PULLER SLIDE MECHANISM

On Model E and F Elrod machines above Serial #574G,  
the Puller Slide Cam EC123CB, Mitre Gears EC1237C and EC1237 $\frac{1}{2}$ C  
are fastened on the shafts with taper pins instead of set  
screws.

This change was made to prevent the cams and gears  
from becoming loose. See B/P #FI-71 for cross-section of cam  
and gears in place.
