be used. This quad represents a large letter Z reversed. The horizontal ends fit into grooves in the stick, holding the sides of the stick parallel. One clamping Italic division quad is required for each five-slug stick in which Italic matrices will be used.
